FAIR

- The FAIR Guiding Principles for scientific data management and stewardship (Nature, Scientific Data, 2016)

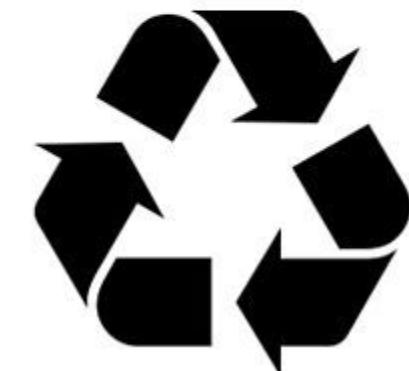

There is an **urgent need to improve the infrastructure** supporting the **reuse of scholarly data**. A diverse set of stakeholders—representing academia, industry, funding agencies, and scholarly publishers—have come together to design and jointly endorse a concise and measureable set of principles that we refer to as the **FAIR Data Principles**. The intent is that these may act as a guideline for those wishing to **enhance the reusability of their data** holdings. Distinct from peer initiatives that focus on the human scholar, the FAIR Principles put specific emphasis on enhancing the ability of **machines to automatically find and use the data**, in addition to supporting its reuse by individuals. This Comment is the first formal publication of the FAIR Principles, and includes the rationale behind them, and some exemplar implementations in the community.

The screenshot shows the F-UJI website homepage. At the top, there is a navigation bar with the F-UJI logo, followed by links to Home, Assess, About, Methods, Docs, and Code. Below the navigation bar, the F-UJI logo is displayed again, consisting of a blue gear and a yellow gear with a central eye-like icon. To the right of the logo, the text "F-UJI | Automated FAIR Data Assessment Tool" is written. Below this, a large paragraph describes the service: "F-UJI is a web service to programmatically assess FAIRness of research data objects at the dataset level based on the FAIRsFAIR Data Object Assessment Metrics ☺". At the bottom, a blue button with the text "Click here to assess a dataset" is visible.

F-UJI (FAIRsFAIR)

FAIR assessment

F-UJI is a web service to programmatically assess FAIRness of research data objects (aka data sets) based on metrics developed by the [FAIRsFAIR](#) project.

Please use the form below to enter an identifier (e.g. DOI, URL) of the data set you wish to assess. Optionally you also can enter a metadata service (OAI-PMH, SPARQL, CSW) endpoint URI which F-UJI can use to identify additional information.

Report:

Findable

FsF-F1-01D - Data is assigned a globally unique identifier.	 
FsF-F1-02D - Data is assigned a persistent identifier.	 
FsF-F2-01M - Metadata includes descriptive core elements (creator, title, data identifier, publisher, publication date, summary and keywords) to support data findability.	 
FsF-F3-01M - Metadata includes the identifier of the data it describes.	 
FsF-F4-01M - Metadata is offered in such a way that it can be retrieved programmatically.	 

Accessible

FsF-A1-01M - Metadata contains access level and access conditions of the data.	 
FsF-A1-03D - Data is accessible through a standardized communication protocol.	 
FsF-A1-02M - Metadata is accessible through a standardized communication protocol.	 

Interoperable

FsF-I1-01M - Metadata is represented using a formal knowledge representation language.	 
FsF-I1-02M - Metadata uses semantic resources	 
FsF-I3-01M - Metadata includes links between the data and its related entities.	 

Reusable

FsF-R1-01MD - Metadata specifies the content of the data.	 
FsF-R1.1-01M - Metadata includes license information under which data can be reused.	 
FsF-R1.2-01M - Metadata includes provenance information about data creation or generation.	 
FsF-R1.3-01M - Metadata follows a standard recommended by the target research community of the data.	 
FsF-R1.3-02D - Data is available in a file format recommended by the target research community.
