Background

- Academic libraries are increasingly participating in research information management (RIM) workflows at their universities (Bryant et al., 2021)
- Our approach
 - RIM-related work distributed across different librarians and services
 - We're looking to take a more systematic approach to aggregating, curating, and openly sharing metadata about IUPUI's research activities
- Why Now?
 - IUPUI (Indiana University Purdue University Indianapolis) is becoming Indiana University Indianapolis with the departure of Purdue University in 2024
 - A systematic approach to RIM supports research assessment and strategic planning as our campus goes through unprecedented change

“The future is already here. It’s just not evenly distributed yet.”
– [quote attributed to William Gibson](#)

The pieces

People

Systems

Services

People

- Identifying partners with overlap in mission
- Looking for opportunities to share cost in shared infrastructure
- Future plans: explore new opportunities for collaboration

Centering contributors

- Focus on open and reproducible
- Researcher control over data and profiles
- Incentives for researchers
