We used the Australia Telescope Compact Array (ATCA) to perform a radio observation of the short GRB 200411A. The rapidly scheduled observations began on 2020 Apr 11.25 UT for 5 hours (1.5 hrs post-burst; Fermi GBM Team GCN 27535, A. Tohuavavohu et al., GCN 27536). No radio source was detected at the enhanced Swift-XRT position (J.P. Osborne et al., GCN 27538), with preliminary 3 sigma upper-limits of 45 microJy and 36 microJy at 5.5 and 9 GHz, respectively. Further observations are planned.

We thank the ATCA and CSIRO Astronomy and Space Science (CASS) staff for scheduling these observations.
