The research described in this thesis was performed at the Department of Molecular Hematology of Sanquin Research, Amsterdam, The Netherlands. This research was supported by grant 1702 from the Landsteiner Foundation for Blood Research.

Cover illustrations by Awital Bar Barroeta. Protein structures used in the illustrations were based on the crystal structure of factor XI (PDB: 6i58), a camelid nanobody (PDB: 5imk), and thrombin (PDB: 7mj5).

Cover design by Erwin Timmerman.
