## EDITORIAL

## In Honor of Our Peer Reviewers

Richard Alweis\*, Elizabeth Mamo, Christina Goodermote

Rochester Regional Health, USA

As of the date of the writing of this editorial (February 6, 2023), *Advances in Clinical Medical Research and Healthcare Delivery* (ACMRHD) has readers in 130 countries and has achieved its first 5 citations during 2022! This success is due to the lifeblood of any medical journal - its peer review team. This diverse volunteer group generously gave their time to ensure that the high standards of publication ethics and integrity are upheld and to advance the journal's mission to produce freely available articles of importance to the medical community worldwide. Our 2022 peer reviewers are listed in [Table 1](#) below; the editors of ACMRHD wish to express our sincerest gratitude for their time, sagacity, and commitment.

While we have so many to thank, there is always room for more peer reviewers. Some view peer review as a way of paying back to the research community for the work that others do in reviewing their manuscript submissions; others identify peer review as a necessary part of their role as a researcher.<sup>1,2</sup> Many organizations expect peer review for academic advancement.<sup>1,3</sup>

We should not lose sight of other benefits of peer reviewing. Being one of the first to read new information that is contributing to your field of expertise or the field of medicine in general is a significant motivating factor for peer reviewers.<sup>3</sup> It may even stimulate your own ideas for performing research.<sup>1</sup> In addition, it is an opportunity to be recognized as having expertise in your field, to build a relationship with a journal, and to potentially become more involved in the editorial/medical publishing industry.<sup>1,2</sup> Most importantly, however, it is just plain fun.
