*The full range of Survey publications is available from the BGS Sales Desks at Nottingham, Edinburgh and London; see contact details above or shop online at [www.geologyshop.com](http://www.geologyshop.com)*

*The London Office also maintains a reference collection of BGS publications, including maps, for consultation.*

*The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.*

*The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Foreign, Commonwealth & Development Office.*

*The British Geological Survey is a component Institute of UK Research and Innovation (UKRI).*

## PREFACE

Welcome to the latest edition of World Mineral Production which includes global mineral production data for 2021 and is a continuation of the dataset that began in 1913.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey (BGS), through which we aim to provide a reliable and continuous set of data covering most of the minerals that enter international trade. In this volume we have set out the production figures by country for more than 70 mineral commodities, over the five-year period from 2017 to 2021. We have also included a new layout for the tantalum and niobium table and the lithium table, making the presented data more usable and informative. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the BGS by numerous national and international organisations is gratefully acknowledged.

Despite the COVID-19 pandemic, which was still having a negative impact on the global minerals industry in the early part of 2021, almost two-thirds of the commodities considered in this volume increased their total world production during 2021 relative to 2020 levels. Towards the end of 2021 there were hints of the Russia conflict with Ukraine. This was already having an impact on world economies, with a reluctance of several countries to be so reliant on Russia, particularly for oil and gas.

In 2021 the mining industry started to make some recovery after the challenges of the global pandemic. A few commodities increased considerably during 2021. Global production of lithium, bismuth, and chromium increased by more than 17 per cent on the previous year.

Lithium production increased significantly in 2021 relative to 2020 at 30 per cent and demand has grown rapidly since the pandemic. Over a 5-year period lithium production has increased by 42 per cent, showing the longer term growth. Production of all the key battery raw materials, cobalt, graphite, manganese, nickel, and vanadium increased during the same period.

Global production of bismuth increased again on the previous year by 19 per cent in 2021. This is linked to its use in pharmaceuticals and increasingly being used in the automotive industry and a non-toxic alternative to lead. For the first time in 3 years Vietnam produced more bismuth than China, accounting for 44 per cent and 38 per cent respectively. However, over the past 5 years total world bismuth production has decreased by 20 per cent and is still not back to the global production levels of 2017 and 2018.

South Africa is the world's largest producer of chromium ores and concentrates with 53 per cent of total production, followed by Kazakhstan (18%) and Turkey (8%). Over five years chromium has increased by 4 per cent due to South Africa, Zimbabwe, Finland and Russia all increasing their production significantly. A lot of chromium is sent to China, particularly from South Africa, to fuel its ferro-chrome and stainless-steel industries.

Certain commodities experienced significant reductions in production during 2021. Antimony production decreased by more than 24 per cent relative to 2020, and over 5 years this decrease is even higher at 44 per cent. The significant drop in production over the 5 years is predominantly due to reduced production by China (53%), which has started importing a lot more antimony in recent years. Production of mined tin decreased by more than 12 per cent in 2021 relative to the previous year. This has been caused mainly by China, Indonesia, and Myanmar, which are all producing much less than previously. The price of tin dropped which encouraged many companies to bring forward scheduled maintenance work. China has also had issues with its supply chain and the impact of COVID-19 restrictions. It is expected that tin production should pick up in the coming years.

Over a 5-year period, mercury production has decreased significantly, by 38 per cent. Obtaining official reported figures for mercury can be difficult. A few countries are understood to have stopped producing altogether, such as Argentina and Chile, while others have reduced production considerably: notably China, Mexico, and Morocco. In recent years mercury has seen tighter regulatory controls and the implementation of new rules surrounding its use due to its highly toxic nature. The use of mercury in industrial processes and products has reduced.

International interest in the security of supply of minerals continues to grow. In 2022, the UK Government created the Critical Minerals Intelligence Centre (CMIC). Hosted by the BGS, the objective of CMIC is to collect and analyse information on the supply of critical minerals, which are vital to the UK's economic success and national security, and to guide decision-making and research on critical raw materials, with increasing focus on those required for the clean energy transition. Notable publications during the last year include 'the geological potential of the UK for battery minerals' which focuses on 4 main commodities (lithium, nickel, cobalt and graphite) and the 'UK critical minerals list'. These and other reports can be downloaded from the CMIC website (<https://ukcmic.org/>).

BGS has a large programme of UK and international work. Recently BGS has been looking at hard rock lithium resources in Ghana, rare earth element mining in South East Asia and graphite in Africa, which is developing a reconnaissance exploration methodology for flake graphite.

As always, I would welcome any comments and suggestions that you have relating to this volume, which might help us to meet your ongoing needs.

## CONTENTS

### Commodity Index

Alumina 3	Magnesium 45
Aluminium 4	Manganese 46
Antimony 5	Mercury 47
Arsenic 5	Mica 47
Asbestos 6	Molybdenum 48
Barytes 6	Natural gas 54
Bauxite 2	Natural sodium carbonate 64
Bentonite 7	Nepheline syenite 48
Beryl 9	Nickel 49
Bismuth 10	Niobium 69
Borates 10	Perlite 51
Bromine 11	Petroleum 52
Cadmium 11	Phosphate rock 56
Chromium 12	Platinum 57
Coal 12	Potash 58
Cobalt 15	Pyrites 65
Copper 17	Rare earths 58
Diamond 20	Rhenium 59
Diatomite 21	Salt 59
Feldspar 22	Selenium 62
Ferro alloys 36	Silicon 36
Fluorspar 23	Sillimanite 62
Fuller's earth 7	Silver 63
Gallium 24	Strontium 64
Germanium 24	Sulphur 65
Gold 25	Talc 68
Graphite 28	Tantalum 69
Gypsum 29	Tellurium 70
Helium 30	Tin 71
Indium 31	Titanium 72
Iodine 31	Tungsten 74
Iron ore 31	Uranium 75
Iron and steel 33	Vanadium 75
Kaolin 39	Vermiculite 76
Lead 41	Wollastonite 76
Lithium 44	Zinc 77
Magnesite 45	Zirconium 79

## APPENDIX

Appendix 1: Tables relating to Europe only  
Aggregates 82  
Cement 84

Appendix 2: Further acknowledgments

## EXPLANATORY NOTES

### Coverage

*World Mineral Production* covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (from 1913 for many commodities) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Copies of these publications are available in the World Archive section of the website: [www.mineralsUK.com](http://www.mineralsUK.com).

### Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe  
Africa  
North and Central America, including the Caribbean  
South America  
Asia  
Australasia, including the Pacific Islands

### Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material wherever possible.

### World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

### Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the UK Research and Innovation (UKRI) and the Natural Environment Research Council (NERC) give no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. UKRI/NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

### *Acknowledgements*

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group, the International Nickel Study Group and the Barytes Association. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Appendix 2 contains a fuller list of organisations to whom acknowledgement is made.

### *Units*

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to metric units:

long tons  $\times 1.0161$  = tonnes  
short tons  $\times 0.9072$  = tonnes  
pounds  $\times 0.4536$  = kilograms  
troy ounces  $\times 0.0311$  = kilograms  
cubic feet  $\times 0.0283$  = cubic metres  
1 barrels of crude petroleum  $\times 0.1364$  = tonne of crude petroleum  
1 flask mercury = 34.7 kilograms

### *Symbols*

### Note(s)

- (1) This table includes production of refractory bauxite
- (2) In addition to the countries listed, some bauxite continues to be produced in Mexico but it is all used as construction aggregates and figures are not reported.

- (a) For non-metallurgical uses
- (b) No adjustment has been made for moisture content
- (c) Data for Alabama only
- (d) Years ended 30 September of that stated
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated
- (g) Years ended 30 June of that stated
- (h) Conservative BGS estimate based on reported exports

### Note(s)

- (1) Where possible figures in this table show the alumina equivalent (Al<sub>2</sub>O<sub>3</sub>) of total hydrate produced, whether or not calcined.
- (2) The figures in this table represent alumina produced from bauxite. Alumina-rich materials can also be derived from salt slags formed during the production of secondary aluminium.

### Note(s)

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important.
  - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process.
  - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties.
  - (4) In addition to the countries listed, Vietnam may produce bentonite and Algeria, France, Iran and Japan may produce fuller's earth.
- (a) Sales
  - (b) Smectite
  - (c) Sold or used by producers
  - (d) Years ended 31 March following that stated
  - (e) Years ended 20 March following that stated
  - (f) Years ended 30 June of that stated
  - (g) Including attapulgite and sepiolite

## Production of beryl

tonnes (metric)

Country	2017	2018	2019	2020	2021
Madagascar (a)	* 16	* 16	* 16	* 16	* 16
Mozambique	53	416	45	80	330
Uganda	—	24	15	186	* 180
Zambia	3	5	6	* 6	* 6
USA (b)	3 760	4 130	* 4 000	* 4 130	* 4 250
China	* 1 200	* 1 200	* 1 800	* 1 800	* 1 800

### Note(s)

- (a) Includes ornamental and industrial products
- (b) Includes bertrandite ore, calculated as equivalent to beryl containing 11% beryllium oxide

## Mine production of bismuth

tonnes (metal content)

Country	2017	2018	2019	2020	2021

Japan (a)	489	547	527	574	478
Kazakhstan	* 240	* 290	* 7	* 450	* 20
Vietnam	2 743	3 099	917	993	2 067
World total	5 900	6 300	3 700	4 000	4 700

### Note(s)

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported.
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown.
- (3) In addition to the countries listed, the Republic of Korea may produce bismuth but data are confidential.

(a) Metal production

See notes on the following page.

## Production of coal

### Note(s)

- (1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term.
  - (2) Data for coking coal is not always distinguished from other types of bituminous coal. The term "bituminous" in this table may include coking coal where the latter is not separately shown.
  - (3) Where no sub-commodity is shown the figures relate to all ranks of coal.
- (a) Spitzbergen: not including production from mines controlled by Russia  
 (b) Excluding production in Kosovo  
 (c) Including lignite  
 (d) May also include other types of coal  
 (e) Years ended 20 March following that stated  
 (f) Years ended 30 June of that stated  
 (g) Years ended 31 March following that stated  
 (h) Years ended 15 July of that shown  
 (i) Including sub-bituminous

### Note(s)

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered.
- (2) In many countries it is not clear whether cobalt that is known to be present in the extracted ore is subsequently recovered, nor whether the reported figure is contained or recovered cobalt.
- (3) Consequently, the figures in this table may relate either to cobalt recovered or to cobalt contained in ore raised.
- (4) In addition to the countries listed, cobalt is contained within copper ores in Poland but this is not currently recovered.

(a) Metal and/or refined

(b) Years ended 30 June of that stated

### Note(s)

(1) Refined cobalt can be in the form of metal, oxides, carbonates, sulphates and many other compounds. Efforts are made to avoid double-counting but it is not always possible to be certain.

- (a) Some refined cobalt production in China is recorded in Belgium
- (b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere
- (c) Includes metal and cobalt contained in sulphate
- (d) Including oxides
- (e) Carbonate

### Note(s)

(1) Figures relate to both primary and secondary refined copper, whether electrolytic or fire refined. Metal recovered from secondary materials by remelting alone is excluded.

(2) In addition to the countries listed, Albania and Colombia produce refined copper.

(a) Years ended 20 March following that stated

(b) Sales

## Production of diamond

Carats

- (c) Years ended 20 March following that stated

## Production of primary gallium

tonnes (metric)

Country	2017	2018	2019	2020	2021
Russia	* 13	* 13	* 13	* 13	* 13
Ukraine	* 4	* 4	* 8	* 4	* 4
China	319	404	357	* 350	* 350
Japan	3	3	3	3	3
Korea (Rep. of) (a)	* 3	* 3	* 3	* 2	* 2

Note(s)

- (1) Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques. As a consequence, this table may not be complete.
- (2) Lower grade production is often subsequently refined to higher grade material which complicates the collection of data as double counting is a significant risk.
- (3) In addition to the above primary production, there is also believed to be significant production of refined gallium from scrap recycling.

(a) Primary production only

## Production of germanium metal

tonnes (metric)

Country	2017	2018	2019	2020	2021
Russia	* 6	* 6	* 5	* 5	* 5
USA (a)	* 3	* 3	* 3	* 3	* 3
China	79	95	86	* 95	* 95

Note(s)

- (1) Germanium is also believed to be recovered from imported or domestic material in Belgium, Canada, Germany, Japan.

(a) Including production of secondary metal

## Mine production of gold

In addition to 'industrial scale' gold mines around the world, a significant quantity of gold is mined by small scale or artisanal producers, both on a legal and illegal basis. In some countries the quantities involved with artisanal mining can be relatively large. The compilation of reliable data for the quantity produced by artisanal mining in each country is difficult, particularly where the actions are illegal. Artisanal mining can be seasonal, temporary and highly variable, on both geographical and temporal scales.

Where possible, the table attempts to include estimates for artisanal mining of gold in order that the calculated world totals are as complete as possible. However, the difficulties noted above mean that these totals cannot be completely accurate and they are consequently rounded to a greater degree than the individual country figures may suggest is appropriate. This is an attempt to convey the level of uncertainty associated with these total figures.

For clarity, additional comments on specific countries are shown below (there may be other countries where artisanal mining also occurs; these comments are not intended to be exhaustive):-

Benin – artisanal gold mining is known to take place but no reliable estimates are available.

Burkina Faso – official figures include 250 kg for artisanal mining in 2021; 332 kg in 2020; 259 kg in 2019; 306 kg in 2018 and 150 kg in 2017. It is believed the actual artisanal production is likely to be higher.

Cameroon – all gold mining is currently small scale or artisanal. Available estimates vary widely, from as low as 200 kg per year to something in the order of 1500 kg per year.

Central African Republic – artisanal gold mining is known to take place. No reliable estimates are available but it could be in the region of 50-80 kg per year. The figures shown are reported and it is assumed these are artisanal but they may not be fully inclusive in every year.

Colombia – Artisanal and small-scale mining, both legal and illegal, is extensive within Colombia. Although the government is taking steps to improve the licencing of legal artisanal mining and also to crack down on illegal activities, during the last decade it is believed that illegal mining has grown to the extent that it has become more widespread than legal mining. Some illegal mining and trade is thought to be coordinated by organised crime groups. It is possible that illegally mined material is brought into or out of the country without being recorded. It can therefore be assumed that the total mine production of gold significantly exceeds the reported figure, however it has not been possible to make a reliable estimate for this additional material.

Congo – all gold mining is believed to be small scale or artisanal and it is believed there are more than 200 locations where this occurs. A nominal estimate of 150 kg per year is shown in the table.

Costa Rica – all gold mining is currently artisanal. The figures in the table are reported by an official source.

Democratic Republic of Congo – artisanal mining is quite extensive, the figures shown include estimates for artisanal mining ranging from 4000 to 11000 kg per year.

Equatorial Guinea – artisanal gold mining is very likely to be taking place but no accurate information is available. A nominal estimate of 200 kg per year is included in the table but it could be more or less than this.

Ethiopia – small scale and artisanal gold mining is significant, but not all of it is illegal because some artisanal miners operate under a formal license. A proportion of the gold mined from artisanal sources is sold to the national bank but illicit sales to non-licensed buyers remains widespread. National bank purchases of gold from artisanal sources in fiscal year 2017/18 amounted to 823 kg and in 2018/19 to 3 179 kg. Actual artisanal production could be higher.

France (French Guiana) – the table includes an estimate of 5000 kg to 10000 kg per year for artisanal mining which is not included in the official reported figures.

Gabon – attempts to regulate artisanal gold mining are being undertaken with gold from artisanal miners being purchased by a government agency from 2013. The figures in the table include 40 kg for artisanal mining in 2017. Data from 2018 onwards is all artisanal.

Ghana – gold produced by artisanal mining is purchased by a state-owned marketing organisation, but official figures of the quantity vary depending on the source. They are also reported in publications produced by under the Extractive Industry Transparency Initiative (EITI). In the table below the following figures are included for artisanal production: 45 992 kg in 2017; 61 812 kg in 2018; 52,229 kg in 2019; and 36 547 in 2020.

Guinea – the figures in the table include reported figures for artisanal mining. However, actual artisanal production may be higher than those reported because it is difficult to distinguish the material derived from artisanal mining within Guinea from that moved across the border from Mali or other countries.

Ivory Coast – efforts are being made within Ivory Coast to rationalise artisanal mining as part of the EITI process. Reports suggest that it varies considerably from year to year and may range between 1000 kg and 10 000 kg per year. It is thought that the reported figures include an amount for artisanal mining.

Kenya – The reported figures shown are believed to include artisanal mining but in reality, it could be much higher.

Liberia – official figures are believed to include both the industrial mine and artisanal production.

Madagascar – estimates of artisanal mining are in the order of 100 kg to 3000 kg per year.

Mali – the figures include an estimate for artisanal mining of 6000 kg per year, but it is likely the real figure varies more than this from year to year.

Myanmar – the figures shown in the table are reported and are believed to include artisanal mining.

Nigeria – Official reporting of artisanal gold production by the Ministry is low (355 kilograms in 2021). However, imports of gold to other countries from Nigeria are reported to be much larger, which suggests the quantity of production may be higher and the estimates in the table reflect this. The EITI reports plans for formalising the artisanal mining sector and for the support of 10 000 artisanal miners in five regions of the federation.

Panama – artisanal mining is known to occur but no reliable estimates are available. A nominal estimate of 100 kg per year has been included.

Papua New Guinea – official estimates of "alluvial and small scale" mining is approximately 3500 to 4000 kg per year.

Rwanda – it is believed that the reported and estimated figures are actually gold that originated in Nigeria or other countries in the region but is not recorded in those countries.

Senegal – an estimate of between 2000kg and 4000kg has been added to each year for artisanal mining.

South Africa – illegal artisanal mining is known to occur. No information on reliable estimates.

South Sudan – artisanal mining is known to occur, but reliable estimates are difficult to obtain. It has been estimated as approximately 200 kg per year.

Tanzania – Artisanal mining is known to occur, the reported figures are believed to include artisanal mining.

Togo – the reported figures are exports of gold which is transiting through the country. It is believed the majority of this originates in Burkina Faso from artisanal mining but it is not recorded within the production figures for that country. Consequently, it is recorded here for completeness. Some artisanal mining is also believed to occur in Togo.

Venezuela – artisanal mining is believed to be quite extensive and increasing. Estimates of quantities vary widely from less than 1000 kg up to 9000 kg per year. The Central Bank aims to purchase all the artisanal mined gold, however, actual output is believed to be larger than the reported figures and therefore higher estimates have been used.

Vietnam – artisanal mining is believed to be taking place at the site of a former industrial mine. No information is available to indicate likely scale.

### Note(s)

- (1) In several countries substantial amounts of gold produced in small and/or artisanal operations are not recorded in the official statistics.  
Estimates have been added where possible, but these have varying degrees of uncertainty.

(2) In addition to the countries listed, Cambodia, El Salvador, Haiti, Malawi, Pakistan, Paraguay and Portugal may produce gold.

- (a) Metal production
- (b) Years ended 7 July of that stated
- (c) Exports
- (d) Contained in blister copper, refinery muds and electrolytic copper
- (e) Year ended 30 November of the year stated
- (f) Years ended 20 March following that stated
- (g) Years ended 31 March following that stated

### Note(s)

- (1) Some countries produce large quantities of synthetic gypsum. Where possible, this output is excluded from the table.  
(2) In addition to the countries listed, Indonesia and Vietnam may also produce gypsum.

- (a) Including anhydrite
- (b) Sales
- (c) Excluding output from the region east of the River Nistru and the Municipality of Bender
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Years ended 31 March following that stated
- (g) Including selenite
- (h) Years ended 20 March following that stated

### Note(s)

(1) The data in this table include sponge iron and direct reduced iron (DRI), where these have been separately identified.

(a) Includes ferro-manganese

(b) Including sponge iron

## Production of crude steel

### Note(s)

(1) In addition to the countries listed, Bulgaria is believed to produce magnesite.

(a) Chloride produced from solution mining

(b) Officially described as magnesitic dolomite and brucite

(c) Including beneficiated and directly shipped material

(d) Years ended 31 March following that stated

(e) Years ended 20 March following that stated

(f) Magnesium chloride

(g) Years ended 30 June of that stated

## Production of primary magnesium metal

tonnes (metric)

Country	2017	2018	2019	2020	2021
Russia	15 593	15 753	15 336	12 795	15 000

China	904 600	848 079	969 000	858 000	898 000
Israel	23 000	21 100	21 350	18 500	18 200
Korea (Rep. of)	3 000	110	—	—	—
Malaysia	* 30	* —	* —	* —	* —

### Note(s)

(1) In addition, substantial quantities of magnesium compounds are produced by, used and recycled within the process of titanium sponge production. It is believed this relates to the mineral carnallite and/or secondary magnesium chloride.

(2) Magnesium used within the process of titanium sponge production is not marketed as primary magnesium metal and is therefore excluded from this table. Annual quantities are likely to be approximately: Russia 50,000 t, Kazakhstan 10,000 t and Ukraine 8 000 t.

### Note(s)

(1) Several countries are believed to have unrecorded production of mercury from copper electrowinning processes and by recovery from effluents.

(a) BGS estimates based on net exports

(b) From copper solvent extraction and electrowinning processes

## Production of mica

tonnes (metric)

Country	2017	2018	2019	2020	2021

### Note(s)

- (1) Data relate to refined nickel plus the nickel content of ferro-nickel, nickel oxide and nickel salts. It does not include nickel content of nickel hydroxide cake or nickel matte as these are further refined elsewhere.
- (2) In addition to the countries listed, the USA produces some nickel as a refinery by-product.

(a) Years ending 31 March following that stated

### Note(s)

(1) The figures shown in this table include natural gas liquids.

- (a) Including oil from shale and coal
- (b) including natural gas liquids
- (c) From oil shale
- (d) Years ended 31 March following that stated
- (e) Including shares of production from the Neutral Zone
- (f) Years ended 30 June of that stated

World total	257 000 000	230 000 000	226 000 000	222 000 000	222 000 000

### Note(s)

(1) In addition to the countries listed, Indonesia and Nigeria are believed to produce phosphate rock.

(a) Years ended 30 June of that stated

(b) Including lime phosphates

(c) Including beneficiated and directly shipped material

(d) Exports

(e) Including phosphate dust

(f) Years ended 31 March following that stated

(g) Years ended 20 March following that stated

## Mine production of platinum group metals

kilograms (metal content)

World total	454 000	469 000	461 000	431 000	472 000

### Note(s)

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated.
- (2) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table.
- (3) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals.

- (a) Sales from mine production and stocks
- (b) Years ending 7 July of that stated

## Production of potash

Australia (c)	16 003	17 754	19 737	15 761	15 970

### Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent.
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods.
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to estimate the quantities of contained oxides.
- (4) Where possible, data are shown against the country where the mineral is mined.

(a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays

(b) Years ending 31 March following that stated

(c) Years ending 30 June of that stated

## Production of rhenium

### Note(s)

- (1) This table does not include production of refined salt.
- (2) Salt is known to be produced in many countries for which statistics are not available.

- (a) Sea salt
- (b) Sales
- (c) Years ended 30 June of that stated
- (d) Years ended 7 July of that stated
- (e) Lake salt
- (f) Exports
- (g) Including salt in brine
- (h) Sold or used by producers
- (i) Years ended 20 March following that stated
- (j) Seasons beginning in November and ending in May of the year stated.
- (k) Years ended 31 March following that stated

## Production of refined selenium

tonnes (metric)

Country	2017	2018	2019	2020	2021
Armenia	* 20	* 20	* 20	* 20	* 20
Belgium	* 200	* 200	* 200	* 200	* 200

Sillimanite (c)	81 638	69 033	13 236	11 110	* 11 900
Nepal					
Kyanite (d)	2	0	1	0	* 0

Note(s)

(1) A number of other countries produce sillimanite minerals but details of output are not reported.

(2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Brazil, Germany and Hungary.

(3) Production capacity for synthetic mullite also exists in China, India, Japan, the USA and the United Kingdom but output is believed to be zero.

(a) May include other sillimanite minerals

(b) Including related minerals

(c) Years ended 31 March following that stated

(d) Years ending 15 July of that stated Production of

Ta content	1 400	1 700	1 300	1 500	1 500

### Note(s)

- (1) Niobium and tantalum minerals are also believed to be produced in Namibia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates, except where noted.
- (3) Tantalum is also recovered from tin slags and this is believed to have accounted for approximately 20% of raw material.
- (4) The figures in this table include artisanal mining, where data are available.

- (a) Years ended 7 July of that stated
- (b) Years ended 30th June of that stated
- (c) Exports

## Production of refined tellurium

World total	336 000	325 000	317 000	292 000	257 000

### Note(s)

(1) The figures in this table include artisanal mining, where data are available.

(a) Years ended 30 June of that stated

(b) Exports

(c) Recoverable

(d) Years ended 31 March following that stated

(e) Estimate based on reported exports

## Smelter production of tin

tonnes (metric)

Country	2017	2018	2019	2020	2021

Rutile (wt of concs)	700 000	700 000	600 000	600 000	600 000
All forms (TiO <sub>2</sub> content)	6 300 000	6 500 000	6 700 000	6 400 000	6 800 000

### Note(s)

- (1) The figures in this table refer to gross tonnage of titanium concentrates.
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan and USA.

- (a) Including natural rutile
- (b) It is believed that the majority of this is processed into slag.
- (c) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (d) Including synthetic rutile
- (e) Years ended 31 March following that stated
- (f) Years ended 30 June of that stated

## Mine production of tungsten

tonnes (metal content)

Country	2017	2018	2019	2020	2021

World total	83 600	81 200	89 900	92 700	100 700

### Note(s)

- (1) In addition to the countries listed, the USA is known to produce tungsten.
- (2) The figures in this table include artisanal mining, where data are available.

(a) Wolframite and scheelite

(b) Years ended 30 June of that stated

(c) Exports

(d) Including tungsten content of tin-tungsten concentrates

(e) Scheelite

## Mine production of uranium

tonnes (metal content)

Country	2017	2018	2019	2020	2021

### Note(s)

(1) In this table the term 'zirconium minerals' is understood to mean zircon, unless otherwise stated.

- (a) Baddeleyite concentrate
- (b) Including caldasite rock containing zircon and baddeleyite
- (c) Years ending 31 March following that stated
- (d) Conservative BGS estimates, based on exports
- (e) Years ended 30 June of that stated

### Note(s)

- (1) So far as possible, these production statistics include construction sand; gravel, pebbles, shingle and flint; crushed stone used for concrete aggregates, roadstone and other construction uses; granules, chippings and powders.
  - (2) Where official sources show more than one series for aggregates the higher series has generally been used in this table.
  - (3) Where marine sands and gravels have been identified, these are included.
  - (4) Information may be incomplete or absent due to reporting methods, confidentiality or lack of available information.
  - (5) Production from many small operations are not officially compiled. The minimum number of employees for which establishments are required to report production varies between different countries and can also vary from year to year.
  - (6) Quantities of sand from sand and gravel operations may be discarded due to low demand. This may or may not be included in the statistics.
- (a) Sales
  - (b) Estimated by official source based on a previous year census and the rate of change observed from a sample of quarries in subsequent years
  - (c) Includes small quantities for other purposes in Northern Ireland
