Nonribosomal peptide synthetases

Zwahlen, Reto Daniel

IMPORTANT NOTE: You are advised to consult the publisher's version (publisher's PDF) if you wish to cite from it. Please check the document version below.

Document Version

Publisher's PDF, also known as Version of record

Publication date:

2018

[Link to publication in University of Groningen/UMCG research database](#)

Citation for published version (APA):

Zwahlen, R. D. (2018). *Nonribosomal peptide synthetases: Engineering, characterization and biotechnological potential*. [Thesis fully internal (DIV), University of Groningen]. University of Groningen.

Copyright

Other than for strictly personal use, it is not permitted to download or to forward/distribute the text or part of it without the consent of the author(s) and/or copyright holder(s), unless the work is under an open content license (like Creative Commons).

The publication may also be distributed here under the terms of Article 25fa of the Dutch Copyright Act, indicated by the "Taverne" license. More information can be found on the University of Groningen website: <https://www.rug.nl/library/open-access/self-archiving-pure/taverne-amendment>.

Take-down policy

If you believe that this document breaches copyright please contact us providing details, and we will remove access to the work immediately and investigate your claim.

Downloaded from the University of Groningen/UMCG research database (Pure): <http://www.rug.nl/research/portal>. For technical reasons the number of authors shown on this cover page is limited to 10 maximum.

List of publications and patents

Haq U.I., **Zwahlen R.D.**, Yang P., van Elsas J.D., The response of *Paraburkholderia terrae* strains to two soil fungi and the potential role of oxalate, *Frontiers in Microbiology*, **2018**, *accepted*

Haq U.I., **Zwahlen R.D.**, Yang P., van Elsas J.D., A signaling molecule or a potential carbon source: the conundrum of oxalic acid in the interactions of *Burkholderia terrae* strains with two soil fungi, PhD thesis: Interactions of *Burkholderia terrae* with soil fungi, ISBN 978-90-367-9045-1, **2016**, pp.153-173

Zwier M.V., Verhulst E.C., **Zwahlen R.D.**, van de Zande L., DNA methylation plays a crucial role during early *Nasonia* development, *Insect Mol Bio*, 21 (1), **2012**, pp. 129-138.

Guzmán-Chávez, F., **Zwahlen, R.D.**, Bovenberg, R.A.L., Driessen, A.J.M. Engineering of the filamentous fungus *Penicillium chrysogenum* as cell factory for natural products, **2018**, *review to be submitted to Frontiers in Microbiology (abstract accepted)*

Zwahlen R.D., Boer R., Müller U.M., Bovenberg R.A.L., Driessen A.J.M., Identification and characterization of Nonribosomal peptide synthetase modules that activate 4-Hydroxyphenylglycine, *submitted to PLOS one*

Zwahlen R.D., Pohl C., Bovenberg R.A.L., Driessen A.J.M., Prokaryotic MbTH like proteins stimulate secondary metabolism in the filamentous fungus *Penicillium chrysogenum*, *submitted to ACS synthetic biology*

Zwahlen R.D., Crismaru C., Polli F., Bunduc C.M, Müller U.M., Boer R., Schouten O., Bovenberg R.A.L., Driessen A.J.M., An engineered two component nonribosomal peptide synthetase (NRPS) producing a novel peptide-like compound in *Penicillium chrysogenum*, *manuscript in preparation*
