DONATION AND PRESERVATION

Strategies to improve quantity and quality of deceased donor kidneys

- 1. The reasons for terminating a donation procedure are often more multidimensional than thought at first. (*This thesis*)
- 2. A not effectuated donation procedure is not a loss of time. (This thesis)
- 3. uDCD donation is a valuable addition to our daily practice when executed under the right circumstances. (*This thesis*)
- 4. Validating trial results in daily practice greatly enhances the potential of hypothermic machine perfusion for deceased donor kidneys. (*This thesis*)
- 5. Graft failure is the most extreme form of functional loss, survival therewith the ultimate gain. (*This thesis*)
- 6. Equally as important as proving the additional value of oxygenated hypothermic machine perfusion, is showing the absence of damage. (*This thesis*)
- Being able to perform a non invasive test drive of a renal graft does not only increase the potential of that sole kidney, but of the entire donor pool. (*This thesis*)
- 8. Een proefschrift maakt geen betere dokter, het traject wel een veelzijdiger mens.
- 9. Bezint eer ge begint... maar soms moet je gewoon beginnen.
- 10. Een goed geplaatste slechte grap doet vaak meer dan het duurste medicijn.
