Open access publishing incentives

UAB researchers enjoy the agreements with some publishers to publish in 5.500 journals free of charge (the UAB pays the cost of the APCs).

This journal list is composed predominantly by Hybrid journals.

WILEY

AIP

Grant agreements and publishers' policies

Before submitting the article, you must check if the publisher policy fulfils the requirements about open access required by your funder.

Open Research Europe

What is ORE?

ORE is an open access publishing platform created and maintained by the European Commission.

It is a service offered to authors with a Horizon 2020 or Horizon Europe agreement.

It works with an open peer review process.

What isn't ORE?

ORE **is not** a journal. But it is indexed in Google Scholar, PubMed, Scopus and other databases

Example: <https://doi.org/10.12688/openreseurope.13104.2>

+

info: <https://open-research-europe.ec.europa.eu>

CRAG and the UAB institutional repository

The screenshot shows the header of the digital deposit system. On the left is the logo for 'dipòsit digital de documents de la UAB' featuring three green cubes with the letters 'D' on them. To the right is the 'UAB' logo with the text 'Universitat Autònoma de Barcelona'. A user profile icon with the name 'martajordan :: logout' is in the top right. Below the header is a green navigation bar with links for 'Search', 'Submit', 'Help', 'Personalize', 'Administration', 'Library Service', 'About DDD', 'Català', 'English', and 'Español'.

Home > Research literature > UAB research groups literature > Research Centres and Groups (research output) > Experimental sciences > CRAG (Centre for Research in Agricultural Genomics)

CRAG (Centre for Research in Agricultural Genomics)

The CRAG is devoted to leading-edge research in the molecular basis of genetic characters of interest in plants and farm animals and in the applications of molecular approaches for breeding of species important for agriculture and food production. Research at CRAG spans from basic science to applied studies in close collaboration with industry.

CRAG Guidelines

Contents

Open access to research publications

- Open access routes
- Creative Commons Licenses
- Publishers' policies
- CRAG guidelines

Open research data

- What is it? Benefits
- FAIR principle
- Good practices
- CRAG guidelines

What is it?

According the European Comission:

- Refers to information, **facts** or **numbers**
- Collected to be **examined** and **considered**
- As a basis for **reasoning**, **discussion** or **calculation**

What data should be open?

According the European Commission:

1. "the **underlying data** (the data needed to validate the results presented in scientific publications), including the associated metadata (i.e. metadata describing the research data deposited), as soon as possible"

2. **any other data** (for instance curated data not directly attributable to a publication, or raw data), including the associated metadata, as specified and within the deadlines laid down in the DMP – that is, according to the individual judgement by each project/grantee"

Regarding this point 2, you can consider at least the kind of data that has specific well-known repositories

Open research data benefits

- **Research transparency**
- Data **sharing** and **reusing**
- **Optimisation** of time, costs and efforts
- **Collaboration** and **discussion**
- **DOI** identification
- **Impact** increase
- Reinforces the **open science**

FAIR principles

Findable:

- ✓ Persistent identifier: DOI (preferably) and/or URI
- ✓ Publication in institutional or subject repositories. Data must be described according to international standards.
- ✓ All data registered in repositories must be indexed and searchable

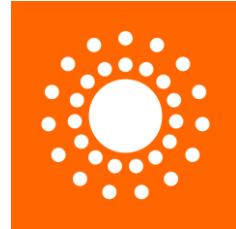

FAIR principles

Accessible:

- ✓ Data and metadata retrievable and harvestable: repositories must work with open and standard communication protocols

FAIR principles

Interoperable:

✓ International standards for metadata description (Dublin Core, DataCite...) must be fulfilled

Examples:

CORA RDR: <https://doi.org/10.34810/data174>

Zenodo: <https://doi.org/10.5281/zenodo.4571628>

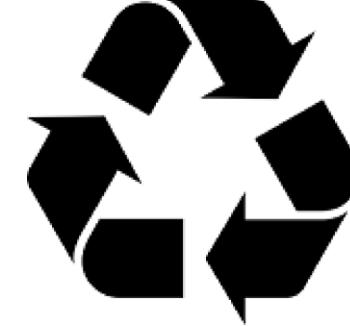

Images:

Dublin Core: <https://dublincore.org/>

DataCite: <https://datacite.org/>

ISO: <https://www.iso.org>

FAIR principles

Reusable:

- ✓ Data described in detail: origin, date of collection, environmental circumstances, observations...
- ✓ Subject area standards for description must be employed. If this is not possible, it is necessary the use of a recognized general standard.
- ✓ Every dataset with a Creative Commons license, or a Public Domain license

Good practices

- ✓ A README file with all the dataset details (contents of every file, units of measurement, how the data were obtained, etc.) UAB template: <https://ddd.uab.cat/record/226740>
- ✓ Recognizable file names (it is better to employ some kind of convention)
- ✓ Files in open formats (txt, csv, pdf, LaTex, jpg, MP3...)
- ✓ Cite all the data employed in your research: third-party data and your own data as well

Good practices

- ✓ Each dataset must have **only one DOI**
- ✓ Indicate, in the research article, the DOI of the dataset

Data Availability Statement

The paper provides all the information needed to replicate the results. All experimental data related to the analysis performed can be downloaded from <https://doi.org/10.5281/zenodo.3820500>.

Image: <https://doi.org/10.1029/2020WR027228>

DATA AVAILABILITY

RNA-seq raw and processed data generated in this study can be found in GEO (GSE198022). All code used for analysis can be found at <https://doi.org/10.34810/data174>.

Image: <https://doi.org/10.1016/j.molp.2022.04.010>

Data availability

The data that support the findings of this study are available from the corresponding author, NSC, upon reasonable request.

Image: <https://doi.org/10.1093/jxb/eraa610>

Datasets vs additional material

- ✓ The additional material complements the article

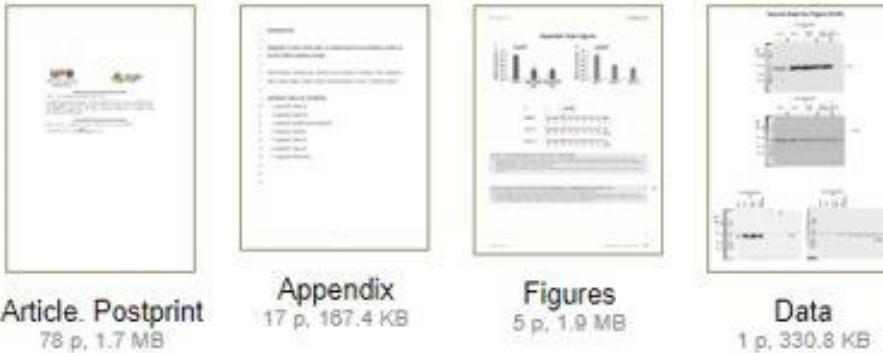

Image: <https://ddd.uab.cat/record/236284>

- ✓ Datasets are independent documents with their own DOI identifier

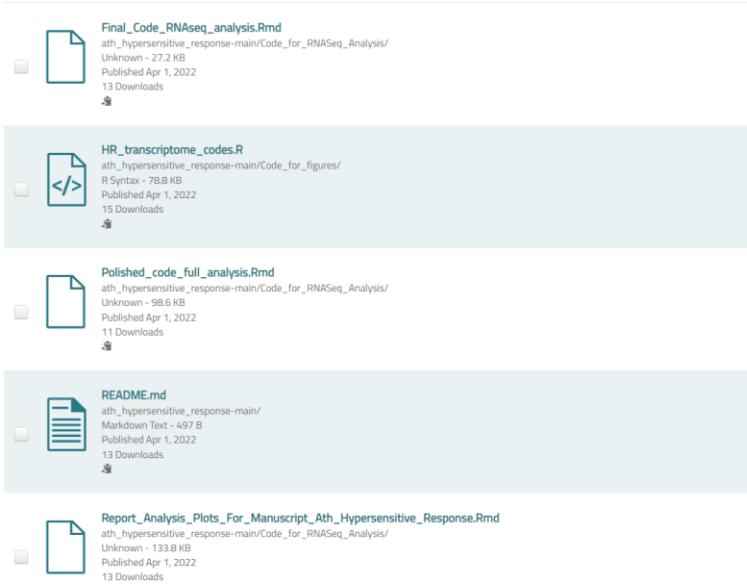

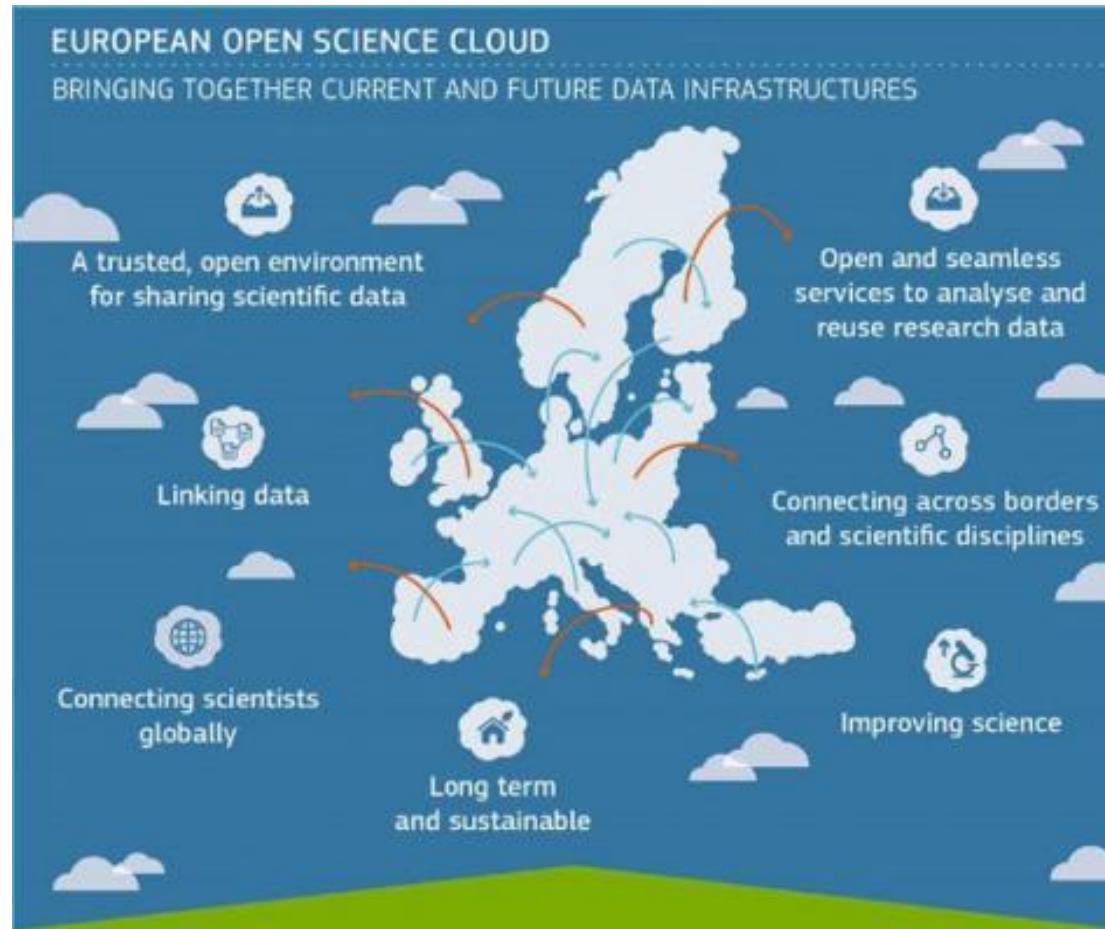

Image: <https://doi.org/10.34810/data174>
