Topics fromsingular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the first course in a sequenceof three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Recommended prerequisites:Mth 435/Mth 535 and Mth 444/Mth 544.

## Mth 635 - Algebraic Topology II (3)

Topics froms ingular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the second course in a sequence of three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Expected preparation: Mth 435/Mth 535 and Mth 444/Mth 544.

## Mth 636 - Algebraic Topology III (3)

Topics froms ingular and simplicial homology and cohomology theories, fundamental group and covering spaces, CW complexes and elements of homotopy theory, algebraic theory of manifolds, introduction to differential topology and vector bundles, applications. This is the third course in a sequenceof three: Mth 634, Mth 635, and Mth 636 which must be taken in sequence. Expected preparation: Mth 435/Mth 535 and Mth 444/Mth 544.

## Mth 637 - Geometric Topology I (3)

Topics fromgeometric and piecewise linear topology, knots and 3-manifolds and gauge theories, geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the first course in a sequence of three: Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

## Mth 638-Geometric Topology II (3)

Topics fromgeometric and piecewise linear topology, knots and 3-manifolds and gauge theories, geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the second course in a sequence of three:

Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

## Mth 639-Geometric Topology III (3)

Topics fromgeometric and piecewise linear topology, knots and 3-manifolds and gauge theories, geometric structures and geometrization of manifolds, applications to differential topology, vector bundles and to mathematical physics. This is the third course in a sequence of three: Mth 637 Mth 638, and Mth 639. Expected preparation: Mth 436/Mth 536.

## Mth 641 - Modern Algebra I (3)

Topics fromgroups, semigroups, rings, fields, algebras, and homological algebra. This is the first course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth $443 / \mathrm{Mth} 543$ or both Mth 442/Mth 542 and Mth 445/Mth 545.

## Mth 642 - Modern Algebra II (3)

Topics fromgroups, semigroups, rings, fields, algebras, and homological algebra. This is the second course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth $443 /$ Mth 543 or both Mth 442/Mth 542 and Mth 445/Mth 545.

## Mth 643 - Modern Algebra III (3)

Topics fromgroups, semigroups, rings, fields, algebras, and homological algebra. This is the third course in a sequence of three: Mth 641, Mth 642, and Mth 643. Expected preparation: Mth $443 / \mathrm{Mth} 543$ or both Mth 442/Mth 542 and Mth 445/Mth 545.

## Mth 651 - Advanced Numerical Analysis I(3)

An advanced study of numericalmethods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonomalizing codes, and treatment of singularities. This is the first course in a sequence of three:Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 311.

## Mth 652 -Advanced Numerical Analysis II (3)

An advanced study of numerical methods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonomalizing codes, and treatment of singularities. This is the second course in a sequence of three: Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 453/Mth 553.

## Mth 653 - Advanced Numerical Analysis III (3)

An advanced study of numerical methods with emphasis on theory, economy of computation, and the solution of pathological problems. Topics will typically be chosen from: evaluation of functions, roots of equations, quadrature, ordinary and partial differential equations, integral equations, eigenvalues, construction of approximating functions, orthonomalizing codes, and treatment of singularities. This is the third course in a sequence of three: Mth 651, Mth 652, and Mth 653 which must be taken in sequence. Expected preparation: Mth 453/Mth 553.

## Mth 661 - Algebraic Graph Theory I (3)

Topics selected fromalgebraic and spectral graph theory, including automorphis mgroups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the first course in a sequence of three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.
Prerequisite: Mth 462 or Mth 562.

## Mth 662 - Algebraic Graph Theory II (3)

Topics selected fromalgebraic and spectral graph theory, including automorphismgroups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the second course in a sequenceof three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.
Prerequisite: Mth 462 or Mth 562.

## Mth 663 - Algebraic Graph Theory III (3)

Topics selected fromalgebraic and spectral graph theory, including automorphis mgroups, transitivity, primitivity, homomorphisms, generalized polygons, designs, projective planes, cores, fractional colorings and cliques, spectral decomposition, eigenvalue interlacing, strongly-regular and distance-regular graphs, line graphs, root systems, graph laplacians, graph polynomials, and graph-theoretic link invariants. This is the third course in a sequence of three: Mth 661, Mth 662, and Mth 663 which must be taken in sequence.

Prerequisite: Mth 462 or Mth 562.
Mth 667 - Stochastic Processes and Probability Theory I (3)

Sets, spaces, and measures. Probability distributions. Randomvariables. Dependence. Limit theorems. Birth and death processes and Markov processes. Mathematical statistics, hypothesis testing, and sequential analysis. Selected applications. This is the first course in a sequence of three: Mth 667, Mth 668, Mth 669 which must be taken in sequence. Expected preparation: Mth 411/Mth 511, Stat 463/Stat 563.

## Mth 668 -Stochastic Processes and Probability Theory II (3)

Sets, spaces, and measures. Probability distributions. Randomvariables. Dependence. Limit theorems. Birth and death processes and Markov processes. Mathematical statistics, hypothesis testing, and sequential analysis. Selected applications. This is the second course in a sequence of three: Mth 667, Mth 668, Mth 669 which must be taken in sequence. Expected preparation: Mth 411/Mth 511, Stat 463/Stat 563.

## Mth 669 - Stochastic Processes and Probability Theory III (3)

Sets, spaces, and measures. Probability distributions. Randomvariables. Dependence. Limit theorems. Birth and death processes and Markov processes. Mathematical statistics, hypothesis testing, and sequential analysis. Selected applications. This is the third course in a sequence of three: Mth 667, Mth 668, Mth 669 which must be taken in sequence. Expected preparation: Mth 411/Mth 511, Stat 463/Stat 563.

## Mth 690 - Introduction to Research in Mathematics Education (3)

Topics in the history of mathematics education including an examination of the current research trends in mathematics education.

## Mth 691 - Curriculumin Mathematics Education (3)

An analysis of curriculumdevelopment and assessment efforts in mathematics education both past and present.

## Mth 692 - Research Methodology and Design (3)

An examination of quantitative and qualitative research methodologies and their applications to the design of research in mathematics education.

## Mth 693 - Research on the Learning of Mathematics (3)

An analysis of the mathematics education research on the learning of mathematics, including topics fromK-16 mathematics.

Mth 694 - Research on the Teaching of Mathematics (3)
An analysis of the research on the teaching of mathematics, including is sues fromlevels K-16.

## Mth 695 - Topics in Research in Mathematics Education (3)

A special topics seminar devoted to exploring particular is sues in more depth.

## Mth 696 - Mathematical Knowledge for Teaching \& Educational Research Grades K-16 (3)

Explore and develop mathematical knowledge for teaching and educational research related to the K-16 grade band. Expected preparation is a bachelors degree in mathematics or equivalent. The goal will be to build on students' core mathematical knowledge in ways that will support themin classroomteaching and in conducting research on the teaching and learning of mathematics. Expected preparation: Equivalent of an undergraduate degree in mathematics. This course may be repeated up to three times for credit.

## Mth 697 - Advanced Mathematics for Teaching \& Educational Research (3)

Develop knowledgeof advanced mathematics for teaching and educational research. Expected preparation is a bachelors degree in mathematics or equivalent. The goal is to build on students' knowledge of advanced mathematics (from pure mathematics course work) in ways that will support themin undergraduateclassroomteaching and in conducting research on the teaching and learning of
undergraduate mathematics. Further, the course supports students in making connections between K-16 mathematics and advanced (graduate level) mathematics. Expected preparation: Equivalent of an undergraduate degreein mathematics. This course may be repeated up to three times for credit.

Mth 801 - Research (1-12)
(Credit to be arranged.)

Mth 802 - Independent Study (1-12)
(Credit to be arranged.)

Mth 804 -Cooperative Education/Internship (1-12)
(Credit to be arranged.)

## Mth 805 - Reading and Conference (1-12)

(Credit to be arranged.)

Mth 806 -Special Problems/Projects (1-12)
(Credit to be arranged.)

Mth 807 -Seminar (1-12)
(Credit to be arranged.)

## Mth 808 - Workshop(0-12)

(Credit to be arranged.)

## Mth 809 - Practicum (1-12)

(Credit to be arranged.)

Mth 810 -SelectedTopics (1-12)
(Credit to be arranged.)

## MuEd - Music Education

## MuEd 045 -Music Education Degree Entry Portfolio (0)

All students applying to the Music Education degree programwill complete and submit a portfolio detailing
interest and abilities needed to become a successfulk-12 Music educator. Will serve as a prerequisite for all MuEd 400 -level courses.

## MuEd 328 - Introduction to Music Education (2)

Overview of the music education profession, with emphasis on the various levels, genres, options, and requirements of the field. Concurrent enrollment in an appropriate practicum(Mus 409) required.

Prerequisite: Mus 111, 112, 113.
MuEd 332 -String Techniques (1)
Study of the stringed instrument family for students in the teachereducation program. Special emphasis will be given to the teaching of these instruments to groups of young and/or inexperienced students.

## MuEd 333-Guitar Techniques (1)

Study of the guitar and the methods and materials used to teach guitar to young and/or inexperienced students. Required for students in the Music Education Program.

## MuEd 334 - Vocal Techniques K-12 (1)

Study of vocal techniques forstudents in the teacher education program. Special emphasis will be given to teaching voice to groups of young and/or inexperienced students fromchildhood through high school.

## MuEd 335 - Percussion Techniques (1)

Study of the percussion instruments of orchestra and band for students in the teacher education program. Special emphasis will be given to the teaching of these instruments to groups of young and/or inexperienced students.

## MuEd 336 - Flute and Double Reeds (1)

Study of how to teach and play flute and double reeds (bassoon and oboe) for students enrolled in the teacher education program.

## MuEd 337-Clarinet and Saxophone (1)

Study of how to teach and play clarinet and saxophone for students enrolled in the teacher education program.

## MuEd 338-High Brass Techniques (1)

Study of how to teach and play trumpet and horn for students enrolled in the teacher education program.

## MuEd 339 - Low Brass Techniques (1)

Study of how to teach and play trombone, euphonium and tuba for students enrolled in the teacher education program.

## MuEd 340-Wind Instrument Techniques (3)

Forstudents in the Choral/General Music Education track. Techniques of brass and woodwind instruments for groups of young students with special emphasis on resources, beginning techniques, and appropriate literature.

## MuEd 341 -Jazz Techniques (1)

Study of techniques used in the teaching of middle and high school ins trumental jazz music. Includes rehearsal techniques, basic arranging, swing concepts, rhythm section concepts, and improvisation.
Prerequisite: ins tructor approval.
MuEd 399 -Special Studies (1-6)
(Credits to be arranged.)

## MuEd 408-Workshop(1-6)

(Credit to be arranged.)

MuEd 409 - Practicum (1-12)
(Credit to be arranged.)

## MuEd 420-Choral Literature and Rehearsal Techniques I (3)

Students will learn the es sentials of rehearsing large choral groups fromgrades 5-8 and requisite materials and techniques for starting and building a middle school choral program. This is the first course in a sequence of two: MuEd 420 and MuEd 421.
Also offered for graduate-level credit as MuEd 520 and may be taken only once for credit. . Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

## MuEd 421 - Choral Literature and Rehearsal Techniques II (3)

Students will learn the es sentials of rehearsing large choral groups fromgrades 9-12 and requisite materials and techniques for starting and building a high school choral program. This is the second coursein a sequence of two: MuEd 420 and MuEd 421.

Also offered for graduate-level credit as MuEd 521 and may be taken only once for credit. . Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

## MuEd 422 - Instrumental Literature and Rehearsal Techniques I (3)

Study of the literature and rehearsal techniques for teaching instrumental music in grades 5-8 primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a middle school instrumental programare the core areas of study.
Also offered for graduate-level credit as MuEd 522 and may be taken only once for credit. . Prerequis ite: MuEd 045, Mus 321, MuEd 328, MuEd 335, MuEd 336, and MuEd 337. .

## MuEd 423 - Instrumental Literature and Rehearsal Techniques II (3)

Study of the literature and rehearsal techniques for teaching in strumental music in grades 9-12, primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and adminis tration of a high school instrumental programare the core areas of study.
Also offered for graduate-level credit as MuEd 523 and may be taken only once for credit. . Prerequisite: MuEd 045, Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337, MuEd 421, and MuEd 521 .

## MuEd 480-Kodály Training: Level I (5)

A two-week intensive introduction to the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, andchoirclas ses within the course.

Also offered for graduate-level credit as MuEd 580 and may be taken only once for credit. . Prerequisite: junior standing.

## MuEd 481 - Kodály Training: Level II (5)

A two-week continuation of the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.

Also offered for graduate-level credit as MuEd 581 and may be taken only once for credit. . Prerequisite: MuEd 480 or MuEd 580 orother Kodály Level 1 coursework.

## MuEd 482 -Kodály Training: Level III (5)

The third course in the Kodály approach andits applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir clas ses with in the course.
Also offered for graduate-level credit as MuEd 582 and may be taken only once for credit. . Prerequisite: MuEd 481 or MuEd 581 orother Kodály Level II coursework.

## MuEd 484 -Music with Children (3)

Methods and materials forteaching general music classes in the elementary school. Designed forthe music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history. Concurrent enrollment in an appropriate practicum(Mus 409) required.
Also offered for graduate-level credit as MuEd 584 and may be taken only once for credit. . Prerequisite: MuEd 045 and MuEd 328.

## MuEd 508-Workshop(1-9)

(Credit to be arranged.)

## MuEd 509-Practicum(1-9)

(Credit to be arranged.)

## MuEd 520-Choral Literature and Rehearsal Techniques I (3)

Students will learn the es sentials of rehearsing large choral groups fromgrades 5-8 and requisite materials and techniques for starting and building a middle school choral program. This is the first course in a sequenceof two: MuEd 520 and MuEd 521.

Also offered for undergraduate-level credit as MuEd 420 and may be taken only once for credit. . Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.

## MuEd 521 -Choral Literature and Rehearsal Techniques II (3)

Students will learn the es sentials of rehearsing large choral groups fromgrades 9-12 and requisite materials and techniques for starting and building a high school choral program. This is the second course in a sequence of two: MuEd 520 and MuEd 521.

Also offered for undergraduate-level credit as MuEd 421 and may be taken only once for credit. . Prerequisite: MuEd 045, Mus 322, MuEd 328, MuEd 334.
MuEd 522 - Instrumental Literature and Rehearsal Techniques I (3)
Study of the literature and rehearsal techniques for teaching instrumental music in grades 5-8 primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a middle school instrumental programare the core areas of study.
Also offered for undergraduate-level credit as MuEd 422 and may be taken only once for credit. . Prerequisite: Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337.

## MuEd 523 - Instrumental Literature and Rehearsal Techniques II (3)

Study of the literature and rehearsal techniques for teaching instrumental music in grades 9-12, primarily. Student will serve as a lab ensemble for each other and will play primary and secondary instruments. Score study, appropriate literature selection and administration of a high school ins trumental programare the core areas of study.
Also offered for undergraduate-level credit as MuEd 423 and may be taken only once for credit. . Prerequisite: Mus 321, MuEd 328, MuEd 335, MuEd 336, MuEd 337, MuEd 422 or MuEd 522.

MuEd 530 - Managing the Music Classroom (2)
Focus on classroommanagement techniques specific to music clas srooms in k-12 schools, both large ensembles and general music courses. Students will research and problem-solve challenges in these unique classes.

## MuEd 580-Kodály Training: Level I (5)

A two-week intensive introduction to the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, and choir classes within the course.

Also offered for undergraduate-levelcredit as MuEd 480 and may be taken only once for credit. . Prerequis ite: juniorstanding.
MuEd 581 - Kodály Training: Level II (5)
A two-week continuation of the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir classes within the course.
Also offered for undergraduate-level credit as MuEd 481 and may be taken only once for credit. . Prerequis ite:

MuEd 480 or MuEd 580 or other Kodály Level 1 coursework.

## MuEd 582 - Kodály Training: Level III (5)

The third course in the Kodály approach and its applications in the field of Music Education. Students will participate in pedagogy, folk music, musicianship, materials, conducting, and choir clas ses within the course.
Also offered for undergraduate-level credit as MuEd 482 and may be taken only once forcredit. . Prerequisite: MuEd 481 or MuEd 581 or other Kodály Level II coursework.

## MuEd 583 -Kodály Training: Level IV (5)

The final course in the Kodály approach and its applications in the field of Music Education. Students will prepare a dvd of their teaching and present their projects/dvds for evaluation as well as participate in pedagogy, folk music, musicianship, materials, conducting, and choir clas ses within the course.

Prerequisite: MuEd 482/582 or other Kodaly Level III coursework.

## MuEd 584 -Music with Children (3)

Methods and materials forteaching general music classes in the elementary school. Designed for the music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history. Concurrent enrollment in an appropriate practicum(Mus 409) required.
Also offered for undergraduate-level credit as MuEd 484 and may be taken only once forcredit. . Prerequisite: upper-division standing in music.

## Mup - Applied Music

## Mup 190 - Applied Music (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor.

## Mup 190A - Applied Music: Trombone (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190B - Applied Music: Bass (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor.

## Mup 190C - Applied Music: Cello (1-4)

Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

## Mup 190D - Applied Music: Percussion (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.
Mup 190E- Applied Music: Farly Instruments (1-4)
Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

## Mup 190F - Applied Music: French Horn (1-4)

Freshman year. Indiv idual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190G- Applied Music: Guitar (1-4)

Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

Mup 190H- Applied Music: Harpsichord/Organ (1-4)
Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

## Mup 190I- Applied Music: Flute (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190J - Applied Music: Jazz Studies (1-4)

Freshman year. Individual instruction in org an, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 198.

## Mup 190K- Applied Music: Clarinet (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequis ite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190L - Applied Music: Bassoon (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190M- Applied Music: Composition (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 185.

## Mup 190N - Applied Music: Non-Western (1-2)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor.
Mup 1900-Applied Music: Oboe (1-4)
Freshman year. Individual instruction in org an, piano, harps ichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor.
Corequisite: Mus 195.

## Mup 190P - Applied Music: Piano (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequis ite: approval of faculty applied music supervisor. Corequisite: Mus 197.

## Mup 190Q-Applied Music: Harp (1-4)

Freshman year. Individual instruction in org an, piano, harpsichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

## Mup 190S - Applied Music: Violin (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

## Mup 190T - Applied Music: Trumpet (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.
Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190U- Applied Music: Trombone (1-4)

Freshman year. Individual instruction in organ, piano, harpsichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190V - Applied Music: Voice (1-4)

Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 197.

## Mup 190W - Applied Music: Tuba (1-4)

Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 190X - Applied Music: Euphonium (1-4)

Freshman year. Individual instruction in organ, piano, harps ichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

Mup 190Y - Applied Music: Viola (1-4)
Freshman year. Individual instruction in org an, piano, harps ichord, voice, guitar, orchestral and band ins truments. Maximum: 12 credits .

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 196.

## Mup 190Z-Applied Music: Saxophone (1-4)

Freshman year. Individual instruction in org an, piano, harps ichord, voice, guitar, orchestral and band instruments. Maximum: 12 credits.

Prerequisite: approval of faculty applied music supervisor. Corequisite: Mus 195.

## Mup 290 -Applied Music (1-4)

Sophomore year. Continuation of Mup 190. Maximum: 12 credits.

Prerequisite: Mup 190 and audition.
Mup 290A - Applied Music: Trombone (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290B - Applied Music: Bass (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition.
Mup 290C - Applied Music: Cello (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 196.
Mup 290D - Applied Music: Percussion (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290E- Applied Music: Early Instruments (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 197.
Mup 290F - Applied Music: French Horn (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

## Mup 290G- Applied Music: Guitar (1-4)

Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 196.
Mup 290H-Applied Music: Harpsichord/Organ (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

## Mup 290I- Applied Music: Flute (1-4)

Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290J - Applied Music: Jazz Studies (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 198.
Mup 290K- Applied Music: Clarinet (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290L - Applied Music: Bassoon (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

## Mup 290M - Applied Music: Composition (1-4)

Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 185.
Mup 2900-Applied Music: Oboe (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290P - Applied Music: Piano (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 197.
Mup 290Q - Applied Music: Harp (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 197.
Mup 290S - Applied Music: Violin (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.
Prerequisite: MuP 190 and audition. Corequisite: Mus 196.
Mup 290T - Applied Music: Trumpet (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

Mup 290U- Applied Music: Trombone (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290V - Applied Music: Voice (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 197.
Mup 290W - Applied Music: Tuba (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290X - Applied Music: Euphonium (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.
Mup 290Y - Applied Music: Viola (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 196.
Mup 290Z-Applied Music: Saxophone (1-4)
Sophomore year. Continuation of MuP 190. Maximum: 12 credits.

Prerequisite: MuP 190 and audition. Corequisite: Mus 195.

## Mup 390 -Applied Music (1-4)

Junior year. Continuation of Mup 290. Maximum: 12 credits.

Prerequisite: Mup 290 and upper division examination.
Mup 390A - Applied Music: Trombone (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.
Mup 390B - Applied Music: Bass (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination.
Mup 390C - Applied Music: Cello (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.

Mup 390D - Applied Music: Percussion (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390E- Applied Music: Early Instruments (1-4) Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper divis ion examination. Corequisite: Mus 397.
Mup 390F - Applied Music: French Horn (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.
Mup 390G- Applied Music: Guitar (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.

Mup 390H- Applied Music: Harpsichord/Organ (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

## Mup 390I- Applied Music: Flute (1-4)

Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390J - Applied Music: Jazz Studies (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 398.
Mup 390K- Applied Music: Clarinet (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

## Mup 390L - Applied Music: Bassoon (1-4)

Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390M- Applied Music: Composition (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination.
Mup 3900 - Applied Music: Oboe (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390P - Applied Music: Piano (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.

Mup 390Q - Applied Music: Harp (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.
Mup 390S - Applied Music: Violin (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.
Mup 390T - Applied Music: Trumpet (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390U- Applied Music: Trombone (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390V - Applied Music: Voice (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 397.

Mup 390W - Applied Music: Tuba (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 390X - Applied Music: Euphonium (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper divis ion examination. Corequisite: Mus 395.
Mup 390Y - Applied Music: Viola (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.

Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 396.
Mup 390Z - Applied Music: Saxophone (1-4)
Junior year. Continuation of MuP 290. Maximum: 12 credits.
Prerequisite: MuP 290 and upper division examination. Corequisite: Mus 395.

Mup 490 - Applied Music (1-4)
Senior year. Continuation of Mup 390. Maximum: 12 credits.

Prerequisite: Mup 390 and audition.
Mup 490A - Applied Music: Trombone (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP390 and audition. Corequisite: Mus 395.
Mup 490B - Applied Music: Bass (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP390 and audition.
Mup 490C - Applied Music: Cello (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 396.
Mup 490D - Applied Music: Percussion (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

Mup 490E- Applied Music: Early Instruments (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 397.
Mup 490F - Applied Music: French Horn (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490G - Applied Music: Guitar (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP390 and audition. Corequisite: Mus 396.
Mup 490H- Applied Music: Harpsichord/Organ (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Mup 490I - Applied Music: Flute (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490J - Applied Music: Jazz Studies (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 398.
Mup 490K - Applied Music: Clarinet (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490L - Applied Music: Bassoon (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490M- Applied Music: Composition (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition.
Mup 4900 - Applied Music: Oboe (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

## Mup 490P - Applied Music: Piano (1-4)

Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 397.
Mup 490Q - Applied Music: Harp (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 397.
Mup 490S - Applied Music: Violin (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 396.
Mup 490T - Applied Music: Trumpet (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490U- Applied Music: Trombone (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490V - Applied Music: Voice (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 397.
Mup 490W - Applied Music: Tuba (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.
Mup 490X - Applied Music: Euphonium (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

## Mup 490Y - Applied Music: Viola (1-4) <br> Senior year. Continuation of MuP 390. Maximum: 12 credits.

Prerequisite: MuP 390 and audition. Corequisite: Mus 396.
Mup 490Z - Applied Music: Saxophone (1-4)
Senior year. Continuation of MuP 390. Maximum: 12 credits.
Prerequisite: MuP 390 and audition. Corequisite: Mus 395.

## Mup 491 - Applied Music in Secondary Area (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Also offered for graduate-level credit as Mup 591 and may be taken only once for credit.

## Mup 491B - Applied Music in Secondary Area: Baritone (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491 C - Applied Music in Secondary Area: Cello/Bass (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491D - Applied Music in Secondary Area: Percussion (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491F - Applied Music in Secondary Area: French Horn (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491G- Applied Music in Secondary Area: Guitar (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include thestudent's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491H- Applied Music in Secondary Area: Harpsichord/Organ (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491I- Applied Music in Secondary Area: Flute (12)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491J - Applied Music in Secondary Area: Jazz Studies (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491K- Applied Music in Secondary Area: Clarinet (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491L - Applied Music in Secondary Area: Bassoon (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 4910 - Applied Music in Secondary Area: Oboe (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491P - Applied Music in Secondary Area: Piano (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491S - Applied Music in Secondary Area: Violin (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491T - Applied Music in Secondary Area: Trumpet (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491U- Applied Music in Secondary Area: Trombone/Tuba (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491V - Applied Music in Secondary Area: Voice (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 491Y - Applied Music in Secondary Area: Viola (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 491Z - Applied Music in Secondary Area: Saxophone (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 590 - Applied Music (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, conducting, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

## Mup 590A - Applied Music: Trombone (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590B - Applied Music: Bass (1-4)

Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

## Mup 590C - Applied Music: Cello/Bass (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.
Mup 590D - Applied Music: Percussion (1-4)
Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.
Mup 590E- Applied Music: Early Instruments (1-4)
Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

## Mup 590F - Applied Music: French Horn (1-4)

Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

## Mup 590G- Applied Music: Guitar (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.
Mup 590H- Applied Music: Harpsichord/Organ (1-4)
Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

## Mup 590I- Applied Music: Flute (1-4)

Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590J - Applied Music: Jazz Studies (1-4)

Individual instruction in org an, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590K- Applied Music: Clarinet (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590L-Applied Music: Bassoon (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590M- Applied Music: Composition (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 5900 - Applied Music: Oboe (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.
Prerequisite: audition.

## Mup 590P - Applied Music: Piano (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590Q - Applied Music: Harp (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590S - Applied Music: Violin (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590T - Applied Music: Trumpet (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590U- Applied Music: Trombone (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.
Mup 590V - Applied Music: Voice (1-4)
Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590W - Applied Music: Tuba (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590X - Applied Music: Euphonium (1-4)

Individual instruction in org an, piano, harp sichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590Y - Applied Music: Viola (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.

## Mup 590Z-Applied Music: Saxophone (1-4)

Individual instruction in organ, piano, harpsichord, voice, guitar, and orchestral and band instruments. Maximum: 12 credits.

Prerequisite: audition.
Mup 591 - Applied Music in Secondary Area (1-2)
Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing Mup 590 audition will be assigned Mup 591.
Also offered for undergraduate-level credit as Mup 491 and may be taken only once for credit.

```
Mup 591A - Applied Music in Secondary Area: Trombone (1-2)
```

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools.

Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 591B - Applied Music in Secondary Area: Baritone (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 591C - Applied Music in Secondary Area: Cello/Bass (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include thestudent's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include thestudent's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591G-Applied Music in Secondary Area: Guitar (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591 H - Applied Music in Secondary Area: Harpsichord/Organ (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591I- Applied Music in Secondary Area: Flute (12)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591J - Applied Music inSecondary Area: Jazz Studies (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 591K- Applied Music in Secondary Area: Clarinet (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591L - Applied Music in Secondary Area: Bassoon(1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 5910 - Applied Music in Secondary Area: Oboe (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include thestudent's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be assigned MuP 591.

## Mup 591P - Applied Music in Secondary Area: Piano (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591S - Applied Music in Secondary Area: Violin (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591T - Applied Music in Secondary Area: Trumpet (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591U- Applied Music in Secondary Area: Trombone/Tuba (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band ins truments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591 V - Applied Music in Secondary Area: Voice (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591 Y - Applied Music in Secondary Area: Viola (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mup 591Z-Applied Music in Secondary Area: Saxophone (1-2)

Private instruction in voice, keyboard, guitar, and orchestral or band instruments, not to include the student's major performance area in order to extend the performance skills of the music specialist in the public schools. Graduate students not passing MuP 590 audition will be as signed MuP 591.

## Mus - Music

## Mus 047 - Final Project (0)

All Bachelor of Arts and Bachelor of Science degree candidates must complete a final project consisting of one of the following: (1) a half recital, (2) a performance project, (3) regular performances on area recitals.

## Mus 056 - Graduate Music History Entrance Exam (0)

The Graduate Entrance Examination in history is a diagnostic test designed to assess entering graduate students' knowledge of music history as presented in traditional undergraduate his tory sequences. Students are expected to have a basic knowledge of genres, composers, compositions, and musical styles from the Middle Ages through the Twentieth Century. The examination will include questions, listening examples and score excerpts from all musical periods. Students who do not pass the exam will be required to take and pass Mus 529 Graduate History Review, before registering for any advanced graduate music his tory courses. The examis given in June and September of each year. Contact theSchool of Music \& Theater for more information about specific times.

## Mus 057 - Graduate Music Theory Entrance Exam (0)

The Graduate Entrance Examination in theory is a diagnostic test designed to as sess entering graduate students' knowledge of music theory as presented in traditional undergraduate theory sequences. Students are expected to have a basic knowledge of aural dictation, analys is and Seventeenth Century voice leading. The examination will include harmonic analysis fromthe Baroque through Romantic periods. Students who do not pass the examwill be required to take and pass Mus 512 Graduate Theory Review, before registering for any advanced graduate music theory courses. The examis given in June and September of each year. Contact the School of Music \& Theater for more information about specific times.

## Mus 101 - Contemporary Music Theory I (4)

Music theory relevant to contemporary musical styles. Explores notation, pitch, rhythm, meter, tonality, intervals, chords, lead sheet notation, and diatonic harmony. Includes basic ear training, sight singing, and rhythmic skills. Requires no previous musical experience. This is the first course in a sequenceof three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.

## Mus 102 - Contemporary Music Theory II (4)

Music theory relevant to contemporary musical styles. Explores harmonic function, roman numeral analysis, 12barblues, non-chord tones, asymmetrical meter, and modes. Includes basic eartraining, sightsinging, and rhythmic skills. This is the second course in a sequence of three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.
Prerequisite: Mus 101 or permission of instructor.

## Mus 103 - Contemporary Music Theory III (4)

Music theory relevant to contemporary musical styles. Explores chromatic harmony, chord extensions, and song forms through analysis, composition, and improvisation. Includes basic ear training, sights singing, and rhythmic skills. This is the third course in a sequence of three: Mus 101, Mus 102, and Mus 103 and must be taken in sequence.
Prerequisite: Mus 102 or permission of instructor.

## Mus 105 - Introduction to Music Theory (3)

Preparatory level of music theory introducing main terms and concepts: music notation, meter, beat, rhythm, intervals, circle of fifth, key signatures, major and minor scales, triads and dominant seventh chord, and their implementation in blues formand popular song. No
previous musical knowledge required. Complements PracticalMusicianship.

## Mus 106 - Aural Skills (3)

Designed to train the student to aurally recognize meters, rhythms, intervals, triads and seventh chords. Students learn to sing melodies on sight as well as develop strategies for composing and harmonizing melodies for instrumental or vocal accompaniment.

## Mus 111 - Music Theory I (3)

Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriateSightSinging/Ear Training course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended formusic majors and minors. This is the first course in a sequence of three: Mus 111, Mus 112, and Mus 113.

## Mus 112 - Music Theory II (3)

Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriateSightSinging/EarTraining course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended for music majors and minors. This is the second course in a sequence of three: Mus 111, Mus 112, and Mus 113.

## Mus 113-Music Theory III (3)

Provides a thorough ground-work in the melodic, harmonic, and rhythmic elements of music with written exercises and analysis based on the styles of Bach, Haydn, Mozart, Beethoven, and other 17th and 18th century composers. Registration in the appropriateSightSinging/EarTraining course is required. An entrance placement examination will be given. Basic Keyboard Skills is recommended formusic majors and minors. This is the third course in a sequence of three: Mus 111, Mus 112, and Mus 113.

## Mus 114-Sight Singing/Ear Training I(1)

Studies to develop the ability to sing notation at sight and to recognize and notate aural patterns. Registration in the
appropriate Music Theory I course is required. This is the first course in a sequenceof three: Mus 114, Mus 115, Mus 116.

## Mus 115-Sight Singing/Ear Training II (1)

Studies to develop the ability to sing notation at sight and to recognize and notate aural patterns. Regis tration in the appropriate Music Theory course is required. This is the second course in a sequence of three: Mus 114, Mus 115, Mus 116.

## Mus 116 -Sight Singing/Ear Training III (1)

Studies to develop the ability to sing not ation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the third course in a sequence of three: Mus 114, Mus 115, Mus 116.

## Mus 129 -DesktopMusic Production (4)

Provides students with the necessary skills and techniques to produceCDquality music using modern music technology. Students will learn to record and edit audio from a variety of sources, processing and effects, MIDI and Podcasting.

## Mus 145 -Music Technology Lab (1)

Introduction to the practical skills of navigating a recording studio, live recording set-up, and amplified music context. Basic music and audio production skills are presented. Some peripheral is sues, including acoustics, software and hardware operation, mixing and archiving, ses sion management are addressed. This is a repeatable, required course in the PSU Sonic Arts and Music Production program.

## Mus 174 - Introduction to Music Technology (3)

A hands-on introduction to the basic concepts, equipment, and software involved in modern music production. Covers introduction to MIDI sequencing, analog and digital audio, and basic studio techniques.

## Mus 187 - Yoga, Relaxation and Flexibility for Musicians (1)

A course for musicians that incorporates gentle stretching, mild postures, breathing and relaxation techniques. Class participants will be guided through activities drawn from the disciplines of yoga, Tai Chi, and general flexibility and
relaxation exercises. There are no prerequisites forthis class. Equipment required: yoga mat and strap. Optional equipment: yoga block.

## Mus 188 - Performance Attendance (0)

The student is expected to attend a minimum of eight live performances approved by the School of Music \& Theater for each termregistered. It is expected that students will register for Performance Attendance concurrently with registration for Applied Music.

## Mus 189 - Repertoire Study (1)

Study and performance of selected repertoire. Av ailable only to students enrolled in large ensemble, chamber mu sic or applied music.

Prerequisite: consent of instructor.

## Mus 191 - Group Lessons for Beginners I: Piano, Guitar or Voice (2)

Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046 concurrently. This is the first course in a sequence of three: Mus 191, Mus 192, and Mus 193.

## Mus 192 - Group Lessons for Beginners II: Piano, Guitar or Voice (2)

Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046 concurrently. This is the second course in a sequence of three: Mus 191, Mus 192, and Mus 193.

Mus 193 - Group Lessons for Beginners III: Piano, Guitar or Voice (2)
Class instruction in instruments or voice. Offerings include piano, guitar, and voice. Music majors in Mus 193 Class Piano should be enrolled in Mus 046 concurrently. This is the third course in a sequence of three: Mus 191, Mus 192, and Mus 193.

## Mus 194-Chamber Music (1)

Instruction in the art of small ensemble performance; the established repertory of string, wind, keyboard, or vocal chamber music. Maximum: 6 credits. Audition may be requested.
Prerequisite: consent of instructor.

Mus 195 - Band (1)
Maximum: 6 credits. Audition may be requested.

## Mus 196-Orchestra (1)

Maximum: 6 credits. Audition may be requested.

## Mus 197 - Chorus (1)

Maximum: 6 credits. Audition may be requested.

## Mus 198 - Jazz Lab Band (1)

Performance of jazz literature in a big bandsetting. Maximum: 6 credits. Audition may be requested.

## Mus 199 -Special Studies (1-4)

(Credit to be arranged.)

## Mus 200-Musical Instruments (4)

Study of the conventional clas sification, his tory, construction, and the use of instruments in classical, folk, and popular music. Instruments are explored in terms of: manner of producing sound, tuning and transposing, technical capabilities, virtuosity, and compatibility with other instruments/vocal parts as demonstrated in the literature. Develops aural recognition of each ins trument.

## Mus 201 - Introduction to Music (4)

Designed for non-majors. Course involves lectures, reading, and listening. Course may emphasize music of different world cultures. Successively the course deals with elements of music and small forms (201), and large forms of music and categories of musical literature (202). This is the first course in a sequence of two: Mus 201 and Mus 202.

## Mus 202 - Introduction to Music (4)

Designed for non-majors. Course involves lectures, reading, and listening. Course may emphasize music of different world cultures. Successively thecourse deals with elements of music and small forms (201), and large forms of music and categories of musical literature (202). This is the second course in a sequence of two: Mus 201 and Mus 202.

Mus 203-Music in the Western World (4)
Designed for music majors and others with the ability to read music. Introduction to the great composers and their compositions within a historical framework.

## Mus 204 - Body Mapping for Musicians (2)

Anatomical information about the body in movement for musicians. Topics include sensory awareness, inclusive awareness, standing and sitting at balance, skeletal anatomy of the arms and legs, the structures and movements of breathing, hearing loss prevention, and performance anxiety.
Prerequisite: At least one year of experience as a singer or instrumentalist.

## Mus 205-Listening I(1)

Online listening survey of the major works within various musicaltraditions, including Western art music, Jazz, American music, and World music. This is the first course in a sequence of two: Mus 205 and Mus 206.

## Mus 206 - Listening II (1)

Online listening survey of the major works within various musicaltraditions, including Western art music, Jazz, American music, and World music. This is the second course in a sequence of two: Mus 205 and Mus 206.

## Mus 211 - Music Theory IV (3)

Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Regis tration in the appropriate Sight-Singing/Ear Training course is required. This is the first course in a sequence of three: Mus 211, Mus 212, and Mus 213.
Prerequisite: Mus 046, Mus 113, and Mus 116.

## Mus 212-Music Theory V (3)

Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Registration in the appropriate Sight-Singing/Ear Training course is required. This is the second course in a sequence of three: Mus 211, Mus 212, and Mus 213.
Prerequisite: Mus 046, Mus 113, and Mus 116.

## Mus 213-Music Theory VI (3)

Continuation of the study of harmony. Introduction to harmonic counterpoint. Composition in small forms in various 18th, 19th, and 20th century idioms. Regis tration in the appropriate Sight-Singing/Ear Training course is
required. This is the third course in a sequence of three: Mus 211, Mus 212, and Mus 213.

Prerequisite: Mus 046, Mus 113, and Mus 116.
Mus 214 -Sight Singing/Ear Training IV (1)
Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the first course in a sequenceof three: Mus 214, Mus 215, and Mus 216.

Prerequisite: Mus 113 and Mus 116.

## Mus 215 -Sight Singing/ Ear Training V (1)

Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the second course in a sequence of three: Mus 214, Mus 215, and Mus 216.

Prerequisite: Mus 113 and Mus 116.

## Mus 216-Sight Singing/Ear Training VI(1)

Continuation of the study of sight-singing and ear training at an advanced level. Ability to sing notation at sight and to recognize and notate aural patterns. Registration in the appropriate Music Theory course is required. This is the third coursein a sequence of three: Mus 214, Mus 215, and Mus 216.

Prerequisite: Mus 113 and Mus 116.
Mus 224 - Wellness for Musicians (2)
Designed to introduce students to a wide range of healthrelated topics including diet, exercise, sleep, meditation, stress management and injury prevention. Lectures, lab activities, and guest speakers will all be utilized. Students will learn how to improve their health and well-being.

## Mus 228 -S ound Design (4)

Up-to-date introduction to the art of sound synthesis and sampling with special emphasis on today's technology and the evolving market place. Comprehensive overview of specific techniques for creating new sounds, capturing and manipulating existing sounds and application.

Mus 231 -Survey of Popular Music Since 1950 (4)
Informs students of musical, his torical and social as pects of American popular music since 1950. Genres explored include rhythmand blues, country and western, rock and roll, punk, heavy metal and hip-hop.

## Mus 232 - Music and Style (4)

Focus on analysis of the inner workings of the nine selected compositions that marked the development of musicalform and overall period style. Study of fugue, character piece, symphony, chamber forms, opera, and musical, and programand absolute music. Each week brings one significantpiece.

## Mus 233 - Music Notation (4)

Provides students with thorough study in the principles of music notation, providing a comprehensive overview of specific techniques forcreating music manuscripts that are not only correct in terms of notation, but legibly written and clearly communicating the composers' intentions.

## Mus 236 - Wind and Percussion Instruments (1)

A study of the wind and percussion instruments of the orchestra and band for students in the teacher education program.

## Mus 240-Composition I (2)

The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the first course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.

Prerequisite: Mus 113 and Mus 116.
Mus 241 - Composition II (2)
The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the second course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.
Prerequisite: Mus 113 and Mus 116.

## Mus 242-Composition III (2)

The course involves the study of 20th century composition techniques. Students will compose chamber works using techniques studied in the class. This is the third course in a sequence of three: Mus 240, Mus 241, and Mus 242 which must be taken in sequence.
Prerequisite: Mus 113 and Mus 116.
Mus 245 - SAMP I: Audio Recording (3)
Thorough study of digital audio recording and the signal chain from theoretical, technical, and practical perspectives. Students will learn the practical skills of an audio technician through live recording of sounds, musical instruments, and human voices. Topics include digital
audio theory; microphone properties, applications, and ideal placements; and tools and techniques used to acquire robustand clear documentation of sound.

## Mus 246 -SAMP II: Studio Techniques (3)

Foundational study of the concepts and techniques used in commercial music production. This class will introduce multi-tack digital audio recording, editing, mixing and signal processing. Topics will include MIDI music making with virtual instrument plug-ins, synthesis and sampling technologies.
Prerequisite: Mus 245.

## Mus 247 -SAMP III: Studio Production (3)

Recording and producing song-length musical products. Utilizing a series of increasingly complexassignments, students will work through the music production process from inception to distribution. The course includes an examination of the commercial music production business.

Prerequisite: Mus 246.

## Mus 261 - History of Rock Music (4)

Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world. Includes othertypes of popular music in the twentieth century. This is the first course in a sequence of two: Mus 261 and Mus 262.

## Mus 262 - History of Rock Music (4)

Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world. Includes othertypes of popular music in the twentieth century. This is the second course in a sequence of two: Mus 261 and Mus 262.

## Mus 271 - Jazz Improvisation I (2)

Introduces the fundamentals of jazz improvis ation. Beginning jazzskills include scales, song forms, melodic patterns, and repertoire development. Ins tructor approval required. This is the first course in a sequence of three: Mus 271, Mus 272, and Mus 273.

## Mus 272-Jazz Improvisation II (2)

Introduces the fundamentals of jazz improvisation. Beginning jazzs kills include scales, song forms, melodic patterns, and repertoire development. Ins tructor approval required. This is the second course in a sequence of three: Mus 271, Mus 272, and Mus 273.

## Mus 273 - Jazz Improvisation III (2)

Introduces the fundamentals of jazz improv is ation. Beginning jazzskills include scales, song forms, melodic patterns, and repertoire development. Instructor approval required. This is the third course in a sequence of three: Mus 271, Mus 272, and Mus 273.

## Mus 274 - Introduction to WorldMusic (4)

Provides an insight into the abundanceof trends called World Music. Explains what is considered world music and what is not. With a very broad approach, material samples every corner of the world through representative traditions, performing styles and instruments of different nations.

## Mus 291 - Advanced Class Piano I (2)

Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the first course in a sequence of three: Mus 291, Mus 292, and Mus 293.

## Mus 292 - Advanced Class Piano II (2)

Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the second course in a sequence of three: Mus 291, Mus 292, and Mus 293.

## Mus 293 - Advanced Class PianoIII (2)

Advanced class instruction developing functional piano skills. Activities include performing scales, chords, and progressions in all keys. Students develop harmonization, sight reading, and improvisation skills. They perform simple piano pieces and accompaniments. Assessment by the instructor determines whether students are admitted, or should take basic Class Piano first. This is the third course in a sequence of three: Mus 291, Mus 292, and Mus 293.

## Mus 301U-Survey of Music Literature I: Medieval to Classical Era (4)

For non-majors or majors; the study music history by examining the literature of particular time periods. Mus 301U: Music fromthe Medieval to Classical Era; Mus 302U: Music fromthe Romantic to Modern Era. This is the first course in a sequenceof two: Mus 301U and Mus 302U.

## Mus 302U- Survey of Music Literature II: Romantic to Modern Era (4)

For non-majors or majors; the study music history by examining the literature of particular time periods. Mus 301U: Music fromthe Medieval to Classical Era; Mus 302U: Music fromthe Romantic to Modern Era. This is the second course in a sequence of two: Mus 301U and Mus 302U.

## Mus 304 -Music History: Medieval, Renaissance, and Baroque (4)

Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the first course in a sequence of three: Mus 304, Mus 305, and Mus 306.
Prerequisite: Mus 205 and Mus 206.
Mus 305 -Music History: Classical and Romantic (4)
Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the second course in a sequence of three: Mus 304, Mus 305, and Mus 306.

Prerequisite: Mus 205 and Mus 206.

## Mus 306 -Music History: 20th Century (4)

Intensive analytical study of the history of music in the Medieval, Renaissance, and Baroque Periods (Mus 304), Classical and Romantic Periods (Mus 305) and 20th Century Period (Mus 306). This is the third course in a sequence of three: Mus 304, Mus 305, and Mus 306.
Prerequisite: Mus 205 and Mus 206.
Mus 311 -Formal Analysis (3)
Thorough study of formal analys is, including phrases and periods, variations, two- and three-part song forms, developedternary forms, sonata, rondo, and the concerto.
Prerequisite: Mus 213.

## Mus 312 - Orchestration (3)

Fundamentals of arranging music for instrumental ensembles. Emphas is on basic principles of orchestration and their practicalapplications.
Prerequisite: Mus 213. Counterpoint (3) Intensive study of polyphonic music. Analysis and application in writing contrapuntal exercises using two, three, and four voices. Prerequisites:Mus 213.
Mus 313 - Counterpoint (3)
Intensive study of polyphonic music. Analysis and application in writing contrapuntalexercises using two, three, and four voices.
Prerequisite: Mus 213.

## Mus 320 - Fundamentals of Conducting (2)

The basic principles of conducting as they apply to both instrumental and vocal ensembles. Basic batontechnique and beat patterns. Development of an independent use of the hands. Fundamentals of score reading, both instrumental and vocal.
Prerequisite:Mus 213.

## Mus 321 - Instrumental Conducting (2)

The principles of conducting and training instrumental organizations.
Prerequisite: Mus 320.

## Mus 322 - Choral Conducting (2)

The principles of conducting and training choral organizations.
Prerequisite: Mus 320.

## Mus 344 - Sonic Arts and Music Production Laptop Ensemble (1)

An ensemble of humans, laptops, controllers, and speakers. Ensemble members both compose and performin the ensemble, exploring computer-mediated instrument design, sound synthesis, programming, live interactive performance, and incorporation of vis ual media. Explorations culminate in public performance. May be repeated for up to a maximum of six credits.
Prerequisite: Mus 247 or permis sion of instructor.
Mus 345 -SAMP IV: Acoustics for Musicians (3)
Study of acoustics as it pertains to the performing musician, audio recording technician, and sound artist. Topics include sound wave production, propagation and dissipation; practical use of the decibel scale; spectral qualities of sounds; psychoacoustics; and acoustic treatment considerations for recording studios and performance spaces.

Prerequisite: Mus 247.

## Mus 346 -SAMP V: Music with Visual Media (3)

Examines music and sound designcreated to support the visual image. Topics include film scoring technology and technique, creating and editing dialogue and sound effects, working with animation, interfacing with film editors, and the film and video audio post-production business.
Prerequisite: Mus 247 and Mus 345.
Mus 347 -SAMPVI: Integrated Sound Arts (3)
Incorporates recording techniques, studio production, visual media, sound design, electronic composition, and live interactive performance. Introduces new contexts including iOS, cloud-based music collaboration, DIY electronic instrument building, and live interactive installations using sensor-based technology. Students complete creative projects in collaboration with community partners in the arts or business world.
Prerequisite: Mus 346 or permission of instructor.

## Mus 351 - Accompanying (2)

Theoretical and practical study of the art of accompanying vocal and instrumental solos and performing duo-sonatas. This course is repeatable up to 6 times for credit.

## Mus 355U- Jazz History (4)

Examines the development of jazz from its African and European roots and its origins in New Orleans to its florescence in Chicago and New York. Covers period from about 1900 to 1960. Focuses on important musicians and major musical styles.

## Mus 356U- Jazz And American Culture: How History Shaped Our Music, Then and Now (4)

Examines jazz and its development in the context of American history. Jazz, pre-jazz, contemporary practice, and related sub-genres will be explored through listening and analysis. The cultural context from which the music emerged will be dis sected and discussed. Covers period from the mid-1800s to today.

## Mus 360U- The Guitar: its History and Music (4)

This course is designed to explore the origins of the guitar by examining its history, repertoire and performers. The course will look at all aspects of the guitar's his tory from the related ancient Sumerian stringed ins truments to the modern-day electric guitar.

Mus 361U - History of Rock Music I (1950-1970) (4)
Traces the history and development of a popularmusic style in the United States, Great Britain, and other parts of the world from 1950 to 1970. Includes othertypes of popular music in the twentieth century. This is the first course in a sequence of two: Mus 361 and Mus 362 .

## Mus 362U-History of Rock Music II (1970-Present) (4)

Traces the history and development of a popular music style in the United States, Great Britain, and other parts of the world since 1970. Includes other types of popular music in the twentieth century. This is the second course in a sequence of two: Mus 361 and Mus 362 .

## Mus 363U- The Music of the Beatles (4)

Study of the development of the Beatles' mus ic fromthe late 1950's through the early 1970's. Students will gain a deeperunderstanding of the music through elementary musical analysis of form, harmony, and recording studio techniques. The cultural context from which their music emerged and theirsignificant influence on popular culture will be examined.

## Mus 364U- Modern Music Technology (4)

An in-depth examination of digital technologies used for creating and distributing music, and the social impact of these technologies.

## Mus 365U- Film Music (4)

An aesthetic, his torical, commercial, and technical examination of the role of music and sound design within the art of film.

## Mus 366U- New Orleans: Jazz andCulture in the Storyville Era (4)

Examines the music of New Orleans during the Storyville era of early 20thcentury, and its place in the broader context of American popular music history. Students explore the historical narrative surrounding popular music, culture, and identity, as it emerged in New Orleans.

## Mus 367U- The Music of Nashville: From Honky Tonk to Hip-Hop (4)

Examines the music of Nashville, and its place in the broader context of American popular music his tory. Students will explore the historical narrative surrounding popular music, culture, and identity as it emerged in

Nashville, Music City USA. Students will trace the city's country music origins and later developments to include indie, hip-hop, pop, and soul.

## Mus 368U- Motown: Detroit's History and Music (4)

Examines the music of Motown, and its place in the broader context of American popular music history. Students will explore the historical narrative surrounding popular music, culture, and identity as it emerged in Detroit, the city of Motown's origin.

## Mus 369U- Music and Social Change (4)

Examines the connection between music and social/politicalmovements in the United States, with specialemphasis on the tumultuous social, economic, and political challenges of the 20th Century. Students will identify the music of social change, its relationship with history, diversity, and social justice, and its place in the broader context of American Studies.

Mus 374U- World Music: Africaand the Middle East (4)

Study of the major musical cultures of Africa and the Middle East. Explores social and cultural contexts, instrument types, and structural organization of the music. Emphasis on listening. This is the first course in a sequence of two, Mus 374U: Africa and Mus 375U: Asia.

## Mus 375U- World Music: Asia (4)

Study of the major musical cultures of Asia, examined through its unique regions. Explores social and cultural contexts, instrument types, and structural organization of the music. Emphas is on listening. This is the second course in a sequence of two, Mus 374U: Africa and the Middle East, and Mus 375U: Asia.

## Mus 376U-American Musical Traditions (4)

Examines the diversity of musical traditions found in American history and culture. Included are African American, Anglo- American, Hispanic, and NativeAmerican musical cultures, in the are as of folk, popular, and classical music genres.

## Mus 377U- World Music: Latin America and the Caribbean (4)

The course presents Latin American musical genres and forms: bolero, bossa nova, choro, rumba, salsa, samba,
tango, Latin pop. Against the backdrop of each country's historical circumstances, music and social dancing are used as an entry point to understanding political events, cultural trends, and a makeup of Latino cultural identities.

## Mus 381 - Music for Elementary Teachers (4)

Musical skills and concepts for the elementary classroom teacher. Integration projects focus on deeper learning through musical experiences.

## Mus 389 - Repertoire Study (1)

Study and performance of selected repertoire. Available only to students enrolled in large ensemble, chamber music or applied music.

Prerequisite: consent of instructor.

## Mus 394-Chamber Music (1)

Instruction in the art of small ensemble performance; the established repertory of string, wind, keyboard, or vocal chamber music. Maximum: 6 credits.
Prerequisite: consent of instructor.
Mus 395 - Band (1)
Maximum: 6 credits. Audition may be requested.

## Mus 396-Orchestra(1)

Maximum: 6 credits. Audition may be requested.

## Mus 397 - Chorus (1)

Maximum: 6 credits. Audition may be requested.

Mus 398 - Jazz Lab Band (1)
Performance of jazz literature in a big band setting. Maximum: 6 credits. Audition may be requested.

## Mus 399 - Special Studies (1-6)

(Credit to be arranged.)

## Mus 401 - Research (1-6)

(Credit to be arranged.) Consent of instructor.

Mus 402 - Independent Study (1-12)
(Credit to be arranged.)

## Mus 404 -Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Mus 405 -Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Mus 406 -Special Projects (1-12)

(Credit to be arranged.)

## Mus 407-Seminar (1-6)

(Credit to be arranged.) Consent of instructor. Recent topics have included Style Analysis; Style Criticism; Music History;Music in the Elementary School; Seminar in Composition.

Mus 408 - Workshop(0-6)
(Credit to be arranged.)

## Mus 409-Practicum(1-12)

(Credit to be arranged.)

## Mus 410 -Selected Topics (1-6)

(Credit to be arranged.)

## Mus 421 -Analysis of Contemporary Music (3)

Thorough study of compositional techniques and structural devices used in contemporary art music. Topics include formal, harmonic, and rhythmic as pects of the music. Impres sionism, serialism, set theory, indeterminacy and minimalis $m$ are addressed. The focus is on post-tonal music.
Also offered for graduate-level credit as Mus 521 and may be taken only once forcredit. .Prerequisite: Mus 211, Mus 212, Mus 213.

## Mus 422 -Analytical Techniques (3)

Study of the formal structure of musical compositions of various styles with the purpose of discovering the sources of unity, variety, order, and expres sion present in them.
Prerequisite: Mus 311.

## Mus $\mathbf{4 2 4}$ - Ins trumental Jazz Arranging I(2)

In-depth study and application of the fundamentals of composing and arranging fors mall to large jazz ensembles. Subjects included are his tory, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and MIDI applications. Instructor approval required. This is the first course in a sequence of three: Mus 424, Mus 425, and Mus 426.
Also offered for graduate-level credit as Mus 524 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Mus $\mathbf{4 2 5}$ - Instrumental Jazz Arranging II (2)

In-depth study and application of the fundamentals of composing and arranging for s mall to large jazz ensembles. Subjects included are history, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and MIDI applications. Instructor approval required. This is the second course in a sequence of three: Mus 424, Mus 425, and Mus 426.

Also offered for graduate-level credit as Mus 525 and may be taken only once for credit. . Cross-Listed as: Upperdivision standing.

## Mus 426 - Instrumental Jazz Arranging III (2)

In-depth study and application of the fundamentals of composing and arranging for s mall to large jazz ensembles. Subjects included are history, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and MIDI applications. Instructor approval required. This is the third course in a sequence of three: Mus 424, Mus 425 , and Mus 426.

Also offered for graduate-level credit as Mus 526 and may be taken only once for credit. .Prerequisite: Upperdivision standing.

## Mus 427 - Opera Workshop (1)

A workshop in preparing and performing operatic literature for advanced singers.
Also offered for graduate-level credit as Mus 527 and may be taken only once for credit. .Prerequisite: consent of instructor through audition.

## Mus 428 - Opera Production (1-2)

Annual production of a major operatic work. Designed for singers, orchestral instrumentalists, and technical support staff in the areas of costuming, set design, and otherareas.

Casting for production is by audition during winter quarter. This course may be repeated credit.
Also offered for graduate-level credit as Mus 528.
Mus 430 -Song Literature (3)
Study of the solo literature for voice through analysis of scores and recordings and live performances. Historical perspectives fromElizabethan song to 20th-century art songs. Also offere for graduate-level credit as Mus 530 and may be taken only once for credit.
Prerequisite: Mus 304, Mus 305, Mus 306.
Mus 431 - Chamber Music Literature (3)
Historical survey of the music associated with the chamber music repertoire from 1600-1950. Emphasis on analysis of scores and recordings.
Also offered for graduate-level credit as Mus 531 and may be taken only once for credit. .Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 432 - Band Wind Literature (3)

A study of literature for ensembles of wind and wind/percussion instruments fromabout 1600 to the present. Historical pers pective will be gained through reading, style-analysis, and listening. Attention will be given to the practical application of band literature in elementary and secondary teaching situations.
Also offered for graduate-level credit as Mus 532 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 433 - Orchestral Literature (3)

A historicalsurvey of the music associated with the symphony orchestra from the development of each orchestral instrument to the present day. Intensive study of those works of great significance is achieved through score study and analysis of several interpretations through recordings. Attention will be given to the practical application of orchestral literature in elementary and secondary teaching situations.
Also offered for graduate-level credit as Mus 533 and may be taken only once forcredit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 434 - Choral Literature I (3)

The objective of this course is to develop an understanding of the depth and breadth of choral music written fromthe Middle Ages to the Clas sical era. The course will examine representative literature fromthese eras, and will help each student to establis h more thorough knowledge of the repertoire, as they work towards diverse and innovative programming in their eventual choral conducting careers.

Also offered for graduate-level credit as Mus 534 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 435-Choral Literature II (3)

The objective of this course is to develop an understanding of the depth andbreadth of choral music written fromthe Romantic Period to the Present Day. The course will examine representative literature fromthese eras, and will help each student to establish a more thorough knowledge of the repertoire, as they work towards diverse and innovative programming in their eventual choral conducting careers.
Also offered for graduate-level credit as Mus 535 and may be taken only once for credit. Prerequisite: Upperdivision standing.

## Mus 436 - Opera Literature (3)

An intensive study of the development of opera in western music, from the works of Monteverdi in the early 17 th century to the important operas of this century.
Also offered for graduate-level credit as Mus 536 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 437 - Keyboard Literature I (3)

A study of Baroque and Clas sical literature for keyboard instruments. In addition to providing an overview of the historical development of keyboard music, specific works from the repertoire of each period, including traditional western as well as non-traditional and non-western works, will be selected for in-depth study. Intended primarily for piano majors. This is the first course in a sequence of two: Mus 437 and Mus 438.
Also offered for graduate-level credit as Mus 537 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 438 - Keyboard Literature II (3)

A study of Romantic and Twentieth-Twenty First Century literature for piano. In addition to providing an overview of the his torical development of keyboard music, specific works from the repertoire of each period, including traditional western as well as non-traditional and nonwestern works, will be selected for in-depth study. Intended primarily for piano majors. This is the second course in a sequence of two: Mus 437 and Mus 438.
Also offered for graduate-level credit as Mus 538 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 439 - Instrumental Literature (3)

An intensive study of the development of literature for various individual or groups of instruments (e.g., flute, clarinet, oboe, bassoon, s axophone, trumpet, horn,
trombone, tuba, violin, viola, cello, bass, percussion, brass, woodwinds, strings). The course may be listed with the specific instrument in the title.
Also offered for graduate-level credit as Mus 539 and may be taken only once for credit. .Prerequisite:Mus 304, Mus 305, Mus 306.

## Mus 445 -Business of Music (3)

Comprehensive examination of performance and production as professions for mus icians of all genres. Areas of focus include employment strategies, professional affiliations, music career expectations, entertainment industry and management. Topics includebranding, marketing, accounting, taxes, distribution and labels, rights and royalties, business relationships, and professional organizations.
Also offered for graduate-level credit as Mus 545 and may be taken only once forcredit. Prerequis ite: upper-division standing.

## Mus $\mathbf{4 5 0}$ - Collaborative Piano Literature Strings (3)

Introduction to the instruments from the string family through in-depth study of the instruments themselves and standard duo repertoire.

Also offered for graduate-level credit as Mus 550 and may be taken only once forcredit. Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 451 - Collaborative Piano Literature Winds and Brass (3)

Introduction to the instruments fromthe woodwind and brass family through in-depth study of the instruments themselves and standardduo repertoire.
Also offered for graduate-level credit as Mus 551 and may be taken only once forcredit. Prerequisite: Mus 304, Mus 305, and Mus 306.

## Mus 452 - Advanced Keyboard Techniques (3)

This course is designed to provide pianists with skills needed to function successfully in many different profes sionalenvironments. Many of these skills were previously common among pianists such as transposition, harmonization, and figured bassreading butfell out of favor over time. Other advanced skills were born out of today's professional requirements such as playing froma chord chart, using electronic instruments, andextended keyboard techniques.
Also offered for graduate-level credit as Mus 552 and may be taken only once forcredit.

## Mus 470 - Topics in Music History (2)

Examines a selected theme in music history to be drawn from specific composers, performers, genres, styles, works, geographical locations, or time periods. Topics will be
contextualized to address broader issues of race, ethnicity, gender, cultural significance, ownership, transmission, technology, and globalization. Specific topics vary by term. Course may be taken more than once with permission of instructor.
Also offered for graduate-level credit as Mus 570. Prerequisite: Mus 306.
Mus 471 - Advanced Jazz Improvisation I (2)
Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminished harmonies, inside-outside playing, synthetic scales, and free improvis ation. Instructor approval required. This is the first course in a sequence of three: Mus 471, Mus 472, and Mus 473.
Also offered for graduate-level credit as Mus 571 and may be taken only once for credit. . Prerequisite:Mus 271,Mus 272, and Mus 273.

## Mus 472 - Advanced Jazz Improvisation II (2)

Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminis hed harmonies, inside-outside playing, synthetic scales, and free improvisation. Instructor approval required. This is the second course in a sequence of three: Mus 471, Mus 472, and Mus 473.

Also offered for graduate-level credit as Mus 572 and may be taken only once for credit. . Prerequisite: Mus 271, Mus 272, and Mus 273.

## Mus 473 - Advanced Jazz Improvisation III (2)

Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminis hed harmonies, inside-outside playing, synthetic scales, and free improvisation. Instructor approval required. This is the third course in a sequence of three: Mus 471 , Mus 472, and Mus 473.
Also offered for graduate-level credit as Mus 573 and may be taken only once for credit. . Prerequisite: Mus 271, Mus 272, and Mus 273.
Mus 474-Midi Applications (2)
Study of the fundamentals of MIDI and computer music programs. Includes work on synthesizers, sequencing, and notation software. This is the first course in a sequence of two: Mus 474 and Mus 475.
Also offered for graduate-level credit as Mus 574 and may be taken only once for credit. . Prerequisite: consent of instructor.

## Mus 476 - Computer Music Composition (3)

Introduces concepts, applications, and projects in sound synthesis, sampling, and digital signal processing. Students learn to create real time compositions using a graphical programming environment and studio pieces using various soundediting applications.

Prerequisite: Mus 242, Mus 247, or permission of instructor.

## Mus 481 -Pedagogy (3)

Methods, materials, curriculum, and philosophical bases for teaching in a private studio and clas sroom with focus on individual and group instruction. This is the first course in a sequence of three: Mus 481, Mus 482, and Mus 483.

Prerequisite: Mus 213, Mus 216, Mus 304, Mus 305, Mus 306.

## Mus 484 -Music with Children (3)

Methods and materials for teaching general music classes in the elementary school. Designed for the music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history. Concurrent enrollment in an appropriate practicum(Mus 409) required.
Also offered for graduate-level credit as Mus 584 and may be taken only once for credit. Prerequisite: upper division standing in music.

## Mus 485 -Diction for Singers: Italian (2)

Designed for singers and other musicians interested in classical vocal literature in Italian, this course presents the principles of lyric diction and provides practice in the skills needed to sing in Italian correctly, idiomatically, and expres sively. This is the first course in a sequence of three: Mus 485, Mus 486, and Mus 487.

Also offered for graduate-level credit as Mus 585 and may be taken only onceforcredit. .Prerequisite: Upperdivision standing.

## Mus 486 -Diction for Singers: German (2)

Designed for singers and other musicians interested in classical vocal literature in German, this course presents the principles of lyric diction and provides practice in the skills needed to sing in German correctly, idiomatically, and expressively. This is the second course in a sequence of three: Mus 485, Mus 486, and Mus 487.
Also offered for graduate-level credit as Mus 586 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Mus 487 -Diction for Singers: French (2)

Designed for singers and other musicians interested in classical vocal literature in French, this course presents the principles of lyric diction and provides practice in the skills needed to sing in French correctly, idiomatically, and expressively. This is the third course in a sequence of three: Mus 485, Mus 486, and Mus 487.

Also offered for graduate-level credit as Mus 587 and may be taken only once for credit. . Prerequisite: Upperdivision standing.
Mus 490 - Fundamentals of Acting for Singers (3)
Acting training tailored to singers pursuing careers in performance. Methods are Stanislavski-based, combined with Meisner techniques, and Reichean breath work. The class will involve some lecture, but will primarily focus on storytelling, character development, and other performance techniques taught in an experiential fashion.

Also offered for graduate-level credit as Mus 590 and may be taken only once for credit. Prerequisite: Mup 190 and Mup 290.

## Mus 501 - Research (1-9)

(Credit to be arranged.) Consent of ins tructor.

Mus 502 - Independent Study (1-9)
(Credit to be arranged.)

Mus 503 -Thesis (1-9)
Thes is (Credit to be arranged.)

## Mus 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Mus 505 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Mus 506-Graduate Project or Recital (1-4)

Final conducting project or performance recital required for all Master of Music degrees.

## Mus 507 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor. Recent topics have included Style Analysis; Style Criticism; Music History; Music in the Elementary School; Seminar in Composition.

## Mus 508-Workshop(1-6)

(Credit to be arranged.)

## Mus 509-Practicum(1-9)

(Credit to be arranged.)

## Mus 510 -Selected Topics (1-6)

(Credit to be arranged.)

## Mus 511 -Music Research Methods (3)

A systematic study of research techniques and materials in music his tory, literature, and music education. Emphas is on the use of library resources and practical applications of research techniques.
Prerequisite: graduatestanding in music.
Mus 512 -Graduate Theory Review (3)
A course designed for graduate students who need to review theirknowledge of basic theoretical concepts. Can be taken forcredit but will not be applied toward completion of degree requirements.

## Mus 513 -Score Reading (3)

Techniques for reading and studying scores with a goal of performance.

## Mus 514 -Graduate Aural Skills ReviewI (1)

Designed for graduate students who need to review basic aural skills. Sight singing, melodic and harmonic dictation, aural identification, and improvisation are integral elements of this study. Note: graduate review class credits cannotbe applied towards completion of degree requirements.

## Mus 515 -Graduate Aural Skills Review II (1)

Designed for graduate students who need to review basic aural skills. Sight singing, melodic and harmonic dictation, aural identification, and improvisation are integral elements of this study. Note: graduate review class credits cannot be applied towards completion of degree requirements.
Prerequisite: Mus 514.

## Mus 516 -Graduate Aural Skills ReviewIII (1)

Designed for graduate students who need to review basic aural skills. Sight singing, melodic and harmonic dictation, aural identification, and improvisation are integral elements of this study. Note: graduate review class credits cannot be applied towards completion of degree requirements.

Prerequisite: Mus 515.
Mus 520 - Analytical Techniques (3)
Study of analyticaltechniques applied to musical compositions of various styles to discover sources of unity, variety, order, and expression present in them. The application of a variety of analytical approaches will guide discovery of musical materials, harmonic and rhythmic relationships, compositional procedures, and formal structures in music. This course may be repeated for credit.
Prerequisite:Pass Mus 057 or Mus 512.
Mus 521 - Analysis of Contemporary Music (3)
Thorough study of compositional techniques and structural devices used in contemporary art music. Topics include formal, harmonic, and rhythmic aspects of the music. Impressionism, serialism, set theory, indeterminacy and minimalism are addres sed. The focus is on post-tonal music.
Also offered for undergraduate-level credit as Mus 421 and may be taken only once for credit. . Prerequisite: Mus 057 or Mus 512.
Mus 522 - Advanced Orchestral Arranging (3)
Instruction in writing for instruments used in large orchestras, showing basic techniques of scoring for string quartet, wood wind and brass quintet, and percussion ensemble. Practical application through scoring of piano music for various orchestral groups of the nature and capability found in the public schools.

Prerequis ite: successful completion of the department's graduate entrance examination.

## Mus 523 - Advanced Choral Arranging (3)

Study of voice types, text setting, and techniques of writing for various combinations of voices. Practice in arranging melodies for two-, three, and four-part choruses, mixed and unmixed, such as those encountered in the public schools.
Prerequis ite: successful completion of the department's graduate entrance examination.

## Mus 524 - Instrumental Jazz Arranging I (2)

In-depth study and application of the fundamentals of composing and arranging for s mall to large jazz ensembles. Subjects included are his tory, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and MIDI applications. Instructor approval required. This is the first course in a sequenceof three: Mus 524, Mus 525 , and Mus 526.
Also offered for undergraduate-level credit as Mus 424 and may be taken only once for credit. .

## Mus 525 - Instrumental Jazz Arranging II (2)

In-depth study and application of the fundamentals of composing and arranging for s mall to large jazz ensembles. Subjects included are his tory, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and MIDI applications. Instructor approval required. This is the second course in a sequence of three: Mus 524, Mus 525, and Mus 526.
Also offered for undergraduate-level credit as Mus 425 and may be taken only once for credit. .

## Mus 526 - Instrumental Jazz Arranging III (2)

In-depth study and application of the fundamentals of composing and arranging for s mall to large jazz ensembles. Subjects included are his tory, transposition, instruments, forms, harmonic and melodic construction, rhythmsection, voicing, moving harmonization, score and part preparation, vocal arranging techniques, rehearsal techniques, and
MIDI applications. Instructor approval required. This is the third course in a sequence of three: Mus 524, Mus 525, and Mus 526.

Also offered for undergraduate-levelcredit as Mus 426 and may be taken only once for credit. .

## Mus 527 - Opera Workshop (1)

A workshop in preparing and performing operatic literature for advanced singers.
Also offered for undergraduate-level credit as Mus 427 and may be taken only once for credit. . Prerequisite: consent of instructor through audition.

## Mus 528 - Opera Production (1-2)

Annual production of a major operatic work. Designed for singers, orchestral instrumentalists, and technical support staff in the areas of costuming, set design, and other areas. Casting for production is by audition during winter quarter. This course may be repeated for up to 9 credits.
Also offered for undergraduate-levelcredit as Mus 428.

## Mus 529 - Grad History Review (3)

A course designed for graduatestudents who need to review their knowledge of basic historical concepts of music. Can be taken forcredit but will not be applied toward completion of degree requirements.

## Mus 530 -Song Literature (3)

Study of the solo literature for voice through analysis of scores and recordings and live performances. Historical perspectives fromElizabethan song to 20th-century art songs. Also offere for undergraduate-level credit as Mus 430 and may be taken only once for credit.

Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 531 - Chamber Music Literature (3)

Historical survey of the music associated with the chamber music repertoire from 1600-1950. Emphas is on analysis of scores and recordings.
Also offered for undergraduate-level credit as Mus 431 and may be taken only once for credit. . Prerequis ite: Mus 304, Mus 305, Mus 306.

## Mus 532 - Band Wind Literature (3)

A study of literature for ensembles of wind and wind/percussion instruments fromabout 1600 to the present. Historical perspective will be gained through reading, style-analysis, and listening. Attention will be given to the practical application of band literature in elementary and secondary teaching situations.
Also offered for undergraduate-level credit as Mus 432 and may be taken only once for credit. . Prerequis ite: Mus 304, Mus 305, Mus 306.

## Mus 533-Orchestral Literature (3)

A historical survey of the music associated with the symphony orchestra fromthe development of each orches tral ins trument to the present day. Intensive study of those works of great significance is achieved through score study and analysis of several interpretations through recordings. Attention will be given to the practical application of orchestral literature in elementary and secondary teaching situations.

Also offered for undergraduate-level credit as Mus 433 and may be taken only once for credit. . Prerequis ite: Mus 304, Mus 305, Mus 306.

## Mus 534 - Choral Literature I (3)

The objective of this course is to develop an understanding of the depth and breadth of choral music written from the Middle Ages to the Clas sical era. The course will examine representative literature fromthese eras, and will help each student to establish a more thorough knowledge of the repertoire, as they work towards diverse and innovative programming in their eventual choral conducting careers.
Also offered for undergraduate-level credit as Mus 434 and may be taken only once for credit. .

## Mus 535-Choral Literature II (3)

The objective of this course is to develop an understanding of the depth and breadth of choral music written fromthe Romantic Period to the Present Day. The course will examine representative literature fromthese eras, and will help each student to establish a more thorough knowledge of the repertoire, as they work to wards diverse and innovative programming in their eventual choral conducting careers.

Also offered for undergraduate-level credit as Mus 435 and may be taken only once for credit.

## Mus 536 - Opera Literature (3)

An intensive study of the development of opera in western music, from the works of Monteverdi in the early 17th century to the important operas of this century.

Also offered for undergraduate-level credit as Mus 436 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.

## Mus 537 - Keyboard Literature I (3)

A study of Baroque and Classical literature for keyboard instruments. In addition to providing an overview of the historical development of keyboard music, specific works from the repertoire of each period, including traditional western as well as non-traditional and non-western works, will be selected for in-depth study. Intended primarily for piano majors. This is the first course in a sequence of two: Mus 537 and Mus 538.

Also offered for undergraduate-level credit as Mus 437 and may be taken only once for credit. .
Mus 538 - Keyboard Literature II (3)
A study of Romantic and Twentieth-Twenty First Century literature for piano. In addition to providing an overview of the his torical development of keyboard music, specific works from the repertoire of each period, including traditional western as well as non-traditional and nonwestern works, will be selected for in-depth study. Intended primarily for piano majors. This is the second course in a sequenceoftwo: Mus 537 and Mus 538.
Also offered for undergraduate-levelcredit as Mus 438 and may be taken only once for credit. .

## Mus 539 - Instrumental Literature (3)

An intensive study of the development of literature for various individual or groups of instruments (e.g., flute, clarinet, oboe, bassoon, s axo phone, trumpet, horn, trombone, tuba, violin, viola, cello, bas s, percussion, brass, woodwinds, strings). The course may be listed with the specific instrument in the title.
Also offered for undergraduate-levelcredit as Mus 439 and may be taken only once for credit. . Prerequisite: Mus 304, Mus 305, Mus 306.
Mus 540 - Jazz Literature (3)
Study and analysis of the classic Jazz compositions and recordings.

Prerequisite: Mus 355U.
Mus 541 - Advanced Conducting Methods (3)
Study of the concepts of conducting applied to a wide range of mus ic literature. Music of different eras will be
used to analyze and practice the conductor's process. Incorporated into the study of conducting will be rehearsal techniques and relevanthistorical and theoretical concepts, providing an integrated study of the conductor's art. This course is intended for MA/MS in Music graduate students, MM in Conducting graduate students, or senior-level undergraduate students with instructor permis sion.
Prerequisite: graduatestanding in music or permis sion of instructor.

## Mus 542 - Advanced Choral Conducting (3)

Study of the concepts of conducting applied to a wide range of choral music. Music of different eras will be used to analyze and practice the conductor's process.
Incorporated into the study of conducting will be rehearsal techniques and relevanthistorical and theoretical concepts, providing an integ rated study of the conductor's art.
Particular attention given to the creative role of the University, Church, Community, and Public SchoolChoir Director. This course is intended for MM in Conducting graduate students.
Prerequisite: graduate standing in music.

## Mus 543 - Advanced Instrumental Conducting (3)

Study of the concepts of conducting applied to a wide range of instrumental music. Music of different eras will be used to analyze and practice the conductor's process. Incorporated into the study of conducting will be rehears al techniques and relevanthistorical and theoretical concepts, providing an integrated study of the conductor's art. Particular attention given to the creative role of the University, Community, Professional, and Public School Band or Orchestra Conductor. This course is intended for MM in Conducting graduate students.
Prerequisite: graduatestanding in music.

## Mus 545 - Business of Music (3)

Comprehensive examination of performance and production as professions for musicians of all genres. Areas of focus include employment strategies, professional affiliations, music career expectations, entertainment industry and management. Topics include branding, marketing, accounting, taxes, dis tribution and labels, rights and royalties, business relationships, and professional organizations.
Also offered for undergraduate-level credit as Mus 445 and may be taken only once for credit. Prerequisite: upperdivision standing.
Mus 550 - Collaborative Piano Literature Strings (3)
Introduction to the instruments fromthe string family through in-depth study of the instruments themselves and standard duo repertoire.

Also offered for undergraduate-levelcredit as Mus 450 and may be taken only once for credit.

## Mus 551 - Collaborative Piano Literature Winds and Brass (3)

Introduction to the instruments from the woodwind and brass family through in-depth study of the instruments themselves and standard duo repertoire.

Also offered for undergraduate-levelcredit as Mus 451 and may be taken only once for credit.
Mus 552 - Advanced Keyboard Techniques (3)
This course is designed to provide pianists with skills needed to function successfully in many different profes sionalenvironments. Many of these skills were previously common among pianists such as transposition, harmonization, and figured bassreading butfell out of favor over time. Other advanced skills were born out of today's professional requirements such as playing froma chord chart, using electronic ins truments, and extended keyboard techniques.

Also offered for undergraduate-levelcredit as Mus 452 and may be taken only once for credit.
Mus 560 -Music History: The Medieval Period (2)
Intensive, analytical study of the history of music of the Middle Ages and its relationship to contemporary his torical events. This course may be repeated for credit.
Prerequisite: Pass Mus 056 or Mus 529.
Mus 561 -Music History: The Renaissance Period(2)
Intens ive, analytical study of the history of music from 1400 to 1600 and its relationship to contemporary his torical events. This course may be repeated for credit.
Prerequisite: Pas s Mus 056 or Mus 529.

## Mus 562 -Music History: The Baroque Period (2)

Intensive, analytical study of the history of music from 1600 to 1750 and its relationship to contemporary his torical events. This course may be repeated for credit.
Prerequisite: Pass Mus 056 or Mus 529.

## Mus 563 -Music History: The Classical Period (2)

Intensive, analytical study of the history of music from 1750 to 1825 and its relationship to contemporary historicalevents.
Prerequisite: Pas s Mus 056 or Mus 529.
Mus 564 -Music History: The Romantic Period (2)
Intensive, analytical study of the history of music from 1825 to 1900 and its relationship to contemporary his torical events. This course may be repeated for credit.
Prerequisite: Pas s Mus 056 or Mus 529.

Mus 565 - Music History: Early 20th Century (2)
Intensive, analytical study of the history of music from 1900 to 1950 and its relationship to contemporary historical events. This course may be repeated for credit.
Prerequisite: Pass Mus 056 or Mus 529.
Mus 566 - Music History: Music Since 1950 (2)
Intensive, analytical study of the history of music since 1950 and its relationship to contemporary historical events. This course may be repeated for credit.
Prerequisite: Pass Mus 056 or Mus 529.
Mus 567 - Jazz History (2)
Advanced studies in Jazz History. Course involves individual research projects culminating in student class presentations. This course may be repeated for credit.

Prerequis ite: Pass Mus 056 or Mus 529.
Mus 570 - Topics in Music History (2)
Examines a selected theme in music history to be drawn from specific composers, performers, genres, styles, works, geographical locations, or time periods. Topics will be contextualized to address broader issues of race, ethnicity, gender, cultural significance, ownership, transmission, technology, and globalization. Specific topics vary by term. Course may be repeated once with permission of instructor.
Also offered for undergraduate-level credit as Mus 470.
Mus 571 - Advanced Jazz Improvisation I (2)
Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminished harmonies, inside-outside playing, synthetic scales, and free improvisation. Instructor approval required. This is the first course in a sequence of three: Mus 571, Mus 572, and Mus 573.

Also offered for undergraduate-level credit as Mus 471 and may be taken only once for credit. Prerequisite: Mus 271, Mus 272, and Mus 273.

## Mus 572 - Advanced Jazz Improvisation II (2)

Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminished harmonies, inside-outside playing, synthetic scales, and free improvisation. Instructor approval required. This is the second course in a sequence of three: Mus 571, Mus 572, and Mus 573.
Also offered for undergraduate-level credit as Mus 472 and may be taken only once for credit. . Prerequisite: Mus 271, Mus 272, and Mus 273.
Mus 573 - Advanced Jazz Improvisation III (2)
Advanced concepts of jazzimprovis ation. Principles of pentatonics, diminished harmonies, inside-outside playing, synthetic scales, and free improvisation. Instructor
approval required. This is the third course in a sequence of three: Mus 571, Mus 572, and Mus 573.

Also offered for undergraduate-level credit as Mus 473 and may be taken only once for credit. . Prerequisite: Mus 271, Mus 272, and Mus 273.

Mus 574-Midi Applications (2)
Study of the fundamentals of MIDI and computer music programs. Includes work on synthesizers, sequencing, and notation software. This is the first course in a sequence of two: Mus 574 and Mus 575.

Also offered for undergraduate-level credit as Mus 474 and may be taken only once for credit. . Prerequisite: consent of instructor.

## Mus 580 - Body Mapping for Musicians: Anatomy, Physiology, Movement and Sensory Awareness (2)

Provides musicians with anatomical information about the body in movement, which will assist the performersing and sound a musical instrument without pain, tension, or injury. The curriculum will improve facility and expressiveness and once acquired, as sist the student to incorporate Body Mapping techniques into their teaching.

## Mus 581 -Pedagogy (3)

Methods, materials, curriculum, and philosophical bases for teaching in a private studio and clas sroomwith focus on individual and group instruction. This is the first course in a sequence of three: Mus 581, Mus 582, and Mus 583.

Also offered as undergraduate-level credit as Mus 481 and may be taken only once for credit. . Prerequis ite: Mus 213, Mus 216, Mus 304, Mus 305, Mus 306.

## Mus 584 -Music with Children (3)

Methods and materials forteaching general music clas ses in the elementary school. Designed for the music specialist; required of all students who seek a basic teaching certificate in music. It is presupposed that all students have performing and theoretical skills and at least one year of music history. Concurrent enrollment in an appropriate practicum(Mus 409) required.
Also offered for undergraduate-level credit as Mus 484 and may be taken only once for credit. Prerequisite: upper division standing in music.

## Mus 585 -Diction for Singers: Italian (2)

Designed for singers and other musicians interested in classical vocal literature in Italian, this course presents the principles of lyric diction and provides practice in the skills needed to sing in Italian correctly, idiomatically, and expres sively. This is the first course in a sequence of three: Mus 585, Mus 586, and Mus 587.

Also offered for undergraduate-level credit as Mus 485 and may be taken only once for credit. .

## Mus 586 - Diction for Singers: German (2)

Designed for singers and other musicians interested in classical vocal literature in German, this course presents the principles of lyric diction and provides practice in the skills needed to sing in German correctly, idiomatically, and expressively. This is the second course in a sequence of three: Mus 585, Mus 586, and Mus 587.

Also offered for undergraduate-level credit as Mus 486 and may be taken only once for credit. .

## Mus 587 -Diction for Singers: French (2)

Designed for singers and other musicians interested in classical vocal literature in French, this course presents the principles of lyric diction and provides practice in the skills needed tosing in French correctly, idiomatically, and expressively. This is the third course in a sequence of three: Mus 585, Mus 586, and Mus 587.

Also offered for undergraduate-level credit as Mus 487 and may be taken only once for credit. .

## Mus 588 - Advanced Choral Methods (3)

Designed for the experienced teacher. In addition to studies of current methods and trends in choral music teaching, the course also provides a forumfor problemsolving and dealing with special issues and problems in current choral music education.

## Mus 590 - Fundamentals of Acting for Singers (3)

Acting training tailored to singers pursuing careers in performance. Methods are Stanislavski-based, combined with Meisner techniques, and Reichean breath work. The class will involve some lecture, but will primarily focus on storytelling, character development, and other performance techniques taught in an experiential fashion.
Also offered for undergraduate-level credit as Mus 490 and may be taken only once for credit. Prerequisite: Mup 190 and Mup 290.

## Mus 594 - Chamber Music (1)

Instruction in the art of small ensemble performance; the established repertory of string, wind, keyboard, or vocal chamber music. Maximum: 6 credits.
Prerequisite: graduatestanding in music.
Mus 595 - Band (1)
Maximum: 6 credits.
Prerequisite: graduatestanding in music.

## Mus 596 - Orchestra(1)

Maximum: 6 credits.
Prerequisite: graduate standing in music.
Mus 597 - Chorus (1)
Maximum: 6 credits.
Prerequisite: graduatestanding in music.

## Mus 598 -Jazz Lab Band (1)

Performance of jazz literature in a big bandsetting. Maximum: 6 credits.

Prerequisite: graduatestanding in music.

## NAS - Indigenous Nations Studies

## NAS 201 - Introduction to Native American Studies (4)

Introduction to the principal subject matter and interdisciplinary methods of Native American studies. Topics include understanding traditional cultures and languages and their significance for contemporary native peoples; the political and legal status of Native Americans in the United States and at the U.N.; contemporary native communities and tribal governments; Native American literature, art, music, dance, both contemporary and traditional.

## NAS 299 - Special Studies (1-4)

(Credit to be arranged.)

## NAS 301 - Introduction to Native American Languages

 (4)General introduction to the linguistic and cultural background of end angered native languages of North America. Topics include structure of native languages; relationship of language to other aspects of culture such as worldview, social org anization, and story telling; history of language change and current tribal projects to revitalize native languages.

## NAS 306 - Red Power (4)

The Red Power movement arose in reaction to centuries of oppressive federal oversight of American Indian peoples. It comprised an assortment of gras sroots organizations that fought for treaty rights, tribal sovereignty, selfdetermination, cultural preservation, and cultural relevancy in education. This course will examine the Alcatraz occupation and the governmentres ponse.

NAS 334U- Topics in Film Genres and Movements (4)
Study of major aesthetic, cultural, and social movements in film.

## NAS 335U- Topics in Literature and Film (4)

Study of the interplay between the textual and cinematic presentation:how these media have treated specific historical, social, and cultural phenomena, as well as the ways literature and film have inspired and influenced each other in terms of content, form, and audience. This is the same course as Eng 335U and may be repeated for credit with different topics.
Cross-Listed as: Eng 335U.

## NAS 342 - Indigenous Gardens and Food Justice (4)

This course examines impacts of colonization on local/traditional foods and health; ethnobotany; and revitalization practices of Indigenous land, water and food sovereignty. Students partner with Native American communities on site design and implementation of edible/medicinal gardens and participate in restoration and creative place-based projects on public lands.

## NAS 344 - Indigenous Women Leadership (4)

From Sacajawe a to Winona LaDuke, this course identifies the contributions of Indigenous women as keepers of tradition, leaders, teachers, healers, activists and visionaries, drawing upon their voices to understand leadership principles fundamental to Native American and global communities. Social justice, particularly in areas of land and the environment, is emphasized.

## NAS 346 - Contemporary Issues in Indian Country (4)

This course examines issues and challenges in Indian Country today, including economic development, natural resourcemanagement, health, education, identity and assimilation, social and environmental justice, tribal sovereignty and treaty rights, and the revitalization of Native cultures in the 21st Century. Students will develop a deeper awareness of those issues and how tribes and urban Native communities and org anizations are planning, advocating, and taking action locally, nationally, and globally. This course may be repeated for up to 8 credits .

## NAS 348 - Indigenous Practices for Environmental Sustainability (4)

This course examines Traditional Ecological Knowledge and Indigenous methodologies and how they affect/inform environmental sustainability, education and land/water management practices and policies. Students spend time in
natural areas exploring relationship-building, creative place-based projects, and analysis of current is sues facing social/environmental justice in Native American communities.

## NAS 349 - Indigenous Leadership for Sus tainable

 Futures (4)We will explore Indigenous leadership styles, strategies, and skills used by individuals in their communities, including governmental and tribal/indigenous org anizations, nonprofits and informal groups. The course looks at the effects of globalization on human and more-than-human populations and our environment, and offers insights into the role/application of Seventh Generations/sustainability principles and indigenous values and practices to address contemporary social, environmental and economic challenges, including Climate impacts fromcolonizing practices globally.

## NAS 351 - Indigenous Philosophy (4)

Surveys historical and contemporary indigenous philosophical writings on decolonization, epistemology, metaphysics, and ethics. The majority of the texts will be from authors such as BlackElk, Vine Deloria, Jr, and Leslie Marmon Silko, but sources fromindigenous peoples across the globe should also be considered. Possible topics may include indigenous perspectives on sovereignty, properhuman relationships with the land, waters, and animals, communication through storytelling, language, and dance, and gender-sexual identity.

## NAS 392 - Indigenous Ways of Knowing (4)

This course presents a basic world view of Indigenous peoples identifying useful concepts, terms, intellectual frameworks and strategies in their struggles toward liberation and self-determination. Combining feminist, anti-racist theory and tribal critical race theory, this course explores Indigenous philosophy as a means to transforma Eurocentric consciousness.

NAS 404 - Cooperative Education/Internship (1-12)
Prerequisites:NAS 201, and 8 upper-division credits in NAS or courses approved by adviser.

## NAS 405 - Reading and Conference (1-8)

(Credit to be arranged.)

NAS 406 -Special Projects (1-12)
(Credit to be arranged.)

NAS 407-(1-6)

## NAS 410 -Selected Topics (1-4)

(Credit to be arranged.)

## NAS 411 - Nationhood: Tribal Sovereignty, Governance \& Policy (4)

Nationhood examines prevalent theories and strategies for pursuing Indigenous self-determination fromboth inside and outside the s tate-centric globalcapital system. This course looks to distinguish between Indigenous placebased cultures and Western time-oriented heritages by utilizing position and land occupation as an ontological framework for understanding relationships.

Prerequisite: Upper-division standing.

## NAS 417 - Maintenance and Revitalization of Endangered Languages (4)

General introduction to endangered language revitalization, with a focus on native languages of the Pacific Northwest. Topics include history of attempts to eradicate native languages and the effects on those languages and their communities; theoretical basis for revitalization; emerging tribal policies; and relations between linguists and native communities.

## NAS 422 -First Foods of the Pacific Northwest (4)

Using examples from the Pacific NW, this course will investigate the interconnected social, cultural, and political relationships between Indigenous food systems, spirituality, kinship, food sovereignty, and ecology; from subsistence food traditions to government commodity foods to urban Native American food movements. We will contemplate and learn about Traditional Ecological Cultural Knowledge (TECK) and the impact of colonization on Indigenous food systems and landscapes from a place based lens.

Also offered for graduate-level credit as NAS 522 and may be taken only once for credit. Prerequisite: NAS 201 or instructor approval.

## NAS 424 - Cultural Ecology: Indigenous Science and the Natural World (4)

What does "science" mean to you? Indigenous peoples have practiced "science" sincetime immemorial. This applied course will provide the basis for understanding "science" through the perspective of Traditional Ecological and Cultural Knowledge, and how Indigenous teachings guide values and protect First Foods. Traditional ecological and cultural knowledge, Indigenous teachings, values and First Foods will ground and guide students through their course experience which will include a mixture of lecture, discussion, film, group exercises \& field excursions to gain awareness of Indigenous Science.
Prerequisite: NAS 201 or instructor approval.
NAS 426 - Tribal Critical Race Theory (4)
This course involves the discourse on Native American Studies fromthe perception of Indigenous storytellers, artists, and activists whose compelling productions undertake critical examinations of imperialism, history, writing and theory-- focusing on strategies of res istance. These productions will help us challenge myths about Indigenous peoples which replicate and reproduce stereotypes.
Prerequisite: NAS 201 or instructor approval.
NAS 442 - Decolonizing Methodologies: Insurgent Res earch and Indigenous Education (4)
Decolonizing Methodologies will provide students the analytical tools and methods necessary for conducting applied research, as well as exploration of the practical, ethical, and political is sues involved in conducting research with Indigenous communities. This course integrates a post-colonial research utilizing a decolonized lens - encouraging students to engage in community-based research.

Prerequisite: NAS 201 or instructor approval.
NAS 502 - Independent Study (1-12)
(Credit to be arranged.)

NAS 506 -Special Projects (1-12)
(Credit to be arranged.)

## NAS 509-Practicum(1-9)

(Credit to be arranged.)

## NAS 510 -SelectedStudies (1-8)

(Credit to be arranged.)

## NAS 522 - First Foods of the Pacific Northwest (4)

Using examples from the Pacific NW, this course will investigate the interconnected social, cultural, and political relationships between Indigenous food systems, spirituality, kinship, food sovereignty, and ecology; from subsistence food traditions to government commodity foods to urbanNative American food movements. We will contemplate and learn about Traditional Ecological Cultural Knowledge (TECK) and the impact of colonization on Indigenous food systems and landscapes from a place based lens.
Also offered for undergraduate-level credit as NAS 422 and may be taken only once forcredit.

## Norw - Norwegian

## Norw 101 - First-Year Norwegian Term 1 (4)

Beginning Norwegian. Emphasis on communication skills: listening, speaking, reading, writing. This is the first course in a sequence of three: Norw 101, Norw 102, and Norw 103.

## Norw 102 - First-Year Norwegian Term 2 (4)

Beginning Norwegian. Emphasis on communication skills: listening, speaking, reading, writing. This is the second course in a sequence of three: Norw 101, Norw 102, and Norw 103.

## Norw 103 -First-Year Norwegian Term 3 (4)

Beginning Norwegian. Emphasis on communication skills: listening, speaking, reading, writing. This is the third course in a sequence of three: Norw 101, Norw 102, and Norw 103.

## Norw 199 -Special Studies (1-5)

(Credit to be arranged.)

## Norw 201 -Second-Year Norwegian Term 1 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is
the first course in a sequence of three: Norw 201, Norw 202, and Norw 203. Recommended prerequisite: Norw 103.

## Norw 202 -Second-Year Norwegian Term 2 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is the second course in a sequence of three: Norw 201, Norw 202, and Norw 203. Recommended prerequisite: Norw 103.

## Norw 203 -Second-Year Norwegian Term 3 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is the third course in a sequenceof three: Norw 201, Norw 202, and Norw 203. Recommended prerequisite: Norw 103.

Norw 299 -Special Studies (1-5)
(Credit to be arranged.)

Norw 399 -Special Studies (1-8)
(Credit to be arranged.)

## OMSE - Software Engineering

OMSE 500 - Principles of Software Engineering (3)
An introduction to software engineering in industry. This course focuses on understanding the nature of software engineering, the software engineering process, and the problems and solutions manifest in real software development and modification projects. Different models of the software engineering process are compared and contrasted. Current best practices in software engineering and various approaches to software process improvement are presented. Two years of software development experience is required for registration.

OMSE 510 - Special Topics (1-4)
(Credit to be arranged.)

## OMSE 511 - Managing Software Development (3)

Provides the knowledge and skills needed to plan, org anize, lead, and control a software project. Topics include planning and estimating, meas uring and controlling, and leading and directing a software project. Quantitative measures and risk management will be emphasized throughoutthe course. Students will prepare project plans for real or hy pothetical soft ware projects, to include effort, cost, and schedule estimates and risk management plans. Two years of software development experience is required for registration.

OMSE 513 - Professional Communication Skills for Software Engineers (3)
Covers the skills necessary for appropriate professional conduct and effective communication in a professional setting. It includes technical writing, making effective presentations, conducting effective meetings, conflict resolution, teamand decision-making skills, and professional ethics. Students willengage in a project that covers the major topics of the course. Two years of software development experience is required for regis tration.

## OMSE 514 - Computing Foundations (3)

Introduction to the building blocks of a basic computing machine including the central processing unit, data transfer buses, registers, programcounters, various types of memories, and instruction sets. A range of processor architectures and org anizations including pipelining, virtual memory and caching are explored. Also explores the principles of operating systems and how they relate to the underlying hardware structures as well as concurrency, process synchronization, process scheduling, memory management, interrupthandling, and device management. Basic understanding of C or $\mathrm{C}++$ required.

## OMSE 515 -Software Foundations (3)

Introduction to fundamental language constructs including pointers, recursion and abstraction, and the principles of algorithmic analysis and Big-O notation. Progressively explores several foundation data structures and algorithms including linked lists, trees, hashing, and graphs which are illus trated using C, C++ and Java code fragments. Introduces selected topics in statistics and discrete mathematics, in particular, sets, set operations, propositional calculus, first-order predicate calculus and
finite state machines. Registration requires permis sion of the OMSEprogramoffice. Recommended prerequisite: Mth 112.

## OMSE 516 -Software Process Improvement (3)

How to effectively introduce improvements to software engineering processes in theirorganization. Designed to help the student successfully discover and improve software engineering practices in such areas as software requirements, architecture, design, coding, integration and testing. Technical is sues are emphasized but balanced with real-world considerations including org anizational politics, corporate culture, and psychology.
Prerequisite: OMSE500.

## OMSE 517 - Agile Software Development (3)

Designed for graduate level software engineering students who are interested in learning and applying the fundamentals of the Agile software development process in the real world. Explores Agile concepts both in theory and practice. Introduction to the principles and foundations of Agile Development, XP (Extreme Programming) and the SCRUM methodology. Also introduces the students to day-to-day life on an Agile team. Expected preparation: OMSE 500.

## OMSE 521 - Using Metrics and Models to Support Quantitative Decision Making (3)

Provides the knowledge and skills needed to apply quantitative tools based on metrics and models of the software product and development process to make decisions under uncertainty. Topics covered will include measurement concepts, decision-making under uncertainty, and model and metric development for the software development enterprise. Foundation coursework is required for registration.

## OMSE 522 - Modeling and Analysis of Software

 Systems (3)Abstract models are used to formalize specifications of software systems. Formalized reference specifications serve as a basis for the design of software implementations and for validating critical properties of software sy stems. Provides the fundamental mathematical concepts needed to understand abstract models of software and to reason about them. Foundation coursework is required for registration.

## OMSE 525 -Software Quality Analysis (3)

Processes, methods, and techniques for developing quality software, for as sessing software quality, and for
maintaining the quality of software. Tradeoffs between software cost, schedule time, and quality. Integrating quality into the software development process; formal review and inspection methods; principles of testing and test planning; module design for tes tability; maintaining quality while supporting existing software. Two years of software development experience is required for registration.

## OMSE 531 -Software Requirements Engineering (3)

Principles, tools, and techniques for requirements elicitation, specification, and analysis. Focus on understanding the role of requirements in the development process, goals of the requirements phase, es sential difficulties of specifying requirements for real systems, and effective methods, tools, and techniques. Covers techniques for formally modeling and specifying software requirements with hands-on experience. Two years of software development experience is required for registration.

## OMSE 532 -Software Architecture and Domain Analysis (3)

Methods and principles of the architectural design of complex, large-scale software systems to accommodate change and evolution through many product releases or vers ions. Survey of the major architectural styles, their strengths and weaknesses, and architectural trade-offs with respect to systemgoals and desired properties. Study of architectural approach to de velopment of open systems and frameworks based on case studies. Software engineering of domain-specific software architectures for families of systems (e.g.,product lines) including domain analysis, domain modeling, and design of domain-specific software architectures. Relation of software architecture to requirements and its effects on downstreamdesign and software evolution. Students examine domain analysis and the architectural design process and products in the businesscontext including the effect of decisions on cost and schedule. Foundation coursework is required for registration.

## OMSE 533-Software Design Techniques (3)

Covers the principles of software design and a survey of design methods, techniques, and tools. In-depth and handson study of at least one method such as object-oriented design as applied to a realistic industrial problem. Examines the effects of design decisions on the functional and non-functional properties of the software (e.g., easeof understanding, maintainability, and reuse) and how software engineering principles are applied to make appropriate trade-offs. Also examines the design process
and products in context including the effect of design decisions on function, quality, cost, and schedule. Foundation coursework is required for regis tration.

## OMSE 534 -Software Estimating (3)

Software estimating techniques and tools enable the res ponsible software engineering manager to as sess project feasibility, secure adequate budgets, and manage project tasks and schedules. The student learns how to make viable software estimates to consistently inform software project planning, scheduling, and oversight. The full range of software estimating methods and tools are explored.
Prerequisite: OMSE500, OMSE 511.
OMSE 535 -Software Implementation and Testing (3)
Covers the principles of implementing and verifying computer software. Implementation topics include coding style, packaging principles, reuse, testability, and maintainability. Verification topics includestructural (white box) testing and techniques for code verification. Also included will be verification and integration of foreign code; testing techniques and how to apply them; including code-based and specification-based testing; hands-on application of the testing process including test case generation; and test adequacy, test validation, test execution, and automation. Foundation coursework is required for registration.

## OMSE 551 - Strategic Software Engineering (3)

Where traditional software engineering focuses on the development and maintenance of individual systems, strategic software engineering addresses the development of multiple systems over time. Significant gains in productivity, cost, and schedule can re sult from sy stematic improvement of the software development process and systematic reuseof life-cycle products over multiple developments. Covers the principles, methods, and tools for strategic software development including process modeling and improvement, developing programs as families of systems, and systematic approaches to code generation and the reuse of non-code products, including requirements and design.
Prerequisite: All previous OMSEcourses.

## OMSE 555 - Software Engineering PracticumI(3)

The objective of the practicumis to provide hands-on software engineering management and development experience applying the principles, methods, processes and tools learned fromOMSE courses. The practicumis comprised of two parts and org anized as two courses, OMSE 555 and OMSE556 (3 credits each) completed in sequence. The class is grouped into one or more integrated project teams jointly undertaking a coordinated software
engineering problem. The evaluation (grading) process equally weights group and individual performance. Problems undertaken by student teams apply the practices learned in OMSE clas ses across the s oftware engineering process. Projects range fromtechnical evaluations, analysis and specification, through architectural design to prototype development and testing. Every project involves applying best project management, quality assurance and configuration management practices. This is the first course in a sequence of two: OMSE 555 and OMSE556 which must be taken in sequence.

Prerequisite: All core OMSEcourses other than OMSE 555 and OMSE 556, namely, OMSE 500, OMSE 511, OMSE 513, OMSE 525, OMSE 531, OMSE 521, OMSE 532, OMSE 533, OMSE 534, OMSE 535 and OMSE 551.

## OMSE 556 -Software Engineering Practicum II (3)

The objective of the practicumis to provide hands-on software engineering management and development experience applying the principles, methods, processes and tools learned fromOMSE courses. The practicumis comprised of two parts and organized as two courses, OMSE 555 and OMSE556 ( 3 credits each) completed in sequence. The class is grouped into oneor more integrated project teams jointly undertaking a coordinated software engineering problem. The evaluation (grading) process equally weights group and individual performance. Problems undertaken by student teams apply the practices learned in OMSE classes across the software engineering process. Projects range fromtechnical evaluations, analysis and specification, through architectural design to prototype development and testing. Every project involves applying best project management, quality assurance and configuration management practices. This is the second course in a sequence of two: OMSE 555 and OMSE 556 which must be taken in sequence.

Prerequisite: All core OMSEcourses other than OMSE 555 and OMSE 556, namely, OMSE 500, OMSE 511, OMSE 513, OMSE 525, OMSE 531, OMSE 521, OMSE 532, OMSE 533, OMSE 534, OMSE 535 and OMSE 551.

(Credit to be arranged.)

## PA 311U - Introduction to Civic Engagement (4)

This course examines the concept of civic engagement by exploring how relationships are strengthened and communication is nurtured among members of society, and how this contributes to a civic identity that promotes socially conscious thought and action. The course will examine the values, skills and actions that contribute to a sense of civic identity through as signed readings, lectures, discussions, group activities, and self-reflection. A central goal of this course is to help students prepare for a lifetime of responsible citizenship and civic engagement. This course includes a community-based learning project.

## PA 312U - Foundations of Community Leadership (4)

This course explores the role of community leadership in advancing civic engagement, civils ociety, civic capacity, community-building, reasoned debateand otherkey civic virtues in democratic societies. Students will integrate leadership theory with practical observations in the context of the United States' socio-political history and the role of civic engagement in ourevolving social system. The course builds a definition for community leadership that recognizes the close interface between the role of public servants as agents of policy implementation and the role of citizens as active stewards of the public good.

## PA 313U - Fundamentals of Public Service (4)

Exploration of how public serviceinforms the roles of public/nonprofit organizations in social change. Introduction to conceptual public service frameworks and exploration of the historical dimensions, underlying values and external forces that shape contemporary public service. Ways forcommunity members to influence public policy through civic engagement are addressed.

## PA 314U- Students as Leaders (4)

Introduces the concepts of leadership fromtheoretical and practical perspectives. Students will explore their own leadership competencies using the Social Change Model in relation to individuality, group dynamics and community building. Through in-class activities, interviews, and research, students will examine leadership as an individual/group process to create social change.

## PA 315U - Managing People for Change (4)

This course examines today's workforce and the new competencies required to manage people to meet the corresponding modern day challenges. It borrows from contemporary discussions about public sector (government and nonprofit) organizations as well as private sector org anizations. Topics include human capital, workplace politics, intergenerational challenges, and job/wage disparities.
Prerequisite: junior standing.

## PA 316 -Leadership in New Student Programs (3)

Focus on developing an understanding of the transitional needs of students and their families upon entering Portland State University (PSU). Explores the demographics of students and identifies student development theory in relationship to New Student Programs. Key topics include: utilizing the ChangeModel of Leadership Development, teamwork, communication, student development, leadership development, and diversity.

## PA 320U - Introduction to Nonprofit Management (4)

Introduction to the importance of the nonprofit sector in contemporary society andexamination of the sector's contribution to the social, political, and economic economy. Emphasis placed on practical application of nonprofit management theory, helping students gain the knowledge and skills appropriate to taking on nonprofit leadership roles.

## PA 399 -Special Studies (1-4)

(Credit to be arranged.)

## PA 402 - Independent Studies (1-8)

(Credit to be arranged.)

PA 403-(1-9)

## PA 405 - Reading and Conference (1-8)

(Credit to be arranged.)

## PA 406 - Special Projects (1-8)

(Credit to be arranged.) Consent of instructor.

## PA 409 - Practicum (1-12)

(Credit to be arranged.)

## PA 410 - Selected Topics (1-6)

(Credit to be arranged.)

## PA 412 - Civic Engagement: The Role of Governing Institutions (4)

This course develops understanding of how local governments carry out their governance responsibilities and the roles they play within the larger scheme of the American democratic system. The goalis to assess how the structures and processes of local governments affect opportunities for democratic accountability, citizen participation, the development of civic capacity, citizenship and civic leadership.
Prerequisite: PA 311U or PA 312U.

## PA 413 - Civic Engagement: The Role of Individuals (4)

This course provides an overview of the role of the individual in civic engagement processes. Students will develop an understanding of the variety and forms of engagement processes in which individuals participate within local and national governments and public organizations. The course focuses on developing students' ability to critically analyze a variety of civic engagement processes and understand the consequences, limitations, opportunities, and benefits of these various processes. Students will examine whether individuals have equal opportunities to engage in political and socialdecisionmaking structures, and how they serve as change agents to address social injustice.

Prerequisite: PA 311U, PA 312U or PA 313U.

## PA 414-Civic Engagement: The Role of Social Institutions (4)

Develops an understanding of the roles that social institutions (voluntary associations, public interest groups, educational and religious institutions, and nonprofit organizations) play within democratic societies.
Additionally, the course investig ates the literature on social institutions and social capital, including their his torical development, modern forms, social functions, and ways in which they shape individuals' participation in governing processes. Students will examine the relationships among socially sustainable communities, strong social institutions and private interests by analyzing the mechanis ms that generateparticipation and deliberation.

Prerequisite: PA 311U or PA 312U.

## PA 415 -Civic LeadershipIntegrative Seminar (4)

This seminar is devoted to exploring, investigating, discussing, understanding, and synthesizing the theoretical understandings and practical applications of civic leadership. Students will have an opportunity to reflect upon, synthesize, and showcase their knowledge through development of a portfolio that demonstrates their learning about civic leadership.

Prerequisite: One of PA 311U, PA 312U or PA 313U, plus one of PA 412, PA 413 or PA 414.

## PA 417 - Ethical Leadership (4)

Explores potential ethical conflicts faced by leaders in public and community service. The course will provide students with ethical leadership models that will help them to judge the ethical compromises that may put personal, professional, organizational, and public service values in conflict with one another. Coursework will include a review of the theoretical concepts that underpin ethical leadership and will explore their practical application through case studies and the experiences of elected and career public officials who have faced ethical dilemmas in public and community service.
Prerequisite: PA 312U or PA 313U.

## PA 425 - Grantwriting for Nonprofit Organizations (4)

Students will acquire necessary skills to write successful grant proposals for foundations and other private funders. Students will learn how to: develop a project idea, plan a project or program, cultivate and work with prospective funders, develop and write a proposal, and generally learn skills to strengthen the grant-seeking process.

## PA 430 - Recruitment of Volunteers (2)

This course takes a marketing approach to volunteerism. Interactive activities and dis cussion build on applying basic principles of volunteerism; examining different styles
of volunteering; building a recruiting plan; examining marketing for volunteers; and managing recruitment. Assignments are interactive and designed to build applicable skills.
Prerequisite: upper-division standing.

## PA 431 - Training of Volunteers (2)

This course engages students in organizing training and continuing education sessions for volunteers. Topics include: how adults learn, learning styles, building content, meas ureable learning objectives, selecting the best teaching techniques, and evaluation of learning. Assignments are interactive designed to build skills directly applicable to a manager of volunteers program.
Prerequisite: upper-division standing.

## PA 432 - Leadership and Management of Volunteer Programs (2)

The healthy organization aligns support for staff who work with volunteers, makes volunteers an integral part of all work, provides staff development, and rewards staff accomplishments related to work with volunteers. In this course students will gain an understanding of the impact of communication style and leadership on volunteer programs.

Prerequisite: upper-division standing.

## PA 433 - Evaluation and Recognition of Volunteer Programs (2)

Students are exposed to evaluation methods, types, and styles for programs and for individual volunteers. Motivational theories are connected to the effectiveness of different type of recognition. Assignments are interactive and designed to build skills directly applicable to a manager of volunteers program.

Prerequisite: upper-division standing.

## PA 501 - Research (1-9)

(Credit to be arranged.)

## PA 502 - Independent Study (1-9)

(Credit to be arranged.)

## PA 504-Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## PA 505 - Reading and Conference (1-6)

(Credit to be arranged.)

## PA 506 -Special Projects (1-6)

(Credit to be arranged.) Consent of instructor.

## PA 507 -Seminar (0-6)

(Credit to be arranged.)

## PA 508 -Reflective Practice (3)

(Credit to be arranged.)

## PA 509-Organizational Experience (1-6)

Final integrativeexperience required for all M.P.A. and M.P.A.:HA students, who have limited or no adminis trative experience, and for all M.P.H.:HMP students reg ardless of experience. The student completes a field experience with an appropriate agency, culminating in a project report systematically analyzing an administrative problemthat is bothinstructive to the student and of importance to the agency. Students are required to attend an orientation seminar to aid themin planning how the field experience will integrate with their coursework and their career goals, and to cultivate the habit of reflective practice. PA 509 may only be taken after students have earned at least 42 credits in their programof study.

## PA 510 -Selected Topics (0-6)

(Credit to be arranged.)

## PA 511 - Public Administration (3)

The role of administration in a democratic society. The course surveys the field, the development of the profession and practices in public administration, and examines the legal, historical, economic, and political foundations of the A merican governmental and nonprofit traditions.

## PA 512 - Case Analysis (3-6)

This course is designed to provide mid-career students with adminis trative experience an opportunity to develop skills in the areas of reflective practice, adminis trative problemsolving, consulting, and coaching. Students will be required to present a case problemthey developed as the basis of an exercise in adminis trative problemsolving and coaching for their fellow students.
Prerequisite: at least three years of full-time adminis trative or management experience in a public, nonprofit and/or healthcare organization and 42 hours of completed course work toward the degree.

## PA 513 - Administrative Ethics and Values (3)

Explores values, ethics, and morality in public sector administration. It considers such concepts and is sues as the following: personal and professional values and roles; the myth of value neutrality; the public interest; values, ethics, and change; value trade-offs; ethical ambiguities; ethical codes, fiscal ethics, and ethics and adminis trative discretion.

Prerequisite: PA 511.

## PA 514 - Global Leadership and Management (3)

Contemporary g lobal realities require emerging public sector leaders to prepare thems elves by learning adaptable leadership and management concepts and tools. This core course is designed to equip interested students, both from the U.S. and abroad, with professional skills and practical knowledge that will help them "to lead and manage res ponsibly" in a range of global settings.

## PA 515 - Public Works Administration (3)

A general overview of adminis trative practices in public works, including an evaluation of organizational practices, project management, and relationships to political processes. The course will consider actual problems in the administration of public works.

## PA 516 - Current Issues in Public Management (3)

Explores two major strategies for the reform of public organizations: (1) an economic-centered approach that emphasizes private market-place incentives and the meas urement of outcomes and (2) a civic dialogue approach that advocates the useof deliberative processes, reliance on collaboration, and a greater role of nonprofit org anizations in the design and delivery of public services. The purposeof this course is to examine these approaches within the context of traditional models that haveguided the public policy and management role of the bureaucracy in the American system of democratic governance.

## PA 517 - Leadership Development for Public Organizations (3)

Course focuses on two activities: (1) use of as sessment instruments to prepare individual leadership profiles and (2) an examination of various leadership theories with applications to specific leadership situations. The goal of the course is to as sist participants in understanding their own individual leadership styles and capacities and to better appreciate what is required to successfully lead at an individual, team/group, org anizational, and larger community level.

## PA 518 -Leading Public Organizations (3)

Course seeks to develop an understanding of the essential ingredients of leading public organizations, including creating a vision, developing support for the vis ion, and transforming the vision into an organizational legacy. It focuses on the distinctive role res ponsibilities of the leader as an agent of the organization within the larger community setting, thus distinguishing the course from other leadership clas ses that focus on either an individual or org anizational perspective. As part of this larger external focus, participants acquire the knowledge and skills to undertake inter-jurisdictional and strategic planning, conflict management, to work with the media, and to develop and implement collaborative agreements.

## PA 519 - Civic Capacity (3)

Examines the factors that contribute to the capacity of communities to create social agreement and to sustain collective action over time. Provides students with an opportunity to evaluate current research on the factors that contribute to the development of social capital and to apply this research to field-based community building activities.

## PA 520 - Introduction to Nonprofit Management (3)

Introduces students to a wide range of management needs, problems, and is sues of not-for-profit org anizations. It considers suchitems as the following: the executive director as manager; as pects of governance; volunteer/staff relations; personnel administration; budgeting and financial management; fund raising and sources of revenue; long-range planning; and community organization.

## PA 521 -History And Foundations of the Nonprofit Sector (3)

Provides an introduction to thehistory and development of the private, nonprofit sector in the United States. It explores theories and concepts that describe the social, political, legal, and economic meaning of volunteerism, philanthropy, and the nonprofit sector as a sector separate from government and business. It provides a specific focus on the relationship of nonprofit to government in the delivery of public services within the context of a welfare state.

## PA 522 - Governance of Nonprofit Organizations (3)

Addresses the history and functions of boards in the nonprofit sector, including an examination of the roles of boards in governance and leadership; policy and administration; decision-making processes; board-staff
relations; resource development; board composition and recruitment; ethics and liability; and current research on boards and organizational effectiveness.

## PA 523 - Nongovernmental Organizations: Nonprofits on the World Stage (3)

Introduction to the history and development of Nongovernmental Organizations (NGOs) and the roles they play on the world stage. Examines the causes of the growth and significant role of NGOs in creating civil society, as well as the roles of NGOs in fighting oppression, safeguarding theenvironment, building and training workforces and advocating major societal changes.

## PA 524 - Financial Management in Nonprofit Organizations (3)

Designed to provide participants withoutformal accounting or finance training with the conceptual framework and practical tools needed to providestrong fiscal management and fiscal leadership in the nonprofit environment. For students with formal finance and/or accounting background, the course will provide opportunities to compare and contrast fiscal management objectives and functions in nonprofit with those found in for profit and/or governmentalentities. It is structured to illus trate the nonprofit fiscal management cycle: planning, execution, recording, reporting, and monitoring.

## PA 525-Grantwriting for Nonprofit Organizations (3)

The process of grant acquisition, beginning with the formulation of a fundable idea and concluding in an application and its review. Students are expected to identify potential funding sources, initiate inquiries, and develop an application for funds to support a programor study of special interest. The steps in this process are discussed in general terms and in the context of each student's application. The focus is the development of grants fromprivate rather than public funders.

## PA 526 - Fundamentals of Fundraising in Nonprofit Organizations (3)

Creating an environment for successful fund development within a nonprofit organization is a serious undertaking that requires a substantive understanding of, and experience with, development programs and fundraising practices. Course provides the learner with the basic theories, principles, and techniques for fund development.

## PA 527 -New/Emerging Nonprofits: Development and Management (3)

Intended to develop knowledgeable leaders for the nonprofit sector that understand how to establish and manage newly emerging org anizations. Examines a wide range of management and leadership needs, problems and is sues that arise for an org anization in its early years. Explores how an organization develops and emerges and how the traditional tasks of management: supervision, planning, budgeting, fundraising and marketing can be most effectively administered. Recommended prerequisites: PA 520 or PA 521.

## PA 528 -Leadership for the Nonprofit Sector (3)

Examination of the challenges nonprofit leaders face in working across org anizations, jurisdictions, and sectors to address entrenched social problems. This course operates from the as sumption that a collaborative, systems -based approach to leadership is es sential for sustained success. Through this course, students will learn essential leadership concepts and practices to expand their abilities to address and negotiate leadership challenges that arise when stakeholders come together to plan, make decisions, and take action in org anizational, community, and sectorwide settings.

## PA 529 - Nonprofit Field Study in Oaxaca, Mexico (3-6)

An intensive immersion programin Oaxaca, Mexico, offered by the Institute for Nonprofit Management in the Hatfield School of Government. Course includes nonprofit field study and site visits, cultural immers ion homestays, and visits to cultural sites. The program varies fromyear to year in the types of nongovernmental nonprofit organizations the students visit, based in part on the interests of the students who register. Site visits in recent years have included programs for juvenile offenders and gang members, human rights advocacy groups, medical clinics, an AIDS education program, and a coalition of environmental groups. On-site translation is provided so that proficiency in Spanish is not necessary, but Spanish language study is part of the immersion experience.

## PA 530 - Higher Education Policy (3)

Seminar explores critical is sues and opportunities facing today's higher education. Also examines the organization and governance of colleges and universities in the contemporary policy arena. The overarching theme of this course is how interactions and tensions betweenhigher education institutions and policy makers and public influence and shape universities.

## PA 533-Public Policy: Origins and Process (3)

Drawing on the general concept of the policy cycle, this course explores the central actors, processes, and is sues as sociated with all stages of the public policy process. The course considers the interactions among the branches and levels of government, interest groups, nonprofit organizations, and the private sector. Tensions among various forces that affect the development and implementation of policy approaches are considered throughout the course.

## PA 534 - Administrative Law (3)

When policies receive the formal status of laws, they acquire a special significance for the executive and judicial branches. This course examines the process of policy implementation through the use of adminis trative discretion and the rule-making process. Delegation of legis lative power, judicialreview, informal adjudication, and the role of the adminis trative law judge are emphasized. The limits of discretionary authority are explored. Students address the theoretical, practical, and ethical issues in implementation, giving particular attention to the relationship between stated goals and actual outcomes.

## PA 535 - Strategies for Organizing Recovery, Mitigation and Resilience (3)

Application of resilience concepts in the policy and planning context. The course provides tools for using resilience concepts in policy making, policy analysis, and hazards and dis aster planning. Introduces practical tools for analyzing community vulnerabilities and actions to take to improve resilience.
Cross-Listed as: This is the same course andEMCR 535 and may be taken only once for credit.

## PA 536 -Strategic Planning (3)

Provides an overview of the application of planning systems to public sector functions and explores newer "stakeholder" theories of planning, planning models, and the step-by-step process for initiating and engaging in strategic planning processes at various levels of government. Through the useof case studies and hands-on exercises, students are exposed to practical applications of strategic planning approaches and techniques.

## PA 537 - Law \& Public Policy (3)

Law and courts are critical to public policy. The policy process often starts with cases for which no formal policy exists. The seminar examines judges as policymakers and the operation the policy process when courts are involved.

It considers critical is sues in judicial policymaking, examines fields where courts have played important policy roles, contemplates difficulties faced by judges, and helps students develop techniques to analyze judicial policymaking.

## PA 538 - Advocacy and Political Participation by Nonprofit Organizations (3)

Exploration of the role of citizen advocacy and political participation in the United States in the twenty-first century. Investigates the many meanings of the term" civil society," as well as the role of nonprofit and voluntary org anizations in lobbying and advocacy, and the role of citizen movements in shaping local, national and global democracy. Will discuss and analyze specific advocacy campaigns with a focus on strategy.

## PA 539 - National Policy Process (3)

As a seminar in public adminis tration, the National Policy Process is studied on-site in W ashington, D.C. Attention is paid to the actors and the action of policy process, to the institutionalization of that process, and to the adminis trative components of that process. Meetings are arranged with key policy actors in appropriate organizations including the Office of Management and Budget, Congressional staff, lobbyists and think tanks, the General Accounting Office, regulatory boards, and various agencies. A current piece of legislation or set of legis lative initiatives is used as a case study throughout the week.

## PA 540 - Administrative Theory and Behavior (3)

Managing organizational systems to accomplish purposeful outcomes. Attention is given to how formal structures and informal processes influence organizational goals in public and nonprofit environments. This includes theories of org anizational, group, and individual behavior, such as org anizational design, power and authority, leadership, teamwork, communications, work des ign, and motivation. Emphasis is on managers and managing in public purpose organizations by reviewing major theories and their application and effective use.
Prerequisite: PA 511.

## PA 541 -Social Entrepreneurship(3)

This course provides students with core theories and concepts of social entrepreneurship, and contemporary approaches to entrepreneurship for the public and nonprofit sector. It analyzes successfulcases of social entrepreneurship and develops competencies to create org anizations that generate revenues while serving a social mission. Students learn about setting up and managing socialentrepreneurial ventures, focusing on the resources,
impact and support structures for social entrepreneurs. Students are given the opportunity to develop their own social entrepreneurial design.

## PA 542 - Sustainable Development Implementation (3)

Focuses on the challenges involved in attempting to turn international commitments and policy promises into action. Using examples from around the U.S. and around the world, we examine sus tainable development policy implementation and operation in an effort to see what worked, what did not, and how implementation challenges can be addressed.

## PA 543 - Creating Collaborative Communities (3)

Collaboration is perceived as an important method for addressing complex community is sues through alliances with otherorganizations in the non profit, for-profit, and government organizations. This course introduces students to the theory and practice of collaboration through in-class and "living" casestudies in the community. Students will learn the success factors, barriers to, and preconditions of collaboration at the intraorganizational, interorganizational, and intersectoral levels. They will explore the potential for using collaboration in a variety of community settings.

## PA 544 - International Field Experience (3)

Students are teamed with counterpart public servants and public organizations in a foreign country to understand "what counts for success" in developing and implementing public policy initiatives. Students usethis international comparative governance experience to reflect on the consequences for improving public service innovation and practices within their home organizations and jurisdictions in the United States. An additional important learning goal is to provide students with the knowledge and skills to work more effectively in cross-cultural teamsettings.

## PA 545-Organizational Development (3)

A consideration of org anization development as a strategy for org anizational change. This course emphasizes concepts and methodologies relating to organizational problemdiagnosis, action research, planned change, change implementation and evaluation, and the development of appropriate interpersonal competencies and skills. Focuses on the public manager as change agent.
Prerequisite: PA 540.

## PA 546 - Supervision in the Public Sector (3)

Focuses on the role of the supervis or in contemporary public and nonprofit organizations and the knowledge,
skills, and abilities needed to effectively performthis role. Among the topics considered are the ethics and values of supervision; work planning; delegating, motivating, and empowering; communicating effectively; developing a team; coping with conflict; monitoring and evaluating performance; and dealing with the boss(es).

## PA 547 - Culture, Values and Leadership (3)

Students reflect the role of culture and values in shaping the role res ponsibilities of public service and nonprofit leaders. Draws fromthe fields of cultural anthropology, inter-cultural communication, and organizational theory to explore how public and nonprofit servants can become more effective through the integration of cultural diversity into their nonprofit and public serviceroles.

## PA 549 - Cross-cultural Communication in the Public Sector (3)

An examination of intercultural communication aspects, processes, and scenarios occurring in public sector interactions. Emphas is on external client/ constituent relationships. Development of intercultural awareness is a key goal introduced through class discussion, scenario investigation, and research projects. The course is highly interactive with class discussion required.

## PA 550 - Managing Information Resources (3)

Considers information management and computer information systems as they affect public management and public policy. Basic concepts are covered, and emphasis is placed on the use of computerized information technologies as management tools for public sector adminis trators. Substantialuse is made of case studies to highlight how the public sector manager may most appropriately and effectively use computer res ources and avoid inappropriate and mis leading use of these resources.

## PA 551 - Analytic Methods in Public Administration I (3)

Topics to be covered include: research design, sampling methods and theory, data collection, techniques of data analys is and presentation, statistical reasoning, and computer applications for statistical analysis.

## PA 552 - Analytic Methods in Public Administration II

 (3)A continuation andexpansion of topics covered in PA 551, focusing on analytic methods used in research and evaluation of public sector policies, systems, and
programs. Topics to be covered may include: qualitative and quantitative applications in res earch design and data collection; statistical modeling, forecasting, program evaluation, and other areas of applied research.
Prerequisite: PA 551.
PA 552R - (0)

## PA 553 - Sustainable Development Policy and Governance (3)

Provides a foundation in sustainability-related policy design, policy analysis and governance approaches at multiple jurisdictional levels and in different cultural and social contexts. Explores challenges and opportunities related to developing policies and governance models that address the complexsocial, economic and environmental aspects of sustainability. Examines the role systems thinking plays in policy development and analysis in order to achieve integration across scales and sectors. Relevant topical is sues serve as the focus for exploring how policy development and governance develops on the ground.

## PA 554 - Policy Analysis Research (3)

Course requires student to become proficient in the use of reference tools for successfully undertaking policy research. Students are required to identify a policy is sue and to use library and online resources to track a piece of public policy through the stages of agenda-setting, legislative policy-making, adminis trative implementation, court adjudication, and follow-up analysis andevaluation of consequences. The course consists of a series of on-line exercises corresponding to each stage of the policy development and implementation process. The exercises are supplemented with discussion and lectures.
Also offered for graduate-level credit as PAP 654 and may be taken only onceforcredit.

## PA 555 - ProgramEvaluation and Management (3)

Examines programevaluation from the perspective of the public administrator. Covers the major approaches, methods, and concepts in the field of programevaluation. Topics include impact assessment, research design, qualitative evaluation methods, performance auditing, benefit-cost analysis, and other selected topics.

## PA 556 - Public Contract Management (3)

Explores what happens when public sector org anizations form working relationships with other agencies, communities, nonprofit organizations, or for-profit firms through contracts. It seeks to understand key elements of the formation, operation, and termination (or transformation) of these relationships and to do so from the
pers pective of the generalist manager rather than froma narrow technical view. The purpose here is not to debate whether government at all levels should do more contracting or less but to assess what happens when the decision is made to use contractual arrangements to performservices or provides materials.

## PA 557 - Operations Research in Public Administration (3)

Addresses the need for today's public adminis trators to have some understanding of the increasingly important tools of management science and operations research. It has no prerequisite: quantitative or technical background is not required. A variety of topics will be covered, with some flexibility in choice of topics according to students' interest. Topics include: linear programming, queueing, simulation, decis ion analysis, forecasting, PERT/CPM, inventory analysis, and replacement analysis. Methods taught in the course will be in the context of public administration.

## PA 558 - Managing Public Projects and Programs: From Local to Global (3)

Introduction to management concepts and tools required for the design, implementation and sustainability of public sector (government and non-governmental organizations) programs and projects. Draws on contemporary literature and case studies. Students apply their management learnings from this course to a real-life programor project.

## PA 559 - Research Design and Analytic Methods for Administrative Leaders (3)

This course provides adminis trative leaders with the es sential principles to frame, develop, review and evaluate research proposals. It also addresses appropriate data collection and analysis methods that aligns with the purpose of the research and supports research conclusions and claims.

## PA 560 - Local Government Administration (3)

Introduction to public adminis tration practice at the local government level. Addresses those factors that make local government administration unique, but informed by the fact that contemporary local government professionals are closely connected to a wide range of intergovernmental and often cross-sectoral working relationships. Local government administration learn that leadership within the organization, engagement with the community, and work across org anizational and juris dictional boundaries.

## PA 561 - Intergovernmental Relations (3)

This course addresses the complexweb of intergovernmental relations that is essential to the successful operation of public adminis tration and policy throughout the nation. At the core of these relationships is a set of concerns about the political, legal, fiscal, and org anizational relationships across governments and sectors. This course provides an in-depth examination of the foundations and challenges of these relationships.

## PA 562 - Managing Employee Performance in the Public Sector (3)

Managing human capital can be a challenging endeavor and doing so in the public sector, particularly in government, introduces the added burden of politics. This course explores the multifaceted nature of performance in the workplace including the political, legal, economical and managerial issues that often accompany addressing employee performance in the public sector (government and nonprofit). The goal is to manage and improve human resources while hold ing individual employees and pu blic agencies accountable for org anizational performance.

## PA 563 - Citizens and Administration (3)

This course analyzes modern civic life and its challenges. Its major focus is the often ambiguous relationship between citizens and adminis trators in the political system. Other topics emphasized are: transformation of civic life in modern times, declining citizen trust in government, modern approaches to citizen participation in government, and the future of "civism" in the United States.

## PA 564 - Environmental Policy and Administration (3)

Explores governance of the en vironment at international, national, regional, and local scales. The course examines federal, state, local, and informal institutions active in addressing air and water pollution, hazardous wastes, toxics management, and the causes of climate change. The course explores different disciplinary approaches for examining environmental policy is sues, how policy tools can be effectively matched to specific environmental problems, and how social sciences and ecology can be integ rated for effective environmental problem-solving.

## PA 565 - Natural Resource Policy and Administration (3)

Reviews the history, politics, and institutions related to current environmental and natural resource policy and its administration. Reviews policy domains like land and forest, water, energy, fish and wildlife, and environmental
quality. Special attention is paid to policy and adminis trative governance is sues like sustaining common pool goods, structuring intergovernmental relations, and evaluating policy implementation strategies of direct production, planning, regulation, and changing market incentives. A central premise is that natural resource administrators face a policy arena that is intrinsically problematic because of the dynamic nature of social values about natural resources, the long time horizon implicit in resource systems, the broadening geographic scale considered in natural resources decisions, and the interdependency of social and ecological communities. Recommended as a first course in the environmental and natural resource adminis tration specialization.

## PA 566 - Water Resources Policy and Administration (3)

Reviews the history, politics, and institutions related to current water policy and adminis tration in the United States. Examines policy history leading to present institutional and legal arrangements for federal, tribal, regional, state, and local water quality and quantity decision making. Attention is given to the industrial development of the Eastand created water resources of the arid West as a way to understand changing social sentiments toward water and water policy. Examines the evolution of purpose in pollution laws fromhuman health protection to include ecosystemhealth protection and explores implementation of such protection through "waters hed" approaches to land use and water quality management by NGOs, and federal, state, and local government. A major theme is the problemof developing coherent water policies in a policy arena which has divided authority, plural traditions, and multiple resource and socialissues.

## PA 567 -Energy Res ources Policy and Administration

 (3)Reviews the history, politics, and institutions related to current energy policy and adminis tration with particular attention to the Pacific Northwest and development of hydroelectric power. National energy policy history is reviewed including political, financial, and environmental problems. Explores the roles of interest groups; state, local, national, and international governments; and regional governing institutions. It explores the changing dis tribution of social costs and benefits as both a cause and result of policy change. Passage of the 1980 Northwest Power Act, the Northwest Power Planning Council created in the act, and the implementation of the act will be studied, as will current is sues like energy conservation, regional power planning, deregulation and the status of institutions involved in energy policy, and Columbia basin fish and wildlife conservation.

## PA 568 - Forest Policy and Administration (3)

Reviews the history, politics, and institutions related to forest res ource policy and management. Focuses on how policy affecting public and private forest land is made and implemented. Case studies, largely fromthe northwestern United States, are used to examine these processes. History, laws, and programs relating to forestland owners hip, public and private forest management, and as sociated environmental protection are studied at the federal and state levels. Special attention is given to understanding how public values about forests develop, and how public values affect public policy related to forests held by public, nonprofit, industrial, and private owners.

## PA 569 - Fish and Wildife Policy and Administration (3)

Reviews the history, politics, and institutions related to fish and wildlife policy and administration. Focuses on how policy affecting fish and wildlife is made and implemented. Case studies, largely fromthe northwestern United States, are used to examine these processes. Policy history is studied at the state and federallevel with particular attention to the federalization of authority in this arena and the role of interest groups in policy making and implementation. Current is sues like endangered species, the role of tribes, bio-diversity conservation, and interjurisdictional management of fish and wildlife are the focus of study.

## PA 570 - Environmental and Natural Resource Leadership (3)

Skills, styles and attributes of those who lead natural resource and environmental org anizations will be examined to enhance the leadership abilities of those in the class. Each class member will analyze presentations by current leaders, prepare a leadership prescription for an organization with which they are familiar, and design a leadership learning program. The course is intended for all those concerned with leadership in natural resource and environmental organizations, reg ardless of background. Considerable time will be devoted to exchange of information among those in the class.

## PA 572 - Columbia River Basin Governance (3)

Uses Columbia River Basin governance as a case study to build an understanding of how org anizational interests, culture, institutional identities, and values drive any collaborative governance framework. Examines the Basin's governance history and the interests of major
institutional actors through reading, writing, and expert panel discussion. Expected preparation: PA 540
Adminis trative Theory and Behavior.

## PA 573-Smart Grid and Sustainable Communities: Making the Smart Grid Work (3)

Provides students with a basic understanding of Smart Grid technology and the conditions that need to be in place for its success as a policy tool for reducing CO 2 emissions. Students will be provided with the his torical development of the technology and its currentstatus fromthe standpoint of policy implementation. Expected preparation: PA 540 Adminis trative Theory and Behavior.

## PA 574 -Food and Agriculture Policy (3)

Course explores food- and agriculture policy development and implementation at global, national, and local levels. Examines the social, economic and environmental as pects of food and agricultural systems, including impacts of trade and aid policies, the FarmBill, food system frameworks, and cross-cutting issues including water resources, toxics, and social equity.

## PA 575 -Foundations of Collaborative Governance (3)

This initial course provides an overview of the current governing context and thenew models that have emerged in response. In addition, students will explore the nature of collaborative relationships, the role of trust, harnessing the potential power of groups, and how to address conflict and reach consensus.

## PA 576 -Collaborative Governance Process and Systems (3)

This skills-based course focuses on the assessment, organization and phases of facilitating collaborative agreement-seeking processes, emphasizing techniques and challenges for reaching mutually satisfying agreements, including how to frame an is sue to increase the group's chance for success.

## PA 577 -Case Studies in Collaborative Governance (3)

Studentteams toreview three collaborative governance cases, one successful, one unsuccessful, and one a work in progress. A fourth case will be identified by the team. The course introduces ty pologies for different forms of collaborative governance and provides theory-based frameworks to assist in analyzing governance network efficacy.

## PA 578-Collaborative Governance Practicum(3)

In this culminating practicumstudents participate in discussions with faculty experts and fellow students as they apply the knowledge and skills gained in core courses to a community-based problem, is sue or project of their choosing.
Prerequisite: PA 575, PA 576, and USP 584.

## PA 579 - Policy Tools in Policy Design (3)

This course concerns the use of policy tools in designing public policy. It considers the strengths and weaknesses of the individual tools and the tradeoffs made in choosing or combining them. The way policy mechanisms and instruments are as sembled into a policy mix can be helpful or seriously problematic.

## PA 581 - Advanced Fundraising (3)

Focus on the understandings, processes, and skills that are neces sary for successful major gift development. As a skill development course, it follows the Fundamentals of Fundrais ing course (PA 526) which provides theory and content. The course will address the process of developing advanced fundraising techniques, beginning with the formulation of the development plan, moving through developing a gift management system, and concluding with application and design of effective gift stewardship. The steps in the process are identified in general terms with specific application applied to the context of student experience or projects. The course will also cover the role of leadership especially volunteer leadership and the relationship of that leadership with other human res ources such as the DevelopmentOfficer and the Chief Executive Officer. Expected preparation: PA 526.

## PA 582 - Public Budgeting (3)

Focuses on the major dimensions of public sector budgetary systems. Major emphasis will be devoted to the local budget processes. Topics will include basic concepts of public budgeting, the budget cycle, budget strategy, planning and presentation, alternative budgeting systems, the budget as a political and management tool.

## PA 583 - Advanced Budgeting Concepts and Techniques (3)

Investigates how budgeting can be used to review, analyze, and establish public policy and administrative accountability. Students learn how to: 1) design the best budget systemto fit various political environments; 2)review the effectiveness and efficiency of programs through budget analyses; and 3)use the budget to clarify public policy is sues andestablish management
accountability for performance. The mechanics of public budgeting will also be discussed in detail, including developing a budgetcalendar, making fund balance estimates, balancing revenues and expenditures, and monitoring the approved budget. Students should have practical experience or a previous course in budgeting.

## PA 585 - Financial Management in the Public Sector (3)

An investigation of the sources, methods, and mechanisms available for financing public organizations in a dynamic and complexenvironment. It includes a consideration of the administrative and behavioral as well as the economic dimensions of financing public org anizations. The examination identifies and explores the skills which are appropriate for managing contemporary public finance systems. Among the specific topics considered in this course are the following: taxand nontax sources of revenue; intergovernmental fiscal relations; debt management; productivity; rate analysis; cash flow management; and managing fiscal retrenchment.

## PA 587 -Principles andPractices of Emergency Management (3)

Explores the history, doctrines, and authorities of emergency management as well as the role of the emergency manager. It provides background on this emerging field as well on theoretical foundations of effective emergency management and strategies for effective emergency management leadership.
Cross-Listed as: This is the same course as EMCR 587 and may be taken only once for credit.

## PA 588 - International Perspectives on Disaster Management \& Resilience (3)

Narratives, images, and research across the globe continue to document the devastating effects of disasters, both human-made and natural. This documentation demonstrates the monumental effects disasters canhave on human life, infrastructure, and the natural environment, let alone an economy. Emergency management systems vary across nations and cultures, reflecting differential challenges, government types and capacity, public involvement and commitment to response, and cultural backgrounds.
Cross-Listed as: This is the same course as EMCR 588 and may be taken only once for credit.

## PA 590 - Human Resource Management in the Public Sector (3)

Adminis tration and management of human resource systems in public sector and nonprofit organizations. Focus is on the underlying values of human resource management, related public policies, structural patterns,
and the functional areas of HRM systems. Specific attention will be directed to the strategic roles of human resource management in day-to-day operations, merit systemconcepts and practices, position and wage classification systems, methods of securing a qualified labor force, and labor relations. Legal requirements in each of these areas will be examined. Emphas is will be on learning by doing through use of skill-building exercises, simulation and analysis of case materials, review of relevant case law, adminis trative rulemaking, and current literature. This courseserves as a foundation for PA 591.

Prerequisite: PA 511.

## PA 591 - Employment Law and Policy (3)

This course delves into the legal environment and the range of laws that are as sociated with the employment process fromrecruiting through termination or retirement and its overall policy impact on the practice of human resource management (HRM). Such areas entail federal, state and local legis lation as well as ordinances, statutes and Executive Orders that govern equal employment opportunity and the legal framework within which human resource management must operate. Also considered are the constitutionality of employment laws and how constitutional law is applied to certain groups that may render private sector employees somewhat distinct in some ways fromthose in the public sector, in this case, government or state actors (e.g., those who work on behalf of the government). This course is heavily focused on case law, case analyses and the impact of various court decisions over time on policy interpretations, HRM practices and charting the employment through termination processes. Expected preparation: PA 511 and PA 590.

## PA 592 - Volunteerism and Volunteer Management (3)

Examines the historical, social, and cultural context of voluntarismin America as a way of understanding who volunteers and why, and what difference it makes in the lives of org anizations and communities. The course includes skill development in the management and administration of volunteer programs in a nonprofit org anizational context, including volunteer program planning, evaluation of volunteer programs, recruitment, training, and retention of volunteers.

## PA 593 - Civil Rights for Public Managers (3)

Public service professionals deal with a variety of civil rights issues on a regular basis. They manage a diverse workforce with civil rights considerations central to effective human resource management. That diverse workforce serves increasingly diverse communities. Civil rights include race and ethnicity, but other is sues and groups as well. This course considers the major is sues of
civil rights froma public law perspective with a concern for the challenges facing public managers.

## PA 594 - Enhancing Diversity in the Workplace (3)

To examine the effects of diversity across org anizations with particular emphasis on those within the public sector. Three aspects of divers ity initiatives will be employed: valuing, enabling and managing diversity. A wide range of cultural and social diversity issues, to include but not limited to race, gender, age, nationality, class, language, sexual orientation and disability, will be discussed. Theories and practical tools will be explored and students will be given the opportunity to work on diversity is sues by way of discussions, case studies and field assessments.

## PA 595 - Public Sector Labor Relations (3)

The his tory and development of public sector labor relations in the United States. This course explores the impact of labor org anizations on government activities and the role of public sector managers in responding to unions. The course provides both a his torical context for labor relations and a set of precepts for working with labor org anizations in public administration. Fromhospitals, to school districts, regional government, cities, counties, state agencies and even some large nonprofits, this course explores the importance of developing and maintaining a constructive working relationship with the labor org anizations that represent the employees of those organizations.

## PA 596 - Public Sector Collective Bargaining: Negotiations and Impasse Resolution (3)

Deals with the diversity of roles of the parities in negotiation; planning for negotiations; development of original demands and fallback positions; negotiation strategy and tactics; the major issues in negotiating; and the diversity and similarity of negotiations in state government, cities, counties, school districts, and higher education. A mock negotiation case will be bargained. This course will also deal with the process of mediation, factfinding, and interest arbitration.
Prerequisite: PA 595.

## PA 598 - Values -bas edManagement I (3)

Introduces the model of values-based management as a method to enhance compatibility between the individual and the organization that is es sential for decision-making and supervision, particularly in nonprofit org anizations. Students will develop a theoretical understanding of the elements of effective supervision and of the impact that a director/supervisor has on thehuman res ource systemin their organizations. Students will work through the process
of clarifying agency mis sion, purpose, and values and develop skills for aligning their practices with these values.

## PA 601 - Research (1-9)

(Credit to be arranged.)

## PA 603 - Thesis (1-15)

(Credit to be arranged.)

## PA 605 - Reading and Conference (1-9)

(Credit to be arranged.)

## PA 607 -Seminar (1-9)

(Credit to be arranged.)

## PA 609 - Practicum (1-9)

(Credit to be arranged.)

## PA 610 - SelectedTopics (1-9)

(Credit to be arranged.)

## PA 699 - Special Studies (1-6)

(Credit to be arranged.)

## PA 710-Special Studies (1)

(Credit to be arranged.)

## PAH - Public Administration: Health

## PAH 399 - Special Studies (1-8)

(Credit to be arranged.)

## PAH 410 - SelectedStudies (1-6)

(Credit to be arranged.)

## PAH 509 - Practicum(1-6)

(Credit to be arranged.)

## PAH 543 - Culture and Health Care (3)

The course is designed to provide an examination of health delivery and outcomes and the influence of culture. Using readings in conjunction with interactive learning, students consider various cultures and their interactions with the health care system. Knowledge of the tools, techniques, and applications of cultural assessment and cultural competency will be achieved. This course is open to admitted students in the graduate programs in the Division of Public Adminis tration and other appropriate graduate programs. This is the same course as HSMP 543 and may be taken only once for credit.
Cross-Listed as:HSMP 543.

## PAH 570 - Health Administration (3)

An examination of is sues related to the adminis tration of health care systems. Topics include: changing patterns of health care, budget and financial management techniques, and political influences on health adminis tration. This is the same course as HSMP 570 and may be taken only once for credit.
Cross-Listed as: HSMP 570.

## PAP-Public-Affairs-Policy

## PAP 403 - Thesis (1-12)

(Credit to be arranged.)

## PAP 412 - Introduction to Policy Advocacy (3)

Examines the importance of public policy advocacy for public and nonprofit org anizations and the impact of policy advocacy on society.
Also offered for graduate-level credit as PAP 512 and may be taken only once for credit. . Prerequisite: upper-division standing.
PAP 504-(1-9)

## PAP 505 - Reading and Conference (1-9)

(Credit to be arranged.)

## PAP 508 - Professional Development Plan (1-3)

Professional development planning works hop for students enrolled in the Master of Public Policy program. Students work with faculty to prepare a professionaldevelopment plan, including career-goals, portfolio creation, job networking, and a programexit interview.
Prerequisite: Enrollment in the Master of Public Policy program.

## PAP 509-Public Policy Project (1-3)

Summative project for students enrolled in the Master of Public Policy program. Options include a research-oriented report or a client report linked to a short internship or placement experience.
Prerequisite: enrollment in Master of Public Policy program.

## PAP 510 - SelectedStudies (1-9)

(Credit to be arranged.)

## PAP 511 - Introduction to Public Policy (3)

This course explores fundamental concepts and approaches to public policy analysis and advocacy. Policy actors, process and issues are all part of the domain. The course will introduce students to a number of current policy issues.

PAP 512 - Introduction to Policy Advocacy (3)
Examines the importance of public policy advocacy for public and nonprofit organizations and the impact of policy advocacy on society.
Also offered for undergraduate-level credit as PAP 412 and may be taken only once for credit.
PAP 514 - Institutional Dynamics of Public Policy (3)
Focus on the institutional determinants and factors that shape the public policy arena. Coverage includes the varieties of institutions, including their rules and cultures, that affect public policy, how policy change strategies can incorporate institutions, and how institutions shape policy outcomes and impacts.

## PAP 533 - Ethics and Public Policy (4)

An examination of the normative dimensions of public policy, focusing both on the ethical is sues raised by the means of policymaking as well as the values that might shape the ends of public policy.
Cross-Listed as: Also offered for graduate-level credits as PS 533 and may be taken only once forcredit.

PAP 601 - Research (1-9)
(Credit to be arranged.)

## PAP 602 - Independent Study (1-9)

(Credit to be arranged.)

## PAP 603 - Dissertation (1-15)

(Credits to be arranged.)

PAP 604 - Internship(1-9)
(Credit to be arranged.)

PAP 605 - Reading and Conference (1-9)
(Credit to be arranged.)

PAP 606-Project (1-8)
(Credit to be arranged.)

## PAP 607 - Seminar (1-8)

(Credit to be arranged.)

PAP 609 - Practicum(1-9)
(Credit to be arranged.)

## PAP 610 - SelectedStudies (1-9)

(Credit to be arranged.)

## PAP 611 - Normative Foundations of Governance (3)

A survey of the major theories of the normative basis of governance that have shaped approaches to political legitimacy in the modern era.

## PAP 613 - Organization Theory and Behavior (3)

An examination of the structure and design of org anizations, the interaction of organizations and their environment, and the behavior of individuals within organizations. Application to problems of administration and governance.

## PAP 614 - Contemporary Governance (3)

Contemporary factors impacting governance world wide: political instability and fragmentation of government; erosion in the jurisdiction and power of the nation state and its causes; the search for new approaches and substitutes to government; accelerated blurring of sector boundaries; increasing use of third party providers; and non-political boundaries.

Prerequisite: admission to thePh.D. programin public administration and policy.

## PAP 615 - Administrative Process (3)

The purposeof this course is to explore the nature of the administrative process and its relationship to org anizational structure, process, and behavior within the broader context of programmatic and organizational governance. Emphasis will be placed on the following topics: the influence of structural alternatives on behavior; value systems and normative prescriptions; organizational culture; and the influence of the administrative process on the way in which agencies formulate and implement policy within the context of their res pective legislative mandates.
Prerequisite: admission to the Ph.D. programin public administration and policy.

## PAP 616 - Policy Process (3)

This course focuses on the politics of the policy process. It examines the role, influence, and interaction of legis latures, executives, bureaucracies, courts, policy communities, and citizens. The course follows the stages of policy development: problemdefinition, agendasetting, budgeting, authorization, implementation, and oversight. Case material is taken from federal, state, and local governments with special consideration given to the intergovernmental aspects of the policy process.
Prerequisite: admission to the Ph.D. programin public administration and policy.

## PAP 620 - Seminar on American Political Institutions

 (3)Introduction to the field of American Politics, with a particular focus on American political institutions and their respective sub-fields within the discipline of political science.

## PAP 621 - Comparative Political Institutions (3)

This course examines the performance, capabilities, and overall function of governments worldwide. Emphas is on advanced analyses of theories and concepts in comparative politics, with a particular focus on institutions of the state.

## PAP 630 - Proseminar in International Relations (4)

Graduate seminar surveys the main theoretical and analytical approaches encountered in the study of international relations. Themes include the grand theoretical traditions of liberalism, realis $m$, and radicalis $m$; analytical and methodological pers pectives, like behavioralismand rational choice theory; as well as the normative, critical, and postmodern challenges to the mains tream.

## PAP 645 - American Foreign Policy (4)

A seminar that explores different kinds of international disputes and actual conflicts in order to identify and assess theories, analy tical frameworks, and methods of conflict resolution, management, and prevention. Emphasis is on understanding the roots of conflicts and techniques that may be appropriate to different levels and dimensions of conflict.

## PAP 653 - Policy Analysis (3)

Introduction to policy analy sis as a practice of creating, assessing, and communicating information that is useful for understanding and improving policies. Theoretical methods of problems tructuring, forecasting, recommending, monitoring, evaluating, and improving policies.

## PAP 654 - Policy Analysis Research (3)

Course requires student to become proficient in the use of reference tools for successfully undertaking policy research. Students are required to identify a policy is sue and to use library and online resources to track a piece of public policy through the stages of agenda-setting, legislative policy-making, adminis trativeimplementation, court adjudication, and follow-up analysis and evaluation of consequences. The course consists of a series of on-line exercises corresponding toeach stage of the policy development and implementation process. The exercises are supplemented with discussion and lectures.
Also offered for graduate-level credit as PA 554 and may be taken only once for credit.

## PAP 656 - Advanced Political Economy (3)

Readings seminar provides a review of the literature in theories and selected is sues in international political economy. Core requirement for graduate students in the PAP doctoral programand for master's students in political science who select international relations as their primary field of specialization.

## PAP 690 - Research Design for Politics and Policy (4)

This course helps students understand the processes, design, and the philosophical foundations of research. The focus of this course is to train students to become researchers who can design professional-quality research, and write a research proposal that will satisfy the requirements for a doctoral dis sertation or grant proposal.
Cross-Listed as: This is the same course as PS 594 and may be taken only once for credit.

## PE - Physical Education

## PE 100 - Adapted Physical Activity (1)

This course is designed to individualize workouts for students with permanent or temporary physical dis abilities. This course can also be used to make accommodations for students enrolled in other PEcourses who have health or injury conditions which impact regular participation in the course.

## PE 101 - Gentle Yoga (1)

This course is designed forstudents who need a slowerpaced, less rigorous class: those with health issues, including but not limited to injuries, pregnancy, chronic illness; those who have not or do not exercise on a regular basis. Focus in this class will be on alignment; increasing flexibility and learning to work safely in each as ana (pose), using props to bring the pose to the student. Poses will be modified or variations of the pose will be taught based on students' needs.

## PE 102 - Gentle Tai Chi (1)

Please contact the department for a course description.

## PE 103 - Relaxation Yoga (1)

The gentle practice of mind/body integration allows for the development of strength, endurance, flexibility, and balance in a supportive and non-threatening atmo sphere. Through these practices the student is lead to greater health, renewed energy, and restored balance. We will be exploring various different techniques to bring about greater relaxation and awareness. Class will include res torative yoga, somatics, yoga nidra and gentle movements. This course is designed to attempt to meet your individual needs with gentle yoga poses and breaths that focus on restoring and maintaining health. If you have an individual need, be sure to discuss it with me and sit close to the front. Usually, any pose can be adapted to accommodate individual needs.

## PE 104 - Meditation (1)

Meditation is oftenhelpful in reducing stress, dis covering inner resources for peace of mind, healing, creativity, and calming of spirit. Meditation is a universal, health-giving resourceused forhundreds of years and in most cultures. This course will introduce the student to different methods of meditation, including gazing, imagery, breathing, mindfulness and other methods.

## PE 105-Yoga (1)

Yoga is an ancient philosophy, one of six, from India. Originating in the oral tradition, there are 196 sutras or threads - short statements which explain the philosophy of Yoga - written by Patanjali. The word yogameans union, to bring together the mind, body, and spirit. There are eight as pects of yoga: Yama (universal moral commandments), Niyama (personal disciplines), As anas (practice of the poses), Pranayama (rhythmic controlled breathing), Pratyahara (withdrawal of the senses), Dharana (concentration), Dhy ana (meditation), and Samadhi (a state of super-consciousness orbliss). This course will explore these different aspects of the yoga experience, looking into the meanings and practice of each and its role in yoga

## PE 112 - Tai Chi Chuan 24 Forms (1)

Tai Chi Chuan is one of the most popular and influential Chinese martialarts (Wu Shu). It is composed of slow, gentle and constant body movements. This 24-posture Tai Chi Chuan formis based on Yang style TaiChi, also known as a moving meditation. Practitioners performa series of postures designed to achieve balance and harmony in both body and mind, as well as to improve overall health.

## PE 119-Zumba (1)

This course provides the student with the opportunity to participate in Zumba ${ }^{\circledR}$ Fitness for credit. Are you ready to party yourself into shape? That's exactly what the Zumba® programis all about. It's an exhilarating, effective, easy-tofollow, Latin-ins pired, calorie-burning dance fitnessparty ${ }^{\mathrm{TM}}$ that's moving millions of people toward joy and health. Zumba Fitness® is the only Latin-inspired dancefitness programthat blends red-hot international music, created by Grammy Award-winning producers, and contagious steps to forma "fitnes s-party" that is downright addictive. Since its inception in 2001, the Zumba program has grown to become the world's largest - and most successful-dance-fitness programwith more than 14 million people of all shapes, sizes and ages taking weekly Zumba classes in over 140,000 locations across more than 150 countries.

## PE 120 - Barre Fitness (1)

Barre Fitness combines the Pilates philosophy with traditional ballet barre choreography to create a fun, highenergy sculpting class that tones, strengthens and stretches the entire body uniformly. This class challenges the body's range of motion with balance work, high repetitions, weights, balls and bands. Much of this class is performed on relev (tip toe) and in plie (bent knees). This class is open to multiple levels, as modifications are available.

## PE 121 - Cardio Kickboxing (1)

This fast paced exercise class combines real kickboxing techniques to modern dance beats for a great workout. Cardio kickboxing is a group-led class which uses a combination of martial arts kicks, punches, strength and cardio training to help reach streng th and endurance goals. This class offers an intense, high impact workout which incorporates basic self-defense actions. Cardio-kickboxing is rated as the \#1 calorie-burning workout, with the potential to burn 600-800 calories per hour of activity. This class targets all the major muscle groups of the body for an incredibly effective workout while reducing stress and improving self-confidence.

## PE 122 - Body Weight Boot Camp (1)

This course utilizes HIIT (high intensity interval training) incorporating bodyweight exercises. This course provides the ultimate workout forcardio and fat burning. HIIT is an intense interval training circuit that gets the body's major muscle groups involved through a series of repeated bodyweight exercises. With high intensity exercise, your body continues to burn fat long after your workout is complete. This class is super effective and is the perfect workout to burn calories, strengthen and lengthen your body.

## PE 124 - Abs and Lower Body (1)

Abs and Lower Body is a group-ledexercise class designed to improve muscle strength and tone in your core and lower body. You will see a wide range of exercises and performdifferent levels of squats, lunges, lower body, back and abdominal exercises, as well as high-intensity exercises such as jump-roping, running, and stair climbing. This is an advanced levelclass, but modifications are available. When the weather is nice, the clas s goes outside.

## PE 125 - Body Sculpt (1)

This course emphasizes muscular endurance training for the upper body, lower body, and abdominals. In a typical ses sion, we use dumbbells, soft weights, tubing, steps, small medicine balls, and body resistance to challenge every major muscle group in the body. This class is an excellent choice for participants who get plenty of cardiovascular training through other activities and want to concentrate on muscular development.

## PE 127 - Flex Fitness (1)

This course provides the student with the flexibility for self-paced and self-directed participation in the Physical

Education courses offered at PSU. With the freedomto select the activity, day and time from the attached list of approved coursed, the options are almost limitless. The student can attend an activity once or they may choose to stick with the same class throughout the entire term. The choice is completely up to themand their schedule(s). Simply select the desired activity, check with the ins tructor of the chosen activity before participating and present attached attendance record formand join the activity (given space available). No more stressing about missing class to meet with classmates or instructors - just choose an alternate activity, date or time. This class is available as a 1 or 2 credit option.

## PE 128 -Weight Training (1)

This class gives instruction and practice in the use of resistance machines, free weights and other training implements. It is a self-paced class and individual workout plans are expected. Instruction will be given on proper lifting techniqueand spotting. Students are requested to follow a routine in order to achievebest results. Students can proceed on their own or arrange a time to design a programwith the instructor. All weight roomrules will be strictly enforced.

## PE 129 - Fitness Conditioning (1)

Achieve a higher level of physical fitness for a longer, healthier lifespan. A fun, moderate-impact cardio routine that will leave you feeling lean and mean, Fitness Conditioning is designed to transformyour body to an entirely new fitness level. Each clas s session will utilize a variety of cardiovascular activities, targeted strength and bodyweight exercises to prevent injuries and avoid plateaus while improving all areas of your physical fitness.

## PE 131 -Sports Conditioning (1)

This course includes sport specific training for a multitude of sports, including plyometric training, speed and agility training, res is tance training, and different modes of aerobic training. Sports Conditioning focuses on how to train different types of athletes, as well as teaching how each specific type of training is related to the sport/event involved. This is a high intensity exercise course.

## PE 132 -Weight Loss Boot Camp (1)

Weight Loss Boot Camp (WLBoot Camp) is a group fitness class, which includes high impact exercises and for an intense workout. The class uses body sculpting, muscular endurance, and cardiovascular endurance activities to enhance weightloss goals. The class will incorporate squats, lunges, stair climbing, running,
jumping, side stepping, push-ups, and dips, in a wide variety of combinations to preserve muscle mass while you lose weight.

## PE 135-Pilates 1: Streng th andForm (1)

Students learn the structure, technique and form of Pilates, while awakening and strengthening the deep muscular skeletal system.

## PE 136 - Pilates Fusion (1)

Combining The Pilates form with aspects of internal martial arts, yogaand release technique, students learn to activate their center through complex movement patterning, breath and mindfulness practices.

## PE 137 - Pilates 2: Mindful Movement Flow (1)

Combining the Pilates form with aspects of internal martial arts, yoga and release technique, students learn to activate their center through complexmovement patterning, breath and mindfulness practices.

## PE 140 -Self Defense (1)

This class is reality based: we will teach what works best to defend against threats to your life and body in the real world. The training exposes you to simulated verbal attacks fromobnoxious bar patrons, vulg ar street thugs and the common irate, shopper who gets in your face and starts cussing a blue streak in the parking lot. As a reality based class the students are presented with live simulations which forces one to function even while jacked up on adrenaline. Since the adrenal rush is an instinctual reaction to stres s, the trick is learning to harness and focus all that power into one's defenseby using tools that don't require size or streng th for the average person. Preferred strategy: remain cognizant of surrounding at all times. This increases our chance of being successful and fluctuates from day to night.

## PE 144 - Judo (1)

In the study of Judo, you will learn techniques in falling, throwing and grappling to aid in self-defense. Judo will improve yours trength, agility and overall aerobic capacity. Judo utilizes virtually every muscle of the body and is an excellent overall conditioner. This discipline promotes a confidence that affects one's entire life.

## PE 145 - Brazilian Jiu-Jitsu I (1)

Brazilian Jiu-Jitsu is an advanced form of the Japanese martial art of the same name. It has been modified by the Brazilians to become "arguably the mosteffective martial art in the world." The formof Jiu-Jitsu the Brazilians created is a Martial Art that is designed to adapt to any type of Fighting Style or Martial Art, making it reality based. This is a tes ted and proven style, art, and science. With the arrival of Brazilian Jiu-Jitsu on the martial arts scene, it has foreverchanged the way fighters train. Brazilian Jiu-Jitsu offers a complete sy stemof self-defense that works whether you are big and strong or small of frame. Because of the principles of leverage thatBrazilian Jiu-Jitsu is founded upon, a practitioner could pursue it throughout their lifetime. Brazilian Jiu-Jitsu is beneficial in helping maintain cardiovascular fitness and the integrity of bones and muscles, thus keeping you fit and youthful.

## PE 146 - Brazilian Jiu-Jitsu II (1)

Review the bas ic fundamentals of Brazilian Jiu-Jitsu and refine your skills. Students will learn to identify their strengths and improve upon their weakness. (See the class description for Brazilian Jiu-Jitsu for more detail).

## PE 149 - Aqua Fitness (1)

## PE 160 - Argentine Tango (1)

An introduction to the beautiful dance of Argentine Tango, known to be a dance of passion and grace. Argentine tango is a highly individualistic and improvisational dance, with endless possibilities for expressing the music. A true socialdance, based on the art of leading and following, students will find it to be everexciting, challenging and fun. In this class students will explore both the close embrace and open embrace, "Milonguero" and "Salon" styles and movements of tango. Music education will include a wide variety of traditional clas sical tango orchestras as well as popular alternative tango music. Variations of movement and the depth of emotion and expression will be explored in traditional tango, fast paced playful Milonga, and the elegant Vals. Tango is a dance of present moment connection and zen, highly addictive, and a worth while adventure

## PE 161 -S wing Dance (1)

Swing dance, sometimes referred to as " sophisticated swing", is a slotted swing dance, using techniques of connection through body positions that create extension/ leverage, compression, and elasticity controlling momentumto create amazing lead and follow options. It is a playful and wonderful dance, with much roomfor
improvisation and self-expression. Using many rhythm variations, syncopations, slides, and stops, West Coast swing allows dancers a lot of freedomto play with their own pers onality and be creative with the music on the dance floor.

## PE 162 - Beginning Belly Dance (1)

This course will focus on the movement technique of popular styles of belly dance and related traditional dances. An emphas is will be placed on understanding the complexity of the rhythms and how they relate to the dance movement.

## PE 163 - BallroomDance (1)

A fun dance class created to introduce you to the joy of social ballroomdancing Each termstudents will explore the 6 most popular ballroom dance styles: W altz, Rumba, Foxtrot, Tango, Swing ChaCha. Time permitting, we may also explore more other styles of Ballroom, Viennese Waltz, Quickstep, Samba, Bolero, Jive or Paso Doble. Developing a new appreciation and skill set for the art of lead/follow, connection with your partner, and the necessary posture, technique styling to create each dance style developed for expres sing the music. Students will learn mini-routines in each dance style taught for social dancing success and students may choose to showcase what they learn and perform at local venues, sharing the joy of ballroomdance with others

## PE 164 -Salsa and Social Latin (1)

An introduction to Sals a social Latin dancing. Focuses primarily on the popular social dance styles of today, including Salsa, Bachata, Cha-Cha, Merengue and Cumbia. Designed to bring success in social dancing. Emphas is on ?Club styling? used for the smaller, crowded, dance floors and the basic rhythm variations found in Latin music from cultures around the world.

## PE 165 - Dance Improv (1)

Practice the techniques, tools and training needed to cultivate the sensing, and imaginative body, and use them as a guide in movement patterns and dances, both individually and collectively. No prior dance experience required.

## PE 176 - Day Hiking (1)

Portland has numerous parks and a variety of neighborhood pedestrian paths to offer enjoyable exercise to residents and visitors. The course will introduce a
sample of day excursions between 4 to 8 miles in length on a variety of surfaces: as phalt, gravel, natural trails, flat, or hilly. The hikes in this course will be within 15-25 minutes of PSU. Hiking is a great way to improve cardiov ascular fitness while burning calories. Basic hiking principles, selecting appropriate paths for ability levels, and progression of difficulty will be the cornerstone of the course. Since hiking is a weight bearing exercise and low impact workout, it prevents osteoporosis while enjoying the outdoors.

## PE 177 -Hiking in the Columbia Gorge (1)

Portland as a city is privileged to have in close proximity the Columbia Gorge. Within 30-45 minutes it offers numerous hiking trails (long short) of all levels for enjoyment and exercise in the outdoors. This course will introduce light hiking day excursions between 3 to 5 miles in length which will provide walking fitness, but als ofocus on waterfalls, geology, Oregonhistory, animal habitats, flora and fauna.

## PE 181 - Varsity Sports (1)

Please contact the department for a course description.

## PE 193 - Fitness Instruction: Adapted Physical Education (2)

Please contact the department for a course description.

## PE 194 -Fitness Instruction: Personal Training (2)

Please contact the department for a course description.

## PE 227 -Flex Fitness (2)

This course provides the student with the flexibility for self-paced and self-directed participation in the Physical Education courses offered at PSU. W ith the freedomto select the activity, day and time from the attached list of approved coursed, the options are almost limitless. The studentcan attend an activity once or they may choose to stick with the same class throughout the entire term. The choice is completely up to themand their schedule(s). Simply select the desired activity, check with the instructor of the chosen activity before participating and present attached attendance record formand jo in the activity (given space available). No more stressing about missing class to meet with clas smates or instructors - just choose an alternate activity, date or time. This class is available as a 1 or 2 credit option.

## PE 230-(4)

## PE 280 - Physical Education Service Courses: Women

 (2)A variety of activities taught for physiological and recreational values. Two hours per week plus field trips and extended experiences.

## PE 281 - Viking Experience (2)

Please contact the department for a course description.

## PE 281L - Lab for PE 281 (0)

Please contact the department for a course description.

## Per - Persian

## Per 101 - First-Year Persian Term 1 (4)

Introduction to spoken and written Persian. Grammar, reading, and simple conversation. This is the first course in a sequence of three: Per 101, Per 102, and Per 103.

## Per 102 - First-Year Persian Term 2 (4)

Introduction to spoken and written Persian. Grammar, reading, and simple conversation. This is the second course in a sequence of three: Per 101, Per 102, and Per 103.

## Per 103 - First-Year Persian Term3 (4)

Introduction to spoken and written Persian. Grammar, reading, and simple conversation. This is the third course in a sequence of three: Per 101, Per 102, and Per 103.

Per 199 -Special Studies (1-6)
(Credit to be arranged.)

## Per 201 -Second-Year Persian Term1 (4)

Graded readings in the modern literary language. Conversation and prose composition. This is the first course in a sequence of three: Per 201, Per 202, and Per 203. Recommended prerequis ite: Per 103.

Per 202 - Second-Year Persian Term 2 (4)
Graded readings in the modern literary language. Convers ation and prose composition. This is the second course in a sequence of three: Per 201, Per 202, and Per 203. Recommended prerequisite: Per 103.

## Per 203 - Second-Year Persian Term 3 (4)

Graded readings in the modern literary language. Convers ation and prose composition. This is the third course in a sequence of three: Per 201, Per 202, and Per 203. Recommended prerequisite: Per 103.

## Per 299 - Special Studies (1-12)

(Credit to be arranged.)

## Per 301 - Third-year Persian (4)

Reading in literature, composition, expository writing, and conversation. This is the first course in a sequence of two: Per 301 and Per 302. Recommended prerequisite: Per 203.

## Per 302 - Third-year Persian (4)

Reading in literature, composition, expository writing, and conversation. This is the second course in a sequenceof two: Per 301 and Per 302. Recommended prerequisite: Per 203.

## Per 330U- Persian Culture and Civilization (4)

A multimedia survey of major aspects of 2500 years of Persian civilization including traditions, art, music, architecture, handicrafts, literature, cities, and sports. Reflects Persian culture fromthe glories of Iran's past to contemporary scenes of rural life. Taught in English.

## Per 341 - Introduction to Persian Literature (4)

Selected texts fromclassical and modern Persian poetry and prose including epic, lyric, and mystic traditions placed in historical contexts. Covers the most important genres such as the Qasida, the Ghazal, the Ruba'i and the Masnavi. Expected preparation: Per 302.

Per 399 - Special Studies (1-4)
(Credit to be arranged.)

## Per 401 -Research (1-6)

(Credit to be arranged.)

## Per 404 -Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Per 409 - Practicum(1-4)

(Credit to be arranged.)

## Per 410 -Selected Topics (1-6)

(Credit to be arranged.)

## Ph - Physics

## Ph 101 -Essentials of Physics (4)

An elementary introduction to the basic principles of physics, their interpretation and application. Designed to accommodate all liberal arts students. This is the first course in a sequence of two: Ph 101 and Ph 102.
Concurrent enrollment in $\mathrm{Ph} 104,105$ is encouraged. Recommended prerequis ite: high school algebra.

## Ph 102 - Essentials of Physics (4)

An elementary introduction to the basic principles of physics, their interpretation and application. Designed to accommodate all liberal arts students. This is the second course in a sequence of two: Ph 101 and Ph 102.
Concurrent enrollment in $\mathrm{Ph} 104,105$ is encouraged. Recommended prerequis ite: high school algebra.

## Ph 104 -Experimental Investigations for Non-science Majors (2)

Dis covery labs for essential laws of physics. Investigate gravity, force, acceleration, momentum, heat, work, energy, electricity, light, and radioactivity. Make simple electrical circuits and an electrical motor. Improve computer literacy by working with graphic models of radioactive decay. This is the first course in a sequence of two: Ph 104 and Ph 105 . One two-hour discussion and laboratory period. Concurrent enrollment in $\mathrm{Ph} 101,102$ is encouraged. Recommended prerequisite: high school algebra.

## Ph 105 - Experimental Investigations for Non-science Majors (2)

Dis covery labs for es sential laws of physics. Investigate gravity, force, acceleration, momentum, heat, work, energy, electricity, light, and radioactivity. Make simple electrical circuits and an electrical motor. Improve computer literacy by working with graphic models of radioactive decay. This is the second course in a sequence of two: Ph 104 and Ph 105 . One two-hour discussion and laboratory period. Concurrent enrollment in $\mathrm{Ph} 101,102$ is encouraged. Recommended prerequisite: high school algebra.

## Ph 121 - General Astronomy (4)

An introductory his torical, descriptive, and interpretative study of as tronomy. Emphasis on the basic scientific methods as they apply to as tronomical problems. Detailed examination of the earth, followed by a survey of the other members of the solar system. Survey of the stars, their types, grouping, and motions. Models for the evolution of the Universe and the possibility of life elsewhere. The nature of light, the types of information it carries, and the types of devices used to detect it. This is the first course in a sequence of two: Ph 121 and Ph 122 which need not be taken in sequence.

## Ph 122 - General Astronomy (4)

An introductory his torical, descriptive, and interpretative study of as tronomy. Emphasis on the basic scientific methods as they apply to as tronomical problems. Detailed examination of the earth, followed by a survey of the other members of the solars ystem. Survey of the stars, their types, grouping, and motions. Models for the evolution of the Universe and the possibility of life elsewhere. The nature of light, the types of information it carries, and the types of devices used to detect it. This is the second course in a sequence of two: Ph 121 and Ph 122 which need not be taken in sequence.

## Ph 199 - Special Studies (1-3)

(Credit to be arranged.)

## Ph 201 - General Physics (4)

Introductory physics for science majors. The student will explore topics in physics including Newtonian mechanics, electricity, and magnetism, thermal physics, optics, and modern physics. This is the first course in a sequence of three: $\mathrm{Ph} 201, \mathrm{Ph} 202$, and Ph 203 and must be taken in sequence.

Prerequisite: Mth 112 or Mth 251 or Aleks Placement Test score 76 or higher. Corequisite: Ph 214.

## Ph 202-General Physics (4)

Introductory physics for science majors. The student will explore topics in physics including Newtonian mechanics, electricity, and magnetism, thermal physics, optics, and modern physics. This is the second course in a sequenceof three: Ph 201, Ph 202, and Ph 203 and must be taken in sequence.
Prerequisite: Ph 201 or Ph 231 . Corequisite: Ph 215.

## Ph 203 -General Physics (4)

Introductory physics for science majors. The student will explore topics in physics including Newtonian mechanics, electricity, and magnetism, thermal physics, optics, and modern physics. This is the third course in a sequence of three: Ph 201, Ph 202, and Ph 203 and must be taken in sequence.
Prerequisite: Ph 202 or Ph 232 . Corequisite: Ph 216.

## Ph 211 - General Physics (with Calculus) I(4)

Introductory physics for students majoring in science and engineering. The student will explore statics and dynamics using the methods of calculus. This is the first course in a sequence of three: $\mathrm{Ph} 211, \mathrm{Ph} 212$, and Ph 213 and must be taken in sequence.
Prerequisite: Mth 251. Corequisite: Ph 214.

## Ph 212 - General Physics (with Calculus) II (4)

Introductory physics for students majoring in science and engineering. The student will explore topics in electricity and electromagnetismusing the methods of calculus. This is the second course in a sequence of three: $\mathrm{Ph} 211, \mathrm{Ph}$ 212, and Ph 213 and must be taken in sequence.

Prerequisite: Ph 211 and Mth 252. Corequisite: Ph 215.

## Ph 213 - General Physics (with Calculus) III (4)

Introductory physics for students majoring in science and engineering. The student will explore topics in thermodynamics, and optics using the methods of calculus. This is the third course in a sequence of three: $\mathrm{Ph} 211, \mathrm{Ph}$ 212, and Ph 213 and must be taken in sequence.
Prerequisite: Ph 212 and Mth 252. Corequisite: Ph 216.
Ph 214 -Lab for Ph 201 or Ph 211 or Ph 221 or Ph 231 (1)

Introductory laboratory forstudents in General Physics (with Calculus). This is the first lab in a sequence of three: $\mathrm{Ph} 214, \mathrm{Ph} 215$, and Ph 216 . One 3-hour laboratory period.
Prerequisite: Concurrent enrollment in $\mathrm{Ph} 201, \mathrm{Ph} 211, \mathrm{Ph}$ 221, or Ph 231.

Ph 215 - Lab for Ph 202 or Ph 212 or Ph 222 or Ph 232 (1)

Introductory laboratory for students in General Physics (with Calculus). This is the second lab in a sequence of three: Ph 214, Ph 215, and Ph 216. One 3-hour laboratory period.
Prerequisite: Concurrent enrollment in $\mathrm{Ph} 202, \mathrm{Ph} 212, \mathrm{Ph}$ 222, or Ph 232.

## Ph 216 - Lab for Ph 203 or Ph 213 or Ph 223 or Ph 233

 (1)Introductory laboratory for students in General Physics (with Calculus). This is the third lab in a sequence of three: Ph 214, Ph 215, and Ph 216. One 3-hour laboratory period.
Prerequisite: Concurrent enrollment in Ph 203 , Ph 213 , Ph 223, or Ph 233.

## Ph 221 - General Physics (with Calculus) I(3)

Introductory physics for students majoring in engineering. The student will explore topics in statics and dynamics using the methods of calculus. This is the first course in a sequence of three: $\mathrm{Ph} 221, \mathrm{Ph} 222$, and Ph 223 and must be taken in sequence.
Prerequisite: Mth 251. Corequisite: Ph 214.
Ph 222 - General Physics (with Calculus) II (3)
Introductory physics for students majoring in engineering. The student will explore topics in electricity and electromagnetismusing the methods of calculus. This is the second course in a sequence of three: $\mathrm{Ph} 221, \mathrm{Ph} 222$, and Ph 223 and must be taken in sequence.
Prerequisite: Ph 221 and Mth 252. Corequisite: Ph 215.

## Ph 223 - General Physics (with Calculus) III (3)

Introductory physics for students majoring in engineering. The student will explore topics in thermody namics, and optics using the methods of calculus. This is the third course in a sequence of three: $\mathrm{Ph} 221, \mathrm{Ph} 222$, and Ph 223 and must be taken in sequence.

Prerequisite: Ph 222 and Mth 252. Corequisite: Ph 216.

## Ph 231 - General Physics I with Life Science and Medical Applications (4)

This is a generalphysics course with a focus on life science and medical applications. In Ph 231 students explore mechanics. This is the first course in a sequence of three: Ph 231 , Ph 232 , and Ph 233 and it is recommended they be taken in this order.
Prerequisite: MTH 111 or Mth 251 or Aleks Placement Test score 76 or higher. Corequisite: Ph 214.

## Ph 232 -General Physics II with Life Science and Medical Applications (4)

This is a general physics course with a focus on life science and medical applications. In Ph 232 students explore fluids and electromagnetis $m$. This is the second course in a sequence of three: $\mathrm{Ph} 231, \mathrm{Ph} 232$, and Ph 233 and it is recommended they be taken in this order.
Prerequisite: Ph 201 or Ph 231. Corequisite: Ph 215.
Ph 233 - General Physics III with Life Science and Medical Applications (4)
This is a general physics course with a focus on life science and medical applications. In Ph 233 students explore thermodynamics, waves and optics. This is the third course in a sequence of three: $\mathrm{Ph} 231, \mathrm{Ph} 232$, and Ph 233 and it is recommended they be taken in this order.
Prerequisite: Ph 202 orPh 232. Corequisite: Ph 216.
Ph 234 -Lab for General Physics I with Life Science and Medical Applications (1)
This is a general physics lab course with a focus on life science and medical applications. Students conduct lab exercises exploring mechanics and thermalphysics. This is the first course in a sequence of three: Ph 234, Ph 235, and Ph 236 and it is recommended they be taken in this order.
Prerequisite: Mth 112 or Aleks Placement Test at $75 \%$. Corequisite: Ph 231.
Ph 235 -Lab for General Physics II with Life Science and Medical Applications (1)
This is a general physics lab course with a focus on life science and medical applications. Students conduct lab exercises exploring fluids and electromagnetism. This is the second course in a sequence of three: Ph 234, Ph 235, and Ph 236 and it is recommended they be taken in this order.
Prerequisite: Mth 112 or Aleks Placement Test at $75 \%$. Corequisite: Ph 232.

## Ph 236 -Lab for General Physics III with Life Science and Medical Applications (1)

This is a general physics lab course with a focus on life science and medical applications. Students conduct lab exercises exploring waves andoptics. This is the third course in a sequence of three: $\mathrm{Ph} 234, \mathrm{Ph} 235$, and Ph 236 and it is recommended they be taken in this order.
Prerequisite: Mth 112 or Aleks Placement Test at $75 \%$. Corequisite: Ph 233.
Ph 274 - Workshopfor PH 231 General Physics I with Life Scienceand Medical Applications (1)
Optional peer-led problem-solving sessions designed to promote the success of students in $\mathrm{Ph} 231, \mathrm{Ph} 232$, Ph 233

General Physics with Life Science and Medical Applications sequence.
Corequisite: Concurrent enrollment in Ph 231 required.
Ph 275 - Workshopfor PH 232 General Physics II with Life Scienceand Medical Applications (1)

Optional peer-led problem-solving sessions designed to promote the success of students in Ph 231, Ph 232, Ph 233 General Physics with Life Science and Medical Applications sequence.
Corequisite: Concurrent enrollment in Ph 232 required.
Ph 276 - Workshopfor PH 233 General Physics III with Life Science and Medical Applications (1)

Optional peer-led problem-solving sessions designed to promote the success of students in Ph 231 , Ph 232 , Ph 233 General Physics with Life Science and Medical Applications sequence.
Corequisite: Concurrent enrollment in Ph 233 required.

## Ph 284 - Workshopfor Ph 201 General Physics (1)

Optional peer-led problem-solving sessions designed to promote the success of students in Ph 201, Ph 202, Ph 203 general physics sequence. Concurrent enrollment: corresponding lecture course $\mathrm{Ph} 201, \mathrm{Ph} 202$, Ph 203. Pass/nopass only.
Prerequisite: Concurrent enrollment in Ph 201.
Ph 285 - Workshopfor Ph 202 General Physics (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ph 201, Ph 202, Ph 203 generalphysics sequence. Concurrent enrollment: corresponding lecture course Ph 201, Ph 202, Ph 203. Pass/nopass only.
Prerequisite: Concurrent enrollment in Ph 202.
Ph 286 - Workshopfor Ph 203 General Physics (1)
Optional peer-led problem-solving sessions designed to promote the success of students in Ph 201, Ph 202, Ph 203 general physics sequence. Concurrent enrollment: corresponding lecture course $\mathrm{Ph} 201, \mathrm{Ph} 202$, Ph 203. Pass/nopass only.
Prerequisite: Concurrent enrollment in Ph 203.
Ph 294 - Workshopfor Ph 211/221 General Physics (with Calculus) (1)
Optional peer-led problem-solving sessions designed to promote the success of students in $\mathrm{Ph} 211, \mathrm{Ph} 212, \mathrm{Ph} 213$ OR Ph 221, Ph 222, Ph 223 general physics sequence. Concurrent prerequisite: corresponding lecture course Ph 211 orPh 221, Ph 212 or Ph 222, Ph 213 or Ph 223. Pass/nopass only.
Prerequisite: Concurrent enrollment in Ph 211 or Ph 221.

## Ph 295 - Workshopfor Ph 212/222 General Physics (with Calculus) (1)

Optional peer-led problem-solving sessions designed to promote the success of students in $\mathrm{Ph} 211, \mathrm{Ph} 212, \mathrm{Ph} 213$ OR Ph 221, Ph 222, Ph 223 general physics sequence. Concurrent prerequisite: corresponding lecture course Ph 211 or Ph 221, Ph 212 or Ph 222, Ph 213 or Ph 223. Pass/no pass only.
Prerequisite: Concurrent enrollment in Ph 212 or Ph 222.

## Ph 296 - Workshopfor Ph 213/223 General Physics (with Calculus)(1)

Optional peer-led problem-solving sessions designed to promote the success of students in $\mathrm{Ph} 211, \mathrm{Ph} 212, \mathrm{Ph} 213$
OR Ph 221, Ph 222, Ph 223 general physics sequence. Concurrent prerequisite: corresponding lecture course Ph 211 or Ph 221, Ph 212 or Ph 222, Ph 213 or Ph 223. Pass/nopass only.
Prerequisite: Concurrent enrollment in Ph 213 or Ph 223.

## Ph 299 -Special Studies (1-8)

(Credit to be arranged.)

## Ph 311 - Introduction to Modern Physics I (4)

The revolution in the concepts of physics in the early 20th century. Quanta, black-body radiation, relativity, Bohr's theory of the atom. Introduction to quantummechanics. This is the first course in a sequence of two: Ph 311 and Ph 312 and must be taken in sequence. Expected preparation: Mth 253.
Prerequisite: Mth 252, Ph 203 or Ph 213.

## Ph 312 - Introduction to Modern Physics II (4)

The revolution in the concepts of physics in the 20th century. Radioactivity, introduction to quantum mechanics. Atomic, molecular spectroscopy, periodic table. Introduction to nuclear and solid state physics, and elementary particles. This is the second course in a sequence of two: Ph 311 and Ph 312 and must be taken in sequence.
Prerequisite: Ph 311.

## Ph 314 -Experimental Physics I(4)

Experiments in electrical measurements, digital logic circuits with applications to experimental control and computer interfacing, and analog circuits. Two 3-hour lab periods. This is the first course in a sequence of three: Ph 314, Ph 315 and Ph 316.

## Ph 315 - Experimental Physics II(4)

Experiments in electrical measurements, digitallogic circuits with applications to experimental control and computer interfacing, and analog circuits. Two 3-hour lab periods. This is the second course in a sequenceof three: Ph 314, Ph 315 and Ph 316.

## Ph 316 - Experimental Physics III (4)

Students will performseveral experiments illus trating quantumand relativistic effects. The emphasis will be on computer-assisted experimentation and data analysis. Experiments will include instrumentation and counting in nuclear physics, measurement of band gap in semiconductors, meas urement of ratio of electron charge to electron mass, speed of light, Frank-Hertzexperiment and electron spin resonance. Two 3-hour laboratory periods. This is the third course in a sequence of three: $\mathrm{Ph} 314, \mathrm{Ph}$ 315 and Ph 316 . Expected preparation: Ph 311.

## Ph 319 - SolidState Physics for Engineering Students

 (4)Survey of solid state physics including topics necessary for understanding crystalline solids and their electron transport processes. Topics includecrystal lattices, x-ray diffraction, concepts of quantumphysics, the Schrodinger equation, electron tunneling, physical statistics, the free electron theory of metals, periodic potentials, semiconductors, and superconductors. Recommended prerequisite: Ph 213 or 223.

## Ph 321 - Current Electricity (4)

Electric potential and current; Kirchoff's Laws and equivalent circuits. Transient and A.C. behavior of circuit elements. Theory of operation of diodes and transistors. Recommended prerequisites: Ph 203 or 213; concurrent enrollment in Ph 314.

Corequisite: Ph 314.

## Ph 322 - Computational Physics (4)

Formulation and numerical solution of physics problems. Use of computers and graphical dis plays to enhance intuition and supplement analytical procedures. Approaches to complexphysical situations, especially those involving dissipative, nonlinear and stochastic phenomena. Recommended prerequisite: Working knowledge of at least one computer language.

## Ph 331 - Physics of Music (4)

A series of lectures and laboratories illustrating the basic principles of acoustics and their application to string, wind,
brass, and percussion/instruments. Some of the laboratory exercises are adaptable for use in primary and secondary school classes. Recommended prerequisite: one year of music, or one year of a physical science.

## Ph 333U- Weather (4)

Introductory course in the atmospheric environment providing a comprehensive unders tanding of atmospheric structure and the changes overtime that result in the weather we experience. Topics include: atmospheric moisture (fog, rain, clouds), atmos pheric stability and cloud development, air pres sure and winds, air masses and fronts, and hurricanes and tornadoes. This course is the same as Geog 333U; course may be taken only once for credit. Recommended: upper division standing or Geog 210.

Cross-Listed as: Geog 333U.

## Ph 335U - Wacky or Real: What Everyone Should Know About Physics Scams (4)

The use and misuse of physics: beginning with a firm understanding of the strengths and weaknesses of the scientific method, analyzes how people veer away fromit, resulting in pathological, junk, pseudo and fraudulent physics. Examples such as magnetic therapy, perpetual motion, ESP, X-ray cures, and astrology are included. Recommended prerequis ites: upper division standing.

## Ph 337 -Physics in Biomedicine (4)

The physics behind the most important medical instruments and technologies. A wide range of concepts from electromagnetism, optics, to quantummechanics are used to explain the mechanisms behindultrasound, endoscopy, optical microscopy, EKG, pacemaker, defibrillators,LASER eye surgery, microscopy, x-ray, radiation, CAT scan, PET scan, MRI, and more. Expected preparation: $\mathrm{Ph} 201,203$ or Ph 101, 102.

## Ph 353U- Radiation in the Environment (4)

Examines sources of radiation and the hazards they represent. Students will explore the interaction of radiation with matter, including living tissue, and examine dos age and risk assessment. Topics include: fundamentals of electromagnetic radiation, nuclei and radioactive decay; cosmic background radiation and radon gas; nuclear chain reactions and atomic weapons; nuclear power generation, waste disposal and nuclear dis asters; medical x-rays and non-ionizing radiation frommicrowaves and cellular phones.

Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as Sci353U and may be taken only once for credit.

## Ph 361U- General Astronomy I (4)

An introduction to the history of astronomy, the nature of light, telescopes, and an examination of the Earth and other planets both within and outside of the solar system. Emphasis on basic scientific methods, including relationships found through ratios, powers, and a few square roots. Includes laboratory. This is the first course in a sequence of two: Ph 361 U and Ph 362 U .

Cross-Listed as: Sci315U.

## Ph 362U - General Astronomy II (4)

Survey of the sun, stars, black holes, galaxies, and the role of women in the study of cosmic evolution and structure. Emphasis on basic scientific methods, including relationships found through ratios, powers, and a few square roots. Includes laboratory. This is the second course in a sequence of two: Ph 361 U and Ph 362 U .

Cross-Listed as: Sci316U.

## Ph 365 - Fractals, Chaos, and Complexity (4)

Introduction to the basic physical ideas behind fractals in nature, chaos, complexity, and other current concepts in physics, with emphasis on fractals and chaos. Computer simulations and desktop experiments involving fractals, chaos, and complex systems. Recommended prerequisite: astronomy, general physics, or Natural Science Inquiry.

## Ph 366U-Complexity and the Universe I (4)

Introduction to the basic physical ideas behind complexity and other current concepts in physics. Computer simulations and desktop experiments involving fractals, chaos, and complex sy stems. Includes laboratory and/or fieldwork. Recommended prerequisite: general physics or Natural Science Inquiry.

## Ph 367U-Complexity and the Universe II (4)

Continuation of Sci318/Ph 366. Emphasizes scientific cosmology with a focus on understanding how insights gained fromphysics and astronomy affect your view of the universe and your place in it. Students participate actively in seeing how some of the information was gathered, to help critically analyze what to believe about the history and arrangement of the universe and what it means to them. Includes laboratory and/or fieldwork. Recommended prerequisite: as tronomy, generalphysics, or Natural Science Inquiry.

## Ph 371 -Fractals, Chaos, Complexity, and Other Current Topics in Physics (4)

Introductory survey to current concepts in fractals in the natural world, chaos, complexity, and other related topics in physics. Computer simulations and the use of microcomputers, desktop experiments are an essential part of the course. Recommended prerequisite: one year of general physics.

## Ph 375U - Climate Change and Human Life (4)

An introduction to the global environment and how human activities are causing climatic changes, ozone depletion, and deforestation. Emphasizes the interrelationship between environmental processes. Deals with the qualitative aspects of how the earth's climate works, how it can be altered by burning of fossil fuels (emis sions of carbon dioxide) and by the increasing concentrations of other "greenhouse gases"; how the ozone layer can be depleted by man-made chemicals, and what is being done, or can be done to avert the undesirable consequences of these global changes.

## Ph 378U-Science Through Science Fiction (4)

This class uses sciencefiction literature to examine a wide variety of topics in science. Recommended prerequisites: as tronomy, general physics, orNatural Science Inquiry. Also listed as Sci355; course may be taken only once for credit.

## Ph 382U- Introduction to Nanoscience and Nanotechnology (4)

Basic introduction to nanoscience and nanotechnology for all interested science, en gineering and social science and humanities students. This is the same course as Sci382U and may be taken only once for credit.

Cross-Listed as: Sci 382 U .

## Ph 384 -From Contemporary Nanoscience Towards Sustainable Nanotechnologies (4)

Provides an overview of nanoscience/technology, its interdisciplinarity, how it complements biomedical, engineering, economic, and environmental studies and gives students an appreciation of why "soft" machines are favored over "hard" machines. As second part of Ph 382U (cross listedSci382U), it provides a scientific/technological basis for sustainable future technology developments.

Cross-Listed as: This is the same course as Sci 384 and may be taken only once for credit. .

## Ph 399 - Special Studies (0-6)

(Credit to be arranged.)

## Ph 401 - Research (1-6)

(Credit to be arranged.) Consent of instructor.

## Ph 402 - Independent Study (1-9)

(Credit to be arranged.)

Ph 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

## Ph 405 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

Ph 406 -Special Projects (0-9)
(Credit to be arranged.) Consent of instructor.

## Ph 407 - Seminar (0-6)

(Credit to be arranged.) Consent of instructor.

## Ph 408 - Workshop(1-12)

(Credit to be arranged.)

## Ph 410 - SelectedTopics (1-6)

(Credit to be arranged.) Consent of instructor.

## Ph 411 - Introduction to Quantum Mechanics (4)

An introduction to the formulation and application of wave mechanics; the Schrodingerequation and its application to time-independent problems (both one- and threedimensional problems); identical particles; approximation methods including mainly time-independent perturbations. Brief exploration of the potential applications of quantum mechanics to engineering: quantumnano-structures and quantumcomputers. Expected preparation: Ph 318 or 311, Mth 256.

Also offered for graduate-level credit as Ph 511 and may be taken only oncefor credit.

## Ph 412 - Quantum Mechanics II (4)

Introduction to the three-dimensional Schrodinger equation and applications such as band theory, selection rules, and molecules. The first half of the course will focus on exactly solvable models and analytic solutions. The second half will emphasize approximation methods in quantum mechanics, including perturbation theory, the variational principle, and the WKB approximation. The use of scientific software and modeling to solve quantum mechanical problems will be emphasized.
Also offered for graduate-level credit as Ph 512 and may be taken only once forcredit. Prerequisite: $\mathrm{Ph} 411, \mathrm{Ph} 311$, and Mth 256.

## Ph 413 - Introduction to SolidState Physics (4)

Experimental and theoretical survey of the lattice and electronic properties of solids with particularemphasis on the properties of electrons in semiconductors and modern materials. Expected preparation: Ph 411 or Ph 312.

Also offered for graduate-level credit as Ph 513 and may be taken only once forcredit. .Prerequisite: Upper division standing.

## Ph 415 - Experimental Optics (3)

Advanced experiments in physical optics. One 4-hour laboratory period. Expected preparation: Ph 203 or Ph 213.
Also offered for graduate-level credit as Ph 515 and may be taken only once for credit. .

## Ph 424 - Classical Mechanics I (4)

The Newtonian formulation of mechanics. Kinematics and dynamics of particles in inertial and accelerated reference frames. Conservation principles. Centralforces, gravitation, and celestial mechanics. Free and forced vibrations. Recommended prerequisites: Ph 203 or 213; Mth 256 previously or concurrently.

## Ph 425 - Classical Mechanics II (4)

Advanced formulation of mechanics. Lagrange's and Hamilton's equations. The inertial tensor, free rotations, and rigid body dy namics. Theory of small oscillations, coupled oscillations and normal modes. Expected preparation: Ph 424 and Mth 256.
Also offered for graduate-level credit as Ph 525 and may be taken only once forcredit. .

## Ph 426 - Thermodynamics and Statistical Mechanics (4)

Concepts of temperature, work, and heat; first and second laws of thermodynamics and applications; thermodynamic potentials; heat engines, Carnot cycle, and ideal gases; entropy and its statistical interpretation; kinetic theory of gases; classical and quantumstatistics; introduction to
statistical mechanical ensembles. Expected preparation: Ph 203 or Ph 213 , Mth 254, and Ph 311.

Also offered for graduate-level credit as Ph 526 and may be taken only once for credit. .

## Ph 431 - Electricity and MagnetismI (4)

Advanced study of electricity and magnetismcovering field and potentialof charge arrays, electrostatic field energy, images, multipoles, Laplace's equation, Biot-Savart and Ampere's laws, magnetic field energy, vector potential, displacement current, dielectrics and their microscopic models, electromagnetic wave equations, boundary conditions, energy radiation, magnetic materials and their microscopic models. This is the first course in a sequence of two: Ph 431 and Ph 432 . Expected preparation: Ph 312 and Mth 256.

Also offered for graduate-level credit as Ph 531 and may be taken only once for credit. .

## Ph 432 - Electricity and Magnetism II (4)

Advanced study of electricity and magnetismcovering field and potentialof charge arrays, electrostatic field energy, images, multipoles, Laplace's equation, Biot-Savart and Ampere's laws, magnetic field energy, vector potential, displacement current, dielectrics and their microscopic models, electromagnetic wave equations, boundary conditions, energy radiation, magnetic materials and their microscopic models. This is the second course in a sequence of two: Ph 431 and Ph 432 . Expected preparation: Ph 312 and Mth 256.
Also offered for graduate-level credit as Ph 532 and may be taken only once for credit. .

## Ph 434 - Methods of Mathematical Physics (4)

A survey of methods of applied mathematics used in modern physics, to include: vectors, matrices, operators, and eigen values; perturbation theory and series expansion; variation and optimization; numericalmethods; transforms; and special functions. Expected preparation: Ph 312 and Mth 256.
Also offered for graduate-level credit as Ph 534 and may be taken only once for credit. .

## Ph 440 - Physics of SolidState Devices (4)

This is a survey intended to provide the foundation neces sary for understanding of function, technology and design of solid state devices, rather than their application. Topics will include: introduction to and application of concepts of quantumphysics to solids, effect of periodicity in solids on electron energy states, electron statistics, metals, insulators, semiconductors and superconductors, thermionic and field ass isted electron emission, electron scattering and mobility of charge carriers, intrinsic and extrins ic semiconductors, quantitative treatment of $p-n$ junction, diffusion and recombination of excess carriers,
quantitative treatment of electron injection, majority and minority components of the junction current, breakdown, quantitative treatments of bipolar junction transistor, field effect transistor and tunnel diodes, physics of metalsemiconductor and metal-insulator-semiconductor junctions and devices, superconductivity and superconducting devices, DC and AC Josephson effects, Josephson junctions, superconductive quantum interference devices. This is the first course in a sequence of two: Ph 440 and Ph 441. Expected preparation: Ph 312 or Ph 318.

Also offered for graduate-level credit as Ph 540 and may be taken only once forcredit. .

## Ph 441 -Physics of SolidState Devices (4)

This is a survey intended to provide the foundation necessary for understanding of function, technology and design of solid state devices, rather than their application. Topics will include: introduction to and application of concepts of quantumphysics to solids, effect of periodicity in solids on electron energy states, electron statistics, metals, insulators, semiconductors and superconductors, thermionic and field assistedelectron emis sion, electron scattering and mobility of charge carriers, intrinsic and extrinsic semiconductors, quantitative treatment of $p-n$ junction, diffusion and recombination of excess carriers, quantitative treatment of electron injection, majority and minority components of the junction current, breakdown, quantitative treatments of bipolar junction transistor, field effect transistor and tunnel diodes, physics of metalsemiconductor and metal-insulator-semiconductor junctions and devices, superconductivity and superconducting devices, DC and AC Josephson effects, Josephson junctions, superconductive quantum interference devices. This is the second course in a sequence of two: Ph 440 and Ph 441 . Expected preparation: Ph 312 or Ph 318.
Also offered for graduate-level credit as Ph 541 and may be taken only once for credit. .

## Ph 445 -Microelectronic Device Fabrication I (4)

The first part of the series includes crystal growth, crystal structure, wafer preparation, ion implantation, doping and diffusion, oxidation, defects, heterogeneous chemical reactions, thermodynamics and kinetics of basic processes such as diffusion and oxidation. These concepts are applied bothto IC and photovoltaic devicefabrication. Realistic process flows, physical metrology, device structure, electrical beh avior and their trade-offs are discussed. Extension and limitation of "top-down" processing to fabrication of nanoscale structures such as nano-rods, nano-wires, etc., and application of these to devices are also introduced.
Also offered for graduate-level credit as Ph 545 and may be taken only once for credit. .Prerequisite: Ph 314or consent of instructor.

## Ph 446 - Microelectronic Device Fabrication II (4)

The emphasis of second part of this seroes is on metallization, dielectrics, and multilevel interconnects. Metallization is sues discussed will include silicides, barrier layers, interconnects, multilevel metallization architecture, and low-k dielectrics. This is be followed by discussion of deposition and properties of various dielectric films. Epitaxial growth and properties of SOI and SiGe devices are also covered. In all these discussions, physics related to fabrication of nanoscale devices and special effects that come into play at these dimensions will be examined. Assignments will include computer simulations of device fabrication (i.e., virtual fab software).
Also offered for graduate-level credit as Ph 546 and may be taken only once for credit. . Prerequisite: Ph 445 or Ph 545 or consent of instructor.

## Ph 447 - Microelectronic Device Fabrication III (4)

The third part of this series starts with the techniques required to pattern the nanoscale structures on wafers. These techniques include electron beam, x-ray, EUV, and photolithography, including discussion of resist technology. This is followed by methods to produce these structures using wet and dry methods. Discussion of dry processing includes fundamentals and applications of plas mas for etching and deposition (e.g., high-density plasmas), including plasma damage. The limitations of fabrication and operation of nano-scale devices are discussed. Special project for this class will involve fabrication of a virtual device (bipolar junction transistor) with specified electrical performance parameters using the virtual fab software.

Also offered for graduate-level credit as Ph 547 and may be taken only once for credit. . Prerequisite: Ph 446 or Ph 546 or consent of instructor.

## Ph 451 -Electron Microscopy (4)

Electron optics theory, specimen preparation and experimental work with trans mis sion and scanning electron microscopes, Microchemical analysis with an energy dispersive spectrometer. Specimens from all the sciences. Two lectures, one 3-hour laboratory period. This is the first course in a sequence of two: Ph 451 and Ph 452. Expected preparation: one year of general physics and one yearof any otherscience.
Also offered for graduate-level credit as Ph 551 and may be taken only once for credit. .

## Ph 452 - Electron Microscopy (4)

Electron optics theory, specimen preparation and experimental work with trans mis sion and scanning electron microscopes, Microchemical analysis with an energy dispersive spectrometer. Specimens fromall the sciences. Two lectures, one 3 -hour laboratory period. This is the second course in a sequence of two: Ph 451 and Ph
452. Expected preparation: one year of general physics and one year of any other science.
Also offered for graduate-level credit as Ph 552 and may be taken only once for credit. .

## Ph 464 - Applied Optics (4)

An overview of optics and such principal application as fiberoptics; chemical, biological, and physical sensors; optical information processing, acousto-optics; lasers and detectors. This course is the same as ECE594; coursemay only be taken once for credit. Expected preparation: Ph 203 or Ph 213 or Ph 223, Mth 254.
Also offered for graduate-level credit as Ph 564 and may be taken only once for credit. .

## Ph 471 -Physical and Human Dimensions of Climate Change (4)

A holistic course on global change scienceconnecting atmospheric change, climate theory and the human response to global warming. Lays a foundation for understanding the complexissues of climatic change, its linkages and feedbacks. Policy options to manage the climate are examined using models, their predictions, and uncertainties.

Also offered for graduate-level credit as Ph 571 and may be taken only once forcredit. Prerequisite: $\mathrm{Ph} 211, \mathrm{Ph} 212$, Ph 213, Mth 251, Mth 252, Mth 253. Cross-Listed as: ESM 471.
Ph 472 - Introduction to Nonlinear Dynamics and Chaos (4)

Introduction to basic theoretical and experimental tools to study chaos and nonlinear behavior. Desktop experiments and computer simulations of chaotic systems. Expected preparation: one year of general physics.

Also offered for graduate-level credit as Ph 572 and may be taken only once forcredit.

## Ph 473 - Alternative Energies (4)

Starting with a review of global energy trends, this course will cover the major resources of alternative energies (hydropower, wave, tidal and wind energy, solarenergy, nuclear fis sion and fusion), their characteristics, utilization and technology as well as environmental and public impact. Special attention will be given to photovoltaics and solarcell technology. Market developments will also be analyzed based on simple models.
Also offered for graduate-level credit as Ph 573 and may be taken only once forcredit. .Prerequisite: Ph 213 or Ph 223.

## Ph 475 -Stellar Astronomy Online for Educators (4)

Class will acces s online materials in stellar as tronomy education to help current and prospective science teachers
update their knowledge of recent developments in as tronomy. Expected preparation: oneyear of general physics.
Also offered for graduate-level credit as Ph 575 and may be taken only once for credit. .

## Ph 476 - Obs ervational Astronomy (2)

Emphasis on hands-on activities and the observation of our own night sky. Observation of planets, sun, moon, globular clusters, galaxies, and black holes. Observational techniques including the use of telescopes, binoculars, and photography will be covered. Observational field trip to an observatory at a dark sky site. Expected preparation: one year of general physics.
Also offered for graduate-level credit as Ph 576 and may be taken only once for credit. .

## Ph 477 - Air Pollution (4)

Air pollution meteorology needed to understand air pollution, at mospheric dis persion models, K-theory, box models and receptor models. Useof simple computer models. This course is a foundation for the quantitative understanding of air pollution: At any point in the environment(receptor), how much pollution is caused by a known source? If there are many sources, how much pollution does each source contribute at a receptor? Expected preparation: Ph 213 or Ph 223 , one year of calculus, introductory course in differential equations.
Also offered for graduate-level credit as Ph 577 and may be taken only once for credit. .
Ph 481 - Introduction to Nano(materials)-Scienceand Engineering (4)
An introduction to nano(materials)-science andengineering for students in physics, chemistry, geology, electrical and computer engineering, and mechanical and materials engineering. Nanoscale processes and devices and their applications. Expected preparation: two specific advanced upper division science courses dependent on major, or consent of ins tructor.
Also offered for graduate-level credit as Ph 581 and may be taken only once for credit. .

## Ph 490 - Cellular and Molecular Biophysics (4)

An introduction to the physical ideas and methods in the studies of biological phenomena, org anization, structure, and function at the cellular and molecular level. Atomic and molecular structures, energy and interacting forces relating to cellular and molecular biophysics will be discussed. This is the first course in a sequence of two: Ph 490 and Ph 491 . Expected preparation: Ph 203 , Bi 253, and Ch 223. Calculus, previously or concurrently, is recommended.

Also offered for graduate-level credit as Ph 590 and may be taken only once for credit. .

## Ph 491 - Cellular and Molecular Biophysics (4)

An introduction to the physical ideas and methods in the studies of biological phenomena, organization, structure, and function at thecellular and molecular level. Atomic and molecular structures, energy and interacting forces relating to cellular and molecular biophysics will be discussed. This is the second course in a sequence of two: Ph 490 and Ph 491 . Expected preparation: Ph 203 , Bi 253, and Ch 223. Calculus, previously or concurrently, is recommended.

Also offered for graduate-level credit as Ph 591 and may be taken only once forcredit. .

## Ph 495 -Materials Physics: Structure andPhysical Properties of Ordered and Disordered Condensed Matter (4)

Introduction to materials physics. Generalized geometricstructural crystallography is at the core of this field because it allows for the derivation of the physical properties of condensed matter. Crystallographic symmetries are treated as continuous features. Quantitative X-ray diffraction, crystal defects, textures, modulated structures, and quasicrystals are also discussed.

Also offered for graduate-level credit as Ph 595 and may be taken only onceforcredit. .Prerequisite: Ph 211, Ph 212, Ph 213, Ph 221, Ph 222, Ph 223, Ph 311, Ph 312, Ph 314, Ph 315, Ph 316, Ph 322, Ph 431, Ph 432, Ph 434, and their prerequisites; Mth251, Mth 252, Mth 253: Calculus I-III, Mth 256: Differential equations and multivariate calculus, Mth 261: Linear Algebra and their prerequisites.

## Ph 501 - Research (1-9)

(Credit to be arranged.) Consent of instructor.

## Ph 502 - Independent Study (1-6)

(Credit to be arranged.)

## Ph 503 -Thesis (1-9)

(Credit to be arranged.)

## Ph 504 -Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Ph 505 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Ph 506 -Special Projects (1-9)

(Credit to be arranged.) Consent of instructor.

## Ph 507 -Seminar (0-6)

(Credit to be arranged.) Consent of instructor.

## Ph 510 -Selected Topics (1-6)

(Credit to be arranged.) Consent of instructor.

## Ph 511 - Introduction to Quantum Mechanics (4)

An introduction to the formulation and application of wave mechanics; the Schrodingerequation and its application to time-independent problems (both one-and threedimensional problems ); identical particles; approximation methods including mainly time-independent perturbations. Brief exploration of the potential applications of quantum mechanics to engineering: quantumnano-structures and quantumcomputers. This course is the same as ECE 598 and may be taken only once for credit. Expected preparation: Ph 318 or 311, Mth 256.
Also offered for undergraduate-level credit as Ph 411 and may be taken only once for credit. Cross-Listed as: ECE 598.

## Ph 512 - Quantum Mechanics II (4)

Introduction to the three-dimensional Schrodinger equation and applications such as band theory, selection rules, and molecules. The first half of the course will focus on exactly solvable models and analytic solutions. The second half will emphasize approximation methods in quantum mechanics, including perturbation theory, the variational principle, and the WKB approximation. The use of scientific software and modeling to solve quantum mechanical problems will be emphasized. Expected preparation: Ph 434 or Mth 322.
Also offered for undergraduate-level credit as Ph 412 and may be taken only once for credit. Prerequisite: $\mathrm{Ph} 511, \mathrm{Ph}$ 311, and Mth 256.

## Ph 513 - Introduction to SolidState Physics (4)

Experimental and theoretical survey of the lattice and electronic properties of solids with particularemphasis on the properties of electrons in semiconductors and modern materials. Expected preparation: Ph 411 or Ph 312.
Also offered for undergraduate-level credit as Ph 413 and may be taken only once for credit. .

Ph 515 - Experimental Optics (3)
Advanced experiments in physicaloptics. One 4-hour laboratory period.

Also offered for undergraduate-levelcredit as Ph 415 and may be taken only once for credit. .

## Ph 525 - Classical Mechanics II (4)

Advanced formulation of mechanics. Lagrange's and Hamilton's equations. The inertial tensor, free rotations, and rigid body dy namics. Theory of s mall oscillations, coupled oscillations and normal modes.

Also offered for undergraduate-level credit as Ph 425 and may be taken only once for credit. .

## Ph 526 - Thermodynamics and Statistical Mechanics (4)

Concepts of temperature, work, and heat; first and second laws of thermodynamics and applications; thermodynamic potentials; heat engines, Carnot cycle, and ideal gases; entropy and its statistical interpretation; kinetic theory of gases; classical and quantumstatistics; introduction to statistical mechanical ensembles.
Also offered for undergraduate-levelcredit as Ph 426 and may be taken only once for credit. .

## Ph 531 -Electricity and MagnetismI (4)

Advanced study of electricity and magnetismcovering field and potential of charge arrays, electrostatic field energy, images, multipoles, Laplace's equation, Biot-Savart and Ampere's laws, magnetic field energy, vector potential, dis placement current, dielectrics and their microscopic models, electromagnetic wave equations, boundary conditions, energy radiation, magnetic materials and their microscopic models. This is the first course in a sequence of two: Ph 531 and Ph 532.

Also offered for undergraduate-levelcredit as Ph 431 and may be taken only once for credit. .

## Ph 532 -Electricity and MagnetismII (4)

Advanced study of electricity and magnetismcovering field and potential of charge arrays, electrostatic field energy, images, multipoles, Laplace's equation, Biot-Savart and Ampere's laws, magnetic field energy, vector potential, dis placement current, dielectrics and their microscopic models, electromagnetic wave equations, boundary conditions, energy radiation, magnetic materials and their microscopic models. This is the second course in a sequence of two: Ph 531 and Ph 532.
Also offered for undergraduate-level credit as Ph 432 and may be taken only once for credit. .

## Ph 534 -Methods of Mathematical Physics (4)

A survey of methods of applied mathematics used in modern physics, to include: vectors, matrices, operators, and eigenvalues; perturbation theory and series expansion; variation and optimization; numerical methods; transforms; and special functions.

Also offered for undergraduate-level credit as Ph 434 and may be taken only once for credit. .

## Ph 540 - Physics of SolidState Devices (4)

This is a survey intended to providethe foundation neces sary for understanding of function, technology and design of solid state devices, rather than their application. Topics will include: introduction to and application of concepts of quantumphysics to solids, effect of periodicity in solids on electron energy states, electron statistics, metals, insulators, semiconductors and superconductors, thermionic and field as sisted electron emis sion, electron scattering and mobility of charge carriers, intrinsic and extrinsic semiconductors, quantitative treatment of p-n junction, diffusion and recombination of excess carriers, quantitative treatment of electron injection, majority and minority components of the junction current, breakdown, quantitative treatments of bipolar junction transistor, field effect trans istor and tunnel diodes, physics of metalsemiconductor and metal-insulator-semiconductor junctions and devices, superconductivity and superconducting devices, DC and AC Josephson effects, Josephson junctions, superconductive quantum interference devices. This is the first course in a sequence of two: Ph 540 and Ph 541.
Also offered for undergraduate-level credit as Ph 440 and may be taken only once for credit. .

## Ph 541 - Physics of SolidState Devices (4)

This is a survey intended to provide the foundation neces sary for understanding of function, technology and design of solid state devices, rather than their application. Topics will include: introduction to and application of concepts of quantumphysics to solids, effect of periodicity in solids on electron energy states, electron statistics, metals, insulators, semiconductors and superconductors, thermionic and field as sisted electron emis sion, electron scattering and mobility of charge carriers, intrinsic and extrins ic semiconductors, quantitative treatment of p-n junction, diffusion and recombination of excess carriers, quantitative treatment of electron injection, majority and minority components of the junction current, breakdown, quantitative treatments of bipolar junction transistor, field effect trans istor and tunnel diodes, physics of metalsemiconductor and metal-insulator-semiconductor junctions and devices, superconductivity and superconducting devices, DC and AC Josephson effects, Josephson junctions, superconductive quantum. interference devices. This is the second course in a sequence of two: Ph 540 and Ph 541.
Also offered for undergraduate-level credit as Ph 441 and may be taken only once for credit. .

## Ph 545 - Microelectronic Devise Fabrication I (4)

The first part of the series includes crystal growth, crystal structure, wafer preparation, ion implantation, doping and
diffusion, oxidation, defects, heterogeneous chemical reactions, thermodynamics and kinetics of basic processes such as diffusion and oxidation. These concepts are applied bothto IC and photovoltaic devicefabrication. Realistic process flows, physical metrology, device structure, electrical behavior and their trade-offs are discussed. Extension and limitation of "top-down" processing to fabrication of nanoscale structures such as nano-rods, nano-wires, etc., and application of these to devices are also introduced.

Also offered for undergraduate-levelcredit as Ph 445 and may be taken only once for credit. .

## Ph 546 - Microelectronic Device Fabrication II (4)

The emphas is of second part of this seroes is on metallization, dielectrics, and multilevel interconnects. Metallization is sues discussed will include silicides, barrier layers, interconnects, multile vel metallization architecture, and low-k dielectrics. This is be followed by discussion of deposition and properties of various dielectric films. Epitaxial growth and properties of SOI and SiGe devices are also covered. In all these discussions, physics related to fabrication of nanoscale devices and specialeffects that come into play at these dimensions will be examined. Assignments will include computer simulations of device fabrication (i.e., virtual fab software).
Also offered for undergraduate-levelcredit as Ph 446 and may be taken only once for credit. .

## Ph 547 -Microelectronic Device Fabrication III (4)

The third part of this series starts with the techniques required to pattern the nanoscale structures on wafers. These techniques include electron beam, x-ray, EUV, and photolithography, including discussion of resist technology. This is followed by methods to produce these structures using wet and dry methods. Discussion of dry processing includes fundamentals and applications of plasmas foretching and deposition (e.g., high-density plasmas), including plasma damage. The limitations of fabrication and operation of nano-scale devices are discussed. Special project for this class will involve fabrication of a virtual device (bipolar junction transistor) with specified electrical performance parameters using the virtual fab software.

Also offered for undergraduate-level credit as Ph 447 and may be taken only once for credit. . Prerequisite: Ph 446 or Ph 546 or consent of instructor.

## Ph 551 - Electron Microscopy (4)

Electron optics theory, specimen preparation and experimental work with trans mis sion and scanning electron microscopes, Microchemical analysis with an energy dispersive spectrometer. Specimens fromall the sciences. Two lectures, one 3-hour laboratory period. This is the first course in a sequenceof two: Ph 551 and Ph 552.

Also offered for undergraduate-level credit as Ph 451 and may be taken only once for credit. .

## Ph 552 - Eectron Microscopy (4)

Electron optics theory, specimen preparation and experimental work with trans mis sion and scanning electron microscopes, Microchemical analysis with an energy dispersive spectrometer. Specimens fromall the sciences. Two lectures, one 3-hour laboratory period. This is the second coursein a sequence of two: Ph 551 and Ph 552.

Also offered for undergraduate-level credit as Ph 452 and may be taken only once for credit. .

## Ph 564 - Applied Optics (4)

An overview of optics and such principal application as fiberoptics; chemical, biological, and physical sensors; optical information processing, acousto-optics; lasers and detectors.
Also offered for undergraduate-level credit as Ph 464 and may be taken only once for credit. .Cross-Listed as:This course is the same as ECE 594 and may only be taken only once for credit.

## Ph 571 - Physical and Human Dimensions of Climate Change (4)

A holistic course on global change science connecting atmospheric change, climate theory and the human response to global warming. Lays a foundation for understanding the complexis sues of climatic change, its linkages and feedbacks. Policy options to manage the climate are examined using models, their predictions, and uncertainties.

Also offered for undergraduate-level credit as Ph 471 and may be taken only once for credit. Prerequisite: $\mathrm{Ph} 211, \mathrm{Ph}$ 212, Ph 213, Mth 251, Mth 252, Mth 253. Cross-Listed as: ESM 571.

## Ph 572 - Introduction to Nonlinear Dynamics and Chaos (4)

Introduction to basic theoretical and experimental tools to study chaos and nonlinear behavior. Desktopexperiments and computer simulations of chaotic systems. Expected preparation: one year of general physics.
Also offered for undergraduate-level credit as Ph 472 and may be taken only once for credit. .

## Ph 573 - Alternative Energies (4)

Starting with a review of global energy trends, this course will coverthe major resources of alternative energies (hydropower, wave, tidal and wind energy, solarenergy, nuclear fission and fusion), theircharacteristics, utilization and technology as well as environmental and public impact. Special attention will be given to photovoltaics and
solarcell technology. Market developments will als o be analyzed based on simple models.

Also offered for undergraduate-levelcredit as Ph 473 and may be taken only once for credit. .

## Ph 575 -Stellar Astronomy Online for Educators (4)

Class will access online materials in stellar as tronomy education to help current and prospective science teachers update their knowledge of recent developments in astronomy.
Also offered for undergraduate-level credit as Ph 475 and may be taken only once for credit. .

## Ph 576 - Observational Astronomy (2)

Emphasis on hands-on activities and the observation of our own night sky. Observation of planets, sun, moon, globular clusters, galaxies, and black holes. Observational techniques including the use of telescopes, binoculars, and photography will be covered. Observational field trip to an observatory at a dark sky site.
Also offered for undergraduate-level credit as Ph 476 and may be taken only once for credit. .

## Ph 577 - Air Pollution (4)

Air pollution meteorology needed to understand air pollution, atmospheric dispersion models, K-theory, box models and receptor models. Us eof simple computer models. This course is a foundation for the quantitative understanding of air pollution: At any point in the environment (receptor), how much pollution is caused by a known source? If there are many sources, how much pollution does each source contribute at a receptor?
Also offered for undergraduate-levelcredit as Ph 477 and may be taken only once for credit. .

## Ph 581 - Introduction to Nano(materials)-Scienceand Engineering (4)

An introduction to nano(materials)-science and engineering for students in physics, chemistry, geology, electrical and computer engineering, and mechanical and materials engineering. Nanoscale processes and devices and their applications.
Also offered for undergraduate-level credit as Ph 481 and may be taken only once for credit. .

## Ph 582 -Physical Metallurgy (2)

Introduction to principles of physical metallurgy. Includes the atomic and crystalographic structures of metals and alloys; defects in structure and the importance of them in determining the properties of metals; phase diagrams of alloy systems and examples of important sy stems; diffusion and phase transformations, emphasizing the solid state; plasticity and fracture of crystals; and corrosion. Recommended prerequisites: Ph 203, Ch 223.

## Ph 583 - Physical Metallurgy (2)

Introduction to principles of physical metallurgy. Includes the atomic and crystalographic structures of metals and alloys; defects in structure and the importance of themin determining the properties of metals; phase diagrams of alloy systems and examples of important systems; diffusion and phase transformations, emphasizing the solid state; plasticity and fracture of cry stals; and corrosion. Recommended prerequisites: Ph 203, Ch 223.

## Ph 584 - Physical Metallurgy Laboratory (1)

Experimental studies of the structure of metals by light microscope, X-ray diffraction, and microhardness techniques. Heat treatment of metals and studies of the resulting structural changes. Corequisite: concurrent enrollment in $\mathrm{Ph} 481,482,483$.

## Ph 585 - Experimental Methods in Applied Physics (4)

Introduction to modern instrumentation used in applied physics, focusing on nanoscience and materials, atmospheric physics, and biophysics, including theory and practice of the instruments. This is the first course in a sequence of two: Ph 585 and Ph 586.
Prerequisite: admis sion to Ph.D programin Applied Physics, M.S. in Physics, or ESR Ph.D programs.

## Ph 586 - Experimental Methods in Applied Physics (4)

Introduction to modern ins trumentation used in applied physics, focusing on nanoscience and materials, atmospheric physics, and biophysics, including theory and practice of the instruments. This is the second course in a sequence of two: Ph 585 and Ph 586.
Prerequisite: admis sionto Ph.D programin Applied Physics, M.S. in Physics, or ESR Ph.D programs.

## Ph 590 - Cellular and Molecular Biophysics (4)

An introduction to the physical ideas and methods in the studies of biological phenomena, org anization, structure, and function at the cellular and molecular level. Atomic and molecular structures, energy and interacting forces relating to cellular and molecular biophysics will be discussed. This is the first course in a sequence of two: Ph 590 and Ph 591.

Also offered for undergraduate-level credit as Ph 490 and may be taken only once for credit. .

## Ph 591 - Cellular and Molecular Biophysics (4)

An introduction to the physical ideas and methods in the studies of biological phenomena, org anization, structure, and function at the cellular and molecular level. Atomic
and molecular structures, energy and interacting forces relating to cellular and molecularbiophysics will be discussed. This is the second course in a sequence of two: Ph 590 and Ph 591.

Also offered for undergraduate-levelcredit as Ph 491 and may be taken only once for credit. .

## Ph 595 -Materials Physics: Structure andPhysical Properties of Ordered and Disordered Condensed Matter (4)

Introduction to materials physics. Generalized geometricstructural crystallography is at the core of this field because it allows for the derivation of the physical properties of condensed matter. Crystallographic symmetries are treated as continuous features. Quantitative X-ray diffraction, crystal defects, textures, modulated structures, and quasicrystals are also discussed.
Also offered for undergraduate-levelcredit as Ph 495 and may be taken only once for credit. . Prerequisite: Ph 211 , Ph 212, Ph 213, Ph 221, Ph 222, Ph 223, Ph 311, Ph 312, Ph 314, Ph 315, Ph 316, Ph 322, Ph 431, Ph 432, Ph 434, and their prerequisites; Mth 251, Mth 252, Mth 253:
Calculus I-III, Mth 256: Differential equations and multivariate calculus, Mth 261: Linear Algebra and their prerequisites.
Ph 601 - Research (1-12)
(Credit to be arranged.)

## Ph 602 - Independent Study (1-12)

(Credit to be arranged.)

## Ph 603 -Dissertation (1-16)

(Credit to be arranged.)

## Ph 604 -Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Ph 605 - Reading and Conference (1-9)

(Credit to be arranged.)

## Ph 606 -Special Problems/Projects (1-9)

(Credit to be arranged.)

## Ph 607 -Seminar (0-9)

(Credit to be arranged.)

## Ph 610 -SelectedTopics (1-9)

(Credit to be arranged.)

## Ph 617 - Quantum Mechanics (4)

A detailed discussion of the approximation models for solving the time-independent Schrödingerequation; scattering theory in terms of stationary unbound states; time-dependent theory including the perturbation method; the two-level problemand its application to laser operation. Dirac's formulation using bra and ket; different time-evolution pictures; concept of density matrices; Berry's phase; quantumtheory of angular momentum; Feynman's pathintegral formulation; introduction to relativistic quantummechanics; is sues on the fundamental aspects of quantummechanics including Bell's theorem, the EPR paradox, hidden-variable theory; and Schrödinger's cat problem. This is the first course in a sequence of three: $\mathrm{Ph} 617, \mathrm{Ph} 618$, and Ph 619.

Prerequis ite: $\mathrm{Ph} 411 / 511, \mathrm{Ph} 424$.

## Ph 618 - Quantum Mechanics (4)

A detailed discussion of the approximation models for solving the time-independent Schrödinger equation; scattering theory in terms of stationary unbound states; time-dependent theory including the perturbation method; the two-levelproblemand its application to laser operation. Dirac's formulation using bra and ket; different time-evolution pictures; concept of density matrices; Berry's phase; quantumtheory of angular momentum; Feynman's pathintegral formulation; introduction to relativistic quantummechanics; is sues on the fundamental aspects of quantummechanics including Bell's theorem, the EPR paradox, hidden-variable theory; and
Schrödinger's cat problem. This is the second course in a sequence of three: $\mathrm{Ph} 617, \mathrm{Ph} 618$, and Ph 619.

Prerequisite: $\mathrm{Ph} 411 / 511, \mathrm{Ph} 424$.
Ph 619 - Quantum Mechanics (4)
A detailed discussion of the approximation models for solving the time-independent Schrödingerequation; scattering theory in terms of stationary unbound states; time-dependent theory including the perturbation method; the two-levelproblemand its application to laser operation. Dirac's formulation using bra and ket; different time-evolution pictures; concept of density matrices; Berry's phase; quantumtheory of angular momentum; Feynman's path integral formulation; introduction to relativistic quantummechanics; is sues on the fundamental aspects of quantummechanics including Bell's theorem, the EPR paradox, hidden-variable theory; and
Schrödinger's cat problem. This is the third course in a sequence of three: $\mathrm{Ph} 617, \mathrm{Ph} 618$, and Ph 619.

Prerequisite: $\mathrm{Ph} 411 / 511, \mathrm{Ph} 424$.

## Ph 624 - Classical Mechanics (4)

Advanced treatment of analytical mechanics of particles, systems of particles, and rigid bodies. Methods of Lagrange, Hamilton, and Jacobi. Symmetry and conservation laws. This is the first course in a sequence of two: Ph 624 and Ph 625 . Recommended prerequisite: Ph 425.

## Ph 626 -Hydrodynamics (4)

The theory of fluids and continuous media. Equations of continuity, Euler's equation, flow fields, and applications. Recommended prerequisite: Ph 625.

## Ph 631 -Electromagnetic Fields and Interactions (4)

Classical description of the electromagnetic field: classical electron theory and plasmas. This is the first course in a sequence of three: $\mathrm{Ph} 631, \mathrm{Ph} 632$, and Ph 633 . This course is the same as ECE 635, 636, 637; course may only be taken once for credit.
Prerequisite: Ph 431. Cross-Listed as: ECE 635.

## Ph 632 -Electromagnetic Fields and Interactions (4)

Classical description of the electromagnetic field: classical electron theory and plasmas. This is the second course in a sequence of three: $\mathrm{Ph} 631, \mathrm{Ph} 632$, and Ph 633 . This course is the same as ECE 635, 636, 637; course may only be taken once for credit.
Prerequisite: Ph 431 . Cross-Listed as: ECE 636.
Ph 633 -Electromagnetic Fields and Interactions (4)
Classical description of the electromagnetic field: clas sical electron theory and plasmas. This is the third course in a sequence of three: $\mathrm{Ph} 631, \mathrm{Ph} 632$, and Ph 633 . This course is the same as ECE 635, 636, 637; course may only be taken once for credit.

Prerequisite: Ph 431. Cross-Listed as: ECE 637.

## Ph 664 -Statistical Mechanics (4)

Foundations of statistical mechanics and kinetic theory; statistical interpretation of thermodynamics; ensembles in classical and quantum systems; transport phenomena. This is the first course in a sequence of three: $\mathrm{Ph} 664, \mathrm{Ph} 665$, and Ph 666 . Recommended prerequisite: Ph 619 or 625.

## Ph 665 -Statistical Mechanics (4)

Foundations of statistical mechanics and kinetic theory; statistical interpretation of thermodynamics; ensembles in classical and quantum systems; transport phenomena. This
is the second course in a sequence of three: $\mathrm{Ph} 664, \mathrm{Ph}$ 665, and Ph 666. Expected Preparation: Ph 619 or Ph 625.

## Ph 679 - Advanced Atmospheric Physics (4)

Advanced course to provide a working knowledge of base models for studying global change including the greenhouse effect, global warming, stratospheric ozone depletion fromman-made chemicals, tropospheric chemistry of HO and O 3 and transport modeling. Recommended prerequisites: Ph 578.

PHE - Public Health Education
PHE 199 -Special Studies (1-4)
(Credit to be arranged.)

## PHE 215 - Why Public Health Needs Indigenous Values: Intro to Decolonizing Public Health (4)

As a gateway course of the OHSU-PSU undergraduate Indigenous Health Concentration, this foundational course will engage in concepts of Indigenous values, knowledge and perspectives and launch students into concepts of racial healing and racial justice for health equity. This course will introduce students to a decolonizing framework to advance health equity that centers on the strengths of Indigenous peoples.

PHE 250 - Our Community: Our Health (4)
Examines social, behavioral, and environmental community health-related issues and the controversies that surround them. This course will be a recommended prerequisite for all upper-division classes in the major.

## PHE 252 - First Aid (4)

Emergency care for various types of injuries: assessment, life threatening injuries, medical emergencies, and special situations. Additional training for childbirth and CPR for adult, infant, and child. Course leads to Red Cross certification.

## PHE 270 -Basic Biomechanics (2)

Designed to introduce the anatomical and mechanical principles of kinesiology and biomechanics and their influences upon human movement/physical activity to include; Fundamental principles of the anatomy related to the musculoskeletal systemto include; basic muscular
structure, functional anatomy of joints and basic principles of physics.

## PHE 275 - Stress Management (4)

An overview of the physiology of stress, stress triggers, assessment of stress, and stress management techniques and strategies.

## PHE 295 - Health Promotion/Disease Prevention (4)

Examines scientific literature regarding lifestyle choices that promote optimal health and functioning. Behaviors regarding self-protection, self-care, and health promotion are compared to recommendations emerging fromthis literature.

## PHE 299 -Special Studies (0-4)

(Credit to be arranged.)

## PHE 314 - Research in Health and Fitness (4)

Examines basic aspects of scientific research related to health and fitness. Topics include: reading and critically evaluating scientific research reports; reviewing interpretation of basic statistical analyses; investigating the fundamental skills for developing a research plan, including problemselection, literature review, instrumentation, ethics and sampling.

## PHE 315 - Justice in Public Health: The Epidemic of Missing andMurdered Indigenous Women \& Peoples (4)

Students will investigate the Mis sing Murdered Indigenous Women and People epidemic through a multi-layered decolonizing framework. They will study theory and praxis centered around his torical trauma fromcolonization, the long-termeffects of colonialism, and the social and system-level res ponses that serve to further disempower Indigenous women and girls and perpetuate the ongoing cycle of colonial violence against them. Students will also study critical healing and strengths-based approaches drawn from Indigenous values, experiences, and perspectives to address this critical is sue.

## PHE 320U - Health Ethics: Contemporary Issues (4)

Explores the theoretical, historical, and institutional contexts of health ethics across populations. Students will learn and apply practical skills to deconstruct and analyze ethical challenges across a continuumof health-related
topics fromthe clas sical cases through contemporary debates regarding our global social health, social justice, and related issues. This is the same course as PAH 320U and may be taken only once forcredit.
Cross-Listed as: PAH320U.

## PHE 321U - Introduction to Health Policy (4)

This course presents an overview of health policymaking and describes health policy at the state and federal levels. In addition to the policy process, special emphasis is placed on the role of health services and public health managers and other advocates, and the role they play in crafting policy. The course examines new developments in health policy as they are introduced during the duration of the course and follows themthroughout their journey.

## PHE 322U - Health Services Administration (4)

Understanding the functions of management and adminis tration is essential for anyone assuming adminis trative roles in health services delivery organizations (e.g., hospitals, clinics, and nonprofits). This course introduces the sixclassic management functions, and illus trates health services applications of topics such as strategic planning, risk management, working in/with teams, and changing trends in health care. Students will develop knowledge and the interdisciplinary skills needed to effectively work in adminis tration in various types of health services organizations.

## PHE 323U - Intro to Fat Studies (4)

This course will use a social justice and critical pedagogy approach to examine the impacts of weight bias (sizeis m) on individuals and society. We will center the voices and experiences of those living in larger bodies and use an intersectional lens to analyze how we can effectively impact social determinants of health and well-being. Current innovativechallenges to the weight bias paradigm will be explored along with ways that students can participate in this emerging movement.

## PHE 324 -Health Coaching Foundations (4)

Introduction to health and wellness coaching practice including helping and learning models, behavior change stage theories and evidence-based coaching modalities. Fundamentals of building effectivecoaching relationships including, developing rapport, nonviolent communication, appreciative inquiry, designthinking and generative moments. Students gain practical experience through live demonstrations and partner-coaching.

Prerequisite: PHE 250.

## PHE 325U - Nutrition for Health (4)

Examines basis for and quality of current nutritional requirements, standards, and guidelines. Studies evidence regarding current food fads and controversies. Analyzes personal dietary practices.

## PHE 326U- Drug Education (4)

Examines various approaches to drug education, harm reduction and treatment, while engaging students in furthering their own education on drugs and their impacts on the individual and society. Reviews current and controversial is sues, and innovative solution options.

## PHE 327U- Community Nutrition (4)

This course provides students with an understanding of community nutrition as a career. Course topics include programplanning, policies, resources, and is sues specific to community nutrition.

## PHE 328U-Health and Housing Across the Life Course (4)

Addresses social, cultural, and environmental forces on the relationships between health and housing throughout the life-course. Topics include health disparities in housing quality and type; interventions toimprove housing and neighborhood health; and international models of housing. Public and private strategies to prevent or solve housingrelated health problems will be emphasized.

## PHE 335U - Human Sexuality (4)

A survey of the psychological, phy siological, and behavioral as pects of human sexuality, with particular emphasis on the influenceof popular culture on these dimensions.

## PHE 340 - Motor Learning (4)

Introduction to the principles and practice of motor learning as applied to physical education, physical fitness and sports related activities. Examination of the fundamental process of learning and teaching human movement patterns. the learner, and the process of teaching movement skills.

## PHE 350 - Health and Health Systems (4)

An overview of the organization, financing, and delivery of health services in the United States, with particular
emphasis on analysis fromprofessional, organizational, community, and systems perspectives.

## PHE 351U - Film and Health (4)

Critically explores public health issues as they are portrayed in popular films and discusses the scientific, social, and political underpinnings of the public health is sues portrayed in these movies. Covers diseases such as AIDS, hemorrhagic fever, MS, cancer, leukemia, and multiple chemical sensitivity frombothbiomedical and socialperspectives. Guest speakers from the community will contribute to the discussion.

## PHE 354U - Social Gerontology (4)

Addresses the social andethical is sues, problems, policies, and programs thataffect thequality of life for our rapidly aging population. The interdisciplinary field of gerontology offers students theopportunity to integrate biological, psychological, and social theories of aging. Also examines the economic and political impacts of an aging society.

## PHE 355U - Consumer Health Issues (4)

Identifies and critically analyzes is sues related to the production, marketing, and consumption of health-related goods and services. Media messages about consumer health is sues are examined; topical and timely research is analyzed.

## PHE 361 - Care and Prevention of Injuries (4)

Introduction to the prevention, recognition, care, and rehabilitation of injuries resulting fromparticipation in activity. Practical skills are demonstrated and practiced with emphas is on student participation. Recommended prerequisites: $\mathrm{Bi} 301,302$.

## PHE 363 - Communicable Diseases and Chronic Heal th Problems (4)

Reviews etiology, epidemiology, and approaches to prevention of infectious and chronic diseases. Aspects of risk factors, transmis sion, pathogenesis, immunology, case management, and control programs are discussed. Bas ic human physiological processes are reviewed. Expected preparation: PHE250.

## PHE 365 - Health Promotion Programs for Children and Youth (4)

Provides an understanding of factors thatinfluence health status and development of children and youth in the United States. Particular attention will be directed at health promotion programs for children, youth, and families in school and community settings. Includes a service component.

## PHE 369 - Public Health Law, Policy, and Ethics (4)

This course will introduce the ways in which the public's health is impacted by public policy, law and ethics through the examination of real-world case studies. What health protections are individuals and communities entitled to, who are the players who determine and enforce public health law and policy, and what are the implications of the conflicts of interest that arise?

## PHE 370 - Applied Kinesiology (4)

Overview of anatomical and mechanical bases of human movement. Review of biomechanical principles with applications to exercise and health.

Prerequisite: PHE 270.
PHE 399-Special Studies (1-6)
(Credit to be arranged.)

## PHE 401 - Research (1-8)

(Credit to be arranged.) Consent of instructor.

## PHE 402 - Independent Study (1-8)

(Credit to be arranged.)

## PHE 404-Cooperative Education/Internship (1-15)

(Credit to be arranged.) A work related experience designed to connect and integrate theory with specific activities in a "real" environmentunder supervision. Field hours forstudents taking the internship will be 30 hours percredit per term. Additionally, students will be expected to attend scheduled seminars.

PHE 405 - Reading and Conference (0-6)
(Credit to be arranged.) Consent of instructor.

## PHE 406 -Special Projects (1-6)

(Credit to be arranged.)

PHE 407 -Seminar (1-9)
(Credit to be arranged.) Maximum: 9 credits .

## PHE 408 - Workshop(0-15)

(Credit to be arranged.)

PHE 409 - Practicum(1-12)
(Credit to be arranged.)

## PHE 410 -Selected Topics (1-8)

(Credit to be arranged.)

## PHE 415 -Native American Health: Decolonizing Health Equity (4)

Provides an overview of socio-cultural determinants of health within a Native American context, and culturally responsive and community-centered solutions to achieve health equity with an emphasis on Native American experiences, wisdom, and healing.

Prerequisite: Upper-division standing.

## PHE 416 - Families and Aging (4)

Family ties of middle aged and older adults are explored using a life course perspective. The diversity of family structure and experience is emphasized with attention to gender, race, class, and ethnicity. Life transitions are highlighted as are informal and formal services available to support older adults and their families.
Prerequisite: junior standing.

## PHE 417 - Adapted Physical Education (4)

Designed to give students a background in how to effectively teach physical activity to individuals with disabilities. Additionally, this course is constructed to facilitate the student's understanding of the specific characteristics of exceptional individuals in order to realize their limitations, and especially to maximize their potential.

Prerequisite: Twelve hours of upper-division coursework in PHE.

## PHE 418-Lactation Education 1: Introduction to Human Lactation (4)

The first in the lactation education s eries. Students will develop skills to assess and counsel families experiencing common breastfeeding challenges. Assessment tools and techniques will be introduced. Student will gain strategies for working with diverse adult learners and develop profes sional communication skills for the health care setting. This is the first course in a sequence of three: PHE 418, PHE 419, PHE 420 which must be taken in sequence.
Prerequisite: Instructor approval.

## PHE 419-Lactation Education 2: Advanced Lactation

 Care (4)The second in the lactation education series. Students will develop evaluation and support techniques to address complex maternal and infant breastfeeding challenges. Attention will be given to critically understanding and utilizing evidence-informed information to guide direct lactation support and communication with the health-care team. Students will deepen knowledge of use of referrals and res ources to support the parent-baby dyad. This is the second course in a sequence of three: PHE418, PHE 419, PHE 420 which must be taken in sequence.
Prerequisite: PHE418.

## PHE 420 - Lactation Education 3: Clinical Considerations in Lactation (2)

The third in the lactation education series. This course prepares students for working with complexcases including prematurity, medically fragile infants, and infants or parents with special medical or nutritional needs. Students will strengthen their understanding of the IBLCE Code of Professional Conduct, the IBLCE Scope of Practice, the ILCA Standards of Practice plus additional policies that govern the practice of International Board Certified Lactation Consultants(IBCLCs). Students completing this course as part of the Lactation Education series are prepared for clinical experience and are eligible to apply for the Lactation Practicum. This is the third course in a sequence of three: PHE418, PHE 419, PHE 420 which must be taken in sequence.
Prerequisite: PHE419.

## PHE 421 - Health Coaching Strategies (4)

Concepts and techniques for working with individuals and groups on improving all areas of wellness including fitness, nutrition, weight, stress, and management of life is sues that affecthealth. Best practices for facilitating behavior change, including adminis tering assessments, evaluating readiness for change, motivational interviewing and practice management. Students gain practical experience through live demonstrations and partnercoaching.

Prerequisite: PHE 324.

## PHE 423 - Business and Aging (4)

Economic and business implications of population aging, including an exploration of demographic changes, the economic reality faced by today's older adults in work and retirement, and older adults as consumers.

Prerequisite: Upper-division standing.

## PHE 426 - Advanced Topics in Health Services Administration (4)

This advanced course will build upon knowledge attained in previous courses in the HSMP curriculum. Content addresses advanced discussion of topics regarding systems, policy and organization in health services adminis tration practice. Current is sues/events will be emphasized. The course employs techniques that capitalize on group participation and peer-to-peer learning to stimulate sharing of diverse perspectives and increase the participants' level of engagement with his torically marginalized viewpoints.
Prerequisite: PHE350.

## PHE 427 - Introduction to Health Informatics (4)

An introduction to health informatics, the field devoted to the optimal use of data, information, and knowledge to advance individual health, health care, public health, and health-related research. Students will learn the application of informatics skills and knowledge to health-related problems.
Prerequisite: Upper-division standing.

## PHE 443U - Environmental Health (4)

Designed to enable thes tudent to understand and evaluate complex environmental health is sues induced by waste products generated by modern technology. Specific topics include water quality, air quality, solid and hazardous waste, occupational health, ionizing and nonionizing radiation, chemical contamination of foods, food additives, animal transmission of dis ease, noise, and selected current topics.

## PHE 444U - Global Health (4)

Critically explores global public health is sues as they pertain to different populations throughout the world, such as global disease eradication initiatives, environmental and infectious diseases froman international perspective, and discusses health needs of special populations.

## PHE 445 -Men's Health (4)

The focus of this course is currentmen's health is sues. Students have opportunities to critically explore a broad array of men's health concerns across the life span froma
multidisciplinary perspective. Men's health is sues may include such topics as reproductive health, violence, aging, heart disease, depression, and sexuality. The clas s is taught in an interactive format through group dis cussion, presentations, and the participation of group speakers. The course focuses on the consideration and critique of current influences on men's health including theeffect of the health care system, male s ocialization, the impact of the social and cultural factors, and the influence of evolving technology.

Also offered for graduate-level credit as PHE545 and may be taken only onceforcredit.

## PHE 446U - Health Equity and Social Justice (4)

Provides an overview of the practice of community health promotion. Examines the structure of community health service delivery and the role of advocacy and activismin official/unofficial agencies and policy/decision-making processes.

## PHE 448 - Health Education Techniques and Strategies (4)

Introduces students to basic techniques and strategies used in planning and carrying out healtheducation programs in a variety of settings. Special emphasis is given to scope and sequencing skills, objective writing, selection/development of health education res ources/materials, and methods for and use of technology in the delivery of health education programs. Recommended prerequisite: PHE350.

## PHE 450 - Epidemiology (4)

Introduces principles and methods of epidemiological investigation of infectious/non-infectious dis eases. Illustrates methods by which properly conducted studies of the distribution and dynamic behavior of disease in a population can contribute to understanding of etiologic factors, modes of transmission, and pathogenesis of disease. Recommended prerequisite: PHE 363.

## PHE 451 - Women and Holistic Health (4)

Exploring the intersection of three fields --allopathic medicine, women's health, and complementary therapies-the course examines the emerging field of integrative medicine, highlighting the contributions that women care givers and healers have made to its development. An overview of common women's health concerns provides the opportunity to compare and contrast essential elements of holistic treatment approaches with those of allopathic medicine. Expected preparation: PHE295 or WS 101.

Also offered for graduate-level credit as PHE551 and may be taken only once for credit. .

## PHE 452U - Gender, Race, Class and Health (4)

Emphasizes how the gender-, race-, and class-based organization of society affects the health of our communities. Covers an introduction and historical framework for socialinequities in health; describes disparities in health by gender, race, and class; and explores the interplay between these major social forces and the biological mechanisms that influence the occurrence of disease.

## PHE 453 - Women's Reproductive Health (4)

Critical review of current public health and socio-political is sues in women's reproductive health. Both national and international topics are discussed. Students apply health knowledge in identifying and seeking solutions to the is sues which concernhealth care providers, consumers, and policy makers. Expected preparation: PHE 250 and PHE 335.

Also offered for graduate-level credit as PHE553 and may be taken only once for credit. .

## PHE 454 -Maternal \& Child Health (4)

This course uses a discussion-based format to address maternal and child health as a public health is sue. The course will emphasize the importance of the social, political, and economic contexts for maternal and child health. Ultimately, students in this course will be exposed to the major health issues facing mothers and children today and understand how politics and social norms affect maternal and child health.

Also offered for graduate-level credit as PHE554 and may be taken only once for credit. Prerequis ite: Junior standing.

## PHE 456 - Health Aspects of Aging (4)

Examination of health-related changes that occur with aging. Review of current scientific literature with an investigation of physiological mechanisms responsible for changes in functional capacity throughout life. Explores the role of physical activity and nutrition in healthy aging. Expected preparation: PHE 295 or PHE 250, and Bi 302.

## PHE 466 -Mind/Body Health: Dis ease Prevention (4)

An inves tigation of the integral relationship between body and mind and how that relationship manifests itself in health, illness, and promotes healing. Philosophical and scientific foundations of mind/body health are explored. Mind/body research and its application within allopathic medicine is examined as is research and practice in complementary fields of medicine and health care. Expected preparation: Ps y 204, PHE 363.

Also offered for graduate-level credit as PHE566 and may be taken only once for credit. .

## PHE 467 - Mind/Body Health: Human Potential (4)

Theory and research in the human potential movement is integrated with research in mind/body medicine to produce an expanded understanding of human transformative capacities. Transformative practices including meditation, yoga, imagery, biofeedback, and sport are examined. Elements common to all transformative practices are identified. Expected preparation: PHE466/566.
Also offered for graduate-level credit as PHE567 and may be taken only once forcredit. .

## PHE 471 - Program Planning and Evaluation in Heal th Education: Theory and Skill Development (4)

Examines programplanning models for healtheducation. Includes needs assessment; program goals and objectives; programcontent and methodologies, evaluation, budgeting, and proposal writing. Students will gain practical experience in programplanning and evaluation through community-based learning. Field work required. Recommended prerequis ite: twelve hours of upper-division cours ework in PHE.

## PHE 472 - Marketing Public Health (4)

From behavior change to policy change, how do we make the healthy choice the easy choice? This course will explore the attitudes we bring to our public health work, and tools and strategies we can use to develop our effectiveness in improving health outcomes for individuals and society.
Prerequisite: junior standing.

## PHE 473 - Physiology of Exercise (4)

Examination of physiological responses and adaptations to exercise, with a focus on the interaction of metabolic, endocrine, neuromuscular, circulorespiratory, and environmental factors related to fitness and health.

Also offered for graduate-level credit as PHE 573 and may be taken only once forcredit. . Prerequisite: Bi 301 and Bi 302 or equivalent. Corequisite: PHE 473L.

## PHE 473L - Physiology of Exercise Lab (0)

Physiology exercise lab.

## PHE 474 -Exercise Prescription and Training (4)

Focuses on the basic principles and skills needed for developing and implementing physical fitness programs. Emphas is includes: appropriate/ safe training procedures and the underlying principles which support such methods, applications to younger and older populations, gender
differences, motivational strategies and health behavior theory, and exercise leadership skills. A significant portion of the course involves experiential learning. Recommended prerequisites: PHE 295, 473.

## PHE 475 - Exercise Testing Techniques (4)

Theory and application of as sessmentmethods/tools used to evaluate physiological function relating to fitness and health, including laboratory and field tests. Significant emphas is on developing skills necessary for conducting tests on apparently healthy individuals. Assessment categories include anaerobic performance, muscular strength and endurance, flexibility, body composition, cardiovascularfunction.

Also offered for graduate-level credit as PHE575 and may be taken only once for credit. . Prerequisite: PHE473, or consent of ins tructor. Corequisite: PHE475L.
PHE 475L - Exercise Testing Techniques Lab(0)
Exercise testing techniques lab.

## PHE 478 -ProgramPlanning and Evaluation: Needs Assessment and Interventions (4)

Examines programplanning theories and models for health education. Includes needs assessment; programgoals and objectives; interventions; programcontent and methodologies, measurement, and proposal writing. Students will gain practical experience in program planning through community-based learning. Field work required.This is the first course in a sequenceof two: PHE 478 and PHE 479 and must be taken in sequence.

## PHE 479 - Program Planning and Evaluation in Health Education: Implementation and Evaluation (4)

Examines programplanning theories and models for health education. Includes implementation strategies and evaluation approaches; resource allocation, budgeting, marketing, evaluation design, data analy sis and reporting. Students will gain practical experience in program planning through community-based learning. Field work required. This is the second course in a sequence of two: PHE 478 and PHE 479 and must be taken in sequence.
Prerequisite: PHE478.
PHE 480 - Controversial Issues in Community Health (4)

Examines controversial issues in the field of community health (e.g., violence, women's health, medical technology, access to health services). Group presentations required. Recommended prerequisites: senior status and 12 credits of PHE.

## PHE 501-Research (1-6)

(Credit to be arranged.) Consent of instructor.

## PHE 502 - Independent Study (1-8)

(Credit to be arranged.)

## PHE 503 - Thesis (0-15)

(Credit to be arranged.)

PHE 504 - Cooperative Education/Internship (0-15)
(Credit to be arranged.)

## PHE 505 - Reading and Conference (0-6)

(Credit to be arranged.) Consent of instructor.

## PHE 506-Special Projects (1-6)

(Credit to be arranged.)

## PHE 507 -Seminar (1-9)

(Credit to be arranged.) Maximum: 9 credits.

## PHE 508-Workshop(0-15)

(Credit to be arranged.)

## PHE 509-Practicum(1-9)

(Credit to be arranged.)

## PHE 510 -SelectedTopics (1-8)

(Credit to be arranged.)

## PHE 511 - Foundations of Public Health (3)

Provides students with an understanding of the field of public health. It provides knowledge about public health principles, concepts, values, tools, and applications. Key topics in the clas s include the miss ion of public health, the politics of public health, determinants of health in the United States, major models and strategies for health promotion, and community perspectives on public health interventions.

## PHE 512 -Principles of Health Behavior (3)

Presents the biological, psychological, behavioral, sociocultural, and environmental factors that function in the promotion of health and prevention of disease. Theories developed to explain health and illness behaviors at intrapers onal, interpersonal, and group/community levels are introduced. Ethical is sues involved in healthrelated behaviorchange are examined. Satis fies the core M.P.H. requirement. Expected preparation: graduate standing.

Also offered as PHE612 for doctoral students.
PHE 513 - Introduction to Public Health (3)
This survey course intended to provide graduate students with foundational knowledge of public health and will take a population science approach to public health practice.

## PHE 514 -Physical Activity in Public Health (3)

Overview of topics relevant to the study of physical activity in the United States. Topics: review of physiological alterations related to physical activity; historical background of physical activity recommendations; meas urement issues; community-based approaches to increasing physical activity; school-based physical activity programs; older adults and special populations; work site and health care settings.

## PHE 517 - Community Organizing (3)

Emphasizes the role of community organizing to engage diverse communities to advance the conditions in which people can be healthy. It further examines the role of health educators, grassroots activists, and others in stimulating social, political, and economic approaches to promote community health. Also addresses the advancement of theoretical knowledge and practical skills of community organizing.

## PHE 518 - Topics in Health Studies (3)

In-depth analysis of recent research and related program developments on one or more health-related topics. Topics vary according to termand instructor. Course may be taken more than onceon different topics. Topics may include: mind/body health, nutrition, international health, environmentalhealth, physical activity/exercise, and health of special populations. Recommended prerequisite: graduate standing.

## PHE 519 - Introduction to the Etiology of Disease(3)

The biological and molecular bases of public health: the immune system, genomics, environmental exposures. The evidence-based role of biology in ecological models of population health, its integration in disease prevention and control policies and programs. Effects of behavior on biology. Legal, social, ethical issues will be considered.

## PHE 520-Qualitative Research Design (3)

Presents the philosophical and theoretical bases supporting the development of alternate research paradigms in human inquiry. Es sential characteristics of three major alternate paradigms (interpretivist, constructivist, and critical theory) are introduced. Validity, reliability, and related concepts are examined fromthe pers pective of each paradigm. Alternate strategies for inquiry are presented and ethical considerations related to qualitative forms of inquiry are addressed. Recommended prerequis ite: graduate standing.

## PHE 521 - Quantitative Research Design and Analysis (3)

Introduction to quantitative research design and statistical analys is. Emphasis on development of a research proposal. Topics include descriptive research, experimental and quasi-experimental research, univariate statistical procedures, and methods for planning and writing a research report.

Prerequisite: Bsta 525 and Epi 512.

## PHE 522 - Health and Social Inequalities (3)

Introduction to historical and theoreticalfoundations for social epidemiology; investigates the conceptualization and meas urement of different social determinants of health using a lifecourse approach; explores how the "embodiment" of social forces influence disease processes; and examines different actions (i.e., behavioral, clinical, social, legis lative and political) used to eliminate health inequities within our local, national and international communities.

Also offered as PHE622 and may be taken only once for credit.

PHE 527 - Food Systems and Public Health (3)
Examines public health effects of industrial and alternative food systems. Designed as an introductory coursefor students interested in exploring issues at the intersections of public health, equity, and the environment. Key course themes include: food consumption patterns, health inequities, food insecurity and hunger, healthy food environments, food animal production.

PHE 531 - Women and Exercise: Physiological Aspects (3)

Overview of physiological and health-related effects of exercise on women. Emphasis on the responses and adaptations to exercise specific to women. Topics include gender differences, the mens trual cycle, pregnancy, menopause, and osteoporosis. Recommended prerequisite: PHE 473/573.

## PHE 532 - Developmental Origins of Health and Dis ease (DOHaD) - Epidemiology (3)

Covers the his tory of the Developmental Origins of Health and Disease ( DOHaD ) framework, the trends that drive and result fromDOHaD processes. It will explain epigenetics and other mechanis ms which through priming influence lifelong health.

Also offered as PHE632 to doctoral students.
PHE 534 -Social Epidemiology Methods \& Theory (3)
Surveys socialepidemiology practice including meas urement, study design, analysis and translation for researching behavioral, social, economic, and cultural determinants of population distributions of health outcomes. The courseemphasizes the application of social epidemiology methods tightly coupled to theory salient to community health practice \& policy.
Also offered as PHE634 for doctoral students.
Prerequisite: Epi 512 and Bsta 525.

## PHE 540 -Mass Media and Health (3)

Examine the use andeffectiveness of mass media to both report the news about health and to promote changes of action in health-related areas. Students will be required to critique media health mess ages reg arding their objectivity and the extent to which they are comprehensive.
Prerequisite: PHE512.

## PHE 541 -Media Advocacy and Public Health (3)

Provides students with an understanding of the role of media advocacy in advancing public health policies to promote health. The course uses lectures, group exercises, and case studies to illus trate basic concepts and skills related to media advocacy. Topics covered include: gaining access to the news, framing is sues froma public health perspective, and the use of paid advertising to advance policy. Content areas include tobacco, violence, handguns, suicide, alcohol, and other public health is sues.
Prerequisite: PHE512.
PHE 543 -Drugs, Behavior, and Society (3)
Emphasis will be placed on the relationship between drug and alcohol use and a broad range of social circumstances
as sociated with socio-economic status, race/ethnicity, and gender. Particular attention will be given to policy and service is sues regarding the treatment and prevention of alcohol and drug abuse froma public health perspective. Recommended prerequisite: graduate standing.

## PHE 545 - Men's Health (4)

The focus of this course is current men's health is sues. Students have opportunities to critically explore a broad array of men's health concerns across the life span froma multidisciplinary perspective. Men's health is sues may include such topics as reproductive health, violence, aging, heart disease, depression, and sexuality. The clas s is taught in an interactive format through group dis cussion, presentations, and the participation of group speakers. The course focuses on the consideration and critique of current influences on men's health including theeffect of the health care system, male socialization, the impact of the social and cultural factors, and the influence of evolving technology.
Also offered for undergraduate-level credit as PHE445 and may be taken only once for credit.

## PHE 546 - Urban and Community Health (3)

Examines the social factors as sociated with urban health and quality of life, such as social class, gender inequalities, and racism. Emphasis will be placed upon community development and collective responses to the maintenance of health rather than upon individualized health promotion and disease prevention strategies.

## PHE 550 - Health Promotion ProgramPlanning (4)

Addresses practical applications of health promotion theories. Presents examples of planning, implementation, and evaluation of health promotion programs in a variety of settings as guides for the development of health promotion programs.

## PHE 551 - Women and Holistic Health (4)

Exploring the intersection of three fields --allopathic medicine, women's health, and complementary therapies-the course examines the emerging field of integrative medicine, highlighting the contributions that women care givers and healers have made to its development. An overview of common women's health concerns provides the opportunity to compare and contrast essential elements of holis tic treatment approaches with those of allopathic medicine.

Also offered for undergraduate-level credit as PHE451 and may be taken only once for credit. .

## PHE 552 - Women's Health (3)

Focuses on constructions of gender and sexand their implications for understanding determinants of population health, developing health promotion programs, and creating healthy public policy. Emphasizes the importance of the social, political, and economic context for women's health. Topics include epidemiology of women's health; diversity and health issues; reproductive health and sexuality; health care and access to health services; violence; mental health and emotional well-being; aging; lesbian health; and research in women's health. Course learning will be synthesized through a community-based learning experience involving working with a community org anization to evaluate women's health needs in Portland.

## PHE 553 - Women's Reproductive Health (4)

Critical review of current public health and socio-political is sues in women's reproductive health. Both national and international topics are discussed. Students apply health knowledge in identifying and seeking solutions to the is sues which concern health care providers, consumers, and policy makers.
Also offered for undergraduate-level credit as PHE453 and may be taken only once forcredit. .

## PHE 554 -Maternal \& Child Health (4)

This course uses a dis cussion-based format to address maternal and child health as a public health is sue. The course will emphas ize the importance of the social, political, and economic contexts for maternal and child health. Ultimately, students in this course will be exposed to the major health issues facing mothers and children today and understand how politics and socialnorms affect maternal and child health.
Also offered for undergraduate-level credit as PHE454 and may be taken only once forcredit.

## PHE 561 - Cultural Variations in Aging (3)

The aging population includes an increasing percentageof people froma variety of ethnic groups. Although there may be cultural similarities between these groups and the dominant culture, there are also important differences, particularly in the role of the family in decision-making, attitudes and beliefs about illnes s, dying, and death. Students learn about cultural differences and similarities through observing programs that serve ethnic elders, talking with guest speakers who represent different ethnic communities, and reading several texts related to counseling, healthcare, and understanding grief, death, and dying in a variety of ethnic groups.
Also offered as PHE661 and may be taken only once for credit.

## PHE 562 - Global Aging (3)

The rapid, unprecedented aging of the world's populations is resulting in myriad changes that will affect societies, cultures, economies, families, and individuals and their daily lives. Students will learn about broad global trends related to the aging of the world as well as aging in particular countries and regions.

## PHE 566 -Mind/Body Health: Disease Prevention (4)

An investigation of the integral relationship between body and mind and how that relationship manifests itself in health, illness, and promotes healing. Philosophical and scientific foundations of mind/body health are explored. Mind/body research and its application within allopathic medicine is examined as is research and practice in complementary fields of medicine and health care.
Also offered for undergraduate-level credit as PHE466 and may be taken only once for credit. .

## PHE 567 -Mind/Body Health: Human Potential (4)

Theory and research in the human potential movement is integrated with research in mind/body medicine to produce an expanded understanding of human transformative capacities. Transformative practices including meditation, yoga, imagery, biofeedback, and s port are examined. Elements common to all transformative practices are identified. Expected preparation: PHE466/566.
Also offered for undergraduate-level credit as PHE467 and may be taken only once for credit. .

## PHE 573 - Physiology of Exercise (4)

Examination of physiological responses and adaptations to exercise, with a focus on the interaction of metabolic, endocrine, neuromuscular, circulorespiratory, and environmental factors related to fitness and health.
Also offered for undergraduate-level credit as PHE473 and may be taken only once for credit. . Corequisite: PHE 573L.

PHE 573L - Physiology of Exercise Lab (0)
Physiology exercise lab.

## PHE 575 - Exercise Testing Techniques (4)

Theory and application of as sessment methods/tools used to evaluate physiological function relating to fitness and health, including laboratory and field tests. Significant emphasis on developing skills necessary forconducting tests on apparently healthy individuals. Assessment categories include anaerobic performance, muscular strength and endurance, flexibility, body composition, cardiovascular function.

Also offered for undergraduate-level credit as PHE475 and may be taken only once for credit. . Prerequisite: PHE 473, or consent of instructor. Corequis ite: PHE 575L.

PHE 575L - Exercise Testing Techniques Lab(0)
Exercise testing techniques lab.

## PHE 576 -Physical Activity, Health, and Disease (3)

Review of current research to explore the relationships between physical activity/exercise and health/disease. Primarily investigates the role of physical activity in disease prevention, but als o examines the impact of a variety of physical conditions (e.g., obesity, aging, etc.) on the potential for an active lifestyle. Topics include cardiovascular dis eases, musculoskeletal dis orders, respiratory conditions, metabolic diseases, cancers, and mental health. Recommended prerequisite: PHE473.

## PHE 577 -Exercise, Nutrition, and Performance (3)

Review of metabolic processes and physiological mechanis ms involved in nutrient utilization in humans. Examination of the relationships between nutrition and health, with an emphasis on analysis of current research. Topics include carbohydrates, fats, protein, vitamins/minerals, fluids, weight control, and ergogenic aids. Analysis of nutritional modifications presumably related to exercise, health, and performance. Recommended prerequisites: PHE473.

PHE 601 -Research (1-12)
(Credit to be arranged.)

PHE 602 -Independent Study (1-6)
(Credit to be arranged.)

PHE 603-(1-12)

PHE 605 - Reading and Conference (1-8)
(Credit to be arranged.)

PHE 606 -Special Projects (1-12)
(Credit to be arranged.)

PHE 607 -Seminar (1-9)
(Credit to be arranged.)

## PHE 608-Workshop (1-9)

(Credit to be arranged.)

## PHE 609-Practicum(1-9)

(Credit to be arranged.)

## PHE 610 -Special Topics (1-9)

(Credit to be arranged.)

## PHE 612 - Principles of Health Behavior (3)

Presents the biological, psychological, behavioral, sociocultural, and environmental factors thatfunction in the promotion of health and prevention of disease. Theories developed to explain health and illness behaviors at intrapersonal, interpersonal, and group/community levels are introduced. Ethical is sues involved in healthrelated behaviorchange are examined. Satis fies the core M.P.H. requirement.Expected preparation: graduate standing.
Also offered as PHE512.
PHE 619-Mentored Teaching Experience (4)
Each student will be paired with a Community Health faculty member to shadow one termof teaching of either an UG or an MPH level Community Health class.

## PHE 622 - Health and Social Inequalities (3)

Introduction to historical and theoretical foundations for social epidemiology; investigates the conceptualization and measurement of differentsocial determinants of health using a lifecourse approach; explores how the "embodiment" of social forces influence disease processes; and examines different actions (i.e., behavioral, clinical, social, legis lative and political) used to eliminate health inequities within our local, national and international communities.

Also offered as PHE522 and may be taken only once for credit.

## PHE 623 - Doctoral Seminar in Health Research (1)

Research seminar required for first - and second-year doctoral students in the community health PhD program. Students learn aboutcritical evaluation of health research, hypothesis generation, the publication and review process, grant application process, and development an independent research program.

## PHE 624 -From Philos ophy through Power Calculations: Writing Methods Sections for Research Proposals (3)

Approaches to community health research are explored, including the scientific method, ethics in research, theories, conceptual models and hypothesis generation, causal inference, the elements of research design, meas urement (reliability, validity), developing data collection instruments, internal and external validity, and experimental methods.

## PHE 625 -Advanced Methods Toolkit:Design, Sampling, Scale Development, \& More (3)

A course in applied, non-experimental research designs used in epidemiological research. Emphas is in this course is on quasi-experimental designs, programevaluation, sampling methods, longitudinal designs, and secondary data sources. Students will learn about research design, critical evaluation of research methods, and research proposalconcepts.

## PHE 626 - Teaching and Learning in Health Promotion \& Social Work (3)

This course focuses on pedagogical theory and practice in professional settings. Students develop skills to design, evaluate, and implement effective curriculum and instruction across settings: academic clas srooms, community contexts, and research projects. Topics include educational theory, course design, learning and teaching strategies, as sessment, and scholarship of teaching and learning.
Cross-Listed as: SW 626.

## PHE 632 -Developmental Origins of Health and Disease (DOHaD) - Epidemiology (3)

Covers the history of the Developmental Origins of Health and Disease ( DOHaD ) framework, the trends that drive and result fromDOHaD proces ses. It will explain epigenetics and other mechanis ms which through priming influence lifelong health.
Also offered for graduate-level credit as PHE532.
PHE 634 -Social Epidemiology Methods \& Theory (3)
Surveys socialepidemiology practice including measurement, study design, analysis and translation for researching behavioral, social, economic, and cultural determinants of population distributions of health outcomes. The course emphasizes the application of social epidemiology methods tightly coupled to theory salient to community health practice \& policy.

Also offered for graduate-level credit as PHE534.
Prerequisite: Epi 512 and Bsta 525.

## PHE 661 - Cultural Variations in Aging (3)

The aging population includes an increasing percentage of people froma variety of ethnic groups. Although there may be cultural similarities between these groups and the dominant culture, there are also important differences, particularly in the role of the family in decision-making, attitudes and beliefs about illness, dying, and death. Students learn about cultural differences and similarities through observing programs that serve ethnic elders, talking with guest speakers who represent different ethnic communities, and reading several texts related to counseling, healthcare, and unders tanding grief, death, and dying in a variety of ethnic groups.

Also offered as PHE561 and may be taken only once for credit.
PHE 699 - Special Studies (1-6)
(Credit to be arranged.)

## Phl - Philosophy

Phl 199 - Special Studies (1-6)
(Credit to be arranged.)

## Phl 201 - Introduction to Philos ophy (4)

General introduction to philosophy. While different instructors will use different materials -- typically classical texts -- attention will be given to what makes a question a philosophical question and the nature and methods of philosophicalinquiry.

## Phl 210 - Philos ophy of Religion (4)

Examination of philos ophical questions involved in the study of religion, e.g., the meaning of "God," or "gods;" the traditional arguments for the existence of a god; the meaning of faith and the question of its connection to reason; the problemofevil (of reconciling a god's alleged perfection with the exis tence of evil). Note: this is not a class in comparative religion or the history of religion.

## Phl 212 - Philos ophy in Literature (4)

An introduction to traditional philosophical is sues as they appear in literature, es pecially in fiction. The specific philosophical problems and the literary works willvary from term to term and from instructor to instructor.

## Phl 299 - Special Studies (1-12)

(Credit to be arranged.)

## Phl 300U - Philos ophical Methods and Concepts (4)

A survey of the major strategies of proof and dis proof central to philosophical reasoning, and of the fundamental concepts and distinctions employed in current philos ophical discourse. Aims at providing students who have a serious interest in thinking philosophically with the conceptual tools found to be useful for this purpose. Not recommended as a first course in philosophy.

## Phl 301U - Ancient Philos ophy (4)

Study of Ancient Greek philos ophy with a primary focus on the philosophies of Plato and Aristotle. Key topics include form, matter, substance, and causation.

## Phl 302U - Medieval Philosophy (4)

Study of philosophy during the Medieval period. Topics include developments in logic, role of faith and reason in knowledge, and use of Platonic and Aristotelian philosophy. Course readings include Christian, Jewish, and Islamic authors.

## Phl 303U - Early Modern Philosophy (4)

History of Western philosophy during the Early Modern period (17th and 18th centuries) fromDescartes to Kant. Topics include nature of knowledge and reality; theories of human nature.

## Phl 304U - Nineteenth Century Philos ophy (4)

Study of continental European philosophy fromHegel to Nietzsche. Topics include post-Kantian idealis m, the "social turn" in epis temology, communitarian ethics, reactions to the crisis in Christianity, and the radical critiques of modern social and political institutions.

## Phl 305U - Philos ophy of Medicine (4)

Examination of central philosophical is sues that arise within the theory and practiceof medicine such as: the relationship of medicine to basic sciences, the roles played in medicine by normative concepts such as health and illness, the nature of causal reasoning in medicine, and the nature of diagnostic categories in medicine and psychiatry.

## Phl 306U-Science and Ps eudoscience (4)

An examination of basic is sues in philosophy of science through an analysis of creation science, faith healing, UFO abduction stories, and other pseudosciences. Some of the questions addressed: What distinguishes science from pseudoscience? How are theories tested? When is evidence reliable? Must we invoke the supernatural to explain certain aspects of reality?

## Phl 307U - Science andSociety (4)

Introduction to the philosophy of social science including socialepistemology. Topics include the nature of explanation in social science, the role of normative and hermeneutical principles in it, and the influence of social processes on scientific knowledge.

## Phl 308U- Elementary Ethics (4)

General introduction to ethical theory. Attention will be given to such questions as whether there are objective moral distinctions, what makes right acts right and wrong acts wrong, and how we know (if we do) that actions are right or wrong. Among the theories to be considered are relativism, egoism, utilitarianism, and Kantianism.

## Phl 309U- Business Ethics (4)

Study of the ethical aspects of practices and organizational structuresin the business world such as: the moral status of corporations; the concept of work place rights;
responsibility in advertising; environmental constraints on business; affirmative action in hiring; the social roles of profit and private property; role of work in the life of the individual.

## Phl 310U - Environmental Ethics (4)

Critical study of issues raised by the attempt to formulate an adequateenvironmental ethic. Some of these is sues deal with how our treatment of the environment affects other human beings, i.e., future generations. Others have to do with how non-human beings are to be treated. Do animals have rights? Do species have rights? Do our proper moral concerns extend to such things as trees, rivers, and possibly the planet itself? A number of current problems will be considered, such as population control, limits to growth, global warming, and endangered species.

## Phl 311U- The Morality of Punishment (4)

The focus is on the nature and proper aims of punishment; moral cons iderations that bear on the justice and wisdom of punishment. Consideration will be given to the main
theories of punishment: retributionism, utilitarianism, paternalism, and the view that punishment should be replaced by therapy.

## Phl 312U - Feminist Philos ophy (4)

Critically examines traditional schools of philosophical thinking froma feminist pers pective.

## Phl 313U - Life and Death Issues (4)

Study of moral problems dealing with life and death is sues including abortion, euthanasia, the death penalty, starvation, and nuclear war.

## Phl 314U - Computer Ethics (4)

Examines the moral principles and judgments relevant for computer-related practices. Topics include: ethical as pects of new information technologies; are technologies valueladen; potential abuses and their social consequences; freedom, privacy, and control; security, reliability, and professional responsibilities; risks, control, and regulations; piracy and ownership; ethics of hacking; ethics of virtual environment; and international aspects of new technologies.

## Phl 315-Existentialism(4)

Introduction to a number of philos ophers and literary figures gathered together under the name "existentialism." Authors include Dostoyevsky, Kierkegaard, Nietzsche, Rilke, Kafka, Ortega y Gasset, Jaspers, Heidegger, Sartre and Camus. Topics includeconsciousness, (in)authenticity, alienation, death, anxiety, freedom, time, nihilis m, historical meaning and religion. Recommended: one philosophy course.

## Phl 316U - Social and Political Philosophy (4)

The main philosophical theories of the nature and principles of a just society. Social and political order, freedom, justice, and happiness are declared to be the principalends of any society. Philosophical theories describe, explore, explain, and frequently attempt to justify specific social or political arrangements in order to attain these goals.

## Phl 317U - Philos ophy of Art (4)

Philosophical is sues concerning the creation, interpretation, and consumption of art. Includes an overview of the major philos ophical theories about the
nature of art, an examination of the relationship between art and ethics, art and psychology, art and pornography, and relativism of aes thetic value judgments.

## Phl 318U - Philos ophy of Medicine (4)

Examination of central philosophical is sues that arise within the theory and practiceof medicine such as: the relationship of medicine to basic sciences, the roles played in medicine by normative concepts such as health and illness, the nature of causal reasoning in medicine, and the nature of diagnostic categories in medicine and psychiatry.

## Phl 319U - Introduction to Asian Philosophy (4)

A study of different systems of eastern philosophy through the main classical texts drawn fromHinduism, Buddhism, Taoism, and Confucianism. Topics include: the nature of reality, the self, caus ality, language, knowledge, and ethics.

## Phl 320U- Critical Thinking (4)

Designed to improve reasoning and skills of critical as essment of information. Focuses on practical methods that are applied to case studies frompublic media such as editorials, essays, propag and a advertisements, and newspaper reports of scientific studies.

## Phl 321U- Practical Epistemology (4)

Considers criteria for knowled ge-claims based on different sources, such as: memory, perception, eyewitness testimony, expert testimony, and medical and scientific experts.

## Phl 322U- Minds and Machines (4)

Study of philosophical aspects of artificialintelligence including its functionalist ontology. Topics include the nature of computation, learning, and intelligence and the role of consciousness in thinking and behavior. Expected preparation: 8 credits in any scienceor 8 credits in any philosophy courses.

## Phl 324U - Introduction to Formal Logic I (4)

A course in basic propositional and predicate logic. Topics include translation into formal languages, semantic methods for validity (including truth tables and countermodels), and natural deduction proofs.

## Phl 325U - Introduction to Formal Logic II, Predicate Logic (4)

An extension of the topics in Phl 324 U to include topics such as truth trees, expressive adequacy, and meta-theory (soundness and completeness). Other topics may include modal logic, probabilistic logic, non-classical logics, logic circuits, and computability theory.

## Phl 327 - Introduction to Quantitative Literacy (4)

The goal is to learn to think intelligently and critically about important uses of quantitative data by means of discussion of the following topics: samples, measures, scales, relationships, risks, predictions, graphs, averages, percentages, distributions, randomeffects, and estimates. Intended for students who do not normally take clas ses that involve quantitative matters; its mathematicalcontent is kept at an absolute minimum.

## Phl 330U - Language, Representation, and Reality (4)

An introduction to theories of meaning and their central topics: nature of representation and the referential capacity of language, role of use in meaning, and therole of language in thought and experience.

## Phl 331U - Philos ophy of Education (4)

Exploration of the nature, aims, and value of education by situating it in its historical and contemporary philosophical context and perspectives. Expected preparation: at least one course in philosophy and/or education.

## Phl 332 - Intentionality, Phenomenology, and Existentialism(4)

Examination of the Kantian roots of what becomes known as "intentionality" (i.e., that our conscious acts are directed toward objects, intending them) and subsequent theories of intentionality (e.g., Husserl, Heidegger, Frege, and Searle). Recommended prerequisite: 8 credits in philosophy.

## Phl 333U - Philos ophy of Law (4)

Examines the nature of law, legal obligation and legal interpretation. Is law a part of morality, or nothing more than an expres sion of social power? When are we permitted or required to disobey the law? What is the proper methodology for interpreting laws and deciding cases? Do judges dis cover orcreate law? Readings include classics of jurisprudence (e.g., Austin, Hart, Dworkin) as well as judicial opinions in a selected topic. Recommended prerequisites: Ph1308, 311 or 316.

## Phl 336 - Ancient Political Philos ophy (4)

A study of central philos ophical themes (justice, power, citizenship, etc.) across major figures in ancient Greek and Roman political thought.

## Phl 341 - Latinx Philos ophy (4)

Latinx Philosophy will explore the philosophical contributions of indigenous, His panic, and Latinxthinkers in the Americas and in the Iberian Peninsula, situating philosophical thought in its social and political contexts. Students will grapple with the questions of Latinx identity and philosophy, read philosophical and literary works from pre-Columbian civilizations, scholastic, and Marxian traditions, as well as engage contemporary thinkers on feminism, race, social movements, and migration.
Cross-Listed as: This is the same course as ChLa 341 and may be taken only once for credit.

## Phl 344U- Military Ethics (4)

Examination of the central conceptual, ethical, and existential issues concerning war and the military as an institution and a culture. Topics include theories of war, military values, and theethics of technology (UAVs, WMDs ), insurgency, and terrorism.

## Phl 350U - International Ethics (4)

Introduction to central moral principles relevant for international relations. Topics include military, humanitarian, and covert intervention, economic sanctions, development assistance and human rights.

## Phl 351U- Philosophy of International Human Rights

 (4)Examination of concepts of human rights through classics of political philos ophy, international human rights law and its development, and currenthigh-profile cases of alleged violations of human rights.

## Phl 352U - Philos ophy of International Law (4)

Analysis of International Law through its philosophical foundations, major his torical forms of implementation, and current roles in ameliorating global problems (e.g., war, poverty, and revolutions).

## Phl 355U - Morality and Health Care (4)

Examination of central is sues of the ethics of health care such as euthanasia, abortion and equitable medical allocation.

## Phl 360U - American Philos ophy (4)

Study of American pragmatis mthrough some of its major representatives (e.g., Dewey, Peirce, James, and Mead), its intellectual and cultural context, and its influences on contemporary American philosophers.

## Phl 365U - Atheism (4)

Examination of atheist philosophy including secularismin ethics and politics, naturalismin epistemology and metaphysics, and contemporary naturalistic accounts of religion and faith-based beliefs.

## Phl 367U - Philos ophy of Sport (4)

An examination of the central conceptual, ethical, and existential issues concerning sports. Topics include the nature and role of sports in human flourishing, theories of embodiment, and the morality of sports as an institution and culture including competition and violence.

## Phl 369U- Philos ophy of Sex and Love (4)

An examination of the central philosophical issues emerging from a reflection on sexand love such as: possible essenceofheterosexuality, homosexuality, and as exuality; morality of different expressions of sexand love such as sadomasochismand poly gamy; role of sexuality and romantic love in our self-conception; influence of conceptual sources on our experiences of sexuality and love.

## Phl 370U - Philos ophy of Work and Leisure (4)

Role and nature of work and leisure in theories of the good life and central social and political practices.

## Phl 371U - Philosophy and the City (4)

Explores the role and nature of the city in the history of philosophy and especially social and political theory and the philos ophical bases of contemporary urban theory including political, civic, sustainable, and aesthetic ideas of the city.

## Phl 373 - Queer Philos ophy (4)

The aim of this course is to illuminate the theoretical underpinnings and the radical epistemological, social, and political pos sibilities that are afforded by queer philosophy/theory. Queer Philosophy problematizes and challenges rigid identity categories, norms of sexuality and gender and the oppression and violence that such norms justify. This course will interrog ate the metaphysical, epistemological, phenomenological, social, and political dimensions of queer philosophy.

Cross-Listed as: This is the s ame course as WS 373 and may be taken only once for credit.

## Phl 375U - Food Ethics (4)

An introduction to ethical is sues surrounding food choices including the fairness of food markets, the moral status of animals, and our obligations to the hungry.

## Phl 379U- Feminist Care Ethics (4)

Provides a comprehensive introduction to care ethics from its origins in feminist theory to its present multidisciplinary and international manifestations. The implications of care ethics for ontology, epistemology, aesthetics, identity, performativity and moral theory are addressed. Care ethics is differentiated frommainstreamethical theories. Care theory is applied to a variety of academic and profes sional disciplines including but not limited to business, education, healthcare, literature, political science, performance studies, and ps ychology.
Cross-Listed as: This is the same course as WS 379U and may be taken only once for credit.

## Phl 380 - Philos ophical Writing (4)

Philosophical Writing is a "writing in the genre" course for philosophy majors. It teaches strategies for the major types of philosophical writing, including summaries, blog posts, abstracts, argumentative essays, and research papers. Students may also study es says, dialogues, and short stories to explore the diverse ways in which people have communicated philosophical ideas. This is a writingintensivecourse in which students will receive feedback on multiple drafts to improve their writing.

## Phl 399 - Special Studies (1-6)

(Credit to be arranged.)

## Phl 401 - Research (1-6)

(Credit to be arranged.) Consent of instructor.

## Phl 402 - Independent Study (1-12)

(Credit to be arranged.)

## Phl 403 - Honors Thesis (1-4)

(Credit to be arranged.) Consent of instructor.

## Phl 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Phl 405 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Phl 406 - Projects (1-12)

(Credit to be arranged.)

Phl 407 -Seminar (1-6)
(Credit to be arranged.)

## Phl 409 - Practicum (1-12)

(Credit to be arranged.)

## Phl 410 -Selected Topics (1-6)

(Credit to be arranged.)

## Phl 414 - Plato (4)

Study of selected dialogues of Plato with attention to such topics as his theory of forms, moral philosophy, political philosophy, and to the individual topics of the dialogues, as, for example, knowledge, being, virtue, piety, love, friendship, the state, the nature of philosophy. Expected preparation: 8 credits in philos ophy.

Also offered for graduate-level credit as Ph1514 and may be taken only once for credit. .

## Phl 415 - Aristotle (4)

Study of some of the works of Aristotle, such as his Physics, Metaphysics, Ethics, Politics, parts of the Organon Rhetoric. Among topics for attention are substance, essence, categories, cause, the good man, practical reason. Recommended prerequisite: 8 credits in philosophy.

Also offered for graduate-level credit as Ph1515 and may be taken only once for credit. .

## Phl 416 - The Rationalists: Descartes, Leibniz,Spinoza

 (4)Study, with comparis ons, of selected works of philosophers who maintained that knowledge comes primarily from reason.Likely readings: forDescartes, Meditations, or Rules, or Discourse on Method; for Spinoza, Ethics; forLeibniz, a selection fromamong his many collected works and fragments. Recommended prerequisite: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1516 and may be taken only once for credit. .

## Phl 417 - The Empiricists (4)

Study of the British philosophers, Locke, Berkeley and Hume, who hold that allof the ingredients of thought enter the mind by way of experience and that only what has a definite relation to experience can be thought. Among the particular topics considered will be material substance, spirit, abstract ideas, causation, induction, and skepticism. Recommended prerequis ite: 8 credits in philos ophy.
Also offered for graduate-level credit as Ph 1517 and may be taken only once for credit. .

## Phl 419-Kant (4)

Study of Kant's Philos ophy primarily as represented in the Critiques of Pure Reason, Practical Reason, Judgment. Readings froms ome of these or related works. Possible topics for consideration: necessary connection, the analytic-synthetic distinction, conceptions of science and metaphysics, relation between metaphysics and morality. Recommended prerequisite: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1519 and may be taken only once forcredit. .

## Phl 420 - Wittgenstein (4)

Study of some of the major works of Wittgenstein with emphasis on the later work, especially the Philos ophical Investigations. Attention will be given to Wittgenstein's contributions to philosophical method, as well as to his treatment of iss ues concerning language, meaning, intention, understanding, necessity, and the nature of human pers ons as language users. Recommended prerequisite: 12 credits in philos ophy.
Also offered for graduate-levelcredit as Ph1520 and may be taken only once for credit. .

## Phl 423 - Metaphysics (4)

Philosophical examination of traditional metaphysical is sues (such as relation of body and mind, free will and determinism) and of the more influential ontologies (idealism, materialism, dualism). Introduction also to contemporary controversies over the feasibility of
metaphysics as a rational discipline (logical positivis mand its critics). Recommended prerequisite: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1523 and may be taken only once forcredit. .
Phl 424 - Epistemology (4)
Philosophical examination of some of the main is sues in the theory of knowledge (such as our knowledge of the external world, of the minds of others, of logical and mathematical truths, etc.). Recommended prerequisite: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1524 and may be taken only once for credit. .

## Phl 432 - Philos ophy of Mind (4)

Study of the debates over the nature of mental states and ourknowledge of them. Main topics are dualis mand various forms of physicalism, behaviorism, mind-body identity theories, functionalismand eliminativism. Expected preparation: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1532 and may be taken only once for credit. .

## Phl 433 - Philos ophy of Language (4)

A study of the nature of language, and of problems of meaning, reference, and truth. Recommended prerequis ite: 8 credits in philos ophy.
Also offered for graduate-level credit as Ph1533 and may be taken only once for credit. .

## Phl 445 - Advanced Ethics (4)

A course in moralepistemology or "meta-ethics" dealing with such matters as the distinction and connections between fact and value, " is " and "ought," and description and evaluation. Recommended prerequisite: 8 credits in philosophy.
Also offered for graduate-level credit as Ph1545 and may be taken only once for credit. .

## Phl 446 - Topics in Ethics (4)

Topics in contemporary moral philosophy, including (but not limited to) the relation between applied and theoretical ethics, the foundations of moral responsibility, virtues, and the role of outcomes in moralevaluation. Course may be repeated forcredit to ward major requirements with departmental approval. Expected preparation: Ph1 308 or Phl 445.
Also offered for graduate-level credit as Ph1546 and may be taken only once for credit. .

## Phl 447 - Topics in Social and Political Philosophy (4)

An in-depth study of an important current is sue (such as global justice, multiculturalism, or power) or figure (such as John Rawls, Jürgen Habermas, orMichel Foucault) in social and political philosophy. Course may be repeated for credit if topics are different.
Also offered for graduate-level credit as Ph1547 and may be taken only once forcredit. .Prerequisite: Phl316U or junior-levelstanding orby instructor approval.
Phl 448 - Biomedical Ethics (4)
Advanced study of centralethical is sues in medicine, biomedical research, and health care systems, such as patient autonomy and medical paternalism, justice in provis ion of health services, protection of human subjects in research, and death, dying, andend of life care. Expected preparation: Ph1355.
Also offered for graduate level credit as Phl 548 and may be taken only onceforcredit. Prerequisite: Upper-division standing.

## Phl 449 - Philos ophy of Sustainability (4)

Examination of the core philosophical is sues that arise within the theory and practice of sustain ability and across its three complementary dimensions: environmental, economic, and social.
Also offered for graduate-levle credit as Ph1549 and may be taken only once for credit. .Prerequisite: junior standing.

## Phl 451 - Classical Figures (4)

Intens ive study of some clas sical figures such as Des cartes, Spinoza, Leibniz, Nietzsche, Hegel. Course may be repeated for credit. Recommended: junior level standing.
Also offered for graduate-level credit as Ph1551 and may be taken only once forcredit. .

## Phl 460 - Contemporary European Philosophy (4)

In-depth study of a current theme (such as phenomenology, post-modernis $m$, or post-structuralism) or topical figure (such as Habermas, Derrida, or Benjamin) of European, "Continental" Philosophy.
Also offered for graduate-level credit as Phl 560 and may be taken only once forcredit.. Prerequisite: Junior standing or consent of instructor.
Phl 470 - Philos ophy of Science (4)
History and philosophy of the scientific method. Topics include an overview of the major models of the scientific method (inductivism, falsificationism, Kuhnian paradigms, etc.) and is sues pertaining to the accuracy of these models and their rationality such as theory- ladenness of observation, testing-holism, and the incommensurability of
theory change. Recommended prerequisites: 8 credits in philosophy and upper-division standing.
Also offered for graduate-level credit as Ph1570 and may be taken only once for credit. .

## Phl 471 - Topics in Philosophy of Science (4)

An in-depth analysis of some specific metaphysical issue pertaining to scientific epistemology such as (but not limited to) explanation, causation, realism, geometry, and relativism. Topics vary percourse which will allow students to take course more than once, with departmental approval, to apply toward major requirements. Recommended prerequisites: 8 credits in philosophy and upper-division standing.
Also offered for graduate-level credit as Ph1571 and may be taken only once for credit. .

## Phl 474 -Philos ophy of Logic (4)

Topics: validity, sentence-proposition, connectives, quantifiers, truth, paradoxes, logical necessity and possibility. Optional topics: metalogic, the construction of formal systems of logic and formal proofs of certain of their properties, e.g., consistency and completeness. Recommended prerequisite: Phl 325 .
Also offered for graduate-level credit as Ph1574 and may be taken only once for credit. .
Phl 485-Honors Seminar (4)
Selected topics within areas of the instructor's research. Students will be expected to produce substantial written material on the topic, to be shared and critiqued.
Recommended particularly for students considering graduate work in philosophy. Recommended prerequisites: 20 credits in philosophy with a GPA in philosophy courses of at least 3.5.

## Phl 501 -Research (1-9)

(Credit to be arranged.)

## Phl 504-Cooperative Education/Internship (0-12)

(Credit to be arranged.)

## Phl 505 - Reading and Conference (0-6)

(Credit to be arranged.) Consent of instructor.

## Phl 507 -Seminar (1-6)

(Credit to be arranged.)

## Phl 510 -Selected Topics (1-6)

(Credit to be arranged.)

## Phl 514 - Plato (4)

Study of selected dialogues of Plato with attention to such topics as his theory of forms, moral philosophy, political philosophy, and to the individual topics of the dialogues, as, for example, knowledge, being, virtue, piety, love, friendship, thes tate, the nature of philosophy.
Also offered for undergraduate-levelcredit as Phl 414 and may be taken only once for credit. .

## Phl 515 - Aristotle (4)

Study of some of the works of Aristotle, such as his Physics, Metaphysics, Ethics, Politics, parts of the Organon Rhetoric. A mong topics for attention are substance, essence, categ ories, cause, the good man, practical reason.
Also offered for undergraduate-levelcredit as Ph1415 and may be taken only once for credit. .

## Phl 516 - The Rationalists: Descartes, Leibniz, Spinoza

 (4)Study, with comparis ons, of selected works of philosophers who maintained that knowledge comes primarily from reason. Likely readings: forDescartes, Meditations, or Rules, or Dis course on Method; for Spinoza, Ethics; for Leibniz, a selection fromamong his many collected works and fragments.
Also offered for undergraduate-levelcredit as Phl416 and may be taken only once for credit. .

## Phl 517 - The Empiricists (4)

Study of the British philosophers, Locke, Berkeley and Hume, who hold that all of the ingredients of thought enter the mind by way of experience and that only what has a definite relation to experience can be thought. Among the particular topics considered will be material substance, spirit, abstract ideas, causation, induction, and skepticism.

Also offered for undergraduate-levelcredit as Phl417 and may be taken only once for credit. .

## Phl 519 - Kant (4)

Study of Kant's Philos ophy primarily as represented in the Critiques of Pure Reason, Practical Reason, Judgment. Readings froms ome of these or related works. Possible topics for consideration: necessary connection, the analytic-synthetic distinction, conceptions of science and metaphysics, relation between metaphysics and morality.
Also offered for undergraduate-levelcredit as Ph1419 and may be taken only once for credit. .

## Phl 520 - Wittgenstein (4)

Study of some of the major works of Wittgenstein with emphas is on the later work, especially the Philosophical Inves tigations. Attention will be given to Wittgenstein's contributions to philosophical method, as well as to his treatment of issues concerning language, meaning, intention, understanding, necessity, and the nature of human pers ons as language users.
Also offered for undergraduate-level credit as Phl420 and may be taken only once for credit. .
Phl 523 - Metaphysics (4)
Philosophical examination of traditional metaphysical is sues (such as relation of body and mind, free will and determinism) and of the more influential ontologies (idealism, materialism, dualism). Introduction als o to contemporary controversies over the feasibility of metaphysics as a rational discipline (logical positivismand its critics).

Also offered for undergraduate-level credit as Phl423 and may be taken only once for credit. .
Phl 524 - Epistemology (4)
Philosophical examination of some of the main is sues in the theory of knowledge (such as our knowledgeof the external world, of the minds of others, of logical and mathematical truths, etc.).
Also offered for undergraduate-level credit as Phl424 and may be taken only once forcredit. .

## Phl 532 - Philos ophy of Mind (4)

Study of the debates over the nature of mental states and our knowledge of them. Main topics are dualis mand various forms of physicalism, behaviorism, mind-body identity theories, functionalismand eliminativism.
Also offered for undergraduate-level credit as Ph1432 and may be taken only once for credit. .

## Phl 533 - Philos ophy of Language (4)

A study of the nature of language, and of problems of meaning, reference, and truth.
Also offered for undergraduate-level credit as Phl433 and may be taken only once for credit. .

## Phl 545 - Advanced Ethics (4)

A course in moralepistemology or "meta-ethics" dealing with such matters as the distinction and connections between fact and value, "is " and "ought," and description and evaluation.
Also offered for undergraduate-level credit as Ph1445 and may be taken only once for credit. .

## Phl 546 - Topics in Ethics (4)

Topics in contemporary moral philosophy, including (but not limited to) the relation between applied and theoretical ethics, the foundations of moral res ponsibility, virtues, and the role of outcomes in moral evaluation. Course may be repeated forcredit toward major requirements with departmental approval.

Also offered for undergraduate-levelcredit as Phl446 and may be taken only once for credit. .

## Phl 547 - Topics in Social and Political Philosophy (4)

An in-depth study of an important current is sue (such as global justice, multiculturalis m , or power) or figure (such as John Rawls, Jürgen Habermas, or MichelFoucault) in social and political philosophy. Course may be repeated for credit if topics are different.

Also offered for undergraduate-levelcredit as Ph 1447 and may be taken only once for credit.

## Phl 548 - Biomedical Ethics (4)

Advanced study of central ethical is sues in medicine, biomedical research, and health care systems, such as patient autonomy and medical paternalism, justice in provision of health services, protection of human subjects in research, and death, dying, and end of life care.

Also offered for undergraduate credit as Phl 448 and may be taken only onceforcredit.

## Phl 549 - Philos ophy of Sustainability (4)

Examination of the core philosophical is sues that arise within the theory and practice of sustainability and across its three complementary dimensions: environmental, economic, and social.

Also offered for undergraduate-levle credit as Phl449 and may be taken only once for credit. .

## Phl 551 - Classical Figures (4)

Intensive study of some clas sical figures such as Descartes, Spinoza, Leibniz, Nietzsche, Hegel. Course may be repeated forcredit.
Also offered for undergraduate-levelcredit as Phl451 and may be taken only once for credit. .

## Phl 555 - Morality and Health Care (4)

Examination of issues in health care such as euthanasia, abortion, allocation of transplantable organs, rationing health care, treatment of impaired newborns. Recommended prerequisite: 8 credits in philosophy.

## Phl 560 - Contemporary European Philos ophy (4)

In-depth study of a current theme (such as phenomenology, post-modernis $m$, or post-structuralis $m$ ) or topical figure
(such as Habermas, Derrida, orBenjamin) of European, "Continental" Philosophy.

Also offered for undergraduate-level credit as Ph1460 and may be taken only once for credit. .

## Phl 570 - Philos ophy of Science (4)

History and philosophy of the scientific method. Topics include an overview of the major models of the scientific method (inductivism, fals ificationism, Kuhnian paradigms, etc.) and issues pertaining to the accuracy of these models and their rationality such as theory- ladenness of observation, testing-holism, and the incommens urability of theory change.
Also offered for undergraduate-level credit as Phl470 and may be taken only once for credit. .

## Phl 571 - Topics in Philos ophy of Science (4)

An in-depth analysis of some specific metaphysical issue pertaining to scientific epis temology such as (but not limited to) explanation, causation, realism, geometry, and relativism. Topics vary percourse which will allow students to take course more than once, with departmental approval, to apply toward major requirements.
Also offered for undergraduate-level credit as Ph1471 and may be taken only once for credit. .

## Phl 574 -Philos ophy of Logic (4)

Topics: validity, sentence-proposition, connectives, quantifiers, truth, paradoxes, logical necessity and possibility. Optional topics: metalogic, the construction of formal systems of logic and formal proofs of certain of their properties, e.g., consistency and completeness.
Also offered for undergraduate-level credit as Phl474 and may be taken only once for credit. .

## PHP - Public Health Practice

Courses offered as part of the joint OHSU-PSU School of Public Health.

## PIAA - Pacific Islander and Asian American Studies

## Port - Portuguese

## Port 101 - First-Year Portuguese Term 1 (4)

An introduction to elementary Portuguese. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, elementary readings. This is the first course in a sequence of three: Port 101, Port 102, and Port 103.

## Port 102 -First-Year Portuguese Term 2 (4)

An introduction toelementary Portuguese. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, elementary readings. This is the second course in a sequence of three: Port 101, Port 102, and Port 103.

## Port 103 -First-Year Portuguese Term 3 (4)

An introduction to elementary Portuguese. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, elementary readings. This is the third course in a sequence of three: Port 101, Port 102, and Port 103.

## Port 199 -Special Studies (1-3)

(Credit to be arranged.)

## Port 201 -Second-Year Portuguese Term 1 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the first course in a sequence of three: Port 201, Port 202, and Port 203. Expected preparation: Port 103.

## Port 202 -Second-Year Portuguese Term 2 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the second course in a sequenceof three: Port 201, Port 202, and Port 203. Expected preparation: Port 103.

## Port 203 -Second-Year Portuguese Term 3 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the third course in a sequence of three: Port 201, Port 202, and Port 203. Expected preparation: Port 103.

## Port 299 -Special Studies (1-12)

(Credit to be arranged.)

## Port 301 - Third Year Portuguese (4)

Continued work on the Portuguese language. Port 301 emphasizes listening comprehension and speaking, 302 grammatical patterns, reading, and writing. May be taken concurrently. This is the first course in a sequence of two: Port 301 and Port 302. Expected preparation:Port 203.

## Port 302 - Third Year Portuguese (4)

Continued work on the Portuguese language. Port 301 emphasizes listening comprehension and speaking, 302 grammatical patterns, reading, and writing. May be taken concurrently. This is the second course in a sequence of two: Port 301 and Port 302. Expected preparation: Port 203.

## Port 330 - Brazilian Culture and Civilization (4)

Historical development of life, thought and the arts in Brazil. Conducted in English. This course may be taken twice for credit with different topics.

## Port 399 - Special Studies (1-6)

(Credit to be arranged.)

Port 404 - Cooperative Education/Internship (1-12)
(Credit to be arranged.)

## Port 409 - Practicum(1-8)

(Credit to be arranged.)

## PS - Political Science

## PS 101 - United States Government (4)

An examination is made of American government in theory and practice. Topics include: the constitutional foundations of American government; federalism, civil liberties, and civil rights; Congress and the legis lative process; the presidency and modern bureaucracy; the Supreme Court and judicial policy-making.

## PS 102 - United States Politics (4)

Introduction to is sues and trends in political culture, political behavior, and public policy making. Topics include: public opinion, political parties and pressure groups, elections and voting behavior, political participation, the role of the media, policy making, the budget process, domestic policy, and national security policy.

Critical analys is of the nature and meaning of social justice. Special attention is given to liberal theories of justice, questions of distributive justice, justice and the rule of law, inter-generational justice, and political alternatives to the liberal vision of social justice. Expected preparation: PS 381.

Also offered for graduate-level credit as PS 583 and may be taken only once for credit. .

## PS 484-Conservatism (4)

Studies classical and contemporary works of conservative political thought, with a focus on how these theories have been applied to political practice.
Also offered for graduate-level credit as PS 584 and may be taken only once for credit. Prerequis ite: Upper-division standing.

## PS 486 - American Political Thought: 1600 to 1820 (4)

The development from 1600 to 1820 of American political thought about government and its proper relation to the individual and society. Specific topics considered include the English background; the colonial mind; ideas informing the revolution; the creation of the Constitution; and the ratification debates; the Jeffersonian and Hamiltonian conflict; John Marshall and the expansion of national power. Attention given to bringing to the surface the fundamental, often inarticulate, patterns, and presuppositions of American thought about political things.
Also offered for graduate-level credit as PS 586 and may be taken only oncefor credit.

## PS 487 -American Political Culture: 1820 to the Present (4)

The development from 1820 to the present of American political thought about government and its proper relation to life, liberty, property and the pursuit of happiness. Topics considered include democratization and the Jacksonian period, slavery, and the nature of the Union, Social Darwinism and industrialization, the progressive period, the coming of the welfare state, and contemporary concerns. Attention given to bringing to the surface the fundamental, often inarticulate, patterns, and presuppositions of American thought about politicalthings.
Also offered for graduate-level credit as PS 587 and may be taken only onceforcredit.

## PS 491 - Testing Theories in Political Science (4)

Survey of the most common methods used to evaluate empirical questions in political science research and as sess the adequacy of theories. The course prepares students to interpret, critique, design, and conduct social scientific analysis. It examines both qualitative andquantitative methodologies, including case study, content analy sis, interviewing, surveys, particip ant observation, field experiments, and statistical analysis.

Also offered for graduate-level credit as PS 591 and may be taken only once forcredit. Prerequisite: Upper division standing or permiss ion of instructor.

## PS 493 - Philosophy of the Social Sciences (4)

An analysis of the practical challenges and competing approaches to the practice of social science, especially political science. Subjects considered include the aims of social science, concepts and description, causality, rationality, macro and micro explanations, interpretation, and postmodernism.
Also offered for graduate-level credit as PS 593 and may be taken only onceforcredit.

## PS 495 - Topics in Specialized Research Methods for Political Science (4)

An examination of a specialized methodological approach and/or technique for interpreting and conducting empirical political science res earch. Each quarter will offer in-depth coverage of a single topic; topics will vary fromquarter to quarter dependent on student interests and instructor specialty. Sample topics include: network analysis, survey research, qualitative methods, formal modeling, maximum likelihood estimation, or us age of specific statistical software applications. Expected preparation: Mth 243, Mth 244, and/or PS 491. This course may be repeated for credit with different topics.
Also offered for graduate-level credit as PS 595.
Prerequisite: Upper-division standing.

## PS 501-Research (1-9)

(Credit to be arranged.) Consent of instructor.

PS 502-(1-9)

## PS 503 - Thesis (1-9)

(Credit to be arranged.) Pass/no pass option.

## PS 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## PS 505 - Reading and Conference (1-12)

(Credit to be arranged.)

## PS 506 -Special Problems (1-12)

(Credit to be arranged.)

## PS 507 - Seminar (1-6)

(Credit to be arranged.) Reading and discussion about an area of political science, with a research projectrequired. Enrollment limited.

## PS 509 - Practicum(1-9)

(Credit to be arranged.) Consent of instructor.

## PS 510 - Selected Topics (1-6)

(Credit to be arranged.) Consent of instructor.

## PS 511 - Advanced Overview of Political Science (4)

An advanced overview of the four es tablished fields of research in political science: American, Comparative, International Relations, and Political Theory, and faculty sub-areas of expertise.
Also offered for undergraduate-level credit as PS 411 and may be taken only once for credit.

## PS 512 - The Presidency (4)

Analysis of the institution, functions, and problems of the presidency. Special attention given to presidential elections, presidential powers, relations with media, presidential leadership. White House staff, executive-
legis lative relations, and the presidential role in domestic, economic, foreign policy making and execution.
Also offered for undergraduate-levelcredit as PS 412 and may be taken only once for credit. .

## PS 513 -Congress (4)

Study of the structure, organization, powers and operations of Congress. Topics covered include: the evolution of Congress, congressional recruitment and elections, legis lative functions, the membership, the leaders, the committee system, the rules and procedures, executivelegis lative relations, pressure groups, lobbying, and reform.
Also offered for undergraduate-levelcredit as PS 413 and may be taken only once for credit. .

## PS 514 -Issues in Public Policy (4)

A study of selected major policies and programs of governmental regulation and service. Emphas is is placed upon the formation, adminis tration, and substantive content of policies in such areas as transportation, public utility regulation, medicalcare, civil rights, education, agriculture, natural resources, and antitrust laws and the preservation of competition.
Also offered for undergraduate-levelcredit as PS 414 and may be taken only once for credit.

## PS 515 - Comparative Public Policy (4)

Introduction to theories, methods, and cases in comparative public policy. Emphas is on policy learning and applied comparative policy analysis. Unique and shared characteristics of policies in different countries or regions. Topics may include welfare andenvironmental policy.
Also offered for undergraduate-levelcredit as PS 415 and may be taken only once for credit. .

## PS 516 -Political Parties and Elections (4)

An examination of political parties and elections in America. Covers such topics as: the changing role of party organizations, machine politics, electoral rules, candidate recruitment, the nomination process, campaign strategies and tactics, campaign finance, and electoral reform.
Also offered for undergraduate-levelcredit as PS 416 and may be taken only once for credit. .

## PS 517 - Interest Groups (4)

This course analyzes the role of interest groups in the political process. Particular attention is given to why some interests are more successfulat forming groups and influencing politics than others. The course also examines techniques used to lobby legis latures, the executive branch, and the courts.
Also offered for undergraduate-levelcredit as PS 417 and may be taken only once for credit. .

## PS 518-Contemporary Political Protest in America (4)

Analyzes the role of social movements in recent American history. The course blends theoretical readings with empirical research into specific movements. Movements considered include but are not limited to: civil rights, the new left, public interestreform, the freeze movement, the women's movement, the Christian Right, and the paramilitary/skinhead movement.
Also offered for undergraduate-level credit as PS 418 and may be taken only once for credit.

## PS 519-Political Reform(4)

Examines the concerns that drive the demand for political reform in America, and how specific reformproposals may affect the politicalsystem. The first part of the course focuses on a variety of proposals to open up the electoral systemand to improve representation. The second part examines various reforms that are designed to make the government work more effectively andefficiently.
Also offered for undergraduate-level credit as PS 419 and may be taken only once for credit.
PS 520 -Seminar on American Political Institutions (4)
Introduction to the field of American Politics, with a particular focus on American political institutions and their respective sub-fields within the discipline of political science.

## PS 521 - The Supreme Court and American Politics (4)

Uses selective case law in order to explore the place of the Supreme Court in America's constitutional structure and its interpretation of the relationship between the branches of federal government. Examines the way the Court forms and shapes policy through constitutionalinterpretation, and the way political forces and influences shape Court practices, judicial selection, and the decision-making process.
Also offered for undergraduate-level credit as PS 421 and may be taken only once for credit.

## PS 522 - Constitutional Law (4)

A study of the way in which the Supreme Court has shaped and influenced governmental structure and political power. Special attention is given to judicial decisions in the areas of federalism, separation of powers, the commerce clause, and the authority of the presidency.
Also offered for undergraduate-level credit as PS 422 and may be taken only once for credit. .

## PS 523 - Civil Liberties (4)

A study of Supreme Court decis ions that affect individual rights and liberties. Areas of concentration include, but are not limited to, freedom of speech and press, religious
liberty, criminal justice, racial justice, gender justice, and the right to privacy.

Also offered for undergraduate-levelcredit as PS 423 and may be taken only once for credit. .

## PS 524 -Law, Politics, andSociety (4)

Examines connection between law and the society which creates andenforces it. Law will be studied frombottom up rather than top down. Emphas is placed on what law is, how people use law, including whether access to law is equal, and how the state exercises power through law.

Also offered for undergraduate-level credit as PS 424 and may be taken only once for credit. .

## PS 525 - Women and the Law (4)

Examines the relationship between women and the law. The first half of the course considers several theories of women's equality. During the second half of the course students will apply these theories to a variety of problems in gender justice. Substantive issues covered may include: sexual harassment, abortion, fetal protection policies, and pornography.
Also offered for undergraduate-level credit as PS 425 and may be taken only once for credit.

## PS 526 - The Politics of the News (4)

Explores the role of the news media in political life and the political and economic forces shaping the news. Examines the purposes and functions of mass media in a democracy, the leg al and economic structure of the American media, and the journalistic practices and communications strategies that contribute to news coverage of politics.
Also offered for undergraduate-levelcredit as PS 426 and may be taken only once forcredit.

## PS 527 - The Politics of Public Opinion (4)

Course provides students with solid foundations for understanding thenature and evaluating the role of public opinion in American democracy. It will also teach students how to interpret public opinion polls intelligently. Specific topics covered will include how "public opinion" has been defined historically and in contemporary discourse; the various influences that shape peoples' values, beliefs, and attitudes about politics; the methods that pollsters and survey researchers use to measure public opinion and problems with those methods; and the content of Americans' views on controversial political is sues.

Also offered for undergraduate-levelcredit as PS 427 and may be taken only once for credit. .

## PS 528 - The Politics of Law and Order (4)

As American crime control policies havebecome increas ingly punitive, the criminal justice systemhas expanded in size and scope, crime control has become
increasingly federalized, and record numbers of A mericans have been incarcerated. Class explores what is political about crime control and why American crime policy takes on a particularly punitive cast. In particular, carefully examines the social construction of the crime problem: how popular beliefs aboutcriminals and the causes of crime interact with the media and the political systemto create a style of crime policy that is uniquely American.
Also offered for undergraduate-level credit as PS 428 and may be taken only once for credit. .

## PS 529 - American Immigration Politics \& Policy (4)

Exploration of American immigration politics overtime and into the current era.

Also offered for undergraduate-level credit as PS 429 and may be taken only once for credit.

## PS 530 - Proseminar in International Relations (4)

Graduate seminar surveys the main theoretical and analytical approaches encountered in the study of international relations. Themes include the grand theoretical traditions of liberalism, realis $m$, and radicalis m; analytical and methodological pers pectives, like behavioralismand rational choice theory; as well as the normative, critical, and postmodern challenges to the mains tream.

## PS 531 - State and Local Politics (4)

Intensive examination of the role of the states and cities in the federal system. The course pays particular attention to the importance of political culture in shaping state politics and power relationships between the different levels and branches of government. Oregon's political experiences are used as example and for comparis on.
Also offered for undergraduate-level credit as PS 431 and may be taken only once for credit. .

## PS 533 - Ethics and Public Policy (4)

An examination of the normative dimensions of public policy, focusing bothon the ethical is sues raised by the means of policymaking as well as the values that might shape the ends of public policy.

Cross-Listed as: This is the same course as PAP 533 and may be taken only once for credit.

## PS 535 - Disasters and Public Policy (4)

The political, adminis trative, and public policy issues surrounding major and catastrophic risks and dis asters including both natural (earthquakes, pandemics, asteroids) and man-made (climate change, nuclear weapons, bioterrorism) events.

Also offered for undergraduate-level credit as PS 435 and may be taken only once for credit. .

## PS 542 - Contemporary Theories of World Politics (4)

Surveys concepts and arguments from various theoretical traditions in international relations. Topics are drawn from the ongoing debate between the realist and liberal schools of thought, as well as the challenges posed by radical, normative, and critical international relations theory. Theories will be examined mainly for their insights on is sues of war and peace.
Also offered for undergraduate-level credit as PS 442 and may be taken only once for credit. .

## PS 543 - Resolving International Conflicts (4)

A seminar that explores different kinds of international disputes and actual conflicts in order to identify and assess theories, analytical frameworks, and methods of conflict resolution, management, and prevention. Emphasis is on understanding the roots of conflicts and techniques that may be appropriate to different levels and dimensions of conflict.

## PS 544 -National Security Strategy: Regional Perspectives (4)

Focuses on the regional contexts that influence U.S. national security strategy and the multifaceted reasons security polices succeed or fail in each region of the world. Critical analys is applied to major social, cultural, political, economic, military, technological, and his torical issues that shape formation of regional security strategy, and to strategic assessments of U.S. security policies as perceived from other regions' perspectives.
Also offered for undergraduate-level credit as PS 444 and may be taken only once for credit. .

## PS 545 - American Foreign Policy (4)

Contemporary foreign relations of the United States; objectives, world, and domestic factors affecting American foreign policy; governmental institutions concerned with development and execution of foreign policy; major is sues and problems.

## PS 546 - National and International Security Policies

 (4)A comparis on of national and international security systems, strategies, and policies. Emphas is will be on the current is sues arising in these security systems and on the problems that arise when their needs conflict. Particular emphasis will be placed on contending theories of national and international security.
Also offered for undergraduate-level credit as PS 446 and may be taken only once for credit. .

## PS 547 - International Organization (4)

The nature and extent of the organization of interaction among nations. Focus on the United Nations, but illustrations and generalization froma wide range of regional and functional org anizations including the specialized agencies. Emphasis on the processes of communication, interaction, and negotiation within the organizational environment.
Also offered for undergraduate-level credit as PS 447 and may be taken only once for credit.

## PS 548 - International Law (4)

Introduction to public international law. Particular emphas is is placed on the interplay of politics and law in the international system. Types of law, sources of law, law creating agencies, law applying agencies are considered. Contemporary substantive is sues in international law will be discussed.
Also offered for undergraduate-level credit as PS 448 and may be taken only once for credit. .

## PS 549 - International Environmental Politics andLaw

 (4)Explores various environmental problems and is sue areas that exist between and among nation-states. There will be an exploration of the political difficulties that impede solutions and the various pathways that may lead to en vironmentalcooperation. There will also be a focus on the international legal regimes and international institutions designed to regulateenvironmental problems.
Also offered for undergraduate-level credit as PS 449 and may be taken only once for credit.

## PS 552 - The European Union (4)

Focuses on how the EU has evolved since its be ginnings in the 1950s, on its present-day organization and functions, and on how the member countries interact with one another in making EU policies for jointly regulating their internal economies and societies as well as their external policies, i.e., how the EU members also try to manage their relations with the rest of the world.
Also offered for undergraduate-level credit as PS 452 and may be taken only once for credit.

## PS 553 - Power Transitions: Past, Present, andFuture

 (4)Uses powertransition theory to examine what elements contribute to global war. Creates a foundation for understanding why nations fight, when they fight, the outcome of wars, and the relationship between global and regional conflicts. Also explores the continuum of peaceful interactions at the global level, and how and when thenext series of upheavals will occur in the international system.

Also offered for undergraduate-levelcredit as PS 453 and may be taken only once for credit. .

## PS 554 - International Political Economy (4)

A study of the conten ding theories of international political economy: power and interdependence, Regime Theory, dependency, integration, and functionalis $m$, as well as the ideologies of political economy-the liberal, national, and Marxist pers pectives. Also considered are the politics of trade, aid, and investment.

Also offered for undergraduate-level credit as PS 454 and may be taken only once for credit. .

## PS 555 -Politics of Economic Reform in Emerging Market Countries (4)

Explores the process of economic reformin a comparative and international setting by focusing onemerging market countries (e.g., Argentina, Brazil, Mexico, Indonesia, Poland, Turkey, and Thailand). Des igned to give a more in-depth analysis of reformpolicies for the students. Expected preparation: PS 554.

Also offered for undergraduate-levelcredit as PS 455 and may be taken only once for credit. .

## PS 556 - Advanced Political Economy (3)

Readings seminar provides a review of the literature in theories and selected issues in international political economy. Core requirement for graduate students in the PAP doctoral programand formaster's students in political science who select international relations as their primary field of specialization.

## PS 559 - Political and Economic Decision-making (3)

Examines the philosophical and conceptual assumptions embodied in alternative decision-making theories in the fields of economics and politics. Designed to show students thedifferences in individual and collective decision-making processes and the technical and social challenges faced in decision-making processes in the market place and the realmof politics. Examples cover local, national, and international policy topics. This course is the same as USP 636; can only be taken once for credit. Recommended prerequis ite: USP 515/615.

Cross-Listed as: USP 636.

## PS 560 - Political Development in Modern Turkey (4)

Designed to provide students with an in-depth study of political development literature with a focus on modern Turkey. Examines how modern Turkish republic emerged from the as hes of the Ottoman Empire and evaluate stages of political development during the first, second, and third republic. Finally, as sesses theimplications of Turkey's new geopolitics (since the end of the Cold War) on Turkish political and economic development in a global
perspective. This course is the same as Intl 560 and may be taken only once for credit.

Also offered for undergraduate-level credit as PS 460 and may be taken only once for credit. Cross-Listed as: Intl 560.

## PS 561 - Politics of Economic Reform in Modern Turkey (4)

This course is designed to providestudents with an in depth study of political development literature with a focus on modern Turkey. We will examine how modern Turkish republic emerged fromthe ashes of the Ottoman Empire and evaluate stages of economic development during the first, second, and third republic. Finally, we will as sess the implications of Turkey's new geopolitics (since the end of the Cold W ar) on Turkish economic development in a global perspective. This course is the same as Intl 561 and may be taken only once for credit.
Also offered for undergraduate-level credit as PS 461 and may be taken only once for credit. Cross-Listed as: Intl 561.

## PS 562 - International Relations of the Middle East (4)

Examination of the external dimension of Middle East politics; the role of the great powers; brief analy sis of the British and French roles since 1945; extended analysis of American and Soviet/Russian policy in the Middle East. Special attention will be given to new patterns of international relations in the Middle East in the post- Cold War, post-Gulf W ar era.

Also offered for undergraduate-level credit as PS 462 and may be taken only once for credit. .

## PS 563 - Politics andPolicy of the Middle East (4)

Examines conceptual debates in comparative politics and international relations of the Middle East. Focuses on state formation; authoritarian politics, political regimes, and institutions; public opinion, Islamist movements; gender and politics; political economy; the Is raeli-Palestinian conflict, and regional and international relations of the greater Middle East.

## PS 565 - Politics of Russia (4)

An in-depth exploration of Russian politics, history, and culture. Begins with a focus on history, and thus considers the beginnings of the Russian Empire across the centuries. Then examines the rise and fall of communis $m$, with a particular focus on Lenin and Stalin. The final segment of the course focuses on modern Russian politics, with a particularemphasis on the strategies and success of Vladimir Putin.

Also offered for undergraduate-level credit as PS 465 and may be taken only once for credit.

## PS 566 -Politics of China (4)

A survey of the historical, ins titutional, and social roots of contemporary politics in China as well as a consideration of several public policy areas.
Also offered for undergraduate-level credit as PS 466 and may be taken only once for credit.

## PS 568 - International Politics of East Asia (4)

Examination of the foreign policy motives, objectives, and systems of the major East Asian states: China, Japan, and Korea. Attention is paid in particular to the political economy of regional and extra-regional relationships.

Also offered for undergraduate-levelcredit as PS 468 and may be taken only once for credit.

## PS 569 - Comparative Political Institutions (4)

Examines the performance, capabilities, and overall function of governments worldwide. Emphas is on advanced analyses of theories and concepts in comparative politics, with a particular focus on institutions of the state.

## PS 570 - Theories of Comparative Politics (4)

Examines the evolution of the theories and methods of comparative politics, addressing both the recent history of the discipline and the current state of its practices. Topics include: the behavioral revolution, political development, the role of state, the new institutionalism, and the state-insociety approaches.
Also offered for undergraduate-level credit as PS 470 and may be taken only once for credit. .

## PS 571 - Gender \& Politics: A Comparative Perspective

 (4)Examination of the role, progress, behavior, and power of women in politics using a comparative lens. Topics include the representation of women in government, the problems confronting female candidates, the behavior of women officeholders, and the gender gapin politics. Examines women in western democracies, as well as in communist states and developing nations. Individual countries are used as case studies.
Also offered for undergraduate-levelcredit as PS 471 and may be taken only once for credit. .

## PS 572 -Democratization and Authoritarianismin the Middle East and North Africa (4)

Introduction to theoretical, empirical, and methodological debates in the comparative and international relations of the Middle East. Examination of contemporary political, economic, and social topics, including institutions and regimes, politicaleconomy, women and politics, Is raeliPalestinian conflict, and regional and international affairs.

Also offered for undergraduate-level credit as PS 472 and may be taken only once for credit.

## PS 573 - Government and Politics of Arab North Africa

 (4)Examines the domestic and international politics of Arab North Africa, including Morocco, the Moroccan/Western Sahara, Mauritania, Algeria, Tunisia, Libya, and Egypt. Topics include the history of the region, political regimes and authoritarianism, the Arab spring, women's rights, and U.S.-Maghrebi relations.

Also offered for undergraduate-level credit as PS 473 and may be taken only once forcredit. .

## PS 574 - Democracy and Development in Latin America (4)

Examines issues of democracy and development in Latin America. It addresses such topics as the role of history, political culture, political leadership, political institutions, the state, the military, civil society, social clas ses, level of socio-economic development, and their relationship to the possibilities of success or failure for democracy in Latin America. The course examines specific cases such as Argentina, Brazil, Mexico, Chile, Peru, Venezuela, and Uruguay.
Also offered for undergraduate-level credit as PS 474 and may be taken only once for credit. .

## PS 575 - Comparative Political Parties andElections (4)

Parties and elections are crucial elements of governancein countries around the world. But while these institutions are omnipresent, there are differences in the power and behavior of political parties as well as in the function and outcome of legislative electoral systems. In this course, we examine those differences with a focus on representation, party survival, and electoral behavior, and performindepth case studies of elections in such countries as Germany, Russia, Japan, and Brazil.
Also offered for undergraduate-level credit as PS 475 and may be taken only once for credit.

## PS 576 - Politics of Inequality in the United States (4)

Examines three themes: 1) How and why did economic inequality explode in the U.S. in recent decades? This level of inequality is notinevitable. We look to American politics for ans wers. 2) How does economic inequality intersect with other forms of inequality (e.g., gender, race, and place)? and 3) What is to be done? Students will draw from their pers onal experiences with inequality via exercises and assignments.
Also offered for undergraduate-level credit as PS 476 and may be taken only once for credit.

## PS 577 -Global Food Politics and Policy (4)

Politics and policy of food production and consumption in both rich and poor nations. Review of competing policy arguments across is sues relating to food security, markets and market access, and the environment and public health.
Also offered for undergraduate-levelcredit as PS 477 and may be taken only once for credit. Prerequisite:Upperdivis ion standing or graduate standing.

## PS 578 -Comparative Democratic Institutions (4)

Examines differences in how democratic governments are structured across the globe and what these differences mean for governing. Explores differences both among and between presidential, parliamentary, and semi-presidential political systems. Examines federal and unitary political structures, and the role of supreme courts. Field trip to observe alternative democratic system.
Also offered for undergraduate-levelcredit as PS 478 and may be taken only once for credit.

## PS 579 - Transitions to Democracy (4)

Comparative analysis of political systems which have experienced a transition from an authoritarian to a democratic regime. Attention is given to the conditions supportive of democratic transition and to the problems of maintaining democratic stability.
Also offered for undergraduate-levelcredit as PS 479 and may be taken only once for credit. .

## PS 581 -Democratic Theory (4)

Critical examination of the principles of democratic politics, including important statements in the his tory of political thought and contemporary political theory. Issues discussed include participation, deliberation, electoral competition, constitutionalism, and the challenges of democratic legitimacy in the context of US institutions and increasing globalization.
Also offered for undergraduate-levelcredit as PS 481 and may be taken only once for credit. .

## PS 582 -Liberalismand Its Critics (4)

Critical examination of the theory and practice of liberalism as an ongoing tradition. The basic elements of liberalism are identified and discussed and criticisms of the liberal tradition, as offered by communitarians, classical republicans, feminists, and postmodernists, are examined. Liberal responses to these criticis ms are also explored.
Also offered for undergraduate-levelcredit as PS 482 and may be taken only once for credit. .

## PS 583 - Justice in the Modern World (4)

Critical analys is of the nature and meaning of social justice. Special attention is given to liberal theories of justice, questions of distributive justice, justice and the rule
of law, inter-generational justice, and political alternatives to the liberal vision of social justice.
Also offered for undergraduate-level credit as PS 483 and may be taken only once for credit. .

## PS 584-Conservatism(4)

Studies classical and contemporary works of conservative political thought, with a focus on how these theories have been applied to political practice.
Also offered for undergraduate-level credit as PS 484 and may be taken only once forcredit.

## PS 585 - Political Theory and Governance (4)

A survey of the intersection between political theory and governance that explores how political legitimacy might be understood. This class is a graduate-level introduction to these concepts that engages with a broad range of political theorists and approaches to offer the means of evaluating contemporary governance froma normative perspective.

## PS 586 - American Political Thought: 1600 to 1820 (4)

The development from 1600 to 1820 of American political thought aboutgovernment and its proper relation to the individual and society. Specific topics considered include the English background; the colonial mind; ideas informing the revolution; the creation of the Constitution; and the ratification debates; the Jeffersonian and Hamiltonian conflict; John Marshall and the expansion of national power. Attention given to bringing to the surface the fundamental, often inarticulate, patterns, and presuppositions of A merican thought about political things.
Also offered for undergraduate-level credit as PS 486 and may be taken only once for credit.

## PS 587 -American Political Culture: 1820 to the Present (4)

The development from 1820 to the present of American political thought about government and its proper relation to life, liberty, property and the pursuit of happiness. Topics considered includedemocratization and the Jacksonian period, slavery, and the nature of the Union, Social Darwinism and industrialization, the progressive period, the coming of the welfare state, and contemporary concerns. Attention given to bringing to the surface the fundamental, often inarticulate, patterns, and presuppositions of American thought about political things.
Also offered for undergraduate-level credit as PS 487 and may be taken only once for credit.

## PS 588-Political Scientist Professionalization (2)

This is a skill-building course that focuses on developing two sets of practical skills that allfuture political scientists working in academia will need: first, the skills necessary to
create a top-quality application package that will get students into top-ranked Political Science PhD programs, and second, the skills to revise written work into an excellent writing sample or conference paper.

## PS 589 -How to Teach and Present Social Science Research (2)

Focuses on the skills necessary for designing and teaching a political science course and delivering effectiveresearch presentations at conferences. Students will spend the first half of the course on teaching skills and the second half on building and works hopping presentations, emphasizing skills such as public speaking, building effective slideshows and other visuals, and communicating research to audiences with mixed levels of expertise.

## PS 590 - Introduction to Graduate School: Skills for Scholarly Success (1)

Welcomes students to the graduate environment and culture of academia. Des igned for the first quarter of graduate study, this course focuses on developing es sential skills for success in graduate leveleducation, such as: how to read academic literature, note-taking and seminar noms, and understanding the prospectus requirement. Also teaches skills to navigate the often-competing demands on graduate students' time, and develops the students' academic toolkit which will serve them throughout their career.

## PS 591 - Testing Theories in Political Science (4)

Survey of the most common methods used to evaluate empirical questions in political science research and as sess the adequacy of theories. The course prepares students to interpret, critique, design, and conduct social scientific analys is. It examines both qualitative and quantitative methodologies, including case study, content analysis, interviewing, surveys, participant observation, field experiments, and statistical analysis. PS 591 is required for graduate students in the political sciencemaster's program and should be taken after PS 594.
Also offered for undergraduate-level credit as PS 491 and may be taken only once for credit.

## PS 593 - Philos ophy of the Social Sciences (4)

An analysis of the practical challenges and competing approaches to the practice of social science, es pecially political science. Subjects considered include the aims of social science, concepts and description, causality, rationality, macro and micro explanations, interpretation, and postmodernism.

Also offered for undergraduate-level credit as PS 493 and may be taken only once for credit.

## PS 594 - Research Design for Politics and Policy (4)

This course will introduce the logic of social science research and provide a brief overview of the various methods that are commonly used. The focus is on developing design skills that will help clarify research ideas, organize research design and research questions of interest to students.

Cross-Listed as: This is the same course as PAP 690 and may be taken only once for credit.

## PS 595 - Topics in Specialized Res earch Methods for Political Science (4)

An examination of a specialized methodological approach and/or technique for interpreting and conducting empirical political science research. Each quarter will offer in-depth coverage of a single topic; topics will vary fromquarter to quarter dependent on student interests and instructor specialty. Sample topics include: network analysis, survey research, qualitative methods, formal modeling, maximum likelihood estimation, or usage of specific statistical software applications. Expected preparation: Mth 243, Mth 244, and/or PS 491. This course may be repeated for credit with different topics.
Also offered for undergraduate-level credit as PS 495.
PS 603 - Dissertation (1-12)
(Credit to be arranged.)

## PS 605 - Reading and Conference (1-6)

(Credit to be arranged.)

## PS 663 - Politics andPolicy of the Middle East (4)

Examines conceptual debates in comparative politics and international relations of the Middle East. Focuses on state formation; authoritarian politics, political regimes, and institutions; public opinion, Islamist movements; gender and politics; political economy; the Is raeli-Palestinian conflict, and regional and international relations of the greater Middle East.

## Psy - Psychology

## Psy 200 - Psychology as a Natural Science (4)

Covers the scientific foundations of human behavior in areas such as physiological and biological psychology, cognitive, moral, and emotional development, sensation and perception, consciousness, learning, thinking and memory. Also focuses on is sues in experimental design
and teaches students how to critically evaluate psychological research.

## Psy 204 -Psychology as a Social Science (4)

Explores human individuality and the social context of behavior. Topics include intelligence, personality, motivation, social psychology, coping with stress, and ps ychological disorders. Describes theories and research findings in the context of social is sues and introduces students to challenges of psychological meas urement. Recommended as a first ps ychology course for both majors and nonmajors.

## Psy 207 - Introduction to Applied Psychology (4)

A survey of selected applications of concepts and methodologies from the different areas of psychology such as experimental, industrial/organizational, social, and developmental. Recommended prerequisites: Ps y 200, 204.

## Psy 299 -Special Studies (1-4)

(Credit to be Arranged.)
Prerequisite: Psy 204.

## Psy 300U- Personal Decision Making (4)

How to make wiser decisions. Ways to think more creatively and more logically in making both everyday choices and major life decis ions. Instruction and hands-on experience.

## Psy 310U- Psychology of Women (4)

Review and evaluateassumptions underlying psychological research on women. Survey the research in areas such as the development of sexdifferences, acquisition of gender roles and maintenance of gender stereotypes. Explore the pertinence of these findings to topical areas such as women's work roles, women and mentalhealth, and the women's movement. Recommended prerequisite: 4 credits in psychology.

## Psy 311U- Human Development (4)

Development of the individual across the lifespan, from conception to death. Surveys the biological bases and social contexts of developmental processes (e.g., cognitive, social, emotional development). Implications of research for education, parenting/family relations, and social policy. Recommended prerequisites: Psy 200 and 204, or appropriate Sophomore Inquiry course.

## Psy 315 - Careers in Ps ychology (4)

The coursecombines career considerations with exploration of multiple aspects of psychology as a discipline and their relevance to student futures. Exposure to faculty, graduate students and employers will help ground decisions about employment and graduate school, broadening perspective on what it is to be a knowled geable, psychologically literate citizen.
Prerequisite: Psy 204.
Psy 317 -Personal and Social Adjustment (4)
Traces the course of normal adjustment with special interest in those factors which are instrumental in shaping human behavior. Concepts such as emotional maturity, psychological stress, and maladjustment are considered. Recommended prerequisite: 4 credits in 200-level psychology.

## Psy 320 - Social Science Research Methods II (4)

Introduction and application of statistical modeling to psychological data. Guidance and practice in the interpretation and reporting of common statistical tests and software use. Topics include descriptive statistics, comparis ons of means among groups, relations among variables, statistical model specification with multiple predictors, and the analysis of categorical data.
Prerequisite: Stat 243 or Soc 396.

## Psy 321 - Research Methods in Psychology (4)

Study of methods for evaluating the quality of psychological measurements, including various concepts of reliability and validity, and itemanalysis techniques; common sources of invalidity in the interpretation of psychological data; strategies of selecting and analyzing observations which minimize these sources of in validity. Recommended prerequisites: Stat 243,244 , and 4 credits in psychology.

## Psy 340 - Principles of Behavior Analysis (4)

A course in the concepts of behavior analysis. Includes presentation of respondent and operant conditioning, extinction, response differentiation, schedules of reinforcement, shaping, es cape and avoid ance behavior, stimulus discrimination, punishment and similar concepts. The course is intended to provide thestudent with a thorough introduction to a developing technology of behavior.

## Psy 342 -Social Psychology: Self, Attitudes and Social Influence (4)

Examination of psychological and sociological processes as sociated with people's thoughts about and interactions with one another. Particular emphases on self, social identity, social cognition, attitudes, prejudice and persuasion. Expected preparation: Soc 200, or Psy 200 or 204. Credit will not be given for both Soc 342 and Psy 342.

## Psy 343 -Social Psychology: Social Relationships and Groups (4)

Examination of sociological and psychological processes as sociated with interpersonal, group, and inter-group behavior. Particular emphases on aggression, pro-social behavior, interpersonal attraction, group influence, conflict and cooperation. Expected preparation: Soc 200, or Psy 200 or 204. Credit will not be given for both Soc 343 and Psy 343.

## Psy 345 -Motivation (4)

A course on the causes for acquiring, choosing, or persisting in specific actions within specific circumstances. Students review the conditions, principles, and theories of motivation. Recommended prerequisite: Psy 200 or 204.

## Psy 346 -Learning (4)

Conditions, principles, and theories of learning. Assessment of experimental methods and results in relation to current theory. Recommended prerequisite: 4 credits in 200-level psychology.

## Psy 347 -Perception (4)

Introduction to the principles and theories of visual and auditory perception. Topics include sensory pathways, color perception, perceptual illusions, and the role of knowledge and cognitive factors in perception. Recommended prerequisite: Psy 200.

## Psy 348 - Cognition (4)

Proces ses by which we form representations of reality, and strategies we use for manipulating those representations in order to explore possible actions and outcomes. Includes topics in perception, attention, memory, imagery, language, comprehension, problemsolving, creative thinking, judgment, reasoning, and decision making. Recommended prerequisite: 4 credits in 200-level psychology.

## Psy 350 - Counseling (4)

A survey of counseling and interviewing procedures, contributions of psychological theory to counseling techniques. Recommended prerequisite: 4 credits in 200levelpsychology.

## Psy 357 - Comparative Psychology (4)

A study of the behavioral differences and similarities within the phylogenetic scale. Emphas is on the examination of the evolution of the behavior of individuals and species, paying particular attention to the basic concepts of psychology, such as sensation, perception, learning, and social processes. The role of animals in theories and as models forhuman behavior. Recommended prerequisite: 4 credits in 200- level psychology.

## Psy 360 - Industrial/Organizational Psychology (4)

The scientific study of human behavior in work settings, covering the adjustments people make to the places they go, the people they meet, and the things they do in their occupational activities of alltypes. Recommended prerequisite: Psy 200 or 204.

## Psy 361 - Industrial Psychology (4)

Overview of the scientific study of people in work settings, including job analysis, the meas urement of individual differences forhiring and promoting workers, the as sessment of employee performance through performance apprais al systems, and employee training. Course contains a substantial component focused on application through a community-based learning or class project.

## Psy 362 - Organizational Psychology (4)

Overview of the scientific study of people in work settings, including work motivation, leadership, organizational change and development, group processes, work and family is sues, stress, job attitudes, and occupational health psychology. Course contains a substantial component focused on applications such as community based learning or clas projects.

## Psy 399 -Special Studies (1-6)

(Credit to be arranged.)

## Psy 401 - Research (0-6)

(Credit to be arranged.) Consent of instructor.

## Psy 402 - Independent Study (1-12)

(Credit to be arranged.)

## Psy 403 -Thesis (1-12)

(Credit to be arranged.)

## Psy 404 - Cooperative Education/Internship (0-12)

(Credit to be arranged.)

## Psy 405 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Psy 406 -Special Projects (1-12)

(Credit to be arranged.)

## Psy 407 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## Psy 409 - Practicum(0-12)

(Credit to be arranged.) Supervised psychological practice including observing, studying, and participating in the activities of private settings or community service agencies such as: schools, mental health clinics, correctional agencies, and day care centers. Supervision may include guided reading, daily journals, and evaluative reports.

## Psy 410 -Selected Topics (1-6)

(Credit to be arranged.)

## Psy 413 - Ecops ychology (4)

Course explores a range of topics regarding the humannature relationship, including humans as an inseparable from nature, influences of built and natural environments on mind and behavior, psychological theory and strategies for addressing environmental problems, evolutionary and cultural factors, and the use of nature in therapy.
Discussions, lecturettes, experiential, guest-speakers.

Also offered for graduate-level credit as Psy 513 and may be taken only once for credit. Prerequisite: Psy 200, Psy 204, and Psy 321.

## Psy 425 - Psychology of Black Manhood in America (4)

Examines the psychological underpinnings of the Black male experience in American culture; looks at the "inv is ibility syndrome" and the impact of dis crimination on mental, emotional, and physical health. In addition, consideration will also be given to understanding the ways racism, medicalneglect and malpractice, stereotypes, and various forms of trauma negatively impacts perceptions of self.
Prerequisite: Upper-division standing.

## Psy 426 - Ps ychology of Stigma \& Social Inequality (4)

Inves tigates the ways in which individuals perceive, respond to, perpetuate, and work to dis mantle stigma and socialinequality. We will delve into classic and contemporary work, touching on topics including: why do we stigmatize? How and why do we justify social inequality? How do stigma and social inequality affect our health, well-being, and interactions with others? We will also think deeply abouthow to apply our knowledge to current social is sues and policy.

Prerequisite: Upper-division standing.

## Psy 427 -History and Systems of Psychology (4)

A survey of the history of psychology and of past and current theoretical approaches in psychology. Study of the historical roots of current theories in perception, learning, motivation, personality and other fields. Expected preparation: Stat 243 and Stat 244, at least 18 credits in psychology, including Psy 321.

Also offered for graduate-level credit as Psy 527 and may be taken only once for credit. .

## Psy 428 - Diversity, Prejudice and Intergroup Relations

 (4)Delves into social psychological research and theory on Prejudice, Diversity, and Intergroup Relations. Froma socialpsychological pers pective, it addresses both historical and contemporary perspectives on stereotyping, prejudice, and discrimination, including implicit bias, modern racis $m$, social identity threats, and benevolent sexism. Example topics include the impact of prejudice in policing, education, work organizations, online mediums, and health care. The course also focuses on ways to reduce prejudice and counteract bias.
Prerequisite: Upper-division standing.

## Psy 429 - The Psychology of Race \& Gender in Sport (4)

Using a social psychological approach, this course will examine how is sues of race and gender affect the sporting
domain. Specifically, the course will emphasize how social psychological theories of intergroup relations, stereotyping, prejudice, and dis crimination impact athletes, coaches, referees, and fans.
Prerequisite: upper-division standing.

## Psy 430 - Applied Social Psychology (4)

Explores current and potential applications of social psychological theories and research methods, with a focus on work conducted in field settings. As a final project, each student examines an applied area of their own choosing (previous projects have focused on normative role transitions, responses to natural dis asters, political attitudes, conflict resolution, and intergroup relations). Expected preparation: Stat 243 and Stat 244, Psy 321, Psy 342, or Psy 343.
Also offered for graduate-level credit as Psy 530 and may be taken only once forcredit. .

## Psy 431U- Psychology of Men and Masculinities (4)

Reviews various social and personality theories that describe the psychology of men and the diverse forms and expressions of masculinity across cultures. Applies these theories to a wide range of is sues in men's lives, including emotions, health, work and family roles, sexuality, relationships, and violence.
Prerequisite: fourcredits in psychology.

## Psy 432 - Personality (4)

Personality structure and theory. Recommended prerequisite: Stat 243 and 244, eight credits in ps ychology, including Psy 321.

## Psy 433 - Introduction to Psychological Testing (4)

Covers theoretical and practical is sues related to psychological tests used in educational, organizational, and clinical settings. Testing areas covered include intelligence, personality, values, interests, moral development, aptitudes and psychological dis orders. Students will learn how to evaluate the quality of a psychological test and how to make informed choices about whether a test is appropriate for a particular setting. Recommended prerequisites: Psy 321 and Stat 243 and 244.

## Psy 434 - Introduction to Psychopathology (4)

Course content will survey the development of modern ideas of mental illness, the origins of mental illnesses, the diagnostic system and the clinical syndromes, and methods of treatment of neuropsychiatric disorder. This course does not produce diagnosticians of mentalillness but is a preparation for the clinical study of diagnosis. Expected preparation: Psy 200, Ps y 204, Stat 243 and Stat 244, and
at least 6 additional credits in psychology, including Psy 321.

Also offered for graduate-level credit as Psy 534 and may be taken only once for credit. .

## Psy 436 - Performance Appraisal and Feedback (4)

Applications of psychological concepts to the development of performance appraisal systems in organizations. Topics include job analysis, cognitive processes in performance apprais al, types of rating scales, rater training methods, technical as pects of developing a performance appraisal system, performancefeedback, individuals' reactions to performance feedback factors related to the perceived accuracy of performancefeedback. Recommended prerequisites: Stat 243 and 244, Psy 321 and 360 or 361 .

## Psy 440 - Group Process (4)

A course on the psychology of small groups. Topics will include but not be limited to: interpers onal attraction, stages of group development, group structure, coalition formation, pers onal power, leadership, group decision making and problemsolving, intergroup relations and the principles of negotiation. Expected preparation: Stat 243 and Stat 244, Psy 321, graduate standing or consent of instructor.

Also offered for graduate-level credit as Psy 540 and may be taken only once for credit. .

## Psy 444 - Job Analysis (4)

Methods (e.g., interviews, surveys) used to collect information about jobs for use in human res ource functions such as personnel recruitment and selection, training, performance appraisal, and compensation. Such information is also used to developjob descriptions and specifications. Course contains a community-based learning component. Students participate in a full job analys is including data collection, analysis, and interpretation. Expected preparation: Stat 243 and Stat 244; Psy 321 and Psy 360 or Psy 361 ; or comparable Business Adminis tration courses.
Also offered for graduate-level credit as Psy 544 and may be taken only once for credit. .

## Psy 445 - Employee Development (4)

Covers the application of psychological principles to employee training and development. Topics include organization, job, and person analysis; programdesign; the application of learning principles to enhance training effectiveness; evaluation of training programs; and employee training and development methodology. A heavy emphas is is placed on current psychological research. This course may include a community-based learning component. Expected preparation: Stat 243 and Stat 244; Psy 321 and Psy 360 or Psy 361.

Also offered for graduate-level credit as Psy 545 and may be taken only once for credit. .

## Psy 447 -Pers onnel Psychology (4)

How individual differences affect work behavior and task performance and how psychologists measure and predict such differences. Covers the development, adminis tration, and utility of modern instruments for selection and appraisal. Data combination strategies and decision making in pers onnel systems are dis cussed. Expected preparation: Stat 243 and Stat 244, Psy 321 and Psy 360 or Psy 361.

Also offered for graduate-level credit as Psy 547 and may be taken only once forcredit. .

## Psy 448 - Psychology of Work Motivation (4)

Examination of the role that motivation plays in initiating, guiding, and maintaining work behaviors. Discussion of job attitudes, emotional intelligence, personality factors, socialization and culture, effects of participation, careers, job enrichment, re-engineering, and power and politics. Expected preparation: Psy 321.

Also offered for graduate-level credit as Psy 548 and may be taken only once for credit. .

## Psy 449 - Survey of Human Factors (4)

An introduction to systems analysis concepts. An examination of the role of man and his interrelationships with complex man-machine systems. Topics include: manmachine systems, vis ual and auditory presentation of information, design of controls, layout of work places, effects of environment on human performance, and the physical limits of human performance. Recommended prerequisites: eight credits in psychology; Stat 243,244, and Psy 321.

## Psy 450 - Psychopharmacology (4)

How do drugs affect us? Discover the structure and function of the nervous system, techniques used to study drug actions and effects, and the specific molecular and behavioral influence of alcohol and other drugs, including opioids, psychostimulants, cannabinoids and psychedelics.
Prerequisite: Upper division standing.

## Psy 451 -Introduction to Neurophysiological

 Psychology (4)The study of the nervous system, various anatomical, neurophysiological, and imaging techniques for studying the brain and behavior, including specific cognitive abilities such as sensation, perception, attention, language, and emotion.
Also offered for graduate-level credit as Psy 551 and may be taken only once for credit. . Prerequisite: Junior standing.

## Psy 452 - Advanced Neurophysiological Psychology (4)

Explore current federally funded topics in neurophysiology, acquire skill in reading and presenting original research, visit the Oregon National Primate Research Center and learn alongside area graduate students and postdocs in neuroscience.

Prerequisite: Psy 347 or Psy 450 or Psy 451.

## Psy 454 - Experimental Psychology (5)

Principles of experimentaldesign, evaluation of research methods, formulation and testing of hypotheses using research procedures, use of statistical software for analyzing the research data, writing a research manuscript using APA form. Recommended prerequisites: at least 12 credits in psychology including Psy 321 and at least one of the following: Stat 243 and 244.

## Psy 455 - Experimental Psychology (4)

Principles of experimentaldesign, evaluation of research methods, formulation and testing of hypotheses using research procedures, use of statistical software for analyzing the research data, writing a research manuscript using APA form. Recommended prerequisites: at least 12 credits in ps ychology including Psy 321 and at least one of the following: Stat 243 and 244.

## Psy 458 - Development \& Education of AfricanDiaspora Children \& Youth (4)

Explores developmentfromchildhood through emerging adulthood for persons in the African-diaspora using a sociocultural psychology perspective. Individual AfricanAmerican children and youths' interactions with local, distal, and sociohistorical contexts will be discussed as sources of developmental trajectories. Special attention will be given to schooling as a developmental context and critical psychology perspectives.

Prerequisite: Upper-division standing.
Psy 459 - Infant Development (4)
Development of the individual fromconception to age two. Theory and research pertaining to infant development.

## Psy 459U- Infant Development (4)

Development of the individual fromconception to age two. Theory and rese arch pertaining to infant development.
Prerequisite: Upper-division standing.
Psy 460 - Child Psychology (4)
Development of the individual fromconception through childhood. Theory and research pertaining to child
development. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321.
Also offered for graduate-level credit as Psy 560 and may be taken only once forcredit. .

## Psy 461 U- Psychology of Adolescence and Early Maturity (4)

Development of the individual frompuberty to early adulthood. Theory and research pertaining to adolescent development.
Prerequisite: Upper-division standing.

## Psy 462 - Psychology of Adult Development and Aging

 (4)Development of the individual fromearly adulthood through old age. Theory and research focusing on adult development from a life-span perspective. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321 plus one of the following: Psy 459, Psy 460, or Psy 461.
Also offered for graduate-level credit as Psy 562 and may be taken only once for credit. .

## Psy 463 -Development and Education of Immigrant

 Children and Youth (4)This undergraduate seminar course will focus on the development and education of children and youth from immigrant backgrounds, primarily in the U.S. The course readings are selected to be broad in scope but will focus on original scholarship and current research on the education and development of immigrant children and adolescents. The course will cover topics such as acculturation, ethnic identity, school experiences, and major sources of risk and resilience among children fromimmigrant backgrounds.
Prerequisite: Upper-division standing.

## Psy 464 -Developmental Psychopathology (4)

Study of the origins and course of individual patterns of behavioral adaptation and malad aption. Application of developmental principles to an understanding of social, emotional, and conduct disorders of children and their outcome in adult life. Expected preparation: Stat 243 and Stat 244, Psy 321 and Psy 434 plus 8 credits in courses numbered Psy 459-461.

Also offered for graduate-level credit as Psy 564 and may be taken only once forcredit. .

## Psy 465 - Applied Developmental Psychology (4)

Theory, methods, and research in selected areas of applied developmental ps ychology. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321 and consent of instructor.

Also offered for graduate-level credit as Psy 565 and may be taken only once forcredit. .

## Psy 467 - Work and Family (4)

An examination of the effects of work on family, and family on work, in contemporary society. Includes study of dual-career and dual-work families, effects of maternal employment on children, impact of child care and elder care on the workplace, and parental leave and other workplace supports for families. Implications of research for social policy. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321.
Also offered for graduate-level credit as Psy 567 and may be taken only once for credit. .

## Psy 468 -Social Development (4)

Development of individual's social relationships from infancy to adolescence. Theory and research pertaining to socialdevelopment froman interactional perspective. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321 and one of the following: Psy 459, Psy 460, Psy 461, or Psy 462.

Also offered for graduate-level credit as Psy 568 and may be taken only once for credit. .

## Psy 469 - Ps ychology of Human Sexuality (4)

Explores questions relating to sexuality, with a particular emphas is on the psychological aspects of sex. We will discuss gender roles, gender identity, sexual orientation, relationships, sexual aggression, pornography, contraception, pregnancy, abortion, sexuality across the lifespan, and cultural influences that impact decisions we make about sex. This course is designed to increase awareness and sensitivity to sexuality and is sues relating to it.

Prerequisite: Upper-division standing.

## Psy 470 -Diversity in the Workplace (4)

Explores human diversity in workplace contexts, with an emphas is on the psychological as pects of diversity and management. We will first cover the ps ychology of diversity and inclusion and proceed to cover the perspectives of several different employee groups. We will also discover relevant theoretical and practical cons iderations concerning strategies for implementing effect diversity management policies and procedures.

Prerequis ite: Upper-division standing.

## Psy 471 - Health Psychology (4)

Study of the social and psychological influences on how people stay well, why some people become ill, and how persons respond to illness. Particular attention to the stress process. Expected preparation: Stat 243 and Stat 244, plus 12 credits in psychology, including Psy 321; Soc 200 may be substituted for 4 of these credits andPHE 223 may be substituted for 4 of these credits.

Also offered for graduate-level credit as Psy 571 and may be taken only once for credit. .

## Psy 478 -Leadership and Group Effectiveness (4)

Study of leadership in s mallgroups with an emphasis on interpers onal influence processes. Leadership is viewed as statements or actions intended to influence a group's efforts toward goal setting and achievement. Includes discussion of leadership training/development, and self-awareness of style. Expected preparation: Psy 321.

Also offered for graduate-level credit as Psy 578 and may be taken only once for credit. .
Psy 479 - Women and Organizational Psychology (4)
Examines the relationship between gender and work in different kinds of organizations across the economy. Focus is on the ways that gender influences such experiences as stress, hiring and career development, leadership opportunity, group interactions and organizational relationships, and the ways the greater understanding of gender/work interactions can influence individual experience and result in strategies for change.
Recommended prerequisites: Stat 243 and Stat 244, Psy 310 and Psy 321.

## Psy 480 - Community Psychology: Empowerment,

 Action, and Social Change (4)Community Psychology seeks to understand the relationship between individual well-being and diverse environmental influences, fromfamilies and neighborhoods to culture and mas s media. In this course, students will learn major theories and concepts in the field, apply them to pres sing social is sues, evaluate their implications for research, practice, and policy.

Also offered for graduate-level credit as Psy 580 and may be taken only oncefor credit. . Prerequisite: upper-division standing.

## Psy 484 - Principles of Behavior Modification (4)

A survey of recent developments in the application of behavior theory to problems of ps ychological adjustment. The course includes treatment of the behavioral concept of "abnormal", and the development of a technology of behavior therapy. The course is intended for advanced students in psychology, social work, special education, speech pathology, and nursing. Expected preparation: Psy 346.

Also offered for graduate-level credit as Psy 584 and may be taken only once forcredit. . Prerequisite: Psy 340.

## Psy 485 -Self-modification of Behavior (4)

The technology of self-change developed within the framework of behavior modification theory, including relevant ethical and theoretical is sue 4 s , specific techniques
of change and the application of these techniques within a systematic programdevelopment model. Expected preparation: Psy 346.
Also offered for graduate-level credit as Psy 585 and may be taken only once for credit. . Prerequisite: Psy 484.
Psy 486 - Human Performance and Mental Workload (4)

Introduction to mathematical and conceptual theories of how the human performs simple and complicated tasks. Topics include signal detection theory, information theory, reaction time, attention, effort. Measures and theories of mental workload will be discussed as well as what leads to cognitive overload and how it can be altered.
Recommended prerequisites: Psy 321, Stat 243 and 244, and 12 credits of psychology.

## Psy 487 -Life-span Development (4)

Theories and methodology for the study of processes and change in life-span developmental pers pective. Practical implications of different perspectives for theories and research regarding human development. Expected preparation: Stat 243 and Stat 244, Psy 311 and Psy 321 plus 8 credits in courses numbered Psy 459 , Psy 460 , Psy 461, or Psy 462.

Also offered for graduate-level credit as Psy 587 and may be taken only once for credit. .

## Psy 491 - Decision Making I: Values \& Choice (4)

Normative models, descriptive models, and cognitive aids for structuring decision problems, evaluating consequences of alternative courses of action, and choosing among alternatives.

Prerequisite: Stat 243 and 244, Psy 321 and 348; or permission of instructor.

## Psy 492 - Decision Making II: Judgement and Reason (4)

Contact the department for a description of this course.

## Psy 493 - Decision Making Laboratory (4)

Practice in the use of judgment techniques and decision software to structure decision problems, evaluate alternative courses of action, perform sensitivity analyses, and prepare presentations. Wherever possible, practice will be on current decision problems in field settings. Expected preparation: Psy 491, Psy 492.

Also offered for graduate-level credit as Psy 593 and may be taken only once for credit. .

## Psy 495 -Psychological Measurement (4)

Development, validation, and applications of psychological tests. Students will learn about various types of psychological tests, the is sues of reliability, validity, item analysis, and standardization of tests, and ethics in choosing and applying tests. There will be both lecture and lab portions required.

Prerequisite: Stat 243 and 244, and Psy 321.

## Psy 497 - Applied Survey Research (4)

Provides theoretical framework for and experience in design, execution, and interpretation of social surveys including sampling procedures, questionnaire design, interviewing techniques, coding and computer analysis, and report writing. Expected preparation: Stat 243 and Stat 244, Psy 321.

Also offered for graduate-level credit as Psy 597 and may be taken only once for credit. .

## Psy 498 - Field Obs ervation Methods (4)

Applied experience in the major methodological techniques offield observation, as well as the key problems of validity and reliability as they arise while developing a behavioralobservation system. Expected preparation: Stat 243 and Stat 244, Ps y 321, plus 12 upperdivis ion credits in psychology.
Also offered for graduate-level credit as Psy 598 and may be taken only once for credit. .
Psy 501 - Research (0-9)
(Credit to be arranged.) Consent of instructor.

## Psy 502 - Independent Study (1-9)

(Credit to be arranged.)

## Psy 503 - Thesis (0-9)

(Credit to be arranged.)

## Psy 504 - Cooperative Education/Internship (0-9)

(Credit to be arranged.)

## Psy 505 - Reading and Conference (0-9)

(Credit to be arranged.) Consent of instructor.

## Psy 506 -Projects (1-9)

(Credit to be arranged.)

## Psy 507 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## Psy 509 - Practicum (0-9)

(Credit to be arranged.) Supervised psychological practice including observing, studying, and participating in the activities of private settings or community service agencies such as: schools, mental health clinics, correctional agencies, and day care centers. Supervision may include guided reading, daily journals, and evaluativereports.

## Psy 510 -Selected Topics (1-6)

(Credit to be arranged.)

## Psy 511 - Advanced Community Psychology (4)

Theory, methods, practice, and selected topics in advanced community psychology.

Also offered as Psy 611 and may be taken only once for credit.

## Psy 513 - Ecops ychology (4)

Course explores a range of topics reg arding the humannature relationship, including humans as an inseparable from nature, influences of built and natural environments on mind and behavior, psychological theory and strategies for addressing en vironmental problems, evolutionary and cultural factors, and the use of nature in therapy.
Discussions, lecturettes, experiential, guest-speakers.
Also offered for undergraduate-level credit as Psy 413 and may be taken only once for credit. Prerequisite: Psy 200, Psy 204, and Psy 321.
Psy 514 - Advanced Applied Social Psychology (4)
Theory, methods, and selected topics in advanced applied socialpsychology.

Also offered as Psy 614 and may be taken only once for credit.

## Psy 515 - Advanced Applied Developmental Psychology

 (4)Theory, methods, and selected topics in advanced applied developmental psychology.

Also offered as Psy 615 and may be taken only once for credit.

## Psy 516 - Advanced Organizational Psychology (4)

Theory, methods, and selected topics in organizational psychology including leadership, motivation, job attitudes, job stress, organizational climate, and employee retention.
Also offered as Psy 616 and may be taken only once for credit.

## Psy 517 - Advanced Industrial Psychology (4)

Theory, methods, and selected topics in industrial psychology including job analysis, performance appraisal, personnel selection, legal issues, and training. Expected preparation: admis sion to Ps ychology graduate program.
Also offered as Psy 617 and may be taken only once for credit. .

## Psy 518 - Ethics and Professional Issues in Applied Research and Practice (4)

Examines ethical is sues of importance to applied psychologists with special attention to the use of human subjects in psychological research. Addresses ethical issues in professional relationships and in the teaching of psychology.

Also offered as Psy 618 and may be taken only once for credit.

## Psy 519 -Field Experimental Methods (4)

Problems of designing an experimental investigation of psychological phenomenain a naturalistic field setting. Course requirements include the design of a realis tic research proposal. Extensive use is made of instructor experience with field experimental studies in the field of mentalhealth.
Prerequisite: graduates tatus in psychology or urban studies.

## Psy 520 - Methods of Psychological Assessment (4)

Formulation of problems that can be answered by tests. Reliability, validity, and standardization of measurement, test fairness; methods of identifying assessment tools (tests, etc.) appropriate to specific testing or assessment problems are also considered.
Prerequisite: Stat 243.

## Psy 521 - Univariate Quantitative Methods (5)

Survey of topics in univariate quantitative methods, including: graphical displays, descriptive statistics, statistical inference, group comparisons, analysis of variance for between group and factorial des igns, correlation, regression, and analysis of association for categorical variables.

Also offered as Psy 621 and may be taken only once for credit.

## Psy 522 - Multiple Regression and Multivariate Quantitative Methods (5)

Exploration of statistical methods with several variables, including: simultaneous and hierarchical regression, discriminant analysis, multiv ariate analy sis of variance, analys is of covariance, and logistic regression. SPSS will be used for conducting analyses and students will gain experience in writing journal quality results and discussion sections.
Also offered as Psy 622 and may be taken only once for credit.

## Psy 523 - Structural Equation Modeling (4)

Introduction to path analysis, confirmatory factor analysis, and structuralequation modeling, topics include exploratory and confirmatory factor analysis, model fitting concepts, mediation, analysis of nonnormal and categorical data, and longitudinal models.
Also offered as Psy 623 and may be taken only once for credit.

## Psy 524 - Res earch Design in Applied Ps ychology (4)

Process of exploring how key social/community, org anizational, and developmental concepts shape the conceptualization and design of research in applied psychology. Students conceptualize and construct three alternative study designs employing the relevant concepts. Explore basic design is sues such as control, causation, confounding, contrasts, and threats to validity; measurement; and the use of key concepts such as organizational context, social interactions, dynamics, levels of analysis, and systems in ps ychologicaltheory and research.

Also offered as Psy 624 and may be taken only once for credit.

## Psy 525 - Categorical Data Analysis (4)

Introduction to categorical data analyses. Topics include: review of discrete probability distributions and descriptive statistics, simple proportions and chi-square, contingency table analyses, matched pairs analy ses, loglinear models, logistic and probit regression models, propensity scores, ordinal and multinomial logistic regression, generalized linear models, and categorical measurement issues.

Also offered as Psy 625. Prerequis ite: Students should have at least one graduate statistics course covering chisquare, ANOVA, and regression analy sis, such as Ps y 521/Psy 621 and Psy 522/Psy 622.

## Psy 526 - Multilevel Regression (4)

Multilevel regression models can be used to analyze hierarchically structured data, such as educational studies, and longitudinal data. Material is presented with an applied researcher's perspective in mind, covering fundamental
concepts, basic mathematical and statistical underpinnings, and illustrations using computer software. Topics include: randomcoefficients, interclass correlation coefficient, explained variance, cross-level interactions, centering, model ass umptions and diagnostics, binary and ordinal outcomes, and growth curve models. This course assumes prior knowledge about multiple regression analysis.
Prerequisite: Prerequisites: Psy 521/Psy 621 and Psy 522/Psy 622 or equivalent approved by ins tructor.

## Psy 527 -History and Systems of Psychology (4)

A survey of the history of ps ychology and of past and current theoretical approaches in psychology. Study of the historical roots of current theories in perception, learning, motivation, personality and other fields.

Also offered for undergraduate-level credit as Psy 427 and may be taken only once for credit. .

## Psy 528 -Seminar in Applied Developmental Psychology (4)

Theory and research in selected topics in applied developmental psychology.
Also offered as Psy 628 and may be taken only once for credit.

## Psy 529 - Psychological Issues in Later Life (4)

Methodological, theoretical and empirical is sues in research on psychology and aging. Topics include cognitive processes, family and caregiving relationships, environmental issues and psychological predictors of successful aging. Emphas is is on encouraging students to develop their own research project in the field of psychology of aging.
Prerequisite: admission to a graduate programor Graduate Certificate in Gerontology program.

## Psy 530 - Applied Social Psychology (4)

Explores current and potential applications of social psychological theories and research methods, with a focus on work conducted in field settings. As a final project, each studentexamines an applied area of their own choosing (previous projects have focused on normative role transitions, responses to natural dis asters, political attitudes, conflict resolution, and intergroup relations).
Also offered for undergraduate-levelcredit as Psy 430 and may be taken only once for credit.

## Psy 532 - Clinical Interviewing (4)

Introduction to principles and techniques of interviewing. Focus on clinical applications in organizational settings.

## Psy 533 - Contemporary Social Psychology (4)

Current knowledge of social ps ychology presented with an emphas is on what the field can contribute to understanding contemporary social problems and is sues. Major topics will include the nature of social interaction, the relationship of attitude and behavior, and group processes. Areas of application will include social helping networks and the relationships of social psychology to law, health, and the environment.
Prerequisite: admis sion to a graduate programin psychology, systems science, or urban affairs.
Psy 534 - Introduction to Psychopathology (4)
Course content will survey the development of modern ideas of mentalillness, the origins of mentalillnesses, the diagnostic systemand the clinical syndromes, and methods of treatment of neuropsychiatric disorder. This course does not produce diagnosticians of mental illness but is a preparation for the clinical study of diagnosis.
Also offered for undergraduate-level credit as Psy 434 and may be taken only once for credit. .
Psy 535 - Ps ychological Consulting in Organizations (4)
Psychologically-based theories and techniques aimed at the planned changeof organizational work setting for the purpose of enhancing individual developmentand improving organizational performance. Issues in consultant-clientrelationships, specific change methods, and systemramifications of guided change using the action research model are integrated throughout the course.

## Psy 536 - Performance Appraisal and Feedback (4)

Applications of psychological concepts to the development of performance appraisal systems in organizations. Topics include job analysis, cognitive processes in performance apprais al, types of rating scales, rater training methods, technical as pects of developing a performance appraisal system, performancefeedback, individuals' reactions to performance feedback factors related to the perceived accuracy of performance feedback. Recommended prerequisites: Stat 243 and 244, Psy 321 and 360 or 361.

## Psy 537 - Qualitative Research Methods for Social Inquiry (4)

Introduction to qualitative research methods in psychology. Covers epistemology, res earch design, data collection techniques, narrative analysis, computer-aided analysis of text, qualitative research ethics, and writing/reporting of research. Includes field research project in the community.
Also offered as Psy 637 and may be taken only once for credit.

## Psy 540 - Group Process (4)

A course on the psychology of small groups. Topics will include but notbe limited to: interpers onal attraction, stages of group development, group structure, coalition formation, pers onal power, leadership, group decision making and problemsolving, intergroup relations and the principles of negotiation. Expected preparation: graduate standing or consent of ins tructor.
Also offered for undergraduate-levelcredit as Psy 440 and may be taken only once for credit. .

## Psy 544 -Job Anal ysis (4)

Methods (e.g., interviews, surveys) used to collect information about jobs for use in human res ource functions such as personnel recruitment and selection, training, performance appraisal, and compensation. Such information is also used to developjob descriptions and specifications. Course contains a community-based learning component. Students participate in a full job analys is including data collection, analysis, and interpretation.
Also offered for undergraduate-level credit as Psy 444 and may be taken only once for credit. .

## Psy 545 -Employee Development (4)

Covers the application of psychological principles to employee training and development. Topics include organization, job, and person analysis; programdesign; the application of learning principles to enhance training effectiveness; evaluation of training programs; and employee training and development methodology. A heavy emphasis is placed on current psychological research. This course may include a community-based learning component.

Also offered for undergraduate-levelcredit as Psy 445 and may be taken only once for credit. .

## Psy 546 -Personnel Selection (4)

Technicaland theoretical issues involved in selecting the appropriate worker to fit a job. Includes current research and theory in test development, test validation, selection methods, and criterion development. Heavy emphasis on psychological measurement (e.g., reliability and validity) and the legal issues involved in hiring and promoting employees.
Also offered as Psy 646 and may be taken only once for credit. . Prerequisite: admission to the psychology graduate program.

## Psy 547 -Pers onnel Psychology (4)

How individual differences affect work behavior and task performance and how psychologists meas ure and predict such differences. Covers the development, adminis tration, and utility of modern ins truments for selection and
apprais al. Data combination strategies and decision making in personnel systems are discussed.

Also offered for undergraduate-level credit as Psy 447 and may be taken only once for credit. .

## Psy 548 - Ps ychology of Work Motivation (4)

Examination of the role that motivation plays in initiating, guiding, and maintaining work behaviors. Discussion of job attitudes, emotional intelligence, personality factors, socialization and culture, effects of participation, careers, job enrichment, re-en gineering, and power and politics.

Also offered for undergraduate-level credit as Psy 448 and may be taken only once for credit. .

## Psy 550 - Occupational Health Psychology (4)

Application of professional psychological principles of practice, theory, and research to work settings. Focus on science and practice drawn fromps ychology and other disciplines in the promotion and development of workplace health-and safety-related initiatives. Occupational Health Psychology researchers and practitioners draw from the domains of public health, preventive medicine, nursing, industrial engineering, law, epidemiology, and psychology to develop sound theory and practice for protecting and promoting the safety, health, and wellbeing of individuals in occupational settings.
Also offered as Psy 650 and may be taken only once for credit.

## Psy 551 - Introduction to Neurophysiological Psychology (4)

The study of the nervous system, various anatomical, neurophysiological, and imaging techniques forstudying the brain and behavior, including specific cognitive abilities such as sensation, perception, attention, language, and emotion.
Also offered for undergraduate-level credit as Psy 451 and may be taken only once for credit. .

## Psy 554 -Social Psychology of Mental Health (4)

Principles of experimentaldesign, evaluation of research methods, formulation and testing of hypotheses using research procedures, use of statistical software for analyzing the research data, writing a research manuscript using APA form.
Also offered as Psy 654 and may be taken only once for credit. .

## Psy 559 - Infant Development (4)

Development of the individual fromconception to age two. Theory and research pertaining to infant development.

## Psy 560 - Child Psychology (4)

Development of the individual fromconception through childhood. Theory and research pertaining to child development.
Also offered for undergraduate-levelcredit as Psy 460 and may be taken only once for credit. .

## Psy 561 -Psychology of Adolescence and Early

 Maturity (4)Development of the individual frompuberty to early adulthood. Theory and research pertaining to adolescent development.

## Psy 562 -Psychology of Adult Development and Aging (4)

Development of the individual fromearly adulthood through old age. Theory and research focusing on adult development froma life-span perspective.
Also offered for undergraduate-levelcredit as Psy 462 and may be taken only once for credit. .

## Psy 564 -Developmental Psychopathology (4)

Study of the origins and course of individual patterns of behavioral adaptation and maladaption. Application of developmental principles to an understanding of social, emotional, and conduct disorders of children and their outcome in adult life.

Also offered for undergraduate-level credit as Psy 464 and may be taken only once for credit. .

## Psy 565 - Applied Developmental Psychology (4)

Theory, methods, and research in selected areas of applied developmental psychology.
Also offered for undergraduate-levelcredit as Psy 465 and may be taken only once for credit.

## Psy 566 - Research in Applied Developmental

 Psychology (4)Conducted in collaboration with an approved faculty research mentor. Research areas may include prosocial, social, cognitive, and motivational development, attachment, peer groups, parenting, teaching, early literacy, identity, aging, coping, self-s ystemprocesses, and the social and cross-cultural contexts of development, including the family, schools, and day care. Involves data gathering, analysis, and/or reporting results of research conducted in a field setting. Emphas is on applied is sues related to research design, data collection, data analy sis, and scientific writing.

Also offered as Psy 666 and may be taken only once for credit.

## Psy 567 - Work and Family (4)

An examination of the effects of work on family, and family on work, in contemporary society. Includes study of dual-career and dual-work families, effects of maternal employment on children, impact of child care and elder care on the workplace, and parental leave and other workplace supports for families. Implications of research for social policy.
Also offered for undergraduate-level credit as Psy 467 and may be taken only once for credit. .

## Psy 568 -Social Development (4)

Development of individual's social relationships from infancy to adolescence. Theory and research pertaining to social development froman interactional perspective.

Also offered for undergraduate-level credit as Psy 468 and may be taken only once for credit. .

## Psy 569 - Res earch in Applied Social/Community Psychology (4)

Conducted in collaboration with an approved faculty research mentor. Research areas may include social relationships and health behaviors; social relationships and subjective well-being; community-based interventions; self-help groups; social psychological perspectives on socialmovements; gender issues; family violence; and prevention. Involves data gathering, analysis, and/or reporting results of research conducted in a field setting. Emphasis on applied issues related to research design, data collection, data analysis, and scientific writing.

Also offered as Psy 669 and may be taken only once for credit.

## Psy 571 - Health Psychology (4)

Study of the social and psychological influences on how people stay well, why some people become ill, and how persons res pond to illness. Particular attention to the stress process
Also offered for undergraduate-level credit as Psy 471 and may be taken only once for credit. .

## Psy 578 - Leadership and Group Effectiveness (4)

Study of leadership in s mall groups with an emphasis on interpersonal influence processes. Leadership is viewed as statements or actions intended to influence a group's efforts toward goal setting and achievement. Includes discussion of leadership training/development, and self-awareness of style.

Also offered for undergraduate-level credit as Psy 478 and may be taken only once for credit. .

## Psy 580 -Community Psychology: Empowerment, Action, and Social Change (4)

Community Psychology seeks to understand the relation ship between individual well-being and diverse environmental influences, fromfamilies and neighborhoods to culture and mass media. In this course, students will learn major theories and concepts in the field, apply themto pressing social is sues, evaluate their implications for research, practice, and policy.
Also offered for undergraduate-level credit as Psy 480 and may be taken only once for credit.

## Psy 584 -Principles of Behavior Modification (4)

A survey of recent developments in the application of behavior theory to problems of psychological adjustment. The course includes treatment of the behavioral concept of "abnormal", and the development of a technology of behavior therapy. The course is intended for advanced students in ps ychology, social work, specialeducation, speech pathology, and nursing.

Also offered for undergraduate-levelcredit as Psy 484 and may be taken only once for credit. .

## Psy 585 -Self-modification of Behavior (4)

The technology of self-change developed within the framework of behavior modification theory, including relevant ethical and theoretical is sue 4 s , specific techniques of change and the application of these techniques within a systematic programdevelopment model.
Also offered for undergraduate-levelcredit as Psy 485 and may be taken only once for credit. .

## Psy 586 -Social ProgramEvaluation (4)

Foundational concepts in social programevaluation theory and practice including theoretical pers pectives on the nature and purposeof programevaluation, phases of programevaluation, ethics and standards of practice, sociopoliticalconsiderations, and proposal and report writing. Expected preparation: Psy 521, Psy 522, Psy 524.
Also offered as Psy 686 and may be taken only once for credit. .

## Psy 587 -Life-span Development (4)

Theories and methodology for the study of processes and change in life-span developmental perspective. Practical implications of different perspectives for theories and research regarding human development.
Also offered for undergraduate-level credit as Psy 487 and may be taken only once for credit. .

## Psy 589 - Adult Socialization (4)

This course examines the acquisition of social roles in adulthood. Two themes prevail: stages of socialization; and
levels of transmission of social norms (cultural, org anizational, and interpersonal).
Also offered as Psy 689 and may be taken only once for credit. Prerequisite: graduate status. .

## Psy 591 - Decision Making I: Values and Choice (4)

Normative models, des criptive models, and cognitive aids for structuring decision problems, evaluating consequences of alternative courses of action, and choosing among alternatives.

Prerequisite: Stat 243 and 244, Psy 321 and 348; or permis $s$ ion of instructor.

## Psy 592 - Decision Making II: Judgement and Reason

 (4)Normative and descriptive models for structuring decis ion problems, evaluating consequences of alternativecourses of action, thinking about probability and causation, and choosing among alternatives. Recommended prerequisites: Stat 243 and 244, Psy 321 and 348.

## Psy 593-Decision Making Laboratory (4)

Practice in the use of judgmenttechniques and decision software to structure decision problems, evaluate alternative courses of action, perform sensitivity analyses, and prepare presentations. Wherever possible, practice will be on current decision problems in field settings. Expected preparation: Psy 591, Psy 592.
Also offered for undergraduate-level credit as Psy 493 and may be taken only once for credit. .

## Psy 594-Mathematical Models in Psychology (4)

Introduction to the use of probability theory and elementary functions in models for psychological processes: applications include decis ion analysis, psychophysics, and descriptive and theoretical applications of Markov chains in the study of learning and interpersonal interactions.

## Psy 595 -Psychological Measurement (4)

Theories, methods, and implications in the development and validation of measures of psychological constructs. Students will learn about the issues of reliability, validity, item analys is, standardization, and applications of measures via both lectures and hands-on experiences in the lab. Expected preparation: PSY521 or equivalent statistics/method courses.

Also offered as Psy 695 and may be taken only once for credit. .

## Psy 597 - Applied Survey Research (4)

Provides theoretical framework for and experience in design, execution, and interpretation of social surveys including sampling procedures, questionnaire design, interviewing techniques, coding and computer analysis, and report writing.

Also offered for undergraduate-levelcredit as Psy 497 and may be taken only once for credit. .

## Psy 598 -Field Obs ervation Methods

Applied experience in the major methodological techniques offield observation, as well as the key problems of validity and reliability as they arise while developing a behavioralobservation system.
Also offered for undergraduate-level credit as Psy 498 and may be taken only once for credit. .

## Psy 601 - Research (1-12)

(Credit to be arranged.) Consent of instructor.

## Psy 602 - Independent Study (1-9)

(Credit to be arranged.)

## Psy 603 -Dissertation (1-12)

(Credit to be arranged.)

## Psy 604 - Internship(1-9)

(Credit to be arranged.)

## Psy 605 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Psy 606 - Projects (1-9)

(Credit to be arranged.)

## Psy 607 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## Psy 608 -Workshop(1-9)

(Credit to be arranged.)

## Psy 609 - Practicum(1-9)

(Credit to be arranged.)

## Psy 610 -Selected Topics (1-6)

(Credit to be arranged.)

## Psy 611 - Advanced Community Psychology (4)

Theory, methods, practice, and selected topics in advanced community psychology.
Also offered as Psy 511 and may be taken only once for credit.

## Psy 614 - Advanced Applied Social Psychology (4)

Theory, methods, and selected topics in advanced applied socialpsychology.
Also offered as Psy 514 and may be taken only once for credit.

## Psy 615 - Advanced Applied Developmental Psychology (4)

Theory, methods, and selected topics in advanced applied developmental psychology.
Also offered as Psy 515 and may be taken only once for credit.

## Psy 616 - Advanced Organizational Psychology (4)

Theory, methods, and selected topics in organizational psychology including leadership, motivation, job attitudes, job stress, organizational climate, and employee retention.
Also offered as Psy 516 and may be taken only once for credit.

## Psy 617 - Advanced Industrial Psychology (4)

Theory, methods, and selected topics in industrial psychology including job analysis, performance appraisal, pers onnel selection, legalissues, and training. Expected preparation: admission to Psychology graduate program.
Also offered as Psy 517 and may be taken only once for credit. .

## Psy 618 - Ethics and Professional Issues in Applied Research and Practice (4)

Examines ethical is sues of importance to applied psychologists with special attention to the useof human subjects in psychological research. Addresses ethical issues in professional relationships and in the teaching of psychology.
Also offered as Psy 518 and may be taken only once for credit.

## Psy 621 - Univariate Quantitative Methods (5)

Survey of topics in univariate quantitative methods, including: graphical displays, descriptive statistics, statistical inference, group comparisons, analysis of variance for between group and factorial designs, correlation, regression, and analysis of association for categorical variables.
Also offered as Psy 521 and may be taken only once for credit.

## Psy 622 -Multiple Regression and Multivariate Quantitative Methods (5)

Exploration of statistical methods with several variables, including: simultaneous and hierarchical regression, discriminant analysis, multivariate analysis of variance, analys is of covariance, and logistic regression. SPSS will be used for conducting analyses and students will gain experience in writing journal quality results and discussion sections.

Also offered as Psy 522 and may be taken only once for credit.

## Psy 623 -Structural Equation Modeling (4)

Introduction to path analysis, confirmatory factor analy sis, and structural equation modeling, topics include exploratory and confirmatory factor analysis, model fitting concepts, mediation, analysis of nonnormal and categorical data, and longitudinal models.
Also offered as Psy 523 and may be taken only once for credit.

## Psy 624 - Research Design in Applied Psychology (4)

Process of exploring how key social/community, organizational, and developmental concepts shape the conceptualization and design of research in applied psychology. Students conceptualize and construct three alternative study designs employing the relevant concepts. Explore basic design is sues such as control, causation, confounding, contrasts, and threats to validity; measurement; and the use of key concepts such as org anizational context, social interactions, dynamics, levels of analysis, and systems in psychological theory and research.

Also offered as Psy 524 and may be taken only once for credit.

## Psy 625 - Categorical Data Analysis (4)

Introduction to categorical data analyses. Topics include: review of discrete probability distributions and descriptive statistics, simple proportions and chi-square, contingency table analyses, matched pairs analyses, loglinear models, logistic and probit regression models, propensity scores, ordinal and multinomial logistic regression, generalized linear models, and categorical measurement is sues.

Also offered as Psy 525. Prerequisite: Students should have at least one graduate statistics course covering chisquare, ANOVA, and regression analy sis, such as Psy 521/Psy 621 and Psy 522/Psy 622.

## Psy 626 - Multilevel Regression (4)

Multilevel regression models can be used to analyze hierarchically structured data, such as educational studies, and longitudinal data. Material is presented with an applied researcher's perspective in mind, covering fundamental concepts, basic mathematical and statistical underpinnings, and illus trations using computer software. Topics include: randomcoefficients, interclass correlation coefficient, explained variance, cross-level interactions, centering, model assumptions and diagnostics, binary and ordinal outcomes, and growth curve models. This course assumes prior knowled ge about multiple regression analy sis.
Prerequisite: Prerequisites: Psy 521/Psy 621 and Psy 522/Psy 622 or equivalent approved by instructor.

## Psy 628 - Seminar in Applied Developmental Psychology (4)

Theory and research in selected topics in applied developmental psychology.
Also offered as Psy 528 and may be taken only once for credit.

## Psy 629 - Ps ychological Issues in Later Life (4)

Methodological, theoretical and empirical issues in research on psychology and aging. Topics include cognitive processes, family and caregiving relationships, environmental issues and psychological predictors of successful aging. Emph as is is on encouraging students to develop their own research project in the field of psychology of aging.

Prerequis ite: admis sion to a graduate programor Graduate Certificate in Gerontology program.
Psy 632 - Clinical Interviewing (4)
Introduction to principles and techniques of interviewing. Focus on clinical applications in organizational settings.

## Psy 633 - Contemporary Social Psychology (4)

Current knowledgeof social ps ychology presented with an emphas is on what the field can contribute to understanding contemporary social problems and is sues. Major topics will include the nature of social interaction, the relationship of attitude and behavior, and group processes. Areas of application will include social helping networks and the relationships of social psychology to law, health, and the environment.

Prerequisite: admis sion to a graduate programin psychology, systems science, or urban affairs.

## Psy 635 -Psychological Consulting in Organizations (4)

Ps ychologically-based theories and techniques aimed at the planned change of organizational work setting for the purpose of enhancing individual development and improving org anizational performance. Issues in consultant-client relationships, specific change methods, and systemramifications of guided change using the action research model are integrated throughout the course.

## Psy 637 -Qualitative Research Methods for Social Inquiry (4)

Introduction to qualitative research methods in the social sciences. The coursereviews epistemologies informing qualitative research. The course also explores commonly used methods including field notes, interviews, focus groups, case studies, observational methods, and openended surveys. Introduction to various analysis and writing strategies will be explored. This is the same course as SW 637 and may be taken only once for credit.

Also offered as Psy 537 and may be taken only once for credit. Cross-Listed as:SW 637.

## Psy 646 -Personnel Selection (4)

Technicaland theoretical issues involved in selecting the appropriate worker to fit a job. Includes current research and theory in test development, test validation, selection methods, and criterion development. Heavy emphasis on psychological meas urement (e.g., reliability and validity) and the legal is sues involved in hiring and promoting employees.
Also offered as Psy 546 and may be taken only once for credit. . Prerequisite: admission to the psychology graduate program.

## Psy 650 - Occupational Health Psychology (4)

Application of professional psychological principles of practice, theory, and research to work settings. Focus on science and practice drawn frompsy chology and other disciplines in the promotion and development of workplace health- and safety-related initiatives. Occupational Health Ps ychology researchers and practitioners draw from the domains of public health, preventive medicine, nursing, indus trial engineering, law, epidemiology, and psychology to develop sound theory and practice for protecting and promoting the safety, health, and well being of individuals in occupational settings.
Also offered as Psy 550 and may be taken only once for credit.

## Psy 654 -Social Psychology of Mental Health (4)

Principles of experimental design, evaluation of research methods, formulation and testing of hypotheses using research procedures, use of statistical software for
analyzing the research data, writing a research manuscript using APA form.
Also offered as Psy 554 and may be taken only once for credit. .

## Psy 666 - Research in Applied Developmental Psychology (4)

Conducted in collaboration with an approved faculty research mentor. Research areas may include prosocial, social, cognitive, and motivational development, attachment, peer groups, parenting, teaching, early literacy, identity, aging, coping, self-systemprocesses, and the social and cross-cultural contexts of development, including the family, schools, and day care. Involves data gathering, analysis, and/or reporting results of research conducted in a field setting. Emphasis on applied is sues related to research design, data collection, data analy sis, and scientific writing.
Also offered as Psy 566 and may be taken only once for credit.

## Psy 669 - Res earch in Applied Social/Community Psychology (4)

Conducted in collaboration with an approved faculty research mentor. Research areas may include social relationships and health behaviors; social relationships and subjective well-being; community-based interventions; self-help groups; social ps ychological perspectives on social movements; gender is sues; family violence; and prevention. Involves data gathering, analysis, and/or reporting results of res earch conducted in a field setting. Emphasis on applied issues related to research design, data collection, data analysis, and scientific writing.

Also offered as Psy 569 and may be taken only once for credit.

## Psy 686 -Social ProgramEvaluation (4)

Foundational concepts in social programevaluation theory and practice including theoretical perspectives on the nature and purposeof programevaluation, phases of programevaluation, ethics and standards of practice, sociopolitical considerations, and proposal and report writing. Expected preparation: Psy 621,Psy 622, Psy 624.
Also offered as Psy 586 and may be taken only once for credit. .

## Psy 689 - Adult Socialization (4)

This course examines the acquisition of social roles in adulthood. Two themes prevail: stages of socialization; and levels of transmission of social norms (cultural, organizational, and interpersonal).
Also offered as Psy 589 and maybe taken only once for credit. Prerequisite: graduate status. .

## Psy 695 -Psychological Measurement (4)

Theories, methods, and implications in the development and validation of measures of psychological constructs. Students will learn about the issues of reliability, validity, item analys is, standardization, and applications of measures via both lectures and hands-on experiences in the lab. Expected preparation: Ps y 621 or equivalent statistics/method courses.
Also offered as Psy 595 and may be taken only once for credit. .

## READ - READOregon

## READ 509 - Practicum: ReadOregon (1-3)

The practicumis carried out in schools and/or districts and consists of reading endorsement candidates working directly with students, other faculty, adminis trators, and the school community to fulfill various roles of the reading specialist. Among the roles to be demonstrated during the practicumare: (1) teaching reading; (2) literacy testing; (3) developing curriculumfor various groups of readers including ELL, struggling, readers, average and/or gifted readers; (4) assessing and making recommendations for a school's reading program; and (5) developing literacyfocused professional development sessions for faculty, administrators, instructional assistances, and parents.
Prerequisite: The practicummay not be taken untila candidate has completed a minimum of 12 credit hours of coursework in literacy. Typically, the practicumis the final caps tone course of the reading endorsement course of study.

## READ 518 - Language and Literacy Development, K-8

 (3)Examine the connection between early childhood oral language acquisition and the development of reading and writing skills, Discuss relevant language and literacy research, differences in language and literacy development, foundations of language development in the brain and its implication as regards phonological skills, grammatical knowledge, vocabulary, comprehension, and writing.

## READ 519 -Linguistics, Phonics, and Word-Level Reading Difficulties (3)

Addresses phonetics, phonological awareness, phonics, word identification, and spelling. Explores developmental trajectories, instructional strategies, and assessment tools through culturally responsive and culturally sustaining pedagogical lenses. Includes characteristics as sociated with dyslexia, tools used to screen for such characteristics, ins tructional strategies designed to benefit students with these characteristics, and related laws/policies. Field-based work with K-12 reader exhibiting characteristics of
dyslexia and with K-12 school to examine curriculumand interview teachers.

## READ 522 -Literacy Foundations (3)

Focuses on the foundational areas of psychology, history, theory, and research, and familiarizes teachers and reading specialists with varied ideas about how reading and writing work and how they are learned, through the examination of major theorists and researchers, both present and past.

## READ 527 - Literature in Classrooms K-12 (3)

This course focuses on the exploration of literature for students in grades K-12, and the application of literature in the clas sroom. Emphas is is on selection and evaluation of books, children's reading interests, clas sroomapplications and school leadership in promoting literature in clas sroom and school settings.

## READ 530 - Reading and Composition in the Content Areas (3)

Designed for pre-service and in-service teachers to explore literacy strategies in order to guide their students in acquiring skills needed for adequate reading, writing, and study in content areas. Emphasis is on the functional teaching of reading and writing including designing and preparing materials to use with curriculummaterials in all school subjects. Designed also to help educators identify and design materials to promote and develop Oregon's Standard and Benchmark literacy abilities in their students.

## READ 531 - Teaching the Struggling Adolescent Reader (3)

For middle and high school teachers who want to experience hands-on teaching and learning strategies for improving motivation and learning in the core subject areas. As part of a collaborative effort, teachers will work with each other to develop tutoring plans and activities in curriculummaterials to be used in teaching struggling readers in their own clas sroom. Recommended prerequisites: enrollment in ReadOregon Reading Endorsement programor COE Literacy or master's program.

## READ 532 - Writing ProgramDesign and Implementation in K-12 Classrooms (3)

This course explores the design and implementation of writing curricula in both literacy and content-based clas srooms. The course provides a comprehensive approach to the development of a writing clas sroom,
including the designing writing strategies and assessment. In addition, the course explores the roles of inquiry, inclusion, and collaboration in the teaching of writing. The focus is on creating writing instruction and assessment that is authentic, engaging and aligned to the instructional needs of students.

## READ 533 - Boy Readers/Boy Writers (3)

Critically analyze and implement research-based practices in reading and writing as they relate to boys' learning style. Demons trate appropriate professional knowledge, skills and dis positions through reading criticaltheory in instructional strategies that benefit boy's needs. Use evidence to solve problems of practice and make educational decisions.

## READ 534 -Literacy Assessment (3)

Examines purposes for and types of literacy as sessment; how culture and language intersect with as sessment. Addresses selection of specific assessments to guide instruction, us ing assessments to inform various stakeholders, evaluation of validity and reliability, as sessment bias, stereotype threat, advocating for equity and as set-based practices with colleagues, schoolwide as sessment plans, and analysis of current practices. Fieldbased work with K-12 school: participate in data analysis meeting, interview teachers, examine a literacy assessment tool and student assessment data.

## READ 540 - Media Literacy: K-12 (1)

This course is concerned with helping $\mathrm{K}-12$ teachers develop an informed and critical understanding of the nature of mass media, so that they can teach children how to build connections between their learning in the clas sroomand their use of media outside of school. Participants will develop abilities to access, analyze, evaluate, and communicate information in a variety of formats.

## READ 544-Comprehension, Text Structure, and Vocabulary (3)

Addresses learning, teaching, and assessing reading comprehension and vocabulary. Emphas is on culturally responsive and culturally sustaining instruction, students who are emergent multilinguals, and students experiencing difficulty with comprehension or vocabulary. Topics include developmental trajectories, morphology, historical instructional approaches, strategic reading, cultural variations in text structure, curricular analysis, digital tools, digital citizenship, and visual literacy. Field-based
work with K-12 reader experiencing difficulty with comprehension or vocabulary.

## READ 551 -Literacy Instruction for Special Needs Students K-12 (3)

Designed to prepare effective and reflective teachers in language and literacy instruction for students with special needs. Participants will explore multiple perspectives, practices, and methodological approaches to literacy instruction which are research-based, and proven effective to promote literacy development. Topics include (but are not limited to): (1) language and literacy development; (2) characteristics of specialneeds students; (3) framework of effective literacy instruction within context of students with specialneeds; (4) methods of effective basic literacy skills instruction; (5) methods of teaching comprehension and critical thinking strategies; (6) methods of promoting learning and meta-cognitive strategies for lifelong learning, and (7) methods of appropriate and meaningful assessment.

## READ 554 -Literacy Instruction Strategies with ELL Students, K-12 (3)

Focuses on research-based effective literacy instruction frameworks and strategies for working with English language learners. Emphasis is placed on frameworks and strategies that promote ELL's academic and English literacy development in an authentic and culturally responsive environment.

## READ 571 - Principles/Methods of Diagnosis and Assessment K-12 (3)

Literacy theory (review/overview of the psychological, sociological, and linguistic foundations of reading processes and instruction, including developmental stages of literacy). Ps ychometrics (the science of meas urement in the social sciences). Measures of reading proficiency and reading achievement (with specific examples of standardized reading measures and discrete-point reading proficiency measures). Authentic literacy assessment (with specific examples of authentic reading as sessment tasks). Literacy assessment and students with special needs (English language learners, students with learning disabilities, talented and gifted students). Test ethics and how assessment results are used (including communication with various stakeholders). Recommended prerequisites: enrollment in ReadOregon Reading Endorsement program or COE Literacy or master's program.

## READ 580 - School Reading ProgramLeadership (3)

Designed for pre-service and practicing educators who are applying for a reading endorsement or MEd with a reading emphasis, as well as others interested in school leadership. Emphas is is on the functional planning, org anization, and management of classroomand school-wide reading programs. Recommended prerequisites: Enrollment in ReadOregon Reading Endorsement programor COE Literacy or master's program.

## READ 582 - Reading Leadership in Middle and High

 Schools (3)Designed for adminis trators and teachers in leadership roles in middle and high schools. Explores ways to improve reading achievement in schools by identifying the school's existing strengths, apply current research and practice, and creating an action plan. Recommended prerequisites: enrollment in ReadOregon Reading Endorsement programor COE Literacy or master's program.

## RE - Real Estate

RE 199 - Special Studies (1-8)
(Credit to be arranged.)

## RE 360 - Real Estate Finance I (4)

Application of finance and economic principles to analysis of realestate finance and investments. Emphasis on the development of problem solving capabilities through the use of computer application programs. Special attention is given to risk analys is, alternative mortgageinstruments, hedging techniques, and the taxeffects of real estate investment.

Prerequisite: Ec 201. This course is cross listed as USP 360 and may only be taken once for credit.

## RE 399 - Special Studies (1-8)

(Credit to be arranged.)

## RE 401 - Research (1-12)

(Credit to be arranged.)

## RE 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## RE 405 - Reading and Conference (1-8)

(Credit to be arranged.)

## RE 407 - Seminar (1-8)

(Credit to be arranged.)

## RE 409 - Practicum(1-8)

(Credit to be arranged.)

## RE 410 - SelectedStudies (1-8)

(Credit to be arranged.)

## RE 431 - Urban Economics (4)

Functions of the urban economy: the market sector and the public sector. Economic analysis of is sues such as land use, environmental quality, transportation, housing, income distribution, and the organization and financing of urban public services. This course is the same as Ec 431 and USP 431 and may only be taken once forcredit.

Prerequisite: Ec 201, Ec 202 and junior standing. CrossListed as: Ec 431 and USP 431.

## RE 438 - Real Estate Law I (3)

Provides students with a comprehensive summary of real property froma legal perspective with an emphasis on trans actional is sues. Includes is sues relating to types of ownership, descriptions of property, easements, public and private limitations on use, real estate contracts, forms utilized in transfers, financing and title as surances. The class will enable students to understand the legal framework and the rights and responsibilities of owners and transferors/transferees of real property. This is the same course as USP 438 and may be taken only once for credit.
Also offered for graduate-level credit as RE538S and may be taken only once for credit. . Prerequisite: Ec 201. Cross Listed as: USP 438.

## RE 459 - Real Estate Valuation II (3)

Applies concepts from 439/539 to examine case studies in real estate apprais al and valuation. Topics include valuation for financial reporting, determining the highest and bestuse for a site, and determination of value following a property taking or condemnation.
Also offered for graduate-level credit as RE559 and may be taken only once for credit. .Prerequisite: RE439 and Fin 319.

## RE 460 - Real Estate Finance II (4)

Finance principles applied in the context of real estate investments. Fin ancial strength analysis, cash flow estimation, determining the cost of capital, various dis counted cash flow methods. Option valuation and real options approaches. Relative valuation approaches. Applied to the valuation of RealEstate Investment Trusts and other real estate developmententities.

## RE 501 - Research (1-12)

(Credit to be arranged.)

## RE 504 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## RE 505-Reading and Conference (1-8)

(Credit to be arranged.)

## RE 507 - Seminar (1-8)

(Credit to be arranged.)

## RE 509- Practicum(1-8)

(Credit to be arranged.)

## RE 510 - SelectedStudies (1-8)

(Credit to be arranged.)

RE 510S - (1-8)

## RE 521 - Real Estate Finance I (4)

Introduces fundamental concepts and analytical techniques of commercial real es tate investment and finance. Concepts and techniques discussed include the characteristics of commercial real estate markets and realestate as a financial asset; lease and market analy sis; real estate inves tment strategies; investment pro-forma statements and fin ancial spreadsheet modeling; commercial realestate data analytics; mortgage financing and real estate private equity. It places an emphasis on quantitative analysis and real-world application.

## RE 522 - Real Estate Finance II (4)

Introduces advanced concepts and analytical techniques of commercial real estate investment and finance. Topics discussed include real estate investment trusts (REITs), mortgage-backed securities, real estate portfolio management, and financing decisions in the context of owner-occupiers (corporate realestate management). This course places an emphasis on quantitative analysis and real-world application.
Prerequisite: RE521.

## RE 523 - Real Estate Investment Analytics (4)

Students will learn financial approach to analyzing real es tate investments, analyzing case studies of investment decisions, learning s preadsheet-based software for analyzing leases and income flows, and understanding the tax implications of real estate investment.
Prerequisite: RE521 and RE 522 or permission of the instructor. RE522 may be taken concurrently.

## RE 531 - Executive Perspectives on Real Estate (1)

A series of presentations by localand regional leaders in the real estate industry highlighting is sues in the development of their bus iness and career opportunities in the realestate industry.

Prerequisite: admis sion to the Master of Real Estate Development program.

## RE 532 - Multifamily Property Management (4)

Gives students an overview of multifamily property management, including operations, maintenance, management and leasing of various types of apartment communities. The course will cover fundamental components of thehuman resources function for apartment communities, an overview of accounting and budgeting skills needed to meet a property owners' goals, fair hous ing laws, key components of a maintenance plan, and fundamental marketing tools and analysis for multifamily properties.

Also offered for undergraduate-level credit as Mgmt 432 and may be taken only once forcredit. Cross-Listed as: This is the same course as RE532S and may be taken only once for credit.

## RE 532S - Multifamily Property Management (4)

Gives students an overview of multifamily property management, including operations, maintenance, management and leas ing of various types of apartment communities. The course will cover fundamental components of the human resources function for apartment communities, an overview of accounting and budgeting skills needed to meet a property owners' goals, fair housing laws, key components of a maintenance plan, and
fundamental marketing tools and analysis for multifamily properties.

Also offered for undergraduate-levelcredit as Mgmt 432 and may be taken only once for credit. Cross-Listed as: This is the same course as RE532 and may be taken only once forcredit.

## RE 533 - Commercial Property and Asset Management (4)

Explores management of different classes of commercial real estate including office, retail, and industrial as well as management of a portfolio of real estate assets. Students will gain an understanding of the following areas of commercial property and asset management: financial/budgeting, facility, management, and legal. Discussions will cover leasing strategies and ways to enhance building value. Students will learn how to reposition an asset to increase its value and how to best use technology to manage assets.

Also offered for undergraduate-level credit as Mgmt 433 and may be taken only once for credit. Cross-Listed as: This is the same course as RE533S and may be taken only once forcredit.

## RE 533S - Commercial Property and Asset Management (4)

Explores management of different classes of commercial real estateincluding office, retail, and industrial as well as management of a portfolio of real estate assets. Students will gain an understanding of the following areas of commercial property and asset management:
financial/budgeting, facility, management, and legal. Discussions will cover leasing strategies and ways to enhance building value. Students will learn how to reposition an asset to increaseits value and how to best use technology to manage assets.
Also offered for undergraduate-level credit as Mgmt 433 and may be taken only once for credit. Cross-Listed as: This is the same course as RE533 and may be taken only once forcredit.

## RE 538S - Real Estate Law I (3)

Provides students with a comprehensive summary of real property froma legal pers pective with an emphasis on trans actional issues. Includes is sues relating to types of ownership, descriptions of property, easements, public and private limitations on use, real es tatecontracts, forms utilized in transfers, financing and title assurances. The class will enable students to understand the legal framework and the rights and res ponsibilities of owners and transferors/transferees of realproperty. This is the same course as USP 538 and may be taken only once for credit. Expected preparation for graduate students: RE 521.
Also offered for undergraduate-levelcredit as RE438 and may be taken only once for credit. Cross-Listed as: This is
the same course as USP 538 and may be taken only once for credit.

## RE 539 - Real Estate Valuation I (4)

Fundamentals of appraising real estate, focusing on valuation techniques for income-producing real estate as sets. Analysis of income and expenses, net operating income, leveraged and unleveraged cash flows, debt coverage ratios, direct capitalization, multipliers, and discounted cash flows. Marketability analysis, highest and best use concepts, zoning, environmental is sues, and the risks and rewards of real estate development are discussed.

Also offered for undergraduate-level credit as Fin 439 and may be taken only once for credit. . Prerequis ite: Fin 513 or Fin 551 or RE 521. Cross-Listed as: This is the same course as RE539S and may be taken only once for credit.

## RE 539S - Real Estate Valuation I (4)

Fundamentals of appraising real estate. Land utilization. Analysis of real estate values by approaches followed by governmental and private appraisers.

Also offered for undergraduate-level credit as Fin 439 and may be taken only once for credit. Prerequisite: Fin 513 or Fin 551 or RE 521. Cross-Listed as:This is the same course as RE539 and may be taken only once for credit.

## RE 548 - Real Estate Market Analysis (3)

A well-researched market study provides critical information that can make or break a development project. This course will provide students with the tools needed to evaluate trends and understand the key factors affecting real estate markets. The class will demonstrate where to get and analyze information on the demand for multifamily, hotel, office, industrial, and mixed-use developments. Expected preparation: RE 521 or USP 515.

## RE 559 - Real Estate Valuation II (3)

Applies concepts from439/539 to examine case studies in real estate apprais al and valuation. Topics include valuation for financial reporting, determining the highest and bestuse for a site, and determination of value following a property taking or condemnation.

Also offered for undergraduate-level credit as RE459 and may be taken only once for credit. . Prerequisite: RE 539 and RE 521.

## RE 562 - Real Estate Development Workshop(4)

Students forma real estate development team and produce an original development plan, including the development concept, the market analysis, theconceptual design, economic analysis capital and operations budget, and management plan. The student's plan will demons trate mastery of the development concepts and tools learned through the previous courses.

Prerequisite: USP 546 or instructor's consent. Course may be taken twice for credit with instructor's consent.

## RE 573 - Real Estate Economics (4)

Looks at the economics of real estate and housing, including land rent, interest rates, apartment rents, and housing prices, using an economic framework. Basic concepts in urban economics such as urbanization and agglomeration, tran sportation costs and congestion, inequality and segregation, growth controls and sprawl, as well as amenities, externalities, and public goods are reviewed. Explores the technique most commonly used in real estate and housing economics: hedonic pricing. Explores the rationale and impact of government intervention in the private real es tate market. Expected preparation: USP 515 or Fin 512.
Corequisite: Taking RE521 and RE 573 simultaneously is permitted. Cross-Listed as: This is the same course as USP 573 and may be taken only once for credit.

## Rus - Russian

## Rus 101 - First-Year Russian Term 1 (4)

An introduction toelementary Russian. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the first course in a sequence of three: Rus 101, Rus 102, and Rus 103.

## Rus 102 - First-Year Russian Term 2 (4)

An introduction to elementary Russian. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the second course in a sequence of three: Rus 101, Rus 102, and Rus 103.

## Rus 103 - First-Year Russian Term3 (4)

An introduction to elementary Russian. Emphasis on lis tening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings. This is the third course in a sequence of three: Rus 101, Rus 102, and Rus 103.

## Rus 111 - Introduction to FlagshipStudies Term 1 (1)

An introduction to is sues related to language acquisition, proficiency standards, and assessment instruments for students in the Russian Flagship Program. This is the first course in a sequenceof three: Rus 111, Rus 112, and Rus 113.

Prerequisite: admis sion to the Rus sian Flag ship Partner Program.

## Rus 112 - Introduction to FlagshipStudies Term 1 (1)

An introduction to is sues related to language acquisition, proficiency standards, and assessment instruments for students in the Rus sian Flagship Program. This is the second course in a sequence of three: Rus 111, Rus 112, and Rus 113.

Prerequis ite: admis sion to the Rus sianFlagship Partner Program.

## Rus 113 - Introduction to FlagshipStudies Term 3 (1)

An introduction to is sues related tolanguage acquisition, proficiency standards, and assessment instruments for students in the Rus sian Flagship Program. This is the third course in a sequence of three: Rus 111, Rus 112, and Rus 113.

Prerequisite: admis sion to the Rus sian Flagship Partner Program.

## Rus 150 - Beginning Flagship Russian Term 1 (6)

Intensive introduction to fundamentals of Rus sian focusing on language production in high-frequency settings. Conducted primarily in Russian, the course prepares students for study in Russia and is a prerequisite for further study in the Rus sian Flagship Program. This is the first course in a sequence of three: Rus 150 , Rus 151 , and Rus 152.

## Rus 151 -Beginning Flagship Russian Term 2 (6)

Intensive introduction to fundamentals of Russian focusing on language production in high-frequency settings. Conducted primarily in Russian, the course prepares students for study in Russia and is a prerequisite for further study in the Russian Flagship Program. This is the second course in a sequence of three: Rus 150, Rus 151, and Rus 152.

## Rus 152 - Beginning Flagship Russian Term 3 (6)

Intensive introduction to fundamentals of Russian focusing on language production in high-frequency settings. Conducted primarily in Russian, the course prepares students for study in Russia and is a prerequisite for further study in the RussianFlagship Program. This is the third course in a sequence of three: Rus 150, Rus 151, and Rus 152.

Rus 199 -Special Studies (1-12)
(Credit to be arranged.)

## Rus 201 -Second-Year Russian Term 1 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the first course in a sequence of three: Rus 201, Rus 202, and Rus 203. Expected preparation: Rus 103.

## Rus 201H-Second-year Russian Heritage ()

Designed for students who speak Rus sian but have limited writing skills. Covers the content of second-year Rus sian with particularattention to writing. Rus 203 H satis fies the PSU BA requirement and prepares students to enter Rus 301H.

## Rus 202 -Second-Year Russian Term 2 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the second course in a sequence of three: Rus 201, Rus 202, and Rus 203. Expected preparation: Rus 103.

## Rus 202H-Second-year Russian Heritage ()

Designed for students who speak Rus sian but have limited writing skills. Covers the content of second-year Rus sian with particular attention to writing. Rus 203 H satis fies the PSU BA requirement and prepares students to enter Rus 301H.

## Rus 203 -Second-Year Russian Term 3 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the third course in a sequence of three: Rus 201, Rus 202, and Rus 203. Expected preparation: Rus 103.

## Rus 203H-Second-year Russian Heritage ()

Designed for students who speak Rus sian but have limited writing skills. Covers the content of second-year Rus sian with particular attention to writing. Rus 203 H satisfies the PSU BA requirement and prepares students to enter Rus 301H.

## Rus 299 - Special Studies (1-12)

(Credit to be arranged.)

## Rus 301 - Third-Year Russian Term 1 (4)

Focus on acquisition of vocabulary, practical application. Intensive practice in speaking listening, reading and
writing. This is the first course in a sequence of three: Rus 301, Rus 302, and Rus 303. Expected preparation: Rus 203.

## Rus 301H- Third-year Russian Heritage ()

Designed forstudents fromRussian-speaking backgrounds. Covers the content of third-year Russian with particular attention to culture, stylistic registers, accuracy. Prepares students to enter Rus 411 (Advanced Russian) and to apply for the PSU Russian Language Flagship program.

## Rus 302 - Third-Year Russian Term 2 (4)

Focus on acquisition of vocabulary, practical application. Intensive practice in speaking listening, reading and writing. This is the second course in a sequence of three: Rus 301, Rus 302, and Rus 303. Expected preparation: Rus 203.

## Rus 302H- Third-year Russian Heritage ()

Designed forstudents fromRussian-speaking backgrounds. Covers the content of third-year Russian with particular attention to culture, stylistic registers, accuracy. Prepares students to enter Rus 411 (Advanced Russian) and to apply for the PSU Russian Language Flagship program.

## Rus 303 - Third-Year Russian Term3 (4)

Focus on acquisition of vocabulary, practical application. Intens ive practice in speaking listening, reading and writing. This is the third course in a sequence of three: Rus 301, Rus 302, and Rus 303. Expected preparation: Rus 203.

## Rus 303H- Third-year Russian Heritage ()

Designed forstudents fromRussian-speaking backgrounds. Covers the content of third-year Russian with particular attention to culture, stylistic registers, accuracy. Prepares students to enter Rus 411 (Advanced Russian) and to apply for the PSU Rus sian Language Flagship program.

## Rus 325 - Russian Phonetics and Phonology (4)

Introduction to the sounds of Rus sian: their place and manner of articulation (phonetics) as well as how they pattern with respect to each other and as influenced by
morphological and syntactic factors (phonology). Conducted in English. Expected preparation: Rus 102.

## Rus 330U - Russian Culture and Civilization (4)

A multimedia survey of major developments in Russian art, architecture, music, dance, theater, cinema and literature. The class focuses on ways major works relate to the artistic atmosphere of theirtimes and on how subsequent generations have reinterpreted and reused them. Taught in English.

## Rus 331U - Russian Film Topics (4)

Surveys cinematic narratives significant to Rus sian culture, with a focus on is sues of gender and/or national identity. Taught in English.

## Rus 341 - Introduction to Russian Literature (4)

Study of selected short stories of the 19th century. For nonnative speakers only. This is the first course in a sequence of two: Rus 341 and Rus 342. Expected preparation: Rus 203.

## Rus 342 - Introduction to Russian Literature (4)

Study of selected short stories of the 19th century. For nonnative speakers only. This is the second course in a sequence of two: Rus 341 and Rus 342. Expected preparation: Rus 203.

## Rus 399 - Special Studies (1-6)

(Credit to be arranged.)

## Rus 401 - Research (1-6)

(Credit to be arranged.)

## Rus 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Rus 405 - Reading and Conference (1-12)

(Credit to be arranged.)

## Rus 407 -Seminar (1-12)

(Credit to be arranged.)

## Rus 408 -Workshop(1-12)

(Credit to be arranged.)

## Rus 409-Practicum(1-12)

(Credit to be arranged.)

## Rus 410 -SelectedTopics (1-12)

(Credit to be arranged.)

## Rus 411 -Advanced Russian (4)

Special problems of Rus sian grammar; selected writing and reading assignments and dis cussion. For non-native speakers of Russian only. This is the first course in a sequence of three: Rus 411, Rus 412, and Rus 413. Expected preparation: Rus 303.
Also offered for graduate-level credit as Rus 511 and may be taken only once for credit. .

## Rus 412 -Advanced Russian (4)

Special problems of Russian grammar; selected writing and reading assignments and discussion. For non-native speakers of Russian only. This is the second course in a sequence of three: Rus 411, Rus 412, and Rus 413. Expected preparation: Rus 303.
Also offered for graduate-level credit as Rus 512 and may be taken only once for credit. .

## Rus 413 -Advanced Russian (4)

Special problems of Russian grammar; selected writing and reading assignments and discussion. For non-native speakers of Russian only. This is the third course in a sequence of three: Rus 411, Rus 412, and Rus 413. Expected preparation: Rus 303.
Also offered for graduate-level credit as Rus 513 and may be taken only once for credit. .

## Rus 414 - Advanced Russian Grammar (4)

Systematic study of Rus sian grammar for advanced students and prospective teachers. Expected preparation: Rus 301.
Also offered for graduate-level credit as Rus 514 and may be taken only once for credit. .

## Rus 416 - Readings in Russian (2)

A variable-content course designed to give advanced students of Russian experience reading in a variety of content areas. Rus 416 is to be taken in conjunction with regularly scheduled corequis ite courses. Students taking a
corequisite course will do part of the required reading for that course in Russian. Expected preparation: Rus 342.

## Rus 420 - Topics in Russian History (4)

A content-based language course based on study of major is sues in Russian and Soviet history such as Peter I, Westerners and Slavophiles, the Thaw, and others. May be repeated forcredit when topics differ. Expected preparation: Rus 342.
Also offered for graduate-level credit as Rus 520 and may be taken only once forcredit. . Prerequisite: junior standing.

## Rus 421 - Topics in Contemporary Russian Culture (4)

Study of current is sues in post-Soviet society such as political proces ses, educational reform, migration, and others. May be repeated for credit when topics differ. Expected preparation Rus 342.
Also offered for graduate-level credit as Rus 521 and may be taken only once for credit. .

## Rus 427 - Topics in Russian Literature of the 19th

 Century (4)Representative literature of the major Rus sian writers of the nineteenth century. Such topics as Golden Age, or the 19th Century Short Story. Expected preparation: Rus 303.
Also offered for graduate-level credit as Rus 527 and may be taken only once forcredit. .

## Rus 433 - Topics in Russian Literature of the 20th Century (4)

Representative literature of major Russian writers of the twentieth century. Such topics as Soviet Satire, The Thaw, Glasnost. Expected preparation: Rus 303. May be repeated for credit when topic differs.

Also offered for graduate-level credit as Rus 533 and may be taken only onceforcredit. .

## Rus 441U- Russian Literature in Translation: Nineteenth Century (4)

Major works of nineteenth-century Russian literature. Readings, lectures, and discussion in English. Expected preparation: Sophomore Inquiry or 4 credits of upper division literature.

## Rus 442U- Russian Literature in Translation: Twentieth Century (4)

Major works of twentieth-century Russian literature. Readings, lectures, and discussions in English. Expected preparation: Sophomore Inquiry or 4 credits of upper division literature.

## Rus 444 -FlagshipStudies: Globalization Term 1 (2)

A Russian across the curriculumcourse aligned with PSU's University Studies Program. Flagship students develop advanced reading, writing, speaking and listening skills while exploring "Globalization" in Russian. This is the first course in a sequence of three: Rus 444, Rus 445, and Rus 446.

Prerequisite: admis sion to the Rus sianFlagship Program.
Rus 445 -FlagshipStudies: Globalization Term 2 (2)
A Russian across the curriculumcourse aligned with PSU's University Studies Program. Flagship students develop adv anced reading, writing, speaking and listening skills while exploring "Globalization" in Russian. This is the second course in a sequence of three: Rus 444, Rus 445, and Rus 446.
Prerequisite: admis sion to the Russian Flagship Program.
Rus 446 -FlagshipStudies: Globalization Term 3 (2)
A Russian across the curriculumcourse aligned with PSU's Univers ity Studies Program. Flagship students develop advanced reading, writing, speaking and listening skills while exploring "Globalization" in Russian. This is the third course in a sequenceof three: Rus 444, Rus 445, and Rus 446.

Prerequis ite: admis sion to the Rus sianFlagship Program.
Rus 454 -FlagshipStudies: American Studies (2)
A Russian across the curriculumcourse aligned with PSU's University Studies Program. Flagship students perfect advanced reading, writing, speaking and listening skills while exploring the U.S. Jazz Age in Russian.

Prerequis ite: admis sion to the Rus sian Flagship Program.

## Rus 455 -FlagshipStudies: European Studies (2)

A Russian across the curriculumcourse aligned with PSU's Univers ity Studies Program. Flagship students perfect advanced reading, writing, speaking and listening skills while exploring the modern Europeanhis tory and culture in Russian.

Prerequis ite: admis sion to the Russian Flagship Program.

## Rus 456 - FlagshipStudies: Environmental Sustainability (2)

A Russian across the curriculumcourse aligned with PSU's University Studies Program. Flagship students perfect advanced reading, writing, speaking and listening skills while exploring the questions of ecology and sustainability in Russian.
Prerequisite: admis sion to the Russian Flagship Program.

## Rus 457 - FlagshipStudies: Russian in the Major Term 1 (2)

A Russian across the curriculumcourse designed to permit advanced Flagship students to develop appropriate vocabulary, discourse strategies, and research skills in their respective majors. This is the first coursein a sequence of three: Rus 457, Rus 458, and Rus 459.

Prerequisite: admission to the Russian Flagship Program.

## Rus 458 - FlagshipStudies: Russian in the Major Term

 2 (2)A Russian across the curriculumcourse designed to permit advanced Flagship students to develop appropriate vocabulary, discourse strategies, and research skills in their respective majors. This is the third course in a sequence of three: Rus 457, Rus 458, and Rus 459.

Prerequisite: admission to the Russian Flagship Program.
Rus 459 - FlagshipStudies: Russian in the Major Term 3 (2)
A Russian across the curriculumcoursedesigned to permit advanced Flagship students to develop appropriate vocabulary, discourse strategies, and research skills in their respective majors.
Prerequisite: admission to the Russian Flagship Program.

## Rus 494 - Russian Linguistics (4)

Introduction to the basic concepts of linguistics and their application to Russian. Analysis of the phonetics, phonemics, syntax and morphology of modern Russian. Recommended prerequisite: Rus 303.

## Rus 497 - Applied Russian Linguistics (4)

A practical application of linguistics to modern Russian. Emphas is on a contrastive analy sis of the structures of Russian and English. Recommended prerequisite: Rus 303.

## Rus 501 - Research (1-9)

(Credit to be arranged.)

## Rus 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Rus 505 - Reading and Conference (1-12)

(Credit to be arranged.)

## Rus 507 -Seminar (1-12)

(Credit to be arranged.)

## Rus 508 -Workshop(1-8)

(Credit to be arranged.)

## Rus 509 -Practicum(1-6)

(Credit to be arranged.)

## Rus 510 -SelectedTopics (1-12)

(Credit to be arranged.)

## Rus 511 - Advanced Russian (4)

Special problems of Russian grammar; selected writing and reading assignments and dis cussion. For non-native speakers of Russian only. This is the first course in a sequence of three: Rus 511, Rus 512, and Rus 513. Expected preparation: Rus 303.

Also offered for undergraduate-level credit as Rus 411 and may be taken only once for credit. .

## Rus 512 - Advanced Russian (4)

Special problems of Rus sian grammar; selected writing and reading assignments and discussion. For non-native speakers of Russian only. This is the second course in a sequence of three: Rus 511, Rus 512, and Rus 513. Expected preparation: Rus 303.

Also offered for undergraduate-level credit as Rus 412 and may be taken only once for credit. .

## Rus 513 - Advanced Russian (4)

Special problems of Rus sian grammar; selected writing and reading assignments and dis cussion. For non-native speakers of Russian only. This is the third course in a sequence of three:Rus 511, Rus 512, and Rus 513. Expected preparation: Rus 303.
Also offered for undergraduate-level credit as Rus 413 and may be taken only once for credit. .

## Rus 514 - Advanced Russian Grammar (4)

Systematic study of Rus sian grammar for advanced students and prospective teachers. Expected preparation: Rus 301.

Also offered for undergraduate-level credit as Rus 414 and may be taken only once for credit.

## Rus 520 - Topics in Russian History (4)

A content-based language course based on study of major is sues in Russian and Soviet history such as Peter I, Westerners and Slavophiles, the Thaw, and others. May be repeated forcredit when topics differ. Expected preparation: Rus 342.
Also offered for undergraduate-level credit as Rus 420 and may be taken only once for credit. . Prerequisite:junior standing.

## Rus 521 - Topics in Contemporary Russian Culture (4)

Study of currentissues in post-Sovietsociety such as political processes, educational reform, migration, and others. May be repeated for credit when topics differ. Expected preparation:Rus 342.
Also offered for undergraduate-levelcredit as Rus 421 and may be taken only once for credit. .

## Rus 527 - Topics in Russian Literature of the 19th

 Century (4)Representative literature of the major Rus sian writers of the nineteenth century. Such topics as Golden Age, or the 19th Century Short Story. Expected preparation: Rus 303.
Also offered for undergraduate-level credit as Rus 427 and may be taken only once for credit. .

## Rus 533 - Topics in Russian Literature of the 20th

 Century (4)Representative literature of major Russian writers of the twentieth century. Such topics as Soviet Satire, The Thaw, Glasnost. May be repeated for credit when topic differs. Expected preparation:Rus 303.
Also offered for undergraduate-level credit as Rus 433 and may be taken only once for credit. .

## Rus 594 - Russian Linguistics (4)

Introduction to the basic concepts of linguistics and their application to Russian. Analy sis of the phonetics, phonemics, syntax and morphology of modern Russian. Recommended prerequisite: Rus 303.

## Rus 597 - Applied Russian Linguistics (4)

A practical application of linguistics to modern Russian. Emphas is on a contrastive analysis of the structures of Russian and English. Recommended prerequisite: Rus 303.

## Sci - Science Ed: Center for

## Sci 199-Special Studies (1-8)

(Credit to be arranged.)

## Sci 201 -Natural Science Inquiry (4)

This is the University Studies Sophomore Inquiry course that serves as the gateway to the Science in the Liberal Arts curriculum. The course aims to introduce students to the knowledge-making strategies of science. The curriculum is taught using s mall group and class projects that engage students in various science inquiry activities. Students gain experience in gathering and understanding scientific information, data management, interpretation and presentation, making and defending knowledgeclaims, working collaboratively, writing technically, and communicating scientific results.
Cross-Listed as:This is the same course as UnSt 286.

## Sci 311U-Teaching Everyday Science (4)

Two-termsequence designed to immerse potential mathematics and science teachers in laboratory and thinking experiences that they can use as a foundation for their own understanding of the physical sciences and related mathematics and curriculumdevelopment in future teaching experiences. In addition to experiences in the laboratory, environmental impact issues will be in vestigated. Includes laboratory and/or fieldwork. This is the first course in a sequence of two: Sci 311 and Sci 312. Recommended prerequis ite: Natural Science Inquiry.

## Sci 312U - Teaching Everyday Science (4)

Two-termsequence designed to immerse potential mathematics and science teachers in laboratory and thinking experiences that they can use as a foundation for their own understanding of the physical sciences and related mathematics and curriculumdevelopment in future teaching experiences. In addition to experiences in the laboratory, environmental impact issues will be investigated. Includes laboratory and/or fieldwork. This is the second course in a sequence of two: Sci311 and Sci 312. Recommended prerequis ite: Natural Science Inquiry.

## Sci 313U-Environmental Mathematical Modeling (4)

An introduction todifferential and integral calculus, this course is intuitive in approach andemphasizes applications, especially with respect to environmental is sues. The interested student may follow it with a more extensive and rigorous calculus sequence. Includes laboratory and/or fieldwork. Recommended prerequisites: Natural Science Inquiry, Mth 111.

## Sci 314U-Environmental Statistics (4)

Explores a selection of mathematical topics in the context of environmental is sues, using real data. Topics will
include statistics, data display, data analysis, probability, and probability distributions. Includes laboratory and/or fieldwork. Recommended prerequisites: Natural Science Inquiry, Mth 95.

## Sci 315U- General Astronomy I (4)

Introductory historical, descriptive, and interpretive study of as tronomy. Emphas is is on the basic scientific methods as they apply to astronomical problems. Detailed examination of the earth, followed by a survey of the other members of the solar system. Survey of the stars, their types, grouping, and motions. Models for the evolution of the Universe and the possibility of life elsewhere. The nature of light, the types of information it carries, and the types of devices used to detect it. Includes laboratory and/or fieldwork. This is the first course in a sequence of two: Sci 315U and Sci 316U. This is the same course as Ph 361 U and may be taken only once for credit. Expected preparation: Natural Science Inquiry. Taught by a faculty member from the Department of Physics.
Cross-Listed as: Ph 361U.

## Sci 316U- General Astronomy II (4)

Introductory historical, descriptive, and interpretive study of as tronomy. Emphas is is on the basic scientific methods as they apply to astronomical problems. Detailed examination of the earth, followed by a survey of the other members of the solar system. Survey of the stars, their types, grouping, and motions. Models for the evolution of the Universe and the possibility of life else where. The nature of light, the types of information it carries, and the types of devices used to detect it. Inclu des laboratory and/or fieldwork. This is the second course in a sequence of two: Sci 315U and Sci316U. This is the same course as Ph 362U and may be taken only once for credit. Expected preparation: Natural Science Inquiry. Taught by a faculty member from the Department of Physics.
Cross-Listedas: Ph 362U.

## Sci 317U- Fractals, Chaos, and Complexity (4)

Introduction to the physics of fractals in nature, chaos, and complexity. Computersimulations and desktop experiments involving fractals, chaos, and complex systems. Recommended prerequisite: Natural Science Inquiry. Taught by a faculty member fromthe Department of Physics.

## Sci 318U-Complexity and the Universe I (4)

Introduction to the physics of complexity and other current concepts in physics. Computer simulations and desktop experiments involving fractals, chaos, and complex systems. Includes laboratory and/or fieldwork. Recommended prerequisite: Natural Science Inquiry.

Taught by a faculty member fromthe Department of Physics.

## Sci 319U-Complexity and the Universe II (4)

Continuation of Sci 318/Ph 366. Emphasizes scientific cosmology with a focus on understanding how insights gained fromphysics and astronomy affect your view of the universe and your place in it. Students participate actively in seeing how some of the information was gathered, help critically analyze what to believe about the history and arrangement of the universe and what it means to them. Includes laboratory and/or fieldwork. Recommended prerequisite: Natural Science Inquiry. Taught by a faculty member from the Department of Physics.

## Sci 320U-Rates of Change (4)

Explores rates of change in a laboratory-style format. Analyzes the relationships between quantities and rates using hand-drawn and computer-generated graphic representations. Provides resources for pre-service teachers.

## Sci 321U-Energy and Society I (4)

Study of the generation and usage of energy, including the technical, economic, social, and political is sues related to energy production and end uses. Examination of energy resources, methods of producing and converting various forms of energy, energy conservation, and environmental and economic implications of energy production and energy policies. Includes laboratory and possibly fieldwork. This is the first course in a sequence of two: Sci 321 and Sci 322. Recommended prerequisite: Natural Science Inquiry.

## Sci 322U-Energy and Society II (4)

Study of the generation and usage of energy, including the technical, economic, social, and political is sues related to energy production and end uses. Examination of energy resources, methods of producing and converting various forms of energy, energy conservation, and environmental and economic implications of energy production and energy policies. Includes laboratory and possibly fieldwork. This is the second course in a sequence of two: Sci 321 and Sci 322. Recommended prerequisite: Natural Science Inquiry.

## Sci 325U-Science of a Hydrogen Economy (4)

Hydrogen is considered as an ideal energy source. Explores various methods of hydrogen production, storage,
delivery, and uses. Includes discussion of hy drogen's image as an abundant, clean, high energy output, easily obtainable, safe energy source. Considers safety is sues and codes/standards fromvarious related agencies and organizations that would have been necessary to have avoided such historical mishaps as those in volving the Hindenberg and the space shuttle Challenger. Recommended prerequisite: Natural Science Inquiry.

## Sci 327U- Oceans and Society (4)

Provides a working knowledgeof how the physical, chemical and biological ocean environment impacts the development and distribution of marine communities. Discussions on how humans interface with marine systems, how marine systems impact global sustainability, the environmental, economic and ethical res ponsibilities humans have for our marine systems.

## Sci 331U- AI: Urban Air Pollution (4)

Interaction of the atmosphere with other earth systems, chemical cycling, and the effect of humans on the atmosphere will be explored. The physical and chemical properties and interactions of the atmosphere will be investigated through laboratory investigations, fieldwork, and computer modeling. Topics will include urban air quality, global climate change, and the " management" of the atmosphere. Includes laboratory and/or fieldwork. This is the first course in a sequenceof two: Sci 331 and Sci 332. Recommended prerequisite: Natural Science Inquiry.

## Sci 332U-AI: Urban AirPollution (4)

Interaction of the atmosphere with other earth systems, chemical cycling, and the effect of humans on the atmosphere will be explored. The physical and chemical properties and interactions of the atmosphere will be investig ated through laboratory investigations, fieldwork, and computer modeling. Topics will include urban air quality, global climate change, and the " management" of the atmosphere. Includes laboratory and/or fieldwork. This is the second course in a sequence of two: Sci331 and Sci 332. Recommended prerequisite: Natural Science Inquiry.

## Sci 333U- Climate and Water Resources (4)

An inquiry-based examination of the principal controls on climate and hydrology, with emphasis on processes and interactions; students will do fieldwork, data analysis, and laboratory work. Recommended prerequisite: Natural Science Inquiry. Also listed as Geog 310U; course may be taken only once for credit.
Cross-Listed as: Geog 310U.

## Sci 334U-Climate Variability and Change (4)

Provides an understanding of how and why climate varies and changes over space and time. Climate variability is explored across a range of scales fromice ages to monsoon circulations. Examines the scientific basis for anthropogenic climate change and how it differs from natural variability. Students will learn by analyzing climate data, performing experiments with climate models, and researching how climate variability and change impact everyday life. Includes laboratory and/or fieldwork.

Cross-Listed as: Also offered as Geog 312U and may betaken only once forcredit.

## Sci 335U-Water in the Environment I (4)

Studies of the unique properties of water in all of its roles, including a study of the water cycle, water resources, treatment of municipal water, and wastewater treatment. Special attention will be placed on natural waters as a resource, including natural and introduced constituents and the movements of natural waters. Includes laboratory and fieldwork. This is the first course in a sequence of two: Sci 335 and Sci 336. Recommended prerequisite: Natural Science Inquiry.

## Sci 336U-Water in the Environment II (4)

Studies of the unique properties of water in all of its roles, including a study of the water cycle, water resources, treatment of municipal water, and wastewater treatment. Special attention will be placed on natural waters as a resource, including natural and introduced constituents and the movements of natural waters. Includes laboratory and fieldwork. This is the second course in a sequence of two: Sci 335 and Sci 336. Recommended prerequisite: Natural Science Inquiry.

## Sci 338U-Investigating Forest Ecosystems (4)

Fundamental concepts of terres trial ecology in the context of present unresolved forest managementissues.
Participants will learn an appropriate set of field skills in soil and vegetation monitoring and engage in a short-term research project at a local site. Socio-political context of Pacific Northwest forest management will be covered through guided controversies and guest speakers.
Prerequisite: one ecology or environmental science course.
Sci 341L - Lab for Bi 341 (0)
Lab for Bi 341.
Corequisite: Sci341U.

## Sci 341U-Biology Concepts and Applications I (4)

Two-termcourse focusing on four main topics: classical Mendelian and currentmolecular genetics, evolution and
predator/prey interactions, growth and metabolism, and biomes and biodiversity. In each topic area students will participate in laboratory and or field components, discussion, and Internet exercises. Includes laboratory and/or fieldwork. This is the first course in a sequence of two: Sci 341 and Sci 342. Recommended prerequisite: NaturalScience Inquiry.
Corequisite: Sci 341L.
Sci 342L - Lab for Sci 342 (0)
Lab for Sci 342.
Corequisite: Sci342U.

## Sci 342U-Biology Concepts and Applications II (4)

Two-term course focusing on four main topics: classical Mendelian and current molecular genetics, evolution and predator/prey interactions, growth and metabolism, and biomes and biodiversity. In each topic area students will participate in laboratory and or field components, discussion, and Internet exercises. Includes laboratory and/or fieldwork. This is the second course in a sequence of two: Sci 341 and Sci342. Recommended prerequisite: NaturalScience Inquiry.
Corequisite: Sci 342L.

## Sci 343U - Columbia Basin Plant Communities (4)

In this two-termcoursestudents will explore the relationships found in alpine, desert, forest, and grassland plant communities. They will gain an understanding of how these plant communities interact with their environment and why they exhibit certain characteristics and processes. Includes laboratory and fieldwork. Recommended prerequisite: Natural ScienceInquiry.

## Sci 345U-Old Growth Forest Ecology and Management I (4)

Explores the ecological characteris tics of old growth forests, including the outstanding biodiversity that exists at multiple levels, as well as the management paradigms that have impacted these systems in the Pacific Northwest (U.S. and Canada), including ethical, social, economic, and political as pects of forestmanagement. Sci 345 includes laboratory and local fieldwork plus projects involving: analys is of environmentalimpact statement alternatives, evaluation of management is sues, and ad visory statements for governmental activities. Sci346 involves more extensive fieldwork, data analysis, and presentations. This is the first course in a sequenceof two: Sci 345 and Sci 346. Recommended prerequisite: Natural Science Inquiry.

## Sci346U-Old Growth Forest Ecology and Management II (4)

Explores the ecological characteristics of old growth forests, including the outstanding biodiversity thatexists at multiple levels, as well as the management paradigms that have impacted these systems in the Pacific Northwest (U.S. and Canada), including ethical, social, economic, and political aspects of forest management. Sci 345 includes laboratory and local fieldwork plus projects involving: analys is of environmental impact statement alternatives, evaluation of management is sues, and advisory statements for governmental activities. Sci 346 in volves more extensive fieldwork, data analy sis, and presentations. This is the second course in a sequence of two: Sci 345 and Sci 346. Recommended prerequisite: Natural Science Inquiry.

## Sci 347 U-Science, Gender, and Social Context I (4)

Considers how gender, race and sexuality in fluence and are constructed by the theories and practiceofscience, using historical and contemporary examples. Explores the strengths and limitations of science to describe and predict human and non-human natural phenomena. Topics may include ecological, evolutionary, and environmental sciences. Laboratory and/or field experiences are included and emphasized. Companion course to Sci 348U; can be taken in any order.
Cross-Listed as: This course is the same as WS 347U and may only be taken once for credit.

## Sci 348U-Science, Gender, and Social Context II (4)

Considers how gender, race and sexuality influence and are constructed by the theories and practice of science, using historical and contemporary examples. Explores the strengths and limitations of science to describe and predict human and non-human natural phenomena. Topics may include organis mal, cell/molecular, or biomedical sciences. Laboratory and/or field experiences are included and emphasized. Companion course to Sci 347 U ; can be taken in any order.
Cross-Listed as:This course is the same as WS 348U and may only be taken once for credit.

## Sci 350U - Context of Science in Society (4)

Addresses the promises and limitations of the scientific enterprise in the framework of "real world" social, economic, political, and ethical is sues. Courses also address the historical and cultural role of science and technology, providing a link between laboratory science and contemporary society. Some CSS courses introduce risk-benefit analyses and decision-making methodologies. The prerequisite course for Context of Science in Society courses is Sci 201 Natural Science Inquiry or consent of the instructor.

## Sci 351U-Northwest Wetlands: Conservation, Restoration, and Mitigation (4)

Focus on science and public policy is sues in wetland conservation, res toration, and mitigation, especially in Oregon and thePacific Northwest. Recommended prerequisite: Natural Science Inquiry or consent of instructor.

## Sci 352U-Science andPolicy of Climate Change (4)

Evaluates the scientific data and the policy statements concerning the potential for human impact of climate, and in particular the questions of the existence and impacts of global warming. The interaction between scientific analys is and policy analy sis will be explored, and students will consider the roles that citizens, scientists, and policy make in developing local, regional, and global res ponses to climate change. Recommended prerequisite:Natural Science Inquiry.

## Sci 353U-Radiation in the Environment (4)

Examines sources of radiation and the hazards they represent. Students will explore the interaction of radiation with matter, including living tissue, and examine dosage and risk assessment. Topics include:fundamentals of electromagnetic radiation, nuclei and radioactive decay; cosmic background radiation and radon gas; nuclear chain reactions and atomic weapons; nuclear powergeneration, waste disposal and nuclear dis asters; medical x-rays and non-ionizing radiation from microwaves and cellular phones.

Prerequisite:Upper-division standing. Cross-Listed as: This is the same course as Ph 353 U and may be taken only once forcredit.

## Sci 354U-Science andPolitics of Columbia River Decisions (4)

Exploration of case studies of relationships between science and politics in making decisions about controversial Columbia River management is sues. Students will identify a particular is sue and its related stakeholders, define objectives, collect as well as analyze scientific data and political positions, and participate in role-playing decisions as stakeholder groups and as management committees.
Prerequisite: Natural Science Inquiry.

## Sci 355U-Science Through Science Fiction (4)

This class uses science fiction literature to examine a wide variety of topics in science. Recommended prerequisite: NaturalScience Inquiry. Alsolisted as Ph 378; course may be taken only once forcredit.

## Sci 356U-Environmental Success Stories (4)

A positive reflection on how and why we can approach environmentalcatastrophes with willingness and certainty that we can develop strategies to overcome current and future challenges. Case-studies, work with community organizations and evaluation of the literature will help students identify key elements of successful endeavors and create best-practices for successful environmental problem solving. Community connections will also focus on how to create sustainable and resilient solutions by identifying and supporting stakeholder values.

## Sci 357U -Sustainability in the United States-Mexico Border Region (4)

Explores environmental and economic sustainability is sues at the United States-Mexico border. Dialogue with United States and Mexican border residents; tours of immigration facilities and multinational factories; homestays with working class families; and service with Mexican-based agencies. Spanish language skills not required.

## Sci 359U-Biopolitics (4)

Designed to introduce the ethical, social, and political implications of knowledge and technologies attending advances in reproductive medicine and molecular genetics, including: in vitro fertilization, fetal surgery, and somatic cell gene therapy. Particular attention is paid to the manner in which such advances are likely to affect women's lives. Recommended prerequisite: Natural Science Inquiry.

## Sci 361U-Science: Power-Knowledge (4)

Systematically examines orthodoxportrayals of science in comparis on to recent anthropological, feminist, and poststructuralist accounts in an attemptto formulate a fresh understanding of the public's science literacy as a critical component of democratic political practice and civic responsibility. Recommended prerequisite: Natural Science Inquiry.

## Sci 365U - The Science of Gendered Bodies (4)

The scientific gendering of the human body is studied from an interdisciplinary and intersectional queer and feminist pers pective integrating biology, health and medicine with current and historical social, cultural and political forces.
Cross-Listed as:This is the same course as WS 365U and may be taken only once for credit.

## Sci 367U-STEM Research:Solving Today's Problems (4)

Students will gain tools for success in STEM disciplines, including professional skills, scientific research, scientific literature and writing, and working in interdisciplinary teams to address complexissues such as global environmental challenges. Students will gain the skills, knowledge and social capital needed to engage in locally and globally relevant research.

## Sci 368U- Green Roof Ecology (4)

An Undergraduate Research Experience investigating how green roof plant communities function in an urban rooftop en vironment. Working in small groups, students pursue an original research project and deliver a final technical report to PSU green roof researchers. The research topic changes each term- potential topics include plant communities; urban habitats and climate resilience; ecological services provided by green roofs; or impacts on air and water quality. Assignments focus on scientific writing and realworld research practices.

## Sci 369U- Green Roof Monitoring and Ecodesign (4)

An Undergraduate Research Experience investigating the efficiency and/or resiliency of living roofs in an urban environment. Working in small groups, students pursue an original research project and deliver a final technical report to PSU green roof researchers. The research topic changes each term- potential topics include stormwater mitigation, energy efficiency, or impacts on local air and water quality. Assignments focus on scientific writing and realworld research practices.

## Sci 382U-Introduction to Nanoscience and Nanotechnology (4)

Basic introduction to nanoscience and nanotechnology for all interested science, en gineering and social science and humanities students. This is the s ame course as Ph 382 U and may be taken only once for credit.
Prerequisite: sophomore inquiry - Natural Science Inquiry. Cross-Listed as: Ph 382U.

Sci 383U- Nanotechnology: Simulation \& Design (4)
Introductory circuit simulation; properties of selected nanotechnology devices and systems; nanodevice simulation; development of nanodevice models. This is the same course as ECE 383U and may be taken only once for credit.
Prerequisite: upper-division standing or permis sion of the instructor. Cross-Listed as: ECE 383U.

## Sci 384 -From Contemporary Nanoscience Towards Sustainable Nanotechnologies (4)

Provides an overview of nanoscience/technology, its interdisciplinarity, how it complements biomedical, engineering, economic, and environmental studies and gives students an appreciation of why "soft" machines are favored over "hard" machines. As second part of PH 382U (cross listed SCI 382U), it provides a
scientific/technological basis for sustainable future technology developments.

Cross-Listed as: This is the same course as Ph 384 and may be taken only once for credit. .

## Sci 399 -Special Studies (1-5)

(Credit to be arranged.)

## Sci 399U-Special Studies (4)

(Credit to be arranged.)

## Sci 401 - Research (1-8)

(Credit to be arranged.)

## Sci 402 - Independent Study (1-8)

(Credit to be arranged.)

## Sci 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Sci 405 - Reading and Conference (1-8)

(Credit to be arranged.)

## Sci 407 -Seminar (1-8)

(Credit to be arranged.)

## Sci 409 - Practicum(1-12)

(Credit to be arranged.)

## Sci 410 -Selected Topics (1-8)

(Credit to be arranged.)

## Sci 415 - Understanding the Next Generation Science Standards: Energy and Matter (4)

This course will provide current and future teachers with the science content knowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated program of short lectures, labs, and student projects.
Also offered for graduate-level credit as Sci 515 and may be taken only once for credit. .Prerequisite: upper-division standing.

## Sci 416 - Understanding the Next Generation Science

 Standards: Change Over Time (4)This course will provide current and future teachers with the science content knowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated program of short lectures, labs, and student projects.
Also offered for graduate-level credit as Sci 516 and may be taken only onceforcredit. .Prerequisite: upper-division standing.

## Sci 417 - Understanding the Next Generation Science Standards : Interactions and Systems (4)

This course will provide current and future teachers with the science contentknowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated program of short lectures, labs, and student projects.
Also offered for graduate-level credit as Sci517 and may be taken only once forcredit. .Prerequisite: upper-division standing.

## Sci 501 -Research (1-8)

(Credit to be arranged.)

## Sci 502 - Independent Study (1-8)

(Credit to be arranged.)

## Sci 503 -Thesis (1-12)

(Credit to be arranged.)

## Sci 504-Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Sci 505 -Reading and Conference (1-8)

(Credit to be arranged.)

## Sci 506 -Special Projects (1-12)

(Credit to be arranged.)

## Sci 507 -Seminar (1-8)

(Credit to be arranged.)

## Sci 508 -Workshop(1-9)

(Credit to be arranged.)

## Sci 509-Practicum(1-12)

(Credit to be arranged.)

## Sci 510 -Selected Topics (0-8)

(Credit to be arranged.)

## Sci 515 -Understanding the Next Generation Science Standards: Energy and Matter (4)

This course will provide current and future teachers with the sciencecontent knowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated program of short lectures, labs, and student projects.
Also offered for undergraduate-level credit as Sci 415 and may be taken only once for credit. . Prerequisite: upperdivision standing.

## Sci 516 -Understanding the Next Generation Science Standards: Change Over Time (4)

This course will provide current and future teachers with the sciencecontent knowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated program of short lectures, labs, and student projects.
Also offered for undergraduate-level credit as Sci 416 and may be taken only once for credit. .Prerequisite: upperdivision standing.

Sci 517 - Understanding the Next Generation Science Standards : Interactions and Systems (4)

This course will provide current and future teachers with the sciencecontent knowledge they will need to teach science as presented in the Next Generation Science Standards (NGSS) at the elementary level. . The course will be conducted through an integrated programof short lectures, labs, and student projects.
Also offered for undergraduate-levelcredit as Sci 417 and may be taken only once for credit. . Prerequisite: upperdivision standing.

## Sci 808 - Workshop(1-12)

CSE offers a number of credit-based professional development opportunities for existing science teachers. These courses are taught by CSE faculty and community partners and cover a wide range of environmental and science education topics. Credits earned through these courses do not fulfill graduate programcredit requirements.

## Sci 810 -Special Topics (1-12)

CSE offers a number of credit-based professional development opportunities for existing science teachers. These courses are taught by CSE faculty and community partners and cover a wide range of environmental and science education topics. Credits earned through these courses do not fulfill graduate programcredit requirements.

## Sc - Science: General

Sc 601 - Research (1-9)
(Credit to be arranged.)

## Sc 602 - Independent Study (1-9)

(Credit to be arranged.)

## Sc 603 - Thesis (1-9)

(Credit to be arranged.)

## Sc 604 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Sc 605 - Reading and Conference (1-9)

(Credit to be arranged.)

## Sc 607 - Seminar (1-9)

(Credit to be arranged.)

## Sc 608 - Workshop (1-9)

(Credit to be arranged.)

Sc 609 - Practicum (1-9)
(Credit to be arranged.)

## Sc 610 -Selected Topics (1-9)

(Credit to be arranged.)

## Soc - Sociology

Soc 199 -Special Studies (0-9)
Recommended prerequisite: consent of instructor. Maximum: 8 credits .

## Soc 200 - Introduction to Sociology (4)

Sociological concepts and perspectives concerning human groups; includes attention to socialization, culture, institutions, stratification, and societies. Consideration of fundamental concepts and research methodology.

## Soc 250 - Introduction to Sociology for the Health Sciences (4) <br> Provides a comprehensive overview of sociological concepts that are important to the health sciences.

## Soc 299 -Special Studies (1-8)

(Credit to be arranged.)

## Soc 300 - Foundations of Sociology I (4)

Examination and comparis on of modes of sociological thinking, from the emergence of a distinctive sociological pers pective through sociologicaltheory of the midtwentieth century. Recommended: Soc 200.

## Soc 301 - Classical Sociological Theory (4)

Examination and comparis on of modes of sociological thinking, from the emergence of a distinctive sociological perspective through sociological theory of the midtwentieth century. Recommended: Soc 200.

## Soc 302 - Contemporary Sociological Theory (4)

Developments in American sociological theory frommidtwentieth century to today. Considers impact of social change and social movements on theory, including neoMarxism, feminism, post-modernismand current new directions.

Prerequisite: Soc 301.

## Soc 310 - U.S. Society (4)

Examination of the social structure, culture, and demography of the United States. Sociological approaches to such institutions as the economy, religion, education, and the family are explored. Attention given to comparison with other industrialized countries as well as to selected social issues and controversies. Recommended prerequisites: Soc 200, 301, 302.

## Soc 314U- Alcohol and Other Drugs (4)

Sociological analysis of the behavior and belief patterns relative to alcohol and other drugs in American society. Prevention and intervention strategies are briefly reviewed.

## Soc 320U- Globalization (4)

Exploration of issues and approaches in sociological thinking relative to world systems. World systems are treated notonly as world orders made up of political and economic exchanges, butalso as culturalorders and institutionalized structures transcending national geographic boundaries. Attention given to the international, national, regional, and local ways that people attempt to deal with the instabilities accompanying globalization. Expected preparation: Soc 200, Soc 301, Soc 302.

## Soc 330 -Sociology of Food Inequalities (4)

Examination of food and nutrition is sues and problems through the lens of the social sciences, with an emphasis on inequalities in the production, distribution and consumption of food. Economic, social, political and symbolic dimensions of food systems and food behaviors. Social determinants of hunger, malnutrition, and obesity.

Exploration of solutions at the local, societal and global level.

## Soc 336U- Social Movements (4)

Formation, dynamics, and outcomes of social movements. Examination of the effects of circumstances, strategies, and alliances on the outcomes of social movements, including their impact on politics and society.

## Soc 337U - Prejudice, Privilege, andPower (4)

Examines the structuring of relationships between dominant and minority groups, including racial, ethnic, gender, religious, and cultural minorities, with primary emphas is on U.S. society. Covers basic concepts and theoretical approaches to thestudy of majority-minority group relations, including is sues of oppression, privilege, adaptation, and intersectionality. Emphasizes the social construction of difference, as well as the structural and historical roots of dominant group privilege and unequal social, economic, and political power.

## Soc 339U- Marriage and Intimacy (4)

Introduction to sociological and social psychological perspectives on intimate relationships, marriage, and diverse family forms. Examination of the effects of historical and current social contexts and the role of gender, race, and class in shaping personal choices and experiences. Emphas is is on sociological theory and research.

## Soc 341U- Population Trends and Policy (4)

Introduction to the general field of population analysis; a review of the development of population theories, techniques of meas urement and analysis of the basic demographic variables, their interrelationships, and population changes. Recommended prerequis ites: Soc 200.

## Soc 342 -Social Psychology: Self, Attitudes and Social Influence (4)

Examination of psychological and sociological processes as sociated with people's thoughts about and interactions with one another. Particularemphases on self, social identity, social cognition, attitudes, prejudice and persuasion. Expected preparation: Soc 200, or Psy 200 or 204. Credit will not be given for both Soc 342 and Psy 342.

## Soc 343 -Social Psychology: Social Relationships and Groups (4)

Examination of sociological and psychological processes as sociated with interpersonal, group, and inter-group behavior. Particular emphases on aggression, pro-social behavior, interpersonal attraction, group influence, conflict and cooperation. Expected preparation: Soc 200, or Psy 200 or 204. Credit will not be given for both Soc 343 and Psy 343.

## Soc 344U- Gender and Sexualities (4)

Examines the ways in which social constructions of gender both influence and are influenced by the cultural org anization of and individual expres sions of sexuality. The courseexplores the intersections among sexuality, culture, gender, and the body and examines a variety of sexualities and emphasizes the multifaceted nature of power, privilege, and oppression.

## Soc 350U- Coming of Age: Adulthood in the US, Europe, and Asia (4)

An examination of changes in life-course in the US, Scandinavia, Southern Europe, and Japan focusing on the impact of globalization, gender, race and class on key lifetransitions (leaving home, education, work, partnering, and having children)

## Soc 370 -Sociology of Deviancy (4)

Introduction and analysis of deviant behavior. Delineation of the sociological and social ps ychological factors which give rise to deviant roles. Recommended prerequisites: Soc 200.

## Soc 376 -Social Change (4)

Deals with the technological and ideological factors which govern theevolution and transformation of society, with specialemphasis on the operation of such factors since 1800. Recommended prerequisites: Soc 200.

## Soc 380U-S ports in Society (4)

An objectiveexamination of sports in America as social phenomena. Study of various socio-cultural structures, patterns, and organizations or groups in volved with sports. Issues such as race, gender, and class within the context of sports will be explored through a critical sociological lens.

## Soc 396 - Social Research Methods, Social Statistics (4)

Introduction to the range of techniques for analy zing social science data. Emphasis on the conceptualization, operationalization, and measurement of socially based phenomena. Topics include: level of measurement, operationalization, summary statistics, probability, hypothesis tests, and the useof data analysis software (SPSS).

## Soc 397 -Social Research Methods (5)

Study of the structuring of sociological inquiry, conceptualization and measurement, operationalization, computers in social research, analysis of bivariate and multivariate relations, the logic of sampling and inference. Course includes lecture (4hours per week) and an introductory research laboratory ( 2 hours per week).
Prerequisite: Stat 243. Expected preparation: Soc 200, 301, 302.

## Soc 397L - Social Research Methods Lab (0)

Lab for Soc 397.
Corequisite: Soc 397.

## Soc 398 - Sociology Res earch Project (4)

Development and execution of a research project integrating some aspect of sociological theory with social science research methodology. Students work in teams to identify a research problem, design and conduct research bearing on this problem, and write a research report. Soc 397 and 398 are to be taken as a two-termsequence.

## Soc 399 - Special Studies (1-6)

(Credit to be arranged.)

## Soc 399U- Special Studies (4)

(Credit to be arranged.)

## Soc 401 - Research (1-6)

(Credit to be arranged.) Consent of instructor.

## Soc 402 - Independent Study (1-8)

(Credit to be arranged.)

## Soc 403 - Thesis (1-4)

(Credit to be arranged.)

## Soc 404 -Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Soc 405 -Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Soc 407 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## Soc 408-Workshop(1-12)

(Credit to be arranged.)

## Soc 410 -Selected Topics (1-9)

(Credit to be arranged.) Maximum: 12 credits. Consent of instructor.

## Soc 417 -Law \& Society: The Sociology of Law (4)

Examination of different sociological and sociolegal theories and empirical research on the social origins, processes, functions, and actors of the social reality known as law. Consideration of law as a social institution that shapes and is shaped by society, including how law reinforces and/or ameliorates class, gender, and racial inequalities as well as fundamental issues such as free speech and privacy.
Prerequisite: Soc 200.

## Soc 418 - Criminology and Delinquency (4)

Social and legal meaning of crime and delinquency explored. Historical and contemporary theories of causes of law breaking reviewed. Social and cultural factors promoting and inhibiting law breaking by juveniles and adults are examined. Attention given to strategies of prevention and control. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 518 and may be taken only once forcredit. .

## Soc 419 -Sociology of Mental IIIness (4)

An overview of sociological perspectives on mental health and illness. Informs understanding of mentalhealth and illness by challenging dominant views of mental illness, examining how social relationships play a role in mental illness, questioning the goals and implications of mental health policy and presenting research on how mental health services are organized and provided.

Also offered for graduate-level credit as Soc 519 and may be taken only once for credit. .Prerequisite: Soc 200.

## Soc 420 - Urbanization and Community (4)

Analytical approach to the meaning of community in the modern world. The determinants, social consequences of, and responses to the processes of urbanization are considered. Theories of the city emphasizing ecological, sociocultural, and critical explanations for growth and change in urban regions are examined. Patterns of social and structural org anization of the metropolis and the cognitive and behavioral aspects of urban life are explored. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 520 and may be taken only once for credit. .

## Soc 423 - Stratification (4)

Survey and analy sis of stratification theories and empirical research. Analysis of class, race, ethnicity, gender, and sexual orientation, considering economic, social, political, and cultural dimensions of power. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 523 and may be taken only once for credit. .

## Soc 424 - Groups, Interaction and Identity (4)

Analysis of the formation and functioning of intergroup and intragroup relations. Attention to group org anization and interaction, performance, cooperation, conflict, and group membership and individual identity. Expected preparation: Soc orPsy 342.
Also offered for graduate-level credit as Soc 524 and may be taken only once for credit. . Prerequisite: Soc 200.

## Soc 425 -Sociology of Gender (4)

Consideration of the theoretical, methodological, and empirical contributions of current sociological scholarship on gender. Emphasis on the intersection of gender, sexuality, race/ethnicity, and class. Analysis of topics such as: masculinity/femininity, parenting, family, education, work, sexualities, reproduction, politics, and social change. This is the same course as WS 425 and may be taken only once for credit.

Also offered for graduate-level credit as Soc 525 and may be taken only once forcredit. . Prerequisite: junior standing. Cross-Listed as: WS 425.

## Soc 426 - Gender \& Mental Health (4)

Social and historical explanations of, and researchon, mentalillness and mental health, with a focus on gender. Contemporary distributions, diagnoses, and treatments of mental illness among men and women are examined. Focus on psychiatric dis order and gender-based discourse. This is the same course as WS 426 and may be taken only once for credit.

Also offered for graduate-level credit as Soc 526 and may be taken only once forcredit. Prerequisite: Upper-division standing. Cross-Listed as: WS 426.

## Soc 427 - Gender and Work (4)

Consideration of the theoretical, methodological, and empirical contributions of current scholarship in the area of gender and work. Emphas is on the intersection of gender, sexuality, race/ethnicity, and class. Topics include: inequalities in the labor force, low wage work and poverty, work/family conflict, sex/sexuality in the workplace, and masculinity.

Also offered for graduate-level credit as Soc 527 and may be taken only once forcredit.

## Soc 430 - Hate Crimes (4)

Hate crimes as a social issue. Central themes: the role that gender plays in the commis sion and awareness of hate crimes and the mainstreaming of bias crimes and the ideology behind them. Includes analy sis of propaganda and coded language in the popular media and the Internet, analys is of the grass-roots response in the popular media, and evaluation of their effectiveness.
Also offered for graduate-level credit as Soc 530 and may be taken only once for credit. . Prerequisite: Soc 200.

## Soc 441 -Population and Society (4)

Survey and analysis of population dynamics (births, deaths, migration) and society. Examination of demographic concepts, theories, data and measurements, and research. Role of population processes on social life and public policies are highlighted, including population aging, economic development and the en vironment, urbanization, health and health care, race and ethnicity, and government/social/business planning. This course is the same as USP 419/USP 519; course may be taken only once for credit.

Also offered for graduate-level credit as Soc 541 and may be taken only once forcredit. .Prerequisite: Soc 200. Cross-Listed as: USP 419.

## Soc 444 - Race, Ethnicity, and Nationality (4)

Analysis of the emergence, persistence and meaning of definitions of racial, ethnic and national statuses in selected areas of the modern world. Consideration of the consequences of changing definitions for intergroup and globalrelations. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 544 and may be taken only once for credit. .

## Soc 446 - Immigrants in America (4)

Exploration of controversial issues around immigration to the U.S. Students will read and discuss social science research on demographics of immigrants, immigration
policy, immigrant incorporation, and the impact of immigration on the receiving society.

Prerequisite: Soc 200 or Soc 337 U .

## Soc 448 -Sociology of Education (4)

Development of a sociological understanding of education in the United States. Examination the role of schooling in regards to the larger society, the social structure of schools, processes of social mobility, stratification and social reproduction; the dynamics of race, class, and gender inequalities in education, student teacher relationship; school choice; and the outcomes of education. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 548 and may be taken only once for credit. . Prerequisite:Soc 300 .

## Soc 450 -Sociology of Higher Education (4)

Social factors affecting individuals within higher education. Particular attention to inequalities within higher education and the role higher education plays in promoting social mobility as well as social reproduction. Includes models of higher education, the application of sociological theories to is sues in higher education, access to college, Affirmative Action, standardized testing, andclass, race, and gender-based differences in individual educational outcomes and retention.
Also offered for graduate-level credit as Soc 550 and may be taken only once for credit. . Prerequisite: sophomore standing or higher; Soc 200.

## Soc 452 - Education and Equality: Comparing the US, Asia, Europe (4)

Despite the promise of equal opportunity, US public schools produce vast inequalities in educational outcomes compared to other nations. Why? Thecourse examines the impacts of tracking, testing, teaching styles, race, class, and gender in the US through comparisons of Japan, Singapore, Germany, and Finland.
Also offered for graduate-level credit as Soc 552 and may be taken only once for credit. . Prerequisite: Soc 200, Soc 310 , or Soc 320.

## Soc 454 -Sociology through Film (4)

Filmmakers, like sociological fieldworkers, use stories to trace the action of their subjects or characters and scenes to reconstruct their shared social worlds. Through sociological studies and documentary and narrative films, the course examines portrayals of social institutions and processes which may include education, ethnic relations, artistic production, and otherfields.
Also offered for graduate-level credit as Soc 554 and may be taken only oncefor credit. . Prerequisite: Soc 200, Soc 310 , or Soc 320.

## Soc 456 -Sociology of Horror Films (4)

Examines core tenets of sociology through the use of horror films. Explores how gender, sexuality, race, and other forms of oppression are embedded in classic and contemporary horror films. Drawing on feminist theories, sociology of race and ethnicity, students learn to critically analyze horror films, while also conducting an independent content analy sis res earch project.
Prerequisite: Upper-division standing.

## Soc 457 - Complex Organizations (4)

Examination of complex organizations both as formal structures and as cultural systems. Analysis of the relations between organizations and individuals of interorg anizational dynamics and of the rationalization of modern societies. Expected preparation: Soc 200.

Also offered for graduate-level credit as Soc 557 and may be taken only once for credit. .

## Soc 459 -Sociology of Health and Medicine (4)

The application of sociology to the field of health and medicine. Attention given to a consideration of the broader questions of health in modern society, including the role of the medical practitioner in modern society, social factors and disease and responses to illness. The social organization of medicine is examined within the context of the larger medical care system. Recommended prerequisite: Soc 200.

## Soc 460 - Youth Subcultures (4)

Youth as crisis and in cris is. Focus on methodology, ethnomethodology, and field experience; students will create ethnographs. Examination of the science of semiotics to understand subcultural style as language. Expected preparation: Soc 397.
Also offered for graduate-level credit as Soc 560 and may be taken only once for credit. .Prerequisite: Soc 200. .

## Soc 461 -Sociology of the Family (4)

Sociological analysis of the structure and functions of the family institution and its relationship to external systems such as the economy and polity. Changing and diverse forms of family organization in urban society. Analysis of role relations in the family. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 561 and may be taken only once for credit. .

## Soc 462 -Sociology of Integrative Medicine (4)

An examination of common systems and practices understood as complementary and alternative medicine (CAM) including prevalence, patterns of use, trends, consumer health beliefs and motivations, and integration with mainstreamallopathic medicine; philosophical,
historical and political dimensions; theories of health and illness; evidence-based research vs.traditional and folk beliefs; and a consideration of benefits and limitations considering the growing popularity. Not a course about how to practice any form of alternative medicine. Expected preparation: Soc 200.

Also offered for graduate-level credit as Soc 562 and may be taken only once for credit. .

## Soc 463 - Global Inequalities and Health (4)

An examination of international health inequalities from social, political and economic perspectives. The impact of globalization, transnationalismand migration on population health. Inequalities within and between countries and regions, and the social dy namics that shape those inequalities. Infectious pandemics and chronic diseases, and global efforts to control diseases and improve health. Recommended prerequisites: Soc 200.

## Soc 465 - Environmental Sociology (4)

Survey and analysis of the types of social forces which frame the nature of environmental problems concerning natural resource use and distribution as they emerge in public consciousness within the United States and globally. Examination of the socialforces which lead to the consideration and implementation of mechanisms to solve these is sues once they have emerged.

## Soc 466 - Sociology of Dying and Death (4)

This course will explore the nature of dying and death in the U.S. Topics will include: where death occurs, how social policy affects theexperience of dying, how medical pers pectives affect the experience of dying, how death affects family members, and race, class, gender differences in dying and death.
Also offered for graduate-level credit as Soc 566 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Soc 468 - Political Sociology (4)

Analysis of consensus and dis sensus in community and society. Examination of public opinion, authority, influence, and the processes by which elites are formed and acquire legitimacy and popular support. Social bases of democracy and totalitarianism. Recommended prerequisite: Soc 200.

## Soc 469 - Sociology of Aging (4)

A study of social determinants of the human life course, including biological and demographic conditions, age status patterns, age grading, rites of passage, socialization,
generational phenomena, and youth and old age movements. Expected preparation: Soc 200.

Also offered for graduate-level credit as Soc 569 and may be taken only once for credit. .

## Soc 480 -Sociology of Religion (4)

Analysis of the nature of the sacred; attitudes toward the sacred in contrast to the secular. Comparison of the social organization of sect and church in their relation to the larger society. Survey of recent empirical studies of religiosity and religious practices in America. New trends in American religion. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 580 and may be taken only once forcredit. .

## Soc 483 - Sociology of the Middle East (4)

This course will examine the sociological development of the modern Middle East. It will especially focus on causes and consequences of rapid social change, including revolutions, coups, and ins urgent movements. It will examine the role of Is lam and tribalismin these movements. Expected preparation: Soc 200.
Also offered for graduate-level credit as Soc 583 and may be taken only once for credit. .

## Soc 497 - Applied Survey Research (4)

Provides theoretical framework for and experience in design, execution, and interpretation of social surveys including sampling procedures, questionnaire design, interviewing techniques, coding and computer analysis, and report writing. Expected preparation: Stat 243 and Soc 397, Soc 398 or equivalent.
Also offered for graduate-level credit as Soc 597 and may be taken only once for credit. .

Soc 501 - Research (1-9)
(Credit to be arranged.) Consent of instructor.

## 502 - Independent Study (1-9)

(Credit to be arranged.)

## Soc 503 - Thesis (1-9)

(Credit to be arranged.) Pas s/no pass option.

## Soc 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Soc 505 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## Soc 507 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## Soc 509 - Practicum(1-9)

(Credit to be arranged.)

## Soc 510 -Selected Topics (1-9)

(Credit to be arranged.) Maximum: 12 credits. Consent of instructor.

## Soc 513 - Thesis Workshop (1)

Workshop for all sociology graduate students who are currently enrolled in Soc 503 for four credits or more. Discussion and review of students' progress and problems. Recommended prerequisite: graduate status in sociology. Corequisite: Soc 503. Pas s/nopass only.

## Soc 518 - Criminology and Delinquency (4)

Social and legal meaning of crime and delinquency explored. Historical and contemporary theories of causes of law breaking reviewed. Social and cultural factors promoting and inhibiting law breaking by juveniles and adults are examined. Attention given to strategies of prevention and control. Expected preparation: Soc 200.

Also offered for undergraduate-level credit as Soc 418 and may be taken only once for credit. .

## Soc 519 - Sociology of Mental Illness (4)

An overview of sociological perspectives on mental health and illness. Informs understanding of mental health and illness by challenging dominant views of mental illness, examining how social relationships play a role in mental illness, questioning the goals and implications of mental health policy and presenting research on how mental health services are organized and provided.
Also offered for undergraduate-level credit as Soc 419 and may be taken only once for credit. . Prerequisite: Soc 200.

## Soc 520 - Urbanization and Community (4)

Analytical approach to the meaning of community in the modern world. The determinants, social consequences of, and responses to the processes of urbanization are considered. Theories of the city emphasizing ecological, sociocultural, and criticalexplanations for growth and
change in urban regions are examined. Patterns of social and structural organization of the metropolis and the cognitive and behavioral as pects of urban life are explored. Expected preparation: Soc 200.
Also offered for undergraduate-level credit as Soc 420 and may be taken only once for credit. .

## Soc 523 -Stratification (4)

Survey and analysis of stratification theories and empirical research. Analysis of class, race, ethnicity, gender, and sexual orientation, considering economic, social, political, and cultural dimensions of power. Recommended prerequisite: Soc 200.
Also offered for undergraduate-levelcredit as Soc 423 and may be taken only once for credit. .

## Soc 524 - Groups, Interaction and Identity (4)

Analysis of the formation and functioning of intergroup and intragroup relations. Attention to group organization and interaction, performance, cooperation, conflict, and group membership and individualidentity. Analysis of the formation and functioning of intergroup and intragroup relations. Attention to group organization and interaction, performance, cooperation, conflict, and group membership and individual identity. Expected preparation: Soc or Psy 342.

Also offered for undergraduate-level credit as Soc 424 and may be taken only once for credit. . Prerequisite: Soc 200.

## Soc 525 -Sociology of Gender (4)

Consideration of the theoretical, methodological, and empirical contributions of current sociological scholarship on gender. Emphasis on the intersection of gender, sexuality, race/ethnicity, and class. Analysis of topics such as: masculinity/femininity, parenting, family, education, work, sexualities, reproduction, politics, and social change. This is the same course as WS 525 and may be taken only once forcredit.

Also offered for undergraduate-levelcredit as Soc 425 and may be taken only once for credit. . Prerequisite: junior standing. Cross-Listed as: WS 525.

## Soc 526 - Gender \& Mental Health (4)

Social and historical explanations of, and research on, mental illness and mental health, with a focus on gender. Contemporary distributions, diagnoses, and treatments of mentalillness among men and women are examined.
Focus on psychiatric dis order and gender-based discourse. This is the same course as WS 526 and may be taken only once forcredit.
Also offered for undergraduate-level credit as Soc 426 and may be taken only once for credit. Cross-Listed as:WS 526.

## Soc 527 - Gender and Work (4)

Consideration of the theoretical, methodological, and empirical contributions of current scholarship in the area of gender and work. Emphas is on the intersection of gender, sexuality, race/ethnicity, and class. Topics include: inequalities in the labor force, low wage work and poverty, work/family conflict, sex/sexuality in the workplace, and masculinity.
Also offered for undergraduate-level credit as Soc 427 and may be taken only once for credit.

## Soc 528 - Gender Inequality (4)

Explore sociological scholarship on topics related to gender inequality. Emphas is on examining the intersection of gender with race, ethnicity, class, and sexuality. Major focus will be evaluating the theoretical, methodological, and empirical contributions of scholarship in the area of gender inequality.
Also offered as Soc 628 and may be taken only oncefor credit.

## Soc 530 - Hate Crimes (4)

Hate crimes as a social issue. Central themes: the role that gender plays in the commission and awareness of hate crimes and the mainstreaming of bias crimes and the ideology behind them. Includes analy sis of propaganda and coded language in the popular media and the Internet, analys is of the grass-roots res ponse in the popular media, and evaluation of their effectiveness.

Also offered for undergraduate-level credit as Soc 430 and may be taken only once for credit. . Prerequisite: Soc 200.

## Soc 537 -Qualitative Data Analysis (4)

Introduction to three techniques for analyzing qualitative data: software-based analysis using ATLAS.ti, Grounded Theory, and Thematic Analysis. Practical orientation, emphasizing hands-on experience with these techniques. Most usefulfor students engaged in data collection.

Also offered as Soc 637 and may be taken only oncefor credit. Prerequisite: Soc 592.

## Soc 538 - Integrating Qualitative and Quantitative Methods (4)

Research designs for combining qualitative and quantitative methods thathavereasonably well-understood benefits, and can be implemented in a relatively straightforward fashion. The value of pragmatis mas a philosophical paradigmfor doing mixed methods research will also be considered.

Also offered as Soc 638 and may be taken only once for credit.

## Soc 539 - Focus Groups Interviewing (4)

A practically oriented course which teaches the methods of conducting researchusing focus groups. Course will follow the steps involved in conducting a res earch project that uses focus groups. Related methods, dyadic interviewing, and hands on training are at the center of this course.

Also offered as Soc 639 and may be taken only oncefor credit.

## Soc 541 - Population and Society (4)

Survey and analysis of population dy namics (births, deaths, migration) and society. Examination of demographic concepts, theories, data and measurements, and research. Role of population processes on social life and public policies are highlighted, including population aging, economic development and the environment, urbanization, health and health care, race and ethnicity, and government/social/business planning. This course is the same as course as USP 519 and may be taken only once for credit.
Also offered for undergraduate-levelcredit as Soc 441 and may be taken only once for credit. . Prerequisite: Soc 200. Cross-Listed as: USP 519.

## Soc 544 - Race, Ethnicity, and Nationality (4)

Analysis of the emergence, persistence and meaning of definitions of racial, ethnic and national statuses in selected areas of the modern world. Consideration of the consequences of changing definitions for intergroup and global relations. Expected preparation: Soc 200.
Also offered for undergraduate-levelcredit as Soc 444 and may be taken only once for credit. .

## Soc 548 -Sociology of Education (4)

Development of a sociological understanding of education in the United States. Examination the role of schooling in regards to the larger society, the social structure of schools, processes of social mobility, stratification and social reproduction; the dynamics of race, class, and gender inequalities in education, student teacher relationship; school choice; and the outcomes of education.

Also offered for undergraduate-level credit as Soc 448 and may be taken only once for credit. . Prerequisite: Soc 300. Expected preparation: Soc 200.

## Soc 550 -Sociology of Higher Education (4)

Social factors affecting individuals within higher education. Particular attention to inequalities within higher education and the role higher education plays in promoting social mobility as well as social reproduction. Includes models of higher education, the application of sociological theories to is sues in higher education, access to college, Affirmative Action, standardized testing, and clas s, race,
and gender-based differences in individualeducational outcomes and retention.

Also offered for undergraduate-level credit as Soc 450 and may be taken only once for credit. . Prerequisite: sophomore standing or higher; Soc 200.

## Soc 552 - Education and Equality: Comparing the US, Asia, Europe (4)

Despite the promise of equal opportunity, US public schools produce vast inequalities in educational outcomes compared to other nations. Why? Thecourse examines the impacts of tracking, testing, teaching styles, race, class, and gender in the US through comparisons of Japan, Singapore, Germany, and Finland.
Also offered for undergraduate-level credit as Soc 452 and may be taken only once for credit. . Prerequisite: Soc 200, Soc 310, or Soc 320.

## Soc 554 -Sociology through Film (4)

Filmmakers, like sociological fieldworkers, use stories to trace the action of their subjects or characters and scenes to reconstruct their shared social worlds. Through sociological studies and documentary and narrative films, the course examines portrayals of social institutions and processes which may include education, ethnic relations, artistic production, and other fields.

Also offered for undergraduate-level credit as Soc 454 and may be taken only once for credit. Prerequisite: Soc 200, Soc 310, or Soc 320.

## Soc 557 - Complex Organizations (4)

Examination of complex organizations both as formal structures and as cultural systems. Analysis of the relations between organizations and individuals of interorg anizational dy namics and of the rationalization of modern societies. Expected preparation: Soc 200.
Also offered for undergraduate-level credit as Soc 457 and may be taken only once for credit. .

Soc 560 - Youth Subcultures (4)
Youth as cris is and in cris is. Focus on methodology, ethnomethodology, and field experience; students will create ethnographs. Examination of the science of semiotics to understand subcultural style as language. Expected preparation: Soc 397.
Also offered for undergraduate-level credit as Soc 460 and may be taken only once for credit. . Prerequisite: Soc 200. .
Soc 561 -Sociology of the Family (4)
Sociological analysis of the structure and functions of the family institution and its relationship to external systems such as the economy and polity. Changing and diverse forms of family organization in urban society. Analysis of role relations in the family. Expected preparation: Soc 200.

Also offered for undergraduate-levelcredit as Soc 461 and may be taken only once for credit. .

## Soc 562 -Sociology of Integrative Medicine (4)

An examination of common systems and practices understood as complementary and alternative medicine (CAM) including prevalence, patterns of use, trends, consumer health beliefs and motivations, and integration with mainstreamallopathic medicine; philosophical, historical and political dimensions; theories of health and illness; evidence-based research vs. traditional and folk beliefs; and a consideration of benefits and limitations considering the growing popularity. Not a course about how to practice any form of alternative medicine. Recommended: Soc 200.

Also offered for undergraduate-level credit as Soc 462 and may be taken only once for credit. .

## Soc 565 -Environmental Sociology (4)

Analysis of the types of social forces which frame the nature of environmental problems concerning resource use and distribution across spatial and geopoliticallevels. Examines the social forces which influence which problems are tackled; the mechanisms selected to solve the problems; and the social impact of the selected solutions. Expected preparation: undergraduate exposure to basic social science concepts.
Also offered as Soc 665 and may be taken only once for credit. .

## Soc 566 -Sociology of Dying and Death (4)

This course will explore the nature of dying and death in the U.S. Topics will include: where death occurs, how social policy affects theexperience of dying, how medical perspectives affect the experience of dying, how death affects family members, and race, class, gender differences in dying and death.
Also offered for undergraduate-level credit as Soc 466 and may be taken only once for credit.

## Soc 569 -S ociology of Aging (4)

A study of social determinants of the human life course, including biological and demographic conditions, age status patterns, age grading, rites of passage, socialization, generational phenomena, and youth and old age movements. Expected preparation: Soc 200.
Also offered for undergraduate-levelcredit as Soc 469 and may be taken only once for credit. .

## Soc 572 -Contemporary Sociological Theory (4)

Study of various frames of reference in contemporary sociological theory. Specific topics vary with instructor. Recommended prerequisites: Soc 200, 301, 302; senior standing.

## Soc 576 - Theories of Social Change (3)

A critical examination of the major theories of social change. Analy sis of the components of change; cause, agents, targets, channels, and strategies. Consideration of the relationship between change and power, influence, planning and control, modernization, development, and world systems approaches. Recommended prerequisite: graduate status.

## Soc 577 - Topics in Contemporary Theory (4)

Exploration of theoretical approaches and is sues of emerging interest in sociology, such as conceptualization of social systems, conflict, the problems of relativity, and ideology. Specific topics vary with ins tructor. Recommended prerequisite: $\operatorname{Soc} 301,302$ and graduate status.

## Soc 579 - Food, Justice, and Social Movements (4)

This seminar examines growing social movements around food and agriculture. Includes theoretical and conceptual frameworks for understanding historical and current dynamics in the global food and agriculture system, and debates over land grabs, food price crises, hunger, and the role of biotechnology, agribusiness, and low-input peasant agriculture. Case studies examine social movements around land and food in the global South and North. Concludes with alternative models and emerging paradigms, including food sovereignty and food justice.
Also offered as Soc 679 and may be taken only oncefor credit.

## Soc 580 - Sociology of Religion (4)

Analysis of the nature of the sacred; attitudes toward the sacred in contrast to the secular. Comparis on of the social organization of sect and church in their relation to the larger society. Survey of recent empirical studies of religiosity and religious practices in America. New trends in American religion. Expected preparation: Soc 200.
Also offered for undergraduate-level credit as Soc 480 and may be taken only once for credit. .

## Soc 583 - Sociology of the Middle East (4)

This course will examine the sociological development of the modern Middle East. It will especially focus on causes and consequences of rapid social change, including revolutions, coups, and ins urgent movements. It will examine the role of Is lam and tribalismin these movements. Expected preparation: Soc 200.

Also offered for undergraduate-level credit as Soc 483 and may be taken only once for credit. .

## Soc 584 -Social Inequality (4)

Theoretical perspectives and current research in social inequality including dimensions such as social class, race/ethnicity, gender, age, and nativity. Exploration of social inequality in selected domains, such as health services and outcomes, employment and work, educational attainment, housing, and other areas of sociological inquiry.
Also offered as Soc 684 and may be taken only once for credit.

## Soc 585 -Medical Sociology (4)

Seminar in medical sociology. Topics includehow social stratification affects health outcomes, en vironmental hazards, social construction of medical knowledge, health care occupations, U.S. health policy, privatization of medical industries, and comparative health care systems. Expected preparation: Soc 459/Soc 559 or consent of instructor.

Also offered as Soc 685 and may be taken only oncefor credit. .

## Soc 586 - Topics in Health and Inequality (4)

Seminar focusing on the impact of race, class, and/or gender on health and health care. Topics may inc lude medicalization of women's bodies, the social consequences of disparities, and current public policy debates about reducing disparities. Expected preparation: Soc 459/559.
Also offered as Soc 686 and may be taken only oncefor credit. .

## Soc 587 - International Health Inequalities (4)

Explores the sociology of health and inequality in an international context. Topics include international health institutions, healthcare systems, and the social determinants of health inequalities in a global perspective.
Also offered as Soc 687 and may be taken only once for credit.

## Soc 588 -Social Sustainability Theory and Practice (4)

Healthy families; healthy communities; healthy democracies; economic, gender and racial equity; and social justice are all factors of social sustainability. This course will examine how to meas ure and how to reach these goals, by examining models locally, nationally and internationally. We will look at best practices of city, state and national governments, businesses, unions, and NGOs . We will also examine the relationship between economic, environmental and social sustainability.
Also offered as Soc 688 and may be taken only oncefor credit.

## Soc 590 - Social Res earch Strategies (4)

Consideration of the nature of sociological knowledge; elements of social res earch design; methods of observation and data collection; reliability and validity of information; techniques of data analysis. Recommended prerequisite: graduate status.

## Soc 591 - Theoretical Perspectives in Sociology (4)

Analysis of the major contemporary theories in sociology. Attention to the problems of order and change, and power and inequality, as well as to the micro/macro problemin sociological theory. Recommended prerequisite: Soc 470 and graduate status.

## Soc 592 - Qualitative Methods (4)

Strategies for acquisition and analysis of data using such approaches as participantobservation, content analy sis, field and case studies. Attention to the special problems of validity and reliability in such research. Consideration of ethical is sues and researcher responsibility in qualitative research. Recommended prerequisite: graduate status.

## Soc 593 - Quantitative Methods (4)

The application of quantitative methodology to sociological problems. Topics include: science and logical empiricism; measurement of association; procedures of statistical inference; multivariate and log linear analysis; computer application for social research. Recommended prerequisites: Stat 243 , $\operatorname{Soc} 397,398$, graduate status.

## Soc 594 - Theory Construction and Research (4)

Examination of the craft of sociological research in conjunction with thesis work. The role of theory in research, evaluating published work, biases in data sources and the process of thesis writing. Recommended prerequisites: Soc 590, 591; graduate status.

## Soc 595 - Advanced Quantitative Methods (4)

Introduces a range of advanced quantitative methods commonly found in published research in sociology. Particular attention will be paid to the techniques commonly used to address the most common shortcomings of sociological data, including estimation of multivariate models with categorical dependent variables (i.e. logistic regression) and to nonparametric methods for analyzing data.
Also offered as Soc 695 and may be taken only oncefor credit. Prerequisite: Soc 593, or Stat 543 or equivalent.

## Soc 597 - Applied Survey Research (4)

Provides theoretical framework for and experience in design, execution, and interpretation of social surveys including sampling procedures, questionnaire design, interv iewing techniques, coding and computer analysis, and report writing. Expected preparation: Stat 243 and Soc 397, 398 orequivalent.
Also offered for undergraduate-levelcredit as Soc 497 and may be taken only once for credit. .

## Soc 598 - Globalization Seminar (4)

Analysis of the ways in which economic patterns that reach across national boundaries affect the security of communities and theirstandards of living. Topics include how different economic clas ses fare in the rapid reshuffling of national economies that globalization entails; the role of international institutions in shaping economic globalization; the experience and responses of workers as a group; and the role of states in facilitating or res is ting the adverse impacts of globalization.
Also offered as Soc 698 and may be taken only once for credit.
Soc 601 - Research (0-9)
(Credit to be arranged.)

## Soc 603 -Dissertation (1-9)

(Credit to be arranged.)

## Soc 604 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## Soc 605 - Reading and Conference (1-6)

(Credit to be arranged.)

## Soc 607 -Seminar (1-6)

(Credit to be arranged.)

## Soc 610 -Selected Topics (1-9)

(Credit to be arranged.)

## Soc 619 -Sociology of Mental Health \& Mental Illness (4)

The sociological study of mental health and illness is uniquely different from the orientations of other disciplines
in that it focuses on (1) identify ing the social conditions that affect psychological well-being and (2) describing the processes linking the social conditions to their psychologicaleffects. The dual aims of this course are to provide both the theoretical foundations necessary for the study of societal effects on individuals' well-being and a familiarity with relevant sociological research on mental health and mental illnes s.
Prerequis ite: Graduate student status or permis sion of the instructor.

## Soc 628 - Gender Inequality (4)

Explore sociological scholarship on topics related to gender inequality. Emphas is on examining the intersection of gender with race, ethnicity, class, and sexuality. Major focus will be evaluating the theoretical, methodological, and empirical contributions of scholarship in the area of gender inequality.
Also offered as Soc 528 and may be taken only oncefor credit.

## Soc 637 - Qualitative Data Analysis (4)

Introduction to three techniques for analyzing qualitative data: software-based analysis using ATLAS.ti, Grounded Theory, and Thematic Analysis. Practical orientation, emphasizing hands-on experience with these techniques. Most useful for students engaged in data collection.
Also offered as Soc 537 and may be taken only once for credit. Prerequisite: Soc 592.

## Soc 638 - Integrating Qualitative and Quantitative Methods (4)

Research designs for combining qualitative and quantitative methods thathavereasonably well-understood benefits, and can be implemented in a relatively straightforward fas hion. The value of pragmatis mas a philosophical paradigmfor doing mixed methods research will also be considered.
Also offered as Soc 538 and may be taken only oncefor credit.

## Soc 639 - Focus Groups Interviewing (4)

A practically oriented course which teaches the methods of conducting researchusing focus groups. Course will follow the steps involved in conducting a research project that uses focus groups. Related methods, dyadic interviewing, and hands on training are at the center of this course.
Also offered as Soc 539 and may be taken only oncefor credit.

## Soc 665 - Environmental Sociology (4)

Analysis of the types of social forces which frame the nature of environmental problems concerning resource use
and distribution across spatial and geopoliticallevels. Examines the social forces which influence which problems are tackled; the mechanisms selected to solve the problems; and the social impact of the selected solutions. Expected preparation: undergraduate exposure to basic social science concepts.

Also offered as Soc 565 and may be taken only once for credit. .

## Soc 679 - Food, Justice, and Social Movements (4)

This seminar examines growing social movements around food and agriculture. Includes theoretical and conceptual frameworks for understanding historical and current dynamics in the global food and agriculture system, and debates over land grabs, food price crises, hunger, and the role of biotechnology, agribusiness, and low-input peasant agriculture. Case studies examine social movements around land and food in the global South and North. Concludes with alternative models and emerging paradigms, including food sovereignty and food justice.
Also offered as Soc 579 and may be taken only once for credit. Prerequisite: None.

## Soc 684 -Social Inequality (4)

Theoretical pers pectives and current research in social inequality including dimensions such as social class, race/ethnicity, gender, age, and nativity. Exploration of social inequality in selected domains, such as health services and outcomes, employment and work, educational attainment, housing, and other areas of sociological inquiry.
Also offered as Soc 584 and may be taken only once for credit.

## Soc 685 -Medical Sociology (4)

Seminar in medical sociology. Topics includehow social stratification affects health outcomes, en vironmental hazards, social construction of medical knowledge, health care occupations, U.S. health policy, privatization of medical industries, and comparative health care systems. Expected preparation: Soc 459/Soc 559 or consent of instructor.
Also offered as Soc 585 and may be taken only oncefor credit. .

## Soc 686 - Topics in Health and Inequality (4)

Seminar focusing on the impact of race, class, and/or gender on health and health care. Topics may include medicalization of women's bodies, the social consequences of disparities, and current public policy debates about reducing disparities. Expected preparation: Soc 459/Soc 559.

Also offered as Soc 586 and may be taken only once for credit. .

## Soc 687 - International Health Inequalities (4)

Explores the sociology of health and inequality in an international context. Topics include international health institutions, healthcare systems, and the social determinants of health inequalities in a global perspective.
Also offered as Soc 587 and may be taken only oncefor credit.

## Soc 688 -Social Sustainability Theory and Practice (4)

Healthy families; healthy communities; healthy democracies; economic, gender and racial equity; and socialjustice are all factors of social sustainability. This course will examine how to measure and how to reach these goals, by examining models locally, nationally and internationally. We will look at best practices of city, state and national governments, businesses, unions, and NGOs. We will also examine the relationship between economic, environmental and social sustainability.
Also offered as Soc 588 and may be taken only once for credit.

## Soc 692 - Foundations of Ecosystem Services (4)

Learn key ecological, social, economic and philosophical theories that underlie ecosystem services science and management. Examine ecological processes, policy and governance in managing these systems, as well as impacts of changing climate, human demographics, etc. This is the same course as ESR 692 and may be taken only once for credit.

Cross-Listed as: ESR 692.

## Soc 694 - Analysis of the Impacts of Social and Management Practices on EcosystemServices (4)

Examination of socialforces and institutions that influence use and guide policy for management of ecosystem services. Investigation of inter-juris dictional governance of natural systems to establish law and policy that promote investment in ecosystems to create sustainable cities.

## Soc 695 - Advanced Quantitative Methods (4)

Introduces a range of advanced quantitative methods commonly found in published research in sociology. Particular attention will be paid to the techniques commonly used to address the most common shortcomings of sociological data, including estimation of multivariate models with categ orical dependent variables (i.e. logistic regression) and to nonparametric methods for analyzing data.
Als o offered for graduate-level credit as Soc 595 and may be taken only once for credit. Prerequisite: Soc 593, or Stat 543 or equivalent.

## Soc 695L-Advanced Methods inSociology Lab (0)

Lab for Advanced Methods in Sociology.

## Soc 698 - Globalization Seminar (4)

Analysis of the ways in which economic patterns that reach across national boundaries affect the security of communities and theirstandards of living. Topics include how different economic clas ses fare in the rapid reshuffling of national economies that globalization entails; the role of international institutions in shaping economic globalization; the experience and responses of workers as a group; and the role of states in facilitating or resis ting the adverse impacts of globalization.
Also offered as Soc 598 and may be taken only once for credit.

## Span-Spanish

## Span 101 - First-Year Spanish Term 1 (4)

An introduction to elementary Spanish. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings. This is the first course in a sequence of three: Span 101, Span 102, and Span 103.

## Span 101M- First-year Spanish Modified (4)

An introduction toelementary Spanish. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings.

## Span 102 - First-Year Spanish Term2 (4)

An introduction toelementary Spanish. Emphasis on lis tening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings. This is the second course in a sequenceof three: Span 101, Span 102, and Span 103.

## Span 102M- First-year Spanish Modified (4)

An introduction to elementary Spanish. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings.

## Span 103 - First-Year Spanish Term3 (4)

An introduction to elementary Spanish. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings.

This is the third course in a sequence of three: Span 101, Span 102, and Span 103.

## Span 103M- First-year Spanish Modified (4)

An introduction toelementary Spanish. Emphasis on listening comprehension and oral practice, the elements of grammar, vocabulary building, andelementary readings.

## Span 150 - First-year Spanish (Intensive) (6)

A two-termcourse covering the content of Span 101, 102, 103.

## Span 151 - First-year Spanish (Intensive) (6)

A two-termcourse covering the content of Span 101, 102, 103.

Span 199-Special Studies (1-12)
(Credit to be arranged.)

## Span 201 -Second-Year Spanish Term 1 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the first course in a sequence of three: Span 201, Span 202, and Span 203. Expected preparation: Span 103.

## Span 201H-Second-year Spanish Heritage ()

Intensive review of basic materials introduced in first-year programand further development of communication skills. Expected preparation: Span 103.

## Span 202 -Second-Year Spanish Term 2 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the second course in a sequence of three: Span 201, Span 202, and Span 203. Expected preparation:Span 103.

## Span 202H-Second-year Spanish Heritage ()

Intensive review of basic materials introduced in first-year programand further development of communication skills. Expected preparation: Span 103.

## Span 203 -Second-Year Spanish Term 3 (4)

Intensive review of basic materials introduced in first-year programand further development of communication skills. This is the third course in a sequence of three: Span 201, Span 202, and Span 203. Expected preparation: Span 103.

## Span 203H-Second-year Spanish Heritage ()

Intensive review of basic materials introduced in first-year programand further development of communication skills. Expected preparation: Span 103.

## Span 299-Special Studies (1-12)

(Credit to be arranged.)

## Span 299H-Special Studies (1-12)

(Credit to be arranged.)

## Span 301 - Third-year Spanish (4)

Spanish language study to help develop advanced proficiency. Intensive grammar instruction in preparation for upper division courses in culture, linguistics and literature. Emphasis on speaking, listening comprehension, reading, and writing skills for analysis and research. This is the first course in a sequence of three: Span 301, Span 302, and Span 303. It is preferable to take the sequencein order.

## Span 301H- Third-year Spanish Heritage ()

Continued work on the Spanish language at intermediateadvanced level. Prepares student for upper divis ion classes. Intensive grammar review. Span 301 emphasizes listening comprehension and speaking. Recommended: Span 203. Span 302 emphasizes reading and writing. Highly recommended: Span 301. Span 303 emphasizes oral and written skills in order to prepare student for literary analys is and critical writing. Highly recommended: Span 301 and Span 302.

## Span 302 - Third-year Spanish (4)

Spanish language study to help developadvanced proficiency. Intensive grammar instruction in preparation for upper division courses in culture, linguistics and literature. Emphasis on speaking, lis tening comprehension, reading, and writing skills for analysis and research. This is the second course in a sequence of three: Span 301, Span 302, and Span 303. It is preferable to take the sequence in order.

## Span 302H- Third-year Spanish Heritage ()

Continued work on the Spanish language at intermediateadvanced level. Prepares student for upper division classes. Intensive grammar review. Span 301 emphasizes listening comprehension and speaking. Recommended: Span 203. Span 302 emphasizes reading and writing. Highly recommended: Span 301. Span 303 emphas izes oral and written skills in order to prepare student for literary analys is and critical writing. Highly recommended: Span 301 and Span 302.

## Span 303 - Third-year Spanish (4)

Spanish language study to help develop advanced proficiency. Intensive grammar instruction in preparation for upper division courses in culture, linguistics and literature. Emphas is on speaking, listening comprehension, reading, and writing skills for analysis and research. This is the third course in a sequence of three: Span 301, Span 302, and Span 303. It is preferable to take the sequence in order.

## Span 303H- Third-year Spanish Heritage ()

Continued work on the Spanish language at intermediateadvanced level. Prepares student for upper division classes. Intensive grammar review. Span 301 emphas izes listening comprehension and speaking. Recommended: Span 203. Span 302 emphasizes reading and writing. Highly recommended: Span 301. Span 303 emphas izes oral and written skills in order to prepare student for literary analys is and critical writing. Highly recommended: Span 301 and Span 302.

## Span 311 - Spanish Conversation (4)

Practice of spoken Spanish through conversation, interviews, and listening to or viewing Spanish language broadcasts. Special language focus chosen by instructor, such as: pronunciation, word choice, the subjunctive, the sequence of tenses, or special time expressions.

Prerequisite: 8 credits of Span 301, 301H, 302, 302H, 303, or 303 H .

## Span 312 - Introduction to Teaching Spanish (4)

Introduction to the field of teaching Spanish. Students will explore current practices through observation and reflection, as well as research and discuss a variety of is sues related to Spanish language teaching. Students will identify and articulate theirown beliefs about teaching, and develop individual plans for professional development. Course is conducted in Spanish.

Prerequisite: 8 credits of Span 301, Span 302, or Span 303, or equivalent Spanish language proficiency.

## Span 313 - Business \& Culture in the Hispanic World

 (4)Solid foundation in Spanishbusiness vocabulary and cultural business concepts. Students will engage in situational role-play practices that will prepare themto successfully interact with today's growing Hispanic economies.
Prerequisite: 8 credits of Span 301, Span 302 or Span 303.

## Span 314 -Spanish inSocial and Legal Services (4)

Study of cultural and linguistic is sues that affect successful interaction with the Spanish-speaking community faced with matters concerning the law and social services.

Prerequisite: 8 credits of Span 301, Span 302, or Span 303.

## Span 315 -Written Translation (English-Span \& Span-

 English) (4)Practice in trans lating a variety of genres and styles, both literary and non-literary. It introduces the translation of specialized subjectmatter, in particular political texts and economic and financial texts. Students have the opportunity to analyze critically, and to resolve creatively, the problems in volving such is sues in translation as context, register, tone, and audience. Written translation is offered both fromEnglish to Spanish, and fromSpanish to English.
Prerequisite: 8 credits of any of these classes: Span 301, or Span 302, or Span 303, or Span 301H, or Span 302H, or Span 303H.

## Span 316 - Spanish and Medical Culture (4)

An his torical-descriptive and interdisciplinary perspective on the field and practice of medicine, this course will help students get familiar with the themes and vocabulary of the medical profession.
Prerequisite: 8 credits of Span 301, Span 302, or Span 303,.

## Span 317 -Spanish for Agriculture Purposes (4)

This class will improve student's Spanish agricultural vocabulary and their ability to describe and particpate in agricultural practices in Spanish. It will also give a summary of US agricultural policy and its connection to migrant communities; explaining theimpact of the international industrialization of agriculture on rural populations in both Latin America and the United States.

Prerequisite: 8 credits of any of these classes: Span 301, or Span 302, or Span 303, or Span 301H, or Span 302H, or Span 303H.

## Span 325 -Spanish Phonetics and Phonology (4)

Introduction to the sounds of Spanish: their place and manner of articulation (phonetics) as well as how they pattern with respect to each other and as influenced by morphological and syntactic factors (phonology).
Prerequisite: Eight credits of Span 301, Span 302, or Span 303.

## Span 330 - Peninsular Culture and Civilization (4)

Historical development of life, thought, and the arts in Spain.

Prerequisite: Eight credits of Span 301, Span 302, or Span 303. .

## Span 331 - Latin American Culture and Civilization (4)

Historical development of life, thought, and the arts in Latin America.

Prerequisite: Eight credits of Span 301, Span 302, or Span 303.

## Span 341 - Pre-Modern Cultural and Literary Foundations (4)

Study of medieval and/or pre-Colombian cultural texts and practices that formthe foundations of Spanish literary traditions.

Prerequisite: $\operatorname{Span} 301, \operatorname{Span} 302$, and $\operatorname{Span} 303$.

## Span 342 - Early Modern and Colonial Cultural and Literary Expression (4)

Study of Early Modern Spanish and/or Hispanic American literary practices and works from the 15th to the 17th century.

Prerequisite: Span 301, Span 302, and Span 303.
Span 343 - Cultural and Literary Expressions of Independence (4)

Study of Spanish and/or His panic American literary practices and works in the context of 18th-, 19th-, and 20th-century independence and republican movements.
Prerequisite: Span 301, Span 302, and Span 303.
Span 344-Modern Cultural and Literary Expressions (4)

Study of Spanish and/or His panic American literary practices and works in the 20th century with emphases on war, dictatorship, revolution and globalization.

Prerequisite: Span 301, Span 302, and Span 303.

## Span 345 - Present-Day Cultural and Literary Expression (4)

Study of contemporary Spanish and/or His panic American literary practices, works, and new media and works in global and digital contexts.
Prerequisite: Span 301, Span 302, and Span 303.

## Span 395-Spanish in the World (4)

The expansion of Spanish through media, Spanish and the other official languages of the Iberian Peninsula, Spanish in the USA, and the language politics of Latin America.

## Span 399 -Special Studies (1-12)

(Credit to be arranged.)

## Span 399U- Special Studies (4)

(Credit to be arranged.)

Span 401 - Research (1-6)
(Credit to be arranged.)

## Span 404-Cooperative Education/internship(1-12)

(Credit to be arranged.)

## Span 405 - Reading and Conference (1-6)

(Credit to be arranged.)

## Span 407 -Seminar (0-6)

(Credit to be arranged.)

## Span 408 - Workshop(1-6)

(Credit to be arranged.)

## Span 409-Practicum(1-12)

(Credit to be arranged.)

## Span 410 -Selected Topics (1-12)

(Credit to be arranged.)

## Span 411 - Advanced Spanish (4)

Intens ive training in composition, translation, and conversation. May be taken concurrently with Span 414 or Span 514.
Also offered for graduate-level credit as Span 511 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## Span 414 - Advanced Spanish Grammar (4)

A thorough study of grammar and syntax for majors and prospective teachers. May be taken concurrently with Span 411 or Span 511.
Also offered for graduate-level credit as Span 514 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## Span 421 - Major Topics: Peninsular Prose (4)

Study, analysis, and critique of major prose works of Spain by authors such as Fernando de Rojas, Cervantes, Galdos, Unamuno, and Goytisolo.

Also offered for graduate-level credit as Span 521. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

Span 422-Major Topics: Peninsular Drama (4)
Study, analysis, and critique of major dramatic works of Spain by authors such as Lope de Vega, Tirso de Molina, Calderon de la Baraca, Zorrilla, Garcia Lorca, and Buero Vallejo.

Also offered for graduate-level credit as Span 522. Prerequisite: 4 units of Span 341, Span 342, Span 343, Span 344 or Span 345.
Span 423-Major Topics: Peninsular Poetry (4)
Study, analysis, and critique of the poetry of Spain by authors such as Berceo, Gongora, Quevedo, Machado, Jimenez, and Cernuda.
Also offered for graduate-levelcredit as Span 523. Prerequisite: 4 units of SPAN 341, Span 342, SPAN343, SPAN 344 or SPAN 345.

## Span 427 - Major Topics: Latin American Prose (4)

Study, analysis, and critique of major prose works of Lat in America by authors such as Garcia Marquez, Fuentes, Paz, Vargas Llosa, Mastretta, and Borges. The course may be repeated for up to 12 credits.
Also offered for graduate-level credit as Span 527. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 428 - Major Topics: Latin American Drama (4)

Study, analysis, and critique of major dramatic works of Latin America by authors such as Gambaro, Benedetti, Usigli, Diaz, and de la Parra.
Also offered for graduate-level credit as Span 528. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 429 - Major Topics: Latin American Poetry (4)

Study, analysis, and critique of major prose works of Latin America, by authors such as Dario, Huidobro, Vallejo, Neruda, Guillen, and Mistral.

Also offered for graduate-level credit as Span 529. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 430 - Major Topics: Ibero-American Film (4)

Study, analysis, and critique of films from Ibero-America on such topics as national film traditions, Cinema Novo, Third Cinema, violence, migration, gender studies, and globalization. Course may be repeated for credit when topics vary.
Also offered for graduate-level credit as Span 530. .
Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 434-Major Topics: Peninsular Multiple Genres

 (4)Study, analysis, and critique of works in multiple genres on such topics as Medieval Literature, the Celestina, W omen Writers, Literature of the Franco Years, the Poetry \& Drama of Garcia Lorca, and the Generation of '98. Course may be repeated forcredit when topics vary.
Also offered for graduate-level credit as Span 534. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 436 - Major Topics: Latin American Multiple Genres (4)

Study, analysis, and critique of works in multiple genres on such topics as Transvestism, Feminism, Sickness and Literature, Prose and Poetry of Borges, and Pre-Colombian Literature. Course may be repeated for credit when topics vary.

Also offered for graduate-level credit as Span 536. . Prerequisite: 4 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 441 - Major Works in Translation (4)

Study of selections frommas terpieces in translation by authors such as Cervantes, Neruda, Borges, Lispector, and Garcia Marquez. Readings, lectures, and discussions in

English. Expected preparation: 4 credits of upper division literature.

Also offered for graduate-level credit as Span 541 and may be taken only once for credit. .

## Span 490 - History of the Spanish Language (4)

Study of the development of the Spanish language in terms of phonological, morphological, and syntactical changes.

Also offered for graduate-level credit as Span 590 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, Span 303, and Span 325.

## Span 494 -Spanish Linguistics (4)

Introduction to the basic concepts of linguistics and their application to the Spanish language. Emphasis on practical analys is of the sound system and the grammatical system. Brief survey of the his torical development, followed by an analys is of the phonetics, phonemics, morphology, and syntax of modern Spanish.
Also offered for graduate-level credit as Span 594 and may be taken only oncefor credit. . Prerequisite: Span 301, Span 302, Span 303, and Span 325.

## Span 495 -Spanish Dialectology (4)

Study of Spanish dialects with attention to geographic regions that differentiate the Spanish speaking world including official and unofficial varieties of Spanish in Europe, the Americas, Africa, and Asia.
Also offered for graduate-level credit as Span 595 and may be taken only once for credit. . Prerequisite: Span 325.

## Span 497 - Applied Spanish Linguistics (4)

A practical application of linguis tics to modern Spanish. Emphasis on a contrastive analy sis of the structure of Spanish and English. Expected preparation: 4 credits of linguistics.

Also offered for graduate-level credit as Span 597 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## Span 498 -Spanish Syntax (4)

A practical approach to Spanish Syntax. Study and analysis of syntactical functions and sentence structure. Emphasis on modern grammatical theory and findings. Examination of discourse connectors. Expected preparation: 4 credits of linguistics.
Also offered for graduate-level credit as Span 598 and may be taken only oncefor credit. . Prerequisite: $\operatorname{Span} 301$, Span 302, and Span 303.

## Span 501 - Research (1-9)

(Credit to be arranged.)

## Span 502 - Independent Study (1-9)

(Credit to be arranged.)

## Span 503 -Thesis (1-9)

(Credit to be arranged.)

## Span 504-Cooperative Education/internship(1-9)

(Credit to be arranged.)

## Span 505 - Reading and Conference (1-6)

## (Credit to be arranged.)

## Span 507 -Seminar (1-6)

(Credit to be arranged.)

## Span 508 - Workshop(1-6)

(Credit to be arranged.)

## Span 509 - Practicum(1-9)

(Credit to be arranged.)

## Span 510 -SelectedTopics (1-6)

(Credit to be arranged.)

## Span 511 - Advanced Spanish (4)

Intensive training in composition, translation, and conversation. May be taken concurrently with Span 414 or Span 514.
Also offered for undergraduate-levelcredit as Span 411 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

Span 514 - Advanced Spanish Grammar (4)
A thorough study of grammar and syntaxfor majors and prospective teachers. May be taken concurrently with Span 411 or Span 511.

Also offered for undergraduate-levelcredit as Span414 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## Span 521 - Major Topics: Peninsular Prose (4)

Study, analysis, and critique of major prose works of Spain by authors such as Fernando de Rojas, Cervantes, Galdos, Unamuno, and Goytisolo.
Also offered for undergraduate-level credit as Span 421.. Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 522 - Major Topics: Peninsular Drama (4)

Study, analysis, and critique of major dramatic works of Spain by authors such as Lope de Vega, Tirso de Molina, Calderon de la Baraca, Zorrilla, Garcia Lorca, and Buero Vallejo.
Also offered for undergraduate-level credit as Span 422. Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 523-Major Topics: Peninsular Poetry (4)

Study, analysis, and critique of the poetry of Spain by authors such as Berceo, Gongora, Quevedo, Machado, Jimenez, and Cernuda.

Also offered for undergraduate-level credit as Span 423. Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

Span 527-Major Topics: Latin American Prose (4)
Study, analysis, and critique of major prose works of Latin America by authors such as Garcia Marquez, Fuentes, Paz, Vargas Llosa, Mastretta, and Borges. The course may be repeated for up to 12 credits .

Also offered for undergraduate-level credit as Span 427.. Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

Span 528 -Major Topics:Latin American Drama (4)
Study, analysis, and critique of major dramatic works of Latin America by authors such as Gambaro, Benedetti, Usigli, Diaz, and de la Parra.

Also offered for undergraduate-level credit as Span 428. . Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 529-Major Topics:Latin American Poetry (4)

Study, analysis, and critique of major prose works of Lat in America, by authors such as Dario, Huidobro, Vallejo, Neruda, Guillen, and Mistral.

Also offered for undergraduate-level credit as Span 429.. Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.
Span 530 - Major Topics: Ibero-American Film (4)
Study, analysis, and critique of films from Ibero-America on such topics as national film traditions, Cinema Novo,

Third Cinema, violence, migration, gender studies, and globalization. Course may be repeated forcredit when topics vary.
Also offered for undergraduate-levelcredit as Span 430. . Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 534-Major Topics: Peninsular Multiple Genres

 (4)Study, analysis, and critique of works in multiple genres on such topics as Medieval Literature, the Celestina, Women Writers, Literature of the Franco Years, the Poetry Drama of Garcia Lorca, and the Generation of '98. Course may be repeated forcredit when topics vary.
Also offered for undergraduate-levelcredit as Span 434. . Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 536-Major Topics: Latin American Multiple Genres (4)

Study, analysis, and critique of works in multiple genres on such topics as Transvestism, Feminism, Sickness and Literature, Prose and Poetry of Borges, and Pre-Colombian Literature. Course may be repeated for credit when topics vary.
Also offered for undergraduate-levelcredit as Span 436. . Prerequisite: 8 credits of Span 341, Span 342, Span 343, Span 344, or Span 345.

## Span 541 - Major Works in Translation (4)

Study of selections frommasterpieces in translation by authors such as Cervantes, Neruda, Borges, Lispector, and Garcia Marquez. Readings, lectures, and discussions in English. Expected preparation: 4 credits of upper division literature.
Also offered for undergraduate-levelcredit as Span 441 and may be taken only once for credit.
Span 551 - Hispanic Poetry (4)
Critical study of the lyric poetry of Latin America and/or Spain.

## Span 552 -Hispanic Drama (4)

Critical study of representative works of Latin American and/or Spanish drama.

## Span 553 - Hispanic Prose (4)

Critical study of representative works of the proseof Latin America and/or Spain.

## Span 554 -Language, Culture and Interdisciplinary Practices (4)

Critical study of works in language, culture, and interdisciplinary practices in Spanish-speaking countries.

## Span 590 - History of the Spanish Language (4)

Study of the development of the Spanish language in terms of phonological, morphological, and syntactical changes.
Also offered for undergraduate-level credit as Span 490 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, Span 303, and Span 325.

## Span 594 -Spanish Linguistics (4)

Introduction to the basic concepts of linguistics and their application to the Spanish language. Emphasis on practical analys is of the sound system and the grammatical system. Brief survey of the his torical development, followed by an analys is of the phonetics, phonemics, morphology, and syntax of modern Spanish. Must be taken in sequence.
Also offered for undergraduate-level credit as Span 494 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, Span 303, and Span 325.

## Span 595-Spanish Dialectology (4)

Study of Spanish dialects with attention to geographic regions that differentiate the Spanish speaking world including official and unofficial varieties of Spanish in Europe, the Americas, Africa, and Asia.

Also offered for undergraduate-level credit as Span 495 and may be taken only once for credit.

## Span 597 - Applied Spanish Linguistics (4)

A practical application of linguistics to modern Spanish. Emphasis on a contrastive analy sis of the structure of Spanish and English. Expected preparation: 4 credits of linguistics.
Also offered for undergraduate-level credit as Span 497 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## Span 598 - Spanish Syntax (4)

A practical approach to Spanish Syntax. Study and analysis of syntactical functions and sentence structure. Emphasis on modern grammatical theory and findings. Examination of discourse connectors. Expected preparation: 4 credits of linguistics.
Also offered for undergraduate-level credit as Span 498 and may be taken only once for credit. . Prerequisite: Span 301, Span 302, and Span 303.

## SpEd - Special Education

## SpEd 120 - Career and Community Studies First Year of Study (2)

This course will support first year students to actively engage in academic studies, employment, independent living and campus life. Students will meet with their CCS advis or, academic coach and peer navigator each week and attend a series of three seminars. Students will learn to more fully participate in their person-centered planning meetings, use their individualized supports, develop college goals, and practice skills that will be critical to their success during and after college.

## SpEd 199 -Special Studies (1-6)

(Credit to be arranged.)

## SpEd 220 - Career and Community Studies Second Year of Study (2)

This course will support second year Career and Community Studies (CCS) students to increase their independence and engagement in college through a full range of individualized supports with seminar and workshop options to choose fromeach term. Students will learn to make decisions about academic course options, use their supports, expand their experiences on campus, dis cover career interests while on the job, speak up for themselves within planning meetings, and setcollege goals.
Prerequisite: SpEd 120.

## SpEd 320 - Career and Community Studies Third Year of Study (2)

This course will support third year Career and Community Studies (CCS) students to increase their independence and engagement in college through a full range of individualized supports with seminar and workshop options to choose fromeach term. Students will self manage their supports, use their voices and make informed decisions, expand their experiences on campus, deepen their awareness of career pathways, learn to lead their planning meetings, and meet their college goals.
Prerequisite: SpEd 120 and SpEd 220.
SpEd 401 - Research (1-6)
(Credit to be arranged.)

SpEd 402 - Independent Study (0-9)
(Credit to be arranged.)

## SpEd 403 - Thesis (1-6)

(Credit to be arranged.)

SpEd 404-Cooperative Education/Internship (1-12)
(Credit to be arranged.)

## SpEd 405 - Reading and Conference (1-6)

(Credit to be arranged.)

## SpEd 406 -Special Problems (1-6)

(Credit to be arranged.)

SpEd 407 -Seminar (1-6)
(Credit to be arranged.)

SpEd 408-Workshop(1-6)
(Credit to be arranged.)

SpEd 409-Practicum(1-12)
(Credit to be arranged.)

## SpEd 410 - Experimental Course (1-12)

(Credit to be arranged.)

## SpEd 411 - Foundations of Special Education (3)

Introduces research, theory and data as foundation for guiding decision making and professional practice in special education guided by the "Critical Concepts" of Special Education" as identified by department faculty including Individualization; Inclusion and Diversity; Scaffolding Instruction; Data-based Decision Making; Collaboration and Teaming; and Leadership and Advocacy.
Also offered for graduate-level credit as SpEd 511 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 412 -Diagnostic Assessment (3-4)

The focus of this course is the legal requirements and professional skills required for conducting non-biased, standardized, academic as sessments. Students will develop knowledge and skills in: collecting relevant background
information; selecting, administering, and interpreting as sessments; developing academic goals and objectives; preparing meaningfulreports; and conducting meetings to convey assessment results.
Also offered for graduate-level credit as $\operatorname{SpEd} 512$ and may be taken only once for credit. Prerequisite: Mth 211, Mth 212, $\operatorname{SpEd} 418$, and admission to the program.
SpEd 414 -Legal and Ethical Foundations of Special Education (3)

Overview of state and federal laws, rules and regulations, including analysis of the Individuals with Dis abilities Education Act (2004), and their impact on service provision for students with dis abilities. Is sues of ethics, inclusion, and diversity are integrated within this course. Application of Oregon Administrative Rules will be highlighted.
Also offered for graduate-level credit as SpEd 514 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure ProgramorMS in Special Education.

## SpEd 415 - Classroom Ass essment, Instruction, and Behavior Management (Elementary) (4)

Focus on establishing effective instructional environments through research-based techniques of behavior management, assessment, and instructional delivery in elementary settings.
Also offered for graduate-level credit as SpEd 515 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 416 - Classroom Assessment, Instruction, and Behavior Management (Secondary) (4)

Establishing effective instructional environments through research-based techniques of behavior management, as sessment, and instructional delivery.
Also offered for graduate-level credit as $\operatorname{SpEd} 516$ and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 417 - Introduction to Special Education (4)

Provides an introduction to the field of special education and the use of evidence-based teaching practices in special education. Students explore particular career options of interest and participate in a community-based learning experience in public school settings with learners who are at-risk or have special education needs. Recommended prerequisite (or concurrentenrollment): Psy 311, SpEd 418.

## SpEd 418 -Survey of Exceptional Learners (3)

Overview of working with exceptional individuals, including special education and multicultural differences. Nature of diversities (including the talented and gifted) and educational ramifications for the teacher. Expected preparation: Psy 311.

Also offered for graduate-level credit as $\operatorname{SpEd} 518$ and may be taken only once for credit. .

## SpEd 419 - Principles of Special Education (3)

Prepares students entering special education with basic knowledge, skills, and values necessary for future success in their profession. Major overview of theory and res earch underly ing delivery of special education services in the public schools. Intensive study of career planning, graduate writing and research, information systems, current legislation, teaching and learning theory, curricular models, and professional ethics and standards. Expected preparation(or concurrent enrollment): Psy 311, SpEd 418.

Also offered for graduate-level credit as SpEd 519 and may be taken only once forcredit..

## SpEd 420-Career and Community Studies Fourth Year of Study (2)

This course will support fourth year Career and Community Studies (CCS) students to increase their independence and engagement in college through a full range of individualized supports with seminar and an ePortfolio workshop series each term. Students will set goals for finishing college, transition to a career-focused job off campus, expand their experiences in the community, develop a portfolio, lead their planning meetings, and direct their supports at college and in the community.

Prerequisite: $\operatorname{SpEd} 120, \operatorname{SpEd} 220$ and $\operatorname{SpEd} 320$.
SpEd 422 - Comprehensive Individualized Assessment and CurriculumI (3)
Applies knowledge and skills for functional assessment and applied behavior analysis in the design and implementation of an individualized curriculumfor individuals with significant and multiple dis abilities. Emphasizes curricular content for life skills, communication, social, motor, and cognitive/functional academic domains. Provides instructional strategies for routines-based, naturalistic, and teacher-directed learning. This is the first course in a sequence of two: SpEd 422 and SpEd 423.

Also offered for graduate-level credit as SpEd 522 and may be taken only once for credit. Prerequisite: Admis sion to the program.

## SpEd 423 -Comprehensive Individualized Assessment and Curriculum II (3)

Applies knowledge and skills for functional assessment and applied behavior analysis in the design and implementation of an individualized curriculumfor individuals with significant and multiple dis abilities. Emphasizes curricular content for life skills, communication, social, motor, and cognitive/functional academic domains. Provides instructional strategies for routines-based, naturalistic, and teacher-directed learning. This is the second course in a sequence of two: SpEd 422 and SpEd 423.
Also offered for graduate-level credit as SpEd 523 and may be taken only once for credit. Prerequisite: Admis sion to the program.

## SpEd $\mathbf{4 2 5}$-Student Teaching (6-15)

This full-time student teaching experience provides opportunities for students to apply, practice, and generalize concepts and skills learned in university courses. Students will have opportunities toobserve and participate in the responsibilities of the special educator, and further develop their skills in instruction and classroom management.
Also offered for graduate-level credit as $\operatorname{SpEd} 525$.
Prerequisite: Mth 211, Mth 212, SpEd 418 and admiss ion to program. Corequisite: SpEd 426.

## SpEd 426 - IEP and Collaborative Teaming (4)

This course is about the processes and skills involved in collaborative teaming and consultation within schools settings. Throughout the studentteaching experience, course participants will learn about their role in the IEP process, experience a full range of profes sional res ponsibilities including ins tructional and nonins tructional roles, and prepare an edTPA portfolio.
Also offered for graduate-level credit as SpEd 526 and may be taken only once for credit. Prerequisite:Mth 211, Mth 212, SpEd 418 and admis sion to program. Corequisite: $\operatorname{SpEd} 425$.

## SpEd 427 -IEP and Collaborative Teaming

 (Secondary) (3)This course examines collaborative teaming and consultation among teaching professionals, students, families, paraprofessionals, adminis trators and service personnel in the context of culturally diverse schools and communities. Carefulexamination of the IEP process will help define requis ite case management skills and effective meeting facilitation skills that promote productiveteaming processes.
Also offered for graduate-level credit as SpEd 527 and may be taken only once for credit. Prerequisite:Admis sion to the Special Educator Licensure ProgramorMS in Special Education.

## SpEd 430 - Families and Advocacy (3)

This course investigates practicals trategies in the areas of student support and ad vocacy, school-family collaboration and transition planning. Person-centered planning and teaching self-determination skills will be addres sed. Course participants will examine collaborative skills needed to empower students and families to work effectively with school professionals in K-12 and transition settings.
Also offered for graduate-level credit as SpEd 530 and may be taken only once for credit. Prerequisite: Admis sion to program.

## SpEd 431 - Families and Advocacy (Secondary) (3)

Inves tigate practical strategies, tools and exemplary practitioners in the areas of studentsupport and advocacy, school-family collaboration and transition planning. Address concepts and curriculumrelated to personcentered planning and teaching self-determination skills. Examine collaborative skills needed to empower students, families, service agencies, and other support systems to facilitate inclusive practices.
Also offered for graduate-level credit as SpEd 531 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 432 - Inclusive Practices (2)

This course prepares teacher candidates to useevidencebased practices to support students with diverse learning needs togain access to the general education curriculum. Incorporating Universal Design for Learning as a framework, teacher candidates will plan, implement and as sess study skills and learning strategies forstudents in all academic areas.
Also offered for graduate-level credit as SpEd 532 and may be taken only once for credit. Prerequisite: Mth 211, Mth 212, SpEd 418 and admission to the program.

## SpEd 433-Math Assessment andInstruction (3)

Examine assessment, instructional methods, and curricula for teaching math and supporting the learning of SPED students at the elementary and secondary levels. Learn techniques for teaching concepts, skills, problemsolving, and learning strategies as means to help learners achieve success in school and beyond the secondary levels.
Also offered for graduate-le vel credit as SpEd 533 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 437-Reading Assessment and Instruction (Elementary) (3-4)

Teacher candidates will develop a foundation in researchbased instruction for reading to children pre-kindergarten through eighth grade with a broad range of skills and needs in special and regulareducation. Course provides an overview of language and reading development, instructional practices for teaching, and assessing core early literacy skills.
Also offered for graduate-level credit as SpEd 537 and may be taken only once for credit. Prerequisite: Admis sion to program.

## SpEd 438 - Reading Assessment and Instruction (Secondary) (3-4)

Develop the knowledge base and skills for effectively teaching reading skills to students with high incidence dis abilities in schools. Address ins tructional methods for students who are emergent, developing, and more fluent readers and writers. Explore the use of research-based reading programs and other literacy materials in grades 612.

Also offered for graduate-level credit as SpEd 538 and may be taken only once for credit. Prerequisite: Admis sion to program.

## SpEd 439 -Historical and Contemporary Issues in Disability Studies (4)

Examines how views of disability in schools and other social contexts challenge traditional understandings of dis ability in the field of special education. Students will examine their views of dis ability through analy sis of texts produced by writers with dis abilities and the examination of society's treatment of persons with dis ability.
Also offered for graduate-level credit as SpEd 539 and may be taken only once for credit. Prerequisite: Upperdivision standing.

## SpEd 448 -Positive Behavior Support in the Classroom

 (3)This course will teach research-based strategies within a positive behavior support framework to promote desired clas sroombehavior and maximize instructional time. Prevention, teaching and consequence strategies (positive and corrective) will be taught for implementation ranging from school-wide intervention to classroom-wide instruction to individualized function-based support for students with intensive needs.

Also offered for graduate-level credit as SpEd 548 and may be taken only once for credit. . Prerequisite:
Admis sion to the Special Educator Licensure Program.

## SpEd 455 - Working With LEP Children Who Have Special Needs (2)

Examine the current research in special education and see where it is appropriate in working with the Limited English Proficient (LEP) child. Consider issues including testing and diagnosis, appropriate teaching material and method, and placement. Discuss political, social, and community concerns in working with LEP students with special needs.
Also offered for graduate-level credit as $\operatorname{SpEd} 555$ and may be taken only once for credit.

## SpEd 460-Outdoor Education/Recreation With Pers ons With Disabilities (6)

Course provides a supervised practicumin a variety of outdoor activities with children, youth, and adults with disabilities. Students serve as counselor trainees, under the guidance of experienced outdoor specialists and teachers in a residential programlocated at the Mt . Hood Kiwanis Camp. Emphasis on learning fromand about persons with disabilities, teamwork within living groups, and developing outdoor and leadership skills.

Also offered for graduate-level credit as $\operatorname{SpEd} 560$ and may be taken only once for credit.

## SpEd 480 - Introduction to Early Intervention/Early Childhood Special Education (3)

Provides historical, social, and leg al foundations for early intervention and early childhood special edu cation and other services to young children with special needs. Introduces concepts and processes forscreening and as sessment, family-centered planning, blending developmentally and individually appropriate practices, providing learning opportunities in natural early childhood settings, planning environments and activities to include all children, and transition planning. Expected preparation: admission to programor permis sion of instructor.
Also offered for graduate-level credit as $\operatorname{SpEd} 580$ and may be taken only once forcredit. .
SpEd 481 - Family Guided Early Intervention (3)
Develops knowledge and skills necessary for providing early intervention services to infants and toddlers with developmental delay/disabilities and their families.

Also offered for graduate-level credit as SpEd 581 and may be taken only once for credit.
SpEd 482 -SpecializedTechniques: Early Intervention/Early Childhood Special Education (3)
Develops specialized knowledge and skills necessary for providing early intervention and early childhood special education services to infants, toddlers, and preschool children with severe and multiple disabilities, including children with physical and sensory impairments, children with health impairments, and children with autism.

Also offered for graduate-level credit as SpEd 582 and may be taken only once fror credit.

## SpEd 483 - Communication and Language

 Development: EI/SE (Early Intervention/Early Childhood Special Education) (3)Designed to provide information about typical and atypical communication development, birth through early childhood. In addition, information will include strategies for $\mathrm{EI} / \mathrm{SE}$ to promote communication development for all children. Expected preparation: SpEd 480/580 and admission to program.

Also offered for graduate-level credit as $\operatorname{SpEd} 583$ and may be taken only once for credit. .

## SpEd 487 - Introduction to Infant Toddler Mental Health (3)

Introductory course linking theory, research, and practice with interdisciplinary principles and collaboration. Key concepts of mental health of children (birth through 36 months) and their families including attachment, temperament, social-emotional development, context of family, culture and community, risk and resilience. Practices related to observation, screening, assessment, diagnosis; treatment.

Also offered for graduate-level credit as SpEd 587 and may be taken only once for credit. Prerequisite: Upperdivision standing.
SpEd 501 - Research (1-9)
(Credit to be arranged.)

## SpEd 502 -Independent Study (0-9)

(Credit to be arranged.)

## SpEd 503 -Thesis (1-9)

(Credit to be arranged.)

## SpEd 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## SpEd 505 -Reading and Conference (1-6)

(Credit to be arranged.)

## SpEd 506 -Special Problems (1-6)

(Credit to be arranged.)

SpEd 507 -Seminar (1-6)
(Credit to be arranged.)

SpEd 508 - Workshop(1-6)
(Credit to be arranged.)

## SpEd 509-Practicum(1-9)

(Credit to be arranged.)

## SpEd 510 - Experimental Course (1-12)

Experimental course. Contact the department for a course description. (Credit to be arranged.)

## SpEd 511 - Foundations of Special Education (3)

Introduces research, theory and data as foundation for guiding decision making and professional practice in specialeducation guided by the "Critical Concepts" of Special Education" as identified by department faculty including Individualization; Inclusion and Diversity; Scaffolding Instruction; Data-based Decision Making; Collaboration and Teaming; and Leadership and Advocacy.

Also offered for undergraduate-level credit as SpEd 411 and may be taken only once forcredit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 512 - Diagnostic Assessment (3-4)

The focus of this course is the legal requirements and professional skills required for conducting non-biased, standardized, academic as sessments. Students will develop knowledge and skills in: collecting relevant background information; selecting, administering, and interpreting as sessments; developing academic goals and objectives; preparing meaningful reports; and conducting meetings to convey assessment results.

Also offered for undergraduate-level credit as SpEd 412 and may be taken only once forcredit. Prerequisite: Mth 211, Mth 212, SpEd 418 and Admis sion to program.

## SpEd 513-ClassroomBasedAssessment and Instructional Planning (3)

Informal, formative, ongoing assessment techniques for students with special needs in special and regular education settings. Using information from as sessments to make instructional decisions and for IEP documentation and planning.
Prerequis ite: SpEd 519 and admission to program.

## SpEd 514 -Legal and Ethical Foundations of Special Education (3)

Overview of state and federal laws, rules and regulations, including analysis of the Individuals with Disabilities Education Act (2004), and their impact on service provis ion for students with dis abilities. Is sues of ethics, inclusion, and diversity are integrated within this course. Application of Oregon Administrative Rules will be highlighted.
Also offered for undergraduate-levelcredit as SpEd 414 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in SpecialEducation.
SpEd 515 -Classroom Assessment, Instruction, and Behavior Management (Hementary) (4)

Focus on establishing effective instructional environments through research-based techniques of behavior management, assessment, and instructional delivery in elementary settings.
Also offered for undergraduate-level credit as SpEd 415 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 516 -Classroom Assessment, Instruction, and Behavior Management (Secondary) (4)

Establishing effective instructional environments through research-based techniques of behavior management, assessment, and ins structional delivery.
Also offered as undergraduate-level credit as SpEd 416 and may be taken only once for credit. Prerequisite: Admis sion to the SpecialEducator Licensure Programor MS in Special Education.

## SpEd 518 -Survey of Exceptional Learners (3)

Overview of working with exceptional individuals, including special education and multicultural differences. Nature of diversities (including the talented and gifted) and educational ramifications for the teacher.
Also offered for undergraduate-levelcredit as SpEd 418 and may be taken only once for credit. .

## SpEd 519 - Principles of Special Education (3)

Prepares students entering special education with basic knowledge, skills, and values necessary for future success in their profession. Major overview of theory and research underlying delivery of special education services in the public schools. Intensive study of career planning, graduate writing and research, information systems, current legis lation, teaching and learning theory, curricular models, and professional ethics and standards. Expected preparation(or concurrentenrollment: Psy 311, SpEd 418.

Also offered for undergraduate-level credit as $\operatorname{SpEd} 419$ and may be taken only once forcredit. .

## SpEd 520 - Collaboration I: Families and Community -

 EL and EI/SE (3)Designed to develop knowledge in the areas of family systems theory, strengths-based model, information gathering techniques, and collaboration techniques with families and profes sionals. Information related to cultural competence is infused throughout the course. In addition, students receive information on grief related to having a child with a disability and the death of a student. Students are required to participate in a family conversation project to identify family strengths, concerns, and resources with a family who has a child with special needs.

Prerequisite: admis sion to program.
SpEd 522 - Comprehensive Individualized Assessment and CurriculumI (3)
Applies knowledge and skills for functional assessment and applied behavior analysis in the design and implementation of an individualized curriculumfor individuals with significant and multiple dis abilities. Emphasizes curricularcontent forlife skills, communication, social, motor, and cognitive/functional academic domains. Provides instructional strategies for routines-based, naturalistic, and teacher-directed learning. This is the first course in a sequence of two: $\operatorname{SpEd} 522$ and SpEd 523.
Also offered for undergraduate-level credit as SpEd 422 and may be taken only once for credit. Prerequis ite: Admis sion to program.
SpEd 523 - Comprehensive Individualized Assessment and Curriculum II (3)
Applies knowledge and skills for functional assessment and applied behavior analysis in the design and implementation of an individualized curriculumfor individuals with significant and multiple dis abilities. Emphasizes curricular content for life skills, communication, social, motor, and cognitive/functional academic domains. Provides instructional strategies for routines-based, naturalistic, and teacher-directed learning. This is the secondcourse in a sequence of two: SpEd 522 and $\operatorname{SpEd} 523$.
Also offered for undergraduate-level credit as SpEd 423 and may be taken only once for credit. Prerequis ite: Admis sion to program.
SpEd 524 - Collaboration II: Schools and Inclusion Strategies (Mid-level/High School) (3)
Designed to help preservice teachers learn collaborative strategies that facilitate the inclusion of students with disabilities into thegeneral education program.

## SpEd 525 -Student Teaching (6-15)

Observation and teaching under the direction of a supervis ing teacher. Opportunities for as suming direct responsibility for the learning activities of the disabled learner, for developing skill in techniques of teaching and schoolroommanagement, and for participating in the life of the school.

Also offered for undergraduate-level credit as SpEd 425. Prerequisite: Sat is factory completion of SpEd 509 Directed Field Experience II. Corequisite: SpEd 526.

## SpEd 526-IEP and Collaborative Teaming (4)

This course is about the processes and skills involved in collaborative teaming and consultation within schools settings. Throughout the student teaching experience, course participants will learn about their role in the IEP process, experience a fullrange of profes sional responsibilities including instructional and noninstructional roles, and prepare an edTPA portfolio.
Also offered for undergraduate-levelcredit as SpEd 426 and may be taken only once for credit. Prerequis ite: Admis sion to program. Corequisite: SPED 525 and SPED 526 are taken together.

## SpEd 527 -IEP and Collaborative Teaming

 (Secondary) (3)This course examines collaborative teaming and consultation among teaching professionals, students, families, paraprofessionals, adminis trators and service personnel in the context of culturally diverse schools and communities. Carefulexamination of the IEP process will help define requisite case management skills and effective meeting facilitation skills that promote productiveteaming processes.

Also offered for undergraduate-levelcredit as SpEd 427 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in Special Education.

## SpEd 528 -Instructional Methods I: Literacy (Midlevel/High School) (3)

Develops knowledge and practices for teaching reading, writing, and other literacy skills to middle and secondary students with high incidence disabilities. Curriculum and instructional methods for students who are emergent, developing, and fluent readers and writers are addressed. The development of student's use of learning strategies to become more independent and effective learners is described.
Prerequisite: $\operatorname{SpEd} 519, \mathrm{Ed} 511$, and admis sion to program.

SpEd 529 - Instructional Methods II: Math and Content Instruction (Mid-level/High School) (3)
Purpose of this course is for preservice and practicing educators to develop the knowledge and skills to effectively teach mathematics and other content area subjects to students with mild disabilities in middle/secondary schools. Educators will learn how to use instructional methods and contentenhancement devices to make curricular content more accessible fors students with disabilities. Strategies for promoting retention, application, and generalization of content learning will also be examined.
Prerequisite: SpEd 519 and admission to program.

## SpEd 530 - Families and Advocacy (3)

This course investigates practicals trategies in the areas of student support and advocacy, school-family collaboration and transition planning. Pers on-centered planning and teaching self-determination skills will be addres sed. Course participants will examine collaborativeskills needed to empower students and families to work effectively with school professionals in K-12 and transition settings.
Also offered for undergraduate-level credit as $\operatorname{SpEd} 430$ and may be taken only once for credit. Prerequisite: Admission to program.
SpEd 531 - Families and Advocacy (Secondary) (3)
Investigate practical strategies, tools and exemplary practitioners in the areas of student support and advocacy, school-family collaboration and transition planning. Address concepts and curriculumrelated to personcentered planning and teaching self-determination skills. Examine collaborative skills needed to empower students, families, service agencies, and other support systems to facilitate inclus ive practices.
Also offered for undergraduate-level credit as SpEd 431 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licensure Programor MS in SpecialEducation.

## SpEd 532 - Inclusive Practices (2)

This course prepares teacher candidates to useevidencebased practices to support students with diverse learning needs to gain access to the general education curriculum. Incorporating Universal Design forLearning as a framework, teacher candidates will plan, implement and as sess study skills and learning strategies for students in all academic areas.
Prerequisite: Admission to the program. Cross-Listed as: SPED 432 This course prepares teacher candidates to use evidence-based practices to support students with diverse learning needs to gain access to the general education curriculum. Incorporating Universal Design for Learning
as a framework, teacher candidates will plan, implement and as sess study skills and learning strategies for students in all academic areas.

## SpEd 533-Math Assessment and Instruction (3)

Examine assessment, instructional methods, and curricula for teaching math and supporting the learning of SPED students at the elementary and secondary levels. Learn techniques for teaching concepts, skills, problemsolving, and learning strategies as means to help learners achieve success in school and beyond the secondary levels.

Also offered for undergraduate-levelcredit as SpEd 433 and may be taken only once for credit. Prerequisite: Admis sion to the Special Educator Licens ure Programor MS in SpecialEducation.

## SpEd 536 -SpecializedTechniques (3)

Information and skills developmentfor meeting the specialized support needs commonly found with students with significant disabilities. Focus on educational implications considering (1) the nature of the medical condition, (2) methods for instruction (i.e., positioning, mobility), and (3) procedures for structuralmodifications. Course incorporates information fromvarious disciplines and is designed to assist the educator in becoming an effective member of a transdisciplinary team that serves students with routine and emergency medical and physical needs.

Prerequisite: $\mathrm{SpEd} 418 / 518$ and admis sion to the program.

## SpEd 537 - Reading Assessment and Instruction

 (Elementary) (3-4)Teacher candidates will develop a foundation in researchbased instruction for reading to children pre-kindergarten through eighth grade with a broad range of skills and needs in special and regular education. Course provides an overview of language and reading development, instructional practices for teaching, and assessing core early literacy skills.

Also offered for undergraduate-levelcredit as SpEd 437 and may be taken only once for credit. Prerequisite: Admis sion to program.

## SpEd 538 - Reading Assessment and Instruction

 (Secondary) (3-4)Develop the knowledge baseand skills for effectively teaching reading skills to students with high incidence dis abilities in schools. Address instructional methods for students who are emergent, developing, and more fluent readers and writers. Explore the use of research-based reading programs and other literacy materials in grades 6 12.

Also offered for undergraduate-level credit as SPED 438 and may be taken only once for credit. Prerequisite: Admis sion to program.

## SpEd 539 -Historical and Contemporary Issues in Disability Studies (4)

Examines how views of dis ability in schools and other social contexts challenge traditionalunderstandings of disability in the field of specialeducation. Students will examine their views of disability through analy sis of texts produced by writers with dis abilities and the examination of society's treatment of persons with dis ability.
Also offered for undergraduate-level credit as SpEd 439 and may be taken only once for credit.

## SpEd 540 - Foundations of Education for the Visually Impaired Learner (3)

Provides historical educational background for students with visual impairments, common eye conditions, basic eye anatomy, and overview of instructional strategies with emphas is on the expanded core curriculum. Introduces Grade I braille and tactile graphics production. Addresses instructional considerations for diverse learners with vision loss, including additional dis abilities and deafblindness.

Prerequis ite: $\operatorname{SpEd} 418 / \mathrm{SpEd} 518$ and admiss ion to the program.

## SpEd 541 - Implications of Vision Problems of Children/Youth (3)

Anatomy, physiology, common diseases, and hygiene of the human eye. Emphasis on vision screening, testing, and techniques for evaluation of functional visual skills in the clas sroom. Focus includes strategies for improving medical/ optometric eye reports. Emphasis on working with the regular class roomteacher regarding prevention of potentialeye dis orders and referral to eye specialists.
Prerequisite: SpEd 540 and admission to the program.
SpEd 542 - Assessment of the Visually Impaired (3)
Examination and application of diagnostic and assessment instruments useful with or modified for visually impaired learners. Designed to prepare teachers of the visually disabled for administering, scoring, and interpreting test results for programplanning and implementation. Developmental areas includecognition, social/ emotional skills, psychomotor skills, and self-help skills.
Prerequisite: $\operatorname{SpEd} 418 / 518$ and admission to the program.

```
SpEd 543 - Reading and Literacy - Visually Impaired Learners (3)
```

This course provides an overview of language development and literacy instruction fromprereading through adolescence. Age-appropriate methods for literacy instruction will be discussed, with emphasis on similarities and differences between sighted print readers and readers with visual impairments, including blindness. Both conventional and functional literacy will be addressed.

SpEd 544 -Methods of Teaching Academics: Visually Impaired Learner (3)

Course focuses upon curricular adaptations for use with the visually impaired learner in the clas sroom. Academic areas examined and strategies for inclusion for the visually impaired learner in all aspects of the school curriculum. Teaching of Braille, use of abacus for mathematics, and adapted materials. In-depth curricular focus for the multidis abled child.
Prerequisite: $\operatorname{SpEd} 418 / 518$ and admis sion to the program.
SpEd 545 - Introduction to Orientation and Mobility and Independent Living Skills (3)
Introduces the his torical development and field of orientation and mobility (O\&M). Provides instruction in basic $\mathrm{O} \& \mathrm{M}$ and human guide techniques. Emphasizes evidence-based curricular content for independent living skills; psychosocial, motor, and concept development domains. Addresses instructional considerations for diverse 1 learners with vision loss, including additional dis abilities and deafblindness.

Prerequisite: $\operatorname{SpEd} 418 / \mathrm{SpEd} 518$.
SpEd 546 - Braille I (3)
The Braille code is presented, to include Grade II literary Braille, and use of the abacus.

Prerequisite: SpEd 540 and admission to the program.
SpEd 547 - Braille II (2)
All special signs and symbols relating to the literary code are learned and special formatting techniques used in printed materials, charts, and graphs. Study of Braille Nemeth Code for mathematics.
Prerequisite: $\operatorname{SpEd} 546$ and admission to the program.
SpEd 548 -Positive Behavior Support in the Classroom (3)

This course will teach research-based strategies within a positive behavior support framework to promote desired clas sroombehavior and maximize instructional time. Prevention, teaching and consequence strategies (positive and corrective) will be taught for implementation ranging from school-wide intervention to classroom-wide instruction to individualized function-based support for students with intensive needs.

Also offered for undergraduate-level credit as SpEd 448 and may be taken only once for credit. . Prerequis ite: Admis sion to the Special Educator Licensure Program.

SpEd 549 - Orientation and Mobility Methods (3)
Examine the foundations of learning and teaching Orientation and Mobility. Activities and synchronous online lectures introduce the principles of concept
development, spatial orientation, and environmental analys is as related to the independent travel of individuals who are visualimpairments including those with additional disabilities, deafblindness and/or fromdiverse backgrounds.
Prerequisite: SpEd 540, SpEd 541, SpEd 545.

## SpEd 550 - Orientation and Mobility Assessment and Instruction - Children (3)

Provides an overview of O\&M assessment and instruction for infants, preschoolers, elementary and transition age students with vision loss, including those fromdiverse backgrounds and additional dis abilities and deafblindness. Examines methods in teaminstruction, consultation and itinerant teaching. Includes 25 hours of field-based experiences in the school setting.

Prerequisite: SpEd 540, SpEd 541, SpEd 545.
SpEd 551 - Orientation and Mobility Assessment and Instruction - Adults (3)
Examines demographics and service delivery models for adults with visual impairments fromdiverse backgrounds, including those with health conditions and sensory impairments. Addresses O\&M as sessment and instruction while considering individual travel environments and emerging technologies. Includes 25 hours of field-based experiences with adults receiving $O \& M$ training.
Prerequisite: SpEd 540, SpEd 545, SpEd 541.

## SpEd 552 - Orientation and Mobility Advanced Techniques (4)

Instruction in navigation methods used by persons with vision loss. Students complete 5+hours lab based work per day under simulated conditions in indoor and outdoor environments. Course covers the knowledge base of the instructional needs of pers ons with vis ual impairments including those fromdiverse backgrounds, additional disabilities and deafblindness.

Prerequisite: SpEd 540, SpEd 541, SpEd 545.
SpEd 553 - Leisure Education for Pers ons with Disabilities (3)

Focuses on recreation and leisure as a major as pect of independent living and community adjustment. Roles of the schools in providing a comprehensive leis ure education programfor students with dis abilities.
Prerequisite: $\operatorname{SpEd} 418 / 518$.

## SpEd 554 - Orientation and Mobility Practicum (3-12)

Minimum 350 hour supervised internship for pre-service O\&M specialists with individuals with visual impairment, ranging fromschool-aged students to adult vocational and geriatric populations, including diverse learners with additional dis abilities and deafblindness. Integrates O\&M
coursework and field-based competencies tailored to pass the international ACVREP O\&M examination.

Prerequisite: SpEd 540, SpEd 541, SpEd 545, SpEd 549, SpEd 550, SpEd 551, and SpEd 552.

## SpEd 555 - Working With LEP Children Who Have Special Needs (2)

Examine the current research in special education and see where it is appropriate in working with the Limited English Proficient (LEP) child. Consider is sues including testing and diagnosis, appropriate teaching material and method, and placement. Discuss political, social, and community concerns in working with LEP students with special needs.
Also offered for undergraduate-levelcredit as SpEd 455 and may be taken only once for credit.

SpEd 556 - Career Education for Persons with Disabilities (3)

Course presents a broad conceptual framework for organizing and developing career education programs for dis abled students (elementary/young adult); helps participants gain knowledge which strengthens vocational success for dis abled persons; and programmodels train persons with dis abilities in transition fromschool to community life.

Prerequisite: $\operatorname{SpEd} 418 / 518$.

## SpEd 558 - Concepts and Principles of Applied Behavior Analysis (5)

Introduces students to the philosophical underpinnings of applied behavior analysis (ABA). It provides students with knowledge of ABA concepts and principles. Students will learn how to apply positive behavior support and technologicalmethods specific to the needs of the community in such settings as schools, clinics, and homes.

## SpEd 559 - Ass essing Behavior (5)

Students will learn the fundamental elements of behavior as sessment, how to identify behaviors appropriate for behavioral as sessment, selecting behavior goals and strategies, conducting indirect and direct assessments to identify behavior function, and addressing professional is sues that may arise during the process of behavioral as sessment.

## SpEd 560-Outdoor Education/Recreation With Persons With Disabilities (6)

Course provides a supervised practicumin a variety of outdoor activities with children, youth, and adults with dis abilities. Students serve as counselor trainees, under the guidanceof experienced outdoor specialists and teachers in a residential programlocated at the Mt. Hood Kiwanis

Camp. Emphas is on learning fromand about persons with disabilities, teamwork within living groups, and developing outdoor and leadership skills.
Also offered for undergraduate-level credit as SpEd 460 and may be taken only once for credit.

## SpEd 561 -PBS: Behavior-Change Strategies (5)

Focuses on the design of comprehensive, multicomponent, functional as sessment-based behavior support plans for individuals with a variety of dis abilities who engage in challenging behavior. Students learn how to apply the positive behavior support method and to choose appropriate andeffective behavior-change strategies to address behavior goals. These include the useof technology and responses to ethical and professional is sues in implementing behavior support plans.

## SpEd 562 - Ethical Issues in Applied Behavior Analysis (5)

Students learn how to apply ethical standards that are salient to the interactions in their work, with the people they serve, and with others involved in the process (e.g., other professionals, families, sy stems of care, society). Although the class focuses on the BACB's Professional and Ethical Compliance Code for Behavior Analy sts, other ethical standards will be reviewed as well.

## SpEd 563 - Advanced Techniques of Reading (3)

Primarily concerned with educational methods designed to teach students with severe to moderateres ponse deficits in reading.

Prerequisite: CI474/574.

## SpEd 564 - Learning Disabilities (3)

Concepts, is sues, and major sources in the field of learning disabilities: definition, causation and identification, ability vs.task analy sis models, perceptual training, and aptitude treatment interaction, early identification, and reading disability.

## SpEd 565 - Single-Subject Res earch Design in Applied Behavior Analysis (5)

Introduces students to the foundations of single-subject research designs and the application of single-case research methodology. The course content aligns with items on the BCBA TaskList (5th Edition). It provides students with the most effective experimental research methods to measure cutting-edgetreatments, such as innovative technological interventions and positive behavior support.

## SpEd 566 - Advanced Research Methods in ABA (4)

Students will demons trate their knowledge and application of single-caseresearch methodology. Specifically, the implementation of research proposals designed to answer applied research questions specific to the needs of the local community in schools, clinics, homes, and other settings. In addition to their managementof overall intervention implementation, students will as sess the quality of implementation and intervention impact.

## SpEd 567 -ABA Leadership Capstone (3)

As a culminating experience for students in the ABA Program, this course focuses on current is sues in ABA, supports students' preparation for the $B C B A ®$ exam, and supports students in formulating their own plan for supervision and management of supervisees. The topics selected for this seminar were guided by BACB® Task List (5th ed.) on what behavior analysts should know about the scienceof behavior analysis, as well as providing ABA services and supervision.

## SpEd 568 - Advanced Behavior Management (3)

Course for educational professionals serving students with challenging behavior. Focuses on a continuum of behavioral intervention in schools including functional behavioral as sessment and positive behavioral supports for students with challenging behavior.

Prerequisite: SpEd 521.

## SpEd 570 - Communication Systems for Persons with Severe Disabilities (3)

Course for students who will be teaching communication skills to pers ons with severe disabilities, including nonverbal individuals. Examines specialized systems for teaching communication skills, normal speech, and implementation of communication instruction.
Prerequisite: $\mathrm{SpEd} 418 / 518$.

## SpEd 571 - Adolescents with Learning Differences (2)

Explores the impact of various disabilities or other life experiences on learning and the developmental stage of adoles cence. Examines what middle and high school teachers need to understand about students with learning differences and how they can provide support and accommodations.
Prerequisite: admissionto SDEP program. .

## SpEd 573 - Assessment and Planning for Students With

 Mild Disabilities (3)Examination and application of diagnostic and assessment instruments used to meas ure cognitive language abilities
and social/emotional functioning. Formal and informal methods of as sessment.
Prerequisite: $\operatorname{SpEd} 418 / 518$.
SpEd 575 - Braille III/Technology for the Visually Impaired (3)
Study of computer applications for visually impaired learners, including existing and proposed hardware and software that would improve accessibility to print information by visually impaired and blind students. Adaptations of existing technology, evaluation of its effectiveness.

Prerequisite: SpEd 540.
SpEd 576 - Visually Impaired Learner with Additional Disabilities (3)
Study of visually handic apped students with concomitant disabilities such as hearing impairments, mental retardation, and behavior dis orders. Emph as is on curricular adaptations, teaching strategies, and behavior management.
Prerequisite: $\mathrm{SpEd} 418 / 518$.
SpEd 577 -Interagency Collaboration (2)
Focuses on service coordination that unifies school personnel and community agencies to strategically use collective expertise to plan the transition fromschool to adult life with students and families for the development and well-being of youth. Strategies for effective leadership and community resource mapping are employed.

## SpEd 579 - Literacy in Early Intervention/Special Education (3)

Knowledge and skill development of early literacy, including early writing and spelling, for children, birth through age 8 , with special needs. Focuses on strategies to support early foundations of literacy, language concepts, vocabulary, phonological awareness, alphabetic understanding, letter-sound correspondence, phonics, reading comprehension. Emphasizes collaboration of families and profes sionals.

## SpEd 580 - Introduction to Early Intervention/Early Childhood Special Education (3)

Provides historical, social, and legal foundations forearly intervention and early childhood special education and other services to young children with special needs. Introduces concepts and processes for screening and assessment, family-centered planning, blending developmentally and individually appropriate practices, providing learning opportunities in natural early childhood settings, planning environments and activities to include all
children, and transition planning. Expected preparation: admission to programor permission of instructor.

Also offered for undergraduate-level credit as SpEd 480 and may be taken only once for credit. .

## SpEd 581 -Family Guided Early Intervention (3)

Develops knowledge and skills necessary for providing early intervention services to infants and toddlers with developmental delay/disabilities and their families.
Also offered for undergraduate-level credit as SpEd 481 and may be taken only once for credit.

## SpEd 582 -SpecializedTechniques: Early Intervention/Early Childhood Special Education (3)

Develops specialized knowledge and skills necessary for providing early intervention and early childhood special education services to infants, toddlers, and preschool children with severe and multiple disabilities, including children with physical and sensory impairments, children with health impairments, and children with autism.

Also offered for undergraduate-levelcredit as SpEd 482 and may be taken only once fror credit.

SpEd 583 - Communication and Language Development: EI/SE (Early Intervention/Early Childhood Special Education) (3)

Designed to provide information about typical and atypical communication development, birth through early childhood. In addition, information will include strategies for EI/SE to promote communication development for all children. Expected preparation: SpEd $480 / \mathrm{SpEd} 580$ and admission to program.

Also offered for undergraduate-level credit as SpEd 483 and may be taken only once for credit. .

## SpEd 584 -Assessment: EI/SE (3)

Provides an overview of as sessment procedures in the field of early intervention/early childhood special education. These procedures include screening and testing using norm-referenced, criterion-referenced, curriculum-based, and observational methods. Reliability and validity of assessments are discussed in relation to standardized testing. Learners have the opportunity to observe and record the behaviors of young children. Assessment strategies such as arena assessment, play-based as sessment, parentreporting, and family interviewing. Emphas is on the assessment process for the young child and the family's role in the assessment of the young child with developmental delays or dis abilities.

## SpEd 585 - Instructional Strategies I: EI/SE (3)

Develops knowledge and practices for teaching and facilitating development of children with special needs,
birth through the primary grades. Builds upon the student's knowledge of child development and developmentally appropriate practices. Focuses upon the design of individually appropriate practices, principles of applied behavior analysis, activity-based intervention, naturalistic teaching strategies, dis crete trial teaching, and positive behavioral supports. Develops knowledge and skills for curriculum-based assessment, design of individual programplans, and use of data collection systems to monitor child progress.

## SpEd 586 - Instructional Strategies II: EI/SE (3)

Develops advanced knowledge and practices for teaching and facilitating development of children with special needs, birth through the primary grades. Builds upon the student's knowledgeof individually appropriate practice, applied behavior analysis, and design of individual and group plans for instruction. Develops knowledge and skills for implementation of specific strategies supported by current research and recommended practices, including strategies to support early relationships, peer interaction, social-emotional development, cognitive development, and early literacy.

## SpEd 587 - Introduction to Infant Toddler Mental Health (3)

Introductory course linking theory, research, and practice with interdisciplinary principles and collaboration. Key concepts of mental health of children (birth through 36 months) and their families including attachment, temperament, social-emotional development, context of family, culture and community, risk and resilience. Practices related to observation, screening, assessment, diagnosis; treatment.
Also offered for undergraduate-level credit as SpEd 487 and may be taken only once forcredit.

## SpEd 594 - Assessment Methods and Classification in Infant Mental Health (3)

Develop knowledge and skills to complete the as sessment process of infants, toddlers and their caregivers through multiple sources of information within a culturally relevant context. Topics include selection of tools and methods for information collection, methods for screening and as sessment, and use of classification systems within the mentalhealth system.

## SpEd 595 - Prevention and Intervention in Infant Mental Health (3)

Concepts of early intervention and prevention with the infant-toddler mental health perspective. Examines the range of interventions used in the field of infant mental
health. Emphas is on the importance of treating infants and toddlers in the context of their families and communities. Intervention strategies for those targeted at children with psychosocial/relational and developmental dis turbances as well as those determined to be at risk. Includes a review of international, national, and regional establis hed and pilot programs in early intervention and prevention. Assess and critically evaluate the current science around treatment efficacy of various interventions.

## SpEd 596 - Topics in Special Education Research (3)

Specialized topics in special education focused on the scientific process and the development of research-based practice. Research regarding theories, interventions, instructional strategies, curriculum, and assessment are examined for each topic. Sections address topics such as: Literacy, English Language Learners, Positive Behavior InterventionSupports and Students with Significant Dis abilities.

## SpEd 597 -Topics in Special Education Issues and Practices (3)

Specialized topics in special education focused on is sues and practices in the education of students with dis abilities. Current practices and issues, evidence-based practices, the use of research and assessment to understand problems, and the implementation and evaluation of interventions are examined for each topic. Topics such as the following are included: Literacy, English LanguageLearners, Positive Behavior Intervention Supports, Students with Significant Dis abilities.

## SpEd 601 -Research (1-9)

(Credit to be arranged.)

## SpEd 602 -Independent Study (1-9)

(Credit to be arranged.)

## SpHr - Speech \& Hearing Sci

SpHr 199 -Special Studies (0-15)
(Credit to be arranged.)

## SpHr 222 - Introduction to Speech, Language \& Hearing Sciences (4)

An overview of the field of speech, language and hearing sciences and its professions. Focus on the scientific bas is of speech production, hearing perception and speech acoustics. Foundational information regarding language science will also be addressed. Emphasis on the scientific analys is of speech and language, with an applied clinical focus.

## SpHr 262 - Voice and Diction (4)

Study and practice of principles of voice production and articulation of speech sound, with attention to elementary speech physiology and phonetics. Intended for students who desire to develop more effective speech and for meeting special needs of teachers, radio and television speakers, public speakers, and others who require special competence in speaking. Emphasis on both theory and practice. Two hours per week of laboratory work required.

SpHr 365U-Survey of Speech, Language, and Hearing Disorders (4)
Designed as an overview of speech, language, and hearing in children and adults. Topics to include: cleft palate, stuttering, hearing impairment, and multi-cultural differences. Recommended for general speech students.

## SpHr 370-Phonetics and Acoustics (4)

A study of sounds used in speech, their acoustic properties, and their transcription utilizing the IPA; description of sounds, their symbolic nature, their production, and physical and psychological problems involved in their perception. The acoustical bases of speech and hearing will also be addressed.

SpHr 371 - Anatomy and Physiology of Speech and Swallowing (4)

A study of the anatomy and physiology of the res piratory, phonatory, and articulatory systems for speech, with applications to speech disorders. The physiology of swallowing and s wallowing disorders is also covered.

## SpHr 372U- Speech and Language Development in Children (4)

Provides students with a foundation of knowledge regarding basic processes of language acquisition. In addition to the study of normal language development from a theoretical, developmental, and clinical perspective, related areas of study include cognition, social interactions, play, and literacy. Bilingual and multicultural is sues are also addressed.

## SpHr 385 - AutismSpectrum Disorders (4)

Examines current is sues related to diagnosis and intervention for children and adolescents with autism spectrumdis orders (ASD). It focuses on current research related to theories of development across varied domains (social and communicative, motor, sensory, cognitive and adaptive behaviors) and interdisciplinary practice for serving children with ASD.

## SpHr 394 - Guided Observation (1)

Designed to acquaint students with theclinical process in speech, language, and audiology cases. Students will observe phases of clinical operation including diagnostic management, parent conferencing, and material preparation.

## SpHr 395-Directed Clinical Assistantship (2)

Designed to acquaint pre-professional students with the direct management of speech, language, and hearing cases $n$ cooperation with advanced clinicians and under the direction of a qualified clinical supervisor. Students will participate in all phases of clinicaloperation, including scheduling, diagnostic management, parentconferencing, report writing, material preparation.
Prerequisite: SpHr 370 ; may be taken in conjunction with $\mathrm{SpHr} 494,495$ or 496.

SpHr 399 - Special Studies (0-15)
(Credit to be arranged.)

## $\mathbf{S p H r} 401$ - Research (0-15)

(Credit to be arranged.) Consent of instructor. Use 501 to register forcomprehensive exams.

## SpHr 402 -Independent Study (1-12)

(Credit to be arranged.)

## SpHr 404-Cooperative Education/Internship (1-15)

(Credit to be arranged.)

## SpHr 405 -Reading and Conference (0-15)

(Credit to be arranged.) Consent of instructor.

## SpHr 406-Special Projects (1-8)

(Credit to be arranged.) Consent of instructor.

## SpHr 407 -Seminar (0-15)

(Credit to be arranged.) Consent of instructor.

## SpHr 408 -Workshop(0-15)

(Credit to be arranged.)

## SpHr 409 - Practicum(0-12)

(Credit to be arranged.) Students must show proof of professional liability insurance.

## SpHr 410 -SelectedTopics (0-12)

(Credit to be arranged.)

## SpHr 432 - Alternative Medicine (4)

This course offers a general introduction to influential medical systems (i.e., Traditional Chinese Medicine, Western Homeopathy, Indian A yurveda, etc.) in the world that are emerging in the U.S. as alternative medicines to the conventional (or allopathic) biomedicine. For s enior level and graduate students of all majors who are interested in health and medicine, including those who are preparing for medical or allied health professions like speechlanguage pathology.

SpHr 452 -Screening in the Schools (1)
Students will participate, under supervision, in screening school-aged students for speech, language, and/or hearing disabilities.
Also offered for graduate-level credit as SpHr 552 .
Prerequisite: 25 clock hours of practicum.
SpHr 461 - Neurology of Speech and Hearing (4)
A course specifically designed for speech and hearing majors to provide a study in-depth of the neurology of the speech and hearing mechanisms with special attention given to the majordeviations affecting verbal communication.
Also offered for graduate-level credit as SpHr 561 and may be taken only once for credit.

## SpHr 463 - Language Dis orders in Children (4)

An overview of developmental language disorders in children. Dis orders will be presented in terms of etiology, incidence, and characteristics. Assessment is sues and treatment principles will be discussed.
Prerequisite: SpHr 372 U .

## SpHr 464 - Speech Disorders in Children (4)

Discussion of normal speech development andhow it can differ in individuals with speech disorders. Exploration of assessment, diagnosis, and treatment for speech disorders in children. Introduction to linguistic and cultural factors related to speech development and disorders, and to special populations with high incidence of speech disorders.

Prerequisite: $\mathrm{SpHr} 370,372$. .

## SpHr 465 - Introduction to Research Methods for Clinical Scientists (4)

Covers designs and data interpretation methods used in clinical research. Validity threats are highlighted and discussed in the context of clinical studies. Focus on application of research principles in the evaluation of journal articles, with the goal of enabling students to critically review the literature.
Prerequisite: Stat 244 or Soc 396 or equivalent.

## SpHr 471 -Neurolinguistics (4)

Neurolinguistics introduces the study of the relationship between linguistic processes and the human brain. Learn about language processing frompsychological and neurological perspectives. Expected preparation: Introductory understanding of linguistics and psychology is strongly recommended (Introduction to Linguistics and Introduction to Ps ychology).
Also offered for graduate-level credit as SpHr 571 and may be taken only once for credit. Prerequis ite: SpHr 461 or equivalent.

## SpHr 473 -Perspectives on Disability (4)

Introduces students to perspectives on dis ability and ableism. Students will examine definitions of dis ability and the history of disability, particularly as it relates to communication and clinical practice. We will investigate the influence of media on perceptions of disability and discuss how models of disability influence approaches to service provision, communication choice, intervention, and education. These issues will be examined within the framework of how ableis mhas evolved and is expressed within society.

Also offered for graduate-level credit as SpHr 573 and may be taken only onceforcredit. Prerequisite: Upper-division standing.

## SpHr 475 - Introduction to the Professions of SpeechLanguage Pathology and Audiology (4)

Overview of topics related to professional development in speech-language pathology and audiology, including profes sional behavior, ethical res ponsibility, scope of practice, interdisciplinary collaboration, professional affiliations, continuumof care, typical work settings, and applying to graduate schools.
Prerequisite: senior standing.

## SpHr 480 - Introduction to Sociocultural Aspects of Interactions (4)

Introduction to communication and interaction on context and influence of context on communication disorders. Explores situational, social-interpersonal, and cultural variables. Examines systems theory and cultural practices as they influence communication.
Prerequisite: must be junior, undergraduate, or postbaccalaureate status.

SpHr 485 -Bilingualismand Communication Disorders (4)

Introduction to typical bilingual/bicultural development and communication dis orders. Addresses language, cognitive and social-emotional characteristics of bilingual children and adults with communication dis orders. Discussions on clinical challenges and general as sessment and intervention approaches when working with bilinguals with communication dis orders in SpeechLanguage pathology. Students participate in small group and class discussions, review related literature and participate in small projects.
Prerequisite: SpHr 372 U .

## SpHr 487 -Hearing Sciences (4)

Introductory course in audiology emphasizing basic acoustics and psychoacoustics, anatomy and physiology of the ear, hearing meas urement, and types and causes of hearing impairment.

Prerequisite: upper-division standing.
SpHr 488-Clinical Audiology (4)
Introduction to the audiological test battery. Topics include bone-conduction, masking, speech audiometry, and objective tests. Auditory pathologies and their audiometric correlates are also covered.

Prerequisite: SpHr 487 ; may be taken concurrently .

## SpHr 489 - Aural Rehabilitation (4)

Theoretical course covering the role of speechreading (lip reading) and auditory training as it relates to speech, language, and communication. Historical perspectives and philosophies considered, communication systems, speech acoustics and perception, amplification and hearing aids, speech reading, and auditory training. Multicultural issues will be included. Expected preparation: $\mathrm{SpHr} 488 / \mathrm{SpHr}$ 588.

Also offered for graduate-level credit as SpHr 589 and may be taken only once for credit.

## SpHr 490 - Audiological Rehabilitation Clinic (2)

Supervised clinical practicumin the diagnosis and rehabilitation of children and adults with hearing disabilities; staff seminars in case dispositions. Maximum: 18 credits. Recommended prerequisite: $\mathrm{SpHr} 489 / 589$, 498/598.

Also offered for graduate-level credit as SpHr 590.
SpHr 491 - Principles of Behavior Analysis: Clinical Applications (4)
The aim of this course is to examine key principles of behavior, including: assessment, behavior modification, and measurement. While the course will discuss how principles of behavior can be applied across all populations, specific attention will be given to individuals with communication challenges and how to be meet the needs of individuals with such challenges. Prerequisite: Upper-division standing.
Prerequisite: Upper-division standing.

## SpHr 495 -Neurogenic Communication Dis orders (4)

Introduction to speech and language disorders with emphas is on acquired neurogenic disorders due to stroke, traumatic brain injury, and neurodegenerative disorders (e.g., aphasia, dysarthria, right hemis phere syndrome).

Prerequisite: SpHr 461.

## SpHr 496 - Introduction to Clinical Management (4)

Provides an introduction to assessment and management of diverse persons with communication disorders across the lifespan. Covers basic principles of assessment and intervention, evidence-based practices, and behavior management. Introduces terminology and basic techniques
for addressing speech, language, and hearing disorders, with special consideration of programdesign and delivery.

Prerequisite: SpHr 371, 372. Expected Preparation: SpHr 370.

SpHr 501 - Research (0-15)
(Credit to be arranged.) Consent of instructor. Use 501 to register for comprehensive exams.

SpHr 502 - Independent Study (1-12)
(Credit to be arranged.)

## SpHr 503 -Thesis (0-9)

Consent of instructor. Must register for minimum of 6 credits total, with at least 1 credit in term of defense. (Credit to be arranged.)

## SpHr 504 - Cooperative Education/Internship (0-15)

(Credit to be arranged.)

## SpHr 505 - Reading and Conference (0-9)

(Credit to be arranged.) Consent of instructor.

## SpHr 506 -Special Projects (1-8)

(Credit to be arranged.) Consent of instructor.

SpHr 507 -Seminar (0-15)
(Credit to be arranged.) Consent of instructor.

## SpHr 508-Workshop(0-15)

(Credit to be arranged.)

## SpHr 509-Practicum(1-12)

(Credit to be arranged) Restricted to SpHrgraduate students only. Students must show proof of professional liability insurance.

## SpHr 510 -SelectedTopics (0-15)

(Credit to be arranged.)

## SpHr 530 - Evidence-based Practices in Communication Disorders (4)

Focuses on theevidence-based practices of as sessment and intervention in communication differences and dis orders. Specifically, principles of static and dynamic as sessment, intervention planning and implementation, goal writing and data collection-across communities and developmental stages. Emphas izes diversity, equity, and contextual influences on communication and social interaction. Restricted to graduate students.

Prerequis ite: SpHr 370 and SpHr 463.

## SpHr 540 - Multicultural Topics in Communication Disorders (2)

Introduces topics of communication dis orders within the framework of culture and identity. Explores cultural attitudes and beliefs about communication and dis abilities, cultural differences and cultural identity. May not be repeated forcredit.

## SpHr 541 - Bilingual Topics in Communication Disorders (2)

Explores current topics within bilingual speech and language development and dis orders. Covers typical and atypical development within many areas of speech and language, diagnostic criteria for determining disability, and as sessment and intervention topics for children and adults from bilingual language backgrounds. Emphas is on Spanish-English bilingual populations.

## SpHr 545 - Pathways to Professional Practice (2)

Overview of topics related to professional practice of speech-language pathology: professional organization membership, certification, licensure, and ethical and legal responsibilities. Career development is sues: preparing for national exams; résumé writing, interviewing, and planning for the Clinical Fellowship; teamcollaboration; supervision; and reimbursement practices.

Prerequisite: SpHr 530.

## SpHr 546 - Professional Ethics (2)

Enhances student awareness of and knowledge about ethical principles that form the basis for the American Speech-Language-Hearing Association Code of Ethics. Explores complexity of professional practice of SLP that have ethical considerations. Includes weekly group discussion to engage in ethical diagnosis using clinical scenarios based on individuals with communication disorders.
Prerequisite: SpHr 530.

## SpHr 552 -Screening in the Schools (1)

Students will participate, under supervision, in screening school-aged students for speech, language, and/or hearing dis abilities.
Also offered for undergraduate-level credit as SpHr 452. Prerequisite: 25 clock hours of practicum.

SpHr 553 -Counseling in Communication Disorders (2)
Presents approaches to counseling with emphasis on and implications for developing effective working relationships with clients with communication dis orders and their families. Presents techniques for effective therapeutic interventions. Students will explore and apply current interviewing and counseling strategies used for as sessment, treatment, and intervention in the practice of speechlanguage pathology.

Prerequisite: SpHr 530.
SpHr 554 -Advanced Speech Sound Dis orders: Theories and Application (4)
Development and disorders of speech sound production, with particularemphas is on children. Phonological and phonetic theories used in understanding speech and speech sound development and disorders. Various means of assessing and providing intervention for speech sound dis orders, including childhood apraxia of speech. Restricted to graduate students.

## SpHr 555 -Assessment and Treatment of Dysphagiain Adults ()

Introduction to dysphagia and related disorders in adults. Covers the following topics: 1) anatomy and physiology of swallowing; 2) types of acquired dysphagia; 3) clinical swallowing examination; 4) common methods of instrumental swallowing examination, including radiographic studies, fiber-endoscopic examinations and manometry; and 5) Dys phagia Intervention.

## SpHr 556 - Assessment and Treatment of Dysphagiain Pediatrics ()

Introduction to dysphagia and related disorders in children. Covers the following topics: 1) anatomy and physiology of swallowing; 2) types of acquired dysphagia; 3) clinical swallowing examination; 4) common methods of instrumental swallowing examination, including radiographic studies, fiber-endoscopic examinations and 5) Dysphagia Intervention.

SpHr 558 -Symbol Systems in Early Communication (2)

Focuses on communication characteristics of individuals with severe communication dis orders and their use of augmentative and alternative communication to meet both pre-intentional and intentional and symbolic communication needs. Emphas is on holistic communication assessment methods and intervention strategies to enhancecommunication in children.
Prerequisite: SpHr 530.

## SpHr 559 - Augmentative and Alternative Communication (2)

Introductory course in augmentative and alternative communication (AAC) with a focus on manual and technological communication methods. Includes strategies for appropriate assessment of speech, language, cognitive, and sensory-motor skills, and addresses partner support requirements for AAC use. Students gain knowledge and skills for treating children, adolescents, and adults with moderate to severe developmental or acquired disorders in speech and language.
Prerequisite: SpHr 530 of permis sion frominstructor.

## SpHr 560 - Research Methods in Communication Sciences andDisorders (4)

Introduction to research methods in communication sciences and dis orders. Covers research strategies and designs commonly used in communication sciences and disorders, as well as methods used in the collection, analys is and interpretation of data. The course focuses on the application of research principles in the critical evaluation of journal articles and other research literature, with the goal ofenabling students to make informed decisions as to which developments in communication disorders should be applied to clinical practice. The principles and processes of evidence-based, clinical practice are emphasized.
Prerequisite: Stat 243, 244 or equivalent.

## SpHr 561 - Neurology of Speech and Hearing (4)

A course specifically designed for speech and hearing majors to provide a study in-depth of the neurology of the speech and hearing mech anisms with special attention given to the major deviations affecting verbal communication.
Also offered for undergraduate-level credit as SpHr 461 and may be taken only once for credit.

## SpHr 562-Cognitive Rehabilitation (4)

Discus ses causes, symptoms, prevention, assessment, and management of cognitive-communication dis orders following acquired brain injury across the lifes pan. Specific populations to be discussed include traumatic
brain injury, stroke, and the dementias. Places emphasis on evidence-based clinical reas oning and applying the W orld Health Organization model to clinical management in rehabilitation settings. Restricted to graduate students.

## SpHr 563 - Adult Language Disorders (4)

Presents theories of acquired language dis orders in adults specific to aphasia rehabilitation, including causes, symptoms, prevention, as sessment, and management of aphasia in adults. Emphas is is placed onevidence-based clinical reasoning and applying the W orld Health Organization model to clinical management in a variety of rehabilitation settings.
Prerequisite: SpHr 461 . Restricted to graduate students.
SpHr 564 -Medical Speech-Language Pathology I (2)
Addresses current topics related to practice of medical speech-language pathology in a variety of settings. Topics may include management of tracheostomy/ventilator dependence; medical terminology; medicalbilling, reporting, and appeals; interdis ciplinary models; evidencebased practices; common medications and their side effects; and other topics of contemporary interest to learners.

Prerequisite: $\mathrm{SpHr} 461, \mathrm{SpHr} 562$, and SpHr 563.

## SpHr 566-Motor Speech Disorders (4)

Discusses dis orders of speech sensorimotor production, including causes, symptoms, prevention, assessment, and management of acquired apraxia of speech and the dysarthrias across the lifespan. Emphas is placed on evidence-based clinical reas oning and apply ing the W orld Health Org anization model to clinical management in varied settings.
Prerequisite: SpHr 530.

## SpHr 567 - Cleft and Craniofacial Disorders (2)

Provides in-depth clinical management of children with cleft lip and palate and other craniofacial syndromes. Particular emphas is placed on identification, description, as essment, and treatment of speech production, feeding, and psychosocial development. Explores evidence-based models of teamcare, including the role of other medical profes sionals.
Prerequisite: $\mathrm{SpHr} 370, \mathrm{SpHr} 371, \mathrm{SpHr} 530$, and SpHr 554.

## SpHr 568 - Medical Speech Pathology II (2)

Covers advanced topics pertinent to as sessment and treatment of speech and swallowing in individuals with respiratory impairments in a medical setting. Topics will include pulmonary function and defenses, types of res piratory impairments, tracheostomy, mechanical
ventilation, and selected speech and swallowing interventions for individuals with res piratory impairments.

Prerequisite:For current students in the Speech-Language Pathology Graduate Program, completion of SpHr 564 Medical SpeechPathology I is required. For practicing community clinicians with a Masters degreeor higher, no prerequisite is required.

## SpHr 570 - Audiometric Practicum (2)

Supervised clinical practice designed for Speech and Hearing Science majors. Practical training in basic puretone and speech audiometry, including audiometric screening of children and adults.
Prerequisite: $\mathrm{SpHr} 488 / 588$.

## SpHr 571 - Neurolinguistics (4)

Neurolinguistics introduces the study of the relationship between linguistic processes and the human brain. Learn about language processing fromps ychological and neurological perspectives. Expected preparation: Introductory understanding of linguistics and psychology is strongly recommended (Introduction toLinguistics and Introduction to Psychology).
Also offered for undergraduate-level credit as SpHr 471 and may be taken only once forcredit.

SpHr 573 - Perspectives on Disability (4)
Introduces students to perspectives on disability and ableism. Students will examine definitions of dis ability and the history of disability, particularly as it relates to communication and clinical practice. We will investigate the influence of media on perceptions of dis ability and discuss how models of dis ability influence approaches to service provision, communication choice, intervention, and education. These is sues will be examined within the framework of how ableismhas evolved and is expressed within society.
Also offered for undergraduate-level credit as SpHr 473 and may be taken only once for credit.
SpHr 581 -Stuttering (3)
Covers disorders of fluency, including causes, symptoms, prevention, theories of stuttering, as sessment, and management of stuttering in pediatrics and adults. Emphasis is placed on evidence-based clinical reasoning and applying the W orld Health Organization model to clinical management in a variety of practical settings.
Prerequis ite: SpHr 530.

## SpHr 582 - Voice Dis orders (3)

Presents advanced information about the anatomy and physiology of normal and dis ordered voice production, including causes, symptoms, prevention, assessment, and
management of voice disorders across the lifes pan for org anic and functional voice disorders.

Prerequisite: SpHr 530.

## SpHr 584 - Assessment and Treatment of Language Disorders: Birth to Age Five (4)

Focuses on causation, evaluation, and management for addressing communication dis orders in infants, toddlers, and preschool children with multiple challenges; particular emphasis on emerging communication across multiple developmental domains, with family-centered, interdis ciplinary assessment and intervention. Alltopics target use of evidence-based practices and the influence of context on performance.

## SpHr 585 - Assessment and Treatment of Language Disorders in School-aged Children and Adolescents (4)

Includes static, dynamic, and curriculum-based communication assessment of language, learning, and communication disorders. Discusses relation between language and learning dis abilities, with focus on treatment of language-based dis orders of reading and writing. Intervention emphasizes interdisciplinary service delivery models. Topics target use of evidence-based practices and influence of context on performance.
Prerequisite: SpHr 584.
SpHr 586-Autism (2)
Investigates current is sues related to diagnosis and intervention for children and adolescents with autism spectrumdis orders (ASD). Focuses on current research related to theories of social, communication, motor, sens ory, cognitive, and adaptive behavior development. Emphas izes interdisciplinary nature of serving children with ASD. Restricted to graduate students.

## SpHr 587 - Advanced Topics in Literacy in Children with Language Impairments (2)

Current topics specific to literacy disorders in children and adolescents with language impairment and other communication disorders. Specific topics may include review of typical literacy development, classification of literacy dis orders, perspectives in teaching literacy, and as sessment and intervention in areas including decoding, spelling, reading comprehension, digital literacy and written language.
Prerequisite: SpHr 585.

## SpHr 588 - Advanced Ass essment and Intervention for

 Bilinguals (2)This course is focused on clinical language assessment and intervention for bilingual, bicultural, and non-mainstream
populations within the field of speech-language pathology. Students learn how to select, administer and synthesize results fromvarious assessment tools (e.g., standardized normed-referenced, criterion-referenced tests, dynamic as sessment and parent interviews) to diagnose or rule out language impairment in bilinguals. Intervention goals and models are also addressed. While the course addresses several languages and cultures, it focuses on general principles.

## SpHr 589 - Aural Rehabilitation (4)

Theoretical course covering the role of speechreading (lip reading) and auditory training as it relates to speech, language, and communication. Historical perspectives and philosophies considered, communication systems, speech acoustics and perception, amplification and hearing aids, speech reading, and auditory training. Multicultural issues will be included. Expected preparation: $\mathrm{SpHr} 488 / \mathrm{SpHr}$ 588.

Also offered for undergraduate-level credit as SpHr 489 and may be taken only once for credit.

## SpHr 590 - Audiological Rehabilitation Clinic (2)

Supervised clinical practicumin the diagnosis and rehabilitation of children and adults with hearing disabilities; staff seminars in case dispositions. Maximum: 18 credits. Recommended prerequis ite: $\mathrm{SpHr} 489 / 589$, 498/598.
Also offered for undergraduate-level credit as SpHr 490.
SSc - Social Science: General
SSc 299 -Special Studies (1-6)
(Credit to be arranged.)

## SSc 601-Research (1-9)

(Credit to be arranged.)

## SSc 602 - Independent Study (1-9)

(Credit to be arranged.)

## SSc 603-Thesis (1-9)

(Credit to be arranged.)

## SSc 604-Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## SSc 605 -Reading and Conference (1-9)

(Credit to be arranged.)

## SSc 606-Special Problems/Projects (1-9)

(Credit to be arranged.)

## SSc 607-Seminar (1-9)

(Credit to be arranged.)

## SSc 608-Workshop(1-9)

(Credit to be arranged.)

## SSc 609-Practicum(1-9)

(Credit to be arranged.)

## SSc 610-SelectedTopics (1-9)

(Credit to be arranged.)

## Stat - Statistics

## Stat 105 -Eementary Data Analysis (4)

A course in exploration of data analysis and basic statistical topics. May include descriptives tatistics, graphical and tabular summaries, computer software, confidence intervals, correlation and regression.
Prerequisite: Completion of Mth 95 with a grade of C- or above within the last year, or passing at the necessary level on the mathematics placement test within the last year(see Math Department webpage at mth.pdx.edu for information).

Stat 199 -Special Studies (1-4)
(Credit to be arranged.)

## Stat 241 - Application of Statistics for Business (4)

Introduction of statistical analysis as partof management practice. Content includes statistical analysis, theoretical foundations and tools, as they relate to the application of statis tics to problemsolving in uncertain business environments. Emphasizes application of statistical tools to real world datasets and ability of students to make managerial recommendations.

Prerequisite: Completion of Mth 95 with a grade of C- or above within the last year, or passing at the necessary level
on the mathematics placement test within the last year (see Math Department webpageat mth.pdx.edu for information).

## Stat 243 - Introduction to Probability and Statistics I

 (4)A bas ic course in statistical analysis including presentation of data, descriptive statistics, probability, probability distributions, sampling distributions, es timation, and use of statistical computer packages. A broad nontechnical survey designed primarily for non-math students who need to utilize the subject in theirown fields. Not approved for major credit. This is the first course in a sequence of two: Stat 243 and Stat 244 which must be taken in sequence.
Prerequisite: Completion of Mth 095 with a grade of C- or above within the last year, or pas sing at the necessary level on the mathematics placement test within the lastyear (see Math Department webpageat mth.pdx.edu for information).

Stat 243R-Recitation for Stat 243 (0)
Recitation forStat 243.
Corequisite:Stat 243.

## Stat 244 - Introduction to Probability and Statistics II

 (4)A basic course in statistical analysis including estimation, tests of significance, experimental design and analysis of variance, linear regression and correlation, nonparametric statistics, selected topics, applications, and use of statistical computer packages. A broad nontechnical survey designed primarily for non-math students who need to utilize the subject in theirown fields. Not approved for major credit. This is the second course in a sequence of two: Stat 243 and Stat 244 which must be taken in sequence.

Prerequisite: Stat 243.
Stat 244R-Recitation for Stat 244 (0)
Recitation forStat 244.
Corequisite: Stat 244.
Stat 299 -Special Studies (1-4)
(Credit to be arranged.)

## Stat 351 - Probability and Statistics for Hectrical and Computer Engineering (4)

An introduction to applied probability, statistics, and data analys is. Sample spaces, probability laws, discrete and continuous probability models, sampling theory, point and interval estimation, hypothesis testing, regression, correlation, experimental design, analysis of variance, computer simulation and computation in Matlab.

Applications to problems of current interest to electrical and computer eng ineers.

Prerequisite: Mth 252.

## Stat 353 - Exploratory Data Analysis and Statistics for Mechanical and Materials Engineering (4)

A statistics course with the main emphasis on understanding data frommechanicalengineering applications. Computer-based methods and the R software are used extensively. Descriptive statistics, probability and Bayes' Rule are introduced. Formal inference and hypothesis testing are presented with methods of regression and analysis of variance.
Prerequisite: Mth 252.

## Stat 361 - Introduction to Statistical Methods (4)

Calculus-based introductory statistics course. Introduction to probability concepts (random variables, probability distributions, expectation, variance, covariance) and statistical concepts (fundamental sampling distributions and data descriptions, one-sample estimation and testing problems).

Prerequisite: Mth 252.
Stat 363 -Statistical Computing and Data Visualization in $R$ (4)

Provides an introductory survey of methods in R, RStudio and R Markdown to process, manipulate, analyze, and visualize data; as well as to generate reproducible reports from a data driven analysis. Expected preparation: Prior programming experience is helpfulbut not required. We will be using the R language in RStudio and R Markdown for ease of exposition.
Prerequisite: Stat 361.

## Stat 364 - Modern Regression Analysis (4)

Foundations of statistical regression modeling and applications. Focus on application of statistical models. Topics include linear regression, multiple linear regres sion, model diag nosis, model selection and validation, and inference.

Prerequisite: Mth 343 and Stat 363.

## Stat 366 - Introduction to Experimental Design (4)

Nonparametric statistics, multiple regression, topics in experimental design analysis of variance, factorial designs, analys is of covariance, other designs.
Prerequisite: Stat 244.

## Stat 387 - Introduction to Statistical Learning (4)

Provides an introduction to the techniques of statistical learning, including assessing model accuracy, linear regression in high dimension, binary and multi-ary
classification, re-sampling methods, tree-based methods and neural networks.

Prerequisite: Stat 364.

## Stat 399-Special Studies (1-6)

(Credit to be arranged.)

## Stat 401 - Research (1-6)

(Credit to be arranged.) Consent of instructor.

## Stat 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

Stat 405 - Reading and Conference (1-8)
(Credit to be arranged.) Consent of instructor.

## Stat 407 -Seminar (1-4)

(Credit to be arranged.) Consent of instructor.

## Stat 409 - Practicum (1-12)

(Credit to be arranged.)

## Stat 410 -SelectedTopics (1-8)

(Credit to be arranged.) Consent of instructor.

## Stat 451 - Applied Statistics for Engineers and Scientists I(4)

Sample spaces, probability, counting measures, discrete and continuous probability models, sampling theory, and computer applications. This is the first course in a sequence of two: Stat 451 and Stat 452 and must be taken in sequence.

Also offered for graduate-level credit as Stat 551 and may be taken only once for credit. . Prerequisite: Mth 252 .

## Stat 452 - Applied Statistics for Engineers and Scientists II (3)

Point and interval estimation, hypothesis testing, regression, correlation, experimental design, analysis of variance, multivariable experiments, nonparametrics, statistical quality control, and computer applications. This is the second coursein a sequence of two: Stat 451 and Stat 452 and must be taken in sequence.

Also offered for graduate-level credit as Stat 552 and may be taken only once for credit. . Prerequisite: Stat 451.

## Stat 461 - Introduction to Mathematical Statistics I(3)

Theory of probability, distribution of random variables, expectation and bivariate distributions. This is the first course in a sequenceof three: Stat 461, Stat 462, and Stat 463 which must be taken in sequence. Expected preparation: MTH253.
Prerequisite: Mth 254 and Mth 261 or equivalent.

## Stat 462 - Introduction to Mathematical Statistics II (3)

Functions of randomvariables - one dimensional and higher dimens ional, s ampling dis tributions, Central Limit Theorem, point and interval estimation. This is the second course in a sequenceof three: Stat 461, Stat 462, and Stat 463 which must be taken in sequence.

Prerequisite: Stat 461 or equivalent.

## Stat 463 - Introduction to Mathematical Statistics III (3)

Testing of hy potheses, analy sis of variance, analysis of categorical data, introduction to regression and correlation and nonparametric tests. This is the third course in a sequence of three: Stat 461 , Stat 462 , and Stat 463 which must be taken in sequence.

Prerequisite: Stat 462 or equivalent.

## Stat 464 - Applied Regression Analysis (3)

Basic concepts of regression analysis, matrix approach to linear regression selecting the ?best? regression equation, and multiple regression. Computational algorithms and computer software regression packages. Applications in science, en gineering, and business.

Also offered for graduate-level credit as Stat 564 and may be taken only once for credit. . Prerequisite: Mth261 and eitherStat 451/Stat 551 or Stat 461/Stat 561.

## Stat 465 - Experimental Design: Theory and Methods I (3)

A theoretical and applied treatment of experimental design; analys is of variance, checking model adequacy; block designs; Latin squares; factorial designs; fractional factorial designs. All sections will illustrate real world applications with computer usage. This is the first course in a sequence of two: Stat 465 and Stat 466 which must be taken in sequence.
Also offered for graduate-level credit as Stat 565 and may be taken only oncefor credit. .Prerequisite: Stat 464/Stat 564.

## Stat 466 - Experimental Design: Theory and Methods II (3)

A theoretical and applied treatment of experimental design; fixed and randomeffects models; split-plot designs; nested designs; relation to regression analysis; analysis of covariance. All sections will illustrate real world applications with computer usage. This is the second course in a sequence of two: Stat 465 and Stat 466 which must be taken in sequence.
Also offered for graduate-level credit as Stat 566 and may be taken only once for credit. . Prerequisite: Stat 465/Stat 565.

## Stat 467 - Applied Probability I (3)

Basic concepts of probability, conditional probability, conditional expectation, dis crete-time Markov chains, branching processes, Poisson processes. This is the first course in a sequence of two: Stat 467 and Stat 468 which must be taken in sequence.
Also offered for graduate-level credit as Stat 567 and may be taken only once for credit. . Prerequisite: Stat 461/Stat 561 or Stat 451/Stat 551.

## Stat 468 - Applied Probability II (3)

Continuous-time Markov chains, birth and death processes, queues and inventory, renewal processes. This is the second course in a sequence of two: Stat 467 and Stat 468 which must be taken in sequence.
Also offered for graduate-level credit as Stat 568 and may be taken only once for credit. . Prerequisite: Stat 467.

## Stat 470 -Statistical Consulting (1-3)

Introduction to techniques and methods of statistical consulting. Faculty supervised consulting sessions with clients on appropriate projects brought to the Statistics Consulting Laboratory. Data and/or statistical problems, from within and outside the University, are provided by clients and interdisciplinary guest lecturers. Introduction to and proficiency with various statistical computing packages as dataanalytic tools. A community -based learning course.
Also offered for graduate-level credit as Stat 570 and may be taken only once for credit.

Stat 501 - Research (1-6)
(Credit to be arranged.) Consent of instructor.

## Stat 504 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Stat 505 - Reading and Conference (1-12)

(Credit to be arranged.) Consent of instructor.

## Stat 507 -Seminar (1-4)

(Credit to be arranged.) Consent of instructor.

## Stat 510 -SelectedTopics (1-8)

(Credit to be arranged.) Consent of ins tructor.

## Stat 543 - Survey of Statistical Methods (4)

An introductory, discipline-neutral course in statistical analys is to prepare graduate students for research methods courses in other departments. Topics include descriptive statistics, confidence intervals, hypothesis tests, regression and correlation, analysis of variance, chisquared tests, and use of statistical software.

## Stat 551 - Applied Statistics for Engineers and Scientists I(4)

Sample spaces, probability, counting measures, discrete and continuous probability models, sampling theory, and computer applications. This is the first course in a sequence of two: Stat 551 and Stat 552 and must be taken in sequence.
Also offered for undergraduate-level credit as Stat 451 and may be taken only once for credit. . Prerequisite: Mth 252.

## Stat 552 - Applied Statistics for Engineers and Scientists II (3)

Point and interval estimation, hypothesis testing, regression, correlation, experimentaldesign, analysis of variance, multivariable experiments, nonparametrics, statisticalquality control, and computer applications. This is the second course in a sequence of two: Stat 551 and Stat 552 and must be taken in sequence.
Also offered for undergraduate-level credit as Stat 452 and may be taken only once for credit. . Prerequisite: Stat 551.

## Stat 561 - Mathematical Statistics I (3)

Provides a foundation in the theory and methods of statistical inference. Topics include foundations of probability, randomvariables and distribution functions, moment generating functions, and common families of distributions. This is the first course in a sequence of three: Stat 561 , Stat 562 , and Stat 563 which must be taken in sequence.
Prerequisite: Stat 462 or equivalent.

## Stat 562 - Mathematical Statistics II (3)

Provides a foundation in the theory and methods of statistical inference. Topics include multivariate distributions, transformmethods, conditional dis tributions, covariance, distributions of sample statistics, and convergence theorems. This is the second course in a sequence of three: Stat 561, Stat 562, and Stat 563 which must be taken in sequence.
Prerequisite: Stat 561.

## Stat 563 - Mathematical Statistics III (3)

Provides a foundation in the theory and methods of statistical inference. Topics include point estimation, evaluating estimators, hypothesis testing, confidence intervals, and as ymptotic results for statistical tests. This is the third course in a sequence of three: Stat 561, Stat 562, and Stat 563 which must be taken in sequence.
Prerequisite: Stat 562.

## Stat 564 - Applied Regression Analysis (3)

Basic concepts of regression analysis, matrix approach to linear regression selecting the "best" regression equation, and multiple regres sion. Computational algorithms and computer s oftware regression packages. Applications in science, engineering, and business.
Also offered for undergraduate-level credit as Stat 464 and may be taken only once for credit. . Prerequisite: Mth 261 and either Stat 451/Stat 551 or Stat 461/Stat 561.

## Stat 565 - Experimental Design: Theory and Methods I (3)

A theoretical and applied treatment of experimental design; analys is of variance, checking model adequacy; block designs; Latin squares; factorial designs; fractional factorial designs. All sections will illustrate real world applications with computer usage. This is the first course in a sequence of two: Stat 565 and Stat 566.
Also offered for undergraduate-level credit as Stat 465 and may be taken only once for credit. . Prerequisite: Stat 464/Stat 564.

## Stat 566 - Experimental Design: Theory and Methods II (3)

A theoretical and applied treatment of experimental design; fixed and randomeffects models; split-plot designs; nested designs; relation to regression analysis; analysis of covariance. All sections will illustrate real world applications with computer usage. This is the second course in a sequence of two: Stat 565 and Stat 566.
Also offered for undergraduate-level credit as Stat 466 and may be taken only once for credit. . Prerequisite: Stat 465/Stat 565.

## Stat 567 - Applied Probability I (3)

Basic concepts of probability, conditional probability, conditional expectation, dis crete-time Markov chains, branching processes, Pois son processes. This is the first course in a sequenceof two: Stat 567 and Stat 568 which must be taken in sequence.

Also offered for undergraduate-levelcredit as Stat 467 and may be taken only once for credit. . Prerequisite: Stat 461/Stat 561 or Stat 451/Stat 551.

## Stat 568 - Applied Probability II (3)

Continuous-time Markov chains, birth and death processes, queues and inventory, renewal processes. This is the second course in a sequence of two: Stat 567 and Stat 568 which must be taken in sequence.

Also offered for undergraduate-level credit as Stat 468 and may be taken only once for credit. . Prerequisite: Stat 567.

## Stat 570 - Statistical Consulting (1-3)

Introduction to techniques and methods of statistical consulting. Faculty supervised consulting sessions with clients on appropriate projects brought to the Statistics Consulting Laboratory. Dataand/orstatistical problems, from within and outside the University, are provided by clients and interdisciplinary guest lecturers. Introduction to and proficiency with various statistical computing packages as data analytic tools. A community-based learning course.
Also offered for undergraduate-level credit as Stat 470 and may be taken only once for credit.

## Stat 571 - Applied Multivariate Statistical Analysis (3)

Introduction to techniques and methods of multiv ariate statistical analysis. Deals with vector-valued data generated on individual experimental units. Applies the methods of vector analysis and matrix algebra to statistical problems of estimation and hypothesis testing, based primarily on the multivariate normal distribution. Computing to be an integral part of the course. Calculations will be done using a software package such as SAS or SPSS. Recommended prerequisites: Stat 244, Mth 254, and Mth 261.

## Stat 572 - Bayesian Statistics (3)

Modern applied Bayesian methods including Markov Chain Monte Carlo methods for analyzing multivariate posterior distributions. Computing will be done primarily in R using standard libraries for sampling.
Prerequisite: Stat 561 or instructor approval.
Stat 573 - Computer Intensive Methods in Statistics (3)
Resampling methods in statistics using empirical data, programming with statistical software, review materials
(sampling dis tributions, hypothesis testing, confidence interval construction, and design of experiments), resampling version of review materials, and applications. Expected preparation: Stat 452/Stat 552 or Stat 466/Stat 566.

## Stat 576 - Sampling Theory and Methods (3)

Introduction to the theory and methodology of random sampling. Includes stratified, cluster, systematic, and multi-s tage sampling. Applications include sampling design and analysis, as well as sample weighting and sampling with unequal probabilities. Expected preparation: Stat 451/Stat 551.

## Stat 577 - Categorical Data Analysis (4)

Topics include cross-tabulation statistics for matched samples, and methods to assess confounding and interaction via stratified tables. Students explore logistic regression in some detail, and relate results back to those found with stratified analyses. Topics for logis tic regression will include: parameter interpretation, statistical adjustment, variable selectiontechniques, and modelfit as sessment. Statistical software is used. Expected preparation: Stat 452/Stat 552.

## Stat 578 -Survival Analysis (3)

Time-to-event data subject to randomand/or deliberate censoring. Specialized models and procedures that accommodate censoring are presented. Parametric models and methods, including accelerated failure time models, the Kaplan-Meier estimateof survival, Coxproportionate hazards model, the extended Cox model, and frailty models. Software package such as S-PLUS is used. Expected preparation: Stat 452/Stat 552.

## Stat 580 - Nonparametric Methods (3)

Focus on standard nonparametric methods useful for the analys is of experimental data with minimal model as sumptions. Topics include one and two-sample problems, one and two-way analysis of variance, multiple comparis ons, rank correlation, estimation and confidence intervals, theory of U-s tatistics, permutation tests, Bootstrap, Monte Carlo powersimulation studies.
Prerequisite: Stat 562 or with the approval of the Instructor.

## Stat 601 - Research (1-9)

(Credit to be arranged.)

## Stat 604 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## Stat 605 - Reading and Conference (1-8)

(Credit to be arranged.)

## Stat 607-Seminar (1-4)

(Credit to be arranged.)

## Stat 610 -SelectedTopics (0-4)

(Credit to be arranged.)

## Stat 661 - Advanced Mathematical Statistics I(3)

Theory of estimation; tests of statistical hypotheses. Single and multi-parameter cases. Robustness. Classical notions, including lower bound theory, sufficiency, and maximum likelihood estimation. The Neyman-Pearson construction, likelihood ratio tests, robust analogues. Recommended prerequisites: Mth511, Stat 563.

## Stat 662 - Advanced Mathematical Statistics II (3)

Theory of estimation; tests of statistical hypotheses. Single and multi-parameter cases. Robustness. Classical notions, including lower bound theory, sufficiency, and maximum likelihood estimation. The Neyman-Pearson construction, likelihood ratio tests, robust analogues. Recommended prerequisites: Mth511, Stat 563.

## Stat 663 - Advanced Mathematical Statistics III (3)

Theory of estimation; tests of statistical hypotheses. Single and multi-parameter cases. Robustness. Classical notions, including lower bound theory, sufficiency, and maximum likelihood estimation. The Neyman-Pearson construction, likelihood ratio tests, robust analogues. Recommended prerequisites: Mth511, Stat 563.

## Stat 664 - Theory of Linear Models I (3)

Multivariate normal distribution; moments and characteristic functions; noncentral Chi-square and noncentral F distributions; dis tribution of quadratic forms; estimation and distribution of estimators; principles of maximum likelihood and least squares; confidence regions and tests of hypotheses; regression models; Wishart dis tribution; Hotelling's T2 statistic. This is the first course in a sequence of three: Stat 664, Stat 665, and Stat 666
which must be taken in sequence. Recommended prerequisite: Stat 563.

## Stat 665 - Theory of Linear Models II (3)

Multivariate normal distribution; moments and characteristic functions; noncentral Chi-square and noncentral $F$ distributions; distribution of quadratic forms; estimation and dis tribution of estimators; principles of maximum likelihood and least squares; confidence regions and tests of hypotheses; regression models; Wishart distribution; Hotelling's T2 statistic. This is the second course in a sequence of three: Stat 664, Stat 665, and Stat 666 which must be taken in sequence. Recommended prerequisite: Stat 563.

## Stat 666 - Theory of Linear Models III (3)

Multivariate normal distribution; moments and characteristic functions; noncentral Chi-square and noncentral $F$ distributions; distribution of quadratic forms; estimation and dis tribution of estimators; principles of maximum likelihood and least squares; confidence regions and tests of hypotheses; regression models; Wishart distribution; Hotelling's T2 statistic. This is the third course in a sequence of three: Stat 664, Stat 665, and Stat 666 which must be taken in sequence. Recommended prerequisite: Stat 563.

## Stat 671 - Statistical Learning I(3)

Bayesian theory of classification, the bias/variance tradeoff, linear and quadratic discriminant analysis, Bayesian logistic regression, neural networks, Gaussian processes and structured learning. This is the first course in a sequence of three courses on Statistical Learning: Stat 671, Stat 672, Stat 673.

Prerequisite: Stat 561 and Stat 562 and Stat 563.
Stat 672 - Statistical Learning II (3)
Bayesian networks, k-means, mixture models, the expectation maximization algorithm, Markov random fields, Gibbs distributions, belief propagation algorithms, variational inference, Markov chain Monte Carlo. This is the second course in a sequence of three courses on StatisticalLearning: Stat 671, Stat 672, Stat 673.
Prerequisite: Stat 561 and Stat 562 and Stat 563.
Stat 673 -Statistical Learning III (3)
This sequence is designed for graduate students in Math/Stat or Engineering. The focus of this third course is research topics in statistical learning to be determined each time this course is taught. This is the third course in a
sequence of three courses on Statistical Learning: Stat 671, Stat 672, Stat 673.

Prerequisite: Stat 561 and Stat 562 and Stat 563.

## Swah - Swahili

These courses are currently inactive and the department is not planning offer themthis year.

## Swah 101 - First-Year Swahili Term1 (4)

Introduction to elementary Swahili. Emphasis on listening comprehension, and oral practice, the elements of grammar, vocabulary building, andelementary readings. This is the first course in a sequence of three: Swah 101, Swah 102, and Swah 103.

## Swah 102 -First-Year Swahili Term 2 (4)

Introduction to elementary Swahili. Emphasis on listening comprehension, and oral practice, the elements of grammar, vocabulary building, and elementary readings. This is the second course in a sequence of three: Swah 101, Swah 102, and Swah 103.

## Swah 103 -First-Year Swahili Term 3 (4)

Introduction to elementary Swahili. Emphasis on listening comprehension, and oral practice, the elements of grammar, vocabulary building, andelementary readings. This is the third course in a sequence of three: Swah 101, Swah 102, and Swah 103.

## Swah 201 -Second-Year S wahili Term 1 (4)

Intensive review of basic materials introduced in first year programand further development of communication skills. This is the first course in a sequence of three: Swah 201, Swah 202, and Swah 203. Expected preparation: Swah 103.

## Swah 202 -Second-Year S wahili Term 2 (4)

Intensive review of basic materials introduced in first year programand further development of communication skills. This is the second course in a sequence of three: Swah 201, Swah 202, and Swah 203. Expected preparation: Swah 103.

## Swah 203 -Second-Year S wahili Term 3 (4)

Intensive review of basic materials introduced in first year programand further development of communication skills. This is the third course in a sequence of three: Swah 201,

Swah 202, and Swah 203. Expected preparation: Swah 103.

## Swah 301 - Third-Year Swahili (4)

Focus on acquisition of vocabulary, practical application. Intensive practice in speaking, listening, reading, and writing. This is the first course in a sequence of three: Swah 301, Swah 302, and Swah 303. Expected preparation: Swah 203.

## Swah 302 - Third-Year Swahili (4)

Focus on acquisition of vocabulary, practical application. Intensive practice in speaking, listening, reading, and writing. This is the second course in a sequence of three: Swah 301, Swah 302, and Swah 303. Expected preparation: Swah 203.

## Swah 303 - Third-Year Swahili (4)

Focus on acquisition of vocabulary, practical application. Intensive practice in speaking, listening, reading, and writing. This is the third course in a sequence of three: Swah 301, Swah 302, and Swah 303. Expected preparation: Swah 203.

## Swah 330 - Topics in East African Culture and Civilization (4)

A study of literary forms, theories, and analysis of texts in their socio-cultural contexts. Topics include: Oral literature, folklore, short stories, traditions and modernity, and biographies. Conducted in English.

## Swah 331 -Language, Literacy and Leadership: A Community BasedLearning Course (4)

Students learn by helping students fromother cultures (e.g. Swahili) succeed in the US. Through classroomstudy and community involvement, students obtain knowledge and skills applicable to societalproblems. Students will tutor individuals and small groups while gaining an understanding of other communities and their challenges.

## Swah 399 - Special Studies (1-6)

(Credit to be arranged.)

## Swed - Swedish

## Swed 101 -First-Year Swedish Term 1 (4)

Beginning Swedish. Emphasis on communication skills: listening, speaking, reading, writing. This is the first course in a sequence of three: Swed 101, Swed 102, and Swed 103.

## Swed 102 -First-Year Swedish Term 2 (4)

Beginning Swedish. Emphasis on communication skills: listening, speaking, reading, writing. This is the second course in a sequenceof three: Swed 101, Swed 102, and Swed 103.

## Swed 103 -First-Year Swedish Term 3 (4)

Beginning Swedish. Emphasis on communication skills: listening, speaking, reading, writing. This is the third course in a sequenceof three: Swed 101, Swed 102, and Swed 103.

## Swed 199 -Special Studies (1-5)

(Credit to be arranged.)

## Swed 201 -Second-Year Swedish Term 1 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is the first course in a sequence of three: Swed 201, Swed 202, and Swed 203. Recommended prerequisite: Swed 103.

## Swed 202 -Second-Year S wedish Term 2 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is the second course in a sequence of three: Swed 201, Swed 202, and Swed 203. Recommended prerequisite: Swed 103.

## Swed 203 -Second-Year Swedish Term 3 (4)

Intensive review of basics introduced in first-year courses and further development of communication skills. This is the third course in a sequence of three: Swed 201, Swed 202, and Swed 203. Recommended prerequisite: Swed 103.

## Swed 299 - Special Studies (1-5)

(Credit to be arranged.)

## SW - Social Work

## SW 301U- Introduction to Social Work (4)

This course introduces the student to the profession of social work and the field of social welfare through a historical lens. This course provides the student with the foundational language, principles of social work and introduces the student to the BSW Program. It will include introduction and overview of the knowledge, values, and skills of becoming a professional generalist social worker.

## SW 320U- Introduction to Child Welfare (4)

An overview of the child welfare systems. Introduction to the identification, treatment of child abuse and neglect. Present his torical and current development of child welfare systems in the United States, discussion of the key practice considerations human service professionals working with maltreated children and their families address.

## SW 339 - Introduction to Oppression and Privilege (4)

Introduction and exploration of diversity, oppression and privilege frameworks; intersectionality regarding the dynamics of race, ethnicity, gender, sexual orientation, religion, (dis) ability status, and class. The course will focus on theory, knowledge, values, and beginning skills to work with individuals in the area of socialjustice and social work. The course will have relevant knowledge, values, and skills pertaining to acquiring theBASW.

Prerequisite: Admis sion to major.

## SW 340 - Advocacy for Policy Change (4)

Current structures and history of social welfare policies and services will be examined, and students will be engaged in policy practice to advance social and economic well-being of families, groups and communities.
Prerequisite: Admis sion to major, junior standing, SW 339.

## SW 341 -Social Justice Practice (4)

Engages in generalist social work policy practice to advance social and economic well-being and to deliver effective social work services through the lens of social justice.
Prerequisite: admis sion to major; junior standing; SW 339, SW 340, SW 350.

## SW 350 - Human Behavior Through the Lifespan (4)

Theoretical and conceptual foundations of working with individuals and families throughoutthe lifespan in profes sional and community settings. His torical and sociopolitical is sues will be integrated with theory to prepare beginning generalist social workers for effective practice in a variety of contexts.
Prerequisite: Admission to the major, junior standing, SW 339.

## SW 351 -Social Work Practice I (4)

This is the first course in a four-course sequence, Social Work Practice I-IV, which prepares students to work with individuals, families, groups, and communities. Successful completion of this course is required for students to enter a field placement in their senior year (SW 400).

Prerequisite: SW 339, SW 340, SW 350.

## SW 375 - Intimate Partner Violence: Theories \& Practices (4)

Introduces theories, interventions, res earch, and complex is sues associated with intimate partner violence (IPV). Survey popular/unpopular theories used to understand and explain IPV. Explores range of interventions targeting individuals communities used by diverse stakeholders. While most IPV interventions engaged by soc serv providers target micro practice, students will explore the intersections of micro macro violence to betterunderstand the influence of state and structural violence on the lives of individuals communities, particularly those from racialized groups.

## SW 384U- Addictions and Recovery: Impact on Families and Communities (4)

The impact of addictions will be addressed through the literature and practices of psychology, sociology, medicine, and social work. We will explore the definitions of substance abuse and paths to recovery mediated by the influence of social, cultural, and political forces impacting individuals, families, and communities.
Prerequisite: Upper-division standing.
SW 399 -Special Studies (1-4)
(Credit to be arranged.)

## SW 399U- Special Studies (4)

(Credit to be arranged.)

## SW 400 - Field Placement and Seminar I-III (4)

This course is the 9-month agency-based field placement and concurrent field seminar where students apply generalist social work knowledge, values, and develop generalist social work skills. The supervised field placement and weekly field seminar facilitate a student's application of social work practice skills, the integration of theoretical content and the development of critical thinking skills. This course is a core component of the BSW curriculum, allowing students to apply knowledge gained in their social work courses in real world practice settings.

Corequisite: Corequisites: SW 430, SW 431 and SW 432.

## SW 401 - Research (1-12)

(Credit to be arranged.)

SW 402 - Independent Study (1-12)
(Credit to be arranged.)

## SW 403 - Thesis (1-4)

(Credit to be arranged.)

## SW 404 - Internship(1-8)

Contact the department for a description for this course.

## SW 405 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

SW 406-(1-12)

## SW 407 -Seminar (1-6)

(Credit to be arranged.) Consent of instructor.

## SW 409 - Practicum(1-12)

(Credit to be arranged.)

## SW 410 -Selected Topics (1-6)

(Credit to be arranged.)

## SW 416-Motivational Interviewing (4)

Hands on practice intensive course teaches the central theoretical and empirical tenets of Motivational

Interviewing (MI), as wellas the clinical skills neces sary to deliver the intervention to a wide range of clients in diverse settings. Students will learn and practice both the spirit and techniques of motivational interviewing.
Prerequisite: Upper Division or Post-Bac standing.

## SW 430 -Social Work Practice II (3)

This is the second course in a four-course sequence, Social Work Practice I-IV, which prepares students to work with individuals, families, groups, and communities. BSW students take this sequence concurrently with their field placement.

Prerequisite: Admission to the major and SW 351. Corequisite: SW 400.

## SW 431 -Social Work Practice III (3)

The third course in a four-course sequence, Social Work Practice I-IV, which prepares students to work with individuals, families, groups, and communities. BSW students take this sequence concurrently with their field placement.

Prerequisite: SW 351 and SW 430. Corequisite: SW 400.

## SW 432 -Social Work Practice IV (3)

This is the fourth course in a four-course sequence, Social Work Practice I-IV, which prepares students to work with individuals, families, groups, and communities. BSW students take this sequence concurrently with their field placement.

Prerequisite: SW 431. Corequisite: SW 400.
SW 441 -Ps ychobiology for Social Workers (3)
Provides baccalaureate level social workers with a bas ic understanding of biological concepts, physiological systems, and neurological-environmental interactions. Enhances social work practice skills by providing a holistic conceptualization of people-in-environment.
Prerequisite: Admission to major.

## SW 447 -Social Work andSustainability (3)

Examines the role of profes sional social work in achieving sustainability at individual, community, regional, national, and global levels. Using a multidisciplinary perspective, the environmental, economic, and social aspects of sustainability, considered theoretically and practically. Sustainability linked to attainment of environmental, economic, and socialjustice. Includes community-based learning projects addressing sustainability.

Removing dual-level cross-listing. Prerequisite: SW 440 or equivalent.

## SW 450 - Social Work Research andEvaluation I (3)

The importance of social work research and evaluation for practice and policy. Qualitative and quantitative research, critical consumption of research, and conducting evaluations. Focuses on research that promotes social and economic justice and that encourages respect for diversity. Includes experimental designs, single systemdesigns, focus groups, and interviews. Covers early phases of the research process: conceptualization, design, sampling, measurement, and data collection. Emphasizes ethical issues.

Prerequisite: Admis sion to major; SW 351.

## SW 451 - Social Work Research andEvaluation II (3)

Teaches next phases of the research and evaluation process: data analy sis, formulation of implications of findings, and dissemination. Critical consumption of research findings as well as conducting dataanalysis. Qualitative and quantitative data analysis, including descriptive statistics, hypothesis testing, data analysis of single system designs, and thematic analysis. Focuses on research and evaluation that promote social and economic justice and that encourage respect for diversity.
Emphasizes ethical is sues.
Prerequisite: Admis sion to major; SW 450.

## SW 465 - Introduction to Indian Child Welfare and the Indian Child Welfare Act (4)

Introduction to Indian child welfare with an emphasis on understanding legal, historical, and cultural issues applying to work with American Indian and Alaskan native youth. Emphasis is on Indian child welfare issues in the Pacific Northwest.

## SW 501 - Research (1-9)

(Credit to be arranged.)

## SW 502 -Laboratory (1-9)

(Credit to be arranged.)

## SW 503 - Thesis I, II III (1-9)

(Credit to be arranged.)

## SW 504 - Cooperative Education/Internship (0-15)

(Credit to be arranged.)

## SW 505 - Reading and Conference (1-6)

(Credit to be arranged.)

## SW 506 -Special Problems (1-6)

(Credit to be arranged.)

## SW 507 -Seminar (1-6)

(Credit to be arranged.)

## SW 508 - Workshop(1-6)

(Credit to be arranged.)

## SW 509 - Practicum(1-9)

(Credit to be arranged.)

## SW 510 -SelectedTopics (1-6)

(Credit to be arranged.)

## SW 511 - Field Seminar and Field Placement (1-4)

Engage in 9-month agency-based generalist field internship and concurrent weekly seminar. Apply knowledge gained in social work courses and build skills in real-world practice settings, while concurrently synthesizing field learning with peers in discussion-based seminar to explore what it means to be a social worker; reflect on how their identities, use of power, definition of profes sionalism, use of supervision, engagement with ethics, and conceptualization of social worker well-being inform their approach to social work practice.

## SW 512 -Advanced Field Placement (1-4)

Nine month agency-based 500 hour field placement. Supervised field placement to integrate advanced theory and skill building. Core component of MSW curriculum. Required three times in advanced year.

## SW 513 -Research Methods for Social Work Advanced Standing Students (3)

Required research methods course for students admitted to the MSW Advanced Standing program. It as sures students have a solid foundation in research knowledge and skills needed for the advanced year of the MSW Program.

## SW 514-Cultural and Spanish Language Immersion for Social Workers Costa Rica (3)

Course includes culture and language classes with visits to socialservice agencies in Costa Rica. Course will prepare students to offer social work services in multicultural, multilingual settings through the context of social work values andethics and with special attention to antioppressive and non-discriminatory practice with diverse populations.

## SW 515 - Skills for the Helping Process - Groups (3)

Help students to develop assessment and intervention skills across multiple levels. Assess types and stages of groups, roles, and group dynamics. Develop a group proposal. Learn how to begin, facilitate, and end a group with clients, org anizations, and communities.
Corequisite:SW 511.

## SW 516-Motivational Interviewing (3)

Teaches the central theoretical and empirical tenets of Motivational Interviewing (MI), as well as the clinical skills necessary to deliver the intervention to a wide range of clients in diverse settings. Students will learn and practice both the spirit and techniques of motivational interviewing.

## SW 520 - Social Welfare History and Policy (3)

Addresses the policy making of social welfare and explores values and ethical choices affecting the process. Examines historical and contemporary issues and their impact on the social work profession and social welfare. Highlights relations among social problems, social policies, and social practices as means for promoting social justice.

## SW 521 - Advanced Anti-Oppressive Practice (3)

This course builds student capacity for anti-oppressive practice in the micro and mezzo practice arenas, with an emphas is on the micro levels of intervention. The focus is on the positional privilege of social worker and the oppression experiences of serviceusers (clients) and communities.
Prerequisite:SW 539 or SW 589. Corequisite:NA.

## SW 522 - Trauma Informed Care (3)

Prepares students to apply Trauma Informed Care principles. Reviews trauma and toxic stress (neurobiology, adversechildhood experiences, and resiliency) and uses this knowledge to evaluate behavior, policies, and procedures. Examines how TIC complicates and compliments others approaches with a specific focus on
the intersection with equity, inclusion, and cultural responsivity. TIC is beneficial to a variety of disciplines in a variety of settings including judicial/corrections, veterans' services, housing, healthcare, education, and child-welfare.

## SW 523 -Health Care Policies andPrograms (3)

Advanced policy course analyzes the history of selected health care policies, programs, and disease categories within the context of social work practice in health care. Contemporary outcomes in current health and service delivery systems presented froma policy perspective. Develops skills for policy change.

## SW 524 - Community Organization (3)

Presents community organizing as a well-es tablis hed social work method for promoting social change and improving community life through community and institutional reform. Topics for class will include an overview of the his tory of community organizing, models of community change (locality development, social planning and social action), methods of social change (advocacy, mobilizing, organizing, coalition building, and partnership), examples of community-based org anization, leadership development, and measuring the benefit to communities. Discussion also includes understanding the role of power and culture that exists within neighborhoods and communities.
Prerequisite: SW 520 or SW 589 (Advanced standing only).

## SW 525 -Poverty: Policies and Programs (3)

Examines the nature and causes of poverty and inequality in the United States and the impact of economic globalization on social work's response to these critical social problems. Studies ways in which people in poverty cope and support each other in low-income urban neighborhoods; examines the ways in which work and welfare interact with each other and with informal social supports. Addresses policy is sues, including those involved in both service and income strategies to relieve or prevent poverty; develops skills foreffective practice with lowincome communities, families, and individuals.
Also offered as SW 625 and may be taken only once for credit. . Prerequisite: SW 520 or SW 589 (Advanced standing only).
SW 526 - Applied Ethics and Law inSocial Work Practice (3)
Apply ethical theory, law, policy, and codes to actual social work practice cases and situations. Consider the role of individual free will, and strategies to address the influence of personal values and biases. Explore the
interpretation and application of Oregon statutes to social work practice.

## SW 528 - Facilitation of Multi-disciplinary/Care Coordination Team Meetings (3)

Addresses the theoretical foundations, applications and facilitation skills required for collaborative participatory decis ion-making in the context of social work practice across populations. Develop framework for facilitating indepth strengths, needs assessment and problemsolving. Gain understanding and skills in balancing power dynamics, clinical perspectives, and timely decisionmaking within agency parameters.

## SW 529 - International Mental Health Policy (3)

Compares mental health policies froma global perspective, emphasizing United Nations and World Health Organization perspectives. Programs and policies from various countries are compared and contrasted with those of the U.S., and Oregon in particular.
Also offered as SW 629 and may be taken only once for credit. . Prerequisite: SW 520 or SW 589 (Advanced standing only).

## SW 530 -Social Work Practice with Individuals and Families I Theory and Engagement (3)

The first in a two-course sequence focusing on social work practice with individuals and families and integration of theory into practice. Students will develop engagement and exploration skills for working with individuals and families. They will critically evaluate and apply commonly used human development theories during the engagement and exploration phase of generalist practice. A framework for critical evaluation will be presented for comparing, applying, and evaluating various development theories covered in the course.

Corequisite: SW 511.

## SW 531 - SW Practice with Individuals and Families II Theory, Ass essment and Intervention (3)

The second in a two-course sequence focuses on social work practice with individuals and families and integration of theory into practice. Students will develop as sessment and intervention skills for working with individuals and families. They will critically evaluate and apply commonly used human development theories during the assessment and intervention phase of generalist practice. A framework for critical evaluation will be used to compare, apply, and evaluate various human development theories covered in the course.

Prerequisite: SW 530. Corequisite: SW 511.

## SW 532 -Advocacy and Empowerment (3)

Builds the advocacy skills to formpurposive and equitable partnerships with service users, their communities, and organizations. Includes empowerment-based practices in micro, mezzo and macro work. Healthy critique of the role of the professional social worker as "expert" is examined.

Prerequisite: SW 520.

## SW 533 - Advanced Clinical Practice I(3)

This first courseteaches social work practice that honors the strengths, vulnerabilities, goals, and needs of clients and how to be responsive to the socio-political and systemic contexts of clients' lives. Students learn engagement, as sessment, and case-conceptualization skills grounded in critical theory. Students are supported to connect with their own competence, compassion, and hope; and to develop self-awareness. Attention is paid to recognizing oppressive conditions and pathologizing narratives that impact clients, policies, and service delivery.

Prerequisite: SW 511 or SW 589 (Advanced standing only). Corequisite: SW 512.

## SW 534 - Advanced Clinical Practice II (3)

This second course focuses on increasing student selfawareness of the perspectives, strengths, biases and limitations they bring to clinical practice. Attention is given to exploring practice theories and specific intervention skills related to clinical work. Students are supported to learn about practice theory and cultural context models. Students will learn skills in managing reactivity (their own and that of client systems) and in the provision of different interventions through direct practice.

Prerequisite: SW 533. Corequisite: SW 512.

## SW 535 - Advanced Clinical Practice III (3)

This final course provides students an opportunity to articulate their personal theoretical orientation and preferred practice models. Student commitment to effectiveness and accountability is reinforced through review of evidencebased principles, professionalethics, and the ongoing integration of research and evaluation. The course includes content on using supervision/consultation, continuing education, licensure, and practices of self-care. Students will also critically examine the impact of white supremacy culture on agency practices, systemstructures, and clinical services.

Prerequisite: SW 534. Corequisite: SW 512.

## SW 539 -Social Justice in Social Work (3)

Examines epistemological and theoretical approaches to understanding social justice and equity as they relate to social exclusion, marginalization, and oppression.

Prerequisite: Must be enrolled in the MSW program.

## SW 541 -Societal, Community and Organizational Structures and Processes (3)

Service users and social work practitioners are constrained by societal, community, and organizational structures and processes. Social construction of conceptual frames with socialwork values andethics are critiqued. Theories addressing the behavior and change in process of communities and organizations are applied and evaluated.

## SW 542 -Social Work in Native American Communities (3)

Introduces and expands social work knowledge and methods appropriate for working with tribal and urban Indian communities. Thehis torical, social and cultural contexts of social work practice with individuals, families, groups, and communities in Indian Country will be examined.

## SW 543 - The African American Family: Multigenerational Trauma and Issues of Violence (3)

Exposes students to historical events and policies which have led to contemporary social problems and structural inequalities that continue to negatively impact African Americans. Will provide practical tools to inform practice at the five levels of service and empower individuals, families, groups, organizations and communities throughout the change process.

## SW 544 - Mid-Life and Beyond (3)

Focuses on development in mid and late adulthood froma lifes pan pers pective. Promotes appreciation of the developmental potential for normal and healthy aging. Explores demographic, socio-historical and developmental characteristics of currently emerging older adults. Focuses on current developmental theories in socialcognition and identity development in mid and late adulthood.

## SW 547 - Social Work andEnvironmental Justice (3)

Explores the role of racism, colonization, white supremacy, neoliberalism, and capitalis min environmental injustice through an Africana worldview. Employs a multidisciplinary perspective to examine the role of social work in achieving en vironmental justice at individual, community, regional, national, and global levels. This course considers theenvironmental, economic, and social aspects of sustainability, theoretically and practically, and social work links to the attainment of justice. Clas s includes a photovoice project focused on environmental justice.

Prerequisite: SW 541 or SW 589.

## SW 548 -Latinx Informed Mental Health Practice (3)

Provides a foundation of Latinxsocial work in outpatient mental health and integrated health settings. Examines Latinx cultural divers ity, health disparities, values, attitudes, traditions, spirituality and offers general guidelines to integrate these cultural factors in effective behavioral/mental health screens and evaluations as well as interventions to address consumers' needs.
Prerequisite: (SW 530 and SW 531) or SW 589.
SW 549 - Spirituality in Social Work Practice (3)
Explore the spiritual and religious diversity of clients and communities and its role in individual, group and community life. Identify and apply a framework of knowledge, values and practice methodologies to conducting bio-psychosocial spiritual as sessments within a wide range of social work practice settings.

## SW 550 - Introduction to Social Work Research (3)

Introduction to research and evaluation as systematic inquiry in social work. Introduces knowledge and skills for critical engagementand design of research relevant to social work practice and policy, promotes social and economic justice, advances human and social well-being, and works to end racismand discrimination. It covers quantitative, qualitative, and mixed-methods. Addresses cultural sensitivity and inclusion, diversity, andethical challenges, including protection of human subjects and application of research to promote social justice.

## SW 551 - Research and Evaluation II (3)

Focuses on techniques of quantitative data analysis and introduces methods of qualitative data analysis. Descriptive statistics, probability theory and hypothesis testing, and inferential methods. Addresses connections between (a) social work research and evaluation and (b) social and economic justice, cultural sensitivity, inclusion, and diversity.
Prerequisite: SW 550.

## SW 552 - Applied Program Evaluation for Social Work

 (3)Carefully designed and implemented evaluation can answer critical questions for social work practitioners such as: What group of intended beneficiaries does a program actually reach? Did the intervention accomplishits goals? How can interventions or programs be improved? In this course, students will learn the foundations of program evaluation design in social work practice. Working with a community partner, students will constructa comprehensive evaluation design that eng ages community
stakeholders and is responsive to the structural and sociocultural context.
Prerequisite:SW 550 or SW 589.

## SW 553 - Research for Racial Justice (3)

Reduce racial inequities in organizations requires gaining theory and practice skills. This course provides both, integrating heightened attention to policy, research and intervention approaches to reduce racial dis parities in a wide array of human service systems. The course focuses on building individual, org anizational and leadership efficacy for advancing racialequity.
Prerequisite: SW 550 or SW 589.

## SW 554 -Social Work Perspectives on Mental Health Dis orders: Children and Adolescents (3)

Reviews and analyzes mentaldis orders impacting Children and Adolescents fromDSM-5 and SW perspectives and variables that reshape and redefine concepts and definition of MH. The development, use, influence, and limitations of DSM are considered from various contexts. Examine strategic approaches to assessment, diagnosis, and intervention fromSW perspectives with developmental and age-appropriate applications focus. Incorporates best practices that support self-determination, social justice, diversity, and community integration, and emphasize youth and family narratives of MH symptoms.
Prerequisite: SW 531 or SW 589.

## SW 555 - Social Work Perspectives on Mental Health Disorders: Adults (3)

Reviews and analyzes mental dis orders fromDSM-5 perspectives and variables thatres hape and redefine concepts and definitions of mental health and illness. The development, use, influence, and limitations of DSM are considered from various contexts. Examines strategic approaches to assessment, diagnosis, and intervention from the recovery philosophy and SW perspectives.
Prerequisite: (SW 530 and SW 531) or SW 589.

## SW 556 - Clinical Practicein IntegratedHealth (3)

The objectiveof this course is to introduce students to the direct practice of social work in integrated medical settings. Students will gain knowledge of social work practice in medical settings, understanding the intersections of physical health, mental health, substance use and influencing sociopolitical factors. Through focused work on engagement, assessment and intervention students will learn how to work effectively on multidisciplinary teams and develop skills in brief and/or single session work.
Prerequisite: (SW 530 and SW 531) or SW 589.

## SW 557 -Supervision in Social Work Practice (3)

Explores the knowledge and skills foreffective social work supervis ion, emphasizing a collaborative, developmental, reflective and competency-based approach. Attention is paid to the cross cultural, sociopolitical, and ethical influences on supervis ion and the supervisory relationship.

## SW 558 - Abuse and Trauma: Theory and Intervention (3)

Examines the impact of trauma and abuse on adults, children, and families. Acute and long-termsequelae will be identified, emphasizing the interaction of traumatic and developmental effects. An integrative biopsychosocial intervention model for working with individuals, groups, and families will be explored through multiple theoretical lens.

Prerequisite: (SW 530 and SW 531) or SW 589.

## SW 559 - Community and Organization Research (3)

Prepares for mezzo and macro research practices to create the evidence base for socialchange (building the research base to advance reforms ), strengthening organizations (designing and using programevaluation to improve programs and organizations), and building the voice and influence of marginalized communities (including local and regional communities and organizational service users).
Prerequisite: SW 550 or SW 589.

## SW 560 - Understanding and Working with LGBT Populations in Social Work (3)

Explore current theory of privilege and oppression that applies to sexual orientation/gender/gender identity/gender expression. Emphas is on combating oppression and discrimination in professional, personal, community, and social environments, and in developing affirming SW practices. Focus on students engaging in experiential learning that challenges their internalized and socially constructed beliefs.

## SW 561 - Clinical Social Work with Groups (3)

Deals with the theory and practice of clinical social work within the wide range of groups in which social workers participate as workers and co-workers. Articulates issues related to group process and development as to theireffect on the group experience. Includes leadership strategies and diverse populations.
Prerequisite: SW 515 or SW 589.

## SW 562 - Loss \& Grief Across the Lifespan (3)

Examination of loss and grief in relation to death and diverse non-death experiences across the lifespan. Review of theory, research, and best practices for social workers helping with bereavement processes, grief integration, and meaning making for individuals, families, and across communities. Unique cultural and spiritual perspectives discounted or devalued through dominant discourses are brought to light.
Prerequisite: (SW 530 and SW 531) or SW 589.

## SW 563 -Social Work with Children, Adolescents, and Their Families (3)

Explores clinical social work practice with children, adoles cents, and families. Emphasizes a collaborative and contextual approach that, in addition to child-focused interventions, includes work with parents, families, and groups in a variety of settings. Delineation and demonstration of specific clinical strategies and techniques with opportunities to practice and apply in field.

Prerequisite: (SW 530 and SW 531) or SW 589.

## SW 564 -Social Work in Schools (3)

Uses a policy/practiceperspective to prepare students for effective and culturally sensitive social work practice in early childhood and K-12 education. Presents multiple roles of school social workers and educational policies that provide context for practice. Emphasizes collaboration among families, schools, and communities.

## SW 565 - Critical Disability Studies in Practice (3)

Emphasizes deepening understanding of lived experiences of individuals with dis ability in the context of larger societal and community structures. Students will examine participation, community, health, mental health, education, academia, pers onal as sistance services, violence, hate crime, and employment through critical dis abilities studies theory and first person narratives. Through lectures, readings, guest speakers, assignments and discussions, students will engage with each other to encourage application of new concepts in current and future academic, profes sional, and personallives.

## SW 566 - Child Welfare Seminar: Practice and Policy (1)

Offered to social work students who also work in the field of child welfare across the state of Oregon. The course offers a 9-month online seminar format to discuss key practice and policy issues in child welfare and explore innovative approaches nationally and around the world. Students will deepen their knowledge of applying social work skills to their work in child welfare at both micro and
macro levels of social work practice. This course is repeatable for up to 3 credits.

## SW 567 -Evidence Based Interventions for Community Mental Health Practice (3)

Reviews and critiques evidence-based interventions for community-based mental health populations. These interventions include supported employment, as sertive community treatment/case management, psychosocial rehabilitation, psychopharmacology, recovery and cons umer pers pectives, and integrated treatment for cooccurring substance use disorders. Theoretical frameworks include harmreduction, transtheoretical/readiness to change, and health promotion.

Prerequisite: SW 531, SW 532, or SW 589 (Advanced standingonly).

## SW 568 -Interdisciplinary Community Mental Health Seminar (1-3)

Seminar on interdisciplinary relationships among social work, psychiatry, and nursing; and on a variety of clinical, and policy topics. For students in community mental health placements and those working with individuals with severe and persistent mental illness. Jointly offered with OHSU's Department of Public Psychiatry. Enrollment is limited to six students per termand requires instructor approval. This course is repeatable up to 2 times forcredit.

## SW 569 -Social Work in End-of-Life and Palliative Care (3)

Covers a broad range of topics related to social work and end-of-life and palliative care. Addresses: cultural and spiritual dimensions at end-of-life, pain and symptom management, hospice, ethical considerations, practice and policy guidelines, teamwork, mental health at end-of-life, vulnerable populations and resources available to patients and families.

## SW 570 - Brief Behavioral Interventions \& Treatment

 (3)Prepares students to practice brief interventions with clients and families. They will develop skills in case conceptualization, as sessment, intervention, and treatment planning using advanced therapeutic techniques and methods including solution-focused, cognitive-behavioral, and mindfulness with special focus on crisis intervention. Students will also gain knowledge and skills in antioppressive, culturally res ponsive practice.
Prerequisite: (SW 530 and SW 531) or SW 589.
Corequisite: NA.

## SW 571 - Substance Use, Abuse and Addiction and Social Work Practice (3)

Provide students with a foundation in direct and indirect practice is sues with clients, families and communities challenged by substance abuse and addiction. Assist students in further developing and integrating their social work practice frameworks with deeper understanding and skill regarding the psychodynamic, biological and ecological nature of substance abuse disorders.

## SW 574 -Social Work with Older Adults (3)

Mental and physical frailties experienced by older adults are examined for their implications for adaptation and intervention. Mental disorders as they are uniquely characterized in late adulthood are reviewed, with special emphas is on age appropriate assessment. Ps y chosocial interventions for both community and institutionalized populations will include individual, family, group, and environmentalapproaches.

## SW 575 - Multicultural Social Justice Work in Action (3)

Examine current perspectives on multicultural SW practices for individuals, families and groups marginalized due to race, ethnicity, economic status, sexual identity, and immigration. Develop strategies to provide holistic, empowering and culturally-responsive services based on as sessment, en gagement and intervention and the liberation health SW model.
Prerequisite: (SW 539, SW 530, and SW 531) or SW 589.

## SW 578 - Social Work in the Juvenile and Criminal Justice Systems (3)

Analyzes current controversies concerning the origin and meaning of criminal and delinquent behavior; the socioeconomic and multicultural characteristics of contemporary life contributing to delinquency and crime; social work's role in the "people processing system"; the major current modalities and inquiry into their effectiveness; social policy issues confronting the juvenile justice system; and current policy and practice trends toward incarceration and away fromrehabilitation.

Also offered as SW 678 and may be taken only once for credit. . Prerequisite: (SW 520 and SW 531) or SW 589 (Advanced standing only).

## SW 579 - Engaging with the Mandated Client (3)

Course examines legal, ethical and effective practice with involuntary clients, often members of oppressed groups. Will also address res earch reg arding "involuntary practitioners," self-care, client advocacy, value conflicts, and reformefforts.

## SW 583 -Empowerment Approaches with TransitionAge Youth with Mental Health Needs (3)

Prepares students to work collaboratively with youth and young adults with mental health needs. Co-taught with a young adult and a parent with mental health services experience. Focuses on skills for partnering with youth to overcome barriers to success, increase self-determination and leadership skills, and strengthen family and peer support.

## SW 584 - Intimate Partner Violence (3)

Aims to (re)introduce theories, interventions, research, and complex issues associated with intimate partner violence (IPV). Students will be as ked to explore the intersections of micro and macro violence to better understand the influence of state and structural violence on the lives of individuals and communities, particularly those from racialized groups.

## SW 585 -Fund Development and Grant Writing (3)

Deepening understanding of funding role and development in nonprofit industry. Application of fundraising strategies and grant writing to create or recreateinnovative programs and marketing strategies. Develop program budgeting, accurate case statements and mes sages, draft grant applications and learn to create and sustain authentic long term fund development strategies.

## SW 589 - Advanced Standing Seminar (4)

Students who successfully complete this seminar will demons trate the competencies to enter the advanced year of the MSW program. This seminar will provide a connection between the BSW curriculumand adv anced MSW curriculum, and evaluate students' readiness for advanced practice. The course requires students to demons trate foundational social work skills, critical selfreflection, and academic readiness for graduate course work.
Prerequisite: Admission to advanced standing program.

## SW 590 - Advanced Topics in Applied Research Methods for Social Work (3)

Builds on foundation research methods and data analysis courses. Courses offered under this number present an evidence-based framework for social work practice and methods for analy zing quantitative data (e.g., multiple linear regres sion) and/or qualitative data (e.g., ethnography). Emphasizes application of methods to build knowledge in a specialized area relevant to a student's field of practice and/or to complete an evaluation of
program(s) or practice. Emphasizes interpretation of results to inform effective social work practice in community and agency-based settings. May be repeated for credit.
Prerequisite: SW 550 or SW 589 (Advanced standing only).

## SW 591 - Child \& Adolescent Behavior \& Development in the Social Environment: Advanced Theory \& Research (3)

Builds on micro and macro Human Behavior in the Social Environment and research methods. Presents ecologicaldevelopmental framework and culturally sensitive theories for understanding individual, family, peer, school, community, and societal influences on child and adolescent behavior and development. Presents prevention framework for using research-based knowledgeof behavior and development.
Prerequisite: SW 531 or SW 589.

## SW 593 - Advanced Macro Practice I (3)

This course anchors the three-quarter advanced macro practice concentration. By leveraging learning opportunities in the clas sroom, in students' field settings, as well as in the community, students will develop the skills and knowledge needed to articulate how personal values, beliefs, and thoughts impact community and org anizational practice; employ well-developed assessment practices in order to understand the needs, desires, and constraints of communities and organizations; build effective and accountable collaborations with diverse stakeholders to advance justice.
Prerequisite: SW 511 or SW 589. Corequisite: SW 512.

## SW 594 - Advanced Macro Practice II (3)

This is the second in the three-quarter advanced macro practice concentration. By leveraging learning opportunities in the clas sroom, in students' field settings, as well as in the community, students will develop the knowledge and skills needed to: engage with constituents in ways that increase their vis ibility, voice, and influence; construct well-developed plans for community; and organizational change; and evaluate the effectiveness of community and org anizational practice.
Prerequisite: SW 593. Corequisite: SW 512.

## SW 595 - Advanced Macro Practice III (3)

This is the third in the three-quarter advanced macro practice concentration. By leveraging learning opportunities in the clas sroom, in students' field settings, as well as in the community, students will develop the skills and knowledge needed to evaluate the alignment of goals to outcomes in community and organizational practice; effectively communicate results and recommendations to stakeholders; build capacity for individual, community, and organizational well-being.

Prerequisite:SW 594. Corequisite: SW 512.
SW 601 - Research (0-15)
(Credit to be arranged.)

## SW 602 - Independent Study (1-9)

(Credit to be arranged.)

## SW 603 -Dissertation (0-15)

(Credit to be arranged.)

## SW 605 - Reading and Conference (0-15)

(Credit to be arranged.)

## SW 607 -Seminar (0-15)

(Credit to be arranged.)

## SW 610 -SelectedTopics (0-15)

(Credit to be arranged.)

## SW 620 -Substantive Area Conceptualization (3)

Primary focus is development of a conceptual framework to guide scholarly work in student's selected area of inquiry. Students define domain of interest, review relevant literature, consider cultural, his torical, and political contexts, and note relevance for human services professions. Students explore multiple theoretical perspectives, evaluate their merits, synthesize into conceptual framework, and discuss implications for research and practice.

## SW 621 -Social Problem Analysis: Intervention Phase (3)

Intervention phase of the social problemsolving process applied to the student's selected social problem. Focus is on the development of a multi-level intervention plan based on review of empiricalliterature. Programtheory and theories of change will be explored. Analys is of policy-level interventions and related effectiveness literature. Construction of logic models. Integration of policy and practice will be emphasized.
Prerequisite: SW 620.

## SW 622 - Substantive Area Investigation (3)

This class allows students to put into practice what they have learned in their theory, research methods, and substantive area courses. Students will design a study in their substantive area, focusing on methodological rigor, ethical practice, community/stakeholder engagement, and potential impact.
Prerequisite: SW 620.

## SW 625 - Poverty: Policies and Programs (3)

Examines the nature and causes of poverty and inequality in the United States and the impact of economic globalization on social work's response to these critical social problems. Studies ways in which people in poverty cope and support each other in low-income urban neighborhoods; examines the ways in which work and welfare interact with each other and with informal social supports. Addresses policy is sues, including those in volved in both service and income strategies to relieve or prevent poverty; develops skills for effective practice with lowincome communities, families, and individuals.
Also offered as SW 525 and may be taken only once for credit. . Prerequisite: SW 520 or SW 589 (Advanced standing only).

## SW 626 - Teaching and Learning in Health Promotion \& Social Work (3)

Focus on pedagogical theory and practice in professional settings. Students develop skills to design, evaluate, and implement effective curriculumand instruction across settings: clas srooms, community contexts, and research projects. Topics include educational theory, course design, learning and teaching strategies, assessment, and scholarship of teaching and learning. This is the same course as PHE 626 and may be taken only once forcredit.
Prerequisite: Doctoral student status in Social Work. Cross-Listed as: PHE 626.

## SW 629 - International Mental Health Policy (3)

Compares mental health policies froma global perspective, emphasizing United Nations and World Health Organization perspectives. Programs and policies from various countries are compared and contrasted with those of the U.S., and Oregon in particular.

Also offered as SW 529 and may be taken only once for credit. . Prerequisite: SW 520 or SW 589 (Advanced standing only).

## SW 630 - Philos ophy of Science for Social Sciences (3)

The goal of this course is to introducestudents to philosophies of science and the implications for scientific practices and other means of generating knowledge. The course will advances tudents' activities to critically analyze
is sues related to the consumption and production of knowledge in the social and behavioral sciences generally.

## SW 631 - Introduction to Quantitative Research Methods inSocial Work (3)

Introduces students to basic quantitative methods for applied social work research and examines the assumptions underlying quantitative methods. Reviews core elements of research design and the selection of appropriate methods to address specific types of research questions with attention to questions of ethics and research across diverse populations. Includes a review of internal and external validity is sues in conducting experimental and quasiexperimental designs. Provides experience in applying quantitative methods by developing a proposal for social work research project.

## SW 632 - Quantitative Data Analysis in Social Work Research (4)

Provides preparation in the selection and use of statistical methods appropriate for social work research questions. Covers descriptive statistics, probability theory, statistical inference, and basic inferential methods. Preparation for multivariate statistical methods. Empirical social work studies critiqued and discussed. Includes application and analys is laboratory.
Prerequisite: SW 630,631.

## SW 633 - Qualitative Research I: Critical Research Frames and Beginning Practices (3)

This course is the first part of a required three-term sequence that introduces students to the theoretical foundations and methods for qualitative research in social work. The class is designed to support learners with techniques and tools to approach the inquiry process from a critical perspective, as contextualized in the profession of social work. The forms of research methods covered in this research sequence (and introduced in this first course) cover qualitative research at the micro, mezzo and macro levels, specifically: individual lived experiences, society and culture, and language and communication. In order to covereach of these levels of analysis, the course will address at least one research methodology in each of the three levels. These are hermeneutic phenomenology, life his tory research, critical ethnography, and critical discourse analysis.
Prerequisite: SW 630.

## SW 634 -Quantitative Data Analysis in Social Work Research II (4)

Introductory multivariate statistical procedures. Core topics: correlation and partial correlation, reliability and validity of measures and scale construction, and linear and
logistic regression. Covers considerations of level of meas urement and distributional as sumptions for each statistical procedure. Balances developing theoretical understanding and hands-on running of tests and interpretation of results.
Prerequisite: SW 632.

## SW 635 - Qualitative Research II: Collecting Data for Interpretive \& Constructivist Research (3)

The second course of a required three-termsequence. Data collection methods with a special emphasis on collecting stories and narratives to explore the individual, group, community, organizational, and national experience.
Prerequisite: SW 630 and SW 633.

## SW 637 - Qualitative Research Methods for Social Inquiry (4)

Introduction to qualitative research methods in the social sciences. The course reviews epistemologies informing qualitative research. The course also explores commonly used methods including field notes, interviews, focus groups, case studies, observational methods, and openended surveys. Introduction to various analysis and writing strategies will be explored. This is the same course as Psy 637 and may be taken only once for credit.
Cross-Listed as: Psy 637.

## SW 640 - Research Practicum and Seminar (3)

Participation in a research study under the supervision of appropriate faculty. Opportunity to master research skills which fit the student's learning needs. Time on site working on the project is 100 hours. Seminar taken concurrently with practicumenables students to explore together their research experiences in their respective research projects. Students will gain deepening knowledge through comparis on of experiences. Pass/no pass only.
Prerequisite: SW 637.

## SW 644 - Mid-Life and Beyond (3)

Focuses on development in mid and late adulthood froma lifes pan perspective. Promotes appreciation of the developmental potential for normal and healthy aging. Explores demographic, socio-historical and developmental characteristics of currently emerg ing older adults. Focuses on current developmental theories in socialcognition and identity development in mid and late adulthood.

## SW 650 - History of Social Work Profession/al (3)

History of the profession of social work through a social justice lens. The role of government, economics, historical figures, and culture in shaping social work profes sion. Critical theories will guide the exploration of social work's
mission, history, ethics, values and prominent is sues within the context of national and international trends.

## SW 651 - Integrative Writing Seminar (1)

Course addresses integration of social work theory, practice, policy, and research. Synthesis developed through writing of manuscript for submission to professional journal, a grant application, or other suitable product. Assistance with submis sion provided.
Prerequisite: completion of Part I of comprehensive examinations. May be repeated for additional credit.

## SW 653 - PhD Data Analysis Seminar (1)

Provides a structure to facilitate a working group of researchers who share ideas and support one another in the conduct of res earch. Group members may work together on research projects as well as use the group to consult about independent res earch projects. Expected themes include research design issues, measurement selection, rating and coding procedures, data analysis and presentation and reporting of research results. The primary focus of this group is on quantitative methods, with secondary attention to qualitative methods. Course may be repeated for credit.

Prerequisite: SW 634.

## SW 660 - Ph.D. Seminar - First Year (1)

Discusses current research studies undertaken in the field of social work. Based on published articles, working papers, and research project materials, the seminar features presentations by social work faculty, graduate students, and community partners. Considers practical as pects of applied research, including methodological issues, cultural competency, consumer involvement, and interdisciplinary collaboration. May be repeated for additional credit.

## SW 661 - Ph.D. Seminar - Second Year (1)

The Ph.D. Seminar-Second Year is a three-termsequence designed to provide a forumfor students to continue professional exploration, and learn how to navigate finding and securing employmentopportunities both within and outside academia. Students also spend this time learning how to progress successfully through major miles tones post-coursework, including comprehensive examination and dissertation.

Prerequisite: SW 660.

## SW 678 -Social Work in the Juvenile and Criminal

 Justice Systems (3)Analyzes currentcontroversies concerning the origin and meaning of criminal and delinquent behavior; the socioeconomic and multicultural characteristics of
contemporary life contributing to delinquency and crime; socialwork's role in the "people processing system"; the major current modalities and inquiry into their effectiveness; social policy issues confronting the juvenile justice system; and current policy and practice trends toward incarceration and away fromrehabilitation.

Also offered as SW 578 and may be taken only once for credit. . Prerequisite: (SW 520 and SW 531) or SW 589 (Advanced standing only).

## SW 690 - Teaching Practicum and Seminar (3)

Focuses on the practical teaching aspects in various social work settings, including instruction in the classroom, and the facilitation of trainings and works hops. Salient theoretical and practical is sues in adult learning are explored. Discusses curriculumplanning and issues around human divers ity and teaching. Supports student teaching experiences. This course requires to complete 65 hours of hands-on teaching-related experience.

Prerequisite: SW 626.

## SW 700 - Pos tbaccalaureate Professional Development (1-6)

(Credit to be arranged.)

## SySc - Systems Science

## SySc 330U-Models in Science (4)

This interdisciplinary course focuses on the role of models in scientific inquiry. Students explore how scientists froma variety of disciplines use different types of models, including physical (scale), mathematical (analytic and numeric), agent-based, animal, and network. The course has three stages of inquiry: Definition, Analysis, and Synthesis.

## SySc 332U-Introduction to Agent-BasedModeling (4)

At the cros sroads of biology, ecology, economics, philosophy, and artificial intelligence, this course introduces Agent-Based Modeling: a new computer-based approach that's grounded in the perspective that the complex macro-level patterns we observe in social systems are emergent fromdecentralized and self-organizing micro-level interaction among agents following simple and localized rules.

## SySc 334U-Modeling Social-Ecological Systems (4)

Understanding social and ecological cycles and the interaction between social and ecological systems is essential for making human actions more sustainable. This course uses ideas fromUNEP's Green Economy Initiative
and an easy-to-learn computer modeling approach called SystemDynamics to explore the interaction between and dynamics within social-ecological systems.

## SySc 336U-Networks and Society (4)

Introduces the new science of networks and its role in modeling the inherently complex problems of an interconnected, global society. Simulations explore the evolution of hierarchical, small-world and scale-free network structures and their dynamic behaviors. Implications for information democracy, cyber-terrorism, alternative economies (among other topics of student interest) are discussed.
Prerequisite: upper-division standing.

## SySc 338U- Decision Making in Complex Environments: A View Towards Collective Action and Social Change (4)

An interdisciplinary course that explores the heuristics through which individuals, groups and communities make their decisions in response to their environmental conditions. Such actions are sometimes optimal, sometimes sub-optimal and sometimes outright irrational and harmful and the course identifies the reasons for deviations fromrational behavior.

## SySc 340U-Big Data and the Modern World (4)

Overview of data science, big data, and its impact society including its promise, limitations, and ethical considerations.

## SySc 342U-Systems Thinking for Social Change (4)

Why are complexs ocial problems like poverty, homeles sness, and climate change so hard to solve? How can we identify effective leverage points for change? This interdis ciplinary course addresses social challenges using the methods of systems thinking. We'll dig into real-world examples and learn how to create interactive systems "maps" using causal-loop diagramming. Causal mapping enables a rich understanding of context, interrelationships, and perspectives. Students will gain practical tools they can use in their future work.

## SySc 346U-Exploring Complexity in Science and Technology (4)

Introduction to ComplexSystems, an interdisciplinary field that studies how collections of simple entities org anize themselves to produce complexbehavior, use information, and adapt and learn. Focus on common principles underlying complexity in science and technology, and
includes ideas fromphysics, biology, the social sciences, and computer science. This course is the same as CS 346U; course may be taken only once for credit.
Cross-Listed as: CS 346U.

## SySc 350U - Indigenous and Systems Perspectives on Sustainability (4)

Explores sustainability by drawing upon the field of Systems Science and the perspectives of traditional and contemporary indigenous peoples and scholars. Dialogueoriented format and small group exercis es promote a cooperative, student-driven learning environment. Course work calls upon students to apply their developing understanding of sustainability to their own lives.

SySc 399-Special Studies (4)
(Credit to be arranged.)

SySc 399U-Special Studies (4)
(Credit to be arranged.)

## SySc 401 - Research (1-8)

(Credits to be arranged.)

SySc 403-Honor Thesis (1-8)
(Credits to be arranged.)

## SySc 405 - Reading and Conference (1-8)

(Credits to be arranged.)

## SySc 406 -Special Projects (1-12)

(Credits to be arranged.)

SySc 407 -Seminar (1-8)
(Credits to be arranged.)

SySc 409-Practicum (1-8)
(Credits to be arranged.)

## SySc 410 -SelectedStudies (1-6)

(Credit to be arranged.)

## SySc 411 -Systems Theory (4)

Surveys fundamental systems concepts and central aspects of systems theory. Gives an overview of the systems paradigmand the systems field as a whole. Topics include introductions to networks, set-and information-theoretic multivariate relations, dynamic systems, regulation and control, modeling, decision analy sis, optimization, and game theory.
Also offered for graduate-level credit as SySc 511 and may be taken only once for credit. Prerequisite: Upper-division standing and either CS 346 U or any course labeled SYSC 3XXU or SYSC 4XXU.

## SySc 413 - Holistic Strategies for ProblemSolving (4)

This course focuses on the application of Systems ideas and practitioner skill development across disciplines. Readings and diversified class sessions explore topics including the meaning of "holistic," multiple levels of analys is, multiple perspectives, values, learning org anizations, frameworks/processes for problem-s olving, and use of tools like graphic representations and causalloop diagramming.
Also offered for graduate-level credit as SySc 513 and may be taken only once for credit. Prerequisite: upper-division standing and completion of one SySc cluster course or permis sion of instructor.

## SySc 414 -SystemDynamics (4)

Introduces concepts and methodology to analyze dynamic behavior of systems with complexfeedback loops. Emphasizes building computer models to enhance understanding, make predictions, and find ways to improve the performance of systems and processes. Models are defined via "rate" equations that are numerically integrated to simulate behavior.

Also offered for graduate-level credit as SySc 514 and may be taken only once for credit. Prerequisite: Upper-division standing and either CS346U or any course labeled SYSC3xxU or SYSC4xxU.

## SySc 416 - Systems Thinking for Business (4)

Learn highly applied systemthinking that delivers crucial insights into business or career situations where the usual methods are lacking. Specifically, to developqualitative skills: systemarchetypes, leverage points, strategic behavior and game theory, ecosystems and evolution, and networks; and to gain high-level working knowledge of systemmodeling and simulation.
Also offered for graduate-level credit as SySc 516 and may be taken only once forcredit. Prerequisite: upper-division standing.

## SySc 418 -SystemSustainability and Organizational Resilience (4)

Organizations are complexadaptive systems coupled with their environment, supply chains, strategic partners, and competitors. Survival depends on structural resilience market turbulence, and the environmental/political climate. Principles of emergent leadership and living systems are applied to various fields including strategic business management, environmental stewardship, health and public adminis tration, technology management.
Also offered for graduate-level credit as Sy Sc 518 and may be taken only once for credit. Prerequisite: Upper-division standing and either CS 346U or any course labeled SySc $3 x x U$ or SySc $4 x x$.

## SySc 421 -Systems Philosophy (4)

A study of ideas central to systems theory and philosophy. The course focuses on concepts rather than mathematics, and org anizes systems ideas around the theme of the fundamental "difficulties" (problems, imperfections, modes of failure) encountered by systems of widely differing types. Though these systems ideas often come fromthe natural sciences and engineering, they are significant also for the social sciences, the professional fields, and even the arts and humanities.

Also offered for graduate-level credit as SySc 521 and may be taken only once for credit. Prerequis ite: upper-division standing and/or admission to the Honors College or one SySc cluster course.

## SySc 423 -Systems Ideas and Sustainability: Limits, Structural Change, and Resilience (4)

This course offers a systems-theoretic perspective on sustainability. Us ing graph theory, non-linear dy namics, game/decision theory, thermodynamics, and theories of complexity and complex adaptive systems, the course explores systems insights into the challengeof environmental, economic, and social sustainability and systems principles to help us meet this challenge.

Also offered for graduate-level credit as SySc 523 and may be taken only once for credit. Prerequisite: upper-division standing and completion of one of the SySc 300-level clustercourses.

## SySc 431 - Data Mining with Information Theory (4)

DMIT is a hands-on project-based course in which students use information- and graph-theoretic methods to analyze their own data to discover complexand nonlinear interactions. These methods are implemented in OCCAM, software developed at PSU, the main analyticaltoolused in the course.

Also offered for graduate-level credit as SySc 531 and may be taken only once for credit. Prerequisite: upper-division
standing and completion of one of the SySccluster courses.

## SySc 435 - Modeling \& Simulation with R and Python

 (4)Computer modeling \& simulation using general purpose tools, R and Python. Covers statistical and simulationbased approaches for simulating dynamics, MonteCarlo methods for addressing uncertainty and risk, and interacting agents to incorporate heterogeneity and network effects.

Also offered for graduate-level credit as SySc 535 and may be taken only oncefor credit. . Prerequisite: Stat 241 or Stat 243 and Mth 252.

## SySc 440 - Introduction to Network Science (4)

Interdisciplinary introduction to network science, complex systems research, and social psychological concepts. In depth exposure to foundations of network science, including clas sical topics: randomgraphs, small world networks, etc. Discussion of social processes such as social contagion, opinion formation, etc. Introduction to advanced topics: community detection and (social) network interventions.

Also offered for graduate-level credit as SySc 540 and may be taken only once for credit. . Prerequisite: Stat 241 or Stat 243, and Mth 261.

## SySc 445 - Application of Data Science (4)

Introduction to data science as a profession and toolset, including its role in various types of projects, from exploration to discovery to prediction. Surveys current methods and technologies, emphasizing what's possible, feasible, and practical in terms of modeling and interactive visualization. Complements courses focused on specific methods and tools. Expected preparation: It will be helpful though not required to have exposure to data management or programming/scripting tools such as Matlab, Mathematica, R, Python, SPSS, or advanced Excel scripting or formulas.
Also offered for graduate-level credit as SySc 545 and may be taken only once for credit. Prerequisite: Stat 241 or Stat 243 and CS 161.

## SySc 452 - Game Theory (4)

Study of cooperation, competition, and conflict in social systems and associated is sues of rationality. Emphas is is on game-theoretic models, particularly of dilemmas of collective action, their possible solutions, and their applications to social, economic, and political phenomena. Also covered are socialchoice theory, and other systems theoretic approaches to cooperation, competition and conflict.
Also offered for graduate-level credit as SySc 552 and may be taken only onceforcredit.

## SySc 501 - Research (1-9)

(Credits to be arranged.)

## SySc 502 - Independent Study (1-12)

(Credit to be arranged.)

SySc 503-Thesis (1-9)
(Credits to be arranged.)

## SySc 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## SySc 505 - Reading and Conference (1-6)

(Credits to be arranged.)

## SySc 506 -Special Projects (1-6)

(Credits to be arranged.)

SySc 507 -Seminar (1-6)
(Credits to be arranged.)

## SySc 508-Workshop(2-6)

(Credits to be arranged.)

## SySc 509 - Practicum (1-9)

(Credits to be arranged.)

## SySc 510 -SelectedStudies (1-6)

(Credits to be arranged.)

## SySc 511 -Systems Theory (4)

Surveys fundamental systems concepts and central aspects of systems theory. Gives an overview of the systems paradigmand the systems field as a whole. Topics include introductions to networks, set- and information-theoretic multivariate relations, dynamic systems, regulation and control, modeling, decision analysis, optimization, and game theory.
Also offered for undergraduate-level credit as SySc 411 and may be taken only once for credit. Prerequis ite:
graduate standing, calculus, probability, computer programming.

## SySc 513 - Holistic Strategies for ProblemSolving (4)

This course focuses on the application of Systems ideas and practitioner skill development across disciplines. Readings and diversified class sessions explore topics including the meaning of "holistic," multiple levels of analys is, multiple perspectives, values, learning org anizations, frameworks/processes for problem-solving, and use of tools like graphic representations and causalloop diagramming.

Also offered for undergraduate-levelcredit as SySc 413 and may be taken only once for credit. Prerequisite: upperdivision standing and completion of one SySc cluster course or permission of ins tructor.

## SySc 514 -SystemDynamics (4)

Introduces concepts and methodology to analyze dynamic behavior of systems with complexfeedback loops. Emphasizes building computer models to enhance understanding, make predictions, and find ways to improve the performance of systems and processes. Models are defined via "rate" equations that are numerically integrated to simulate behavior.

Also offered for undergraduate-levelcredit as SySc 414 and may be taken only once for credit. Prerequisite: Graduate standing.

## SySc 516 -Systems Thinking for Business (4)

Learn highly applied systemthinking that delivers crucial insights into business or career situations where the usual methods are lacking. Specifically, to developqualitative skills: systemarchetypes, leverage points, strategic behavior and game theory, ecosystems and evolution, and networks; and to gain high-level working knowledge of systemmodeling and simulation.
Also offered for undergraduate-levelcredit as SySc 416 and may be taken only once for credit. Prerequisite: upperdivision standing.
SySc 518 - SystemSustainability and Organizational Resilience (4)
Organizations are complex adaptive systems coupled with their environment, supply chains, strategic partners, and competitors. Survival depends on structural resilience market turbulence, and the en vironmental/political climate. Principles of emergent leadership and living systems are applied to various fields including strategic business management, environmental stewardship, health and public administration, technology management.
Also offered for undergraduate-levelcredit as SySc 418 and may be taken only once for credit.

## SySc 521 -Systems Philosophy (4)

A study of ideas central to sy stems theory and philosophy. The course focuses on concepts rather than mathematics, and organizes systems ideas around the theme of the fundamental "difficulties" (problems, imperfections, modes of failure) encountered by systems of widely differing types. Though theses ystems ideas often come from the natural sciences and engineering, they are significant also for the social sciences, the professional fields, and even the arts and humanities.

Also offered for undergraduate-level credit as SySc 421 and may be taken only once for credit. Prerequisite: upperdivision standing and/or admission to the Honors College or one SySc cluster course.

## SySc 523 -Systems Ideas and Sustainability: Limits, Structural Change, and Resilience (4)

This course offers a systems-theoretic perspective on sustainability. Using graph theory, non-linear dy namics, game/decision theory, thermodynamics, and theories of complexity and complex adaptive systems, the course explores systems insights into the challenge of environmental, economic, and social sustainability and systems principles to help us meet this challenge.

Also offered for undergraduate-level credit as SySc 423 and may be taken only once for credit. Prerequisite: upperdivision standing and completion of one of the SySc 300levelcluster courses.

## SySc 525 - Agent BasedSimulation (4)

Introduction to simulation methods that impart simple rules to collections of "agents" that interact within an environmentrepresented as a spatial grid. The properties of the agents and the environment vary dynamically, and often result in behavior patterns that are complex in ways that are not readily apparent froman examination of the rules that generated the behavior. Suchbehavior is often referred to as emergent, with examples including flocks of birds, traffic jams, ant colonies, crowd phenomena, etc. Of particular interest is the fact that such phenomenaoccur without centralized control. This approach is often used to study social systems, but may be used to study a variety of natural and non-natural systems.
Also offered as SySc 625 and may be taken only once for credit.

## SySc 527 - Discrete SystemSimulation (4)

The primary focus is on the application of dis crete system simulation to real world problems us ing the Arena simulation language. The mathematical basis for dis crete systemsimulation is probability theory and queuing theory. It is used extensively in the fields of operations research, civilengineering, and industrialengineering. Students apply the tools to projects within their fields of interest.

Also offered as SySc 627 and may be taken only once for credit. Prerequisite: graduate standing or consent of the instructor. .

## SySc 531 - Data Mining with Information Theory (4)

DMIT is a hands-on project-based course in which students use information- and graph-theoretic methods to analyze their own data to discover complex and nonlinear interactions. These methods are implemented in OCCAM, software developed at PSU, the main analytical tool used in the course.

Also offered for undergraduate-levelcredit as SySc 431 and may be taken only once for credit. Prerequisite: upperdivision standing and completion of one of the SySc cluster courses.

## SySc 535-Modeling \& Simulation with R and Python

 (4)Computer modeling \& simulation using general purpose tools, R and Python. Covers statistical and simulationbased approaches for simulating dynamics, Monte Carlo methods for addressing uncertainty and risk, and interacting agents to incorporate heterogeneity and network effects.

Also offered for undergraduate-levelcredit as SySc 435 and may be taken only once for credit. . Prerequisite: Recommended preparation: Bas ic probability \& statistics and exposure to calculus; exposure to writing scripts (e.g. Matlab, Mathematica, R, etc.).

## SySc 540 - Introduction to Network Science (4)

Interdisciplinary introduction to network science, complex systems research, and social psychological concepts. In depth exposure to foundations of network science, including clas sical topics: random graphs, s mall world networks, etc. Dis cussion of social processes such as social contagion, opinion formation, etc. Introduction to advanced topics: community detection and (social) network interventions.

Also offered for undergraduate-levelcredit as SySc 440 and may be taken only once for credit. . Prerequis ite: Recommended preparation: Bas ic linear algebra, probability, statistics, and scripting tools such as Matlab, Mathematica, orR.

## SySc 545 - Application of Data Science (4)

Introduction to data science as a profession and toolset, including its role in various types of projects, from exploration to discovery to prediction. Surveys current methods and technologies, emphasizing what's possible, feasible, and practical in terms of modeling and interactive visualization. Complements courses focused on specific methods and tools. Expected preparation: It will be helpful though not required to haveexposure to datamanagement or programming/scripting tools such as Matlab,

Mathematica, R, Python, SPSS, or advanced Excel scripting or formulas.

Also offered for undergraduate-level credit as SySc 445 and may be taken only once for credit. Prerequisite: Stat 241 or Stat 243 and CS 161.

## SySc 551 - Discrete Multivariate Modeling (4)

This course focuses on information theory as a tool for modeling and multivariate analy sis and as a general framework for the study of structure and organization. The course examines the useof set- and information-theoretic techniques for the analysis of constraints in qualitative, as well as quantitative, data. Alsocovered are software implementations, relations to log-linear methods, and applications in the natural and social sciences and the arts.

Also offered as SySc 651 and may be taken only once for credit.

## SySc 552 - Game Theory (4)

Study of cooperation, competition, and conflict in social systems and associated is sues of rationality. Emphasis is on game-theoretic models, particularly of dilemmas of collective action, their possible solutions, and their applications to social, economic, and political phenomena. Als o covered are social choice theory, and other systems theoretic approaches to cooperation, competition and conflict.
Also offered for undergraduate-level credit as SySc 452 and may be taken only once for credit.

## SySc 557 - Artificial Life (4)

Artificial life (ALife) encompasses mathematical and computational studies of phenomena such as replication, metabolism, morphogenesis, learning, adaptation, and evolution. Situated at the intersection of computer science and biology (also physics and chemistry) and focused on abstract, materiality-independent aspects of life, its purpose is two-fold: to understand biological phenomena and to develop computational technologies. ALife bears significantly also on the social sciences and philosophy. It is part of the research programinto "complexadaptive systems". Emphasizes (1) cellular automata (and other discrete dynamical models), (2) ecological and evolutionary simulations, and (3) genetic algorithm optimization and adaptation. Other topics include artificial chemistry (metabolismand origins of life) and philosophical is sues.

Also offered as SySc 657 and may be taken only once for credit. Prerequisite: graduate standing, calculus, probability, computer programming.

## SySc 575 - AI: Neural Networks I (4)

Introduces approach for developing computing devices whose design is based on models taken fromneurobiology and on notion of "learning." A variety of NN architectures
and as sociated computationalalgorithms for accomplishing the learning are studied. Experiments with various available architectures are performed via a simulation package. Students do a major project on the simulator or a special programming project.
Prerequisite: graduatestanding. .
SySc 601 - Research (0-15)
(Credit to be arranged.)

## SySc 603 -Dissertation (0-15)

(Credit to be arranged.)

## SySc 604 -Internship (1-9)

(Credit to be arranged.)

## SySc 605 - Reading and Conference (0-9)

(Credit to be arranged.)

## SySc 607 -Seminar (1-9)

(Credit to be arranged.)

## SySc 608 - Workshop (1-9)

(Credit to be arranged.)

## SySc 610 -SelectedStudies (1-9)

(Credit to be arranged.)

## SySc 625 - Agent BasedSimulation (4)

Introduction to simulation methods that impart simple rules to collections of "agents" that interact within an environmentrepresented as a spatial grid. The properties of the agents and the environment vary dynamically, and often result in behavior patterns that are complexin ways that are not readily apparent froman examination of the rules that generated the behavior. Suchbehavior is often referred to as emergent, with examples including flocks of birds, traffic jams, ant colonies, crowd phenomena, etc. Of particular interest is the fact that such phenomena occur without centralized control. This approach is often used to study social systems, but may be used to study a variety of natural and non-natural systems.
Also offered as SySc 525 and may be taken only once for credit.

## SySc 627 - Discrete SystemSimulation (4)

The primary focus is on the application of discrete system simulation to real world problems using the Arena simulation language. The mathematical basis for dis crete systemsimulation is probability theory and queuing theory. It is usedextensively in the fields of operations research, civilengineering, and industrial engineering. Students apply the tools to projects within their fields of interest.
Also offered as SySc 527 and may be taken only once for credit. Prerequis ite: graduate standing or consent of the instructor. .

## SySc 651 - Discrete Multivariate Modeling (4)

This course focuses on information theory as a tool for modeling and multivariate analy sis and as a general framework for the study of structure and organization. The course examines the useof set- and information-theoretic techniques for the analysis of constraints in qualitative, as well as quantitative, data. Also covered are software implementations, relations to log-linear methods, and applications in the natural and social sciences and the arts.
Also offered as SySc 551 and may be taken only once for credit.

## SySc 657 - Artificial Life (4)

Artificial life (ALife) encompasses mathematical and computational studies of phenomena such as replication, metabolism, morphogenesis, learning, adaptation, and evolution. Situated at the intersection of computer science and biology (also physics and chemistry) and focused on abstract, materiality-independent aspects of life, its purpose is two-fold: to understand biological phenomena and to develop computationaltechnologies. ALife bears significantly also on the social sciences and philosophy. It is part of the research programinto "complexadaptive systems". Emphasizes (1) cellular automata (and other discrete dynamical models), (2) ecological and evolutionary simulations, and (3) genetic algorithm optimization and adaptation. Other topics include artificial chemistry (metabolis mand origins of life) and philosophical is sues.

Also offered as SySc 557 and may be taken only once for credit. Prerequis ite: graduate standing, calculus, probability, computer programming.

## SysE - Systems Engineering

SysE 504 - Cooperative Education/Internship (1-9)

## SysE 505 - Reading and Conference (1-8)

(Credit to be arranged.)

## SysE 506-Special Projects (1-9)

(Credit to be arranged.)

## SysE 510 -SelectedStudies (1-6)

(Credit to be arranged.)

## SysE 561 -Logistics Engineering (4)

Concentrates on logistics froma systems engineering perspective. Systems will include a mix of products and processes, materials, equipment, software, people, data, information, and services, within some formofhierarchy. The design for supportability/serviceability, the production and effective distribution for customeruse, and the sustaining maintenance will be addressed on a total system life-cycle basis, with particularemphasis in the early phases of the development of new systems and/or reengineering of existing systems.
Prerequisite: basic knowledge of systems engineering concepts and statistics.

## SysE 567 - Systems Engineering Management (4)

Management techniques applicable to Systems Engineering as part of its interface role to integrate project control (cost and scheduling) and technical specialties, including evaluating new technologies and integrating with legacy systems, technical performance measures, development-process tailoring, maturity as sessment models, conducting technical reviews. Expected preparation: SysE591.

## SysE 573 - Requirements Engineering (4)

Students gain knowledge to translate need s and priorities into systemrequirements that are the starting point for the engineering of complexhard ware/software systems.
Topics include: larger context in which requirements for a systemare developed; developing mission needs or market opportunities first versus as sessing available technology first; translating needs and priorities into an operational concept and then into specific functional and performance requirements; assessment of requirements, including such aspects as correctness, completeness, consistency, measurability, testability and clarity of documentation; relationship between interface definitions and requirements; risk management of requirement is sues, and stakeholders inputto increase the prospects for project success. Case studies will be used, many provided by students and involving software-intensive systems. Recommended prerequis ite: SysE591.

## SysE 575 - Reducing Risk in Decision Making (4)

Examines the concepts, techniques and tools for managing risk and making decisions as key components of the systems engineering process. Risk connotes a measure of the probability and severity of an undesiredevent. Begins with an overview of the risk management (identifying, assessing, monitoring, and mitigating) and decision process. Differences between mission critical and nonmis sion critical programmatic risk emphasized. Other topics include the limits of expected value-based risk analys is, decision making strategies such as max/min, $\mathrm{min} / \mathrm{max}$ and regrets. Formal methods in risk analysis, elementary decision analysis and decis ion trees, multiobjective decision making, pareto techniques, optimality, and trade-off analysis will be covered. Risk and decision techniques will be contrasted with theinterfacing processes of programmanagement and software engineering, from both the government and industrial perspectives.
Prerequisite: experience with systems engineering process.

## SysE590 - Integrative Workshop(0-4)

Systems engineering is an acquired behavior to be developed throughout the master's degree program. Students and faculty ad visers will eng age in creative workshop activities integrating technical specialty skills and project experienceinvoking systems engineering applications of communication, synthesis and creativity, teambuilding, problemsolving, management of time and resources, and systemlife-cycle thinking. A student portfolio will document the programplan and document that the desired behavioral change is taking place.
Prerequisite: consent of instructor. Pass/No pass only.

## SysE 591 - Systems Engineering Approach (4)

Engineering of complexhardware, software systems encompasses quantitative methods to understand vague problemstatements, determine what a proposed product/systemmust do (functionality), generate measurable requirements, decidehow to select the most appropriate solution design, integrate the hardware and software subsystems, and test the finished product to verify it satisfies the documented requirements. Additional topics that span theentire product life cycle include interface management and control, risk management, tailoring of process to meet organizational and project environments, configuration management, test strategies, and trade-off studies.
Prerequisite: consent of instructor.

## SysE 595-Hardware-Software Integration (4)

Systems engineering is applied to the integration of hardware-s oftware systems, focusing on embedded computer products development and information technology systems. Factors that affect the selection of hardware and software solutions in design will be
examined, as well as the use of tradestudies to optimize the efficiency of integration is sues. Techniques for partitioning of system-level functions and requirements to hardware/software components will be provided, as will practical guidance, through case studies, process templates, and design checklists.

Prerequisite: basic understanding of hardware and software development.

## TA - Theater Arts

## TA 101 - Theater Appreciation (4)

This course is intended as a general introduction to the art of the theater: acting; directing; playwriting; scenic, costume, and lighting design. Emphasis is placed on theater as a performing art today rather than upon the history or origins of the theater. The class, in part, involves attendance at live performances and events in the Portland area.

## TA 102 - Introduction to Acting (4)

A study in the basic building blocks of how to approach, prepare, and act a role. Text analys is, improvisation, exercises to expand the imaginative world of the play, preparation, commitment to an action, commitment to body and voiceexercises to increase awareness, and how to work collaboratively.

## TA 111 - Stagecraft I (3)

An introduction to backstage fundamentals and the tools and techniques used to build scenery. Also covered are technical drawings, stage machinery, and rigging.
Corequisite: TA 114.

## TA 112 - Stagecraft II (3)

This second course in a two-course sequence concerns stage lighting and sound. Students will learn to read lighting plots and to understand lighting instruments and controls. Sound equipmentand its installation for production will be covered. This course requires a twohour lab period per week and participation in departmental productions presented that term. This is the second course in a sequence of two: TA 111 and TA 112 and must be taken in sequence.

Prerequisite: TA 111. Corequisite: TA 115.
TA 114 - Technical Theater Production I (1)
Students gain hands-on proficiency in stagecraft while working on the department's current production.

Corequisite: Must be taken with TA 111.

## TA 115 - Technical Theater Production II (1)

Students gain hands-on proficiency in stagecraft while working on the department's current production.
Prerequisite:TA 111 and TA 114. Corequisite:TA 112.

## TA 121 - Introduction to Design for Theater (4)

Introduces the four primary fields of theatrical design scenery, costumes, lighting and sound, with an emphasis on analysis, res earch, and the exploration of design ideas. Basic artistic skills and techniques introduced to aid development of the skills required to communicate design. Technical skills are not required.

## TA 134 - Workshop Theater: Scenery, Costume \& Lighting Production I (1)

A study and practical application of skills related to scenery, costume, and lighting for the theater. Students will learn through participating on construction and implementation and/or run crews for the departmental production.

## TA 144 - Voice for the Actor I (3)

An introductory course in basic principles and techniques of voice production specifically forstage performance including physiology, breath support and res onance, articulation and projection.

## TA 145 - Acting Workshop(1-4)

Rehearsal, performance, and analysis of scenes directed by Directing I students for studio presentation and critique.
Prerequisite: TA 102.

## TA 146 - Acting/Playwriting Workshop (3)

Readings, discussions, and walk-throughs of plays written by Playwriting II students.
Prerequisite: TA 142.

## TA 147 - Movement for the Actor (3)

Introduction to concepts and techniques of theatrical movement and physical theater. Will utilize a variety of relaxation, centering, stylization, and imagery exercises designed to increase body awareness and expressiveness. Skills in ensemble, mime, mask, and light acrobatics will be developed.

## TA 151 - Introduction to Theater Arts \& Practice (4)

Investigates theater as both a dramatic art and an industry. Introduces topics in theater history, playwriting,
performance, design, and theater management. Students exposed to a variety of productions and theater professions in the Portland community.

## TA 199 - Special Studies (1-12)

(Credit to be arranged.)

## TA 201 - Script Analysis (4)

Examination and analysis of fundamental principles of dramatic structure, form, and style though study and analys is of representative plays selected frommajor periods. Emphasis on the productionimplications of selected text.

## TA 234 - Workshop Theater: Scenery, Costume \& Lighting Production II (1)

A study and practical application of skills related to scenery, costume, and lighting for the theatre. Students will learn through participating on construction and implementation and/or run crews for the departmental production. 200 level workshops assume familiarity with the shop(s); a higher level of res ponsibility will be expected.

Prerequisite:TA 134.

## TA 241 - Improvisational Acting I (3)

Seeks to acquaint the student through exercises, theater games, and study of basic techniques for creative role playing with the skills and techniques necessary for improvisational acting and de velopment of material for public performance. This is the first course in a sequence of two: TA 241 and TA 242 which must be taken in sequence.

## TA 242 - Improvisational Acting II (3)

Seeks to acquaint the student through exercises, theater games, and study of basic techniques for creative role playing with the skills and techniques necessary for improvisational acting and development of material for public performance. This is the second course in a sequence of two: TA 241 and TA 242 which must be taken in sequence.

## TA 248 - Acting I: Process (4)

The first acting class for the major. Emphas is on the building blocks of actor technique leading into scene work: text analys is for the actor, preparation, commitment, character arc, boldness, rhythm, living a life onstage, and
collaboration. This course is rigorous and demands outside time commitment for rehears al.

Prerequisite:TA major; sophomore standing.

## TA 252 - Stage Makeup (2)

A study of the basic principles of the art and technique of makeup fors tage and screen.

## TA 253 - Workshop Theater I- (1-3)

Training in theater production through the intensive study and rehearsal of scenes and plays. Maximum: 12 credits.

## TA 299 - Special Studies (1-4)

(Credit to be arranged.)

## TA 305U - Understanding Theater (4)

An investigation of theater designed to develop a heightened awareness of how the theater arts express and communicate ideas and experiences. To expand critical awareness of the process by which theater creates meaning and communicates through performance to contemporary audiences. Course will examine the dynamic relationship between theater and the society it both mirrors and influences.

## TA 311 - Scene Design I (4)

A study of visual arts principles as related to scenic design. Projects in stage geography, design composition, and visual imagery are used to develop thestudent's communication skills in the area of scenic design.
Prerequisite:TA 111, 112, 301, 316. Recommended:TA 114 and 115.

## TA 312 - Scene Painting (3)

Training to extend the student's basic skills in traditional methods and techniques of scene painting.

Prerequisite: TA 111, 112. Recommended:TA 114, 115, and 316.

## TA 314 - Lighting Design 1 (4)

Introduction to stage lighting. Exploration of the medium of light through observation, analysis, and recreation while working with the fixtures used in modern stage lighting. Also includes the graphic standards for stage lighting design. Open to non-majors with instructor consent.

Prerequisite: TA 121, TA 201.

## TA 316 - Technical Theater Lab (2)

Students gain advanced hands-on proficiency in stagecraft while working on the department's current production. Students will take on greater res ponsibilities on productions building on their experiences from the TA 114/TA 115 production labs.
Prerequisite: TA 111, TA 112, TA 114, TA 115.
TA 317 - Theater Technologies (2)
The study and practical application of advanced techniques and materials in all as pects of stagecraft, including drafting and drawing for the sceneshop, theorganization and planning of scenery construction within a production calendar, and problem solving on current department productions. Expected preparation: TA 114, 115.

Prerequisite: TA 111, TA 316.

## TA 321 - Introduction to Costume Design (4)

An introduction to the theory, techniques, and design principles of contemporary stage costumes.
Prerequisite: TA 111, TA 201.

## TA 322U- History of Dress I (4)

Historical survey of dress in Western civilization from ancient Egyptian to modern times with emphasis on aes thetic, cultural, and political expres sions of clothing. Course may be taken out of sequence.
Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as Art 322U and may be taken only once forcredit.

## TA 323U- History of Dress II (4)

His torical survey of dress in Western civilization from ancient Egyptian to modern times with emphasis on aes thetic, cultural, and political expres sions of clothing. Course may be taken out of sequence.
Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as Art 323 U and may be taken only once forcredit.

## TA 325 - Costume Production (2)

A study and practical application of stage costume construction techniques, beginning and advanced. Students will participate in the construction of costumes for departmental productions. Recommended prerequisite: 3 credits of theater arts. Maximum 6 credits.

## TA 326 - Pattern Development (1-4)

A study and practical application of the methods for creating patterns for theatrical costumes, including flat drafting, draping, and period pattern adaptation.

Prerequisite:TA 325. Recommended:TA 321.

## TA 327 - Costume Technology (1-4)

A study and practical application of costume craft and decorative techniques, including fabric dyeing and painting and accessories fabrication. Recommended prerequisite: TA 321.

## TA 330U- Multicultural Theater (4)

Exploration of the diversity of our society through theater --comparing and contrasting the works of certain ethnic specific writers and those writers often considered to be in the mainstreamof the modern theater.

## TA 333 - Workshop Theater: Directing/Stage Management/Dramaturgy (1-2)

For the School of Music and Theater productions. Offerings include stage manager, assis tant director, dramaturg, choreography, and music direction. Participants are required to audition or interview for productions. Information about auditions/interviews is provided on the Theater Call Board outs ide of LH 127. Meeting times are arranged by the director. Most performances and rehearsals are held in the evening. Technical rehearsal for mainstage productions require a full weekend technical schedule. Course is repeatable forcredit.

## TA 334 - Workshop Theater: Scenery, Costume \& Lighting Production 3 (1-2)

ForPSU Theater Department productions. Offerings include scene construction and painting, costume construction and crew, stage/run crews, props, sound design and crew, lighting design and crew. Meeting times depend upon the assignment registered for, butusually include daytime, evening, and/or weekends. Technical rehears al for mains tage productions require a full weekend technical schedule. Course is repeatable for credit.

## TA 335 - Workshop Theater: Management/Publicity (1)

ForPSU Theater Department productions. Offerings include house management, public relations, audience development, publications, educational outreach, and display. This course meets each termfor one hour per week as a group, with the remaining meeting times depending upon the specific assignments for the termin question. Meeting times depend upon the as signment registered for, but may include daytime, evening, and/or weekends. Course is repeatable for credit.

## TA 340 - Acting II: Scene Study (4)

Building on TA 248, coursework deepens the student actor's understanding of arc, character development, commitment, rhythmof sound and language, and choices that ignite the text. Class demands commitment to intense scene work outside the classroom. Must be taken in sequence.

Prerequisite: TA major, TA 248, and permis sion of instructor.

## TA 341 - Acting III: Classical Text (4)

Building on TA 340, and using increasingly difficult texts, this advanced class moves the actor further into technique. Language and epic style is a major focus of the work, with emphasis on such writers as Shakespeare, Moliere, Behn, and Ford. Class demands commitment to intense scene work outs ide the classroom.

Prerequisite: TA major; TA 248 and TA 340, and permis sion of instructor.

## TA 342 - Advanced Acting (4)

Builds on past lessons and explores the way we rehearse and apply our craft. Individual acting blocks are addressed. Advanced acting problems are explored through complex texts. Must be taken in sequence.

Prerequisite:TA major; TA 341, and permission of instructor.

## TA 344 - Voice for the Actor II (3)

An intermediate course in the principles of voice production for the stage, concepts and techniques for adapting the voice to various stage environments, and techniques necessary for analyzing stage speech problems and developing appropriate solutions.

Prerequisite: TA 144.

## TA 345 - Topics in Acting (1-4)

Intensive study of a particular subset of performance, for example, How 2 B Funny, Audition Techniques, Movement Performance or Stage Combat. This course is repeatable up to 6 times for credit.

## TA 346 - Stage Dialects (4)

An introduction to the method and techniques of dialect production for theatrical performance, including a survey of basic American, English, and European dialects.

## TA 347 - Mainstage Production (1-4)

Through rehearsal and the stage production, students are challenged to pursue a commitment to individual excellence and collaboration, dis cover a passion for their
discipline, and develop a firm grounding in the core components of live performance.

## TA 348 - Acting for the Camera (4)

An introduction to acting before the camera for film and video.

## TA 361 - Theater Appreciation (4)

An intermediate course in the art of the theater: acting; directing; playwriting; and, design. Specialemphasis on theater as a performing art today, not the history or origins of the theater. Course involves in part, attendance at live performances in the Portland area.
Prerequisite: upper-division standing.

## TA 363 - Development of Dramatic Art I (4)

Survey of dramatic literature and theater history from ancient times to the emergence of the modern theater in the 19th century. This is the first course in a sequence of two: TA 363, TA 364; the course is chronological in its presentation buteach termmay be taken separately.
Prerequisite: upper-division standing.

## TA 364 - Development of Dramatic Art II (4)

Survey of dramatic literature and theater his tory from ancient times to the emergence of the modern theater in the 19th century. This is the second course in a sequence of two: TA 363, TA 364; the course is chronological in its presentation buteach termmay be taken separately.

Prerequisite: upper-division standing.

## TA 369U- Women, Theater, and Society (4)

An examination of ways in which women and sexuality have been represented in Western theatrical production since the Greeks. Selected topics will be analyzed relating feminist theories to the creation of the theater arts by women, with consideration of cultural contexts in which they work. Study of artistic practice by women in relation to is sues of power, representation, and access.

## TA 381L-Lab for TA 381 (0)

Lab for TA 381.
Corequisite: TA 381.
TA 383L - Lab for TA 383 (0)
Lab for TA 383.
Corequisite: TA 383.

## TA 399 - Special Studies (1-6)

(Credit to be arranged.)

## TA 401 - Research (1-6)

(Credit to be arranged.)

TA 402 - Independent Study (1-12)
(Credit to be arranged.)

## TA 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## TA 405 - Reading and Conference (1-6)

(Credit to be arranged.)

## TA 406 - Special Projects (1-6)

(Credit to be arranged.)

## TA 407 - Seminar (1-6)

(Credit to be arranged.) Recent topics have included Introduction to Playwriting and Women, Theater, and Society.

## TA 408 - Workshop(1-6)

(Credit to be arranged.)

## TA 409 - Practicum (1-12)

(Credit to be arranged.)

## TA 410 - Selected Topics (1-6)

(Credit to be arranged.)

## TA 421 - Costume Design (3)

An in-depth study of costume design principles. Emphasis is placed on the design of costumes for specific plays, using a variety of styles and rendering media.
Recommended:TA 325.
Prerequisite:TA 321.

## TA 430 - Scene Design 2 (4)

Advanced course in scene design for the theater. Emph as is on research, conceptual thought, the imagination and manipulation of the stage environment, constructive collaboration, and the development of technical skills required of professional scenic designers. Open to nonmajors with instructor consent.

Prerequisite: TA 311.

## TA 435 - Lighting Design 2 (4)

Advanced stage lighting with primary focus on implementation and documentation required to organize, communicate and track your ideas. Extens ive training in two ess ential programs: Vectorworks ${ }^{\text {TM }}$ and Lightwright ${ }^{\mathrm{TM}}$.

Prerequisite:TA 314. Open to non-majors with instructor consent.

## TA 440 - Advanced Acting Studio (1-4)

Advanced studio work focusing on rehearsal technique, style, preparation, developing material, and working with diverse environments, all leading to a public performance. May be repeated for a total of 12 credit hours.
Also offered for graduate-levelcredit as TA 540.
Prerequisite: TA major; TA 342, by audition/interview and permission of instructor.

## TA 454 - Directing I(4)

Study and practice in play analy sis and directing of scenes. Expected preparation: TA 311, TA 321.

Als o offered for graduate-level credit as TA 554 and may be taken only once for credit. Prerequisite: TA 111, TA 201, TA 248.

## TA 455 - Directing II (4)

Advanced practice in analysis and directing of plays for public performance.
Also offered for graduate-levelcredit as TA 555 and may be taken only once for credit. Prerequisite: TA 111, TA 316, TA 454.

## TA 460 - Advanced Directing (3)

Specific problems in directorial methods and styles for presentation in public performance.

Also offered for graduate-level credit as TA 560 and may be taken only once for credit. Prerequisite: TA 455 or equivalentexperience.

TA 466W -Development of Dramatic Literature (3)
A survey of dramatic literature fromits beginnings to the emergence of the modern theater in the late 19th century together with pertinent facts on theaters and stagings. The
course is chronological in its presentation buteach term may be taken separately.

## TA 467 - Modern Theater I (4)

A consideration of theater and drama fromthe late 19th and early 20th century to the present. Representative plays chosen from continentalEuropean, English, Irish, and American repertories. Examination of key directors and trends in staging. This is the first course in a sequence of two: TA 467 and TA 468. Courses may be taken out of sequence.

Also offered for graduate-level credit as TA 567 and may be taken only once forcredit. Prerequisite: upper-division standing.

## TA 468 - Modern Theater II (4)

A consideration of theater and drama fromthe late 19th and early 20th century to the present. Representative plays chosen from continentalEuropean, English, Irish, and American repertories. Examination of key directors and trends in staging. This is the second course in a sequence of two: TA 467 and TA 468 . Courses may be taken out of sequence.

Also offered for graduate-level credit as TA 568 and may be taken only once for credit. Prerequisite: upper-division standing.

## TA 471 - Theater History: Periods and Topics (1-4)

Concentrated study of a particular period and/or topic in theater history: for example, Ancient Greek Theater and Drama, Medieval and Renaissance Theater, Theater and Science, Restoration/18th Century Drama, American Theater and Drama, and Theatrical Expressionism. Expected preparation:TA 363 and TA 364 or appropriate sophomore inquiry course.
Also offered for graduate-level credit as TA 571.
TA 472 - Theater History: Major Figures (1-4)
Concentrated study of the contribution of one or more major theater artists: for example, Ibsen, Stanislavsky, Appia, Brecht, and Artaud.
Also offered for graduate-level credit as TA 572.
Prerequisite: upper-division standing.

## TA 474 - Dramatic Writing I (4)

A sequence in scriptwriting involving analy sis of dramatic structure, practical application of scriptwriting techniques. This is the first course in a sequence of two:TA 474 and TA 475 which must be taken in sequence.
Also offered for graduate-level credit as TA 574 and may be taken only once forcredit. Prerequisite: TA 201 or permission of the instructor.

## TA 475 - Dramatic Writing II (4)

A sequence in scriptwriting involving analysis of dramatic structure, practical application of scriptwriting techniques. This is the second course in a sequence of two: TA 474 and TA 475 which must be taken in sequence. Expected preparation: 8 credits of TA and/or English.

Also offered for graduate-level credit as TA 575 and may be taken only once for credit.

## TA 501 - Research (1-9)

(Credit to be arranged.)

TA 502 - Independent Study (1-12)
(Credit to be arranged.)

TA 503 - Thesis (1-9)
(Credit to be arranged.)

## TA 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## TA 505 - Reading and Conference (1-6)

(Credit to be arranged.)

## TA 506 - Special Projects (1-6)

(Credit to be arranged.)

## TA 507 - Seminar (1-6)

(Credit to be arranged.) Recent topics have included Introduction to Play writing and W omen, Theater, and Society.

## TA 508 - Workshop(1-6)

(Credit to be arranged.)

## TA 509 - Practicum (1-9)

(Credit to be arranged.)

## TA 510 - Selected Topics (1-6)

(Credit to be arranged.)

## TA 511 - Introduction to Theater Research (2)

An introductory course in research methods and bibliography for graduate study in theater.

## TA 514 - History of Decor (4)

A historicalsurvey of period decor focusing on furniture and interior architectural detail from Egyptian to modern times with emphas is on periods mostcommonly used in theater production. Expected preparation: 6 credits of theater arts.

## TA 540 - Advanced Acting Studio (1-4)

Advanced studio work focusing on rehearsal technique, style, preparation, developing material, and working with diverse environments, all leading to a public performance. May be repeated for a total of 12 credit hours.
Also offered for undergraduate-levelcredit as TA 440 and may be taken only once for credit. Prerequisite:TA major; TA 342, by audition/interview and permis sion of instructor.

## TA 554 - Directing I(4)

Study and practice in play analy sis and directing of scenes.
Also offered for undergraduate-levelcredit as TA 454 and may be taken only once forcredit.
TA 555 - Directing II (4)
Advanced practice in analysis and directing of plays for public performance.
Also offered for undergraduate-levelcredit as TA 455 and may be taken only once for credit.

## TA 560 - Advanced Directing (3)

Specific problems in directorial methods and styles for presentation in public performance.
Also offered for undergraduate-level credit as TA 460 and may be taken only once for credit. Prerequisite:TA 455 or equivalentexperience.

## TA 567 - Modern Theater I (4)

A consideration of theater and drama from the late 19th and early 20th century to the present. Representative plays chosen from continental European, English, Irish, and American repertories. Examination of key directors and trends in staging. This is the first course in a sequence of two:TA 567 and TA 568. Courses may be taken out of sequence.
Also offered for undergraduate-level credit as TA 467 and may be taken only once for credit. Prerequisite: upperdivision standing.

## TA 568 - Modern Theater II (4)

A consideration of theater and drama from the late 19th and early 20th century to the present. Representative plays chosen from continental European, English, Irish, and American repertories. Examination of key directors and trends in staging. This is the second course in a sequence of two:TA 567 and TA 568. Courses may be taken out of sequence.
Also offered for undergraduate-level credit as TA 468 and may be taken only once for credit. Prerequisite: upperdivision standing.

## TA 571 - Theater History: Periods and Topics (1-4)

Concentrated study of a particular period and/or topic in theater history: for example, Ancient Greek Theater and Drama, Medieval and Renaissance Theater, Theater and Science, Restoration/18th Century Drama, American Theater and Drama, and Theatrical Expressionism. Expected preparation:TA 464 and TA 465 or appropriate sophomore inquiry course.

Also offered for undergraduate-level credit as TA 471.
TA 572 - Theater History: Major Figures (1-4)
Concentrated study of the contribution of one or more major theater artists: for example, Ibsen,Stanislavsky, Appia, Brecht, and Artaud.
Also offered for undergraduate-level credit as TA 472. Prerequisite: upper-division standing.

## TA 574 - Dramatic Writing I (4)

A sequence in scriptwriting involving analy sis of dramatic structure, practical application of scriptwriting techniques. This is the first course in a sequence of two:TA 574 and TA 575 which must be taken in sequence. Expected preparation: 8 credits of TA and/or English.
Also offered for undergraduate-level credit as TA 474 and may be taken only once for credit.

## TA 575 - Dramatic Writing II (4)

A sequence in scriptwriting involving analysis of dramatic structure, practical application of scriptwriting techniques. This is the second course in a sequence of two:TA 574 and TA 575 which must be taken in sequence. Expected preparation: 8 credits of TA and/or English.
Also offered for undergraduate-level credit as TA 475 and may be taken only once for credit.

## Tur - Turkish

These courses are currently inactive and the department is not planning offer themth is year.

## Tur 101 - First-Year Turkish Term1 (4)

Introduction to Turkish. Emphasis on elements of grammar, vocabulary building, and conversation. Elementary reading. This is the first course in a sequence of three: Tur 101, Tur 102, and Tur 103.

## Tur 102 - First-Year Turkish Term 2 (4)

Introduction to Turkish. Emphasis on elements of grammar, vocabulary building, and conversation. Elementary reading. This is the second course in a sequence of three: Tur 101, Tur 102, and Tur 103.

## Tur 103 - First-Year Turkish Term3 (4)

Introduction to Turkish. Emphasis on elements of grammar, vocabulary building, and conversation. Elementary reading. This is the third course in a sequence of three: Tur 101, Tur 102, and Tur 103.

## Tur 199 - Special Studies (1-5)

(Credit to be arranged.)

## Tur 201 -Second-Year Turkish Term1 (4)

Intensereview of materials introduced in first-year course and further development of communicative skill and reading comprehension. Elementary writing. This is the first course in a sequence of three: Tur 201, Tur 202, and Tur 203. Expected preparation: Tur 103.

## Tur 202 -Second-Year Turkish Term 2 (4)

Intensereview of materials introduced in first-year course and further development of communicative skill and reading comprehension. Elementary writing. This is the second course in a sequence of three: Tur 201, Tur 202, and Tur 203. Expected preparation: Tur 103.

## Tur 203 -Second-Year Turkish Term 3 (4)

Intensereview of materials introduced in first-year course and further development of communicative skill and reading comprehension. Elementary writing. This is the third course in a sequence of three: Tur 201, Tur 202, and Tur 203. Expected preparation: Tur 103.

## Tur 299 - Special Studies (1-12)

(Credit to be arranged.)

## Tur 301 - Third-year Turkish (4)

Composition, conversation, readings in literature, and grammar review. This is the first course in a sequence of three: Tur 301, Tur 302, and Tur 303. Expected preparation: Tur 203.

## Tur 302 -Third-year Turkish (4)

Composition, conversation, readings in literature, and grammar review. This is the second course in a sequence of three: Tur 301, Tur 302, and Tur 303. Expected preparation: Tur203.

## Tur 303 -Third-year Turkish (4)

Composition, conversation, readings in literature, and grammar review. This is the third course in a sequence of three: Tur 301, Tur 302, and Tur 303. Expected preparation: Tur 203.

## Tur 330U - Popular Culture and Literature in Turkey (4)

Development of popular culture and literature in modern Turkey. Impact of Westernization, modernization, journalism, and urban and European migration. Popular literature, films, and media interacting with Marxism, feminism, and Islamism. Conducted in English.

## Tur 331U- Women and Gender in Turkey (4)

Explores construction of gender, women's roles and is sues through modern Turkish literature and culture. Conducted in English.

## Tur 341U- Turkish Literature in Translation (4)

Study of texts representative of major Turkish authors, themes or genres from the modern period in translation. Examples are modern drama, realism, autobiography, contemporary novel. Conducted in English.

## Tur 361 U- Turkey through Film (4)

Viewing of feature films or made-for-TV series followed by discussion of social, historical, and artistic significance of the visual narratives. Individual directors like Yilmaz Güney, genres like comedy and period-dramas of the 1970s or 1960s may be used. Films have subtitles. Readings, viewings and discussions are in English. Expected preparation: Tur 203.

## Tur 399-Special Studies (1-12)

(Credit to be arranged.)

## Tur 401 - Research (1-6)

(Credit to be arranged.)

Tur 404-Cooperative Education/Internship (1-12)
(Credit to be arranged.)

## Tur 410 -SelectedTopics (1-12)

(Credit to be arranged.)

## Tur 416 - Readings in Turkish (2)

A variable-content course designed to give advanced students of Turkish experience reading in a variety of content areas. To be taken in conjunction with regularly scheduled co-requis ite courses. Students taking a corequisite course will do part of the required reading for that course in Turkish. Expected preparation: Tur 341.

## ULib - Library Research

Ulib 101 - Library Research Skills (2)
Introduces library research skills with a focus on information use in the digital environment. Topics include finding, evaluating, and using information ethically. Emphasizes research skills needed for undergraduate research assignments.

## ULib 510 -Special Topics (1-9)

(Credit to be arranged.)

## Ulib 511 - Library Research \& Scholarly Communication Fundamentals (1)

Introduces graduate students to practical skills and res ources related to research; such as, searching for literature review sources, data management basics, and citation management. We will also explore the dis semination of scholarship and the publishing landscape. Students are encouraged to utilize weekly activities and their final project to support their research and other scholarship. This course is recommended for graduate students working on a thesis, dissertation, or other large research project.

## UnSt - University Studies

## UnSt 101 - Race \& Social Justice (5)

This course will study biology that undermines the concept of race itself; sociology that defines the concept as socially constructed; a history that is not acknowledged in standard K -12 texts; and literature that opens a diversity of windows onto the experience of race. Through both increased knowled ge and personal reflection, students can develop capabilities useful to the work of moving U.S. society past its racial dilemma.

## UnSt 107 - Portland (5)

How do our surroundings shape our lives? How do we shape our surroundings? In this course, the complex relationship between people and the places in which we live, recreate, and work is explored. We specifically focus on Portland: its place as a context forhuman development and cultural expres sion; its place as an urban area of diverse communities; and its place within the natural, material, and social environment of the Pacific Northwest.

## UnSt 117 - Human/Nature (5)

The human animal is considered to be both a part of and yet distinct fromnature. This relationship between our human selves and the natural world we inhabit is complicated and perplexing. This theme explores the complex connections between humans and nature. Is there such a thing as human nature, and if so, what is it? How are we related to nature and the larger natural world? Over the course of the year, we will attempt to answer questions like these, drawing on the resources of the social and biological sciences, his tory, literature, and the arts.

## UnSt 121 - Design \& Society (5)

Designers influence the creation of products, images, infras tructure, and environments surrounding us, both virtual and real. Acting in a deliberate manner, designers engage with the problems facing their communities and act to solve themby developing pragmatic, creative, and innovative solutions. This course will use designers' activities as a lens across a variety of activities.

## UnSt 124 -Sustainability (5)

Although we often think of the natural world as separate from our largely urban lives, our most basic needs such as nutritious food to eat, clean air to breathe, and clean water to drink depend on the health of the natural systems of
which we are a part. This courseexplores the interconnectedness of global systems (including physical, ecological, cultural, social, and economic) and their impact on the world.

## UnSt 131 - The Work of Art (5)

Approaching art froma variety of disciplines, this course examines how the work of art shapes, reflects, dis guises, and complicates our pers onal and cultural identities. We explore the various roles that art plays in our imaginary, political, and social lives.

## UnSt 134 - Life Unlimited? (5)

This course delves into the fascinating relationship between non-living and living matter, life and death, nature and the artificial, humans and machines. Our inquiry starts with the fundamental question, "What is life?" We explore the ways the human search for"perfection" is embodied in various myths and utopian visions. As well as examining the risks and opportunities of technologies and how they redefine social relations and values.

## UnSt 141 - Power \& Imagination (5)

This course explores the interwoven relationships among domination, resistance, and empowerment--fromthe interpers onal to the global--through the stories of power and perception as they are represented in art and literature, science, and politics. His torical and contemporary case studies will help us understand the positiveconsequences and potential dangers of my thmaking.

## UnSt 144 - Health, Happiness, \& Human Rights (5)

This course examines the nature and state of healthy individuals and populations in their various environments. A dynamic approach is used to study the places where people live and interact, such as the community, the workplace, and the natural environment. Specific emphasis will be given to the intersections between health, communities (both local and global), and human rights and the impact on happiness.

## UnSt 147 - Immigration, Migration, \& Belonging (5)

The movement of people across borders is a central political and cultural issue throughout the world. Although many are aware of the mobility of goods and capital in a global economy, we tend to be less aware of the movement of people in the globaleconomic systemand we also tend to forget that the movement of people, both as workers and as refugees, is not a new phenomenon.

## UnSt 167 -What are Great Books? (5)

This theme focuses on some of the great literary works, watershed scientific discoveries, and seminal insights and creative acts that characterized the last two millennia of human thought and culture. To do so we will cross disciplines at every stage, working to unders tand how history, literature, art, philosophy, math, and science are not discrete disciplines but have always influenced and contributed profoundly to one another.

## UnSt 170 - Multilingual FRINQ/SINQ Lab (1-2)

Multilingual resident and international FRINQ/SINQ students collaborate to further develop skills and strategies for academic success. Course content includes targeted instruction in reading, writing, presentation, and class participation skills and is res ponsive to self-reported student needs. Instructors utilize materials from FRINQ/SINQ courses and provide students with individualized as sistance.

## UnSt 194 - College Success Topics (3)

College Success is a comprehensive course designed to enhance student success and retention. Students will learn strategies forcreating greater academic, professional, and personal success. Students will understand selfempowerment, pers onal responsibility, self-motivation, interdependence, self-awareness and other critical components of keeping themon course to their goals.

## UnSt 195 - Career Exploration (1)

Explores and explains the career planning process by engaging students in self-assessment and career exploration activities intended to as sist themin choosing a major or career.

## UnSt 196 - Summer Bridge Program (3)

The Summer Bridge Programis a TRiO/Student Support Services (SSS)joint partnership with PSU. Students will strengthen and use the academic skills needed for success at the University. Students will become familiar with the campus and visit classes to better understand the rigor and expectations of college courses.

## UnSt 197 - Academic Writing Support/Student Support Services (1)

The purpose of this course is to assist Student Support Services students with their academic writing. This class is
designed to support students who feel unprepared with the writing demands of college or who may feel the need for additional writing support. Instructor consent required.

## UnSt 198 - Roads to Success Inters ession (3)

Roads to Success is an early start programfornew freshmen at PSU designed to enhance student and academic success and retention at PSU. The course will examine effective college study strategies, selfempowerment theories, differences between high school and college, goal setting and engagement at PSU.
Corequisite: UnSt 298.
UnSt 199 - Special Studies (1-8)
(Credit to be arranged.)

## UnSt 210 - Sophomore Transition (4-5)

Contact department for more information on this course.

## UnSt 212 - American Identities (4)

American Studies examines the tensions, contradictions, traditions, and possibilities that define the American experience. Using perspectives from the humanities and social sciences, students will investigate ethical, social, political, geographic, and cultural developments. Courses may explore film, archaeology, literature, conflict resolution, music, as well as gender and sexualities in order to compare diverse American identities and how they have changed over time. Each class will examine key American narratives, symbols, policies, and places and can apply a broad range of cultural and historical perspectives.

## UnSt 220 - Community Studies (4)

This clusterexplores the nature of the communities we live in, whether defined spatially (such as a neighborhood) or as a set of ties based on sharing a common interest. Building community has become a central debate in a number of social sciences, including sociology, political science, economics, and psychology. In a culture emphasizing individualismand individual rights, how can needs for community and responsibility to others be balanced? Thus, in this cluster, students have the opportunity to gain practical as well as theoretical experience with building communities.

## UnSt 222 - Design <br> Thinking/Innovation/Entrepreneurship (4)

It's not enough to observe and talk about the world's problems; it's up to PSU students to solve them. The Design Thinking/Innovation/ Entrepreneurship (DTIE) clusterempowers students to develop the skills to deeply understand human and environmentalneeds and to address them with creative products and services. By using the Design Thinking methodology introduced in the Sophomore Inquiry course (UnSt 222) to identify needs, brainstorm solutions, incorporate feedback, iterate designs, and formulate enduring business models, students will work on projects that lead to las ting value. The cluster then allows students to harness innovation processes that will serve as touchstones in their careers and lives by drawing on approaches ranging fromthose used to create new social ventures in developing economies to entrepreneurial practices in Silicon Valley.

## UnSt 224 - Environmental Sustainability (4)

This cluster explores what we as humans are doing to our surroundings, the consequences of our actions, and what we should be doing to be more in harmony with the environment. By defining, characterizing, and understanding the en vironment, students will learn how to creatively promote and contribute to sustainability. They will accomplish this by investigating the possibilities of urban planning, studying literature and film, and analyzing the consequences of air and water pollution. Courses are designed to navigate a path through the scientific approach to analyze and solve environmental problems, socioeconomic concerns in environmental policy, and the historic and philosophical basis of our relationship to different ecosystems.

## UnSt 228 - Families and Society (4)

The Families and Society Clusterequips students with the skills to examine family forms in the United States, their intersections with social environments, contemporary challenges, and the effect of public policies on diverse contemporary families. This Cluster highlights theoretical models rooted in ecological systems, social justice, and social res ponsibility, as well as individual and micro-level family experiences. Students fromall majors who participate in the Families and Society Cluster will find the courses relevant to their own and others' family experiences, while also developing a foundation to enhance career development in a variety offields, such as education, business, social work, public health, and other health disciplines.

## UnSt 230 - Freedom, Privacy, and Technology (4)

The aim of this cluster is to provide the knowledge that will enable those whocomplete the cluster to face thoughtfully thequestion of the appropriate use of and limitations upon modern technology. One important feature of the cluster is that it brings together actual sciences with humanistic and social science disciplines.

## UnSt 231 - Gender and Sexuality Studies (4)

This Cluster includes a diverse selection of courses that foregrounds gender and sexuality as they relate to course material in the humanities, social sciences, and sciences. Students explore how gender and sexuality are contemporary socially-constructed concepts and deconstruct the labels and binaries society has placedon their experiences. By offering a profound senseof belonging, students engage in theoretical, personal, and social aspects of various sources in order to navigate their ideas and bodies toward deeperunderstanding of one's own, as well as others', experiences through critical thinking and community engagement.

## UnSt 232 - Global Environmental Change (4)

Students are barraged on a daily basis with news stories of El Nino, global warming, CO2 increasing, greenhouse effects, ozone hole, etc. This cluster will introduce some of the scientific concepts and is sues of natural global cycles and how the systems have changed in the past. We will discuss the physical, chemical and biological changes of the earth's environment in the past, present and future. The past will concentrate on the physical, chemical and biologicalchanges that are recorded in the rock, ice and sediment record. The present will concentrate on recent changes on the oceans and atmosphere, and discuss the human dimension. The future will discuss the merits and limits of global models.

## UnSt 233 - Global Perspectives (4)

The aim of this cluster is to introducestudents to the richness of cultures in Africa, Asia, Europe, Latin America, and the Middle East, drawing on perspectives from the humanities and social sciences. Through exploring the interplay between political, economic, environmental, and cultural sy stems, past and present, students will develop skills and attitudes tofunction as "globalcitizens."

## UnSt 234 - Healthy People/Healthy Places (4)

This clusterexamines the nature and state of healthy individuals in their various environments. A dynamic
approach will be used to study the places in which people live and interact, such as the community, the workplace and the naturalenvironment. Topics will focus on ways to solve and prevent problems that may affect the health and wellbeing of the individual, the local environmentand/or the global community. Individual behavior change, social policies, community development and social res ponsibility may be emphasized.

## UnSt 236 - Interpreting the Past (4)

In this cluster students explore our complexand interwovenhistories. While each of the courses has its own unique focus, they all have in common the useof interpretive tools the humanities and sciences offer us to examine evidence that has come from the past:that is , a prior human culture's literature, science, technology, and/or art. By concentrating on the pre-20th century world, we investigate the diversity of our shared human pastboth the continuities in human experiences across time and space, as well as the profound differences in the lives of people in other times andplaces. Interpreting continuities and changes in the past give students a necessary context for understanding the present.

## UnSt 239 - Knowledge, Values, and Rationality (4)

The theme of the cluster is the nature of rationality and its emergence from the interplay of knowledge and values. The curriculumexplores the major forms that human rationality takes in the acquisition of knowledge, logical inference, moral reas oning, decis ion making, and societal organizations and policy. Individual courses focus on models of rationality as such and conceptualizations of rationality in areas such as logic and inference, natural and social sciences, biomedicine and psy chiatry, social and political theory, low, educational policy, societal value conflicts, and moral theorizing including everyday ethical dilemmas. Human rationality is also approached froma comparative perspective that includes machine and animal learning including broader evolutionary perspectives. Finally, cluster courses offer critical perspective on perennial and popular doctrines that endorse non-rational or irrational approaches to existential and ethical questions, politics, and scientific inquiry.

## UnSt 242 - Leading Social Change (4)

The Leading Social Changeclusterexplores how to create change in society throughevery day acts of leadership. Students will explore elements of leadership such as identity, politics, and culture, and apply this knowledge to a range of social issues in a variety of social contexts where individual or community leadership is required. Through discussion of the implicit and explicit values that guide leaders, and the exploration of various sociocultural
contexts and issues, thecluster recognizes that everyone possesses the capacity for leadership. The cluster is ideal both for students who are interested in learning more about how leaders affect the world and who seek to explore leadership and develop their own leadership skills.

## UnSt 254 - Examining Popular Culture (4)

Popular Culture is generally associated with media and activities: music, movies, TV, Internet, advertising, sports, games, fashion, magazines, comic books-in short, "fun" stuff that many people enjoy. Pop culture offers a common ground that we, as theorist John Storey says, can use to get a fairly accurate read on the values and beliefs of contemporary American society, as well as cultures around the world. Through the process of myth reading and in recognizing and decoding signs of everyday life, students will observe, research, and write about cultural phenomena and gain experience with different methods while delving into popular media. The end goal of these courses is to gain control of, rather than being controlled by, the texts of popularculture.

## UnSt 286 - Science in Social Context (4)

The theme of this cluster is science-in-the-making or the ongoing process of active scientific inquiry - the processes of problem-posing, problemsolving, and persuasion. This thematic emphasis is applied to scientific inquiry in general, to the study of general natural science concepts, and to the analysis of scientific is sues in political, economic, social and ethical contexts.

Cross-Listed as: This is the same course as Sci 201.

## UnSt 298 - Roads to Success Fall Seminar (1)

Roads to Success fall seminar is a co-requisite to Roads to Success Intersession and continues the curriculumfrom the two-week course. Students are exposed to critical study skills, PSU resources for success and learn the important of becoming engaged members of the PSU community.
Corequisite: UnSt 198.
UnSt 299 - SelectedStudies (1-4)
(Credit to be arranged.)

## UnSt 310 - Transfer Transition (4-5)

Contact department for more information on this course.

## UnSt 321U- Learning in Action (4)

Applied learning experience in the UNST cluster. Two required parts: 1) Individual community internship,
volunteer experience, or project. 2) Online course exploring connections between disciplinary approaches in cluster and community work, different forms of engagement, intersections of race, clas s, and gender with community work, and development of professional skills.

## UnSt 389 - Transition from College to Your Professional Life (1)

This course is designed to assist Student Support Services upperclassmen transition fromcollege to career opportunities or graduate and/or professional programs. By providing assistance with these processes, we hopeour students will experience success in their various endeavors after graduation.

## UnSt 390 - TRiO Student Support Services - Transfer Student Bridge Program (2)

Introduction to personnel, resources, and systems at PSU. Through classroomactivities, discussions, group work, and presentations, the class aims to give transfer students a solid foundation for understanding how to successfully navigate their experience at PSU and get the mostout of their education.

Prerequisite: Admis sion to the TRiO SSS program.

## UnSt 394 - College Success Topics (3)

College Success is a comprehensive course designed to enhance student success and retention. Students will learn proven strategies for creating greater academic, professional, and personal success. Students will understand self-empowerment, personal res ponsibility, self-motivation, interdependence, self-awareness and other critical components of keeping themon course to their goals.

UnSt 399 - Special Studies (1-8)
(Credit to be arranged.)

## UnSt 401 - Research (1-4)

(Credit to be arranged.)

## UnSt 402 - Independent Study (1-9)

(Credit to be arranged.)

UnSt 404 - Cooperative Ed/Internship (1-8)
(Credit to be arranged.)

UnSt 405 - Reading and Conference (1-8)
(Credit to be arranged.)

## UnSt 406 -Special Projects (1-4)

(Credit to be arranged.)

## UnSt 407 -Seminar (1-6)

(Credit to be arranged.)

UnSt 408-Workshop(1-8)
(Credit to be arranged.)

## UnSt 409 - Practicum(0-4)

(Credit to be arranged.)

## UnSt 410 -SelectedStudies (1-6)

(Credit to be arranged.)

## UnSt 411 - Inquiry Mentor (3)

Contact department for more information on this course.

## UnSt 412 - Inquiry Mentor (1-4)

Contact department for more information on this course.

## UnSt 413 - Inquiry Mentor (1-3)

Contact department for more information on this course.

## UnSt 421 - Capstone (1-6)

The culmination of the University Studies programis the Caps tone courserequirement. This 6 -credit, communitybased learning course is designed to provide students with the opportunity to apply, in a team context, what they have learned in the major and in their other university studies courses to a real challenge emanating from the community. Interdisciplinary teams of students address these challenges and produce a summation product in a University Studies approved Capstone course under the instruction of PSU faculty member. The Capstone's purpose is to further enhance student learning while cultivating critical life abilities that are important both
academically and professionally:establishing connections within the larger community, developing strategies for analyzing and addressing problems, and working with others trained in fields different fromone's own. Independent volunteering, work experience, by arrangement credits, internships and practica cannot fulfill the Capstone requirement. Students musthave completed 90 credit hours before registering fortheir Capstone course. For a full description of each of the 220 Capstone courses, please visit the Capstone website at: http://capstone.unst.pdx.edu/.

## UnSt 450 - Mentoring in Higher Education (4)

Introduction to theories, research, and best practices for peer mentoring in highereducation. Focus is on is sues that impact the retention and success rates of college students. Students will develop their own frameworks, res ources, and skills to become effectivepeer mentors.

## UnSt 509-Practicum(1-4)

(Credit to be arranged.)

## UPA-Urban and Public Affairs

UPA 103 -CUPA Pathways: Student Success (4)
Focuses on identity, community and skill building for a successful and meaningful educational experience. Assignments enable the development of strong technical and communication skills, preparing students for academic and professional success. Autonomy, realistic educational objectives and support services are highlighted.

UPA 199-(1-12)

## UPA 335 -World Changing Jobs: Career Exploration

 (4)Expose students to a wide array of career related resources in urban and public affairs, allow for skill building and professional networking. Students will gain a better understanding of what career options would be a good fit for themand ways to use their educational experience for professional development purposes. Assignments will allow students to further develop communication, research, and presentation skills.

## UPA 399 -Special Studies (1-12)

(Credit to be arranged.)

UPA 401 - Research (1-6)
(Credit to be arranged.)

## UPA 402 - Independent Study (1-8)

(Credit to be arranged.)

## UPA 404 - Cooperative Ed/Internship (1-9)

(Credit to be arranged.)

## UPA 405-Reading \& Conference (1-6)

(Credit to be arranged.)

## UPA 407 -Seminar (4)

(Credit to be arranged.)

## UPA 408-Workshop(1-6)

(Credit to be arranged.)

## UPA 409 - Practicum (1-12)

(Credit to be arranged.)

## UPA 410 -SelectedStudies (1-6)

(Credit to be arranged.)

## UPA 425-CUPA Dean's Seminar (4)

An integrative course providing students with substantive opportunities to explore, connect and apply major theories and practices associated with urban and public affairs. Students will focus on issues of community resilience based in democratic participation for positive community change.
Prerequisite: Seniors tanding.

## USP - Urban Studies \& Planning

USP 199 -Special Studies (1-4)
(Credit to be arranged.)

## USP 233 - Real Estate Principles (3)

Surveys the legal, physical, andeconomic structure of the real estate market and the characteristics of realestate resources. Develops basic real estate valuation procedures and provides an overview of market analy sis and real es tate production, marketing and finance methods.

Prerequisite: Ec 201.

## USP 299 - Special Studies (1-4)

(Credit to be arranged.)

## USP 300U- Introduction to Urban Studies (4)

Introduction to the interdis ciplinary field of urban studies drawing on the urban planning, economics, geography, sociology, politics, and the humanities to provide basic concepts for understanding the urbanized world of the twenty-firstcentury. Cities as economic, social, and political systems and ways in which people have thought about cities.

USP 300-(4)
Introduction to Urban Studies (4)

Introduction to the interdis ciplinary field of urban studies drawing on the urban planning, economics, geography, sociology politics, and the humanities to provide basic concepts for understanding the urbanized world of the twenty-firstcentury. Cities as economic, social, and political systems and ways in which people have thought about cities.

## USP 301U- Introduction to Community Development (4)

An inves tigation of concepts, models and perspectives of community development practice. Explores social, cultural, religious, politicaleconomic and environmental as pects that affect community development practice. Asset-based and sustainable human development models and action research are emphasized. The course utilizes teaching cases and experts fromthe field and requires substantial reading reflection and dis cussion.

## USP 302 - Theory and Philosophy of Community Development (4)

New approaches to the philosophy of community; theory and comparative practice; and case study of local theory
and practice, presentation of an in-depth case study from the Pacific Northwest.

Prerequisite: USP 301.

## USP 311 U- Introduction to Urban Planning (4)

An interdisciplinary perspective on planning theories, principles, and practice. Focuses on the planning process, particularly at the local level. Explores the political, economic, social, and legal forces that influence the planning function and the roles of planners. Changing concepts in practice are also considered. Recommended prerequisite: upper-division standing.

## USP 312U - Urban Housing and Development (4)

Problems of housing, development, and redevelopmentin an urban setting are analyzed fromeconomic, demographic, and planning perspectives. Introduction to the nature of the urban economy and residential location, with a focus on housing problems and their as sociated social, physical, and racial aspects. Role of federal and community-based housing policies and programs. Recommended prerequis ite: USP 311.

## USP 313U - Urban Environmental Issues (4)

Environmental is sues and problems are evaluated in the urban context. The course addresses both the origins of urban environmental problems and their economic and social implications. Finding solutions that attempt to achieve balance between social, economic, and ecological factors is addressed in the context of urban environmental policy, planning and community activism.

## USP 314U - The Global City in Film (4)

Critically examines urban social issues reflected in films from different countries. Course includes in-class screening, lecture and discussion, and film review writing exercises. Topics for dis cussion include the urb an form, is sues of race, gender and social class, the relationships among communities, political authority, industry, commerce, police, street gangs, criminals, public schools, and other institutions and denizens of the city.
Cross-Listed as: This is the same course as Int1314U and may be taken only once for credit.

## USP 316 - Community Organizing and Social Change

 (4)Community organizing seeks to involve people in collective action to address is sues of socialchange and social justice. This course covers thehis tory, philosophy and goals of community organizing and various elements
of the organizing process. Case studies will provide the basics for the development of action plans.

## USP 317U - Introduction to International Community Development (4)

An inves tigation of concepts, models, and perspectives of International Community Development practice. Explores social, cultural, religious, political, economic, and environmentalaspects that affect community development practice in the Third or Developing World. Asset-based and sustainable human development models and action research are emphasized. The course utilizes teaching cases and experts fromthe field and requires substantial reading, reflection and discussion.

## USP 323U- Real Estate Development and Finance (4)

Examines urban realestate development, including location of activities within metropolitan areas, public/priv ate partnerships, downtown redevelopment, and affordable housing. Presents tools toevaluate the financial feasibility and performance of a project, including discounting of cash flows and pro forma analysis. Uses a case study method showing how the design, development, market, finance, construction, and management of the project are integrated.

## USP 324U- Healthy Communities (4)

Addresses major is sues at the intersection of urban policy and planning and individual and community health. Relationships between the ways in which land is used, the trans portation choices available, and the health of both urban places and city residents is explored in light of growing concern about increased rates of various health problems. Health consequences of political, economic, and social as pects of metropolitan life are also examined. Movements and programs to create and maintain healthy communities around the world are analyzed.

## USP 325U- Community and the Built Environment (4)

This course examines the relationships between urban form and social patterns, and efforts by urban designers to influence community life by shaping the built environment. The history of ideas about urban formand community development, and the history of proposed and implemented projects will be surveyed, and their relevance for contemporary urban planning and design practices will be as sessed. Initiatives in the Portland metropolitan area to enhance community livability will be studied.

## USP 326U - Neighborhood Change and Gentrification (4)

The dynamics of neighborhood development, including economic and institutional factors in neighborhood change; neighborhood definition and image, residential choice; residential segregation; neighborhoods in the political process; and neighborhood conservation strategies.

## USP 350U - Inclusive Engagement (4)

Examination of principles, methods, and programs for giving explicit attention to the perspectives of the public in the development and implementation of public policies and programs. Sets public participation in its historical context with an as sessment of its impact to date. Participation from the pers pective of both the public and the government will be covered as will the variety of approaches for achie ving participationgoals andobjectives.

## USP 360 - Real Estate Finance I (4)

Application of finance and economic principles to analysis of realestate finance and investments. Emphasis on the development of problem solving capabilities through the use of computer application programs. Special attention is given to risk analys is, alternative mortgage instruments, hedging techniques, and the taxeffects of realestate investment.
Prerequisite:Ec 201. . Cross-Listed as:The course is cross listed as RE 360 , and may only be taken once forcredit.

## USP 385U - History of American Cities (4)

Traces the evolution of urban centers from the colonial period to the present. Focuses on the developing system of cities, on growth within cities, and on the expansion of public responsibility for the welfare of urban residents. Particular attention is given to the industrial and modern eras. Recommended prerequisite: upper-division standing. Also listed as Hst 337. May be taken only once for credit.

## USP 386U - Portland Past and Present (4)

Begins with the geological/geographical foundations of Portland then briefly explores Portland's original inhabitants, early exploration and commercial growth. Particular attention is paid to the 20th century and the plans and projects that have guided Portland's develop ment over the past 100 years. Considers the shaping of Portland as a regional city, examining the evolving cityscape, architecture, land use, and transportation, and its development frompolitical, social, economic, and cultural perspectives.

## USP 399 -Special Studies (1-6)

(Credit to be arranged.)

## USP 401 - Research (0-6)

(Credit to be arranged.) Consent of instructor.

USP 402 - Independent Study (1-8)

USP 407 -Seminar (1-6)
(Credit to be arranged.)

USP 407U - Seminar (4)
(Credit to be arranged.)

## USP 408-Workshop(0-6)

(Credit to be arranged.)

USP 409 - Practicum(0-12)
(Credit to be arranged.) Consent of ins tructor.

## USP 410 - SelectedTopics (1-6)

(Credit to be arranged.)

## USP 411 -Pedestrian and Bicycle Planning Lab (3)

A practical approach to bicycle and pedestrian planning and design through a project-based course that focuses on all aspects of the planning process. Students research and develop solutions to a practical challenge in the Portland region and present recommendations in report and presentation form. Co-registered with USP 465 or USP 565 or have taken USP 465 or 565 within the past two years.
Also offered for graduate-level credit as USP 511 and may be taken only once for credit. Prerequis ite: Junior standing.

## USP 413 - Public Space (4)

An introduction to the study of public spaces in American cities, with a special focus on Portland. Key readings include history and theory of concepts of public space, as well as contemporary case studies and field assignments to understand the production and maintenance of public spaces around Portland.
Also offered for graduate credit as USP 513 and may be taken only once for credit. Prerequisite: upper-division or graduate-level standing.

## USP 414 - Trans portation Seminar (1)

This weekly seminar features a different speaker each week covering various topics in transportation research and practice. The topics cover all modes of transportation, with a focus on current practice. This course may be taken for credit up to three times.
Also offered for graduate-level credit as USP 514 and may be taken only onceforcredit. Cross-Listed as:This is the same course as CE414.

## USP 416 - International Urban Issues Seminar (1)

This seminar surveys research about local and regional planning issues in a global context. It brings speakers with international experiences to share their understanding of urban is sues, and to reflect on cultural, economic, and socio-political dimensions of policy-making processes around the world that influence planning world wide.

Also offered for graduate-level credit as USP 516.
Prerequisite: Upper-division standing.

## USP 419 - Population and Society (4)

Survey and analysis of population dynamics (births, deaths, and migration) and society. Examination of demographic concepts, theories, data and measurements, and research. Role of population processes in social life and public policies are highlighted, including population aging, economic development and the environment, urbanization, health and health care, race andethnicity, and government/social/business planning. This course is the same as Soc 441 and may only be taken once for credit.

Also offered for graduate-level credit as USP 519 and may be taken only once for credit. Prerequisite: Soc 200. CrossListed as: Soc 441.

## USP 427-Commercial District Revitalization (3)

Examines the evolution and revitalization of commercial districts over time. It explores the role of commercial districts in contemporary urban regions, and introduces the concepts of commercial district management and other strategies for promoting vital urban centers. Through readings, field observations, classroomdiscussions, and a series of as signments, students will explore the interrelationships between the built environment, economic trends, and public policy in shaping the commercial districts we see today. Students should learn to understand commercial districts as complex and multifaceted places that are always changing and unpredictable, but often play a crucial role in a community's identity and purpose and in supporting affordability, equity, and sustainability.
Also offered for graduate-level credit as USP 527 and may be taken only once for credit. Prerequisite: Upper-division standing.

## USP 428 - Concepts of Community Development (4)

An investigation of models and perspectives on community development. Both structural and dynamic concepts related to processes of community- based change will be explored, including methodological approaches for as sessing community settings, and the various roles and relationships in a community-based decision environment. Includes required field observation and a substantial independent field research project which examines cases of community problem-solving. Graduate students undertake a substantial independent project in addition to other course requirements.
Also offered for graduate-level credit as USP 528 and may be taken only once for credit. Prerequisite: USP 301 for undergraduates.

## USP 429 - Poverty in the Urban Community (3)

An introductory course about the nature, extent, and causes of poverty in the United States. It covers a brief his torical overview, demographics and trends, explanations of poverty, and anti-poverty policies. Questions of race, gender, and the spatial manifestation of poverty will be addressed.

## USP 430 - Participatory Research Methods for Community Development (4)

This course introduces students to participatory methods, placing special emphasis on research ethics, the positionality of the researcher, and embedding research within community development practice. It focuses on research design, data collection, data analysis, and the
dissemination of results. Various approaches to measuring urban phenomenaare covered, including basic interview techniques, survey methods, and quantitative analytical methods.

## USP 431 - Urban Economics (4)

Functions of the urban economy: the market sector and the public sector. Economic analysis of issues such as land use, environmental quality, transportation, housing, income distribution, and financing of urb an public services. This is the same course as Ec 431 and RE 431 may only be taken once forcredit.
Prerequisite: Ec 201. Cross-Listed as: Ec 431 and RE 431.

## USP 434 - Green Buildings (3)

An overview of contemporary green building practices and the design and development processes essentialto their success. Emphasis on strategies that have thehighest economic return and/or the greatestenvironmental benefits. The full lifecycle of the built environment is considered, fromplanning and design through construction, operation, and the end of use.
Also offered for graduate-level credit as USP 534 and may be taken only once forcredit. Prerequis ite: Upper division standing.
USP 438 - Real Estate Law (3)
Provides students with a comprehensive summary of real property froma legal perspective with an emphasis on trans actional issues. Includes is sues relating to types of ownership, descriptions of property, easements, public and private limitations on use, realestate contracts, forms utilized in transfers, financing and title assurances. The class will enable students to understand the legal framework and the rights and res ponsibilities of owners and transferors/transferees of real property. This is the same course as RE438 and may be taken only once for credit. Expected preparation for graduates tudents: RE 521.
Also offered for graduate-level credit as USP 538 and may be taken only once for credit. Prerequis ite: Ec 201
(undergraduates). .Cross-Listed as:RE438.

## USP 439 - Workforce Development (3)

Introduction to policies and practices for workforce development. Topics discussed include labor market dynamics, failures and inequities; tools and methods for urban labor market analysis; and workforce de velopment policies for skill investment, job matching and career development toward goals of household, business, community and regional economic development.
Also offered for graduate-level credit as USP 539 and may be taken only once for credit. Prerequis ite: Upper-division standing.

## USP 440 - Critical Analysis of Community Data (4)

Applied research methods and essential data skills for quantitatively meas uring social, economic, and demographic trends across urban places. Discussion of theoretical, practical, andethical issues related to quantify ing populations and places as well as interpreting and presenting findings.
Prerequisite: upper-division standing.

## USP $\mathbf{4 4 5}$ - Cities and Third World Development (3)

Critical survey of his torical, economic, cultural, political, and urban aspects of Third World development, starting with the colonial era. Historical patterns of integration of the Third World with the emerging world market system. Covers problems of the post-independence period, focusing on urban sectoral is sues and policy alternatives. Specific topics include trade, investment, industrialization, finance, technology transfer, political participation, land use, housing, transportation, information infrastructure, population growth, social services, militaris m , and cultural conflict. This is the same course as Int1445 and may be taken only once for credit.
Also offered for graduate-level credit as USP 545 and may be taken only once for credit. Cross-Listed as: Intl445.

## USP 451 - Community Economic Development (3)

Course sets community economic development within the context of traditional state and localeconomic development policy and compares theirunderlying theoretical pers pectives. It examines the impact of recent economic, social, and demographic transformations on locallabor markets and surveys the labor-market problem solving activities of local governments and communitybased organizations. Business and commercial development strategies are also explored.
Also offered for graduate-level credit as USP 551 and may be taken only once for credit.

## USP 452 - GIS for Community Development (4)

This course uses lab exercises and lectures to help students develop an in-depth understanding and basic skills for the uses of geographic information systems in community development and planning.
Prerequisite: upper-division standing.

## USP 455 -Land Use: Legal Aspects (3)

Land use and planning fromthe legal perspective. Includes historical review of attitudes toward property tenure and ownership; the relationship between local planning and regulations; and current is sues and perspectives on land use including emerging state and federal roles. Graduate students undertake a substantial independent project in addition to other requirements.

Also offered for graduate-level credit as USP 555 and may be taken only onceforcredit.

## USP 456 - Urban Transportation: Problems and Policies (3)

An introduction to urban transportation policy froma historical and political perspective. Historical developments in transportation policy are traced from the early streetcar days up through the present. Federal, state, and local trans portation policies are examined for their impact on urban spatial and economic development. An overview of current issues in transportation policy and planning includes transportation demand management strategies, transit- oriented design, road pricing, and alternative transportation modes. The intersection of environmental and tran sportation policy is also examined, as is the decision-making structure at the local, regional, and state level.
Also offered for graduate-level credit as USP 556 and may be taken only once for credit.

## USP 457 - Information Cities (3)

Focuses on the political, social, and cultural impacts of mass media and information technologies within the urban matrix. Contextualizes the "information society" in historical, institutional, political, economic, and global settings. Topics include the flexible production, the segmentation of consumption, alternatives to mass media, the Web, the reorganization of work, the trans nationalization of culture, commercial and political surveillance, and the development of urban information infrastructure.
Also offered for graduate-level credit as USP 557 and may be taken only once for credit.
USP 460 - Community Development Field Seminar (26)

Participant observation through placement in a community-based organization actively engaged in community development activities on behalf of a specific community, and critical reflection on the placement experience. Culminating experience for the Community Development major. This course is repeatable for up to 6 credits.

Prerequisite: Completion of the Community Development Core (USP 300U, 301, and 302) and at least one course from among those listed as Methods in Community Development (USP 350U, USP 430, USP 440, or USP 452).

## USP 465 - Pedestrian and Bicycle Planning (3)

Examines the importance of walking and bicycling as means of transportation in a sustainable urban environment. Covers planning, design, implementation, and maintenance of bikeways and walkways, as well as
ancillary facilities such as bicycle parking. Focus on the role of education, advocacy, and outreach in improving walking and bicycling conditions. Study relevant examples from various cities, with a heavy emphasis on Portland's experience.
Also offered for graduate-level credit as USP 565 and may be taken only oncefor credit.

## USP 468-Oregon Land Use Law (3)

The Oreg on programis placed in a national context that stres ses the broad nature of planning here. Structural relations between state, regional, and local government planning and regulation are analyzed. Legal aspects of the implementation of the various functional statewide planning goals are studied, as are the OregonLand Use Board of Appeals and recent developments in local government land use planning and regulatory processes.
Also offered for graduate-level credit as USP 568 and may be taken only oncefor credit.

## USP 475 - Urban Design Workshop (4)

The workshop will explore the use of urban design as an integral part of the planning process through the creation of an urban design plan. Projects in the Portland region will be chosen to familiarize students with the practice of urban design planning and the products of the workshop will be presented to the public.
Also offered for graduate-level credit as USP 575 and may be taken only once for credit. Prerequisite: Enrollment in good standing in the MARCH or MURP graduate degree programs or permission of the instructor.

## USP 480 - Political Economy of Nonprofit Organizations (3)

Considers theories of altruism, trust, and social capital. Examines the connections between wealth and social responsibility and between elite status and social reproduction. Explores the broad scope of non profit activity in the economy, theinterdependenceof government and nonprofit organizations in the modern state, and the role of think tanks in shaping public policy. Surveys the dramatic rise of non-governmental org anizations in developing countries and the future of nonprofits in a globaleconomy.
Also offered for graduate-level credit as USP 580 and may be taken only oncefor credit.

## USP 485 - Housing Environments for Older Adults (3)

Explores physical, social, and service contexts related to housing andenvironments for people across the age and ability spectrums, focusing on older adults. Ecological pers pectives and social theories on aging will be examined and applied and students will examine evidence regarding how older adults use, perceive, and are affected by their homes and environments. Topics include housing options,
acces sible and inclusiveenvironments, supports and services, policies and politics, economics, neighborhood design, and age-friendly communities.
Also offered for graduate-level credit as USP 585 and may be taken only onceforcredit. Prerequisite: Upper-division standing.

## USP 490 - Green Economics and Sus tainable Development (3)

Examines prevailing as sumptions about economic growth, production, consumption, labor, and leisure. Considers how changes in these basic assumptions might help us design an economic systemthat includes alternative values such as appropriate scale, community impact and environmental sustainability.
Also offered for graduate-level credit as USP 590 and may be taken only onceforcredit.

## USP 493 - Public Participation GIS (3)

Offered as a studio-based GIS class. The objective is for students to apply GIS skills acquired in previous GIS courses to a specific real-world spatial problem. Tasks will involve problemdefinition, primary data collection, advanced GIS analys is, and presentation of results. This format will give students practical experience in implementing GIS technologies with specific emphasis on planning problems. Students will be required to work in small groups in a simulated professional planning practice environment. Expected preparation: USP 531 and USP 543 or USP 591 and USP 592.

Also offered for graduate-level credit as USP 593 and may be taken only onceforcredit.

## USP 496 - Affordable Housing Finance (3)

Introduction to the uniquechallenges of financing and developing affordable housing projects. The challenges and tools for financing rental as well as owner-occupied housing will be covered, and case studies will be used to illustrate the ways in which financing for affordable housing is created and used, and poses unique challenges for investors, juris dictions, and community-based groups. Expected preparation: USP 312.
Also offered for graduate-level credit as USP 596 and may be taken only onceforcredit.
USP 498 - Introduction to Finance and Real Estate (3)
Designed for students seeking the graduate certificate in real estate development who have little or no business education, or for those students who desire a course in basic finance and realestateconcepts and techniques. Introduces business finance within the context of commercial real estate. Concepts and techniques will include financial statements, analysis, and forecasting; present value and discounted cash flow analysis, an introduction to real estate valuation measurements; and
analys is of performance risk versus return. Students also receive an overview of the legal definitions of real estate and its forms of ownership, as well as an overview of real estate title, contract, regulation, and financing is sues. Recommended prerequisites: Ec 201 and 202.

## USP 499 - Real Estate Finance and Investments (3)

Application of finance and economic principles to analysis of real estate finance and investments. Emphasis on the development of problemsolving capabilities through the use of computer application programs. Special attention is given to risk analys is, alternative mortgage instruments, hedging techniques, and the taxeffects of reales tate investment.

## USP 501 - Research (0-9)

(Credit to be arranged.) Consent of instructor.

USP 502 - Independent Study (1-9)
(Credit to be arranged.)

USP 503 - Thesis (0-9)
(Credit to be arranged.)

## USP 504 - Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## USP 505 - Reading and Conference (0-6)

(Credit to be arranged.)

## USP 506 - Projects (1-9)

(Credit to be arranged.)

USP 507 - Seminar (1-6)
(Credit to be arranged.)

## USP 508 - Workshop(0-6)

(Credit to be arranged.)

USP 509-Practicum(0-9)
(Credit to be arranged.) Consent of instructor.

## USP 510 -Selected Topics (0-6)

(Credit to be arranged.)

## USP 511 -Pedestrian and Bicycle Planning Lab(3)

A practical approach to bicycle and pedestrian planning and designthrough a project-based course that focuses on all aspects of the planning process. Students research and develop solutions to a practical challenge in the Portland region and present recommendations in report and presentation form. Co-registered with USP 465 or USP 565 or have taken USP 465 or 565 within the pasttwo years.
Also offered for undergraduate-levelcredit as USP 411 and may be taken only once for credit. Prerequis ite: junior standing.

## USP 512 - Environmental Planning Methods (3)

Examination of the patterns and processes in humandominated landscapes, and the tools forunderstanding human behavior and decision making. By applying several environmental planning tools to managing landscapes, this course aims to provide students with skills to translate data into information. Topics covered include, land conservation, impact of land useon watersheds, sustainability design, environmental impact as sessments, and environmental modeling and simulation. Focus is on the application of tools to addressing pressing problems of regionalsignificance. Recommended prerequisites: USP 531 or Geog 488/588.

## USP 513 -Public Space (4)

An introduction to the study of public spaces in American cities, with a special focus on Portland. Key readings include his tory and theory of concepts of public space, as well as contemporary case studies and field assignments to understand the production and maintenance of public spaces around Portland.
Also offered for undergraduate credit as USP413 and may be taken only once for credit. Prerequisite: upper-division or graduate-level standing.

## USP 514 - Transportation Seminar (1)

This weekly seminar features a different speaker each week covering various topics in transportation research and practice. The topics cover all modes of transportation, with a focus on current practice. This course may be taken for credit up to three times.
Also offered for undergraduate-level credit as USP 414 and may be taken only once for credit. Cross-Listed as: This is the same course as CE514.

## USP 515 - Economics: Applications in Urban Studies

(4)

Microeconomic analysis of individual and firm behavior is developed with emphasis on applications to urban studies. Topics which may be covered include: land use and land rents, urban structure, poverty, housing and slums, transportation, environmental quality, and local government finance.

## USP 516 - International Urban Issues Seminar (1)

This seminarsurveys research about local and regional planning is sues in a global context. It brings speakers with international experiences to share their understanding of urban issues, and to reflect on cultural, economic, and socio-political dimensions of policy-making processes around the world that influence planning worldwide.
Also offered for undergraduate-level credit as USP 416.

## USP 517 - Urban Economic Development Policy (3)

This course analyzes urban economic development policy by building on an overall framework that demonstrates how urban economies create and distribute wealth and affect citizens' quality of life. Federal, state, and local policies must pursue three broad objectives: 1. rais ing the area's standard of living; 2 . preserving and protecting environmentalquality andquality-of-life; 3 . reducing poverty and income inequality. This course provides students the ability to analyze and assess alternative policies through an understanding of the theoretical found ations of urban growth and decline; through the ability to apply analytical methods for assessing policy effectiveness; by examination of evidence of policy effectiveness; by reviewing casestudies; and via a student's personal research of specific urban problems.
Prerequisite: USP 515 or equivalent courses in economics.

## USP 518 - Energy and Society (3)

Consideration of the role of energy in human society, including energy and social change, energy andurban form, technologies of energy supply and demand, social institutions governing access to energy, and cultures of consumption. Current social issues involving energy efficiency, renewable energy technologies and climate change are stressed.

## USP 519 - Population and Society (4)

Survey and analysis of population dynamics (births, deaths, and migration) and society. Examination of demographic concepts, theories, data and measurements, and research. Role of population processes in social life and public policies are highlighted, including population aging, economic development and the environment,
urbanization, health and health care, race and ethnicity, and government/social/business planning. This course is the same as Soc 541and may only be taken once for credit.
Also offered for undergraduate-level credit as USP 419 and may be taken only once for credit. Prerequisite: Soc 200. Cross-Listed as: Soc 541.

## USP 520 - Applied Demographic Methods I (4)

The first of a two-course sequence. The purpose is to introduce the various basic methods of demographic analys is. The topics to be covered include datas ources, population characteristics and change, and measures of mortality and fertility. In addition, the course will help students develop good judgment about data availability and quality, and acquire skills for presenting data.
Recommended prerequisite: a course in regression analys is, such as USP 534.

## USP 521 - Applied Demographic Methods II (4)

The second of a two-course sequence. The purpose is to introduce more advanced methods of applied demographic analys is. The topics to be covered are: data sources, internal and international migration, data evaluation, population estimates, and projection projections. The course will cons is t of readings, lectures, laboratory ses sions, homework exercises, one examination, and one term-long project.

## USP 522 - Practicumin Applied Demography (4)

Represents the capstone course for the graduate concentration in applied demography. The focus is on integrating a practicumexperience with the methods of applied demography into a research paper. Students will develop, revise, and resubmit numerous drafts of a final research paper. Students will also provide professional peer review in evaluating the development of fellow studentresearch papers.

## USP 523 - Real Estate Development I (4)

Evaluates the new public/private partnerships that are neces sary for downtown redevelopment, historic rehabilitation, integrated mixed-use urban centers, urban villages, and new communities. Students will analyze the critical conceptual, feasibility, and deal-making phases of the development process, as well as the development and management stages. The course examines the new affirmative roles played by both public and private developers, as well as unusual joint development entities. Also considered are innovative concepts of incremental growth, land and development banking, shared parking, and alternative development patterns. Expected
preparation: USP 515 or Fin 598 (may be taken concurrently).

## USP 524 -Site Planning (3)

This course introduces the fundamentals of site planning in an urban context, as well as contemporary urban design theory and practice. Students will learn the principles of site planning and urban design at the scale of urban centers and specific sites, as well as the synthesis of multiple design decisions made by different actors, at different times, about different properties. The course will explore these topics from various perspectives, including planners and designers, developers and regulators, and others. Slideshow lectures, downtown walking tours, and a term project will use Portland as a living laboratory for how the principles of urban design and site planning are played out in public and private development projects. Students will work in teams to apply class principles to a specific site that is currently slated for redevelopment.

## USP 525 - Design Analys is in Planning (2)

Approaches to the analysis of design issues in urban planning. The definition of urban space through mass, rhythm, and scale. Design and urban circulation. Planning tools for the implementation of design goals.

## USP 526 - Neighborhood Conservation and Change (4)

The dynamics of neighborhood development, including economic and institutional factors in neighborhood change; neighborhood definition and image, residential choice; residential segregation; neighborhoods in the political process; and neighborhood conservation strategies. Recommended prerequis ite: junior standing. Graduate students undertake a substantial independent project in addition to other course requirements.

## USP 527-Commercial District Revitalization (3)

Examines the evolution and revitalization of commercial districts over time. It explores the role of commercial districts in contemporary urban regions, and introduces the concepts of commercial dis trict management and other strategies for promoting vital urban centers. Through readings, field observations, classroomdis cussions, and a series of as signments, students will explore the interrelationships between the built environment, economic trends, and public policy in shaping the commercial districts we see today. Students should learn to understand commercial districts as complexand multifaceted places that are always changing and unpredictable, but often play a crucial role in a community's identity and purpose and in supporting affordability, equity, and sustainability.

Also offered for undergraduate-levelcredit as USP 427 and may be taken only once for credit.

## USP 528 - Concepts of Community Development (3)

An investigation of models and perspectives on community development. Both structural and dynamic concepts related to processes of community-based change will be explored, including methodological approaches for as sessing community settings, and the various roles and relationships in a community-based decision environment. Includes required field observation and a substantial independent field research project which examines cases of community problem-solving. Graduate students undertakea substantial independent project in addition to other course requirements.

Also offered for undergraduate-level credit as USP 428 and may be taken only once for credit.

## USP 530 - Building Community Resilience (4)

Introduction to resilience theory, concepts, and applications in a hazards planning and dis aster management. Surveys sociological, public administration, and planning theory literature to understand risk, resilience, and methods to address these at the community level.

Cross-Listed as: This is the same course as EMCR 530 and may be taken only once for credit.

## USP 531 - Geographic Information Sys tems (GIS) for Planners (4)

Introduction to principles and methods of collecting, org anizing, analyzing, and visualizing geographic information. Explores types and sources of geographical data used in urban and regional studies and planning with an emphas is on Census data. Provides an overview of principles and components of Geographic Information Systems (GIS) as a primary tool of spatial data analy sis and visualization. Attention is givento practical applications of GIS and to developing essential skills in desktop mapping and spread sheet software.

## USP 532 - Data Collection (4)

The acquisition of data for research in an urban context. Emphas is is on the concepts, terminology, and methods related to the use of survey research and secondary data. Recommended prerequisite: USP 430 and/or an introductory undergraduate statistics sequence and USP 530.

## USP 533 - Planning Methods I (4)

Introduction to applied research in planning with emphasis on problemdefinition, planning and policy research
design, collection and analysis for secondary data, and the use of qualitative observations.
Prerequisite: undergraduate statis tics course.

## USP 534 - Green Buildings (3)

An overview of contemporary green building practices and the design and development processes essential to their success. Emphasis on strategies that have the highest economic return and/or the greatest environmental benefits. The full lifecycle of the built environment is considered, fromplanning and design through construction, operation, and the end of use.
Also offered for undergraduate-level credit as USP 434 and may be taken only once forcredit.

## USP 535 - Planning Methods II (4)

Continuation of USP 533 focusing on statistics, forecasting, interpretation, and presentation of data in the context of planning practice.
Prerequisite: USP 533.

## USP 536 - Policy Evaluation Methods (3)

Focuses on the methodological is sues that must be addressed in attempting to evaluate programs and policies. Course offers an introduction to a variety of techniques useful in policy evaluation. Topics which may be covered include difference equations, Markov models, and queuing models. A section of the course considers the methodological issues that arise in cost-benefit analysis, such as present value calculations, determining the value of non-market benefits, and correctly evaluating costs. Recommended prerequisite: USP 515 or equivalent.

## USP 537 - Economics of Urban Transportation (3)

The trans portation system is critical to the functioning of an urban area. The movement of people and goods affects both the productivity and livability of the region. Trans portation systems also affect and are affected by land use and location decisions. This course presents the economic analysis of urban transportation. This will include analysis of the effects of tran sportation systems on land use and location as well as the evaluation of trans portation investments. These methods will then be applied to evaluation of various proposals to improve the urban transportation system. Recommended prerequisite: USP 515 or615.

## USP 538 - Real Estate Law (3)

Provides students with a comprehensive summary of real property froma legal perspective with an emphasis on trans actional is sues. Includes is sues relating to types of ownership, descriptions of property, easements, public and
private limitations on use, real es tate contracts, forms utilized in transfers, financing and title assurances. The class will enable students to understand the legal framework and the rights and res ponsibilities of owners and transferors/transferees of realproperty. This is the same course as RE538S and may be taken only once for credit. Expected preparation for graduate students: RE 521.
Also offered for undergraduate-level credit as USP 438 and may be taken only once for credit. Cross-Listed as:RE 538S.

## USP 539 - Workforce Development (3)

Introduction to policies and practices for workforce development. Topics discussed include labor market dynamics, failures and inequities; tools and methods for urban labor market analysis; and workforce development policies for skill investment, job matching and career development toward goals of household, business, community and regional economic development.

Also offered for undergraduate-level credit as USP 439 and may be taken only once for credit.

## USP 540 - History and Theory of Planning (4)

The evolution of the urban planning field from its 19th century European origins through the 20th century U.S. history. Course addresses the question: why do we produce and implement plans? Specific topics include: philosophicalissues and political-organization contexts of professional activity; the placeof planning in the political economy of U.S. metropolitan development; and problems of rationality in forecasting, analysis, decision making, and design.

## USP 541 - Dynamics of Planning Practice (3)

Examination of principles, methods, and programs for giving explicit attention to the perspectives of citizens in the development and implementation of public policies, programs and planmaking. Sets citizen participation in its his torical context with an assessment of its impact to date. Examines is sues pertaining to working with diverse communities and highlights ethical dilemmas faced by professional planners.

## USP 542 - Land Use Implementation (3)

An examination of alternative approaches to implementation of plans. Topics include: regulatory tools, e.g., zoning and subdivision ordinances; review functions, e.g., design review and administrative review; and programs, e.g., growth management, capital improvements, community development, housing assistance plans; and political-procedural is sues, e.g., permit streamlining, cost impacts.

## USP 543 - Geographic Applications to Planning (4)

Principles and models of spatial org anization, behavior, and location in geographic space. Major conceptual models of urban structure and form, urban regional hierarchy, trans portation flows and other forms of spatial interaction, and their applications to modern planning and other disciplines. Spatial data models (rasters, TINs, LRSs, other) and advanced analytical and modeling capabilities of GIS (surface, 3-D, and network analyses). Dis cussion of real-life GIS applications to transportation, land use, environmental planning, community development, and related areas.

## USP 544 - Urban Transportation Planning (3)

Introduces fundamental concepts and methods used in multi-modal urban transportation planning, including problemidentification, alternatives analysis, evaluation and decision making, plan implementation, and program management. Exposes students to processes and analytical methods frommultiple disciplines, such as law, politics, engineering, sociology, economics, finance, management and marketing. Emphas is on analysis of moderately complex technical information and its interpretation for communication with decision makers.
Prerequisite: USP 535 or equivalent coursework in descriptive and inferential statistics and data presentation. Recommended: USP 515 or USP 537 or an equivalent intermediate-level course in applied microeconomics.

## USP 545 - Cities and Third World Development (3)

Critical survey of historical, economic, cultural, political, and urban aspects of Third World development, starting with the colonial era. Historical patterns of integration of the Third World with the emerging world market system. Covers problems of the post-independence period, focusing on urban sectoral is sues and policy alternatives. Specific topics include trade, investment, industrialization, finance, technology transfer, political participation, land use, housing, transportation, information infrastructure, population growth, social services, militarism, and cultural conflict.
Also offered for undergraduate-level credit as USP 445 and may be taken only once for credit.

## USP 546 - Real Estate Development II (3)

Introduces students to persistent and emerging challenges of real estate development through analysis of case studies. Provides students the experience of developing a comprehensive and unified analysis of a commercial real es tate project. Each student will submit a case study with greater specificity showing how the design, development, market, finance, construction, and management of the
project are integrated. Students will work closely with industry participants and faculty to develop their analy sis as well as alternative strategies for the project at critical stages of its development.
Prerequisite: USP 523.

## USP 547 - Urbanization and Planning in the Global South (3)

Urban planning interventions in many cities in the Global South have been facing big challenges as rapid population growth has led to resource scarcity, environmental degradation, and social inequality. This course develops tools and ideas to understand is sues confronting cities in diverse socio-economic, political, and cultural circumstances, and how globalization impacts the local space of cities and regions. It focuses on challenges and opportunities in formulating appropriate planning interventions, and prepares planners to work in the diverse and rapidly changing contexts of the Global South.

## USP 548 -Public Transportation Planning and Policy

 (3)Public transit ridership and investments have been growing for the pasttwo decades as regions around the world grapple with worsening congestion, growing concerns about climate change, health, and social equity, and a reinvigoration of urban living and sustainable lifestyles. This course will introduce students to processes, policies and rules concerning the planning of public transit systems and the development of new transit investments, focusing mostly on buses and light rail.

## USP 549 - Regional Planning and Metropolitan Growth Management (3)

Explores regional planning in the U.S. today through an examination of historical and contemporary regional planning practice. Begins with an overview of the his tory of regional planning, including the evolution of thought regarding regionalismand the nature of regions. Examples of regional plans will be used as the basis for examining as sumptions, approaches, and methods serving as the foundation for regional planning practice. A synthesis of the findings of the review of plans will be used to draw general conclusions about the field and its prospects. Pays particular attention to the principles, approaches, and methods of growth management generally and with respect to metropolitan regions.

## USP 550 - Participatory Planning (3)

Examines the principles and methods for creating participatory planning. Demonstrates the linkage between frameworks and concepts such as collaborative planning,
deliberative democracy, equity planning, and the coproduction of plans and applied work. Considers various processes, techniques, and tools to foster equitable community engagement. Students design a participatory process forclients.

## USP 551 - Community Economic Development (3)

Course sets community economic development within the context of traditional state and local economic development policy and compares their underlying theoretical perspectives. It examines the impact of recent economic, social, and demographic transformations on local labor markets and surveys the labor-market problem solving activities of local governments and communitybased organizations. Business and commercial development strategies are als o explored.
Also offered for undergraduate-level credit as USP 451 and may be taken only once for credit.

## USP 552 - Urban Poverty in Critical Perspective (3)

Examines historical, empirical, and theoretical perspectives on urban poverty in the United States. It addresses the politics of poverty discourse by examining why explanations and policy prescriptions have emphasized morality and behavior; race, family, and culture; and dependency and responsibility rather than systemic economic inequality.

## USP 553 - Legal Processes in Urban Planning (1)

Covers the legalcontext within which land use planning and plan implementation takes place at the local level. Requirements for the conduct of hearings, appeals, and evidentiary processes are analyzed; skills for and techniques of writing findings and conditions of approval are developed; and questions of ordinance interpretation and liability are discussed.

## USP 554 - Planning and Housing Markets (3)

Explores the interaction of planning and local housing markets and submarkets. In a market economy, non-public actors build, own, and operate the majority of the housing stock (along with other assets, including other types of real estate, businesses, even ideas). Planning has a role in framing and influencing the decisions and approaches of these actors.

## USP 555 - Land Use: Legal Aspects (3)

Land use and planning fromthe legal perspective. Includes historical review of attitudes toward property tenure and ownership; the relationship between local planning and
regulations; and current is sues and perspectives on land use including emerging state and federal roles. Graduate students undertake a substantial independent project in addition to other requirements.
Also offered for undergraduate-level credit as USP 455 and may be taken only once for credit.

## USP 556 - Urban Transportation: Problems and Policies (3)

An introduction to urban transportation policy froma historical and political perspective. Historical developments in transportation policy are traced from the early streetcar days up through the present. Federal, state, and local transportation policies are examined for their impact on urban spatial and economic development. An overview of current issues in transportation policy and planning includes transportation demand management strategies, transit- oriented design, road pricing, and alternative transportation modes. The intersection of environmental and transportation policy is also examined, as is the decision-making structure at the local, regional, and state level.
Also offered for undergraduate-level credit as USP 456 and may be taken only once for credit.

## USP 557 - Information Cities (3)

Focuses on the political, social, and cultural impacts of mass media and information technologies within the urban matrix. Contextualizes the "information society" in historical, institutional, political, economic, and global settings. Topics include the flexible production, the segmentation of consumption, alternatives to mass media, the Web, the reorganization of work, the trans nationalization of culture, commercial and political surveillance, and the development of urban information infrastructure.
Also offered for undergraduate-level credit as USP 457 and may be taken only once for credit.

## USP 558 - Planning Workshop (3-6)

Organized teamapproach to a current planning problemin the Portland metropolitan area. Focus on planning practice, field investigation, data analysis, written and oral communication. Work programincludes strategies, methods, and skills needed to identify is sues and draw together all participants in the search for solutions. Emphas is is on the blending of practical skills with knowledge gained fromcore-area courses. Two-term sequence, credit for first term dependent upon successful completion of the second term.

## USP 559 - InternshipSeminar (1)

A 400-hour internship, or combination of internships, is required for completion of the MURP degree. This

Seminar serves as a means for graduatestudents admitted to the MURP deg ree programto share information regarding securing internships and the work products as sociated with internship experiences. An annual calendar for the seminar will be posted at the beginning of the year. Attendance at scheduled seminar meetings is required for all MURP candidates during the first two years of their enrollment in the program.

## USP 560 - Climate Resiliency Planning (3)

Aims to examine the res ponse of society to a changing climate, with an emphas is on the practices, processes, and programs that can improve the resiliency of communities to climate-induced impacts. We will investigate what it means to be "resilient", exploring principles from planning, sociology, engineering, environmental studies, and disaster studies, and other related fields. We will also pay special attention to the interplay between social inequality, poverty, social exclusion and vulnerability to natural disaster.
Cross-Listed as: This is the same course as EMCR 560 and may be taken only once for credit.

## USP 561 - Affordable Housing Development Workshop (5)

Students formteams to create a full proposal for an affordable housing development project, including funding, design, and resident services; when available students will enter project competitions. Two-term sequence, credit for first termdependent upon successful completion of the second term.

## USP 562 - Real Estate Development Workshop(3)

Students forma real estate development team and produce an original development plan, including the development concept, the market analysis, the conceptual design, economic analysis, capital and operations budget, and management plan. The student's plan will demons trate and apply mastery of the developmentconcepts and tools learned through the previous courses.
Prerequisite: USP 523 or instructor's consent. Course may be taken twice for credit with instructor's consent.

## USP 563 - Real Estate Construction (3)

Reviews the nature and characteristics of the reales tate construction process, including materials, costestimating procedures, budgets, schedules and legal procedures. Emphasis on the selection of building systems and review of the forms of construction contracts and associated documents commonly used in the industry. Reviews lessons learned fromcase studies.

Prerequisite: RE521.

## USP 564 - Political and Administrative Issues in Aging (3)

Coverage of organizational dynamics as related to the elderly including the provis ion and use of services. Covers voting behavior and advocacy as well as adminis trative and legal is sues that are particularly applicable to the elderly.

## USP 565 - Pedestrian and Bicycle Planning (3)

Examines the importance of walking and bicycling as means of transportation in a sustainable urban environment. Covers planning, design, implementation, and maintenance of bikeways and walkways, as well as ancillary facilities such as bicycle parking. Focus on the role of education, advocacy, and outreach in improving walking and bicycling conditions. Study relevant examples from various cities, with a heavy emphasis on Portland's experience.
Also offered for undergraduate-levelcredit as USP 465 and may be taken only once for credit.

## USP 566 - National Urban Policy (3)

Examination of the federal government's involvement with urban is sues froma historical and political perspective. Focus on policies pertaining to social welfare and economic development, with an overview of other policy arenas such as housing, health, andeducation. Critical analys is of how and why the federal government responds to urban crises with national policy initiatives and how changes in political regime correspond with changes in policy emphases and perspectives.

## USP 567 - Urban Housing Policies (3)

Review of the history and the role of public policy in the housing sector. Study of past and current trends in the delivery of housing services in urban areas. The basic philosophies related to the supply of housing are analyzed and examined relative to current trends in the delivery of housing services in urban areas. Critical review of the role of the federal government and the construction industry. Equal attention to the role of public housing and the impact of urban renewal. Active participation in discussion and a research paper are required.

## USP 568-Oregon Land Use Law (3)

The Oreg on programis placed in a national context that stres ses the broad nature of planning here. Structural relations between state, regional, and local government planning and regulation are analyzed. Legal as pects of the implementation of the various functional statewide planning goals are studied, as are the OregonLand Use

Board of Appeals and recent developments in local government land use planning and regulatory processes.

Also offered for undergraduate-level credit as USP 468 and may be taken only once for credit.

## USP 569 - Sustainable Cities and Regions (3)

This course explores the questions of whether and how cities can be sustainable -- and how they can continue as places that sustain cultures, economics, and nature. Basic technological and theoretical models of human-nature interaction will be considered, along with visionary possibilities for the future of cities and urban regions, globally and in Portland. Particular attention will be given to global-local interactions and to the strategies, programs, policies, and tools that can deliver sustainable and equitable development and advance environmental justice.

## USP 570 - Transportation and Land Use (3)

An analysis of transportation and land use interactions in urban areas. The impact of highway and transit changes on travel behavior, locational decisions, and urban formare examined. Recommended prerequisites: USP 515 and 544.

## USP 571 - Environmental Policy (3)

Surveys federal, state, and international environmental policy-making with an emphasis on process design. Political and technical objectives for policy, the roles and responsibilities of institutions, federal-s tate tensions, representation and analy sis of stakeholding interests, the role of the media, and environmental justice are key elements. Topical areas include is sues concerning res ource management as well as pollution prevention.

## USP 572 - Regional Economic Development (3)

This course focuses on methods of analyzing why regions differ economically, how they interrelate, and why and how they react to changes in economic policies and conditions. Part of the course will be devoted to a study of models of regional structure and growth, such as economic base or input-output, and the strengths and weaknesses of each in modeling the regional economy. The remainder of the course will be concerned with the development of models for use in regional forecasting and/orevaluation of policy changes on regional development. Recommended prerequisite: USP 515.

## USP 573 - Real Estate Economics (4)

Looks at the economics of real estate and housing, including land rent, interest rates, apartment rents, and housing prices, using an economic framework. Basic
concepts in urban economics such as agglomeration, trans portation costs and congestion, inequality and segregation, growth controls and sprawl, as well as amenities, externalities, and public goods are reviewed. Explores the technique mostcommonly used in realestate and housing economics: hedonic pricing. Explores the rationale and impact of government intervention in the private real estate market. Expected preparation: USP 515 or Fin 512.

Corequisite: Taking RE521 and USP 573 simultaneously is permitted. Cross-Listed as:This is the same course as RE 573 and may be taken only once for credit.

## USP 574 -Socio-Technical Change in the City (4)

At the core of the urban sustainability challenge is how societies build, maintain and reformsocio-technical systems-linking actors, institutions and values to the built and natural environment. Drawing fromscience and technology studies, this course analyzes socio-technical systems and the challenges to navig ating themalong more sustainable trajectories.

## USP 575 - Urban Design Workshop (4)

The workshop will explore the use of urban design as an integral part of the planning process through the creation of an urban design plan. Projects in the Portland region will be chosen to familiarize students with the practice of urban design planning and the products of the works hop will be presented to the public.
Also offered for undergraduate-level credit as USP 475 and may be taken only once for credit. . Prerequisite: Enrollment in good standing in the MARCH or MURP graduate degree programs or permis sion of the instructor.

## USP 576 -Feeding the City (4)

Introduction to historical and contemporary efforts to foster more just and sustainable urban food systems. Integrates critical social science perspectives, applied planning literature, case studies, and analysis of policy and planning best practices.

## USP 577 - Urban Environmental Management (3)

An accelerated survey of principles, concepts, and techniques employed in the management of urban environmental problems, with particularemphasis on "best practice" and emerging ideas. Selected topics may include: watershed stewardship, brownfield development, green spaces, protection of urban wildlife, stormwater management, urban agriculture, residential toxics.

## USP 578 - Impact Assessment (3)

Empirical techniques employed in measuring the impacts as sociated with land use change. Topics: goals achievement matrix approaches to impact as sessment, trade-offs between community and regional welfare, distance and time in urban analy sis, estimating the social profitability of land development, cost-benefit analy sis applied to freeway location, techniques for valuation of non-priced resources, measuring municipal revenue and expenditure impacts, gravity models and transport demand estimation, economic base analysis for employment and population impact assessment, estimating air and noise pollution as sociated with land development. Recommended prerequisite: USP 515.

## USP 579 - State and Local Public Finance (3)

The course will focus on the tax burdens, fiscal res ources, and expenditure patterns of local governments in metropolitan areas. The impact of revenue sharing and categorical grants will be discussed in relation to state and federal influence on local government finance. The spatial distribution of local government services, transfer payments, and tax burdens will be analyzed. Special attention will be paid to Oregon's complexproperty tax limitations.

Prerequisite: USP 515.

## USP 580 - Political Economy of Nonprofit Organizations (3)

Considers theories of altruism, trust, and social capital. Examines the connections between wealth and social responsibility and between elite status and social reproduction. Explores the broad scope of non profit activity in the economy, the interdependenceof government and nonprofit organizations in the modern state, and the role of think tanks in shaping public policy. Surveys the dramatic rise of non-governmental org anizations in developing countries and the future of nonprofits in a globaleconomy.
Also offered for undergraduate-level credit as USP 480 and may be taken only once forcredit.

## USP 581 - Environmental Psychology (3)

Examination of the relationship between people and their physical environments. Specific topics include human spatial behavior (pers onal space and territoriality), the contribution of the behavioral sciences to architectural and urban design, community and neighboring in the city, and environmental cognition.

## USP 582 -Sustainable Transportation (3)

This course covers the sustainability dimensions of transportation, considering his torical trends and future prospects. Topics covered in the course includeenergy use and alternative energy sources, technological change, traffic safety, vehicle emissions, environmental justice, the role of transportation in the economy, and the role of land use and urban design.
Prerequisite: graduate standing.

## USP 583 - Transportation Finance (3)

Much of the current funding for roads, transit, and freight comes fromfuel taxes; but increasing fuelefficiency of vehicles and the use of alternative energy sources raise questions about the long-termviability of this revenue source. This course will existing transportation fin ance and examine some of the proposals for alternative financing mechanisms.

## USP 584 - Negotiation in the Public Sector (4)

Overview of conventional and innovative applications of negotiations in public sector activities, and the potential and limitations of negotiation-based approaches to public decision making. Key components include negotiation theory, individual skill development, and a review of the institutional, legal, and political context of negotiations.

## USP 585 -Housing Environments for Older Adults (3)

Explores physical, social, and service contexts related to housing and environments for people across the age and ability spectrums, focusing on older adults. Ecological perspectives and social theories on aging will be examined and applied and students will examine evidence regarding how older adults use, perceive, and are affected by their homes and environments. Topics includehousing options, acces sible and inclusiveenvironments, supports and services, policies and politics, economics, neighborhood design, and age-friendly communities.
Also offered for undergraduate-level credit as USP 485 and may be taken only once for credit.

## USP 586 - Urban Social Networks (3)

Analysis of the socialps ychological and anthropological literature on social networks: the structure and content of interpers onal networks (including kinship, friendship, instrumental) in an urban setting. Specific topics will include: the nature of interpersonal ties in the city, urban migration and networks, access to urban res ources, methods of analyzing personal and group networks.

## USP 587 - Travel Demand Modeling (3)

Understand, analyze, and apply travel demand forecasting models from an applied and practical pers pective. The underlying theoretical basis of model components will also be covered. Student will become familiar with the traditional four-step travel forecasting process, including model application software package, and interpretation of model output. Involves hands-on use of transportation modeling software.
Prerequisite: an introductory course in urban transportation planning or professional experience in urban tran sportation planning; familiarity with spreadsheet software; collegelevel algebra; and introductory statistics (i.e., regres sion analys is). Prior experience with DOS is helpfulbut not mandatory.

## USP 588 -Sustainable Development Practices (3)

Introduction to analytic and management approaches intended to limit the social and environmental harms as sociated with most past patterns of development. Builds upon basic understanding of socio-environmental change and provides a foundation for subsequent indepth studies of particular sustainable development strategies and analytic techniques. Students study a broader range of sustainable development topics, tools, and techniques.

## USP 589 - Theorizing Urban Natures (4)

This seminarexamines various ways of understanding urban "nature". Students will contrast dominant ecological frameworks with those used in the social sciences (e.g., urban politicalecology, actor-network theory), with attention to the social, political, and economic contexts in which they arose, and implications of each for research, practice, and politics.

## USP 590 - Green Economics and Sustainable Development (3)

Examines prevailing as sumptions about economic growth, production, consumption, labor, and leisure. Considers how changes in these basic as sumptions might help us design an economic systemthat includes alternative values such as appropriate scale, community impact and environmental sustainability.
Also offered for undergraduate-level credit as USP 490 and may be taken only once for credit.

## USP 591 - Geographic Information Systems I: Introduction (4)

The use of computers in Geographic Information Systems (GIS) and mapping. Includes theory of databases related to geographic information management and practical aspects of database design. Students willuse a variety of programs
for mapping and spatial analysis of geographic information. Each student completes a series of exercises demonstrating a variety of approaches to the analysis and display of spatial data. Students enrolling in this class must register for a computer lab section. This is the same course as Geog 588 and may be taken only once forcredit.
Expected preparation: Geog 380 or equivalent experience in cartography.
Corequisite: Geog 588L. Cross-Listed as: Geog 588.

## USP 592 - Geographic Information Systems II: Applications (4)

Analysis and applications of geographic information systems concepts and technology to land planning and management is sues. The multipurpose land information systems concept is used as an organizing device for spatial regis tration of data layers to achieve data sharing and compatibility among functions. Userneeds assessment and systems design provides the basis for systems procurement, implementation, and use. Expected preparation: Geog 488/588 or USP 591. Students enrolling in this class must register for a computer lab section. This is the same course as Geog 592 and may be taken only once for credit.

Corequisite: Geog 592L. Cross-Listed as: Geog 592.

## USP 593 - Public Participation GIS (3)

Offered as a studio-based GIS class. The objective is for students to apply GIS skills acquired in previous GIS courses to a specific real-world spatial problem. Tasks will involve problemdefinition, primary data collection, advanced GIS analys is, and presentation of results. This format will give students practical experience in implementing GIS technologies with specific emphasis on planning problems. Students will be required to work in small groups in a simulated professional planning practice environment. Expected preparation: USP 531 and USP 543 or USP 591 and USP 592.

Also offered for undergraduate-level credit as USP 493 and may be taken only once for credit. .

## USP 594 - Planning in the Pacific Northwest (3)

This course will utilize the work of Pacific Northwest historians, writers, critics, and others as a vehicle for equipping planners with a some what systematic and certainly eclectic cultural overview of the region they hope to serve. This course will attempt to prepare them to be members of a place and of a culture of place, and to embrace the art and literature of the Pacific Northwest as part of their ongoing professional development. Though focused on the Pacific North west, the general approach used in this course should be applicable to other regions as well.

## USP 595 - Reshaping the Metropolis (3)

Examination of the contrast between classic models of metropolitan settlement and new patterns emerging in the late twentieth century. Land use changes in the context of new patterns of economic activity; ideas about the physical form of the goodcity and the societal implications of development patterns; is sues of res idential choice, community change, globalization, and environmental protection as affected by metropolitan growth.

## USP 596 - Affordable Housing Finance (3)

Introduction to the uniquechallenges of financing and developing affordable housing projects. The challenges and tools forfinancing rental as well as owner-occupied housing will be covered, and case studies will be used to illus trate the ways in which financing for affordable housing is created and used, and poses unique challenges for investors, juris dictions, and community-based groups. Expected preparation: USP 312.

Als o offered for undergraduate-level credit as USP 496 and may be taken only once forcredit. .

## USP 597 - Regional Economic Analysis (2)

Reviews analytical tools and datasources and provides hands on training for applying themto questions about regionaleconomies. Includes demographic analysis, regional business structure, analyzing regional economic change, labor market analysis, researching firms, and conducting cluster analysis and economic opportunities analys is. Expected preparation: basic statistics.

## USP 598 - Project Management for Planners (1)

Project management is the practice of deploying resources, developing schedules and analyzing risks to produce a desired outcome. In this class we will use hands-on case studies to explore the dimensions of project management and build skills for projects typical to urban planning in scope and scale. The course will also address strategies for building leadership and communication skills and promoting equity and inclusion in project development, client engagement and teammanagement.

## USP 601 - Research (0-9)

(Credit to be arranged.)

USP 602 - Independent Study (1-9)
(Credit to be arranged.)

## USP 603 -Dissertation (0-15)

(Credit to be arranged.)

## USP 604-Cooperative Education/Internship (1-9)

(Credit to be arranged.)

## USP 605 - Reading and Conference (0-9)

(Credit to be arranged.)

## USP 606 - Project (1-9)

(Credit to be arranged.)

## USP 607 -Seminar (1-9)

(Credit to be arranged.)

## USP 609-Practicum(1-9)

(Credit to be arranged.)

## USP 610 -Selected Topics (0-9)

(Credit to be arranged.)

## USP 612 - Community, Planning, and Ethics (4)

Introduction to the his tory and theory of community development in North America, thetheory and practice of urban planning in North America, and to theethics of civic and business practices linking the public, private, and nonprofit sectors. It examines the tensions among marketbased development, community action, and public intervention. Topics range in scale fromhousing style choices to aggregate trends in metropolitan formand cover a wide range of actors including individual households, private builders and developers, reformers, nonprofit organizations, and governments. The course will focus on plans as theoutcome of political processes with specific consequences fordifferent constituencies within the city.

## USP 613 - Urban Economic and Spatial Structure (3)

Provides an introduction to the economic and spatial aspects relevant to the field of urban studies. Provides an overview of existing theories and empirical evidence relating to urban spatial and economic relationships. Examines the impact of federal, state, and local government policies, and changing economic conditions on these relationships.

## USP 614 - History and Theory of Urban Studies (3)

Leading thinkers and milestones in the analysis of urban development and urban life. Complementary theories and models of the social sciences. Postmodern approaches. Visionary and critical res ponses to the possibilities of metropolitan life.

## USP 615 - Economic Analysis of Public Policy (4)

Introduction to the use of microeconomic analysis in the evaluation of public policy. Intended forentering graduate students with a limited background in economics. Develops basic analytic methods andemphasizes application of the analy sis to is sues of public policy. Prepares students for adv anced classes that use this type of analys is.

## USP 616 - Cities in the Global Political Economy (3)

Introduction to political theory and the political economy of globalization. Begins with core political ideas from classical works of political economy (Locke, Rousseau, Smith, Mills, Marx, Marshall, Keynes, Friedman, and Rawls) and proceeds to an analysis of the rise of transnationalismand globalization. Looks at changes in the globaleconomy, revolutionary changes to capitalism, the fall of communism, and impacts of globalization on cities, communities, the state, work, social mobility, welfare, cultural diversity, and the environment.

## USP 617 - The Sociology and Politics of Urban Life (3)

A survey of important theories of and empirical research about the social structure and political dynamics of urban areas. The impacts of globalization on urb an social and political life, the changing nature of community and social relations within cities and suburbs, and evolving patterns of intergovernmental cooperation and conflict within metropolitan regions will be analyzed.

## USP 619 - Development Partnerships (3)

Considers public and private partnerships to develop real estate in terms of the benefits to the wider urban community and policy goals such as affordable housing, community redevelopmentto economic development, and sustainability. The course looks at how public and private organizations can meet policy goals, createeconomic returns, and mitigate risk. Expected preparation: USP 523.

## USP 624 -Development Project Design (3)

Provides an understanding of architectural practice, the value added by design, the intersection of design with broader community concerns and developer's objectives, and the management of the design process, including tools for decision analysis in all phases of the building design process. A primer on building systems and engineering and case studies of the major building types will be presented. Expected preparation: USP 523.

## USP 625 - Green Buildings II (3)

Applies green building concepts to advanced real es tate problems, including the rehabilitation and adaptive reuse of existing real estate properties. Properties being covered include retail, office, hotel, industrial, and residential properties. The class will examine techniques for increas ing density, recycling materials, improving energy efficiency, and creating healthy work and living environments. The course will look at property management and portfolio management froma green building perspective.
Prerequisite: USP 529.

## USP 630 - Research Design (4)

Principles of research design, including philosophical bases of scientific research, approaches to research, problemidentification, problemstatement, development of research questions, development of research hypotheses, and the relationship of research hypotheses to modes of data gathering and analysis. The laboratory (530L) must be taken concurrently. Recommended prerequisite: USP 430.
Corequisite: USP 630L.

## USP 630L - Res earch Design Lab (0)

Research design lab.
Corequisite: USP 630.

## USP 634 - Data Analysis I(4)

Application of multivariate statistical analysis in an urban context. Emphasis on applications of various techniques within the general linear model. Recommended prerequisite: USP 532. The laboratory (USP 534L) must be taken concurrently. Recommended prerequisite: USP 430.

Corequisite: USP 634L.

## USP 634L - Data Analysis Lab (0)

Data analys is lab.
Corequis ite: USP 634.

## USP 636 -Political and Economic Decision-making (3)

Examines the philosophical and conceptual assumptions embodied in alternative decision-making theories in the
fields of economics and politics. Designed to show students thedifferences in individual and collective decis ion-making processes and the technical and social challenges faced in decision-making processes in the market place and the realm of politics. Examples cover local, national, and international policy topics. This is the same course as PS 559 and may be taken for credit only once. Recommended prerequisite: USP 515/615.
Cross-Listed as: PS 559.

## USP 654 - Data Analysis II (4)

Takes an applied approach to statistical analysis and research methodology and is the second in a two-course sequence. Provides students with statistical background, conceptual understanding, technical writing skills, computer application, and the ability to apply these skills to realistic data analysis problems and research designs. Topics include simple regression and correlation, multiple regression, and logistic regression. The laboratory (USP 654 L ) must be taken concurrently. Recommended prerequisites: USP 634 or an equivalent course approved the instructor and prior experience with statistical software.
Corequisite: USP 654L.
USP 654L - Data Analysis II Lab (0)
Data analys is lab.
Corequisite: USP 654.

## USP 655 - Advanced Data Analysis: Structural Equation Modeling (3)

Introduces students to structural equation modeling, a regression-based technique that incorporates elements of path analysis and confirmatory factor analysis. Topics covered include path analysis, confirmatory factor analysis, and structural models with cross-sectional, longitudinal, and multiple groups. The general goal is to provide a thorough background in the conceptual aspects, statistical underpinnings, and application of this method.

## USP 657 - Advanced Data Analysis: Discrete Choice Modeling (3)

Presents the theory and practice underlying the formulation and estimation of models of individual dis crete choice behavior with applications to travel, travel related and other choices. Provides students with an understanding of the theory, methods, application and interpretation of multinomial logit (MNL), nested logit and other members of the Generalized Extreme Value (GEV) family of models, as well as an introduction to mixed logit models.
Prerequisite: USP 634 or equivalent intermediate statistics/econometrics course.

## USP 660 - Policy Process (3)

Focuses on the politics of the policy process. It examines the role, influence and interaction of legis latures, executives, bureaucracies, courts, policy communities and citizens. Follows the stages of policy development: problemdefinition, agenda setting, budgeting, authorization, implementation and oversight. Case material is taken from federal, state, and local governments with special consideration given to the intergovernmental aspects of the policy process.

## USP 663 - ProgramEvaluation (3)

This course is designed as a graduate introduction to the field of evaluation research and programevaluation. Topics covered include contemporary and emerging theoretical pers pectives on evaluation research, experimental and quasi-experimental design, internal and external validity and reliability, measurement, analysis of change, ethical is sues in evaluation, adminis tration of programevaluation.

## USP 674 -Spatial Analysis (3)

The use of geographically coded datato identify and anticipate future patterns of human activity in metropolitan areas and systems of cities. Emphasizes techniques to establish whether the characteristic landscapes associated with static and dy namic models of behavior are present. Diffusion processes, expanded location theories, and models of decision making fromspatially arrayed cues receive particular attention. Recommended prerequis ite: USP 532.

## USP 676 - Activity Location (3)

The location of human activities in urban systems. Location of economic activities where profit maximization is desired, and location decisions with equity maxima.

## USP 679 - Metropolitan Fiscal Structure (3)

The course will focus on the following topics: the tax burdens, fiscal res ources and expenditure patterns of local governments in metropolitan areas. The impact of revenue sharing and categorical grants. The spatial distribution of local government services, transfer payments, and tax burdens. Review of literature on the urban-suburban exploitation thesis, the Tiebout-Oates model, etc.
Prerequisite: USP 515.

## USP 682 -Sustainable Transportation (3)

This course covers the sustainability dimensions of transportation, considering his torical trends and future
prospects. Topics covered in the course include energy use and alternative energy sources, technological change, traffic safety, vehicle emis sions, environmental justice, the role of transportation in the economy, and the role of land use and urban design.

Prerequisite: graduate standing.

## USP 683 - Qualitative Analysis (4)

Study of a variety of qualitative methods of analyzing socialscience problems, with an emphasis on applications to urban studies. Students study the philosophy of academic inquiry, understanding and interpretation of socialaction. Specific techniques include content analysis, participant observation, field observation, ethnography, interviewing, and focus groups, among others.
Organization, coding, and analysis of qualitative data. Expected preparation: USP 630.

## USP 689 - Advanced Urban Politics and Sociology (3)

This is an advanced readings seminar focusing on the literature and emerging theoretical and methodological debates in the fields of urban sociology and political science. This course is intended as an intensive seminar for graduate students seeking both greater familiarity and involvement with the literature and discourse in these fields.
Prerequisite: USP 517/617.

## USP 697 - Res earch Design 2 (4)

Research seminar required for students in urban studies doctoral program; open to MUS and other adv anced graduate students. Students apply their substantive background and methodological training to develop all the components of a social science research paper:statement of focused research question, literature review, development of hypotheses, definition of appropriate methodology, design of data acquisition, and pilot testing of data acquisition strategy. Expected preparation: USP 614, USP 613, and USP 617.

## Viet-Vietnamese

## Viet 101 - First-Year Vietnamese Term 1 (4)

Elementary work in the Vietnamese language with emphas is on listening comprehension, speaking, grammatical patterns, reading, and writing. Includes discussions of Vietnamese culture and traditions. Suitable for beginners and Vietnamese speakers with limited ability. This is the first course in a sequence of three: Viet 101, Viet 102, and Viet 103.

## Viet 102 - First-Year Vietnamese Term 2 (4)

Elementary work in the Vietnamese language with emphasis on listening comprehension, speaking, grammatical patterns, reading, and writing. Includes discussions of Vietnamese culture and traditions. Suitable for beginners and Vietnamese speakers with limited ability. This is the second course in a sequence of three: Viet 101, Viet 102, and Viet 103.

## Viet 103 - First-Year Vietnamese Term 3 (4)

Elementary work in the Vietnamese language with emphasis on listening comprehension, speaking, grammatical patterns, reading, and writing. Includes discussions of Vietnamese culture and traditions. Suitable for beginners and Vietnamese speakers with limited ability. This is the third course in a sequence of three: Viet 101, Viet 102, and Viet 103.

## Viet 201 -Second-Year Vietnamese Term 1 (4)

Work in the Vietnamese language focusing on various cultural aspects of Vietnamese life. The language skills include speaking, listening, reading and writing. Resources and information fundamental to the Vietnamese heritage will be discussed. This is the first course in a sequenceof three: Viet 201, Viet 202, and Viet 203.

## Viet 202 -Second-Year Vietnamese Term 2 (4)

Work in the Vietnamese language focusing on various cultural aspects of Vietnames elife. The language skills include speaking, listening, reading and writing. Resources and information fundamental to the Vietnamese heritage will be discussed. This is the second course in a sequence of three: Viet 201, Viet 202, and Viet 203.

## Viet 203 -Second-Year Vietnamese Term3 (4)

Work in the Vietnamese language focusing on various cultural aspects of Vietnames elife. The language skills include speaking, listening, reading and writing. Res ources and information fundamental to the Vietnamese heritage will be discussed. This is the third course in a sequence of three: Viet 201, Viet 202, and Viet 203.

## WLL - World Languages \& Literature

## WLL 101 -Special Studies (1-4)

(Credit to be arranged.)

## WLL 102 - First-year World Languages (1-4)

Contact the department for information on this course.

## WLL 103 - First-year World Languages (1-4)

Contact the department for information on this course.

## WLL 199 - Special Studies (1-8)

(Credit to be arranged.)

## WLL 201 -Special Studies (1-4)

(Credit to be arranged.)

## WLL 202 -Second-year WorldLanguages (1-4)

Contact the department for information on this course.

## WLL 203 -Second-year WorldLanguages (1-4)

Contact the department for information on this course.

## WLL 299 - Special Studies (1-6)

(Credit to be arranged.)

## WLL 319U - Fairy Tales and Folklore (4)

A study of the fairy tale, folklore and/or other works originating orally representing a range of critical social and cultural issues. May be repeated with differenttopics. Course taught in English.

## WLL 335U - The Icelandic Sagas (4)

Explores the sagas and the cultural milieu in which they were created. Conducted in English. Expected preparation: Sophomore Inquiry.

## WLL 349 - Forbidden Love (4)

Study of depictions in literary works of gender and sexual identity, orientation, or practice that differs fromthat of the majority of the surrounding society. Works will be drawn from world literatures in translation. Course may be repeated with different topics. Course conducted in English.

## WLL 361 U- Bestsellers andBlockbusters (4)

Study of the interplay between literary works froma variety of time periods and their cinematic representations. Students will develop analytical and critical thinking skills applicable both to the page and the screen. May be repeated with different topics. Course taught in English.

## WLL 371 -Global Citizenshipin Professional Contexts

 (4)Designed for students who are interested in developing a betterunderstanding of today's global issues and ascertaining possible strategies to be functional in a global setting. Through hands-on projects, students will develop strategies to help thembreak down cultural barriers, challenge stereotypes, appreciate differences and converge commonalities in people, cultures, and communities.

## WLL 380 - Introduction to Comparative Literary and Cultural Studies (4)

Overview of the practices, methods, and materials of comparative literary and cultural studies, with an emphasis on learning specific modes of encountering creative expression fromdifferent linguistic, cultural, and national backgrounds. Introduces students to major questions, concepts, and debates in the field as well as literary works in relation to various themes, ideas, genres, and contexts.
Prerequisite: Upper-division standing. Cross-Listed as: This is the same course as Eng 380 and may be taken only once forcredit.

## WLL 381 - Topics in Translation Studies (4)

Students will develop analytical frameworks to understand trans lation and its implications for textual interpretation. Students work with case studies that highlight the role of translation throughout history; they also examine how methods fromTranslation Studies enrich the study of literary and non-literary texts alike. Those with secondlanguage competency can optionally develop skills to producetranslations of their own. This course may be repeated forup to 8 credits.
Cross-Listed as: This is the same course as Eng 381.

## WLL 383U - Topics in Comparative Literature, Film and Comics (4)

Students learn how to compare literary, film, or comicbook genres across two or more world cultures; readings (viewings) of texts/films are followed by discussion of cultural differences. Students also learn how to discuss genre differences and how cultural attitudes shape those different artistic res ponses and appropriations of global artistic ideas. Analysis of critical texts reveal how cultural attitudes create different expectations or requirements for
genres. Readings and discussions are in English. This course may be repeated for up to 8 credits.

Cross-Listed as: This is the same course as Eng 383U.

## WLL 390 - Languages of the World (4)

Overview of the world's languages and language families.
Presentation of specific languages, basic phonemic and structural analyses to illus trate linguis tic terms and concepts.

## WLL 399 -Special Studies (1-12)

(Credit to be arranged.)

## WLL 403 - Thesis (1-9)

(Credit to be arranged.)

## WLL 404-Cooperative Education (1-12)

(Credit to be arranged.)

## WLL 405 - Reading and Conference (1-12)

(Credit to be arranged.)

## WLL 408 - Workshop(1-12)

(Credit to be arranged.)

## WLL 409 - Practicum(1-12)

(Credit to be arranged.)

## WLL 410 -SelectedStudies (1-12)

(Credit to be arranged.)

## WLL 438 - Language and Technology (4)

Examination of the communicative dynamics, cultures, and educational possibilities of digital environments as they are used in social, professional and world languageeducation settings. Students will analyze and as sess a variety of online environments for their own language learning or can choose to focus on research or pedag ogical projects.
Also offered for graduate-level credit as WLL538 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## WLL 448U- Major Figures in World Literature (4)

Concentrated study of the canon of one or more major writers: for example, Dostoevsky, Cervantes, Goethe. Recommended prerequis ite: Sophomore Inquiry or 12 credits of literature. Conducted in English.

## WLL 449 - Major Topics in World Literature and Culture (4)

Study of the treatment of topics in one or more of the cultures of the world. Such topics as Europe as self and other, Don Juan, exile, the quest, outlaws and bandits, ghosts, fairies and gods. Expected preparation: Sophomore Inquiry or 12 credits of literature. Conducted in English.
Also offered for graduate-level credit as WLL547 and may be taken only once for credit. .

## WLL 493 -Language Proficiency Testing and Teaching

 (4)Application of proficiency standards in tes ting and teaching at the novice and intermediate levels. Introduction to ILR/ACTFL/ETS/FSI guidelines and compatible testing methods. Discussion of pragmatic issues: testing technique and test validity; useof teaching materials; logistics. Expected preparation: three years of a foreign language. Conducted in English.

Also offered for graduate-level credit as WLL593 and may be taken only once for credit. .

## WLL 498 - Methods of Teaching Foreign Languages (4)

Study and analysis of various pedagogical theories as applied to the learning and teaching of foreign languages. Specialemphasis on discourse and content analysis. Recommended for prospective language teachers. Expected preparation: three years of a foreign language. Conducted in English.
Also offered for graduate-level credit as WLL598 and may be taken only once for credit. .

## WLL 501 - Research (1-9)

(Credit to be arranged.)

## WLL 504 -Cooperative Education (1-12)

(Credit to be arranged.)

## WLL 505 - Reading and Conference (1-12)

(Credit to be arranged.)

## WLL 508 - Workshop(1-12)

(Credit to be arranged.)

## WLL 509 - Practicum(1-12)

(Credit to be arranged.)

## WLL 510 -SelectedStudies (1-12)

(Credit to be arranged.)

## WLL 538 - Language and Technology (4)

Examination of the communicative dynamics, cultures, and educational possibilities of digital environments as they are used in social, professional and world languageeducation settings. Students will analyze and assess a variety of online environments for their own language learning or can choose to focus on research or pedagogical projects.
Also offered for undergraduate-level credit as WLL438 and may be taken only once for credit. .

## WLL 549 - Major Topics in World Literature and Culture (4)

Study of the treatment of topics in one or more of the cultures of the world. Such topics as Europe as self and other, Don Juan, exile, the quest, outlaws and bandits, ghosts, fairies and gods. Expected preparation: Sophomore Inquiry or 12 credits of literature. Conducted in English.
Also offered for undergraduate-level credit as WLL447 and may be taken only once for credit. .

## WLL 560 - Principles of Scholarly Research (4)

A theoretical and practical introduction to research methods and literary theory. Investigation of bibliographic materials, primary texts, secondary literature, and major forms of literary criticis $m$. To be taken in first year of graduate study.

## WLL 593 - Language Proficiency Testing and Teaching

 (4)Application of proficiency standards in testing and teaching at the novice and intermediate levels. Introduction to ILR/ACTFL/ETS/FSI guidelines and compatible testing methods. Discussion of pragmatic is sues: testing technique and test validity; useof teaching materials; logistics.
Expected preparation: threeyears of a foreign language. Conducted in English.

Also offered for undergraduate-level credit as WLL493 and may be taken only once for credit. .

## WLL 598 - Methods of Teaching Foreign Languages (4)

Study and analysis of various pedagogical theories as applied to the learning and teaching of foreign languages. Specialemphasis on discourse and content analysis. Recommended for prospective language teachers. Expected preparation: three years of a foreign language. Conducted in English.
Also offered for undergraduate-levelcredit as WLL498 and may be taken only once for credit. .

## Wr - Writing

## Wr 115 - Introduction to College Writing (4)

Study and practice of college-level writing and reading, with focus on developing strategies for academic writing. Designed for students wanting preparation for WR 121 or Freshman Inquiry.

## Wr 121 - College Writing (4)

Study and practice of critical writing, with focus on analyzing and adapting to different contexts. Designed as a foundation for college-level writing.

## Wr 199 - Special Studies (1-4)

May be repeated for a maximum of 12 credits. See department for course description. (Credit to be arranged.)

## Wr 200 - Writing About Literature (4)

Introduction to various approaches to writing about literature, with focus on explication, analysis, and research.

## Wr 210 - Grammar Refresher (2)

Practical review of Standard Academic English, including parts of speech, sentence construction, and punctuation, with focus on self-evaluation and editing.

## Wr 211 - Writing Practice (4)

Pursuit of advanced writing projects, with focus on writing processes, editorial response, and revision.

## Wr 212 - Introductory Fiction Writing (4)

Introduces the beginning fiction writer to bas ic techniques of developing character, point of view, plot, and story idea in fiction. Includes dis cussion of student work. May be repeated for a total of 8 credits. Expected preparation: Freshman Inquiry.

## Wr 213 - Introductory Poetry Writing (4)

Introduces the beginning writer of poetry to basic techniques for developing a sense of language, meter, sound, imagery, and structure. Includes discussion of professional examples and student work. May be repeated for a total of 8 credits. Expected preparation:Freshman Inquiry.

## Wr 214 - Introductory Nonfiction Writing (4)

An introduction to writing with the major forms and techniques of literary nonfiction. Beginning with exercises in foundational skills such as description, reportage and the crafting of pers onal narrative, students will write and respond to short works of creative nonfiction. May be repeated for a total of 8 credits. Expected preparation: Freshman Inquiry or equivalent.

## Wr 222 - Writing Res earch Papers (4)

Introduction to academic inquiry, with focus on evaluating and engaging with secondary research and on conventions for documentation.

## Wr 227 - Introductory Technical Writing (4)

Practical experience in forms of technical communication, emphasizing basic org anization and presentation of technical information. Focuses on strategies for analyzing the audience and its information needs. Recommended: Wr 121 or Freshman Inquiry.

## Wr 228-Media Writing (4)

An introductory course in media reporting and writing. Focus on identifying newsworthiness, writing leads, constructing news stories, interviewing, and attributing quotes. Students learn to gather local news, writing some stories in a computer lab on deadline. Expected preparation: Wr 121 or Freshman Inquiry. May be repeated once for a total of 8 credits.

## Wr 299 - Special Studies (1-4)

(Credit to be arranged.)

## Wr 300 - Topics in Rhetoric and Composition (4)

Study and practice of writing in different rhetorical contexts, with focus on critical analy sis, generic conventions, and writing processes. Course may be
repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.

## Wr 301 - Critical Writing in English (4)

This writing-intensive course extends the skills developed in Eng 300 by studying some selected theoretical and disciplinary approaches to literary and other texts (including literary and rhetorical theory), and by introducing students to research methods as a way of entering scholarly conversations.

## Wr 312 - Intermediate Fiction Writing (4)

Builds on fictional techniques introduced in Wr212, including variations on the classic plot, complexpoints of view, and conventions of genre. Emphasizes discussion of student work. May be repeated once for credit.
Prerequisite: B or higher in Wr 212, or consent of instructor based on a writing sample.

## Wr 313 - Intermediate Poetry Writing (4)

Continues the study of poetry writing techniques introduced in Wr213. Includes additional instruction in poetic forms, variations on traditional forms, and experimental forms. Emphasizes discussion of student work. May be repeated once for credit.
Prerequisite: B or above in Wr213 or consent of instructor based on a writing sample.

## Wr 323 - Writing as Critical Inquiry (4)

Study and practice of writing and research in various contexts, with focus on pursuing critical questions and crafting rhetorical dis course.

## Wr 327 - Technical Report Writing (4)

Prepares students for writing as professionals in engineering, scientific and other technical disciplines. Topics covered include technical and workplace genres of writing, such as proposals and reports, oral presentations, writing about and with data, effective language practices, writing collaboratively, and ethics.

## Wr 328 - Media Editing (4)

Preparation of news and feature stories for publication. Emphas is is on line editing, copy editing, editorial troubleshooting, headline writing, layout, and integration with multimedia.
Prerequisite: Wr 228.

## Wr 330 - Desk top Publishing I (4)

Integrates writing, design, and visual communication with computer technology, with emphasis on preparing students to produce a variety of shorter products combining writing and design elements.

## Wr 331 - Book Publishing for Writers (4)

Provides an overview of the book publishing process for writers who would like to publish their own writing, either through traditional publis hing processes or alternative routes such as self-publishing. Students will write query letters, create marketing plans, and provide peer editorial feedback as they learn more about editing, design, production, marketing, distribution, and sales.

## Wr 333 - Advanced Essay Writing (4)

Study and practice of the essay genre across creative and critical contexts.

## Wr 394 - Careers for English Majors (4)

Exploration of potential career paths for English majors, including (but not limited to) writing, editing, and teaching in various contexts. Students will participate in professional development activities according to their interests.

## Wr 398 - Topics: Writing Comics (4)

Study and practice of creating comics and graphic narratives in a variety of genres, with a focus on formand process. Course may be repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course numbercan be applied to the English major.

## Wr 399 -Special Studies (1-5)

See department for course description. (Credit to be arranged.)

## Wr 400 - Advanced Topics in Composition (4)

Advanced study of writing theory and practice, with focus on rhetoric, genre, and process. Course may be repeated for credit with different topics for up to 8 credits. Up to 8 credits of this course number can be applied to the English major.

Also offered for graduate-levelcredit as Wr 500. Prerequisite: Upper-division standing.

## Wr 402 - Independent Study (1-12)

(Credit to be arranged.)

## Wr 403 - Thesis (1-12) <br> (credit to be arranged.)

## Wr 404 - Cooperative Education/Internship (1-12)

See department for course description. (Credit to be arranged.)

## Wr 405 - Writing and Conference (1-6)

Consent of instructor. See department for course description. (Credit to be arranged.)

## Wr 407 - Writing Seminar (1-6)

Consent of instructor. See department for course description. (Credit to be arranged.)

## Wr 410 -SelectedTopics in Writing (0-6)

See department for course description. (Credit to be arranged.)

## Wr 411 - Internship (1-4)

Students apply their academic training and skills in the workforce, further developing those skills and learning new skills in the process. Students develop a better understanding of the value to employers of their education in literature, writing, and/or publishing. Integrating an internship with reflection and professional development enhances theexperience.

Also offered for graduate-level credit as Wr 511.
Prerequisite: Permis sion of instructor.

## Wr 412 - Advanced Fiction Writing (4)

Students can expect to write longer and more ambitious works of fiction, while exploring a variety of technical problems and other questions emerging fromclass discussion. Course may be repeated once for credit.
Prerequisite: "B" or higher in Wr 312, or consent of instructor based on a writing sample.

## Wr 413 - Advanced Poetry Writing (4)

Students can expect to explore a variety of demanding technical problems and to experiment with poetic voices. Course may be repeated once forcredit.

Prerequisite: "B" or higher in Wr313, or consent of instructor based on a writing sample.

## Wr 416 -Screenwriting (4)

Students will be introduced to the process of conceiving, structuring, writing, rewriting, and marketing a screenplay for the contemporary American marketplace. "Screenplay paradigms" will be discussed, and a variety of movies will be analyzed. May be repeated for credit.
Also offered for graduate-level credit as Wr 516.
Wr 420 - Writing Studio (4)
Pursuit of advanced writing projects, with focus on process, response, reflection, and revision. Course may be repeated forcredit with different topics. Up to 8 credits of this course numbercan be applied to the English major.

Also offered for graduate-level credit as Wr 520. . Prerequisite: Upper-division standing.

## Wr 424 - Grant Writing for Professional Writers (4)

Introduces students training for careers as professional writers to the best practices in writing grants and managing the grant writing process across multiple sectors of the non-profit world and in academia. Students will work collaboratively and individually to develop business plans, identify potential funding sources, and begin preparing grants.
Also offered for graduate-level credit as Wr 524 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 425 - Advanced Technical Writing ()

Study and practice of foundational ways of thinking and professional skills for students planning to pursue a role or a career as a technical writer across a variety of industries and disciplines, including technology, health, engineering, science, manufacturing, and non-profits. Course topics include audience analysis, writing and editing in plain language for diverse audiences, common genres, ethics, collaborative writing, and project management. Students author individual and collaborative projects for a pers onal or programprofessional portfolio.
Also offered for graduate-level credit as Wr 525 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 426 - Document Design (4)

Document planning, creation, and revision, including discussion of the use and abuse of language in business, government, insurance, and law. Students will consider general strategies for document production; analyze different document styles; address questions of target audience; evaluate documents for readability and efficiency; and study thePlain English Movement and its legislative and legalimplications.

Also offered for graduate-level credit as Wr 526 and may be taken only oncefor credit.

## Wr 427 - Technical Editing (4)

Gives technical writers practice in technical editing by exposing themto samples of a variety of documents from the files of org anizations in the surrounding community. As a community based learning course, it requires students to interact with community partners in collaborative student teams. May be repeated for a maximum of 8 credits.

Also offered for graduate-level credit as Wr 527.

## Wr 428 - Advanced Media Writing (4)

Building on the journalis mskills learned in Media Writing and Media Editing, students use Portland to cover and write stories fromcommunity sources. Students are also introduced to reporting on a regular basis fromnews beats of their choosing. Expected preparation: Wr 328.
Also offered for graduate-level credit as Wr 528 and may be taken only onceforcredit. . Prerequisite: Wr 228.

## Wr 429 - Writing Computer Documentation (4)

Develop skills in writing computer documentation, primarily user manuals and systems pecifications. Focuses on analyzing informational needs of the audience, and defining and explaining computer terms and concepts for non-technical and semi-technical audiences. Expected preparation: Wr327, ISQA 111 or CS 105 or equivalent, word processing skills.

Also offered for graduate-level credit as Wr 529 and may be taken only once for credit. .

## Wr 430 - Desktop Publishing II (4)

Builds from the foundation in Desktop Publishing I to explore further the skills needed to produce publications in the computer age. Topics include typography, page layout, photography, and informational graphics, with a special emphasis on hands-on project production of a 12-page newsletter or magazine.
Also offered for graduate-level credit as Wr 530 and may be taken only once for credit.

## Wr 431 - Advanced Topics in Technical Writing Technologies (4)

An introduction to a contemporary technology used by technical writers in industry. Students will producea portfolio project to demonstrate proficiency in the technology. Students will also learn general strategies for learning new technologies as part of a profes sional practice. This course is repeatable for up to 16 credits.
Also offered for graduate-level credit as Wr 531. Prerequisite: Upper-division standing.

## Wr 432 - Frameworks for Technical Writing (4)

Introduces students to the many frameworks for understanding the fundamental questions that shape technical writing as a practice in industry and as a field of academic study, such as rhetoric, ethics, or social justice. Students will choose a framework to analyze and respond to a technical writing problemor situation of their choice and produce a portfolio to share findings.
Also offered for graduate-level credit as Wr 532 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 433 - Research Methods for Technical Writers (4)

Introduces students to the research methods commonly practiced by professional technical writers. These methods include interviewing subject-matter experts, researching genre conventions, user research, website content analysis, and usability testing. Students will practice methods via client-projects with local community partners, so the methods taught in any given section of the course will be shaped by the needs of the client-project. Students will produce professional-quality project deliverables for the client and the programportfolio.

Also offered for graduate-level credit as Wr 533 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 435 - Grammar for Writers (4)

Study and practice of contemporary English grammar and usage, with focus on the relationship between stylistic choices and their rhetoricaleffects.

Also offered for graduate-level credit as Wr 535 and may be taken only once forcredit. Prerequisite: Upper-division standing.

## Wr 456 - Forms of Nonfiction (4)

Explores various forms of nonfiction, including essay, personal essay, reviewing, immersion journalism, and memoir, with practice writing in each.

Also offered for graduate-level credit as Wr 556 and may be taken only once for credit. . Prerequisite: Wr214 or Wr 228. Instructor approval required.

## Wr 457 - Pers onal Essay Writing (4)

The history and contemporary use of personal es say as a mode of creative communication; gives an understanding of and practice in this kind of writing.
Also offered for graduate-level credit as Wr 557 and may be taken only once for credit. . Prerequisite: Wr214 or Wr 228. Instructor approval required.

## Wr 458 - Magazine Writing (4)

Examines the development of both long-and short-form magazine pieces, as well as the business and economics of
magazine publishing. Students write and peer-critique articles in the styles and formats of a variety of publications and magazine departments.
Also offered for graduate-level credit as Wr 558 and may be taken only once forcredit. . Prerequisite: Wr 214 or Wr 228. Instructor approval required.

## Wr 459 - Memoir Writing (4)

Concentrates on elements necessary for writing successful personal narrative, including structure, tone/voice, dialogue, characterization, tense, and point-of-view. Memoirs will be read and discussed, and students will turn in several pieces over the course of the termfor workshop discussion.
Also offered for graduate-level credit as Wr 559 and may be taken only once for credit. . Prerequisite: Wr 214 or Wr 228. Instructor approval required.

## Wr 460 - Introduction to Book Publishing (4)

Provides a detailed overview of the publishing process, organized around the division of labor, including introductions to contemporary American publishing, is sues of intellectual commerce, copyright law, publishing contracts, book editing, book design and production, book marketing and distribution, and bookselling. Based on work in mock publishing companies, students prepare portfolios of written documents, i.e., book proposals, editorial guidelines, design and production standards, and marketing plans. Guest speakers fromthe publishing industry and field trips provide exposure to the industry.
Also offered for graduate-level credit as Wr 560 and may be taken only oncefor credit. . Prerequisite: Upperdivision standing.

## Wr 461 - Book Editing (4)

Provides a comprehensive course in professional book editing, including editorial management, acquisitions editing, substantive/developmentalediting, and copyediting. Issues specific to both fiction and nonfiction books will be covered.
Also offered for graduate-level credit as Wr 561 and may be taken only oncefor credit. . Prerequisite: Upperdivision standing.

## Wr 462 - Book Design Software (4)

Comprehensive course in professional book design and production. Issues specific to the design of fiction and nonfiction books in a variety of genres and markets will be covered, including the applications of bothold and new technologies in design and production.
Also offered for graduate-level credit as Wr 562 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Wr 463 - Book Marketing (4)

Comprehensive course in professional book marketing. Is sues specific to the marketing of fiction/nonfiction books in variety of genres and markets will be covered. Students will do market research, produce marketing plans, write press releases, write advertising copy, and develop related marketing materials.
Also offered for graduate-level credit as Wr 563 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Wr 464 - Business of Book Publishing (4)

Comprehensive course in the business of book publishing. Topics covered include publications management, accounting, book production, distribution, and books elling. Students learn how a variety of agents, including publishers, publishing service companies, distributors, wholesalers, bookstores, etc., are organized.
Also offered for graduate-level credit as Wr 564 and may be taken only once for credit. . Prerequisite: Wr460.

## Wr 465 - Intellectual Property and Copyright (4)

Outlines opportunities and pitfalls faced by writer (editor, graphic designer, artist) in legal and ethical spheres. Copyright law, U.S. First Amendment law, defamation, right of privacy, trademark, trade secret law. Discusses the importance of the Internetin rethinking copyright and intellectual property rules.
Also offered for graduate-level credit as Wr 565 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Wr 466 - Digital Skills (4)

Gives hands-on training in digital skills and surveys developmental trends in writing in computational environments: webpages, computer programs, word processing programs, multimodales says. Learn core principles and methods of web design, web management, media history, and present-day uses of authoring software. Assess scholarly articles about writing and reading in computational environments.
Also offered for graduate-level credit as Wr 566 and may be taken only once for credit. Prerequis ite: Upper-division standing.

## Wr 471 - Typography, Layout, and Production (4)

Comprehensive course in professional book design and production. Is sues specific to the design of fiction and nonfiction books in a variety of genres and markets will be covered.
Also offered for graduate-level credit as Wr 571 and may be taken only once for credit. . Prerequisite: Wr 462.

## Wr 472 - Copyediting (4)

Learn how to improve the clarity, coherency, consistency, and correctness of other people's writing through application of grammatical and stylistic guidelines. Study grammar, usage, punctuation, and style. Narrow focus on editing at the line and substantive level, with little to no attention given to broad development of a manuscript.

Also offered for graduate-level credit as Wr 572 and may be taken only onceforcredit. .Prerequisite: Wr 461.

## Wr 473 - Developmental Editing (4)

Explores the relationship between an editor, a writer, and the work in the process of developmental editing-also known as global, substantive, or comprehensive editing. Examines historically significant editor/author relations, how the editorial process and relationships have changed over time, and how editorial expectations shift based on the expectations of the publisher, the constantly changing global marketplace, and the introduction of new technologies.

Also offered for graduate-level credit as Wr 573 and may be taken only once for credit. . Prerequisite: Wr 461.

## Wr 474 - Publishing Studio (4)

Perform the work of a real publishing house, from acquiring manuscripts to selling books. Gain publishing experience by participating in the various departments of a student-staffed publishing house, Ooligan Press. Departments include Acquisitions, Editing, Design and Sustainable Production, Marketing, External Promotions, Sales, DigitalContent, SocialMedia, and Project Management and Operations. Course may be repeated multiple times.
Also offered for graduate-level credit as Wr 574. . Prerequisite: Wr475.

## Wr 475 - Publishing Lab (1)

Perform the work of a real publishing house, from acquiring manuscripts to selling books. Gain publishing experience by participating in the various departments of a student-staffed publishing house, Ooligan Press. Departments include Acquisitions, Editorial, Design, Marketing and Sales, Digital, and Social Media. Course may be taken multiple times for credit.
Also offered for graduate-level credit as Wr 575.
Prerequisite: Upper-division standing.
Wr 476 - Publishing for Young Adults (4)
Study the techniques commonly deployed by writers and publishers of young adult and middle grade literature.
Also offered for graduate-level credit as Wr 576 and may be taken only once for credit. .

## Wr 477 - Children's Book Publishing (4)

Study the techniques commonly used by writers and publishers of children's literature.
Also offered for graduate-level credit as Wr 577 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## Wr 478 - Digital Marketing for Book Publishers (4)

This course examines the contexts and impacts of digital book marketing on the book industry, authors, and readers.
Also offered for graduate-level credit as Wr 578 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 480 - Advanced Book Design (4)

Builds upon the Adobe InDesign, Photoshop, Illustrator, and Acrobat skills that students developed in WR 462/562 BookDesign Software and further applied in WR 471/571 Typography, Layout, and Design. This class utilizes handson design projects that incorporate more advanced book des ign skills in terms of workflow, indexing, illustrations, visual data representations, etc.
Also offered for graduate-level credit as Wr 580 and may be taken only once for credit. Prerequis ite: Wr 471.

## Wr 481 - Ebook Production (4)

Ebook Production teaches the hands-on skills of digital publishing. The course will build on an established understanding of basic text-based languages like HTML, CSS, and XML. Students will be introduced to new tools like iBooks Author, oXygen, and Sigil.
Also offered for graduate-level credit as Wr 581 and may be taken only once for credit. Prerequisite: Upper-division standing.

## Wr 500 - Advanced Topics in Composition (4)

Advanced study of writing theory and practice, with focus on rhetoric, genre, and process. Course may be repeated for credit with different topics for up to 8 credits.

Also offered for undergraduate-level credit as Wr 400.
Wr 501 - Research (1-12)
(Credit to be arranged.)

## Wr 502 - Independent Study (1-6)

(Credit to be arranged.)

Wr 503 - Thesis (1-12)
(Credit to be arranged.)

## Wr 504-Cooperative Education/Internship (1-9)

See department for course description. (Credit to be arranged.)

## Wr 505 - Writing and Conference (1-6)

Consent of instructor. See department forcourse description. (Credit to be arranged.)

## Wr 506-Special Projects (1-8)

(Credit to be arranged.)

## Wr 507 - Writing Seminar (1-6)

Consent of instructor. See department for course description. (Credit to be arranged.)

## Wr 509-Practicum(1-9)

## Wr 510 -Selected Topics in Writing (0-6)

See department for course description. (Credit to be arranged.)

## Wr 511 - Internship (1-4)

Students apply their academic training and skills in the workforce, further developing those skills and learning new skills in the process. Students develop a better understanding of the value to employers of their education in literature, writing, and/or publishing. Integrating an internship with reflection and professional development enhances the experience.
Also offered for undergraduate-levelcredit as Wr 411 . Prerequisite: Permis sion of instructor.

## Wr 512 -Graduate Fiction Writing (4)

Students will further refine their skills by writing longer and more ambitious works of fiction, as well as confront a variety of technical problems emerging fromclass discussion.

## Wr 513 -Fiction Writing (4)

An intensive course for writers who are currently embarked on a project involving the writing of fiction, whether short story, novella, or novel. Recommended prerequisites: $\mathrm{Wr} 212,312,412$ or their equivalents. Consent of instructor required.

## Wr 514 - Graduate Poetry Writing (4)

Within a workshop format of writing, revising, critiquing and reading, students will strengthen their writing skills, and their understanding of how poems work. May be repeated once for credit.

## Wr 515 - Poetry Writing II (4)

Advanced poetry writing at the graduate level. Builds on Wr 514, ass umes students will submit their work for publication. Traditional works hop format in which students write, revise, and respond to the poems of others. May be repeated for credit. Recommended prerequisite: Wr 514.

## Wr 516-Screenwriting (4)

Students will be introduced to the process of conceiving, structuring, writing, rewriting, and marketing a screenplay for the contemporary American marketplace. "Screenplay paradigms" will be discussed, and a variety of movies will be analyzed. May be repeated forcredit.
Also offered for undergraduate-level credit as Wr 416.

## Wr 520 - Writing Studio(4)

Pursuit of advanced writing projects, with focus on process, response, reflection, and revision. Course may be repeated forcredit with different topics.
Also offered for undergraduate-level credit as Wr 420.
Wr 521 - MFA Core Workshopin Fiction (4)
The MFA Core Workshop in Fiction focuses on the writing, revis ion, and critical discussion of student short stories and chapters from novels. Students' critical analyses of their peers' work are informed by their study of published fiction in the texts, supplemented by lectures clarifying technical strategies in the writing of fiction. May be taken up to sixtimes for credit. This course is restricted to graduate students admitted to the Writing Program (Fiction).

## Wr 522-MFA Core Workshopin Poetry (4)

The MFA Core Works hop in Poetry focuses on the writing, revision, and critical dis cussion of student poems. Students' verbal and written critical analyses of their peers' work are informed by their reading of publis hed poems representing a range of formal strategies and his torical and cultural contexts, and by their reading in prosody and poetics. May be taken up to sixtimes for credit. This course is restricted to graduate students admitted to the Writing Program(Poetry).

## Wr 523 - MFA Core Workshopin Nonfiction (4)

The MFA Core W orkshop in Nonfiction concentrates on elements necessary for writing successful nonfiction prose --including structure, voice, dialog, characterization, and point-of-view-- with a primary emphas is on the in-class workshop and peer review of student pieces. Nonfiction models, both short pieces and book-length, will be read and dis cussed, and students will write critical responses regarding those models. May be taken up to sixtimes for credit. This course is restricted to graduate students admitted to the Writing Program(Nonfiction).

## Wr 524 - Grant Writing for Professional Writers (4)

Introduces students training for careers as professional writers to the best practices in writing grants and managing the grant writing process across multiple sectors of the non-profit world and in academia. Students will work collaboratively and individually to develop business plans, identify potential funding sources, and begin preparing grants.
Also offered for undergraduate-levelcredit as Wr 424 and may be taken only once for credit.

## Wr 525 - Advanced Technical Writing (4)

Study and practice of foundational ways of thinking and profes sional skills for students planning to pursue a role or a career as a technical writer across a variety of industries and disciplines, including technology, health, engineering, science, manufacturing, and non-profits. Course topics include audience analysis, writing and editing in plain language for diverse audiences, common genres, ethics, collaborative writing, and project management. Students author individual and collaborative projects for a pers onal or programprofessional portfolio.
Also offered for undergraduate-level credit as Wr 425 and may be taken only once for credit.

## Wr 526 - Document Design (4)

Document planning, creation, and revision, including discussion of the use and abuse of language in business, government, ins urance, and law. Students will consider general strategies for document production; analyze different document styles; address questions of target audience; evaluate documents for readability and efficiency; and study the Plain English Movement and its legis lative and legal implications.

Also offered for undergraduate-levelcredit as Wr426 and may be taken only once for credit.

## Wr 527 - Technical Editing (4)

Gives technical writers practice in technical editing by exposing themto samples of a variety of documents from the files of organizations in the surrounding community.

As a community based learning course, it requires students to interact with community partners in collaborative student teams. May be repeated for a maximum of 8 credits.

Also offered for undergraduate-level credit as Wr 427.

## Wr 528 - Advanced Media Writing (4)

Building on the journalismskills learned in Media Writing and Media Editing, students use Portland to cover and write stories fromcommunity sources. Students are also introduced to reporting on a regular basis fromnews beats of their choosing.

Also offered for undergraduate-level credit as Wr 428 and may be taken only once for credit.

## Wr 529 - Writing Computer Documentation (4)

Develop skills in writing computer documentation, primarily user manuals and system specifications. Focuses on analyzing informational needs of the audience, and defining and explaining computer terms and concepts for non-technical and semi-technical audiences. Expected preparation: Wr327, ISQA 111 orCS 105 or equivalent, word processing skills.
Also offered for undergraduate-level credit as Wr 429 and may be taken only once for credit. .

## Wr 530 - DesktopPublishing II (4)

Builds from the foundation in Desktop Publishing Ito explore further the skills needed to produce publications in the computer age. Topics includetypography, page layout, photography, and informational graphics, with a special emphas is on hands-on project production of a 12-page news letter or magazine.
Also offered for undergraduate-level credit as Wr 430 and may be taken only once for credit.

## Wr 531 - Advanced Topics in Technical Writing Technologies (4)

An introduction to contemporary technology used by writers in industry. Students will produce a portfolio project to demonstrate proficiency in the technology. Students will also learn general strategies for learning new technologies as partof a profes sional practice. This course is repeatable for up to 16 credits.

Also offered for undergraduate-level credit as Wr 431.

## Wr 532 - Frameworks for Technical Writing (4)

Introduces students to the many frameworks for understanding the fundamental questions that shape technical writing as a practice in industry and as a field of academic study, such as rhetoric, ethics, or social justice. Students will choose a framework to analyze and respond to a technical writing problemorsituation of their choice and produce a portfolio to share findings.

Also offered for undergraduate-levelcredit as Wr432 and may be taken only once for credit.

## Wr 533 - Res earch Methods for Technical Writers (4)

Introduces students to the research methods commonly practiced by professional technical writers. These methods include interviewing subject-matter experts, researching genre conventions, user research, website content analysis, and usability testing. Students will practice methods via client-projects with local community partners, so the methods taught in any given section of the course will be shaped by the needs of the client-project. Students will produce professional-quality project deliverables for the client and the programportfolio.
Also offered for undergraduate-level credit as Wr433 and may be taken only once for credit.

## Wr 535 - Grammar for Writers (4)

Study and practice of contemporary English grammar and us age, with focus on the relationship between stylistic choices and their rhetorical effects.

Also offered for undergraduate-levelcredit as Wr 435 and may be taken only once for credit. . Prerequis ite: Senior or graduate status.

## Wr 540 - Technical Writing Portfolio Workshop (1)

Provides a structured and collaborativeenvironment for authoring the Master's in Professional and Technical Writing graduation portfolio requirement. Students explore the rhetorical, design, and technical is sues related to portfolio creation. May be repeated twice for credit.

## Wr 550 - Portland Review (1-2)

Graduate students will gain hands-on editorial, publishing, and marketing knowledge while collaboratively producing and operating Portland Review, an (online) international literary journal. By participating in Portland Review's publication process and understanding the practices of running a literary journal, students will gain practical experience in the field of literary publishing. May be repeated for up to 8 credits.

## Wr 556 - Forms of Nonfiction (4)

Explores various forms of nonfiction, includingessay, personal essay, reviewing, immersion journalism, and memoir, with practice writing in each.

Also offered for undergraduate-level credit as Wr 456 and may be taken only once for credit. . Prerequis ite: Wr 214 or Wr228. Instructor approval required.

## Wr 557 - Pers onal Essay Writing (4)

The his tory and contemporary use of personal es say as a mode of creative communication; gives an understanding of and practice in this kind of writing.
Also offered for undergraduate-level credit as Wr 457 and may be taken only once for credit. .

## Wr 558 - Magazine Writing (4)

Examines the development of both long-and short-form magazine pieces, as well as the business and economics of magazine publishing. Students write and peer-critique articles in the styles and formats of a variety of publications and magazine departments. .
Also offered for undergraduate-level credit as Wr 458 and may be taken only once for credit. .

## Wr 559 - Memoir Writing (4)

Concentrates on elements necessary for writing successful pers onal narrative, including structure, tone/voice, dialogue, characterization, tense, and point-of-view. Memoirs will be read and discussed, and students will turn in several pieces over the course of the termfor workshop discussion.

Also offered for undergraduate-level credit as Wr 459 and may be taken only once for credit. . Prerequisite: Wr 214 or Wr 228. Instructor approval required.

## Wr 560 - Introduction to Book Publishing (4)

Provides a detailed overview of the publishing process, org anized around the division of labor, including introductions to contemporary American publishing, is sues of intellectual commerce, copyright law, publishing contracts, book editing, book design and production, book marketing and distribution, and bookselling. Based on work in mock publishing companies, students prepare portfolios of written documents, i.e., book proposals, editorial guidelines, design and production standards, and marketing plans. Guest speakers from the publishing industry and field trips provide exposure to the industry.

Also offered for undergraduate-level credit as Wr 460 and may be taken only once for credit.

## Wr 561 - Book Editing (4)

Provides a comprehensivecourse in professional book editing, including editorial management, acquisitions editing, substantive/developmentalediting, and copyediting. Is sues specific to both fiction and nonfiction books will be covered.

Also offered for undergraduate-level credit as Wr 461 and may be taken only once for credit.

## Wr 562 - Book Design Software (4)

Provides a strong foundation in design software used in the book publishing industry, focusing on Adobe InDesign.

Also explores Adobe Photoshop, Illustrator, and Acrobat, as well as XHTMLand e-book design. The class considers audience expectations through a range of hands-on design projects.
Also offered for undergraduate-levelcredit as Wr 462 and may be taken only once for credit.

## Wr 563 - Book Marketing (4)

Comprehensive course in professional book marketing. Issues specific to marketing of fiction and nonfiction books in variety of genres and markets will be covered. Students will do market research, produce marketing plans, write press releases, write advertising copy, and develop related marketing materials.
Also offered for undergraduate-level credit as Wr 463 and may be taken only once for credit.

## Wr 564 - Business of Book Publishing (4)

Comprehensive course in the business of book publishing. Topics covered include publications management, accounting, book production, dis tribution, and bookselling. Students learn how a variety of agents, including publishers, publishing services companies, distributors, wholes alers, bookstores, etc., are org anized and function in the marketplace.

Also offered for undergraduate-levelcredit as Wr 464 and may be taken only once for credit.

## Wr 565 - Intellectual Property and Copyright (4)

Outlines opportunities and pitfalls faced by writer (editor, graphic designer, artist) in legal and ethical spheres. Copyright law, U.S.First Amendment law, defamation, right of privacy, trademark, trade secret law. Discusses the importance of the Internet in rethinking copyright and intellectual property rules.
Also offered for undergraduate-level credit as Wr 465 and may be taken only once for credit.

## Wr 566 - Digital Skills (4)

Gives hands-on training in digital skills and surveys developmental trends in writing in computational environments: webpages, computer programs, word processing programs, multimodal essays. Learn core principles and methods of web design, web management, media history, and present-day uses of authoring software. Assess scholarly articles about writing and reading in computational environments.
Also offered for undergraduate-level credit as Wr 466 and may be taken only once for credit.

## Wr 571 - Typography, Layout, and Production (4)

Comprehensive course in professional book design and production. Issues specific to the design of fiction and
nonfiction books in a variety of genres and markets will be covered.

Also offered for undergraduate-level credit as Wr471 and may be taken only once for credit. . Prerequisite: Wr 562.

## Wr 572 - Copyediting (4)

Learn how to improve the clarity, coherency, consistency, and correctness of other people's writing through application of grammatical and sty listic guidelines. Study grammar, usage, punctuation, and style. Narrow focus on editing at the line and substantive level, with little to no attention given to broad development of a manuscript.

Also offered for undergraduate-level credit as Wr 472 and may be taken only once forcredit. . Prerequisite: Wr 561.

## Wr 573 - Developmental Editing (4)

Explores the relationship between an editor, a writer, and the work in the process of developmentalediting-also known as global, substantive, or comprehensive editing. Examines historically significant editor/author relations, how the editorial process and relationships have changed over time, and how editorial expectations shift based on the expectations of the publisher, the constantly changing global marketplace, and the introduction of new technologies.

Also offered for undergraduate-level credit as Wr473 and may be taken only once for credit. . Prerequis ite: Wr 561.

## Wr 574 - Publishing Studio (4)

Perform the work of a real publishing house, from acquiring manuscripts to selling books. Gain publishing experience by participating in the various departments of a student-staffed publishing house, Ooligan Press. Departments include Acquisitions, Editing, Design and Sustainable Production, Marketing, External Promotions, Sales, Digital Content, Social Media, and Project Management and Operations. May be taken multiple times for credit.

Also offered for undergraduate-level credit as Wr 474. Prerequisite: Wr 575.

## Wr 575 - Publishing Lab (1)

Perform the work of a real publishing house, from acquiring manuscripts to selling books. Gain publishing experience by participating in the various departments of a student-staffed publishing house, Oolig an Press. Departments include Acquisitions, Editorial, Design, Marketing and Sales, Digital, and Social Media. May be taken multiple times for credit.
Also offered for undergraduate-level credit as Wr 475.
Wr 576 - Publishing for Young Adults (4)
Study the techniques commonly deployed by writers and publishers of young adult and middle grade literature.

Also offered for undergraduate-levelcredit as Wr 476 and may be taken only once for credit.

## Wr 577 - Children's Book Publishing (4)

Study the techniques commonly used by writers and publishers of children's literature.

Also offered for undergraduate-level credit as Wr 477 and may be taken only once for credit.

## Wr 578 - Digital Marketing for Book Publishers (4)

This course examines the contexts and impacts of digital book marketing on the book industry, authors, and readers.

## Wr 579 - Res earching Book Publishing (4)

Students will learn about book publishing research methods (both qualitative and quantitative) and work through various stages of their final research paper for the culmination of the Book Publishing Master's Program. This course may be repeated once forcredit.

## Wr 580 - Advanced Book Design (4)

Builds upon the Adobe InDesign, Photoshop, Illustrator, and Acrobat skills that students developed in WR 462/562 BookDesign Software and further applied in WR 471/571 Typography, Layout, and Design. This class utilizes handson design projects that incorporate more advanced book design skills in terms of workflow, indexing, illustrations, visualdata representations, etc.
Also offered for undergraduate-level credit as Wr 480 and may be taken only once for credit. Prerequisite: Wr571.

## Wr 581 - Ebook Production (4)

Ebook Production teaches the hands-on skills of digital publishing. The course will build on an established understanding of basic text-based languages like HTML, CSS, and XML. Students will be introduced to new tools like iBooks Author, oXygen, and Sigil.
Also offered for undergraduate-level credit as Wr 481 and may be taken only once for credit. Prerequisite: Wr 562.

## Wr 582 - Literary Agents and Acquisitions (4)

Offers an in-depth examination of how a book gets selected for publication by those in the traditional role of gatekeeper: literary agents and acquisitions editors. Topics discussed will include selecting book projects from authors, submitting those book projects to publishers, negotiating terms for contracts, managing translation and film rights (called subsidiary rights), overseeing author book publicity and marketing, planning and managing an author's long-termcareer, and navigating career paths for as piring agents and acquisitions editors.

## WS - Women's Studies

## WS 101 - Introduction to Women's Studies (4)

An overview of a range of topics fromboth a contemporary and historic feminist lens.Emphasizes an intersectional critical analysis of how various is sues impact individuals and communities. Comprehensive introduction to feminist perspectives, expanding students' awareness of resistance to systems of oppression and resulting structural and social change.

Partnering with a local feminist nonprofit, students will gain hands-on knowledgeof how feminist org anizations strive to put theory into practice.
Prerequisite: WS 307 or junior standing.
WS 399 - Special Studies (1-6)
(Credit to be arranged.)

WS 401 - Research (1-6)
(Credit to be arranged.)

WS 402 - Independent Study (1-12)
(Credit to be arranged.)

## WS 404 - Cooperative Education/Internship (1-12)

(Credit to be arranged.)

## WS 405 - Reading and Conference (1-6)

(Credit to be arranged.) Consent of instructor.

## WS 407 -Seminar (1-6)

(Credit to be arranged.)

## WS 409 - Practicum(1-12)

(Credit to be arranged.)

## WS 410 -SelectedTopics (1-6)

(Credit to be arranged.)

## WS 411 - Experiential Learning Seminar (2)

Required during the first termof WS 409 practicum. Serves as a learning community for students to present and reflect on theircommunity-based practicumexperiences. Participants critically as sess the contexts in which they are operating and analyze the relationship between critical theory and practice.

Prerequisite: Upper division standing and permis sion of the instructor.

## WS 412 -Feminist Methodologies (4)

Introduces a range of feminist research methodologies, emphasizing interconnections among race, gender, sexuality, class, disability and other aspects of difference. Assesses knowledge-generating strategies in terms of their suitability for feminist research and addressing power relations. Development of critical awareness in doing selfdirected feminist, queer, decolonial and critical race research.
Also offered for graduate-level credit as WS 512 and may be taken only once forcredit. .Prerequisite: (WS 301 and WS 305) or WS 381.

## WS 415 -Senior Seminar (4)

Focuses on developing and completing an independent project using feminist and/or queer theories and methodologies. Structured works hop format where students will be guided through their project with peer and instructor feed back. Students will work collaboratively as well as independently.
Prerequisite: WS 412.

## WS 417 -Women in the Economy (4)

Different economic theoretical perspectives are presented to account for women's particular economic roles currently and historically. Emphas is on women's responsibility for child rearing and housework; women's relatively low wages; occupational segregation by gender; economic differences among women due to ethnicity, generation, and class; and policy iss ues with particular importance for women's economic situation. Expected preparation: Ec 201, Ec 202.
Also offerer for graduate-levelcredit as WS 517 and may be taken only once forcredit.

## WS 422 - Critical Perspectives on Quantitative Analysis (4)

Uses critical Indigenous, decolonizing, feminist and antiracist lenses to evaluate quantitative research applications, including development of research questions; study
designs; appropriate use of statistical and other quantitative methods; audience and dissemination of quantitative findings. Interdisciplinary and intersectional focus and applications. Note: Not a methods course; does not teach statistical orquantitative methods.
Also offered for graduate-level credit as WS 522 and may be taken only once for credit. Prerequis ite: Familiarity and experience with basic statistical and quantitative data and methods. Instructor permis sion required. Cross-Listed as: This is the same course as GRN 422 and may be taken only once for credit.

## WS 424 - Women and the Law (4)

Examines the relationship between women and the law. The first half of the course considers several theories of women's equality. During the second half of the course students will apply these theories to a variety of problems in gender justice. Substantive is sues covered may include: sexual harassment, abortion, fetal protection policies, and pornography. This course is the same as PS 425; may only be taken once forcredit.
Cross-Listed as: PS 425.

## WS 425 - Sociology of Gender (4)

Consideration of the theoretical, methodological, and empirical contributions of current sociological scholarship on gender. Emphasis on the intersection of gender, sexuality, race/ethnicity, and class. Analysis of topics such as: masculinity/femininity, parenting, family, education, work, sexualities, reproduction, politics, and social change. This is the same course as Soc 425 and may be taken only once for credit.
Also offered for graduate-level credit as WS 525 and may be taken only once for credit. .Prerequisite: junior standing. Cross-Listed as: Soc 425.

## WS 426 - Gender \& Mental Health (4)

Social and historical explanations of, and researchon, mental illness and mental health, with a focus on gender. Contemporary dis tributions, diagnoses, and treatments of mental illness among men and women are examined. Focus on psychiatric dis order and gender-based discourse. This is the same course as Soc 426 and may be taken only once for credit.
Also offered for graduate-level credit as WS 526 and may be taken only once for credit. Prerequis ite: Upper-division standing. Cross-Listed as: Soc 426.
WS 428 - Lesbian History (4)
Surveys the history of les bian existence in the United States. Begins by asking what "lesbian" means, identify ing the different historical markers of female same-sexdes ire. Using a rich variety of primary and secondary sources, we analyze his torical attitudes about female same-sexdesire, follow the emergence of lesbian subcultures and
communities, examine the development of sexual identities during the twentieth century, and end by considering lesbian is sues.

## WS 430 - Visionary Feminism (2)

In this seminar, students will explore their relationship to feminis $m$ as visionaries and change agents. They will understand contributions of various feminis ms to social and personal transformation, explore the effects of gender, difference and equity in their lives and apply an intersectionallens to an analysis of their experience and examine their goals for the future.
Prerequisite: Upper-division standing.

## WS 431 U- Women in the Visual Arts (4)

This course studies both the representation of women and gender and the art and patronage by women in various media (painting, sculpture, architecture, printmaking, photography, textiles and mixed media). Explores 19th century and 20th century America and Europe. This is the same course as ArH431U and may be taken only once for credit.
Cross-Listed as: ArH431U.

## WS 442 - Women Writers in Global Contexts (4)

Study of the works of women writers fromthe postcolonial and non-Western world.
Prerequisite: junior-standing. Cross-Listed as: This is the same course as Eng 442 and may be taken only oncefor credit.

## WS 444 - British Women Writers (4)

Study of the works of British women writers with attention to themes, styles, and characteris tic concerns in the light of feminist criticis m and scholarship. This is the same course as Eng 444 and may be taken only once for credit.

## WS 445 - American Women Writers (4)

Study of American women writers, with attention to themes, styles and characteristic concerns, in the light of feminist criticis $m$ and scholarship. This is the same course as Eng 445.

## WS 451 - Interrupting Oppression (4)

Advanced exploration of diversity and social justice. It provides a framework for understanding specific interlocking systems of oppression and how they affectus. It gives a pedagogical frame for training about concepts of oppression and diversity; and how to apply this knowledge through the practice.

Also offered for graduate-level credit as WS 551 and may be taken once forcredit. Prerequisite: Upper-division standing.

## WS 452 - Gender and Race in the Media (4)

Primarily examines the representations of gender and race, including age, class and sexual orientation in various media (mainstreamand alternative), and will examine theoretical and methodological approaches which may be used to interpret these representations. The overall aim is for students to understand how their own cultural identities affect their media consumption and social positioning. This course is the same as Comm452; course may only be taken once for credit.

Cross-Listed as: Comm 452.

## WS 453 - Feminismand Women?s Health (4)

The medicalization of women?s bodies sustains the myth that the female body is essentially a reproductive body and the male body the standard of health. Using a feminist lens of analysis, this class will examine these gendered conceptions relating to health, medical research, and treatments of gendered bodies.

Also offered for graduate-level credit as WS 553 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## WS 467 - Work and Family (4)

An examination of the effects of work on family, and family on work, in contemporary society. Includes study of dual-career and dual-work families, effects of maternal employment on children, impact of child care and elder care on the workplace, and parental leave and other workplace supports for families. Implications of research for social policy. Recommended prerequisites: Ps y 311 and 3 credits in courses numbered Ps y 321 or higher.

## WS 470U- Asian American Women's Studies (4)

Interdisciplinary coursefocusing on the contemporary experiences of Asian American women, examining ways in which race, gender, class, sexuality, and national identity shape the experiences of Asian American women. Topics: his tories of immigration and western colonization; family and community structures; representations and stereotypes in media and popular culture; sexuality and sexual identities; mixed-heritage and bicultural experiences; the politics of language; violence against Asian American women; labor force participation; relationship to feminis $m$; and activis mand resistance.

## WS 471 - Global Feminisms (4)

Themes and theoretical principles of global feminisms, with special emphasis placed on feminist movements from non-Western countries and regions, and theorizations of the transnational. Themes explored include colonialism, globalization, nationalismand nation.

Also offered for graduate-level credit as WS 571 and may be taken only only once for credit. . Prerequisite: WS 301 or consent of instructor.

## WS 479 - Women and Organizational Psychology (4)

Examines the relationship between gender and the social organization of the workplace. Focus is on gender development as socialization (e.g. hierarch and leadership, discrimination and harassment, deskilling) froma social ps ychological perspective. Strategies for change are cons idered. Recommended prerequisites: Ps y 310 and 3 additional credits in courses numbered Psy 330 or higher.

## WS 480 - Introduction to Critical Disability Studies (4)

Introduction to critical dis ability studies, what it is, and what it is not. Through lectures, readings, guest speakers, as signments and small group discussion, students will engage with each other to encourage application of new concepts in their current and future academic and personal lives.

Also offered for graduate-level credit as WS 580 and may be taken only once forcredit. .Prerequisite: Senior standing or instructor approval. .

## WS 481 - Disability and Intersectionality (4)

Focuses on intersectionality in the context of disability. Explores the historical and current contexts of disability in combination with race, ethnicity, gender, sexuality, and social class. Students engage with the application of these new concepts in their current and future studies and personal lives.

Also offered for graduate-level credit as WS 581 and may be taken only once for credit. . Prerequisite: WS 480 or consent of instructor.

## WS 482 - Topics in Global Sexuality Studies (4)

An examination of how sexualities are theorized and understood within a global frame of analysis. Topics include the sexual politics of migration, tourismand desire, colonialismand its lingering effects, militarization and sexuality, transnational biopolitics of sexuality, and the politics of global queer rights dis course.
Prerequisite: junior standing.
WS 501 - Research (1-12)
(Credit to be arranged.)

## WS 502 - Independent Study (1-9)

(Credit to be arranged.)

## WS 505 - Reading and Conference (1-8)

(Credit to be arranged.)

## WS 507 -Seminar (1-8)

(Credit to be arranged.)

## WS 509-Practicum(1-8)

(Credit to be arranged.)

## WS 510 -Selected Topics (3-4)

(Credit to be arranged.)

## WS 512 - Feminist Methodologies (4)

Introduces a range of feminist research methodologies, emphasizing interconnections among race, gender, sexuality, class, disability and other as pects of difference. Assesses knowled ge-generating strategies in terms of their suitability for feminist research and addressing power relations. Development of critical awareness in doing selfdirected feminist, queer, decolonial and critical race research.

Also offered for undergraduate-level credit as WS 412 and may be taken only once for credit. . Prerequisite: WS 315.

## WS 517 - Women in the Economy (4)

Different economic theoretical perspectives are presented to account for women's particulareconomic roles currently and historically. Emphasis on women's responsibility for child rearing and housework; women?s relatively low wages; occupational segregation by gender; economic differences among women due to ethnicity, generation, and class; and policy is sues with particular importance for women's economic situation. Recommended prerequisites: Ec 201, 202.

## WS 522 - Critical Perspectives on Quantitative Analysis (4)

Uses critical Indigenous, decolonizing, feminist and antiracist lenses to evaluatequantitative research applications, including development of research questions; study designs; appropriate use of statistical and other quantitative methods; audience and dissemination of quantitative
findings. Interdisciplinary and intersectional focus and applications. Note: Not a methods course; does not teach statistical or quantitative methods.
Also offered for undergraduate-levelcredit as WS 422 and may be taken only once for credit. Prerequisite:Familiarity and experience with basic statistical and quantitative data and methods. Cross-Listed as: This is the same course as GRN 522 and may be taken only once for credit.

## WS 525 -Sociology of Gender (4)

Consideration of the theoretical, methodological, and empirical contributions of current sociological scholarship on gender. Emphasis on the intersection of gender, sexuality, race/ethnicity, and class. Analysis of topics such as: masculinity/femininity, parenting, family, education, work, sexualities, reproduction, politics, and social change. This is the same course as Soc 525 and may be taken only once forcredit.
Also offered for undergraduate-level credit as WS 425 and may be taken only once for credit. . Prerequis ite: junior standing. Cross-Listed as: Soc 525.

## WS 526 - Gender \& Mental Health (4)

Social and historical explanations of, and research on, mental illness and mental health, with a focus on gender. Contemporary dis tributions, diagnoses, and treatments of mentalillness among men and women are examined. Focus on psychiatric dis order and gender-based discourse. This is the same course as Soc 526 and may be taken only once forcredit.
Also offered for undergraduate-level credit as WS 426 and may be taken only once for credit. Cross-Listed as: Soc 526.

## WS 530 - Women in the Visual Arts II (4)

This course studies both the representation of women and gender and the art and patronage by women in various media (painting, sculpture, architecture, printmaking, photography, textiles and mixed media). Explores 19th century and 20th century America and Europe.

## WS 545 - American Women Writers (4)

Study of American women writers, with attention to themes, styles and characteristic concerns, in the light of feminist criticis $m$ and scholarship. Recommended prerequisite: 15 credits in literature. WS 260 recommended.

## WS 546 - American Women Writers (4)

Study of American women writers, with attention to themes, styles and characteristic concerns, in the light of feminist criticis $m$ and scholarship. Recommended
prerequisite: 15 credits in literature. WS 260 recommended.

## WS 551 - Interrupting Oppression (4)

Advanced exploration of diversity and social justice. It provides a framework for understanding specific interlocking systems of oppression and how they affectus. It gives a pedagogical frame for training about concepts of oppression and diversity; and how to apply this knowledge through the practice.

Also offered for undergraduate-level credit as WS 451 and may be taken only once for credit.

## WS 552 - Gender and Race in the Media (4)

Primarily examines the representations of gender and race, including age, class and sexual orientation in various media (mainstreamand alternative), and will examine theoretical and methodological approaches which may be used to interpret these representations. In addition, considers the potential impact that media institutions have on people's lives, political decisions and social relations. The overall aim is for students to understand how their own cultural identities affect their media consumption and social positioning. This course is the same as Sp 552 ; course may only be taken once for credit.
Cross-Listed as: Comm 552.

## WS 553 - Feminismand Women?s Health (4)

The medicalization of women?s bodies sustains the myth that the female body is essentially a reproductive body and the male body the standard of health. Using a feminist lens of analysis, this class will examine these gendered conceptions relating to health, medical research, and treatments of gendered bodies.
Also offered for undergraduate-level credit as WS 453 and may be taken only once for credit. . Prerequisite: Upperdivision standing.

## WS 555 - Gender and Education (4)

Explores the significanceof gender in educational work. The focus will be on the history of gender arrangements in educational org anizations and the formation of gender roles in contemporary American society, particularly in the family, schools, and the economy. Students will examine differential socialization of males and females, ongoing practices in educational organizations that are gender-related and/or gender biased and the convergence of gender, race, and class in educational organizations. This course is cross-listed as ELP 455; may only be taken once for credit.

## WS 570 - Asian American Women's Studies (4)

Interdisciplinary course focusing on the contemporary experiences of Asian American women, examining ways in which race, gender, class, sexuality, and national identity shape the experiences of Asian American women. Topics: histories of immigration and western colonization; family and community structures; representations and stereotypes in media and popular culture; sexuality and sexual identities; mixed-heritage andbicultural experiences; the politics of language; violence against Asian American women; labor force participation; relationship to feminis $m$; and activis mand resistance.

## WS 571 - Global Feminisms (4)

Themes and theoretical principles of global feminisms, with special emphasis placed on feminist movements from non-Western countries and regions, and theorizations of the transnational. Themes explored include colonialis m, globalization, nationalismand nation.
Also offered for undergraduate-levelcredit as WS 471 and may be taken only once for credit. .

## WS 580 - Introduction to Critical Disability Studies (4)

Introduction to critical dis ability studies, what it is, and what it is not. Through lectures, readings, guest speakers, as signments and small group discussion, students will engage with each other to encourage application of new concepts in their current and future academic and personal lives.
Also offered for undergraduate-level credit as WS 480 and may be taken only once for credit. Prerequisite: Senior standing or instructor approval.

## WS 581 - Disability and Intersectionality (4)

Focuses on intersectionality in the context of disability. Explores the historical and current contexts of disability in combination with race, ethnicity, gender, sexuality, and social class. Students engage with the application of these new concepts in their current and future studies and personal lives.
Also offered for undergraduate-levelcredit as WS 481 and may be taken only once for credit.

## WS 583 - Critical Disability Studies Service Learning I

 (2)The fociof the 3 quarter sequence are to: prepare students to be culturally res ponsive change agents working equitably with people with dis abilities, provide an opportunity for students to work cooperatively with disability communities, and result in an in-depth study of a policy impacting people with dis abilities. This is the first course in a sequenceof three: WS 583, WS 584, WS 585 and must be taken in sequence.

Prerequisite: WS 580, WS 581. .
WS 584 - Critical Disability Studies Service Learning II (2)

The foci of the 3 quarter sequence are to: prepare students to be culturally responsive change agents working equitably with people with dis abilities, provide an opportunity for students to work cooperatively with disability communities, and result in an in-depth study of a policy impacting people with disabilities. This is the second course in a sequence of three: WS 583, WS 584, WS 585 and must be taken in sequence.
Prerequisite: WS 580, WS 581, WS 583.

## WS 585 - Critical Disability Studies Service Learning III (2)

The fociof the 3 quarter sequence are to: prepare students to be culturally responsivechange agents working equitably with people with disabilities, provide an opportunity for students to work cooperatively with disability communities, and result in an in-depth study of a policy impacting people with disabilities. This is the third course in a sequence of three: WS 583, WS 584, WS 585 and must be taken in sequence.
Prerequisite: WS 584..
