INITIATIVE ON Mixed Farming Systems

# Cross-cutting streams: Gender and social inclusion Cross-Cutting lead for Laos: Natalia Triana (n.triana@cgiar.org)

## Gender and social inclusion in the SI-MFS initiative

Challenges Addresses Addresses Addresses Deepening?

Sustainable intensification

"Production of more food on the same piece of land while reducing the negative environmental impacts and at the same time increasing the contributions to natural capital and flow of environmental services".
This definition has evolved to include non-environmental dimensions such as <u>social issues</u>, economics, and the human condition to ensure <u>a balanced approach to the intensification process</u>, echoing the Brundtland perspective.

Low attention to how Sustainable Intensification may (re-) produce inequalities

#### Activities and methods aligning

Gender and social inclusion gap identification in M&T
 Guidelines for DEED

# Key Demand, Innovation and Scaling partners

TBD

## Linkages to other WPs of SI-MFS

- Establish criteria for the selection of suitable technical innovations
- Focus on co-designing/bundling 1-2 innovations per country aligned with gender-transformative approaches
- Meet with each country team and partners to discuss the results of the selection and on how to coordinate efforts

Co-design socio-technical innovation bundles in interdisciplinary teams
