JUNE 26, 1974

MARINE AND POLAR EXPEDITIONARY REPORTS IN THE PELL MARINE SCIENCE LIBRARY

The voyages of discovery of the 15th and 16th centuries have a counterpart in the interdisciplinary scientific expeditions¹ that since the late 19th century have studied in detail the expanses of oceans, which centuries earlier had been only thoroughfares for exploration. The published findings of these expeditions, often requiring many more years to prepare than were consumed by the expeditions themselves, may be regarded as both documents and monuments.

The collection of marine and polar expeditionary reports in the Pell Marine Science Library of the Graduate School of Oceanography, on the Narragansett Bay Campus, is shelved in its Challenger Room, the Library's conference room, named in honor of the British corvette "Challenger" whose scientific voyage around the world, from 1873 to 1876, is generally regarded as marking the beginning of modern oceanography. In this collection, the major expeditions of the past are represented by the complete original editions of their reports, but the field is vast² and many relatively recent expeditions are still sporadically issuing reports, so that, in many cases, holdings are partial and some minor expeditions are not represented at all. Also not represented are expeditionary reports published in the journal literature rather than as a separate series of reports.

In order to make the existence of the collection

more widely known and to make the details of its contents more conveniently available to potential users, the expedient of reproducing the catalog records has been employed. Because the rules governing library catalog entries sometimes designate a report series in a way that is different from the reader's expectations, a list of cross references from the names of ships and conventional names of expeditions is included. The reader should consult both the list of cross references and the main listing before concluding that a report series is not in the collection.

The gathering and organizing of this collection has been the work of several hands over a number of years. We are to be credited only with the preparation of this listing.
