

# NEUROFIBROMATOSIS

By: Sanjana Nekkanti & Divya Choudhary

5 YEARS LATER

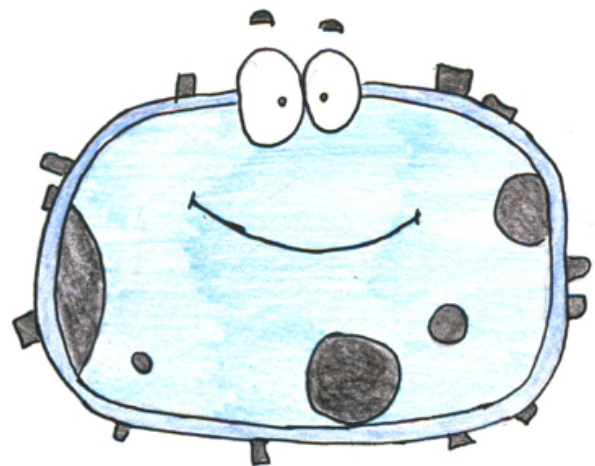

Let's go to the hospital and make sure you are alright!

A simple drawing of a light blue car on a road, heading towards a white hospital building with a red cross on its side.

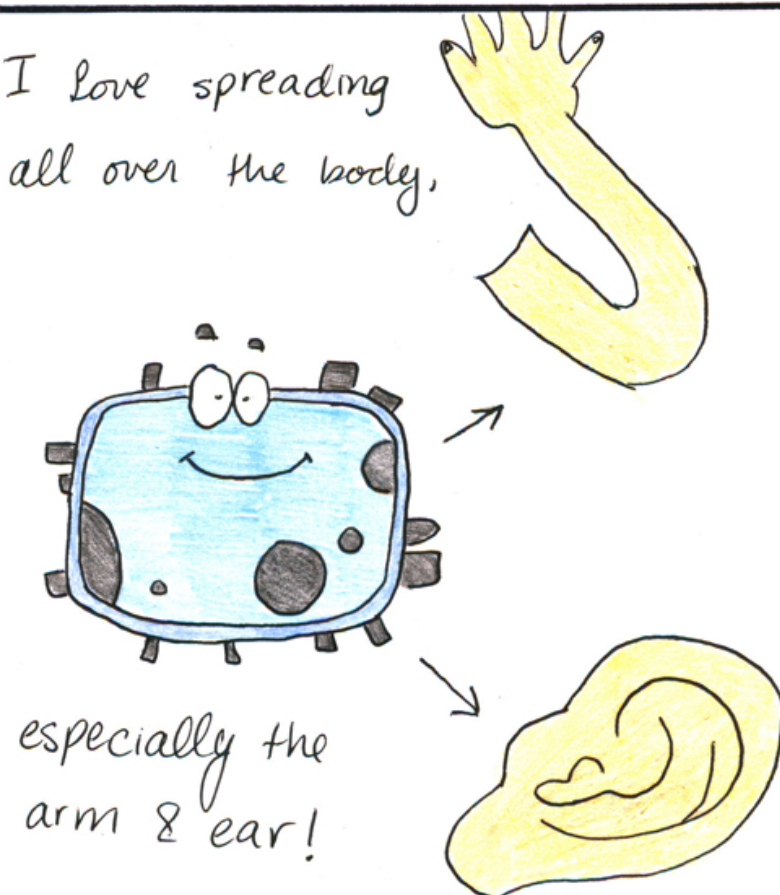

Let's take a blood test to see if we can determine what is going on.

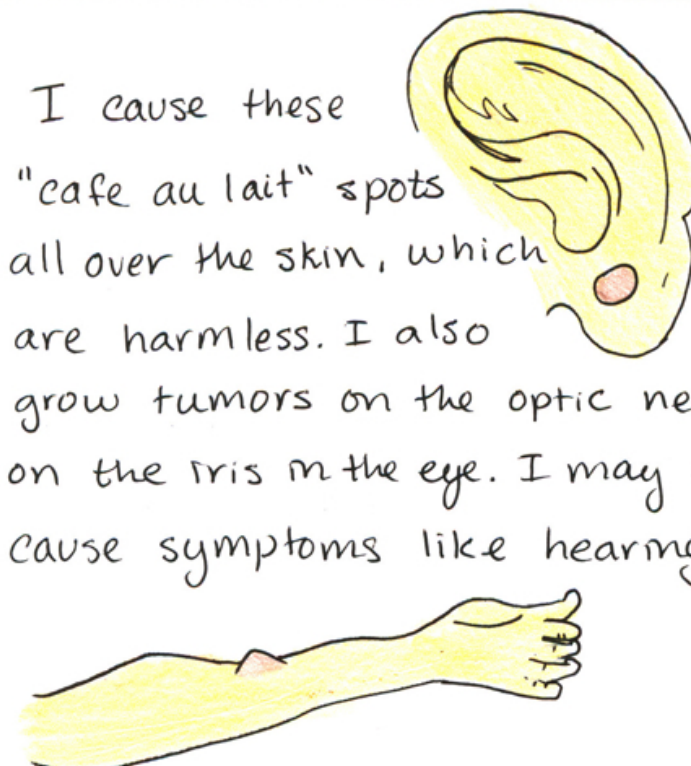

Hi! I am the neurofibromatosis cell!

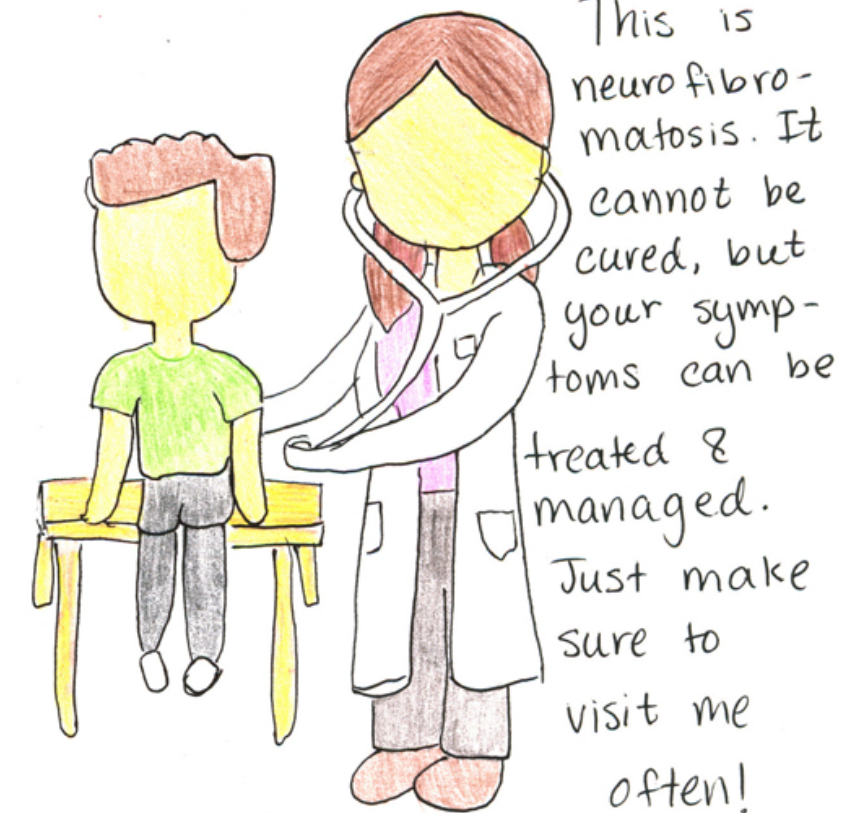

I love spreading all over the body,

I cause these "cafe au lait" spots all over the skin, which are harmless. I also grow tumors on the optic nerve & on the iris in the eye. I may also cause symptoms like hearing loss,

problems with swallowing, speech, balance, & eye movements.

This is neurofibromatosis. It cannot be cured, but your symptoms can be treated & managed. Just make sure to visit me often!
