Abstract:

In using conventional scientific research methods in the field of physical training and sports, we selected and built the content of 04 measures to improve the quality of teaching Basketball subject for non-specialized students of Bac Ninh Sport University of Viet Nam under the credit-based training system, at the same time test the theory on the feasibility of measures by an expert method. The result showed that the selected and built measures were feasible and could be applied in practice to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based training system.

Keywords: measures, Basketball subject, non-specialized students, Bac Ninh Sport University of Vietnam

1. Introduction

Training under the credit-based training system is a form of training aimed at the dynamism and interests of students, applied in the Basketball subject starting from 2016-

ⁱ Correspondence: email ductoansport@gmail.com

2017 academic year. Therefore, for the past time, despite many efforts, the subject has still faced many entanglements and confusion, especially in finding measures to improve teaching effectiveness. In response to this problem, it is necessary to choose and build content and measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam.

2. Research Methods

The research process uses the following methods: analysis and synthesis of documents; interview; pedagogical observation and mathematical statistics.

3. Research Result and Discussion

3.1 Selection of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based training system

The selection of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam is based on the results of assessing the actual situation of teaching Basketball subject for non-specialized students and ensures the following principles: Synchronicity, feasibility, practicality and scientificity.

Through observations, audits of theoretical and practical teaching hours of subject teachers with 15 lesson plans and reference to 25 relevant documents on teaching, we selected 4 measures including:

- Measure 1: Change the perception of lecturers and students in response to the requirements of taking teaching - learning under the credit-based learning system as the core, boosting discussion and group learning;
- Measure 2: Manage teaching activities of lecturers, improve teaching methods according to credit-based training.
- Measure 3: Build a team of qualified academic advisors, guide students to self-study effectively.
- Measure 4: Strengthen the management of self-study form of non-specialized Basketball subject students.

3.2 Building of the content of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based system

On the basis of the selected measures, we proceed to build the content of the measures including:

Measure 1: Change the perception of lecturers and students in response to the requirements of taking teaching-learning according to the credit-based learning system as the core, boosting discussion and group learning.

A. Purpose

To raise the right awareness, new way of thinking, new mindset about teaching and learning Basketball subject, thereby creating motivation, taking measures to solve problems in a reasonable and creative way to achieve teaching effectiveness.

B. Content and way to proceed

- Manage and direct lecturers and students to be aware of the role and position of Basketball subject in credit-based training to meet social needs.
- Awakening, arousing potential, self-consciousness of students is extremely important. Acting as managers, the faculties need to thoroughly grasp this content and regularly organize the implementation through specific and useful activities. In order to facilitate students to have a sense of self-study, lecturers must always orient the perception and build the mentality of students in the process of implementing the lesson plan. Lecturers must coordinate and flexibly apply teaching methods and forms to stimulate self-discipline and positive perception of students.
- Strengthen traditional education, political ideology for lecturers and students, foster the will to self-study for students.

For students: During class hours, teachers need to propagate and educate students to understand the role of self-study in credit-based training, and consider self-study as a central issue. In order for students to form and develop self-study motivation, teachers must always orient the perception for students, facilitate students to be fully aware of the learning requirements and missions, and be ready to perform the mission requirements in a good manner. At the end of class time or after 1 credit, it is necessary to conduct the test to assess the perception level of students of learning content, especially the perception of self-study activities; form of praise – criticism needs to be applied in a timely manner to each individual, each class collective and widely publicized for students of the subject to learn and gain experience.

For lecturers: Each lecturer in the subject always self-improves and self-innovates teaching methods in response to the requirement for credit-based training; the faculty actively participates in the class hours and assesses the lecturers according to the plan; organizes seminars and talk-shows to exchange experiences among lecturers in the subject in order to stimulate lecturers to apply the "student-centered" teaching method. Acting as advisors, directors and controllers of the teaching process by lecturers will motivate learners to actively perceive and aspire to gain knowledge, master knowledge and master professional skills and techniques.

C. Testing - assessment

- Through interview forms to lecturers and students after a period, measures are taken in the process of fostering the perception of lecturers and students in training in the form of credit.
- Criteria for assessing measures with teachers through interview result.
- Criteria for assessing students through academic result in the second semester of 2018-2019 academic year.

Measure 2: Manage teaching activities of lecturers, improve teaching methods according to credit-based training.

A. Purpose

To improve the management of detailed course outlines, lesson plan records, correctly and fully implement output standards to meet social requirements. Agree on improving methods and content of teaching Basketball subject effectively among lecturers, ensure the quality of teaching Basketball subject.

B. Content and way to proceed

Managing teaching activities of lecturers is the management of detailed course outlines, content and teaching methods through professional statutes, through directing the innovation of teaching methods, through testing and assessment of the realization of teaching objectives of lecturers for each subject, specifically:

Manage and direct the planning and implementation of the teaching program:

- The training program under the credit-based system must be restructured in the direction of modularization into the modules and schedule must be performed very accurately. Well implement the building of lesson plan, on the one hand facilitate each lecturer in conducting teaching proactively, on the other hand facilitate the administration and management of teaching activities of the University, faculty and subject in a synchronized and effective manner. To be able to do this job well, every lecturer must master the following issues:
 - Objectives, requirements, principles of content structure of the subject program;
 - Sources of corresponding textbooks and documents;
 - Current conditions of facilities and equipment of faculty and the university;
 - Experience and methods of planning the subject, including assurance of time, funding conditions along with the corresponding verification and feasibility test.

On the basis of the university's framework program, the faculty needs to build a detailed program suitable for each of its majors.

- Manage the preparation of lectures, lesson plans of lecturers:

Managing the preparation of lectures and lesson plans plays a very important role in improving the quality of teaching. Department and faculty managers must plan, create good conditions and effectively administer this work based on the following factors:

- Determine that the objectives of the lesson plan must be consistent with the goals and general requirements of the subject program, aimed at learners. The more measurable, verifiable and achievable the lecturer requirements are, the better the realization is.
- The content of the lesson must be consistent with the course curriculum.
- The content of the lesson plan must show comprehensiveness, show the innovations in teaching methods in a positive way, by creating and raising situations for learners to think and solve by their own.

Management and direction of improvement of teaching methods:

Effective teaching methods must be suitable for specific learners and specific teaching conditions. The successful transformation of training from a fixed-curriculum to credit-based depends mainly on the role of lecturers. In order to improve and innovate teaching methods, first of all, it is necessary to make the teaching staff become aware of the teaching relationship between teachers and learners that creates new factors about teaching methods such as:

- Collaborative teaching: lecturers provide problems, introduce solutions, and students solve problems by their own. Lecturers test and assess.
- Problem-solving-based teaching: lecturers raise problems, students solve problems by their own and then lecturers check and assess.
- Active teaching: bring into full play the initiative, active self-perception of learners, considering learners as subjects in the process of perceptive activities also means "learners-centered"
- Individualized, group-based teaching is an active teaching style in a particular form.
- Technicalization of teaching: use modern technical means and equipment (audio-visual equipment, informatics technology, computers) to support teachers and students according to the programmed and modeling method.

For credit-based training, the time to go to class is reduced, but the role of teachers is not so overshadowed, on the contrary, teacher's role is even become more important, and increasingly enhanced, especially in the role of controlling, guidance and provision of advice.

- Management of examination and assessment of learning outcomes of students: examination and assessment in credit-based training have many differences compared to fixed-curriculum training. Credit attaches importance to self-training and self-study of learners. Credit-based training emphasizes the responsibility of teachers. Teachers are responsible for teaching, organizing discussions, doing group exercises, individual exercises, setting questions and marking exams for finishing the subject. Teachers are those who grasp the most information to assess

the learning quality of learners. Module assessment in credit-based training is the assessment of the training process not only by tests and final exams, but also by different assessment methods:

- Classroom activities (number of present class hours, attitude towards lectures, discussions).
- Home self-study (through the content of class discussions, time and quality of completing homework assigned by lecturers).
- Final exam.

The examination and assessment have educational and teaching significance. Good management of this work is one of the management measures to improve the quality of education and training. Through testing and assessment, students know their own level of grasping documents and lessons to self-regulate their learning activities, stimulate the promotion of advantages and overcome weaknesses. Also, thanks to the assessment, lecturers can assess their teaching activities to adjust and supplement, lecturers can see the characteristics of each student and that is the basis for improving teaching methods.

C. Testing - assessment

Assessing this measure through class observation, comments of lecturers on class time management as well as the application of new teaching methods in teaching Basketball subject for non-specialized students.

Measure 3: Build a team of qualified academic advisors, guide students to self-study effectively.

A. Purpose

Through academic mentoring activities for classes to build a team of academic advisors who are capable and enthusiastic, and they may grasp thoughts, aspirations, emotions, personal capabilities and family circumstances, aspirations of each student in order to promptly give suggestions to the faculties and the University on measures to support students as well as perform well the student management.

B. Content and way to proceed

In order to have a team of academic advisors in the right sense, it is necessary to do the following:

On the faculty/department's side:

- It is necessary to prepare specific regulations for the team of academic advisors, according to the functions and tasks of the University, specifically:
 - The team of academic advisors must have a firm grasp of the subject training objectives, contents, programs, training methods, statutes and regulations on

learning, training and student work of the University to advise and support students throughout the academic year.

- Thoroughly grasp the functions and duties of relevant units in student work to guide students to find out job contact information in the right channel, right job, and right audience.
- Advise students to develop study plans for the entire course, guide students to register for courses in each semester to complete the study plan.
- Grasp the list, personal information of students. Monitor learning situation and result of students in each semester; thereby knowing the learning capacity and circumstances of each student to advise and guide students to register and adjust the study plan accordingly.
- Conduct student performance assessment work.
- Guide, encourage and facilitate students to participate in academic, scientific research activities and healthy and useful literary, physical and aesthetic activities.
- Propose to reward and discipline students in the class in charge.
- Facilitate academic advisors to come to visit and learn from schools that have implemented credit-based training for many years, so that they can gain more experience.
- Create conditions in terms of facilities, especially the University should have a separate working place for the team of academic advisors so that they have conditions to advise students; The University needs to connect computer network for team of academic advisors with all students in the University to facilitate communication in two ways between students and the team of academic advisors. On the side of the team of academic advisors:
 - Self-learn and research on training documents, statutes and regulations, clearly understand and thoroughly grasp those regulations to be able to advise students.
 - Be really dedicated to helping students with the teacher's heart.

In order to do their job well, the team of academic advisors needs to do the following:

- Periodically organize class meetings about twice/semester.
- Elect class managers and assign specific tasks to the class managers, clarify the working relationship between the team of academic advisors and the class managers.
- Disseminate and guide statutes and regulations related to students.
- Instruct students for learning methods.
- For students with special circumstances, having difficulties in learning and in life, the team of academic advisors needs to give priority to regularly contacting, helping and encouraging students to overcome difficulties to complete the set plan.

- The team of academic advisors must regularly contact the class to grasp the situation, which can be in many forms such as face-to-face meeting, phone or email.

C. Testing - assessment

- Assess the result of fully participating in the sessions of flag salutation, political studying of the University, professional activities of the subject, faculty and collective activities of the class.
- Assess through academic results for 2018-2019 academic year.

Measure 4: Strengthen the management of self-study form of non-specialized Basketball subject students.

A. Purpose

Synchronous coordination between functional departments towards the self-study of students is a key measure to ensure a smooth management process, and the service is conducted in a sequence as determined, based on the norms to ensure the consistency of goals, best serve the self-study activities of students, and at the same time ensure the implementation of the management rules and standards.

B. Content and way to proceed

In order to successfully complete the management of self-study activities of students, it is necessary to assign specific tasks to subject managers:

a. For Head of Subject:

- Build a plan to manage the teaching quality of the faculty in each semester and the whole school year. The goal of the plan must follow the training goals of the major and the feedback from lecturers and students.
- Assign specific responsibilities to the subject.
- Proactively inspect and supervise the implementation of teaching and learning in the subject.
- Organize the teaching registration of lecturers, assign teaching.
- Manage the teaching.
- Organize the examination scoring
- Monitor and organize professional training for lecturers at the faculty.

b. For lecturers of Basketball subject

Guide non-specialized students on the way to self-study as follows:

- Guide students on the way to prepare study plans and exercise plans.
- Guide students on the way to do exercises, practice in class and self-study and practice at home.
- Guide students on finding documents on the internet...
- Guide students on selecting appropriate learning methods.

C. Testing - assessment

Assess through learning results of students after an experimental semester in the second semester of 2018-2019 academic year.

3.3 Theoretical testing of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based system

In order to test the selected measures in practice for their objectivity and feasibility, we conduct a theoretical test of the selected measure. Theoretical testing was conducted on the basis of interviews with 15 people (05 lecturers teaching Basketball subject, 10 managers of specialized faculties).

The topic uses a Likert scale with five levels to assess the opinions of experts about the importance of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam according to credit-based training system: *Very suitable (5 points); Suitable (4 points); Normal (3 points); Unsuitable (2 points); Very unsuitable (1 point)*

The result of the interviews is presented in Table 1.

Pham Duc Toan, Nguyen Van Hoa, Do Dinh Du, Nguyen Son, Tran Manh Hung
 MEASURES TO IMPROVE THE LEARNING QUALITY OF BASKETBALL SUBJECT FOR
 NON-SPECIALIZED STUDENTS AT BAC NINH SPORTS UNIVERSITY OF VIETNAM
 UNDER THE CREDIT-BASED TRAINING SYSTEM

Table 1: Result of theoretical testing of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based training system (n=15)

No.	Contents of measures	Result of assessment											Rating
		Very unsuitable		Unsuitable		Normal		Suitable		Very suitable		Point	
		n	%	n	%	n	%	n	%	n	%	\bar{X}	
1.	Change the perception of lecturers and students in response to the requirements of taking teaching - learning under the credit-based learning system as the core, boosting discussion and group learning	00	0.00	00	0.00	00	0.00	03	20.0	12	80.0	4.8	Very good
2.	Strengthen the management of self-study form of non-specialized Basketball subject students	00	0.00	00	0.00	00	0.00	04	26.6	11	73.3	4.73	Very good
3.	Manage teaching activities of lecturers, improve teaching methods according to credit-based training	00	0.00	00	0.00	00	0.00	05	33.3	10	66.6	4.66	Very good
4.	Build a team of qualified academic advisors, guide students to self-study effectively.	00	0.00	12	80.0	3	20.0	02	13.3	13	86.6	4.86	Very good

The result in Table 1 showed that: of 4 measures that the topic selected, all of them were assessed by experts at a very suitable level with the assessment score from 4.66 to 4.8. They were rated at Good – very good or higher. Thus, it could be affirmed that the result of the theoretical testing of measures to improve the quality of teaching Basketball subject for non-specialized students at Bac Ninh Sport University of Viet Nam under the credit-based training system could continue to be applied in practice.

4. Conclusion

- 1) Select and develop detailed contents of 4 measures to improve the quality of teaching Basketball subject for non-specialized students, including:
 - Change the perception of lecturers and students in response to the requirements of taking teaching - learning under the credit-based learning system as the core, boosting discussion and group learning;
 - Strengthen the management of self-study form of non-specialized Basketball subject students;
 - Manage teaching activities of lecturers, improve teaching methods according to credit-based training;
 - Build a team of qualified academic advisors, guide students to self-study effectively.
- 2) Theoretical testing showed that the measures were assessed by experts at a suitable level and ensuring effective application in practice.
