Table S1.Summary of hunting evidence, habitats and conservation action at six Rousettus madagascariensis
roosts from 2006 to 2010. ('*' indicates the source of different types of information, '-' for no
activities/observations, H = high, M = medium, L = low. The R. madagascariensis roost at Valanirana
was reportedly inside forest and subject to hunting pressure prior to 1998 and before conversion of
the area in agriculture. Valanirana roost site was reportedly subject to hunting pressure before 1997)
