1 INTRODUCTION

This document describes the activities that JIRAM performed during the activity period JM0101 (PJ10), with particular attention to the comparison with the expected data and that achieved, keeping track of the configuration of the instrument with commanding file (SASF).

3 ACTIVITY DESCRIPTION

During PJ10 pass, JIRAM could have a partial coverage of the North Poles of Jupiter (see figure 2) and the coverage of the South Aurora. Note that in correspondance of each imager's pictures there is a spectral observation. Details about imager/spectrometer coupling and, more in general, about the instrument and its performances can be found in Adriani et al., 2014 and 2016. Moreover, observations of the Jupiter's moons IO and Ganymede have also been done (not reported in the figures). During this PJ, JIRAM performed from -16:23 PJ to -02:30 PJ dedicated radiation and calibration observations.

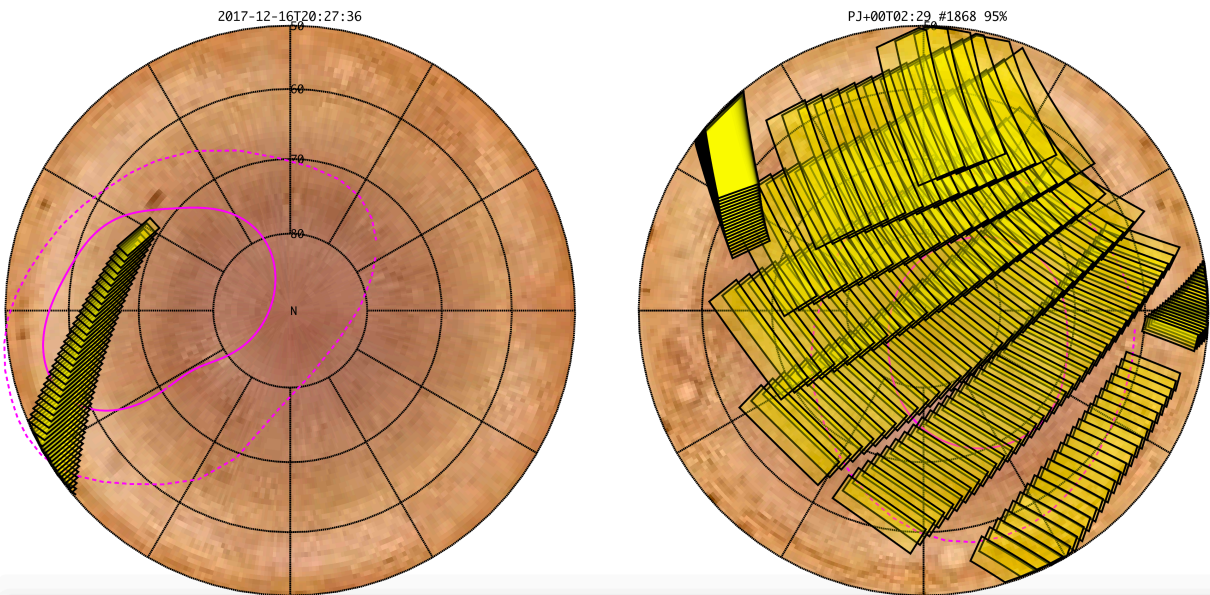

Figure 2. South Aurora - Imager filter L.

4 RADIATIONS ACQUISITION

Radiation sequences were collected in locations of low particle flux in order to update the mapping of good pixel locations to be used in subsequent radiation data processing. Radiation sequences targeting observations of the radiation environment were performed in the middle magnetosphere and the synchrotron emission region of the inner magnetosphere.
