Hello,

Husein has submitted the manuscript, "Implementation of Renewable Energy Indicators to Manage Water Supply Resources" to Asian Journal of Water, Environment and Pollution.

If you have any questions, please contact me. Thank you for considering this journal as a venue for your work.

Editor's Note

To Author: Thank you for the opportunity to read your paper. This is an interesting topic in an area of growing significance that is relevant to Implementation of Renewable Energy Indicators to Manage Water Supply Resources . I have a few suggestions that you may consider as you develop the paper further: ABSTRACT In the abstract, talk more about your conclusion.

INTRODUCTION Paragraph 1, with no references, explaining the context of the research. Paragraph 2, with references, explaining very generally what we know about the topic introduced in Paragraph 1. Paragraph 3 explaining what we need to find out. Paragraph 4 explaining briefly what this paper will do to find out, method etc. Paragraph 5, with no references, explaining the structure of this paper.

LITERATURE REVIEW. Theoretical literature has not been considered and reviewed. It's better to observe the connection between the contents. Try to explain everything except the topics to establish the necessary coherence. Theoretical Development: The literature review must engage in the constructs of your analytical framing in a meaningful way. The literature review section could be improved by being more analytical. In other words, building on the existing literature to highlight what is missing and what is yet to be done and in so doing outline the theoretical puzzles or debates to which this work contributes. I have concerns related to theoretical development and note the need for a more rigorous critique of the literature to help deepen the theoretical underpinnings of the study. Long paragraphs are written without reference. It is better to be more concise. referenced sentences are personal statements of authors that have no scientific validity. Discussion and contributions. Findings and Conclusions Do not show the difference between this article and previous studies. How your research results can be used in other articles? What suggestions do you have for other researchers to continue your work? What components should be emphasized more? Which areas do you think should do more research in this area? What are the limitations of this research? Write suggestions for future research. What are the theoretical and practical implications of your study

REFERENCES References should be modified according to the journal format. The references used in the theoretical literature are old and authors should use references (2019-2020-2021).

Result this paper: Major revision

Reviewer A:

Paper length::

Quite long

Originality::

Acceptable

Scope of paper::

Relevant to Asian Journal of Water, Environment and Pollution

Related work::

Acceptable

Language::

needs tighter editing, several grammatical errors found, incorrect spacings, and incoherent sentences/paragraph. There are parts that are too repetitive. And redundant words in the same paragraph.

References::

There is an adequate number of references. However, some in-text citations do not follow the APA format. Additional comments along the following lines: originality, literature review, methodology, evaluation of results, research implications, quality of communication, etc.:

Language::

The paper must be improved in the use of English. It is tough to understand.

References::

At the moment, they seem to be ok. Additional comments along the following lines: originality, literature review, methodology, evaluation of results, research implications, quality of communication, etc.: The paper presents conceptual research based on a survey that seems not been applied and on a few interviews. It is not an exciting study despite the theme interest because the methodology is not entirely understood. The methodology description and implementation need to be improved, so the results are comprehensive, and it possible to analyse the pertinence of the discussion and conclusion.
