September 2008

PREFACE

The Federal Housing Enterprises Financial Safety and Soundness Act of 1992, as revised by Section 1126 of the Housing and Economic Recovery Act of 2008, requires that the Department of Housing and Urban Development publicly release data—in forms useful to the public—on mortgages purchased by Fannie Mae and Freddie Mac. These government-sponsored enterprises (GSEs) operate in the secondary market for residential mortgages. In keeping with HUD’s mandate, this compendium of tables presents profiles of mortgages purchased by the GSEs (mainly in 2005-2007, but also in some cases covering previous years). The GSEs’ purchases during 2005-2007 were subject to housing goals established by HUD in November 2004.¹

Release of these tables augments the scope of information that the Department makes available on Fannie Mae’s and Freddie Mac’s mortgage purchases, which includes an annual loan-level public use data base and various analytical reports and working papers.² The release of these tables results from Departmental decisions in 2000 and 2001 to treat certain aggregations of data as non-proprietary.

Some figures in these tables, where indicated, reflect a transition from the 1990 to the 2000 Census. Also, with improvements made to Home Mortgage Disclosure Act (HMDA) data reporting starting in 2005, adjustments to the market data to remove the effect of the subprime market on the housing goals can be made more precisely.

This publication is an update of previous volumes, “Profiles of GSE Mortgage Purchases in 1999 and 2000,” and “Profiles of GSE Mortgage Purchases in 2005-2007,” which are available on the Office of Policy Development and Research’s web site, HUD User.³ In accordance with the Housing and Economic Recovery Act of 2008, HUD’s mission regulation authority over Fannie Mae and Freddie Mac is being transferred to the Federal Housing Finance Agency (FHFA), thus any future updates of this publication will be issued by the FHFA.

Table 18: GSEs' Multifamily Mortgages: Method of Acquisition, 2005-2007

DISCUSSION OF THE TABLES

Tables 1-7 describe the GSEs' mortgage purchases at the national level. Specifically, Table 1 presents figures on the GSEs' performance relative to the affordable housing goals which were established for the GSEs by the Department, and Tables 2-7 describe characteristics of the mortgages purchased by the GSEs that qualify under the goals, including comparisons between the GSEs' single-family purchases and aggregate single-family mortgage originations in the conventional conforming market. Table 8 shows percentages of housing units that qualify under each of the affordable housing goals by metropolitan statistical area (MSA), and Table 9 compares GSE single-family mortgage purchases with mortgage originations by housing goal category for MSAs. Tables 10-14 give profiles of the GSEs' purchases of mortgages on one-unit properties by loan-to-value ratio. Tables 15-18 present information on the GSEs' purchases of mortgages on multifamily rental properties. Each table includes explanatory notes.

Each of the three GSE housing goals – Low- and Moderate-Income, Special Affordable, and Geographically-Targeted – is based on the number of dwelling units that *qualify* to count toward the goal as a percentage of the number of units *eligible* to count. Eligible units are limited to properties where the mortgages are *conforming* and *conventional*, which satisfy other counting rules. The calculation (used in computing the figures in Table 1) includes mortgages that were financed either prior to or during the year of purchase by the GSE, and it is based on units financed by mortgages that were acquisitions of refinance as well as home purchase loans. Prior to 2001, dwelling units financed after December 31, 1992 with missing information necessary to determine whether the unit qualified were required to be included in the denominator and excluded from the numerator, but effective January 1, 2001, procedures went into effect which allow some missing-data units to be excluded from the denominator or to be included in the numerator and the denominator based on estimation techniques.

The maximum loan amount that can be financed by a GSE is referred to as the “conforming loan limit.” The conforming loan limits for 2004-2007 are shown in the following table:

Conforming Loan Limits for One-Unit Properties*

<u>Year</u>	<u>Limit</u>
2004	\$333,700
2005	\$359,659
2006	\$417,000
2007	\$417,000

* Except for Alaska, Hawaii, Guam and the Virgin Islands, where the loan limits are 50 percent higher. Loan limits for second mortgages are equal to 50 percent of these amounts.

In establishing the goals, HUD is statutorily required to consider the ability of the GSEs to *lead the industry* in making mortgage credit available for families whose mortgages, if acquired by the GSEs, would be eligible to count toward each goal. HUD has developed a particular methodology to compare the percentages of goal-qualifying mortgages in the GSEs' mortgage acquisitions with corresponding market percentages (see HUD November 2004 Final Rule).⁴

Tables 2 and 3 compare borrower race and income characteristics for single-family-owner loans purchased by the GSEs with loans originated in the primary market. HUD calculates the various GSE percentages in Tables 2 and 3 from data submitted to HUD by the GSEs. HUD computes the corresponding market percentages based on mortgage origination data from reports submitted annually by primary lenders in accordance with the Home Mortgage Disclosure Act (HMDA). The following explains steps HUD took to standardize for differences between the GSE and HMDA data reporting concepts:

1. The analysis is based on numbers of *mortgages* for single-family (1 to 4 unit) *owner-occupied* properties, even though official goal performance is based on number of *units* in owner properties. HMDA data do not include the number of units in the property. Mortgages for single-family *investor* properties are excluded from Tables 2 and 3.
2. The conventional conforming market is defined as all loans below the conforming loan limit; thus, no jumbo loans are included. (Government-backed loans—FHA-insured, VA-guaranteed, and RHS loans--are also not included in the conventional conforming market totals.)

⁴ HUD's *Housing Goals for the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (Freddie Mac) for the Years 2005-2008 and Amendments to HUD's Regulation of Fannie Mae and Freddie Mac; Final Rule*. Federal Register, November 2, 2004, pp. 63580-63886.

3. Only mortgages reported as “originated” are counted in the market definition; mortgages recorded as “purchased” in HMDA data are not included in the market data.
4. Because HMDA coverage is less complete outside than inside of metropolitan areas, the analysis is based on mortgages for properties in metropolitan areas only.
5. As explained in HUD’s November 2004 Final Rule, HUD includes the A-minus portion of the subprime market in its estimates for the conventional conforming market (thus, market estimates are presented that *exclude* so-called “B&C” subprime loans). Prior to 2004, the “B&C” portion of the subprime market was defined as one-half of loans originated by subprime lenders that report in accordance with HMDA. For 2004 and after, the “B&C” portion of the subprime mortgage market was defined as loans with an APR-spread greater than the estimated threshold that maximizes the exclusion of “B&C” loans while minimizing the exclusion of “A-minus” loans as reported in HMDA data.⁵ The market concept used in HUD’s analysis is otherwise inclusive. For example, loans originated in metropolitan areas by lenders identified as manufactured home lenders are included.
6. The GSE ratio is based on purchases of mortgages originated in the current year or any prior year, consistent with the definition of the housing goals. In contrast, the HMDA-based market ratio is limited to mortgages originated in the current year. The effect of this is demonstrated in Table 2, which distinguishes prior-year from current-year originations in GSE purchases.
7. There is missing data in both the HMDA and GSE data. Mortgages with missing data are excluded from the numerator and denominator in both the GSE ratio and the market ratio.

⁵ The mortgage market definitions in Tables 2 and 3, as well as the methodologies for determining the “B&C” portion of the subprime market are discussed in a paper by Harold L. Bunce entitled *The GSEs’ Funding of Affordable Loans: A 2004-05 Update*, Working Paper No. HF-018, U.S. Department of Housing and Urban Development, Office of Policy Development and Research, June 2007 (<http://www.huduser.org/publications/hsgfin/workpapr.html>).

Table 1a

Overview of the GSEs' Housing Goals and Performance, 2001-2007¹

Goal ²	Goals	Performance				2005		2006		2007

Source: HUD analysis of data submitted by the GSEs. Some results differ from performance reported by the GSEs in their Annual Housing Activities Reports (AHARs).

¹ Percentages of dwelling units in properties whose mortgages were purchased by the GSEs that qualified for each goal: in 2001-2004 based on HUD's October 2000 rule, and in 2005-2007 based on HUD's November 2004 rule. Performance figures for 2001-2004 incorporate technical changes in counting rules and the treatment of missing data, small multifamily and single-family rental bonus points, and Freddie Mac's temporary adjustment factor (TAF). Performance figures for 2005-2007 incorporates the treatment of missing data.

² Abbreviated Definitions of Goals:

Low- and Moderate-Income: Households with income less than or equal to area median income (AMI).

Geographically Targeted: Dwelling units in metropolitan census tracts with (1) tract median family income less than or equal to 90 percent of AMI or (2) minority concentration of at least 30 percent and tract median family income less than or equal to 120 percent of AMI; dwelling units in nonmetropolitan counties with (1) median family income less than or equal to 95 percent of the greater of state or national nonmetropolitan median income or (2) minority concentration of at least 30 percent *and* county median family income less than or equal to 120 percent of the greater state or national nonmetropolitan median income.

Special Affordable: Households with income (1) less than or equal to 60 percent of AMI or (2) less than or equal to 80 percent of AMI and located in low-income areas. For the low- and moderate-income and special affordable goals, AMI is median income for the MSA for borrowers in metropolitan areas, and the greater of county or state nonmetro median income for borrowers outside metropolitan areas.

³ Ratio of Freddie Mac share to Fannie Mae share.

⁴ Data for 2004 based on 1990 census; subgoal and performance for 2005-2007 based on 2000 census.

⁵ Goals and performance in billions of dollars; goals for 2001-04 were 1.0 percent of each GSE's average mortgage purchases in 1997-99; goals for 2005-07 were 1.0 percent of each GSE's average mortgage purchases in 2000-02.

Source: The Fannie Mae and Freddie Mac data for their purchases of "Prior Year" mortgages, "Current Year" mortgages, and "All" mortgages are from the loan-level data that they provide to HUD. All mortgages are conventional conforming home purchase and refinance mortgages. The "HMDA Data for (GSE)" are those mortgages that HMDA identifies as being sold to the GSEs. The Conforming Market data are from HMDA data. HMDA-based market shares that have been adjusted to exclude the B&C portion of the subprime market. It should be recognized that there exists some uncertainty regarding the number of B&C loans in the HMDA data. The adjustment assumes that the B&C loans represent one-half of the subprime market. Loans with a loan-to-income-ratio greater than six are excluded from the borrower income calculations. Special affordable includes very low-income borrowers and low-income borrowers living in low-income census tracts. Data with missing values are excluded.

¹ HMDA-based market shares have been adjusted to exclude the B&C portion of the subprime market. It should be recognized that there exists some uncertainty regarding the number of B&C loans in the HMDA data. The adjustment assumes that the B&C loans represent one-half of the subprime market; for further discussion, see Harold, L. Bunce, *The GSEs' Funding of Affordable Loans: A 2004-05 Update*, Working Paper HF-018, Office of Policy Development and Research, June 2007.

2006	41.1	46.2	29.9	34.2	32.5	37.8	39.0	41.1	39.3
2007	38.2	46.5	32.2	34.9	33.9	36.6	37.5	37.5	35.6

Notes: The FHA, depositories, and market percentages are derived from 2004-2007 HMDA data. The GSE percentages are derived from the loan-level data that Fannie Mae and Freddie Mac provide to HUD. The GSE data include conventional loans acquired during 2004-2007; thus, these data include their acquisition of seasoned loans as well as their acquisition of mortgages originated during the current year (e.g., mortgages originated prior 2007 but acquired by a GSE in 2007 as well as their acquisition of mortgages originated during 2007 are included in the 2007 figures). The "Total Market" combines the government sector (FHA and VA loans) and the conventional conforming market. Thus, it includes all loans except "jumbo" loans above the conforming loan limit which was \$417,000 in 2007. "Total Depositories" data are loans originated by HMDA reporters regulated by FDIC, OTS, OCC, FRB, and The National Credit Union Administration; they consist mainly of banks, thrifts, and their subsidiaries. The "Portfolio Depositories" data refer to new originations that are not sold by banks and thrift institutions during 2004-2007 and thus are retained in depository portfolios. Because HMDA data indicate owner-occupancy but do not include the number of units in the property, the analysis is based on numbers of mortgages for 1 to 4-family owner-occupied properties even though official goal performance is based on number of units in owner and investor properties. Mortgages with a loan amount greater than six times borrower income are excluded for the purposes of the low- and moderate-income and special affordable analyses. Because missing value percentages differ between GSE and HMDA data, mortgages with missing data are excluded from both the GSE and market analyses.

¹ Each percentage represents the share of a sector's portfolio accounted for by the borrower or neighborhood characteristic. For example, 53.3 percent of FHA-insured home loans were loans for low-income borrowers. It should be noted that due to FHA's streamline refinance program, borrower income data were not available for almost 70 percent of FHA's refinance loans.

² HMDA-based market shares have been adjusted to exclude the B&C portion of the subprime market. It should be recognized that there exists some uncertainty regarding the number of B&C loans in the HMDA data. The adjustment assumes that the B&C loans represent one-half of the subprime market; for further discussion, see Harold, L. Bunce, *The GSEs' Funding of Affordable Loans: A 2004-05 Update*, Working Paper HF-018, Office of Policy Development and Research, June 2007.

Note: This table gives Low- and Moderate-Income, Geographically Targeted, and Special Affordable percentages based on application of housing goal counting rules to units in properties covered by GSE mortgage purchases in each MSA. The table also gives total numbers of single-family (1- to 4-unit) and multifamily (5 or more unit) properties covered by GSE mortgage purchases in each MSA. The Housing Goals are defined on a national level. The GSEs are not required to meet the Housing Goals in individual MSAs.

Table 9-2007

* Interpreted as follows: 33.1% of Fannie Mae's year 2007 purchases were for low- and moderate-income borrowers.

** Interpreted as follows: 30.1% of mortgages originated during 2007 in the conventional conforming market were for low- and moderate-income borrowers. The market estimate includes only the A and A-minus portions of the conventional conforming market.
Additional footnotes follow the table.

The GSE percentages are derived from the GSE Public Use Database. The GSE data include all single-family loans purchased in metropolitan areas in 2007, regardless of year of origination.

The market percentages are derived from HMDA data on mortgages originated in metropolitan areas in 2007. The "Market" is defined as the conventional conforming market for home purchase and refinance loans. Thus it includes all conventional loans except "jumbo" loans above the conforming loan limit, which was \$417,000 in 2007. Mortgages with a loan amount greater than six times borrower income are excluded for purposes of the low- and moderate-income and special affordable analyses.

Because missing value percentages differ between GSE and HMDA data, mortgages with missing data are excluded from both the GSE and market analyses. Neither HMDA data nor the GSE data available at the MSA level include the number of units in the property; therefore, the analysis is based on numbers of mortgages for 1 to 4-family owner-occupied and investor properties, even though official goal performance is based on numbers of units.

In both the GSE and market analyses, mortgages classified as special affordable include mortgages from very-low-income borrowers and low-income borrowers living in low-income census tracts.

The Housing Goals are defined on a national level. The GSEs are not required to meet the Housing Goals in individual MSAs.

¹ HMDA-based market shares have been adjusted to exclude the B&C portion of the subprime market. It should be recognized that there exists some uncertainty regarding the number of B&C loans in the HMDA data. The adjustment assumes that the B&C loans represent one-half of the subprime market; for further discussion, see Harold, L. Bunce, *The GSEs' Funding of Affordable Loans: A 2004-05 Update*, Working Paper HF-018, Office of Policy Development and Research, June 2007.

Table 10a-2007
