# Directors' report

The DNB Bank Group is part of the DNB Group <sup>1)</sup>. The DNB Group, hereinafter called DNB, is Scandinavia's largest financial services group. DNB offers a full range of financial services, including loans, savings, advisory services, real estate broking, insurance and pension products for retail and corporate customers and the public sector. The banking group serves customers in Norway through its customer service centres, online banking services and branch offices.

#### **Operations in 2019**

The banking group recorded profits of NOK 22 805 million in 2019, up NOK 696 million, or 3.1 per cent, compared with 2018, driven by higher net interest income.

Return on equity was 11.1 per cent, compared with 11.5 per cent in the year-earlier period.

The common equity Tier 1 (CET1) capital ratio was 18.3 per cent, up from 17.3 per cent in 2018.

Net interest income increased by NOK 2 520 million, or 6.7 per cent, from 2018, as a result of higher volumes in all customer segments and positive repricing effects.

Net other operating income increased by NOK 1 795 million compared with 2018, mainly due to a positive effect from basis swaps of NOK 1 628 million. Net commissions and fees were at the same level as in 2018.

Total operating expenses increased by NOK 1 032 million from 2018 due to increased IT expenses as well as higher salaries and personnel expenses.

There were net impairment losses on financial instruments of NOK 2 191 million in the full year of 2019, compared with net reversals of 139 million in 2018. Impairment losses within the personal customers and small and medium-sized enterprises segments were on the same level as last year, whereas the large corporates and international customers segment had an increase in impairment losses of approximately NOK 2 260 million. This increase can partly be explained by large net reversals within oil, gas and offshore in 2018 and a large impairment loss related to one specific customer in the third quarter of 2019.

Overall, forecasts for most macro indicators remained stable and the asset quality of the portfolio as a whole remained strong in 2019.

#### Strategy and targets

The banking group's overarching goals are to create the best customer experiences and to reach its financial targets. Several strategic initiatives priorities and ambitions have been drawn up to ensure target attainment. Read more about the banking group's strategy in the chapter 'Strategic report' in DNB Group's annual report.

#### Review of the annual accounts

In accordance with the provisions of the Norwegian Accounting Act, the Board of Directors confirms that the accounts have been prepared on a going concern basis and that the going concern assumption applies.

Pursuant to Section 3-9 of the Norwegian Accounting Act, the banking group prepares consolidated annual accounts in accordance with IFRS, International Financial Reporting Standards, approved by the EU. The statutory accounts of DNB Bank ASA have been prepared in accordance with Norwegian IFRS regulations.

#### Net interest income

| Amounts in NOK million                                 | 2019    | 2018   |
|--|---------|--------|
| Lending spreads, customer segments                     | 28 096  | 28 152 |
| Deposit spreads, customer segments                     | 4 808   | 2 742  |
| Amortisation effects and fees                          | 3 369   | 3 200  |
| Operational leasing                                    | 1 731   | 1 525  |
| Resolution fund fee and deposit<br>guarantee fund levy | (1 106) | (564)  |
| Other net interest income                              | 3 011   | 2 333  |
| Net interest income                                    | 39 908  | 37 388 |

Net interest income increased by NOK 2 520 million, or 6.7 per cent, from 2018. This was mainly due to increased lending volumes, deposit spreads and higher interest income from equity. Four interest hikes were implemented over the course of the year. The positive net interest income development was partly offset by an increase in the resolution fund fee and deposit guarantee fund levy of NOK 542 million.

There was an average increase in the healthy loan portfolio of NOK 77.7 billion, or 5.4 per cent, parallel to a NOK 15.4 billion, or 1.6 per cent, increase in average deposit volumes from 2018. Combined spreads widened by 3 basis points compared with the year-earlier period. Average lending spreads for the customer segments narrowed by 10 basis points, and deposit spreads widened by 21 basis points.

#### Net other operating income

| Amounts in NOK million                          | 2019   | 2018    |
|---|--------|---------|
| Net commissions and fees                        | 6 618  | 6 605   |
| Basis swaps                                     | 270    | (1 358) |
| Exchange rate effects additional Tier 1 capital | (143)  | 721     |
| Net gains on other financial instruments        | 3 046  | 1 989   |
| Net profit from associated companies            | 302    | 314     |
| Other operating income                          | 2 180  | 2 208   |
| Net other operating income                      | 12 272 | 10 478  |

Net other operating income was up NOK 1 795 million from 2018. Net commissions and fees were stable, while there was a strong increase in revenues from investment banking services. Basis swaps contributed positively with NOK 1 628 million compared with the previous year.

#### **Operating expenses**

| Amounts in NOK million                      | 2019     | 2018     |
|---|----------|----------|
| Salaries and other personnel expenses       | (11 920) | (11 089) |
| Restructuring expenses                      | (70)     | (127)    |
| Other expenses                              | (7 131)  | (7 658)  |
| Depreciation of fixed and intangible assets | (2 950)  | (1 997)  |
| Impairment of fixed and intangible assets   | (207)    | (374)    |
| Operating expenses                          | (22 278) | (21 246) |

Total operating expenses were up NOK 1 032 million. This was mainly due to increased IT, personnel and pension expenses. The increase in pension expenses was largely a result of an increased return related to the compensation scheme.

The cost/income ratio was 42.7 per cent in 2019, down from 44.4 per cent in 2018.

<sup>&</sup>lt;sup>1)</sup> DNB Bank ASA is a subsidiary of DNB ASA and part of the DNB Group. The DNB Bank Group, hereinafter called "the banking group", comprises the bank and the bank's subsidiaries. Other companies owned by DNB ASA, including DNB Livsforsikring and DNB Asset Management, are not part of the banking group. Operations in DNB ASA and the total DNB Group are not covered in this report but described in a separate report.

#### Impairment of financial instruments

| Amounts in NOK million                    | 2019    | 2018  |
|---|---------|-------|
| Personal customers                        | (354)   | (287) |
| Commercial real estate                    | (124)   | 82    |
| Shipping                                  | 105     | 8     |
| Oil, gas and offshore                     | (274)   | 1 079 |
| Other industry segments                   | (1 544) | (744) |
| Total impairment of financial instruments | (2 191) | 139   |

There were net impairment losses on financial instruments of NOK 2 191 million in the full year of 2019, compared with reversals of 139 million in 2018.

Impairment losses increased in both the personal customers and commercial real estate segments compared with 2018, but impairment losses nevertheless remained at a low level.

The shipping segment experienced net reversals of NOK 105 million in 2019. This was an increase in reversals of NOK 97 million compared with 2018. The reversals were primarily related to a positive development for one customer in stage 3.

Net impairment of financial instruments for the oil, gas and offshore segment amounted to NOK 274 million in 2019. This represents an increase of NOK 1 354 million compared with 2018. The increase can primarily be explained by large reversals within stage 2 in 2018 due to improved macro forecasts. Although the modest improvement in macroeconomic developments continued in 2019, impairment losses on stage 3 customers resulted in net impairment losses in 2019.

For other industry segments, net impairment losses increased by NOK 800 million in 2019 compared with 2018. The increase can primarily be explained by a large impairment loss related to one specific customer in stage 3 in the third quarter of 2019.

Overall, forecasts for most macro indicators remained stable and the asset quality of the portfolio as a whole remained strong in 2019.

#### Taxes

The banking group's tax expense for the full year 2019 is estimated at NOK 4 825 million, representing 17.4 per cent of pre-tax operating profit.

#### Funding, liquidity and balance sheet

2019 was an active year for DNB in the short-term funding market and there was generally a high level of interest in the bank's securities with both long and short maturities. While USD was the main short-term funding currency for DNB, the European market was influenced by low interest rates in continental Europe, and due to Brexit in the UK, some instability was noticed here. On the other hand, with high activity in the long-term funding market towards the end of 2019, the bank used this increased flexibility to reduce the outstanding volumes somewhat in the short-term market.

There was some instability in the long-term funding market at the end of 2018, which continued into the first quarter of 2019. Spread levels peaked in mid-January before starting to narrow again. The spreads narrowed significantly from mid-January until the summer, while spread levels remained more or less stable in the second half of the year. Despite volatile markets, funding activity was high as usual in the first quarter, with large volumes issued. In March, the US ten-year Treasury yield fell below the three-month Treasury bill, and ten-year German bonds fell below 0 per cent, a clear indication of the market's fear of an upcoming recession. The ongoing trade war between the US and China, in addition to concerns about Brexit, added to this sense of uncertainty. In October, the European Central Bank (ECB) restarted their asset purchase programme, which had been on hold since the beginning of 2019. DNB was very active in the senior and covered bonds market in the first half of the year. In the fourth quarter, the bank reassumed the activity with some sizeable senior bond issues. Over the course of the year there was also an increasing number of issues of so-called senior non-preferred bonds in the

market, due to the upcoming minimum requirement for own funds and eligible liabilities (MREL). Overall, DNB had good access to long-term funding markets at attractive spreads throughout the year.

The nominal value of long-term debt securities issued by the banking group was NOK 655 billion at the end of 2019, compared with NOK 606 billion the previous year. The average remaining term to maturity for these long-term debt securities was 3.7 years at the end of December, compared with 4.1 years a year earlier.

The short-term liquidity requirement, Liquidity Coverage Ratio, LCR, remained stable at above 100 per cent throughout the year and stood at 138 per cent at end-December 2019.

Total assets in the banking group were NOK 2 471 billion at year-end 2019 and NOK 2 308 billion a year earlier.

Loans to customers increased by NOK 73.3 billion, or 4.6 per cent, from end-December 2018. Customer deposits were up NOK 37.4 billion, or 4.0 per cent, during the same period. The ratio of customer deposits to net loans to customers was 58.5 per cent at end-December, down from 58.8 per cent a year earlier.

#### **Corporate governance**

The management of the banking group is based, inter alia, on the Norwegian Accounting Act and the Norwegian Code of Practice for Corporate Governance. Read more about the banking group's corporate governance principles and practice in the chapter Corporate Governance in the DNB Group's annual report.

#### Capital

On 31 December 2019, Norway fully implemented the EU's capital requirements legislation CRR/CRD IV, and the so-called Basel I floor was removed.

The banking group's common equity Tier 1 (CET1) capital ratio was 18.3 per cent at the end of December 2019, up from 17.3 per cent at year-end 2018. The CET1 capital decreased by NOK 4.1 billion from a year earlier to NOK 169.0 billion at year-end 2019. The reduction was caused by the fact that the paid group contribution was higher than this year's retained earnings.

Risk-weighted assets were reduced by NOK 76 billion from end-December 2018 to NOK 925 billion at end-December 2019. Reduced risk-weighted assets in stage 3 loans and the Luminor sale contributed to a reduction of NOK 44 and 18 billion respectively. Furthermore, a reduction in the capital requirement for loans to small and medium-sized enterprises (the SME supporting factor) was introduced as a consequence of the new CRR / CRD IV regulations. This resulted in a reduction in the risk-weighted assets of NOK 17 billion, partly offset by a higher risk factor for regional portfolios as a result of regulatory, increased security margins for loss given default (LGD).

The leverage ratio was 7.2 per cent at the end of December 2019, down from 7.4 per cent at the end of December 2018. The banking group meets the minimum requirement of 6 per cent by a good margin.

#### Capital requirements

The capital adequacy regulations specify a minimum primary capital requirement based on risk-weighted assets that include credit risk, market risk and operational risk. In addition to meeting the minimum requirement, the banking group must satisfy various buffer requirements (Pillar 1 and Pillar 2 requirements).

|                                   | 2019 | 2018  |
|-----------------------------------|------|-------|
|                                   |      |       |
| CET 1 capital ratio, per cent     | 18.3 | 17.3  |
| Tier 1 capital ratio, per cent    | 21.1 | 18.9  |
| Capital ratio, per cent           | 24.4 | 21.9  |
| Risk-weighted assets, NOK billion | 925  | 1 000 |
| Leverage ratio, per cent          | 7.2  | 7.4   |

#### Segments

Financial governance in the banking group is adapted to the different customer segments. The follow-up of total customer relationships and segment profitability are two important dimensions when making strategic priorities and deciding on where to allocate the banking group's resources. Reported figures reflect the banking group's total sales of products and services to the relevant segments.

Due to the reorganisation of the banking group in the autumn of 2019, segment reporting will change from the first quarter of 2020.

#### **Personal customers**

This segment includes the banking group's more than 2 million personal customers in Norway. The personal customers segment delivered sound results in 2019, with a pre-tax operating profit before impairment of NOK 9 190 million and a return on allocated capital of 14.2 per cent.

| Income statement in NOK million            | 2019    | 2018    |
|--|---------|---------|
| Net interest income                        | 13 693  | 13 422  |
| Net other operating income                 | 3 766   | 3 920   |
| Total income                               | 17 459  | 17 342  |
| Operating expenses                         | (8 269) | (7 842) |
| Pre-tax operating profit before impairment | 9 190   | 9 499   |
| Net gain on fixed and intangible assets    | (0)     | 49      |
| Impairment of financial instruments        | (353)   | (318)   |
| Pre-tax operating profit                   | 8 837   | 9 230   |
| Profit for the year                        | 6 628   | 6 923   |
| Average balance sheet items in NOK billion |         |         |
| Net loans to customers                     | 784.3   | 760.0   |
| Deposits from customers                    | 424.6   | 408.9   |
| Key figures in per cent                    |         |         |
| Return on allocated capital                | 14.2    | 15.4    |

Net interest income increased by NOK 271 million, corresponding to 2.0 per cent, from 2018. Combined spreads on loans and deposits narrowed by 0.03 percentage points in the period. Average net loans for 2019 rose by 3.2 per cent from the previous year, while deposits showed an increase of 3.8 per cent on average.

Net other operating income decreased by 3.9 per cent from 2018. A reduction in net income from payment services are the main explanations for the negative development, while the increase in activity in DNB Eiendom contributed positively.

Operating expenses increased by 5.5 per cent due to increased IT and real estate activity, in addition to extraordinary impairment of IT systems, which explain the cost growth from 2018. The development was partly offset by a streamlining of distribution.

Net impairment of financial instruments maintained a stable, low level with 0.05 per cent of average net loans. There is low risk in the home mortgage portfolio, and impairment losses within consumer finance also remained stable throughout the year.

The market share of credit to households stood at 23.5 per cent at the end of December 2019, down from 24.0 per cent from the same period in 2018. The market share of total household savings was 30.2 per cent. DNB Eiendom had an average market share of 18.4 per cent in 2019, down from 18.7 per cent a year earlier.

The banking group aspires to achieve continued profitable growth in the personal customers segment and will sustain its efforts to adapt products, solutions, customer service and cost level to the competitive situation of the future. The mobile bank is one of the main communication channels between the banking group and its customers, and is continuously developed. In December 2019, it passed the 1 million mark for unique users, while the Internet bank had 1.5 million unique users with a total of 65 million logins in 2019.

#### Small and medium-sized enterprises

This segment includes sales of products and advisory services to the banking group's small and medium-sized corporate customers in Norway. Strong growth in net interest income contributed to very solid pre-tax profits before impairments in 2019, despite increased costs. Impairment losses were up from the previous year, but remained at a satisfactorily low level. Combined, this resulted in an improvement in the pre-tax operating profit of as much as 14.1 per cent from 2018. The segment delivered a total return on allocated capital of 17.7 per cent in 2019, compared with 17.6 per cent in 2018.

| Income statement in NOK million            | 2019    | 2018    |
|--|---------|---------|
| Net interest income                        | 10 627  | 9 530   |
| Net other operating income                 | 1 724   | 1 541   |
| Total income                               | 12 351  | 11 071  |
| Operating expenses                         | (4 274) | (3 946) |
| Pre-tax operating profit before impairment | 8 077   | 7 125   |
| Net gains on fixed and intangible assets   | (0)     | 3       |
| Impairment of financial instruments        | (595)   | (566)   |
| Profit from repossessed operations         | 16      | 8       |
| Pre-tax operating profit                   | 7 497   | 6 570   |
| Profit for the year                        | 5 623   | 4 927   |
| Average balance sheet items in NOK billion |         |         |
| Net loans to customers                     | 323.6   | 301.0   |
| Deposits from customers                    | 219.5   | 211.4   |
| Key figures in per cent                    |         |         |
| Return on allocated capital                | 17.7    | 17.6    |

Net loans to customers showed an average increase of 7.5 per cent from 2018, while deposits rose by 3.8 per cent. Higher loan volumes and wider deposit spreads contributed to a growth in net interest income of 11.5 per cent compared with 2018.

Net other operating income showed an increase of 11.9 per cent from 2018. Income from interest rate hedging products and capital market activities contributed to raising the income in this product area from the previous year. Increased sales of guarantees, as well as higher income from payment services, also contributed to the income increase.

Operating expenses increased by 8.3 per cent from 2018, of which ordinary expenses increased by 5.0 per cent and depreciation related to increased operational leasing increased by 16.3 per cent. Restructuring costs amounted to NOK 23 million in 2019 compared to 1 million in 2018.

Net impairment of financial instruments in 2019 totalled NOK 595 million. This represented 0.18 per cent of average loans. Most of the impairment losses in 2019 were related to a few customers. The quality of the portfolio is considered to be satisfactory. Developments are closely monitored, and preventive measures are continually considered and implemented to retain the strong portfolio quality.

The banking group aims to help companies succeed. This involves making it easy to be a customer by offering easy-to-use digital solutions and by being more than a bank. Much attention is paid to automation and digitalisation of products and services that meet customers' needs and expectations in the time ahead. Towards the end of 2018, the banking group launched two new services that made corporate customers' lives easier. These services were the accounting app DNB Regnskap for the smallest companies, and DNB Puls, which is a separate app for managing the company's finances from a mobile phone. Throughout 2019, there has been a strong focus on developing these services and reaching the target groups through targeted marketing. In parallel with this, the banking group is working to be the best possible adviser with expertise in start-up and growth companies, selected industries and a wide range of traditional banking services. In 2019, the banking group also performed a comprehensive analysis of the proportion of women in the corporate market, both among entrepreneurs and in the form of participation in the business sector. This was used in the second phase of the #huninvesterer ('#girlsinvest') marketing campaign, which focuses on gender equality and to inspire more women to become entrepreneurs. Read more about #huninvesterer in DNB Group's annual report.

#### Large corporates and international customers

This segment includes the banking group's largest Norwegian corporate customers and all international corporate customers. Higher loan volumes and wider deposit spreads, together with a low cost increase, led to an improvement of 9.8 per cent in operating profit before impairment. The large impairment reversals in 2018, nevertheless meant that the return on allocated capital was still somewhat reduced compared with 2018.

| Income statement in NOK million            | 2019    | 2018    |
|--|---------|---------|
| Net interest income                        | 13 005  | 12 110  |
| Net other operating income                 | 4 762   | 4 511   |
| Total income                               | 17 767  | 16 621  |
| Operating expenses                         | (6 480) | (6 340) |
| Pre-tax operating profit before impairment | 11 287  | 10 280  |
| Net gains on fixed and intangible assets   | 16      | (0)     |
| Impairment of financial instruments        | (1 240) | 1 022   |
| Profit from repossessed operations         | (124)   | (263)   |
| Pre-tax operating profit                   | 9 938   | 11 039  |
| Profit for the year                        | 7 553   | 8 490   |
| Average balance sheet items in NOK billion |         |         |
| Net loans to customers                     | 440.6   | 409.0   |
| Deposits from customers                    | 308.0   | 315.9   |
| Key figures in per cent                    |         |         |
| Return on allocated capital                | 11.6    | 12.8    |

The trend in volume growth over the past years has been affected by measures to rebalance operations, including restructuring of portfolios and reducing exposures within shipping, oil and offshorerelated sectors.

Average loans to customers increased by 7.7 per cent from the previous year. From year-end 2018 to year-end 2019, lending increased by 1.5 per cent, while the underlying growth rate excluding exchange rate effects was 1.2 per cent. Average customer deposits decreased by 2.5 per cent. Deposit volumes were up 6.2 per cent from year-end 2018 to year-end 2019.

Net interest income increased by 7.4 per cent. Combined spreads widened by 0.09 percentage points from 2018, ending at 1.34 per cent in 2019. Both the lending and deposit spreads showed a positive development throughout the year.

Net other operating income increased by 5.6 per cent from the previous year. Low long-term interest rates and volatile foreign exchange markets resulted in increased income from currency and hedging products. There was a strong demand for investment banking services, and income increased from last year.

Total operating expenses showed an increase of 2.2 per cent from 2018.

Net impairment of financial instruments amounted to NOK 1 240 million in 2019. In comparison, there were reversals of NOK 1 022 million in 2018, mainly within oil, gas and offshore. Measured in proportion to average loans, net impairment of financial instruments amounted to 0.28 per cent in 2019. Net stage 3 exposures amounted to NOK 12.3 billion at the end of 2019.

The main aim for the segment is to strengthen profitability and contribute to fulfilling the banking group's long-term ambitions. Active portfolio management will continue in 2020 by channeling capital and resources to segments, customers and transactions that will ensure higher profitability in the longer term. An 'originate and distribute' approach, which gives higher turnover in the portfolio, will ensure lower hold on the banking group's books and increase ancillary income. The banking group will continue to focus on utilising in-depth industry expertise, offering a wide range of financial services and modern technological solutions to priority customers. Through close relations with leading companies, the banking group is well-positioned to help our customers meet their extensive financial needs. This will form the basis for increasing the contribution from non-lending products, such as investment banking, defined-contribution pensions, trade finance, leasing and factoring products.

#### Other operations

The segment comprises the business activities in the risk management operations in Markets in addition to several group items not allocated to the segments.

| Income statement in NOK million                   | 2019    | 2018    |
|---|---------|---------|
| Net interest income                               | 2 584   | 2 327   |
| Net other operating income                        | 3 384   | 2 227   |
| Total income                                      | 5 967   | 4 554   |
| Operating expenses                                | (4 617) | (4 838) |
| Pre-tax operating profit before impairment        | 1 350   | (284)   |
| Net gain on fixed and intangible assets           | (48)    | 477     |
| Impairment of financial instruments               | (4)     | (0)     |
| Profit from repossessed operations                | 109     | 256     |
| Pre-tax operating profit                          | 1 407   | 449     |
| Tax expenses                                      | 1 644   | 1 513   |
| Profit from operations held for sale, after taxes | (49)    | (194)   |
| Profit of the year                                | 3 002   | 1 769   |
|   |         |         |
| Average balance sheet items in NOK billion        |         |         |
|   |         |         |

| Net loans to customers  | 102.0 | 81.5 |
|-------------------------|-------|------|
| Deposits from customers | 37.2  | 61.7 |

#### Pre-tax operating profit was NOK 1 407 million in 2019.

The profit in the segment is affected by several group items and market value changes that may vary greatly from year to year. Of the NOK 1 157 million increase from 2018 in net other operating income, 764 million were market value changes related to basis swaps and currency hedging of additional Tier 1 capital.

Markets' risk management activities reduced revenues by NOK 280 million compared with the year-earlier period, and return on allocated capital was just under 11 per cent. Increased regulatory requirements with associated costs and a flat interest rate curve were the main reasons for the declining result. Income from money market activities, repurchase agreements (repo trading) and credit spread entries contributed positively.

#### Corporate responsibility

Corporate responsibility is about how the banking group creates value by considering both risks and opportunities in a long-term perspective, and forms a natural part of the company's operations and activities. Ethical, environmental and social issues are integrated into corporate governance through corporate responsibility principles, which provide the overall framework for the strategic management of the banking group.

The banking group meets the authorities' requirements for reporting relating to human rights, labour rights and social conditions, the external environment and the fight against corruption in its business strategies, daily operations and in the relationships with stakeholders through integrated annual reporting and through reporting according to the Global Reporting Initiative, GRI.

The DNB Group's integrated annual report fully reflects how DNB and the banking group works for, and safeguards, its corporate responsibility.

#### **Employees and competence**

Adapting to the new banking reality, with rapid changes in customer behaviour, digitalisation and stricter capital adequacy requirements, also characterised organisational and leadership development in 2019. Systematic efforts were made to ensure that the banking group has the right competencies and to promote change capacity, adaptability and employee engagement. Furthermore, work was done on the reorganisation of the banking group from September 2019.

The sickness absence rate in the banking group's Norwegian operations was 4.1 per cent in 2019.

Read more about the priorities that are considered to be essential for the banking group to ensure the right competencies, and about working conditions, equality and diversity in DNB Group's annual report and a more detailed description in note 21 Salaries and other personnel expenses in the annual accounts.

#### New regulatory framework

#### Changes in capital requirements for banks

On 31 December 2019, the EU's capital requirements regulations CRR/CRD IV were fully implemented in Norway. This regulatory framework helps highlight the strong capital adequacy of the banking group. At the same time, the Norwegian Ministry of Finance has clearly signalled that there should be no easing of the capital requirements for banks as a result of the removal of the so-called Basel I floor and the reduction of the capital requirement for lending to small and medium-sized enterprises (the SME supporting factor). The Ministry is therefore adjusting the use of policy instruments in the banks' capital requirements so that a greater share of the risk is covered by the capital requirements in Pillar 1.

For the DNB Bank Group and other banks using the advanced IRB approach, the systemic risk buffer requirement will increase from 3 to 4.5 per cent with effect from 31 December 2020. For the banking group's exposures abroad, the buffer rate set in the country in question will apply, and for exposures in countries that have not set a systemic risk buffer requirement, the rate will be 0 per cent. This means that the systemic risk buffer requirement for the banking group is reduced from 4.5 to about 3.1 per cent. In order to avoid double regulation, the Ministry intends to establish a transitional rule that will contribute to consistency between the capital requirements in Pillar 1 and Pillar 2.

The Norwegian Ministry of Finance is also introducing a floor for the average risk weighting of lending for real estate, especially aimed at foreign banks with operations in Norway. The countercyclical capital buffer requirement was raised from 2 per cent to 2.5 per cent with effect from 31 December 2019, in line with the previous decision. The effective requirement for the banking group is 2.1 per cent.

#### New rules on securitisation underway

A working group appointed by the Norwegian Ministry of Finance has considered the implementation of the EU's rules on securitisation in Norwegian law. The working group has concluded that failure to implement the rules correctly and in full will constitute a breach of Norway's obligations under the EEA Agreement. DNB is thus one step closer to a system where Norwegian banks are allowed the same access as banks in the EU to use this type of instrument for both funding and risk management. The Ministry of Finance is expected to present a bill in the course of 2020.

#### Sustainable finance high on the EU's agenda

The European Commission's action plan on sustainable finance includes a number of different initiatives, and the pace of development is high. Among the initiatives introduced are a classification system (taxonomy) for sustainable economic activities, financial benchmarks for carbon footprints and more stringent requirements for disclosures relating to sustainable investments and sustainability risks. The Commission is also working on a labelling scheme for sustainable financial products and an EU standard for green bonds.

By 2022, banks are required to report on sustainability and ESG risk (Environmental, Social and Governance). The European Banking Authority (EBA) has been tasked with preparing a report on ESG risk management in banks, and on how supervisory authorities can include this in their supervisory review and evaluation process (SREP). The European Commission is also considering whether it is appropriate to give banks a capital requirement discount for 'green' assets and/or increased capital requirements for 'brown' assets. A revised version of the action plan for sustainable finance is expected in the third quarter of 2020.

# Home Mortgage Regulations to be continued for one more year

The purpose of the Home Mortgage Regulations is to contribute to a sustainable development in household debt. Following a public consultation in the autumn of 2019, where Finanstilsynet recommended a tightening of the regulations, the Norwegian Ministry of Finance decided to continue the current Home Mortgage Regulations until 31 December 2020. The Ministry pointed out, among other things, that the Home Mortgage Regulations are having the intended effect, and that it would be expedient to evaluate the them and the Consumer Loan Regulations at the same time.

# Credit information companies will enable better credit assessments

In 2019, two debt information companies became fully operational in Norway, and all banks licenced to provide unsecured loans are obliged to furnish these two companies with information about established loan agreements and credit line agreements.

The debt information services are intended to function as an aid for both customers and banks. It is now easier for customers to get an overview of their own debt situation, and banks can easily check the actual amount of debt a loan applicant has. Banks can thus conduct a better credit assessment of customers seeking loans, which may prevent consumers from taking up more debt than they can service.

#### **PSD2** and Open Banking

The EU's revised payment services directive, PSD2, has now entered into force in Norway. The directive was mainly implemented in the Norwegian Financial Institutions Act and the Payment Services Regulations in March 2019. The technical regulations for secure customer authentication came into force on 14 September 2019, and this, in effect, marked the start of the provision of third-party services related to account information and account-to-account payments in Norway. So far, interest seems to be limited among potential providers as well as consumers. This is in line with the experience in markets where developments have progressed further. The DNB Bank group is actively working to position the bank with a view to protecting its existing business operations, while making the most of the potential and reducing the disadvantages of Open Banking.

#### Regulatory sandbox established to facilitate innovation

Finanstilsynet has created a regulatory sandbox for the fintech industry. The sandbox will give businesses the opportunity to test new products and services on a small scale under close supervision by Finanstilsynet, the aim being that the sandbox will contribute to technological innovation and the entry of more new players in the market. The sandbox is also intended help enhance Finanstilsynet's understanding of new technological solutions and business models, and make it easier to identify potential risks or the need for regulatory changes at an early stage.

# Tax advisers' disclosure obligation and duty of confidentiality

In the Official Norwegian Report NOU 2019:15, the so-called Skatterådgiverutvalget (tax advisers committee) proposes that a disclosure obligation be imposed towards the Norwegian tax authorities. The disclosure obligation shall apply to both tax advisers and customers, who are thus obliged to disclose information about tax arrangements that pose a risk of aggressive tax planning, in line with international recommendations (BEPS). The committee proposes to implement this in Norway in the same manner as in the EU, to a large extent based on the EU Council Directive DAC 6. The proposal is comprehensive and will primarily have consequences for lawyers, accountants and others who offer tax advice. Financial institutions may also become subject to the disclosure obligation. In addition, the committee has proposed that correspondence between in-house lawyers and their clients shall no longer be subject to legal privilege. The proposals have been circulated for public comment and are now being considered by the Ministry of Finance.

#### New Security Act may result in stricter security measures

The new Security Act entered into force on 1 January 2019. In accordance with the act, the ministries have been responsible for designating so-called basic national functions ('grunnleggende nasjonale funksjoner', GNFs) in the course of 2019, and for identifying companies within their respective sectors that fulfil such functions. The government has announced that a proposal will be presented in the spring of 2020.

#### Macroeconomic developments

The escalation of trade barriers between China and the US was a contributing factor to weaker growth in the two economies in 2019. This had a negative impact on the rest of the world and contributed to weaker global growth. DNB believes growth will slow further to 2.8 per cent in 2020, the weakest year since 2001 (apart from the financial crisis). Eurozone economies have seen a sharp decline, not only as a result of the trade war, but also because of a downturn in the German automotive industry. In the UK, the economy is still characterised by the uncertainty over Brexit. The United Kingdom did leave the EU on 31 January 2020 with a transitional agreement, but negotiations on a trade agreement will be demanding and the economy will probably continue to be characterised by persistent uncertainty.

The central banks have responded to the weak economic development with a more expansionary monetary policy. The US Federal Reserve cut interest rates three times in 2019, while the European Central Bank announced a package of interest rate cuts and new quantitative easings. Monetary policy is likely to remain expansionary in the years ahead, but has already been stretched with both negative interest rates and large bond purchases in some economies. There is a risk that fiscal policy stimuli will be necessary. Improved economic key figures towards the end of 2019 may indicate that the need for further stimuli has been somewhat reduced.

The positive development in the Norwegian economy continued into the fourth quarter of 2019, and the Norwegian economy is currently experiencing a boom. It is modest in strength and duration, however, and primarily driven by positive growth impulses from oil investments. The outlook for oil investment in 2020 is considerably weaker because several large projects are moving towards completion without projects of similar scope taking over. Combined with weaker growth for our trading partners, this contributes to a slowdown in the Norwegian economy in 2020 and a slight drop below normal (which DNB Markets estimates at approximately 1.75 per cent) the following year.

Good growth in employment in recent years has helped reduce unemployment to a low level in the historical context. DNB expects unemployment to remain low in 2020, but increase modestly over the next couple of years. Wage growth is projected at just over 3 per cent in the forecast period, which is from 2019 to 2023. A weak Norwegian krone will contribute to an inflation close to the target of 2 per cent this year, but the moderate wage growth leads us to believe that price inflation will decrease to slightly below the target in the coming years. Lower electricity prices will also help to curb inflation somewhat.

Due to low unemployment, a weak krone and inflation close to the target, Norges Bank has raised interest rates four times in just over a year, most recently to 1.50 per cent in September 2019. At the same time, the central bank signalled that the interest rate peak has most likely been reached. This message was reiterated at the monetary policy meeting in December, and DNB expects the key policy rate to remain at the current level in the years ahead.

Housing price growth was moderate in 2019, while the turnover remained high. Interest rate rises, a plentiful supply of housing and home loan and consumer loan adjustments have most likely contributed to curbing inflation, while low unemployment and good income growth have kept it up. Looking ahead, DNB expects a slightly weaker economy, but also that the number of new housing units will be somewhat lower than in 2019 and that interest rates will remain at current levels. DNB therefore expects continued moderate inflation in the coming years.

Household credit growth has diminished over the past two to three years, and is now approaching the income growth. Mortgage and consumer loan regulations, as well as the establishment of the debt register in the summer of 2019, have most likely contributed to this decline. A more moderate rise in housing prices and slightly higher interest rate levels in the past year have probably also been contributing factors. Due to continued moderate housing price growth and a continuation of regulations, we expect credit growth to slow down somewhat in the coming years.

#### **Future prospects**

On the Capital Markets Day in November, DNB announced that a return on equity (ROE) of more than 12 per cent remains the overall financial target for DNB. Several factors will contribute to reaching the ROE target: increased net interest income, growth in commissions and fees from capital-light products combined with a number of cost control initiatives. Growth in income is expected to exceed growth in costs. In addition, DNB will focus on capital efficiency based on the new CRR/CRD IV capital requirements implemented in Norway, effective as of year-end 2019.

The increase in Norges Bank's key policy rate from 1.25 per cent to 1.50 per cent in September, followed by DNB's announcement of increased interest rates effective from November, will have full effect in the first guarter of 2020.

Between 2020 and 2022, the annual increase in lending and deposit volumes is expected to be between 3 and 4 per cent. During the same period, DNB has an ambition to increase net commissions and fees by 4 to 5 per cent annually and to have a cost/income ratio below 40 per cent.

#### Allocation of profits

Profits for 2019 in DNB Bank ASA came to NOK 26 761 million, compared with NOK 19 366 million in 2018.

The Board of Directors has proposed a dividend from DNB Bank ASA to DNB ASA of NOK 24 428 million and a group contribution of NOK 572 million after tax, totalling NOK 25 000 million.

The banking group's capital ratio as at 31 December 2019 was 24.4 per cent, while the common equity Tier 1 capital ratio was 18.3 per cent. Correspondingly, the capital ratio in DNB Bank ASA was 26.3 per cent and the common equity Tier 1 capital ratio 19.3 per cent.

In the opinion of the Board of Directors, following the proposed allocations, DNB Bank ASA will have adequate financial strength and flexibility to provide sufficient support to operations in subsidiaries and meet the banking group's expansion requirements and changes in external parameters.

Oslo, 4 March 2020 The Board of Directors of DNB Bank ASA

1) Recorded under "Due from credit institutions" in the balance sheet.

The cash flow statement shows receipts and payments of cash and cash equivalents during the year. The statement has been prepared in accordance with the direct method. Cash flows are classified as operating activities, investment activities or funding activities. Balance sheet items are adjusted for the effects of exchange rate movements. Cash is defined as cash and deposits with central banks, and deposits with credit institutions with no agreed period of notice.

#### 1. Corporate information

DNB Bank ASA is a subsidiary of DNB ASA, which is a Norwegian public limited company listed on the Oslo Stock Exchange (Oslo Børs). The consolidated financial statements for 2019 were approved by the Board of Directors on 4 March 2020.

The banking group offers banking services and securities and investment services and real estate broking services in the Norwegian and international retail and corporate markets.

The visiting address to the banking group's head office is Dronning Eufemias gate 30, Bjørvika, Oslo, Norway.

#### 2. Basis for preparation

DNB Bank group has prepared the consolidated financial statements for 2019 in accordance with International Financial Reporting Standards (IFRSs), as issued by the International Accounting Standards Board (IASB) and endorsed by the European Union (EU).

DNB Bank ASA has prepared its stand-alone financial statements according to the Norwegian Ministry of Finance's regulations on annual accounts, Section 1-6, on the use of IFRS, hereinafter called the Norwegian IFRS regulations, which implies that recognition and measurements are in accordance with IFRS. The only exception is that the Norwegian IFRS regulations also give permission to recognise provisions for dividends and group contributions in subsidiaries as income and recognise the Board of Directors' proposed dividends and group contributions as liabilities on the balance sheet date. According to IFRS, dividends should be presented as equity until approved by the general meeting. DNB Bank ASA presents disclosure information in accordance with IFRS.

The consolidated financial statements are based on the historic cost principle, with the exception of financial assets and liabilities measured at fair value and investment properties. The consolidated financial statements are presented in Norwegian kroner. Unless otherwise specified, all amounts are rounded to the nearest million.

The banking group's consolidated balance sheets are primarily based on an assessment of the liquidity of the assets and liabilities.

#### 3. Changes in accounting principles

The DNB Bank group applied hedge accounting according to IFRS 9 Financial instruments as of 1 January 2019. Hedging relationships in the DNB Bank group that qualified for hedge accounting in accordance with IAS 39 Financial Instruments: Recognition and Measurement, also qualify for hedge accounting under IFRS 9.

The following new standards were adopted with effect from 1 January 2019:

#### **IFRS 16 Leases**

IFRS 16 Leases has been effective from 1 January 2019 when it replaced IAS 17 Leases. IFRS 16 establishes significant new accounting requirements for lessees, while the requirements for lessors are more or less unchanged. For lessees, IFRS 16 eliminates the distinction between operating and finance leases as is required by IAS 17, and instead introduces a single lessee accounting model. When applying the new model, DNB recognises a liability representing lease payments (lease liability) and an asset representing the right to use the underlying asset during the lease term (right-of-use asset). In the income statement, depreciation of the right-of-use and together these replace lease expenses under IAS 17. DNB has decided on the following policy choices and practical expedients upon implementation:

- to apply a single discount rate to leases with similar characteristics
- to apply the low value exception (primarily for office equipment)
- to not recognise non-lease components in the lease liability
- to rely on the assessment of onerous contracts using IAS 37 immediately before the date of initial application. The right-ofuse asset on initial application has been adjusted to reflect the provision for onerous contracts.
- to apply the modified retrospective approach for transition to IFRS 16, meaning that the Group will not restate the comparatives for 2018. Right-of-use assets and lease liabilities will be measured at the same amount, taking into consideration prepayments, accruals and provisions recognised as of 31 December 2018.

The major part of DNB's lease liabilities arises from leases on commercial real estate in addition to some IT equipment. Within real estate, the most significant liabilities are related to head offices in Norway and DNB's international offices. The total lease liabilities and right-of-use assets as at 1 January 2019 was NOK 6 billion.

The right-of-use-asset is assigned a risk weight of 100 per cent, and the impact on the CET1 ratio was approximately 8 basis points (negative). The impact on profit and loss will vary over time, but the combination of interest and depreciation expenses from IFRS 16 is expected to be slightly higher than the lease expenses from IAS 17 at the start of the lease term and lower towards the end.

The weighted average incremental borrowing rate upon implementation was 2.3 per cent. There are no material differences between the leasing commitments under IAS 17 at 31 December 2018 discounted using the incremental borrowing rate, and the lease commitment recognised at 1 January 2019 under IFRS 16.

#### 4. Consolidation

The consolidated financial statements for DNB Bank ASA ("DNB Bank" or "the banking group") include DNB Bank and subsidiaries.

The accounting principles are applied consistently when consolidating ownership interests in subsidiaries and are based on the same reporting periods as those used for the parent company.

When preparing the consolidated financial statements, intragroup transactions and balances, along with gains and losses on transactions between the bankinggroup units, are eliminated.

#### Subsidiaries

Subsidiaries are defined as companies in which DNB Bank, directly or indirectly, has control. Control over an entity is evidenced by the banking group's ability to exercise its power in order to affect any variable returns that the banking group is exposed to through its involvement with the entity. When assessing whether to consolidate an entity the banking group evaluates a range of control factors, including:

- the purpose and design of the entity
- the relevant activities and how these are determined
- whether the banking group's rights result in the ability to direct the relevant activities
- whether the banking group's has exposure or right to variable returns
- whether the banking group's has the ability to use its power to affect its return

Where voting rights are relevant, the banking group is deemed to have control where it holds, directly or indirectly, more than half of the voting rights in an entity, unless the banking group through agreements does not have corresponding voting rights in relevant decision-making bodies. With respect to companies where the banking group's holding represent less than half of the rights, it makes an assessment of whether other factors indicate de facto control.

Subsidiaries are fully consolidated from the date on which control is obtained and until control ceases.

#### Associated companies and joint arrangements

Associated companies are companies in which DNB Bank has a significant influence, that is the power to participate in the financial and operating policy decisions of the companies, but is not in control or joint control of the companies. DNB Bank assumes that significant influence exists when the banking group holds between 20 and 50 per cent of the voting share capital or primary capital in another entity. Associated companies are recognised in the consolidated financial statements according to the equity method.

Joint arrangements are classified as either joint ventures or joint operations. When accounting for joint ventures, the equity method is applied. For joint operations, the parties recognise their rights to assets and liabilities in their balance sheets and recognise their share of income and costs incurred jointly in their income statements. DNB's joint arrangements are determined to be joint ventures.

Under the equity method of accounting, the investment is recognised at cost at the time of. Any goodwill is included in the acquisition cost. The banking group's share of profits or losses is recognised in the income statement and added to the cost price of the investment along with other changes in equity which have not been reflected in the income statement. The banking group's share of losses is not reflected in the income statement if the carrying amount of the investment will be negative, unless the banking group has taken on commitments or issued guarantees for the commitments of the associated company or joint venture.

At the end of each reporting period the banking group assess whether any indication of impairment exists. If such indication exists, the investment will be tested for impairment. The carrying value of the investment will be compared with the recoverable amount (the higher of fair value less costs to sell and value in use). If necessary, the carrying value will be written down to the recoverable amount.

The banking group's share of unrealised gains on transactions between the banking group and its associated companies or joint ventures is eliminated. The same applies to unrealised losses unless the transaction indicates an impairment of the transferred assets.

#### Conversion of transactions in foreign currency

The presentation currency in the banking group's consolidated financial statements is Norwegian kroner. The parent entity in the banking group, DNB Bank ASA, has Norwegian kroner as its functional currency. Balance sheet items of foreign branches and subsidiaries in other functional currencies are translated into the presentation currency, Norwegian kroner, according to the exchange rates prevailing on the balance sheet date, while profit or loss items are translated according to exchange rates on the transaction date. Changes in net assets resulting from exchange rate movements are recognised in other comprehensive income.

Monetary assets and liabilities in foreign currency are translated into the entities' functional currency at the exchange rates prevailing on the balance sheet date. Changes in the carrying amount of such assets due to exchange rate movements between the transaction date and the balance sheet date are recognised within the line item "Net gains on financial instruments at fair value" in the income statement.

#### 5. Segment information

Financial governance in DNB Bank is adapted to the different customer segments. The follow-up of total customer relationships and segment profitability are two important dimensions when making strategic priorities and deciding where to allocate the banking group's resources. Reported figures for the various segments reflect the banking group's total sales of products and services to the specific segment.

The segment information has been prepared on the basis of internal financial reporting to the banking group management team (chief operating decision-making body) for an assessment of developments and the allocation of resources. Figures for the operating segments are based on DNB Bank's management model and the banking group's accounting principles. The figures are based on a number of assumptions, estimates and discretionary distribution.

According to DNB Bank's management model, the operating segments are independent profit centres that are fully responsible for their profit after tax and for achieving the targeted returns on allocated capital. All of the banking group's customer activities are divided among the operating segments, along with the related balance-sheet items, income and expenses.

Excess liquidity and liquidity deficits in the operating segments are placed in or borrowed from the bank's Treasury at market terms, where interest rates are based on duration and the banking group's financial position.

When operating segments cooperate on the delivery of financial services to customers, internal deliveries are based on market prices.

Services provided by group services and staff units are charged to the operating segments in accordance with service agreements. Joint expenses which are indirectly linked to activities in the operating segments, are charged to the operating segments on the basis of distribution formulas.

A number of key functions and profits from activities not related to the operating segments' strategic operations are presented within Other operations. This item comprises income and expenses relating to the banking group's liquidity management, income from investments in equity instruments not included in the trading portfolio, interest income assigned to the banking group's unallocated capital, ownership-related expenses and income from the management of the bank's real estate portfolio.

Net profits from repossessed operations which are fully consolidated in the banking group are presented as "Profit from repossessed operations" in the segment reporting. The effect of consolidation of the repossessed companies is presented within Other operations.

Return on capital is estimated on the basis of internal measurement of risk-adjusted capital requirements. See note 2 Segments for further information about the principles for allocation of capital.

## 6. Recognition in the income statement and in other comprehensive income

Interest income is recognised using the effective interest method. This implies that interest is recognised when incurred, with the addition of amortised front-end fees and any other fees which are regarded as an integral part of the effective interest rate.

The effective interest rate is set by discounting contractual cash flows based on the expected life of the asset. Cash flows include front-end fees and direct transaction costs which are not paid directly by the customer.

Interest is recognised according to the effective interest method with respect to both balance sheet items measured at amortised cost and balance sheet items measured at fair value in the income statement, with the exception of front-end fees on loans at fair value, which are recognised when earned. Interest on impaired loans ("stage 3") corresponds to the effective interest rate on the book value, net of impairment. "Net other operating income" includes, among others, fees and commissions relating to money transfers, financial guarantees, performance/success fees, credit broking, real estate broking, corporate finance and securities services. Credit broking commissions include syndication income in the form of fees and commissions from transactions where DNB Bank arranges the loans without retaining parts of the loan itself or participates in a loan syndicate and receives compensation in excess of the effective interest received by the other participants. Fees that are not included in the effective interest rate calculation, as well as commissions, are recognised over time when the services are rendered or at point in time when the transactions are completed.

Variable performance/ success fees are only recognised to the extent it is highly probable that a significant reversal of the amount of cumulative revenue will not occur.

Fees related to credit broking, real estate broking and corporate finance services include issuing services, are recognised when the transactions are completed.

Dividends on investments are recognised at the date the dividends are approved at the general meeting.

Income from financial instruments carried at fair value through profit or loss is described under 7. Financial instruments while net income from investment property is described under 8. Investment property and fixed assets.

Items of income and expense in other comprehensive income are grouped based on whether or not they can be reclassified to the income statement at a future date.

#### 7. Financial instruments

Recognition and derecognition Initial recognition

Financial assets are recognised in the balance sheet either on the trade date or the settlement date. Trade date accounting is applied for financial assets measured at fair value through profit or loss, while settlement date accounting is applied for financial assets measured at amortised cost.

Financial liabilities are recognised in the balance sheet on the date when the banking group becomes a party to the contractual provisions of the instrument.

#### Derecognition of financial assets

Financial assets are derecognised when the right to receive and retain cash flows from the asset has expired or been transferred, and also if modifications lead to derecognition. The banking group enters into certain transactions where it transfers assets recognised on its balance sheet, but retains either all or parts of the risks and rewards of the transferred asset. If all or substantially all of the risks and rewards are retained, the transferred financial asset is not derecognised from the balance sheet. Derecognition of financial liabilities

Financial liabilities are derecognised when the contractual obligations have been discharged, cancelled or have expired.

#### Modifications

An assessment of whether or not a modification of a financial asset leads to de-recognition and recognition of new asset is based on the following considerations:

- Differentiate between modifications to cash flows or other significant items in line with terms in the contract and modifications outside of the contract.
- An assessment of whether or not a modification is substantial.
   A substantial modification is defined as a full credit process, a pricing decision and the signing of a new contract.
- An assessment of whether the modification is caused by distress or made on commercial terms.

#### Repurchase and reverse repurchase agreements

Securities purchased under agreements to resell are generally not recognised in the financial statements as the risk and returns are normally not taken over by the banking group. This is done irrespective of whether the banking group has the right to sell or repledge the securities. Upon the sale of securities received, the banking group recognises an obligation in the balance sheet. For more information, see note 32 Securities received which can be sold or repledged.

Securities sold under agreements to repurchase are generally not derecognised as the risk and returns are normally not transferred. This is done irrespective of whether the recipient is entitled to sell or repledge the securities. These securities are presented as securities in the banking group's balance sheet and are specified in note 31 Transferred assets or assets with other restrictions.

#### Securities borrowing and lending agreements

Transactions mainly include equity borrowing or lending. Agreements on securities borrowing and lending are generally based on collateral in the form of cash or securities.

Equities which have been received or transferred in such transactions, are generally not recognised or derecognised, as risks and returns associated with ownership of the assets are normally not taken over or transferred.

Equities received, including equities received as collateral, are registered off the balance sheet irrespective of whether the banking group has the right to sell or repledge the securities. Upon the sale of securities received, the banking group will recognise an obligation in the balance sheet. For more information, see note 32 Securities received which can be sold or repledged.

Transferred equities and collateral which the recipient is entitled to sell or repledge, are presented as equities or securities in the banking group's balance sheet and are specified in note 31 Transferred assets or assets with other restrictions.

#### **Classification and presentation**

Financial assets are classified in one of the following measurement categories:

- amortised cost
- fair value through other comprehensive income (FVOCI)
- fair value through profit or loss (FVTPL)

The classification of financial assets depends on two factors:

- the business model of the portfolio to which the financial asset belongs
- the contractual cash flow characteristics of the financial asset

When determining the business model, the banking group assesses at portfolio level how the business is managed, sales activities, risk management and how information is provided to the executive management. The business model assessment has been performed for each business area. The portfolios belonging to the customer areas are held within a business model whose objective is to hold the assets and collect the contractual cash flows, while there are several different business models for the portfolios belonging to the product area Markets. For instance, the business model for the liquidity portfolio in Markets is to both hold the assets to collect the contractual cash flows and to sell the assets. However, the portfolio is designated at fair value through profit or loss in order to reduce an accounting mismatch.

A contractual cash flow characteristics test is performed on initial recognition of financial assets. Financial assets with cash flows that are solely payments of principal and interest (SPPI) pass the test if the interest only compensates for the time value of money, credit risk, liquidity risk, servicing and administrative costs and a profit margin. Financial liabilities are classified at amortised cost, except for financial liabilities that are required to be measured at fair value through profit or loss or designated at fair value through profit or loss.

Financial assets may irrevocably be designated at fair value through profit or loss on initial recognition if the following criterion is met:

 The classification eliminates or significantly reduces measurement or recognition inconsistency that otherwise would arise from measuring financial assets or recognising the gains and losses on them on different bases.

Financial liabilities may also irrevocably be designated at fair value through profit or loss on initial recognition if the criterion above is fulfilled or one of the following:

- The financial instruments are part of a portfolio that is managed and evaluated on a fair value basis, in accordance with a documented risk management or investment strategy.
- The host contract contains one or more embedded derivatives.

#### Financial assets measured at amortised cost

Investments in financial assets, which are not designated at fair value through profit or loss, are measured at amortised cost if both of the following conditions are met:

- The assets are held within a business model whose objective is to hold the asset and collect the contractual cash flows.
- The contractual cash flows represent solely payment of principal and interest.

Financial assets measured at amortised cost are initially recognised at fair value plus any directly attributable transaction costs. Subsequent measurement follows the effective interest method, less impairment. Impairment losses and reversals are measured based on a three-stage expected credit loss model. This model is described under Expected credit loss measurement.

A change in expected credit loss allowance for financial assets measured at amortised cost on the balance sheet date is presented under "Impairment of financial instruments" in the income statement.

Interest income on financial instruments classified in this category is presented under "Interest income, amortised cost" using the effective interest method.

This category mainly comprises loans to customers, cash and deposits, receivables, reverse repurchase agreements and bond investments.

#### Financial liabilities measured at amortised cost

Financial liabilities measured at amortised cost are initially recognised at fair value minus any directly attributable transaction costs. Interest expenses on such instruments are presented under "Interest expense, amortised cost" using the effective interest method.

This category includes deposits from customers and credit institutions, repurchase agreements, issued commercial paper and bonds, subordinated loan capital and perpetual subordinated loan capital securities.

# Financial assets measured at fair value through other comprehensive income

Investments in financial assets, which are not designated at fair value through profit or loss, are measured at fair value through other comprehensive income if both of the following conditions are met:

• The assets are held within a business model whose objective is to both hold the asset to collect the contractual cash flows and to sell the asset.

 The contractual cash flows represent solely payment of principal and interest.

At initial recognition, financial assets measured at fair value through other comprehensive income are recognised at fair value plus any directly attributable transaction costs. Subsequent measurement is fair value through other comprehensive income. Changes in fair value are recognised in other comprehensive income and accumulated within a separate component of equity. Impairment losses or reversals, interest income and foreign exchange gains or losses are recognised in profit or loss. When the financial asset is derecognised, the cumulative gain or loss recognised in other comprehensive income, is recycled over profit or loss and recognised in "Net gains on financial instruments at fair value". Impairment losses and reversals are measured based on a three-stage expected credit loss model, which is described under Expected credit loss measurement.

This category comprises a portfolio of bond investments and a portfolio of mortgage loans with variable interest rates in DNB Bank ASA. Since these loans are regularly sold to DNB Boligkreditt AS, the business model is hold to collect and sell.

#### Financial instruments measured at fair value through profit or loss The following instruments are recognised in this category:

- derivatives
- equity instruments
- financial instruments held for trading
- financial assets managed at fair value
- financial instruments designated at fair value through profit or loss on initial recognition
- financial assets with contractual cash flows that do not represent solely payment of principal and interest

Instruments in this category are initially recognised at fair value, with transaction costs recognised in profit or loss as they occur. Subsequent measurement is fair value with gains and losses recognised in the income statement.

Changes in the fair value of the financial instruments are presented under "Net gains on financial instruments at fair value" in the income statement. Financial derivatives are presented as an asset if the fair value is positive and as a liability if the fair value is negative.

Interest income and interest expenses from interest-bearing financial instruments including financial derivatives are presented under "Net interest income", except for interest income and interest expenses from financial instruments belonging to the trading portfolio.

The trading portfolio consists of instruments, which are acquired primarily for the purpose of selling or repurchasing in the short term. This includes financial derivatives, shareholdings and bond portfolios. Interest income and interest expenses from financial instruments belonging to the trading portfolio are presented as "Net gains on financial instruments at fair value".

Financial assets designated at fair value through profit or loss on initial recognition, mainly consist of bonds and fixed-rate mortgage loans in Norwegian kroner.

Financial liabilities designated at fair value through profit or loss on initial recognition mainly consist of fixed-rate securities issued in Norwegian kroner. The change in fair value related to changes in DNB Bank's credit risk is calculated using relevant credit spread curves from Nordic Bond Pricing. Fair value of changes in credit risk on other financial liabilities is limited due to the short term nature of the instruments. Changes in credit risk on DNB Bank's long-term borrowings in Norwegian kroner designated at fair value through profit or loss do not create or enlarge an accounting mismatch and are therefore separated and recognised in other comprehensive income. See the statement of changes in equity for a presentation of the effects.

#### **Reclassifications**

Financial assets are only reclassified when there is a significant change in the business model for those assets. Such changes are expected to be very infrequent. Financial liabilities are not reclassified.

#### Issued financial guarantees

Contracts resulting in the banking group having to reimburse the holder for a loss incurred because a specific debtor fails to make payments when due, are classified as issued financial guarantees.

On initial recognition, issued financial guarantees are recognised at the consideration received for the guarantee. Issued financial guarantees are subsequently measured at the higher of the amount of loss allowance and the amount initially recognised less the cumulative amount of any revenue recognised in the income statement.

When issuing financial guarantees, the consideration for the guarantee is presented under the line item "Provisions" in the balance sheet. Income from issued financial guarantees and expenses from bought financial guarantees, are amortised over the duration of the instruments and presented as "Commission and fee income" or "Commission and fee expense".

Change in expected credit loss is recognised under the line item "Impairment of financial instruments" in the income statement.

#### Loan commitments

An expected credit loss is calculated for loan commitments and presented under the line item "Provisions" in the balance sheet. Any change in the expected credit loss allowance is recognised under the line item "Impairment of financial instruments" in the income statement.

For instruments containing both a drawn and an undrawn component, the expected credit loss is split pro rata between the loss allowance and provisions in the balance sheet based on the relative parts of the exposure.

#### Financial instruments with the characteristics of equity

Issued additional Tier 1 capital instruments are instruments where DNB has a unilateral right not to repay interest or the principal to the investors. As a consequence of these terms, the instruments do not meet the requirements for a liability and are therefore presented on the line "Additional Tier 1 Capital" within the banking group's equity. Transaction expenses and accrued interest are presented as a reduction in "Other equity", while the advantage of the tax deduction for the interest will give an increase in "Other equity".

Equity in foreign currency shall be converted to Norwegian kroner based on the exchange rate on the transaction date and is not subject to subsequent revaluation.

#### Offsetting

Financial assets and financial liabilities are offset and presented net in the balance sheet when the banking group has a legally enforceable right to offset recognised amounts and has agreed to settle the balances on a net basis or to realise the asset and settle the liability simultaneously. Master netting agreements or similar agreements give the right to offset in the event of default. Such agreements reduce the banking group's exposure in the event of default, but do not on their own qualify for offsetting in accordance with IFRS, as there also needs to be an intention to settle the contractual cash flows net on an ongoing basis. See note 29 Offsetting for details about the financial assets and financial liabilities subject to offsetting agreements.

#### Determination of fair value

Fair value is the price that would be received by selling an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Financial assets and liabilities in active markets are measured at the price within the bid-ask spread that is most representative of the fair value at the measurement date. In most cases bid or asking prices for these instruments are the most representative price for assets and liabilities respectively. Derivatives which are carried net are recognised at midmarket prices at the balance sheet date.

Financial instruments measured at fair value are valued on a daily basis with the exception of a few financial instruments that are valued on a monthly or quarterly basis. As far as possible, directly observable market prices are used. Valuations of the various types of financial instruments are based on wellacknowledged techniques and models. The prices and input parameters used are controlled and assessed based on established routines and control procedures.

The control environment for fair value measurement of financial instruments is an integrated part of the company's financial reporting. A number of controls are carried out on a daily basis, including controls of the day-one results on traded positions and controls of the key input parameters in the valuation. At the end of each month and quarter, extended controls are carried out to ensure that the valuations are consistent with the accounting policy for fair value including variation analyses. Special emphasis is placed on valuations in the level 3 in the valuation hierarchy, where the effects may be significant or particularly challenging.

#### Instruments traded in an active market

With respect to instruments traded in an active market, quoted prices are used, obtained from a stock exchange, a broker or a price-setting agency.

A market is considered active if it is possible to obtain external, observable prices, exchange rates or interest rates and these prices represent actual and frequent market transactions.

Some investments in equities and commercial paper and bonds are traded in active markets.

#### Instruments not traded in an active market

Financial instruments not traded in an active market are valued according to different valuation techniques and are divided into two categories:

Valuation based on observable market data:

- recently observed transactions in the relevant instrument between informed, willing and independent parties
- instruments traded in an active market which are substantially similar to the instrument that is valued
- other valuation techniques where key parameters are based on observable market data

Valuation based on other factors than observable market data:

- estimated cash flows
- valuation of assets and liabilities in companies
- models where key parameters are not based on observable market data
- possible industry standards

In the valuation of OTC derivatives, a fair value adjustment is made for the counterparty's credit risk (CVA) and for the banking group's own credit risk (DVA). In addition, an adjustment is made for expected funding costs (FVA). Adjustments are made based on the net exposure towards each counterparty for CVA and DVA, and towards a funding netting set for FVA. The banking group estimates CVA as a function of a simulated expected positive exposure, the counterparty's probability of default and loss given default. The majority of the banking group's derivative counterparties have no market-implied credit spread and no external rating. Internal ratings are therefore combined with historical credit default swap (CDS) spreads as well as current CDS index prices to arrive at the counterparty's estimated CDS spreads. This means that the banking group uses its own credit models and their discriminatory power, but calibrates against pricing levels for similar credit risk in the market. The DVA is based on the same approach, using an assessment of the banking group's credit spread.

FVA reflects the estimated present value of the future funding costs associated with funding uncollateralised derivative exposures. It is calculated by applying a funding spread to the expected exposure. Funding benefits are not estimated for positions for which DNB calculates DVA.

For financial instruments measured by using valuation techniques, a gain or loss might from time to time occur at initial recognition when the estimated fair value is different from the actual transaction price. When the measurement is based on nonobservable input parameters (level 3), the gain or loss is deferred and therefore not recognised at day one. Fair value changes in later period are only recognised to the extent the change is caused by factors that market participants would take into account.

#### Expected credit loss measurement (ECL)

The expected credit loss model estimates impairment on the following instruments that are not measured at fair value through profit or loss:

- financial assets that are debt instruments
- lease receivables
- issued financial guarantee contracts
- loan commitments

The banking group measures ECL at each reporting date for these instruments, reflecting:

- an unbiased and probability-weighted amount that is determined by evaluating a range of possible outcomes
- the time value of money
- reasonable and supportable information that is available without undue cost or effort at the reporting date about past events, current conditions and forecasts of future economic conditions

The banking group measures a loss allowance at an amount reflecting lifetime ECL for all instruments that have been subject to a significant increase in credit risk since initial recognition. Instruments for which there has been no significant change in risk, a 12-month expected credit loss is recognised.

Please refer to note 5 Measurement of expected credit loss for more information on the methodology for estimating expected credit loss.

#### Repossession of assets

Assets which are repossessed as part of the management of defaulted loans are recognised at fair value at the time of acquisition. Such assets are recognised in the balance sheet according to the nature of the asset. Any difference between the carrying amount of the loan and the fair value of the asset is presented within the line item "Impairment of financial instruments" in the income statement. Subsequent valuations and presentation of the impact to the income statement follow the principles for the relevant balance sheet item.

#### Hedge accounting

The banking group applied hedge accounting according to IFRS 9 Financial instruments as of 1 January 2019.

Both derivative and non-derivative instruments are used to manage exposures to interest rate risk and foreign exchange risk. Hedge accounting is applied to economic hedge relationships in order to reduce or eliminate an accounting mismatch. Fair value hedge accounting is applied to hedges of interest rate risk on issued debt in foreign currency and a portfolio of bond investments in DNB Bank ASA and DNB Bank Group. Net investment hedge is applied to currency translation of investments in foreign operations in DNB Bank Group. See note 15 Financial derivatives and hedge accounting for more information.

#### Fair value hedge of interest rate risk

DNB uses interest rate swaps to protect against changes in the fair value of fixed-rate issued bonds and subordinated debt in foreign currency, as well as a portfolio of bond investments caused by movements in market interest rates. The hedges are entered into at the same time as the debt is issued in order to achieve a match in the terms of the derivative and the debt instrument. For bond investments, the hedge is also entered into at the same time as the investment is made.

Fair value hedge accounting is applied to the economic hedge relationships that qualify for hedge accounting. When hedge accounting is applied, there is a qualitative assessment of the economic relationship between the debt instrument or bond investment and the derivative that is documented at the inception of the hedge. Thereafter, it is periodically assessed whether the derivatives designated as hedging instruments have been effective in offsetting changes in fair value of the hedged item. The accumulated fair value changes related to interest rate risk on the debt instruments is compared with the accumulated fair value changes related to movements in the interest rate swaps.

DNB's fair value hedges of interest rate risk on issued debt and bond investments are expected to be highly effective. However, hedge ineffectiveness can arise if the terms of the derivative and the debt instrument are not fully aligned.

Hedging instruments are measured at fair value in the financial statements and changes in the fair value are presented under "Net gains on financial instruments at fair value" in the income statement. Interest income and expense from financial instruments designated as hedging instruments are presented as "Net interest income".

The changes in the fair value of the hedged item attributable to the hedged risk is recognised as an addition to or deduction from the balance sheet value of financial liabilities and presented under "Net gains on financial instruments at fair value" in the income statement.

If the hedge relationship ceases to exist or adequate hedge effectiveness cannot be verified, the accumulated change in fair value of the hedged item is amortised over the remaining time to maturity.

Net investment hedge of investments in foreign operations DNB hedges investments in foreign subsidiaries to eliminate the foreign currency exposure that arises when a subsidiary has a different functional currency from that of the banking group. The amount of the investment varies as a result of fluctuations in spot exchange rates between the functional currency of the subsidiaries and the banking group's functional currency. This risk is hedged, since it may have significant financial impact on the banking group's financial statements.

Foreign currency borrowings are used as hedging instruments. At the inception of the hedge, there is a qualitative assessment of hedge effectiveness. Hedge designations are reassessed on a quarterly basis. Hedge effectiveness is periodically assessed by comparing changes in the carrying amount of the foreign currency borrowings that are attributable to a change in spot rate, with changes in the investment in the subsidiary due to movement in the spot rate. The hedges are expected to be highly effective, since the investments are hedged with instruments in the same currency and with an amount corresponding to the size of the investment.

Gains or losses after taxes on the hedging instruments are recognised directly in the banking group's equity and presented in the statement of changes in equity as "Net investment hedge reserve" and in the comprehensive income statement as "Hedging of net investment".

If a foreign operation is disposed of, the cumulative gains or losses of the hedging instruments recognised in equity is reclassified to the income statement.

#### 8. Investment property and fixed assets

Properties held to generate profits through rental income or for an increase in value, are presented in the balance sheet as investment property. Other tangible assets are presented as fixed assets in the balance sheet.

On initial recognition, investment properties are measured at cost including acquisition costs.

In subsequent periods, investment properties are measured at fair value. Therefore, no annual depreciation is made on an investment property. Fair value is determined by using well-acknowledged valuation techniques. Internal and external expertise is used for valuations. A selection of external appraisals are obtained and compared with internal valuations for control purposes. Providers of valuations are also followed up on an ongoing basis through dialogue and enquiries concerning the valuation of individual properties. Changes in fair value of investment property are recognised within the line item "Net gains on investment property" in the income statement.

Other tangible assets are measured at cost less accumulated depreciation and impairment losses. Cost includes expenses directly related to the acquisition of the asset. Subsequent expenses are capitalised on the relevant assets when it is probable that future economic benefits associated with the expenditure will flow to DNB Bank and can be measured reliably. Expenses for repairs and maintenance are recognised in the income statement as they occur. The residual values and useful lives of the assets are reviewed annually and adjusted if required.

Gains and losses on the sale of fixed assets are recognised within the line item "Net gain on fixed and intangible assets" in the income statement.

### 9. Intangible assets Goodwill

Goodwill is initially measured at the acquisition date, as the excess of the aggregate of the consideration transferred and the amount recognised for any non-controlling interest over the fair value of the identifiable assets acquired and liabilities assumed in a business combination. Goodwill acquired is allocated to each cash generating unit, or group of units, expected to benefit from the combinaion's synergies. Following initial recognition, goodwill is measured at cost less any accumulated impairment losses.

#### Development of IT systems and software

Acquired software is recognised at cost with the addition of expenses incurred to make the software ready for use. Identifiable costs for internally developed software controlled by the banking group where it is probable that economic benefits will cover development expenses at the balance sheet date, are recognised as intangible assets. When assessing capitalisation, the economic benefits are evaluated on the basis of profitability analyses. Development expenses include expenses covering pay to employees directly involved in the project, materials and a share of directly related overhead expenses. Expenses relating to maintenance of software and IT systems are recognised in the income statement as they occur. Software expenses recognised in the balance sheet are depreciated according to a straight line principle over their expected useful life, usually five years. The assessment for whether there is a need for impairment is considered according to the principles described below.

#### 10. Impairment of fixed and intangible assets

At end of each reporting period the banking group considers whether any indication of impairment of fixed or intangible assets exists. If such indication exists, the recoverable amount of the asset is calculated to estimate possible impairment. Goodwill and intangible assets with an indefinite useful life are tested for impairment minimum once a year. DNB has chosen to perform this annual test in the fourth quarter.

The recoverable amount represents the higher of an asset's fair value less costs to sell and its value in use. If the asset's carrying amount exceeds the estimated recoverable amount, the asset is written down to its recoverable amount. See note 36 Intangible assets for description of impairment testing.

The following relevant criteria are considered when assessing whether indications of impairment exists:

- a decline in the asset's market value
- changes in the long-term return requirement which may affect the discount rate used in the calculation of the asset's value in use
- plans to restructure or liquidate the asset
- the asset generates less income than anticipated

Calculations of value in use are based on historical results and plan figures approved by management. On the basis of plan figures for the cash-generating units, a future cash flow is estimated, defined as the potential return to the owner. The return includes profits from the cash-generating unit adjusted for the need to build sufficient capital to meet expected future capital adequacy requirements. Higher capital requirements due to expanded operations could make it necessary to retain part of the profits or to inject more capital from the owner, if profits from the cash-generating unit are not adequate to build the necessary capital. Beyond the plan period, which is three years, cash flow trends are assumed to reflect market expectations for the type of operations carried out by the cash-generating unit. Future expected cash flows are established for a ten year period where the Gordons growth formula is used to estimate the terminal value to be included.

The required rate of return is based on an assessment of the market's required rate of return for the type of operations carried out by the cash-generating unit. The required rate of return reflects the risk of the operations.

#### 11. Pensions

DNB has country-specific pension schemes for its employees. In Norway, DNB has a defined-contribution pension scheme. See note 24 Pensions for more information.

#### **Defined-contribution pension schemes**

Under defined-contribution pension schemes, the banking group does not commit itself to paying specified future pension benefits, but makes annual contributions to the employees' pension savings. Future pensions will depend on the size of annual contributions and the annual return on pension savings. After paying annual contributions, the banking group has no further commitments linked to employees' work performance. The expenses following from the defined-contribution pension schemes are recognised in the income statement

#### Defined-benefit pension schemes

Pension expenses are calculated based on a linear distribution of pension entitlements measured against estimated accumulated commitments at the time of retirement. Pension commitments are matched against the pension funds in the schemes. Pension commitments are estimated based on the present value of estimated future pension payments at the balance sheet date. The calculation of the pension commitments is based on actuarial and economic assumptions about life expectancy, rise in salaries and early retirement. The discount rate used is determined by reference to the yield on covered bonds at the balance sheet date, plus an add-on that reflects the relevant duration of the pension commitments.

#### 12. Income tax

Taxes for the year comprise payable taxes for the financial year, any payable taxes for previous years and changes in deferred taxes on temporary differences. Temporary differences are differences between the carrying amount of an asset or liability and the taxable value of the asset or liability.

Deferred taxes are calculated on the basis of tax rates and tax rules that are applied on the balance sheet date or are highly likely to be approved and are expected to be applicable when the deferred tax asset is realised or the deferred tax liability settled.

The DNB Bank Group recognises liabilities related to the future outcome of tax dispute based on estimates of changed income taxes. When assessing the recognition of uncertain tax liabilities it is considered if the liability is probable.

Deferred tax assets are recognised in the balance sheet to the extent that it is probable that future taxable income will be available against which they can be utilised. Deferred taxes and deferred tax assets within the same tax group are presented net in the balance sheet.

Taxes payable and deferred taxes relating to elements of other comprehensive income are presented net along with the related income or cost in the comprehensive income statement.

See note 25 Taxes for more information.

#### 13. Provisions

Provisions are recognised when it is probable that the DNB Bank will need to settle a present obligation in connection with a past event, and it can be reliably estimated.

If restructuring plans that change the scope of the banking group's operations or the way the banking group carries out its operations are approved and communicated to the affected employees, the need for restructuring provisions is considered. This includes provisions for agreements on severance packages with employees when used as part of the restructuring.

Provisions are measured at best estimate, reviewed on each reporting date and adjusted as necessary.

#### 14. Leasing

#### DNB Bank as lessor

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. Other leases are classified as operating leases.

#### Operating leases

Operating leases are leases where not an insignificant share of the risk and rewards relating to the investment in the leased object accrues to DNB Bank at the end of the lease period. Operating assets are recognised as fixed assets in the balance sheet. Income from operating leases is recognised over the lease term on a straight-line basis. Depreciation of the fixed assets is presented as ordinary depreciation in the income statement.

#### Financial leases

Financial leases are presented as lending in the balance sheet, and at inception the lease is measured at an amount equal to the net investment in the lease. The net investment represents minimum lease payments, unguaranteed residual values and any direct expenses incurred by the lessor in negotiating the lease, discounted by the implicit interest rate (internal rate of return). Leasing income is recognised in the income statement according to the annuity method, where the interest component is recognised within the line item "Net interest income" while instalments reduce the balance sheet value of the loan.

#### **DNB Bank as lessee**

On contract inception, it is assessed whether the contract contains a lease. A lease entails that DNB is given control of an identified asset for a specific period of time against lease payment and receives substantially all the economic benefits of the asset in this period. On contract inception it is also assessed whether parts of the contract relates to non-lease components. For DNB, this will typically be overhead costs and taxes related to the leasing of commercial real estate. Further, DNB has elected not to recognise leases with low value. These are primarily related to office equipment.

On the lease commencement date, a right-of-use asset and a lease liability is recognised. The right-of-use asset is measured at cost on initial recognition. Cost equals the lease liability on initial recognition adjusted for prepayments made before rent commencement, lease incentives received related to the lease agreement, initial direct cost and any prospective cost of restoring the asset to its original state.

After initial recognition, the right-of-use asset is depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets. Periodical assessments of indicators of impairment are performed on the right-of-use asset. The right-of-use asset will also be adjusted for certain changes in the lease liability and primarily through the annual index adjustment of lease payments.

At initial recognition, the lease liability is measured as the present value of future lease payments discounted using the incremental borrowing rate. Lease payments consist of fixed payments and variable payments related to index adjustment of the lease. When establishing the lease period, it is assessed whether it can be determined with reasonably certainty if any extension or termination options will be exercised. The incremental borrowing rate reflects the currency of the lease payments and the length of the contract. DNB has elected to use the incremental borrowing rate for leases with similar characteristics such as equal type of asset, equal lease period and similar economic environment.

After initial recognition, the lease liability is measured at amortised cost using the effective interest rate method. The lease liability is re-measured following changes in lease payments due to index adjustments, or if DNB changes the assessment of the likelihood that a termination or extension option will be exercised. Adjustments to the lease liability following re-measurement will also adjust the right-of-use asset. If the right-of-use asset is zero, the adjustment is recognised in the income statement.

Right-of-use assets are classified as fixed assets in the balance sheet, while the lease liabilities are classified as other liabilities. In the income statement depreciation from the right of use asset is included in the line item "Depreciation and impairment of fixed and intangible assets". Interest cost from the lease liability is included in the line item "Interest expenses, amortised cost". Subleased right of use assets classified as operating leases are classified and measured as investment properties in the balance sheet with changes in fair value presented in the line item "Net gains on investment properties" in the income statement.

#### 15. Cash flow statements

The cash flow statements show cash flows grouped according to source and use. The cash flows are presented as operating activities, investment activities or funding activities. Cash is defined as cash, deposits with central banks and deposits with credit institutions with no agreed period of notice. The cash flow statement has been prepared in accordance with the direct method.

#### 16. Dividends

Proposed dividends are part of equity until approved by the general meeting. At that time, the dividend is presented as liability in the financial statement. Proposed dividends are not included in capital adequacy calculations.

# 17. Important accounting estimates, judgments and assumptions

When preparing the consolidated financial statements, management makes estimates, judgment and assumptions that affect the application of the accounting principles and the carrying amount of assets, liabilities, income and expenses. Estimates and assumptions are subject to continual evaluation and are based on historical experience and other factors, including expectations of future events that are believed to be probable on the balance sheet date.

#### Impairment of financial instruments

See note 4 Credit risk management for information about the management and follow-up of credit risk and note 5 Measurement of expected credit loss for information about methodology for estimating impairment including an assessment of measurement uncertainty.

## Fair value of financial derivatives and other financial instruments

The fair value of financial instruments that are not traded in an active market is determined by using different valuation techniques. The banking group considers and chooses techniques and assumptions that as far as possible are based on observable market data representing the market conditions on the balance sheet date. When measuring financial instruments for which observable market data are not available, the banking group makes assumptions regarding what market participants would use as the basis for valuing similar financial instruments. The valuations require application of significant judgment when calculating liquidity risk, credit risk and volatility among others. Changes in these factors would affect the estimated fair value of the banking group's financial instruments. For more information see note 28 Financial instruments at fair value.

# Income taxes, including deferred tax assets and uncertain tax liabilities

The banking group is subject to income taxes in a number of jurisdictions. Significant judgment is required in determining the income tax in the consolidated financial statements, including assessments of recognised deferred tax assets and uncertain tax liabilities.

Deferred tax assets are recognised to the extent it is probable that the banking group will have future taxable income against which they can be utilised. Extensive assessments must be made to determine the amount which can be recognised, included the expected time of utilisation, the level of profits computed for tax purposes as well as strategies for tax planning and the existence of taxable temporary differences.

There will be uncertainty related to the final tax liability for many transactions and calculations. The banking group recognises liabilities related to the future outcome of tax disputes based on estimates of changed income taxes. When assessing the recognition of uncertain tax liabilities it is considered if the liability is probable. If the final outcome of the tax disputes deviates from the amounts recognised in the balance sheet, the deviations will impact the income tax expense in the income statement for the applicable period.

# 18. Changes in line items in the income statement

The presentation of interest income from derivatives has been changed as of 31 December 2019. Interest expenses reported on the line "Interest expenses, amortised cost" have decreased and interest expenses reported as "Other interest expenses" have increased with an equal amount. Figures in previous periods have been restated correspondingly. The effects are shown in the table below.

|                                   | DNB Bank Grou |         |  |  |  |
|-----------------------------------|---------------|---------|--|--|--|
| Amounts in NOK million            | 2019          | 2018    |  |  |  |
| Interest expenses, amortised cost | 4 801         | 4 858   |  |  |  |
| Other interest expenses           | (4 801)       | (4 858) |  |  |  |

Interest expenses from derivatives designated as hedging instruments are presented as "Interest expenses, amortised cost" together with effects from the hedged item, while interest expenses from other derivatives are presented as "Other interest expenses".

#### Note 2 Segments

According to DNB Bank's management model, the operating segments are independent profit centres that are fully responsible for their profit after tax and for achieving the targeted returns on allocated capital. DNB Bank has the following operating segments: Personal customers, Small and medium-sized enterprises, Large corporates and international customers and Risk management. Risk management segment is included in Other operations. DNB's share of the profit in associated companies (most importantly Luminor and Vipps) is included in Other operations. DNB's organisational structure, including the Group Management team, was changed on 23 September 2019. The segment reporting has not been changed as per 2019, but will be reviewed, and any changes will be applicable as of the first quarter of 2020.

| Personal customers -                              | includes the banking group's total products and activities to private customers in all channels, both digital and physical. DNB offers a wide range of products through Norway's largest distribution network, comprising mobile banking, digital banking, branch offices, customer centres and real estate broking. In addition, external distribution of credit cards and car financing in Sweden is included in the business area. DNB has also had external distribution through the collaboration with Norway Post, but this agreement will be phased out in mid-2020, with the transition to a solution based on the payment app Vipps. |
|---|---|
| Small and medium-sized -<br>enterprises           | is responsible for product sales and advisory services to small and medium-sized enterprises in Norway.<br>Customers in this segment range from small businesses and start-up companies to relatively large corporate<br>customers, and the product offerings are adapted to the customers' different needs. Small and medium-sized<br>enterprises are served through the banking group's physical distribution network throughout Norway as well as<br>digital and mobile bank. Factoring, leasing and asset financing for small and medium-sized enterprises in<br>Sweden and Denmark are also included in this business area.              |
| Large corporates and -<br>international customers | includes large Norwegian and international corporate customers. Operations are based on sound industry expertise and long-term customer relationships.  |

The income statement and balance sheet for the segments have been prepared on the basis of internal financial reporting for the functional organisation of the DNB Bank Group into segments, as reported to group management (chief operating decision maker) for an assessment of current developments and the allocation of resources. Figures for segments are based on the banking group's accounting principles and DNB's management model. Allocation of costs and capital between segments involves a number of assumptions, estimates and discretionary distributions.

Capital allocated to the segments is calculated on the basis of the DNB bank group's common equity Tier 1 capital and long-term capitalisation ambition. The allocation of capital to all units is based on the banking group's adaptation to Basel III with capital requirement related to credit risk, market risk and operational risk. The allocation of capital for credit risk is based on the DNB bank group's internal measurement of risk-adjusted capital requirements for credit. Capital requirements for market risk are allocated directly in accordance with risk-weighted volume, and operational risk is allocated based on the respective units' total income.

1) Loans to customers include accrued interest, impairment and value adjustments. Correspondingly, deposits from customers include accrued interest.

2) Allocated capital for the segments is calculated based on the external capital adequacy requirement (Basel III/Solvency II) which must be met by the banking group. The capital allocated in 2019 corresponds to a common equity Tier 1 capital ratio of 16.8 per cent compared to 16.2 per cent in 2018. Book equity is used for the banking group.

1) Total operating expenses relative to total income.

2) Deposits from customers relative to loans to customers.

3) Allocated capital for the segments is calculated based on the external capital adequacy requirement (Basel III/Solvency II) which must be met by the banking group. Return on equity is used for the banking group.

### Note 3 Capitalisation policy and capital adequacy

The DNB Group aims to maintain a management buffer of 1.0 percentage point in addition to the total regulatory common equity Tier 1 (CET1) capital ratio, in line with the Pillar 2 Guidance from Finanstilsynet (the Financial Supervisory Authority of Norway). The object of the management buffer is to cushion against fluctuations in risk-weighted assets and earnings that can occur as a result of, for example, exchange rate movements or changes in credit spreads, and thereby enable the Group to maintain normal growth in lending and a predictable dividend policy. At year-end 2019, the total regulatory CET1 capital ratio requirement was 16.1 per cent. The requirement will vary due to the counter-cyclical buffer, which is determined based on the total exposure in each country. The capitalisation targets relate to the Group's risk-weighted assets at any given time. On 31 December 2019, Norway fully implemented the EU's capital requirements legislation CRR/CRD IV. At the same time, the so-called Basel I floor was removed.

At year-end 2019, the DNB Bank Group had a CET1 capital ratio of 18.3 per cent and a capital adequacy ratio of 24.4 per cent, compared with 17.3 per cent and 21.9 per cent, respectively, a year earlier. Risk-weighted assets came to NOK 925 billion at year-end 2019, compared with NOK 1 000 billion the year before.

DNB Bank ASA had a CET1 capital ratio of 19.3 per cent at year-end 2019, compared with 18.1 per cent a year earlier. The capital adequacy ratio was 26.3 per cent at year-end 2019, compared with 23.5 per cent a year earlier.

At year-end 2019, DNB Boligkreditt AS had a CET1 capital ratio of 24.5 per cent and a capital adequacy ratio of 27.6 per cent, compared with 24.7 and 27.7 per cent at year-end 2018.

As a supplement to the risk-weighted capital adequacy regime, the Basel Committee introduced a new capital measure, "leverage ratio" or non-risk based CET1 capital ratio. The basis of calculation consists of assets and off-balance sheet items converted by means of the conversion factors used in the standardised approach for calculating ordinary capital adequacy. In addition, some special adjustments are made for derivatives and repo transactions. The Norwegian leverage ratio requirement consists of a minimum requirement of 3 per cent that will apply to all credit institutions, a mandatory 2 per cent buffer for banks and an additional mandatory buffer of 1 per cent for systematically important banks. DNB is the only institution in Norway that will be required to have a leverage ratio of 6 per cent.

The DNB Bank Group calculates its leverage ratio in accordance with the revised article 429 of the CRR, and the European Commission Regulation that entered into force on 18 January 2015. At year-end 2019, the Bank Group's leverage ratio was 7.2 per cent, compared with 7.4 per cent a year earlier. DNB meets the minimum requirement of 6 per cent by a wide margin.

### Note 3 Capitalisation policy and capital adequacy (continued)

#### Capital adequacy

Capital adequacy is calculated and reported in accordance with the EU capital requirements regulations for banks and investment firms (CRR/CRD IV). The regulatory consolidation deviates from consolidation in the accounts and comprises the parent company, subsidiaries and associated companies within the financial sector. Associated companies are consolidated pro rata.

On 31 December 2019, Norway fully implemented the EU's capital requirements legislation CRR/CRD IV, and the so-called Basel I floor was removed. The additional capital requirements due to the transitional rules have been removed from the historical figures. The harmonised rules include the introduction of the SME discount factor.

### Note 3 Capitalisation policy and capital adequacy (continued)

The majority of the credit portfolios are reported according to the IRB approach. Exposures to central governments, institutions, equity positions and other assets are, however, reported according to the standardised approach.

1) EAD, exposure at default.

DNB Bank Group

#### Note 4 Credit risk management

Credit risk or counterparty risk is the risk of financial losses due to failure by the banking group's customers/counterparties to meet their payment obligations towards DNB. Credit risk refers to all claims against customers/counterparties, mainly loans, but also commitments in the form of other extended credits, guarantees, interest-bearing securities, unutilised credit lines, derivative trading and interbank deposits. Credit risk also includes residual value risk and concentration risk. Residual risk is the risk that the value of securing an exposure is lower than expected. Concentration risk includes risk associated with large exposures to a single customer or concentration within geographical areas, within industries or related to homogeneous customer groups.

Credit risk management and measurement is described in detail in the Risk and Capital Management (Pillar 3) report. The banking group guidelines for credit activity are approved by the Boards of Directors of DNB. The principal objective of credit activity is to ensure that the quality and composition of the loan portfolio provide a good basis for the banking group's short and long-term profitability. The quality of the portfolio should be consistent with DNB's aim of maintaining a low risk profile.

The Board of Directors of DNB ASA sets long-term targets for the risk profile through the risk appetite framework. The aim of this framework is to ensure that risk is managed and integrated with the banking group's governance processes. The risk appetite framework should provide a holistic and balanced view of the risk in the business and it defines maximum limits for credit exposure. Limits have been set for annual growth in lending, risk concentrations, total credit risk exposure and predicted expected loss. An upper limit for growth, measured in terms of exposure at default (EAD), is set for each business area. To limit concentration risk, limits are set for exposure on individual customers and certain industries. The limit for expected losses applies to all types of credit risk and is measured by means of the banking group's internal credit models. The risk appetite framework is operationalised through credit strategies for the individual customer segments. In addition, risk indicators are established and used for monitoring managers on all levels.

#### Credit risk exposure

The maximum credit risk exposure will be the carrying amount of financial assets plus off-balance sheet exposure, which mainly includes guarantees, unutilised credit lines and loan offers. The banking group's maximum credit risk exposure and related collateral at year end are presented in note 6 Credit risk exposure and collateral.

#### Classification

DNB's internal models for risk classification of customers are subject to continual improvement and testing. The models are adapted to different industries and segments and are updated if calibrations show that their explanatory power has diminished over time. The IRB approach is used for most of the customers in the corporate and personal customer portfolios to which the DNB Bank Group has exposure. The standardised approach is used for housing cooperatives, newly-founded businesses and exposures in Poland.

All corporate customers with granted credit must be classified according to risk in connection with every significant credit approval and, unless otherwise decided, at least once a year. In the personal banking market, where there are a large number of customers, the majority of credit decisions are made on the basis of automated scoring and decision support systems. Risk classification should reflect long-term risk associated with each customer and the customer's credit commitment.

The risk classification systems are used for decision support, monitoring and reporting. The risk parameters used in the classification systems are an integrated part of the credit process and ongoing risk monitoring, including the follow-up of credit strategies.

Probability of default, PD, is used to measure credit quality. The banking group divides its portfolio into ten risk grades based on the PD for each credit commitment. This is presented in the table below. Credit-impaired exposures (exposures in stage 3) are assigned a PD of 100 per cent. The banking group's portfolio divided into risk grades and IFRS 9 stages is presented in note 7 Credit risk exposure per risk grade.

#### DNB's risk classification <sup>1)</sup>

|            |         | Probability of default<br>(per cent) |             |                   |  |  |
|------------|---------|--------------------------------------|-------------|-------------------|--|--|
| Risk class | As from | Up to                                | Moody's     | Standard & Poor's |  |  |
| 1          | 0.01    | 0.10                                 | Aaa – A3    | AAA – A-          |  |  |
| 2          | 0.10    | 0.25                                 | Baa1 – Baa2 | BBB+ – BBB        |  |  |
| 3          | 0.25    | 0.50                                 | Baa3        | BBB-              |  |  |
| 4          | 0.50    | 0.75                                 | Ba1         | BB+               |  |  |
| 5          | 0.75    | 1.25                                 | Ba2         | BB                |  |  |
| 6          | 1.25    | 2.00                                 |             |                   |  |  |
| 7          | 2.00    | 3.00                                 | Ba3         | BB-               |  |  |
| 8          | 3.00    | 5.00                                 | B1          | B+                |  |  |
| 9          | 5.00    | 8.00                                 | B2          | В                 |  |  |
| 10         | 8.00    | default                              | B3, Caa/C   | B-, CCC/C         |  |  |

1) DNB's risk classification system, where 1 represents the lowest risk and 10 the highest risk.

#### **Guidelines for credit activity**

DNB's guidelines and processes for approving credits are described in DNB Group's guidelines for credit activity. The guidelines describe how DNB shall grant and follow up credit exposures in the various segments. Detailed descriptions are given of the assessment of new customers, follow-up of performing credit exposures, customers in financial difficulty and procedures for handling credit-impaired loans.

#### Note 4 Credit risk management (continued)

The granting of credit in DNB is based on authorisation and approval matrices. As a fundamental principle, one person makes a recommendation and another one approves it. The matrices are differentiated on the basis of volume, risk and, if relevant, industry. While only two employees may be involved in recommending and approving a low-risk exposure in the form of a home mortgage, recommendations for large/complex exposures must also be endorsed by a senior credit officer. In addition, advice will be sought from credit committees and the involvement of industry specialists may be required.

A decisive element when granting credit is the customers' debt servicing capacity in the form of incoming future cash flows, such as earned income or income from the business operations which are being financed. The bank seeks to further mitigate the risk of future losses by requiring that collateral are furnished. Collateral can be in the form of physical assets, guarantees, cash deposits or netting agreements. As a rule, physical collateral shall be insured. Negative pledges, whereby customers undertake to keep their assets free from encumbrances vis-à-vis other lenders, are also used as a risk-mitigating measure.

In addition to collateral, most corporate credit agreements will include financial covenants, which represent an additional risk-mitigating element to ensure that DNB becomes aware of and involved in any financial challenges at an early stage. Examples of financial covenants are minimum net cash flow and equity ratio requirements.

#### Monitoring credit risk

#### Performing customers

The annually updated risk classification of customers is a complete review of all risks identified by DNB relating to each customer. A new evaluation of all collateral provided is an integral part of the review. The decision-making and authorisation matrices shall also be used in connection with the renewal of all existing credits and thus ensure that presonnel with relevant expertise are always involved when considering large and complicated exposures. Performing customers also include customers that have experienced significant increase in credit risk.

Personal customers are followed up through a systematic portfolio management system. Exposures are followed up individually if increased credit risk has been identified.

#### Watchlist

The watchlist is the Banking group's primary tool for following up corporate customers when credit risk has increased. If customers breach financial covenants or a loss event has occurred, it will be considered to include the exposure on the watchlist. Loss events include serious financial problems or major changes in market conditions. In addition it is an integral part of credit activity to consider whether to place high-risk customers(risk grades 8-10) on the watchlist. Watchlisted customers are subject to special monitoring. More frequent, often quarterly risk assessments are required, including an updated valuation of collateral. In addition, DNB must prepare an action plan to manage the risk situation that has arisen. The particularly close follow-up of customers facing greater challenges is based on the bank's experience that special monitoring both reduces the risk that losses will occur and minimises the losses that actually materialise. Each time watchlisted exposures are reviewed, the need for individual assessment of impairment losses will be performed.

#### Forbearance

If a customer gets into financial difficulties, DNB may in some cases grant voluntary concessions in the form of less stringent financial covenants or reduced/deferred interest and instalment payments. Such measures are offered in accordance with DNB Group's credit guidelines, thus aiming to help customers through a tough financial period when it is expected that they will meet their obligations on a later date. This is part of DNB's strategy to reduce losses. The banking group's total forbearance exposures, in accordance with the definition of forbearance in CRD IV, are shown in the following table:

| DNB Bank ASA       |         |        | Forbearance as at 31 December 2019         | DNB Bank Group |              |         |
|--------------------|---------|--------|--|----------------|--------------|---------|
| Stage 2            | Stage 3 | Total  | Amounts in NOK million                     | Total          | Stage 3      | Stage 2 |
| 17 654             | 10 709  | 28 364 | Gross carrying amount and loan commitments | 34 469         | 11 638       | 22 831  |
| 272                | 4 272   | 4 544  | Expected credit loss                       | 4 820          | 4 503        | 317     |
| DNB Bank ASA Forbe |         |        | Forbearance as at 31 December 2018         |                | DNB Bank Gro |         |
| Stage 2            | Stage 3 | Total  | Amounts in NOK million                     | Total          | Stage 3      | Stage 2 |
| 21 292             | 12 631  | 33 923 | Gross carrying amount and loan commitments | 40 839         | 15 299       | 25 540  |
| 390                | 3 398   | 3 788  | Expected credit loss                       | 4 138          | 3 679        | 459     |

#### Credit-impaired portfolio

In the event of credit impairment, customers are closely monitored. In the bank's experience, other supplementary resources are required during this stage than for performing customers. Customer exposures which fall into this category will either be transferred in their entirety to a separate unit with special expertise, or persons from this unit will join the customer team.

#### Repossessed companies and assets

In connection with the follow-up of defaulted exposures, DNB will in some cases take over assets provided as collateral for loans and guarantees. All acquired assets are normally followed up by the DNB Group Investment unit, whose main target is to secure/recover values for DNB's shareholders through financial restructuring when companies or other assets are repossessed due to default. At the time of acquisition, such assets are valued at their estimated realisable value. Any deviations from the carrying amount of the exposures at the time of acquisition are classified as impairment of loans and guarantees in the income statement. Repossessed assets are recognised in the balance sheet and measured after initial recognition according to the rules that apply for the foreclosed assets.

#### Note 4 Credit risk management (continued)

#### Counterparty risk for derivatives

DNB enters into derivative transactions on the basis of customer demand and to hedge positions resulting from such activity. In addition, derivatives are used to hedge positions in the trading portfolio and take positions in the interest rate, currency, commodity and equity markets. In addition, derivatives are also used to hedge currency and interest rate risk arising in connection with funding and lending. Derivatives are generally traded "over the counter" (OTC), which means that individual contracts are agreed upon by the parties. The credit risk that arises in connection with derivative trading is included in the DNB Group's overall credit risk measurement.

Netting agreements and bilateral guarantee agreements are used as a means of minimising counterparty risk associated with individual counterparties. These agreements make it possible to net the positive and negative market values linked to contracts with individual counterparties. CSA (Credit Support Annex) agreements are another type of risk-mitigating measure. CSA agreements have been entered into with most major bank counterparties and other financial counterparties, as well as a steadily increasing number of non-financial counterparties. Under these agreements, the market value of all derivative contracts between DNB and the counterparty is settled either daily or weekly, which largely eliminates counterparty risk. These transactions are mostly settled in cash, though government bonds and covered bonds are used as well. The agreements are not normally dependent on the credit quality of the counterparty, but some of them stipulate that the maximum exposure level before collateral is required (the threshold value) will be reduced if the counterparty is downgraded.

The different interest rate products (interest rate swaps and Forward Rate Agreements (FRAs) in currencies) are settled through clearing houses like LCH. DNB's counterparty risk on an individual counterparty is thus transferred to the clearing house. Equity forward contracts, securities loans and currency trading for personal customers are monitored and increases/decreases in value are settled daily.

#### Note 5 Measurement of expected credit loss

DNB applies a three-stage approach when measuring expected credit loss (ECL) on loans to customers, loan commitments, financial guarantees and other financial instruments subject to the IFRS 9 impairment rules:

- A financial instrument that is not purchased or originated credit impaired is classified as stage 1 with 12-month ECL.
- If a significant increase in credit risk since initial recognition is identified the financial instrument is moved to stage 2 with lifetime ECL measurement.
- An increase in credit risk reflects both customer-specific circumstances and developments in relevant macro risk drivers for the segment where the customer belongs. The assessment of what is considered to be a significant increase in credit risk is based on a combination of quantitative and qualitative indicators and backstops.
- If credit risk deteriorates further and the financial instrument is assessed to be credit impaired, the financial instrument is moved to stage 3
  with lifetime ECL measurement. As opposed to stage 1 and 2, the effective interest rate is calculated on amortised cost instead of the
  gross carrying amount. For definition of credit impaired see further description below.

The expected credit loss measurement is based on the following principles:

- 12-month ECL is measured at an amount equal to the portion of lifetime ECL that results from possible default events within the next 12 months.
- The loss provision for financial assets in stage 1 and stage 2 is calculated as the present value of exposure at default (EAD) multiplied by the probability of default (PD) multiplied by loss given default (LGD) and discounted by using the effective interest rate (EIR). PD, LGD and EAD use the IRB framework as a starting point, but are converted to be point in time and forward-looking as opposed to through the cycle and conservative.
- Past, present and forward-looking information is used to estimate ECL. For this purpose, DNB's loan portfolio is split into 22 segments based on geography and industry. All customers within a segment are exposed to the same risk drivers.
- For stage 3 individual assessments are performed for credit impaired financial instruments.
- For stage 1 and 2, a model is used to calculate ECL.

#### Key components for the ECL measurement, summarised

|              |                         |                  | ECL         | ECL                                 |                                |
|--------------|-------------------------|------------------|-------------|-------------------------------------|--------------------------------|
| IFRS 9 stage | Credit risk development | Customer status  | measurement | measurement method                  | Effective interest calculation |
| Stage 1      | No significant increase | Performing       | 12-month    | ECL model                           | Gross carrying amount          |
| Stage 2      | Significant increase    | Performing       | Lifetime    | ECL model                           | Gross carrying amount          |
| Stage 3      | Defaulted               | Credit impeaired | Lifetime    | Individual measurement per customer | Amortised cost                 |

#### Note 5 Measurement of expected credit loss (continued)

#### Measurement of expected credit loss in stage 1 and 2 (ECL model)

The model used for stage 1 and stage 2 follows five steps: Segmentation, determination of macro scenarios, determination of credit cycle index, calculation of ECL and staging. In the following each step will be described in more detail.

#### Segmentation, macro scenarios and credit cycle index

The assessment of significant increase in credit risk and the calculation of ECL incorporate past, present and forward-looking information. In order to reflect the effect of macro drivers in a reasonable and supportable manner DNB's portfolio has been divided into 22 segments with shared credit risk characteristics. The segmentation is based on industry and geographical location, but about half of the industry segments are exposed to global markets and are influenced by global risk drivers.

Based on a statistical regression analysis, key risk drivers impacting PD are identified for the different segments. The assessments used to select the different risk drivers have been based on several criteria; the statistical model's explanatory power, a qualitative reasonableness check (e.g. if it makes sense to include the risk driver) and an aim not to have too many factors as this would unnecessarily increase the complexity. Relevant macro drivers are shown in the table below. Their impact on ECL will vary by financial instrument. Forecasts of each of the relevant risk drivers (the base economic scenario) are primarily prepared on a quarterly basis and provide the best estimate of developments in the risk drivers for the forecast period. The forecasts are based on a range of information sources, primarily external market information, but also internal sources. The forecast period varies between three and four years.

The macro forecasts are incorporated in the credit cycle index (CCI). The CCI shows the relationship between the historically observed defaults and relevant macro factors established from statistical regression analysis. The position on the index indicates whether the current state of the economy for a given segment is better or worse than normal, and the forecasts are used to project the development of the index in the forecast period. After the forecast period, the CCI is assumed to be mean reverting. This means that the credit cycle for each segment returns to a normal state (long-term mean).

The CCI is further used to generate a base line PD curve for each instrument that follows the development of the CCI. When the CCI moves towards better times, the PD will everything else equal be reduced and vice versa.

#### **Multiple scenarios**

In order to capture the non-linear relationship between negative credit risk development and ECL, multiple scenarios are incorporated when determining significant increase in credit risk and measuring ECL. DNB use the base scenario for each risk driver as a starting point when deriving CCI and PD curves as described above. Alternative scenarios are translated into alternative paths of a probability fan around the baseline. This method means that each scenario represents one percentile on a probability fan with each percentile representing a possible development in credit risk depending on the macroeconomic development.

The width of the fan for the individual segment is determined by the past volatility in the correlation between developments in the risk drivers and developments in credit risk and ECL. This results in a correlation where the higher the volatility in a segment resulting from changes in the risk drivers, the larger the gap between the baseline and the outer percentiles of the fan.

#### Sensitivity

To calculate expected credit losses in stage 1 and 2, DNB uses a range of macroeconomic variables where each variable is given several alternative scenarios of probability.

Macroeconomic variables are interrelated in that, changes in a forecast in one variable will most likely affect forecasts in the other variables. Furthermore a weakening of the macro forecasts would normally imply more customers migrating from stages 1 and 2 to stages 2 and 3. Comparative sensitivity analyses for each macroeconomic variable, will therefore, in isolation, not provide relevant sensitivity information.

DNB has simulated an alternative low scenario for relevant macro forecasts. The scenario represents a possible downside compared with the base scenario. Each macroeconomic variable is given alternative weaker expectations for each period in the forecast period. The table below shows the average change in the macro variables in the alternative scenario compared with the base scenario in the forecast period, in per cent. In the simulated alternative scenario, as presented in the table below, the ECL in stages 1 and 2 would increase by approximately 14 per cent compared with the ECL in stages 1 and 2 at 31 December 2019.

The following table provides an overview of the macro forecasts that are included in the loan loss model. The table includes the average stress that is imposed on each macro variable in the alternative scenario.

## Note 5 Measurement of expected credit loss (continued)

#### Selected macro variables used in base scenario and alternativ scenario

DNB Bank ASA

| Per cent   | Average change from base<br>to alternative scenario |
|--|---|
| World GDP, year-to-year growth                         | (10)  |
| Emerging countries GDP, year-to-year growth            | (4)   |
| Oil price, USD per barrel                              | (21)  |
| Norwegian mainland GDP, year-to-year growth            | (51)  |
| Norwegian consumer price index, year-to-year growth    | 13  |
| Norwegian house price index, year-to-year growth       | (302)   |
| Norwegian registered unemployment rate, per cent       | 24  |
| NIBOR 3-month interes rate, per cent                   | (28)  |
| Swedish GDP, year-to-year growth                       | (3)   |
| Norwegian commercial real estate rental price, NOK/sqm | (9)   |
| Salmon price, NOK per kg                               | (17)  |
| Floater spot rate, USD per day                         | (10)  |
| Utilisation rate rig                                   | (10)  |
| VLCC spot rate, USD per day                            | (19)  |
| Capesice spot rate, USD per day                        | (26)  |
| VLGC spot rate, USD per day                            | (30)  |

One of the most significant exposures in stages 1 and 2 is lending to personal customers. The lending includes mortgage lending, credit card and consumer financing. In addition to specific customer attributes, the portfolio's ECL is forecast based on the Norwegian house price Index, the Norwegian interest rate, household debt level and the unemployment rate. In the simulated alternative scenario, where all of these input parameters are reduced, the ECL in stages 1 and 2 would increase by approximately 15 per cent for the personal customer portfolio compared with the ECL measured at 31 December 2019 for the same portfolio and stages.

DNB has furthermore investigated the effect of non-linearity in the ECL for stage 1 and stage 2. If the base scenario alone is used to calculate expected credit losses, thereby excluding the fan that represents the range of alternative scenarios, the ECL at 31.12.2019 would decrease by 21 per cent.

#### **Calculation of ECL**

The determination of a significant increase in credit risk and the measurement of ECL are based on parameters already used in credit risk management and for capital adequacy calculations: PD, LGD and EAD. The parameters have been adjusted in order to give an unbiased estimate of ECL.

#### Probability of default (PD)

DNB applies a range of different models to determine a customer's PD. The choice of model depends on whether it is a personal or corporate customer and on which industry the customer operates in. The development in the customer's PD is a key component in DNB's monitoring of credit risk in the portfolio, see note 4 Credit risk management, and is used both in calculating the ECL and in assessing whether a significant increase in credit risk has occurred since initial recognition. For determining PD in capital adequacy calculations, DNB has been granted permission to use the Internal Ratings Based (IRB) approach. These models are conservative and only reflect a limited degree of cyclicality. For the ECL measurement, there is a need to generate a PD which is forward-looking and reflects all available relevant information. This is necessary in order to provide an unbiased probability-weighted estimate of ECL. In order to apply PDs for ECL measurement, four modifications have been made to the PDs generated using the IRB approach:

- incorporation of macroeconomic scenarios
- conversion to an unbiased, forward-looking PD
- conversion of 12-month PD to lifetime PD
- removal of margin of conservatism in the PD estimate.

These modifications imply that the PD used for the ECL measurement reflects management's current view of expected cyclical changes and that all PD estimates are unbiased.

Two types of PDs (IFRS modified) are generated and used in the ECL calculation:

- A 12-month PD is the probability of default occurring within the next 12 months (or over the remaining life of the financial instrument if that is less than 12 months). This is used to calculate the 12-month ECL.
- A lifetime PD is the annualised probability of a default occurring over the remaining life of the financial instrument. This is used to evaluate if there has been a significant increase in credit risk since initial recognition and to calculate lifetime ECL.

## Note 5 Measurement of expected credit loss (continued)

#### Loss given default (LGD)

LGD represents the percentage of EAD which the banking group expects to lose if customers fail to meettheir obligations, taking the collateral provided by the customer, future cash flows and other relevant factors into consideration.

Similar to PDs, DNB uses IRB LGDs for capital adequacy calculations. In order to convert the IRB LGDs to IFRS LGDs four modifications have been made:

- incorporation of macroeconomic scenarios
- use of the effective interest rate to discount future estimated cash flows
- removal of the margin of conservatism to produce unbiased projections rather than downturn projections, and to exclude regulatory floors
- removal of the estimated indirect costs of realising collateral.

These modifications imply that the LGDs used for the ECL measurement should reflect management's current view of the cyclical changes and that all LGD estimates are unbiased.

#### Exposure at default (EAD)

EAD is the share of the approved credit that is expected to be drawn at the time of any future default. The EAD is adjusted to reflect contractual payments of principal, interest and estimated early repayment. The proportion of undrawn commitments expected to be drawn at the time of default is reflected in the EAD by using a credit conversion factor.

#### Significant increase in credit risk (staging)

The assessment of a significant increase in credit risk is based on a combination of quantitative and qualitative indicators and back stops. A significant increase in credit risk has occurred when one or more of the criteria below are met.

#### Quantitative criteria

A significant increase in credit risk is determined by comparing the remaining lifetime PD for an instrument at the reporting date, as expected at initial recognition, with the actual lifetime PD at the reporting date. If the actual lifetime PD is higher than what it was expected to be, an assessment is made of whether the increase is significant.

An increase in lifetime PD with a factor of 2.5 or more from initial recognition is assessed to be a significant increase in credit risk. This threshold is based on an assessment of the increase in credit risk that would lead to closer customer follow-up in order to ensure that proper credit risk management and business decisions are made.

Further, the change in PD must be a minimum of 0.6 percentage points for the deterioration in credit risk to be considered to be significant. In the high end of the risk scale a change of 7.5 percentage points or more is considered to be a significant deterioration in credit risk even if this is less than a change of 2.5 times lifetime PD. These limits reflect the high sensitivity to change in the low end of the risk scale and the low sensitivity to change in the high end of the scale.

As part of DNB's credit risk management policy the group applies a risk scale where all customers and instruments are rated on a coherent scale meaning that a risk grade has the same explanatory power independent of segment, geography and product. DNB therefore uses a common threshold for all financial instruments with respect to what constitute a significant increase in credit risk. For further information about DNBs risk scale and classification see note 4 Credit risk management.

#### Qualitative criteria

Qualitative information is normally reflected in the respective PD models for each group of customers.

#### Back stop

Back stops are used and a significant increase in credit risk has occurred if:

- the customer's contractual payments are 30 days past due
- the customer has been granted forbearance measures due to financial distress, though it is not severe enough for the financial instrument to be classified as credit impaired.

#### <u>Sensitivitiy</u>

DNB has performed a sensitivity analysis on threshold of the significant increase in credit risk used to measure ECL in stages 1 and 2. If a threshold of 1.5 times lifetime PD is used for determining the significant increase in credit risk, as an alternative to the 2.5 threshold, more exposures would migrate from stage 1 to stage 2 and the ECL in stage 1 and 2 would increase by 5 per cent compared with the ECL measured at 31 December 2019. If a threshold of 3.5 times lifetime PD is used instead, the ECL would decrease by 1 per cent compared with the ECL measured at 31 December 2019.

#### Expert credit judgement

For many of the input parameters in the ECL-measurement significant professional judgment is applied. The assessment of the macro prognoses and the impact to the forecasted credit cycle index is key judgments and DNB has established an advisory forum for the Group's Chief Financial Officer to address this. The forum's purpose is to assess if the predicted Credit Cycle Index for each segment reflect the management's view on the expected future economic development.

## Note 5 Measurement of expected credit loss (continued)

### Definition of default and credit impaired exposures in stage 3

The definition of credit impaired is fully aligned with the regulatory definition of default.

A financial instrument is defined to be in default if a claim is more than 90 days overdue, the overdue amount exceeds NOK 2 000 and the default is not due to delays or accidental circumstances on the part of the debtor.

A commitment is also defined to be in default if the DNB Group:

- significantly writes down the commitment as a result of a weakening of the debtor's creditworthiness
- agrees to changes in the terms and conditions because the debtor is having problems meeting payment obligations, and this is assumed to significantly reduce the value of the cash flow
- sells the debt for an amount that is significantly lower than the nominal value as a result of an impairment of the debtor's creditworthiness
- has reasons to assume that the debtor will be subject to debt settlement or bankruptcy/involuntary liquidation proceedings, or be placed in receivership
- has other reasons to assume for assuming that the payment obligation will not be met (anticipated default).

A commitment is defined to represent anticipated default if it is considered likely that the customer, based on its regular business activities, does not have debt payment ability for its total obligations (unlikeliness to pay).

#### Measurement of expected credit loss for credit-impaired financial instruments

In DNB, the ECL for credit-impaired financial instruments with exposure above NOK 5 million is calculated individually per customer and without the use of modelled inputs. When a customer becomes credit impaired (stage 3) the probability of default is set to 100 per cent. The ECL provision is estimated as the difference between the carrying amount and the net present value of the estimated future cash flows discounted by the original effective interest rate. The estimated future cash flows are based on developments in the customer's exposure, past experience with the customer, the probable outcome of negotiations and expected macroeconomic developments that will influence the customer's expected cash flow. If the exposure is collateralised, the value of the collateral in going concern scenarios is included in the estimated future cash flows regardless of whether foreclosure is probable or not. When establishing the estimated collateral value, weighting of at least two possible scenarios for the development in future cash flows from the collateral in a going concern scenario are incorporated. In some cases a liquidation scenario is included in the valuation of the collateral.

For credit impaired exposures below NOK 5 million a portfolio approach is used to estimate ECL.

#### Sensitivity:

If the value of collaterals on all stage 3 exposures were reduced by 10 per cent, the stage 3 ECL at year-end 2019 would increase by approximately NOK 1.6 billion.

#### DNB's write-off policy

DNB writes off and thereby reduces the carrying amount of a financial asset when there is no reasonable expectation of recovery. This might for example be the case when a court of law has reached a final decision, a decision has been made to forgive the debt, or a scheme of composition has been confirmed. Write-off can relate to the entire asset or a portion of the asset and can constitute a derecognition event. DNB maintains the legal claim towards the customer even though a write-off has been recognised. For corporate customers, there is a difference between internal write-offs and debt forgiveness. In the latter, DNB does not maintain a legal claim.

#### Measurement uncertainty

The measurement of the expected credit loss involves increased complexity, and management must apply its professional judgement for many of the key assumptions used as input in the measurement. For stage 1 and 2, estimation uncertainty in the ECL calculation relates to the determination of PD, LGD and EAD. This is both in terms of using historic data in the development and calibration of models and the judgement performed in relation to setting these parameters as part of the credit process. Furthermore, the determination of how to do the segmentation of the loan portfolio, the identification of relevant risk drivers for each segment and the forecasts for each of the risk drivers also create estimation uncertainty.

Other areas with significant estimation uncertainty are the creation of multiple future economic scenarios, estimation of expected lifetime, assessment of significant increases in credit risk and determination of whether the criterions for default are satisfied.

For exposures in stage 3 where ECL is measured individually per customer, significant judgement is applied when determining assumptions used as input for the customer's future cash flow and assumptions related to valuation of collateral, including the point in time when collateral is potentially taken over.

Sensitivities are disclosed separately above.

Financial assets of NOK 2 084 million in stage 3 has no credit loss due to collateralisation.

The table above includes on and off-balance sheet items which entail credit risk and the assessed value of related collateral. If available, fair values are used. In general, fair values are estimated according to different techniques depending on the type of collateral. With respect to properties, models estimating the value of collateral based on market parameters for similar properties, are used. Corresponding techniques are used for other non-financial collateral. In order to reflect the effective available collateral value, the fair value of collateral included in the table is limited to the maximum credit exposure of the individual loan or exposure.

Comments to the main items as at 31 December 2019:

Total maximum exposure to credit risk not reflected on the balance sheet

Total

- Deposits with central banks: Deposits with Norges Bank totalled NOK 6 million. DNB engages only in short-term transactions with central banks outside Norway, mainly in OECD countries.
- Loans to customers: See further description under "Guidelines for credit activity" in note 4 Credit risk management.
- Commercial paper and bonds: The Group's investments in commercial paper and bonds, are within market risk limits approved by the Board of Directors.
- Financial derivatives: Other collateral represents netting opportunities against other outstanding balances with customers and cash collateral received.
- Guarantees: See further description under "Guidelines for credit activity" in note 4 Credit risk management.
- Unutilised credit lines and loan offers: Offers of loans, credits and credit lines totalling NOK 117 590 million for the DNB Bank Group and 127 930 for the DNB Bank ASA were included in the maximum credit exposure. No formal collateral has been established for such exposure, and the assessed value is not included in the table. Collateral is established once the offers are accepted by the customers. The assessment of the value of any collateral established in connection with such offers follows the procedure and criteria described under "Guidelines for credit activity" in note 4 Credit risk management.

## Note 7 Credit risk exposure by risk grade

In the tables below, all loans to customers and financial commitments to customers are presented by risk grade. The amounts are based on the gross carrying amount and the maximum exposure before adjustments for impairments.

#### Loans as at 31 December 2019

The contractual amount outstanding on financial assets that were written off during the reporting period and is still subject to enforcement activity, was NOK 70 million as at 31 December 2019 for DNB Bank ASA (NOK 67 million as at 31 December 2018) and NOK 100 million as at 31 December 2019 for DNB Bank Group (NOK 95 million as at 31 December 2018).

#### Note 9 Development in gross carrying amount and maximum exposure

The following tables reconcile the opening and closing balances for gross carrying amount and the maximum exposure for loans to customers at amortised cost and financial commitments. Reconciling items include the following:

- Transfers between stages due to significant changes in credit risk.
- Changes due to the derecognition of loans and financial commitments during the period.
- Changes due to the origination of new financial instruments during the period.
- Exchange rate movements and other changes affecting the gross carrying amount and maximum exposure.

## Note 10 Development in accumulated impairment of financial instruments

The following tables reconcile the opening and closing balances for accumulated impairment of loans to customers at amortised cost and financial commitments. Reconciling items includes the following:

- Transfers between stages due to significant changes in credit risk. The transfers are presumed to occur before the subsequent remeasurement of the allowance.
- Changes due to transfers between 12-month expected credit loss in stage 1 and lifetime expected credit loss in stages 2 and 3.
- Changes in allowance due to the origination of new financial instruments during the period.
- Increases and decreases in expected credit loss resulting from changes in input parameters and assumptions, including macro forecasts, as well as the effect of partial repayments on existing facilities and the unwinding of the time value of discounts due to the passage of time.
- Changes in allowance due to the derecognition of financial instruments during the period.
- Write-offs, exchange rate movements and other changes affecting the expected credit loss.

| Loans to customers at amortised cost          |         |         | DI      | NB Bank ASA |
|---|---------|---------|---------|-------------|
| Amounts in NOK million                        | Stage 1 | Stage 2 | Stage 3 | Total       |
| Accumulated impairment as at 1 January 2018   | (196)   | (2 138) | (6 562) | (8 896)     |
| Transfer to stage 1                           | (171)   | 157     | 14      |             |

| Accumulated impairment as at 31 December 2018 | (154)   | (850)   | (7 416) | (8 420)     |
| Transfer to stage 1                           | (219)   | 199     | 20      |             |
| Transfer to stage 2                           | 33      | (174)   | 141     |             |
| Transfer to stage 3                           | 3       | 33      | (37)    |             |
| Originated and purchased                      | (83)    | (137)   |         | (220)       |
| Increased expected credit loss 1)             | (201)   | (959)   | (5 392) | (6 552)     |
| Decreased (reversed) expected credit loss 1)  | 431     | 781     | 2 884   | 4 096       |
| Write-offs                                    | 0       | 0       | 1 558   | 1 558       |
| Derecognition (including repayments)          | 23      | 330     | 19      | 371         |
| Exchange rate movements                       | 0       | 1       | (30)    | (29)        |
| Accumulated impairment as at 31 December 2019 | (168)   | (777)   | (8 252) | (9 197)     |

1) In the second quarter of 2019, DNB performed a recalibration of the IFRS 9 models used for stage 1 and stage 2 loans and financial commitments. The net effect of the recalibration is an increase in expected credit loss of approximately NOK 70 million. As the recalibration resulted in both increases and decreases on a financial instrument level, the effect is included in the flows 'increased expected credit loss' and 'decreased (reversed) expected credit loss'.

| Accumulated impairment as at 31 December 2019 | (305)   | (1 041) | (8 904) | (10 251)   |

 In the second quarter of 2019, DNB performed a recalibration of the IFRS 9 models used for stage 1 and stage 2 loans and financial commitments. The net effect of the recalibration is a decrease in expected credit loss of NOK 5 million. As the recalibration resulted in both increases and decreases on a financial instrument level, the effect is included in the flows 'increased expected credit loss' and 'decreased (reversed) expected credit loss'.

 In the second quarter of 2019, DNB performed a recalibration of the IFRS 9 models used for stage 1 and stage 2 loans and financial commitments. The net effect of the recalibration is a decrease in expected credit loss of NOK 5 million. As the recalibration resulted in both increases and decreases on a financial instrument level, the effect is included in the flows 'increased expected credit loss' and 'decreased (reversed) expected credit loss'.

## Note 12 Market risk

Market risk is the risk of losses or reduced future income due to fluctuations in market prices or exchange rates. The risk arises as a consequence of the banking Group's unhedged transactions and exposure to the foreign exchange, property, interest rate, commodity, credit and equity markets. The risk level reflects market price volatility and the size of the exposure.

DNB quantifies risk by calculating economic capital for individual risk categories and for the banking group's overall risk, see note 4 Risk management. Economic capital for market risk should cover potential market risk losses at the 99.9 per cent confidence level over a one year horizon. Exposures included in the model could be either actual exposures or limits.

Economic capital for total market risk in the banking group at year-end 2019 was NOK 5.8 billion, compared with NOK 7.3 billion in 2018. The change in economic capital is largely due to the reduced investment in Luminor Holding.

DNB Bank Group

**DNB Bank Group** 

## Note 13 Interest rate sensitivity

#### Interest rate sensitivity for different time intervals

The value of items on and off the balance sheet is affected by interest rate movements. The table shows potential losses for the DNB Bank Group excluding DNB Poland resulting from parallel one percentage point changes in all interest rates.

The calculations are based on a hypothetical situation where interest rate movements in all currencies are unfavourable for the DNB Bank Group relative to the bank's positions. Also, all interest rate movements within the same interval will be unfavourable for the banking group. The figures will thus reflect maximum losses for the DNB Bank Group.

The calculations are based on the banking group's positions as at 31 December and market rates on the same date. The table does not include administrative interest rate risk and interest rate risk tied to non-interest-earning assets.

1) The figures do not include the operations in DNB Poland and are identical for DNB Bank ASA.

## Note 14 Currency positions

The table shows net currency positions as at 31 December, including financial derivatives as defined by Norges Bank. Foreign exchange risk related to investments in subsidiaries is included in the currency position by the amount recorded in the accounts.

## Note 15 Financial derivatives and hedge accounting

The majority of derivative transactions in DNB relate to transactions with customers, where DNB enables them to transfer, modify, take or reduce prevailing or expected risk. Derivatives are also used to hedge currency and interest rate risk arising in connection with funding and lending. In addition, Markets conducts derivative trading for their own account and also acts as market maker. A market maker is obliged to furnish both offer and bid prices with a maximum differential between offer and bid price, together with a minimum volume. Market makers always trade for their own account.

DNB uses a range of financial derivatives for both trading and hedging purposes. "Over the counter" (OTC) derivatives are contracts entered into outside an exchange where terms are negotiated directly with the counterparties. OTC derivatives are usually traded under a standardised International Swaps and Derivatives Association (ISDA) master agreement between DNB and its counterparties. Exchange-traded derivatives are derivative contracts with standardised terms for amounts and settlement dates, which are bought and sold on regulated exchanges.

#### Risk related to financial derivatives

Derivatives are traded in portfolios which also include balance sheet products. The market risk on derivatives is handled, monitored and controlled as an integral part of the market risk of these portfolios. See note 12 Market risk. Derivatives are traded with many different counterparties and most of these are also engaged in other types of business with DNB. The credit risk arising in connection with derivatives trading is included in the total credit risk measurement of the DNB Bank Group. Netting agreements or bilateral agreements on collateral are entered into with a number of counterparties, thus reducing credit risk. The authorities' capital adequacy requirements take into account netting agreements and similar bilateral agreements, resulting in a reduction of capital adequacy requirements. See note 4 Credit risk management for a description of counterparty risk.

The DNB Bank Group uses basis swaps and cross currency interest swaps to convert foreign currency borrowings into the desired currency. As a typical example, DNB raises a loan in euro and converts it into US dollars through a basis swap. In this example DNB pays a US dollar interest rate based on a swap curve and receives a euro interest rate reduced or increased by a margin. The basis swaps are financial derivatives measured at fair value. There may be significant variations in the value of the basis swaps from day to day, due to changes in basis swap spreads. This unhedged risk causes unrealised gains and losses. For the year 2019, there was a NOK 270 million increase in value (positive effect on profits), compared with a NOK 1 358 million decrease in value in 2018.

#### Hedge accounting

DNB applies fair value hedge of interest rate risk on issued bonds and subordinated debt with fixed interest and net investment hedge of investments in foreign operations in order to reduce or eliminate accounting mismatches. Fair value hedge of interest rate risk is applied both in DNB Bank ASA and in DNB Bank Group, while net investment hedge is only applied in DNB Bank Group.

Both derivative and non-derivative instruments are designated as hedging instruments in the hedge relationships that qualify for hedge accounting. See note 1 Accounting principles for information about hedge accounting and the presentation of financial derivatives in the financial statements.

## Note 15 Financial derivatives and hedge accounting (continued)

In fair value hedges of interest rate risk, the interest rate exposure on fixed-rate borrowings is converted to floating rates. Only the interest rate component is hedged. It is determined as the change in fair value arising from changes in the interbank swap interest rate.

The critical terms of the hedging instruments and the hedging objects are set to match at the inception of the hedge and the hedge ratio is 1:1. Consequently, there was no significant hedge ineffectiveness during the year.

In net investment hedges of foreign operations in the DNB Bank Group, foreign currency deposits and foreign currency borrowings are used as hedging instruments. These instruments are presented as deposits from customers and debt securities issued in the balance sheet. Instruments in EUR, USD, GBP and SEK are used to hedge the investments in the DNB Bank Group's subsidiaries with functional currencies of EUR, USD, GBP, SEK and DKK.

The total hedged exposure in the net investment hedges amounted to NOK 73 605 million at 31 December 2019. There was no significant hedge ineffectiveness during the year, since the foreign currency gains and losses on the hedged items were offset by the foreign currency gains and losses on the hedged items were offset by the foreign currency gains and losses on the hedge can be seen in the statement of changes in equity.

Any reclassifications from net investment hedge reserve to the income statement, due to for instance sales of subsidiaries, can be seen in the comprehensive income statement and the statement of changes in equity.

## Note 16 Liquidity risk

Liquidity risk is the risk that the DNB Bank Group will be unable to meet its payment obligations. Overall liquidity management in the banking group implies that DNB Bank ASA is responsible for funding domestic and international group entities. Liquidity risk is managed and measured by means of various measurement techniques.

The Board of Directors has approved internal limits which restrict the short-term maturity of liabilities within different time frames. The various maturities are subject to stress testing based on a bank-specific crisis, a systemic crisis and a combination thereof, and a contingency plan has been established to handle market events. In addition, limits have been set for structural liquidity risk, which implies that lending to customers should largely be financed through customer deposits, subordinated capital and long-term funding. Ordinary senior bond debt and covered bonds are the major sources of long-term funding. The banking group's ratio of deposits to net loans was 58.5 per cent at end-December 2019, down from 58.8 per cent a year earlier.

2019 was an active year for DNB in the short-term funding market, and there was generally a high level of interest in the bank's securities with both long and short maturities. While USD was the main short-term funding currency for DNB, the European market was influenced by low interest rates in continental Europe, and due to Brexit in the UK, some instability was registered here. On the other hand, with high activity in the long-term funding market towards the end of 2019, the bank used this increased flexibility to reduce outstanding volumes somewhat in the short-term market during the fourth quarter of 2019.

In the long-term funding market, there was some instability at the end of 2018, which continued into the first quarter of 2019. Spread levels peaked in mid-January before starting to narrow again. From mid-January to the summer, the spreads narrowed significantly, but remained more or less stable in the second half of the year. Despite volatile markets, the funding activity was high as usual in the first quarter, with large volumes issued. In March, the US 10-year Treasury yield fell below the 3-month Treasury bill, and 10-year German bonds fell below 0 per cent, which indicated the market's fear of an upcoming recession. The ongoing trade war between the US and China, in addition to concerns about Brexit, added to this sense of uncertainty. In October, the European Central Bank (ECB) restarted their asset purchase programme, which had been on hold since the beginning of 2019. DNB was very active in the senior and covered bonds market in the first half of the year. In the fourth quarter, the bank re-assumed this activity with some sizeable issues of senior bonds. In the course of the year, there was also an increasing number of issues of so-called senior non-preferred bonds in the market, due to the upcoming minimum requirement for own funds and eligible liabilities (MREL). Overall, DNB had good access to long-term funding markets at attractive spreads during the year.

The nominal value of long-term debt securities issued by the banking group was NOK 655 billion at the end of December 2019, compared with NOK 606 billion a year earlier. The average remaining term to maturity for these long-term debt securities was 3.7 years at the end of December, compared with 4.1 years a year earlier.

The short-term liquidity requirement, the Liquidity Coverage Ratio (LCR), remained stable at above 100 per cent throughout the year and stood at 138 per cent at the end of December 2019.

| 884          |         | Financial guarantees                                       |         | 909        |
| (6)          | (27)    | Dividends  | (6)     | 8          |
| 3 659        | 2 688   | Net gains on financial instruments at FVTPL                | 3 173   | 1 351      |

 The change in fair value due to credit risk amounted to a NOK 22 million gain during the year and a NOK 82 million loss cumulatively for DNB Bank Group and a NOK 3 million gain during the year and a NOK 17 million loss cumulatively for DNB Bank ASA. Credit risk reflected in fair value measurements is based on normalised losses and changes in normalised losses in the relevant portfolio.

2) The change in fair value due to changes in credit spreads amounted to a NOK 273 million gain during the year and a NOK 329 million gain cumulatively.

3) For liabilities designated as at FVTPL, changes in fair value due to credit risk are recognised in other comprehensive income.

4) With respect to hedged liabilities, the hedged risk is measured at fair value, while the rest of the instrument is measured at amortised cost. Derivatives used for hedging are measured at fair value. Changes in fair value arising from hedged risk are presented under Financial derivatives, hedging. Net gains on hedged financial liabilities include amortization of fair values on discontinued hedging relationships.

5) The DNB Group uses hedge accounting for long-term borrowings in foreign currency in DNB Boligkreditt and DNB Bank ASA. Loans are hedged 1:1 through external contracts where there is a correlation between currencies, interest rate flows and the hedging instrument. At the time the loans are raised, Markets considers whether to enter into a hedging transaction for the relevant loan based on the Group's foreign currency positions and the underlying interest rate exposure for the loan.

| (2 431)      | (3 203) | Total depreciation and impairment of fixed and intangible assets | (3 157) | (2 371)    |

See note 36 Intangible assets and note 37 Fixed assets.

## Note 24 Pensions

#### Description of the pension schemes

The DNB Group has defined-contribution pensions for all employees in Norway, with the exception of around 270 employees from the former Postbanken, who are covered by a closed, group pension plan in the Norwegian Public Service Pension Fund.

The contribution rates are:

- Salary equivalent to 0 to 7.1 times the National Insurance basic amount, G: 7 per cent
- Salary equivalent to 7.1 to 12 times G: 15 per cent
- The Group has no defined-contribution pension scheme for salaries exceeding 12G (apart from the closed scheme for employees from before 2008).

Employees who were enrolled in the former defined-benefit pension schemes (terminated between 2015 and 2017) are also covered by a compensation scheme that is structured as a supplementary, contribution-based direct pension scheme.

Based on the terms and conditions approved at the time of conversion, the savings plan in the compensation scheme aims to give the individual employee a total pension capital when reaching the age of 67 corresponding to what he or she would have received if the defined-benefit pension scheme had been retained. Both the pension entitlements and the return on the pension funds are funded through operations.

The DNB Group has a disability pension scheme for all employees in Norway. The disability pension represents:

- 3 per cent of pensionable income up to 12G
- 25 per cent of G, maximum 6 per cent of pensionable income, up to 12G
- 66 per cent of pensionable income in the interval between 6G and 12G

The Norwegian companies in the Group are part of the contractual early retirement pension (AFP) scheme for the private sector. In addition, the Group has an agreement on contractual early retirement pension according to public sector rules for employees who are members of the Norwegian Public Service Pension Fund.

The private early retirement pension scheme will be funded through an annual premium established as a percentage of salaries between 1 and 7.1G.

Employer's contributions and financial activities tax are included in pension expenses and commitments.

Subsidiaries and branch offices outside Norway have separate schemes for their employees, mainly in the form of defined-contribution pension schemes. Pension expenses for employees outside Norway represented NOK 173 million.

## Note 24 Pensions (continued)

Economic assumptions applied in calculating pension expenses and commitments are in accordance with the guidance from the Norwegian Accounting Standards Board per 31 December 2019.

| Pension expenses                          | DNB     | Bank ASA |

 In Norway, a company's income from share investments is normally exempt from tax. As a rule, this applies to investments in companies domiciled in the EU/EEA. The tax exemption applies to both dividends and gains/ (losses) upon realisation. However, 3 per cent of dividends from tax-exempt investments is included in taxable income.

 Deferred taxes for tax-deductible differences (mainly losses carried forward) in subsidiaries are not recognised in the balance sheet unless the Group can prove that these tax positions will be utilised in the future.

#### Tax effect of different tax rates in other countries

The Group has operations in a number of countries whose tax rates are different from that in Norway (22 per cent).

#### Tax effect of debt interest distribution with international branch offices

According to Norwegian tax legislation, external interest expenses shall be distributed proportionally among operations in Norway and international branches based on the respective units' total assets. This could result in additions or deductions from income in Norway.

DNB has been notified of changes in the tax assessment provisions for the years 2015–2017, related to the calculation of debt interest deduction. The changes considered by the tax authorities in the notification amount to approximately NOK 3.6 billion in increased taxable income for the period in question. DNB disagrees with the tax authorities' interpretation of the regulations, and has submitted a reply that counters all points in the notification. Against this background, allocations have not been made for the claim in the notification at the end of 2019.

## Note 25 Taxes (continued)

### Expectations regarding the effective tax rate

The nominal tax rate in Norway was 22 per cent in 2019. Business operations outside Norway are subject to local tax rates in their country of operation, and nominal tax rates range from 12 to 25 per cent. The effective taxation of operations outside Norway depends on both local tax rules and on whether it is possible to avoid double taxation. Tax-exempt income from share investments contributes to a lower expected tax rate than 22 per cent. In some periods, tax losses carried forward that are not recognised in the balance sheet have caused variations in the effective tax rate. In periods when such assets have not been recognised, the effective tax rate has been higher than the long-term expectation, whereas it has been lower in periods when tax losses not recognised as assets have been utilised.

A significant share of the financial instruments are measured at fair value in the accounts, while for tax purposes, the same instruments are recorded on an accrual basis in accordance with the realisation principle. This gives rise to large differences between profits stated in the accounts and profits computed for tax purposes for the individual accounting years, especially in years with significant fluctuations in interest rate levels and exchange rates. These differences are offset in the longer term.

Due to large exchange rate fluctuations in 2019 and 2018, there were significant changes in unrealised gains and losses on financial instruments used in managing the banking group's currency and interest rate risk. Financial instruments are recorded in accordance with the realisation principle, while the current rate method is used for receivables and liabilities in foreign currency. These differences are expected to be reversed within a short period of time.

1) The measurement category for debt securities issued in Norwegian kroner with floating rates has been changed from FVTPL to amortised cost as of

31 December 2019. Comparative information has not been restated.

2) See note 28 Financial instruments at fair value for a definition of the levels.

#### Due from credit institutions (level 2)

The value of loans to and deposits with credit institutions is assessed to equal amortised cost. The fixed-rate period is relatively short.

#### Loans to customers (levels 2 and 3)

When valuing loans, the loan portfolio has been divided into the following categories: personal customers, small and medium-sized enterprises and the divisions in large corporates and international customers. In addition, separate calculations have been made for DNB Finans and Poland.

Loans in level 2 mainly consist of retail loans with floating interest rate measured at amortised cost. Since the fixed-rate period is very short amortised cost is considered to be a good estimate of fair value. All other loans measured at amortised cost are classified in level 3.

The valuations of loans in level 3 are based on average margins in December, considered relative to the business units' best estimate of the potential margin requirement at year-end 2019 if the loans had been extended at that time. Differentiated margin requirements have been calculated for each category, as specified above, based on estimated costs related to lending. The margin requirement includes costs covering normalised losses, which, as opposed to impairment recorded in the annual accounts, represent a long-term assessment of loss levels.

A margin requirement is calculated for margin loans, and the difference between the margin requirement and the agreed margin is discounted over the average expected time to repricing of the loan.

With respect to impaired loans, an assessment has been made of potential cash flows for the loans discounted by the effective rate of interest adjusted for changes in market conditions for corresponding non-impaired loans. Loan rates prior to provisions being made reflect the increased credit risk of the commitment. Given the general uncertainty in fair value measurements, it is evaluated that the impaired value gives a good reflection of the fair value of these loans.

## Note 27 Fair value of financial instruments at amortised cost (continued)

Customers will often use loan products which are carried partly at amortised cost and partly at fair value. The profitability of a customer relationship is considered on an aggregate basis, and prices are set based on an overall evaluation. Correspondingly, a possible reduction in the customer relationship value is based on an overall assessment of all products. Any decline in value apart from price changes on specific products is included in the overall assessment of credits in the relevant customer relationship. Any reduction in the total customer relationship value is measured on the basis of amortised cost and reported under impairment on loans.

#### Commercial paper and bonds (level 3)

For papers classified as level 3, the valuation is based on models.

#### Due to credit institutions (level 2)

Due to credit institutions is measured in the same manner as due from credit institutions. For these instruments with very short term to maturity fair value is assessed to equal amortised cost.

#### Deposits from customers (level 2)

For deposits from customers fair value is assessed to equal amortised cost.

#### Securities issued and subordinated loan capital (levels 2 and 3)

The valuation in level 2 is based on observable market data in the form of interest rate curves and credit margins when available. Securities and subordinated loan capital in level 3 are valued based on models. The items consist mainly of funding in foreign currency.

2) Short positions, trading activities.

#### The levels

Financial instruments are categorised within different levels based on the quality of the market data for the individual instruments. Transfers between levels in the fair value hierarchy are reflected as taking place at the end of each quarter. With respect to financial instruments categorised as level 2, the quality of market data may vary depending on whether the relevant instrument has been traded. Thus, it will be natural that some instruments are moved between level 2 and level 3. This applies primarily to commercial paper and bonds.

#### Level 1: Valuation based on quoted prices in an active market

Classified as level 1 are financial instruments valued by using quoted prices in active markets for identical assets or liabilities. Instruments in this category include listed shares and mutual funds, Treasury bills and commercial paper traded in active markets.

#### Level 2: Valuation based on observable market data

Classified as level 2 are financial instruments which are valued by using inputs other than quoted prices, but where prices are directly or indirectly observable for the assets or liabilities, including quoted prices in non-active markets for identical assets or liabilities.

Included in this category are, among others, interbank derivatives such as interest rate swaps, currency swaps and forward contracts with prices quoted on Reuters or Bloomberg, basis swaps between the currencies NOK, EUR, USD and GBP and cross-currency interest rate derivatives with customers with insignificant credit margins. Exchange-traded options are classified as level 2 if it is possible to scan or interpolate/ extrapolate implicit volatility based on observable prices.

#### Level 3: Valuation based on other than observable market data

Classified as level 3 are financial instruments which cannot be valued based on directly observable prices. For these instruments other valuation techniques are used, such as valuation of assets and liabilities in companies, estimated cash flows and other models where key parameters are not based on observable market data.

Included in this category are loans to customers and instruments where credit margins constitute a major part of adjustments to market value.

Gains or losses, that occur when the estimated fair value is different from the transaction price (day-one gain/loss) has not had significant impact to the financial statement neither for 2019 or 2018.

#### The instruments in the different levels

#### Loans to customers (levels 2 and 3)

Loans in level 2 in DNB Bank ASA mainly consist of retail loans with floating interest rate measured at FVOCI. Since the fixed-rate period is very short amortised cost is considered to be a good estimate of fair value. The corresponding loans are measured at amortised cost in the Bank Group, due to a hold to collect business model.

Loans in level 3 consist primarily of fixed-rate loans in Norwegian kroner. The value of fixed-rate loans is determined by discounting agreed cash flows over the term of the loan, using a discount factor adjusted for margin requirements.

#### Commercial paper and bonds (levels 2 and 3)

The valuation in level 2 is primarily based on observable market data in the form of interest rate curves, exchange rates and credit margins related to the individual credit and the characteristics of the bond or commercial paper. For paper classified as level 3, the valuation is based on indicative prices from third parties or comparable paper.

#### Equities including mutual fund holdings (levels 2 and 3)

Equities in level 2 comprise mutual fund holdings where the underlying investments are quoted equities, as well as a small volume of other mutual funds. Instruments which are classified as level 3 essentially comprise property funds, limited partnership units, private equity investments and investments in unquoted equities.

#### Financial derivatives (levels 2 and 3)

Financial derivatives classified as level 2 are primarily currency forward contracts and interest rate and currency swaps. The valuation is based on swap curves, and credit margins constitute a minor part of the value. In addition, the item comprises derivatives related to commodities and forward rate agreements. These are valued based on observable market prices. Derivatives classified as level 2 also comprise equity derivatives used in Markets' market-making activities. Most of these derivatives are related to the most traded equities on Oslo Børs, and the valuation is based on the price development of the relevant/underlying equity and observable or estimated volatility. Financial derivatives classified as level 3 are primarily connected to currency options, interest rate options in Norwegian kroner, as well as index derivatives. The valuation is based on indicative prices from third parties.

#### Deposits from customers (level 2)

The valuation of deposits carried at fair value includes primarily fixed-rate deposits. The valuation is primarily based on measurement in relation to a swap curve, and changes in credit margins have an insignificant effect.

#### Debt securities issued (level 2)

The valuation is primarily based on observable market data in the form of interest rate curves and credit margins. The item consists mainly of funding in Norwegian kroner. For foreign currency funding, hedge accounting is used where hedges are entered into. In all other respects, debt securities issued are carried at amortised cost.

#### Subordinated loan capital (level 2)

Subordinated loans carried at fair value consist of one loan in Norwegian kroner, and the valuation is based on observable interest rate curves and credit margins.

#### Financial instruments at fair value, level 3

#### Loans to customers

The portfolio of loans carried at fair value consists primarily of fixed-rate loans in Norwegian kroner.

#### Fixed-rate loans

The value of fixed-rate loans is determined by discounting agreed interest flows over the term of the loan, using a discount factor adjusted for margin requirements. The discount factor used has as a starting point a swap rate based on a duration equal to the average remaining lock-in period for the relevant fixed-rate loans. The assumptions underlying the calculation of the margin requirement are based on a review of the market conditions on the balance sheet date and on an assessment of the deliberations made by external investors when investing in a corresponding portfolio. Fixed-rate loans carried at fair value totalled NOK 49 985 million at year-end 2019.

#### Commercial paper and bonds

Investments classified as level 3 primarily consist of corporate high-yield bonds with limited liquidity.

#### Equities including mutual fund holdings

Investments classified as level 3 consist of private equity funds, limited partnerships and unquoted equities. A common denominator for these investments is that there is a lag in the access to information from the units. In times of financial market turmoil, there may be considerable uncertainty related to the valuation of these investments.

#### Financial derivatives, assets and liabilities

Items classified as level 3 are primarily currency options, interest rate options in Norwegian kroner and derivatives related to developments in the consumer price index.

| Amounts in NOK million     | Carrying amount | assumptions                                  | Carrying amount  | assumptions                                  |  |
| Loans to customers         | 49 995          | (146)  | 48 794           | (147)  |  |
| Commercial paper and bonds | 356             | (1)  | 319              | (4)  |  |
| Shareholdings              | 795             |  | 741              |  |  |
| Financial derivatives, net | 333             |  | 382              |  |  |

In order to show the sensitivity of the loan portfolio, the discount rate on fixed-rate loans has been increased by 10 basis points.

Level 3 bonds mainly represent investments in Norwegian industries, offshore and power companies. A 10 basis point increase in the discount rate has had insignificant effects.

## Note 29 Offsetting

The table below presents the potential effects of the banking group's netting arrangements on financial assets and financial liabilities. See note 1 Accounting principles for more information.

#### **Restricted assets**

Local statutory capital requirements might restrict the ability of the banking group to access or transfer assets freely to or from other entities within the banking group and to settle liabilities within the banking group.

Restrictions affecting the DNB Bank Group's ability to use assets:

- The DNB Bank Group has pledged assets to collateralise its obligations (pledged securities) and issued covered bonds (cover pool).
- The DNB Bank Group has pledged collateral in connection with derivative instruments, see note 15 Financial derivatives and hedge accounting for further information.

| Cover pool  | DNB          | DNB Boligkreditt AS |  |  |  |
|---|--------------|---------------------|--|--|--|
| Amounts in NOK million  | 31 Dec. 2019 | 31 Dec. 2018        |  |  |  |
| Pool of eligible loans  | 632 580      | 623 859             |  |  |  |
| Market value of eligible derivatives  | 41 595       | 39 482              |  |  |  |
| Total collateralised assets   | 674 176      | 663 342             |  |  |  |
|   |              |                     |  |  |  |
| Debt securities issued, carrying value  | 471 715      | 478 548             |  |  |  |
| Less valuation changes attributable to changes in credit risk on debt carried at fair value | (78)         | (358)               |  |  |  |
| Debt securities issued, valued according to regulation <sup>1)</sup>                        | 471 637      | 478 189             |  |  |  |
| Collateralisation (per cent)  | 142.9        | 138.7               |  |  |  |

 The debt securities issued are bonds with preferred rights in the appurtenant cover pool. The composition and calculation of values in the cover pool are defined in Sections 11-8 and 11-11 of the Financial Institutions Act with appurtenant regulations.

## Note 32 Securities received which can be sold or repledged

| DNB Bank ASA |         | Securities received  | DNB I   | Bank Group |

1) Values in the accounts of associated companies. Preliminary and unaudited accounts have been used.

2) Include deferred tax positions and value adjustments not reflected in the company's balance sheet.

#### **Transactions 2019**

On 30 September, DNB completed the sale of part of its ownership interest in the Baltic banking group Luminor to a consortium led by private equity funds managed by Blackstone. After the transaction, DNB holds a 20 per cent stake in the Luminor Group through the wholly owned subsidiary DNB Baltic Invest AB.

#### **Transactions 2018**

At the end of April 2018, the Norwegian Competition Authority approved the merger between Vipps, BankID Norge and BankAxept. Finanstilsynet gave its approval at the beginning of June 2018.

1) DNB Asia Ltd has part of its share capital denominated in SGD (due to local requirements) and a part of its share capital denominated in USD.

2) DNB Capital LLC, a limited liability company, has paid-in capital of USD 2.4 billion.

#### Hedging of investments in subsidiaries

In DNB Bank ASA, currency risk associated with foreign currency investments in subsidiaries is subject to fair value hedging. The hedging instruments used are mainly debt securities issued. Changes in the value of the investments and hedging instruments resulting from exchange rate movements are recorded in the income statement. At group level, net investments in subsidiaries are hedged through cash flow hedges for an amount corresponding to DNB Bank's investments. Changes in the value of investments and hedging instruments are recorded in the comprehensive income statement. Ineffectiveness in the hedging relationship is recognised in the income statement. The weakening of the Norwegian krone through 2019 increased the value of investments in subsidiaries by NOK 459 million, which was offset by a corresponding reduction in the value of hedging contracts, adjusted for tax effects. In 2018, there was an increase in the value of investments in subsidiaries by NOK 1 060 million.

#### Goodwill

The risk-free interest rate is set at 3 per cent, the market risk premium is set at 5 per cent, and the long-term growth factor is set at 2.0 per cent for all cash-generating units. Beta values are estimated separately for each cash-generating unit. Required rate of return is before tax. For a detailed description of methods and assumptions used in the calculation of the recoverable amount for goodwill, see note 1 Accounting principles.

#### Personal customers

This unit encompasses banking operations (loans and deposits) for personal customers in the regional network in Norway, and recorded goodwill mainly stems from the merger between DnB and Gjensidige NOR and the acquisition of Nordlandsbanken. In addition, some goodwill remains from previously acquired offices in Gjensidige NOR. Key assumptions for cash flows during the plan period are developments in margins, volumes and impairment of loans.

#### Small and medium sized enterprises

This unit encompasses banking operations (loans and deposits) for corporate customers in the regional network in Norway, and recorded goodwill mainly stems from the merger between DnB and Gjensidige NOR. Key assumptions for cash flows during the plan period are developments in margins, volumes and impairment of loans.

#### DNB Finans - car financing

The unit encompasses DNB's car financing operations in Norway and Sweden, and goodwill stems from DNB's acquisition of Skandiabanken's car financing operations with effect from 2008. Critical assumptions for cash flows during the plan period are car sales figures and DNB Finans' ability to retain customer relations with important car dealers, along with long-term margin developments and the level of impairment of loans.

1) Based on cost less any residual value, other assets are subject to straight-line depreciation over their expected useful life within the following limits:

Technical installations10 yearsMachinery3-10 yearsFixtures and fittings5-10 yearsComputer equipment3-5 yearsMeans of transport5-7 years

The DNB Bank ASA has not placed any collateral for loans/funding of fixed assets, including property.

## Note 38 Leasing

DNB Finans offers operational and financial leasing contracts, fleet management and loans to corporate customers, public sector entities and consumer in Norway, Sweden, Denmark and Finland. The business is conducted through vendor partnerships and direct sales, in close cooperation with the client advisers in DNB Bank where possible. Focus is on financing standard assets where there is an existing and functioning second hand market. The largest asset class in the portfolio is passenger cars and LCVs. Other large asset classes are buses, trucks and trailers and construction equipment and machinery.

**DNB Bank Group** 

## Note 45 Remunerations etc.

## Pursuant to Section 6-16a of the Norwegian Public Limited Companies Act, the Board of Directors will present the following statement on remunerations to the Annual General Meeting for voting:

#### A. Standards for the coming accounting year

Financial institutions are required to publish information about the main principles for determining remuneration, criteria for the stipulation of any variable remuneration and quantitative information on remuneration to senior executives. The information in the Board of Directors statement on the stipulation of salaries and other remuneration to senior executives below, represents such information, as stipulated in the Financial Institutions Regulations.

The Group standard for remuneration in the DNB Group applies to the total remuneration to all permanent employees in the DNB Group and has been approved by the Board of Directors. The standard comprises total remuneration (fixed salary, short and long-term incentives and pensions) and employee benefits (personnel insurance and other employee benefits). The Group standard shall ensure that the Group's remuneration schemes comply with regulatory requirements and the government's guidelines on executive pay.

According to the standard, total remuneration is to be based on a total evaluation of the performance of the Group, as well as the unit's and each individual's contributions to value creation. Total remuneration should be structured to ensure that it does not expose the Group to unwanted risk. The remuneration should be competitive, but also cost-effective for the Group.

Furthermore, the standard specifies that total remuneration shall consist of fixed salary, any supplementary pay related to the relevant position and a variable part where appropriate. Fixed salary elements, including supplementary pay related to the position or market conditions, should correspond with the responsibilities and requirements assigned to each position, as well as its complexity, while variable remuneration should encourage increased performance and desired conduct.

Variable remuneration is based on an overall performance assessment in relation to the results achieved within defined target areas for the Group, unit and individual ('what we deliver'), as well as behaviour and target attainment related to the Group's purpose, values, Code of Conduct, compliance and leadership principles ('how we deliver'). Furthermore, it should counteract excessive risk-taking and promote sound and efficient risk management in DNB. Variable remuneration cannot exceed 50 per cent of fixed salary for senior executives and 100 per cent for other risk takers.

The Group standard shall ensure that the use of variable remuneration complies with the regulatory provisions that apply to the Group's various areas of operation and geographical locations. Special rules have been adopted for variable remuneration to senior executives, employees with responsibilities which are of great importance to the company's risk exposure ('risk takers'), and employees in independent control functions.

DNB's variable remuneration scheme applies globally, though non-Norwegian branch offices and subsidiaries will also be required to comply with local legislation. In cases where Norwegian regulations deviate from local legislation, the Group will seek advice from the relevant authorities and international experts to ensure that the practice is in compliance with both Norwegian and local regulations.

Remunerations to the Group Chief Executive Officer (CEO) and other members of the Group Management team should, at all times, support prevailing strategy and values, while contributing to the attainment of the Group's targets. The remunerations shall inspire conduct that builds the desired corporate culture with regard to performance and profit orientation. No changes have been made in the principles for the stipulation of variable remunerations compared with the statement for the previous year.

The Board emphasises the government's guidelines on executive pay when designing and determining remuneration schemes for the Group. Any deviations from these guidelines must be justified in accordance with the guidelines' 'comply-or-explain' principle.

#### Remuneration structure

Fixed salary elements should normally constitute the main part of the total remuneration and be of such a size that in some years, it can be determined that no variable remuneration will be allocated. The individual salary level is determined on the basis of the responsibilities and complexity of each position, as well as the current market level for similar positions and competence.

To ensure the necessary flexibility and to be an attractive employer in the competition for sought-after competence, supplementary pay related to the position or market conditions can be added to the agreed fixed salary.

#### Variable remuneration

The Board of Directors will determine overall criteria, principles and framework for variable remuneration. Variable remuneration shall be allocated based on a comprehensive assessment of performance, and shall as a main rule not exceed 50 per cent of the agreed fixed salary elements. The overall remuneration structure should be of such a nature that it does not contribute to unwanted risk-taking on the part of the individual employee.

For 2020, the Board of Directors has decided that target attainment related to the Group's financial ambitions for return on equity and cost/income ratio should have a weighting of 60 per cent when determining variable remuneration. In addition to the financial targets, strategy-related qualitative and quantitative targets have been established. The degree of achievement of these targets is determined based on an overall assessment and has a weighting of 40 per cent. Conditions such as compliance and ethical behaviour are also included in the overall assessment. The Group's financial target figures have been broken down into relevant targets for the various business areas and staff and support units.

The above targets will be key elements when calculating and allocating the variable remuneration for 2020. All targets have been defined and communicated to the relevant business areas and staff and support units as part of the work with and follow-up of the targets for 2020.

The variable remuneration for 2020 will be determined by means of an overall assessment of performance, based on a combination of quantitative attainment of pre-set performance targets and qualitative assessments of how the targets were achieved.

The Board of Directors will determine a maximum limit for total variable remuneration in the Group, excluding DNB Markets, DNB Eiendom and investment managers in DNB Asset Management. The limit is determined based on the attainment of Group targets over the past two years, combined with a general assessment of other important parameters and the Group's financial capacity. This will be allocated to the organisation based on the individual units' target attainment and contributions to the Group's performance. With respect to DNB Markets and investment managers in DNB Asset Management, separate limits will be determined for variable remuneration based on the profits achieved by the unit and an overall assessment, which is in line with market practice for these types of operations. Similarly, the remuneration model in DNB Eiendom is consistent with market practice, with a high share of variable remuneration based on individual performance.

#### Special rules for risk takers

DNB has prepared and implemented special rules for identified risk takers, employees responsible for independent control functions and senior executives, hereinafter referred to as risk takers. The special rules supplement the general Group standard for remuneration and have been formulated in compliance with the Financial Services Regulations and the related circular from Finanstilsynet (the Financial Supervisory Authority of Norway).

In accordance with prevailing requirements, DNB has surveyed the entire organisation to identify risk takers based on the criteria resulting from the circular and the EU regulation in this area.

For risk takers, the following main principles apply to variable remuneration:

- The remuneration is earned over a period of two years.
- Variable remuneration cannot exceed the agreed fixed remuneration.
- Senior executives in independent control functions will receive no variable remuneration.

For risk takers, 50 per cent of the earned variable remuneration after tax is deferred and conditional and paid in the form of DNB shares. The remuneration paid in the form of shares is subject to a minimum holding period and is released in stages over three years. The deferred and conditional payments will be in compliance with the stipulations in the Financial Services Regulation. During the period in which the right to the shares/instruments is conditional, a subsequent risk adjustment shall be made, including adjustments related to compliance. If the assessment shows that the original risk adjustment was incorrect, the risk taker's right to conditionally allocated shares may be wholly or partly repealed. The same applies if the allocation was found to be based on incorrect grounds or insufficient information.

Shares with a minimum holding period have a lower market value than freely negotiable shares. In order to compensate for this disadvantage, additional shares are granted corresponding to the difference in the estimated market value of freely negotiable shares and shares with the applicable holding period. The calculation is performed according to recognised methodology for such pricing and in line with Norwegian tax assessment practice.

#### Pensions, etc.

Pension schemes and any agreements on termination payments etc. should be considered relative to other remuneration and should ensure competitive terms.

All employees in Norway are members of the defined-contribution pension scheme pursuant to the Norwegian Occupational Pension Act.

Up to 31 December 2016, many senior executives had agreements entitling them to a defined-benefit pension which gave them rights beyond the general occupational pension scheme. As of 1 January 2017, these defined-benefit entitlements have been replaced by defined-contribution direct pension schemes based on the same calculation assumptions and principles as those used in the conversion of the Group's defined-benefit occupational pension scheme in 2016, pursuant to the Norwegian Occupational Pensions Act.

The pension entitlements of the senior executives, calculated on the conversion date, are estimated to correspond to the technical value of the former defined-benefit scheme. Future capital entitlements now comprise annual contributions and the return on the entitlements earned. The annual contributions are calculated individually to ensure that, based on the calculation assumptions, the defined-contribution direct pension scheme will have the same value as the former defined-benefit agreement would have given at the agreed retirement age.

Termination payment agreements and pension schemes must comply with the government's guidelines on executive pay. As a main rule, the Group will honour existing agreements.

#### Remuneration to senior executives

The Group Chief Executive Officer's remuneration is determined by the Board of Directors. The Group Chief Executive Officer determines the remuneration to senior executives in agreement with the Board.

The total remuneration to senior executives consists of fixed salary (main element), any supplementary pay related to the position, benefits in kind, variable remuneration and pension and insurance schemes. The total remuneration is determined based on the need to offer competitive terms. The remuneration should promote the Group's competitiveness in the relevant labour market without making the Group a market leader in terms of salaries, and also promote the Group's profitability, as well as the desired income and cost development. The total remuneration should take into account DNB's reputation and ensure that DNB attracts and retains senior executives with the desired skills and experience. Taking all this into account, the Board emphasises moderation in the determination of the remuneration to senior executives.

The fixed salary and supplementary pay related to the position are subject to an annual evaluation and determined based on salary levels in the labour market in general and in the financial industry in particular.

The variable remuneration to senior executives is determined based on an overall assessment of the results achieved within defined target areas. Variable remuneration cannot exceed 50 per cent of fixed salary.

Benefits in kind may be offered to senior executives to the extent the benefits have a relevant connection to the employee's function in the Group or are in line with market practice. The benefits should not be significant relative to the employee's fixed salary.

A conditional agreement has been entered into with some members of the Group Management team that an additional 30 per cent of ordinary fixed salary is to be paid in shares. This amount is set aside throughout the year, and the net amount after tax is used to purchase shares in DNB ASA after the end of the year, with a minimum holding period for as long as the person is part of the Group Management team. After leaving this position, the shares are released in stages over a period of three years. This scheme is subject to the Annual General Meeting's approval. Should the Annual General Meeting not approve the scheme, entitlements from the scheme will be paid as a lump sum, and the 30 per cent supplement will be replaced by an increase in the ordinary fixed salary.

#### B. Statement on the senior executive salary policy in the previous accounting year

The Group standards determined in 2011, including changes effective as from 2017, have been followed.

#### Total remuneration of the Group Chief Executive Officer (CEO)

The CEO's total remuneration consists of fixed salary (main element), benefits in kind, variable remuneration and pension and insurance schemes. The total remuneration is determined on the basis of an overall assessment of performance where the main element of the variable part of the remuneration is based on the Group's financial targets. In addition to the financial targets, strategic goals have been established for 2019 where, among other things, developments in the organisation's competence, innovative power and corporate responsibility have been assessed. In the Board of Directors' overall assessment of the CEO's variable remuneration, emphasis is also placed on compliance with external and internal regulations, ethical guidelines and leadership principles. The total remuneration to the CEO should be competitive, but not market-leading. DNB's reputation must also be taken into account.

In connection with the appointment of Kjerstin R. Braathen as new CEO, the Board of Directors made a thorough assessment of the CEO's total remuneration. The Board considered factors such as the complexity of the position as CEO of DNB, as well as Braathen's characteristics and competence, compared with similar positions in the Norwegian business community and other Nordic financial institutions. The Board decided on a total remuneration on the same level as the former CEO, Rune Bjerke. The Board considers this to be a competitive level, also in comparison with other large Norwegian companies with state ownership. The Board considers that a continuation of the former CEO's total remuneration level is in accordance with the principle in the government guidelines that the remuneration to senior executives should not have an adverse effect on the company or the company's reputation.

Braathen's pension rights give significantly lower annual accruals compared with Rune Bjerke's pension rights. A higher fixed salary has therefore been agreed with the new CEO, as well as a conditional agreement on fixed salary in the form of shares. The various remuneration elements are described below.

#### The CEO's fixed salary

Upon taking over as CEO, the CEO's fixed salary was set at NOK 7 665 000. The fixed salary is subject to annual evaluation and is determined based on, among other things, salary levels in the labour market in general and in the financial industry in particular, and on remuneration levels for comparable positions.

A conditional agreement has also been entered into with the CEO, that a supplement of 30 per cent of the fixed salary is to be paid in the form of shares. The agreement is conditional because it requires approval by the Annual General Meeting. The amount is set aside throughout the year, and the net amount after tax is to be used to purchase shares in DNB ASA, with a minimum holding period for as long as the CEO holds the position. Upon leaving this position, the shares are released in stages over a period of three years. Should the General Meeting not approve the scheme, entitlements from the scheme will be paid as a lump sum, and the 30 per cent supplement will be replaced by an increase in the CEO's ordinary fixed salary. Consequently, the CEO's total remuneration is not affected by parts of the fixed salary being paid in the form of shares.

#### The CEO's variable remuneration

Variable remuneration to the CEO is determined based on an overall assessment of performance in relation to pre-defined target areas. Variable remuneration cannot exceed 50 per cent of fixed salary. The CEO is not awarded any performance-based benefits other than the stated variable remuneration.

#### The CEO's benefits in kind

In addition to variable remuneration, the CEO can be granted benefits in kind such as company cars, newspapers/periodicals and phones/communication devices. The granting of benefits in kind must be related to the CEO's function in the Group or be in line with market practice, and should not be significant in relation to the CEO's fixed salary.

#### The CEO's pension scheme

The CEO is a member of the defined-contribution pension scheme pursuant to the Occupational Pension Act, with a pensionable income equivalent to 12 times the National Insurance basic amount (G), on a par with all other employees in Norway.

The CEO also has a defined-contribution direct pension agreement. This agreement was continued from a previous position with equal annual earnings in NOK as before becoming CEO. The annual contribution will be adjusted in line with ordinary changes in pensionable income. After the age of 67, no further contribution will be accrued in the defined-contribution direct pension agreement.

In connection with the appointment, the Board considered the CEO's individual pension agreement, also in relation to the government's guidelines on executive pay. The government's guidelines state that senior executives' pension terms must be in line with other employees' terms in the company, and that the pensionable income should not exceed 12 times the National Insurance basic amount, which is the maximum limit in Norwegian tax-favoured group pension schemes. The 2015 document 'The Government's Ownership Policy', specifies an expectation that companies in internal recruitment processes for leading positions renegotiate existing agreements, in order to bring the remuneration up to compliance with the government's guidelines.

When the CEO's employment contract was negotiated in June 2019, the Board of Directors decided to continue the individual pension agreement. In addition to the negotiation situation, the Board emphasised that the rights attached to the CEO's individual accumulation of pension entitlements were originally established in 2003. The Board also emphasised that the long term of the agreement has formed the basis of the CEO's financial planning and allocations over several years, and that a cancellation of the agreement would have had unreasonable effects.

Against this background, the Board considered that there were special circumstances that provided a basis for departing from the government's guidelines with regard to pensions.

#### The CEO's term of notice and termination payment rights

The CEO has a term of notice of six months. In the event of a termination of the employment initiated by the employer, the CEO is entitled to a termination payment equivalent to six months' fixed salary at the end of the term of notice. If the CEO enters another employment relationship, the termination payment shall be reduced. According to the government's guidelines on executive pay, the termination payment shall be reduced by a proportionate amount based on the annual income in the new employment relationship. To provide an extra incentive to find other employment during the termination pay period, thereby reducing DNB's cost of the agreement, the Board of Directors chose a wording in the termination payment clause stating that the CEO's termination payment will be reduced by an amount equivalent to up to half of the income earned during the termination payment period. Supplementary benefits are retained for a period of three months.

#### Other conditional agreements on fixed salary in the form of shares

A conditional agreement has been entered into with two Group Executive Vice Presidents, that a supplement of 30 per cent of ordinary fixed salary is to be paid in shares. This amount is set aside throughout the year, and the net amount after tax is used to purchase shares in DNB ASA after the end of the year, with a minimum holding period for as long as the person is part of the Group Management team. After leaving these positions, the shares will be released in stages over a period of three years. This scheme is subject to the Annual General Meeting's approval. Should the Annual General Meeting not approve the scheme, entitlements from the scheme will be paid as a lump sum and the 30 per cent supplement will be replaced by an increase in the ordinary fixed salary. Consequently, the Group Executive Vice Presidents' total remuneration is not affected by parts of the fixed salary being paid in the form of shares.

#### Changes in the Group Management team

On 31 August 2019, Rune Bjerke resigned as CEO, but he will maintain his employment in DNB with other duties until June 2020. Bjerke's resignation agreement is within the financial framework agreed when he was appointed CEO in 2006 with effect from 1 January 2007. Kjerstin R. Braathen took over as CEO from 1 September 2019. At the same time, Ottar Ertzeid replaced Kjerstin R. Braathen as Chief Financial Officer (CFO), and Alexander Opstad was appointed acting Group Executive Vice President of DNB Markets.

The new Group structure from 23 September 2019 led to changes in the composition of the Group Management team. Maria Ervik Løvold, Alexander Opstad and Kari Bech-Moen became new permanent members of the Group Management team. Alf Otterstad left the Group Management team, but maintains his employment in DNB with other duties. Benedicte S. Fasmer and Solveig Hellebust left their positions, with agreements giving them the right to termination payment over a period of six months from the expiry of the term of notice. Other Group Executive Vice Presidents remained members of the Group Management team, some with altered responsibilities. Their terms have been adapted to their new responsibilities.

#### C. Binding guidelines for shares, subscription rights, options, etc. for the coming accounting year

An amount corresponding to 50 per cent of the earned variable remuneration of the CEO, senior executives and other risk takers is invested in shares in DNB ASA, with a minimum holding period of one year for one-third, two years for one-third and three years for one-third of the shares.

A share programme will be established in 2020, in which members of Group Management can be included. The programme is approved by the Annual General Meeting by adopting these binding guidelines.

The purpose of the share programme is to strengthen the common interest of the company's management and shareholders, by increasing the shareholding of the Group Management. Participation in the share programme should not in itself cause an increase in the participants' total remuneration, but serve as an alternative to fixed salary in the form of cash. The size of the share programme will be an addition of up to 30 per cent of fixed salary in the form of cash, which will be determined when the participant is included in the programme. The amount is set aside throughout the year, and the net amount after tax is used to purchase shares in DNB ASA after the end of the year. DNB ASA carries out the share purchase on behalf of the employees by using net amount after tax to buy shares at market price immediately following the presentation of the DNB Group's results for the accrual year. The allocation of shares within the programme will not be based on performance-based criteria, and allocated shares are therefore regarded as fixed salary. Participants cannot dispose of the shares as long as they are part of the Group Management team (minimum holding period). Upon leaving the Group Management team, the shares are released over a period of three years, with one-third each year.

The Board of Directors has considered the scheme of fixed salary in the form of shares, also in relation to the government's guidelines on executive pay. These guidelines assume that the allocation of shares through a share programme must be based on performance-based criteria. In accordance with the guidelines, the government can accept a share programme with a limit of up to 30 per cent of fixed salary, in addition to a variable salary of up to 50 per cent of fixed salary.

Like the government guidelines, the special legislation for financial institutions limits variable remuneration to up to 50 per cent of fixed salary. The legislation for financial institutions does not, however, allow extending the limit for share programmes with performance-based criteria. Extending the limit for share programmes as part of fixed salary, without performance-based criteria, will be in compliance with the legislation applicable to financial institutions.

Against this background, the Board of Directors has considered whether a portion of the fixed salary for members of the Group Management should be paid in the form of shares instead of cash, and whether there is a basis for deviating from the requirement for performance-based criteria that follow from the government guidelines. The Board has emphasised that strengthening the common interest of the shareholders and the company's management is both positive and desired. The Board has also emphasised that the special legislation for financial institutions puts DNB in a different position than other companies with state ownership.

Following an overall assessment, the Board has concluded that the restrictions resulting from the special legislation applicable to financial institutions provide a basis for departing from the government guidelines.

Other shares, subscription rights, options and other kinds of remuneration only linked to shares or the development of the share price in the company or in other companies within the same Group, are not allocated to the CEO or senior executives. The CEO and senior executives are, however, given the opportunity to participate in a share subscription scheme on the same terms as other employees in the DNB Group.

## D. Statement on the effects on the company and the shareholders of remuneration in the form of shares, subscription rights, options, etc.

An amount corresponding to 50 per cent of the gross variable remuneration earned by the CEO, senior executives and other risk takers in 2019 is invested in shares in DNB ASA. The Board of Directors believes that the awarding of shares to senior-executives, in view of the total number of shares in the company, will have no negative consequences for the company or the shareholders. The same will apply to the introduction of a fixed salary supplement in the form of shares, as described in section C.

#### Terms for the chair of the Board of Directors

In 2019, Olaug Svarva received a remuneration of NOK 587 thousand as Chair of the Board of Directors of DNB ASA, and a remuneration of NOK 472 thousand as Chair of the Board of Directors of DNB Bank ASA.

#### Terms for the Group Chief Executive Officer (CEO)

Kjerstin R. Braathen took over as CEO on 1 September 2019, with a fixed annual salary of NOK 7 665 thousand. In addition, Braathen receives a fixed salary supplement of 30 percent which is paid out in shares in 2020 with a minimum holding period as long as she is a member of the Group Management. The Board of Directors in DNB ASA set the CEO's variable remuneration for 2019 to NOK 2 230 thousand. Variable remuneration will be paid in 2020 of which 50 per cent is deferred and conditional and paid in the form of DNB shares. The share part is divided into three with a holding period of up to three years. Benefits in kind were estimated at NOK 213 thousand. Costs of NOK 774 thousand in connection with the CEO's pension scheme were recognised for the 2019 accounting year. The costs are divided between DNB ASA and DNB Bank ASA.

Former CEO Rune Bjerke received an ordinary remuneration of NOK 6 285 thousand in 2019, compared with NOK 6 173 thousand in 2018.

#### Subscription rights programme for employees

There was no subscription rights programme for employees in the DNB Bank Group at year-end 2019.

The table has been constructed to show rights earned during the period.

#### Remunerations etc. in 2019

1) Fixed annual salary as members of the Board of Directors or the Group Management team during the year.

 Includes remuneration received from all companies within the DNB Group for service on Boards of Directors and committees. For those who have received remuneration for more than one position in 2019, the following amounts are related to their board positions in DNB Bank ASA:

Olaug Svarva: NOK 472 332

Gro Bakstad: NOK 154 667

Some persons are members of more than one body.

3) Includes salary payments for the entire year and holiday pay on variable remuneration. Some employees were members of the Board of Directors or the Group Management team for only parts of the year.

4) Variable remuneration earned in 2019, excluding holiday pay. The amount includes the Group bonus, which is paid according to defined allocation criteria to all permanent employees as at 31 December 2019. For senior executives who have changed positions during 2019, the basis for the variable remuneration is calculated pro rata for the old and the new position.

5) An agreement has been entered into with some members of the Group Management team concerning a fixed salary supplement, which will be allocated for share purchases (see description earlier in note 45).

6) Loans to shareholder-elected representatives are extended on ordinary customer terms. Loans to DNB employees are extended on special terms, which are close to ordinary customer terms.

7) Pension rights earned during the year (SCC). The calculation of pension entitlements is based on the same economic and actuarial assumptions as those used in note 24 Pensions.

8) Ida Lerner is on international assignment from Sweden to Norway. In accordance with DNB's international assignment policy, she has assignment-related benefits in kind, such as accommodation and children's school costs. Both her salary and benefits in kind are provided as net entitlements. The amounts have been grossed up with Norwegian taxes by an external service provider. As she is not a member of the Norwegian National Insurance Scheme, no social security contributions have been included in the gross amounts.

#### DNB Bank Group

The table has been constructed to show rights earned during the period.

DNB Bank Group

1) Fixed annual salary at year-end for employees who were members of the Board of Directors or the Group Management team during the year.

2) Includes remuneration received from all companies within the DNB Group for service on Boards of Directors and committees. For those who have received

remuneration for more than one position in 2018, the following amounts are related to their board positions in DNB Bank ASA: Olaug Svarva: NOK 318 000

Anne Carine Tanum: NOK 151 000

Some persons are members of more than one body.

 Includes salary payments for the entire year and holiday pay variable remuneration. Some employees were members of the Board of Directors or the Group Management team for only parts of the year.

4) Variable remuneration earned excluding holiday pay.

5) Loans to shareholder-elected representatives are extended on ordinary customer terms. Loans to DNB employees are extended on special terms, which are close to ordinary customer terms.

6) Pension rights earned during the year (SCC). The calculation of pension entitlements is based on the same economic and actuarial assumptions as those used in note 24 Pensions.

7) The agreed retirement age is specified when a special agreement has been entered into which includes related defined-contribution pension entitlements deviating from stipulations in the company's general group standards

8) Ida Lerner is on international assignment from Sweden to Norway. Prior to joining DNB's management team on 11 December 2017, she was head of DNB CEMEA in London, also on an international assignment contract. In accordance with DNB's international assignment policy, she has assignment-related benefits in kind, such as accommodation and children's school costs. Both her salary and benefits in kind are provided as net entitlements. The amounts have been grossed up with Norwegian taxes by an external service provider. As she is not a member of the Norwegian National Insurance Scheme, no social security contributions have been included in the gross amounts.

1) Includes fees for interim audit and auditing funds managed by DNB.

2) Mainly refers to tax-related advice to employees on international assignments.

## Note 46 Information on related parties

DNB Bank ASA is 100 per cent owned by DNB ASA. The largest owner of the DNB Group is the Norwegian government, represented by the Ministry of Trade, Industry and fisheries, which owns and controls 34 per cent of the shares in the parent company DNB ASA.

A large number of bank transactions are entered into with related parties as part of ordinary business transactions, comprising loans, deposits and foreign exchange transactions. These transactions are based on market terms. The table below shows transactions with related parties, including balance sheets at year-end and related expenses and income for the year. Related companies in the table are associated companies plus DNB Savings Bank Foundation. See note 34 for a specification of associated companies. Loans to board members and their spouses/ partners and under-age children are extended on ordinary customer terms. Loans to group management, like loans to other group employees, are extended on special terms, which are close to ordinary customer terms. Transactions with other DNB Bank Group companies are shown in a separate table.

1) For DNB Bank ASA, the table includes transactions with subsidiaries, sister companies and DNB ASA. For the banking group, the table includes transactions with sister companies and DNB ASA. Investments in bonds issued by related parties are described below and are not included in the table.

2) Other receivables and other liabilities in DNB Bank ASA as at 31 December 2018 and 2019 were mainly financial derivative contracts with DNB Boligkreditt as counterparty and group contributions.

3) DNB Bank ASA recognised NOK 12 461 million and NOK 3 293 million in group contributions from subsidiaries in 2019 and 2018, respectively.

#### Major transactions and agreements with related parties

#### **DNB Boligkreditt AS**

DNB Boligkreditt (Boligkreditt) is 100 per cent owned by DNB Bank ASA. As part of ordinary business transactions, a large number of banking transactions are entered into between Boligkreditt and the bank, including loans, deposits and financial derivatives used in currency and interest rate risk management. Transactions are carried out on market terms and are regulated in the "Agreement relating to transfer of loan portfolio between DNB Bank ASA and DNB Boligkreditt AS" (the transfer agreement) and the "Contract between DNB Bank ASA and DNB Boligkreditt AS" (the maagement agreement).

The transfer agreement regulates the transfer of loan portfolios qualifying as collateral for the issue of covered bonds. During 2019, portfolios of NOK 1.5 billion (NOK 3.5 billion in 2018) were transferred from the bank to Boligkreditt.

Pursuant to the management agreement, Boligkreditt purchases services from the bank, including administration, bank production, distribution, customer contact, IT operations and financial and liquidity management. Boligkreditt pays an annual management fee for these services based on the lending volume under management and the achieved lending spreads. The management fee paid in 2019 totalled NOK 0.7 billion (NOK 0.7 billion in 2018).

At end-December 2019 the bank had invested NOK 16.2 billion (NOK 9.7 billion in 2018) in covered bonds issued by Boligkreditt.

Boligkreditt enters into reverse repurchasing agreements (reverse repos) with the bank as counterparty. The value of the repos amounted to NOK 5.2 billion at end-December 2019 (NOK 15.1 billion in 2018).

Boligkreditt has a long-term overdraft facility in DNB Bank ASA with a limit of NOK 170 billion.

#### **DNB Livsforsikring AS**

As part of the company's ordinary investment activity, DNB Livsforsikring has subscribed for covered bonds issued by DNB Boligkreditt. At year-end 2019, DNB Livsforsikring's holding of listed DNB Boligkreditt bonds was valued at NOK 1.5 billion (NOK 1.9 billion in 2018).

#### Luminor Group AB

DNB's ownership interest in Luminor Group AB at year-end 2019 was approximately 20 per cent. At year-end 2018, the ownership interest was approximately 44 per cent. At end-December 2019, DNB Bank ASA did not provide any funding to Luminor Group AB, whereas in 2018, the funding totalled NOK 21.0 billion.

## Note 47 Contingencies

Due to its extensive operations in Norway and abroad, the DNB banking group will regularly be party to a number of legal actions. None of the current disputes are expected to have any material impact on the banking group's financial position.

The DNB banking group is subject to a number of complaints and disputes relating to structured products and other investment products.

## Statement pursuant to Section 5-5 of the Securities Trading Act

We hereby confirm that the annual accounts for the banking group and the company for 2019 to the best of our knowledge have been prepared in accordance with applicable accounting standards and give a true and fair view of the assets, liabilities, financial position and profit or loss of the banking group and the company taken as a whole.

The directors' report gives a true and fair review of the development and performance of the business and the position of the banking group and the company, as well as a description of the principal risks and uncertainties facing the banking group.

#### INDEPENDENT AUDITOR'S REPORT

To the Annual Shareholders' Meeting of DNB Bank ASA

### Report on the audit of the financial statements

#### Opinion

We have audited the financial statements of DNB Bank ASA comprising the financial statements of the parent company and the Group. The financial statements of the parent company comprise the balance sheet as at 31 December 2019, the income statement, statement of comprehensive income, statements of cash flows and changes in equity for the year then ended and notes to the financial statements, including a summary of significant accounting policies. The consolidated financial statements of comprehensive income, cash flows and changes in equity for the year then ended and notes to the financial statements comprise the balance sheet as at 31 December 2019, the income statement, statements of comprehensive income, cash flows and changes in equity for the year then ended and notes to the financial statements, including a summary of significant accounting policies.

In our opinion,

- the financial statements are prepared in accordance with the law and regulations;
- the financial statements present fairly, in all material respects, the financial position of the parent company as at 31 December 2019, and of its financial performance and its cash flows for the year then ended in accordance with the Norwegian Accounting Act and accounting standards and practices generally accepted in Norway;
- the consolidated financial statements present fairly, in all material respects the financial position of the Group as at 31 December 2019 and of its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by the EU.

#### **Basis for opinion**

We conducted our audit in accordance with laws, regulations, and auditing standards and practices generally accepted in Norway, including International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report. We are independent of the Company and the Group in accordance with the ethical requirements that are relevant to our audit of the financial statements in Norway, and we have fulfilled our ethical responsibilities as required by law and regulations. We have also complied with our other ethical obligations in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

#### Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements for 2019. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. For each matter below, our description of how our audit addressed the matter is provided in that context.

We have fulfilled the responsibilities described in the Auditor's responsibilities for the audit of the financial statements section of our report, including in relation to these matters. Accordingly, our audit included the performance of procedures designed to respond to our assessment of the risks of material misstatement of the financial statements. The results of our audit procedures, including the procedures performed to address the matters below, provide the basis for our audit opinion on the financial statements.

#### Impairment of loans and financial commitments

Loans to customers represent NOK 1 671 350 million (68 % per cent) of total assets for the Group as at 31 December 2019. Financial commitments amount to 643 124 million as at 31 December 2019. Total expected credit losses on loans to customers and financial commitments amount to NOK 11 606 million, of which NOK 2 159 million is based on model calculations (stages 1 and 2) and NOK 9 447 million is based on individual assessments (stage 3).

In respect of the ECL calculation, IFRS 9 requires models, but does not prescribe a specific approach, thus requiring management to use judgement to obtain an unbiased and probability weighted amount that is determined by evaluating a range of possible outcomes. In addition, the measurement of ECL shall reflect the time value of money and reasonable and supportable information about past events, current conditions and forecasts of economic expectations as well as criteria for significant increases in credit risk at engagement or portfolio level. To calculate the provision the Group is required to make estimates and assumptions, including the probability of default, exposure at default, loss given default and forecasts of economic expectations. Loans subject to individual assessments (stage 3) require judgement about various assumptions, including the expected future cash flows and the value of underlying collateral. Due to the use of judgement in applying the ECL measurement criteria of IFRS 9, the complexity of the calculation and the effect on estimates, we consider provisioning for ECL a key audit matter.

We assessed the Group's methodology applied for calculating ECL including the criteria for determining significant increases in credit risk. We assessed the design and tested the effectiveness of controls related to assumptions, input and calculation of ECL. We also tested IT general controls over access and change management for related IT-systems.

We involved specialists on our team and assessed management's internal validation of the ECL models. We evaluated management's assessments of multiple economic scenarios as well as macroeconomic data used to create forward looking information, including parameters and conclusions from management's expert credit judgement forum. For loans subject to individual assessment by management (stage 3), we assessed the expected future cash flows and the estimated value of underlying collateral for a sample of engagements.

Furthermore, we assessed the adequacy of the disclosures in the financial statements related to IFRS 9 and ECL, and refer to note 4, 5, 6, 7, 8, 9, 10 and 11 in the consolidated financial statements.

#### Valuation of Financial Instruments

Unlisted or illiquid financial instruments measured at fair value are valued based on models that use assumptions that are not observable in the market place. The valuation of these instruments therefore have a higher risk of errors. Such instruments comprise assets of NOK 53 014 million and liabilities of NOK 1 536 million measured at fair value in the consolidated balance sheet and classified as level 3 instruments within the fair value hierarchy. Due to the materiality of the unlisted or illiquid instruments, and the increased risk of errors, we considered the valuation of these instruments a key audit matter.

We assessed the design and tested the operating effectiveness of internal controls over the valuation process including management's determination and approval of assumptions and methodologies used in model-based calculations as well as management's review of valuations provided by internal experts. We also assessed pricing model methodologies against industry practice and valuation guidelines. We performed independent valuations for selected instruments and used external source data where available, and compared results of our valuations to the Group's valuations.

Level 3 instruments which are presented at fair value on the balance sheet are disclosed in note 28 in the consolidated financial statements.

Independent auditor's report - DNB Bank ASA

#### IT environment supporting financial reporting

The Group has a complex and automated IT environment and is dependent on IT processes for reporting of financial information. To ensure complete and accurate processing and reporting of financial data it is important that controls over appropriate access rights and system changes are designed and operate effectively. Also, controls over transaction processing need to be designed and operate effectively. The operation of the IT environment is largely outsourced to various service providers. The IT environment supporting the financial reporting process is considered a Key Audit Matter as the IT environment is critical to ensure accurate, complete and reliable financial reporting.

We obtained an understanding of the Group's IT environment, including outsourced services and controls related to financial reporting. We tested IT general controls over access management, change management and IT operations. Further we tested automated controls in the IT environment supporting financial reporting. For IT systems outsourced to service providers we evaluated third party attestation reports (ISAE 3402 reports) and assessed and tested the effectiveness of the controls. We involved specialists on our team in the understanding the IT environment and in assessing and testing the operative effectiveness of controls.

#### Other information

Other information consists of the information included in the Company's annual report other than the financial statements and our auditor's report thereon. The Board of Directors and Group Chief Executive (management) are responsible for the other information. Our opinion on the financial statements does not cover the other information, and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information, and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

#### Responsibilities of management for the financial statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with the Norwegian Accounting Act and accounting standards and practices generally accepted in Norway for the financial statements of the parent company and International Financial Reporting Standards as adopted by the EU for the financial statements of the Group, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting, unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

#### Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with law, regulations and generally accepted auditing principles in Norway, including ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

#### Independent auditor's report - DNB Bank ASA

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

#### Report on other legal and regulatory requirements

## Opinion on the Directors' report and on the statements on corporate governance and corporate social responsibility

Based on our audit of the financial statements as described above, it is our opinion that the information presented in the Directors' report and in the statements on corporate governance and corporate social responsibility concerning the financial statements, the going concern assumption and proposal for the allocation of the result is consistent with the financial statements and complies with the law and regulations.

Independent auditor's report - DNB Bank ASA

#### Opinion on registration and documentation

Based on our audit of the financial statements as described above, and control procedures we have considered necessary in accordance with the International Standard on Assurance Engagements (ISAE) 3000, «Assurance Engagements Other than Audits or Reviews of Historical Financial Information», it is our opinion that management has fulfilled its duty to ensure that the Company's accounting information is properly recorded and documented as required by law and bookkeeping standards and practices accepted in Norway.
