## Foreword

It is a pleasure and an honor to have organized the Third International Conference on Affective Computing and Intelligent Interaction (ACII). The conference will be held from 10<sup>th</sup> – 12<sup>th</sup> September 2009 in Amsterdam, The Netherlands. The conference series is the premier forum for presenting research in affective computing and related topics. The conference is organized under the auspices of Humaine Association, and continues the tradition of the previous conferences by maintaining the high standard set by its predecessors.

The conference program includes oral papers, posters, invited presentations, sessions on special topics, mini-tutorials, doctoral consortium, demos, and pre- and post-conference workshops. For the conference, we received 157 contributed papers for review. Each of these was assessed by no fewer than two reviewers, with a large majority of papers being assessed by three reviewers; 60 submissions (38%) were selected for oral presentation and 33 submissions for poster presentation (an overall acceptance rate of 59%). These papers will be accompanied by 3 invited presentations, by Qiang Ji (*Rensselaer Polytechnic Institute, US*); Jonathan Gratch (*Institute for Creative Technologies, US*), and Justine Cassell (*Northwestern University, US*). Three mini tutorials will address a number of challenging issues in the field including modeling emotions in game characters, mental state modeling for brain-computer interfaces, and preference learning for affective modeling. Four special sessions will highlight new trends and challenges in affective computing and intelligent interaction including recognizing non-prototypic emotions from speech, processing real-life affective signals, analyzing emotional content of music and the musical performance, and developing games for training and entertainment (sponsored by the GATE project). A panel session will address one more novel and important challenge – social interaction with robots and virtual agents. The technical program will also present 15 stunning interactive demos. The Doctoral Consortium program consists of 13 student paper presentations. The pre- and post-conference workshops will bring together behavioral, neuro- and computer scientists to pursue links between automatic human behavior recognition and related sciences and applications. The Workshop on Affective Brain-Computer Interfaces explores advantages and limitations of using neuro-physiological signals for automatic affect recognition and related applications. The Workshop on Social Signal Processing explores cognitive models, automatic analysis, and machine synthesis of social signals, and possibilities for their usage towards the realization of socially-aware computing (sponsored by the SSPNet project, [FP7/2007-2013] grant agreement 231287). The Behavior Markup Language Workshop will discuss open issues in defining the “core” of BML. The oral presentations, posters, invited addresses, and workshops bring together related communities to share the latest findings and ideas and pursue continuing and new collaborations in research on affective computing and intelligent interaction.

Many people helped make this conference a reality. We are grateful to the efforts of them all. In particular we are grateful to the Program Committee members that completed the reviewing process in good time. We are grateful to the workshop organizers, Brendan Allison, Stephen Dunne, Dirk Heylen, Alessandro Vinciarelli, Stefan Kopp, Zsofi Ruttkay, and Hannes Vilhjalmsson, for all their efforts to organize these truly interesting events. The special session chairs, Nadia Berthouze, Yang Cai, and Paolo Petta, did a tremendous job in selecting the interesting special sessions program. Jonathan Gratch, Ioannis Patras, and Marc Schröder, did a great job in selecting 15 demos that complement perfectly the technical program. Roddy Cowie, Catherine Pelachaud, and Alessandro Vinciarelli, worked hard to attract, review, and select student papers to be presented as a part of the ACII 2009 Doctoral Consortium. The local organizers, Mannes Poel, Dirk Heylen, Charlotte Bijron, Lynn Packwood, and Alice Vissers-Schotmeijer, have helped a lot by answering numerous participants’ questions and enabling many of the local arrangements for the conference. Ferdinand Beljaars and Pyrrhos Stathis (Fyper VOF), our Web Masters and Publication Chairs, were in charge of the reviewing server, registration, and proceedings. We want to thank them for their invaluable help. Terry Boulton helped us a lot with the communication with the IEEE, a technical sponsor and the publisher of the ACII 2009 proceedings. Finally, we thank the Humaine Association Executive Board members, for their assistance, advice, and support during the organization of this conference.

By papers, location, and content, this promises to be an excellent edition of the Affective Computing and Intelligent Interaction conference series. The conference continues to provide a leading forum for cutting-edge research in human affect modeling, affective computing, and intelligent interaction. We wish all delegates a most enjoyable and productive conference.

Jeffrey Cohn, *University of Pittsburgh*

## KEYNOTE TALK: Thursday September 10, 08:30

### User Affect Modeling, Recognition, and Assistance

**Qiang Ji**, *Rensselaer Polytechnic Institute*

**Biographical Note:** Qiang Ji received his Ph.D degree in Electrical Engineering from the University of Washington. He is currently a Professor with the Department of Electrical, Computer, and Systems Engineering at Rensselaer Polytechnic Institute (RPI). He is also a program director at the National Science Foundation, managing NSF's computer vision and machine learning programs. He has also held teaching and research positions with the Beckman Institute at University of Illinois at Urbana-Champaign, the Robotics Institute at Carnegie Mellon University, the Dept. of Computer Science at University of Nevada at Reno, and the US Air Force Research Laboratory. Prof. Ji currently serves as the director of the Intelligent Systems Laboratory (ISL) at RPI. Prof. Ji's research interests are in computer vision, pattern recognition, and probabilistic graphical models. He has published over 150 papers in peer-reviewed journals and conferences. His research has been supported by major governmental agencies including NSF, NIH, DARPA, ONR, ARO, and AFOSR as well as by major companies including Honda and Boeing. He is an editor on several computer vision and pattern recognition related journals and he has served program chair, technical area chair, and program committee in numerous international conferences/workshops. Prof. Ji has received several awards including the research excellence award from RPI's school of Engineering, 2006; the best paper award from the IEEE Transaction of Vehicular Technology, 2004; the best paper award from IEEE Computer Vision and Pattern Recognition Workshop on Face Recognition Grand Challenge Experiments, 2005; and the Honda initiation award, 1998. He is a senior member of the IEEE.

**Abstract:** User emotional states can seriously affect user's psychomotor and decision-making capabilities. The goal of this research is to develop a system to recognize task-specific negative user affective states (e.g. fatigue and stress), and to provide the appropriate intervention to compensate performance decrement resulted from these negative states. The proposed system consists of two major components: multi-modality user state sensing, and user affect and assistance modeling.

For user state sensing, we develop a real time non-invasive system that provides user state measurements from sensors of different modalities. The sensory measurements include physical appearance (facial expression, eye movements, and head movements) extracted from remote video cameras, physiological measurements collected from an emotional mouse we developed, behavioral data from user interaction with the computer, and performance measures. For user affect and assistance modeling, we introduce a general unified decision-theoretic framework based on the Dynamic Influence Diagrams for simultaneously modeling user affect recognition and assistance. Using the framework, affective state recognition is achieved through active probabilistic inference from the available sensory data. Specifically, we introduce an active sensing strategy that allows performing purposive and sufficing information integration in order to infer user's affective state in a timely and efficient manner. User assistance is automatically accomplished through a decision-making process that balances the benefits of keeping the user in productive affective states and the costs of performing user assistance. An information-theoretic approach is introduced to probabilistically determine the most appropriate user augmentation and its application timing in order to maximize the chance of returning user to a productive affective state while minimizing the associated costs. Validation of the proposed framework via a simulation study demonstrates its capability in efficient user affect recognition as well as timely and appropriate user assistance. The affect recognition component of the prototype system is subsequently validated through a real-world study involving human subjects.

## KEYNOTE TALK: Friday September 11, 08:30

### Social Practice: Sociocultural Approaches to Identity in Embodied Conversational Agents?

**Justine Cassell**

*Center for Technology & Social Behavior, Northwestern University*

**Biographical Note:** Justine Cassell holds the AT&T Research Chair and is a full professor in the departments of Electrical Engineering and Computer Science, and Communication Studies at Northwestern University, with courtesy appointments in Linguistics, Psychology, and Learning Science. She is also the director of the Northwestern Center for Technology and Social Behavior, and the director of the new doctoral program in Technology and Social Behavior. Before coming to Northwestern, Cassell was a tenured professor at the MIT Media Lab where she directed the Gesture and Narrative Language Research Group. In 2001, Cassell was awarded the prestigious Edgerton Faculty Award at MIT; in 2008 she was awarded the Anita Borg Institute Women of Vision Leadership Award; in 2009 Cassell was made an ACM Distinguished Lecturer. She spent 2008-2009 on sabbatical at the Stanford Center for Advanced Study in the Behavioral Sciences (CASBS). Cassell's research builds on her multidisciplinary background: she holds undergraduate degrees in Comparative Literature from Dartmouth and in Lettres Modernes from the Universite de Besançon (France). She holds a M.Phil in Linguistics from the University of Edinburgh (Scotland) and a double Ph.D. from the University of Chicago in Linguistics and Psychology. After having spent ten years studying verbal and non-verbal aspects of human communication through microanalysis of videotaped data she began to bring her knowledge of human conversation to the design of computational systems. Her current research investigates the relationship between cultural, linguistic and social phenomena, and how this intersection plays out in the display and deployment of identity, both in real and virtual humans. Cassell has authored more than 100 journal articles, conference proceedings and book chapters on these topics, and has given more than 50 keynote addresses at international conferences.

**Abstract:** In this talk I propose a particular sociocultural approach to the study of the so-called "social emotions" - intrinsically dyadic states such as rapport, friendship, intimacy, affection. I propose in particular to parameterize these social emotions, which I think of as inferable underlying shared states of being, into separable components, including similarity (being like the other person), familiarity (knowing the other person well), positive affect (liking the other person), and commonality (sharing common experience). I use this parameterization to describe the surface level observable verbal and nonverbal behaviors that function to evoke, deepen, reveal, and destroy these dyadic social emotions. I show how the social emotions do not always play a positive role in people's interactions. And then I describe how the relationship between observable behaviors and inferable underlying social states functions against a background of culture and history, and therefore plays a role in deploying, displaying, and demonstrating aspects of identity. Each step of this talk is demonstrated by experiments that involve human-human, and human-agent interaction. I include novel approaches to modeling and generating behaviors for human-agent interaction on the basis of the human-human corpora. And finally, lessons are drawn both for the study of human behavior, and the improved design of technologies capable of engaging in human-computer interaction.

**KEYNOTE TALK: Saturday September 12, 08:30**

## **Computationally Modeling the Cognitive Antecedents and Consequences of Emotion**

**Jonathan Gratch**

*Institute for Creative Technologies, Marina del Ray*

**Biographical Note:** Dr. Jonathan Gratch is an Associate Director for Virtual Humans Research at the University of Southern California's (USC) Institute for Creative Technologies, Research Associate Professor in the Department of Computer Science and co-director of USC's Computational Emotion Group. He completed his Ph.D. in Computer Science at the University of Illinois in Urban-Champaign in 1995. Dr. Gratch's research focuses on virtual humans (artificially intelligent agents embodied in a human-like graphical body), and computational models of emotion. He studies the relationship between cognition and emotion, the cognitive processes underlying emotional responses, and the influence of emotion on decision

making and physical behavior. A recent emphasis of this work is on social emotions, emphasizing the role of contingent nonverbal behavior in the co-construction of emotional trajectories between interaction partners. His research has been supported by the National Science Foundation, DARPA, AFOSR and RDECOM. He is on the editorial board of the journal *Emotion Review* and the President-Elect of the HUMAINE Association for Research on Emotions and Human-Machine Interaction. He is sitting member of the organizing committee for the International Conference on Intelligent Virtual Agents (IVA) and frequent organizer of conferences and workshops on emotion and virtual humans. He belongs to the American Association for Artificial Intelligence (AAAI) and the International Society for Research on Emotion. Dr. Gratch is the author of over 100 technical articles.

**Abstract:** Contemporary research emphasizes emotion's functional role in how organisms sense events, relate them to internal needs, characterize appropriate responses and recruit the cognitive, physical and social resources needed to adaptively respond. Recognizing, modeling and exploiting such influences can have broad impact across a variety of scientific disciplines and applications. In this talk, I will summarize a decade of research, in collaboration with Stacy Marsella, to computationally model the cognitive antecedents and consequences of emotion. I will describe alternative motives for building such models and how these different motivations necessarily lead to different evaluation criteria and potentially different designs. I will focus on EMA, a computational model that simulates both cognitive and social emotional processes and can engage in meaningful social exchanges with human users. I will describe a series of empirical studies on the fidelity of these simulations and discuss their potential, both as practical tools to advance human-computer interaction, but also as methodological tools for the study of human social and cognitive behavior.

# Contents

<b>Oral Session 1-GZ – Gesture &amp; Emotion Recognition</b>	<b>1</b>
Gesture and Emotion: Can basic gestural form features discriminate emotions? <i>Michael Kipp, Jean-Claude Martin</i> . . . . .	1
Learning Models of Speaker Head Nods with Affective Information <i>Jina Lee, Alena Neviarouskaya, Helmut Prendinger, Stacy Marsella</i> . . . . .	9
Automated Classification of Gaze Direction Using Spectral Regression and Support Vector Machine <i>Mohammad H Mahoor, Steven Cadavid, Daniel S. Messinger, Jeffrey Cohn</i> . . . . .	16
<b>Oral Session 1-KzZ – Intelligent Tutoring Systems</b>	<b>22</b>
Natural Affect Data - Collection & Annotation in a Learning Context <i>Shazia Afzal, Peter Robinson</i> . . . . .	22
It's All in the Game: Towards an Affect Sensitive and Context Aware Game Companion <i>Ginevra Castellano, Iolanda Leite, André Pereira, Carlos Martinho, Ana Paiva, Peter William McOwan</i> . . . . .	29
Evaluating the Consequences of Affective Feedback in Intelligent Tutoring Systems <i>Jennifer Lynne Robison, Scott W McQuiggan, James C Lester</i> . . . . .	37
<b>Oral Session 1-KZ – Robots &amp; Artificial Agents 1</b>	<b>43</b>
Empathizing with Robots: Fellow Feeling along the Anthropomorphic Spectrum <i>Laurel D. Riek, Tal-Chen Rabinowitch, Bhismadev Chakrabarti, Peter Robinson</i> . . . . .	43
How about laughter? Perceived naturalness of two laughing humanoid robots <i>Christian Werner Becker-Asano, Takayuki Kanda, Carlos Ishi, Hiroshi Ishiguro</i> . . . . .	49
"Don't think too much!" - Artificial Somatic Markers for Action Selection <i>César F. Pimentel, Maria R. Cravo</i> . . . . .	55
<b>Oral Session 2-GZ – Face &amp; Emotion Recognition</b>	<b>63</b>
Perception of Emotional Expressions in Different Representations Using Facial Feature Points <i>Shazia Afzal, Tevfik Metin Sezgin, Yujian Gao, Peter Robinson</i> . . . . .	63
Automatically Detecting Pain Using Facial Actions <i>Patrick Joseph Lucey, Jeffrey F Cohn, Simon Michael Lucey, Iain Matthews, Sridha Sridharan, Kenneth M Prkachin</i> . . . . .	69
Detecting Depression from Facial Actions and Vocal Prosody <i>Jeffrey F Cohn, Tomas Simon Kruez, Iain Matthews, Ying Yang, Minh Hoai Nguyen, Margara Terjera Padilla, Feng Zhou, Fernando De la Torre</i> . . . . .	77
<b>Oral Session 2-KzZ – Affective Interfaces</b>	<b>84</b>
You Make Me Happy: Using an Adaptive Affective Interface to Investigate the Effect of Social Presence on Positive Emotion Induction <i>Suleman Shahid, Emiel Krahmer, Marc Swerts, Willem A. Melder, Mark A. Neerincx</i> . . . . .	84
Detection of Anger with and without Control for Affective Computing Systems <i>Elena Spiridon, Stephen Fairclough</i> . . . . .	90
Magic: Expressing Affective Messages Between Empty Nesters and Their Children <i>Emma Neuhaus-Klamer, Pavan Dadlani</i> . . . . .	96
<b>Oral Session 2-KZ – Robots &amp; Artificial Agents 2</b>	<b>104</b>
The Effect of Color on Expression of Joy and Sadness in Virtual Humans <i>Celso Miguel de Melo, Jonathan Gratch</i> . . . . .	104
There's Always Hope: Enhancing Agent Believability through Expectation-Based Emotions <i>Tibor Bosse, Edwin Zwanenburg</i> . . . . .	111
Pleasure-Arousal-Dominance Driven Facial Expression Simulation <i>Hana Boukricha, Ipke Wachsmuth, Andrea Hofstätter, Karl Grammer</i> . . . . .	119
<b>Oral Session 3-GZ – Mini Tutorials</b>	<b>126</b>
Preference learning for affective modeling <i>Georgios Yannakakis</i> . . . . .	126
Foundations for Modelling Emotions in Game Characters: Modelling Emotion Effects on Cognition <i>Eva Hudlicka, Joost Broekens</i> . . . . .	132

Emotional Brain-Computer Interfaces <i>Gary Garcia Molina, Tsvetomira Tsoneva, Anton Nijholt</i> . . . . .	138
<b>Poster Session 1 – Models of Emotion &amp; Emotion Recognition - 1st Balcony</b>	<b>147</b>
EEG-Based Emotion Recognition Using Hybrid Filtering and Higher Order Crossings <i>Panagiotis Petrantonakis, Leontios Hadjileontiadias</i> . . . . .	147
Exploring Relations between Cognitive Style and Multimodal Expression of Emotion in a TV Series Corpus <i>Céline Clavel, Jean-Claude Martin</i> . . . . .	153
PAD-based Multimodal Affective Fusion <i>Stephen William Gilroy, Marc Cavazza, Markus Niranen, Elisabeth André, Thurid Vogt, Jérôme Urbain, Maurice Benayoun, Hartmut Seichter, Mark Billinghurst</i> . . . . .	161
Rapport and Facial Expressions <i>Ning Wang, Jonathan Gratch</i> . . . . .	169
Towards Emotion Recognition from Electroencephalographic Signals <i>Kristina Schaaff, Tanja Schultz</i> . . . . .	175
Affective Haptics in Emotional Communication <i>Dzmitry Tsetserukou, Alena Neviarouskaya, Helmut Prendinger, Naoki Kawakami, Mitsuru Ishizuka, Susumu Tachi</i> . . . . .	181
Using Ensemble Classifier Systems for Handling Missing Data in Emotion Recognition from Physiology: One Step Towards a Practical System <i>Cornelia Setz, Johannes Schumm, Claudia Lorenz, Bert Arnrich, Gerhard Troester</i> . . . .	187
A Comparison of PCA, KPCA and LDA for Feature Extraction to Recognize Affect in Gait Kinematics <i>Michelle Elisabeth Karg, Robert Jenke, Wolfgang Seiberl, Kolja Kühnlenz, Ansgar Schwirtz, Martin Buss</i> . . . . .	195
Estimation of User Interest Using Time Delay Features between Proactive Content Presentation and Eye Movements <i>Jean-Baptiste Dodane, Takatsugu Hirayama, Hiroaki Kawashima, Takashi Matsuyama</i> . .	201
Smart Sensor Integration: A Framework for Multimodal Emotion Recognition in Real-Time <i>Johannes Wagner, Elisabeth André, Frank Jung</i> . . . . .	209
Emotion measurement platform for daily life situations <i>Joyce H.D.M. Westerink, Gert-Jan de Vries, Stijn de Waele, Jack van den Eerenbeemd, Marco van Boven, Martin Ouwerkerk</i> . . . . .	217
An Approach for Automatically Measuring Facial Activity in Depressed Subjects <i>Gordon James McIntyre, Roland Goecke, Matthew Hyett, Melissa Green, Michael Breakspear</i>	223
A Model for Emotional Contagion Based on the Emotional Contagion Scale <i>Joao Carlos Viegas Martins Bispo, Ana Paiva</i> . . . . .	231
Does the Mood Matter? <i>Irene Lopatovska</i> . . . . .	237
Is there a dominant channel in perception of emotions? <i>Noam Amir, Adva Weiss, Rachel Hadad</i> . . . . .	241
Resolution of focus of attention using gaze direction estimation and saliency computation <i>Zeynep Yucel, Albert Ali Salah</i> . . . . .	247
<b>Demo Session 1 - 1st/2nd Balconies</b>	<b>253</b>
Multimodal real-time conversation analysis using a novel process engine <i>Stefan Scherer, Volker Fritzsich, Friedhelm Schwenker</i> . . . . .	253
Recording emotions with “MyInnerLife” <i>Elisabeth Eichhorn, Reto Wettach, Boris Müller</i> . . . . .	255
EmoText: Applying Differentiated Semantic Analysis in Lexical Affect Sensing <i>Alexander Osherenko</i> . . . . .	257
EMBR: A Realtime Animation Engine for Interactive Embodied Agents <i>Alexis Heloir, Michael Kipp</i> . . . . .	259
A More Effective Way to Label Affective Expressions <i>Micah Rye Eckhardt, Rosalind Picard</i> . . . . .	261
A Demonstration of Audiovisual Sensitive Artificial Listeners <i>Marc Schröder, Elisabetta Bevacqua, Florian Eyben, Hatice Gunes, Dirk Heylen, Mark ter Maat, Sathish Pammi, Maja Pantic, Catherine Pelachaud, Björn Schuller, Etienne de Sevin, Michel Valstar, Martin Wöllmer</i> . . . . .	263

Demonstration: Interactive Social-Emotional Toolkit (iSET) <i>Mish Anna Rimm Madsen, Rana el Kaliouby, Micah Eckhardt, Matthew Goodwin, Mohammed Ehsan Hoque, Rosalind Picard</i> . . . . .	265
<b>Oral Session 4-GZ – Affect-Based Tagging of Multimedia</b>	<b>267</b>
A Bayesian Framework for Video Affective Representation <i>Mohammad Soleymani, Joep J.M. Kierkels, Guillaume Chanel, Thierry Pun</i> . . . . .	267
Simultaneous exploitation of explicit and implicit tags in affect-based multimedia retrieval <i>Joep J.M. Kierkels, Thierry Pun</i> . . . . .	274
Understanding Affective Interaction: Emotion, Engagement, and Internet Videos <i>Shaowen L Bardzell, Jeffrey S Bardzell, Tyler M Pace</i> . . . . .	280
<b>Oral Session 4-KzZ – Emotion Evaluation 1</b>	<b>288</b>
A Computational Model to Relay Emotions with Tactile Stimuli <i>Victor V. Kryssanov, Eric W. Cooper, Hitoshi Ogawa, Izumi Kurose</i> . . . . .	288
Fundamental issues on the recognition of autonomic patterns produced by visual stimuli <i>Simone Tognetti, Cristiano Alessandro, Andrea Bonarini, Matteo Matteucci</i> . . . . .	294
Categorizing Terms' Subjectivity and Polarity Manually for Opinion Mining in Chinese <i>Xiaoying Xu, Ya Li, Liping Hu, Jianhua Tao</i> . . . . .	300
<b>Oral Session 4-KZ - Emotional Speech Analysis</b>	<b>306</b>
Stress and Emotion Recognition Based on Log-Gabor Filter Analysis of Speech Spectrograms <i>Ling He, Margaret Lech, Namunu Maddage, Nicholas Allen</i> . . . . .	306
Recognition of emotions in speech by a hierarchical approach <i>Zhongzhe Xiao, Emmanuel Dellandrea, Weibei Dou, Liming Chen</i> . . . . .	312
Affect Sensing in Speech: Studying Fusion of Linguistic and Acoustic Features <i>Alexander Osherenko, Thurid Vogt, Elisabeth André</i> . . . . .	320
<b>Oral Session 5-GZ – Affective Computing: Tools &amp; Applications 1</b>	<b>326</b>
A Tool for Polarity Classification of Human Affect from Panel Group Texts <i>Manfred Klenner, Stefanos Petrakis, Angela Fahrni</i> . . . . .	326
ElectroEmotion – A Tool for Producing Emotional Corpora Collaboratively <i>Lassi A Liikkanen, Giulio Jacucci, Matti Helin</i> . . . . .	332
Requirements and Software Framework for Adaptive Multimodal Affect Recognition <i>Elena Vildjiounaite, Vesa Kyllönen, Olli Vuorinen, Satu-Marja Mäkelä, Tommi Keränen, Markus Niiranen, Jouni Knuutinen, Johannes Peltola</i> . . . . .	339
<b>Oral Session 5-KzZ – Emotion Evaluation 2</b>	<b>346</b>
Emotion Attribution to Basic Parametric Static and Dynamic Stimuli <i>Valentijn Visch, Martijn Goudbeek</i> . . . . .	346
The challenges of dealing with distributed signs of emotion: theory and empirical evidence <i>Roddy Cowie, Ellen Douglas-Cowie, Gary McKeown, Ceire Gibney</i> . . . . .	351
The Importance of the Body in Affect-Modulated Action Selection: A Case Study Comparing Proximal versus Distal Perception in a Prey-Predator Scenario <i>Claire Suzanne O'Bryne, Lola Cañamero, John C. Murray</i> . . . . .	357
<b>Oral Session 5-KZ – Lexical Affect Analysis</b>	<b>363</b>
SentiFul: Generating a Reliable Lexicon for Sentiment Analysis <i>Alena Neviarouskaya, Helmut Prendinger, Mitsuru Ishizuka</i> . . . . .	363
Differentiated Semantic Analysis in Lexical Affect Sensing <i>Alexander Osherenko, Elisabeth André</i> . . . . .	369
Sentence Level Emotion Tagging <i>Dipankar Das, Sivaji Bandyopadhyay</i> . . . . .	375
<b>Oral Session 6-GZ – Affective Computing: Tools &amp; Applications 2</b>	<b>381</b>
Therapy Progress Indicator (TPI): Combining speech parameters and the subjective unit of distress <i>Egon L. van den Broek, Frans van der Sluis, Ton Dijkstra</i> . . . . .	381
Emotional Responses to Haptic Stimuli in Laboratory versus Travelling by Bus Contexts <i>Katri Salminen, Veikko Surakka, Jussi Rantala, Jani Lylykangas, Pauli Laitinen, Roope Raisamo</i> . . . . .	387

Analyzing the Impact of Camera Viewpoint on Player Psychophysiology <i>Hector Perez Martinez, Arnav Jhala, Georgios Yannakakis</i> . . . . .	394
AffectButton: Towards a Standard for Dynamic Affective User Feedback <i>Joost Broekens, Willem-Paul Brinkman</i> . . . . .	400
The emotion slider: a self-report device for the continuous measurement of emotion <i>Gaël Laurans, P.M.A. Desmet, P.P.M. Hekkert</i> . . . . .	408
<b>Oral Session 6-KzZ – Models of Emotions 2</b>	<b>414</b>
Assessing the validity of appraisal-based models of emotion <i>Jonathan Gratch, Stacy Marsella, Ning Wang, Brooke Stankovic</i> . . . . .	414
Same or Different? Recollection Of or Empathizing With an Emotional Event From The Perspective of Appraisal Models <i>Gert-Jan de Vries, Paul M.C. Lemmens, Dirk Brokken</i> . . . . .	422
A socio-emotional model of impoliteness for Non-Player Characters <i>Sabrina Campano, Nicolas Sabouret</i> . . . . .	428
Assessing the validity of a computational model of emotional coping <i>Stacy Marsella, Jonathan Gratch, Ning Wang, Brooke Stankovic</i> . . . . .	434
Evaluation of a Computational Model of Surprise Arousal in Narratives <i>Byung-Chull Bae, R. Michael Young</i> . . . . .	442
<b>Oral Session 6-KZ – Emotional Speech Synthesis &amp; Affective Music Players</b>	<b>448</b>
Perception of synthetic emotion expressions in speech: Categorical and dimensional annotations <i>Judith M. Kessens, Mark A. Neerinx, Melanie Kroes, Gerrit Bloothoof, Rosemarijn Looije</i>	448
Annotating meaning of listener vocalizations for speech synthesis <i>Sathish Pammi, Marc Schröder</i> . . . . .	453
Deploying music characteristics for an affective music player <i>Marjolein van der Zwaag, Joyce H.D.M. Westerink, Egon L. van den Broek</i> . . . . .	459
Emotional Speech Synthesis by Sensing Affective Information from Text <i>Mostafa Al Masum Shaikh, Antonio Rui Ferreira Rebordao, Keikichi Hirose, Mitsuru Ishizuka</i>	466
Personalized affective music player <i>Joris H. Janssen, Egon L. van den Broek, Joyce H.D.M. Westerink</i> . . . . .	472
<b>Poster Session 2 – Speech Analysis &amp; Synthesis, Affective Interfaces &amp; Artificial Agents</b>	<b>478</b>
<b>- 1st Balcony</b>	<b>478</b>
Mixtract: A Directable Musical Expression System <i>Mitsuyo Hashida, Shunji Tanaka, Haruhiro Katayose</i> . . . . .	478
The Power of Words: Enhancing Music Mood Estimation with Textual Input of Lyrics <i>Ying-Sian Wu, Wei-rong Chu, Chung-Yi Chi, Daniel C Wu, Richard Tzong-Han Tsai, Jane Yung-jen Hsu</i> . . . . .	484
Pitch Envelope based Frame Level Score Reweighed Algorithm for Emotion Robust Speaker Recognition <i>Dongdong Li, Yingchun Yang, Ting Huang</i> . . . . .	490
Transmission of vocal emotion: do we have to care about the listener? The case of the Italian speech corpus EMOVO <i>Carlo Giovannella, Riccardo Santoboni, Davide Conflitti, Andrea Paoloni</i> . . . . .	494
Understanding Behavioral Problems in Text-based Communication Using Neuroscientific Perspective <i>Didem Gökçay, Şeref Arıkan, Gülsen Yıldırım</i> . . . . .	500
Accounting for irony and emotional oscillation in computer architectures <i>Artemy Kotov</i> . . . . .	506
Ambient Telephony: Designing a Communication System for Enhancing Social Presence in Home Mediated Communication <i>Jorge Peregrín Empananza, Pavan Dadlani, Boris de Ruyter, Aki Harma</i> . . . . .	512
Engineering affective computing: a unifying software architecture <i>Alexis Clay, Nadine Rouillon Couture, Laurence Nigay</i> . . . . .	520
Game Adaptivity Impact on Affective Physical Interaction <i>Georgios Yannakakis</i> . . . . .	526
Creating Emotional Communication with Interactive Artwork <i>Matt Iacobini, Tina Gonsalves, Chris Frith, Nadia Bianchi Berthouze</i> . . . . .	532
Social Networking Service for Mobile Communities Based on Spatial Cumulative Gossiping <i>Arttu Akseli Lamsa, Jani Mantyjärvi</i> . . . . .	538

Simulation of the Dynamics of Virtual Characters' Emotions and Social Relations <i>Magalie Ochs, Nicolas Sabouret</i> . . . . .	544
An Ambient Agent Model for Group Emotion Support <i>Rob Duell, Zulfiqar Ali Memon, Jan Treur, C. Natalie van der Wal</i> . . . . .	550
Study of consumer's emotion during product interviews <i>Christophe Vaudable, Christine Balague, Laurence Y. Devillers</i> . . . . .	558
Theme Detection an Exploration of Opinion Subjectivity <i>Amitava Das, Sivaji Bandyopadhyay</i> . . . . .	564
Protocol CINEMO: The use of fiction for collecting emotional data in naturalistic controlled oriented context <i>Nicolas Rollet, Agnes Delaborde, Laurence Y. Devillers</i> . . . . .	570
openEAR - Introducing the Munich Open-Source Emotion and Affect Recognition Toolkit <i>Florian Eyben, Martin Wöllmer, Björn Schuller</i> . . . . .	576
<b>Demo Session 2 - (1st/2nd Balconies)</b>	<b>582</b>
OSSE: an Open Source Socio-Emotional simulator <i>Nicolas Sabouret, Magalie Ochs</i> . . . . .	582
Emotional Communication with Interactive Artwork – The Chameleon Project <i>Tina Maree Gonsalves, Chris Frith, Bruno Averbeck, Youssef Kashef, Rana El kaliouby, Ros Picard, Nadia Berthouze, Matt Iacobini, Hugo Critchley, Helen Sloan</i> . . . . .	584
Affective haptic garment enhancing communication in Second Life. <i>Dzmitry Tsetserukou, Alena Neviarouskaya</i> . . . . .	586
A collaborative Personalized Affective Video Retrieval System <i>Mohammad Soleymani, Jeremy Davis, Thierry Pun</i> . . . . .	588
Roll and Rock: Exploring the Affective Loop in a Pen <i>Miguel Bruns Alonso, Caroline c.m. Hummels, David v. Keyson</i> . . . . .	590
GraphLaugh: a Tool for the Interactive Generation of Humorous Puns <i>Alessandro Valitutti, Oliviero Stock, Carlo Strapparava</i> . . . . .	592
iCalm: Measuring Electrodermal Activity in Almost Any Setting <i>Elliott Hedman, Ming-Zher Poh, Oliver Wilder-Smith, Rich Fletcher, Matthew S. Goodwin, Rosalind Picard</i> . . . . .	594
Dynamic Emotion and Personality Synthesis <i>Ian Wilson</i> . . . . .	596
<b>Oral Session 7-GZ – Facial Expression Recognition</b>	<b>598</b>
Evaluating AAM Fitting Methods for Facial Expression Recognition <i>Akshay Asthana, Jason Mora Saragih, Michael Wagner, Roland Goecke</i> . . . . .	598
Get The FACS Fast: Automated FACS face analysis benefits from the addition of velocity <i>Timothy R Brick, Michael D Hunter, Jeffrey F Cohn</i> . . . . .	606
Dynamic Cascades with Bidirectional Bootstrapping for Spontaneous Facial Action Unit Detection <i>Yunfeng Zhu, Fernando De la Torre, Jeffrey Cohn, Yujin Zhang</i> . . . . .	613
<b>Oral Session 7-KzZ – Emotional Synthetic Characters 1</b>	<b>621</b>
Facial and vocal emotion expression of a personal computer assistant <i>Judith M. Kessens, Mark A. Neerincx, Rosemarijn Looije, Melanie Kroes, Gerrit Bloothoof</i>	621
Relations between Facial Display, Eye Gaze and Head Tilt: Dominance Perception Variations of Virtual Agents <i>Nikolaus Bee, Stefan Franke, Elisabeth André</i> . . . . .	628
Evaluation of Multimodal Sequential Expressions of Emotions in ECA <i>Radoslaw Niewiadomski, Sylwia Hyniewska, Catherine Pelachaud</i> . . . . .	635
<b>Oral Session 8-KzZ - Emotional Synthetic Characters 2</b>	<b>642</b>
Integration of a semantic and affective model for realistic generation of emotional states in virtual characters <i>Diana Arellano, Isaac Lera, Javier Varona, Francisco J. Perales</i> . . . . .	642
“I can feel it too!”: Emergent empathic reactions between synthetic characters. <i>Sérgio Hortas Rodrigues, Samuel Francisco Mascarenhas, João Dias, Ana Paiva</i> . . . . .	649
Effects of Emotional Agents on Human Players in the Public Goods Game <i>Katharina Göttlicher, Sabine Stein, Dirk M. Reichardt</i> . . . . .	656

<b>Recognition of Non-prototypical Emotion from Speech: The Final Frontier</b>	<b>662</b>
Interpreting Ambiguous Emotional Expressions	
<i>Emily Mower, Angeliki Metallinou, Chi-Chun Lee, Abe Kazemzadeh, Carlos Busso, Sungbok Lee, Shrikanth Narayanan . . . . .</i>	<i>662</i>
Real-time vocal emotion recognition in artistic installations and interactive storytelling: Experiences and lessons learnt from CALLAS and IRIS	
<i>Thurid Vogt, Elisabeth André, Johannes Wagner, Steve Gilroy, Fred Charles, Marc Cavazza</i>	<i>670</i>
A Multiple Perception Model on Emotional Speech	
<i>Jianhua Tao, Ya Li, Shifeng Pan . . . . .</i>	<i>678</i>
Emotion Detection in Dialog Systems: Applications, Strategies and Challenges	
<i>Felix Burkhardt, Markus van Ballegooy, Klaus-Peter Engelbrecht, Tim Polzehl, Joachim Stegmann . . . . .</i>	<i>684</i>
The Hinterland of Emotions: Facing the Open-Microphone Challenge	
<i>Stefan Steidl, Björn Schuller, Anton Batliner, Dino Seppi . . . . .</i>	<i>690</i>
<b>Panel Session 3-KzZ – Social interaction with robots and agents: where do we stand, where do we go?</b>	<b>698</b>
Social interaction with robots and agents: Where do we stand, Where do we go?	
<i>Eva Hudlicka, Christian Becker-Asano, Sabine Payr, Rodrigo Ventura, Iolanda Leite, Ana Paiva, Kerstin Fischer . . . . .</i>	<i>698</i>
<b>Special Session 2-GZ – Guidelines for Affective Signal Processing: From Lab to Life</b>	<b>704</b>
Guidelines for Affective Signal Processing (ASP): From Lab to Life	
<i>Egon L. van den Broek, Joris H. Janssen, Joyce H.D.M. Westerink . . . . .</i>	<i>704</i>
Experiences with adaptive statistical models for biosignals in daily life	
<i>Stijn de Waele, Gert-Jan de Vries, Mark Jaeger . . . . .</i>	<i>710</i>
Artefact-free Real-time Computation of Cardiovascular Measures	
<i>Arjan Stuiver, Ben Mulder . . . . .</i>	<i>716</i>
Towards User-Independent Classification of Multimodal Emotional Signals	
<i>Jonghwa Kim, Elisabeth Andre, Thurid Vogt . . . . .</i>	<i>722</i>
Affect Detection in the Real World: Recording and Processing Physiological Signals	
<i>Jennifer A. Healey . . . . .</i>	<i>729</i>
<b>Special Session 4-KzZ – Music &amp; Emotion</b>	<b>735</b>
Measurement of Motion and Emotion during Musical Performance	
<i>R Benjamin Knapp, Javier Jaimovich, Niall Coghlan . . . . .</i>	<i>735</i>
Using Dimensional Descriptions to Express the Emotional Content of Music	
<i>Roddy Cowie, Cian Doherty, Edelle McMahon . . . . .</i>	<i>740</i>
Measuring entrainment in small groups of musicians	
<i>Antonio Camurri, Giovanna Varni, Gualtiero Volpe . . . . .</i>	<i>746</i>
