Title: Looking back on 10 RESIM workshops

Abstract:

This year sees the 10th RESIM workshop, which is a good moment to look back on this series of workshops. Partially, this will be a "trip down memory lane": remembering all the meetings and venues. Partially, it will be more serious. Can we see any trends in the topics discussed in the workshops? Are there problems that have been solved and closed, and/or new problems that have arisen? Are there sticky problems that are still open after all those years? And what about application areas; have they changed?
