Author Correction: Reconfigurable beam system for non-line-of-sight free-space optical communication

Zizheng Cao, Xuebing Zhang, Gerwin Osnabrugge, Juhao Li, Ivo M. Vellekoop  and Antonius M. J. Koonen

Addendum to: *Light: Science & Applications*
<https://doi.org/10.1038/s41377-019-0177-3>

Addendum:

We were recently made aware of the fact that Professor Nabeel A. Riza's laboratory theoretically proposed earlier a Non-Line of Sight (NLOS) indoor optical wireless communications arrangement with three-dimensional optical beamforming via a spatial light modulator using diffuse reflections from diffuse optical elements¹. This is exactly the type of arrangement that would benefit greatly from our technique, since the

coherent arrayed optical transmitter (CAO-Tx) we proposed makes the reflection focus onto the receiver, rather than diffusely scatter it in all directions. We apologize for the omission of this prior-art.
