

Corrigendum

Corrigendum to “Transport and surface reaction model of a photocatalytic membrane during the radical filtration of methylene blue” [Chem. Eng. Sci. 254 (2022) 117617]

Fig. 4 in this paper, displays a wrongly scaled image, which affects the radiation distribution. The overall light intensity is still correct, as it was measured independently from the distribution, but the mentioned radiation uniformity index decreases from 0.86 to 0.49. This error does not affect any of the conclusions in this paper, but is relevant to upcoming work where we specifically address the light distribution (in)homogeneity.

The above image displays the corrected light distribution scale (white circle) and the current (black circle).
