## **Does Memory Enhancement Training Alter Perceptual Representations?**

## Juliana Rhee<sup>1</sup>, Talia Konkle<sup>2</sup>, Timothy Brady<sup>1</sup>, & George Alvarez<sup>1</sup>

<sup>2</sup>University of Trento, Italy

## Conclusions

Observers learn regularities and use them to store more content in working memory.

Working memory training enables observers to form more efficient representations of relevant information.

This training alters perceptual representations, even when the trained information is no longer task-relevant.

The advantage of training is strongest in the first test block and decreases over subsequent blocks.
