Projekt - Übersicht

Das EU-finanzierte Projekt "OpenAIRE-Nexus - Eine zugänglichere offene Wissenschaft" hatte zum Ziel, in der Welt der offenen Wissenschaft eine **faire, benutzerfreundliche und offene Kommunikation sowie Informationsweitergabe zu fördern**. Um Forschung zu unterstützen, müssen Inhalte und Informationen daher leicht zu finden und anzuzeigen sein. OpenAIRE Nexus stellte ein **Dienstportfolio** zusammen, das bei der **Veröffentlichung von Forschungsergebnissen, zum Monitoring ihres Impacts und zur Verbreitung des neuen Wissens** wesentlich **beitragen** kann. Diese in **Europa und darüber hinaus** bereits etablierten Dienstleistungen werden von öffentlich-rechtlichen Institutionen und Einrichtungen bereitgestellt. Ziel war es, dieses Portfolio in die **European Open Science Cloud** (EOSC) und die globale **offene Wissenschaftsgemeinschaft** einzubinden.

Virtual Access Cost (VA)

Direct costs for **providing virtual access to the installation**:

- Personnel cost of administrative, technical and scientific staff directly assigned to the functioning of the installation and to the support of the users.
- Costs of contracts for maintenance and repair (including specific cleaning, calibrating and testing) specifically awarded for the functioning of the installation (if not capitalised).
- Costs of consumables specifically used for the installation.
- Costs of contracts for installation management, including security fees, insurance costs, quality control and certification, upgrading to national and/or EU quality, safety or security standards (if not capitalised) specifically incurred for the functioning of the installation.
- Costs of energy power and water supplied specifically for the installation.
- Costs of software licence, internet connection or other electronic services for data management and computing supplied specifically for the installation when they are needed to provide virtual access services.
- Costs of specific scientific services included in the access provided or needed for the provision of virtual access by the installation.

Key Performance Indicator - Definition

Service name: UsageCounts

KPI name	Definition
#APIrequests (Unit of Access)	Number of requests handled by publicly available APIs
#RepositoriesRegistered	Repositories registered in UsageCounts
#Uptime	Service availability, expressed as percentage value

Service name: OpenAPC

KPI name	Definition
#DataProviderInstitutions (Unit of Access)	Number of institutions providing the data
#APIrequests	Number of requests handled by publicly available APIs
#Uptime	Service availability, expressed as percentage value

Virtual Access Cost (VA)

Service name: OpenAIRE PROVIDE

KPI name	Definition
#DataSources (Unit of access)	Number of data sources covering institutional repositories only
#Repositories	Total number of repositories registered in OpenAIRE PROVIDE
#BrokeringEvents	Total number of brokering events which are expected to be consumed by subscribers
#Uptime	Service availability, expressed as percentage value

Key Performance Indicator - Werte

Service	KPI	Point of reference (Basis)	Success Target (% inc)	Initial value	Success Target value (M30)	M12 value	M24 value	M30 value
UsageCounts	#APIrequests (UoA)	649,779	115%	0	747,246	495,800	5,598,233 ⁵	8,945,126
UsageCounts	#RepositoriesRegistered	200	250%	0	500	436	506	563
UsageCounts	#Uptime				99,98%	100%	100%	100%
OpenAPC	#DataProviderInstitutions (UoA)	230	59%	0	136	93	152	163⁶
OpenAPC	#APIrequests	70,000	50%	0	35,000	33,795	148,016	261,008
OpenAPC	#Uptime				99,98%	100%	100%	99,99%

Key Performance Indicator - Werte

Service	KPI	Point of reference (Basis)	Success Target (% inc)	Initial value	Success Target value (M30)	M12 value	M24 value	M30 value
PROVIDE	#DataSources (UoA)	150	153%	0	230	85	182	231

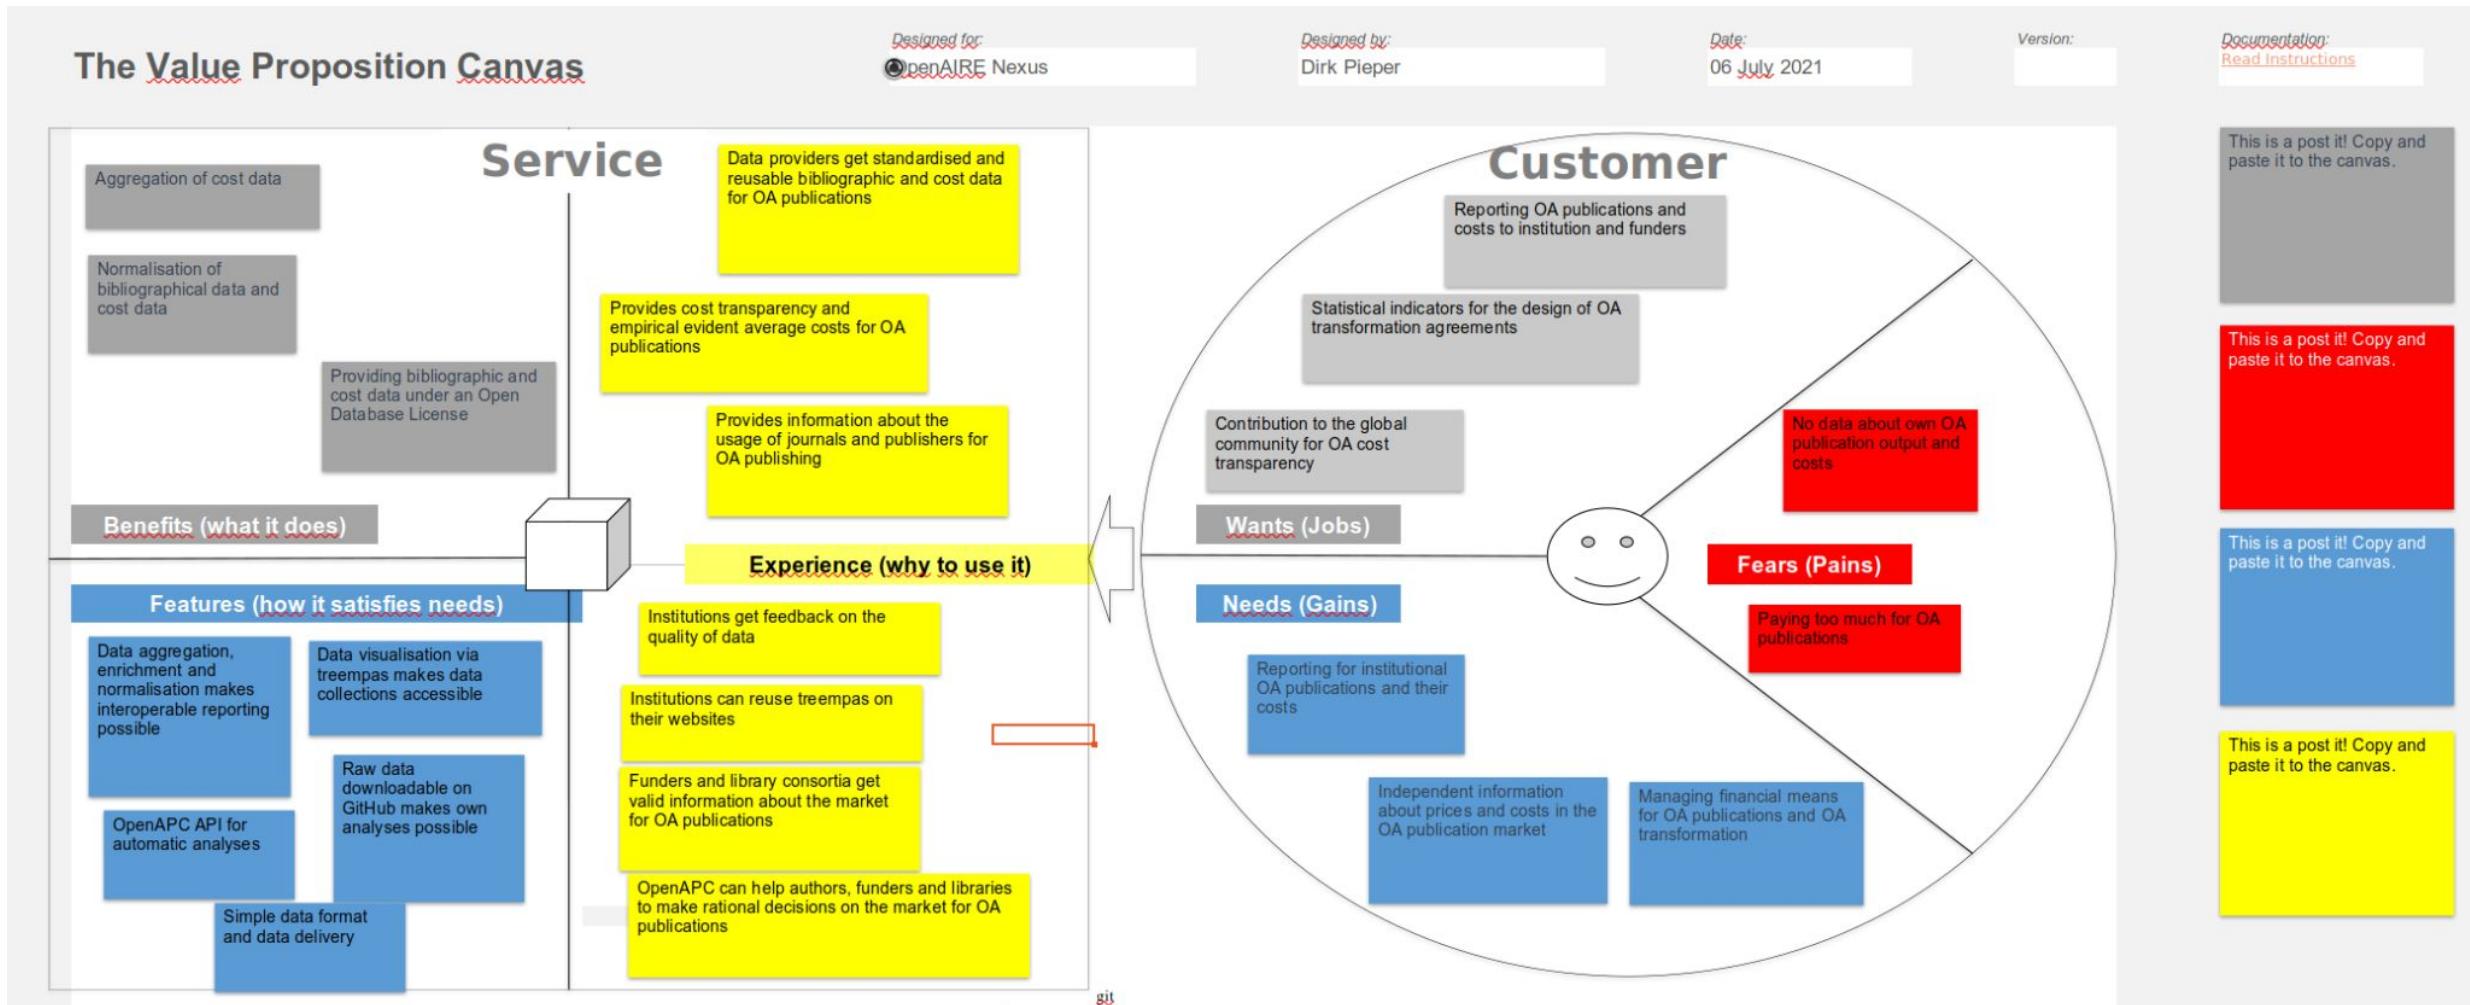

PROVIDE	#Repositories	189	153%	0	289	122	252 279 ³	351
PROVIDE	#BrokeringEvents	29,000, 000	40%	8,481,089	20,081,089	24,803,631	13,921,850	14,668,384⁴

Article and Book Publishing Costs (APC and BPC): cost transparency of Open Access publishing

Factsheet for Institutions, Libraries and Funders

What is OpenAPC?

OpenAPC aggregates and normalises cost data and bibliographic data on open access journal articles, open access books and on articles published under transformative agreements.

Because of the discrepancies between publisher price lists and actual costs for so called article processing charges (APC) and book processing charges (BPC). OpenAPC is based on voluntary and regular data submissions from libraries and library consortia, academic institutions and research funders.

The data sets are made available since 2014 under the Open Database License:

<http://opendatacommons.org/licenses/odbl/1.0/>.

How it works?

OpenAPC data delivery, normalization and enrichment workflow for journal articles and books. A very minimal set of data is required to start the process.

OpenAIRE Services Fact sheets

with all the necessary information about the main OpenAIRE services, and how to use their functionalities to easily adopt Open Science.

OpenAIRE **EUROPEAN OPEN SCIENCE CLOUD** **open APC**

Cost transparency of Open Access Publishing:
Article and Book Publishing Costs

Facts for Institutions, Libraries, and Funders

What is OpenAPC?

OpenAPC aggregates and normalises cost data and bibliographic data on open access journal articles, open access books and on articles published under transformative agreements.

OpenAPC is based on voluntary data submissions from libraries and library consortia, academic institutions and research funders. The data sets are made available under the Open Database License:

<http://opendatacommons.org/licenses/odbl/1.0/>

Workflows

OpenAPC data delivery, normalisation and enrichment workflows for journal articles and books. A minimal initial set of information is needed to bootstrap the process.

Which OpenAIRE services use OpenAPC?

OpenAPC data is fully embedded in the OpenAIRE Research Graph <https://graph.openaire.eu/> and we use it in constructing open science indicators in our MONITOR Dashboard <https://monitor.openaire.eu/> (for funders and institutions) and in the Open Science Observatory portal <https://osobservatory.openaire.eu/>.

Already EOSC onboarded

Since 2021, OpenAPC is registered as a service/resource in the EOSC marketplace.

For Institutions/Libraries/Funders

- Getting reports on Open Access publications and costs
- Tracking development of costs for OA publishing over time
- Leverage OpenAPC data when negotiating publication charges
- Reuse enriched OpenAPC data and integrate treemap visualisations into institutional sites.

The idea

Publisher list prices for Article Processing Charges (APC) and Book Processing Charges (BPC) may differ from actual paid costs. At the same time, steadily increasing expenses for Open Access publishing require solid data on expenditures to prevent overpayments and to limit expenses in the future.

OpenAPC demonstrates how aggregating data on fee-based open access publishing as a community-based effort can lead to transparent and reproducible cost data across publishers, journals and institutions.

Notable features

- Simple data format and workflows for data providers.
- Automated data reports for participants, meant to help finding possible errors in the contributed data.
- Detailed analyses of contributed data in the OpenAPC project blog.
- Automated testing routines ensure metadata consistency.
- Treemap-based data visualisations for interactive data exploration.
- Raw data sets made available on GitHub.

Successful Research Data Management: Integrating Technology and Human Expertise

Effective Research Data Management is the cornerstone of research not only for researchers but for funders and institutions as well. Due to national and European standards, development and delivery of a Data Management Plan (DMP) at the very start of a project or at times even before the project starts is essential (or even mandatory in some cases, e.g., Horizon Europe funded projects) for all research input and output. In this episode, our training experts Venkat and Jonathan provide insights on why DMPs are crucial steps in the research lifecycle while Elli, Argos's service Manager, explains how OpenAIRE tools and services can support researchers and research support staff to write and deliver effective DMPs and how, ultimately, funders and research performing organisations can benefit from its adoption.

Speakers: Elli Papadopoulou, Shanmugasundaram Venkataaraman, Jonathan England

Unleashing the Power of Research: How Repositories Fuel Open Science

In today's scientific workflow, one of the key ways to unlock the full potential of research is by archiving publications, data, software, and other research outputs in dedicated infrastructures known as "repositories." In this episode, we explore the benefits of depositing your work in a repository, and how this practice can become a crucial pillar of support for Open Science. To give us a comprehensive overview of this topic, we have invited Andreas Czerniak and Pedro Principe, who provide insights into the OpenAIRE Guidelines and the OpenAIRE Provide service. Additionally, Kathleen Shearer offers her expertise on the global repository landscape.

Jack of all trades: the contribution of the OpenAIRE Graph

Open Science is a multifaceted term that encompasses various research practices. It involves more than just publishing a manuscript or making data available. In this episode, Paolo Manghi and Pedro Principe will provide insights into OpenAIRE's flagship service, the Graph. Find out what makes OpenAIRE Graph so unique, and how you can use it to unlock the power of open science data and enter a world full of opportunities.

Speakers: Paolo Manghi, Pedro Principe

FAIR - Community

- Analyse der *RDA FAIR Data Maturity Model: specification and guidelines* (<https://doi.org/10.15497/RDA00050>).
- Adaption der *FAIR Data Maturity Specifications* auf nicht Datensätze.
- Entwicklung des prototypischen FAIR-Validator für OAI-PMH Endpunkte, nicht beschränkt auf Datensets, im OpenAIRE PROVIDE Dashboard zur Assistenz der Repositorien Manager (<https://doi.org/10.5281/zenodo.5541133>).
- *FAIR Assessment Tools: Towards "Apples to Apples" Comparisons* mit Mark D. Wilkinson
- Report über die Adaption der RDA FAIR DMM Spezifikation und Evaluierung der *OpenAIRE Guidelines for CRIS Managers v1.1.1*
 - *Compliance of the OpenAIRE Guidelines for CRIS Managers v1.1.1 with the FAIR Principles* (<https://doi.org/10.5281/zenodo.6627246>)

Guidelines for CRIS Managers - Aktualisierung

- List of changes in the 1.2.0 version (since 1.1.1) <https://doi.org/10.5281/zenodo.8050936>

1. The **Medium** CERIF entity is brought into the profile to represent locations of files. It is never used as a top-level entity, so it does not have its own OAI-PMH set. ([#59](#))
2. The **COAR Resource Types** controlled vocabulary is upgraded to Version 3.1. ([#99](#) and [#143](#))
3. The **COAR Access Types** controlled vocabulary is upgraded to Version 1.0. ([#86](#))
4. Support for generic **Person Identifier**:s is added. ([#91](#))
5. Some constraints in structured **Person Identifiers**:s were expanded. ([#146](#) and [#154](#))
6. Support for structured **OrgUnit Identifiers**:s is added. ([#64](#))
7. The meaning of date fields in **Patent**:s is clarified. ([#88](#))
8. ZDB-ID is added among structured identifiers for **Publication**:s ([#66](#))
9. GrantDOI is added as a structured identifier for **Funding**.
10. Unmanaged entities are allowed without an **Internal Identifier** attribute. ([#56](#))
11. The `xml:lang` attributes are no longer required. ([#61](#))
12. DataCite Metadata Kernel *Dates* are supported in the **Product** ([#84](#)) and **Medium** ([#150](#)) entities with a common *DatesStructure_Group*.
13. The use of **SPDX License** URIs is recommended. ([#134](#))
14. The rules for constructing the OAI identifiers have been relaxed ([#126](#), [#85](#))
15. Examples were added, documentation has been improved. ([#65](#), [#83](#), [#88](#), [#97](#))
16. Other minor extensions and cleanup.

<https://github.com/openaire/guidelines-cris-managers/>

- Unterstützung der aktualisierten Guidelines im Validator , v2.0.0

<https://github.com/EuroCRIS/openaire-cris-validator>

Abschluss

eine kurze Zusammenfassung

- Key Performance Indikatoren (KPIs) wurden erreicht.
- Festlegung der Zielgruppen und direkte Ansprache.
- Erweiterung des Präsentations-Material für die Dienste
- Integration der neuen Dienste in das OpenAIRE Kern-Produkt, dem *OpenAIRE Research Graph* einer der Kern-Komponenten von der **European Open Science Cloud** ist.
- Förderung der FAIRen Informations-Weitergabe.

Herzlichen Dank an die
UB-Kolleg:inn:en für die
exzellente Kooperation in den
vergangenen zwei Jahren.

Vielen Dank für
Ihre/Eure
Aufmerksamkeit

und seid FAIR.
