Lorraine Leeson
artist

Overview

- The roots of the project in *Democratising Technology*
- Growing ambitions
- Five years doing patchwork projects on patchwork funding
- One water turbine later...
- What we learnt

Democratising Technology

I like your new
tablecloth.

Thanks! But in
the *future*...

Yeah...??

Well...in the *future*,
this tablecloth
won't be just a
tablecloth; it'll be a
cloak of ***invisible
information...***

Cor! So what'll
it look like
then...?

- To devise methods to engage people outside the design world in discussions about the design of digital technology, in particular, networks;
- To help them envision new social arrangements enabled by technology;
- To equip people to deal with the challenges of conceptualising developments that seem both abstract and currently irrelevant to their experience.

GeezerPower

The Geezers

- The Geezers Club, one of the 5 groups of older people.
- Fitted brief: older people, little access to formal education when young; typical use of digital technology for age-group.
- Ranged from mid-60s to early 80s in age, varied life experience, left school at 14 skilled manual labour: electricians and engineers, market porter, local Docks.
- Tuesday lunchtimes in a community hall, providing an alternative to “pub and betting shop”.
- Initially gave 3 weekly 2-hour sessions to help us.

SET OF A GEEZER: Tom Dale, 82

GEEZER POWER

Seniors unveil renewable energy plan

By VICTORIA HUNTLEY

COCKNEY geezers who say they know a thing or two about the world are leading an innovative initiative from the younger generation.

An group of seven men, all aged between 70 and 80, met at Age Concern Tower Hamlets, who will showcase the Geezers' vision they believe will solve London's power problems. They have joined with computer artist and University of East London research fellow Louise Loxton to launch a world-changing renewable energy project using the wind power of the Thames.

The project now on public show at Mary Queen of Scots gallery in Hackney is being called 'Geezer Power'.

Coordinator Ray Gibson said:

"Older people have more experience of the world and are more likely to have the skills to solve technological innovation. We may be past our 'sell by date' but we still have a lot to offer – and a special interest in how the world will be for future generations."

The 12 members, based at Age Concern's branch in Rennie Street, Bethnal Green, have teamed up for the project for the exhibition called 'Geezer Power' which opened at the gallery in November.

The Geezers' innovative, power generating idea would use a string of turbines installed in the lower of the Thames Basin, using the momentum of the river to produce electricity. The team have set up a website www.geezerpower.com and a Facebook page.

"This isn't just an initiative aged people should see attached to London."

Ray Gibson added:

"The wind turbines, solar panels and other technologies have been developed, but they are under-used because of wind farms. Now the threat of nuclear energy has been removed, we need to find a way to generate power. London and us, the Geezers, intend to make it happen."

The group is in time to let the Geezers' vision be made a reality. The 'Geezer Power' idea is an idea which is being developed in partnership with other people in the area. Gibson is the coordinator of the project and is working with computer artist Louise Loxton.

"If we could just provide power for some homes for the elderly, or for the street lighting, that would be an achievement," he said.

"The world needs us as much as we need it. It's time for 'Geezer Power'."

PROJECT WITH DUFFIN MARY COLLEGE & SPACE STUDIOS

Active Energy

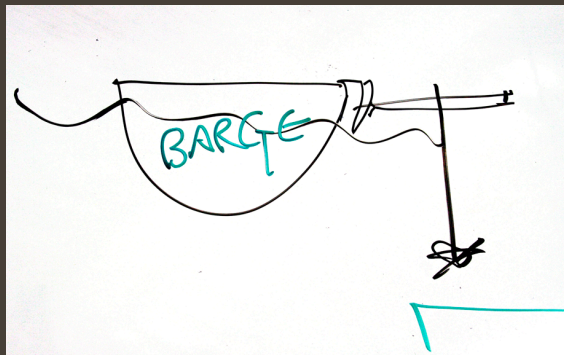

What can this extraordinary case of going it alone, while doing it with others, teach us about design and the conditions we need to carry it out?

People

- Artist
- Geezers
- Mechanical engineer
- Systems engineer
- School kids
- Barge/restaurant owner
- Geography student
- Drama/computer science/design researcher
- etc

Some issues

- Stewardship/mediation (doing stuff vs making stuff happen) – openings, transfer of ownership, intermediary tiers
- Sustainability of group – funding, shared values, endurance: do we need it?
- Match – locus of relevance, who contributes and arbitrariness of participants, potential to generalise
- Design vs Innovation – making new stuff or changing practices in the wider world?

Funding challenges

- Patchwork funding led to a patchwork of projects
- Good in range and experience
- Broader-based innovation – more people, more contexts, more learning (both ways)
- Design constantly thwarted as losing initiative and forgetting detail of craft through delays in testing, etc

Thanks...

- All our participants, younger and older
- Photo credits: include Loraine Leeson and Jim Prevett of SPACE
- The QMUL team for DemTech: Lois, Pat and Gini.
- Everyone at SPACE
- AHRC/EPSRC funding under the “Designing for the 21st Century” call; AHRC grant: Participants United!
- Active Energy stalwarts, such as Toby Borland of SmartLab, University of East London and, obviously, Loraine Leeson.
