Chăn-hênh: Sustainable Animal Productivity for Livelihoods, Nutrition and Gender inclusion in the Northwest Highlands of Vietnam

**WORK PACKAGE I: Technologies and
Practices for Sustainable Animal productivity
GENETICS COMPONENT**

Presenter: Karen Marshall, ILRI and Le
Thi Thanh Huyen, NIAS

Stakeholder engagement meeting

Phu Yen, 21 June 2023

Back ground

Li-Chan project in the Mai Son district (Chieng Chung and Chieng Luong communes) indicated the need for overcome constraints in AI of pigs and cattle:

- Lack of pig AI service providers willing to offer their service in the remote highland communes;
- Lack of semen from local Ban boars (a farmer preferred breed) for use in AI in the highland communes;
- Lack of service providers for AI in cattle.
- The Li-Chan project trained veterinarians and vet workers in cattle AI; pig keepers in pig breed selection and AI; back-stop support to trained farmers and service providers,
- Positive feedback from pig and cattle keepers, AI service providers, and local authorities.

Work package 1: Technologies and practices for sustainable livestock productivity
