Document Version:

Publisher's PDF, also known as Version of Record (includes final page, issue and volume numbers)

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

introduction

This manual describes how to build a bamboo truss to support the roof of a building with 8 meters free span (e.g. school, clinic, etc.). The construction of the truss is based on scientific research by the author.

This manual should be used to teach people how to build such trusses on their own.

They should be familiar with bamboo and with some basic English to use this book independently, although we hope that the pictures will bridge over a great deal of linguistic problems.

This manual contains only information concerning the truss and the purlins; other topics like stability, wind-load, earthquakes, etc. are not dealt with; for these topics is referred to the book "Bamboo" by the same author.

PART 1

we are going to build a bamboo roof,
for a building of about 8 meters span.

1

the roof is supported by a construction called a truss.

2

how many bamboo culms do we need?

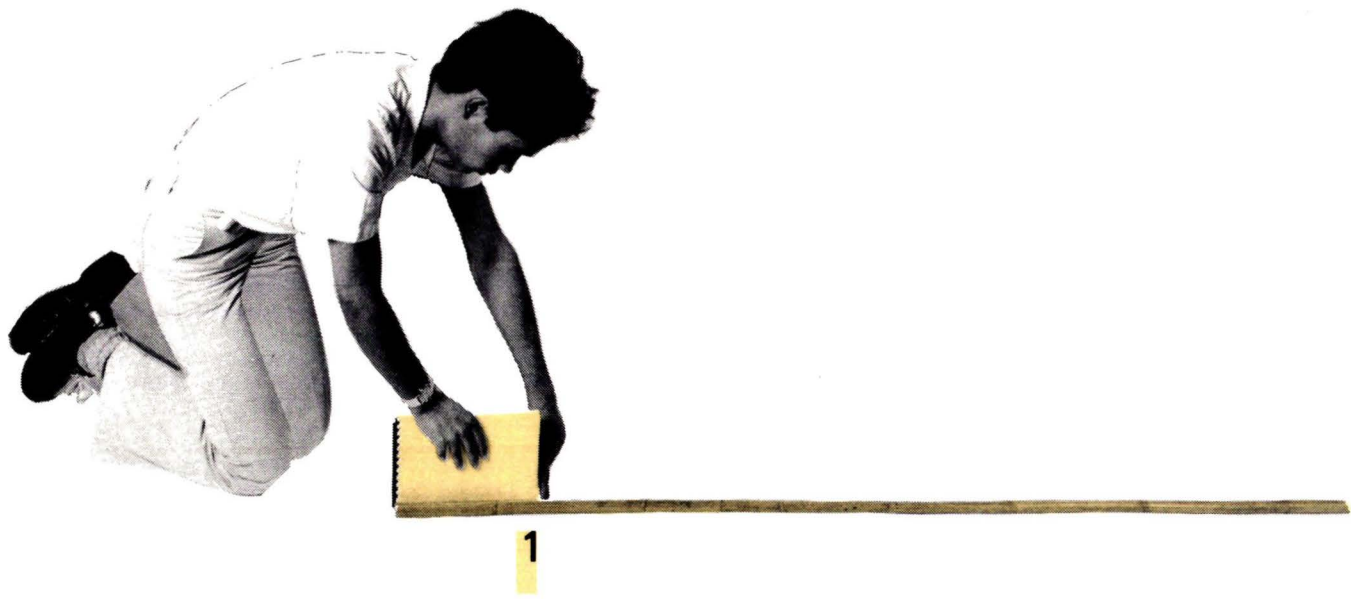

for each truss we need 4 culms.

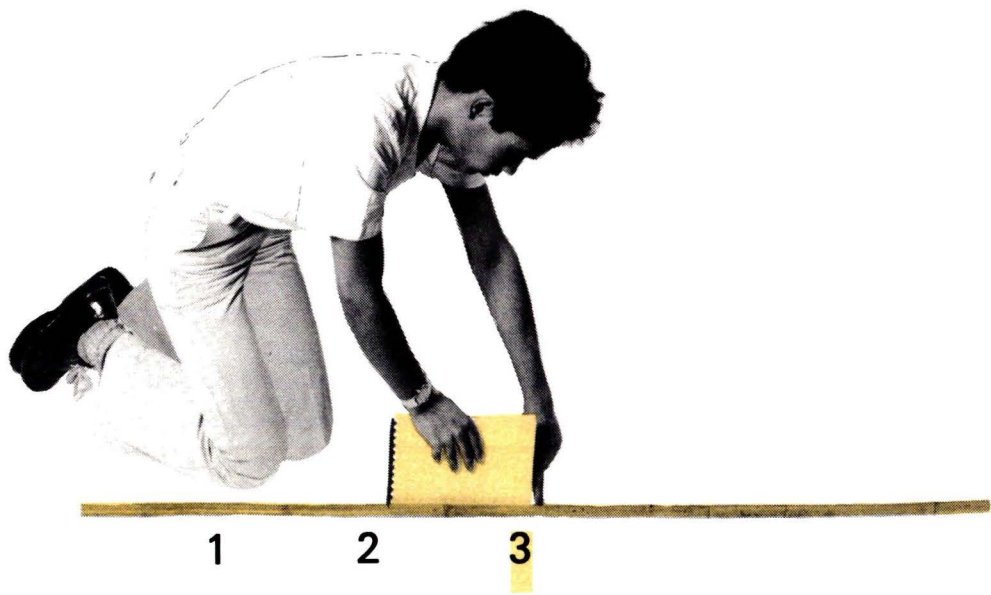

4 we are going to make a measuring-rod
from a thin bamboo.

this booklet is the scale.

we have a measuring-rod of one meter.

- 10 with the rod we measure the length of the bamboo parts needed for a truss.

2x4½ meters and 1x8 meters

the bamboo culms should be cut

as close to a node as possible.

it is very important to build the construction exactly as shown here.

compare the following pictures in this booklet
with the poster.

join the parts as shown.
