**Document status and date:**

Published: 01/01/1998

**Document Version:**

Publisher's PDF, also known as Version of Record (includes final page, issue and volume numbers)

**Please check the document version of this publication:**

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

**[GT1.07] Modelling of Ar/Hg Induction Lamps with PLASIMO**

*J. Van Dijk, G.M. Janssen, J.A.M. Van der Mullen (Eindhoven University of Technology, The Netherlands)*

In the last years various induction lamps have been announced by the major lighting companies. Examples are the Philips QL lamp, Osram's Endura and GE's Genura. In order to improve our understanding of such light sources some modelling has been done with the plasma simulation toolkit [PLASIMO](#), which is being developed at the Eindhoven University of Technology.

PLASIMO has been designed as a general-purpose modelling tool for two-dimensional non-LTE plasmas. It consists of various submodels for the inductive coupling, the particle densities and velocities, the temperatures, the radiative transfer and others. Some results of the PLASIMO application to Philips' QL lamp will be shown. Comparisons will be made with the little experimental data which are available.
