Ahmad Ni'matullah Al-Baarri, PhD
Editor-in-Chief
Journal of Applied Food Technology (JAFT)

Dear Ahmad Ni'matullah Al-Baarri, PhD,

I am submitting a manuscript for consideration of review article publication in JAFT. The manuscript is entitled "**The Potency of Coconut Coir Pulp and Ginger Dregs Oleoresin as Active Food Packaging Materials: A Review.**" In this review article, we aimed to elaborate on the potential of coconut coir and the addition oleoresin from ginger dregs as an active food packaging.

The highlights of this study are:

- The high cellulose and lignin composition indicate that coco fiber has the potential to be used as a material for making paper pulp for packaging
- Ginger dregs contain oleoresin compound which has the potential as an antibacterial, and can be used in the making of food packaging as an active compound.

The authors had chosen to submit this article to JAFT for the relevancy of the topics published in this journal to our research. On behalf of the authors, I also state that all authors have read and approved the manuscript and aware of its submission to JAFT. This manuscript has not been published elsewhere. The authors declare no competing interest.

Thank you for your consideration.

Best Regards,
Dr. Rafli Zulfa Kamil, S. T. P.
