# The Maine Obstetric Medical Simulation (MOMSim) Program Identifies and Categorizes Latent Safety Threats Across Rural Hospitals

Jeffrey Holmes, Micheline Chipman, Becky Hunt, Sarah Austin, Tracy McMillan, Emily Watson, Holly Selby, Leah Mallory.

## Introduction

- Maintaining team and system readiness for rare obstetrical emergencies is difficult for rural hospitals.
- Simulation coupled with Health Care Failure Mode Effect Analysis (HFMEA) has been shown to identify and categorize more latent safety threats (LST) than simulation alone.

# Objective

• Combine in-situ simulation with an HFMEA framework to identify and categorize common system wide LST and opportunities to improve patient safety.

## Methods

- 1. In-situ, interprofessional simulation training was conducted at five regional rural hospitals.
- 2. Teams participated in three high-fidelity scenarios (shoulder dystocia, hypertensive crisis/eclampsia, postpartum hemorrhage).
- 3. Simulations were followed by a formal debrief that included systems evaluation and LST identification.
- 4. HFMEA rubrics were completed for each site, which included the categorization and scoring of each LST.

## Results

- 74 distinct LST were discovered.
- 24 LST (32%) were shared by more than one hospital.
- The three most common LST shared by 5 hospitals were: inconsistent announcement of team roles, inconsistent closed loop communication and no checklist used for postpartum hemorrhage.

### Discussion

- In-situ simulation with an HFMEA framework identified common LST across a group of rural hospitals.
- Identifying themes may facilitate collaborative mitigation solutions and prospective readiness efforts.

n-situ simulation and an HFMEA framework identified and categorized common system wide opportunities to improve patient safety.

### Figure 1: HFMEA Scoring Criteria for LST **DEFINITIONS - PROBABILITY** Occasional (2) Frequent (4) Uncommon (2)

Likely to occur immediately or within a short period

DEFINITIONS - SEVERITY

Catastrophic (4) Failure would cause death or injury

Major (3) Failure causes high degree of dissatisfaction

Moderate (2) Failure overcome with minor performance los

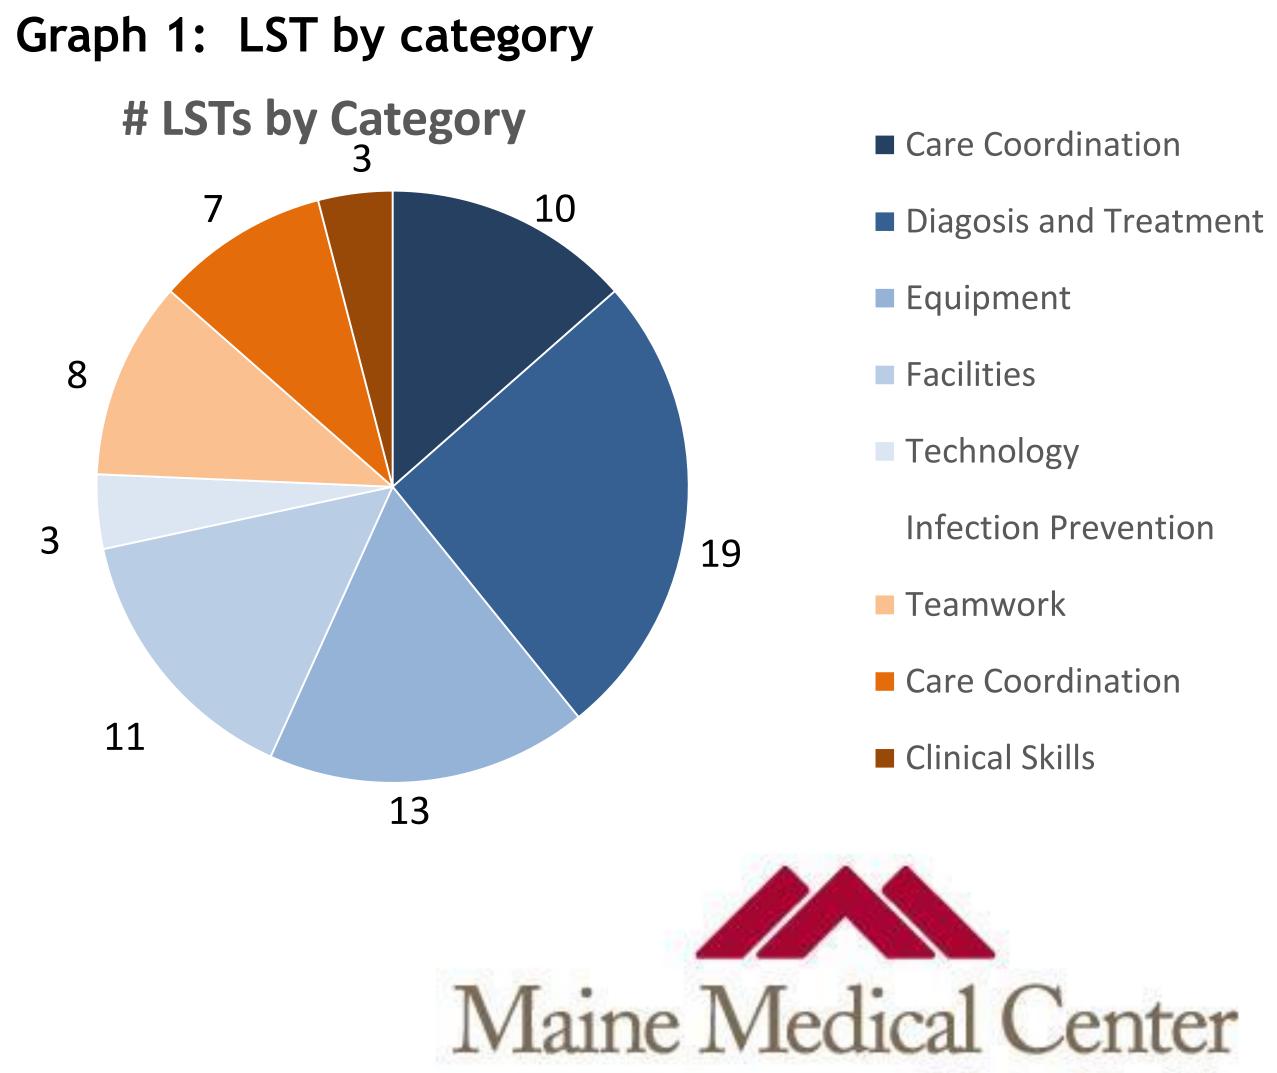

Minor (1) Failure not noticeable to atient and would not affect delivery of the service

HAZARD SCORES

Site	Hospital 1	Hospital 2	Hospital 3	Hospital 4	Hospital 5	Total
# LSTs	20	26	30	26	28	130
# critical	9	14	12	14	15	56

### Table 2: Number of common LST with examples

# sites	# LST	LST
5	3 (4%)	<ol> <li>No Checklist for postpartum hemorrhage</li> <li>Failure to use closed loop communication</li> <li>Inconsistent announcement of team roles</li> </ol>
4	7 (9%)	Example: Blood Loss estimated, not weighed
3	5 (7%)	Example: Potential delay in calling code blue
2	9 (12%)	Example: Staff not aware of treatment algorithm location
1	50 (67%)	Institution dependent

MaineHealth

Occasional (3)	
Probably will occur	
may happen several times	

in 1 to 2 years

Possible to occur may happen sometime in 2 to 5 years

Remote (1) Unlikely to occur may happen sometime in 5 to 30 years

: <b>K</b>						
	Impact on Patient	Impact on Staff				
) ₽ /	Injury resulting in escalation in level of care, permanent disability, death or surgical procedure	Injury resulting in permanent loss of function, requiring hospitalization, permanent or prolonged loss of ability to perform current duties				
) , ,	Non-life threatening delay in care or injury requiring medical attention without escalation in level of care, permanent disability, or death	Injury requiring medical attention, resulting in temporary loss of function or missed work time				
) , 5	Significant negative impact on patient/family experience; varies from stated goals for patient/family experience	Reliability a source of work-related stress and anxiety for staff, introduces inefficiency that impacts frequently performed tasks				
) ; ; ?	No significant negative impact on patient/family experience	Minor nuisance that is not a significant source of stress or anxiety for the majority of staff who encounter the problem				

Severity of Effect					
	Catastrophic (4)	Major (3)	Moderate (2)	Minor (1)	
Frequent (4)	16	12	8	4	
Occasional (3)	12	9	6	3	
Uncommon (2)	8	6	4	2	
Remote (1)	4	3	2	1
