ii. Hardware:	34
a. Desktop Scanners: Consider models such as the Fujitsu ScanSnap iX1600, the Fujitsu fi-7160 or fi-7180. Desktop scanners have proven t	34
b. Dual Monitors that Rotate: One of the objectives is to stop injecting paper into your workflow. So that users can more easily review docum	34
c. Notebooks/Tablets: You must have a way to take your digital files with you to court, client's office, your own conference room, etc. This me	34
iii. Scanner Software That Creates Searchable PDFs: Most copiers and scanners create image-only PDFs which are not searchable	34
iv. Filing System: You can store your electronic documents in a folder system which every Windows and Mac computer provides or you can acqu	34
v. Requirements if You Do Not Buy a Document Management System:	35
a. Search Utility: You'll need a sophisticated search utility which allows you to locate any file, regardless of location or t	35
b. Establish Uniform Folder Structure: You cannot allow users to maintain their own folder structure for the matters they work on. Just like yo	35
c. Establish File Naming Conventions: If you would like everything sorted by date (which is what most lawyers like), simply precede every file	35
vi. Digitize All Documents: In order for this to work, your electronic file must contain everything the paper one does. Therefore, you need to begi	36
vii. Store Email Outside of Your Email Application: First, it is pointless and counter-productive to print your email and stuff it into your paper files.	36
viii. Collaborative Technology: You must be able to share electronic documents securely and collaborate with others. You can use file sharing te	36
ix. Write Down Your Scanning Protocols: Once you've determined the way you want this system to work, it needs to be reduced to.	36
x. Provide Training for all Lawyers and Staff: Don't skip this step because it's the most important one. These systems don't	36
F. Speech Recognition Software: When this technology first hit the market, many people tried it. However, it took a long tim.	37
i. Who Should Consider It: Of course, this technology is great for anyone who doesn't like to type or feels they are slow at i.	37
ii. Uses: Speech recognition software can be used for the following tasks:	37
a. Transcription: Dictation is fast and convenient for the lawyer, but transcription is often slow and laborious for the support staff person who i	37
b. You Talk, It Types: Of course, the technology can also be used for people to speak time entries, emails and documents. Take time entries	37
c. Operate Your PC Hands Free: Speech recognition software can also be used to launch programs, print, send emails and anything else tha	37
iii. Software Options:	38
a. Dragon: Dragon is owned by Nuance (see www.nuance.com). Nuance sells the software direct, but you can get a better deal by shopping	38
(1) PC Versions and List Prices:	38
(a) Differences Between Group and Individual: If you go to Nuance's website and browse through their products,	38
(b) Dragon Home (for home and student use): \$75 This is not appropriate for use in a law firm.	38
(c) Dragon Professional Individual (for professional productivity and small business): \$500 is the list price, but pi	38
(d) Dragon Professional Individual Wireless (for professional productivity and small business): \$400 - Same as I	39
(e) Dragon Legal Individual (for legal professionals and small practices): \$500 - With a specialized legal vocabul	39
(2) Mac Versions: Unfortunately, Nuance abandoned speech recognition software for the Mac in 2018. Howeve	39
(3) Dragon Anywhere: This is an app for any iOS or Android phone which allows you to dictate into your phone :	39
(a) Continuous dictation and no word limits.	40
(b) 99% accurate with powerful voice editing and formatting.	40
(c) Access customized words and auto-text across all devices.	40
(d) Share documents by email, Dropbox, Evernote and more.	40
(4) Recommended Version: We recommend that you go with Dragon Professional at a minimum. If you dictate	40
b. BigHand: BigHand has several speech recognition products that merit consideration. See https://bit.ly/3dQIR6w for more information...	40
c. Office Dictation: If you subscribe to Microsoft 365, you get this in Word and Outlook for free. It's pretty accurate altho.	40
G. Cloud Everything: The most popular of these include the following.	41
i. Software As A Service: Rather than purchasing and installing software on a computer or server, SaaS is simply accessed via a web browser.	41
ii. Hosted Servers also known as IaaS or Infrastructure as a Service: In most cases, this means renting access to a server located in a data cent	41
iii. Client Portal: I know Wikipedia is not a reliable source for everything, but its definition of Client Portal is accurate and well-stated.	41
2. Utilities, Gadgets, Tips and Tricks: I thought I would start this with a few lighter things that I really find to be valuable. As Julie Andr	42
A. X1 Search: The best search utility for a Windows computer.	42
B. WordRake: Many lawyers are revisiting the language used in their documents to try and clean out the legalese and make them more understand	42
C. Grammarly Premium Grammar Checker for Word and Outlook: This is THE BEST grammar checker and puts the one built into Microsoft Office t	42
D. PerfectIt Pro by Intelligent Editing: This is designed specifically for legal writers and editors to improve the process of editing and proofreading le	42
i. Enforces language and usage guidance from the legal writing experts;	42
ii. Catches consistency errors that arise from collaborative efforts or the use of form documents; and.	42
iii. Searches for common errors that may arise from autocorrect, spellcheck or dictation or talk-to-text tools.	42
E. Adobe Sign Built Into Adobe Acrobat Pro DC: Every lawyer needs a good PDF program. If you also need a digital signature platform, then you c	43
i. The Electronic Signatures in Global and National Commerce (E-SIGN) Act , Pub. L. No. 106-229, 114 Stat. 464 (2000) (15 U.S.C.	43
ii. The Uniform Electronic Transactions Act (UETA), as approved by the National Conference of Commissioners on Uniform State Laws in 1999 (43
iii. Many state laws modeled after UETA.	43

Q. Outlook Enhancements & Add-Ons:	44
i. Reply All Monitor for Outlook: Reply all is an email function that streamlines the process of getting fired. If you're tryi.	44
ii. Zoom Email Windows Outlook Utility: Automatically zoom your Outlook windows to your specified zoom percentage. Now you can set your pre	44
iii. Text Lightning: See https://xequite.com/textlightning	45
iv. Boomerang for Outlook: See https://www.boomerangoutlook.com/	45
v. FindTime: See https://findtime.microsoft.com/	45
R. Best Online Dictionary: Whether you need to quickly look up medical terms, legal terms or one of those pesky acronyms littering almost every ar	45
S. Monitor Rear View Mirror: My office is configured so my back is to the door when I'm working on my computer. The problem this caused was the	45
3. Legal Technology Trending Down: I don't have time to waste on talking about what is not hot. So here's a short list:	46
A. Anything analog and slow - paper files, typewriters, etc.	46
B. Drafting documents via dictation & human transcription. Advances with speech recognition software is rendering this antiquated, expensive and s	46
C. iOS and Android tablets because you can buy hybrid PCs that do far more than a traditional tablet.	46
D. WordPerfect.	46
E. Lawyers who are 100% reliant on support staff to produce work product because they refuse to learn how to use the technological tools necessar	46
F. Hourly billing in transactional practices.	46
G. Reliance upon paper client files.	46
H. Doing it that way just because that's the way you've always done it.	46
I. Copiers (being replaced by individual scanners and printers)	46

ICLEF Electronic Publications

Feature Release 4.1

August 2020

To get the most out of your *ICLEF Electronic Publication*, download this material to your PC and use Adobe Acrobat® to open the document. The most current version of the Adobe® software may be found and installed by clicking on one of the following links for either the free [Adobe Acrobat Reader®](#) or the full retail version of [Adobe Acrobat®](#).

Feature list:

1. **Searchable** – All ICLEF Electronic Publications are word searchable. To begin your search, click on the “spyglass” icon at the top of the page while using the Adobe® software.
1. **Bookmarks** – Once the publication is opened using the Adobe Acrobat® software a list of bookmarks will be found in a column located on the left side of the page. Click on a bookmark to advance to that place in the document.
2. **Hypertext Links** – All of the hypertext links provided by our authors are active in the document. Simply click on them to navigate to the information.
3. **Book Index** – We are adding an INDEX at the beginning of each of our publications. The INDEX provides “jump links” to the portion of the publication you wish to review. Simply left click on a topic / listing within the INDEX page(s) to go to that topic within the materials. To return to the INDEX page either select the “INDEX” bookmark from the top left column or right-click with the mouse within the publication and select the words “*Previous View*” to return to the spot within the INDEX page where you began your search.

Please feel free to contact ICLEF with additional suggestions on ways we may further improve our electronic publications. Thank you.

**ESSENTIAL LAW FIRM TECHNOLOGY –
THE BEST OF WHAT'S OUT THERE**

Description

Technology advances quickly and it's not easy to keep up with it while also trying to practice law. This seminar will define and explain the technologies that can help any lawyer solve problems, improve client service, and make life easier. Learn about the essential software and hardware tools that can help you protect client confidentiality, organize case information, manage your practice more efficiently and improve your systems.

Barron K. Henley, Affinity Consulting Group, LLC, Columbus OH

Barron K. Henley, Esq. is one of the founding partners of *Affinity Consulting Group*, a legal technology consulting firm focused on automating and streamlining law firms and legal departments. He earned his B.S./B.A. (marketing and economics) and J.D. from The Ohio State University and is a member of the American, Ohio and Columbus Bar Associations, and the Worthington Estate Planning Council. He is a Fellow of the College of Law Practice Management, a Fellow of the American Bar Foundation, a member of Ohio Supreme Court Commission on Technology and the Courts, and a member of both the ABA Law Practice Management and the Real Property Trust and Estate Law ("RPTE") Sections. He's also a former member of RPTE Futures Task Force, a former Board Member for the ABA TECHSHOW, and the former Chair of the Ohio State Bar Association Law Office Automation & Technology Committee. Mr. Henley heads Affinity's document assembly/automation and software training departments. Barron is also an expert in launching new law firms, overhauling existing firms, and documenting and re-engineering law firm processes. Finally, Barron teaches continuing legal education (CLE) classes throughout the U.S. and Canada covering a wide variety of topics related to law practice management, technology, and ethics.

Legal Technology - The Best of What's Out There

1. **LEGAL TECHNOLOGY TRENDING UP:** Here are a few of the technologies and practice management concepts that are growing in popularity.

A. Document Automation or Assembly:

i. **Document Assembly Defined:** Most document assembly programs integrate with your word processor and enable you to create sophisticated templates. Those templates typically generate an interview (series of questions) presented to the user. Upon answering the questions, a customized document is instantly generated. In addition to simply filling in blanks, document assembly programs support conditional logic (i.e., include the guardianship paragraph if the client has minor children or adult disabled children), infinite lists, and the ability to calculate text, numbers and dates.

The on-screen interview is quite powerful because the template designer can control everything about the sequence and content of the interview. With practice, you can reproduce your entire decision tree in the template and build in safe-guards that walk even novice users through the assembly process. An example of how an interview looks is shown below:

- ii. **Benefits of Document Assembly:** The short story is that document assembly can take complex drafting assignments and make them exponentially faster while simultaneously increasing accuracy. For example, assume an estate planning lawyer is taking 10 hours to get a set of estate planning documents drafted and ready to sign. The lawyer charges a flat fee of \$2,000 which means that she's achieving an effective hourly rate of \$200/hour. If that set of estate planning documents were automated, the time necessary to get documents ready to sign could easily be reduced to 1.5 hours. By charging the same fee (\$2,000), the lawyer is now earning an effective rate of \$1,333/hour.

Document assembly also allows you to take much of what you and your colleagues collectively know about a practice area and perform a "brain dump" into an expert drafting system. For example, assume you have 5 lawyers in your real estate department and they collaborate to build a drafting system for leases. New associate Jim needs to draft a lease in which your firm represents the landlord of a strip mall and the proposed new tenant is a restaurant. The drafting system could skillfully guide Jim through the process, making sure that he a) is using the latest and best form your firm has prepared; and b) addresses all issues that should be addressed in a lease of this type (strip mall, food service tenant, your firm is representing the landlord, etc.). Review by the partner takes minutes instead of hours because the first draft was so well done, even by a relative rookie. The drafting system ensures that the firm's collective knowledge is utilized in every deal.

- iii. **Significant Document Assembly Players:** The big players are HotDocs (dominant market leader) are HotDocs, Contract Express and XpressDox. Lesser players include ActiveDocs, Aurora, Bighand Create, Docassemble, Docmosis, Doxserá, Draftonce, Formstack Documents, Forte, Innova, Lawyaw, Leaflet, Rapidocs, Templafy, Woodpecker, XpressDox, and ZumeForms. I apologize for any omissions.

- B. **Security Upgrades and Technical Competency Training:** In 2013, the American Bar Association made some modifications to the Rules of Professional Conduct ("ROPC") that are often referred to as the "technology" changes. So far, 39 states (including **Indiana**), have adopted them and they impose new duties and standards of care when dealing with client data and confidentiality. In response to those rule changes, many law firms are upgrading their digital security and rolling out technical competency training. In fact, the Florida Supreme Court has gone so far as to require 3 hours of technology-related CLE credits per reporting

period in response to these changes¹. For the specifics, see Indiana Rule 1.1, Comment [6], and Rule 1.6 Comments [16] through [17]².

- i. **Who Bears Responsibility for Mistakes:** Of course, lawyers are responsible for their own violations of the ROPC. I'll spare you from a full recapitulation of Rules 5.1 and 5.3, but briefly, those rules make the partner or supervising lawyer responsible for the mistakes (such as disclosing confidential data) of subordinate lawyers and "nonlawyer assistants."
 - ii. **Technical Competency Training:** Many ethics experts have expressed the opinion that the Rule 1.1 Comment 8 new language makes technical competence a subset of professional competence. Certainly it eliminates the ability for a lawyer to disclaim responsibility for knowing how to use the technical tools necessary to practice law. This means that lawyers need to understand things such as how to remove metadata from a Word file they're emailing opposing counsel, or how to redact a social security number from a PDF pleading being filed in federal court. Further, a lawyer who insists on being analog and slow in a digital world arguably also risks violating ROPC 1.3's requirement that a "lawyer shall act with reasonable diligence and promptness in representing a client."
 - iii. **Security Upgrades:** Lawyers must make reasonable efforts to prevent the disclosure of confidential client information; and act competently to safeguard client information. They are further required to take reasonable precautions to prevent client information from falling into the wrong hands when transmitting a communication. The exact meanings of "reasonable efforts," "act competently" and "reasonable precautions" may be subject to debate. However, it's hard to argue that doing nothing to protect client data would meet the standard. Specifically, lawyers should encrypt email, PCs, and any tablets or phones that contain or have access to client data. Public Wi-Fi connections should also be encrypted via VPN service or other method if client data is being transmitted. Finally, it is recommended that all lawyers employ a password manager so that you can use and remember very strong passwords for all logons.
- C. Document Management System ("DMS"):** There are many choices out there for document management. However, there are only a few that can give you everything. In a nutshell, a good DMS puts you in control and imparts structure,

¹ See http://www.abajournal.com/news/article/florida_supreme_court_approves_mandatory_tech_cles_for_lawyers

² See https://www.in.gov/courts/rules/prof_conduct/

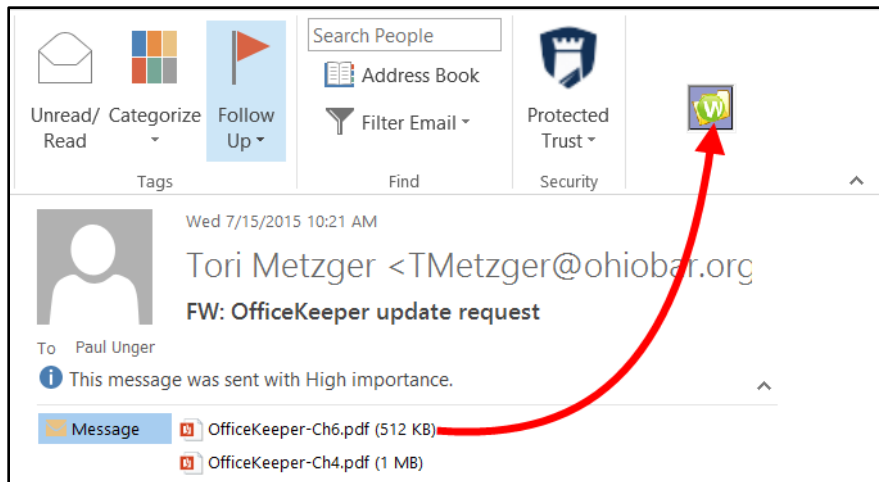

organization, and accessibility to your documents and email. Here is what you want in a DMS:

- i. **What a DMS Does:** A DMS is a system or combination of software/hardware tools which streamlines and automates the process of Document Management. Document Management itself refers to the process of creating, organizing, storing and retrieving electronic files. Electronic files include word processor files, spreadsheets, any scanned documents usually in the form of a PDFs, email, attachments to email (whatever form that takes) and the like. Since DMSs only manage electronic documents, paper documents must be converted (scanned) so that they can be managed by the DMS. In simple terms, your paper "Files" are just collections of paper documents related to a particular matter. Once all of that paper is in digital form, a DMS can organize it by matter just as your paper files are currently organized.

- ii. **Benefits of a DMS:**
 - a. **Easy Remote Access/Offline Access:** Everything in the DMS is available to any authorized user, no matter where they are (provided they have computer, tablet or phone that connects to the internet).

 - b. **Email Integration:** This is extremely important since most people feel crushed by email. A DMS is a full email management system (among other things). Simply having a filing system for email usually makes a big difference for people. With a DMS, all emails related to a particular matter can be easily saved along with the other matter-related documents. Important features include:
 - (1) Ability to save emails with attachments embedded in the native email format from within Outlook without "exporting" them or saving them somewhere else before they're moved into the DMS.

 - (2) Ability to save attachments separately into the DMS from a right-click save-as command or via drag and drop and seen here:

- (3) One-click saving - people will be doing this constantly, every day. The process can't be time consuming, tedious or have too many steps. A good DMS solution will have integration with Outlook by selecting an email and then simply clicking on a toolbar button to either copy or move the email into the DMS.

- (4) Matter Drop Folders in Outlook – ability to drag and drop emails into "matter" folders in Outlook that will automatically deposit the email into the correct client matter folder. These drag and drop folders pictured below in the Worldox DMS solution get created automatically based on your saving history/practices.

- c. **Full Text and Boolean Logic Searches:** Full text searching gives users wide-open access to their documents by framing searches based on concepts rather than categories. Users can search by many criteria - words, combinations of words, phrases, words within proximity of each other, expressions, etc. Each document matching the search terms is returned as a "hit" and the integrated file viewer will highlight each occurrence of a search term in the returned documents. This is exactly like doing a Lexis-type search through your own documents. When evaluating DMSs, you want the ability to view the documents in a viewer without actually opening them, you want to be able to use Boolean logic terms (and, or, not, near, etc.), and you want the search terms highlighted in the document the system found.

The screenshot shows a search window with the following fields and values:

- Name/Comment: Motion in Limine
- Text in File: alcohol (car or automobile or vehicle)
- Date Modified: 2 YEARS AGO TO TODAY
- Profile Group: Client Files
- 1. Client: (empty dropdown)
- 2. Matter: (empty dropdown)
- 3. DocType: (empty dropdown)
- 4. Author: CD
- 5. Typist: (empty dropdown)
- Search What: Active

Buttons at the bottom: Search, Clear, Options, Cancel.

- d. **Ability to OCR PDFs to make them Text Searchable:** The DMS should be able to identify PDFs that are non-searchable and automatically OCR them to make them text searchable. This should happen on the back-end automatically so users do not have to waste time running the OCR process on every PDF they scan or receive via email.

- e. **Ability to Save and Manage Any Type of Document:** The DMS must be able to hold any type of file you've created in-house as well as any type of scanned document (PDF, TIF or JPG) which will typically represent the documents you've received from the outside. A search must turn up all relevant documents regardless of physical location, format, and source application. For example, I have seen plenty of copier-based applications which only hold documents you scan. It does little good to have scanned documents in one system and all of the documents you've created in-house in another system. The idea is to get everything related to a matter in the same system, including documents you've created in-house, documents you've scanned, faxes, hand-written notes, email and attachments to email.

- f. **Forced User Compliance:** In our professional opinion, the system must require user compliance. In other words, if a user wants to save a file from within any program you use (Word, WordPerfect, Acrobat, Excel, etc.), it must be saved into the DMS (or it cannot be saved at all). The DMS can be configured so there is no back-door

or way to circumvent the system. This will absolve anyone in your office from having to police usage of the system and it will ensure the success of the project. In our experience, if you make using the DMS optional, you'll have a lot of people opt out. Frankly, if only some of the people are using the system, then you'll never get full return on your investment. Having said all of that, there may be legitimate business reasons for saving a file outside of the DMS and for those occasions, people can be given the as-needed ability to do so.

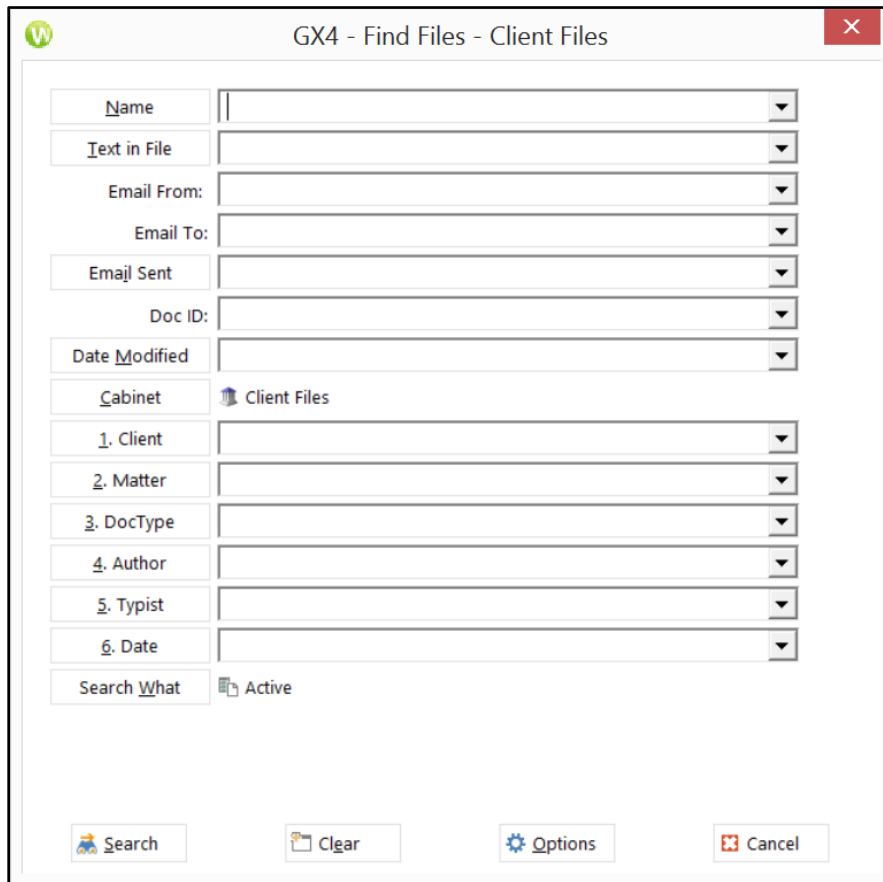

- g. **Integration With Other Programs You Already Use:** In order to be convenient to use and force user compliance, the DMS must integrate with Word, WordPerfect, Acrobat, Excel and any other program in which you save documents or files. When someone clicks the Save or Open button in Word, the DMS must intercede and ask the user to save the document in the DMS, or find the document within the DMS.
- h. **Date Range Searches:** Although it isn't a field that users fill out when they save a document (date created), it's important that users be able to search on date created or date last accessed.
- i. **Fast Searches:** People will be running searches every day, all day so the process needs to be fast. This might not seem like a major point, but if you have to wait on a system to catch up every time you use it to look for something, you'll want to stop using it.
- j. **Security:** Document security involves documents, users, and groups of users. The DMS must give the saver of the document the ability to assign rights and permissions to documents based on individual users, groups of users, and the roles in which users serve within the organization. For example, documents saved in the administrative cabinet would likely not be available to all users. Those documents can be secured by user, user group or by role. You would also have the ability to secure an individual document that otherwise would be available to everyone.
- k. **Check-In/Check-Out Capability:** The DMS must handle documents the same way a library handles books. When you "check out" a document, the system locks it and won't let someone else have the original. Instead, the DMS will notify the second person that you have the document checked out (if they try to open it) and that they can have a read-only copy of it. Of course, once you check the document back in, then it is available for someone else to check

out. This prevents accidental over-writes of documents when multiple people are working on it at the same time.

- I. **Archiving Old Files:** Archiving is a means to move dated or unused files off the main storage medium to secondary storage. The DMS ensures that users can still search for information in the archived files and that there is a ready means to restore it. Many DMSs will allow administrators to set "triggers" in the document profiles that enable automated archiving. For example, it may be desirable to set internal memos to be archived automatically after say, 24 months.

- m. **Metadata Searches:** In the realm of document management, metadata is the additional information stored about the document (other than the file name). For example, when I search for a document, I get the following search screen:

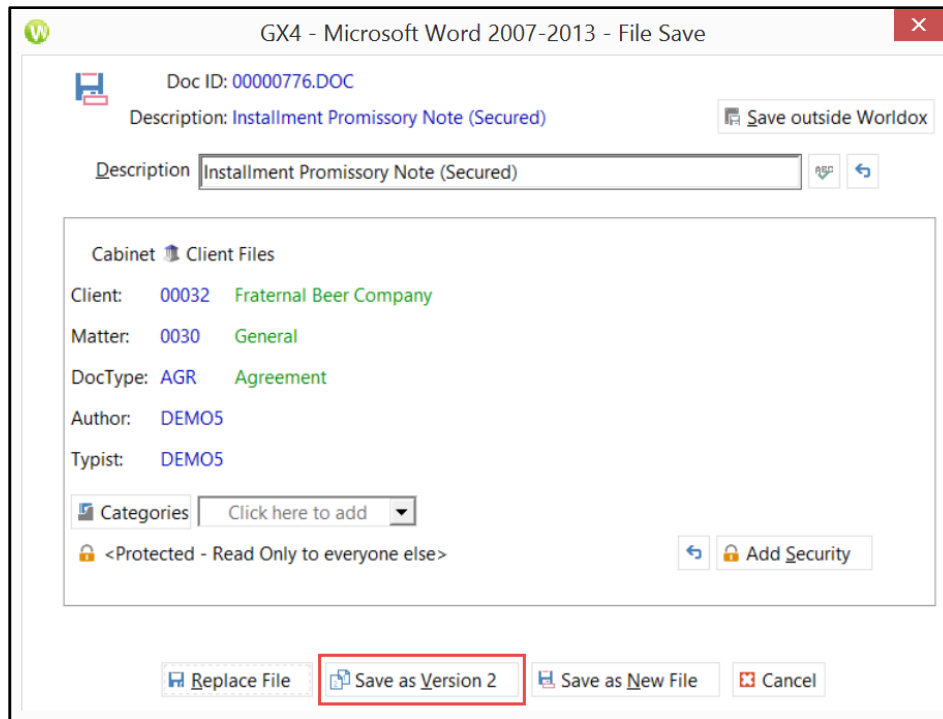

Metadata includes, but it is not limited to, the information you can see above like:

- (1) Name
- (2) Text in File
- (3) Email From
- (4) Email To
- (5) Email Sent Date
- (6) Doc ID
- (7) Date Modified, Created or Accessed
- (8) Cabinet
- (9) Client
- (10) Matter
- (11) DocType
- (12) Author
- (13) Typist
- (14) Date or Date Range
- (15) Active/Inactive

This search capability ensures continuity and a smooth transition when someone leaves or joins your office. For example, if someone unexpectedly left your office, it would be pretty difficult to determine exactly what they were working on before they left. However, if a document management system were in use, it would be quite easy to find every single document or email that person touched in the last 90 days (for example). It's one thing to have a log or list of documents they were working on; it's quite another to actually be able to find those documents. Furthermore, the searches can be narrowed down considerably. For example, I could easily find every pleading (document type), containing the phrase "motion for summary judgment" (text in file), created by a particular employee (author), between 11/1/2008 and 11/1/2009 (date created range), for any matter having to do with the Jelson Electric, Inc. (client name). I imagine that it is presently impossible for anyone in your office to even contemplate a search like that.

- n. **Version Tracking:** The DMS must be able to keep multiple versions of every document. This becomes very important when a document is undergoing revision and is being passed back and forth between attorneys. Most DMSs will keep over 100 versions of every document along with a detailed audit trail noting who did what to the file and when. When a document is saved within the system, it will prompt the user with the option to save it as another version, as see here:

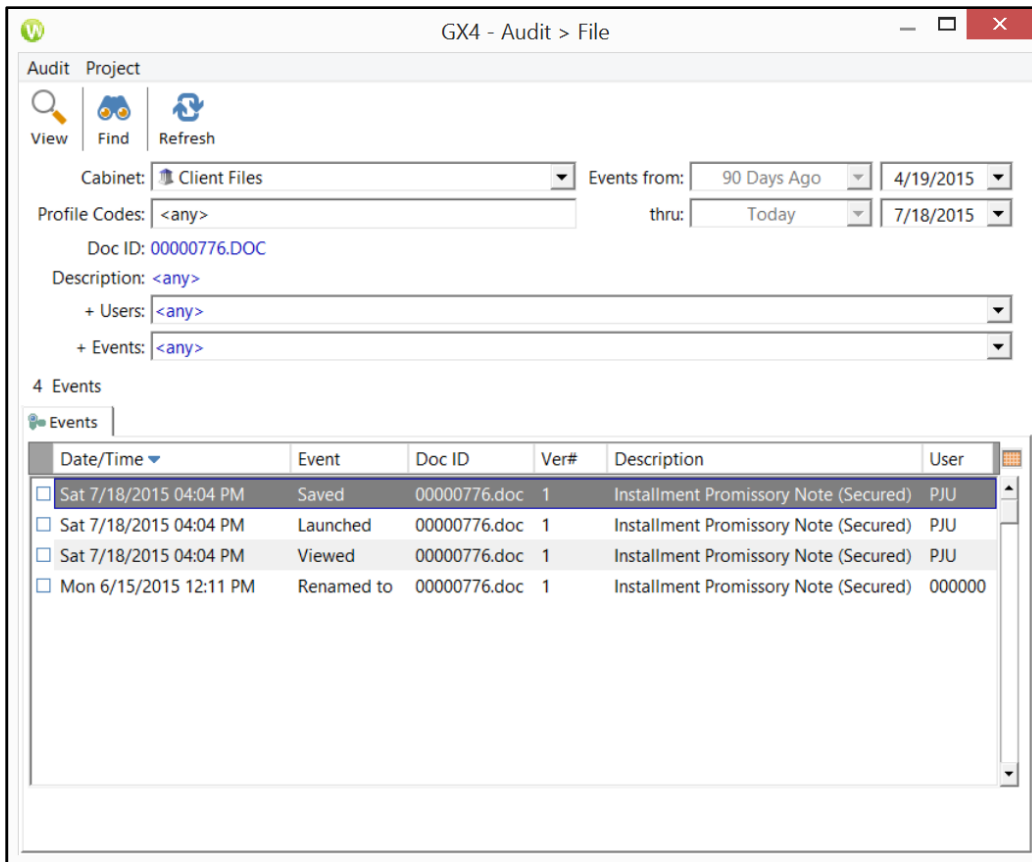

Once saved, whenever that document appears in a search result or list, the DMS indicates that there are multiple versions available of that document, as seen here:

Description	Doc ID	Ver#
DocType: Agreement (AGR)		
<input type="checkbox"/> Installation Promissory Note (Secured)	00000776.doc	2
<input type="checkbox"/> Settlement Agreement	00001229.docx	
<input type="checkbox"/> Settlement Agreement	00001228.docx	

- o. **Tagging/Filtering:** The DMS should give users the ability to create database tags on a matter-by-matter basis so you can organize a file at a more granular level and search or filter based on those database tags.

Description	Doc ID	Ver#	Categories
Client Files - Client: 00001 (Nathan Management (Inc.))	..		
Client Files\00001 - Matter: 0010 (General)	.

CalPX Told To Release Confidential Trade Data To ..	00000943.msg		- Privileged
Fwd: Portland Consultant's Investigation Finds California Has Capacity for Electricity Needs	00000942.msg		- Produced by Paula Jones

- p. **Ability to Compare Documents:** Related to version tracking, users must also have the ability to compare different versions of a document or compare one document to another. In order to compare documents, some people use the compare features built into MS Word while others use 3rd party applications like CompareDocs or Workshare Compare (fka DeltaView). Since all of the documents being compared to one another will be stored in the DMS, the DMS must integrate with these functions in Word or 3rd party programs. Not all DMSs incorporate this functionality which is why this is an important question to ask up front.
- q. **Scanning Integration:** Scanned documents must be easily added to the DMS so that they are included in the document store and can be associated with matters, clients, and the like.
- r. **Consistency:** The system must ensure that documents are consistently labeled and stored. This means that profile fields are drop-down lists and people don't have to manually type document types, client and matter identification numbers, etc.
- s. **Audit Trail:** The DMS must be able to keep automatically audit all transactions related to a file saved within the system so it is easy to determine with files were first created, see everyone who touched it, and determine things like when files were copied, printed, emailed or deleted from the system.

t. **Training Must Be Included:** The DMS will likely be the most used program in the office. Therefore, it is critical that everyone knows how to use it for saving scanned documents, email, attachments and word processor documents; how to search; and how to use it for workflow management (like tracking the status of a contract). Therefore, it is imperative that you get hands-on, on-site training on how to use the system.

iii. **Significant DMS Players:** There are many more than this, but this is a short list of the programs most dominant in the legal world.

a. **NetDocuments:** NetDocuments provides a document management via the web, so you store your documents on their server and pay a monthly fee for the utility of the software. Since you pay by the user, this solution can work for a single lawyer up to thousands of users. For more information, go to <http://www.netdocuments.com/en-us/>. Many lawyers may scoff at the idea of storing all of their documents in the cloud, but you need to see this service to fully appreciate how sophisticated and secure it is.

- b. **Worldox by World Software Corporation:** WORLDOX's unique SQL-free software is installed in more than 2300 companies worldwide, 2000+ of which are law firms and legal departments. It is a "SQL-free" document management system. For the law firm, the total cost of ownership, especially over the long haul, is considerably less. For more information, go to <http://www.worldox.com/>.
- c. **iManage Work (fka WorkSite):** iManage Work is a SQL-based integrated application suite that combines document management, collaboration, portal access, knowledge management, workflow and business process automation in a single solution on a highly scalable and secure Internet platform. WorkSite tends to work better in larger law firms (200 users+). See <https://imanager.com/product/imanager-work/>.
- d. **Laserfiche:** Although not terribly common in the legal world, Laserfiche is a legitimate offering and contains all of the functionality you would want in a document management system. See <https://www.laserfiche.com/>.
- e. **OpenText Document Management eDOCS Edition:** This product can work in any sized organization. For more information, see <http://tinyurl.com/hchc69q>.

D. Case/Matter Management Software:

- i. **Case/Matter Management Objectives:** This is a short list of what one should want in terms of case/matter management organization and workflow.
 - a. **Case/Matter Information Available Electronically:** You need to be able to ascertain the status of any particular matter without having to find and interrogate the responsible lawyer. For example, if your office handles estate planning, anyone in the office should be able to instantly (electronically) access where it is in process, what the next step is, what documents are being drafted, and contact information for the client. You should also be able to see any memos to the file, document or email communications, how much time has been billed/accrued, and all past or future appointments and tasks. Making all of that information available electronically is central to what case/matter management programs do.
 - b. **Sharable Task Management System Used By Everyone:** Losing track of tasks can result in unhappy clients, stress and malpractice

actions. Ideally, any task related to a matter is findable by anyone in the firm by looking at the electronic case file. Your task list should be available to you on any smartphone, tablet or other computer that you use. For example, assume the next task to be completed on an estate plan is to follow up with the client who recently received drafts and see if they have any changes. You should be reminded of that task by the system you're using. Others who might want to know the status of the case should be able to find it without asking you. You shouldn't have to be reminded of the task by a secretary or someone else. Finally, the only evidence of that task shouldn't be something written on a sticky note, legal pad or paper calendar.

- c. **Sharable, Redundant Calendaring System Used By Everyone:** If there are 3 appointments on your calendar related to a particular matter over the next 2 months, those appointments should also be recorded in the electronic case file (without someone double-entering them). Others should be able to look up all future calendared items related to a matter - regardless of whose calendar those items are on. Deadlines should calculate and calendar themselves. Group calendaring should be easy; and you should be able to set up firm-wide calendars for things like statute of limitations expiration dates. The calendaring system should sync with Outlook and be available on any smartphone, tablet or computer you use.
- d. **Sharable Firm-Wide Contact Database:** As soon as anyone enters new client contact information into your system, it should be available to everyone in the firm. With Outlook alone, most users maintain their own, private contact database. So if a team of 4 users will be working on the same case, they'll often all enter the exact same contact information in their own Outlook contacts database over and over. This is obviously a lot of redundant effort. Further, if contact information changes, it's not likely to be updated for all users since private Outlook contacts can't be centrally administered. However, if someone wants to enter a private contact into the system (such as one's personal physician), there should be a way to keep it hidden from everyone else.
- e. **Easy Time Capture Tool:** Users tend to spend all day in a matter management program and since they're working out of it, it's important to be able to bill out of it. A good matter management system makes it easy to bill things as they occur. For example, calendared appointments, tasks, email and documents should all

be billable with one or two clicks. There should be timers to help track time; and ideally the system would remind users to bill events as they occur.

- ii. **Matter Management Software Defined:** Matter Management software allows you to achieve the foregoing objectives and track all important case information electronically. The terms Matter Management, Case Management and Practice Management Software all mean the same thing. Key elements include:
 - a. **Electronic Case Files:** Electronic files which contain all key information related to a matter, people/entities involved and the roles they play, phone calls, emails, tasks, appointments from everyone's calendar and the like.
 - b. **Office-Wide Contact Database:** This is a contact database (any person or entity you deal with) which is shared by everyone. However, private contacts can be made so within the larger database. The contacts are linked to the electronic files they are related to.
 - c. **Office-Wide Calendaring System:** Calendaring system (same as Outlook) which links to the case files.
 - d. **Phone Messaging:** The ability to journalize phone calls and phone messages; and store them with the cases they're related to.
 - e. **Task Lists:** Task lists, each item of which can be associated with a particular matter.
 - f. **Reporting:** The ability to run reports on matters, time entered, calendar information, tasks, custom data for each matter and the like.
 - g. **Document & Email Management:** Sometimes this is a feature built-in and sometimes the matter management software will integrate with a more powerful third-party document management system like Worldox.
 - h. **Time Tracking and Billing:** Most matter management programs don't produce bills but they make it easy to capture time because you can generally one-click bill an appointment, task, email or phone call.

Matter Management Software is a collaborative tool. It's like Outlook except that everything revolves around and is linked to matters (a concept

Outlook doesn't possess). The electronic case file runs parallel to the paper file you already have for a particular matter and contains the key information you would otherwise have to look up in the paper file. Related phone calls and emails are journalized there, the status is listed, and electronic memos to the file are included. It gives you a way to see everything that happened and everything that is yet to be completed in one click.

iii. **Software Options You Install On Your Computer:** The following are options for software you install on your computer rather than access it via the web. Web-based options follow this.

E. Paper Reduction Systems: It's usually impossible to eliminate all paper in a law office, but it can almost always be *reduced*. Almost every law office has scanners and would like to reduce paper. Few actually achieve it. If I had a nickel for every

time a lawyer told me they were frustrated because they feel buried in paper, I'd be retired by now. Anyway, the reason paper reduction isn't achieved is typically because one or more of the following requirements aren't met. Briefly, the elements necessary for a successful paper reduction initiative are as follows:

- i. **Redundant Backup Systems and Security:** Hopefully you have this issue addressed already.
- ii. **Hardware:**
 - a. **Desktop Scanners:** Consider models such as the Fujitsu ScanSnap iX1600, the Fujitsu fi-7160 or fi-7180. Desktop scanners have proven to be a critical key to reducing paper. Trying to rely solely on copiers never seems to work.
 - b. **Dual Monitors that Rotate:** One of the objectives is to stop injecting paper into your workflow. So that users can more easily review documents on screen without having to print them, we strongly recommend dual (or triple monitors) which have the capability of rotating to portrait. Since most monitors are landscape, you can't see the whole page of text at once. By rotating to portrait, not only can you see the whole page of text, but it's much larger than it would be if printed (assuming you're using a monitor 20" or larger).
 - c. **Notebooks/Tablets:** You must have a way to take your digital files with you to court, client's office, your own conference room, etc. This means that you need a notebook, ultrabook³, tablet or other device. Today's super-light notebooks with touch screens blur the distinction between tablets and notebooks (the Dell XPS 13 2-in-1, for example). So it's pretty easy to standardize on one device if you want to.
- iii. **Scanner Software That Creates Searchable PDFs:** Most copiers and scanners create image-only PDFs which are not searchable by text contained inside them because they don't *have* any searchable text within them (unlike PDFs created from Word or WordPerfect, for example). So that you can use a search program or document management system to locate existing files based upon words they contain, all scanned PDFs must be converted to searchable PDFs.
- iv. **Filing System:** You can store your electronic documents in a folder system which every Windows and Mac computer provides or you can acquire a

³ See <http://www.ultrabookreview.com/2796-ultrabook-definition/>

Document Management System ("DMS"). A DMS is a software program that creates a highly sophisticated electronic filing system for your files and provides functionality far beyond what your computer offers natively. For more information, see paragraph 1.C.i. above.

v. **Requirements if You Do Not Buy a Document Management System:**

a. **Search Utility:** You'll need a sophisticated search utility which allows you to locate any file, regardless of location or type, by the words contained inside it. Ideally, you'd be able to use Boolean logic (and, or, not, w/5, etc.) when conducting searches. For Windows computers, consider X1 Search (<https://www.x1.com/products/x1-search/>); and for Mac computers, consider something like HoudahSpot (www.houdah.com). The search utilities built into the operating systems are simply insufficient.

b. **Establish Uniform Folder Structure:** You cannot allow users to maintain their own folder structure for the matters they work on. Just like your paper files, there needs to be a single electronic bucket for all documents related to a matter. If your paper file is a red-rope containing labeled sub-folders for types of documents, then your electronic system should mirror that. For example, under the folder **x:\client matters\probate\Gallant, Howard**, I would have the following sub-folders which would contain everything in the parallel paper files:

- \Appraisals
- \Correspondence
- \Death Certificate
- \Email
- \Expenses
- \Pleadings

c. **Establish File Naming Conventions:** If you would like everything sorted by date (which is what most lawyers like), simply precede every file name with a date, year first. If you enter the date month/day/year, then all of the January files (for all years) are lumped together, all of the February files are together, etc. Our file naming convention:

2014-10-30 - Letter to Bill Biviano re billing system.doc

The date indicates the date the document was mailed out if it's a letter; and the longer description makes it clear what this

document contains without even opening it. If you are scanning a document you received, then the date should be the date the particular document was received.

- vi. **Digitize All Documents:** In order for this to work, your electronic file must contain everything the paper one does. Therefore, you need to begin scanning everything not already in electronic form. This includes all incoming documents, faxes, notes and the like. If you already have a document in electronic form, then you don't necessarily have to print it and scan it unless you absolutely want a digital copy of the document as it looked when it left your office. Ultimately, if your electronic file is incomplete or even suspected of being incomplete by users, then it won't be relied upon and you'll never achieve meaningful paper reduction.
- vii. **Store Email Outside of Your Email Application:** First, it is pointless and counter-productive to print your email and stuff it into your paper files. Instead, start adding those emails electronically to your electronic file. This is easily accomplished by opening an email and saving it as a PDF. If you have a PDF program that integrates with your email program (like Acrobat and Outlook), then creating PDFs from emails will also capture their attachments in the same PDF.
- viii. **Collaborative Technology:** You must be able to share electronic documents securely and collaborate with others. You can use file sharing technologies like ShareFile⁴ or Dropbox⁵. Web meeting services are also important such as Join.Me⁶ or GoToMeeting⁷. You can also send very large files with encryption programs like Protected Trust⁸ (aside from the fact that they allow you to easily send encrypted email and attachments).
- ix. **Write Down Your Scanning Protocols:** Once you've determined the way you want this system to work, it needs to be reduced to writing and added to your operations manual.
- x. **Provide Training for all Lawyers and Staff:** Don't skip this step because it's the most important one. These systems don't work (particularly if you decide to forego a DMS) unless everyone is doing the same thing and

⁴ See <https://www.sharefile.com/>

⁵ See <https://www.dropbox.com/pro>

⁶ See <https://www.join.me/>

⁷ See <http://www.gotomeeting.com/>

⁸ See <https://www.protectedtrust.com/>

rowing in the same direction. If users go rogue and start making up their own protocols, the whole thing will go off the rails pretty quickly.

F. Speech Recognition Software: When this technology first hit the market, many people tried it. However, it took a long time to “train” the software to recognize one’s voice and even after training, the recognition wasn’t always so good. I talk to people regularly who tried it at one point and wrote it off as not ready for prime time. Well, those days are over. Speech recognition software has definitely arrived, it costs less than it used to, the accuracy is amazing.

i. **Who Should Consider It:** Of course, this technology is great for anyone who doesn’t like to type or feels they are slow at it. However, it’s also great for people who can type and are relatively fast. The bottom line is that most people can speak 180 words per minute but almost no one can type that fast. So even if you’re a pretty good typist, this could still be a game changer for you.

ii. **Uses:** Speech recognition software can be used for the following tasks.

a. **Transcription:** Dictation is fast and convenient for the lawyer, but transcription is often slow and laborious for the support staff person who is charged with that task. By using digital voice recorders (which are available everywhere), speech recognition software can be used to transcribe dictation without human intervention. Once transcribed, a support staff person would only have to proofread it and address any formatting issues that are present. Since payroll is always the highest cost in any firm, eliminating the need for people to transcribe dictation is a huge cost savings. The speech recognition software can also transcribe dictation much, much faster than a person can.

b. **You Talk, It Types:** Of course, the technology can also be used for people to speak time entries, emails and documents. Take time entries for example. In many firms, the lawyer will write down their time entries and give them to someone else to enter into the billing system. This is an incredibly expensive way to track time. If the lawyer currently writing down time entries by hand simply spoke them directly into the billing system, it would take less time for the lawyer and would eliminate the non-billable cost of redundant time entry by the staff.

c. **Operate Your PC Hands Free:** Speech recognition software can also be used to launch programs, print, send emails and anything else that a person might do with the keyboard and mouse. Of course, there are more commands to learn but for people with any

sort of physical challenge that makes using a PC via keyboard/mouse difficult, this technology can really help.

iii. **Software Options:**

- a. **Dragon:** Dragon is owned by Nuance (see www.nuance.com). Nuance sells the software direct, but you can get a better deal by shopping around a bit.

(1) **PC Versions and List Prices:**

- (a) **Differences Between Group and Individual:** If you go to Nuance's website and browse through their products, you'll see they offer Dragon Professional Group and Dragon Professional Individual. You only need Group if you need network support for roaming profiles because you'll be dictating from multiple computers. Most people don't do that so you can avoid the extra cost of group by buying the Individual versions of the software.
- (b) **Dragon Home** (for home and student use): \$75 This is not appropriate for use in a law firm.
- (c) **Dragon Professional Individual** (for professional productivity and small business): \$500 is the list price, but pricing fluctuates wildly on Amazon - With powerful customization features, Dragon Professional Individual is ideal for professional individuals or small business owners. Create and transcribe documents, use simple voice commands to short-cut repetitive steps, like inserting your signature, or customize the vocabulary. Synchronize with Dragon Anywhere professional-grade mobile dictation, and get paperwork done anywhere. As of 4-27-21, here's a sample price with headset:

Dragon Professional Individual 15.0 Speech Dictation and Voice Recognition Software [PC Download] with Dragon USB Headset

Brand: Nuance Dragon

Platform : Windows Server 2008, Windows 8.1, Windows 10, Windows 7, Windows 2012 Server

★★★★☆ 14 ratings

Amazon's Choice for "dragon professional individual 15"

Price: \$534.99

Bundle Price: **\$334.99** ✓prime

You Save: **\$200.00** (\$199.99 less than buying separately)

Pay **\$55.83/month for 6 months** (plus S&H, tax) with 0% interest equal monthly payments when you're approved for an Amazon Prime Store Card.

Platform: **PC Download**

Edition: **Dragon Pro Individual w/ USB Headset**

Dragon Pro Individual

- (d) **Dragon Professional Individual Wireless** (for professional productivity and small business): \$400 - Same as Dragon Pro Individual above, except it includes a wireless Bluetooth headset.
- (e) **Dragon Legal Individual** (for legal professionals and small practices): \$500 - With a specialized legal vocabulary, Dragon Legal Individual is the fastest way to streamline legal documentation and improve costs, simply by speaking. Whether buying for individual use or your small practice, legal professionals can save time creating contracts, briefs and other legal documents, reduce transcription costs, and improve overall practice productivity—all by voice.
- (2) **Mac Versions:** Unfortunately, Nuance abandoned speech recognition software for the Mac in 2018. However, Dragon Anywhere (see next) works on an iPhone.
- (3) **Dragon Anywhere:** This is an app for any iOS or Android phone which allows you to dictate into your phone and have it automatically transcribed. According to their website⁹, Dragon Anywhere professional-grade mobile dictation makes it easy to create documents of any length

⁹ See <https://www.nuance.com/dragon/dragon-anywhere.html>

and edit, format and share them directly from your mobile device—whether visiting clients, a job site or your local coffee shop.

- (a) Continuous dictation and no word limits
- (b) 99% accurate with powerful voice editing and formatting
- (c) Access customized words and auto-text across all devices
- (d) Share documents by email, Dropbox, Evernote and more

The app is free for a week trial, \$15/month or \$150/year (17% savings over going month-to-month). There's also a Dragon Legal Anywhere although they appear intent on concealing pricing - see <https://bit.ly/32RWuPh>.

- (4) **Recommended Version:** We recommend that you go with Dragon Professional at a minimum. If you dictate a lot of case & statutory citations and you use a Windows PC, then it would be worth getting Dragon Legal. Otherwise, you can easily teach Dragon Professional to correctly spell any legal words you use that the Professional version doesn't understand out of the box.

- b. **BigHand:** BigHand has several speech recognition products that merit consideration. See <https://bit.ly/3dQIR6w> for more information.

- c. **Office Dictation:** If you subscribe to Microsoft 365, you get this in Word and Outlook for free. It's pretty accurate although you can't teach it new words or how to spell something correctly that it is misinterpreting (like a proper name). For more information, see <https://bit.ly/30ntVJm>. The button in Word is on the home ribbon and looks like this:

G. Cloud Everything: The most popular of these include the following.

- i. **Software As A Service:** Rather than purchasing and installing software on a computer or server, SaaS is simply accessed via a web browser. Your data is stored in the vendor's servers in a data center rather than in your office. There are a ridiculous number of definitions of SaaS, but I think this one sums it up succinctly without using 15 more acronyms requiring definitions:

“Generally speaking, it’s software that’s developed and hosted by the SaaS vendor and which the end user customer accesses over the Internet. Unlike traditional packaged applications that users install on their computers or servers, the SaaS vendor owns the software and runs it on computers in its data center. The customer does not own the software but effectively rents it, usually for a monthly fee. SaaS is sometimes also known as hosted software or by its more marketing-friendly cousin, ‘on-demand.’”¹⁰

To be clear, this means that you do *not* have the software installed on your computer - it is accessible only via a browser on the Internet. Further, your data and/or documents are located on the vendor’s servers and not on your computer or server.

- ii. **Hosted Servers also known as IaaS or Infrastructure as a Service:** In most cases, this means renting access to a server located in a data center. The server provides processing power and electronic storage, both of which are accessed via the Internet. The server is available on-demand and the provider is usually responsible for maintaining the server, providing backup and technical support.
- iii. **Client Portal:** I know Wikipedia is not a reliable source for everything, but its definition of Client Portal is accurate and well-stated:

"A client portal is an electronic gateway to a collection of digital files, services, and information, accessible over the Internet through a web browser. The term is most often applied to a sharing mechanism between an organization and its clients. The organization provides a secure entry point, typically via a website, that lets its clients log into an

¹⁰ *Software as a Service (SaaS) Definition and Solutions*, by Meridith Levinson on May 15, 2007, www.cio.com, see <http://tinyurl.com/24cofbx> for full article.

area where they can view, download, and upload private information."¹¹

So you are using a client portal when you book a flight or hotel online, when you log into your bank's website or even when you use Facebook. Law firms are using these to communicate and share documents with clients and others more efficiently and securely.

2. **UTILITIES, GADGETS, TIPS AND TRICKS:** I thought I would start this with a few lighter things that I really find to be valuable. As Julie Andrews once sang, these are a few of my favorite things.

- A. **X1 Search:** The best search utility for a Windows computer.
- B. **WordRake:** Many lawyers are revisiting the language used in their documents to try and clean out the legalese and make them more understandable to a layperson. If you use Microsoft Word and would like to see how the language in your complex documents might be streamlined, consider WordRake (<http://www.wordrake.com/>). WordRake integrates with Microsoft Word (not WordPerfect, sorry) and will use Word's "track changes" feature to suggest changes to any document you would like it to review. At that point, you can accept or reject each change using Word's built-in features for that purpose. WordRake for Word is \$129/year and WordRake for both Word & Outlook is \$199/year.
- C. **Grammarly Premium Grammar Checker for Word and Outlook:** This is THE BEST grammar checker and puts the one built into Microsoft Office to shame. Want to seriously improve your writing? See <https://www.grammarly.com/premium>.
- D. **PerfectIt Pro by Intelligent Editing:** This is designed specifically for legal writers and editors to improve the process of editing and proofreading legal documents. It:
 - i. Enforces language and usage guidance from the legal writing experts;
 - ii. Catches consistency errors that arise from collaborative efforts or the use of form documents; and
 - iii. Searches for common errors that may arise from autocorrect, spellcheck or dictation or talk-to-text tools.

Consistency Checker scans your text for: hyphenation inconsistencies, numbers that are both spelled out and appear in digits, spelling variations, compound words, and abbreviations in two forms.

¹¹ See http://en.wikipedia.org/wiki/Client_portal

It's easy to forget to define an abbreviation the first time it appears. However, even one undefined abbreviation can break a reader's concentration and make a document frustrating to read. It doesn't have to be that way. With Abbreviation List, you can make sure that every abbreviation in your text is defined; and you can automatically generate a Table of Abbreviations that will make your document more accessible to everyone. Abbreviation List checks for abbreviations that are: not defined, used before they are defined, defined two ways, defined the same way twice, spelled out after they're defined. Abbreviation List produces a list of items to check that appears next to your document. You can use that to insert a Table of Abbreviations, as well as to search for, and quickly fix, any errors that it finds.

- E. Adobe Sign Built Into Adobe Acrobat Pro DC:** Every lawyer needs a good PDF program. If you also need a digital signature platform, then you can get the great PDF program and the digital signature platform in one product - Acrobat Pro DC. Considering it's only \$180/year, it's a great deal versus some of the big competitors like DocuSign (which will run you at least \$300/year). Digital signatures are authorized by:
- i. The Electronic Signatures in Global and National Commerce (E-SIGN) Act , Pub. L. No. 106-229, 114 Stat. 464 (2000) (15 U.S.C. §§7001-7031);
 - ii. The Uniform Electronic Transactions Act (UETA), as approved by the National Conference of Commissioners on Uniform State Laws in 1999 (7A Pt. 1 U.L.A. 211, 211-99 (2002)); and
 - iii. Many state laws modeled after UETA.
- F. ShareFile Secure File Sharing Service:** For sharing files securely with clients, witnesses, co-counsel or anyone else, it's pretty hard to beat ShareFile for ease of use and robust functionality. Even their least expensive plan offers custom branding so the portal will look like part of your website. Impressive service with great technical support. See <https://www.sharefile.com/> for more information.
- G. Lenovo ThinkVision M14:** This is the best portable external monitor so you can have a dual monitor arrangement with your laptop even when you're not in your office. It's \$254 on amazon.com.
- H. Microsoft 365 Included Apps You Should Know About:**
- i. **Microsoft ToDo** - <https://todo.microsoft.com/tasks/>
 - ii. **Microsoft Bookings** - <https://bit.ly/3GdK2dN>
 - iii. **Microsoft Teams** - <https://www.microsoft.com/en-us/microsoft-teams/group-chat-software>

- I. **Print or Make PDFs of Articles on the Web Without The Clutter:** I do a lot of research and I often find articles on web sites that I want to keep copies of as PDFs. However, those articles are often on pages with ads, banners and a lot of extraneous stuff that I don't want in my PDF. To solve this problem, I use the free website <http://www.printfriendly.com/>. PrintFriendly takes any URL and renders the resulting page in a clean, condensed format. Further, it allows you to easily remove anything you want to remove from the article (like photos) before you create a PDF.
- J. **Best USB/Bluetooth Speakerphone:** If you participate in a lot of web meetings and are tired of wearing a headset OR you have a VoIP phone system, you really need to check out the **Jabra Speak 710**. It's normal price is \$314 but as of this writing (1/30/22), it's down to \$184.13 on amazon.com.
- K. **Email Encryption:** Some really great options here include Microsoft Message Encryption (which you can add to a Microsoft 365 account), Rmail (<https://rmail.com/>) and ShareFile (<https://www.sharefile.com/secure-email>).
- L. **Laptop Cooling Pad:** If your laptop fan is coming on, then your laptop is slowing down. It's called "thermal throttling" and all processors slow down when they get too hot. To prevent that from occurring, try a cooling pad for under your laptop. For example, see <https://amzn.to/3Hjqw0M>
- M. **CamelCamelCamel:** This service tracks all prices on Amazon so you can make sure you're getting a good deal. The service can also notify you when a particular product reaches a certain price level. See <https://www.camelcamelcamel.com/>
- N. **Remove Web Meeting Ambient Background Noise:** See <https://krisp.ai/>
- O. **Best Desktop Scanner (Windows or Mac):** See the Fujitsu ScanSnap iX1600 here: <https://amzn.to/3Heb8Tp>
- P. **Best Password Manager:** You need a password manager to keep track of the dozens and likely hundreds of logons and passwords involved in a modern law practice. Our favorites are Dashlane (<https://www.dashlane.com/>) or Roboform (<https://www.roboform.com/>).
- Q. **Outlook Enhancements & Add-Ons:**
 - i. **Reply All Monitor for Outlook:** Reply all is an email function that streamlines the process of getting fired. If you're trying to avoid this – this add-in is for you. See <http://www.sperrysoftware.com/Email-Tools/product/reply-to-all-monitor/> - \$15.
 - ii. **Zoom Email Windows Outlook Utility:** Automatically zoom your Outlook windows to your specified zoom percentage. Now you can set your

preferred zoom percentage to be able to clearly see all your Outlook windows. See <http://www.sperrysoftware.com/Email-Tools/product/zoom-email-windows/>

- iii. **Text Lightning:** See <https://xegute.com/textlightning>
- iv. **Boomerang for Outlook:** See <https://www.boomerangoutlook.com/>
- v. **FindTime:** See <https://findtime.microsoft.com/>

R. Best Online Dictionary: Whether you need to quickly look up medical terms, legal terms or one of those pesky acronyms littering almost every article you read, my favorite resource is <http://www.onelook.com/>. OneLook searches 1,061 dictionaries simultaneously, contains powerful search tools, and includes a reverse dictionary so you can enter a definition of a word you can't think of and it will tell you words that mean what you described.

OneLook

S. Monitor Rear View Mirror: My office is configured so my back is to the door when I'm working on my computer. The problem this caused was that people would walk into my office without me knowing it and unwittingly scare me to death when they spoke. Tired of being snuck up on, I found a rear view mirror that clips onto

my monitor for \$17 on www.amazon.com. It works great and I'm no longer startled 5 times a day when people enter my office.

3. **LEGAL TECHNOLOGY TRENDING DOWN:** I don't have time to waste on talking about what is not hot. So here's a short list:
- A. Anything analog and slow - paper files, typewriters, etc.
 - B. Drafting documents via dictation & human transcription. Advances with speech recognition software is rendering this antiquated, expensive and slow.
 - C. iOS and Android tablets because you can buy hybrid PCs that do far more than a traditional tablet
 - D. WordPerfect
 - E. Lawyers who are 100% reliant on support staff to produce work product because they refuse to learn how to use the technological tools necessary to practice law
 - F. Hourly billing in transactional practices
 - G. Reliance upon paper client files
 - H. Doing it that way just because that's the way you've always done it
 - I. Copiers (being replaced by individual scanners and printers)
