

COMPTES RENDUS GEOSCIENCE

Volume 350 (2018) – No. 6 – September–October

Cover illustration: Extension of the West African Craton (WAC) in northwestern Africa. The contour of the craton corresponds to the white dashed line. The whitish ellipsoidal area encompasses the margins of the WAC and the WAC-dependent terrains that are considered in this thematic issue. The Digital Elevation Model of the background map (kindly provided by Rémi Leprêtre, Cergy-Pontoise University, France) shows the lowest areas in ochre and the highest ones in teal.

Thematic issue

The West African Craton and its margins. A tribute to Professor André Michard for his jubilee of works in Morocco
