

COMPTES RENDUS PHYSIQUE

Tome 6 (2005) – N° 1

Magnetic cobalt rings of width a few atoms (light shading), assembled around Pt(111) islands of monoatomic-height (medium shading). Scanning Tunneling Microscope (STM) image, 100 nm field of view.

Couronnes magnétiques de cobalt de largeur quelques atomes (contraste clair), assemblées autour d'îlots de hauteur monoatomique de Pt(111) (contraste intermédiaire). Image de microscope à effet tunnel (STM), champ de vue 100 nm.

DOSSIER

Self-organization on surfaces / *Auto-organisation sur les surfaces*

Guest editor / *Rédacteur en chef invité* : Olivier Fruchart

• Self-organization on surfaces: foreword Olivier Fruchart	3
• Dynamics of crystal steps Olivier Pierre-Louis	11
• Formation of self-assembled quantum dots induced by the Stranski–Krastanow transition: a comparison of various semiconductor systems Henri Mariette	23
• Self-organized epitaxial growth on spontaneously nano-patterned templates Sylvie Rousset, Bernard Croset, Yann Girard, Geoffroy Prévot, Vincent Repain, Stanislas Rohart	33
• X-ray methods for strain and composition analysis in self-organized semiconductor nanostructures Till Hartmut Metzger, Tobias Urs Schüllli, Martin Schmidbauer	47
• Epitaxial self-organization: from surfaces to magnetic materials Olivier Fruchart	61
• Magnetic anisotropy from single atoms to large monodomain islands of Co/Pt(111) Pietro Gambardella, Stefano Rusponi, Tristan Cren, Nicolas Weiss, Harald Brune	75
