

WELOCOME to the IEEE JOURNAL OF SELECTED TOPICS IN QUANTUM ELECTRONICS (JSTQE) Issue on Biophotonics. Biophotonics is a truly exciting multidisciplinary field as it combines state-of-the-art photonics technologies in quantum electronics, lasers, fiber optics, and electro-optics to the study of life sciences and medicine. Since the invention of the microscope, light has played a crucial role in the discovery of phenomena in all forms of life, from single-celled organisms to humans. The modern field of biophotonics represents a truly broad spectrum of research spanning from basic science studies in botany and zoology, to biomedicine and clinical technologies. Yet, all of these research themes have in common the use of photons on living cells and organisms, which leads to insights being shared and used to inspire new directions across the spectrum of applications. In the biomedical domain, biophotonics approaches often initiate at the “bench,” where promising technologies eventually lead to clinically relevant “bedside” diagnostics and therapeutics. Because of the low cost associated with biomedical technologies, and increasing use of integrated photonics in mobile technologies, this field is rapidly transforming our approach to health care by providing increasingly rapid, accurate, point-of-care, and cost-efficient diagnostics and surgical guidance techniques.

The purpose of this issue of JSTQE is to highlight the recent progress and trends in the development of leading-edge photonic technologies that address current challenges in biology and medicine. This issue presents a wide variety of novel and emerging optically based technologies that push the current capabilities of sensing, metrology, and imaging in biological environments.

This issue contains 46 papers, including 13 invited papers authored by well-regarded research groups, both established and emerging, from all over the world. The invited papers include extended reviews on biophotonic technology development and applications in the areas of photoacoustic imaging, diffuse optical spectroscopy, optical coherence tomography and elastography, computed optical imaging, novel imaging strategies using ultrafast spectroscopy, laser speckle imaging, mechanisms of low-light therapy, microscopy in low-resource settings, and spectroscopy for forensic applications. The contributed papers cover a broad variety of existing and new biophotonic topics including optical tweezers, photodiode technology development, functional and intraoperative capabilities using diffuse optical spectroscopy, selective disinfection of cell cultures, and monitoring of radiation and drug therapies, to name a few. Of particular note is a significant increase in the number of publications in photoacoustics and optical elastography this year, fields which are of rapidly growing interest in the biomedical imaging technology community.

We hope you will find this JSTQE Issue on Biophotonics to be an interesting and thought-provoking reference that will inspire and impact future advances in biophotonics.

ACKNOWLEDGMENT

This issue was made possible by the dedicated efforts of a number of people. First, we thank the many reviewers who volunteered their time and effort to provide in-depth reviews, leading to stimulating scientific discourse and the improvement of many of the manuscripts published in this issue. The continued high quality of IEEE publications and biophotonics research as a whole greatly depend on their ongoing and selfless efforts. Second, this issue would not have been possible without the guidance and help of C. T. Lutz of the IEEE Photonics Society staff, whose excellent organizational skills helped us to meet the deadlines. We also thank Prof. L. Lester, Editor-in-Chief of JSTQE, for his guidance and encouragement in assembling this issue. Finally, we thank the many authors for their invited and contributed papers, their patience during the review process, and the excellent quality of their research that have provided a stimulating Issue on biophotonics in 2016.

Amy Oldenburg received the bachelor's degree in applied physics from the California Institute of Technology, Pasadena, CA, USA, in 1995, and the Ph.D. degree in physics from the University of Illinois at Urbana-Champaign (UIUC), Champaign, IL, USA, in 2001.

She is an Associate Professor at the University of North Carolina at Chapel Hill (UNC Chapel Hill), Chapel Hill, NC, USA. From 2001 to 2008, she was a Postdoctoral Research Associate at the Beckman Institute, UIUC, where she invented magnetomotive OCT and investigated a variety of OCT contrast agents for biomedical applications. In 2008, she founded the Coherence Imaging Laboratory at UNC Chapel Hill, where her research interests include novel OCT and ultrasonic imaging technology development, magnetic and plasmonic contrast agents, and elastography, with targeted applications in obstructive airway disorders, breast cancer, thrombosis, dentistry, and drug delivery.

Dr. Oldenburg received the NSF CAREER Award in Biophotonics in 2014. She became a Senior Member of SPIE in 2011 and a Senior Member of OSA in 2013.

Yu Chen received the bachelor's degree in physics from Peking University, Beijing, China, in 1997, and the Ph.D. degree in bioengineering from the University of Pennsylvania, Philadelphia, PA, USA, in 2003.

He is an Associate Professor at the University of Maryland in College Park, MD, USA. His research interests include the following: optical coherence tomography, laminar optical tomography, and multiphoton microscopy, development of novel quantitative optical sensing and imaging devices for clinical translation, and preclinical and clinical applications of optical technologies in imaging brain function, renal physiology, cancer therapy, and tissue engineering.

Dr. Chen received NSF CAREER Award in 2012. He has been an Associate Editor of *Medical Physics* and a Guest Editor of *IEEE JOURNAL OF SELECTED TOPICS ON QUANTUM ELECTRONICS* and the *SPIE Journal of Neurophotonics*. He is a Member of SPIE and the Optical Society of America (OSA) and has served as a Conference Program Chair and General Chair for OSA Conference on Lasers and Electro-Optics: Applications and Technologies.

Diego Krapf received the bachelor's degree in physics and the M.S. and Ph.D. degrees in applied physics from the Hebrew University of Jerusalem, Jerusalem, Israel.

From 2004 to 2007, he was a Postdoctoral Researcher in the Molecular Biophysics Group, Delft University of Technology, where he focused on single-molecule biophysics using solid-state nanopores. He joined the Department of Electrical and Computer Engineering, Colorado State University as a Faculty Member in August 2007. He was promoted to Associate Professor at Colorado State University in 2013. He is also Associate Professor in the School of Biomedical Engineering. His current research interests include cellular biophysics at the single-molecule level, with particular emphasis on cell architecture and membrane and cytoskeleton dynamics.

Anita Mahadevan-Jansen received the B.Sc. and M.Sc. degrees in physics from the University of Bombay, Mumbai, India, and the M.S. and Ph.D. degrees in biomedical engineering from the University of Texas at Austin, Austin, TX, USA.

His primary research interests include the clinical translation of optical spectroscopies and imaging for disease diagnosis and guidance of therapy. She joined the Vanderbilt engineering faculty in 1996. She is the founding Director of the Vanderbilt Biophotonics Center and is Orrin H. Ingram Professor of Biomedical Engineering and Professor of Neurological Surgery at Vanderbilt University. She is an Associate Editor of *Neurophotonics* as well as *Applied Spectroscopy* and serves as a Reviewer of more than 20 journals and as a Chair of numerous professional conferences. She has authored more than 75 peer-reviewed publications and is a Fellow of the American Institute of Medical and Biological Engineering, and the International Society for Optical Engineering.

Jannick Rolland received the Optical Engineering diploma degree from the Institut D'Optique Théorique et Appliquée, Palaiseau, France, and the M.S. and Ph.D. degrees in optical science from the College of Optical Sciences, University of Arizona, Tucson, AZ, USA.

She is the Brian J. Thompson Professor of Optical Engineering at the Institute of Optics at the University of Rochester, Rochester, NY, USA, and the Chief Technology Officer of LighTopTech Corp., West Henrietta, NY, USA, a startup she cofounded in 2013 in biotechnology at the University of Rochester. She is the Director of the NSF I/UCRC Center for Freeform Optics that focuses on graduate education and the Director of the R.E. Hopkins Center for Optical Design and Engineering that engages undergraduates hands-on in optical design, fabrication and metrology. She leads the ODA Lab (www.odalab-spectrum.org) that supports a team of about 20 scholars from undergraduates to senior scientists. She holds appointments in the Center for Visual Science and the Department of Biomedical Engineering.

Prof. Rolland is a Fellow of OSA, SPIE, and NYSTAR. She served as the Director at Large on the OSA Board of Directors 2010–2013. She received the 2014 OSA David Richardson Medal for “*Visionary Contributions and Leadership in Optical Design and Engineering, Enabling Noninvasive, Optical Biopsy*. ” Her research interests include focus on optical engineering innovations in relation to imaging and visualization across a wide range of driving applications.

James W. Tunnell received the B.S. degree in electrical engineering from the University of Texas at Austin, Austin, TX, USA, in 1998, and the Ph.D. degree in bioengineering from Rice University, Houston, TX, USA, in 2003.

He is an Associate Professor in the Department of Biomedical Engineering, University of Texas at Austin. He joined the faculty of the University of Texas in the fall of 2005. His research interests include the broad field of biomedical optics with a specific focus on using optical spectroscopy and imaging for disease diagnosis and treatment, particularly that of cancer. He has published more than 60 referred journal articles, proceedings and book chapters, presented papers at more than 100 international and national conferences, and edited one book. He has served as an Associate Editor for the *Annals of Biomedical Engineering* and on the program committees for CLEO, OSA, ASLMS, and IEEE-Photonics Society as well as several board positions for OSA and ASLMS.

Dr. Tunnell has received the following awards/honors: South-by-Southwest Interactive Award (2015), Fellow of the American Institute of Medical and Biological Engineers—AIMBE (2015), Best Paper in the Biomedical Engineering Division - America Society for Engineering Education (2012), Outstanding BME Graduate Alumnus from Rice University (2010), Coulter Fellow (2010), “20 Greatest Inventions of the Next Decade,” Business Week (2009), Ralph E. Powe Junior Faculty Enhancement Award from the Oak Ridge Associated Universities (2007), Early Career Award from the Wallace H. Coulter Foundation (2008, 2006), National Research Service Award from the NIH (2004), and Best Basic Science Paper from the American Society for Laser Medicine and Surgery (2000). He received the National Research Service Award from the NIH to fund his postdoctoral fellowship in the Spectroscopy Laboratory at the Massachusetts Institute of Technology from 2003–2005. He is a Member of the OSA, ASLMS, and BMES.
