Title III of the Senate bill, establishing a parking board, “appears acceptable to the House conferees – as long as they get their highway directive.” [“House Conferees Adamant On D.C. Freeway Directive,” *The Evening Star*, July 13, 1968]

Drew Pearson and Jack Anderson published a column saying that the House Public Works action on the bill “illustrates the need” for strict enforcement of a recently adopted House code of ethical conduct. The House version of the 1968 Act was “one of the most lobby-dominated bills

of this session.” The bill “was rammed through the Public Works Committee” by Chairman Fallon (“always a friend of the highway lobby”), Chairman Kluczynski (“the devout friend of the highway lobby”), and Representative Cramer (“another concrete champion”).

The columnists listed “what the lobbyists managed to do” to the House highway bill. The bill removed protections of parks, wildlife refuges, and historic sites “against the invasion of the highways.” It directed construction of freeways in the District of Columbia notwithstanding the ruling of the U.S. Court of Appeals. “This provision sets the precedent for the entire Nation and is probably unconstitutional since it infringes on the power of the courts.” The bill also cut funding for the Highway Beautification Act of 1965 (“a direct slap at Mrs. Johnson”) and added 3,000 miles to the Interstate System:

The Senate, in contrast, has passed a fairly good highway bill.

The two conflicting measures now have gone to conference. Thruway lobbyists and their champions on the House Committee rushed the joint conferences before the public could become aware of what had happened. [Pearson, Drew, and Anderson, Jack, “Highway Lobby Rolls Roughshod,” *The Washington Merry-Go-Round*, *The Washington Post and Times Herald*, July 15, 1968]

On July 24, newspapers reported tentative agreement on the critical issues during the conference committee’s eighth meeting. The Senate had agreed to a modified House mandate on the District freeways. Under the tentative agreement, the District would be ordered to build the Three Sisters Bridge, the Potomac River Freeway along the Georgetown waterfront, the Center Leg (under construction) from the Southwest Freeway to New York Avenue, and the East Leg as far north as Bladensburg Road, NE. However, the city would have time to restudy the North-Central Freeway, the South Leg beneath the Lincoln Memorial grounds and the Tidal Basin, and the North Leg of the Inner Loop (still identified as a tunnel under K Street). The District would be required to submit a report to Congress within 18 months on the studies.

Conferees, according to the reports, had dropped Title III, but had agreed to reconsider. They also had tentatively agreed to reduce the expansion of the Interstate System to 1,500 miles. [Milius, Peter, and Carper, Elsie, “Hill Pushes Plan to Order D.C. Roads,” *The Washington Post and Times Herald*, July 24, 1968; Grigg, William, “Freeway Bill Conferees Back Softened Directive,” *The Evening Star*, July 24, 1968]

As if to heighten the tension, Chairman Tydings and his colleagues on the Senate District Committee wrote on July 23 to warn the city council that the freeway impasse was “undermining any hope for a subway.” The impasse was threatening the regional compact in support of the rail rapid transit system. The letter said that, “despite our mutual frustration, there is no time left for beating the air or for unrealistic posturing.” The question was not if the area would have subways or freeways, “but whether we will ever have rapid transit at all.” [“Senate Unit Cites Peril in Metro Delay,” *City Life*, *The Washington Post and Times Herald*, July 24, 1969]

## The Conference Report

On July 19, Secretary Boyd wrote to Chairman Randolph. Secretary Boyd had received a call from Senator Cooper asking for the Department of Transportation's views on the provision in the House bill on the District of Columbia freeways.

The Senator had "asked me particularly for my views as to whether or not major problems would be encountered in the construction of the East Leg and the Center Leg." Secretary Boyd did not believe any major problems would be encountered on the East Leg as its construction continued northward to the East Capital Street Bridge.

As for the Center Leg, "there are important reasons why construction . . . cannot, at this time, proceed beyond New York Avenue." The Center Leg could be extended north a few blocks to Brentwood Road, NW., just south of Brookland, but beyond that point, the extension of the Center Leg would require an interchange with the North-Central Freeway. If the expressway were not continued north, traffic would have to be diverted onto an expressway in the New York Avenue corridor:

I have been advised by the District of Columbia Government that, because of the interchange problem, until a decision is made as to the location and design of the North Leg [sic], construction of the Center Leg north of New York Avenue is not feasible. Accordingly, the District Government believes and I concur in its position, that it would not be desirable, at this time, to legislate construction of the Center Leg beyond New York Avenue.

He did not want to comment in detail on other segments:

In fact, during our investigation into the District highway program it has become obvious to us in the Department that it is not possible to make useful summary judgements [sic] about any of the projects individually. They must be viewed as parts of a system, the entirety of which – and not its individual components – must be designed so as to best meet the requirements of the city and the region.

Secretary Boyd illustrated this problem by discussing two of the more controversial projects, beginning with the South Leg tunnel. It would, he wrote, funnel traffic onto the Southwest Expressway, "which is already overcrowded at peak hours and which was not designed with a South leg [sic] in mind." In view of traffic flow and the complexity of interchanges required in the 14<sup>th</sup> Street area, "I continue to believe that the South Leg is inordinately expensive relative to the benefits that would be realized from it. Attempting to graft it into the system would create more problems than it would solve, and I do not think it is a wise use of Federal funds."

The Three Sisters Bridge was the other segment that illustrated the difficulty of discussing individual projects:

It appears to me that on no issue is the record more misinterpreted than in the case of the Three Sisters Bridge. There is no doubt that the construction of that facility poses serious questions with respect to its impact upon the environment.

Too little attention, he wrote, had been paid to the bridge's role as a link in the metropolitan area:

As I have said before, to construct the Three Sisters Bridge without at the same time making provisions for a North Leg and an adequate downtown distribution system is to transfer a traffic jam from one side of the Potomac to the other. Construction of the Three Sisters Bridge as an isolated project will serve little purpose. It is for this reason that I maintain that the District Government must be allowed the flexibility to design and construct, as a package, a system for movement across the Potomac and along the waterfront and for both through movement and circulation in the downtown business district. I do not, therefore, think it would be desirable to require by statute construction of the Three Sisters Bridge.

In response to a direct question from Senator Cooper, Secretary Boyd addressed a comment often made in support of the bridge. He enclosed a summary of assumptions on access from the city to Dulles International Airport. "It indicates conclusively that the location of Dulles Airport at its present site was in no way based upon an assumption the Three Sisters Bridge would be constructed." [Federal-Aid Highway Act of 1968 – Conference Report, *Congressional Record-Senate*, July 29, 1968, page 24034]

Conferees released their report on the Federal-Aid Highway Act of 1968 on July 25. The District freeway provisions were contained in Section 23 of the new bill.

Section 23(a) stated that, "Notwithstanding any other provision of law, or any court decision or administrative action to the contrary, the Secretary of Transportation and the government of the District of Columbia shall, in addition to those routes already under construction, construct all routes on the Interstate System within the District of Columbia," as set forth in the 1968 ICE. "Such construction shall be undertaken as soon as possible after the date of enactment of this Act, except as otherwise provided in this section, and shall be carried out in accordance with all applicable provisions of title 23 of the United States Code."

Section 23(b) stated that within 30 days after enactment of the legislation, the District "shall commence work" on:

- Three Sisters Bridge, I-266 (Section B1 to B2).
- Potomac River Freeway I-266 (Section B2 to B4).
- Center Leg of the Inner Loop, I-95 (Section A6 to C4), terminating at New York Avenue.
- East Leg of the Inner Loop, I-295 (Section C1 to C4), terminating at Bladensburg Road

Section 23(c) stated that for projects in the 1968 ICE not specified in (b), the District of Columbia government and the Secretary of Transportation "shall report to Congress no later than 18 months after the date of enactment of this section their recommendations with respect to such projects including any recommended alternative routes or plans, and if no such recommendations are submitted within such 18-month period then the Secretary of Transportation and the government of the District of Columbia shall construct such routes, as soon as possible thereafter, as required by subsection (a) of this section."

Section 23(d) assured the District's ability to employ the highway relocation assistance established by Section 30 of the 1968 Act.

Section 23(e) authorized the District Commissioner (mayor) "to acquire by purchase, donation, condemnation or otherwise, real property for transfer to the Secretary of the Interior in exchange or as replacement for park, parkway, and playground lands transferred to the District of Columbia for a public purpose pursuant to section 1 of the Act of May 20, 1932 . . . and the Commissioner is further authorized to transfer to the United States title to property so acquired."

(Section 1 of the Act of May 20, 1932 (P.L. 72-143) authorized Federal and District authorities to transfer jurisdiction over parts or all of their administered "properties among or between themselves for purposes of administration and maintenance under such conditions as may be mutually agreed upon." Prior to consummation, the National Capital Park and Planning Commission (later renamed NCPC) shall recommend the proposed transfer. The authorities concerned shall report all such transfers to Congress. Section 2 stated that nothing in the Act was intended to repeal any other law authorizing transfer of jurisdiction among Federal and District authorities.)

Finally, Section 23(f) authorized payment to be made by the Commissioner, and received by the Interior Secretary, "in lieu of property transferred pursuant to subsection (e) of this section." This amount "shall represent the cost to the Secretary of the Interior of acquiring real property suitable for replacement of the property so transferred as agreed upon between the Commissioner and the head of said agency and shall be available for the acquiring of the replacement property."

The conference report included a Statement of Managers on the Part of the House "in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report." The statement, signed only by the House conferees, discussed the compromises reflected in the proposed statutory provisions.

Regarding the Three Sisters Bridge, the statement summarized its history – the Policy Advisory Committee's 1966 agreement as to the location of the bridge, the Commission of Fine Arts' approval of the design, NCPC's approval of the general alignment on September 15, 1966, and the geometrics on May 2, 1967, subject to review by the Department of Transportation, and the Department's February 1968 letter returning the decision to local prerogatives:

The bridge location and geometrics shall therefore proceed as presented to the National Capital Planning Commission in September 1966 and May of 1967 with no further actions required by that or any other body.

With respect to the scheduling of construction, the Congress directs that the first substructure contracts be advertised for construction within 90 days of the enactment of this legislation.

Immediately upon completion of construction of the bridge, the District of Columbia shall relinquish to the National Park Service the right-of-way through Glover Archbold [sic]

Park that it presently holds. The design of the bridge does not require intrusion on the Park and the Congress directs that no intrusion of the Park take place.

The statement's discussion of the I-266/Potomac River Freeway stated that the District was to "proceed immediately into the final design stage" on the section of I-266 from the Three Sisters Bridge to approximately 31<sup>st</sup> Street, NW. In addition, "right-of-way acquisition shall be resumed immediately on those parcels remaining to be acquired which are required for the facility and which have already been authorized by the Bureau of Public Roads":

The project shall be built from its eastern extremity at the already completed portion of the Potomac River Freeway at Thirty First Street westward to the Three Sisters Bridge in the vicinity of the intersection of Foxhall Road and Canal Road. It shall be an eight lane facility consisting of two four-lane roadways.

The statement specified the routing of the two four-lane roadways:

The westbound roadway will proceed as an elevated structure from Thirty First Street along the present Whitehurst Freeway to a point just west of Key Bridge where it will proceed *under* the existing C & O Canal to an alinement between the present Canal Road and Georgetown University. It will then proceed past the vicinity of the intersection of Foxhall Road and MacArthur Boulevard to join the westbound lane of the Three Sisters Bridge.

The east bound roadway shall proceed from the terminus of the existing completed elevated section of the Potomac River Freeway at Thirty First Street dropping as soon as possible, consistent with Interstate standards, into a tunnel section under the Georgetown waterfront and proceeding westward *under* the C & O Canal to an alinement immediately parallel to the westbound roadway between the existing Canal Road and Georgetown University. The alinement will then proceed westerly to the eastbound roadway of the Three Sisters Bridge. [Italics in original]

In the vicinity of the Three Sisters Bridge, the statement indicated, "there will be provided ramp connections to the proposed Palisades Parkway which is the extension of the already completed section of the George Washington Memorial Parkway." In addition, "Provision shall be made for connections from the Palisades Parkway to the intersection of Foxhall Road and MacArthur Boulevard":

Canal Road which presently follows directly adjacent to the C & O Canal shall be relocated from Key Bridge to the intersection of Foxhall Road and MacArthur Boulevard by placing it between the Potomac River Freeway and Georgetown University on a high level which will overlook the beauty and splendor of the C & O Canal and this reach of the Potomac River.

The District Department of Highways was to "proceed to design this entire facility, by use of consultants or otherwise, to begin no later than sixty days from enactment of this legislation. Construction shall commence in a logical sequence as soon as designs have been prepared."

Regarding the Center Leg, the statement observed that it was “already under construction, in various stages” and should be completed to New York Avenue. The Center Leg would terminate at New York Avenue “until plans are completed for its continuation and connection with other parts of the system to be approved at a later date.”

Interchange “C,” the statement summarized, was “in various stages of design and construction from 6<sup>th</sup> Street, S.E., to and including Barney Circle.” Construction was to continue on schedule:

The project shall proceed as an eight-lane roadway from Barney Circle to just south of the East Capitol Street Bridge and thence northerly as a six lane facility.

It was to comply with the alignment and geometrics approved by NCPC on September 15, 1966:

It shall proceed northerly from Barney Circle adjacent to the Congressional Cemetery and thence to the east of the D.C. Stadium and under the west approaches to the East Capitol Street Bridge. Access shall be provided to the D.C. Stadium parking areas as indicated in the plan presented to the National Capital Planning Commission. The alinement shall proceed northward under Benning Road and immediately east of the proposed athletic field in the Spingarn High School complex. In the vicinity of the Arboretum at Maryland Avenue an interchange will be provided in conjunction with proposals by the Arboretum for a new entrance treatment at that location. The alinement will then proceed slightly onto Arboretum lands to avoid residences along M Street in accordance with agreements already arrived at with the Arboretum. The design of the terminus at Bladensburg Road will take into account the possibility of extension of this project as a tunnel under Mt. Olivet Road.

The District was to direct the design consultant, already under contract for the section between Barney Road and Benning Road, “to resume work, with the first construction contract to be advertised within 90 days of enactment of this legislation.”

For the section from Benning Road to Bladensburg Road, the city was immediately to begin negotiations for a design contract that would get underway within 60 days of enactment:

Construction on this part of the project shall commence as soon as plans have been prepared. The alinement for this portion of the route shall be as presented at a public hearing in January of 1967 and subsequently approved by the National Capital Planning Commission on February 9, 1967 and the D.C. Board of Commissioners on March 9, 1967.

The statement added that this plan had the approval of NCPC, NPS, “and to the extent required, the Fine Arts Commission”:

The plan contemplates rebuilding the existing golf course in the Kingman Lake area, and the development of an extensive recreation area, involving a marina on the Anacostia River, ball diamonds, etc. The Congress expects that these plans will be carried to full completion at the earliest possible date.

All Federal agencies affected by these plans were “to expedite any actions on their part to meet the time schedule set forth herein.”

As for the other segments in the 1968 ICE, the District and the Secretary of Transportation were “directed to study those projects and report to the Congress within 18 months from the date of enactment their recommendations with respect to such projects, including any recommended alternative routes or plans, so that the remainder of the Interstate System within the District of Columbia may be appropriately authorized.” If the District and Secretary did not submit recommendations within 18 months, “then the Secretary of Transportation and the government of the District of Columbia are required to construct the routes.”

Although these congressional directives by the managers of the House were part of the legislative history of the Federal-Aid Highway Act of 1968, they were not statutory and, therefore, not binding.

As for authorizing the District to participate in the new relocation provisions, the statement continued:

The committee cannot overemphasize the importance of these relocation provisions to the District of Columbia situation, as well as that of many other urban areas.

The conferees also agreed to a 1,500-mile extension of the mileage limitation on routes eligible for construction under the Interstate program. The report explained that:

The Interstate System now stands at 41,000 miles. All of it has been designated, and less than 15 miles remain for making adjustments of any kind.

The report discussed the designation process under the Federal-Aid Highway Acts of 1940 and 1956, noting that “no provision was made for flexibility which would make it possible to meet the tremendous changes that have taken place in population and development in many sections of the nation.” Several cities of 100,000 population were not on an Interstate route. “In addition, because of these and other factors, there are critical gaps in the System which will prevent its efficient functioning as the nation’s major continuous interconnected highway network.”

The missing links, “virtually everyone” recognized, must be built. The report cited the extension of I-75 from its present terminus in Tampa-St. Petersburg to Miami as one of several examples. The States were to submit proposals to the Secretary of Transportation, who was to approve allocation of the mileage within the new limitation. The States were to decide whether construction of the missing links took priority over currently designated segments:

These 1500 miles, to the extent they are used, will increase the ultimate cost of the system, but they will also provide essential flexibility in maintaining the usefulness and efficiency of the entire Interstate System, and its ability to meet the purpose for which it is being constructed. That flexibility is desperately needed now, on an interim basis, pending the time when the Congress determines what the long-range future highway program will be.

The conferees agreed to extend the time for completion of the Interstate System to June 30, 1974.

The conferees amended Section 138 of Title 23, United States Code, to contain the same language as Section 4(f) of the Department of Transportation Act. The key part of the provision read:

After the effective date of the Federal-Aid Highway Act of 1968, the Secretary shall not approve any program or project which requires the use of any publicly owned land from a public park, recreation area, or wildlife and waterfowl refuge of national, State, or local significance as determined by the Federal, State, or local officials having jurisdiction thereof, or any land from an historic site of national, State, or local significance as so determined by such officials unless (1) there is no feasible and prudent alternative to the use of such land, and (2) such program includes all possible planning to minimize harm to such park, recreational area, wildlife and waterfowl refuge, or historic site resulting from such use.

The report explained how the conferees expected Section 138 and the identical Section 4(f) to be interpreted:

This amendment of both relevant sections of law is intended to make it unmistakably clear that *neither* section constitutes a mandatory prohibition against the use of the enumerated lands, but rather, is a discretionary authority which must be used with both wisdom and reason. The Congress does not believe, for example, that substantial numbers of people should be required to move in order to preserve these lands, or that clearly enunciated local preferences should be overruled on the basis of this authority. [Italics in original]

Although the House conferees had yielded on the House provision weakening Section 4(f) and Section 138, they secured this nonstatutory explanatory language that reflected their views.

(According to an internal history by the Department of Transportation explained:

The last clause was inserted after several members of Congress took exception to Secretary Boyd's decision to veto the use of Brackenridge Park in San Antonio, Texas for a freeway, despite the fact that the San Antonio City Council and the voters of San Antonio in a local referendum indicated that the use of the park for highway purposes was desired.

(For information on the San Antonio freeway dispute, see *Busting the Trust: Unraveling the Highway Trust Fund 1968-1978* on this Web site.)

Conferees dropped Title III, Senator Tydings' parking bill. The statement of managers did not explain why. [Federal-Aid Highway Act of 1968, Conference Report to Accompany S. 3418, U.S. House of Representatives, 90<sup>th</sup> Congress, 2d Session, Report No. 1799, July 25, 1968; Conference Report on S. 3418, Federal-Aid Highway Act of 1968, *Congressional Record-House*, July 26, 1968, pages 23692-23704]

## Two Bills in One Day

On July 26, the House of Representatives acted on two bills affecting the District's freeway program. First, Representative Natcher introduced the District of Columbia Appropriations Act, 1969. After discussing appropriations for many District activities, Representative Natcher turned to the freeway program. He explained the committee's support for freeway and rapid transit systems. The freeways, however, had faced a series of delays and obstacles beginning in 1962.

He cited the example of the Three Sisters Bridge as "the focal point" of the freeway network, saying it had "been continuously blocked." He went through its history, including the Department of Transportation's use of the bridge "as a means by which the entire interstate highway program in the District of Columbia was blocked." He cited the February ruling of the U.S. Court of Appeals, which blocked four projects. "The District has held, however . . . that a legal cloud has been thrown over all freeway projects and thus no further freeway projects will be started without specific authorizing legislation." These delays, he pointed out, "have resulted in increased projects costs [sic] which are cause for considerable concern."

His committee's position was "still unchanged." He recalled that in 1966, the committee had denied funding for the rapid transit system:

A slight breakthrough did occur . . . and funds were obligated for the highway program. As a result, the rapid transit funds were agreed to in conference. A similar situation exists currently and until the freeway system is allowed to proceed the committee is again reluctant to provide additional funds for the construction of the rail rapid transit system by the Washington Metropolitan Area Transit Authority, and has accordingly denied the \$27,575,000 requested for the District of Columbia's share of capital outlay for the rapid transit system.

Representative Broyhill asked for assurance that if the freeway logjam were broken that the rapid transit funds would be restored. Representative Natcher replied that, "As soon as the freeway system goes [sic] underway, beyond recall, our committee will recommend the appropriation of construction funds for the rail rapid transit system."

Representative Machen commended Chairman Natcher for his decision to support a balanced transportation system that included freeways. The area was a "tragic situation" where millions of dollars had been spent on planning, but so many of the planned freeways had not been built. "It has been through a rearguard action by a few [opponents] that have blocked not only the will of Congress, but the consensus of Congress in going ahead with a balance [sic] transportation system."

Representative Gude also commended Chairman Natcher's decision. The area needed the freeway system that "the House has overwhelmingly endorsed":

The delay of both systems has already meant additional cost for the taxpayers of our Washington metropolitan area as well as the Nation . . . . The cost of delay in building

both systems when measured in terms of inadequate transportation for business, industry, workers, and the public in general is incalculable but obviously great.

Chairman Kluczynski assured his colleagues that “the gentleman from Kentucky is a man of his word.” He said:

As the gentleman has explained, there is over \$200 million laying here for the construction of highways, and there is nothing being done for the residents of the area or for the thousands of visitors to get in and out of Washington.

He pointed out that the House would soon be voting on the conference report on the Federal-Aid Highway Act of 1968, as a result of which “we will be able to use those highway funds.”

After discussing other aspects of the District appropriations bill, the House approved the bill without a recorded vote. [District of Columbia Appropriations, 1969, *Congressional Record-House*, July 26, 1968, pages 23629-23731]

Later that day, Chairman Fallon introduced the conference report on the Federal-Aid Highway Act of 1968. House conferees, he said, had worked with their Senate counterparts to produce “one of the finest road construction programs that we have ever been able to present”:

I believe we are presenting to you a bill that is not only a workable bill but one which will go a long way toward relieving the congestion in traffic that exists today and promote safety on the highways as well as helping to build up the economy of this country, which is so important and vital to the future of America.

After “great give and take,” the conferees had agreed on the final bill unanimously. He described briefly its many elements, including:

We also think we have taken care of the problems relating to parklands, the District of Columbia highway program, and other features . . . .

One of the most important programs contained in this legislation is a meaningful relocation program, one that is essential for proper highway development and one which will take care of individuals, businesses, or organizations which are forced to relocate because of highway construction. Proper compensation is afforded to these groups under the terms of the relocation section in this report.

Chairman Kluczynski followed to say he thought every member of the House could justly share his satisfaction with the bill. “There has been a lot of publicity about it, and most of the publicity has centered around its less significant sections.” In a quick summary, he said the bill included “what is beyond question the most progressive and soundly written relocation program the Federal Government has ever undertaken.” Further:

It actually strengthens the position of the States and local governments in the protection of parklands, historic areas, and similar lands. It makes it possible to resolve the strangling deadlock on transportation in the Nation’s Capital.

Following discussion of other provisions, Representative McCarthy asked Representative Wright how conferees dealt with District highways. Representative Wright explained that the House, in its bill, had directed the District to construct its entire network of Interstate highways, but the Senate bill had not included a provision on the District freeways:

The compromise which was agreed to in conference directs the immediate construction of those segments on which there is relatively little controversy; namely, the parkway along the riverfront, the north central leg [sic] and the east leg of the expressway and the Three Sisters Bridge.

As regards the rest, the bill directs a study to be made within 18 months and a report to be made not later than January 1970, by the District government as to its plans, intentions, and programs for the remainder.

Representative McCarthy moved on to another subject, amendment of the Highway Beautification Act of 1965, a much more controversial topic nationally than the District freeway provision. Conferees had rejected the House's weakening of the measure, for example by making outdoor advertising control voluntary and providing no program funds. Conferees continued the program, but authorized program funds only for FY 1970.

At one point, Representative Samuel S. Stratton (D-NY) said he was not opposed to highway beauty, but was concerned that restrictions on outdoor advertising would "mean curtains and bankruptcy for thousands of small tourist businessmen across the country" because they could not afford to advertise on the big billboards erected beyond the limits covered by the 1965 Act. He wanted to hold up on the program until Congress had a chance "to stop, look, and listen" on this issue. He wanted the beautification funds in the bill to be deleted.

As debate on the Federal-Aid Highway Act of 1968 neared an end, he offered an amendment to recommit the bill to the Conference Committee for further consideration of the issue. The House rejected the amendment, 98-166.

According to the transcript of the debate, no one other than Representative McCarthy commented on the District freeway situation before the House adopted the report by voice vote. [Conference Report on S. 3418, Federal-Aid Highway Act of 1968, *Congressional Record-House*, July 26, 1968, pages 23704-23714; the McCarthy-Wright dialogue is on page 23710; the Stratton discussion of the Highway Beautification Act is on pages 23710-23711]

House approval prompted District highway officials to tell reporters that the city was ready to start construction "almost right away." Deputy Director Rivard of the division of planning and programming said tests had been completed on sinking piers for the Three Sisters Bridge. The city would advertise the construction contract within 90 days of the bill's enactment. The city also would let a contract within 90 days for design of the Potomac River Freeway as described in the conference report. Construction was underway on the eight-lane underground section of the Center Leg, with the tunnel completed to Massachusetts Avenue and construction begun south of the Capitol. Remaining contracts, Rivard said, "will be let shortly." A consultant was under

contract for extension of the East Leg to Bladensburg Road. [“City to Rush Roads After Hill Order,” *The Washington Post and Times Herald*, July 28, 1968]

On July 28, the *Star* published a lengthy editorial on the congressional call for action on freeways. It began:

Congress’ forceful directive to the District of Columbia and to federal agencies to stop sabotaging Washington’s freeway program – and to get it built, is an unusual action, justified by an extraordinary set of circumstances.

The editors disagreed with Senator Cooper’s suggestion that the provision was an improper intrusion into District affairs. “This is intrusion in the same sense that a patient parent finally takes a firm hand with a group of children who persist, after endless warnings, in trying to tear the house apart.”

For years, “the bureaucratic response to Washington’s urgent need for a modern highway system has been to march forthrightly away from the problem.” Federal and city officials had demonstrated “a total inability to reach firm decisions.” A group of influential citizens had engaged in “persistent, deliberate delaying tactics,” while Secretary Boyd, “who was the logical man to reconcile these difficulties, has merely made them worse.” Finally, Congress had stepped into action “because there was no other way to end this foolishness. It is high time.”

The conferees, modifying the sharp directive in the House bill, “allowed a considerable amount of administrative flexibility, and there is an element of danger in these concessions.” The bill was “entirely reasonable,” but for the District freeway provision to work, it required “a great deal of good-faith cooperation by precisely those officials who in the past have failed to act.”

Chairman Natcher had made clear that until the freeway program was advancing “beyond recall,” he would not recommend District matching funds for the subway. The rearguard tactics would not be tolerated.

As for Mayor Washington, he had “juggled the freeway issue like a hot potato, in a futile effort to try to placate all parties in the controversy.” Given pressures from Congress, NCPC, Secretary Boyd, “and from militant citizens who objected to roads which would encroach on their local neighborhoods,” Mayor Washington had not been able to accomplish the balancing act. The congressional action “eases that dilemma” by providing the mayor with “the means, if he chooses to use them, both to build a freeway system and to answer any of the objections previously raised which warrant answers.”

Congress had given the city 18 months to resolve issues involving the North-Central Freeway, the most troubled of the freeway segments. Mayor Washington had sought “precisely this sort of authority in order to assure himself that the best interests of the community were being served.” Now that he would have the power under the 1968 Act, “he has an obligation to use it constructively.”

Much of the criticism of the freeway network was based on relocation of homes and businesses in the path of the highways:

The new legislation, however, makes federal dollars available to pay up to \$5,000 in excess of fair market value for private homes taken, and it authorizes \$1,500 payments to displaced lessees and renters who previously received nothing. These reforms are the most liberal of any governmental program involving the powers of eminent domain. They should help immeasurably to alleviate the hardships of freeway displacements.

The editors regretted that the conferees did not add the South Leg Freeway to the list of freeways designated for immediate construction. "Because of its great cost, this project, along with remaining elements of the system, were lumped in the category for which the directive ordered firm construction decisions 18 months from now." The 18-month period would allow for public discussion surrounding each of the freeways.

The editorial concluded:

It would be foolish to assume at this point that the opposition to freeway construction will simply dry up and blow away. What Congress has made plain is that this opposition must no longer be permitted to stifle improvements which are vital to the life of the Capital City.

If Mayor Washington also accepts this sensible, necessary premise, and works earnestly for its fulfillment, the balanced transportation system this city requires will emerge. If he should fail to do so, the results will be disastrous. ["Congress Calls for Action on the Freeways," *The Sunday Star*, July 28, 1968]

### **Senate Action**

The Senate debated the Federal-Aid Highway Act of 1968 on July 29. At the start, Majority Leader Mansfield asked to speak because he had another engagement that would keep him away for much of the debate. He understood the importance of the Interstate System to the States and the District of Columbia, but Section 23 "concerns me somewhat" because it "seems to be creating a precedent insofar as the District of Columbia is concerned in placing the Congress in the role of a highway engineer, a precedent we might well extend to the 50 States of the Union."

He was particularly opposed to the Three Sisters Bridge "because of the fear that approaches to this bridge would invade Glover-Archbold Park and, also, would be the first step in an effort to construct a highway through this park." The Glover and Archbold families, he reminded his colleagues, had donated the land in perpetuity for use as a recreation area. Now he had a telegram from Miss Moira Archbold, daughter of one of the original donors, urging him to oppose the bridge for those reasons. He had been assured recently that the bridge would not affect the park and he would like to receive reassurance on the record.

Senator Randolph assured him by citing the conference report, which stated that as soon as the bridge was completed, the District would have to relinquish to the National Park Service the right-of-way through the park that the city presently held. The report added that, "The design of the bridge does not require intrusion on the park and the Congress directs that no intrusion of the park take place."

In that case, Senator Mansfield asked what the plan was for carrying traffic off the bridge into the city. Chairman Randolph said the Potomac River Freeway “would be an outlet for the Three Sisters Bridge in connection with the entrance into the District of Columbia.” Moreover, access to Dulles International Airport was “an important reason” for construction of the bridge.

Finally, Senator Mansfield asked “what assurances can we have against future invasion of this park land?” Chairman Randolph replied that in addition to the directive in the conference report that the city transfer its title to a path through the park to NPS, the amendment to Section 138, incorporating the identical language of Section 4(f), “would give the assurance that the distinguished majority leader is asking for.”

Senator Mansfield was not fully assured by his colloquy with Chairman Randolph. “As I have indicated, this park must be protected and the construction of this bridge will, certainly, be a temptation for the highway builders who want to construct a roadbed through the park and on up Wisconsin Avenue.” In addition to the highway builders, “even Georgetown University, several years ago, was desirous of obtaining some of the acreage at the bottom of the park, toward Canal Road and the Potomac River”:

I hoped we would not succumb too much to the people who believe in highways, ribbons of concrete, various kinds of curlicues, question marks, and what-not; that I would hope in this congested part of our country, which will become more and more congested as time goes on, the Senator from Montana – speaking as a temporary resident of the District of Columbia – would like to state that we should pay more attention to the preservation of open spaces and clear areas than has been the case to date. With the passage of time, space is simply going to become more and more needed and necessary as recreational areas for the people of the District, including citizens in the surrounding States of Maryland and Virginia.

Chairman Randolph again assured the majority leader that conferees had agreed that the Three Sisters Bridge was to be built “in such a way that it will not now, or in the future, result in any encroachment on Glover-Archbold Park.”

Before leaving, the Majority Leader added:

May I say one thing in conclusion? I do happen to be interested in Glover-Archbold Park because I live two blocks away. My property does not abut the parkway.

Chairman Randolph, who lived at 4608 Reservoir Road, NW., noted, “I also live two blocks away.”

With Senator Mansfield’s departure for his meeting, Senator Spong asked to speak about the importance of the bridge and I-266. With Washington National Airport having exceeded its capacity, the bridge and I-266 “would facilitate the utilization of the air transportation potential of Dulles.” For the record, he introduced a resolution adopted by the Virginia General Assembly urging the State’s congressional delegation to “exert all possible efforts to assure the prompt authorization for carrying out plans originally approved” in 1966 to “construct these integral

segments of the Interstate highway system.” Senator Spong appreciated the efforts of the conferees to ensure this recommendation would be carried out.

The Senators discussed other sections of the bill until Senator Dominick, who served on the Senate District Committee, asked about the District of Columbia provision. The fight, he said, over the District freeways had been going on for a long time. “All of a sudden we find that in this conference report Congress is ordering, against the wishes of a great number of people, that the full program go forward.” He feared they were “putting the cart before the horse” in the absence of “any provisions as yet for adequate parking within the District”:

I, for one, do not want to see us turn the District of Columbia into a pad of concrete. I realize the Senate bill did not have this provision in it, that the House bill did. Now as a result of the conference we are saddled with it. I wonder whether the Senator could give me any enlightenment on that matter.

Chairman Randolph said that some of the freeways were “not controversial in nature,” and none of the controversial ones were in the conference report. “We have attempted to move as best we could with realism and with regard for the nearby States of Maryland and Virginia as well as the District.”

In view of the controversy, Senate conferees “approached this matter with reluctance, with reservation, and with restraint.” They did not believe “this was a matter that should be handled in a national highway act.” However, in the interest of comity and completing the bill, “we proposed certain language changes in the House bill.” In “the give-and-take which ensued,” the committee was able to agree on the provision. They specified construction of four projects, three of which they believed were “relatively noncontroversial and can be accomplished with a minimum of disruption and dislocation.”

They knew that the fourth, the Three Sisters Bridge, was controversial, but also that it was “vital to the development of proper access to Dulles International Airport” as well as Virginia’s development of I-66.

Senator Dominick doubted the claim about access to Dulles International Airpoint, in view of the Capital Beltway, Dolley Madison Boulevard (State Route 123), and the current seven bridges across the Potomac River. He also asked how many people would be displaced by the Potomac River Freeway and the Center Leg. Chairman Randolph did not know the exact number of displacees. “It will be more, let us say, a partial disruption of commercial activity. I think of the rendering plant involved. I do not believe people will be dislocated to a great degree.”

Senator Dominick agreed with elimination of the Georgetown rendering plant. Further west, however, “there are some rather heavily populated residential areas.” What about dislocation in that area? Chairman Randolph did not “believe many residents will be involved in the dislocation.”

The reason Senator Dominick raised the question was the issue of traffic projections over the next 10 years. According to information the city’s highway engineers provided to the Senate

District Committee, “there is not going to be a significant increase, and if we can handle the present traffic load, is there a need for spending all these funds in this type of activity? Does not this hamper our efforts to maintain a city with some scenic beauty, instead of developing a mass of concrete?” Chairman Randolph’s response referred only to the bill’s relocation aid provision.

If the Senate rejected the conference report, Senator Dominick asked, would the Senate be able to persuade the House to delete the provision? Chairman Randolph replied that “on this matter there would be no yielding on the part of House conferees. I am sure of this”:

They have, of course, discharged their conferees, by the House vote on the conference report, and there is, therefore, no way of sending this report back to conference. It must be voted up or down.

The Senate conferees had “done the best we could in this conference report.” He added:

I must disagree with those persons who say there is not going to be much more traffic moving in and out of the District of Columbia. I wish to state strongly that in my view there will be much more traffic.

Senator Cooper, one of the conferees, said the District freeway provision was “one of great controversy in the conference.” He had opposed the section “from the beginning to the end” and had not signed the conference report and could not vote for the bill because of this provision and the section that authorized the Secretary to designate 1,500 miles of additional Interstate routes. “I must say that the conferees from the House never showed the slightest inclination to change on this section.

Further, he was “amazed” by the report of the managers of the conference. The bill directed the District of Columbia and Secretary of Transportation to take certain actions:

In the manager’s report, they lay down directions almost like a construction company, how to proceed with the construction. I think this is wholly wrong, and it is wholly wrong for the Congress to direct a political subdivision to make a certain choice of roads. It is wrong.

The District provision in the House bill was, Senator Cooper said, the one provision “the House conferees were not going to yield on.”

Debate continued on other provisions, but after receiving assurance regarding the identical language in Section 138 and Section 4(f), Senator Jackson asked about the Potomac River Freeway. Based on the language calling for it to go under the C&O Canal, he wanted to ensure NPS would be involved to protect its resource. “I take it that there has been no change in the basic provisions of the law and the policy in regard to that situation.” Chairman Randolph confirmed that, “There has been no change.”

Senator Jackson referred to the report language calling for eight lanes, not the six lanes as had been discussed. Chairman Randolph replied, “The number of lanes has not been determined.” Senator Jackson wanted to be sure the Interior Secretary “has an opportunity to go over the final

design” and that nothing in the bill, such as modifications related to Section 4(f), “would change in any manner this relationship and authority that has existed, as it pertains to the Department of the Interior and the Department of Transportation.” Chairman Randolph replied by quoting the language stating, “It shall be carried out in accordance with applicable provisions of title 23 of the United States Code.”

Senator Cooper addressed the Senate in detail regarding his opposition to the District provision:

We must get this matter clear. These are projects on the Interstate and Defense Highway System. They are multi-lane freeways within this city, massive and wide, with interchanges and access and exit ramps, and of limited access – which means they must be elevated or have overpasses to accommodate intersecting streets.

He pointed out that Secretary Boyd, Mayor Washington, and Chairman Hechinger of the city council opposed the measure. After introducing their letters, Senator Cooper said, “On the merits, the Department of Transportation and the Bureau of Public Roads opposed the construction of these legs.”

Chairman Randolph corrected him. The department opposed them, not BPR, but Senator Cooper did not agree, in view of Director Turner’s comment that they would “literally fire three lanes of traffic at three lanes which are already on the expressway.” True, as Chairman Randolph pointed out, Turner was referring only to the South Leg, which the bill did not require the city to build, but the freeways were interconnected:

To construct the Three Sisters Bridge or several legs, without knowing what the total system should be, would be an improper way to proceed with the job. It could be very wasteful, and possibly not accomplish even the traffic objectives.

Moreover, while Senator Cooper respected the members of the House Committee on Public Works, he did not believe the members had “the technical or engineering expertise to lay out a system of roads in the District of Columbia.” And yet that is what the statement of conference managers did, as if it were an order “given by a great construction firm as to the way these roads should be built.”

He also opposed the measure because it was a bad precedent. Instead of letting State and local officials resolve differences through the normal means, “it would direct the State highway department or, in this case of the District of Columbia, its Department of Highways, how to lay out projects and additions to its system.”

Finally, he was concerned that the congressional directive would prevent the people from expressing “their judgments as to the economic, social, and environmental impacts of the system, under a democratic process.” Despite the U.S. Court of Appeals finding about citizen involvement, the House had simply said that notwithstanding any law or court decision, the Secretary of Transportation and the city must “go ahead and build these roads as we want them built – no matter whether it be dangerous to the character of the city; no matter whether this is

what the people want, the poor as well as the rich – go ahead and build them, as a few people sitting in Congress want them built.”

Majority Leader Mansfield, who had returned from his engagement, asked, “What special qualifications do the members of the Committee on Public Works in the House have to entitle them to lay down dictum of that nature?” Senator Cooper replied, “There may be an engineer among them, but they do not have the expertise . . . nor do we”

The Majority Leader asked if Congress could impose its judgment on the States as well as the District of Columbia. “Certainly,” Senator Cooper replied. He doubted they would, but because the District was considered a State under Title 23, the precedent was there for intervention in State controversies.

If the committee wanted to build a freeway through Glover-Archbold Park, Senator Mansfield asked, could the Congress do so? “Yes,” answered Senator Cooper, “because there is the inherent power of Congress to override.” Senator Mansfield asked what was the point of a private group or family bequeathing property to the District for use in perpetuity for recreation if Congress could simply overrule the purpose.

Senator Cooper started to agree, saying “there is no guarantee except Congress,” but Chairman Randolph interrupted to point out that Glover-Archbold Park was not affected by the bill. True, as Senator Mansfield quickly pointed out, but some groups wanted to use it for a highway. “They were interested. We are not allowing it.”

The problem with that statement, Senator Cooper said, was that “in the future, Congress could direct them to run the highway through this park, or any other.” A clearly exasperated Chairman Randolph assured Senators Mansfield and Cooper, “What is proposed to be laid down will not go through the park.”

Senator Cooper reiterated his plan to vote against the conference report:

I do not pretend to know about the merits of these legs. If the proper procedure is followed, the bodies concerned might come up with the same project, even though the Department of Transportation has indicated to the contrary at this point. But I oppose the idea of Congress arrogating to itself the wisdom or the authority to attempt to lay down a road system in the District of Columbia, in any other State, or in any other city in the United States. I think it is a local matter.

In conference, he had proposed substitute language directing the Secretary of Transportation and the District to make any necessary changes and proceed with construction as soon as possible in accordance with the Federal-Aid Highway Act and Title 7 of the District Code. “But the House conferees insisted upon their own position, which resulted in the language now contained in the conference report.” He strongly supported many other provisions of the 1968 Act, but because of Section 23 and the 1,500-mile extension of the Interstate System, he would oppose the conference report. [Federal-Aid Highway Act of 1968 – Conference Report, *Congressional Record-Senate*, July 29, 1968, pages 24023-24036]

Following the debate, the Senate approved the Federal-Aid Highway Act of 1968 by a vote of 66 to 6.

After the vote, Senator Tydings inserted a statement regarding the air rights legislation that had passed the Senate but was awaiting action in the House. "I am today writing Mayor Washington and appropriate members of the House District Committee urging action on this legislation as soon as possible." With Congress having directed the city to proceed with freeway construction, he said:

. . . it would be very unfortunate to lose the opportunity for utilization of the freeway airspace in projects which would help alleviate the consequences for people of the freeway program such as the loss of low-income housing, destruction of neighborhood parks, and increased parking congestion. Utilization of freeway airspace for commercial facilities could also produce needed jobs and revenues for the District. [*Congressional Record-Senate*, July 29, 1968, pages 24038]

### **Awaiting Presidential Action**

Congress was moving through bills it could complete before adjourning for the political conventions to nominate presidential candidates for the November election.

The District of Columbia Appropriations Act, 1969, was one of the bills. The conference report on the bill reached the House floor on August 2. Chairman Natcher had prevailed regarding funding for rail rapid transit.

In response to an inquiry from Representative Gross, he told his colleagues that the District had requested \$27,574,000, but the committee with jurisdiction over WMATA had reduced the amount to \$21,886,000. He explained that while the committee believed the District needed freeways and rapid transit, "under no circumstances would we recommend to the House a rapid transit system cost, under the authorization, \$431,000,000 when they have stopped the freeway system":

Both systems are important and will benefit our Capital City. As soon as the freeway program goes underway, beyond recall then we will come back to the House and request that construction funds for rapid transit be approved.

There is no money in this bill for construction for rapid transit.

The Interior Department appropriations bill for FY 1969 included "a stipulation to the effect that the share of the Federal Government would not be appropriated and would not be expended until the District of Columbia's share was forthcoming." It would not be forthcoming until the freeway system was under construction beyond recall.

In view of Representative Gross's concern about the cost of the transit plan, Chairman Natcher said that when Congress approved the 25.3-mile bill, those in charge of the bill claimed the bobtail system would cost \$431 million, with the District providing \$50 million and the rest to be raised by bonds:

That is the subway that was authorized by the Congress.

I want the distinguished gentleman from Iowa to know that on March 1 of this year this agency agreed to a subway [system] that would entail a total cost of about \$2.5 billion.

He assured Representative Gross that WMATA would have to come back to Congress to secure approval of the higher amount.

The House approved the conference report without a recorded vote. The Senate approved the bill, also without a recorded vote, the same day. [Conference Report on H.R. 18706, District of Columbia Appropriations 1969, *Congressional Record-House*, August 2, 1968, pages 25024-25025; District of Columbia Appropriation Bill, 1969-Conference Report, *Congressional Record-Senate*, August 2, 1968, page 24976]

At home in Texas, President Johnson signed the appropriations bill into law on August 10, 1968 (P.L. 90-473). He issued a signing statement, but did not discuss the freeway-transit aspect of the bill.

### **To Veto or Not to Veto**

By then, objections were being raised about the Federal-Aid Highway Act of 1968 because of Section 24, its provision on the District freeways.

Secretary of the Interior Udall, almost immediately after congressional action, said he might recommend that the President veto the bill. “Yes,” he told reporters at a press conference, “it’s a possibility.” He objected to the Three Sisters Bridge, but his concern went beyond that. Highways should be a local decision, and it was “most unfortunate” to have Congress dictating construction. “There’s not a single Congressman – and I was a Congressman – that wouldn’t be outraged if Congress passed such a bill in his city,” telling the city “how and where and when” to build a highway.

He acknowledged that congressional meddling in the District of Columbia was “a burden this city has to bear” in the absence of home rule, but the idea “raises a very serious question of policy that was hardly discussed during consideration of the highway bill by Congress.” He added:

Most Congressmen don’t give much of a damn about conservation values. Unless people get in and fight, good projects [sic] will be damaged by highway projects in the wrong places.

MacClane of the D.C. Federation of Civic Associations sent a telegram on July 31 urging President Johnson to veto the bill. [“Udall Hints He’ll Urge Veto of Highway Bill,” *The Washington Post and Times Herald*, July 31, 1968; “Udall Studies Call for Veto Of Road Bill,” *The Evening Star*, July 31, 1968]

On August 5, the *Post* published a letter from Representative Machen responding to the July 15 Pearson-Anderson column insinuating that he supported the legislation because of contributions

from the highway lobby. (The column included him in a list of area Members of Congress who helped Chairman Kluczynski pass the bill as it was being “rammed through” the House Public Works Committee and the House.) He wanted to make clear that he fully supported construction of the District freeway system as part of a balanced transportation system. The provision in the 1968 Act “will benefit hundreds of thousands of highway commuters in the area and prevent the city from being choked to death because of a lack of highways.”

The decision to withhold appropriations for the District’s matching share of transit construction “points up once more how strongly we in the Congress feel about the need for a balanced transportation system in the District.” He concluded:

The only “lobbyists” I have had any contact with on this matter have been my constituents and they are tired of the inadequate access which the current transportation system affords to the city. I voted for the Federal Aid Highway bill because I believe the District needs a balanced transportation system. [Representative Machen, Hervey G., “Rep. Machen on Highways,” Letters to the Editor, *The Washington Post and Times Herald*, August 5, 1968]

Representative Machen’s letter prompted a reply from MacClane. “Mr. Machen’s point of view is completely the opposite of the writer’s.” MacClane had “no apologies for my determined stand against the construction of the Three Sisters Bridge and the North Central Freeway”:

Though I am totally opposed to the above projects, if the District is forced to proceed with this construction I would then be opposed to building the subway – a project which I am 100 per cent in favor of – because the population of the metropolitan area is not large enough to support a subway system in competition with a freeway. Any attempt to build both projects would create a white elephant of greater dimension than Dulles Airport. I am sure Mr. Machen would vigorously oppose a freeway that would uproot his constituents unless he desires to be an ex-Congressman. [MacClane, Edward J., “Against the Freeways,” Letters to the Editor, *The Washington Post and Times Herald*, August 8, 1968]

By contrast, *Post* editors supported the provision in the 1968 Act. “At long last, the impasse over the District of Columbia’s freeway program appears to be broken.” Barring a “veto that is unlikely and would be undesirable,” construction could begin within 3 months. “This should clear the way for resolving the rest of the freeway controversy and for making a start on the area’s subway system.”

The editors agreed with Senator Cooper that Congress did not possess the expertise to dictate highway locations and ought to leave those decisions to local officials:

But under the circumstances that have stalled the highway program in this city for years, Congress had little choice. It either had to spell out the details of the highway program itself or run the risk of another round of indecisive meandering in the city’s bureaucratic maze.

Beyond the four freeway segments ordered to construction, the city would have 18 months to resolve difficult issues associated with the remainder of the freeway system. “Thus it is time for Mayor Washington and all the rest of those officials and agencies who have a hand in the transportation problem to sit down and get on with their work.” The legislation strengthened their hand by placing the primary responsibility on them “for keeping control of fundamentally local problems in the hands of local government.”

The editors anticipated that as soon as construction began, “the House of Representatives will honor the commitment of several of its members to provide funds to start work on the subway.” They were troubled by the colloquy between Chairman Natcher and Representative Gross during consideration of the District appropriations bill for 1969 on August 2. It suggested that “the subway system, as current planned, is still in trouble”:

Some Congressmen seem to have failed to grasp the fact that the Washington area has to be treated as a whole in planning transportation and want to return to the idea of a small subway system stopping at the District borders. That idea might have had some merit in 1940 or even 1950 when the District was more than half of the area’s population. But now that the District has less than a third of the population (and its share is shrinking steadily), the subway system must be a regional one if it is to have a substantial impact in reducing the need for even more freeways. [“Congress and the Freeways,” *The Washington Post and Times Herald*, August 6, 1968]

The District government was seriously considering whether to ask President Johnson to veto the bill. Chairman Hechinger was working on the question with Mayor Washington, who had not decided what the city should do. “However,” the *Star* reported, “other sources reported city officials are going over the text of a proposal that recommends a veto”:

In the document now under consideration, the city raises strong objections to the House-originated action that would force the city to begin construction within 30 days after the bill goes into effect.

“Officials have been going over the language of the statement because there is some pretty strong stuff in it,” one source stated. “And there is the dual problem of the city presuming to tell the President what to do and also of asking him to kill an otherwise good bill.” [“District May Propose Veto of Highway Act,” *The Evening Star*, August 7, 1968]

Lee Flor and William Grigg, writing in the *Star*, worried that the bill “created some informal deadlines which transit and highway planners may have trouble meeting. The result could be a deadlock, with no start of the rapid transit system this fall, and more problems for the bitterly opposed Freeway [sic] construction program.”

If the provision is retained and the bill is approved, the District would have 30 days to advertise the freeways for construction:

This means the District could have only a few days after the signing of the bill before it would have to convince Natcher that the freeway projects were under way “beyond recall.”

As a practical matter, the District normally would need several weeks to prepare PS&E for the contracts, then allow time for contractors to submit bids, for the bids to be reviewed by the District and FHWA, and the contracts awarded. Other obstacles to meeting the 30-day mandate included the prospect that freeway opponents might seek an injunction to block local action. Further, although the provision waives Federal laws and court orders, the Johnson Administration “apparently is not absolutely bound to obey this legislative edict.”

Another issue was that Arlington County could go to court arguing that I-266, which was to cross the Potomac River on the Three Sisters Bridge, required land from Spout Run Park. Partly because of that encroachment, the Department of the Interior was expected to ask President Johnson to veto the bill.

Arlington County Board Chairman Thomas W. Richards had sent a telegram to President Johnson urging a veto. The bridge, the telegram stated, “would mean the loss of much of the beautiful Spout Run Parkway in Arlington and would mar the beauty of the Potomac Palisades.”

The result could be that any hope that WMATA had for a groundbreaking on the subway in October could be frustrated simply by timing. [Flor, Lee, and Grigg, William, “Federal Road Bill Deadlines Pose New Peril to Plans,” *The Evening Star*, August 11, 1968; Griffiths, Harriet, “Arlington to Study Moves In Three Sisters Bridge Suit,” *The Sunday Star*, August 25, 1968]

Chairman Gleason, a member of the Montgomery County Council, addressed the impasse during an August 13 council meeting. According to *The Baltimore Sun*, “Barely hiding his anger and frustration at the last-minute congressional refusal” to appropriate funds for the subway, he said, “there is no rational judgment that would dictate holding up one form of transportation for another.” Meeting with Mayor Washington and Secretary Boyd, he had told them that “we believed that Congress was not kidding” when it passed legislation to mandate freeway construction and refused to approve District matching funds for Metro. He planned to meet with area Members of Congress on August 16 to seek help in freeing the funds. [Rovner, Sandy, “Funds Sought For Subway,” *The Baltimore Sun*, August 14, 1968]

On August 16, Mayor Washington and Chairman Hechinger sent a letter to the Bureau of the Budget urging that the Federal-Aid Highway Act of 1968 “not be approved.” The letter did not use the word “veto” but was, according to Lee Flor, “stronger than a first draft which was prepared Thursday.” The stronger language, he said, was “stimulated by citizen reaction to reports of the first draft.” He added that NCPC “reportedly has taken a similar position.” [Flor, Lee, “Mayor Asks For Veto of Roads Bill,” *The Evening Star*, August 17, 1968]

At the strategy session convened by Chairman Gleason on August 16, area Congressmen agreed to fight for release of the subway funds, but warned that a presidential veto of the Federal-Aid Highway Act of 1968 would result in further delay in subway construction. Representative Broyhill said that Chairman Natcher and his allies on the District appropriations subcommittee

were “determined that the subway system is not going to be used to block the Three Sisters Bridge or other highway projects.” Chairman Natcher might move on the funds if President Johnson signed the bill, but “if the President vetoes the bill, we might as well forget any appropriations . . . this year” for rail rapid transit.

Representative Gude agreed that a veto “would be disastrous” for Metro in view of Chairman Natcher’s threat, and urged his colleagues to contact President Johnson, as he had, to urge approval of the bill. Whatever happened with the bill, he joined with Representative Broyhill and Senator Brewster in promising to for everything they could to restore the District matching funds.

Representative Broyhill also warned of another peril to Metro, namely WMATA’s approval of the 97-mile rail rapid transit system that would cost \$2.5 billion. Instead of the \$100 million approved for the bobtail system, the expanded network would require \$1.1 billion in Federal construction funds based on the standard UMTA matching formula. He anticipated objections from Members of Congress from other areas of the country who already questioned the increasing cost of the bobtail network. General Graham reminded the group that WMATA’s priority was the bobtail segments the Congress had approved in 1965. [“LBJ Veto of Roads Bill Seen Periling Subway,” *The Washington Post and Times Herald*, August 17, 1968]

By August 18, Lee Flor and Jack Eisen were speculating on the President’s decision based on sources. Flor reported that transportation officials did not expect President Johnson to veto the bill, which authorized billions for Federal-aid highway projects around the country, while vastly improving relocation assistance for those displaced by the projects and funding the Highway Beautification Act.

The District decision to ask that the President not approve the bill was based on the language in the bill stating that “notwithstanding any other provision of law, or any court order decision or administrative action to the contrary.” This language interfered with the city’s desire that it decide on the future of the freeway network.

Although the language seemed all inclusive, Flor said that “according to precedent, the administration could ignore the clearly stated legislative mandate”:

For example, in 1949 Congress directed President Truman to create a 58-group Air Force. The President signed the appropriations legislation containing the directive but declared he would only have 48 groups. And the chairmen of the Senate and House appropriations committees backed him up.

Just two months ago, President Johnson signed the omnibus crime bill and told federal agencies not to use the liberal wire-tapping authority contained in the bill, except in cases of national security.

Similarly, the President could direct the Department of Transportation not to carry out the congressional mandate to build the freeway project. [sic]

Of course, such an action would leave WMATA “behind the 8-ball,” subject to Chairman Natcher’s opposition to releasing the District matching funds. Flor suggested that options included asking the House Appropriations Subcommittee to release \$47 million in Federal transit funds already appropriated, minus the stipulation that it could be spent only if Chairman Natcher’s subcommittee voted to approve the matching funds. Alternatively, President Johnson “might give the local subway builders federal money from his own contingency funds, on the grounds the Congress already has voted authorization of the subway.” [Flor, Lee, “Johnson Might Ignore D.C. Freeway Mandate,” *The Sunday Star*, August 18, 1968]

Eisen reported strong speculation that President Johnson might pocket veto the bill “rather than get caught in a three-way crossfire among District, road-building and conservation interests.” Normally, if a President does not sign a bill within the 10-day Constitutional period (Sunday excepted) after receiving it, it becomes law. Of course, he could veto the bill, send a message to Congress explaining his objections, and Congress could override the veto by two-thirds votes in the House and Senate, or fail to do so, thus killing the bill. However, if the President were to take no action within the deadline, but Congress had adjourned, the bill would not become law unless Congress, when it returns, passes the bill again and presents it to the President again for signature.

This non-action, known as a pocket veto, was possible in this case because on the 10<sup>th</sup> day (not counting Sunday) after the White House received the bill, August 23, Congress had adjourned for the presidential conventions and its annual August recess. A pocket veto would kill the entire bill, but Congress could pass the bill after returning without the troublesome provisions.

Eisen reported:

Unconfirmed but persistent reports circulated yesterday that both Transportation Secretary Alan S. Boyd and Interior Secretary Stewart I. Udall, whose domain includes the National Park Service, had asked the President to reject the measure.

He described the city’s letter asking that the bill “not be approved”:

The final language, omitting the word “veto,” lent credence to the speculation over a pocket veto. The possibility was mentioned by both backers and opponents of the bill.

Transit backers feared a veto would kill any chance that Chairman Natcher would release the District matching funds for the bobtail system. They were worried that the letter from Mayor Washington and Chairman Hechinger “would stiffen Natcher’s resistance to any subway money this year.”

The mayor’s objections, Eisen reported, centered on the requirement to build the four freeways “precisely as planned earlier, without leeway for changes he thinks are desirable”:

A key highway official said, however, that he was certain that route or design changes could be made administratively to accommodate the problems that concern the Mayor.

Sammie Abbott said that ECTC approved the letter from Mayor Washington and Chairman Hechinger because it proved “they are not political eunuchs.” He warned that ECTC would mobilize citywide efforts to block construction if President Johnson signed the bill. The group also would go to court to test the constitutionality of congressional action overriding a decision by the U.S. Court of Appeals:

Abbott attacked Natcher’s transit fund freeze as “blackmail,” or more appropriately “whitemail,” since it attempts to coerce Washington’s Negroes into supporting disruptive roads [that would benefit white suburbanites]. [Eisen, Jack, “Pocket Veto Is Hinted If President Wants To Kill Highway Bill,” *The Washington Post and Times Herald*, August 18, 1968]

*Star* editors had a different reaction to the letter. In the leaked draft on Thursday, August 15, Mayor Washington “had wisely refrained” from calling for a veto “until the very last moment”:

By late Friday, in a switch that surprised a number of other city officials, he decided to ask that the bill be “not approved.”

We are surprised, too – and disappointed. For the mayor’s performance is inimical to the best interest of this community.

Why this change of heart? According to one source, the mayor caved in to arguments that the directive (1) would authorize certain projects that might better be discarded or revised, (2) would increase “dissension” within the local community and (3) would undermine the city government’s right to make its own “self determination” as to the future of the freeway program.

Congress, however, knew that “left to its own devices,” the city had no reason “to get a balanced transit-freeway system.” At least under the three-commissioner government of years past, the commissioners tried to overcome the obstacles blocking the freeways. Under the mayor-city council government, the obstacles “have grown worse.”

Congress had not dictated a new freeway network, but only ordered construction of the long-planned network, with “considerable planning flexibility” on some controversial segments. The editors stated that “the President should not hesitate to sign the highway bill this week, and to instruct his subordinates, both District and federal, to cooperate with the Congress in a spirit of good faith.” [“Wrong Move,” *The Evening Star*, August 19, 1968]

The editors of the *Post* agreed. “Although the issues involved are not simple, it seems that the weight of arguments is in favor of Presidential approval of the bill insofar as his decision rests on the impact the bill will have in Washington.” Perhaps Congress exceeded its ordinary limits and expertise in mandating construction of specific freeways:

But the situation in the District is hardly an ordinary one and it is hard to blame Congress for wanting to settle a question that the various official bodies in the District have been unable to settle even after a decade of argument.

The editors disagreed with city officials who believed that Congress was infringing on their authority. "It would be precisely that if the present city government were responsible for the mess in which the freeway program is now entangled." The present city government did not exist when the mess evolved to the present moment.

Unfortunately, the editors wrote, the freeway situation was combined with the subway in view of congressional action to deny access to District matching funds. "There is no reason why the two should be linked except for the history of indecision in the District." While the linkage lasted, "every indication that the District government will drag its feet on freeways is simply an additional incentive to delay in starting construction on the subway as well." Unless both were begun and additional downtown parking provided, "the District will have a traffic problem in the foreseeable future that will make the one in New York City look simple." ["Freeways and the President," *The Washington Post and Times Herald*, August 20, 1968]

On August 20, the city council approved Mayor Washington's request to Congress for a \$30 million supplemental appropriation for FY 1969. Of this amount, \$21.8 million was for the District matching share for rail rapid transit construction, while the balance was to initiate the Fort Lincoln urban renewal project. During consideration of the request, council members discussed the city's action in asking President Johnson not to approve the 1968 Act. Schuyler Lowe, the former city budget official who was now with WMATA, told the city council that a veto would "create a very critical situation" with subways and Chairman Natcher. "We certainly would hope that somehow, some way, we could work out an arrangement" to begin subway construction if President Johnson were to take the city's advice to not approve the bill.

Councilman Turner, the former official of the Highway Users Conference, recalled that the city council had unanimously favored the city's draft bill giving the city government the authority to decide the fate of the freeway system. Congress had, he reminded his colleagues, refused to accept the proposal. Now, a presidential veto "may cause a deterioration of the relations between the D.C. government and Congress."

Councilwoman Shackleton said that "freeways should not be tied up with the subway system." Vice Chairman Fauntroy argued that, "Whenever you employ blackmail you are going to have a deterioration of relations."

The *Star* reported:

Meanwhile, sources indicated last night that the District actually sent two letters to the Bureau of the Budget last week. The first letter, reportedly sent Thursday, merely said the District could not approve of the highway bill.

The second, sent Friday and pre-empting the first, urged the President to "disapprove" the measure. The two letters, and two polls of council members by Chairman John W. Hechinger, caused considerable confusion among council members.

Turner was known to have been angered by the veto posture. But several of his colleagues said they believe the eight other council members favored recommending veto.

The vote on the Thursday letter had been 5 to 3, with Vice Chairman Fauntroy out of town. The vote on the Friday letter had been 5 to 4. [Sarro, Ronald, "Restore Cut Funds, D.C. Asks Congress," *The Evening Star*, August 21, 1968]

### **Action on the 1968 Act**

President Johnson left Washington for his Texas ranch on August 23, still undecided what to do about the Federal-Aid Highway Act of 1968. His press secretary, George Christian, told reporters that President Johnson still had "some individuals he needs to discuss it with." If he did not act by 12:01, August 24, the bill would be pocket vetoed. ["President Acts Today On Freeway Program," *The Evening Star*, August 23, 1968]

President Johnson almost decided against signing the bill, largely because of Section 23. At his Texas ranch on the evening of August 23, he signed the bill without ceremony. In a lengthy statement released on August 24, he said:

In this review, I have weighed the bill's positive and progressive features against its shortcomings, the range of executive actions we might take to ease some of its burdens, and the time yet remaining in this session for Congress to correct its drawbacks.

On balance, he decided to sign the bill, which he said was in many respects "the most important highway authorization bill since the start of the interstate program over a decade ago."

He listed some of the bill's positive features:

It authorizes funds to carry the program through 1974, enough to assure the construction of many thousands of miles of roads. These highways can forge new links to more of our cities, serve America's growing transportation needs, and open up new avenues of convenience for millions of citizens. This measure also deals more effectively and more humanely than any previous measure with a modern dilemma – the problems created by roadbuilding in or through our cities. It shows, in these provisions, more of a concern for our citizens than for concrete.

- Families – particularly the poor – who are displaced from their homes by highway projects will receive the assistance they need in moving to other dwellings.
- Authority to acquire new rights-of-way in advance can help assure that highways in the future will be better planned, less costly, and cause the least possible disruption to local residents and businesses.
- Funds to institute innovative measures to improve traffic flows will mean less congestion in city streets.
- A new test program providing fringe parking away from crowded business districts will further improve the movement of traffic.
  
- Highway planners will be required to consider social and environmental factors in determining the location of urban highways--thus preserving many neighborhoods from the bulldozer and the wrecking ball.

-- More effective equal employment opportunity in the highway construction industry will bring jobs to Americans of all races.

He objected to several features of the bill:

By far the most objectionable feature in the bill is the requirement that the District of Columbia Government and the Secretary of Transportation construct all interstate routes within the District as soon as possible – with the District required to commence work on four specific projects within 30 days. These provisions are inconsistent with a basic tenet of sound urban development – to permit the local government and the people affected to participate meaningfully in planning their transportation system.

He acknowledged the unique status of the District of Columbia under the Constitution. He understood the desire of Congress to build the highway system:

But it is vitally important that these roads be constructed in accordance with proper planning and engineering concepts and with minimum disruption of the lives of District citizens.

The factor that allowed him to sign the legislation was the requirement in Section 23(a) that, “Such construction . . . shall be carried out in accordance with all applicable provisions of title 23 of the United States Code.” These requirements, the President said, prevented the Secretary from approving construction unless funds were available, all right-of-way could be obtained, the projects are appropriate links in a comprehensive transportation plan, and other requirements of sound highway construction are met. He continued:

I have therefore directed the Secretary of Transportation promptly to convene the representatives of all interested executive agencies to support the Government of the District of Columbia in developing a comprehensive plan for a D.C. highway system. This plan should:

- Promote the rapid movement of traffic in the metropolitan area.
- Protect the people and neighborhoods affected by the new roads.
- Recognize the city’s needs for expanded parking facilities.

I have asked the Secretary of Transportation and the mayor of the District of Columbia to make certain that the plan is developed in sufficient time to have portions under contract prior to January 1, 1969.

President Johnson said he objected to other provisions of the 1968 Act as well. It would:

- Seriously weaken the pioneering effort to beautify America’s highways by depriving that effort of the funds it needs, and by diluting the billboard removal provisions of the present act.
- Remove the protection we have given in the past to many park lands that should be preserved for the families and children of America.

- Extend the interstate system by 1,500 miles without any serious study of the type of major highway program we will need after we complete the present system in 1974.

His statement concluded:

I believe the good in this bill outweighs the bad. I believe that the progressive steps we are taking here will permit us to improve the highway program in urban areas, and make it more responsive to the needs of the people who live there. I hope that the Congress will assist the executive branch in moving further in this direction, and in amending the undesirable features of this bill.

On August 24, Secretary Boyd met with Mayor Washington, Chairman Hechinger, and Deputy Mayor Fletcher for over 2 hours, then joined Mayor Washington for a joint press conference. The Secretary did not consider Section 23 of the 1968 Act to present the type of comprehensive plan President Johnson had called for:

I do not consider that a comprehensive plan for the District exists. Both the Department of Transportation and the District of Columbia are keenly aware of the need for a comprehensive freeway system within the District. It will be developed and work will be started on aspects of it before January 1.

He directed Administrator Bridwell to meet with Fletcher, beginning the following day, to develop a comprehensive plan for Washington's transportation system.

He declined to promise funding for the projects or say whether he thought the projects might not be built in accordance with the congressional action. "At this point, that would be speculation." He did say, however, that "various elements of the comprehensive plan will shake out" while work on the comprehensive plan was underway, and that the District could implement those elements before the overall plan was completed.

As for the Three Sisters Bridge, he said his opposition had been overstated:

I have never opposed construction of the Three Sisters Bridge. I only did to the extent that there is not a comprehensive plan. I will be at least mildly surprised if the comprehensive plan does not include a bridge in the Three Sisters Island area.

Reporters asked Secretary Boyd if public hearings would be part of the process. "I would be quite confident that there would be public hearings."

Mayor Washington said he considered the President's message was "a mandate to move ahead with a comprehensive system . . . . We are hopeful we . . . can afford as much citizen participation as possible in the planning process." His goal was to work out the highway system "within the framework" of the legislation. They would proceed "with as much input as possible" from the public.

NCPC's role was unclear. "I don't think we can tell you at this point what our plans are. Our consistent position has been that we wanted to assure citizens' participation that would be

meaningful.” He declined reporters’ request that he express his “personal opinion” on the freeways.

As for Chairman Natcher, Secretary Boyd said he was “optimistic” about resolving the dispute that was delaying matching funds for the rail rapid transit system.

According to a *Post* account:

Department of Transportation aides reported the possibility of a compromise plan that might shift the routing of the four segments, while keeping their starting and finishing points at relatively the same places.

Such a compromise would probably involve a new routing of the controversial North Central Freeway, which has aroused protest from Northeast residents who are in its path.

Further:

The clear impression left by the press conference was that Department and City officials have decided that, legally, they could defy the wishes of Congress and delay, alter or even drop any of the four disputed projects.

But whether they can afford to do so tactically is another question.

By contrast, Chairman Kluczynski told reporters by telephone from Chicago, “The District won’t get a dime for a subway until it does what we want it to do on highways.” District officials had to “report to us, and we’ll take a look at what they’re doing.” [Hoagland, Jim, “Johnson Signs Road Bill, Provides D.C. Loophole,” *The Washington Post*, August 25, 1968; Sarro, Ronald, “Roads Plan Is Clouded Despite OK,” *The Sunday Star*, August 25, 1968]

Neither the *Post* nor *Star* editors appreciated these developments. A *Post* editorial pointed out that “all the laboring of Congress to force the District to start building freeways and all the wails about local self-determination of freeway locations seem to have been in vain.” The President’s call for a comprehensive plan meant that if the highways Congress had ordered the District to build weren’t in the plan, “they will not be built.”

The best that backers of rail rapid transit could hope for was that the city would meet the President’s January 1 deadline. However, that means “a start on the subway next year instead of this fall”:

The worst, of course, is that some Congressmen will consider this interpretation of their work so strained and so arbitrary that they will attempt to kill the subway in retaliation.

The burden on city officials was “extremely heavy” because “the history of freeway planning” meant that the January 1 deadline “would seem impossible to meet.” To meet it, “there will have to be much more action and much less quarreling than there has been”:

For if the District misses this chance to plot its own course, either it will have a freeway plan imposed upon it by Congress or it will be doomed to do without either freeways or subways and die a death of automotive strangulation.

Summarizing the President's signing statement and Secretary Boyd's comments during his press conference, *Star* editors wrote, "So it's back to the drawing board, boys, for the latest of a seemingly endless series of runs through the planning wringer."

In defying Congress, President Johnson had at least "stated unequivocally that freeway construction contracts of some sort should be let by the end of this year." Secretary Boyd and Mayor Washington had "pledged that their new plan would likewise be finished by then."

The editors took issue with Secretary Boyd's comments on the Three Sisters Bridge:

Boyd, in answer to a question, further commented that he would be "mildly surprised" if the plan did not include a Three Sisters Bridge. We are mildly surprised, too, for the secretary has made no such assertion, in even the most tentative terms, previously.

The editors were skeptical that Chairman Natcher would advance the transit matching funds:

The trouble is . . . that we have been at this point in the freeway controversy before – on countless occasions. Whenever in recent years firm freeway decisions appeared imminent, the administration's unvarying response has been to discover a sudden, urgent need for further planning.

They also were not reassured that President Johnson gave Secretary Boyd responsibility for determining "appropriate" links in the system:

For the secretary's previous assessments of the sorts of freeway which are "appropriate" in Washington have not been worthy of support.

Whether the so-called comprehensive plan would "satisfy the need for a reasonably adequate system" boiled down to "whether Mayor Washington is willing to insist upon such a goal, and to stand his ground against very strong pressures."

The editors hoped that concern for the District's welfare would prompt Congress to free the matching funds for initial rail transit construction instead of continuing to hold the funds hostage to freeway construction:

Both these systems are desperately needed, and the newly-ordered freeway delay is a severe disappointment. But Congress can and should maintain its pressures in behalf of freeways without further penalizing, at this time, the transit program which is fully ready to proceed. ["District Freeways," *The Washington Post and Times Herald*, August 25, 1968; "More Delay," *The Evening Star*, August 26, 1968]

Reaction to President Johnson's decision to approve the 1968 Act continued to come in. Sammie Abbott expressed "disgust and anger" at the decision after a meeting of ECTC. During the

meeting, ECTC Chairman Booker denounced the congressional action as “cowtowing before the highway lobby and financial contributors.” Legal action was under consideration based on constitutional and racial aspects of the freeway program. ECTC also would hold neighborhood meetings to rally support for forcing District officials to reject the freeways.

Abbott said:

We feel this action is in line with the clearly-expressed mandate of the voters in the recent Democratic primary when by a 19-1 margin of some 93,000 votes to 4,000 they demanded the right of citizens to decide by referendum whether or not freeways should be built within the district borders.

In a statement issued before the Boyd-Washington press conference, Representative Gude said he was pleased by President Johnson’s decision:

This means a green light for both mass transit and freeways for the Washington, D.C., metropolitan region. Now the District government can promptly return to the construction of its modern road system.

I shall continue to press for the appropriation of mass transit funds.

Meanwhile, Arlington County was thinking about new legal steps in what the *Star* called “its long-pending suit to block the proposed Three Sisters Bridge.” County officials would decide whether to amend the suit filed 2 years earlier or seek an immediate injunction blocking bridge construction until the suit is settled. [Griffiths, Harriet, “Arlington to Study Moves In Three Sisters Bridge Suit,” *The Sunday Star*, August 25, 1968]

Bridwell and Fletcher had a luncheon meeting on August 26, after which Fletcher told reporters he expected that new freeway plans and “meaningful alternatives” would be presented to the city council in 60 to 90 days. The plan might differ from past plans, Fletcher told reporters. The Three Sisters Bridge might be dropped, but a new Potomac River crossing was a necessary component of a new plan.

The city council would then hold public hearings and vote on the plans before the city presented a “comprehensive plan” to the Department of Transportation for approval. In considering new “criteria of land use and transportation,” city officials were not “limiting ourselves in our thinking to any prior plans.” Fletcher added that the Department of Transportation “feels it is basically a District responsibility – basically a local decision.”

A reporter asked Fletcher if he thought the city was taking advantage of the Title 23 loophole in Section 23. He did not think so. “It’s a clarification.” As for Chairman Natcher’s threats, Fletcher acknowledged that the plans outlined at the press conference would not meet the “beyond recall” test for releasing the matching funds. Nevertheless, he hoped the funds would be released. “I don’t anticipate the subways suffering at all.” [“New D.C. Freeway Plans expected in 60-90 Days,” *The Evening Star*, August 27, 1968; “Freeway Replanning to Begin at Once,” *The Washington Post and Times Herald*, August 27, 1968]

## Negotiating with Lame Ducks

On March 31, President Johnson had stunned the Nation by announcing he would not seek reelection, but would instead devote his time – unsuccessfully as it turned out – to seeking an end to the war in Vietnam. His announcement set off a scramble within the Democratic Party to select a nominee for the November election. Vice President Hubert H. Humphrey gained the nomination to run against former Vice President Richard M. Nixon.

In the meantime, District officials would have to negotiate with Secretary Boyd and Administrator Bridwell, neither of whom was likely to be around after January 20, 1969, to comply with President Johnson's deadline of January 1 for the start of construction. At the same time, officials would have to be ready to negotiate with an unknown new team that might well want to examine the issues on its own.

When Congress resumed work on September 4, District officials hoped for movement on several important bills, including the request for matching funds in a supplemental appropriations bill that would allow WMATA to begin construction of the rail rapid transit system. That was unlikely, according to the *Post*, unless Chairman Natcher and his allies would “accept a good-faith promise that there will be no further delay in freeway planning.” Other pending bills that would die at the end of the session, unless approved, included the parking and air rights bills. [“District Bills Face Approval,” *The Washington Post and Times Herald*, September 2, 1968]

On September 12, NCPC promised that as part of its Year 1985 Comprehensive Plan, it would adopt a tentative “Major Thoroughfare Plan” on November 7 and a final freeway, rapid transit, and land use plan on December 5. This schedule was in keeping with President Johnson's call for construction to be underway before January 1. As Lee Flor pointed out, the schedule was “expected to be controversial because it will allow only two months for freeway opponents to fight a final decision on where to place disputed projects which have been bitterly fought in the last 10 years. [Flor, Lee, “Freeway Plan Act Set In November,” *The Evening Star*, September 12, 1968]

On September 13, Councilmember Turner, the highway advocate, resigned unexpectedly from the city council “to become active in the campaign on behalf of Vice President Humphrey.” President Johnson nominated 36-year old Philip J. Daugherty to complete the remainder of Turner's term, subject to Senate confirmation.

Other council members were surprised by Turner's departure. “I just heard about it,” said Chairman Hechinger. He was disappointed that his “longtime friend” was leaving the council. Vice Chairman Fauntroy, who was at odds with Turner over freeways, said the resignation was “unbelievable,” while Councilman Yeldell refused to believe it when a reporter asked for comment. “That's inconceivable,” he said.

The *Star* recalled one moment during Turner's service:

One of Turner's most dramatic moments as a councilman came last spring when he had a shouting confrontation with militant members of the anti-freeway Emergency Committee

on the Transportation Crisis. Turner nearly had to be restrained as he rose and shook his finger at committee sparkplug Sammie A. Abbott.

Turner's successor, Daugherty, was a staff representative with the Office and Professional Employees International Union in the District. He said, "I would be very happy to accept" when informed of the nomination. Like Turner, Daugherty was white, thus preserving the racial balance on the city council. In many ways, Turner and Daugherty had similar backgrounds, as the *Star* pointed out:

Besides physical likeness, their backgrounds are nearly carbon copies, so much so that it seems almost fitting that Philip Daugherty should inherit what appears to be emerging as the "labor seat" on the council.

Daugherty grew up in a union family. He graduated with a degree in industrial relations from St. Francis College in Loretto, Pennsylvania, which he attended on a football scholarship. After arriving in the District in 1956, he studied law at Catholic University. He lived with his wife, three sons, and a daughter in a two-story brick home at 4612 Fessenden Street, NW., in the American University Park section of the District close to the Maryland/District line. ["Turner Quits Council; Daugherty to Fill Post," *The Evening Star*, September 13, 1968; Delaney, Paul, "Daugherty Is Like Turner," *The Sunday Star*, September 15, 1968]

When the Senate District Committee held a confirmation hearing on September 25, Bruce J. Terris, chairman of the District Democratic Central Committee, testified against Daugherty's confirmation. Daugherty, Terris said, had advocated the slate of Democratic leaders who were defeated in the May 7 primary. He was "committed to the ideas of the past." Moreover, Terris objected to the way President Johnson had appointed him without consulting the party or anyone else in the District. He added, "I disagree that there should be a labor seat" on the council. He would prefer to see representation for welfare mothers and the poor.

Senator Morse described Terris's arguments as "inconsequential and immaterial." Moreover, he told his colleagues on the committee that he had recommended Turner and Daugherty to President Johnson when he was assembling the city council.

The committee approved the nomination on October 8, and the Senate confirmed Daugherty without discussion by unanimous consent. Daugherty took his oath of office on October 18. [Griff, William, "Terris Testifies Against Okay Of Daugherty," *The Evening Star*, September 25, 1968; "Senate Oks Daugherty For City Council Seat," *The Evening Star*, October 9, 1968; District of Columbia Council, *Congressional Record-Senate*, October 9, 1968, page 30144]

### **Air Rights For City Streets**

On October 6, 1967, Director Airis met with the Mid-City Housing Alliance, a citizens' organization of the Washington Urban League that contended that the freeways that were not scheduled to be tunneled would displace up to 1,700 residents. The group proposed that portions of the Center and North Legs of the Inner Loop Freeway be tunneled under New York Avenue between Mount Vernon Place and the Baltimore and Ohio Railroad tracks.

“The rub,” Airis said, “is that not all of this section can be tunneled, and some homes will probably be torn down on the north side of New York because an eight-lane freeway is wider than the avenue. He said he would present the group’s proposal to NCPC.

Thomas Appleby, RLA director, told the group that if the Northwest I urban renewal project could be extended, air rights housing could be built for freeway displacees. [“Airis Cites ‘Rub’ In Loop Tunnel Plan,” *The Evening Star*, October 6, 1967]

On October 12, NCPC approved construction of low- and moderate-income housing on a deck over the Center Leg Freeway. Northwest I would be extended, RLA would buy the additional land, and turn it over to the highway agency. The highway agency would build a double deck of concrete above the freeway between H, K, 2<sup>d</sup>, and 3<sup>rd</sup> Streets, NW. This was the area that Engineer Commissioner Duke had set aside for a pilot project several years earlier. RLA would put 325 apartments and an acre of recreational space on the top deck, 30 percent of which would be public housing. The lower deck would provide 144 parking spaces.

The *Post* explained how this decision affected routing:

The decision will also affect the alignment of the last section of the K Street tunnel. The tunnel would have linked the Center Leg, which will terminate at New York Avenue, and the North Central Freeway, which will end at Rhode Island Avenue.

Highway Department engineers said yesterday that the only feasible route for the tunnel now is under New York Avenue, surfacing near Florida Avenue and going over the Baltimore and Ohio Railroad tracks to Rhode Island Avenue.

By including housing as part of urban renewal, the plan avoided the need for congressional approval of air-rights in the District as part of the highway program. [Hoagland, Jim, “Planners Approve Air-Right Housing,” *The Washington Post and Times Herald*, October 13, 1967]

On December 14, 1967, the Senate had considered Senator Tydings’ two air rights bills for the District:

- S. 1245 allowed the use of space above and below freeways for housing, recreation, or parking.
- S. 1246 provided the same authority for city streets.

With the first session of the 90<sup>th</sup> Congress prepared to adjourn on December 15, 1967, the Senate passed the two bills without discussion or a recorded vote. [Lease of Airspace, *Congressional Record-Senate*, December 14, 1967, pages 36670-36675]

As the second session began on January 15, 1968, air rights legislation was one of the important District bills awaiting action in the House.

By the time President Johnson approved the Federal-Aid Highway Act of 1968 in August, the House had passed many District bills, but the air rights legislation had not cleared the House District Committee.

On September 5, a subcommittee of the District Committee approved the bill granting air rights authority over city streets. According to an anonymous staff member, the failure to pass the companion bill for freeways stemmed from the view of some subcommittee members that the city already had the authority to use the air rights. They mistakenly thought that congressional authorization to build the Labor Department headquarters over the Center Leg Freeway reflected authority for construction over other freeways. [Grigg, William, "House Unit OKs Building Over Streets," *The Evening Star*, September 5, 1968]

Congress completed the District of Columbia Public Space Utilization Act on October 8. President Johnson signed it on October 17 (P.L. 90-598). Because the House failed to adopt the comparable bill on freeway air rights, the Senate bill died at the end of the 90<sup>th</sup> Congress.

On November 21, 1968, HUD approved \$6.4 million in urban renewal grants to support RLA plan to acquire additional land in Northwest I to provide air rights housing over the Center Leg Freeway running from H to K Street along a right-of-way between 2<sup>nd</sup> and 3<sup>rd</sup> Streets, NW. The estimated cost of the deck was \$2.8 million. RLA Executive Director Appleby said, "This is a major breakthrough and is the first time, to my knowledge, that such a grant has been approved for an urban renewal air-rights housing site." [Lewis, Robert J., "\$6.4 Million Grant Approved For D.C. Air Rights Housing," *The Evening Star*, November 21, 1968; Eisen, Jack, "D.C. Gets Air-Rights Housing," *The Washington Post and Times Herald*, November 21, 1968]

### **The District Plan**

On September 19, Mayor Washington submitted his budget proposals to the city council for FY 1970. "For the first time," Lee Flor reported, "the District is proposing to spend more money for transit than for highways." The budget called for \$19.5 million for the subway (to match \$39 million in Federal transit funds) and only \$3.5 million (matching \$10 million in Federal-aid highway funds) for highway construction. "However, the transit and highway budget proposals have something of an air of unreality." The plans were subject to change by Congress and actions by the city council and NCPC.

First, Chairman Natcher would have to be willing to release the District matching funds for the subway. Basically, "any request for transit money may run head on into the freeway dispute."

The highway funds also were in dispute:

The District also may adopt some new highway plan, in the face of severe pressure from citizen and civic associations bitterly opposed to highways. But because the District needs new authorization for higher taxes for highways in the city, the highway budget is not expected to be increased . . . .

[The] District now has slightly more than \$200 million available in federal and District money available for its highway projects, but cannot spend it because of the planning disputes and citizen opposition which have held up some projects. [Flor, Lee, "District Proposes More For Transit Than Roads," *The Evening Star*, September 16, 1968]

As the city and FHWA negotiated in the wake of President Johnson's schedule for freeway plans, the scope of that plan was affected by a legal opinion by the Department of Transportation's Acting General Counsel, R. Tenny Johnson. His opinion, provided to District officials earlier but not made public until October 19, stated that the District and NCPC had limited maneuverability, as Flor summarized:

The legal opinion apparently means that the District and the planning commission do not have much room to maneuver – they will have to select at least one or more of the four freeway projects, if they wish to follow the presidential mandate.

If the planners select any highway projects that were not approved by Congress when it passed the 1968 Highway Act, they apparently would need additional federal legislation  
.....

His legal opinion said that: "As a practical matter, it will probably be possible to execute the President's deadline only on portions (of the comprehensive plan for the District) which are determined to be within the descriptions in the document (the 1968 cost estimate for freeways in the District).

Apparently the opinion means that the District and planning commission may act only on the four projects by Jan. 1, 1969. After that date, the District and planning commission may get congressional approval for other freeway sections if they are not part of the 1968 highway cost estimate.

In short, the District and NCPC were "in a bind – they can only proceed with the controversial projects, or run the risk of disobeying the President."

Flor discussed the impact of the opinion:

The news of the opinion probably will be viewed by anti-freeway forces as a defeat.

Pro-freeway forces are expected to view the opinion as meaning the District must follow congressional requirements in the 1968 Highway Act.

After reviewing the legal opinion, Secretary Boyd told FHWA officials that it "calls attention to certain legal implications which should be borne in mind in developing and carrying out the comprehensive plan for the District of Columbia." Deputy Federal Highway Administrator John R. Jamieson, who had discussed the legal opinion with Deputy Mayor Fletcher, confirmed to reporters that the opinion hindered changes in the freeway program Congress had mandated. Jamieson said:

In conclusion, the counsel points out that the time established by the President for the construction of part of the system will in all probability limit the construction to route sections designated in the "Federal-Aid Highway Act of 1968." [Flor, Lee, "D.C. in the Middle, Must Act on Roads," *The Evening Star*, October 20, 1968]

Taking the legal opinion into account along with ambitious deadlines announced by President Johnson, the city, and NCPC, *Star* editors wrote:

What all this suggest to us, and we will happily eat our words if we are wrong, is that the President's rosy promise of construction contracts on an adequate freeway program by January 1 didn't mean a thing. And if that is the case, any hope of a logical resolution of this ridiculous controversy will rest after the first of the year with Congress, just as it has before. ["Dubious Deadlines," *The Sunday Star*, October 27, 1968]

In one bit of good news for highway users, the Maryland State Roads Commission announced on November 3 that it had opened the missing ramps of the Pooks Hill interchange on the Capital Beltway. With the opening, traffic northbound on Wisconsin Avenue would be able to access the eastbound lanes of the capital Beltway. By modifying another ramp, the State permitted westbound traffic on the beltway to enter Wisconsin Avenue at Grosvenor Lane to continue north or south on Wisconsin Avenue. ["Pooks Hill Ramp To Beltway Opens," *The Sunday Star*, November 3, 1968]

That same day, newspapers announced that NCPC and the District city council would hold an "unprecedented" joint briefing on November 7 for the public on highway development. NCPC had intended to vote on its Major Thoroughfare Plan for the Year 1985 Comprehensive Plan on November 7, but decided to hold off on considering the plan until mid-December. Lee Flor reported that:

The City Council and planning commission consider the freeway dispute a major obstacle to their efforts to establish a master plan of development for the District. The so-called 1985 Plan has to be completed before the city can embark on major urban renewal projects.

He added that, "The groups have promised to try to completely settle the dispute by Jan. 1."

The briefing would take place in the Department of Commerce Auditorium at 7:30 p.m. First, NCPC staff would present its analysis of the freeway plan, after which the city would provide its analysis of the dispute and demonstrate how its original freeway plan would address congestion.

The two organizations planned a one-sided briefing by officials, without comment from the public. They would follow up with a public hearing in December to receive public comment. A spokesman for ECTC assured reporters that the committee was determined to cross-examine the highway officials at the briefing. [Flor, Lee, "A Public Briefing Set on Freeways," *The Sunday Star*, November 3, 1968]

On November 7, NCPC staff presented the draft Major Thoroughfare Plan to NCPC members, the District city council, and about 200 members of the public, including ECTC and the Committee of 100 on the District of Columbia, at the Department of Commerce Auditorium. The new plan restored the Three Sisters Bridge, rejecting renewed staff consideration of a tunnel, mainly because of the steep grades or the greater length that would be required on the Virginia side.

In addition, the plan projected the full Inner Loop Freeway, including:

- The East Leg along the west bank of the Anacostia River. North of D.C. Stadium, officials might shift the road away from the river to permit construction of the proposed aquatic recreation area at Kingman Lake. Much of the traffic in and out of the city would use the Kenilworth Avenue Expressway east of the Anacostia River and cross the East Capitol Street Bridge, which might have to be widened.
- The South Leg beneath the Lincoln Memorial grounds and the Tidal Basin.
- A tunnel under K Street, NW., and New York Avenue, NE., would replace a route north of Dupont Circle through the heart of the Shaw urban-renewal area. Traffic from the Center Leg Freeway and the K Street tunnel would feed into the tunnel under New York Avenue.

The plan also eliminated I-95 between the District Line and Capital Beltway, with traffic directed along the beltway to the Baltimore-Washington Parkway. The parkway would be rebuilt to Interstate standards to handle the traffic. This routing of the traffic would eliminate the need for a connection between I-95 and the North-Central Freeway in the city. NCPC staff marked the North-Central Freeway for further study, but with the understanding that eliminating it was a possibility.

NCPC also released a proposed Mass Transportation Plan. It largely followed the plan that WMATA had adopted. However, NCPC staff proposed to shift the route planned for 13<sup>th</sup> Street, NW., north of Massachusetts Avenue to follow 7<sup>th</sup> Street to U Street. From there, it would follow 14<sup>th</sup> Street to help revitalize an area that had been damaged in the riots after Dr. King's assassination. NCPC staff also proposed to study a rail route to Dulles International Airport.

To those freeway critics who said the rail rapid transit system could address the city's full transportation job, Charles H. Conrad, NCPC executive director, and Director Airis indicated that the highway plans were drawn with the full rail network in mind. The full rail network was essential to the operation of the freeway system, but inside the city, the freeways were needed to distribute automotive and truck traffic and to free city streets for local traffic.

Lloyd Rivard responded for the District of Columbia. The city wanted to build the North-Central Freeway, not study it. I-95 should be built as planned inside the Capital Beltway, with an interchange with the North-Central Freeway to carry I-95 traffic to Virginia. If the Three Sisters Bridge were not built, Rivard said that traffic would require another bridge to be built elsewhere, possibly near 14<sup>th</sup> Street. The NCPC staff proposal would put too much traffic on the Anacostia Freeway and, overall, would displace about 1,233 families, compared with 1,100 families under the District's plan.

NCPC and the city council officials announced that they would hold a public hearing on December 4 and 5 to accept comments on the draft Major Thoroughfare Plan of the Year 1985 Comprehensive Plan. The city council would vote on the plan after the hearings.

While the briefing was underway, the crowd was not silent. Jack Eisen reported that:

As the briefing went on, with most of the audience listening attentively, some snickered and shouted comments at pro-freeway statements. They applauded references to the proposed rail rapid transit system and suggestions that National Airport be abandoned.

As the meeting opened, Booker presented ECTC's case against freeways. Referring to the city council as the "lame-duck City Council" in view of the incoming Nixon Administration, he said, "It is not a question of alternate routes or tunneling. It is a question of just no roads at all":

Freeways are simply designed for white people who live in the suburbs. Freeways are designed to destroy the black community, both economically and socially.

This was, he said, "a revolution . . . this is war." The incoming Nixon Administration could expect legal action and street violence if the city proposed to build even one more inch of freeways to serve "honkie suburbanites."

Eisen also pointed out that:

City Council Chairman John W. Hechinger was shouted down when, responding to one question, he said the District must move ahead with at least some parts of the freeway program. He reminded the audience that both the City Council and Major opposed a bill enacted by Congress ordering the construction to proceed.

Lee Flor, in his report on the meeting, referred to the "heckling crowd" that accused District officials of not representing the city's people:

Highway officials were accused of using bogus statistics and transit officials were told they had sold out to O. Roy Chalk in approving any bus fare raise for D.C. Transit . . .

The Rev. Joseph Gipson, chairman of the emergency committee's subcommittee on a bus boycott, said that "we will wipe out D.C. Transit, as God is my witness."

Leslie Logan of Arlingtonians for the Preservation of the Potomac Palisades asked why NCPC staff left the Three Sisters Bridge in the plan. He mentioned President Roosevelt's agreement that parkland would not be used for non-park uses, as claimed in Arlington County's lawsuit:

"We will stop planning if the courts tell us to, and you should ask the Virginia Highway Department about the dispute," District highway director Thomas Airis replied.

In addition, NCPC Chairman Hammer was asked where he thought the displaced families would go. He replied, "I don't know where the people will go. I don't have the responsibility for public housing."

At about 45 minutes into the meeting, as Rivard began describing the city's traffic problem and proposed freeway network, ECTC's Sammie Abbot and Grosvenor Chapman of the Committee of 100 led a walkout of about 75 anti-freeway critics. As Eisen put it, they "stalked out, yelling protests." According to Flor, Chapman eventually returned to listen to NCPC staff presentations.

With the public hearing only a few weeks away, Chapman “charged that citizens were not being given enough time to review the proposals.” [Eisen, Jack, “3 Sisters Bridge Back in New Freeway Plan,” *The Washington Post and Times Herald*, November 8, 1968; Flor, Lee, “3 Sisters Span Plan Revived,” *The Evening Star*, November 8, 1968]

*Star* editors praised NCPC staff for their thoroughfare proposal. They had abandoned their brief consideration of the “silly scheme” for a tunnel instead of the Three Sisters Bridge. They had also embraced the inner loop concept and endorsed “at least in general terms, each of the projects which Congress has instructed the city to build immediately.”

The briefing “provided a small taste” of what officials could expect from freeway opponents during the public hearing in December. The editorial quoted Booker’s reference to “honkie suburbanites” and demand for no more roads at all. Officials “might just as well be prepared to hear more of this kind of outrageous nonsense, and to deal with it decisively”:

After that, their public obligation is to approve a reasonable, cohesive freeway network – not only to facilitate the orderly movement of automobiles and trucks which otherwise will jam neighborhood streets, but to advance the region’s rail-transit system, as well. [“Hope for Freeways?” *The Evening Star*, November 9, 1968]

### **Reaction to the draft Major Thoroughfare Plan**

The Board of Trade held its 79<sup>th</sup> annual meeting at the Mayflower Hotel on November 12. During a transportation seminar, T. Murray Toomey, an attorney with the transportation committee, said that freeways and rapid transit were “interdependent in the eyes of Congress.” The board had a “firm commitment to a balanced transportation system of freeways and rail rapid transit,” but the area had experienced a “deplorable lack of progress with the freeway program here.” Even the congressional mandate to begin construction of the freeways had been ignored. He urged business leaders to work to advance the regional freeway system so construction could begin on the Metro bobtail plan.

The most encouraging development in transportation was suburban approval of the bond referendums for transit. These votes were, Toomey said, “a valid and legal expression of approval for rail transit as a metropolitan program.” He referred to a consultant study that concluded that taxpayers would receive \$880 in benefits for every local dollar invested in rapid transit. The Los Angeles-based consultant, addressing the seminar “over the long-distance telephone into a loudspeaker here in Washington,” predicted similar benefits for freeway investment. “There is no question that there will be important benefits.” Lee Flor summarized:

He said the rapid transit and freeway systems serve different purposes, and cautioned that a freeway system could never substitute for a rapid transit system’s function of moving crowds of people in the rush hour. [Flor, Lee, “Businessmen Get Plea To Push Freeway Plan,” *The Evening Star*, November 12, 1968]

On November 16, NCPC distributed material related to its Major Thoroughfare Plan and transit proposals. Included was a letter from General Graham supporting freeways. He was responding

to a request “to comment upon the general question of compatibility between freeways and rapid rail transit.” He wrote, “We welcome this opportunity”:

[WMATA] has consistently maintained that rapid rail transit is a supplement to and not a substitute for alternate modes of transportation. An adequate freeway system and a good bus system are essential to help the rapid rail transit system

WMATA had worked with District highway officials to develop traffic forecasts:

There is no conflict between the freeway proposals and the transit plan. Rather, the two complement each other and often times utilize a joint right-of-way to maximize efficiency and economy.

The philosophy behind the transit system is to provide freedom of choice. Without an adequate transit or freeway system, people will not have that freedom of choice.

Thus, WMATA supports an adequate freeway system and feels that such a system would be compatible with and complementary to a rapid rail system.

Although WMATA is not in position to make specific recommendations on individual segments, it feels that a system in the order of magnitude of the 1968 Interstate Cost Estimate prepared by the District of Columbia would be appropriate to meet the District’s freeway needs.

Traffic projections, Lee Flor pointed out, were important to WMATA because the \$850 million in guaranteed revenue bonds it planned to issue depended on sufficient ridership to convince investors that farebox revenue would be available to retire the bonds.

According to projections “based on a very complicated computer analysis which anti-freeway groups criticize,” 22 percent of all workers in 1990 would use the combined bus-rail transit-subset system. Another 4 percent would use only the buses:

The remaining 74 percent of the people in the metropolitan area will either have to use the highway system because their places of employment are out of the way, or will want to use cars for some personal reason. This is the official traffic forecast, endorsed by both highway and transit officials.

Within the District, about 57 percent of workers will use the freeways.

The background material, including a 29-page analysis by NCPC planners, explained that traffic on I-70S in Montgomery County and I-95 in Prince George’s County would be able to reach downtown Washington from the east on the Baltimore-Washington Parkway by using the Capital Beltway and the Kenilworth interchange.

The traffic from the three freeways and parkway then can go down New York Avenue or over the Kenilworth Expressway, if these two highways are improved, the planning commission staff claims.

Jack Eisen reported that between the parkway and downtown, traffic would use a partly tunneled New York Avenue freeway or a widened double-decked Kenilworth Avenue Expressway. The parkway would be expanded to ten lanes and Interstate standards.

Chairman Wolff of the Maryland State Roads Commission disagreed with the plan to use the Baltimore-Washington Parkway to carry downtown-bound I-70S and I-95 traffic. The plan was, he said, unworkable. He predicted that if the plan were adopted, Maryland would have to widen the Capital Beltway to 12 lanes or more.

Wolff disputed a claim by NCPC's Conrad that Maryland was receptive to taking over the parkway for this purpose. True, Wolff said, Maryland was interested in acquiring the parkway from NPS as a supplement to I-95 and an access road for Friendship International Airport, not to replace I-95. "What would they do to get that traffic into Washington?" he asked. "They are not going to get it to disappear. It will simply overload the existing arterial." Eisen quoted Walter H. Addison, deputy director of the roads commission in charge of planning, as saying the new proposal would "fatten the doughnut instead of the hole." The doughnut, Eisen explained, was the Capital Beltway. Washington was the hole.

As Wolff pointed out, neither NCPC nor District highway officials had consulted Maryland about this plan. Albert A. Grant, technical director of the Washington Regional TPB, said his organization also had not been consulted, despite its responsibility as the MPO for developing the area's 3C transportation plan. He attributed the lapse to the tight schedule President Johnson had imposed. Addison said of the lack of coordination, "They castigate us if we don't plan regionally. But they go ahead and plan us out of the area and don't even talk to us." [Flor, Lee, "Subway Agency Backs D.C. Freeway System," *The Sunday Star*, November 17, 1968; Eisen, Jack, "District Freeway Plan Blasted as Unworkable," *The Washington Post and Times Herald*, November 17, 1968]

On November 18, Addison raised the issue during a planning board meeting, particularly noting the failure by NCPC to coordinate with the MPO. During discussion about taking a stand, Montgomery County Councilman Richmond M. Keeney called elimination of the North-Central Freeway and Northeast Freeway "a travesty." He said, "The time may have been short, but the routes eliminated are vital to the area and are vital to the board."

The board's chairman, City Councilman Yeldell, tried to soften the reaction in view of sensitivities in the District. "I would caution you – request that you handle this as delicately as you can." In the end, the board voted 5 to 1 to take a formal stand in support of the full freeway plan at its December 2 meeting. Yeldell, who cast the lone dissenting vote, appointed a three-man drafting committee of suburban representatives to prepare the formal statement. [Eisen, Jack, "Regional Unit Moves For Showdown on Two Freeway Links," *The Washington Post and Times Herald*, November 19, 1968; Flor, Lee, "Metro Panel Votes 5 to 1 For Full Freeway Plan," *The Evening Star*, November 18, 1968]

James Gleason found his past and present clashing on November 20, as Eisen reported:

James P. Gleason, the rapid-transit official, was introduced yesterday to James P. Gleason, the lawyer. They looked the same but sounded different.

In 1964, Gleason had visited Sammie Abbott's home, where he was hired as ECTC's attorney. (Eisen's comment was anachronistic. ECTC did not exist in 1964; Gleason was hired to represent the Save Takoma Park committee, which included some of the people who formed ECTC.) At hearings, such as those held by NCTA, he expressed ECTC's opposition to freeways. The goal, at least as Gleason understood it, was to encourage a road-rail alliance that would result in congressional support for subway construction.

"It failed," Eisen wrote. Gleason bowed out of his role as ECTC's legal representative, became a member of the Montgomery County Council, and was now chairman of NCTA's successor, WMATA, which had offices in the southwest quadrant's L'Enfant Plaza.

On November 20, ECTC confronted him with General Graham's letter in support of a freeway system comparable to the one described in the District's 1968 ICE. ECTC had called the meeting in Gleason's office to denounce him as "a traitor to the antifreeway forces." He had, ECTC's Booker said, "sold his soul."

Declaring "I have not sold my soul to anybody," Gleason said "the letter sent to Mayor Walter E. Washington and the City Council was not sent out by the authority or approved by me." ECTC might have confronted General Graham as well, but he was vacationing on the West Coast. [Eisen, Jack, "Freeway Foes Call Gleason a Traitor," *The Washington Post and Times Herald*, November 21, 1968; "Gleason Again Denies Endorsing Freeway Plan," *The Evening Star*, November 21, 1968]

The Committee of 100 on the Federal City offered a plan on November 21 for carrying I-95 traffic into the District of Columbia. The plan would route I-95 inside the Capital Beltway west of the University of Maryland, past Hyattsville, to connect with the Kenilworth Avenue Expressway on the east bank of the Anacostia River. In addition, the committee called for extension of the Baltimore-Washington Parkway along the west bank of the Anacostia River to D.C. Stadium. This plan would avoid construction of a freeway in the New York Avenue corridor and extension of the East Leg Freeway north of the stadium. ["D.C. Panel Offers New I-95 Plan," *The Washington Post and Times Herald*, November 22, 1968]

When the TPB met on December 2, Councilman Keeney read the five-page statement drafted by the three-man committee that Chairman Yeldell had appointed. It called for construction of a full freeway system, including freeways carrying I-70S and I-95 into the city. Eliminating them "would create a serious discontinuity and imbalance in the regional transportation system." The statement, Keeney emphasized, did not endorse the specific location of the North-Central Freeway. Instead, it backed a freeway between the points the freeway would link, namely downtown and the Silver Spring area.

NCPC's draft Major Thoroughfare Plan had provided a good freeway system for the "southern portion of the District, in Northern Virginia and in the southern portion of Prince Georges

County.” However, the adopted “proposed freeway system does not provide adequate interregional continuity in . . . the entire northern portion of the District, the northern portion of Prince Georges County and all of Montgomery County.” As a result, NCPC’s plan was not “a comprehensive regional transportation program.

Chairman Yeldell warned that adoption of the pro-freeway resolution would inflame “our very vocal and very organized freeway opponents” by creating “the feeling that suburban interests are ramming freeways down their throat.” The resolution also would complicate the city council’s effort to find a solution to the endless freeway battles, especially in view of the congressional mandate for freeway construction contained in the Federal-Aid Highway Act of 1968. “We’re kidding ourselves,” he said, “if we think the Council has any decision-making power.”

He urged that the North-Central Freeway be set aside for further study. However, Fairfax County Supervisor Harold O. Miller, told him, “There is no need for further study to see if it is needed. The need is obvious.”

All indications were that the board would vote in support of the resolution. However, one of the board members present was found to be ineligible to vote. Lt. Colonel Sam D. Staroben, an engineer serving as an assistant to Mayor Washington, was not qualified to vote on his behalf because of issues related to the transition from a three-commissioner system to a mayor-city council form of government. As a result, the planning board was one member short of the quorum required for a vote.

Keeney proposed a motion for a meeting the following week, but could not get a second. He told his colleagues, “The Transportation Planning Board hasn’t heard the last of this proposal.” [Eisen, Jack, “Wider Debate Over Freeway Plan Thwarted,” *The Washington Post and Times Herald*, December 3, 1968; Barnes, Fred, “North Central Freeway Support Bid Is Rebuffed,” *The Evening Star*, December 2, 1968]

### **The Public Speaks, December 3-4, 1968**

The public hearings on NCPC staff’s Major Thoroughfare Plan began on the afternoon of December 3 in the auditorium of Western High School at 35<sup>th</sup> and R Street, NW.

According to Eisen, the opening session before about 100 people “was relatively tranquil.” Most of the witnesses were anti-freeway, with Sammie Abbott the only witness who provoked an incident. “People don’t want freeways. They want mass transit,” he said. If Congress would give the city money for the subway only if the city built the highways, then “the hell with the subway on that basis.” He told the city council members, “If you stand up and say you don’t want freeways, you will be standing up as the government of the District.” He was still talking when his 15 minutes expired, but he kept talking as Chairman Hechinger tried to gavel him down. “Abbott completed his testimony only when three policemen began walking down the aisle toward him.”

Another anti-freeway witness, J. George Frain of the Kalorama Citizens Association, was testifying when Vice Chairman Fauntroy asked if the city could turn down the freeways or

whether Chairman Natcher's action was "effective blackmail." Frain, a former long-time congressional employee, agreed that the city was effectively blackmailed, but advised that the city council "can either knuckle under . . . or you can stand up and be free men and represent your city." He thought Congress would eventually provide the matching funds.

Grosvenor Chapman did not think an outright rejection of the congressional mandate would be effective. He said, "we'd get it jammed down anyway." He described the Committee of 100's plan for carrying I-95 traffic across the eastern city line.

Among the few pro-freeway witnesses was Caroline Freeland, chairman of the Maryland-National Capital Park and Planning Commission. She favored the North-Central Freeway, saying it would equally benefit suburbanites and Washingtonians.

That evening, the hearing shifted to Hine Junior High School at 335 8th Street, SE. Again, most witnesses opposed freeways. Reginald Booker of ECTC charged that racism was behind NCPC's draft plan and said the members of the city council and NCPC were thieves. He drew applause from the crowd of about 100 people when he said, "Black people should take up arms to defend their community."

Robert F. Koch was a pro-freeway witness. He had commented as a Bethesda resident on previous occasions, but now was identified as representing the Bethesda-Chevy Chase Chamber of Commerce. He said that a handful of anti-freeway militants were intimidating public officials. "These people insist on a democratic planning process, but they are not democratic enough to permit pro-freeway witnesses to testify." Members of the audience shouted "Liar."

Vice Chairman Fauntroy later told reporters that he did not have a clear interpretation of what rejection of the congressional freeway mandate would mean. He said that "some people" had suggested the city council could "say no to Congress and thereby stop the highway system." If he "thought for an instant we could" cancel the freeways without jeopardizing rail rapid transit funding, he would halt freeway construction in the city. "I believe in a balanced system and I would like to balance the freeways we currently have with a rapid transit system." On the other hand, "if I am faced with the consequence of having any of those freeway projects rammed down our throats, I'm going to try to make it the least painful possible." He intended to ask the city's corporation counsel for a formal opinion on what would happen. [Hornig, Roberta, and Flor, Lee, "Fauntroy Seeks 'Out' On Freeways Order," *The Evening Star*, December 4, 1968; Eisen, Jack, "Fauntroy Hints at Rejection Of Freeway Plan by Council," *The Washington Post and Times Herald*, December 4, 1968]

Public hearings resumed with an afternoon session on December 4 at the District Building and an evening hearing at Kelly Miller Junior High School at 49<sup>th</sup> and Brooks Streets, NE. Witnesses included anti- and pro-highway speakers, but the Maryland State Roads Commission dominated the news by submitting a statement without spoken testimony. Walter Addison revived the idea of routing a freeway through Rock Creek Park. Maryland, the statement indicated, had spent considerable funds planning for I-70S and buying right-of-way for the North-Central Freeway that the city and NCPC now were proposing to eliminate. "We believe the District cannot

disregard the legitimate interests of the State of Maryland and the metropolitan counties in this fashion.”

Maryland officials recognized that their proposal was controversial, but if the city could not build the North-Central Freeway as presently planned, the Rock Creek Park alignment could “become a pleasant scenic entrance to the capital from the North and Northwest.” It had the advantages of time, distance, and scenic values. Eisen described the suggested alignment:

As the Maryland road builders revived it yesterday, the road would start in Silver Spring about a mile east of Georgia Avenue and head south generally along 16<sup>th</sup> Street nw. to the area of Washington Carter Barron Amphitheater.

From there, it would angle westward and pass along the east side of the park through or near the Zoo and terminate near 25<sup>th</sup> and K Street nw. At that point it would join the existing west leg of the Inner Loop Freeway

The Maryland agency made clear that it was not proposing “refined alignments” of the road within Washington, leaving that to local officials.

It said the road could be built in a way to preserve the park and give travelers “a monumental scenic, green entry to the Nation’s Capital.”

(The Carter Barron Amphitheater, operated by NPS, is located in Rock Creek Park at 4850 Colorado Avenue, NW. Called the Sesquicentennial Amphitheatre in honor of the District of Columbia’s 150<sup>th</sup> anniversary, it opened on August 4, 1950. In November 1950, it was renamed at the suggestion of President Truman to honor Carter T. Barron, a theater executive and vice chairman of the Sesquicentennial Commission, who had died on November 16, 1950, at the age of 45.)

Other Maryland proposals included retaining the inner loop concept, but dropping the idea of combining I-95, the Baltimore-Washington Parkway, and U.S. 50 traffic in the New York Avenue corridor. I-95 should be connected in the north-central corridor. The State supported rail rapid transit, combined with the freeway system, but warned that transit was “not a panacea for urban ills any more than the freeway is the sole perpetrator of these ills.”

The statement criticized the city and NCPC for ignoring “the need for better communication with the Northwest areas of the District and with Montgomery County, a situation patently unacceptable to Maryland and the affected region.”

As the *Star* reported, “Speaker after speaker urged adoption of a metropolitan subway system in place of the planned freeways.” Mrs. Ann Heutte of Brookland Neighbors accused Congress and highway planners of being “out of earshot of the mobs of us screaming in the distance.” She “berated the officials with passages from Homer’s Iliad on the destruction of cities.”

Robert Berg of the D.C. Community Recreation Advisory Board told officials to “get off the freeway kick and onto the mass transit kick.” He said, “Even before these hearings you knew

what the outcome would be – you know the city’s against the freeways.” He urged them not to “kowtow to a Congress which loves cement and private profit.”

Lloyd D. Smith, president of the Far Northeast-Southeast Council of Civic Associations, said, “We beg, we demand, we plead with the council – do not visit this upon us. How long must the Far Northeast be the dumping ground for freeways?”

Simon Cain of the D.C. Federation of Civic Associations questioned the idea of building housing over freeways. “You be the first to take your families to live in these places of death by carbon monoxide poisoning and emphysema.” He had observed Montreal’s subway system. By comparison, Washington had “one of the most unbalanced transportation systems in the universe.”

A representative of the District Democratic Central Committee claimed the city council could block the congressional mandate by refusing to accept the plan. This was the idea that Vice Chairman Fauntroy had suggested he would adopt in an instant if he thought it would block the freeways without jeopardizing rail rapid transit funds.

Murray Toomey said the board of trade opposed the plan to build a crosstown freeway in a tunnel under K Street and New York Avenue. The board recommended building the North Leg Freeway on the previously proposed alignment close to Florida Avenue. [Somerville, Gerald, and Wright, Chris, “Rock Creek Park Road Plan Revived By State Agency,” *The Evening Star*, December 5, 1968; Eisen, Jack, “Rock Creek Park Freeway Revived,” *The Washington Post and Times Herald*, December 5, 1968]

During the final day of hearings, Addison appeared to discuss the “counter-proposal” included in the statement he had submitted the day before on behalf of the Maryland State Roads Commission. His revival of the Rock Creek Park route took up much of his hour-long appearance before the city council and NCPC. Under questioning, Addison backed off the proposal. It was, he said, only one of four possible routes to connect Montgomery County with downtown. The others were the North-Central Freeway alignment and routes along 16<sup>th</sup> Street, NW., and the Wisconsin Avenue corridor. He pointed out that the Wisconsin Avenue corridor was best aligned with I-70S on the map.

NCPC member James O. Gibson, who had replaced Walter Louchheim, charged that Maryland was playing politics by stressing the Rock Creek Park alignment and not the Wisconsin Avenue corridor, which was shown on the State’s map as passing through fashionable Chevy Chase. “I charge political consideration was given by the Maryland Commission in leaving out lines on its map showing the I-70S corridor through Wisconsin Avenue.” Addison replied, “Politics had nothing to do with our proposal.”

Councilmember Shackleton asked if the State commission had held public hearings on the suggested plan. Addison replied, “Not since 1965.” He also said the commission had not approved the proposal, which had been prepared by the commission’s planning office.

The *Star* reported:

At one point Addison, visibly nervous, said: “We’re not adding any new gateways. But what basis is there to eliminate I-95 and I-70S? We feel the game is a new ball game now.

At the end of his period, he told the city council and NCPC that his proposal was only a “suggestion for consideration” by staff. He did not want to cause a postponement in plans.

Other witnesses presented familiar arguments.

As NCPC and the city council began weighing the pros and cons, Jack Eisen said, only one thing was certain:

Three skeletons of old freeway plans that were brought out by witnesses and rattled anew will be returned to the closet without serious consideration.

First was the Maryland State Roads Commission’s proposal to build a freeway through Rock Creek Park. Then there was the Metropolitan Washington Board of Trade’s suggested revival of the original north-of-downtown route for part of the Inner Loop freeway. The third was a Bethesda business group’s proposal for a new road through the Wisconsin Avenue corridor.

NCPC and the city council faced the same questions at this point as they did before the hearings began: “whether to accept, modify or reject the road plan proposed by the Planning Commission staff.” [Eisen, Jack, “Road Plans Pondered As D.C. Hearings End,” *The Washington Post and Times Herald*, December 6, 1968; Somerville, Gerald, “D.C. Council, Planners Attack Rock Creek Freeway Plan,” *The Evening Star*, December 6, 1968]

*Post* editors, after the hearings ended, concluded that the city council and the public were asking the wrong questions during the hearings:

The question before the Council and on which it could have used advice from individual citizens and citizens groups is not *whether* more freeways are going to be built in the District. It is *where* and *how* these freeways are going to be built.

Since most speakers at the hearings addressed the wrong question, they apparently expect the city council to adopt the “politically expedient” decision to oppose any further freeway construction. “In fact, some Council members seem to believe that they will be dead as budding politicians and community leaders if they do anything else.” If so, they would be “dooming the city to a bad freeway system.” The *Post* said:

With interstate highways bearing down on the District from all directions, it is beyond comprehension to believe that the local government and local citizens can stand at the District line and say this far and no farther. If that is attempted, the inevitable result will be that Congress will order the freeways built along whatever routes it chooses.

The new Congress arriving in January would probably examine what the District had accomplished since enactment of the 1968 Act, “This is the District’s last chance to adapt the

freeway system to its peculiar needs.” [“Wrong Questions on Freeways,” *The Washington Post and Times Herald*, December 7, 1968; italics in original]

The *Star* argued that after 3 days of “marathon public hearings,” the District’s freeway impasse was in “essentially the same muddle of confusion that prevailed before they began.” Some witnesses recognized the need for “a moderate District freeway network to connect with Maryland and Virginia”:

As always at such hearings, the freeway opponents turned out in force – to suggest curtailments of previously approved plans, or no freeway construction at all. Most of the latter group urged concentration on rail transit alone. In a new height of irresponsibility, however, several went so far as to say that if the rail transit program depended upon any degree of freeway construction, it would be better to have nothing built.

How in the world do these people think this city could survive under any such circumstances as that?

An “adequate, modern system of transportation” was not a luxury. NCPC “should firmly approve” the staff plan. “The City Council – whose members obviously are not entranced with freeways – will take their turn soon after.” Before then, the editors hoped that Mayor Washington would abandon his straddling of the impasse and issue “a forthright assertion of support for a reasonable, cohesive freeway network.”

The mayor and city council seemed to have forgotten Section 23 of the Federal-Aid Highway Act of 1968. President Johnson, in his instructions, “was equally unequivocal in ordering that an adequate freeway program for Washington be agreed upon and put in motion by January 1”:

The 1968 highway act has given this city a broad spectrum of valuable new powers with which to handle the problems of relocation and freeway design more effectively. What is required now is a determination at the District Building to use them. [“Freeway Showdown,” *The Evening Star*, December 7, 1968]

### **NCPC and the City Council Act**

On December 11, NCPC approved a revised Major Thoroughfare Plan and the Mass Transportation Plan. The approved Major Thoroughfare Plan dropped the Three Sisters Bridge and the North-Central Freeway. Other features of the plan included:

- Omit the K Street tunnel, with a new study of the North Leg of the Inner Loop to “determine the most feasible route for major east-west traffic improvements in the central area.”
- Redesign the East Leg Expressway north of Pennsylvania Avenue to meet parkway standards. The renamed Anacostia Parkway would provide a connection between the Baltimore-Washington Parkway and the Southeast Freeway at Barney Circle. It would pass D.C. Stadium, tunnel beneath the National Arboretum, and terminate at New York Avenue.

- The Palisades Parkway on the east bank of the Potomac River would connect the Montgomery County line with a point in Georgetown, west of the old D.C. Transit System car barn, where it linked with an underground Potomac River Expressway along the Georgetown waterfront.
- The underground Potomac River Freeway would return to ground level in Washington Circle, with construction of the tunnel allowing removal of the Whitehurst Freeway and redevelopment of the waterfront.
- A Trans-Mall Connector would link the Potomac River Freeway and the Theodore Roosevelt Bridge with the southwest quadrant.
- Construction of the South Leg Freeway beneath the Lincoln Memorial and the Tidal basin from Constitution Avenue near the Potomac River to a 14<sup>th</sup> Street connection with the Southwest Freeway
- The Center Leg, or “Central Distributor,” would be completed to New York Avenue where it would link with an Industrial Freeway to the north.
- The Industrial Freeway would be constructed over the Penn Central Railroad yard north of New York Avenue to “provide access to a major industrial park [proposed for the area] and serve as a bypass for trucks with destinations within the District.”

At the start of the meeting, Dr. Edwards, chairman of NCPC’s transportation committee, outlined the “policies and principles” behind the proposed plan:

The time has come, the commission believes, to take a firm stand in behalf of community values that can be threatened by the sheer force of automobiles on city streets. The commission believes that a policy that seeks to limit the flow of automobiles into the heart of the city is a practical and realistic approach to transportation planning.

He described WMATA’s plan as the “largest and most comprehensive transit system ever planned at one time for an urban area.” It would “tie the heart of the nation’s capital into a broad network of high-speed transit lines capable of performing with speed and efficiency.”

In that context, the freeway system would “perform its rightful and essential functions as a part of the over-all transportation system” that included rail rapid transit. He acknowledged that traffic congestion “will in the short run get worse before it gets better” with completion of the overall plan. The same would be true even if the full freeway system were built.

Eisen reported that Federal Highway Administrator Bridwell had told Chairman Hammer that the plan was “unsatisfactory and unworkable and will not satisfy the congressional mandate.” Bridwell, according to Eisen, had been instrumental in preparing the NCPC staff’s draft Major Thoroughfare Plan. Nevertheless, Hammer said he hoped the plan, which he estimated to cost \$300 million, would satisfy Congress. He said of the NCPC vote:

The community has made a major turn, as many communities are doing. We must have adequate freeway capacities, but we now say we have them.

The NCPC vote was 8-1, with BPR Director Frank Turner of FHWA casting the lone dissent. Colonel Alvin D. Wilder, serving as an alternate for the Chief of the U.S. Army Corps of

Engineers, criticized the plan but abstained from voting. [Eisen, Jack, "D.C. Planners Cut Commuter Roads," *The Washington Post and Times Herald*, December 12, 1968; Lewis, Robert J., "Planners Cut Freeways Sharply," *The Evening Star*, December 11, 1968]

The city council considered the Major Thoroughfare Plan the following day, December 12. Chairman Hechinger said the plan "recognizes that the District is approaching a limit on the number of cars that can be brought into the city and particularly the downtown area." He thought that even without the Three Sisters Bridge and North-Central Freeway, the plan was comprehensive enough to merit congressional action:

With respect to congressional reaction to this plan, I am sure the members of Congress . . . will be convinced by the sound reasons upon which [it] rests.

Specifically, Congressman Natcher has said he doesn't care for any specific road – that he just wanted the highway program started irreversibly.

This is now called for with \$300-million worth of construction. I am sure he will now release the subway funds.

The city council members who voted approved the plans unanimously. Councilman Nevius absented himself because he did not want to vote for or against the plan. He explained that "no one knows today for sure which is right and which is wrong." In a written statement, he said he preferred earlier plans that included the Three Sisters Bridge and a crosstown tunnel under K Street.

(In a letter to the *Star*, Nevius corrected "an inaccurate impression" in reports of his actions. He basically agreed with the NCPC recommendations. Specifically, he disapproved the Three Sisters Bridge and a tunnel along K Street, NW. "However, having reservations about the wisdom of acting upon a plan at this point in time, I came to the conclusion that the right thing to do was to abstain, and I did so in the only way possible under Council rules." ["Nevius' Abstention," Letters to the Editor, *The Evening Star*, December 23, 1968])

Chairman Natcher could not be reached for comment, but Senator Cooper, who had voted against the Federal-Aid Highway Act of 1968 because of Section 23, provided the first congressional reaction. "I am very pleased. The action now taken is a constructive step in the exercise of local responsibility for highway planning consistent with community goals."

ECTC's Booker said he was somewhat pleased that the plan dropped two freeway projects. However, ECTC's position was "not another inch of freeways in D.C." and he urged dropping the entire plan.

In Maryland, the reaction was mainly negative. The Montgomery County Planning Board adopted a resolution saying the plan "deludes the public with false hope that somehow, with no freeways, life in the District will be enhanced, that change and deterioration will somehow be rolled back."

Commissioner Freeland of the Maryland-National Capital Park and Planning Commission said that based on the approved plan, Montgomery and Prince George's Counties were "going to gradually have to forget the District, not because we want to but because we have to." She added that, "The District is beginning to seal itself off and build a wall around itself economically and perhaps culturally as well":

This action will only serve to isolate the District from the major source of employment for its residents. It is a classic case of throwing the baby out with the bathwater.

Moreover, NCPC "showed itself prepared to succumb to those who shout the loudest." While Maryland planners had "waited patiently and quietly . . . in the expectation that the public interest of the entire region would prevail," approval of the Master Thoroughfare Plan demonstrated that it would not. The commission would continue to "fight to achieve" a viable freeway system.

Cleatus E. Barnett, president of the Montgomery County Council, said the freeway cutbacks "could have almost a fatal effect" on the rail rapid transit system. He urged the incoming Nixon Administration to arrange a meeting of Federal, regional, and city officials "to deal realistically" with the area's transportation needs.

In Virginia, Arlington County officials were pleased that the plan dropped the Three Sisters Bridge. Chairman Richards said, "Arlington and the Nation's Capital cannot seek a highway solution to their transportation problem. If they do so, they will be paved over in concrete and their homes will deteriorate."

Secretary Boyd said he was "gratified" by the approved plan, which he said "has considerable merit." It "provides a basis for starting at once the job of expanding the Washington highway network," as Congress had required. He could approve several elements of the plan:

- An Industrial Highway north of New York Avenue.
- The proposed tunnel under the Georgetown waterfront to replace the elevated Whitehurst Freeway, under NPS jurisdiction.
- The Potomac River Freeway tunnel would join the previously proposed Palisades Parkway to carry traffic toward Cabin John.
- Deletion of the Three Sisters Bridge.
- Appointment of a design concept team to study the K Street tunnel and the disruption of traffic in downtown Washington.

Secretary Boyd took the South Leg Freeway out of the plan. He thought that tunneled ramps under the Lincoln Memorial might be needed to carry traffic between the Theodore Roosevelt Bridge and Independence Avenue. He also wanted further study of the East Leg Freeway across the Anacostia River near D.C. Stadium, as Eisen explained:

Boyd also revived the possibility, bitterly opposed by area citizens groups and rejected by the Council, that the existing Kenilworth Expressway on the east bank of the Anacostia River should become a full interstate freeway. A new bridge across the Anacostia would be needed.

As modified by Secretary Boyd, the plan eliminated all new Interstate highways crossing the District line, including the Three Sisters Bridge and the North-Central Freeway. The plan would cost an estimated \$200 million.

On December 13, Maryland State legislative leaders met with the State's congressional delegation in Annapolis to consider options, including a lawsuit, to secure better connections between the State and city. Chairman Wolff asked, "How can they cut us off at the D.C. line? I think that is pretty short-sighted. Commerce is a two-way thing. We are absolutely livid about this."

They were particularly upset about the routing of I-95. The potential lawsuit would be based on the District's failure to plan the network on a regional basis as required by 3C planning process under Federal law. "Even without a lawsuit," Eisen reported, "the whole tangled road issue clearly is destined to be dumped in the laps of Congress and the Nixon Administration to unravel."

The chairman of the Prince George's Board of County Commissioners agreed with Wolff. Francis J. Aluisi said that in view of shared interests across borders, "It is unthinkable that the hub of the metropolitan area should presume to propose any highway system plan without the full accord of all those jurisdictions." Solving the area's transportation problems required "complete cooperation," in the absence of which the result would be "utter chaos."

[Flor, Lee, "D.C. Council Approves Freeways Plan Cutback," *The Evening Star*, December 12, 1968; Eisen, Jack, "Council Adopts Scaled-Down Freeway Plan, 8-0," *The Washington Post and Times Herald*, December 13, 1968; "Freeway Cuts Hit in Maryland," *The Evening Star*, December 13, 1968; Eisen, Jack, "Md. Eyes Suit Over Freeway," *The Washington Post and Times Herald*, December 14, 1968; Macnees, James, "D.C. Road Plan Is Denounced," *The Baltimore Sun*, December 19, 1968]

The *Post* reported that on December 13, the House Committee on Public Works wrote to Secretary Boyd to demand that he approve the Three Sisters Bridge by the end of the year. If he did not do so, the committee promised to report legislation in 1969 requiring construction of the bridge. Secretary Boyd should consult with Mayor Washington prior to approval, a suggestion the committee made "on the assumption that the position of the District government will be favorable."

The letter indicated the committee also was troubled by Secretary Boyd's position on the Inner Loop Freeway. The committee wanted the Department of Transportation to submit plans in February for construction of the remaining segments of The Inner Loop and the North-Central Freeway. The letter advised Secretary Boyd to consider turning the Baltimore-Washington Parkway into an Interstate route as an alternative to the North-Central Freeway.

The committee, the letter stated, was "unalterably opposed" to converting the George Washington Memorial Parkway inside Montgomery County into an Interstate route. The committee would not object, however, if the parkway were extended into the city. ["House Unit Insists on 3 Sisters," *The Washington Post and Times Herald*, December 14, 1967]

The *Post* editorial board was disappointed, but acknowledged that at least, “The Council and the Commission, saying they oppose freeways almost to the death, consented to the beginnings of a freeway system.” They had approved “a small freeway system, as those things go, and one that is not entirely satisfactory.” While approving the plan, the members of both groups “were not content to let their work rest there.” Instead, they expressed concern that any freeways were in the plan. As a result, “their rhetoric alone may doom their plan and the orderly development of transportation in the Washington area.” They had “cloaked their consent in language of defiance that provides a rallying cry for all those who prefer freeways to rapid transit and dared Congress to order more freeways built.”

The editors discussed elements of the plan. They hoped that after further study, officials would approve the K Street tunnel as part of the North Leg of the Inner Loop Freeway. Data had not been presented to demonstrate whether the Three Sisters Bridge was justified, but “the bridge can be added to the new plan with a minimum of disruption.” The plan to tear down the Whitehurst Freeway “has one serious drawback – forcing the traffic off Key Bridge onto M street in Georgetown,” presumably on the assumption that rail rapid transit “will reduce that traffic drastically, and maybe it will.” Abandoning the North-Central Freeway meant that I-95 traffic would have to be carried around the Capital Beltway onto two parkways “from which trucks would be barred unless Maryland takes over the Baltimore-Washington parkway [sic] and converts it to interstate standards.”

Maryland officials were “certainly justified in being outraged over the new plan.” They had been stymied for years because of uncertainty in the District. “This is hardly the way to build a regional transportation system for the Washington area.”

The reality was “that Congress, alas, still runs the place.” Congress made its view clear that the District should have a freeway system. The hope now was that Mayor Washington and Secretary Boyd would convince Congress that the approved plan was “the start that Congress wants.”

The editorial concluded:

It may well be that the District’s best hope now is to persuade Congress to let construction begin on the inner parts of the system and to free the subway money while directing District officials and the Department of Transportation to sit down with Maryland and Virginia officials and make some sense out of the gateways to the city. [“Congress and the Freeway Struggle,” *The Washington Post and Times Herald*, December 16, 1968]

According to *Star* editors, the fact that the plan was “the first time in memory” the city and Federal planners were in accord “does not make the council-commission actions a bit more palatable.” They had agreed on “a thoroughly inadequate plan” that “inevitably will exacerbate Washington’s transportation controversy.” A bitter fight on Capitol Hill early in 1969 was “assured.”

Every “thoughtful observer” realized that freeways, alone, could not meet the area’s transportation needs without a balancing rail rapid transit system. The result was “a modest proposal” for freeway development and a rail-transit plan “all set to proceed”:

A stalemate over District freeways, however, led Congress, rightly in our view, to hold up the transit money while the District took another crack at the freeways.

Congress intervened to direct the District to build the planned freeways. If the city had proceeded as Congress mandated, Congress would be sure to release the District matching funds for rail rapid transit:

Instead, however, the council and the planners have irresponsibly ignored that directive, proposing a scheme of their own that not only drastically modified existing freeway proposals but flatly rejected one of the four projects which Congress said must proceed – the Three Sisters Bridge across the Potomac to Arlington.

The philosophy seemed to be to make congestion so bad that motorists will switch to transit. This result also would be accomplished, according to the planners, “by imposing limits on the volume of future downtown parking spaces”:

At their meetings last week, the council and commission leaders expressed confidence that their united front would convince Congress to buy their new approach in its entirety. We think that is a serious error in judgment.

Secretary Boyd had added to the confusion. He “praises the plan as a sound basis for dealing with the District’s traffic problems, then proceeds virtually to dismantle it”:

One of the major freeway elements approved by the council and the commission, Boyd says, is simply not needed, and should be discarded. In the case of another, he suggests a possible relocation of routes. The status of a third is left uncertain, to say the least.

One puzzle about the plan was that NCPC staff, just a few weeks earlier, supported the need for the Three Sisters Bridge. “Yet, last week, this same staff asserted that the bridge is ‘both unnecessary and undesirable.’” Nothing had changed in that short space of time, including traffic demand. What may have changed “was a sudden growth in the planning commission’s anxiety to reach an accommodation with the city council, which in turn seems sympathetic to militant citizen demands for a halt in all freeway construction.”

In that short period, the final plan had not been subjected to technical analysis or even submitted to the District’s highway officials for review. Moreover, NCPC conceded that its planners had not consulted with Maryland or Virginia officials. One official blamed that failure of coordination on the fact that these were “District plans.” The editors asked, “In this age of urban complexity, what kind of planning is that?”

They also wondered about the impact of the plan on the central city:

Some city council members seem obsessed with the notion that if freeways are sufficiently curtailed, automobiles will simply fade away. They won't, of course.

The likely result was the crowding of existing city streets, which NCPC's planning staff "recognizes in part, at least, by conceding that major arterial streets from the suburbs would have to be redesigned and in some cases rebuilt to accommodate 'high volumes' of traffic," even while the NCPC adopts a policy against any more "gateway arterial" roads.

Construction of the rail rapid transit system must begin as soon as possible:

Every month that passes from now on will not only postpone the availability of this essential system, but increase its cost. The 91<sup>st</sup> Congress and the Nixon administration should insist on adoption of an adequate freeway program, and then free the hostaged transit funds.

Since the Eisenhower Administration, Congress had adopted laws that "have given cities substantial new powers to ease the impact of urban freeways and to make them work more effectively":

What is required now from Congress and the new administration is to see that these powers are put to work in the Nation's capital. The city government is off to a very bad start. ["Those Automobiles Will Not Disappear," *The Sunday Star*, December 15, 1968]

### **Taming the Highway Bulldozers**

On October 23, 1968, FHWA had published a Notice of Proposed Rulemaking in the *Federal Register*. The purpose was "to ensure, to the maximum extent practicable, that highway locations and designs reflect and are consistent with Federal, State, and local goals and objectives."

The proposed regulation called for two hearings, or an opportunity for holding them, to familiarize all interested parties with the project and give them a chance to express their views at stages when the flexibility to respond to those views still existed. First, the State highway agency would hold a corridor public hearing before committing to a specific alternative. The State was to "ensure that an opportunity is afforded for effective participation by interested persons" and to provide a "public forum that affords a full opportunity for presenting views on each proposed highway location, and the social, economic, and environmental effects of that location and alternate locations."

This language reflected Section 24 ("Urban Impact Amendment") of the Federal-Aid Highway Act of 1968. It amended Section 138 ("Public Hearings") of Title 23, United States Code, which called for public hearings for Federal-aid highway projects that bypass or go through urban areas to consider the economic and social effects of such a location. The 1968 Act amendment added: "and social effects of such a location, its impact on the environment, and its consistency with the goals and objectives of such urban planning as had been promulgated by the community."

Second, the State highway agency was to hold a design public hearing after FHWA's division engineer, who headed FHWA's office in the State, approved the route location, but before highway design approval. The purposes were similar to those for the corridor public hearing.

The proposed rule defined the term "social, economic, and environmental effects" as "the direct and indirect benefits or losses to the community and to highway users," as reflected in a range of factors to be considered. The factors included such traditional items as engineering, right-of-way and construction costs, maintenance and operational needs, and operation and use of existing highway facilities and other transportation facilities during construction and after completion. In addition, the factors included national defense, economic activity, employment, aesthetics, residential and neighborhood character and location, religious institutions and practices, conservation (including erosion, sedimentation, and other water pollution problems), natural and historical landmarks, multiple use of space, and public health and safety.

Further, the proposal spelled out new appeals procedures after FHWA's division engineer published a notice of action approving a highway location:

Any interested person may appeal the action of the division engineer on a request for approval of a highway location or design, or both. The appeal must be filed, within 15 days after the date of publication of the notice of that action . . . . The filing of an appeal within the time prescribed . . . stays the action of the division engineer until the appeal is disposed of by the Administrator.

The interested person could then take the complaint to the courts, with construction blocked pending a final determination. [Public Hearings and Location and Design Approval: Notice of Proposed Regulations, *Federal Register*, October 23, 1968, pages 15663-15666]

As reported in *The Wall Street Journal*:

The proposal, as expected, has run into strong criticism from the powerful highway lobby of road builders and users. But there also is nearly solid opposition from governors and state highway officials, who contend the rule would increase Federal control and delay highway building.

Governor Volpe, the nominee for Secretary of Transportation, was one of the Governors who opposed the rule. In a telegram, he stated that the rule would "remove the power of location selection from the states and place it in the hands of Federal authorities who are removed from the many intricacies of each project." Although he favored providing additional information to the public, he believed that requiring a second hearing "only permits abuse of the minority right to dissent." [Shafer, Ronald G., "Volpe, Nominee for Transportation Post, Is Tilting With Agency on Highway Policy," *The Wall Street Journal*, December 12, 1968]

From December 16 through 20, FHWA held a public hearing on the plan in the auditorium of the FAA Building. FHWA heard from over 150 people and received more than 4,000 comments on the proposed regulation.

Secretary of Agriculture Orville D. Freeman was the first witness. He supported the proposal, but was concerned that it gave “any interested person” too much authority to halt projects simply by expressing opposition. Secretary Udall echoed the concern. He called the regulation essential because “time after time under present procedures we have had to stand by while highways sliced up our cities or invaded irreplaceable park and open space areas.” The appeals procedure would “provide the useful mechanism for the review of exceptional cases concerning a proposed highway route’s impact on scenic and historic values.” However, he warned that, “These procedures should not, of course, be so open ended as to hamstring or cause undue delay in the administrative decision-making process.”

Governor Godwin of Virginia, representing the Governors’ Conference, testified that all 50 Governors supported the “intent and purpose and the spirit” of the proposed regulation:

The Governors support increased involvement of individual citizens in public decision-making. But the rules actually defeat this purpose by effectively removing the decision-making responsibility and power from the levels of government closest to the people and placing it in the Federal bureaucracy and ultimately in the Federal courts.

The result of the appeals process would be “no decisions.”

Patrick Healy, speaking for the National League of Cities and the U.S. Conference of Mayors, strongly backed the proposal. “We strongly support the goal of the proposed regulations to assure that local officials and citizens will be involved in decision-making processes in highway projects which affect them.”

Special Assistant Attorney General Buscher of the Maryland State Roads Commission said the regulation would be unenforceable under a 1956 State law that was passed to prevent speculators from buying property they expected would be purchased by the commission for a highway project. Under that law, plats and maps showing design criteria “shall not be considered public records of the commission and shall not be open to public inspection except by permission of the commission” until property was acquired. The proposed regulation would require that information to be made available for the second public hearing on design.

(This 1956 Maryland statute was a result of the right-of-way scandal in 1955. As mentioned earlier, Ben DuPre, a -State highway right-of-way official, sold State highway location plans to developers who acquired the land at a low price, sold it to the Maryland State Roads Commission at a profit, and provided a kickback to DuPre.)

Buscher also condemned the provision allowing “any interested person” to appeal highway decisions. This provision was, he said, “contrary to the intent of Congress,” was “vague and indefinite,” likely would cause “great and unnecessary delay” in project completion. To make the point, Buscher satirized the preamble, saying it should read:

The purpose is to insure, to the maximum extent possible, the delay of highway construction and to take highway design and location away from the respective highway departments.

[It is] intended to afford full opportunity for any citizen with or without justification or provocation, any rabble-rouser . . . to cause delay after delay and even frustrate any federally aided highway . . . .

On December 18, Arthur E. Cohen, president of Baltimore's anti-freeway Movement Against Destruction or M.A.D., testified that his organization favored the regulatory changes. In fact, he asked that the new rules be made retroactive for the expressway program. Expressway planning in Baltimore had been "seriously subject to special influence by private, commercial and political interests."

[Rowland, James B., "Freeman Endorses Proposal On Highway-Route Appeals," *The Evening Star*, December 16, 1968; "Roads Battle Begins in D.C.," *The Baltimore Sun*, December 17, 1968; Morris, John D., "50 Governors Oppose Plan for Road Hearings," *The New York Times*, December 17, 1968; Rowland, James B., "Maryland Sees Conflict In Roads Hearing Plan," *The Evening Star*, December 19, 1968; Keidel, Jane L., "Road Rule Held Contrary to Law," *The Baltimore Sun*, December 20, 1968; Associated Press, "Urban Groups Back Road Hearings Plan," *The New York Times*, December 18, 1968; Keidel, Jane L., "Citizens' Role On Roads Urged," *The Baltimore Sun*, December 19, 1968]

When AASHO gathered in Minneapolis, Minnesota, for its annual meeting the first week of December 1968, the proposal was a major concern for many speakers. John O. Morton, AASHO's president and commissioner of the New Hampshire Department of Public Works, addressed the concerns of many highway officials when he said:

Our new interstate highways are anything but the atrocities the voices of opposition would have the public believe them to be.

He said that AASHO's member agencies had conducted thousands of public hearings and knew "that certain objections will always be presented at a public hearing." Ultimately, State officials must decide how to carry out their program. Morton, in summarizing what State highway officials feared, stated that the proposed rule far exceeded the intent of the 1968 Act:

Contained in the regulations is a provision that would allow a single individual appearing in opposition to a highway project, to effectively tie up the project for an indefinite period of time. It is impossible to comprehend the adoption of a regulation which has been so devised that the desires and needs of an overwhelming majority of the people as presented at a public hearing, could be overridden by the action of a single individual, responsible or otherwise . . . . If this is permitted, domination of [the Nation's] economy will also rest in the hands of this same irresponsible minority group.

It was, Morton said, the first time in the 52-year history of the Federal-aid highway program that "a federal agency has taken over and flaunted [sic] the intent of a piece of highway legislation." He suspected that "people high in the Department of Transportation" were responsible because they "have in the past made reference to the fact that the mentality of the highway departments should be changed." He said that highway officials were "confused, shocked, and alarmed at such a power grab."

Chairman Randolph addressed AASHO about several provisions of the Federal-Aid Highway Act of 1968:

That Act . . . includes a number of important changes which will enable the Highway Program to meet our expanding concern for social, cultural and environmental values . . . a full fledged relocation assistance program for those who suffer private injury through disruption and dislocation as a result of highway construction . . . equal employment opportunity . . . all public hearings (must) consider the social and environmental, as well as the economic, impact of a proposed highway location . . . .

However, he shared AASHO's concern about the appellate procedure in FHWA's notice. He quoted from a letter that he and Senator Cooper had sent to Administrator Bridwell in response to a request for the committee's views:

It is our strong belief that such procedure will invite unnecessary appeals to the Federal Highway Administration and to the Courts. Highway location decisions are really legislative in nature. This authority has been delegated by the Congress and the Legislatures of the respective States to the United States Department of Transportation and the State Highway Departments. Other than to assure that the rules have been fairly applied, there is no contribution which any Federal Court could make to the decisions relating to location and design.

The two Senators urged removal of the appellate procedures from the final version. "We believe the decision of the Federal Highway Administration should be final in all respects unless there is, in fact, a violation of law, in which case normal legal procedures would still pertain."

Bridwell, in his address to AASHO, referred to "problems of antagonism between highway professionals and professionals from other disciplines." Change was coming "too fast, too disordered, and too little anticipated," but like it or not, the program was facing "the same social and community forces that today confront every other basic national undertaking, whether in transportation, conservation, education, or the art of government." He said:

One option not available is to disassociate and insulate our activities from the sweep of events in America today. To pretend otherwise would be the depth of self-delusion. Nor, in many cases, are we masters of these events. Our decisions must reflect our realistic awareness of this.

They were living in a time "of difficult choices . . . matched, and possibly outweighed by the opportunities available to us today to select . . . directions which will produce . . . beneficial results for the future." The Urban Impact Amendment of the 1968 Act was "a clear indication" of the future, but its mandate for consideration of social, economic, and environmental impacts "can only be fulfilled by a fundamental reshaping of attitudes toward highway development in relationship to urban goals." He rejected the "cold war" option of "conflict – of fighting the program's opponents with every means at hand." Instead, he urged each highway official to "reshape his product and his way of doing business to reflect the new demands of the public."

To illustrate his point, he referred to a sign that he said the inventor Thomas Edison kept on his desk: “Pioneer or Perish.” For the Federal-aid highway program in America today, “there can be no more fitting watchword.” [Mertz, W. Lee, *Building the Interstate*,” Section 8, <http://www.fhwa.dot.gov/infrastructure/build08.cfm>]

On January 14, 1969, with just 6 days left in the Johnson Administration, Administrator Bridwell and Director of Public Roads Turner approved a Policy and Procedure Memorandum (PPM) as appendix A of Title 23, Code of Federal Regulations, Section 1.32. The change appeared in the *Federal Register* on January 17, 1969, along with an explanation of how the PPM was developed. The discussion acknowledged the controversy over the appeal provision:

A large number of comments objected to the proposal on the grounds that it would destroy the present State-Federal relationship with respect to the Federal-Aid Highway Program. In particular, it was argued that by providing an appellate review by the Administrator, final highway decisionmaking would be transferred from the States to the Administrator. However, under the laws governing the Federal-Aid Highway Program, final approval authority concerning Federal participation is, and has always been, reserved to the Secretary of Transportation and this authority has consistently been exercised by the Administrator pursuant to a delegation of authority from the Secretary . . . .

The goal was to strengthen the State’s role by increasing dialogue with those affected by proposed projects:

It was designed to help resolve controversies at the State and local level where they can be best dealt with. In recent years, more and more highway controversies have required the personal attention of the Administrator and the Secretary because the present coordination and hearing procedures did not provide for adequate public participation in the development of highway decisions. Appeals to the Administrator have become commonplace, many relating to highway decision approvals rendered over 10 years ago.

While defending the proposed appellate procedures, Bridwell and Turner decided to withdraw it:

The appellate procedures were also objected to on the grounds that the term “interested person” was too broad and that since there was no time limit concerning the disposition of the appeal, highway construction could be delayed indefinitely. Objections were also raised concerning the automatic “stay” of highway projects upon the filing of an appeal. These objections do have merit and accordingly, the proposed appellate procedures are being withdrawn for further review and reconsideration.

Instead of the appellate procedures, the PPM stated that the State was to publish notice of the division engineer’s approval of a highway location or design – and that was the final step in the review.

Other changes included the addition of “Fast, safe, and efficient transportation” as the first factor to be considered along with the social, economic, and environmental factors. The PPM also

clarified when two public hearings were required, namely for all Interstate and primary highway projects; secondary highway projects on larger roads; when the project is on new location or would have a different social, economic, and environmental effect; and projects where the function of connecting roads, including access limits, would be altered. Otherwise PPM 20-8 retained much of the notice. [Administration of Federal-Aid for Highways – Public Hearings and Location and Design Approval, *Federal Register*, January 17, 1969, pages 727-730]

### **The Final Days of the Johnson Administration**

In these final days, Secretary Boyd and Administrator Bridwell completed several other actions.

In response to FHWA's request for nominations under the 1968 Act's expansion of the Interstate System, the States submitted applications totaling more than 10,000 miles. On December 13, 1968, Secretary Boyd announced designation of 1,472.5 miles to routes in 28 States at an estimated cost of \$2.43 billion. The additions included I-27 in Texas (Amarillo to Lubbock), extension of I-75 from St. Petersburg, Florida, to Miami; I-43 from Milwaukee to Green Bay, Wisconsin; and I-88 from Binghamton to Schenectady, New York.

Administrator Bridwell acted on January 17 on the Major Thoroughfare Plan, as well as a request from Maryland. In a letter to Director Airis, Bridwell said that "as a result of official actions taken by the Council and Mayor of the District of Columbia," he was adjusting the District's Interstate System consistent with the city council's December 12 vote. He eliminated I-70S ("From the District of Columbia-Maryland line southward to a junction with FAI Route 95") and I-266 ("From the District of Columbia-Virginia line in the vicinity of Key Bridge eastward to a junction with FAI Route 66," namely the Three Sisters Bridge).

He approved a 3-mile extension of I-95 beyond the Capital Beltway to about half a mile from the District line. Construction would be approved, for now, only to East-West Highway.

He also deleted the I-695 South Leg Freeway tunnel under the Lincoln Memorial grounds and Tidal Basin and the extension of I-295 in Maryland to I-895, both in accordance with the Howard-Cramer amendment to 23 U.S.C. 103 (P.L. 90-238, approved January 2, 1968). Under this provision, the Secretary of Transportation, at the request of a State highway agency, could remove a segment from the Interstate System if the segment is not essential to a unified and connected Interstate System, including "urban routes necessary for metropolitan transportation," and the State promises not to build a toll road in its place. The mileage freed by this deletion could be used elsewhere, with the amendment providing an additional 200 "Howard-Cramer" miles to supplement newly designated routes if needed for connectivity.

With these changes, Bridwell provided revised definitions for routes in the District of Columbia:

Route 66. From the District of Columbia, Virginia line eastward via the Theodore Roosevelt Bridge thence northward and eastward to a junction with FAI Route 295 near the Anacostia River.

Route 95. From the District of Columbia-Virginia line at the south end of the 14<sup>th</sup> Street Bridges to a junction with FAI Route 66 in the vicinity of the intersection of New York Avenue and New Jersey Avenue, Northwest.

Route 295. From the District of Columbia-Maryland line in the vicinity of Oxen Creek northward and northeastward to the District of Columbia-Maryland line en route to the Kenilworth Interchange.

Route 695. From a junction with FAI Route 95 southwest of the U.S. Capitol eastward to a junction with FAI Route 295 in the vicinity of 11<sup>th</sup> Street, Southeast. [Flor, Lee, "Extension of Route 95 Inside Beltway Okayed," *The Evening Star*, January 18, 1969]

On January 17, Bridwell also approved Interstate freeways in Baltimore and New Orleans. In Baltimore, he approved the Owings design concept team's design for the interior legs of I-70 and I-95, including a harbor bridge across the Patapsco River near the city's historic Fort McHenry, whose flag waving after a night of British bombardment during the War of 1812 inspired the country's National Anthem. Mayor Thomas L. J. D'Alesandro, son of the former mayor, called the decision "a very important day for Baltimore." It was, he said, "the culmination of 24 years of study, research, evaluation and re-evaluation of what always has been identified as the East-West Expressway." He did not expect any more changes in the freeway system while he was in office. "Now we can move into the action program."

(The New Orleans decision involved the Riverfront-Elysian Fields Expressway. For information on the New Orleans freeway battle and Bridwell's decision, see "The Battles of New Orleans - Vieux Carré Riverfront Expressway (I-310)" on this Web site at <http://www.fhwa.dot.gov/infrastructure/neworleans.cfm>.)

Ben A. Franklin, who often wrote about environmental issues for *The New York Times*, called the decisions "a victory for people over automobile Technology" [sic] that ended "two bitter disputes over the disruption of cities by highway construction." The Baltimore compromise, he added, "was regarded as a potentially precedent setting example of how to 'civilize' the freeway." [O'Donnell, Jr., John B., "City's 3-A Route Wins Approval of U.S. Agency," *The Baltimore Sun*, January 18, 1969; Franklin, Ben A., "U.S. Approves Modified Designs for 2 Freeways," *The New York Times*, January 18, 1969]

On January 18, Bridwell cleared the way for State highway officials to use Federal-aid to pay 50 percent of the cost of building fringe parking lots as permitted by the Federal-Aid Highway Act of 1968 on a demonstration basis. Under the plan, States could use Federal-aid highway funds to build fringe parking lots to be coordinated with existing or planned public transportation facilities.

Bridwell issued guidelines for the TOPICS program on January 19. In a news release, BPR Director Turner explained that TOPICS could increase the traffic-carrying capacity of a city street system by 25 percent at modest expense:

Mr. Turner explained that TOPICS projects must be part of an area-wide traffic improvement plan, and must be based on a continuing comprehensive transportation planning process. Since July 1, 1965, approval of all Federal-aid highway projects in urban areas of 50,000 or more population has been contingent on such processes.

The same day, Bridwell announced adoption of policies and procedures to foster the cooperative development of future urban freeway corridors and multiple use of highway rights-of-way, including air rights. He explained:

In adopting a Federal policy on joint development of highway corridors, we are giving maximum aid to State highway departments in their attempts to contribute positively to the needs of local communities. The policy will encourage using highway design to deliberately shape the urban environment according to local goals.

Through joint development, communities had created parks, recreation areas, office buildings, and apartments using space above, below, and alongside urban freeways. The news release stated:

Under the new procedures announced by Mr. Bridwell, State highway departments and local governments will extend the practice of cooperation on transportation studies to explicitly consider the joint development possibility of the various alternative route locations for proposed freeways. In addition, the highway program will participate in the more detailed joint development planning for the corridor related to the specific location, once it is selected.

The goal, Bridwell said, was “to relate the proposed highway to the other plans, programs and goals of the affected jurisdictions.” The plan “should highlight the opportunities for profitable cooperation and collaboration between the State highway department and other public or private agencies in carrying out the development of the highway corridor as a single public work.” He added that the plan “should give a more explicit framework for the discussion of alternative route locations and design options in relation to the locality’s stated goals and objectives.”

### **The Baltimore-Washington Parkway Gambit**

The origins of the Baltimore-Washington Parkway can be traced to the parkway movement of the 1920s. Frederic A. Delano, the first chairman of the National Capital Parks and Planning Commission in 1924, was one of the movement’s supporters. As early as 1925, he favored a parkway “connecting the great city of Baltimore with the Federal Capital.” Gradually, supporters justified a Federal parkway as a link between Washington and Camp George G. Meade in Anne Arundel County, several miles southwest of Baltimore.

A National Park Service history of the parkway stated:

By 1930, it had become apparent that the major impetus for establishing the parkway came from the Washington, D.C., end of the route. Maryland would have to develop a lobbying effort and build a portion of the road on the land between Baltimore and Camp Meade acquired from private interests.

Officials considered the route of the parkway to Camp Meade throughout the 1930s. (In 1929, Camp Meade, which the War Department had renamed Fort Leonard Wood in 1928, was renamed Fort George G. Meade by an Act of Congress.) Pressure for the parkway increased as the United States shifted to a war footing in support of its European allies after their war with Germany began in 1939. That same year, Fort Meade expanded by nearly 10,000 acres.

In 1942, Delano's nephew, President Roosevelt directed the Federal Works Administrator to allocate \$2 million of National Industrial Recovery Act funds for PRA to begin right-of-way acquisition and construction of the parkway from the Peace Monument in Bladensburg to the Jessup entrance of Fort Meade. From Jessup Road, the Maryland State Roads Commission would provide the extension into Baltimore. Maryland was willing to pay for the expressway link to Baltimore because it also would provide access to planned Friendship International Airport, which would open on June 24, 1950.

(President Truman participated in the opening ceremony after a short flight from Washington National Airport in the presidential airplane, *Independence*. Maryland Governor William Preston Lane, Jr., and Baltimore Mayor Thomas D'Alesandro, Jr., accompanied the President. It was Mayor D'Alesandro's first flight, taken reluctantly. He told reporters he hadn't "slept a wink last night." Initially, he had prayed for rain in hope that the flight would be canceled, but he changed his mind. "I want to have the greatest airport in the world dedicated in the sunshine." He mentioned Maryland colleagues who had been killed in airplane crashes. "Still, a lot of people seem to think airplanes are safe. Maybe they're right. I sure hope so." The mayor told President Truman, a seasoned air traveler with 83,766 miles flown since taking office, about this being a first. The "Flying President" said, "Well, you are getting on a mighty good plane." But as the group approached the loading ramp, the President told his aides to flank the mayor on both sides, joking, "We've got you now. Just try to run away." According to the *Star*, "Mayor D'Alesandro disappeared inside the gleaming silver plane holding up two firmly crossed fingers." ["Honor Guard and Truman Prod D'Alesandro Aboard Plane," *The Evening Star*, June 24, 1950; Shippen, W. H., "Truman Assails Aviation Critics' 'Foolish Fears,'" *The Evening Star*, June 24, 1950])

While PRA accomplished some acquisition and grading, major construction work could not begin without legislation authorizing funds for the parkway. On May 25, 1950, the House approved the bill, with Representative Fallon, the Baltimore native, one of the advocates. When the Senate considered the House-approved bill on July 26, Senator Tydings, whose adopted stepson, Joseph, would follow him to the Senate in 1965, explained the parkway's military importance, which related to Friendship International Airport. He called it "the most modern airport in America," adding, "It will take any plane that is now in existence, that is now being built, or that is now on the drawing boards." That was essential in case of war:

In the event of an attack on the Capital, which is not an improbability . . . this airfield will be taken over by the Army, and will be the major defense of the Capital of the United States . . . .

I should like to say if the United States should ever be at war with a major power and if the atomic bomb should be brought into play, this airfield would be the interceptor field. There can be no question about that. In such case, we would crowd that field with all the

interceptor planes we could get and we would thank God that the field was there, if we should become involved in a major war in which the atomic bomb is thrown around. Then we shall thank our lucky stars for having the airfield constructed and available. Let there be no misunderstanding as to that. [Baltimore-Washington Parkway, *Congressional Record-Senate*, July 26, 1950, pages 11063-11064]

On August 3, 1950, President Truman signed Public Law 643, providing “for the construction, development, administration, and maintenance of the Baltimore-Washington Parkway . . . as a part of the park system of the District of Columbia and its environs by the Secretary of the Interior” (P.L. 81-643). The law authorized \$13 million (increased to \$14.5 million in 1952) for construction of the parkway to Jessup Road.

Section 1 of the law specified the limits:

All lands and easements heretofore or hereafter acquired by the United States for the right-of-way for the parkway which is being constructed by the Bureau of Public Roads between Anacostia Park in the District of Columbia and the northern boundary of Fort Meade in the State of Maryland, the extension of said parkway into the District of Columbia over park lands to the intersection of New York Avenue extended with the boundary of Anacostia Park, and including any lands required for additional connections to the Maryland road system all of which shall be regarded as an extension of the park system of the District of Columbia and its environs, to be known as the Baltimore-Washington Parkway . . . .

Section 2 of the new law explained the rationale for the parkway:

The parkway shall be constructed, developed, operated, and administered as a limited access road primarily to provide a protected, safe, and suitable approach for passenger-vehicle traffic to the National Capital and for an additional means of access between the several Federal establishments adjacent thereto and the seat of government in the District of Columbia. To avoid impairment of this purpose, the Secretary of the Interior, with the concurrence of the Secretary of Commerce, shall control the location, limit the number of access points, and regulate the use of said parkway by various classes or types of vehicles or traffic.

Under the new law, the NPS would administer the funds while the newly renamed BPR, now in the Department of Commerce, would administer the design and construction contracts. The parkway would be restricted to passenger vehicles, including interstate buses, with heavy trucks prohibited. Maryland would build its portion for general use, including trucks.

One question that came up during hearings on the bill was why Maryland should not contribute to the cost of the Federal section since the State’s travelers would benefit from it. A House report addressed the issue:

It was brought out in the discussion before the committee that while the interest of the Federal Government and the State of Maryland in the service of traffic generally which

the parkway will provide is more or less identical, the Federal Government has the primary interest in the development of the parkway from Fort Meade to the District of Columbia while the primary interest of the State of Maryland lies in the access which the extension of the parkway to Baltimore will provide to the new airport which has been constructed south of Baltimore, and expediting north and south traffic generally. [Providing for the Construction, Development, Administration, and Maintenance of the Baltimore-Washington Parkway . . . , Committee on Public Works, U.S. House of Representatives, 81<sup>st</sup> Congress, 2d Session, Report No. 1785, March 16, 1950, page 5]

The funds Maryland spent on its portion of the road were, in the committee's view, comparable to the standard Federal-State matching ratio of 50-50 for Federal-aid highway projects.

The parkway and its Maryland extension would open in segments. The first opening took place on December 16, 1950, when Governor Lane stood on a hill near the Patapsco River bridge, about a mile south of the Baltimore city line, to dedicate a section of the parkway. He called the parkway "a road for tomorrow" and one of the country's most beautiful highways. Robert M. Reindollar, chairman of the Maryland State Roads Commission, called the day historic because the parkway was the first road in the State with complete control of access. Governor Lane cut a black and gold ribbon to open the segment, with Mayor D'Alesandro and other officials included in the ceremony. ["First Completed Leg of Superhighway to Baltimore is Opened," *The Evening Star*, December 16, 1950]

On August 1, 1953, Maryland opened the remainder of the State's section from the Baltimore city limits to Jessup Road (State Route 175). The Associated Press described the section into the city:

The Baltimore connection to be opened October 28 [actually on the 30<sup>th</sup>] includes a long six-lane bridge over the main line of the Baltimore & Ohio Railroad and a direct route cut through an old slum section straight to the south edge of the main downtown business section. [Associated Press, "First U.S. Part of Parkway Due to Open Soon," *The Evening Star*, October 15, 1953]

The first Federal section opened on October 28, 1953. The 4-mile segment from Jessup Road to Fort Meade Road (State Route 602) between Laurel and Fort Meade. The opening was delayed when bolts delivered for the signs were the wrong size, and BPR had to provide new bolts. An extension from Fort Meade Road to the Laurel-Bowie road (State Route 197) was opened a few days later, bringing the total open mileage to 6.8 miles. ["Baltimore Parkway Leg Open After Delay Caused by Signs," *The Evening Star*, October 29, 1953]

Even as BPR continued work west of Laurel-Bowie Road, NPS was having second thoughts about the parkway. On December 3, 1953, the *Star* reported:

The possibility of relinquishing Federal control over the Baltimore-Washington parkway and the Suitland parkway and making them available as Maryland State roads is under study at the Interior Department, the *Star* learned today . . . .

The possibility of relinquishing Federal control, it was understood, originated during discussions of park operations called by Assistant Interior Secretary Orme Lewis, who has supervision over the Park Service.

An official of that office said the basic question under study is whether the two roads fall within the accepted Park Service concept of “parkways” and, therefore, are a proper activity of the Park Service.

(During World War II, the War Department planned the Suitland Parkway to link Bolling Field (now part of Joint Base Anacostia–Bolling Air Force Base) near the junction of the Anacostia River/Potomac River in the District’s southeast quadrant to Andrews Field (now Joint Base Andrews Naval Air Facility, home of Air Force One). PRA administered the contracts for construction of the parkway. Construction began on September 27, 1943, and was completed on December 9, 1944. After the war, the War Department considered the parkway surplus to military needs and began promoting the idea of transferring the parkway to the NPS. On August 17, 1949, President Truman approved legislation transferring the parkway (P.L. 81-242).)

Maryland, which referred to its portion of the Baltimore-Washington Parkway as an expressway, built its pavement for use by trucks. For the Federal section, “Park officials have held that the legislation intended that the intercity parkway be for passenger cars only and have so ordered.” The pavement was built with passenger vehicles, not trucks, in mind:

If they were to fall under Maryland control, one major expectation is that they would be open to truck traffic. Trucks already use the Suitland road. But park officials have taken an adamant stand that they be banned on the Federal portion of the Baltimore-Washington route.

Suitland Parkway, built with military needs in mind, had been used by trucks from the start. After taking over the facility, NPS had not imposed a truck ban.

The *Star* also reported that NPS Director Wirth “has been instructed to study the possibility and to draft tentative legislation – needed to bring it about – for consideration”:

About 10 days ago . . . Mr. Wirth told a reporter he did not consider the two roads to be true “parkways,” as his service used that term . . . Under Mr. Wirth’s definition, a parkway is “an elongated park, with a road usually used to connect two or more parks.” [Beveridge, George, “Shift of Parkways to Maryland Control is Studied by U.S.,” *The Evening Star*, December 3, 1953]

The Interior Department announced the transfer as a formal policy in congressional hearings that were made public on March 1, 1954. Secretary of the Interior McKay told a House Appropriations subcommittee, “I think we have been getting into parkways . . . where we had no business. I think we ought to leave the highways to the States and the Bureau of Public Roads, and we will stay with the parks.” He was concerned that, “If we do not watch our step we are going to be in the highway business in a big way.”

Assistant Secretary Lewis elaborated on the concern:

We have been quite upset. The parkway problem was called to our attention most forcefully by the Baltimore-Washington Parkway. It is being used for an entirely different type of service than that for which it was originally intended.

Wirth concurred, saying the Baltimore-Washington Parkway and the Suitland Parkway “are deteriorating the real concept of a parkway.” He said he had been authorized to open discussions with Maryland highway officials about the transfer. [Rogers, Harold B., “Give Parkways to Maryland, Interior Urges,” *The Evening Star*, March 1, 1954]

The final section of the Baltimore-Washington Parkway opened on October 23, 1954. District officials assembled to cut the ribbon on the 1.5-mile extension of New York Avenue, from Bladensburg Road, NE., to the newly completed Federal section. District officials had planned an elaborate ceremony with Secretary McKay and Maryland officials, but when they learned the Secretary would be out-of-town, the ceremony was shortened. With the ribbon snipped, thousands of motorists drove onto the parkway.

Representative Fallon, who had played a key role in securing funding for the project in 1950, said the parkway was “a dream I had five years ago come true.” He told reporters that the most important thing about the road was that it was a “safe alternative to Route 1, the most dangerous 30 miles in the country.” [Beveridge, George, “Parkway to Get Breaking-in by D.C. Drivers,” *The Evening Star*, October 23, 1954.]

A year earlier, the *Star* had described what driving on parallel “Old Bloody” U.S. 1 was like. Motorists driving to or from Washington had to steel themselves “for Route 1’s 38 miles of roaring trucks, treacherous crossroads, blind curves and traffic tie-ups.” Maryland road officials were hesitant to predict what would happen to U.S. 1 traffic after the full parkway was in operation, but one estimate indicated up to 65 percent of traffic would shift to the parkway. Truck traffic, however, would have to remain on the old highway because it was excluded from the Federal portion of the parkway:

Officials, however, don’t hear any death rattles coming from “Old Bloody.” They believe increasing industrial and commercial employment centers along Route 1, plus residential expansion and the normal increase in auto use, will keep it in business for a long time to come. [Beveridge, George, “Opening of Parkway to End Crawl into Baltimore,” *The Evening Star*, October 25, 1953]

As 1955 began, Maryland’s congressional delegation was considering legislation transferring the parkway to State control. At the same time, delegates to the General Assembly were considering proposals to ban trucks from the Maryland section, a proposal that had failed in 1954. The chief sponsor, Delegate Jerome Robinson (D-Baltimore City), explained that truck traffic was increasing “at an alarming rate” on the new expressway. “It is just plain foolish to build beautiful parkways and then allow heavy trucks to destroy them or make driving on them difficult.” The business association along U.S. 1 had opposed the measure, instead urging Maryland to take over the Federal section and allow trucks to use it. They were concerned that truck traffic would continue to grow on U.S. 1 at an alarming rate. [“Maryland Bid to Take Over Parkway Seen,”

*The Evening Star*, December 17, 1954; Goodwin, Gene, “Two Bills Seek to Ban Trucks on Expressway,” *The Evening Star*, January 11, 1955]

From the start, Maryland road officials had been skeptical about accepting ownership of the Federal segment. In a letter to the State’s House Ways and Means Committee in early 1955, Chairman McCain of the Maryland State Roads Commission estimated the State would have to spend \$2,350,000 to bring the Federal parkway up to standards suitable for trucks. The Federal segment was “not adequate, according to present day standards, to sustain heavy duty, all-type vehicular traffic.” McCain said the parkway, had an 8-inch concrete pavement laid on an 11-inch subbase, while the State expressway had 10 inches of concrete on 12 inches of subbase. [Goodwin, Gene, “Cost of Taking U.S. Parkway Section Cited,” *The Evening Star*, January 26, 1955]

Despite Maryland’s skepticism, Interior Department officials pursued the transfer of the two parkways to the State or BPR during a hearing a few months later before a House appropriations committee panel. Wirth told the subcommittee:

Roads such as the Washington-Baltimore Parkway and the Suitland Parkway are distinctly in the nature of highways requiring none of the specialized services inherent in the National Park Service organization.

NPS wanted to retain ownership of roads in National Parks, but neither of the parkways in Maryland performed as parks. NPS officials had not yet made a direct proposal to Maryland. [“Interior Pushes Plan to Turn 2 Parkway Over to Maryland,” *The Evening Star*, March 18, 1955].

The issues of ownership and truck use remained unresolved when President Eisenhower approved the Federal-Aid Highway Act of 1956. An expressway link between Baltimore and Washington had been part of the Interstate plan since its earliest incarnation in the 1939 BPR report *Toll Roads and Free Roads*. Now that the time had come to select the location for the link, the question remained open.

When Federal Highway Administrator Volpe met with District and Maryland officials on January 15, 1957, to discuss Interstate routing issues in the area, the subject was raised. The *Star* reported:

Left up in the air the question of whether the Baltimore-Washington parkway should be designated as the interstate connection between those two cities, or whether – as Maryland road officials want – a new intercity route should be built at 90 per cent Federal expense. [Beveridge, George, “U.S. Road Unit Okays Route For Expressway,” *The Evening Star*, January 16, 1957]

A few months later, the *Star* explained:

The Federal Bureau of Public Roads, it is understood, is trying to convert the expressway [i.e., the parkway] into a Federal interstate route under the new Federal Highway Act,

which would involve turning the entire road over to Maryland's care and opening it up to truck traffic.

The Maryland Roads Commission has resisted this proposal and is pressing for Federal interstate aid money for a third route between Baltimore and Washington, which would come into Washington in the area near the Montgomery-Prince Georges boundary line.

The bill banning trucks from Maryland's section had been introduced in the State legislature again despite its failure in previous sessions. If it were approved, it would eliminate the Baltimore-Washington Parkway as an Interstate route because Interstate highways must be open to all traffic. ["Fight Shapes Up to Defeat Expressway Truck Ban," *The Evening Star*, February 28, 1957]

Maryland was set on constructing an Interstate route on new location north of U.S. 1, generally parallel to and east of the Montgomery/Prince George's County line in the Washington area. In September 1958, Maryland was delaying an announcement of the location until it had acquired all the right-of-way and District officials had decided on the entrance of the route into the city, as the *Star* described:

Last November District officials engaged a Boston engineering firm to make a study of the sector between Kansas avenue [just north of the Montgomery-Prince George's County line] and Bladensburg road, N.E. as a possible point of entry, but this drew opposition then from members of the Maryland-National Capital Park and Planning Commission and the county commissioners.

The [Prince George's] county officials urged that the study be broadened to include the area between Bladensburg road and Southern avenue in hopes of getting the new highway built east of the present Baltimore-Washington parkway. They asked that the corridor connect with the proposed Anacostia freeway and the new Jones Point Bridge [Woodrow Wilson Memorial Bridge].

In the fall of 1958, officials of the Maryland State Roads Commission made the State's plans somewhat clearer by attending a zoning hearing to ask the Prince George's County Commissioners to postpone a rezoning request until the State highway agency had acquired the land needed for the new expressway. The State's district engineer, L. E. McCarl, confirmed that the State had plotted the route from Baltimore to the Chillum Road area near the District line. The property in question, on the north side of University Boulevard, meant the expressway would cross suburban Prince George's County west of the University of Maryland, which was bisected by U.S. 1:

Yesterday's disclosure, however, indicated the State Roads Commission intended to carry out its plotted route farther to the west.

The commissioners postponed action for 60 days to allow the State and the property owners to negotiate for the needed land. ["Baltimore Road to Pass West of Maryland U.," *The Evening Star*, September 18, 1958]

One reason for the location of I-95 in Maryland was the lack of expressway access to the District for the heavily populated areas between the Baltimore-Washington Parkway and I-70S in Montgomery County.

With the location of I-95 essentially set, Maryland lost what little incentive it had to take over the Baltimore-Washington Parkway. The lack of an expressway truck route between Baltimore and Washington would be solved by construction of the new Interstate, with the Federal Government paying 90 percent of the cost, rather than upgrading the Baltimore-Washington Parkway.

The idea of taking over the parkway, however, was not dead.

On July 3, 1963, Chairman-Director Funk of the Maryland State Roads Commission met with Administrator Whitton and Director Aitken to discuss the parkway's future. Funk came away from the meeting thinking they had agreed on transferring the parkway to State ownership, designating it I-95, and allowing trucks to use it. The State would widen the four-lane parkway to six lanes, strengthen the pavement for heavier traffic, and modify several interchanges to meet Interstate design standards. Funk estimated the upgrade would cost \$22 million, with BPR paying 90 percent of the cost.

Funk put this understanding in writing in early August, saying it was the "quickest and most inexpensive method of meeting the tremendous traffic demands created by the completion of the expressway network in the Baltimore-Washington corridor." He particularly wanted to divert trucks as soon as possible from U.S. 1, which he said had "reverted to the category of a local service road only."

Whitton and Aitken disagreed with Funk's recollection. Whitton said he had agreed with the idea that Maryland should take over the parkway, but not with shifting the I-95 designation from the current routing, then under construction. Aitken was upset mainly by the denial to shift designation of I-95, which was scheduled to enter the District near Sargent Road, NE., then join I-70S in the city. "I will endeavor to keep an interstate route in that corridor," he said. "Washington needs it badly," despite the difficulty of determining the location in Prince George's County and the District.

Funk, Aitken, and Whitton met again on August 15, 1963, and announced their decision that Maryland would accept ownership of the parkway and upgrade it. However, the I-95 designation would remain with the corridor under construction north of the parkway and U.S. 1 to link the Baltimore and Capital Beltways. Trucks would be permitted to use the parkway until I-95 was completed, tentatively in 1966. Aitken and Funk agreed to expedite construction of I-95 to and through the District. At the time of the meeting, officials were exploring the State and Federal legislation that would be needed to accomplish the transfer of the parkway to Maryland.

This plan, predicated on 90-percent Interstate funds, did not advance. When Senator Brewster asked BPR about it in September 1965, Director Turner explained that 90-percent funding would not be possible. BPR could not designate two Interstate routes between the same terminals. [Chapman, William, "Maryland Asks Parkway Switch to Truck Route," *The Washington Post and Times Herald*, August 7, 1963; "Trucks Get Interim Use of Baltimore Parkway," *The*

*Evening Star*, August 16, 1963; “Road Funds Not Allowed,” *The Baltimore Sun*, September 16, 1965]

In late 1968, Wolff revived the idea. On December 18, 1968, he wrote to Administrator Bridwell to suggest designation of the four-lane parkway as an Interstate freeway. His plan was to ensure a direct truck route between Baltimore and Washington, regardless of whether Maryland and the District agreed on construction of I-95 through the city. Maryland’s plan called for widening the parkway to six lanes between the Baltimore and Capital Beltways, with a possible widening to as many as 8 or 10 lanes inside the Capital Beltway. The 7 miles closest to Washington would be relocated on a route west of the existing road. Interchanges would be reconstructed to meet Interstate standards. In addition, the pavement on the parkway section would be strengthened for truck use. Wolff estimated that the upgrade would cost \$120 million, with FHWA providing 90 percent of the funds.

As noted earlier, Administrator Bridwell took several actions in a letter to Airis dated January 17 to resolve remaining controversies. For Maryland, he approved designation of the Baltimore-Washington Parkway as an extension of I-295. The official description of I-295 in Maryland now read:

From a junction with FAI Route 495 near the Woodrow Wilson Memorial Bridge northerly to the Maryland-District of Columbia line near Oxon Creek and from the Maryland-District of Columbia line near the Kenilworth Interchange via the Baltimore-Washington Parkway to a junction with Interstate Route 95 in Baltimore.

The approval stated, “The inclusion of the Baltimore-Washington Parkway as a part of Route 295 is subject to the concurrence of the Department of the Interior.”

Although I-295 would pass through the area on the east side of the Anacostia River, Bridwell’s approval provided for a connection between the Parkway and the proposed Industrial Freeway parallel to New York Avenue, NE., that would join the Center Leg of the Inner Loop Freeway. The six-lane Industrial Freeway was to extend from the interchange of the North Leg, East Leg, and the North-Central Freeway to the existing U.S. 50 freeway (the John Hanson Highway to Annapolis) that terminated at Bladensburg Road and was to carry the U.S. 50 designation.

Wolff said that new Governor Mandel, who had taken office on January 7, was pleased when he learned of Bridwell’s action. The next step was for the Maryland General Assembly to pass legislation accepting the NPS’s section of the parkway. A *Post* account of the news conference said, “Officials expect this to be a formality.” [Eisen, Jack, “Interstate Aid Due Parkway to Baltimore,” *The Washington Post*, January 18, 1969]

Representative Gude asked Chairman Kluczynski to hold hearings on the area’s curtailed freeway plan:

Delays in the construction of any part of the overall transportation system in our metropolitan area inflates the social, engineering and economic cost of such a system.

There are questions of the legal authority under which the highway changes have been made.

He also wanted the hearing to consider former Administrator Bridwell's approval of the Baltimore-Washington Parkway as part of I-295. [Eisen, Jack, "Hearing Asked by Gude on D.C. Highway Plans," *The Washington Post and Times Herald*, January 31, 1969]

## Part 6 A New Administration Takes Over

### The New Administration Gets to Work

On November 5, 1968, former Vice President Richard M. Nixon defeated the Democratic candidate, Vice President Humphrey. President-elect Nixon would take office on January 20, 1969.

Maryland Governor Agnew would be the new Vice President. (The Maryland General Assembly selected his successor, Speaker of the House of Delegates Marvin Mandel.) Thus, officials in the District trying to sort out the freeway and subway impasse would have to deal not only with a new President, but with a team from a different political party.

In Maryland, Representative Charles McC. Mathias defeated Senator Brewster for his seat in the Senate. In addition, Lawrence J. Hogan, a Republican former FBI agent, defeated Representative Machen, in an upset victory.

In the Washington suburbs, big majorities approved rapid transit referendums that would allow local governments to issue a total of \$207.5 million in bonds. The funds would be used for the planned 97-mile system. According to the *Star*, the “lop-sided” victories “set a national record for support of rapid transit.” WMATA’s Gleason said the votes meant that “metropolitan cooperation was coming of age.” He added:

This is the first significant metropolitan-wide program that has ever been put to the test and approved by voters in this area. The significant margin can’t help but impress Congress that people here are willing to support rapid transit.” [“Rapid Transit Wins Easily in Suburbs’ Vote,” *The Evening Star*, November 6, 1968]

In the Senate, Senator Bible decided to give up his position as chairman of the District Committee. Senator Tydings took his place.

President-elect Nixon selected Governor Volpe of Massachusetts to be Secretary of Transportation. Governor Volpe’s life was often compared to a Horatio Alger rags-to-riches story. He was born in Wakefield, Massachusetts, in 1908, the son of immigrant parents from Italy. Beginning in 1933 with an initial capital of \$300, he built John A. Volpe Construction Company into a multi-million dollar contractor, with offices in Massachusetts, Washington, and Rome. The company engaged in heavy construction in New England, Florida, and Washington. One of the company’s projects was construction of the privately owned Nassif Building at 400 7<sup>th</sup> Street, SW., in Washington, D.C., that housed the U.S. Department of Transportation from the late 1960’s until June 2007. (The renovated building is now called Constitution Center.)

Although the company was not involved in roadbuilding, Governor Volpe was widely known and respected within the highway community. From 1953 to 1956, he had served as Commissioner of Public Works in Massachusetts where he focused on freeway construction. In 1956, Volpe resigned to return to private life but delayed doing so when President Eisenhower asked him to

serve as interim Federal Highway Administrator, a new title for the head of BPR in the Interstate era, while the permanent choice, Bertram D. Tallamy, disengaged from his lead role on the New York State Thruway and secured Senate confirmation. The President did not want any delay in getting his pet program, the Interstate System, underway.

On October 22, 1956, Volpe became the first Federal Highway Administrator and served until Tallamy took office on February 5, 1957. Volpe returned to his construction company and served as president of The Associated General Contractors of America (AGC) in 1960.

That same year, he won election as Governor of Massachusetts, beginning his 2-year term on January 5, 1961. He lost his 1962 reelection bid, but returned to the State House after winning in 1964. In 1966, he won election to the State's first 4-year term as Governor.

As Commissioner of Public Roads and Governor, Volpe was known as a roadbuilder, a reputation that gave highway supporters hope that the Department of Transportation would be in more favorable hands than under Secretary Boyd.

Governor Volpe had fought hard to advance Interstate freeway construction in the Boston area despite strong opposition. Ben Kelley, FHWA's first public affairs director, explained in his 1971 anti-highway book, that, "as governor of Massachusetts, he had established a record of rabid pro-freeway positions and actions, including repeated tongue-lashings" of President Johnson and Secretary Boyd when they took or proposed actions that he saw as anti-highway. Governor Volpe's opposition to Administrator Bridwell's proposed rule on public hearings and citizen appeals was an example. [Kelley, Ben, *The Pavers and the Paved: The Real Cost of America's Highway Program*, Donald W. Brown, Inc, 1971, page 80]

During an address in Boston shortly after the election, Governor Volpe deplored the delay on the city's Inner Belt, designated I-695. He added, "There's a new administration taking office in Washington, and I think we will start to see things happen." During the election, Volpe had strongly supported the Nixon campaign, partly in hope of becoming Secretary of Transportation in the new administration. A book about the Boston freeway controversies explained:

Volpe reportedly was angered over the further delays in the Inner Belt, delays made possible by DOT in a Democratic Administration . . . .

Volpe's arrival in Washington would please state highway officials, who were irritated not only by the delays in local projects but also by new federal proposals calling for greater public participation in decisions over routes and designs. [Lupo, Alan; Colcord, Frank; and Fowler, Edmund P., *Rites of Way: The Politics of Transportation in Boston and the U.S. City*, Little, Brown and Company, 1971, pages 40 (State highway officials pleased) and 50 (Volpe address)]

During the Senate confirmation hearing before the Committee on Commerce on January 15, 1969, several Senators asked about the nominee's views on highways and his actions as Governor. Senator Philip A. Hart (D-Mi.) told Governor Volpe that "in the eyes of minority groups," the Federal highway program "is an enemy, because they do not generally run the

highway through my house or yours; it is the fellow whose property is cheaper, quicker to get, but who when he is moved has less opportunity to relocate successfully than you and I have.”  
The Senator asked:

Would you agree that based on the bitter experience of recent years, which has highlighted the social damage and its great cost falling from this business of which is the cheapest way of building these things, that your administration should attempt to balance and include all the factors affecting the area of any proposed construction than merely the traditional bookkeeping judgment alone is not in the best long term interest of any of us?

The Governor described his experience as commissioner allowing design of highways only after reaching out to local officials. As a result, he secured approval of the alignment from almost all communities involved:

I think we have to remember that the environmental and social factors involved in the bidding [sic] on highways and the engineering for them certainly must be given a very prominent part in the final decision. Cost is important . . . . On the other hand, I think we also have to remember, and I have said this many times, that whether it is a \$50,000 home or an \$80,000 home or a rented apartment, that little apartment or home is just as much a castle to the individual who has lived there for 35 years as the larger home. So, I can certainly assure you, Senator, that I will do everything within my power to be certain that we do take all aspects into consideration – esthetic, environmental, and human factors as well.

He also replied in writing to questions posed by the city of Cambridge that Senator John O. Pastore (D-RI) read into the record. The city worried that as Secretary, Governor Volpe would force construction of the I-695 Inner Belt while Governor Francis W. Sargent, the former Lieutenant Governor who had succeeded Volpe, studied the issues involved in Boston freeway construction. Governor Sargent had shocked his predecessor by putting the Boston freeway network on hold pending results of the study. Now, in response to the city’s questions, Governor Volpe said he would honor Governor Sargent’s request that no action be taken to advance I-695 “because of the delicacy of the relationships between the state and the affected communities in this matter.”

He concluded his responses to the city’s questions by writing:

My own experience has convinced me that each of the methods of transportation has a proper role to play in meeting the requirements for transportation in a metropolitan area. By “balanced” I mean that the transportation planning should seek to utilize the particular capabilities of each mode. “Balanced” means the modes work together as a system in proper relationship to the area it serves. Mass Transit has a vital role to play in such systems. I expect to see greater use of both bus and rail transit systems within our cities, possibly in relation to fringe parking facilities. One of the important policy questions to be examined is the direction for the Federal role in this field and its methods of financing.

(For more information on Governor Sargent's role in the Boston freeway revolt and its impact on the future of the Interstate System, see "Unravelling the Highway Trust Fund 1968-1978" on this Web site.)

Senator Spong raised the "deep-seated controversies which have developed in several of the country's metropolitan centers, including Washington, over highway construction." He added, "In Washington there is a virtual impasse between those who favor construction of additional freeways and those who feel the emphasis should be on rapid transit." He asked about the Department of Transportation's role in urban areas. This was the only reference to the Washington freeway impasse during the hearing.

Volpe explained his support for balanced transportation, saying, "we will need both good highways and good rapid transit systems together with high-speed ground rail transportation between some of the cities in our Nation in order to do the job, because I am convinced that the highways alone will just not do the job." [Nominations-1969, Hearing Before the Committee on Commerce, United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, on Nominations of Hon. Maurice H. Stans . . . and Hon. John A. Volpe . . ., January 15, 1969, Serial 91-2, pages 33, 37, 44-45]

In moving to Washington, Secretary and Mrs. Volpe considered a three-bedroom apartment in Rosslyn, Virginia, and had even consulted an interior decorator. As the *Post* explained, "After crossing the traffic choked Virginia bridges several days at rush hour, however, Volpe changed his mind. He and his wife decided to settle closer to the office, in the unofficial Nixon enclave of Watergate east." His new three-bedroom apartment in Watergate East was a short drive from his office in the southwest quadrant of the city. Like all Cabinet Secretaries in that era, he had a limousine and driver for his commute. [Oberdorfer, Don, and Eisen, Jack, "D.C. Gets Volpe Pledge on Chronic Road Ills," *The Washington Post and Times Herald*, March 9, 1969]

Secretary Volpe selected a career FHWA employee that he knew well from his days as Commissioner of Public Works and Federal Highway Administrator. Francis C. "Frank" Turner, a native of Dallas, had joined BPR as a Junior Highway Engineer in 1929 immediately after graduating from Texas Agricultural and Mechanical College (now Texas A&M). From 1933 to 1940, he was an area engineer in BPR's office in Little Rock, Arkansas; following a period in the Division of Construction in headquarters, he was assigned in 1943 to expedite completion of the Alaska Highway, the land link through Canada between the States and its northern territory, and to work with Canadian officials to ensure its proper maintenance when the war ended. After the war, he was placed in charge of restoring the war-damaged roads and bridges of the Philippines.

He returned to Washington in 1950 as an assistant to Commissioner of Public Roads MacDonald, who left office in March 1953, and his successor, Francis V. du Pont (1953-1955). In the mid-1950s, he worked with Eisenhower Administration officials and Congress as they developed the Federal-Aid Highway Act of 1956 to launch construction of the Interstate System. From 1957 to 1969, he served BPR and the FHWA as Deputy Commissioner, Chief Engineer, and then Director of BPR within FHWA. In these positions, he played a major role in getting Interstate projects underway, resolving project disputes, and addressing the growing criticism of the program. Turner was thoroughly familiar with the District's issues and had represented FHWA

on many occasions while the freeway network was under discussion. [*America's Highway 1776-1976*, pages 185-187]

During Turner's confirmation hearing before the Senate Committee on Public Works, Senator Joseph M. Montoya (D-NM) asked what BPR was doing to improve traffic flow in the Washington area. Turner replied:

We are actively engaged in an effort to resolve the stalemate that has occurred. We are attempting to meet the requirements of the statute that this committee and Congress enacted last year, which instructs the Secretary of Transportation and the District Government that four sections of the system shall be built.

We have studies, we have efforts underway to try to break this impasse, and I hope, I am optimistic, that within a few weeks we will be able to have a solution to that problem and get on with the job in certain parts of the system.

Senator Spong asked about the two-hearing regulation. Turner said he had joined Administrator Bridwell in signing the PPM implementing the requirement. "I would not have signed it had I not felt that it was workable and satisfactory." Only 6 weeks had passed since then, not enough time to judge whether it was a good idea. He added that AASHO had appointed a special task force to examine the working of the plan.

Senator Spong asked about the design concept teams in Baltimore, Chicago, and Cambridge, Massachusetts. Turner was familiar with these plans, although he said a contract had not yet been signed for the Cambridge team. The teams were, however, very expensive. "They are in the order of 15 to 20 times the estimated cost of the normal design team." Moreover, they do not complete final design. "We still have that to do after we get the results of these design concept team studies." He had "rather serious reservations as to whether or not the results being produced are of the order of costs involved." He thought "the regular total transportation planning process" could get the same result in a much less costly way. [Nomination of Francis C. Turner to be Federal Highway Administrator, Hearing Before the Committee on Public Works, United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Serial No. 91-3, March 11, 1969, pages 17-18, 2021]

Following Senate confirmation, Secretary Volpe administered the oath of office for Administrator Turner on March 19, 1969. Chairmen Randolph, Fallon, and Kluczynski attended the ceremony.

Turner lived with his wife at 2529 North Military Road in Arlington, Virginia. He usually commuted by bus.

On December 26, Vice President-elect Agnew had announced that Jerome B. Wolff, a Democrat, would serve as assistant to the Vice President. Governor Agnew announced that, "Mr. Wolff and I have agreed that he will make his services available to the new Governor for such time as may be required to effect an orderly transfer in the best interests of the State." [Associated Press,

“Md. Official Named Aide To Agnew,” *The Washington Post and Times Herald*, December 26, 1968]

### **Transition in the District**

At the start of a press conference on December 11, President-elect Nixon announced his decision on the status of Mayor Washington:

There has been some speculation in the press to the effect that because he is a Democrat and his term expires in February that he would not be reappointed to that position.

However, in checking with both Democrats and Republicans in the District of Columbia, I find that he gets very high marks and consequently today I have asked him to serve for another term. He has agreed to do so.

Some opposition had emerged to the appointment. Representative Broyhill had traveled to President-Elect Nixon’s office in New York City to express opposition to the appointment directly. The Congressman was not critical of Mayor Washington on a personal level, but said he “was the administrative head of the District government and that during the year-plus he has been there, there was further deterioration and you don’t correct or improve it with that kind of leadership.”

After the announcement, Representative Broyhill told reporters:

Of course, I’m disappointed. But I did have an understanding with Nixon headquarters that it would not [represent] a continuation of the status quo – which I violently oppose and fear.

I was assured that there would be high-level conferences with area representatives involved to study new approaches and new programs to the problems of the District government.”

The promise of high-level conferences gave him a “ray of optimism” for the city’s future.

Gilbert Hahn, Jr., chairman of the District Republican Central Committee, had urged the President to appoint a Republican to the post. Following the announcement, he told reporters, “I said last week that the decision was Mr. Nixon’s and that if he reappointed Walter Washington, he would have 100 percent of my support. I meant it then and I still mean it.”

All members of the city council “expressed unanimous delight” at the reappointment, according to the *Star*. Chairman Hechinger praised Mayor Washington’s “calm, cool competence.” Hechinger intended to retire at the end of his term in February to allow President Nixon to appoint a Republican to head the city council.

Mayor Washington told reporters he appreciated the “great evidence of voluntary support” from area groups. He added, “I think we’re serving people.” [“Nixon Retains D.C. Mayor” and

“Decision on Mayor Hailed By All Of D.C. Councilmen,” *The Evening Star*, December 12, 1968]

Columnists Drew Pearson and Jack Anderson had a different view of the reappointment. By the time President-elect Nixon called Mayor Washington to offer him the job, “Nixon was desperate to find a Negro to become part of his Administration.” Hahn, in his “bitter opposition” to reappointment of Mayor Washington, had “even called meetings of Republican businessmen and made impassioned speeches to them about crime in the streets in an attempt to enlist their help to pressure Nixon not to reappoint Washington.” The columnists added:

Note – Nixon should be warned that Hahn will now seek to sabotage the Mayor by bypassing the White House and applying his pressure upon the District of Columbia committees on Capitol Hill. [Pearson, Drew, and Anderson, Jack, “Byplay in Choice of Labor Secretary,” *The Washington Merry-Go-Round*, *The Washington Post and Times Herald*, December 19, 1968]

By January 1969, Hahn had emerged, along with Councilman Nevius, as candidates for chairman of the city council after Chairman Hechinger’s term ended. Hahn, who had discussed District issues with Nixon aides, enlisted help from area Republicans to secure the nomination. Nevius, whose term on the city council was expiring, was not actively campaigning for the top spot.

On February 13, President Nixon attended as Mayor Washington took the oath of office in the East Room of the White House. Supreme Court Justice Thurgood Marshall administered the oath of office while Mayor Washington’s wife Benetta held the Bible.

President Nixon said, “Without a strong local government with real home rule and without the support of the citizens, the people of Washington, the Federal activities will come to naught. He pledged that the Federal Government “will do everything that is appropriate, everything that is possible” to help cities across the Nation address their problems, but added that the responsibility for the Nation’s capital was unique. His objective was for the city to become “the model city for America . . . and the world.” Referring to the mayor as “the top citizen in this city,” President Nixon said, “I am a resident of your city.”

Mayor Washington promised to “look to the future.” He said, “There is no problem . . . that confronts a city that we cannot meet if we meet it together.”

President Nixon used the occasion to announce his long-delayed picks for the city council. He selected Hahn to be chairman and Sterling Tucker to be vice chairman. The Reverend Jerry A. Moore, Jr., would replace Councilman Nevius. [Asher, Robert L., “Nixon Names Hahn, Pushes Home Rule,” *The Washington Post and Times Herald*, February 14, 1969; Dobbin, Muriel, “Nixon Swears In District’s Mayor,” *The Baltimore Sun*, February 14, 1969]

A Washington native, Hahn was an attorney who had graduated from Princeton University in 1944 and Yale Law School in 1948. His father headed the Baltimore and Washington area’s largest shoe store chain, Hahn’s Shoes. He promised to restrict his involvement in the law firm of Amram, Hahn, and Sundlun to avoid conflicts of interest by not representing clients in

disputes with the city or Federal Government. He considered crime to be “the No. 1 problem” in the city and wanted to double the police force and triple the number of judges. In testimony before the city council representing the District’s Republican Central Committee, he had urged adoption of gun control legislation. Hahn, his wife Margot, both white, and their three children lived at 3022 University Terrace, NW., in the District’s Palisades neighborhood south of American University.

Sterling Tucker, an African American born in Akron, Ohio, where he had received a master’s degree in social psychology from the University of Akron. He had been director of the Washington Urban League for 11 years. Tucker, a registered Democrat, had taken a leave of absence from that post to head the National Urban League’s field service division. After working for the league in Akron, he moved to the league’s Washington chapter. He met his wife Alloyce at the University of Akron. They and their two daughters lived in a two-story brick house at 6506 16<sup>th</sup> Street, NW.

The Reverend Moore, a registered Republican, had been pastor for 23 years at the 19<sup>th</sup> Street Baptist Church at 19<sup>th</sup> and I Streets, NW., described in the *Post* as “the oldest Negro Baptist church in the city.” Born in Minden, Louisiana, he had graduated from Morehouse College in Atlanta before receiving a bachelor of divinity degree in 1943 from Howard University in the District. He was a founder and current director of Uplift House, a project to lower the juvenile delinquency rate in the northwest quadrant. He was Howard University’s Baptist chaplain, and served on other civic groups. He, his wife Ettyce, and their two sons lived in the Michigan Park neighborhood at 1612 Buchanan Street, NW.

[“Profiles of New Appointees,” *The Washington Post and Times Herald*, February 14, 1969; “Hahn Says He’ll Restrict Law Practice,” *The Washington Post and Times Herald*; Radcliffe, Donnie, “A New Goal ‘With Crunch,’” House, Toni, “Husband’s Sounding Board,” Billington, Joy, “In Sudden Limelight,” all in *The Evening Star*, February 14, 1969]

On March 13, Supreme Court Justice Potter Stewart administered the oaths of office to the three new members of the city council. The brief ceremony took place in the Fish Room of the White House. President Nixon did not attend the ceremony, during which the wives of Chairman Hahn, Vice Chairman Tucker, and Councilman Moore held the Bibles for their husbands.

Chairman Hahn said his goals were jobs, housing, and schools. He also thought that the city council was too amorphous and could use a shakedown. He planned to work in a bipartisan manner. “There is no Democratic or Republican way to deal with problems such as housing, health, and schools. There is no liberal or conservative way to collect garbage.” [Basham, William, “3 Take D.C. Council Seats, *The Evening Star*, March 13, 1969]

With these changes, the city council would have 5 Democrats and 4 Republicans, a slight change from the previous 5-to-4 ratio. African American membership increased from 5 members to 6 with the addition of Councilmen Tucker and Moore.

(The Fish Room was so-named after President Franklin Roosevelt installed an aquarium and mounted displays on the walls of fish he had caught. President Nixon renamed it the Roosevelt Room in 1969.)

### **Waiting for Secretary Volpe**

As the year began, WMATA Chairman Gleason was succeeded by Frederick A. Babson, chairman of the Fairfax County Board of Supervisors. Gleason urged creation of a national mass transit trust fund, an idea that was gaining support among freeway critics who saw the option as the best way to compete for Federal dollars with the Highway Trust Fund. The proposed fund, Gleason thought, might help avoid the delays WMATA was experiencing with securing appropriation of District matching funds.

The area, he said, badly needed a “balanced system of transportation – a system which gives a choice.” He noted that voters in Atlanta, Los Angeles, and Seattle had defeated rapid transit plans because of financing plans, a problem that a mass transit trust fund could address. The Washington area was the only one in the country ready to go to construction on a rail rapid transit system, if Congress would release the matching funds. He said:

If members of congress who represent the metropolitan areas of the Nation . . . are convinced a vote for the mass transit system here in the Nation’s Capital will facilitate the appropriation of funds for mass transit in their own communities, then this region’s transit system will no longer have to be concerned over local disputes concerning highways. [“Congress Urged to Help Finance Subway Here,” *The Washington Post and Times Herald*, January 4, 1969]

Members of Congress, according to Representative Davis of the District appropriations subcommittee, were becoming “more reluctant” to approve subway funding in view of the inaction on freeways. Legislators did not consider NCPC’s Major Thoroughfare Plan adopted for the Year 1985 Comprehensive Plan to be consistent with the mandate in Section 23 of the Federal-Aid Highway Act of 1968. As a result, the committee was “getting more and more hard-nosed,” or to put it differently, “The more footdragging [sic] we see, the more reluctant we get.” He added, “I don’t think they are going to get their subway money.”

Lee Flor confirmed that members of the House Committee on Public Works felt the same way.

Chairman Kluczynski said, “I just don’t understand the city council,” adding, “They’re not going to have any mass transit or subway, that I can assure them.” Representative Cramer said the 1968 Act had carefully spelled out what Congress wanted the District to do. The votes by NCPC and the city council on the Major Thoroughfare Plan did “great violence to the legislative mandate.”

With the end of the Interstate program expected to occur in the mid-1970s, Chairman Kluczynski pointed out that the District was in danger of losing as much as \$200 million in Federal-aid highway funds. “There are other States looking for money,” he said. “We in Chicago are starving for more roads and mass transit.” [Flor, Lee, “Freeway Dispute May Stall D.C. Subway

Funds Again,” *The Sunday Star*, January 5, 1969; Flor, Lee, “Delays Peril Freeway Funds, D.C. is Warned,” *The Evening Star*, January 7, 1969]

Business leaders, who had formed the Citizens Committee for Better Transportation, were pleased that with their support, the Maryland and Virginia suburban communities had approved bond referenda for bonds to build rail rapid transit. As Lee Flor pointed out:

Had the bond referendums failed, it probably would have been impossible to convince a sceptical [sic] Congress that the suburbs would pay for their share of the \$2.6 billion regional transit system. With the overwhelming victory, this hurdle was passed.

Next the business leaders were going to try “to convince Congress to vote the first construction money to get the subway started.” They expected the incoming Administration to submit a special request for the funding in February. How they would convince Chairman Natcher to cooperate was unknown. [Flor, Lee, “Transit Vote Tribute to Leadership,” *The Sunday Star*, January 12, 1969]

By the end of January, Representative Sisk had introduced legislation authorizing the Federal Government to underwrite \$1.1 billion in transit bonds for Metro. Senator Tydings indicated he would introduce the bill in the Senate. The Johnson Administration had initiated the bills, but the Nixon Administration had not approved them. Under the bills, WMATA would issue the bonds, which the Federal Government would retire with annual grants from the general Treasury. Area governments would provide the balance of construction funds, mainly through local and WMATA bonds that were to be retired with revenue from fare collections.

The bills were vital to the future of the rail rapid transit system, but their future appeared uncertain in view of the blockage of the freeways that the Federal-Aid Highway Act of 1968 had directed the District to build. Of course, central to any legislation was Chairman Natcher’s refusal to appropriate the needed District matching funds. He showed no signs of relenting. Moreover, congressional willingness to authorize such a large sum was uncertain. In a News Analysis, Jack Eisen explained:

In the past, the House has not been overly fond of investing heavily in projects to serve the populace of Washington and its suburbs . . . . City officials, while trying to sell their proposal this year, will try to convince the lawmakers that the curtailed road program is substantial and adequate enough to serve Washington’s needs.

They would have to overcome congressional leaders who saw the Major Thoroughfare Plan “as clear defiance of a law . . . . They also are enraged at city officials for hailing the Washington curtailment as a precedent for other cities.”

Eisen quoted Representative Cramer. “It appears the rapid transit system is in deep trouble because of an unwillingness to deal realistically with the freeway problem.” [Eisen, Jack, “Hill Fight Set on Metro,” News Analysis, *The Washington Post and Times Herald*, January 25, 1969]

WMATA was able to do some work leading to construction. With the District appropriations subcommittee’s approval, WMATA spent District funds for preliminary work, including real

estate acquisition. For \$1.5 million, WMATA acquired the block between 5<sup>th</sup> and 6<sup>th</sup>, G and F Streets, NW. With the subway below, WMATA planned to build its headquarters building above ground (at 600 5<sup>th</sup> Street, NW., near the Gallery Place station east of Verizon Center). By January 1969, crews were demolishing 25 properties on the block to make way for subway construction. WMATA was working with the Jewish Historical Society of Greater Washington on the future of one property on the block, the Adas Israel Synagogue, the first synagogue in the city. (It would be moved three blocks to 3<sup>rd</sup> and G Streets, NW.) [Flor, Lee, "Block in NW Being Razed For Subway Construction," *The Sunday Star*, January 12, 1969]

District leaders tried on January 13 to secure suburban support for the Major Thoroughfare Plan.

Chairman Hechinger and NCPC member Gibson appeared before the TPB where Hechinger contended that the plan met the requirements of Section 23 of the 1968 Act. As Lee Flor reported:

[Hechinger] said every project specified by the congressional act was in the freeway plan, in one form or another, except for the Three Sisters Island bridge.

The bridge would ruin the rest of the carefully designed plan if it were built, Hechinger told representatives of suburban Maryland and Northern Virginia governments.

Gibson argued that suburban residents, as well as District residents, opposed the bridge and the North-Central Freeway. He said the technical assumptions of the freeway engineers had to be challenged by experts in humanity. Automobiles, he said, must be accommodated to the city, not the city to the automobiles. Rail rapid transit would provide for future growth of travelers.

Hechinger and Gibson were greeted with criticism, particularly from Commissioner Douglas Fugate of the Virginia Highway Commission, and Montgomery County Councilman Keeney, as Jack Eisen reported:

Fugate said the failure to provide needed bridges, including Three Sisters, will assure chaotic traffic conditions after Interstate Rte. 66 and a widened Shirley Highway reach the Potomac Shore.

Keeney said the new road plan condemns most Montgomery County motorists to fighting congestion on city streets already filled to capacity. He said the North Central route is clearly needed.

After the meeting, Hechinger told reporters he planned to go to Congress and explain his position to Chairman Natcher. "We're soliciting support from the counties" where voters strongly supported bond issues for rail rapid transit. [Flor, Lee, "Freeway Plan Is Termed In Line With Congress," *The Evening Star*, January 14, 1969; Eisen, Jack, "D.C. Seeks Suburb Aid On Freeways," *The Washington Post and Times Herald*, January 14, 1969]

Chairman-Director Wolff of the Maryland State Roads Commission made his views clear as he prepared to leave office to serve under Vice President Agnew. Appearing before the Maryland House of Delegates' Ways and Means Committee, he criticized the District for deleting the

proposed tie-in of I-95 with the North-Central Expressway. “We had a commitment with the council and they broke it.” Their action was “a unilateral, illegal act” that “placed a cloud over the interstate system in Maryland.”

He was particularly critical of what he called the “liberal thinking” of Secretary Boyd and Administrator Bridwell. “The Federal Government has contributed in large measure to our difficulty” in providing the I-95 link.

At least, Wolff conceded, Bridwell had approved Interstate designation for the Baltimore-Washington Parkway. As a result, the blockage of I-95 might prove to be “a blessing in disguise for Maryland.”

Wolff promised that “all these things will be unraveled by the new Administration” as soon as Governor Mandel found a new chairman-director. In response to a question, Wolff said “I will do my best” in unraveling the problems. However, after the hearing, Wolff retreated slightly. He told reporters, “Not being in the Administration, I’m not going to make a guess about it.” [Jay, Peter A. “Wolff Hits ‘Liberal thinking’ For Blocking I-95 From D.C.,” *The Washington Post and Times Herald*, January 30, 1969; “Maryland Road Chief to Try To ‘Unfreeze’ U.S. Aid Funds,” *The Evening Star*, January 30, 1969]

On January 30, Representative Gude wrote to Chairman Kluczynski to request a hearing into the Major Thoroughfare Plan and former Administrator Bridwell’s January 17 actions. “It is my understanding that none of the elements of the plan or policy were presented to the technical agencies of Maryland, as well as Virginia and the District of Columbia itself, for any kind of review or comment before the plan was adopted.”

Eisen, in a News Analysis, described the letter, saying it did not contain prohighway arguments. “From its bland prose, it is impossible to isolate a single phrase of “head-line grabbing rhetoric.” However, the Congressman posed five questions. Did the city council act within its rights in approving the curtailed plan? What about finances? Will the Palisades Parkway from Cabin John into a tunnel under the Georgetown Waterfront qualify for 90-percent Interstate construction funds or will it “draw its funding from a more limited Interior Department park-roads source?” Finally, as Eisen summarized, “what about traffic service.”

The letter to Chairman Kluczynski stated:

Delays in the construction of any part of the overall transportation system in our metropolitan area inflates the social, engineering and economic cost of such a system. There are questions of the legal authority under which the highway changes been made . . . . [Eisen, Jack, “Hearing Asked By Gude on D.C. Highway Plans,” *The Washington Post and Times Herald*, January 31, 1969; Eisen, Jack, “Gude Seeks Answers in Freeway Hassle,” News Analysis, *The Washington Post and Times Herald*, February 1, 1969; Rowland, Rames B., “Hoyer Seeking Solution To Issue of Rt. 95 Link,” *The Evening Star*, February 3, 1969]

*Star* editors said of Wolff's statements and Representative Gude's letter, "They both are right – in terms of both timing and responsibilities." If the city and NCPC had followed the instructions in the Federal-Aid Highway Act of 1968, "a reasonable end to this long dispute would have been in sight by now." Instead, the city and NCPC, with encouragement from the Johnson Administration, had "hurriedly refashioned a quite different freeway system of their own, the adequacy of which Representative Gude has challenged in a series of succinct questions." His request for a hearing "is a logical starting point."

With the incoming Nixon Administration and a new Congress, the time was right for "a renewal of initiative":

The new secretary, John A. Volpe, has properly avoided comment on the details of the dispute until he has had a chance to explore them.

He has asserted his firm support, however, for a reasonably balanced transportation system, utilizing both freeways and rail transit – and that is the real essence of the matter. The trail transit program is ready to go. What remains is a binding decision to assure the balance. ["New Start," *The Sunday Star*, February 2, 1969]

As frustration built, Representative Broyhill asked President Nixon to help get construction underway on the Three Sisters Bridge. The "on-again, off-again" status of the bridge was tragic and affected 11 stalled projects"

The eleven stalled projects listed by Broyhill are the Potomac River freeway; Palisades Parkway; George Washington Memorial Parkway (Maryland side); Interstate Route 66; Dulles Access Road; widening of Memorial Parkway on Virginia side; ramp connections between Memorial Parkway and Jefferson Davis Highway; Ohio Drive tunnel; additional river crossing lanes in the Chain Bridge area; Glebe Road widening; and widening of Route 123.

Representative Scott, the *Star* reported, was so angry about the delay in building the bridge that he introduced a bill to abolish NCPC and shift its functions to the mayor of Washington. ["Broyhill Asks Nixon to Push Bridge Start," *The Evening Star*, February 6, 1969]

The TPB rejected the Major Thoroughfare Plan on February 17 by a vote of 8 to 3, reflecting a suburbs-city split. The vote supported the Three Sisters Bridge and the North-Central Freeway. The approved policy statement said that "complete accessibility" is a requirement for any regional plan. "A freeway route serving Maryland and the north part of the District of Columbia is essential . . . . Similarly adequate service to the Virginia suburbs is required."

Although the vote encouraged freeway supporters, it had no legal force. Representing the District, Lt. Colonel Starobin said, "I think it will serve only a mischievous purpose." He, Councilman Yeldell, and Robert Harris of NCPC voted to oppose the statement. Yeldell pointed out that "there is unified opposition to freeways in the District." The District Highway Department abstained. ["Area Agency Backs Freeway Projects," *The Evening Star*, February 17,

1969; Eisen, Jack, "Reduced Road Plan Refused by Board," *The Washington Post and Times Herald*, February 18, 1969]

Outgoing Chairman Hechinger urged the board to reverse its vote. Freeways within the District were "disruptive" of good neighborhoods, residential sections, and parks:

The action of the board brings the problem right back where we were. You're talking about more gateways, and the principle of NCPC is not to have any more gateways.

It is very necessary that you repudiate yesterday's vote.

He was speaking during a panel discussion sponsored by the Council of Government's metropolitan congress of citizens. He was, however, the only defender of the Major Thoroughfare Plan. Montgomery County's Kenney pointed out that the vote was to "keep our options open." Although discussion was about the Three Sisters Bridge and the North-Central Freeway, "The action taken by the planning board was not an action that said anything about the Three Sisters Bridge or the North Central Freeway. We didn't mention any specific alignment of any road."

Babson, the new WMATA chairman, said to Hechinger, "I don't see how you're going to get around building the Three Sisters Bridge. Congress wants it, the people want it, except in the District and Arlington. I think we're going to see a Three Sisters Bridge whether we want it or not." [Delaney, Paul, "Rescind Freeway Stand, Hechinger Asks COG," *The Evening Star*, February 19, 1969]

### **Secretary Volpe Gets Involved**

WMATA provided an official estimate on February 7, 1969, based on new engineering studies for each line of the 97.7-mile rail rapid system. Professor Schrag described the resulting *Adopted Regional Rapid Rail Transit Plan and Program*, which was known as the "bronze book" because of its metallic-colored cover:

Along with supporting technical documents, this report, endorsed by the WMATA board and the congress, provided an official statement of what Metro was supposed to accomplish, from creating jobs and real-estate value to enriching the region's social and cultural life. And it estimated the system's price tag: \$2.4946 billion, including \$535.4 million in escalation, another term for inflation. [Schrag, page 171]

Overall, WMATA needed \$573.5 million from local jurisdictions, with \$1.1 billion in matching Federal transit funds. However, the amounts needed from some jurisdictions changed. Several jurisdictions' contributions were reduced (Montgomery and Prince George's Counties in Maryland and Alexandria and Falls Church in Virginia). Increases in other jurisdictions prompted Arlington and Fairfax Counties in Virginia to argue that they could not provide additional funds because of limits in the transit bond referendums that voters had approved only 2 months earlier.

In view of the increases and decreases, WMATA agreed on a compromise total for local jurisdictions of \$555.6 million. Because all the funding was not needed immediately, board members agreed to revisit how to pay the balance of \$17.9 million. [Flor, Lee, "Compromise On Subway's Cost Approved," *The Evening Star*, February 7, 1969]

On February 24, Secretary Volpe held a press conference to announce the nominations of Turner as Federal Highway Administrator and Secord D. Browne as Assistant Secretary for Research and Development. The secretary told reporters he had been studying the Washington area's Interstate System as modified by the Major Thoroughfare Plan.

After the press conference, he met for 70 minutes with members of the National Coalition on the Transportation Crisis, a group of freeway critics from other cities who affiliated with ECTC. ECTC's R. H. Booker, Sammie Abbot, Leonard Siger, and the Reverend Gipson represented the national group. They demanded a halt to freeway construction in all urban areas and the shift of highway funds to rail rapid transit. A spokesman for Secretary Volpe said he told the group he was sympathetic to their goals, but could not halt freeways entirely or shift the funds to transit.

He also met for 45 minutes with Deputy Mayor Fletcher, outgoing Chairman Hechinger, city council members Yeldell and Shackleton, NCPC Chairman Hammer, and other city officials in what they characterized as a get-acquainted meeting that occurred coincidentally on the same day as the meeting with freeway critics. Secretary Volpe assured them that he wanted the area's rail and highway transportation to be a national model. ["Volpe Studies Plan for City Freeways," *The Washington Post and Times Herald*, February 25, 1969; "Volpe Suggests Both Sides Give Ground on Freeways," *The Evening Star*, February 25, 1969]

On February 27, Secretary Volpe addressed the National Governors' Conference at the Washington Hilton Hotel. He recalled that he had been chairman of the Governors' Conference in 1968 when the Governors protested FHWA's proposed two-hearing rulemaking and its controversial appeals process. "In large part because of our opposition," FHWA modified the rule, which in final form "is nowhere near as objectionable to the states now as it was originally." He said the rule, nevertheless, was under review.

He stressed that delays in highway building must end. He said "our greatest concern is that we avoid the on-again, off-again policies of past years – that we insure the continued progress of highways already committed and that we experience no roadblocks in our efforts to construct a coordinated highway network within our proposed coordinated transportation system":

I have been asked in several recent interviews whether I'm a 'Highway Man' or a 'Rapid Transit Man.' The answer, of course, is that as of last month I am a 'Transportation Man.'

I have said before, and I say again, that highways will not do the whole job. I'm a former Commissioner of Public Works, I'm a former Federal Highway Administration, and I've cut plenty of ribbons to open new stretches of pavement . . . but I'll say it again, highways will not do the whole job.

While we cannot neglect our great highway system – either from an expansion or maintenance point of view, we must combine that system with rail, air and rapid transit modes. And we must bring to these other modes the same creative foresight we gave the Federal Highway program back in 1957 [sic].

We need the funding to develop these other modes of transportation and that is in the works. I have told the President that the Department of Transportation will come up with ideas and proposals to bring about the funding and the creation of a true national system.

We need the knowledge, the expertise and – in a sense – the audacity to put our crew of research and development experts to work to come up with fresh ideas backed with solid enthusiasm. [“Volpe Assails Delays in Road Building,” *Transport Topics*, March 10, 1969]

In an interview published in the February 1969 issue of *Highway User* magazine, Secretary Volpe said he was “pleased and honored” to serve in President Nixon’s cabinet. He recalled his brief period as Federal Highway Administrator:

The coincidence is even more striking than your question indicates since it was Mr. Nixon, on behalf of former President Eisenhower, who presented the basic plan for completing the Interstate System to the Governors’ Conference in 1954.

(President Eisenhower intended to deliver a speech on his “Grand Plan” for the Nation’s highways to the Governors’ Conference meeting at Lake George, New York, on July 12, 1954. Because of a death in the family, he was unable to attend, but gave his notes to Vice President Nixon, who delivered the speech. The President called for a \$50 million “grand plan for a properly articulated system that solves the problems of speedy, safe, transcontinental travel – intercity communication – access highways – and farm-to-market movement – metropolitan area congestion – bottlenecks – and parking.” By “articulated,” he meant that each level of government would improve its roads. The plan included “very probably, a program initiated by the Federal government, with State cooperation, for the planning and construction of a modern State highway system . . . to construct new, or modernize existing highways.” This statement, delivered by Vice President Nixon, launched President Eisenhower’s public drive for the Interstate System.)

The Interstate program, Secretary Volpe said, had been important to him as Commissioner of Public Works and Governor of Massachusetts:

I should mention in passing, though, that while the Interstate System is scheduled for completion sometime around the middle of the next decade, the traditional Federal-State highway program will never be brought “to a successful conclusion.” It must continue to keep pace with the ever-increasing demand for personal mobility.

Asked about the chief good and bad points of the program, he replied, “I don’t believe there are any ‘bad’ points, but there are areas which cause continuing concern.” He cited the rising cost and the tragic toll of highway deaths as areas of concern:

On the positive side, we can point to these undisputed “good” points of the highway program: improved transport, safer roads, greater travel comfort, decreased travel time and cost, unlimited mobility on a reasonably good road, and so on.

He said he would take a close look at the two-hearing PPM. “I was strongly opposed to the proposal; however, as finally published, it was changed rather materially, and I have not had the opportunity as yet to study what the full effect of these changes might be.”

In view of pressures to use highway user tax revenue for transit, he told the editors, “I believe that the integrity of the Highway Trust Fund must be preserved without question.” Diverting revenue to purposes other than highways “would abrogate a long-standing moral commitment, as well as a statutory provision.”

As Secretary, he strongly supported rail rapid transit because “we are going to need all of the kinds of transportation we now have or can dream up to meet the mounting requirements of our population.” Rail rapid transit would play an important part in “the scheme of things in larger urban areas”:

To be realistic, though, it is generally considered that rail rapid transit cannot be justified and successfully operated except in areas having at least 1,000,000 inhabitants. That severely limits its feasibility. There is a great future, I believe, in bus rapid transit, which is more flexible and can take advantage of such modern innovations as exclusive bus lanes on city freeways and other arterials . . . . However, all studies appear to indicate that future highway needs in urban areas will be great, even though urban areas undertake extensive programs to improve mass transit, whether bus or rail, or both.

He also responded to a question about the District’s freeway controversy:

Your question recognizes that Washington, D.C., has a “special” transportation problem and that is probably an understatement. Ordinarily I believe that each area must make its own analysis of its transportation needs. However, there are so many factors at play here in the District of Columbia that consensus is just about impossible. The District is the Federal City; many agencies are involved in its affairs; decisions affecting it have wide repercussions in neighboring States. It would seem, therefore, that this particular area should receive more than usual guidance from Congress and the Executive in solving its transportation problems. I believe that a balanced system of freeways and rail transit is urgently needed and that it should go forward as expeditiously as possible. But again, I refer you to my earlier comments about “balanced” transportation. Despite the present impasse, I believe that men of good faith, working objectively, can surely reach a solution that is best for the whole community.

He favored the design concept team as one approach to urban freeway development “if it is properly conceived and administered so that it does not result in costly delay.” At the same time, he thought that “some people” had “greatly distorted” the role of highway engineers and officials:

My own experience has indicated that the able, typical highway official has always been interested in values other than minimum cost and the shortest distance between two points. It is only those who disagreed with his decisions who have so characterized him. Nonetheless, there has been increasing attention given recently and currently to environmental factors of all kinds, and it will be my intention to continue this desirable trend. [“Secretary Volpe Tells Where He Stands,” *Highway User*, February 1969, pages 4-5]

In an interview in his office in the FAA building at Independence Avenue and 7<sup>th</sup> Street, SW., that appeared in the *Post* on March 9, he recalled his months in Washington in the mid-1950s:

While living in Washington as Federal Highway Administrator 13 years ago, John A. Volpe was pleased by plans on the drawing boards to cure the city’s traffic problems.

When he returned to the Capital a few weeks ago as Secretary of Transportation, the traffic was much worse but the plans remained. Some of the same ones were still on the drawing boards. “I was thoroughly amazed,” declared Volpe, discussing these findings in an interview, “and I can tell you, we are going to take some action.”

He had ordered a “complete restudy” of the problems in the Washington area and pledged to “knock some heads together, you might say, to reach some compromise.” Washington’s difficulties were an example of the types of problems occurring around the country:

Unless we as a Department of Transportation can come up with some innovative and imaginative ways of filling the transportation void in urban areas, within five to ten years our cities will be so strangled that you won’t be able to allow cars to come into them at all. [Oberdorfer, Don, and Eisen, Jack, “D.C. Gets Volpe Pledge on Chronic Ills,” *The Washington Post and Times Herald*, March 9, 1969]

In an Associated Press interview published in the *Star* on March 26, Secretary Volpe said that automobiles might have to be banned from some sectors of the Nation’s cities unless a mass transit breakthrough occurred within 2 years. “Some type of mass transportation has got . . . to get into operation pretty rapidly or we do face the real possibility that either we have to shut off . . . certain limited areas within a city [to rubber tires] or charge a fee to come in there.” New highways were needed, he said, but “we wouldn’t be in the mess we’re in today” if mass transit systems had been built as fast as urban expressways.” He added, “If we get down to a point where automobiles have to travel 5 miles an hour, well, you know how long people are going to use them.”

He was asked whether central city residents should have veto power over freeway construction in their neighborhoods:

Any responsible group should certainly have an opportunity to voice its opinions strongly and in the clearest terms. I think it is up to public agencies . . . to listen to these inputs on the part of neighborhood groups or citywide groups, action-oriented groups . . . or whatever they might be.

But in the final analysis it is the elected or appointed officials who have to make some final judgments . . . . Expressways are only one form. I'm convinced that you just don't stop a highway program because, perhaps, a few additional homes will have to be taken.

At the same time, "you just can't depend on a highway program to do the job completely, because it can't do the job." He cited the example of New York City. In 1917, he said, the average speed was 11 miles an hour. Now it was 7 miles an hour. "So we haven't made much progress in over half a century. So something needs to be done. And it needs to be done in a bold and imaginative way."

Did he agree with the urban experts who thought automobiles in central cities during business hours should be subject to user charges? Unless more progress was made more quickly than in the past 5 years, "you're going to have to come to some type of restriction on certain areas within . . . the core city on the utilization of the automobile." Trucks might have to be restricted to certain delivery hours or pedestrians and motor vehicles might have to be separated. "I would prefer to see the alternative of taking some people off the automobile tires if you provide good, swift, safe, economic mass transportation."

He added:

You are going to need highways as long as there's a United States of America.

But you are going to need mass transportation a great deal more and it's got to catch up . . . . And that is why I feel so strongly that we've got to do something by way of public transportation to try to catch up somewhat and minimize these tremendous delays and congestion which are taking place, which are just going to choke the economy of our major cities.

Because the AP conducted the interview for national newspapers, the reporter's article did not discuss the Washington freeway battles. [Hartnett, Ken, "Volpe Foresees Day When Cities May Curb the Use of Cars," *The Evening Star*, March 26, 1969]

By the time a new President is inaugurated, the previous President's political appointees typically have left office or are on their way out the door. One person who may not have realized he was expected to leave was Peter S. Craig, Assistant General Counsel for the Department of Transportation – one of several top-level Department of Transportation officials who were still in office when Secretary Volpe arrived. On March 17, the Department of Transportation gave Craig 30 days to leave. He told reporters he was "surprised and shocked" to learn he was not going to stay. An official told reporters that Craig had been hired for his "extensive knowledge" of ICC and Civil Aeronautics Board procedures. He had not been involved in local highway issues, the official stated.

Craig, 40 years old, said he "really hasn't made plans" on whether to return to the anti-freeway forces in the District now that he was a casualty of the incoming Administration. ["HUD Questions Procedures on Freeway Plans," *The Evening Star*, March 18, 1969; Hodge, Paul,

“District Foe Of Freeways Loses Post,” *The Washington Post and Times Herald*, March 18, 1969])

Craig joined the Southern Railway Company and returned to the freeway battles in the District of Columbia.

### **Trying to Break the Logjam**

Maryland officials were pressuring Secretary Volpe about the District’s decisions. In the General Assembly on February 27, Delegate Daniel J. Cronin (R-Montgomery County) asked his colleagues to postpone action on the Baltimore-Washington Parkway transfer for at least a year. He introduced a resolution calling on the Maryland State Roads Commission to study the needs, feasibility, and priority of spending State funds to upgrade the parkway to Interstate standards. He said:

I don’t see why Maryland should spend one cent on the parkway when we have Interstate 95 languishing a few miles to the west, and no one knowing how it will connect with downtown Washington. There also is a serious need to improve Interstate 70S from the Capital Beltway to Frederick and the work should be done as soon as possible.

The Baltimore-Washington Parkway, as an interstate highway, is not going to provide the access to downtown Washington that was planned earlier when Maryland and District officials prepared the North Central connection with Interstate 95. [Rowland, James B., “State Delay Asked on Parkway Fund,” *The Evening Star*, February 27, 1969]

On March 4, Special Assistant Attorney General Buscher of the roads commission asked the Ways and Means Committee of the House of Delegates to kill the Cronin resolution. His action reflected the State’s determination to fight for routing I-95 through the District. He said that designation of the parkway as I-295 had not eased the need for a District routing of I-95:

I am sure the Federal Highway Administration believes both interstate roads are essential or the agency would never have given them both interstate designations.

He was confident that former Chairman-Director Wolff was talking to Secretary Volpe about breaking the impasse. The Cronin resolution, if adopted, would complicate the State’s plans. “We want to include reconstruction of the parkway in the needs study we submit to the Bureau of Public Roads late this year, and they, in turn, will be able to ask Congress next year for funds to pay for most of the improvements.” [Rowland, James B., “Maryland to Intensify Fight for Route 95 Link,” *The Evening Star*, March 5, 1969]

The Montgomery County Council joined the fight on March 4. The four Republican members of the Council overruled the three Democrats to approve a resolution, introduced by Councilman Keeney, calling for a freeway link to downtown Washington. The resolution declared that the freeway was “vital to economic growth, manpower needs, and stability” in the county and city, and was “essential to a comprehensive, balanced, regional transportation system.” It also called for immediate release of the subway funds that Chairman Natcher was blocking.

The resolution did not specify a route, but as Kenney said, the North-Central Freeway was the only option. “That’s the only way this resolution can point. I can’t imagine starting all over again to plan a new freeway link.”

The Democrats argued for delaying action until Montgomery County officials could meet with District officials, but Councilman Gleason argued successfully that such a meeting would be a “useless exercise in futility.”

ECTC members, including Abbott, were in attendance. Abbott, described in the *Post* article about the session, as a “bellicose freeway foe,” and in the *Star* as “a grizzled veteran of the freeway wars,” reacted strongly when Gleason said, “It’s an interstate project anyway. There’s nothing this Council can do or not do that can affect it . . . . I’ve made enough changes on this thing personally so that I can support the resolution . . . . I don’t want to give Natcher anything that can hold up the transit appropriation.” At that, Abbott shouted, “You’re a traitor,” reminding Gleason of his service as attorney for the Save Takoma Park Committee. For this and other shouted comments, Abbott earned an escort out of the room by two plainclothes county detectives; they did not arrest him. [Feinberg, Lawrence, “Montgomery Council Backs D.C. Freeway,” *The Washington Post and Times Herald*, March 5, 1969; Ikenberry, Kenneth, “Montgomery Council Backs North Central Freeway Plan,” *The Evening Star*, March 5, 1969]

The curtailed freeway network aroused HUD’s suspicion. On March 17, a letter was made public in which HUD Regional Director William L. Kaplan questioned whether the Metropolitan Washington COG had engaged in sufficient city/suburb consultation regarding the freeway plan. He urged the organization to take a new look at the plan. Federal law required urban housing and transportation plans to be reviewed by a regional agency. With the possibility that HUD would withhold housing and other funds from the area, Kaplan wrote about the concerns expressed within the region:

While each of the jurisdictions in the COG planning area must consider the impact of transportation on the local community, these local concerns are to be aired through the Council of Governments where alternatives can be explored . . . .

Up to this point, we have considered that transportation policy . . . decisions would at least be based on the weighing of regional implications and alternative courses of action.

He asked COG to reexamine the plan and indicate “how a similar situation may be avoided in the future.”

Warren D. Quenstedt, secretary of the transportation board, called Kaplan’s letter a “rather direct demand to do what it feels the law declares.” Quenstedt pointed out that the letter “very directly and unequivocally raised questions about federal assistance, but did not say the decision was wrong.” It appeared, he said, to offer the alternative “to explain if it had” complied. At its regular monthly meeting, the board referred Kaplan’s letter to a committee to consider a response. [Eisen, Jack, “HUD Says City Must Confer on Freeway Plan,” *The Washington Post and Times Herald*, March 18, 1969; “HUD Questions Procedures on Freeway Plans,” *The Evening Star*, March 18, 1969]

*Star* editors had to admit that the failure of NCPC and the city council to consult with suburban planners was one of “a number of bad things” about the curtailed freeway plan. “This was, by any standard, a deplorable failure of planning judgment.” The District was not “an island” and it cannot view its transportation needs “apart from those of the metropolitan area as a whole.”

HUD had now called the approval into question, the editors stated, and with good reason in view of suburban complaints. The problem was “that there is really nothing at all that the Council of Governments can do to change the situation unless the city government agrees.” All indications were that the city would not “budge unless it is required to do so by Congress and by the administration”:

HUD has added one more compelling reason for resolving this absurd stalemate through the negotiation of a highway plan which truly relates to the needs of the entire region. We hope that its entrance to the controversy advances that result. [“Non-Regional Planning,” *The Sunday Star*, March 23, 1969]

The *Post* reported on March 21 that backstage negotiations were underway with staff of the House Committee on Public Works to resolve the impasse over freeway construction and rail rapid transit funding. The hope was to resolve the impasse by compromise rather than new legislation. Robert Kennan, the roads chairman of the Committee of 100 on the Federal City, had revealed the negotiations on March 20. A congressional source told the *Post* that the meetings would continue. [“House Committee Seeking to Break Impasse on D.C. Freeways, Metro,” *The Washington Post and Times Herald*, March 21, 1969]

While waiting for Congress release funds for subway construction, WMATA was not idle, as the *Star* described:

At present, seven stations are under final design, as is 5.6 miles of the eventually 97.7-mile network of subway, surface and aerial track.

The geologists are continually boring holes into the streets to study the soil and rock base strength, and the real estate section of WMATA has begun making arrangements to buy the necessary properties along the route.

Other sections of WMATA are working on testing the new metro car and figuring out the massive electronic system that will accurately operate the trains . . . .

Officials and staff were surprised that they had not been able to begin construction:

Finding themselves in the middle of the freeway fight – a true “no-mans land” – the subway builders still seem a little stunned that they couldn’t begin digging last October as they had planned.

The first dirt was to fly at the Judiciary Square station, one of 86, deep beneath the bronze hooves of the Jose de San Martin Equestrian statue.

After the holdback on construction money, the subway builders took out their slide rules and computed that it is costing \$250,000 for every day subway construction is not going on or \$90 million a year.

In their office in “modern, sterile L’Enfant Plaza” along the 10<sup>th</sup> Street Mall, staff had one request of a reporter. “Don’t write anything that will make Congress mad at us and its highway friends.” [“Word on the Subway Countdown: Still Holding,” *The Evening Star*, April 14, 1969]

### **Backstage Negotiation**

On April 21, Mayor Washington, Deputy Mayor Fletcher, and other city officials appeared before Chairman Natcher’s subcommittee to discuss the District of Columbia Appropriations Act for 1970. After covering many other topics, Chairman Natcher asked “Mr. Commissioner” (Mayor Washington) what the city was doing to solve the rapid transit-freeway controversy.

Fletcher acknowledged his work with Public Works Committee staff. “It is our hope that very shortly we will have a compromise proposal that would be accepted by everyone concerned on this, so we can proceed with a balanced transportation system.”

Chairman Natcher asked if a decision would be made while the hearings were underway. Fletcher said “it is my understanding that a meeting of the principal Congressmen involved will be held next week.” The chairman said he hoped the talks would be successful “because we are ready to act on this committee, and we have been ready to act on this committee since 1958.”

Mayor Washington assured him:

We think this is a vital matter. We think the balanced transportation, with the plan, can be developed and I simply appreciate the posture that the committee takes with respect to wanting to see this and wanting to see it soon. I think it is very vital, not only to the economy but to the welfare of the city, that we move forward. [District of Columbia Appropriations for 1970, Hearings, Subcommittee on District of Columbia Appropriations, Committee on Appropriations, U.S. House of Representatives, Part 1, 91st Congress, 1<sup>st</sup> Session, pages 88-89]

Fletcher repeated his assurances the following day before Senator Byrd’s Senate Appropriations Subcommittee on the District. The city would, he said, comply with the requirements of the 1968 Act. He was reluctant to provide details until they were finalized, in part out of fear that anti-freeway forces would launch opposition to the compromise. However, a source told the *Post*’s Jack Eisen that the discussions involved starting construction of the Three Sisters Bridge and beginning an 18-month study of the-North Central Freeway to Silver Spring.

General Graham, testifying later in the day, warned that costs were rising. If construction were delayed beyond July, WMATA might have to renegotiate local contributions, a prospect that might not be “politically feasible.” [Eisen, Jack, “Freeway Accord Near, Senate Told,” *The Washington Post and Times Herald*, April 23, 1969; Grigg, William, “Freeway Crisis May End Soon, Fletcher Says,” *The Evening Star*, April 22, 1969]

*Star* editors considered Deputy Mayor Fletcher's testimony "the first optimistic word on this subject in a long, long while." They hoped he was right:

Riding squarely on the outcome of the highway negotiations is the fate of the region's rail transit program – not merely in terms of a temporary delay, but of a permanent setback.

If construction of the bobtail system did not begin soon, rising costs threatened "the whole package" of financial support for areawide rail rapid transit.

Recognition that this prospect cannot be allowed to come true "has finally raised the prospects of resolving the highway differences." Of course, any settlement involving freeway construction was not likely to "satisfy the vocal, hard-core opponents." Nevertheless, the mayor and city council had an obligation "to see that the opportunity for a modern, balanced system of transportation does not slip away. Congress must be persuaded to release its grip on the transit funds." ["Roads and Rails," *The Evening Star*, April 24, 1969]

Chairman Hahn responded to the news by promising a city council hearing on any agreement reached as a result of the Fletcher negotiations. The hearing would take place May 8 and 9 as part of a scheduled hearing on the future of D.C. Transit Systems, Inc.

The Committee of 100 on the Federal City reacted to the news by sending a letter to Fletcher on April 23 warning:

It is our opinion as a matter of law that the city cannot go ahead with the Three Sisters Bridge and the North Central Freeway, and we will stop it.

The letter, signed by Chairman Chapman, charged that a compromise allowing their construction would be "a complete sellout to the highway lobby by the Mayor's office." The committee's investigations showed that the existing Potomac River bridges "will provide more capacity than necessary" after rail rapid transit to the Virginia suburbs was completed in the 1970s. ["Hearings Promised On Freeway Accord," *The Washington Post and Times Herald*, April 24, 1969; Conconi, Charles, "Committee of 100 Warns On Freeway, 3 Sisters," *The Evening Star*, April 24, 1969]

On April 28, President Nixon issued his second special message to Congress on the District of Columbia. The first had concerned law enforcement and resources to recover from the riots of the previous year. The second concerned the city's aspirations for self-government and other issues, including the need for a rail rapid transit system.

Regarding self-government, President Nixon said:

Full citizenship through local self-government must be given to the people of this city: The District Government cannot be truly responsible until it is made responsible to those who live under its rule. The District's citizens should not be expected to pay taxes for a government which they have no part in choosing – or to bear the full burdens of citizenship without the full rights of citizenship.

I therefore ask Congress to create a Commission on Self-Government for the District of Columbia, to be charged with submitting to Congress and the President a proposal for establishing meaningful self-government in the District.

In a section titled “Balanced Transportation System,” the President said the city “needs and deserves a mass transit system that is truly metropolitan,” but it must be “part of a balanced transportation network”:

A subway will not relieve local governments of the duty to modernize and improve their highway systems and other forms of transportation, so that all citizens have an adequate choice as to how they travel. Clearly, the impasse that has arisen between proponents of road and rail transportation in the Washington metropolitan area has contributed little to the progress of either. There are, however, hopeful signs that a fair and effective settlement of these issues will be reached in the near future. It is in the interest of all those involved – central city dwellers, suburbanites, shoppers, employees, and visitors alike – that this be done.

He endorsed legislation prepared by WMATA that would expand the authorized 25-mile rapid rail transit system to a 97-mile regional system:

The expanded system would provide rapid transit between the downtown and outlying areas. It would facilitate the free flow of resources and labor, and would benefit all eight jurisdictions involved in its planning and approval . . . . The 97-mile system would relieve downtown congestion; increase employment; make educational, cultural and recreational facilities more accessible; reduce air pollution; stimulate business, industry, and tourism; broaden tax bases; and promote orderly urban development of the Nation’s Capital.

The estimated cost of the expanded Metro system was \$2.5 billion, with the Federal share being \$1.1 billion. “I urge that Congress promptly enact the necessary authorizing legislation for the 97-mile system.”

The comment about “hopeful signs” was an apparent reference to Deputy Mayor Fletcher’s negotiations with the House Committee on Public Works. During a briefing on the message, President Nixon’s chief urban affairs adviser, Daniel Patrick Moynihan, replied to a reporter’s question about the phrase. He replied, “The birds are singing, the flowers are blooming, the shad are running,” a response Jack Eisen described as “noncommittal.” [Eisen, Jack, “Nixon Backs Metro, D.C. Freeway Plan,” *The Washington Post and Times Herald*, April 29, 1969]

On April 29, *Star* reporters found that:

Rep. John C. Kluczynski, D-Ill., was all smiles this afternoon as he acknowledged that the committee was scheduled to meet late today to discuss a tentatively reached settlement . . . . He and other committee members have been particularly interested in putting the Three Sisters Bridge back into the city’s freeway planning, which has eliminated both the bridge and the North Central Freeway.

Rep. William H. Natcher, D-Ky., was reported by an associate to be very optimistic that the freeway dispute will be resolved so that he can move soon to release funds for the area subway system.

Although the city council “still would have to approve a compromise,” members of the House Committee on Public Works “appeared certain today” that agreement had been reached.

The *Post*, citing a source close to the negotiations, reported that a draft agreement was only “a couple of days” from final accord. However, the source said negotiators who reviewed the draft agreement on April 29, had not reached any conclusions. [“Gain Reported In Freeway Negotiations,” *The Evening Star*, April 29, 1969; “City and Hill Near Accord,” *The Washington Post and Times Herald*, April 30, 1969]

With agreement so close, the District Building was the source of freeway controversy on May 1. Late the day before, Corporation Counsel Duncan informally ruled that neither NCPC nor the city council could “countermand” the expected agreement restoring the Three Sisters Bridge to the city’s freeway plan or countermand the requirements of the 1968 Act. If the negotiations among city officials, congressional leaders, and FHWA reached a conclusion, the District Highway Department would be able to sign contracts to implement the agreement without consulting the city council or NCPC. The *Star* and *Post* reported that according to congressional sources, agreement had not yet been reached.

Chairman Hahn and other members of the council were angry about the ruling, calling it “arbitrary” and “invalid.” Hahn referred to it as “a nullity” and said:

This ruling deprives the people of a voice on the issue of freeways against homes. The people of Washington don’t want either the North Central Freeway or the Three Sisters Bridge. Without the City Council, the people are helpless. We are the people’s only voice. We will fight.

He added, “I don’t feel prepared to pay any price to get a subway. As far as I’m concerned, the freeway system is one thing and subways are another.”

Duncan replied that, “whether the chairman likes it or not,” the city council would be bound by the ruling “until a court determines otherwise.”

Hahn said that citizens groups may go to the courts, but the city council “would take other sanctions” when Mayor Washington presented his budget for approval. Late in the day, Hahn stated that the city council, as the legislative branch of the government, was not bound by rulings from the city’s legal office. [Delaney, Paul, and West, Woody, “Hahn to Fight Opinion on D.C. Freeway Power,” *The Evening Star*, May 1, 1969; “Duncan Claims City Can’t Stop 3 Sisters Span,” *The Washington Post and Times Herald*, May 1, 1969; Moore, Irna, “Council Scorns Freeway Ruling,” *The Washington Post and Times Herald*, May 2, 1969]

Deputy Mayor Fletcher did not take a position on Duncan’s ruling, saying, “I never get involved between two attorneys.” That evening, however, he met for an hour and a half in the council chamber with ECTC and other groups from the District and Montgomery County to discuss his

negotiations. He denied that an agreement had been reached and said he met with Public Works Committee staff only to find out what it would take to get Congress to release the subway funds.

Representing the city on NCPC, he had voted for the curtailed plan:

I have indicated to the House committee that we are in favor of the council plan. I have told the committee that no agreement could be made that involved the North Central Freeway, and that the houses acquired must be sold back to private individuals, except those that will be used for the subway.

I am opposed to the North Central Freeway.

He said, "The sole reason I have been meeting with the House Public Works Committee is to determine what the city would have to do to build a subway." In negotiations, he found that the price was construction of the Three Sisters Bridge and a study of the North-Central Freeway. "If that is the price we would have to pay for the subway, then I'm willing to pay it."

Nearly everyone in the crowd jumped to their feet and erupted with cries of "throw him out, resign, resign, let's throw him out." Many said they would prefer no subway if more freeways were the price for its construction.

Remaining calm, Fletcher said, "If I could solve this by resigning, I'd resign today." He asked, "If the price of the subway is the Three Sisters Bridge, you're saying we don't want the subway?"

One speaker told him that the situation was becoming a "national scandal" and that Congress would have to release the subway money anyway. Fletcher, the speaker said, should take a firmer line with Congress. ECTC's Booker told Fletcher that the city's African-Americans were starting to wonder if "the only thing the city government can understand" was violence. [Delaney, Paul, "Span-Subway Plan Defended by Fletcher," *The Evening Star*, May 2, 1969; Fiske, Phineas R., "House Talks On Freeway Net Defended," *The Washington Post and Times Herald*, May 3, 1969]

Mayor Washington returned on May 5 from a 10-day vacation; his views on developments were unknown. Chairman Hahn declared that the mayor was barred by law from entering into contracts for the Three Sisters Bridge. He was bound by NCPC's Major Thoroughfare Plan that the city council had adopted in December 1968. Chairman Hahn also again asserted that the city council was not bound by the legal opinions of the city's executive branch. The D.C. Code and the Reorganization Plan that had established the mayor-city council government "provide that no opinion of the corporation counsel binds the council where the council has acted on the subject involved, even if the city has requested the opinion of the corporation counsel":

Since the council has already acted on the highway plan in 1968 to exclude the Three Sisters Bridge and the North Central Freeway, the corporation counsel's advice has no effect.

Second, the Federal Highway Law provides that the mayor may not let contracts for any freeway or bridge except in accordance with the comprehensive major thoroughfare plan approved by the National Capital Planning Commission and the council last December.

As far as he was concerned, the controversy was over.

Appearing on WRC-TV's "Dimension Washington," Hahn said he understood the power of Congress over the city, but given the opposition to the Three Sisters Bridge and the North-Central Freeway, "I just feel that Congress is not going to force us to do what the people here don't want." The city council was "not prepared to pay the price of the North Central Freeway for the subway."

Ongoing city council hearings had exposed a housing crisis. "Anything that affects housing, like a freeway, this is a most important thing . . . . You've got to know that this is what is on people's minds. It's a foolish man who would fail to pay attention to this." He planned to meet with HUD Secretary George W. Romney to discuss the need for 10,000 single-family dwellings and 100,000 housing units as well as the need to save existing housing that had deteriorated. [Delaney, Paul, and Sarro, Ronald, "Hahn Claiming Freeway Power," *The Evening Star*, May 5, 1969; "Hahn Cites 1968 Act in Road Feud," *The Washington Post and Times Herald*, May 5, 1969]

The same day, May 5, Majority Leader Mansfield introduced remarks on the Three Sisters Bridge on the Senate floor for the record. He, too, had heard about the negotiations that would include immediate construction of the bridge and later the North-Central Freeway:

I was shocked when I read in last Friday's papers that the Deputy Mayor said publicly that the Three Sisters Bridge is the price the city has to pay to build a subway system. He said it is willing to pay that price.

Is this the way to plan the Nation's Capital?

Only a few months earlier, NCPC and the city council, "the voice of the people," approved a freeway plan that excluded the Three Sisters Bridge:

Can those who are now involved in what the press calls "negotiations" really believe that an extensive freeway system will enhance the quality of life, the economic strength, or the great beauty of the Capital of the United States? Why do they want to build a bridge that is fervently opposed by the citizens on both sites of the Potomac?

During his time in Washington, he had rejoiced in the city's parks. In the past 10 years alone, however, he was dismayed to learn, 350 acres of parkland had been taken for other uses, mostly for highway construction. "If the highway system resulting from the current 'negotiations' is built, many more acres of parkland will be paved over." He estimated that the Three Sisters Bridge would cost about 25 acres on the District side and more than that in Virginia.

He summarized the restriction on the use of Spout Run Parkway and the potential effect of the bridge's approaches in the District on the Chesapeake and Ohio Canal and Glover-Archbold Park:

Bridges stop at the water's edge, but traffic does not. I read that there is to be a tunnel along the Georgetown waterfront. But tunnels can go only so far. Where does the traffic surface and how does it get across town?

Past plans called for a North Leg Freeway that might take land from Rock Creek Park, from homes and businesses, or be tunneled under K Street "through the city's busiest commercial area." Maybe it would be carried in a tunnel under the South Lawn of the White House. Thus, the decision to build the bridge would have "much wider implications than the construction of a span over the Potomac River."

An Interstate freeway such as I-266, by law, had to carry trucks, but why should truck traffic be routed through the heart of the city? "The beltway makes it possible for trucks with other destinations to bypass the city, and the highway plan approved last December would improve access to the city's warehousing and industrial area."

As for the North-Central Freeway, he thought negotiators were deliberately vague. They hoped "to persuade the black residents of northeast Washington that the Three Sisters Bridge is a problem only for affluent whites in Georgetown, sentimental park lovers, and bird watchers. I do not believe they will succeed."

One thing District residents agreed on was opposition to the freeways. "This is true of the rich and poor, the black and white, and people in every geographical area of the city and in Arlington."

As for the tradeoff, he said:

It is inconceivable to me that the proposed subway system could be held a hostage to more unwanted freeways. The Congress should not sit idly by while these freeways are forced on the Nation's Capital – disrupting the lives of its residents and destroying its great beauty. I invite my colleagues to look to the right as you leave Capitol Hill today to see the extent of the clearance – the great asphalt canyon – that construction of the Center Leg has made necessary. If the Three Sisters Bridge is built, we can expect a canyon like that, filled with exhaust fumes, to run from the Georgetown waterfront somewhere across the city to its Northeast boundary.

Everyone concerned about air quality and our natural heritage "should be gravely concerned about what is happening right now here in the Nation's Capital.

Senator Dominick agreed:

There is a very grave possibility that we are creating a huge pad of concrete which will become the city of Washington if we keep on going into the programs which have been

put forth up to date. I certainly do not wish to see the city of Washington turned into that kind of monstrosity.

When he was on the Senate District committee, he had asked the Interior Department and other agencies if they had studied the pollution that would result from additional automobiles coming into the city. They had not and were not planning to do so. They also had not prepared for off-street parking of any kind. As far as he knew, “we do not have any satisfactory explanation as to what will be done about the pollution problem or the potential enormous pad of concrete which will be built up in Washington over and above its surface.”

Senator Mansfield pointed out that the proposal to build a road under the South Lawn of the White House was “being used as a bargaining point”:

We are told that more concrete to be poured everywhere is the price we must pay to obtain a subway. Included in the bargain we are told is the agreement to go ahead with the building of the Three Sisters Bridge. Such a posture flies in the face of the unanimous opinion of the City Council and the findings and recommendations of the National Capital Planning Commission.

Senator Dominick concluded the colloquy by saying that because he was no longer on the District Committee, “there is not very much I can do about it except to express my opinion and accord with the statement of the Senator from Montana.” [The Three Sisters Bridge, *Congressional Record-Senate*, May 5, 1969, pages 11257-11258]

Largely because of the North-Central Freeway property issue, congressional staff broke off negotiations with Fletcher on May 6. The city considered the freeway a dead issue and was looking for another route. Fletcher thought the houses should be sold because “it is not conceivable to me that we would ever adopt that routing for a North Central Freeway.”

In response, Chairman Fallon made the committee’s position clear. Neither he nor any member of the committee had been involved in negotiations on the city’s freeways. He told reporters he realized the city was looking for a new route, but he didn’t “see any reason” to sell acquired properties:

Fletcher wanted to get rid of the property. We wanted them to wait until after the study was over. Otherwise, if the study showed the old route best after all, they’d have to buy the property back.

Moreover, they might have to “pay more for it.”

Further, the committee was limited to what it had agreed to after enactment of the Federal-Aid Highway Act. “We can’t change the 1968 law except that we could have provided the 18 months to look for an alternate to the North-Central route.”

He said compliance with the law’s provisions was “up to the administrative end,” adding, “we’re just here waiting . . . . We have no alternative.”

Fletcher acknowledged that he had met only with staff aides in hope of finding “the price” for release of subway funds. He had made clear to the aides that the North-Central Freeway in its present routing was not up for debate. “I can’t conceive of the North Central Freeway ever again being a part of the city’s transportation plan.”

Mayor Washington, having been out of town, was not prepared to comment on the issues. Fletcher said the mayor wanted to ask Congress to approve legislation allowing sale to the previous owners. Drafting was underway.

Despite the breakdown in negotiations, Fletcher remained optimistic about the subway. “It is an idea whose time has come,” although he did not know what the next step was to secure the matching funds. He hoped “we can proceed with the subway plan as proposed, also with the council’s freeway plan. However, “somebody else” would have to take the next step, and he did not indicate who that might be.

Chairman Hahn stood by the city council’s decision before he took office, namely the plan without the Three Sisters Bridge or the North-Central Freeway:

In view of the statement attributed to the House Public Works Committee and the statement of Deputy Mayor Fletcher, it appears that no one is asking the council to change its plan which rejects the Three Sisters Bridge and the North Central Freeway.

The council therefore concludes that there is no further action required of it at this time.

I don’t know and never did know how far the proposed compromise went and who offered what. As long as there is no freeway or subway progress being made, we should do everything we can to beef up the bus service and keep down fares.

Councilman Yeldell commented:

That brings us back to the council’s transportation plan, and Congress, in its wisdom, will see that it’s the will of the people and move on.

President Johnson had asked the council to come up with a highway plan, and the council had done so. “We would expect congressmen to honor that plan just as they would honor the will of their constituents.”

Sources told the *Star* that Fletcher’s desire to sell the homes – 69 parcels with boarded up houses on them that ECTC and other anti-freeway groups had highlighted – was a demonstration “of good faith” to ECTC. Judging from comments during a May 6 hearing on legislation providing for public acquisition of D.C. Transit System, the demonstration was not reciprocated. With more than 150 people in attendance, the hearing rarely touched on the status of the transit company. Sammie Abbott, the first of 36 witnesses, warned the city council that it “had better and quick” restore the homes in the North-Central Freeway corridor to private ownership by black families. “We’re going to unboard those homes ourselves. We’re willing to go to jail on the issue.”

Other witnesses expressed shock at Fletcher's negotiations, used phrases such as "unequivocally opposed" to freeways, and demanded a push for the subway, despite Chairman Natcher's opposition. They also called for Fletcher's resignation in view of the now-rejected compromise. ["City Effort to Unravel Freeway Tangle Stalls," *The Washington Post*, May 7, 1969; Grigg, William, "House Unit Vetoes Plan On Freeway," *The Evening Star*, May 6, 1969; Delaney, Paul, and Holland, William, "Mayor Seeks OK to Return Freeway Land," *The Evening Star*, May 7, 1969]

On May 8, the WMATA board erupted in what the *Star* called "a noisy dispute" over the freeway impasse. Gleason warned that rail rapid system was "going to crumble to the dust" unless something was done to resolve the impasse. Chairman Babson, "looking surprised and irritated, grumbled, 'I thought we had agreed to discuss this in executive session.'"

Gleason replied that he was through with discussions in executive sessions out of public view. He said, "Nothing is going to happen if this authority continues to sit in silence." He feared that the jurisdictions contributing to the financing plan would consider pulling out as the cost of the plan escalated by an estimated \$250,000 a day.

Meanwhile, Mayor Washington met with reporters after catching up on what had happened during his 10-day vacation. He disassociated himself from Fletcher's comment that if the price of the subway were the Three Sisters Bridge, "I'm willing to pay for it." Mayor Washington speculated that Fletcher may have been answering a specific question with "his own personal views." As Fletcher had stated, Mayor Washington did not think his deputy had been negotiating an agreement. He was simply trying to find out how the city could help begin Metro construction. The bridge was more an idea of committee members than the city.

The mayor made clear that he supported the plan approved by NCPC and the city council. He had "no intention of departing from that plan":

The city is going to pursue the subway as far as it can, but I don't see what that is.

As far as he was concerned, the freeway impasse and the subway plan were separate issues that should never have been linked. "They are not related issues; they've just been made that way."

The *Star* reported that its sources said Deputy Mayor Fletcher had been negotiating since January on a plan that always included the Three Sisters Bridge as the basis of the talks. Chairman Hechinger had attended the initial talks, but later sent staff to represent him. "Eventually, Hechinger pulled his staff out when it was apparent that a deal including the Three Sisters [sic] was in the making. The new chairman, Gilbert Hahn Jr., said he refused even to talk about negotiations."

In addition, the *Star* reported that two stories were circulating within the District Building to explain relations between Mayor Washington and Deputy Mayor Fletcher. One was that Fletcher had gone too far in negotiating a deal that involved the Three Sisters Bridge. The other claimed that Mayor Washington knew what was happening during his absence, but that when the plan collapsed, "moved to clear his name, leaving Fletcher holding the bag." In this story, "Fletcher is

peevied at the mayor for this reason.” [Delaney, Paul, “Mayor Still Supports Council In Subway-Freeway Impasse,” *The Evening Star*, May 8, 1969; Moore, Irna, “City Ponders Subway Impasse,” *The Washington Post and Times Herald*, May 8, 1969; “Delay Perils Rail Transit, Board Told,” *The Evening Star*, May 9, 1969]

In the Senate, Public Works Committee Chairman Randolph wanted to remain neutral. Addressing the D.C. Metropolitan Area Highway Users Conference at the Continental Hotel, he said of Section 23 in the 1968 Act:

The reluctance of the Senate to become involved is validated by the fact that – some nine months later – the issues are as approximately unsettled as they were when the Act was signed by the President.

He was concerned about “the narrowness of the view, the polarization” of people on both sides of the debate. “I am sure that if an agreement can be reached, we in the Senate would support it.” A solution, however, was doubtful:

I recognize that the problem here has reached emotional proportions of great magnitude. There must be a disengagement of conflicting forces so that answers can be found.

He doubted that all Washingtonians opposed all freeways. “Neither do I believe that all of the projects proposed for the Interstate system as it applies to the District are essential, or that they must be built without regard to the feelings of the citizens.” [Eisen, Jack, “Transit Impasse Laid to Emotions,” *The Washington Post and Times Herald*, May 11, 1969]

On May 11, *Star* editors summarized the situation:

Fletcher’s own efforts to seek a rational way out of this absurd impasse through conversations with House members fell apart last week. Mayor Washington, returning from an out-of-town trip, had nothing of value to add. City Council Chairman Gilbert Hahn’s contribution was a series of anti-highway pronouncements which served merely to compound the confusion. For the moment, Congress is awaiting further developments.

The editors hoped that Secretary Volpe, “who thus far has not tipped his hand as to his position in the dispute,” would see that it ends. Having not been involved since leaving BPR in 1957, he was not bound to any developments since then. “Owing no commitments to anyone, he is free to move on his own toward a realistic compromise.” [“Toward an Area Transportation Compromise,” *The Sunday Star*, May 11, 1969]

Director Airis appeared before Chairman Natcher’s subcommittee on May 12 as part of the subcommittee’s review of District agency needs. Before Airis could begin his statement, Chairman Natcher commented on the freeway and rapid transit controversy. He went through the history of the controversy, including the 1959 freeway plan, the Three Sisters Bridge controversy, the U.S. Court of Appeals decision in February 1968, the increased cost of the freeways caused by years of delay, and the House decision to hold District matching funds for the subway until the freeway impasse was eliminated.

Chairman Natcher praised President Nixon's special message on a balanced transportation system for the District. Quoting the section on the impasse over the freeway network, Chairman Natcher said "this is the first time that any President during the past 10 years has made a frank, fair statement as to the situation." He added, "We have reached an impasse and it should be settled, and it must be settled." He concluded:

The statements that I have made to you today you have heard me make before. I say to you and Mr. Fletcher and the others present that our committee is in the same position that we have been in all along in this matter. We believe that this controversy ought to be settled. When we had the Commissioner [mayor] before our committee one of the first questions I asked him – and I believe you were here – I asked him: "What have you done about settling this matter?" You remember his answer. [District of Columbia Appropriation Bill, 1970, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-680, November 20, 1969, pages 1077-1079]

Airis's statement updated the subcommittee on the status of the freeway network:

Last year, in my appearances here, I reviewed the status of the District's freeway program and outlined principal reasons for lack of progress. Unfortunately, I must report that, except for some sizable new contracts on the lower end of the center leg, the interchange "C" project that connects to the twin 11<sup>th</sup> Street Bridges, which are now in use, and to a usable segment connected with Barney Circle, and for the superstructure of the new 14<sup>th</sup> Street Bridge, we have made no new starts. The contract obligations so far for this fiscal year total approximately \$36.3 million, of all types of funds.

Events of the past year that have continued the stalemate on remaining freeways have had quite wide publicity. I am assuming committee members are familiar with these events, so I shall not review them in this opening statement.

As a result of those events, "it is pointless to discuss" budget needs for FY 1971, which began on July 1, 1970.

As a result of events in late 1968 and 1969, the District at the present time does not have a clear, coherent, and approved interstate freeway system on which it can move forward. Until a system does become firm, it is pointless to discuss, as has been customary at previous budget hearings, the status of the District's Federal-aid interstate fiscal obligations.

Therefore, he left discussion of the matter out of his opening statement. [page 1081]

Representative Wendell Wyatt (R-Or.), a new member of the subcommittee, asked Airis to furnish information on "what you feel the capacity or capability of the Department is in the event the impasse on freeway construction in the District of Columbia is terminated within the next 30 to 60 days." He clarified that if the District received "the green light," how much could the city spend in FY 1970 on the freeway network.

Airis submitted his response in writing on the assumption of a breakthrough:

The Capability of the Department of Highways and Traffic to Proceed  
if the Impasse on the Freeway Program Is Broken

If the impasse on the freeway program is broken, and a firm decision by all authorities is made by June 1 the following work can be started in fiscal year 1970.

*Three Sisters Bridge.*—The Department could award initial construction on the bridge of a river pier in mid-October of this year. The obligation involved for this pier construction is estimated at \$1 million.

*Potomac River Freeway.*—The freeway could be advanced to an engineering contract to design the freeway and develop contract drawings. Allowing for the engineering contract to commence on July 1, the earliest construction contract that we can foresee might be awarded as early as May 1, 1970. The estimated cost of the engineering contract services which could be obligated in 1970 is \$1 million.

*East Leg of the inner loop.*—With proper approvals, the east leg could proceed to a construction contract for grading and drainage between Barney Circle and a point midway between Barney Circle and the East Capitol Street Bridge. Contract award could be made in mid-October for an estimated cost of \$1,400,000. Engineering northward to Benning Road could move toward contract advertisement early in fiscal 1971.

*Center Leg of the inner loop.*—The center leg would continue in construction on its current schedule with previously authorized funds. An additional engineering contract for the center leg north of H Street could get underway during fiscal 1970. [pages 1093-1094]

### **The Nixon Administration Gets Involved**

On May 8, the Nixon Administration released a bill to finance the \$1 billion Federal share of the cost of Metro. The first installment of \$80 million would come on July 1 at the start of FY 1970. Assuming the release of all funds on hold, WMATA would have \$214 million available for construction. Subsequent payments would be as high as \$240 million a year.

This bill differed from the Johnson Administration's financing plan, which had been based on the sale of bonds to raise the funds, with the bonds to be retired with interest over a 30-year period. The proposal had raised objections in Congress where the plan would have bypassed the Senate and House Committees on Appropriations. By contrast, the Nixon plan called for payments from the general Treasury under normal congressional procedures, including annual hearings. This plan met the congressional jurisdiction concern and would save \$150 million in interest payments on the bonds.

The plan depended on approval by the House and Senate District Committees and approval by the House and Senate. After President Nixon approved the bill, the House and Senate Appropriations Committees would have to pass appropriations, followed by approval by both Houses of Congress and the President. The routine procedure did not take into account the

objections of Chairman Natcher who could block the plan by continuing to refuse to approve the District's matching share.

According to an unnamed official, the bill was based "on the optimistic assumption that there will be a subway here." [Grigg, William, "Nixon Seeking \$1.047 Billion For Subway," *The Evening Star*, May 8, 1969; Eisen, Jack, "Nixon Urges Cash Grants For Subway," *The Washington Post and Times Herald*, May 9, 1969]

In response to the concerns HUD had expressed in March about the planning process, the area's TPB adopted a policy statement on May 19 calling on member governments to submit plans well before adopting them. The resolution reflected concerns that NCPC and the city council had approved the Major Thoroughfare Plan without review by the area's planning group. The *Post* pointed out:

The newly adopted policy statement is advisory rather than mandatory. It states that early review of the plans will "resolve conflicts between local and regional objectives as early as possible" as well as facilitate the implementation of regionally consistent transportation programs." ["Transit Unit to Look At Road Plans Early," *The Washington Post and Times Herald*, May 20, 1969]

On May 20, 1969, Secretary Volpe appeared before the Subcommittee on Roads of the House Committee on Public Works, which was holding hearings on the Federal-Aid Highway and Highway Safety Programs. After introductory comments, Secretary Volpe said:

I am sure that you will agree with me that there is one thing that all of you are anxious for, I am extremely anxious for and President Nixon is extremely anxious for, and that is for real coordination and a reestablishment of that fine Federal-State partnership which existed for so many years and which over recent years, for whatever reasons, has seemed to be damaged to some extent at least.

And I can assure you [that] one of our primary tasks will be to reestablish this relationship.

With Federal Highway Administrator Turner, a career Federal highway official, "we can look forward to some real and genuine cooperation and understanding and real partnership between the Federal Government and State government.

His testimony covered many topics, not including the situation in the District of Columbia. However, during the question period, Chairman Kluczynski brought the subject up. He said Chairman Fallon and he wanted the District of Columbia to "become a model city – with mass transportation, our subways and also our roads. He hoped Secretary Volpe could "work something out." Secretary Volpe replied, as he had before:

Let me say to you, Mr. Chairman, that one of the things that not only amazed me, but shocked me when I returned to Washington, D.C. here about 4 months ago, was to find on the drawing boards some of the same plans that we had on the drawing boards over

12 years ago, that I had expected in most cases would have been already built.

But I found that they were in the same place on the drawing board. I can assure you,

Mr. Chairman, that it is our intention, and we have done, as you may know, a great deal of work, some of it behind the scenes – a great deal of it behind the scenes – in an effort to try to bring together the great maze of departments, agencies, boards, commissions,

et cetera, that have to pass judgment on and approve projects before they can be undertaken in this great Capital City of ours.

But regardless of the maze, I pledge you my untiring efforts and dedication in trying to bring about a resolution of this thing so that we can proceed not just with the subway system, which we all recognize is a very important project and one that is essential, but also with a completion of those facets of the highway system that also are very essential to the Nation's Capital.

Chairman Kluczynski thanked him, adding, “we spent over \$20 million over 20 years for planning and surveying. I think we have done enough planning and enough surveying. Let's get some action.” [Highway Legislation, Hearings Before the Subcommittee on Roads of the Committee on Public Works, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-9, 1969, pages 258, 275]

Talking with reporters after the hearing, Secretary Volpe said he thought the North-Central Freeway “definitely needs more study,” but that “the rest of the system is still sound and probably should be completed,” including the Three Sisters Bridge. A balanced system of freeways and subway was essential to the District's future and he pledged to work toward a solution. [Conconi, Charles, “Volpe Backs Most of D.C. Freeway Plan,” *The Evening Star*, May 20, 1969]

On May 21, the RLA signed a \$94,500 design contract for air rights development over the two-block pilot section of the Center Leg Freeway bounded by H and K Street and 2<sup>nd</sup> and 3<sup>rd</sup> Streets, NW. The concept called for 300 housing units on a concrete deck over the six-lane expressway. The original concept by Tippetts, Abbett, McCarthy and Stratton for three high-rise structures had been deemed too expensive at \$14.8 million. Tippetts, Abbett was the lead consultant on the new concept calling for 300 federally subsidized low-income homes, some in a single high-rise apartment and the others in two- and three-story structures, to be inhabited by families displaced by the highway. [Lewis, Robert J., “RLA Signs Contract for NW Freeway Air-Rights Design,” *The Evening Star*, May 24, 1969]

Chairman Natcher held his subcommittee's hearing for the public on May 22, with 24 witnesses scheduled to testify. As usual, citizens commented on many aspects of city life.

Chairman Terris of the District of Columbia Central Democratic Committee was the first to raise the freeway-subway impasse. He began by complaining that the need for the hearing was “extremely unfortunate”:

For what is occurring here today is a scandal. Community leaders in the Capital City of the greatest nation in the free world are forced to come to a body in which they have no representatives to beg for money for vital government services. We have to beg concerning how our own money, the money which we ourselves have paid in taxes to the District government, should be spent.

The result was that in years past, "Congress has slashed and ripped the District budget according to the whims of individual Congressmen."

He said the city "desperately needs a rapid transit system. There can be no excuse for holding the subway as a hostage to force the construction of freeways which District residents almost unanimously oppose." He described the referendum the committee had held during the May 1968 primaries in which participants voted "19 to 1 against the construction of freeways without a referendum on those freeways." The city needed the subway "whether or not more freeways are built; indeed the need is even greater without freeways."

As usual in the citizen hearings, Chairman Natcher did not comment on the substance of the testimony. All he said was, "Thank you, Mr. Terris. We appreciate you coming tonight." [District of Columbia Appropriations for 1970, Hearings Before a Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, part 2, pages 1530-1531, 1533]

C. J. Pasquariello of the Montgomery County Civic Association testified in support of continued development of the regional rail rapid transit system. He emphasized that, "lest we be accused of being caught up in the rampant emotionalism surrounding this issue, that we are not an anti-freeway group." They supported the Major Thoroughfare Plan adopted in December 1968. They also agreed with "every planning agency, civic group, and local jurisdiction" that rail rapid transit was "long overdue, and that the positive steps taken within the last year toward its realization must be continued vigorously if not accelerated." Citizens and suburban governments had "without exception overwhelmingly demonstrated their financial commitment to the transit system." He urged the committee "to recommend rapid appropriation action by the Congress" for the transit funds. [pages 1533-1534]

Ramsay Wood of the Montgomery County Citizens Planning Association recommended "release of the District's share of funds for work on the rapid rail transit system." The entire area needed rail rapid transit, but the surrounding counties "will not get it, of course, until it is operating in Washington":

Delay in starting on the downtown section naturally means delay in getting out to the suburbs where our need increases daily.

There is nothing we can do to change that.

Indeed, we have done all you have asked us to do in the past decade to get rapid rail access to Washington.

They gathered support, entered into a compact, agreed on routes, and provided each jurisdiction's contribution to the cost via referendums:

We think it is a shame that work cannot go ahead to the extent of funds already appropriated on a system that will do so much to increase the efficiency and comfort of movement in the metropolitan area.

An early start on the system was vitally important. "We hope you will release these funds as soon as possible." [page 1552]

Wilton H. Dickerson, chairman of the Metropolitan Council of Citizens, submitted a statement in support of the area's transportation needs. The planned system "of rail rapid transit [and] freeways and parkways" should be completed as soon as possible. Any elements in question "should be carefully studied as to location and design with full consideration given to social, economic and aesthetic impact." Planned elements that were not in question "should be constructed and placed in service without further delay. [pages 1558-1559]

Joseph D. Galligan submitted a statement on behalf of the Michigan Park Citizens' Association in opposition to "the illegal North Central Freeway." He listed several schools that would be located near the proposed freeways and "would be subjected to very serious air pollution and excessive noise from the continual flow of traffic involved." The "illegal freeway" would sever the successfully integrated Brookland and Michigan Park communities. He listed the community facilities that would be lost, adding:

Incidentally, may I call your attention to the demolition of the Tayler [sic] Street Bridge located over the B. & O. Railroad tracks. This bridge was destroyed while the citizens of Washington were anxiously awaiting a freeway decision by the U.S. Court of Appeals. The court said that the freeway program [should] be stopped. Now the residents in the area have no satisfactory outlet to [the] western section of the city. Over \$1,300,000 has been contracted for this bridge.

The North-Central Freeway would remove about 287 properties, as well as businesses, from the District's tax rolls. With the city in a revenue crunch, "the overall cost of the District of Columbia freeway program is some \$800 million." Now was "a most inopportune time" to continue building the freeways. He suggested instead using the existing railroad tracks for rail rapid transit:

This would serve the suburban area at a greatly reduced expense to the taxpayer. Even if a subsidy should be proved to be necessary the total outlay would be much smaller than would be required to implement the construction of the proposed North Central Freeway. [pages 1565-1566]

The Fairfax County Federation of Citizens Associations and Fairfax County Federation of Citizens Associations also submitted statements in support of early construction of rail rapid transit. [pages 1567-1568]

In early June, the *Star* and *Post* reported that Secretary Volpe had been meeting with Chairmen Fallon and Kluczynski, and Representative Cramer of the House Public Works Committee in search of a solution to the impasse. On June 7, the *Star* explained that Chairman Fallon had confirmed the meetings, but said the situation was still in a “stalemate,” with Congress waiting for the District to begin construction of the freeways before providing funds for the subway. “Fallon’s comments, however, did not rule out the impression that Volpe has proposed a compromise that committee members now are studying.” The chairman added that he and other committee members still opposed the resale of properties acquired for the North-Central Freeway.

The *Star* summarized the talks:

Initially, according to a suburban congressman not directly involved in the meetings, Volpe had hoped to get the subway funds released on the basis of his own and President Nixon’s pledge to work for freeway construction. But the congressmen involved have felt that they and the District must follow the general outline of 1968 legislation requirement that the freeway system be completed.

In a telephone interview from Chicago that same morning, Chairman Kluczynski told listeners of WMAL radio that key Members of Congress and Secretary Volpe had agreed to a plan. Congress would add the \$19 million withheld thus far from the subway to a supplemental appropriations bill. In exchange, the District would begin construction of the Three Sisters Bridge as soon as possible. Secretary Volpe pledged to seek an acceptable route for the North Central Freeway. As for the city’s desire to sell properties purchased for the North Central Freeway, he said, “Volpe says he would work it out somehow.” The chairman said that “before the end of the year, we’re going to get started on D.C. highways and the Three Sisters Bridge.

The agreement surprised city officials. Deputy Mayor Fletcher said, “I know nothing about it.” He pointed out that in a recent meeting, he and Mayor Washington had told White House urban affairs aide Moynihan that they would not overrule the city council’s decisions on the freeway network.

Chairman Hahn was skeptical when told of the agreement, as the *Post* reported:

Noting flatly that his own opposition to the bridge and the North Central Freeway “has not changed,” Hahn said he had no reason to believe that Mayor Walter E. Washington was contemplating a change in the city’s highway plan.”

. . . Hahn said that since Deputy Mayor Thomas W. Fletcher “continues to assure me that no change is being sought by the Mayor in the highway plan, it would appear that there is no plan to build either the bridge or the North Central Freeway.”

Under the Federal Highway Act, “no contract to build the Three Sisters Bridge can be let by the Mayor . . . unless the D.C. City Council and the Planning Commission change the highway plan,” he continued. Both projects were rejected in the plan.

The Council chairman added that to the best of his knowledge, no Council member is “entertaining any compromise.”

Congressional support for the plan to end the stalemate may have hinged on the Nixon Administration’s support. The new city council members appointed since President Nixon took office might be the key to reversing the December 1968 vote in support of the Major Thoroughfare Plan. [Grigg, William, “Volpe Action on Deadlock,” *The Evening Star*, June 6, 1969; Grigg, William, “Congressmen Map End to Stalemate on D.C. Freeways,” *The Evening Star*, June 7, 1969; Asher, Robert L., “Hahn Dubious on Roads Pact,” *The Washington Post and Times Herald*, June 8, 1969; Asher, Robert L., “Highway Program Set, Says Committee Head,” *The Washington Post and Times Herald*, June 6, 1969]

### **Advancing Metro**

On June 11 and 12, a joint panel of the House and Senate District Committees held hearings on the Administration’s proposal for financing the proposed 97.7-mile Washington Metro system. Senator Tydings and Representative Fuqua were the co-chairs.

Chairman Tydings opened the hearings with a challenge:

It has taken nearly a decade for the rapid transit system to come this close to construction. These past 10 years have been well spent in planning and engineering studies and in securing the approval of local jurisdictions. It is now incumbent upon us to translate the idea into reality without further delay.

He commented on the delay in construction, which “costs another \$90 million” each year:

The present freeway-subway impasse must be broken. Further delay may well cause the entire rapid mass transit plan to collapse or be delayed many, many years. I am convinced that decisive action by the Secretary of Transportation is the critical element necessary to permit us to move forward. I have so advised the Secretary.

He was encouraged by recent events to think “we may be on the verge of being able to go forward with the rapid transit system as part of a balanced transportation program for the National Capital area.” He added:

The hour is late. The need is enormous. Washington’s subway system cannot be put off any longer. [Financing Subway System for National Capital Region,” Joint Hearings Before the Committee on the District of Columbia of the United States Senate and Subcommittee No. 4 of the Committee on the District of Columbia, U.S. House of Representatives, 91<sup>st</sup> congress, 1<sup>st</sup> Session on S. 2185 and H.R. 11193, June 10-11, 1969, pages 1-2]

Chairman Fuqua, in his brief opening statement, discussed Chairman Whitener’s and Chairman McMillan’s success in securing approval of the bobtail system in 1965. He cited the regional compact leading to WMATA. He added, “The regional organization provided is now anxious to proceed with the continuation of this system.” [pages 17-18]

Representative Broyhill also offered an opening statement on what he considered “one of our most vexing area problems facing the Congress.” Over the years, Congress had repeatedly recognized the need for rail rapid transit in the area and its willingness to partner with area communities in this work. He briefly traced its history to the mid-1950s with congressional and community support throughout. Each jurisdiction had provided the bonding authority needed for its part, but “unless Congress does its part we are not going to have any solution to the transportation dilemma facing this area. There is no other answer to the problem.”

The area needed a rail rapid transit system that was “convenient, economical, attractive, and comfortable.” However, it also needed freeways:

I regret, and I know that you do, that we have this needless delay in moving along with the construction of our highways and freeways, as well as the first leg of this transportation system. The solution to the problem has been delayed long enough . . . .

I think that this legislation we have before us is the final step in this long, rocky road to really solving the most complex problem that we have in this area. [pages 18-19]

As the first witnesses, Under Secretary of Transportation James M. Beggs and J. Thomas Tidd, legal counsel, represented the Department of Transportation. Beggs, a businessman who was born in Pittsburgh, said the department’s interest in this issue stemmed from its role in developing national transportation policies and programs, its responsibility for channeling the Federal contribution to WMATA, and the fact that its tenancy in southwest Washington made it a user of transportation services. Further:

A major task confronting our Nation is the rehabilitation of its urban areas as desirable places to live and work. One of the essential ingredients in any rehabilitation effort is the development of efficient and economical public transportation systems.

Our cities are rapidly approaching a state of transportation strangulation. The suburbanites who make their living at jobs in the center city are wasting millions of man-hours in the traffic jams that accompany their trips to and from the office every working day. The disadvantaged who live in the central city, and who have seen their job opportunities move to the suburbs, are left with no efficient means of reaching their job opportunities except at prices they cannot afford.

The proposed Federal contribution to Metro was “a sound investment.” He quoted President Nixon’s observation that Metro would “facilitate the free flow of resources and labor, and would benefit all eight jurisdictions involved . . . .”

After discussing the bill, he said, “I believe it imperative that the Congress act promptly to authorize the funds requested in S. 2185 and H.R. 11193.” [pages 19-21]

Mayor Washington testified in support of the Administration bill, which he said was “designed to allow the construction of the system within the earliest practicable time frame”:

Its enactment will provide the required authority, the encouragement, and the means of carrying out the long-sought goal of the Congress, the desire of the President, the needs of the District, and the hopes of the metropolitan community for the realization of a modern and efficient mass transit system as a vital element of an effective transportation system in the national Capital area. [pages 27-30]

WMATA Chairman Babson, with General Graham, argued that the long, hard work of all concerned bodies in reaching the point of construction was in danger:

The whole project has taken two decades of active work to assemble. If the Congress does not approve it this year, it will fall apart – and it will take two more decades to restore it to this posture. [pages 42-43; Babson’s lengthy statement for the record is on pages 36-41]

Representative Broyhill asked whether congressional failure to approve the bill would mean that “the mass transit system in the metropolitan area would be practically impossible?” Babson agreed “it would be dead for some years to come”:

Because we have these agreements with the localities already signed by five of the seven, in the process of being negotiated and signed by the other two jurisdictions, and it is based on this intricate financial program and plan whereby each jurisdiction is coming up with its fair share, and with escalation hitting us at the rate of \$250,000 a day, in a few months, if we do not get started within a very short time, the escalation factor alone will have overtaken us and these financial agreements, legal agreements between all of these jurisdictions, will be meaningless.

You will have to start all over and go back again and eventually you will have to go back to the voters for more bond issues, and they will say why do you need more, we voted for \$62 million last year or 2 years ago, and you have not done anything with that.

Representative Broyhill asked General Graham if the bobtail system would function efficiently without its suburban extensions. General Graham replied that the bobtail system would benefit primarily residents of the District, “but I feel that the far more severe problems lie with the suburbs, getting the people from where they live in the suburbs to where they work and in turn getting people who live in the District out to the suburbs for jobs out there”:

All of our studies indicate that at this stage, it really would be foolish not to build a truly metropolitan system. This is not the District of Columbia here, this is the Nation’s Capital. It is really all one entity. The problems of the people are an entity. [pages 60-61]

Representative Andrew Jacobs, Jr. (D-In.), whose 11<sup>th</sup> congressional district was based in Indianapolis, asked if construction of the full Metro system would take care of the freeway problem. General Graham said all of WMATA’s projections were based “on an assumption of completion of the minimum freeway program that has been planned for many years.”

Representative Jacobs suggested that if the freeway program were not expanded, people might find it more convenient to use the transit network. "People seem tired of the so-called suburban Grand Prix, riding on the highways and traffic jams." General Graham said the rail rapid transit system would not be adequate by itself to replace the planned freeway network.

Had any thought been given to expanding Metro to replace the freeways? "We have not considered this. Our assumption has been the highway program would be completed."

What about the mathematics of transportation? An automobile takes up 18 to 20 feet and is 6 to 7 feet wide, while a couple of seats on a transit vehicle take up a fraction of the space. "It might be wise," Representative Jacobs said, "to let the people of the country know what the marginal cost might be to expand the facilities of the subway system in order to save the millions and millions of dollars for an inefficient means of commuter transportation – highways."

General Graham thought people needed the options of a balanced transportation system. "We feel the people of the area need a choice of systems, and highways are needed as well as rail rapid transit."

Representative Jacobs realized he was suggesting "things that never were, and asking why not," but he thought "an imaginative study should be made on this question." Chairman Babson said that he and General Graham did not disagree with the Congressman's premise. "The difficulty is we are operating under something of a mandate from the Congress," which created the framework for the transit system and is on record "favoring the freeway program in this region":

And for this reason, we really had no right to go beyond this and assume no freeways, and no bridges. And I think it would have been subjected to severe criticism had we used the taxpayers' money and congressionally appropriated money and studied something beyond the ideas and mandate of Congress.

Representative Jacobs said he did not mean to criticize WMATA for carrying out its duties as stated by law. "I would only point out that Congress is also on record as being in favor of the Vietnam war, and even the Congress in all of its wisdom can make errors from time to time." The votes in support of transit bond referendums indicated that people were "sick and tired of getting sick of breathing carbon monoxide and taking an hour and 15 minutes or an hour and a half to get into town, when they could get here in 10 or 15 minutes on mass transit." He wished Congress "would read those results and put them into law and make some commonsense [sic] out of our transportation situation." [pages 64-65]

Representative Harsha cited the planned Federal contribution of \$1.047 billion. "Are you going to have to come back at a subsequent date and ask for additional money?" Chairman Babson did not expect to do so:

We think we have devised a realistic plan and program, which assumes escalation, and which has a contingency feature, which we think is not unreasonable, of 10 percent construction cost [sic]. And we do have a continuing cost-control program which already has enabled us to affect [sic] \$88 million in reductions in the planned system, just in the

past year. This value-engineering program will continue and we think we have a solid plan which we can live with, build a system within, if we can start very, very promptly.

Representative Harsha asked what “very promptly” meant. Babson replied, “We would like to start building 75 days from today. We feel it is essential that we start building before the end of the year.” [page 67]

On June 11, Deputy Director Hughes of the Bureau of the Budget, was the first witness. He told the joint committee that President Nixon had assigned “a very high priority” to the full Metro plan. He explained the financing plan for the 97.7-mile regional system:

The total project cost of \$2.5 billion would be partially funded by \$835 million from the sale by the Transit Authority of revenue bonds supported by fare box receipts. The remaining net project cost of \$1,721 million would share on a  $\frac{2}{3}$ - $\frac{1}{3}$  matching basis between the Federal and local governments. This  $\frac{2}{3}$ - $\frac{1}{3}$  matching basis extends the existing formula for the currently authorized basic system which was patterned after the sharing arrangement used in the national urban mass transportation program. This ratio would require capital grants in the aggregate amounts of \$1,147 million from the Federal Government and \$573.5 million in total from the suburban jurisdictions in Maryland and Virginia, and from the District of Columbia.

The Federal contributions would be made to WMATA over the 11-year Metro construction period. The Federal share included \$100 million the National Capital Transportation Act of 1965 had authorized.

Further, “\$609 million would eventually be returned to the Federal Government as its pro rata share of the future excess revenues which must initially be held in reserve to meet the debt service ratios required for the sale of revenue bonds.” The repayment would be made over 50 years without payment of interest. “If this estimate for repayment to the United States is taken into account, the net increase for the Federal share above the amount already authorized by the Congress would be \$438 million.”

The Administration bill authorized the District to make matching payments totaling \$216.5 million. Because the 1965 Act had authorized \$50 million in District funds, the remaining District contribution would be \$166.5 million. [pages 69-73]

After listening to Hughes read his opening statement, Representative Harsha asked if the financial plan covered the entire budget. “Do you anticipate having to come back later and ask the Congress for more money.” Hughes replies, “No, sir; we certainly do not”:

The estimates, contrary to some other estimates in other areas, have been developed rather carefully over a long period of years, with rather thorough consultation, not only within the District of Columbia government, the Washington Metropolitan Area Transit Authority, and the Federal Government in general, but with highly qualified private consultants and industry sources, and we have a great deal of confidence in the reliability of these estimates.

Representative Harsha next asked how President Nixon's support for Metro squared with his recently announced policy of reducing Federal budget expenditures. Hughes replied:

I think that question is both an appropriate and very difficult one. In very brief terms, I think the answer is that in our judgment the priorities of the times, the essential national needs, as we appraise them, are such that this kind of project in the National Capital Area comes up very high on the priority list.

We recognize that within some broad limits, choices must be made as between those kinds of projects and other potential Federal activities, but I think it is quite clear that in the District of Columbia and the Washington metropolitan area, as well as in other major cities of the Nation, the adequacy or inadequacy, rather, of urban transportation has been a very important consideration in meeting employment and general living requirements.

I think the Watts area is one wherein transportation difficulties clearly contributed very substantially to the problem there.

These kinds of consideration have led us and obviously have led the President, as well as the Congress, to move this project very high on the priorities.

If one of the jurisdictions decided not to pay its share of the project cost, Representative Harsha asked, was the Federal Government then "bound to go ahead and contribute?" Hughes replied, "That is correct, Mr. Harsha." The bill was designed to operate "in consonance with a plan that has been developed rather carefully by the authority" on a contract-by-contract, year-by-year basis.

Representative Harsha asked if Hughes had any insights into the stalemate in securing an appropriation for the District's share of costs. Hughes was aware of the problem, and that the pending supplemental appropriations bill included the \$18.7 million in District matching funds, but he did not have any current information:

The problem is one of reaching agreement as to appropriate balance among transportation systems, and we would be pleased to contribute anything that we could toward resolving this problem. But I think that is the problem, and I think it is not unfair to say, at the moment anyway, that the ball is in the Congress' court. [pages 74-78]

Senator Tydings picked up on the subject. "What is the relationship between the funds being requested in the \$18.7 million supplemental appropriation that is now before the Senate Appropriations Committee, and the funds already appropriated or authorized in the last fiscal year for the construction?"

The District, Hughes replied, needed \$18.7 million to match \$37 million Federal funds:

The controversy here, the difficulty, as I understand it, involves the desirable relationship of the rail rapid transit system and the District of Columbia highway system, and the resolution of the controversy that has surrounded the plans for the construction of the District of Columbia Highway System . . . .

The Federal funds have been appropriated previously, but the language – I am not sure whether it is statute or report language – in effect says withhold the Federal funds until the District’s share is available to proceed with the construction. [pages 80-81]

Although the testimony revealed some uncertainty about the status of the District matching funds, the District subcommittee of the Senate Appropriations Committee had included \$18.7 million for the District matching funds in the Second Supplemental Appropriations Act for overall government operations. Combined with \$37.4 million in approved Federal funds that could not be spent until the District had authority to pay the matching share, WMATA would have \$56.1 million to get construction started. Because of the matching requirement, WMATA could not begin construction without the District funds. Of course, inclusion of the funds in the final bill would depend on Chairman Natcher.

Jack Eisen reported:

Sen. Robert C. Byrd (D-W.Va.), whose subcommittee on supplemental appropriations recommended the action . . . did not sound, however, like he would be willing to make a major issue of the subway fund if Rep. William H. Hatcher (D-Ky.) maintains his refusal to consider it.

It was learned, however, that Byrd put up a stiff fight within his subcommittee to win support for transit money . . . .

Byrd, noting that he agrees generally with Natcher’s support of a “balanced” transportation system of roads and rails, said his decision to restore the funds was not the product of any negotiations.

“Nobody got me,” he declared. [Eisen, Jack, “President Pushes Subway,” *The Washington Post and Times Herald*, June 12, 1969]

### **How To Break An Impasse**

*Star* editors were encouraged by the joint hearings and inclusion of the matching funds in the Senate’s supplemental appropriations bill:

All of a sudden, the long, bleak deadlock which has paralyzed Washington’s rail transit and freeway programs has been cracked, at least, by a flurry of encouraging activity.

In addition to the hearings on the Administration bill and inclusion of the matching funds in the appropriations act, the editors referred to:

And most important of all, members of both the House and Senate spoke optimistically of a firm decision on the city’s controversial freeway program which would end this foolish dispute once and for all.

The editors joined with Senator Tydings in hoping “that an acceptable settlement to the highway dispute has been negotiated by Secretary of Transportation John A. Volpe.” Whether that was true, no one but Secretary Volpe could say, and “thus far the secretary has said nothing at all.”

All the editors could do was report hints from sources. But they hoped that when the Senate’s supplemental appropriations act went to conference with the House, “Natcher will relent, and free the transit funds”:

The stakes are too big, however, to rest on hopes. The required solution is the firm, final decision on a balanced program of freeways and transit which has been promised by Secretary Volpe. He has very little time left to produce it. [“Volpe’s Silence,” *The Evening Star*, June 12, 1969]

Volpe had been in Europe on business, but when he returned, a *Star* reporter, William Grigg, was waiting for him at the airport. In response to a question, Secretary Volpe confirmed his involvement. “I have been working on it for three months,” he told Grigg, but when asked for details, said, “I’m not going to spoil [the negotiations] now.” He said he had a general plan in mind before he went to Europe.

Asked if he would meet with Chairman Natcher, Secretary Volpe replied that he did not know. He wanted to hear from his subordinates on developments while he was out of the country.

Grigg summarized the situation:

According to Rep. John C. Kluczynski . . . the plan Volpe developed requires Senate restoration of the delayed funds to start subway construction, followed by a concession to Congress that the Three Sisters Bridge (upriver from Georgetown) and related projects would be built.

The most controversial section of the freeway system – the North-Central freeway to Maryland, which has been vigorously opposed by neighborhood groups – would be left in the limbo of “further study.”

The Senate Appropriations Committee had taken the first step by including the District matching funds in the supplemental appropriations act:

But Sen. Robert C. Byrd . . . has warned that the subway funds could easily be dropped before the final supplemental appropriations bill to which they are attached clears Congress.

Byrd said, in fact, that the funds probably would be dropped if Natcher . . . is not satisfied by progress or pledges of progress on the stalled freeway system. [Grigg, William, “Volpe Confirms Role In D.C. Subway Fight,” *The Evening Star*, June 13, 1969]

On June 17, Secretary Volpe talked with reporters about his involvement, indicating that he had renewed his personal efforts to break the deadlock in hopes of securing release of the District matching funds for Metro after Deputy Mayor Fletcher’s efforts had collapsed. He was pleased

that the Senate Appropriations Committee had included an appropriation for the matching funds in its Second Supplemental Appropriations Act, 1969, for the Federal Government, but thus far he had not secured approval through his outreach to the House. Jack Eisen summarized:

In his initial contacts on Capitol Hill, Volpe is reported to have asked Natcher and other key House members to free the subway money and trust him to get the roads built.

Volpe told newsmen yesterday, he was “not able to accomplish what I set out to do.” He emphasized the delicacy of negotiations and said a public discussion of details would make his task harder.

“I never give up hope in trying to solve something I believe is essential,” Volpe said. “I will continue to work on it.”

Volpe said he has met with small groups of lawmakers as well as individual Congressmen. Likewise, he said he has met with city officials and members of the City Council.

He said that “essential highway and bridge projects” would be part of the final package:

He disclosed that he has asked his staff “for a complete updating of the statistics on the Three Sisters Bridge,” perhaps the most controversial of the stalled projects.

There was no indication that this request necessarily reopened the question of whether the Georgetown-to-Arlington crossing should be built.

He expressed the hope that “responsible officials, both elected and appointed, will be able to come up with ways and means to go ahead” with the balanced transportation system. [Eisen, Jack, “Volpe Renews Efforts On Subway Impasse,” *The Washington Post and Times Herald*, June 18, 1969; Grigg, William, “Early Freeway Accord Vital, Tydings Asserts,” *The Evening Star*, June 18, 1969; “Transit in Trouble,” *The Evening Star*, June 20, 1969]

The House of Representatives had approved the supplemental appropriations act on May 21 without including the District subway matching funds. During Senate debate on June 18, Chairman Tydings defended the \$18.7 million in the Senate bill for the subway. He mentioned the “extraordinary joint hearings” the House and Senate District Committees had conducted a week earlier on the Nixon Administration’s plan for funding the Federal share of \$1.4 billion for Metro:

The rail transit system these funds will create will be a model for the entire Nation, will provide essential transportation for Federal employees and provide a vital link of the balanced transportation system Washington so desperately needs.

The appropriation in the supplemental bill was “the first step on the long journey to the completion of the subway system.” The journey already had “been too long delayed by differences which must be compromised to create a balanced transportation system for Washington.”

The sum of \$18.7 million in matching funds in the bill was the keystone to addressing “the transportation crisis facing the Washington metropolitan area.” As a result, “it is fair to say that this supplemental appropriation bill may prove to be the most important legislation Congress will enact in this session, perhaps in this entire decade, for the Washington metropolitan area.” [Progress on Washington’s Rapid Transit System, *Congressional Record-Senate*, June 18, 1969, pages 16457-16458]

The Senate approved the bill on June 19, with the matching funds for the District included, and asked for a conference with the House to resolve differences.

“In normal circumstances,” *Star* editors wrote, passage of the bill with the transit funds “would have been an occasion for celebration.” Unfortunately, no one had cause to celebrate. The proper response was “apprehension and concern” because “House members have served notice in terms clear enough for anyone to understand that there must first be a break in the senseless District-congressional impasse over highways.”

As Senator Tydings had warned, the time “left to fiddle around” was over, and as Senator Mathias had stated, resolution of the crisis was largely in the hands of District officials who, thus far, had refused “to make the slightest response to Congress’ valid demands that the transit and freeway programs proceed together to provide a reasonable balance of modern transportation facilities.” The District had “chosen the path of no negotiation at all beyond an unacceptable freeway plan endorsed by the council.” Whatever the justification for “this blind posture,” the loss of Metro was “not a price this city can afford.”

The editors wondered if President Nixon “has been fully apprised of this absurd situation, or of the grave, imminent peril to the transit system which he has so frequently cited as an absolute necessity to the growth and well-being of the Nation’s Capital.” Referring to Secretary Volpe’s hope that “responsible officials” would find a way to go forward, the editors concluded:

Where political irresponsibility is so prominently on display there is very little reason for any hope at this point, however, unless President Nixon takes a direct interest in the subject. The stakes are high enough to justify it. [“Transit in Trouble,” *The Evening Star*, June 20, 1969]

On Saturday, June 21, ECTC leaders and supporters arrived at 2732 10<sup>th</sup> Street, NE., to reopen one of the boarded up houses the District had acquired for the North-Central Freeway. Armed with brooms and garden implements, the 100 or so supporters, estimated as one-third white, protested what they called “confiscation” of 69 black-owned homes in what the *Post* described as a block consisting of “once tidy brick dwellings on a quiet, tree-shaded street.”

ECTC’s Booker had written to Mayor Washington to let the city know about the plan to reopen the houses. The letter stated “we can only conclude . . . that the city will not meet its responsibilities to the community where these 69 homes lie in shameful and wasteful deterioration”:

We can no longer permit the irresponsible decay of this attractive residential community, which is spreading and affecting an increasing land area in the adjacent neighborhoods.

For that reason, ECTC planned to “address this urgent issue by removing the boarding from these decaying residences.”

The crowd applauded as Booker and other speakers demanded “cleanup” and return of the homes to their original owners. The city’s attempt to curtail black home ownership represented a “brazen attempt to break black people’s political power, because black home ownership represents black political power in this community.”

With a crowbar, he removed the plywood over the front door and went in with about 25 people, including small children, carrying mops and brooms. They began cleaning the house.

Colonel Starobin, director of the city’s Department of General Services, ordered them to leave. Brief scuffles broke out as police ordered anyone who did not want to be arrested to leave the house. Booker, the Reverend John Mote of Brookland United Methodist Church, and Dr. Tom Rooney were arrested and charged with illegal entry. Abbott, who was not initially arrested, was charged with disorderly conduct after he tried to force his way into the police vehicle where the others were placed.

After the arrests, a dozen police officers stood on the front porch while supporters clipped hedges and cut the lawn. ECTC’s Cassell told the group that they would return the following Saturday to open the house next door. [Carter, Phillip D., “House Is ‘Reopened’ In Freeway Protest,” *The Washington Post and Times Herald*, June 22, 1969; Swanston, Walterene, “4 Arrested in NE Freeway Protest,” *The Evening Star*, June 22, 1969]

As part of the campaign to break the logjam, Secretary Volpe convinced President Nixon to take a 47-minute helicopter tour of the District’s morning rush hour on Tuesday, June 24. The Marine Corps helicopter lifted off from the White House lawn with the President, Secretary Volpe, Federal Highway Administrator Turner, Deputy Mayor Fletcher, City Council Chairman Hahn, and District Highway Director Airis. Two presidential aides were in the rear of the craft with newsmen: Moynihan and John D. Ehrlichman, counsel to the President.

Turner took the lead in conducting the tour, as described by Jack Eisen:

Turner was the chief guide. He noted such phenomena as the almost evenly balanced rush-hour flow of traffic into and out of Washington, such facilities as the new interchange at Telegraph Road and Duke Street in Alexandria “opened just three months ago” and such current projects as the widening of Shirley Highway.

Secretary Volpe had given President Nixon an area map “with a black-bound freeway map and statistical summary of bridge traffic” that rested on the President’s knees:

The figures, studied by the President just before landing, showed bridge traffic of 182,400 vehicles per day in 1950 had grown to 465,500 by last February.

Eisen also recorded the President's reactions:

One of the sites on yesterday's tour, viewed twice, was Three Sisters Islands, the small rock outcroppings in the Potomac River near Georgetown where the road builders want to erect a bridge. It has become the chief symbol of the seemingly endless dispute . . . .

The full itinerary included views of some routes whose twice-daily patterns of congestion became familiar to Mr. Nixon during his 15 earlier Washington years as a Government lawyer, congressman, senator, and Vice President.

"I used to drive out here," the President recalled as he peered down at the Seven Corners shopping center in Fairfax County, ringed in early morning by an empty expanse of asphalt parking lots. "There used to be nothing more than a country store."

Looking at lines of traffic inching across the Theodore Roosevelt and 14<sup>th</sup> Street bridges, Mr. Nixon asked, "Where are they going to park the cars?"

City Council Chairman Gilbert Hahn, Jr. shook his head in silent negative reply. Hahn has said publicly that he would like to curtail all-day parking in the city to induce more transit riding.

Mr. Nixon already was aware of the light use of transit. Observing a jam of automobiles on U.S. Rte. 50 east of Glebe Road in Arlington, he remarked: "Sure not many buses."

. . . Traffic somehow looked from the air to be lighter than it seems to a motorist on the ground, but several jams were seen. Perhaps the most massive were mile-long backups at the South Capitol Street and 11<sup>th</sup> Street bridges across the Anacostia River.

"Unless something is done to change the entire direction of planning in this city," Volpe told the President, "we're faced with some real, real problems."

The tour did not include the northern part of the District or the traffic from Montgomery County into the city. President Nixon had many opportunities to view highway operations, if he wished to, during his trips to Camp David.

Secretary Volpe told President Nixon that the subway should have gone to construction "not yesterday but three years ago."

After the helicopter returned to the White House at about 8:35 a.m., the President summed up the trip. "I'm glad that we don't have to drive to work."

Volpe told reporters that the President was "concerned that the subway funds have been held up for 1½ years," but the Secretary hoped "the differences will be worked out quickly." Referring to freeway opponents, he said, "They are conscientious but their objections don't take into consideration the facts of life."

Chairman Hahn said the tour “demonstrated graphically that we’ve got all the entrances into the city that we need.” It confirmed his view that the subway was more important than the Three Sisters Bridge or the other freeways. “A visual look at the very well-developed road system we have indicates to me we’ve reached a good stopping point.”

Deputy Mayor Fletcher said, “I feel the trip gave the President a very good picture of traffic in the metropolitan area. I don’t think it will lead to any decisions at this point, but it will prove useful to him.”

Later that day, in a meeting with Republican leaders at the White House, President Nixon talked about his tour. House Minority Leader Ford told reporters after the meeting that he thought Secretary Volpe would intensify his effort to “break the logjam” in the next couple of days. [Eisen, Jack, “Nixon Sees Traffic From Air, Says, ‘Glad We Don’t Drive,’” *The Washington Post and Times Herald*, June 25, 1969; Wright, Christopher, “Nixon Gets Air View Of D.C. Traffic Snarl,” *The Evening Star*, June 24, 1969]

(After winning election to the House of Representatives in 1946, Nixon and his family lived in the Park Fairfax Apartments at 3538 Gunston Road in Alexandria, Virginia, from March 1947 to early 1951. In 1951, the Nixons moved to 4801 Tilden Street, NW., near American University and not far from the Montgomery County line. In 1957, the Vice President and his family moved to 4308 Forest Lane, NW., in the Wesley Heights area. Glover-Archbold Park was to the rear of the home. The Nixons moved out in February 1961 when the family returned to California. [Source: E-mail, November 5, 2012, Richard Nixon Presidential Library, National Archives and Records Administration])

June 26 began on an optimistic note when Secretary Volpe released a letter signed 2 days earlier by Mayor Washington and Chairman Hahn. Secretary Volpe was “pleased to announce” the city’s “intention to proceed immediately” to complete 24.5 miles of freeways at a cost of about \$500 million:

- Potomac River Freeway from the Whitehurst Freeway to the Palisades;
- South Leg of the freeway from the Potomac River Freeway to 14<sup>th</sup> Street;
- Center Leg from the Southwest Freeway to New York Avenue;
- East Leg from Barney Circle to Bladensburg Road; and
- Industrial Highway parallel to New York Avenue.

The list did not include the Three Sisters Bridge or the North-Central Freeway.

The city also agreed to propose a final location for the North Leg of the Inner Loop Freeway.

The commitment was comparable to the Major Thoroughfare Plan that NCPC and the city council had approved in December.

In releasing the letter, Secretary Volpe gave the plan his unqualified approval. “This affirmative action by the city government . . . will complete much of the essential planned highway system for the area.” The city’s commitment to this work was “in the spirit of helping to resolve the

situation preventing release of funds needed for the beginning of the area's subway system." He added, "It is my conviction that this constructive step will help solve much of the transportation situation." He intended to "continue working with the concerned parties toward a complete solution." As a result, he hoped the House would "see fit to concur in the Senate action" on the District matching funds.

Chairman Hahn thought the city's letter should be enough to release the subway funds. "We're saying 'Here's a plan for freeways, now build them.'"

As city officials explained to reporters, Secretary Volpe's strategy was to create a bandwagon effect that would pressure Chairman Natcher to release the city's matching funds. President Nixon's helicopter tour was the first step, followed by release of the city's letter dated the same day as the trip.

Later that day, conferees on the Second Supplemental Act, 1969, dropped the \$18.7 million from the bill for the District's subway matching funds. Clearly, the city's actions did not persuade Chairman Natcher. Chairman George H. Mahon (D-Tx.) of the House Committee on Appropriations said the conferees "felt that decisions by officials were not sufficiently clear and final for us to proceed, so we knocked it out." Chairman Natcher, as usual, did not comment to reporters.

At the same time, Mayor Washington announced that the city would move to reopen the 69 homes in the North-Central Freeway corridor. Renovation would begin at 8 a.m. on June 27, starting at 2732 10<sup>th</sup> Street, NE., site of the protest the previous weekend. The District's Department of General Services would undertake the repair work. As an interim measure, the homes would be made available for rental by former owners, families recommended by local groups, and other displaced residents, in that order.

In addition, Mayor Washington asked the Department of Transportation for a legal opinion on the status of the homes. Because the city had used Interstate construction funds to pay 90 percent of the cost of acquisition, the future of the homes depended on Federal right-of-way law, which required resale to the highest bidder, not necessarily the former owner. The city was drafting legislation seeking congressional approval to allow former owners to acquire the homes.

Reaction to the day's events came from many sources. Representative Broyhill called the city's proposal "disgraceful." It was simply a restatement of the city's refusal to comply with the directive in the Federal-Aid Highway Act of 1968.

Former Vice Chairman Fauntroy, now affiliated with the Model Inner City Community Organization, said that citizen groups could "come up with solutions that don't even occur to the most dedicated officials." He called for citizens to join a "city-wide coalition," regardless of "their position on the freeway controversy," to find answers to the transportation impasse.

ECTC's Booker denounced the city's plan. "We oppose any segment of the so-called skeletal freeway system and we will fight it with the same energy we used to fight against the North-Central Freeway." [Jewell, David A., "Volpe Backs City's Plan To Start Freeway Work," *The*

*Washington Post and Times Herald*, June 26, 1969; Grigg, William, “Subway Funds Dropped Pending Freeway Move,” *The Evening Star*, June 26, 1969; Asher, Robert L, and Moore, Irna, “Conferees Reject Subway Funds, City lack of Assurance on Freeway,” *The Washington Post and Times Herald*, June 27, 1969]

*Star* editors cited “a double responsibility for the tragic, imminent loss” of the needed appropriation to begin subway construction. First, District officials “who seem determined to isolate this city from the remainder of the metropolitan community” were at fault. Their letter to Secretary Volpe “not only omitted the bridge project, but actually curtailed some aspects of an inadequate freeway plan endorsed by the City Council.”

The Nixon Administration shared the blame because thus far, it had “been unable to shift the irresponsible position of these presidentially appointed local officials.”

The House-Senate conference committee’s reaction to the city’s attempt to break the logjam was “immediate – and entirely predictable.” Why, the editors wondered, did Secretary Volpe “imagine that the result might be otherwise”? He apparently thought the city’s letter involved a significant concession that, along with his pledge to “continue to work” for a “complete solution,” would be sufficient to change the outcome.

Chairman Hahn’s action belied the hope that the House would take Secretary Volpe’s assertions on faith. No sooner had Secretary Volpe issued his conciliatory announcement than “Hahn took pains to emphasize the he and Mayor Washington ‘still reject’ the bridge project” that Congress had mandated in the 1968 Act:

If the city government cannot be persuaded to yield to that mandate at this point, when the future of the vital transit program is at stake, it is hard to think of anything that might make it yield later.

On the theory that anything is possible, the House might change its position:

But that change, no matter how desirable, is extremely remote unless Secretary Volpe – or President Nixon who expressed his strong personal concern on Tuesday – moves immediately to unravel this mess.

Our guess is that little more would be required than a firm White House decision to proceed with the Three Sisters Bridge. At this moment, however, it is a botched job all around, with the prospects for a truly viable, balanced transportation system for the Capital left in greater jeopardy than ever.

*The Post* agreed. President Nixon’s helicopter ride had been little more than “a public relations gimmick.” He learned, if anything, little more than any commuter could have told him, namely that rush hour congestion “must be experienced to be believed.” The city’s letter was “not much more helpful,” referring mainly to the less controversial elements of the freeway plan.

The House-Senate conferees' action was "something outrageous," but "commonplace" in the political world where Chairman Natcher and others are using "every ounce of political leverage they have for their particular political ends."

The city's letter reflected the fact that the anti-freeway forces had convinced city officials to make the Three Sisters Bridge "a symbol of who is winning the fight over freeways." Divested of that symbolism, the bridge "no doubt could stand on its own for its contribution to area transportation."

Capitol Hill had linked the freeways and subways, regardless of what anyone thought about the logic of doing so:

A politically acceptable package must be put together so that the subway money can be released. Secretary Volpe has had one whack at it without success. The President has shown us how to rise above our traffic jams; unless he means to offer us a helicopter for every garage, however, he must now get back down to the hard business of providing the political muscle to break the transportation impasse. ["The Transit Impasse," *The Evening Star*, June 27, 1969; "A Helicopter in Every Garage," *The Washington Post and Times Herald*, June 27, 1969]

Repair of the homes in the path of the North Central Freeway began on Friday, June 27, under Colonel Starobin's direction. He expected repairs of all 69 homes to be completed in 3 months at a cost of about \$200,000. As Mayor Washington said, "Our city's acute need for decent housing, especially three and four bedroom houses, requires that we make these houses available for occupancy as soon as possible."

One ECTC official said he considered Mayor Washington's decision to be a "political ploy." Nevertheless, the action defused plans for a second Saturday demonstration in the neighborhood.

As the *Star* pointed out, the action "could increase congressional antagonism and lessen chances for a subway construction start":

The move could well antagonize members of the House Public Works Committee and the House District Appropriations subcommittee who have wanted houses purchased for the North Central Freeway left empty while the District makes up its mind whether to build the project. They turned down the idea of disposing of the houses when it was suggested several weeks ago in a proposed compromise package on freeways and subways.

As for the Second Supplemental Appropriation Act, 1969, Chairman Mahon said the conference committee was still working on the details, but District issues were settled. The matching funds for the subway would not be included. ["D.C. Is Repairing for Rental 69 Homes in Freeway Path," *The Evening Star*, June 27, 1969; "Condemned Homes Repaired," *The Washington Post and Times Herald*, June 28, 1969; "D.C. Averts Clash By Opening House In NE to Citizens," *The Sunday Star*, June 29, 1969]

The chairman of the District Republican Committee asked area congressmen to try to restore the subway funds to the supplemental. Edmund E. Pendleton, Jr., considered rejection of the funds a

“dangerous and unwise game.” The city’s letter to Secretary Volpe provided a strong enough commitment to warrant restoration of the funds:

If a half-billion dollars isn’t meaningful, what is? For Mr. Natcher to say “no” to this evidence of intent is beginning to look a little pale.

Pendleton said that for Chairman Natcher, the subway-freeway impasse was “a personal thing . . . killing the subway rather than solving the problem.”

Area congressmen, he said, should challenge the conference report on the supplemental bill when it reached the House and Senate floors for a vote. They should ask why the bill dropped the subway matching funds. The goal should be to convince their colleagues to restore the funds or return the bill for further work. [Asher, Robert L., “City GOP Chief Says Subways Cut ‘Unwise,’” *The Washington Post and Times Herald*, June 28, 1969; “City GOP Chief Issues Plea for Subway Funds,” *The Evening Star*, June 28, 1969]

Director Airis appeared on July 8 before the Senate’s District Subcommittee of the Committee on Appropriations, chaired by Senator Proxmire. After going through the department’s needs, Airis concluded:

I shall close my statement, sir, by pointing out that hopefully we will soon have a resolution of the freeway problem and that we will be able to proceed with a whole balanced transportation system that so long has been planned for the District.

Chairman Proxmire said he was “delighted to see that you are emphasizing, trying to get some of the cars off the street.” He explained:

One of the difficulties is that we build these very, very elaborate and expensive highways and they seem to fill up. The more we build, the more cars you have, the more congestion you have and the more problem[s] you have for the city.

According to studies he had seen, cars were responsible for about 60 percent of land in some cities, counting streets, parking lots, and parking spaces. He preferred “to emphasize making mass transportation available in the form of buses.”

Chairman Proxmire recalled an announcement recently “that the District would proceed with its highway construction” and wanted to know how that decision would affect the city’s budget. Airis started to respond that the city was proceeding with its usual quarterly apportionment, but the chairman interrupted:

Senator Proxmire. No, we are talking about the announcement that followed the President’s flight over the city and Mr. Volpe’s observations at that time.

Mr. Airis. I don’t think that carried funding with it. They just indicated generally that they hoped to be able to go ahead with the full program that has been talked about, and planned here for the last 20 years, sir.

After discussing other subjects, Chairman Proxmire returned to the Interstate freeways, asking Airis what progress had been made in the past year. Airis cited construction of the Center Leg Freeway past the Capitol to Massachusetts Avenue. Construction had not begun on the section between Massachusetts and New York Avenues. "It is awaiting a RLA housing project that is to be built over the freeway." The city was awaiting details of the air rights housing projects.

Chairman Proxmire asked how much of the Interstate program the District had completed. Airis replied that 10 miles of the 29-mile network had been completed, with another 5 miles under construction.

Asked where the District ranked among the States on its Interstate program, Airis said it was next to last, behind Delaware and just above Maryland. He explained why:

One is the multiplicity of planning agencies in the District area, and second is the fact that this is an entirely urban area. In all urban areas at the present time, it is extremely difficult to build public works of all types. That is it in a nutshell. [District of Columbia Appropriations for Fiscal Year 1970, H.R. 14916, Hearings, Subcommittee of the Committee on Appropriations, United State Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, pages 1106-1107, 1117]

The following day, July 9, WMATA appeared before the subcommittee. The delegation consisted of Chairman Babson, General Graham, Executive Officer Schuyler Lowe, and Prince George's County Commissioner Gladys Noon Spellman who was chairman of the Washington Suburban Transit Commission. Babson summarized the history of WMATA and the support for rail rapid transit as reflected in official support and the November 1968 votes for transit bond issues:

We have worked at this long and hard. We have even obtained a benefit-cost analysis to justify our proposed regional system, and it shows a 3.2-to-1 ratio of benefits; quantifiable benefits. And there are a number of so-called nonquantifiable benefits which readily, I think appeal to the mind as being real benefits.

WMATA had approved a final plan for the regional system in February 1969. "We have obtained the agreements in writing from all of the subdivisions, political subdivisions in the area to bind themselves to contribute large amounts, millions of dollars of money":

That is where we are today, Mr. Chairman. We stand ready to begin construction of the system immediately if Congress will release the funds. We have the final design work on some \$60 million worth of projects on which we could let contracts in 75 days. [pages 1179-1180]

After introduction of Babson's lengthy prepared statement, Spellman expressed Maryland's support for the plan:

We are enormously concerned at this moment about the construction stalemate. This is going to be terribly costly to us in the local governments, to the Federal Government, and

we feel that somehow, someway, we must find a method of getting this off center and allowing us to proceed.

She worried that, “folks who are the obstructionists who really did not want a transit system in the first place who now see an opportunity to create problems, who are going to be working with our legislature trying to get them to say, well, now, this is going to cost more than \$88 million that our county has budgeted, and therefore we will have to change the bonding authority.” She and other supporters felt “a great sense of uplift” when the Senate included the District matching funds in the Second Supplemental Appropriations Act, 1969:

And we are really hopeful that a solution to the current highway impasse will soon be found. You know we need those highways, but we need the subway system. And to say we will have nothing is just wrong. We have somehow got to get this moving.

She encouraged the subcommittee to “maintain the position of leadership” it had shown on the issue. [pages 1184-1185]

General Graham confirmed that WMATA was ready for construction:

We are prepared to move rapidly forward on a construction program which would see the first operational trains by the end of 1972 . . . . We are ready to break ground early in this fiscal year. We have been ready for about a year. And once we have the authorization to go ahead we will let eight major construction contracts in very quick succession.

The first contract, for section B-1, would be for a cut and cover project running from Judiciary Square westward to 10<sup>th</sup> and G Streets. This section included the Judiciary Square and Gallery Place stations.

He went through the phases of construction based on authorization to proceed in the near future:

The final segments will be completed and operational by December 1979 from Chillum to Greenbelt station, from north of Silver Spring to Glenmont, from Kenilworth to Addison Road, from Telegraph Road yard to Backlick Road, and the Franconia route.

An extension to Dulles International Airport was planned for construction after 1980.

General Graham summarized:

In summary, Mr. Chairman, we have reached the point where with the continued support of the Congress this rapid transit can soon be a reality. We feel that the local governments have lived up to their responsibilities under the compact; the President has endorsed the transit objective as a part of his program to enhance the Capital City. We are ready to move ahead and we are here today to seek your assistance in the realization of that objective. [pages 1185-1189]

Chairman Proxmire, General Graham, and Chairman Babson discussed a comparison of the Washington area’s plans with those for the Bay Area Rapid Transit System (BART) in

California. Chairman Proxmire asked why the Federal Government was paying 10 percent of construction costs for BART line but almost half the cost of rail rapid transit in the Washington area. Babson replied:

The justification is that Congress has already recognized their obligation to the National Capital area. And if I may, a couple of weeks ago I was in Chicago meeting with the directors of the National Institute for Rapid Transit, and in speaking with the members [that] are representing Boston, San Francisco, Chicago, the whole Nation, all of North America, really, Toronto, every one of those gentlemen thought that Washington is in a different position and no one argues but that the Congress owes a special obligation to the National Capital area.

Chairman Proxmire understood that special obligation, but wondered if it equaled five times as much as for the rest of the country. Babson denied it was 5-to-1. "The urban mass transportation program which has been in being since 1964 provides for the same 2-to-1 Federal-local cost sharing as we provide for in our system." He also pointed out that BART and the Washington system were different. BART at that time was a single line into San Francisco. "We are trying to feed people into the downtown Washington area from 10 different termini on this system." Further, as General Graham added, WMATA planned to begin running trains as soon as a segment was available, while BART planned to open only after the entire line was completed.

Chairman Proxmire thought the estimated cost of \$2.5 billion "is probably very modest." He expected the system would cost "a lot more than that." General Graham assured him:

We feel it is a conservative estimate, sir, because we have cranked into it amounts for escalation for each year of construction and for contingencies, and our assumptions on that are higher than were used in San Francisco.

If WMATA held to that estimate, Chairman Proxmire said, "you deserve a medal." [pages 1190-1192]

General Graham recalled Deputy Director Hughes' recent testimony on the Nixon Administration's bill for financing the 97.7-mile system. The cost of the WMATA plan was a small part of the overall annual Federal public works expenditures because it would be stretched over 10 years at about \$200 million a year.

Chairman Proxmire, who was building a reputation as an enemy of government waste, replied:

I realize that. I voted against the . . . entire public works bill in each of the last 2 years. I was the only Senator who did, because I think it is so inflationary. I realize this is a small part of it, but the whole public works expenditure in this country is now at a level of over \$10 billion, the highest we have ever had, 10 times what it was in the depression. It is inflationary, and I think overall I am sure that you can justify certain public works, there is no question about it, and of course if I had the discretion I certainly would not eliminate all public works . . . .

I think you are making a strong case this morning. I am very impressed by the arguments you have given me. They are very helpful. I am not completely convinced, but I think you are making a strong case.

Babson pointed out that if the subway were not built, “We will have to build more freeways and more highways. The public works projects will go on perhaps in greater magnitude.”

Chairman Proxmire understood but said that if the subway funds were released, the area would have freeways and the subway:

Senator Proxmire. It is not a matter of if you do not break the subway loose you are going to have the highways. If you break the subway loose you have both at the same time.

Mr. Babson. Something has to happen though. If we do not have a subway system, something has got to happen – a freeway program anyhow, I believe. [pages 1195-1196]

Chairman Proxmire asked if WMATA was operating on the assumption that “the individual components of a unified system such as highways, buses, rapid transit, are mutually dependent one on the other and should be carefully coordinated during the planning and construction phase.” Babson agreed. “We have assumed construction of the freeway system in planning our rapid transit system, and we believe very strongly that there should be close coordination between all bodies of transportation in this region”:

Senator Proxmire. Well, I am told this is the position taken by the House Committee, by Mr. Natcher.

Mr. Babson. His position may be characterized that way, Mr. Chairman. [page 1197]

The conference committee on the Second Supplemental Appropriations Act, 1969, issued its report on July 8, with the District’s subway matching funds deleted. The House and Senate considered the conference report on July 9.

In the House, Representative Broyhill raised the subject. “This delay in starting the system is naturally of concern to everyone.” He agreed with the consensus that a balanced system of freeways and rail rapid transit was needed. The delay in freeway construction “has been absolutely ridiculous,” citing as an example the failure to complete I-66 and the Three Sisters Bridge to serve Dulles International Airport. The airport had been opened for 7 years but was “only being used to a fraction of its capacity while Washington National Airport increases in its use each year even after it has passed the point of being dangerously overcrowded.”

He discussed Section 23 of the Federal-Aid Highway Act of 1968. Despite the reluctance of members of the House Committee on Public Works to “get involved in the specific location and administrative details of the construction of highway projects,” they concluded that “further delay could not be tolerated.” They instructed the District to build certain freeways. “Amazingly, the District of Columbia City Council has placed itself above the Congress of the United States and the American people, and has completely ignored this mandate of Congress.” Therefore, Congress had “no choice but to insist that its will be carried out.”

Unfortunately, releasing the city's transit matching funds would give the appearance that Congress acquiesced in the District's obstruction. It would "encourage the District government to continue to defy the will of Congress and to continue to delay construction of these vitally needed highway projects."

Chairman Natcher had assured Representative Broyhill on many occasions that he would release the subway funds once the city began construction of the freeways required by the 1968 Act.

With that introduction, Chairman Natcher told his colleagues that he appreciated the attitude of Representatives Broyhill and Gude and other representatives from the surrounding jurisdictions "in regard to the freeway-rapid transit impasse that we are now confronted with." They agreed with him about the need for a balanced transportation system. "In order to meet the tremendous day-by-day growth of traffic, the highway program must be carried out along with the presently authorized rapid rail transit system."

The freeway system, he said, had been set up in late 1950's after a 5-year study. He was concerned about the increasing cost of the system, citing the East Leg Freeway. In 1961, he was told it would cost \$26.1 million. Now the estimate was \$78 million. "That gives you an example of what this impasse has done in regard to the freeway system here in the District of Columbia."

He recalled the history of the impasse, citing the House's vote in 1966 to withhold District matching funds for the subway. A few weeks later, NCPC voted 6 to 5 in support of starting the freeway system. Chairman Natcher returned to the House and restored the funds. As was well known, a few weeks later, NCPC "was called back into session and changed their vote, and at that time they stopped the freeway system":

In order that there may not be any misunderstanding, we want the House to know that as soon as the freeway program gets under way beyond recall, then we will come back to the House and recommend that construction funds for rapid transit be approved.

He cited Section 23 of the 1968 Act. Despite all the effort that went into the provision and the explanation in the House report, "we find that the District Building . . . completely ignored it."

He complimented President Nixon for his statement on the impasse. "Before reading it, I want you to know that this is the first time in 10 long years that any President has had the nerve and the courage to state the facts." He then read the paragraph in which President Nixon stated that a subway would not relieve local governments of the duty to modernize and improve their highway systems. The President had cited "hopeful signs" that a fair and effective settlement was possible in the near future. "It is in the interest of all those involved . . . that this be done." Chairman Natcher said he agreed "with every word of this statement that I have just read."

He explained how the Senate had included the matching funds in its supplemental bill, but the House conferees had removed the funds. Further, the District had requested \$21,586,000 in matching funds for FY 1970 for construction of the rail rapid transit system:

I want the gentleman from Virginia and the gentleman from Maryland to note that as soon as the freeway system is started and underway according to the Highway Act of 1968, we will come to the House and recommend funds for the authorized rapid rail transit system.

He referred to the pending bill on Federal funding for a 97-mile rail rapid transit system. He wanted Representatives Broyhill and Gude to know “the impasse with which we are confronted is certainly not helping that bill any.”

After Chairman Natcher concluded his statement, Representative Davis rose to agree with him. As the ranking Republican on Chairman Natcher’s subcommittee and a conferee on the supplemental bill, he assured his colleagues that, “As soon as there is some assurance that we are to have a balanced transportation system, the gentleman from Kentucky and I are committed to providing the initial funds that were included in the supplemental requests, and the followup funds that are provided in the 1970 budget.” This was a reasonable position, he said, especially in view of the mandate that Section 23 of the 1968 Act placed on District officials.

Representative Gude agreed with Chairman Natcher that “the District government has refused to obey the law.” Nevertheless, delaying the start of Metro construction was costing \$250,000 every day. “I do not believe it is in the best interest to hold one part of our transportation system hostage to the other.” He just wanted “to express our deep concern and regret over this situation.”

After Representative Broyhill restated his concern that appropriating the matching funds would only encourage further delay on the freeways, Representative Nelsen concluded the discussion:

I speak because of the fact that I did have a hand in the Subway System Act of the District of Columbia and do feel a responsibility with reference thereto. However, I also want to say that the gentleman’s recommendation is fair and in my opinion it is one that we can follow. [Conference Report on H.R. 11400, Second Supplemental Appropriation, 1969, *Congressional Record-House*, July 9, 1969, pages 18793-18795]

The House approved the conference report, 348 to 49.

When Senator Byrd brought the conference report to the Senate floor, he briefly described its dollar amounts, but then said, “Perhaps I should comment briefly on the rapid transit money which the Senate had inserted in the bill.” As for why the funding was not in the conference report, he referred to the obstacles to freeway construction since 1962 and the refusal of the House to appropriate the District matching funds for the subway. He cited the 1966 incident in which NCPD approved the freeways, the House relented and released the subway funds, and then watched NCPD reverse itself a few weeks later. Further, despite Section 23 of the 1968 Act, this direction “has been stalemated through actions of the National Capital Planning Commission and the District of Columbia City Council as well as the Department of Transportation.”

The House District appropriations subcommittee had shown that it would honor its commitment in 1966 after “a slight breakthrough,” and could be counted on to do so again:

I am definitely of the opinion, from my meetings with the conferees on this bill and from my understanding of the current impasse that has developed, that there has been no change on the part of the House committee in respect to this matter. The Senate conferees, therefore, were forced to yield and the moneys were stricken.” [Second Supplemental Appropriations Bill, 1969-Conference Report, *Congressional Record-Senate*, July 9, 1969, page 18926]

The Senate did not discuss the matter further before approving the conference report without a recorded vote. President Nixon approved the \$4.3 billion Second Supplemental Appropriations Act, 1969, on July 22, 1969 (P.L. 91-47).

The *Post* report on the House and Senate action stated that neither the decision to drop the matching funds nor the warnings issued on the House floor “were surprises, but they left the next move clearly to the city.” [Asher, Robert L., “Hill Refuses Subway Funds,” *The Washington Post and Times Herald*, July 10, 1969]

### **Regrouping After a Loss**

On July 8, the Senate considered the National Capital Transportation Act of 1969 as reported by the Committee on the District of Columbia on July 3. It amended the 1965 Act to expand the rail rapid transit system to 97.7 miles as approved by WMATA and authorize a Federal contribution for the plan of up to \$1,147,044,000. The measure included an amendment by Senator Spong authorizing \$150,000 for a study of extending rapid transit to Dulles International Airport. The authorized funds could not be used until appropriated by Congress. Without debate or a recorded vote, the Senate approved the 1969 Act. [The National Capital Transportation Act of 1969, *Congressional Record-Senate*, July 8, 1969, pages 18545-18548]

Despite this show of support for the larger Metro system, the congressional action on July 9 to approve the supplemental appropriations act with the District matching funds prompted debate, public and private, in the city council and WMATA. The issue had barely rated any concern in Congress, and even local supporters of the freeways and subway agreed with Chairman Natcher’s stance in view of the city’s refusal to implement Section 23 of the Federal-Aid Highway Act of 1968. Any path to a reversal of the congressional action left officials with stark choices they would rather not make.

WMATA’s board of directors split on the freeway issue that Chairman Babson had supported in his testimony before the Senate subcommittee on July 9. He accused Chairman Hahn of acting in an “immoral” way that encouraged anti-freeway factions “to riot” if the city built the freeways and bridge that Congress demanded.

Gleason, the former board chairman, thought WMATA should stay out of the freeway fight and instead fight hard for the subway funds. He and Babson engaged in a brief dialogue summarized by the *Star*:

James Gleason of Montgomery County questioned whether Babson should have given the impression that he spoke for the entire board in testifying in support of the House position on freeway construction.

“You want to get your name in the paper . . . . Where do you get your information about Hahn?” Gleason asked Babson.

“I read it in the press somewhere,” Babson replied.

Gleason recommended that the board not take a formal position on the freeways. He said that Congress was acting in “an immoral” way by withholding the District matching funds. Babson replied that the city council was just as “immoral” for maintaining a selfish view on freeways to the “detriment of the greatest number of people.”

Board member Nicholas A. Colassanto of the Alexandria City Council, said, “This one item could kill the whole [transit] program.” He wondered if the District city council understood that if the rail rapid transit system were not built, the city would need more freeways. He saw only one alternative to the subway: “more highways, more and more highways.”

Councilwoman Shackleton, a member of the board, suggested that the board not take action pending a possible change in the city council’s position:

Mrs. Shackleton said it would “be immoral” for the City Council to change the freeway plan without prior action from the National Capital Planning Commission and a series of public hearings.

She hinted the council may follow the full course of action, if changing the freeway plan is the only way to obtain the subway.

“If the planning commission does not act first and public hearings are not held before the council takes action, we might have . . . a law suit,” she explained.

Members of the city council were wrestling with the same issue, as Jack Eisen reported on July 11:

Two key City Council members, seeking a way to break Washington’s stiffening highway-subway deadlock, opened the door yesterday to reconsideration of the controversial Three Sisters Bridge.

The two – Polly Shackleton [sic], long an implacable foe of the city’s freeway program, and the Rev. Jerry A. Moore Jr., – suggested that the National Capital Planning Commission might take a new look at Three Sisters.

Although they did not endorse the Three Sisters Bridge, they could seek support from Councilman Yeldell for a new look. He would go along with a new study “if there is some new evidence to support the need.”

The Reverend Moore said, "I would urge the Planning Commission to take a new look at the highway situation, especially in respect to the Three Sisters Bridge, to see what could be done about reaching acceptable plans . . . ."

NCPC Chairman Hammer dismissed the idea that NCPC would revisit whether to build the bridge. He argued that the issue was a political one, not a planning decision:

"If we do get a final decision [from Congress] that we are not going to get the subway built, then that would be a new planning situation," Hammer said. "We might then consider the need for more highways. Until then, I would think our recommendation [against the bridge] stands." [Green, Stephen, "Transit Authority Split On Freeways Stance," *The Evening Star*, July 10, 1969; Eisen, Jack, "2 Propose New Study Of Three Sisters Span," *The Washington Post and Times Herald*, July 11, 1969]

### **Imminent Compromise**

The *Post* reported on July 12 that a compromise was imminent. The key was to begin construction of the Three Sisters Bridge and launch the study of the North-Central Freeway that the 1968 Act had mandated:

City Council Chairman Gilbert Hahn Jr., a Nixon appointee, is known to be under White House pressure not to jeopardize the subway system by prolonging the Council's opposition to the new Potomac crossing . . . .

Capitol Hill sources have indicated Congress would be content with an agreement by the city to make the new study [of the North-Central Freeway].

A possible solution could come soon, they said, if the city lets construction begin on the bridge. If these steps are taken soon, there would be time to allow the subway funding in the budget now before Congress.

Councilwoman Shackleton released a statement to clarify her position:

The only Council member who probably will refuse any agreement that includes the bridge is Polly Shackleton, whose Georgetown constituency lies in its path. Mrs. Shackleton reaffirmed her position yesterday in a statement of "unalterable" opposition to the bridge. [Moore, Irna, and Asher, Robert L., "Imminent Compromise Seen In City Transit Controversy," *The Washington Post and Times Herald*, July 12, 1969]

With the city council scheduled to consider the issue during a meeting on Thursday, July 17, the *Star's* Paul Delaney reported that the meeting would likely result "in what appears to be the first major crack in the council's solid anti-freeway stance." Based on "informed sources," the meeting was going to be "the beginning of a process for the council to accept a compromise 'and get things rolling.'" By agreeing to begin construction of the Three Sisters Bridge and study the North-Central Freeway, the city council would be accepting the requirements of Section 23 of the 1968 Act:

The compromise also is the same one that was under discussion by Deputy Mayor Thomas W. Fletcher and members of the House Public Works Committee earlier this year. An agreement was scuttled by strong complaints from city council members that they were being undermined and by pressure from anti-freeway forces.

Although Delaney's sources saw a role for NCPC in the decisions, the city council was "the key to settlement, and that the commission most likely would go along with any council recommendation."

Chairman Hahn and Councilwoman Shackleton remained unalterably opposed to a compromise. However, the source said, "We won't need them in the end anyway. We figure we have a 7-1 vote for some kind of compromise and Polly and the chairman can take a walk during the vote." The source speculated, "I figure the chairman will change his mind and vote for a compromise because he will see some public sentiment for it; he realizes the subway must move and if there hasn't been pressure from the White House, there most likely will be."

In contrast, Chairman Hahn said he had "not at all been under any pressure from the White House to change my position and I've no intention of changing my position as long as I think the community backs me in opposition to the Three Sisters Bridge and North-Central Freeway."

Councilman Tucker favored a review of the December 1968 plan, saying "nothing should be closed to review." He added, "This doesn't mean we'll change our minds. But the logjam must be broken; we've got to have the subway." He had hoped the "initial action" would come from Congress. "But the council can't duck its responsibility. Nothing should be closed to a second look":

The members of the council agonize over it. I've got to be sure in my own mind I'm doing the right thing for the people. I am as firm in my conviction today as I was a year ago that we don't need the Three Sisters. But I also am firm that we need the subway.

An unnamed "official of the city administration" said news of a possible compromise was "the most positive thing I've heard all week." He continued, "Their freeway stance has had the government in a very bad position. The budget is up on the Hill, the revenue package already is in danger and the whole legislative program is jeopardized. I'm glad to hear that something is about to be done." [Delaney, Paul, "Shift Indicated In Council's Freeway Stand," *The Sunday Star*, July 13, 1969]

The council members, at their informal weekly meeting on Monday decided to leave the freeway issue off the agenda to avoid confrontation with freeway foes. Councilman Moore had been slated to present the compromise during the public session, with Vice Chairman Tucker set to push the issue. Public comments were to be heard, including from ECTC's Booker who was allotted 15 minutes. "We just wanted to give the council some backbone," he told Delaney. "We heard they were about to succumb to pressure."

On July 15, the city council met in public session to discuss issues unrelated to the freeway battle. However, ECTC and 75 supporters arrived at the start of the session and demanded to

speak. Refusing to hear the protesters, the council members left the chamber to cries of “dictator” and “scaredy-cat.” Booker staged a rump meeting, warning against “congressional blackmail.” They displayed signs with such warnings as “Don’t Sell Out” and “Don’t Be a Judas.” With Colonel Starobin ordering them to leave the chamber and police standing by, ECTC left after about an hour. Booker told reporters, “We made our point so all this bringing in of police doesn’t mean anything.” As they left the chamber, the protesters chanted, “No More Freeways.” [Moore, Irna, “Freeway Foes Seize Council Room,” *The Washington Post and Times Herald*, July 16, 1969; Basham, William, “D.C. Council Ousts Freeway Militants,” *The Evening Star*, July 16, 1969]

By Wednesday, July 16, council members were shifting their views behind the scenes. The compromise plan that had 7-2 support over the weekend had lost some support. A District Building source told the *Star*’s Paul Delaney:

Things are getting hot and the showdown might not come. But I figure the vote is more like 4-4 now, with the successor to Councilman William S. Thompson (who has been nominated for a judgeship) holding the key vote. And his appointment might hinge on his freeway position.

Chairman Hahn and Councilwoman Shackleton were still opposed. Members Haywood and Anderson were now opposed as well. A source said that Councilmen Dougherty, Moore, Tucker, and Yeldell supported the compromise. However, the source added:

But it’s getting hectic in the fight for votes. The pressure is mounting and things could get rough. We all will have a much better idea after the meeting Thursday. [Delaney Paul, “Council Hardening On Freeway Issue,” Interpretation, *The Evening Star*, July 16, 1969]

WMATA invited the city council members to a luncheon on July 17 to discuss the impasse. Only the Reverend Moore, Polly Shackleton, and Joseph Yeldell, as members of the WMATA board, accepted the invitation. Chairman Hahn pointedly refused to attend, while the other members had other scheduled activities. The *Star* reported that “authority staff and suburban members were obviously miffed at the cold rebuff by the District.”

Chairman Babson had hoped to impress the city council members with the urgency of finding a solution to the impasse, but the three WMATA board members from the city council were well aware of the precariousness of the situation and needed no persuasion on the rail rapid transit plan. Shackleton told reporters after the luncheon that there were “a great many questions still to be answered” before she could accept the compromise. Yeldell said “all of us would like to see this problem solved as soon as possible.” He wanted assurances that Chairman Natcher would release the funds if the city council approved the compromise but it was blocked in court:

Then where would we be? This is a political question for us. My own feeling is that if the overall damage to the city is greater by not acceding on the freeways, then I’d be inclined to vote for them.

Several unnamed members of the city council told reporters that Chairman Hahn's actions were crucial to the "agonizing reappraisal" of the group's stance on freeways. The *Post* reported, "They said they were not prepared to back off on their own while Hahn stood pat."

Babson revealed after the meeting that he had written to President Nixon the week before to request his intervention. As a result of the letter, WMATA officials had met with Moynihan. Babson would not reveal what happened at the meeting but said he was hopeful the impasse "might break in the next few days or a week."

Meanwhile, Representative Broyhill increased pressure on the city council by saying he would ask the District Committee to amend the pending District revenue bill to prevent the new taxes from going into effect until the city complied with Section 23 of the Federal-Aid Highway Act of 1968. He said Chairman McMillan and other committee members were "very concerned that a quasi-governmental body was totally ignoring the direct instructions of Congress." [Asher, Robert L, and Boldt, David R., "Added Pressures Hit City Roadblock," *The Washington Post and Times Herald*, July 18, 1969; Wright, Christopher, "Babson Asks Nixon to Held Break Deadlock on Subway," *The Evening Star*, July 18, 1969]

While the city council held off public action on the freeway compromise, the *Star* lamented the city's "stubborn and senseless defiance of the law requiring a start on the city's freeway program." WMATA Chairman Babson, the editors said, had disclosed his contacts with the White House "in utter frustration," while city council members, who had seemed to be working to find a solution, "apparently were gripped by a new attack of doubts."

The editors cited Councilman Yeldell's comment that some council members were worried that Chairman Natcher would not honor his pledge if anti-freeway groups went to court to block construction. Lawsuits were quite likely and would have to be fought on their merits. "The notion that the council is entitled to – and might receive – some kind of further 'assurances' from Congress on the subject, however, is not only politically naïve, it is thoroughly unwarranted."

The editors referred to Chairman Natcher's statement on July 9 during debate on the Second Supplemental Appropriation Act, 1969. He had said that as soon as the freeway program was "underway beyond recall," he would recommend release of the District matching funds for rail rapid transit. The editors asked, "What flatter pledge than that does the council think it can get?"

What was clearer than ever was "that Nixon must step in." Secretary Volpe, Mayor Washington and NCPC Chairman Hammer were "all standing around, awaiting a move from the council. And the wait thus far has been to no avail." ["Nixon and the Subway," *The Sunday Star*, July 20, 1969]

As for the inevitability of lawsuits, Leslie Logan of Arlingtonians for the Preservation of the Palisades made clear on July 21 that if the city council approved the Three Sisters Bridge, the group would file a suit. He did not think the city council would change its position, but if so, it would have to go through the lengthy "dual hearing" procedure before proceeding to construction. Logan assured reporters that in that event, his group and others opposed to the bridge would show up to testify.

Arlington County threatened to revive its lawsuit based on President Roosevelt's 1940 agreement governing the use of the Spout Run Parkway, which had not been considered after the U.S. Court of Appeals' decision blocking the bridge and three other freeways.

ECTC's Booker did not think the city council would approve the bridge, but he pointed out that the group had several volunteer attorneys ready to file suit if the bridge were approved. [Flor, Lee, "Freeway Foes Threaten Suit To Bar Bridge," *The Evening Star*, July 21, 1969]

The city council held a closed 3-hour meeting on July 21, in which all the council members agreed the council would approve the Three Sisters Bridge, 6 to 2, during an open meeting on July 22 in return for the subway funds. Councilman Yeldell explained that approval of the bridge would not only prompt Chairman Natcher to release the subway funds, but would comply with an agreement reached with HUD on Federal funds for housing. As spelled out in a letter from Secretary Romney, HUD would speed up Federal approval of rehabilitation projects and work to provide more funds to the National Capital Housing Authority. "It was," one unidentified council member said, "just an attempt to sweeten the pot." Despite this added incentive, Councilwoman Shackleton and Councilman Anderson said they would oppose the bridge no matter what.

With a public session scheduled for the following day to vote on the plan, the *Star* reported that, "Freeway opponents were reported to have conducted an overnight telephone campaign among council members, urging them not to give in to congressional road construction demands."

On July 22, nearly 200 people were in the council chamber waiting for the meeting to begin at 9:30 a.m. However, during another closed session, Yeldell said that he would not vote for the plan "without a clear pledge that the blackmail will be ended forever." Several members had decided overnight to urge Chairman Hahn to meet with Chairman Natcher to secure assurance that he would release the funds. Hahn, a Republican, asked Democrat Moore to undertake the meeting with the Democratic Chairman Natcher.

With the votes for the plan disappearing, Chairman Hahn concluded that "there was no point in going ahead" with the public meeting. He later told reporters, he "thought we could come close to unlocking the impasse and possibly take a vote. I sensed today that the mood of the majority was not to vote." Another unidentified council member remarked:

It's like a rained-out ball game. We thought we had all the pieces together, but we found this morning that one piece was still missing.

When a secretary informed the crowd that the public meeting had been canceled, she was greeted by boos and shouts for "Hahn to come out here and tell us that."

Chairman Hahn said he had talked with Secretary Volpe about the situation on July 17 in general terms, adding that he had secondhand information that President Nixon wanted the impasse broken before he leaves on July 23 for a foreign trip. The *Star* reported:

Transportation officials said the council has no choice but to yield if the subway is to be built since Congress holds all the cards in terms of power over appropriations.

Secretary Volpe told reporters, "I've been working on this all weekend both from here and Cape Cod." [Green, Stephen, and Basham, William, "D.C. Council Calls Off Subway-Roads Session," *The Evening Star*, July 22, 1969; Moore, Irna, and Eisen, Jack, "Bridge Vote Tied To Metro Funds," *The Washington Post and Times Herald*, July 23, 1969]

As requested, the Reverend Moore, chairman of the Transportation Committee, called Chairman Natcher later in the day. The *Star* reported:

Moore reported that Natcher did say his committee would approve the subway money if the council approved the bridge.

But when the councilman asked Natcher what would happen if the anti-freeway organizations filed suit, the congressman said he would delay subway money, pending the court settlement of the suit.

Although this response "was widely interpreted as dashing hopes for a settlement," Chairman Hahn asked Councilman Moore to talk further with Chairman Natcher. "I hope that Councilman Moore possibly misunderstood Congressman Natcher, after all of the implied promises that the subway money would be released. I'm continuing to try to find a way to break the impasse."

He was concerned by efforts to tie District tax revenue and the Federal payment to the District to the freeway issue. "If that's correct . . . each year's appropriation is going to be used to force something on the city that it doesn't want."

In "a slim chance" to secure the subway funds, "influential members of Congress appeared to be making moves to try to get subway construction money committed if the City Council approved the Three Sisters Island Bridge, even if anti-freeway forces do file a suit." Representative Brock Adams (D-Wa.), a leading liberal Democrat, supported the idea because the city council has no control over the anti-freeway groups. At the same time, he supported Representative Broyhill's effort to hold up District revenue and the Federal payment unless the city begins construction of the bridge. The *Star* reported, "Adams said he would agree to Broyhill's plan only if there was a commitment that subway construction money would not be held up under any circumstances." ["Natcher Shift Dims Chance for Subway," *The Evening Star*, July 23, 1969]

Editors at the *Star* put their reaction this way:

The City Council's latest flip-flop in the District transportation controversy, fed by some absurd new outburst of rhetoric, has seemed to harden further a political deadlock which desperately needs to be broken.

The rhetoric was from The Reverend Channing E. Phillips, the city's Democratic National Committeeman. He had warned that if the city bowed to "threats" and "blackmail" from Congress, the threats would never end. The city would be better off foregoing the subway rather than yielding on the freeways. The editors said that if the city council thought it could win a power struggle with the Congress, its members might want to recall that, "Congress has not yielded its constitutional authority over the Nation's Capital, nor is it apt, ever, to do so

completely.” In this case, the city’s main champion, the Nixon Administration, “happens to be wholly in Congress’ corner”:

The point is not, in other words, that the City Council should capitulate because Congress has said it must, but because Congress in this instance happens to be right. Political courage, in a valid cause, is a most admirable trait in any public official. What the council is displaying in this case, however, is not courage, but irresponsibility. [“Distorted Issues,” *The Evening Star*, July 23, 1969]

Over the next few days, anti-freeway groups renewed their pledges to file suit if the city approved the Three Sisters Bridge. A letter from ETCT and 10 other organizations said the groups were “shocked that Chairman Hahn and Deputy Chairman Sterling Tucker would propose such a plan and urge other city council members to support it on the vague promises of HUD Secretary Romney to provide housing assistance” for those displaced by the North-Central Freeway.” The freeway, they said, would “slice across the city in a greatly destructive arc” that would destroy thousands of homes of Negroes and whites. [“Civic Groups Plan Suite To Block 3 Sisters Span,” *The Evening Star*, July 24, 1969]

On Saturday, July 26, ECTC and a crowd of about 50 held a “victory celebration” outside one of the 69 homes in the Brookland area that had been condemned for the North-Central Freeway. The homes were, Booker said, “symbols of the continuous and unrelenting struggle for the rights of black people and anybody else in the country to own homes.” He urged “no slacking off in this struggle” until the freeway is defeated.

Mayor Washington arrived to address the group. He said, “You’ve got to have the concern of the people at heart.” As for the freeway-subway impasse, he said, “You know how much power I have, and it isn’t much. You know I can’t always deliver everything, so have to go to the people sometimes.” He looked through one of the two houses at the corner of 10<sup>th</sup> and Franklin Streets, NE., that had been renovated; three others were scheduled to be completed in about 3 weeks. He told the crowd that work on the remaining houses would “move forward far faster than the restoration thus far.”

Colonel Starobin, accompanying Mayor Washington, said the first five units had proceeded slowly because they were a “pilot project.” The city had encountered more problems than anticipated in bringing the homes up to current standards. As a result, the work would cost “substantially more” than the initial estimates of \$2,500 to \$3,000 per unit. “We hope to put the rehabilitation of the rest of the buildings up for bid by the end of August.” [Fiske, Phineas, “Happiness Is No Freeway,” *The Washington Post and Times Herald*, July 27, 1969; Holmberg, David, “Washington Attends Anti-Freeway Fete,” *The Sunday Star*, July 27, 1969]

On July 28, Booker held a press conference at the District Building to demand the firing of Chairman Hahn based on two letters that ECTC had obtained. One was a July 16 letter from John F. Grimm, vice president in charge of traffic for O’Boyle Tank Lines in Bethesda. The letter stated that he and other members of the Washington business community had met with Chairman Hahn to express their support for the freeway construction mandated by the Federal-Aid Highway Act of 1968. They felt that city officials were not being exposed “to what we feel

is the overwhelming popular sentiment in favor of construction of the freeways, including the Three Sisters Bridge and North Central Freeway.”

The meeting, Grimm wrote, was “a frank and open exchange, beneficial to all.” Grimm summarized the most important aspect:

Those in our city government who are opposed to the construction of the Three Sisters Bridge and the North Central Freeway are opposed, we gather, not on the merits of these projects, but rather because of the possible repercussions of a public announcement of support for their construction.

Because they feared such an announcement would “provoke an adverse reaction in the inner city,” their opposition seemed based on avoiding “the possibility of civil disturbances,” such as the riots following the assassination of Dr. Martin Luther King, Jr. Some of the businessmen considered this fear an example of what newly elected Representative Hogan had called “government by intimidation.” Grimm wrote, “the possibility of such a reaction, even though we feel it to be remote, should not be overlooked.”

The great majority of inner city residents had “no appreciation for the economic fact that the freeway program is funded through the Highway Trust Fund.” The revenue cannot be used for the “quite reasonable desires for better schools, public housing, recreation areas, and so forth” that residents wanted. Although the funds could not be used for these nonhighway purposes, the stalemate on the freeways had stymied the Metro transit system:

It seems to us that the solution to this problem is the simultaneous announcement, by both the administration and the city government, of a comprehensive plan for construction of public housing, new schools, and freeways.

The plan could use air rights for some of the desired facilities.

The announcement would allow the city council to approve the Three Sisters Bridge and North-Central Freeway “by saying that by holding out until now on these projects, the city has been rewarded with an exemplary public housing program, etc., and not merely the Metro System alone.”

ECTC also released a July 18 letter from an unnamed assistant in Grimm’s office. This letter, intended for recipients of copies of the previous letter, stated that Grimm and Chairman Hahn “have asked that the letter to President Nixon concerning the freeways you received a copy of be kept confidential, especially with regard to the press since the plan outlined would not be effective if it were public knowledge.”

Based on the two letters, Booker announced that he had written to President Nixon to demand the firing of Chairman Hahn for “selling out the city” to “selfish business interests and political hacks.” He also called for an end to “congressional blackmail by releasing the subway funds immediately.”

Very quickly, Hahn and Grimm denied ECTC's characterization of the letters. Chairman Hahn, interviewed while Booker's press conference was underway, said, "I met with these men who disagreed with my position, just as I have met with the ECTC and others who agree with my position." When he saw Grimm's letter, "I called to tell him that it was misleading in describing our meeting but I never asked Mr. Grimm or anybody else to suppress this letter." The public was aware of the city council's efforts "to find a way out of the impasse and to get the subway started," he said, adding that his position "remains unchanged and unaffected by these letters."

Grimm said:

The ideas expressed in the letter were mine, not Mr. Hahn's. If every meeting is characterized as a conspiracy we're all in trouble. We met with Mr. Hahn because we felt there was profreeway sentiment that was being totally ignored.

He took issue with ECTC's tactics, saying that when a pro-freeway voice speaks out, "They use tactics, usually the threat of physical intimidation . . . people don't want to run the gantlet."

Learning of ECTC's press conference, General Graham commented, "I think this is the week . . . we're moving toward a break . . . the council is green and inexperienced, but must realize that Congress holds power over appropriations. It's just a question of when it gets through to them." [Basham, William, "Freeway Foes Accuse Hahn of 'Selling Out,'" *The Evening Star*, July 28, 1969; "Hahn Resignation Demanded By Opponents of Freeway," *The Washington Post and Times Herald*, July 29, 1969; "'Deal' on Freeways Is Denied by Hahn," *The Evening Star*, July 29, 1969]

On July 30, the Federal City Council released a poll conducted by the Oliver Quayle polling organization of New York in February. Contrary to the claims of ECTC and other freeway opponents, Quayle found that Washington residents favored the Three Sisters Bridge and the North-Central Freeway. A summary in the *Star* explained:

Sixty-six percent of Washington Negroes and 65 percent of the city's white population would take a road system that includes the Three Sisters Bridge and the North Central Freeway, if given a choice between the 1968 Highway Act that includes them and the later District City Council plan that deleted them, the poll results said.

Given a choice between new freeways and no freeways at all, 60 percent of the Negroes and 54 percent of the whites would prefer to see new freeway construction, according to the poll results . . . .

Asked to rate needed transportation systems, 52 percent gave top priority to a rail rapid transit system, 25 percent gave priority to more freeways and 23 percent gave priority to more downtown parking facilities.

Twenty-six percent of the Negroes rated freeways more urgently needed, compared with 21 percent of the white[s].

“When asked what they had heard about new freeways, most respondents made neutral comments. Unfavorable reactions, however, came from more whites than Negroes,” the poll results said, adding that “opinion has not polarized on this question.”

Emphasizing that the freeway question is not a racial issue, the poll report said “residents most strongly in favor of new freeways tend to be middle-class working people . . . and are inclined to be men more than women . . . . Residents who most strongly oppose new freeways tend to come from either the upper or lower segments . . . the older, retired people, small business owners or top level businessmen.”

Also, the poll showed that 89 percent of the respondents were dissatisfied with downtown parking facilities, but “the argument that new freeways will only aggravate this situation is not a major motivating factor” to freeway opposition.

A spokesman made clear that the Federal City Council wanted the freeways approved to secure congressional release of funds for the subway. Federal City Council members did not think the city council would believe the anti-freeway “platitudes,” but the spokesman added, “It would be irresponsible for the Federal City Council not to release this now because we must get the subway built.”

Representative Gude said the poll would “discredit those noisy zealots who have obstructed transportation progress in the Nation’s Capital and who are not truly representative.”

One of those zealots, ECTC’s Sammie Abbott, dismissed release of the poll by the pro-freeway Federal City Council because it was “self-serving and the questions are nebulous.”

Chairman Hahn also released the results of a poll he had commissioned. Data Unlimited conducted the poll on July 5 after Chairman Natcher had stated again that he would block the subway funds. The poll of 300 voters found that 59.6 percent who had an opinion favored the Three Sisters Bridge, but 2 out of 5 respondents had no opinion. Of those who responded, 55.6 percent opposed the North-Central Freeway. Overall, the poll found that:

- Some 34 percent favor the bridge, 23 percent opposed it, and 43 percent were undecided.
- Only 31.7 percent favored the freeway, 40 percent were opposed and 28.3 percent were undecided.
- Nearly 80 percent favored a subway, with 8 percent opposed and 12 percent undecided.
- Some 47.7 percent backed a city council compromise with Congress if it would obtain subway building funds, with 34.2 percent opposed and 18 percent undecided.
- Leaving out the 40 percent who were undecided total, 58.1 percent of respondents favored compromise.

Chairman Hahn said the poll was one of the ways he was attempting to see where “people stood on this question.” [Green, Stephen, “Poll Favors ’68 Freeways Plan,” *The Evening Star*, July 30, 1969; Green, Stephen, “Span Back, Freeway Opposed in Hahn Poll,” *The Evening Star*, July 31, 1969; Eisen, Jack, “D.C. Poll Shows Roads Support,” *The Washington Post and Times Herald*, July 31, 1969]

In response to the polls, Chairman Terris of the District Democratic Central Committee held a press conference to call for a referendum to settle the freeway dispute. If freeway supporters thought the Quayle poll was accurate, they should not hesitate to solicit the voters' opinion. (He did not mention the Hahn poll.) He suggested that the referendum could be voted on in November during the District Board of Education election. ECTC endorsed the idea. [Green, Stephen, "Referendum on Freeways By D.C. Voters Proposed," *The Evening Star*, August 1, 1969]

### **Portrait of Natcher**

The impasse prompted Jack Eisen to profile Chairman Natcher, the 59-year old resident of Bowling Green, Kentucky:

He is a commanding figure. About six feet tall, slender, with sharp features and piercing eyes, he parts his wavy, gray-streaked hair precisely down the middle. Always regarded as something of a spiffy dresser, he wears conservative suits and bar-type collar clasp . . . .

When home, Natcher will range widely, usually driving alone in his own car, across the rolling green hills of the Second Congressional District, past shanties and modest farm homes . . . .

In Washington, where his rise on the House seniority ladder has made him into one of the most powerful men – perhaps the most powerful of all – in municipal affairs, he is rarely seen off Capitol Hill . . . . He works evenings, Saturdays, sometimes even Sundays, and never goes to cocktail parties or to other entertainments . . . .

A nonsmoker and a teetotaler from a district that grows some of the best tobacco and distills some of the most mellow bourbon whiskey in the land, Natcher is known to have but one addiction: peppermints.

His stand on the city's freeways "had brought down upon him the wrath of those who see subways and freeways as an either/or proposition." As for those who hope he would relent, those who "know the man, who have watched him at work, insist he is not the kind to change his mind – especially since he has voiced his warning on the subway funds year by year since 1962.

Some highway critics assume his position is based on links to the "highway lobby":

They suggest close connections, perhaps campaign contributions.

But Natcher, who routinely wins elections by margins of 2 to 1 (his last one was 3 to 2 in the face of a Nixon sweep of Kentucky and the election of a Republican governor), has reported no contributions received and nominal campaign expenses.

A check indicates no apparent ties with any outside group. He even voted against the Interstate Highway Act in 1955.

Eisen thought Chairman Natcher's personal reasons ran deep:

Natcher, his friends say, has a deep reverence for Congress as an institution, an emotion stronger than whatever political philosophy he may espouse.

If Congress gives the District of Columbia a mandate, "the city government has no choice but to carry it out."

He also believed in "old-fashioned log rolling: you do something for me and I'll return the favor." If he wanted projects from the Public Works Committee in his district, he would support what the Public Works Committee wanted, and that was the District freeways. [Eisen, Jack, "Rep. Natcher: Policeman of D.C. Freeways," *The Washington Post and Times Herald*, July 20, 1969]

### **BREAKTHROUGH!**

In a News Analysis on Sunday, August 3, Eisen and Robert L. Asher described the freeway-subway deadlock as "at a standstill with neither Congress nor the City Council willing to make a new move."

Mutual distrust reflected a breakdown in communication. The city council was "unconvinced that an agreement to build the Three Sisters Bridge would definitely produce funds for the subway system." Congress, meanwhile, insisted that the city implement Section 23 of the Federal-Aid Highway Act of 1968.

After the contact with Councilman Moore, friends and associates of Chairman Natcher "reported that he feels he has been misinterpreted – and some bluntly relayed this word to the Council":

According to them, Natcher is just suspicious of the Council's follow-through on any agreement. He believes some Council members might vote for the bridge to get the subway money but then covertly encourage any ensuing legal challenge.

He is said to want a firm assurance that Mayor Walter E. Washington and the Council, once committed to the road program, will act decisively to beat down the opposition.

Chairman Natcher "remained publicly silent," as always.

Mayor Washington "has stayed aloof from the infighting," as had Deputy Mayor Fletcher, whose efforts to find a compromise early in 1969 were not well received. Further, Secretary Volpe had "backed away after his intervention proved fruitless."

At the same time, Congress, according to a Senate source, would "have no patience with another lawsuit." Members could override any court decision, as Congress did in the 1968 Act.

Moreover, key lawmakers said that Chairman Natcher had no interest in negotiating with the city council "since few in Congress would acknowledge any hint that the Congress and the Council

are equals.” Congress had spoken, and the city should comply. An unnamed House member told Eisen, “Dickering with the City Council leaves me cold.”

Nevertheless, anti-freeway, pro-subway activists “continue to hammer at the Council not to give in to ‘blackmail’ or unilateral control of the city by Congress. “They insist that the subway is bound to be built eventually if the city continues to hold out.”

WMATA did not share this view; its “frustrated officials . . . warn that 10 years of hard work that has brought the subway to the verge of construction will soon be lost and cannot easily be recouped.” [Eisen, “Trading a Bridge for a Subway: Mistrust Runs High,” News Analysis, *The Washington Post and Times Herald*, August 3, 1969]

On August 6, pressure on the city council increased when the House District Committee reported a revenue package that adopted an amendment by Representative Broyhill, with the support of Representative Adams, delaying release of the Federal payment to the city until it complied with Section 23 of the Federal-Aid Highway Act of 1968. In view of the city council’s approval of the Major Thoroughfare Plan in December 1968, this amendment meant the city would have to construct the Three Sisters Bridge to get the Federal payment. According to Representative Adams, the provision was to be a “trigger mechanism” to break the freeway-subway impasse and allow Chairman Natcher to release the subway funds.

The bill called for additional revenue totaling \$39.7 million, bringing the total to \$105 million, about \$30 million under the city’s request, instead of a 30-percent formula allotment that would have given the city a higher payment. [Sarro, Ronald, “House Panel Cuts District’s Powers,” *The Evening Star*, August 6, 1969]

In addition, Representative Gude announced that he had written to President Nixon to urge him to order the city council to comply with Section 23. The letter stated that the city council was “derelict” and had “failed to obey the law”:

Mr. President, I call upon you to instruct the City Council to build the roads and comply with the law, and to instruct the District government’s legal staff to undertake a full-scale review of all previous legal challenges to the construction of the freeway system, and to prepare its legal defenses against further delaying tactics, and to demonstrate the city’s commitment to the absolute compliance with the Highway Act of 1968.

In closing, he wrote, “The City Council must be asked to prove it is doing its part, or be requested to resign.” [“Nixon Asked To Push City On Highways,” *The Washington Post and Times Herald*, August 7, 1969]

Pressure on the city council increased on August 6 when the House District Committee unanimously approved a revenue bill blocking the annual Federal payment to the city until it agreed to build the Three Sisters Bridge as required by the 1968 Act. [Boldt, David R., “Revenue Bill Restricts City on Tax, Jobs,” *The Washington Post and Times Herald*, August 7, 1969]

During a closed meeting of the WMATA board of directors on August 7, Chairman Babson tried to secure passage of a memorandum directing staff to plan for the “orderly phasing out” of the rail rapid transit program if the city council did not take appropriate action to end the impasse:

The plan should detail all of the legal, financial and organizational implications involved, including a timetable for termination of contracts and release of employes [sic]. The phaseout plan should be submitted to the board in time for consideration at the regular Aug. 28 meeting.

The board declined to approve the resolution. Instead, at the suggestion of suburban members of the board, WMATA postponed 12 engineering contracts worth a total of \$9 million that were due to be awarded. [Sarro, Ronald, and Flor, Lee, “Subway Design Plans Tabled By Agency in Fund Impasse,” *The Evening Star*, August 7, 1969]

That same day, Thursday, August 7, the city council called a special meeting for Saturday morning to reconsider its position on the Three Sisters Bridge. Reports indicated the city council would vote, 6 to 2, to reverse its opposition. Chairman Hahn defended the decision to hold the vote on a resolution that simply called on the D.C. government to “comply with the provisions of Section 23 of the Federal Highway Act of 1968.” He said, “There is no other way to free money for the city’s subway system.” As for his position on the Three Sisters Bridge, he said the House District Committee’s action in tying the Federal payment to the freeways was the final blow:

I believe the building of the bridge is wrong and I am still not convinced that it is in the best interest of the city. However, we do not live in the world we wish, we live in the world as it is. We are forced at times to make rather hard choices – either build the bridge or no subway.

Vice Chairman Tucker confirmed he also would vote yes on the resolution. He explained that “there is no other course, short of chaos, available to the City Council.” He added that the impasse had harmed the city’s relationship with Congress. The District Committee’s action would “surely bring this government to a screeching halt.” He said, “We do not yet have home rule and there will be times, such as now, that awareness of our lack of power will be hard and cruel.”

According to the *Post*, Tucker “was said to have argued strongly against calling the special meeting, urging instead that the Council wait until later in the month.” He might, according to speculation, change his mind and “cast a third negative vote.”

The “yes” votes of Hahn and Tucker virtually assured the final tally would be 6 to 2 in favor of building the Three Sisters Bridge and conducting an 18-month restudy of the North-Central Freeway along with the projects approved in December 1968.

Terris asked the city council not to “bow abjectly to congressional blackmail.” In a letter, he wrote:

Regardless of how great the threats or how much the bribery, the most critical issue is whether the city government can retain the respect of our citizens. No loss of the subway,

no loss of new housing, no loss of tax revenue is anywhere near as important as loss of confidence in our city government to stand by its convictions. [Moore, Irna, and Eisen, Jack, "City Approval Set on 3 Sisters Span," *The Washington Post and Times Herald*, August 8, 1969]

(One member of the city council, the Reverend Moore, was in Austria for a church conference on August 7. Hahn asked him to return to Washington for the vote and he was on his way.)

ECTC planned to pack the hearing with "about 300" followers and to request an opportunity to speak. Hahn, however, said that no witnesses would be heard. [Moore, Irna, "Council Defends Shift on 3 Sisters Bridge," *The Washington Post and Times Herald*, August 9, 1969]

That night, ECTC held a meeting of about 125 freeway opponents at the Brookland Methodist Church to decide what to do. In view of the city council's reported intention, according to Booker, they agreed to go back to court to block the bridge.

On August 9, a crowd of more than 200 people had crowded into the council chamber. As 10 a.m. approached, Sammie Abbott was standing on a chair denouncing the city council to the cheers of the crowd. "The way to get home rule is to fight on issues like this," he shouted as the crowd chanted "freeway, no, subway, yes." When Booker was asked about the city's potential loss of \$115 million, he said the House District Committee's action was "evidence that we have a collection of racial aggressors in Congress, who treat us as a colonial plantation."

When the city council entered the chamber at 10 a.m., the crowd greeted them with shouts of "tricksters," "liars," and "cheats." Abbott shouted, "Here come the sellout artists . . . Let's have one big boo for freeways." An Abbott ally, the Reverend Douglas E. Moore of BUF, yelled, "We will be heard" as Hahn tried to get the meeting underway. Hahn began to speak, but his opening statement was drowned out as the crowd shouted "No! No! No!" and "We will be heard," and called "Mr. Chairman! Mr. Chairman!"

Hahn banged his gavel but the crowd continued to shout. Unable to proceed, Hahn at 10:04 ordered the chamber cleared except for council members, their staff, and reporters. The crowd yelled, "Hell No! We won't go." Just down the hall, 25 police officers were waiting, "clustered around a TV set chuckling over the Saturday morning cartoons," according to the *Post*. Now, their moment had arrived as Deputy Chief Owen E. Davis held a bullhorn to amplify Colonel Starobin's voice as he read the order to clear the chamber and indicated that those who did not obey would be arrested. His "hand shook as he went through the script twice. It shook a little more when Abbott blasted, 'goddamn you, Starobin!'"

All at once, screams and shoving began, police began dragging Abbott out of the chamber, chairs toppled over, and someone in the crowd threw a small metal ashtray that just missed Hahn's head:

Police grappled on the floor with demonstrators, rows of gray chairs were overturned and hurled about, and the hallway began to fill with those fleeing from the Council chamber. Police did not use nightsticks or weapons.

Booker was propelled out of the chamber by police. Terris, the last to be arrested, walked out quietly.

The council members, “some impassive and some visibly upset,” watched as the chaos swirled through the chamber and the police arrested 14 demonstrators. Someone grabbed Councilman Yeldell’s nameplate and slammed it on the desk while swearing at him:

The people who complied with the order to leave jammed the hallway and screamed at the police on the other side of a sawhorse barricade by the door. It was a biracial crowd hurling racial epithets.

The white policemen were “pigs” and “bastards.” The others were . . . “uncle toms.” Reporters were “liars.” Mayor Walter E. Washington, President Nixon and various members of Congress were added to the verbal dishonor roll.

Some of those trying to leave the chamber complained they were being treated roughly. Catherine McCarron of the DuPont Circle Civic Association said she had been grabbed and thrown out of the chamber, leaving a large rip down the back of her dress.

When ECTC’s Cassell complained about the number of policemen and demanded that a guard with a Polaroid camera put it away, Colonel Starobin replied the police were there “to insure that the council can go about its business in a proper fashion.” A woman yelled, “Who’s going to protect us from the council?”

As the *Star* put it, once order was restored, “The chamber was a snarled mass of overturned chairs.”

Finally, at 10:22, Hahn informed the nearly empty chamber that, “This meeting is still in order.” As expected, the vote was 6 to 2, with Shackleton and Anderson casting the negative votes. Yeldell spoke for those who voted for the bridge. He said the vote “has caused more personal anguish” than any other he had cast:

We are all painfully aware that this is no longer just a transportation issue but one that strikes at the very heart of the operation of this city.

He would have voted “no” except for “painful and pressing political realities,” including the need for the subway and the possible loss of the Federal payment.

In casting her vote, Shackleton said, “for the past eight years I have fought for a subway. For the same period of time, I have opposed unnecessary highway projects as detrimental to the nation’s Capital and harmful to the well-being of its residents.” She was committed to the Major Thoroughfare Plan adopted the previous December, adding that the present vote violated that plan.

Anderson said he opposed the resolution in view of the “will of the people” in his community.

After the meeting ended, Hahn said, “The impasse is over.” The Reverend Moore said the council “believes that adoption of this resolution will result in the immediate construction of the subway system.”

Hahn issued a statement saying he regretted the need to clear the room, but that given “the nature of the issue under discussion and the emotionalism built up around it, we had no alternative.”

Mayor Washington issued a statement:

Following the council’s action today, I will instruct the Department of Highways and Traffic to proceed immediately to implement the 1968 Highway Act insofar as it relates to the District of Columbia.

City officials estimated they would need about 5 months to let the construction contracts for the Three Sisters Bridge.

[Eisen, Jack, and Moore, Irna, “Fists Fly at Voting on Roads,” *The Washington Post and Times Herald*, August 10, 1969; Asher, Robert L., “Foes Irate at City’s ‘Sellout,’” *The Washington Post and Times Herald*, August 10, 1969; Sarro, Ronald, “Freeway Foes Clash With Police,” *The Evening Star*, August 9, 1969; Swanston, Walterene, and Sarro, Ronald, “Bridge OKd, Foes Threaten Suits,” *The Sunday Star*, August 10, 1969]

President Nixon called Chairman Hahn after the vote to thank the city council for breaking the subway-freeway impasse. According to the *Star*, “The President said he understood the decision was a difficult one, since the council had stood squarely with the freeway opponents.”

Jack Eisen wrote of the council chamber battle that, “The episode left participants and spectators shaken and could not help but shock those who saw it on their television screens and read of it in their newspapers.” ECTC put out a flyer to explain its actions:

ECTC demanded 15 minutes time before the Council voted so we could strengthen their backbone and warn them not to throw away what little credibility they had. The Council refused, therefore becoming responsible for unleashing the police riot . . . .

The D.C. “government” now stands naked as a sham. Congressmen who practice blackmail will never grant home rule. Struggle, such as that against the freeways, is the *only way to win statehood!* [Eisen, Jack, “Abbott Leads Freeway Foes,” *The Washington Post and Times Herald*, August 19, 1969, italics in original]

### **Forcing the City’s Hand**

On Monday, August 11, the House debated the District of Columbia Revenue Act of 1969. Section 903 stated:

No funds may be appropriated [for the Federal payment] until the President of the United States has reported to the Congress that (1) the District of Columbia government has begun work on each of the projects listed in section 23(b) of the Federal-Aid Highway

Act of 1968, and has committed itself to complete such projects, or (2) the District of Columbia has not begun work on each of those projects or made or carried out that commitment solely because of a court injunction issued in response to a petition filed by a person other than the District of Columbia or any agency, department, or instrumentality of the United States.

Representative Broyhill, the author of this provision, told his colleagues “there is no provision more vitally important to the citizens not only of the District of Columbia, but of the entire metropolitan region.” The Washington area needed a balanced transportation system that included the freeways and “a far-reaching subway system.” The adjacent jurisdictions supported both, as did the President, but “the matter stands on dead center because the District of Columbia Council, in deference to the clamor of a small, selfish segment of the city’s population, thus far has shown no inclination whatever to comply with the 1968 Highway Act . . . .”

In view of the officials’ constitutional obligation to carry out the laws of the land, “I find the defiant attitude of the Council in this matter incomprehensible.” Section 903 was intended to put an end to “this galling situation.”

Representative William D. Edwards (D-Ca.) objected:

I am ashamed of the recent misuse of congressional power in the District, I am ashamed of the use of blackmail, withdrawal of funds, and threats used to blackjack the City Council of Washington, D.C., into accepting a freeway plan and the Three Sisters Bridge.

Comparing the action to the pre-Revolutionary War complaint of “taxation without representation,” he wondered if the House might consider letting District residents vote on the freeways and bridge.

Chairman Natcher was the next to speak. The area, he said, needed a freeway system and a rail rapid system, but that “in order to meet the tremendous day-by-day growth of traffic, the highway program must be carried out along with the presently authorized rapid rail transit system.” He strongly supported Section 903. His subcommittee would quickly appropriate the \$18.7 million in subway matching funds as soon as it received the President’s assurance that “work” on the Section 23 projects, including the Three Sisters Bridge, had begun and that the District of Columbia “has committed itself to complete such projects.”

Congress had the right to expect the corporation counsel’s office and, if necessary, the Attorney General to defend the freeway projects to achieve a speedy decision by the court: “Not months or years but a few weeks.”

If lawsuits were filed, he predicted:

There is every reason to believe that President Nixon will continue his efforts to see that this impasse is solved and will instruct the Attorney General to assign able members of his staff to assist the Corporation Council’s Office in successfully defending any and all litigation which may result from the action of the District officials.

However, if construction were delayed by court challenges, he would recommend release of the subway funds only after the litigation had been “successfully concluded with all orders, decrees and judgments complied with in full by District officials.”

As far as he was concerned, if everyone would “join hands and stop all unnecessary delays and procrastinations there is no reason why rapid rail transit money should not be included in the District of Columbia appropriations bill for fiscal year 1970.”

He did not blame WMATA’s leadership for the delay. District officials were at fault. The freeway system had been approved, he said, in the late 1950s after a 5-year study, but beginning in 1962, “every effort was made to destroy the freeway system.” He recounted the story of how in 1966, his subcommittee urged the House to withhold subway funds until the freeway system “started and reached the point of no recall.” The House approved, but before the Senate took up the measure, NCPC approved the freeway system on a 6-to-5 vote. The Senate approved the subway funds and the House went along in the final bill. Shortly after President Johnson signed the bill, NCPC “was called back into session and by changing one vote the freeway system was brought to an abrupt halt.” Chairman Natcher said:

Our committee and Congress understood at that time that we had been misled and that deceit of the greatest magnitude had taken place.

A lawsuit resulted in a decision by the U.S. Court of Appeals in February 1968 that brought freeway development to a halt. “The suit was not vigorously prosecuted, and every effort was made to kill the freeway program.” He added, “We certainly do not want this to happen again. This suit dragged on from 1966 to February 1968.”

These actions led to Section 23 of the Federal-Aid Highway Act of 1968. Given the “notwithstanding” language in Section 23, the courts “should refuse to grant any injunction or any relief which would stop the freeway system from going [sic] underway.” If a suit is filed, he expected a judgment in weeks, not months or years, to allow construction to begin. But just in case of any change in the District Building, “then as a matter of protection to the Congress and the law we passed in 1968, let us see that that law is complied with.”

He concluded:

Under no circumstances do we intend to make any effort to stop the authorized rapid rail transit system from going under construction. We want this to take place immediately and we want full compliance with the 1968 Federal Highway Act immediately.

Mr. Chairman, we will solve the freeway-rapid rail transit impasse and when we do it will not be cited as a victory for any Member of Congress or for the Public Works Committee, but will be recorded in history as a victory for our Capital City.

Chairman Fallon thanked Chairman Natcher for his support of Section 23 and asked if his statement included study of the North-Central Freeway. Chairman Natcher confirmed that the restudy was required.

Representative Broyhill wanted his colleagues to realize that “if we do anything to cause delay in the construction of freeways, highways, and bridges, we could very well wind up by being penny wise and pound foolish, because it could mean more years of delay in acquiring these much-needed facilities.”

Representative Broyhill referred to the “notwithstanding” provision of Section 23. Given that provision and his amendment, “there would be no requirement in existing law that would convey a right to anyone to demand a public hearing prior to the construction of these highway facilities”:

So I think it is pretty much of a moot question. Yet, it would be somewhat unfair to adopt this language with reference to the President and the City Council in good faith, and then to have a harassment suit filed by someone representing a minority group, and perhaps have some court issue a temporary injunction until the matter was properly adjudicated and thus delay the appropriations and construction of a vitally needed transportation facility where an agreement has been worked out by people in responsible positions.

I would hope that the gentleman would not be too stringent insofar as forbidding some citizen from filing a suit, even though the language is in his favor.

Chairman Natcher agreed that the “notwithstanding” in Section 23 rendered any court challenge moot. “The court should refuse to grant any injunction or relief which would stop the freeway system from going underway”:

But just as a matter of protection, if there is any change downtown [the District Building], and I hope not – and when I say downtown I do not mean the White House –but if there is any change downtown, then as a matter of protection to the Congress and the law we passed in 1968, let us see that the law is complied with. I hope we will not have any trouble.

Representative Adams pointed out that, “The city government has now voted on it” and the matter was now moving forward. He was confident that if a lawsuit were filed, the city and the President, through the Attorney General, would defend the city’s actions. He did not want Congress to “put the onus on the city to do something they cannot control.”

Chairman Natcher began, “as I have just explained to Mr. Broyhill,” the city had not vigorously defended the suit filed in 1966 until its final resolution in 1968 while Congress “waited patiently” for the freeway program to resume work. If a suit were filed and the city said it could not move forward, “we are sorry, Mr. Adams, to be very frank and in order that there be no misunderstanding, I will never come into this House and ask that the Public Works Committee be repudiated and that we void the law of 1968.” Instead, he and Representative Davis would go to the President to have Attorney General John N. Mitchell “assign able lawyers to assist with any suit.” He would recommend to his appropriations subcommittee “that the budget of fiscal year of 1970 be held up until the suit is determined and finally decided.”

Representative Adams clarified his concern. If the lawsuit is filed, and the President assured Congress that “the suit is legitimately fought and the President legitimately assured this Congress that it has been – all I am asking is at that point that the Congress say we will release these funds, because we will not wait on the judiciary to tell us how to legislate.” He “would plead” with Chairman Natcher that in that case, “we not automatically assume the situation of 1966 is going to be repeated, because I do not think it will be.”

Chairman Natcher replied that in the event of a suit, “I know the President of the United States will help us.” He would have Attorney General Mitchell work with the corporation counsel to move the suit along. In that case, Chairman Natcher would agree with Representative Adams that “it would be a moot question.” However, until “a suit is moved along,” he will not ask the House to repudiate the Public Works Committee by ignoring the 1968 Act. He added, “we had our experience in 1966, and I say to the gentleman from Washington [State] let us not have it again.”

Representative Adams asked if Chairman Natcher would accept “a good faith position prior to some final order”:

We will do all we can to help if any suit is filed but our experience of 1966 was enough. My original statement stands, Mr. Chairman, as [to] any or all suits and the position of our subcommittee.

We want to recommend the rapid transit money and we should all join hands and see that any suits are quickly decided.

[“District of Columbia Revenue Act of 1969, *Congressional Record-House*, August 11, 1969, pages 23108-23120]

Jack Eisen described the floor action:

Reps. Joel T. Broyhill (R-Va.) and Brock Adams (D-Wash.), who had moved to force city compliance with the controversial 1968 highway act in order to win subway money appeared stunned and angry when they learned of Natcher’s position shortly before he made his speech.

They hoped, however, to give the city an escape hatch if the highway program was blocked in court.

While Natcher listened impassively, Broyhill and Adams huddled and talked with him animatedly on the House floor.

Eisen added that after Natcher finished his initial statement, “there was a ripple of applause, chiefly from the Republican side of the House.”

After about 6 hours of debate covering many other issues, the House approved the bill by voice vote. The House left the Broyhill amendment unchanged. The bill would now go to the Senate

where the District Fiscal Affairs Subcommittee under Senator Thomas F. Eagleton (D-Mo.) had scheduled a hearing for the next day.

Chairman Hahn, who was on vacation in Massachusetts, released a statement indicating he was “disappointed” by Chairman Natcher’s position. “In voting Saturday at the city council meeting on the provision with the Federal Highway Act of 1968, I was led to believe that the vote would result in immediate release of the subway money.”

Vice Chairman Tucker told reporters that the city council had “been led to believe by people close to Natcher” that their vote would bring release of the subway funds. Otherwise, the city council never would have reversed itself. “I can’t help but feel the government and people of the District of Columbia have been double-crossed.”

ECTC attorney Landon G. Dowdey said Chairman Natcher’s stand “serves the City Council right.” He stated that freeway critics were “not going to jump through the hoop and file suit tomorrow” to speed up the process. Bruce Terris promised, however, “We’re going to sue, no matter what.” He added, “We told the City Council exactly this: ‘if you give in to blackmail, you’ll be blackmailed forever.’” [Eisen, Jack, “Natcher Links Funds for Subway To Settlement of All Freeway Suits,” *The Washington Post and Times Herald*, August 12, 1969]

On August 12, the *Star*’s William Grigg put Chairman Natcher’s words in context. His speech “may not have been quite the threat it seemed.” Far from a threat, “he was providing an outline of an understanding that he, as chairman of the House Appropriations subcommittee on the District, felt he has achieved with President Nixon”:

The understanding gives the President a major role in deciding when his local appointees have brought the city into compliance with the Highway Act of 1968 and thus qualify for subway construction funds.

President Nixon and Chairman Natcher understood, as the city council apparently did not, that the District matching funds could not be released immediately. They had been authorized, but could be released only in a District of Columbia appropriation act. The “next bill that can carry the subway money is the District budget. It is not likely to clear Congress – for reasons unrelated to the subway or freeway projects – until October.” The revenue bill under consideration in Congress could not carry the appropriation of the matching funds.

President Nixon and Chairman Natcher also understood that a great deal of “work” could be accomplished on the freeways prior to the appropriation. In addition, they were convinced that in view of the “notwithstanding” phrase in Section 23, “no valid legal arguments can be raised by anti-freeway forces . . . against the straightforward directive on freeway projects in the Highway Act of 1968.” By contrast, the suit resolved in 1968 after 2 years involved an 1893 statute “in which it was less clear what Congress wanted done in the District” under the current Interstate program.

A member of the District corporation counsel's office agreed with Grigg that legal issues would have to be more narrowly defined in a new suit. However, "he was not ready to predict that a suit could be handled in days or weeks, as Natcher seems to feel":

According to Natcher's view of his discussions with Nixon, then, the President feels that, the District can quickly get the courts to dispose of any request for a work-stopping injunction against the bridge and other projects . . . .

The tip-off that this already has been discussed with Nixon came next [after the reference to weeks] in Natcher's statement: "I have every reason to believe that President Nixon . . . will instruct the attorney general to assign able members of his staff to assist the District's corporation counsel's office . . . ."

This wording made clear that Chairman Natcher "has turned over to the President" the decision on when "work" on the freeway projects was "under way beyond recall." By contrast, if the President did not do so and if lawsuits were filed, Chairman Natcher would release the funds as soon as the litigation was resolved:

This gives the President leverage over sometimes balky appointees such as Hahn himself who, according to congressional sources, delayed until last Saturday a City Council vote on freeways that Nixon had requested be scheduled before he left on his round-the-world trip.

It now appears, from Natcher's statement, that the President has taken a major role in the negotiations that now promise both a bridge to Virginia and an area subway.

It also appears that Natcher is confident that Nixon will continue to push for action on these projects. [Grigg, William, "Natcher Hints Nixon Subway Accord," *The Evening Star*, August 12, 1969]

The following day, Senator Tydings delivered a brief speech during "routine morning business" on the Senate floor to say that the events of recent days convinced him "that we are at last moving forward on the mass transit system." His contacts with everyone involved, including President Nixon, convinced him "the subway will be started by year's end, just in the nick of time to save it."

He summarized the freeway dispute, the intervention of Section 23 of the 1968 Act, and the city council's action in December 1968 in authorizing most of the freeway plan but blocking two of its parts, including one that Section 23 had ordered to be built and one that was to be studied:

The impasse between Congress and the City Council over highways lasted nearly a year, with the subway held hostage.

Meanwhile, inflation relentlessly eroded the financial plans upon which the transit system is based.

The financial plan would be “obsolete by the end of this year,” and once that plan lapsed, “the transit system itself will collapse, not to be revived for a decade or more.”

After all the delays, collapse of the mass transit plan “would be an unparalleled disaster for the National Capital.” The years needed to revive a rail transit plan would result in pressure for more freeways:

In view of the strong possibility that the subway will be permanently derailed by collapse of its financial plan, what Washington faces is not a question of highways versus subways, but rather the question of whether there will be a subway at all or only more highways.

It is worth noting that the subway system was never intended to replace needed highways, but rather to complement them in a balanced transportation program.

Nor could the subway replace the highways in many parts of the Washington metropolitan area which the subway will either never reach, or at least will not reach within the next decade, under current plans.

Senator Tydings had reservations about some of the freeway projects:

But the need for the subway is so urgent, and the number of additional roads eventually required if the subway is lost is so great that I have devoted a substantial part of my time in the past three weeks attempting to help resolve this issue.

The city council’s action in reversing its opposition was a “belated, but essential, act of political realism and responsible urban planning.” But along the way, a year “has been lost.”

Nevertheless, the area was on the verge of achieving a balanced subway-highway program:

It remains now not to “lose our cool” as the last steps are taken toward release of the subway funds. This is no time for loose lips or hot heads.

His experience over the past 2 weeks talking with Chairman Natcher, Secretary Volpe, and President Nixon and his staff “convince me that, if cool heads prevail, subway construction can begin by year’s end”:

Law suits need not deter it if they are vigorously defended. Good faith on all sides can, I believe, assure subway construction and replace the suspicion and hostility which has imperiled Washington’s transportation plan. [The Washington Area Transportation System, *Congressional Record-Senate*, August 13, 1969, page 23781]

Apparently unaware of Senator Tydings’ statement, Chairman Hahn interrupted his vacation to release a statement on August 13 regarding Chairman Natcher’s speech and comments on the House floor:

I ask on behalf of the citizens of Washington that Congressman Natcher clarify his statement to the satisfaction of all concerned. If not, it is apparent that I am left with no other choice but to consider calling the Council back into session for the express purpose of reconsidering our action of Saturday.

He said the city council had acted “with the clear understanding that the Congress would, when it reconvenes, release the subway funds.”

Vice Chairman Tucker, reacting on August 14, supported Chairman Hahn’s position, but suggested that the city council wait until the House acted on the District’s appropriations bill, 1970. “If subway funds are not included, then it is my firm opinion we should at that time either reverse our decision of last Saturday or resign.” Aware of Senator Tydings’ warning, Tucker said the council had “kept its cool,” but, “I think it is time for others to stop speaking for Mr. Natcher and predicting what he will do.”

The *Star* pointed out:

The Hahn threat came as other officials were trying to smooth the path toward final resolution of the freeway controversy that has caused many months of delay in the start of subway construction.

Director Airis announced on August 14 that he had ordered work to resume on design of the bridge substructure. He estimated the city would need about 5 months before contracts could be awarded for construction. [“New Fight Over Span Threatened,” *The Evening Star*, August 14, 1969; “Tydings Hopeful on Subway,” *The Washington Post and Times Herald*, August 14, 1969; Moore, Irna, “Tucker Asks Council to Defer Negative Action on Freeway,” *The Washington Post and Times Herald*, August 15, 1969]

On the eventful day of August 13, Arlington County announced that it would formally drop its 1966 lawsuit – moot in view of court rulings affecting the Three Sisters Bridge – opposing the Three Sisters Bridge under certain conditions. Dr. Kenneth M. Haggerty, chairman of the county board, said that he had received private assurances from FHWA, NPS, and the Virginia Department of Highways, but wanted those assurances in “an ironclad agreement” before the county withdrew the suit.

Dr. Haggerty said the county wanted a balanced transportation system “at the earliest possible moment.” To achieve that goal, the county board had unanimously agreed to stop fighting the Three Sisters Bridge under 13 conditions. The highest priorities were that the bridge not destroy any homes, that parkland used for the I-266 approaches would be replaced on an acre-by-acre basis, and that the county would have a say in future air rights in the Rosslyn area. Other conditions included the widening of U.S. 29/211 between North Kenmore Street and Rosslyn and an additional lane on the George Washington Memorial Parkway from the Spout Run Parkway to Key Bridge. [Crosby, Thomas, “Arlington Lists 13 Conditions For OK of 3 Sisters Bridge,” *The Evening Star*, August 14, 1969]

*Star* editors criticized Chairman Hahn for violating Senator Tydings' warning about "loose lips." Within hours of the Senator's speech, Hahn "began to waggle away in just about the most irresponsible manner imaginable." After repeating the assurances from officials in recent statements, the editorial said of Hahn's comments, "The political absurdity of this statement is surpassed only by its pomposity – as indeed Gilbert Hahn seems incapable to being anything but pompous and absurd on any aspect of the District's relations to Congress." He seemed to believe that "he has no responsibility" for the District's relations with Congress – that was Mayor Washington's job:

And the mayor too often has failed to exert real leadership in futile attempts to seek a united front with the council.

In this instance, Mayor Washington certainly should heed the counsel of Tydings, Adams and Broyhill sufficiently to dissociate himself from Hahn's ridiculous threat. And for the sake of the city, on this issue, Hahn should button his lip. ["Loose Lips," *The Evening Star*, August 15, 1969]

*Post* editors also took exception to Chairman Hahn's statement. Saying Hahn was "clearly ticked off by the tenacity with which Mr. Natcher has been clinging to his position," the editors described the threat to revisit the vote as "a foolish gesture that would accomplish nothing at the risk of antagonizing friends of the city in Congress who are more than a little fed up with the whole controversy." What was "really frustrating" was that city officials could do little until the appropriations act was completed.

The editors were not certain they agreed with Chairman Natcher's assertion that any lawsuits could be resolved in weeks because of the "notwithstanding" phrase in Section 23. "We hope he is right in this judgment. The Washington area cannot afford to wait until next year to start its subway system." ["The Bridge to the Subway," *The Washington Post and Times Herald*, August 16, 1969]

### **President Nixon Intervenes**

On August 17, the "western White House" in San Clemente, California, released an exchange of letters between President Nixon and Chairman Natcher that prompted the *Post* to headline its article:

#### **Metro Funds Now Assured, Nixon Feels**

The *Star* was a bit more cautious in its banner headline on page one:

#### **Nixon Pushing on Subway Funds**

On August 12, President Nixon wrote a "Dear Bill" letter to Chairman Natcher thanking him for his "diligent efforts through the years to ensure that the District of Columbia will enjoy a balanced transportation system . . . ." He continued:

As you know, I have previously expressed my desire that a fair and effective settlement of the issues involved in the transportation controversy be reached to serve the interests of all those concerned – central city dwellers, suburbanites, shoppers, employees and visitors. It is my conviction that those steps necessary for a fair and effective settlement have been taken.

The President summarized recent events in support of the balanced transportation system they both supported. Following the city council's vote on August 9, the city directed the Department of Highways and Traffic "to implement immediately the requirements of the [1968] Act." Secretary Volpe directed Administrator Turner to rescind his predecessor's letter of January 17, 1969, modifying the District's Interstate System and to work closely with District officials to complete the construction work on the freeways and the study of the North-Central Freeway. Turner, in a two-sentence letter on August 13 to Airis, rescinded the January 17 letter; the second sentence explained: "This action reinstates the System to its status as covered in 'The 1968 Interstate System Cost Estimate,' and as referenced in the Federal-Aid Highway Act of 1968."

In addition, President Nixon said he had directed Attorney General Mitchell and Secretary Volpe "to provide assistance to the Corporation Counsel of the District of Columbia to vigorously defend any lawsuits which may be filed to thwart the continuation of the projects called for by the Act."

He concluded:

A balanced transportation system is essential for the proper growth and development of the District of Columbia. I hope that this evidence of tangible progress would permit us to assure the citizens of the District of Columbia that your Subcommittee will be in a position to approve the \$18,737,000 deleted from the Supplemental Appropriation bill together with the \$21,586,000 in the Regular Appropriation bill for the District of Columbia for Fiscal Year 1970.

Chairman Natcher replied on August 13. "As you know," he said, the committee had long "believed that there is a place for both a freeway and rapid transit system and that in order to meet the tremendous day-by-day growth of traffic our highway program must be carried out along with the presently authorized transit system."

The recent steps by the city council and others "should place" the District Department of Highways and Traffic in a position to "begin work" on the Section 23 freeways "and to continue this work until all of the prescribed projects are completed." Everyone would be glad to hear that work had actually started. As for lawsuits:

I definitely am of the opinion that the Corporation Counsel of the District of Columbia, together with assistance provided by the Attorney General, will succeed in obtaining a favorable decision for our Capital City.

He explained that the transit matching funds "cannot automatically just be released, but must be incorporated in appropriation bills and the bill which would be the vehicle is the District of

Columbia bill for fiscal year 1970.” When work on the Revenue bill was completed, the Committee on Appropriations would “then be in a position to pass on [the] rapid transit request at the time we mark up our budget for the District of Columbia . . . .” He anticipated that any lawsuits “would be out of the way by the end of the mark-up of our bill, and the provisions of the Highway Act of 1968 should be in the process of being carried out by the District of Columbia thereby placing us in a position to take up” the transit appropriations.

Chairman Natcher concluded:

Mr. President, it behooves all of us to solve the rapid rail transit-freeway impasse, and again I want to thank you for your assistance.

The President’s spokesman told reporters that he considered Chairman Natcher’s reply “to be a positive one.” The President believed he had taken the steps needed to assure the funds would be released soon. The letters were “signs of real progress.” An unnamed official said, “I think both letters indicate a feeling of confidence there will be no stumbling block by the time of the mark-up.” Natcher’s letter “represents significant progress toward the balanced transportation system.”

The *Star*’s article about the letters pointed out that “Natcher still did not make an unequivocal commitment to release the rapid transit funds if any anti-freeway lawsuits still are pending” at the time of the mark-up of the FY 1970 appropriations bill. Still, the White House was optimistic that any such suits would be “out of the way” by then.

The agreement to involve Attorney General Mitchell was understood to be an informal one. In the absence of a pending lawsuit, Department of Transportation General Counsel R. Tenney Johnson told reporters that any assistance from his office would be “a routine kind of action” to help the Justice Department prepare its case, rather than directly helping the corporation counsel. A Department of Justice spokesman added that Justice would offer the city “any help we can.”

Representative Adams, appearing on WRC’s “Dimension Washington,” said that even prohighway forces realized “they cannot survive with the present system,” and that the city needed the subway rather than more freeways. “It is only now getting to the conscience of Congress that freeways are a bad thing.” He added, “I don’t think there will be another freeway program here if this present system is finished.” [Prince, Richard E., “Metro Funds Now Assured, Nixon Feels,” *The Washington Post and Times Herald*, August 18, 1969; Horner, Garnett D., “Nixon Pushing on Subway Funds,” *The Evening Star*, August 17, 1969; District of Columbia Appropriations, 1970, *Congressional Record-House*, November 24, 1969, page 35528]

In the wake of these positive signs, BUF called for the resignation of the four black members of the city council who voted for the Three Sisters Bridge on August 9. Letters suggested that Vice Chairman Tucker and members Haywood, Moore, and Yeldell send their resignations to President Nixon because the city council had become “a political eunuch” as their acquiescence to congressional indifference to the city’s needs. The letters also advised that the members’ letters of resignation should advise President Nixon to initiate home rule because without it, “the D.C. community may well . . . deteriorate . . . into racial war.”

The four council members declined to resign. According to the *Post*:

Tucker yesterday repeated his position that he will resign if Congress does not include subway money in appropriations bills now before the House, or if the Council does not reverse its position on the Three Sisters Bridge. ["Black Front Demands 4 Councilmen Resign," *The Washington Post and Times Herald*, August 19, 1969; "Quit Council, Black Front Urges Four," *The Evening Star*, August 18, 1969]

Booker held another press conference at the District Building on August 21. ECTC was in no hurry to file a lawsuit to block the Three Sisters Bridge, but when it did, Booker vowed to fight the project "all the way up to the Supreme Court." Lawyers were drafting the lawsuit, and Booker assured reporters that ECTC was "picking up more support every day" for the action. He also criticized President Nixon's suggestion that Attorney General Mitchell and Secretary Volpe would help the city "vigorously defend" against agreement in court. Such a step constituted "an unprecedented intervention," Booker said. ["Delay Seen in Court Action Against Three Sisters Bridge," *City Life*, *The Washington Post and Times Herald*, August 22, 1969; "Suit Is Delayed By Bridge Foes," *The Evening Star*, August 23, 1969]

### **Three Sisters Bridge Construction Plan**

On August 28, Director Airis's timeline for complying with Section 23 of the 1968 Act was made public.

Director Airis had scheduled construction of the Three Sisters Bridge to begin on December 22, but hoped "to beat that date if I can." On August 13, Federal Highway Administrator Turner had restored the bridge to the Interstate System as I-266, ensuring its eligibility for 90-10 Interstate funds. Virginia approved the bridge on August 19. The NPS permit was pending, but Airis expected it to be completed promptly. About 50 percent of the design work was complete, with the first construction set to involve sinking two piers into the river to support the six-lane span. Already, a barge was moored at the mouth of Spout Run with a contractor's equipment to bore into the riverbed to take samples of the bedrock on which the bridge foundations would rest. Working on the test borings began on August 29. Bids for the construction contract were to be requested on November 10.

Airis expected to request bids in May 1970 for construction of the Potomac River Freeway, with construction to begin in the second half of the year. The first section was to run from Wisconsin Avenue to 31<sup>st</sup> Street, NW. Right-of-way acquisition for the freeway between 31<sup>st</sup> Street, NW., and Key Bridge began on August 13. On August 21, Airis had asked NPS for a permit.

Most right-of-way for the Center Leg Freeway between the Southwest Freeway and New York Avenue, NW., had been acquired. Airis expected to open the southern section between the Southwest Freeway and Massachusetts Avenue in July 1970. The northern section between Massachusetts and New York Avenues was scheduled to open in January 1973.

Construction of the East Leg Freeway between Barney Circle and Bladensburg Road was to begin around January 10, 1970. Airis planned to advertise for bids on November 10. [Green,

Stephen, "Target Date Is Set For 3 Sisters Span," *The Evening Star*, August 28, 1969; Eisen, Jack, "Soundings for the Three Sisters Bridge Begin," *The Washington Post and Times Herald*, August 29, 1969]

In early September, Airis moved up the schedule for the bridge after rock samples showed good foundation conditions for the bridge in the bed of the Potomac River. On September 3, he called for bids for construction of the substructure for the Three Sisters Bridge, to be opened on September 17. He now expected construction of the substructure to begin on November 22, but predicted the work could begin on November 17. Design of the superstructure was underway.

Booker reacted to the news of the advanced schedule by charging that the change was "only an attempt to get the citizens to file a lawsuit very quickly so the government can move to litigate it very quickly." He said the lawsuit would be filed by the end of the year on the plaintiff's own schedule, and would challenge the legality of Section 23 of the 1968 Act. The suit would contend that public hearings must be held before the start of construction.

Airis denied the charge that the city was trying to outflank its critics. As for the possibility of a lawsuit, "I don't think it's possible to avoid that. We have gone ahead within the general dictates of the desire of the mayor, Congress, and Council to implement the 1968 act. I am doing it the very best I know how." [Eisen, Jack, "Work on Three Sisters Set to Begin Nov. 17," *The Washington Post and Time Herald*, September 4, 1969; Green, Stephen, "D.C. Speeds Three Sisters Span Action," *The Evening Star*, September 3, 1969]

On September 4, General Graham warned the WMATA board that the crisis for rail rapid transit was "much more critical now" than when the city council approved the bridge and freeway plan on August 9. If Chairman Natcher withheld the matching funds until all legal challenges to the freeways were settled, a process that could take up to a year, the delay "would destroy the Metro financial program" by erasing the contingency fund against rising costs. Chairman Natcher's position put "antifreeway forces in a position where they can and will control the timetables for release of transit funds."

After reviewing Graham's concerns, the board voted to ask Chairman Natcher to approve advertisement of bids to begin construction on the subway line under G Street. The board did not need Chairman Natcher's approval to advertise for bids, but to award the contract, would need the matching funds he was holding. However, as Chairman Babson observed, if Chairman Natcher approved the advertisement, "it will be a good indication we will get our funds." Babson instructed General Graham, who had become acquainted with Natcher while supervising U.S. Army Corps of Engineers projects in the congressman's district, to contact the chairman.

In compliance with the request, General Graham spoke with Chairman Natcher. A spokesman for Graham reported on September 5 that the chairman was "fully aware of the critical status of the rapid rail program," but was noncommittal on the bids or release of the funds. [Eisen, Jack, "Natcher May Get Metro Appeal Today," *The Washington Post and Times Herald*, September 5, 1969; Green, Stephen, "Natcher Office Queried On Subway Bids Okay," *The Evening Star*, September 5, 1969]

Although Booker was unhappy about the speedup on the bridge, *Star* editors were delighted. The speedup was “crucially important,” in part because it provided “solid evidence of the District’s determination to complete, with no further dilly-dallying, the moderate highway system directed by Congress.” Moreover, the speedup could persuade Congress to release the subway matching funds being “held hostage in order to assure the construction of a balanced transportation system.”

The editors dismissed Booker’s claim because the idea that the city would “encourage a lawsuit, now or at any time, is rather absurd.”

WMATA’s decision on September 4 to remain fully geared up to begin construction and to appeal to Chairman Natcher was another positive step. Congress, which withheld the matching funds because of “a long history of broken freeway agreements downtown,” should respond positively. “This time . . . the federal officials involved have abided by their words, and if they falter, the White House has promised to straighten them out.” The city was “playing its role straight.” What was needed was “a little reciprocation of good faith from the Hill.” [“Freeway Speedup,” *The Evening Star*, September 5, 1969]

On September 8, General Graham received Chairman Natcher’s two-sentence reply to their conversation. In the first sentence, he acknowledged General Graham’s inquiry. The second sentence assured the board that he would continue to pay attention to the situation.

WMATA Deputy General Manager Quenstedt told reporters he would give the reply to the board when it meets on September 11. “There is nothing in the letter to indicate we should go ahead and seek bids,” he said, but it would be “foolish” to advertise for bids without knowing whether funds would be available to award the contract. [Green, Stephen, “Natcher Withholds Go-Ahead On Subway Contract Bids,” *The Evening Star*, September 9, 1969; “Natcher Rejects Appeal For Subway Fund Start,” *The Washington Post and Times Herald*, September 10, 1969]

During the meeting General Graham told the board that unless construction began by the end of the year, WMATA would have to renegotiate the agreements calling for area suburbs to contribute more than a collective \$300 million to the cost of construction. The current financial plan would “lose its credibility and viability” if Congress did not release the construction funds. The result, General Graham told reporters, would mean that WMATA would have to request millions of additional dollars from the suburban communities.

Chairman Babson thought it “problematic” whether suburban voters would approve higher bond issuances. In his own Fairfax County, he thought voters would reason, “Why should we give another \$10 million when they haven’t started building yet?” WMATA, he said, would not advertise for bids.

City Council Chairman Hahn said that if General Graham’s warnings came true, “We will have lost for a generation a chance to build the subway.” [Green, Stephen, “Subway Delays Peril Support,” *The Evening Star*, September 11, 1969; “WMATA Prods Hill for Subway Funds,” *The Washington Post and Times Herald*, September 12, 1969]

As if to reinforce the concern about suburban contributions, Maryland's Board of Public Works, composed of the State Comptroller, Governor, and State Treasurer, announced on September 17 that it would dole out the State's \$500,000 contribution to WMATA on a yearly basis. The rationale was that WMATA could not spend the entire amount at one time. State Comptroller Louis L. Goldstein, who dominated the meeting, argued that the policy was "good business," because the State could invest the balance of funds in short-term Federal notes at 7¼ percent interest to earn money for the State. "Money is very tight and hard to come by these days." He added, "We're not holding up anything. It's Natcher."

His attitude was at least in part a response to comments by Carlton Sickles, a member of the Washington Suburban Transit Commission, after the Board of Public Works withheld the payment in August until WMATA provided assurances that its system would be "compatible" with a mass transit system being planned for the Baltimore area to allow for Baltimore-Washington runs. Sickles had referred to the board as "a wart on the face of state government." Further, Secretary Vladimir Wahve of the State Planning Department, told the board that WMATA had sent him an insulting letter about the withholding of the funds.

During the board's September 18 meeting, Wahve said an agreement on compatibility had been signed by Baltimore's Metropolitan Transit Authority, but WMATA had not yet signed it. Goldstein said:

I don't think people should make slurring remarks about the board when we are trying to help. When you need some of that \$500,000, let us know, and we'll have the money to you in two or three days. [Rowland, James B., "State to Stagger Transit Fund," *The Evening Star*, September 19, 1969]

WMATA countered that the State legislature had approved the funds in a lump-sum for WMATA planning and administrative work.

On September 17, the Senate District Committee approved the District of Columbia Revenue

Act with the House freeze on the Federal payment related to freeway construction. According to Chairman Tydings, the committee approved Representative Broyhill's amendment unanimously after concluding that it was still needed to keep pressure on the city not to back off its recent commitments to the Section 23 freeways. Senator Tydings said the impasse was "moving rapidly along the road to solution. I feel we will have that subway." ["Senate Panel Okays 'Hostage' D.C. Funds," *The Evening Star*, September 18, 1969; Jewell, David, "District Revenue Bill Clears Senate Committee," *The Washington Post and Times Herald*, September 18, 1969; District of Columbia Revenue Act of 1969, Report to Accompany H.R. 12982, Committee on the District of Columbia, United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-429, September 24, 1969, pages 16-17]

The District received six bids for the contract to build two piers in the river to support the 1,500-foot long Three Sisters Bridge. The city awarded the contract to the Head Construction Company of Washington, D.C., with FHWA concurrence, for \$1,152,830. Airis informed Chairman Natcher by letter on September 18 that contract documents would be executed on

September 19. Airis added that, “efforts will be made to have the contractors commence operations early during the week of September 22.”

City officials were still debating how to comply with the requirement in Section 23 for a restudy of the North-Central Corridor. Officials were leaning toward hiring a consultant to conduct the study rather than having District highway officials undertake the review. While an inhouse study would be less expensive and could be completed sooner than a consultant’s review, the fear was that if the city conducted the restudy, critics would be alienated from the outcome. Deputy Mayor Fletcher would decide how to proceed when he returned from vacation in about 2 weeks. [“District of Columbia Appropriations, 1970,” *Congressional Record-House*, November 24, 1969, page 35528, “D.C. Firm Makes Low Bid On Three Sisters Bridge Job,” *The Evening Star*, September 18, 1969]

On September 18, Robert P. Mayo, director of the Bureau of the Budget, sent a short letter to Chairman Natcher clarifying the situation regarding appropriations for the rail rapid transit system:

I would like to assure you that the appropriation for fiscal year 1970 of the \$18,737,000, earlier deleted from the District of Columbia supplemental appropriation for fiscal year 1969, together with the appropriation of the \$21,585,000 in the 1970 fiscal year appropriation request, would be in accord with the program of the President. [“District of Columbia Appropriations, 1970,” *Congressional Record-House*, November 24, 1969, pages 35528]

### **A Surprise Move**

In what Jack Eisen called “a surprise move,” Chairman Natcher announced on September 24 that he would release the matching funds for FYs 1969 and 1970. He issued a lengthy statement outlining the history of the impasse and referring to Airis’s September 18 letter as clearly demonstrating “that we are in complete agreement that freeway construction . . . must proceed with rapid rail transit construction.” As a result, the time had come “to proceed with rapid rail transit construction.”

Chairman Natcher’s decision made \$120.9 million in Federal and District funds for rail rapid transit available to begin construction, subject to completion of the appropriations process. In addition to appropriations for the city’s FYs 1969 and 1970 matching funds, the total included the Federal contribution, which had been on hold, and \$34.7 million that Chairman Hansen’s Interior Department appropriations subcommittee had appropriated contingent on Chairman Natcher releasing the matching funds.

Eisen reported:

There was no clear explanation as to why Natcher, in making yesterday’s announcement, backed off from his Aug. 11 threat to hold up the money until the litigation of possible lawsuits against the city’s freeway system is “successfully concluded.”

He had been under “mounting pressure” from the White House and others. Recent examples included the September 18 letter from Director Mayo letting the chairman know that the 2-year appropriations for the subway “would be in accord with the program of the President,” which otherwise proposed cuts in programs. Chairman Natcher also had received a statement from Airis, dated September 18, outlining all the steps the District had taken to advance I-266/Three Sisters Bridge. Another factor was the Senate District Committee’s decision to retain the Broyhill amendment prohibiting release of the annual Federal payment if the city did not comply with Section 23.

As Eisen put it, “Word of the action brought jubilation to the District Building and the offices of the Washington Metropolitan Area Transit Authority.” Mayor Washington said:

I think the release of the subway funds is one of the most vital actions for the economy and stability of the Nation’s Capital and the metropolitan area. It is something we have been working for and people of all walks of life will be pleased by this move.

WMATA Chairman Babson said that release of the funds was “great news for every person in the region. Never has a city and its suburbs been more ready to go with a public improvement project.” He promised to “break ground in 75 days or less from the moment we are assured of funds.” WMATA was ready to award \$60 million in construction contracts.

President Nixon issued a statement on September 24 thanking and congratulating all those who had made construction of the system possible, including Members of Congress, Mayor Washington, the City Council, and WMATA. “More than a subway will begin in December,” he said. “A city will begin to renew itself; a metropolitan area to pull itself together.” Because it involved the Nation’s Capital, this was “an event of national significance.” [Eisen, Jack, “\$121 Million of Subway Fund Freed,” *The Washington Post and Times Herald*, September 25, 1969; Green, Stephen, “Natcher to Release Subway Fund,” *The Evening Star*, September 24, 1969]

On September 25, Secretary Volpe, who was “gratified by the action of Rep. Natcher,” dispatched Under Secretary Beggs to Metro’s office five blocks away to deliver the news in person that the Department of Transportation had arranged to release the \$37.4 million in Federal funds that had been on hold pending release of the District’s matching share. Secretary Volpe called on congressional leaders to take the legislative action needed to complete the appropriation process. The area’s transportation needs “will continue to require serious attention and energy by all parties now and in the years ahead.” He added, “It is my hope and expectation that they will be met and resolved in a spirit of cooperation rather than confrontation.”

WMATA announced that it would advertise for bids for the first construction contracts on October 9 and open the bids on November 24. Jack Eisen summarized the plans:

The two earliest subway construction projects will be at the east and west end of the subway’s G Street section, with a four-block gap between them. The work involves the concrete shell but no tracks or train-operating equipment.

One of the first two sections will run from Judiciary Square at 4<sup>th</sup> and E Streets NW five block northwestward to 10<sup>th</sup> and G Streets and will include two stations, one located partly beneath the D.C. Court of General Sessions. Its estimated cost ranges up to \$30 million.

Cut-and-cover construction will be used, in which a strip of pavement is peeled off, the earth scooped out and the ditch planked over, permitting traffic to move.

This contract included two stations, Judiciary Square and Gallery Place. Because of the cut-and-cover construction method, the contract would involve disruption to surface activities.

The other section, to cost as much as \$10 million, will run from 14<sup>th</sup> and G Streets NW six blocks northwestward to Connecticut Avenue and K Street, without stations. It will cross beneath Lafayette Square, across the street from the White House, and under Farragut Square.

For this section, a tunnel will be bored about 30 feet below the surface, which will remain undisturbed. The dirt will be brought to the surface and removed behind the Keith Theater, 15<sup>th</sup> and G Streets, on a small lot now used for automobile parking.

These two sections were part of the line that would open for passengers in 1972.

A third contract would construct a rock tunnel from Dupont Circle to Rock Creek. This tunnel would not be part of the initial 6-miles of the system, but was needed as a staging area for construction of the Dupont Circle station.

Five other contracts were to be awarded in early 1970. [Green, Stephen, "Builders Being Asked To Enter Subway Bids," *The Evening Star*, September 25, 1969; Eisen, Jack, "\$34 Million Released for Subway," *The Washington Post and Times Herald*, September 26, 1969]

Renovation of homes acquired for the North-Central Freeway was continuing. Five in the 2700 block of 10<sup>th</sup> Street, NW., had been rented and occupied since the work began. These five homes were considered an experiment to see if they could be rented. Now that they had been occupied, Colonel Starobin said he would ask the District Highway Department for funds to renovate 40 more city-owned houses. All leases extended to July 1970, with options for continuation on a month-to-month basis. These were the homes considered least likely to be removed if the city decided to move forward with the freeway after restudying the corridor. [Prince, Richard E., "Homes Rented In Freeway Corridor," *The Washington Post and Times Herald*, September 25, 1969]

With everything moving in a positive direction, *Star* and *Post* editors expressed their optimism in editorials published on September 25. The *Star* editorial began:

The freeway-rapid transit battle is all but over in this Nation's Capital, and that should be very good news for all concerned.

Noting that Chairman Natcher had been accused of “blackmail and various other things,” the editors thought “his action in holding up the transit money was necessary as a counterweight to the strident opposition of the freeway critics.” At the very least, they considered it “very doubtful that the local authorities would have given their approval for freeways had it not been for the pressure that was brought to bear by the Kentucky congressman.”

The editors hoped “all of this is behind us.” Construction of rail rapid transit could begin as soon as Congress completed work on the appropriations process. The editorial concluded:

Completion of this work at the earliest possible date is of the greatest importance to Washington and the surrounding metropolitan areas. Let’s get on with it.

The *Post* editorial began:

A great collective sigh of relief . . . greeted the announcement of Congressman Natcher that he was releasing city and federal funds so that the building of the subway may start.

As a result, the 25-mile bobtail system would be completed by Christmas 1974.

Chairman Natcher had made the point that he would not be flouted, “regardless of the degree of uncertainty and tension he generated in the process”:

So he has made his point, if that makes him happy; given the archaic system by which this city is governed, it is an easy point for the Natchers of this world to make.

At least, the editors said, he had not carried out his threat to wait until all lawsuits were settled.

In truth, he had not been alone in holding up progress:

The struggles of the last few years between extreme partisans in the dispute could shatter a dinner table conversation as readily as an argument over the generation gap or Vietnam.

Those arguments probably would continue, but “for the moment, we can be grateful that the impasse has been broken.”

Much remained to be done, including congressional approval of the 98-mile Metro system and the 18-month restudy of the North-Central Freeway. For now, however, the editors concluded:

Looking back over the past few months, the city will forgive Congressman Natcher for indulging in overkill to get his way if he will now put his great influence behind the completion of the mass transit system on the demanding schedule outlined by Metro.

[“Green Light for Transit,” *The Evening Star*, September 25, 1969; “Into the Subway Trenches by Christmas,” *The Washington Post and Times Herald*, September 25, 1969]

## Enter Senator Proxmire

From early in his career as a member of the Wisconsin State Assembly (1951-1952), Senator Proxmire was concerned about government spending. After he won a special election in August 1957 to succeed the late Senator Joseph McCarthy, he routinely raised concerns about government programs, whether military or civilian. He was a crusader for cutting frills, fat, and waste.

He believed in “a hard-nosed, critical examination of *all* government programs,” as he put it in his 1972 book on wasteful spending. He discussed the role of the Federal Government:

Abraham Lincoln defined the legitimate objects of government as doing for the people “whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities . . . .”

These are the proper functions of government. Broadly stated, they fall into three major areas: (1) the production of public goods and services; (2) to compensate for the inability of the market to allocate resources because of frictions, monopoly, or burdens that the production process places on society (e.g., the spewing of pollutants into the air or the water, which imposes costs on society not borne either by the producer or the consumer of the specific product); and (3) to achieve equity through a redistribution of income to reduce the harshness of society and to make it more humane.” [Proxmire, William, *Uncle Sam-The Last of the Bigtime Spenders*, Simon and Schuster, 1972, page 26-27]

He worried about public works projects. “Billions are spent for public goods and services produced at greater cost than the private economy can make them.” [page 141]

He wanted to review these projects from the start for a simple reason:

Traditionally, the original estimates are far wide of the final mark. One major study showed that because of planning alterations and change orders, public-works projects routinely cost twice as much as their original estimates. In addition, benefits are routinely exaggerated. They amount in reality to about half those listed. [page 144]

He argued that the “biggest savings in the federal budget could be made by ‘controlling the uncontrollable.’ It is candidate number one for pruning waste.” [page 153]

He particularly criticized the Highway Trust Fund:

As the trust fund is established, neither Congress nor the executive branch has any substantial annual control over the amount of money which goes into the trust fund or the amount which goes out. The expenditure generated by the trust fund amounts to between \$4 billion and \$5 billion a year. It is a mindless way of both collecting and spending the money . . . .

The highway trust fund effectively insulates the highway program from policy planning, economic analysis, and Congressional scrutiny . . . . One could hardly devise a system

better designed to frustrate and thwart intelligent attempts to make choices or properly order priorities.

The Federal-aid highway program “must be brought under a system of intelligent analysis.” He recommended abolishing the Highway Trust Fund, as well as other Federal trust funds. [pages 269-271]

Beginning in 1975, he would be widely known for issuing monthly Golden Fleece Awards identifying what he considered frivolous government spending. For example, in November 1981, he gave the Golden Fleece Award to FHWA for the “Worst record of civilian cost overrun in the federal government,” citing the 267-percent, \$100 billion increase in the cost of the Interstate System since 1956 when the estimated cost was \$27 billion. The overrun “dwarfs any other civil project,” he said in the press release.

Now, in September 1969, as everyone else celebrated the start of construction on the area’s much-needed rail rapid transit system, he was concerned. On September 26, just 2 days after Chairman Natcher’s announcement, Chairman Proxmire took to the Senate floor to announce that he would hold a hearing on September 30 to “question the economic justification for timing of the expenditure of large sums proposed for the District of Columbia subway, highway, and public works during this highly inflationary period.”

The city was seeking appropriation of FYs 1969 and 1970 funds for the subway in FY 1970 which, along with other transportation funds, would bring the total to \$120 million:

This is more than double the funds originally requested for the year in which initial construction was to begin.

This in turn means the eventual expenditure of at least \$2.5 billion for the subway system. In the peak years, almost \$400 million will be spent.

This is not all. Expenditures for a vast network of questionable bridges and freeways have been tied to the subway program. They include expenditures for the Three Sisters Bridge, the Potomac Freeway, the East Leg, and the North Central Freeway. Some \$370 million are involved.

Not only is this a bad time to build, but also, many of these projects are highly questionable in themselves.

The country was experiencing “excessive price increases,” with inflation at about 5.5 percent:

Except for unneeded military and space programs, nothing fuels the fires of inflation more than expenditures for public works. They bid up the price of raw materials and skilled labor. They have what the economists call a “multiplier effect,” on the economy.

At a time when the President and Bureau of the Budget were calling for cutbacks, they were supporting the start of “the biggest public works project in the history of the District of Columbia at a time of most serious inflation.” The inflation rate in September 1969 was 5.7 percent, a

product of the “guns and butter” policies instituted by President Johnson during the Vietnam War. [U.S. Inflation Calculator, <http://www.usinflationcalculator.com/inflation/historical-inflation-rates/>]

How, he wondered, can the Budget Bureau justify cutting projects all over the country “while at the same time they accelerate expenditures of subway funds here and approve highly questionable bridge and highway expenditures as part of the program?” His subcommittee would “examine those questions very closely”:

The President has urged every State and locality to cut back on highway and other public works projects. We will want to ask if the District of Columbia is doing its part.

Senator Proxmire emphasized that he considered the subway to be “an excellent long-term investment” and “obviously needed.” He was only questioning the timing of the expenditure:

It may be necessary to go ahead with the subway forthwith. But before we do so, the subcommittee and Congress should satisfy themselves that the expenditures will not add to the serious inflationary problem in the Nation.

Senator Cooper reminded Senator Proxmire of the “very unusual” Section 23 of the 1968 Act. It was “the first time I recall that anyone had ever heard of the Congress attempting to lay out a road system for a local governmental body.” The District government had not approved the road system, but the House of Representatives “asserted an authority” to direct the city to build it. The system included the Three Sisters Bridge, Potomac River Freeway, and a superhighway that “would be tunneled under the Lincoln Memorial, and Mall, and the Tidal Basin and then join the Southwest Expressway, which is already trafficbound [sic].” It also included a freeway through the center of the city “through a section in which there is very poor housing, which would drive those people out of their houses, and cause them to seek homes, at a time very difficult to buy or build a home.” [sic]

During the conference on the 1968 Act, the Senate conferees opposed Section 23, but the House conferees were adamant. Senator Cooper recalled opposing the provision in committee and eventually voting against the 1968 Act, which he otherwise supported, because of Section 23. What, he asked, would the people in Kentucky, which he represented, or Wisconsin think “if Congress attempted or asserted the authority to lay out their road system for them? We are not engineers. We have no expertise in this field”:

I hope the Senator’s committee will study this question very carefully. The effort represented in section 23 of the Highway Act is wrong in principle; it is wrong practically.

Senator Proxmire agreed “wholeheartedly about the gross unsoundness of Congress trying to legislate something that is as peculiarly local as a road system.” His subcommittee would “indeed inquire into that”:

The assumption has been made that once action was taken by the House, everyone could forget about the Senate, that we would just rubber stamp what they had [done]. It seems

to me that we do have a responsibility to consider this matter very carefully, and the subcommittee will certainly do so.

Senator Cooper recognized that it was “a very difficult situation,” because the city needed a subway system “very badly.”

Chairman Proxmire assured him that “I have been deeply concerned for a long, long time about some of the proposals involved in this matter, and this should be an opportunity for the subcommittee to go into it in detail.” He invited Senator Cooper to attend the hearing.

Senator Cooper closed the colloquy by referring again to the debate about Section 23:

The principle is wrong, absolutely wrong. The practice is wrong to attempt to impose on a city a vast highway system which it does not ask for and objects to. This is the awful situation in which we find ourselves. I do not believe the Senate should acquiesce in it.

[“Announcement of Hearings on District of Columbia Public Works Funds,” *Congressional Record-Senate*, September 26, 1969, pages 27290-27191]

Learning of the colloquy, Senator Tydings told reporters he would discuss the matter with Senator Proxmire. In the meantime, he hoped that “Natcher doesn’t lose his cool” until the hearings are conducted. A spokesman for Chairman Natcher said that he would not care to comment on the colloquy.

Reporters gathered word from unnamed sources about reaction within the Capital. One report indicated that Senate Majority Leader Mansfield and Majority Whip Edward M. “Ted” Kennedy (D-Ma.) planned to introduce a “subway amendment” to the revenue bill. It would withhold freeway funds until the subway was under construction. (Senator Kennedy, brother of President Kennedy, had taken office in November 1962 after winning a special election. As described in *Busting the Trust: Unraveling the Highway Trust Fund 1968-1978* on this Web site, he would emerge as a strong foe of urban freeways and a strong supporter of transit, including the use of Highway Trust Fund revenue for urban transit systems.)

Another report indicated that Senator Mansfield shared Senators Proxmire’s and Cooper’s objection to the Senate simply “rubber-stamping” House actions in the freeway-subway controversy. A source told reporters that Senator Mansfield had barred action temporarily on the revenue bill because of the Broyhill amendment making the Federal payment contingent on freeway construction. William Grigg reported:

The Senate objections may be removed early next week. One source refused to confirm that Mansfield held up the revenue bill but said the Senate District Committee has explained to “someone” who had asked about the freeway proviso that it was needed to assure that the House would approve subway funds.

The source said the explanation apparently had proved acceptable. He predicted that the bill, with the proviso, would get final Senate action soon, probably Monday [September 29].

Meanwhile, Senator Cooper planned to introduce an amendment on September 30 to strike the Broyhill amendment from the revenue bill. As reporters explained, Chairman Natcher had agreed to appropriate the District's matching funds for the subway, but the Broyhill amendment gave him a new "hostage" provision that he could use if the city backed away from its commitments to the Section 23 freeways:

Supporters reported that Cooper's move was prompted by continuing opposition to the freeway package by Mrs. Elizabeth Rowe, former chairman of the National Capital Planning Commission. [Jewell, David A., "Subway Snagged In Senate," *The Washington Post and Times Herald*, September 27, 1969; Brigg, William, "3 Senators Rap 'Hostage' Fund Proviso for D.C.," *The Evening Star*, September 27, 1969; "Cut Freeway Edict From Bill on D.C. Revenue, Cooper Asks," *The Evening Star*, September 30, 1969]

The editors of the *Star* and *Post* saw Chairman Proxmire's statements as perilous. A *Star* editorial titled "Perils of Transit" compared the situation to the melodramatic 1914 movie serial *The Perils of Pauline*, a comparison that had been used occasionally over the years during the impasse. (Pauline, played by Pearl White, was in peril at the end of each of the 20 installments, only to escape in the nick of time at the start of the next installment. Since then, the name of the movie had become attached to public situations that seemed to have the same "cliffhanger" aspect.)

The previous week, editors wrote, the subway had been "rescued in the nick-of-time from the clutches of the House Appropriations subcommittee." Now, however, the "orphans of the legislative storm merely moved from the buzz saw operated by the House villains to the edge of a cliff where a handful of dastardly senators are threatening to deliver the fatal push." Have faith, the editors suggested, because just as Pauline was "invariably snatched from the railroad tracks, so will Rapid Transit and the Freeway, in the end, be saved by the men in white hats."

Senators Cooper, Mansfield, and Proxmire had always had questions about one or more of the freeways. "It would be too much to expect that they could forgo another chance, despite the fact that the basic issues have been debated and approved several times already."

Now along came Senator Proxmire with "a new objection" about starting the projects as the Nixon Administration escalated its war on inflation:

He is, of course, quite right. The highway program and the subway should not be started now. They should have been started a few dozen months ago.

But they weren't. And so the only reasonable alternative is to get going.

*Post* editors, in an editorial titled "Sen. Proxmire's Perilous Course," wondered if the Senator was serious:

We hope he isn't because we doubt that anyone could endure further public confrontations over whether the Three Sisters Bridge should be built or whether Congressman Natcher was playing dirty pool or smart politics when he insisted that the subway and bridge go forward together or not at all – and the rest.

The freeway issue had generated so much emotion that it could be settled only a week earlier when freeways and subways finally were given the go-ahead.

Senator Proxmire had been silent all these years while his counterpart, Chairman Natcher, held up the subway funds. “Now that a contract to build the bridge has been let, it would seem to be somewhat belated to raise questions about the *timing* of spending for the projects.” Although his target was apparently the freeways, “he is likely to do mortal damage to the subway too, since its financing depends on its going forward at this time.”

Perhaps Senator Proxmire was only trying to demonstrate that the Senate had power to match Chairman Natcher’s demonstration of House power, “but that does not make his action any more defensible.” The issue had been resolved with passage of the Federal-Aid Highway Act of 1968, which Senator Proxmire had voted to approve.

The freeway debate had been very divisive, as reflected in the fist-flying protest on August 9 when the city council approved the last elements of the Section 23 plan:

The wounds left by the dispute undoubtedly will take a long time to heal. It is questionable whether any useful purpose can be served by reopening them at this time.

[“Perils of Transit,” *The Evening Star*, September 29, 1969; “Sen. Proxmire’s Perilous Course,” *The Washington Post and Times Herald*, September 30, 1969, italics in original]

### **The Proxmire Hearing**

On September 4, President Nixon released a statement on the construction industry. It began, “The cost of building a home or an apartment house has become exorbitant.” Demand for housing was one of the factors affecting inflation. “The entire construction industry has been laboring under demands that have strained its capacity. And these heavy demands will continue.” Therefore, he would take short-term actions to relieve strains on industry costs as well as long-term steps to accelerate the industry’s capacity.

To provide for “more orderly building for the 1970’s,” he directed all Federal agencies “to put into effect immediately a 75-percent reduction in new contracts for Government construction.” Projects “of the highest social priority” would be carried forward as planned. This reduction applied only to direct contracts of the Federal Government, such as contracts awarded by the U.S. Army Corps of Engineers, not to Federal-aid or other construction grant funds to State and local government.

In addition, he said, “I strongly urge the State and local governments to follow the example of the Federal Government by cutting back temporarily on their own construction plans.” Their compliance with his request would determine whether he would have to “restrict the commitments for construction that can be financed through Federal grants.” He would give “due notice” if that step became “unavoidable.” He also urged “businessmen to reappraise their current construction plans, and to postpone projects that are not immediately essential.”

He announced that he was taking other steps to provide for training and vocational education to increase the number of skilled laborers for the construction industry, the shortage of which was one of the factors in inflation. He also established a Cabinet Committee on Construction, including the Secretary of Transportation, to review government programs “to assure that Government is not in its own programs and policies a major source of problems for the industry.” The committee also would study the Nation’s needs to ensure “that the Nation’s on-going construction needs are served in an orderly and efficient manner.”

Inflation also was a concern for FHWA. It reported that “an examination of highway construction costs shows that material prices increased at a modest rate of about 1 percent a year from 1964 through 1968, but in 1969 the rise was approximately 5 percent.” It discussed why:

Average hourly wages, the fastest rising single factor, increased at an average annual rate of approximately 5 percent from 1950 to 1967. In 1968 and 1969 the annual rate of increase was about 10 percent.

Labor factors, a measure of productivity expressed in terms of the number of man-hours used for each million dollars of construction costs, decreased rapidly from 1950 until 1964, but have now practically leveled out. The decrease in man-hour requirements can be credited to the development of new techniques, such as slip form pavers, electronic grade-control devices and larger, more effective hauling units. The increased productivity prior to 1964 helped to counteract increasing wage rates. However, when productivity levels out and wage rates climbed at an even faster rate, bid prices also started to climb at a faster rate. As an example, bid prices increased at an average annual rate of approximately 3 percent from 1961 to 1968 compared with approximately 9 percent in 1969. [*Stewardship Report on Administration of the Federal-Aid Highway Program, 1956-1970*, Federal Highway Administration, Department of Transportation, April 1970, page 69]

President Nixon’s anti-inflation campaign was on Chairman Proxmire’s mind on September 30, when he opened a hearing on the District’s FY 1970 appropriations. He was the only member from the District appropriations subcommittee in attendance. However, Senators Spong and Mathias of the Committee on the District of Columbia joined him as ex official members on the panel.

Chairman Proxmire’s opening statement explained the reason for the hearing. The city was embarking on “what may be the largest public works program any community in the United States has ever built” at a cost of \$2.5 billion. At the same time, the city was embarking on freeway construction it estimated would cost \$370 million. “When contingencies, right-of-way costs, relocation, and other items are added, in my judgment they will cost a minimum of one-half billion dollars”:

These projects are to begin in a period of very serious inflation. They are to start at the very time the President has cut back Federal construction projects by 75 percent and when he has called upon State and local officials to cut back projects over which they have jurisdiction. I have supported his position. His plea obviously should be given even

more weight here in the Capital of the country where greater Federal funds are involved and where the Nation looks for leadership than elsewhere, although everyone, everywhere in the Nation should act upon it.

In the case of rail rapid transit, the committee was being asked “to commit a double dose of subway funds in the first year and to do this at the very time when huge contracts are proposed for bridges, freeways and highways.”

He wanted to make clear that he supported the subway. “Sacrifices have been made to obtain it, and I know that a very delicate, sensitive arrangement has been made . . . . I don’t want to take any action that is going to result in an unfortunate situation where we might not get a subway and get it promptly.” Still, he felt an obligation to “question the timing of such large expenditures all at once.” The committee should “act rationally and intelligently” but ask about the economic effects, the schedule of payment, and how will they affect prices, materials, and labor in this area and the Nation.

Those same questions applied to the freeways, but “other questions are also involved.” They were subject to “deep community opposition,” he said. “Virtually every responsible party or group not having a direct economic interest has opposed them.” He also pointed out the “very real question” about whether the city should comply with Section 23 of the 1968 Act”:

Why, if these programs are to generate vast expenditures of funds in a highly inflationary period, if they are largely unwanted, and if there are real questions about their intrinsic validity, should they be built? Why should not the logic of economic analysis be applied to them? [District of Columbia Appropriations for Fiscal Year 1970, Hearings before the Subcommittee of the Committee on Appropriations, United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, 1969, pages 1417-1418]

Senator Tydings, chairman of the Senate District Committee, was the first witness, present “to plead for legislation.” It was unusual for the chairman of one committee to testify before another, but “I feel compelled to come before you today to urge this subcommittee to appropriate the full transportation request before it.”

As for the inflation Chairman Proxmire was concerned about, “each day Congress has delayed, and it has delayed for the last 2 years really on this vital project, is costing us roughly \$250,000 a day, and \$90 million a year in inflationary costs, building costs.” He agreed with the chairman that “the fate of the entire Metro mass transit plan hangs by a slender thread.” If construction did not begin in 1969, the financial plan, already jeopardized by inflation, will collapse. Suburban jurisdictions voted for bonds to pay their share of construction, but their votes and the years of planning “will have gone to waste.”

The Three Sisters Bridge had been the “primary sticking point” blocking starting Metro construction. The House refused to appropriate the Metro construction funds unless that bridge went to construction. “The House commitment to construction of the bridge is evidenced in the 3-year delay in the Metro start” and in Section 23 of the 1968 Act. The House revenue bill

“reaffirmed its intention to mandate bridge construction when it provided that no Federal payment can be made to the city until the bridge is undertaken”:

So the House refuses to fund the Metro until the Three Sisters Bridge is begun. And the Metro plan will be crushed by inflation within months, if it doesn't go ahead this year.

If the Senate blocks the bridge, Mr. Chairman, in my judgment, the Metro is destroyed at least for this decade.

His own committee had “faced up to this hard choice 2 weeks ago” when it incorporated the Broyhill rider in its revenue bill. This was a difficult decision, particularly for those who opposed the bridge. He decided to include the amendment for several reasons.

- He was convinced the House would insist on the Section 23 plans even if it meant losing Metro.
- Delaying Metro construction would increase pressure enormously for more “highways than anyone presently contemplates.”
- Opinion polls indicate the public would accept the bridge as the price for securing Metro. “These surveys include one taken by the chairman of the District of Columbia City Council, who is himself a critic of the Three Sisters Bridge and the North Central Freeway.”
- The city was taking steps to comply with Section 23 and the Broyhill amendment.
- The Broyhill amendment “provides a continuing assurance to concerned members of Congress that the city will pursue the 1968 Highway Act in good faith.” As a result, the House was willing to release the embargoed Metro construction funds.
- The city has assured the committee that the Three Sisters Bridge will not intrude on Glover-Archbold Park.
- Despite the “strongly held and frequently affirmed views” of the House, he had been assured that release of the Metro funds would follow the Senate District Committee’s adoption of the Broyhill amendment. He was convinced that any other approach “would in the present circumstances destroy the Metro.”
- Finally, while some members of the Senate District Committee had reservations about some elements of the freeway network cited in Section 23, “all the members recognized the reality of our position that the other House has strong feelings of its own on this issue which had to be taken into account. As a result, the Broyhill amendment “was an indispensable vote for the Metro system, a vote without which the Metro system will collapse.”

He spoke about the importance of Metro to the area, and closed by saying:

I can only say, Mr. Chairman, on the basis of my 5 years’ experience with the Metro, that in my view, delay or loss of the Metro would be a tragedy without equal in the history of our National Capital, a disaster from which this entire urban area might never recover.

[pages 1419-1426]

The three-member panel had no questions for Senator Tydings, with Senator Mathias explaining, “we have pumped him dry at previous sessions.”

Senator Spong offered a brief statement. He acknowledged Chairman Proxmire’s concerns, but “I cannot emphasize too much the need for immediately beginning on the Metro system.” As a commuter between Virginia and the District, he could speak from experience when he said, “I believe I can say without any fear of contradiction that if we don’t go forward at this time, it is going to be almost like unscrambling eggs to ever put the Metro system back together again.” Perhaps more than any other part of the country, Washington needed rail rapid transit and a balanced transportation system:

I think one very vital factor raised here is if we do not go forward with this mass transit system at this time . . . I predict far greater expenditure, far greater difficulty, far greater unrest in terms of more bridges and more freeways.

Given the strong support in the House of Representatives for the freeway system and the strong support in the Senate for Metro, “we just dare not falter and hesitate at this time, and it is somewhat awkward for me to sit here with you as an ex officio member of this committee, with that strong a conviction ab initio [from the start], but I feel compelled to say it.” [pages 1426-1427]

Chairman Proxmire commented on Senator Spong’s statement, “It is a fine statement, and I am certainly surrounded by powerful ex officios.”

Senator Mathias, in a statement, said he welcomed Chairman Proxmire’s statement that if the projects were justified, they should be built. “The fact is that these projects can be justified.” The projects were “important not only for some of the obvious reasons which appear, but because of their enormous substantive impact on everything that is going to happen in the Washington Metropolitan area.” With projected population increases, highways could never be sufficient. “I think if you paved the Potomac from bank to bank, from Cabin John to Haines Point, you would never carry all the cars that are going to be upon us in a few years.” Metro would not be the total answer, “but I think it is the only logical answer.” [pages 1427-1428]

Chairman Proxmire responded that he did not question the need for Metro, which he had long supported. “My question is strictly the effect that this has on inflation, the biggest public works project in the country, probably the biggest that has ever been undertaken anyway, all at once, and this is what I want to get at in the course of the questioning.” The “essence of inflationary spending” is in the timing of the expenditures. [pages 1428-1429]

He introduced a statement that Representative Gude had submitted. Representative Gude shared Chairman Proxmire’s concern about inflation, adding “it is precisely this inflation that threatens to jeopardize the financial integrity of our transit program if work does not get under way by the end of this year.” As for the freeways, “experience has proven that there can be no progress on transportation facilities without a genuine compromise involving both freeways and rail rapid transit. “Collapse of a freeway-transit agreement more than three years ago very nearly jeopardized our transit program”:

Now, I fear that any disruption of what amounts to a new transit-freeway package could lead only to more delay and the condemnation of the transit program to certain failure because of the toll of inflation.

The de facto compromise which we have achieved is supported, I believe in the Congress, the Administration and the jurisdictions of the region. I do not delude myself that all parties are ecstatic over every particular. But the compromise appears to be the best that can be achieved and far better than the alternative, which would mean no transit and no freeways. [pages 1429-1430]

The first noncongressional witness was D. P. Herman, the District's Budget Officer. He explained that on September 4, President Nixon had ordered a 75-percent reduction in new Federal contracts. The reduction did not apply to Federal construction grants to State and local governments, although the President asked for their cooperation. The District's capital outlay program was not directly affected by the announcement because the city was not considered a Federal agency. The District was exploring its construction program for areas that could be cut.

He pointed out one part of the September 4 announcement: "This limitation, which will continue until conditions ease, will still permit projects of the highest social priority to be carried forward." The city considered its balanced transportation system "to be of high social priority."

He acknowledged Chairman Proxmire's concern about the timing of expenditures at a time when inflation had prompted President Nixon's action:

Nevertheless, it is difficult to fully predict the ideal time for new construction particularly when it is associated with social need. While in some cases projects can be deferred, the fact is that new construction is needed now in the District of Columbia in many areas in order to eliminate years of neglect and to allow for unmet social requirements.

He hoped the committee would "join us in a realization of our objective of providing for unmet social needs and we assure you that the District will do its utmost to comply with the President's program." [pages 1431-1434]

Chairman Babson testified next, accompanied by General Graham, Chairman Spellman of the Washington Suburban Transit Commission, and other WMATA officials. Babson summarized the history of Metro and discussed President Nixon's September 4 statement. The basic question was whether a rail rapid transit system for the Washington area was "of sufficient social value and priority to warrant the continuation of the effort now underway" at a time of high inflation.

He referred to President Nixon's April 28 letter supporting Metro and his August 12 letter to Chairman Natcher in support of Metro after recent developments that advanced the freeway network. Babson also pointed out Mayo's letter of September 18 stating that the FYs 1969 and 1970 Metro funds "would be in accord with the program of the President." He also pointed out Budget Bureau Deputy Director Hughes's response when asked during the joint hearing about advancing the projects in an inflationary period.

Chairman Proxmire interrupted Babson's opening statement to point out that the Nixon Administration was asking less for mass transit than for supersonic transport [SST], "which in my view is just a plaything for the jet set":

They have asked for very little, and we have been pressing them hard to proceed with mass transit funds in the cities of our country, all over our country, but they have shown a peculiar indifference to it.

They have a feeling that it can be postponed. Now, when it affects us right here in Washington, there seems to be a rather different standard applied by the administration for some strange reason.

He estimated that the SST would eventually cost \$4 billion, but could be as high as \$10 billion. He admitted that WMATA had nothing to do with the SST, but was pointing out the contradiction in priorities. (Secretary Volpe was a strong supporter of SST, and kept a model of the airplane on his desk throughout his tenure.)

(On August 7, 1969, President Nixon had proposed an ambitious \$10 billion public transportation program over a 12-year period "to help in developing and improving public transportation in local communities":

The program which I am recommending would help to replace, improve and expand local bus, rail and subway systems. It would help to develop and modernize subway tracks, stations, and terminals; it would help to build and improve rail train tracks and stations, new bus terminals, and garages . . . .

Under this program, the bus, train, and subway user would have better service. Cars would travel on less congested roads. The poor could get to new opportunities for training, rehabilitation, and employment, while city centers "would avoid strangulation and the suburbs would have better access to urban jobs and shops."

(He concluded:

Most important, we as a Nation would benefit. The Nation which has sent men to the moon [on July 20, 1969] would demonstrate that it can meet the transportation needs of the city as well.)

Resuming his statement, Babson spoke of the social value of Metro, the inflationary impact of delays, and the steadfast support of regional officials for the current financial plan. "However, all are concerned over the cost of continued delay. We are coming perilously close to the break point." He added that the bond issues for construction depended on the certainty of the construction timetable. Without assurances of revenue to support the bonds, "the financial plan will not be acceptable to the bond market."

Metro, Babson continued, was always based on the need for a balanced transportation system that included the freeway network. Throughout development, WMATA had coordinated closely with regional officials involved in developing the freeways:

As a result, our requirements for manpower and materials are considered to be within the bounds of economic practicality. As we move forward, we must necessarily pay close attention to these matters and maintain complete coordination.

He ended his opening statement by quoting President Nixon's September 24 statement:

More than a subway will begin in December. A city will begin to renew itself; a metropolitan area to pull itself together. That the Nation's Capital is involved makes this an event of national significance. [pages 1434-1439]

Chairman Spellman offered a brief statement next. Like Babson, she acknowledged the concern about inflation:

However, I can think of few things short of national security which should be placed in as high a priority in our National Capital area as the construction of the rapid rail system. As they say in law, there must be a balancing of equities and I don't think anyone here would question where, on the equities scale, a project which will provide extraordinary therapy for our city's ills should stand . . . .

Congress and local officials had "a herculean job" trying to solve the area's ills, but "we know that there can be no moratorium declared there, and so we feel that this project is all the more important, because it is vital for providing jobs for the unemployed, for providing the means to reach employment for those without transportation, for providing the means for reaching educational opportunities, for reducing the pollutants in the area we breathe, just to name a few related factors."

Delaying Metro at this time would be "death." She emphasized that she was "not being melodramatic. This is a simple fact that is dictated by economic and political realities." It was not WMATA's fault that Congress had tied rail rapid transit to the freeway system. "It is most unfortunate that our transit system has been fashioned into a Siamese twin who if cut apart from his life-giving partner just won't survive. As I say, this is not something we asked for."

She said, "we ask of you please don't hold transit hostage."

She complimented Chairman Proxmire for jogging to work each day from his home at 3025 Ordway Street, NW., in Cleveland Park. She admitted she jogged only from her parking space about 20 or 30 feet from the entrance. Perhaps, she speculated, if everyone jogged to work, the area would not have its transportation crisis. "Unfortunately, we don't, and we do have a situation." She did not need to repeat what Senators Mathias, Spong, and Tydings had said, but closed by saying, "I think it needs to be recognized, that it is not a matter of do we do this now or later, it is just going to become such an impossible situation if it is postponed anymore that we will end up with freeways everywhere instead of a transit system that can move a great many people. [pages 1440-1442]

(A well-known fitness advocate, Senator Proxmire jogged 5 miles a day to work after warming up with 200 pushups; he jogged home after work. [Green, Mark J., Fallows, James M., Zwick, David R., *Who Runs Congress?* A Bantam/Grossman Book, 1972, page 212])

Director Airis and his colleagues were the final witnesses, although WMATA participated in the ensuing question period. Airis began by pointing out that the balanced transportation program “has lagged far behind other growth in the Washington metropolitan area.” Freeways had been “subjected to endless delays during the past decade with the result that the District of Columbia is ranked next to last in its interstate completion status.”

Despite this lack of progress in providing transportation facilities, “the Washington metropolitan area has continued as one of the fastest growing metropolitan areas in the entire United States during this same decade.” With a current population of around 2.6 or 2.7 million, the area’s projected population for 1990 was 4.5 million. Transportation planning for the area had to consider that increase.

Over the past decade, Airis said, the downtown area had increased by 220 buildings, with construction permits for some years approaching \$1 billion. The boom had slowed at present, with a consequent effect on employment, “but one of the things that would assist greatly in picking up this slack, of course, is some public works projects.”

Babson confirmed that the area’s unemployment rate had increased from 1.8 percent in January to 4.5 percent in December. Constructive activity was down 7½ percent over the previous year. “On this point, if I may for the record, at no point do we expect to employ more than 5,000 people in the construction program of the transit system.” He continued:

The point Mr. Airis touched on, which I wanted to make, is that although we are concerned with the inflation of the economy, I would remind the Senator that the one area which is suffering from a depression is the construction industry.

Chairman Proxmire said home building was suffering from a recession. The Housing Subcommittee was doing everything it possibly could to “get resources out of areas like business investment in plant and equipment, public works, which can’t be fully justified, highway building, and into housing.” Most economists who had looked at it said this focus on housing was what the country needed “because we have had this enormous highway building program in the country, and we have the most serious housing shortage that we have had in 20 years.” Going forward with highway building too fast “will aggravate the housing situation, as well as the inflationary impact of this program.”

Chairman Babson pointed out that once construction of Metro gets underway, WMATA had a program “to train the hard-core unemployed, and to require every contractor to hire a certain percentage of these individuals.” Airis said he supported that program.

Chairman Proxmire pointed out a recent article in the *Washington Daily News* that discussed the types of workers needed for Metro construction: laborers, iron workers, carpenters, operating engineers, electricians, miners, pipefitters, cement finishers, painters, mechanics, tilesetters, and track layers for a total of 4,600 jobs. “The overwhelming majority of these people are not people you are going to get from the hard-core unemployed to train in this program in a few weeks.” Babson pointed out that WMATA did not plan to hire all 5,000 workers when construction began in December.

Chairman Proxmire referred to an article in the morning's edition of *The Wall Street Journal* in which economists predicted inflation would continue for as much as 4 more years "and they say it may be that next year the economy will slow down a little, but not enough to slow inflation."

By this point, Airis had barely read his statement. Given the opportunity to resume, he summarized Section 23 of the 1968 Act. On August 9, he said, the city council had voted to comply with the provision.

Chairman Proxmire interrupted again to refer to President Johnson's "veto message – I should say his approval message, in which he threatened the possibility of having to veto, of August 23, 1968." He quoted the section in which President Johnson said:

Fortunately, the Congress has called for construction only in accordance with the applicable provisions of the Federal Highway Act. If the authority of the Executive Branch were not so preserved, I would have no choice but to veto this bill.

He understood that a report had been made that recommended excluding the four projects listed in Section 23. Airis was unclear what report Proxmire was referring to. He referred to the Major Thoroughfare Plan, which included most of the projects. Chairman Proxmire noted the differences between that plan and Section 23. "So it is pretty far from compliance with the President's message."

Airis resumed his statement with the city council's August 9 approval of the Section 23 plan. The Department of Highways and Traffic was "striving diligently to get the above four projects underway, thereby fulfilling the requirements of congressional intent." These were the "initial actions needed to ultimately provide for the highway portion of the entire balanced system."

Airis said the total cost of the Section 23 projects was \$348 million, but Chairman Proxmire pointed out that this cost did not include expenditures in Virginia. Airis agreed, but pointed out that the expenditures would be spread over the years 1970 to 1976. "A sizable portion of this money will, of course, be expended to complete and make usable freeway inner loop projects that are now well underway, such as the center leg of the inner loop."

He finally concluded his opening statement by saying that the balanced transportation program for the District had been long delayed. Some freeways, such as the Southwest Freeway, were open and heavily used, but other portions "are far behind schedule." As was the case throughout the country, the District's program "will be governed by decisions of the Federal Government on the funding levels of such programs." [pages 1442-1449]

Airis mentioned that the District of Columbia was next to last among the States in progress on the Interstate System, and that Wisconsin was about 20<sup>th</sup>. He said, "we have been scraping along here on kind of a barebones program for quite a few years, and the transportation, sir, affects everybody."

Chairman Proxmire recalled the usual reason that was given for the District's low ranking, namely that it was a city without open country. Wisconsin had long distances of open country in which to build its long-distance Interstate highways. "It is much harder in the city part of

Wisconsin or the city part of all of our States to have these programs.” Airis replied, “There is no question about this.”

Chairman Proxmire, turning to WMATA, said he understood that the Department of Transportation had released \$34.7 million for the subway. Chairman Babson, said that was true, but that WMATA did not actually have the funds in hand. “We watch every mail” for the funds.

Whereabouts of the funds aside, he really just wanted to emphasize “the redeeming social value of this subway system.” Chairman Proxmire said he understood, but “it is a question of timing” with inflation so high:

It is one thing to say that we will postpone expenditures or not build something that is very good and you don’t have to have for several years. That is easy to do, but here is something that we want. I know that you have waited a long, long time.

Now, the region was “so excruciatingly close to getting it . . . . Now when you are right on the brink of it you want it so badly you can taste it.” It was just his view that “when we have a serious inflation and this in my view could set a bad example and we have to weigh our priorities one against another.”

Before leaving briefly for a vote on the Senate floor, Chairman Proxmire asked Chairman Babson to think about what the subway program could do to reduce its impact on inflation. He asked Airis “if you would think of how you can answer this question, because I think where you can make some argument that the subway program will help housing, everything that I have seen has indicated that the highway program has been devastating for housing.” More houses had been destroyed because of the highway program than urban renewal had built with public housing, “and there is a lot of resentment against it by low-income groups. Most poor people don’t have cars but they live in houses the highway program displaces.

When the hearing resumed, Chairman Babson said he would like to be able to say that the construction program could be revised to spread out over 20 or 30 years. Chairman Proxmire interrupted to say he was not concerned about 20 years from now, only about the next year or two of inflation. Chairman Babson asked:

Mr. Chairman, do you really believe that this one bill, this one project, as critical as it is for this region, is going to have that much of an impact on the national economy or the regional economy? And may I suggest that it is much more important that we proceed with this project now before it is dead.

Chairman Proxmire said every city council in the country could make the same argument. It was only \$1 million here, \$10 million there, a pittance in a country with a gross national product of \$1 trillion, but “all of these add up and this is the biggest of all, the biggest ever anywhere when you take this whole operation together.” The requested double appropriation for FY 1969s and 1970 would “trigger all this expenditure.”

General Graham pointed out that the reason for the double appropriation was that construction had been delayed a year:

Because we have already, sir, compressed our design and construction schedule in the first 5 years of this 10-year program to the maximum due to the delay that has been suffered, and if we are to complete this entire system in 10 years, we are right up against it now because of the compression that we have suffered.

What would be the difference, Chairman Proxmire asked, if the system were completed in 11 years instead of 10?

General Graham replied that the financial plans would no longer be viable to potential bond buyers. It would mean another \$100 million in inflation.

Chairman Proxmire asked about the 30-cent fare. General Graham confirmed that the entire financial plan depended on a 30-cent base fare. Asked how many subway systems around the country paid off bonds from the fare box, General Graham replied, "We don't have a case, sir, except in San Francisco, where . . . any modern system is being put together." The others were too old to trace their financing.

Could WMATA postpone future expenditures, Chairman Proxmire asked? The financial plan depended on a continuing flow of funds to complete the system by 1979. "Why," Chairman Proxmire asked, "do we have an Appropriations Committee," if the plan requires the appropriations. Chairman Babson replied, "it would require arduous efforts on the part of many people in this region to go back and undo these agreements and redo them and then try to sell them again to the local governments . . . ."

Before he could finish, Chairman Proxmire said, "We are not persuaded by the fact that you have to make arduous efforts." Chairman Babson said going back to the local communities would be "almost impossible but nothing is impossible. If the Chair wants to make it exciting for us, this would be very difficult."

Chairman Proxmire said he was not trying to make things difficult. He understood the desire to "get the money started and going so there isn't any question you can proceed." However, in this inflationary period, he wanted to find out how to proceed "in a way that will minimize the inflationary impact." He did not think WMATA or Senators Matias, Spong, and Tydings had given any thought to this subject. He did not blame WMATA; that was the responsibility of Congress "to determine what we can do with this very big and expensive program to reduce as much as we can the inflationary impact of it." They needed "some good hard answers, and not simply accept a statement from very competent witnesses that it can't be done." He asked WMATA for a "tough reanalysis" to come up with "some kind of plan and program that will show us how we can save this money or save a part of it this year."

Chairman Babson said, "Save part of it this year?" He suggested that Congress would have an opportunity each year to review the plans and cut back funding.

"Exactly," Chairman Proxmire told him, adding, "and this year we want to cut it back. This is the year." Maybe the schedule could be speeded up in the following year, or the year after that.

“With all due respect,” Chairman Babson began, WMATA was ready to go a year ago, and had it been able to do so, “I don’t think we would be in the midst of the inflationary problem that we are today.” WMATA had compressed the schedule because of the lost year “to the point now where it is almost breaking.” If it does break, they would have to go back to beg the voters to support referendums for larger bond issuances”:

Senator Proxmire. Why do you have to have a referendum if you simply slow down the rate in payment?

Mr. Babson. If we don’t get started right now, Mr. Chairman.

Senator Proxmire. You get started right now but on a limited basis.

Mr. Bason. We don’t have a plan for a limited basis. The whole plan for the region has been sold on a certain plan. The Congress directed us years ago to get to work on this. We have worked on it . . . we have begged, we have pleaded. We have been cut off by the House. The Senate has been very good to us, but now we think we are there. If we don’t get started on the plan we have now, which has been worked out in the minutest intricacies, it all falls apart. Then we have to go back and we have to have more than \$62 million from Fairfax County, maybe it will be \$65 million or \$68 million. We have to have another bond referendum under law over there . . . . Now, this is going to take place in Arlington and in all of the other jurisdictions. The people don’t believe this is ever going to happen, and if it falls flat on its face today, I think they will. . . .

Senator Proxmire. It is not a matter of falling flat on its face. It is a matter of slowing it down so that it doesn’t have the devastating, what I think will be a devastating inflationary impact, especially in terms of example.

Chairman Proxmire thought that if people understood that the project was slowing down to avoid inflationary impacts, they would “have a much stronger argument for proceeding.” General Graham pointed out that if additional referendums were needed, we would “have to win all eight of them, Mr. Chairman. We can’t lose a single one or we are dead.”

But, Chairman Proxmire pointed out, WMATA won the 1968 referendums by big margins. General Graham said WMATA could not predict success in future referendums “before we have holes in the ground to point to, to show that we are on the way.”

Chairman Proxmire assured him, “I want you to put those holes in the ground, but I don’t want you to proceed with the fantastic speed from \$14 million a year ago to . . . \$243 million this coming year.”

General Graham suggested that with BART winding down on construction, WMATA would find that contractors and skilled workers would be available for the Metro project. WMATA was trying to interest those contractors in bidding on the Metro construction contracts. As that project winds down, the result would be deflationary in that area; WMATA would be taking up the slack. All in all, “it may be that the net impact is not inflationary looking at it nationally.”

Chairman Proxmire asked about the percent of District residents who would use Metro. WMATA agreed on a figure of about 26 percent. Chairman Proxmire suggested that if the city didn't have the freeways, more residents would use Metro. Airis objected:

I don't think we are competitive [with Metro]. We are talking about the movement of people and goods, and not just about moving commuters.

Chairman Proxmire, citing the \$370 million cost of the planned freeways, said he was interested in the inflationary impact of the construction plan. Airis pointed out that the Three Sisters Bridge would cost about \$15 million, including approaches, and that the Potomac River Freeway was necessary. He sketched out pending expenditures by year: for 1970 (\$46 million); 1971 (\$74 million) and 1972 (\$132 million).

These figures convinced Chairman Proxmire that the city was making plans over several years for increased expenditures. "In other words, if we go ahead, then you are going to be expanding at this enormously rapid rate and you are going to have this inflationary effect in 1970 and 1971."

Airis said he would "try like the very dickens" to work at that pace "because then the public have the use of these facilities and could use them."

That, Chairman Proxmire said, was what every highway director in the country is saying. "That is why we have this terribly difficult inflationary problem."

Airis again pointed out that the District was next to last in Interstate completion, with Maryland last. The District, like all the States, was bound by the completion date of 1975 in Federal law for the Interstate System.

Chairman Proxmire referred to the U.S. Court of Appeals ruling that the District had not satisfied Title 7 of the District Code. Correct, Airis replied, but that was before the 1968 Act. True, but Chairman Proxmire pointed out President Johnson's call for a comprehensive plan, adding that the comprehensive plan adopted excluded the Three Sisters Bridge and called for the Potomac River Freeway to be in a tunnel and the East Leg Freeway to be more or less a parkway.

Airis said the Major Thoroughfare Plan adopted in December 1968 was not a comprehensive plan. What President Johnson had in mind in referring to a comprehensive plan in his signing statement was never clear. Airis said the more recent action of the city council, on August 9, directed highway officials to proceed with the plan Congress adopted in the 1968 Act.

Chairman Proxmire was skeptical that the city was in compliance with the law. Just because the city council directed the highway department to proceed "doesn't make it right." His job, he said, was "to do my best to see that the law is respected and upheld." He asked for an explanation from the corporation counsel that would explain how the city can proceed in view of the President Johnson's call for a comprehensive plan.

The counsel's statement, submitted after the hearing, explained that the projects had been developed in accordance with Title 23, but the U.S. Court of appeals found that the development also should have complied with Title 7 of the D.C. Code, added in 1893. Section 23 of the 1968

overcame this problem with the “notwithstanding clause.” In this way, “Congress plainly supplied the authority which the court had held that Congress had not previously supplied.” The city council knew the plan it adopted on August 9 was “fully authorized by virtue of Section 23 of the Federal Aid Highway Act of 1968.”

The statement, which did not address President Johnson’s signing statement, concluded:

The provisions of section 23 are clear and unequivocal and the effect of those sections is that the Interstate System within the District of Columbia has been statutorily fixed by Congress, except as to those cases where Congress directed that studies be made and presented to Congress. [page 1470]

Chairman Proxmire cited the Arthur Little Company’s report which he said questioned every one of the projects. Airis explained that the company had questioned the projects “to some extent, but if you look carefully at the tables you will find that it wasn’t at all that bad, that largely, they supported these projects.”

Secretary Boyd also had questioned the Three Sisters Bridge, Chairman Proxmire pointed out, recalling the testimony on December 6, 1967, that the bridge would only transfer congestion from Virginia to the District. He also had called the North-Central Freeway a tremendously expensive and inadequate artery.

Airis responded by discussing, first, how the bridge would cut down the driving time between the District and Dulles International Airport. Second, he pointed out that the bridge would make it easier for traffic on I-66 to get to the District’s northwest quadrant efficiently. Third, only by construction of the Three Sisters Bridge and Potomac River Freeway can the connection with the George Washington Memorial Parkway finally be completed.

How, the chairman asked, can the District proceed with projects that were not in the comprehensive plan – which fails to meet the provisions of the 1968 Act in his opinion. Airis said the corporation counsel gave the go-ahead.

Airis confirmed that the city had awarded a contract for the main piers for the bridge:

Senator Proxmire. Has awarded it without Congress having acted on this?

Mr. Airis. Yes.

Senator Proxmire. Isn’t that pretty insulting to the Congress?

Mr. Airis. Oh, no, I didn’t think so, not when I am told to go ahead by the corporation counsel.

Senator Proxmire. Supposing we should turn you down on this thing?

Mr. Airis. In what way, sir?

Senator Proxmire. Supposing we should act not to approve this?

Mr. Airis. Sir?

Senator Proxmire. You have acted on the basis of a previous appropriation?

Mr. Airis. Oh, yes, definitely.

(This discussion, although somewhat unclear, apparently referred to appropriation of the District matching funds for the projects. Federal funds, because of contract authority, did not require a separate appropriation and were not subject to the jurisdiction of the Senate District Committee.)

Chairman Proxmire asked how the city could proceed in view of the court injunction issued in February 1968. After the hearing, the city filed the response referring to the “notwithstanding” phrase in Section 23. The phrase “supplied the requisite authority which the court . . . had found lacking.” By virtue of that phrase, “the court injunction was no longer with force and effect.” [sic]

Chairman Proxmire switched the discussion to truck traffic on I-266 across Spout Run Parkway. What would happen to the trucks in the city? At present, they would use city streets. The chairman suggested that would be “pretty rugged,” but Airis said it would not be any worse than at present. What about trucks going to the northeast quadrant? Airis said they probably would cross on the Shirley Highway via the 14<sup>th</sup> Street Bridge.

The chairman said, “You see what I am getting at is it looks as if we are going to have another cost now of building a tunnel under K Street, a spur to Florida Avenue in the north, and these two projects will be costly.” Airis pointed out that Section 23 required construction.

Chairman Proxmire asked if the original plans called for construction of a freeway through Glover-Archbold Park. Airis thought perhaps that was the plan before his time in the District. He explained that the city had owned a 100-foot right-of-way through the park since 1893, but had just recently transferred it to the NPS. The chairman wondered if, even so, the existence of the bridge would be like “a gun pointed directly at the park.” Airis said the bridge would not be pointed at the park:

Senator Proxmire. Under those circumstances though, it seems to me – won’t you or your successor be back asking for a freeway to go right through the park?

Mr. Airis. Oh, no, sir.

Turning to the North-Central Freeway, the chairman said that as a member of the Housing Committee, he was very concerned about the housing shortage in the city – 100,000 houses short according to the most recent data he had. The freeway would certainly contribute to the shortage. “As a matter of fact, we have destroyed more housing because of urban renewal and highway construction than we have reconstructed with public housing and with other governmental housing projects. I am told twice as many.” Airis said highways in the city had resulted in displacing 1,800 families.

The chairman pointed out that the Major Thoroughfare Plan had rejected the North-Central Freeway, as had the Arthur Little report. When Airis said the Little report “gave it a pretty good bill of health,” the chairman read from the study’s conclusions that the present plans were based on insufficient data and questionable assumptions, and that transportation planning had been carried out with inadequate regard for long-range economic and social impact. “Now, if that is a

good clean bill of health and enthusiastic recommendation, I would hate to have them condemn a program.”

Airis replied that the table pertaining to individual projects, where they are listed as satisfactory or unsatisfactory found that the North-Central Freeway “has considerable merit.” The chairman looked at the table and found that it ranked the freeway favorably in some categories, but found it insufficient in others and did not rate it in some categories. “I would say against that that seems to me not to represent an enthusiastic support.” He summarized, “as far as you are concerned . . . if it does not get a flat flunk in just about every score, it is not a bad project.”

The chairman wanted to know if the city expected the committee to approve appropriations for the two projects that were not in the Major Thoroughfare Plan. “I want to clear up that question.” Airis confirmed that neither project was in the plan. However, the city council, which is the approving authority for the plan, had voted on August 9 to include them “and it would appear to me, and of course to the corporation counsel, that their action gives us a clear go-ahead.”

Next, the chairman asked Babson how the Federal Government could justify underwriting 46 percent of the cost of constructing Metro, but not do so for other cities. Babson explained the role Metro would play in serving the Federal Government. “Congress found and held some years ago that construction of this rapid transit system is necessary for the efficient functioning of the Federal Government, which is our main industry, almost our sole industry.”

That explanation, in Chairman Proxmire’s view, “does not really answer the question on the basis of equity and need.” Every city needed and wanted more Federal funding for transit. Babson referred to the matching share in the Urban Mass Transportation Act, but Chairman Proxmire countered by saying the problem was that “we neither authorize nor appropriate any significant money for it.”

He asked Airis what he had asked Babson earlier: “what can you do to reduce the inflationary impact of your program?” Airis replied that the city was geared to the Federal program because of financing “and whatever their decision is in the matter . . . .”

Chairman Proxmire interrupted to ask if what was needed was the type of moratorium President Johnson had imposed in 1966. Airis agreed such an event would slow the program, “but I think we have got, sir, really honestly I think we have got to think of the lack of transportation.” Here was a system that had been at bare bones for a long time, with the center city economy suffering as a result:

I think it is time that we really got on, put our best foot forward and got something done here. It is obvious that you cannot use the rapid transit system until they build it. I mean you have got to build a good-sized chunk of it, and likewise with the freeway system. Although we build it in usable segments and each segment can stand on its own feet, the entire system would be most helpful to take care of the 3- to 7-percent increase in traffic that has been generated because of population.

The chairman agreed the subway was needed but he was not certain about some of the highway projects. Airis assured him, “they stand on their own feet.” But, the chairman pointed out, the more freeways are built, the more people drive to work. The freeways are “all obsolete before you get finished.” Airis pointed out that in their absence, the vehicles use city streets that are not adequate for the traffic.

Chairman Proxmire summarized that the committee was faced with “a very grim alternative.” It could approve all the funding for Metro and freeways. It could turn down the whole package. Or it could cut the funding blindly because neither Babson nor Airis would “give us advice on how we can design this in such a way that it will have less of an inflationary impact.” The committee could put some sort of limitation in place, but he did not like to do that “without advice from the people who are most competent” to provide it. “That is why you are here today.” If they would give him “a certain proportion . . . we could reduce the obligations which will be provided by this appropriation bill.”

Babson replied that although it was hard to explain, “It is just impossible at this time” due to the financial arrangements for Metro. Chairman Proxmire asked WMATA to have its general counsel explain how a limitation would affect funding arrangements with local jurisdictions. Counsel John Kennedy submitted a reply for the record, which concluded:

Delaying the start of construction or stretching out the construction schedule would increase proportionately the federal and local contributions, requiring new referenda in several local jurisdictions. Considering that the National Capital area bond election came at a time when similar referenda were failing in several other urban areas, there is solid reason to doubt the eventual success of a further appeal to the electorate in several separate referenda, all of which must be approved. [pages 1483-1485]

With the hearing near an end, Airis asked to make two points. First, even as population has grown, the area’s transportation network has not kept pace. “We have been going along at a bare bones level, and our programs, our respective programs are needed to catch up a little bit now to hold and contain the situation. Second, he read again the “notwithstanding” provision in Section 23(a) of the 1968 Act requiring construction of the Interstate freeways in the 1968 ICE.

Chairman Proxmire agreed about the need for Metro “but as far as these marginal highway projects are concerned, Three Sisters, North Central Freeway, cutback the east leg, the Potomac Freeway, I must say that postponing these seems to me [necessary] if we are going to do anything to show that we mean business about inflation.”

Airis said they were badly needed, but the chairman assured him that in his view, they were “in the front rank . . . of projects that we should slow down.”

The hearing soon came to an end. [pages 1449-1489]

### **After the Hearing**

Jack Eisen summarized the hearing in his opening paragraph the next day:

Sen. William Proxmire (D-Wis.) put the fate of Washington's Metro rapid transit system in doubt again yesterday by threatening to cut funds for both subways and freeways.

The deepest cuts, he declared at a hearing, should be made in money for freeways, which he called "marginal" in justification as compared with the rail system.

While he proposed the cuts based upon a need to curb inflation, Proxmire peppered his commentary with criticism of freeways, including the Three Sisters Bridge.

He said he would not be bound by the decisions of his House counterpart, Chairman Natcher, but would look at each project on its merits:

This raised the question of whether Natcher, if so challenged, might back off from last week's announcement and refuse to grant the promised funds and act to impound \$37.4 million that already has been released.

(Eisen was referring to the \$37.4 million in Federal transit aid that Secretary Volpe had released on September 25. The funds would, in effect, be impounded without the required District matching funds needed for WMATA to use them.)

The fact that Chairman Proxmire conducted the hearing without any other members of his subcommittee present raised a question about whether he could convince the other members to support his position.

After the hearing, Chairman Proxmire told reporters that Airis had made a "weak" case for the freeways, especially in comparison with the "strong and very persuasive" case made for Metro by the WMATA panel.

The *Star's* Stephen Green reported that Chairman Hahn had visited Chairman Proxmire on September 30, the day of the hearing, to assure him that the city council's August 9 vote was legal:

Hahn met Proxmire behind closed doors in the senator's office. Proxmire could be heard telling Hahn that, under federal law, interstate highway projects must be included in the city's comprehensive plan. The Three Sisters Bridge and related freeway projects are not.

After leaving Proxmire, Hahn said they only discussed whether an early-1968 U.S. Court of Appeals injunction against freeway building still is in effect. The council president [sic] said he had explained that the later 1968 Highway Act ordered the city to build the bridge and road and specifically stated that previous court actions did not apply.

Green also reported that WMATA staff and Chairman Proxmire's staff were working "to come up with a construction slowdown plan." At the same time, WMATA voted to seek bids for construction of the second phase of the first 6 miles of the tunnel from Lafayette Park to Connecticut Avenue and K Street, NW.

Finally, Green reported that “Airis yesterday said that he will not give Proxmire a plan to cut down on freeway construction.” [Green, Stephen, “Proxmire Calls Plans Illegal To Build Freeways, Bridge,” *The Evening Star*, October 3, 1969]

The Senate considered the District of Columbia Revenue Act of 1969 on October 3. The bill included the Broyhill amendment as Section 801. Chairman Eagleton of the Fiscal Affairs Subcommittee informed his colleague that the Senate District Committee had retained the House provision because “the committee believes that it has taken every reasonable step to remove obstacles to the release of authorized subway funds.” The Federal payment would be withheld only until President Nixon reported to Congress that the city “has committed itself irrevocably to full compliance with the provisions of section 23(b) of the Federal-Aid Highway Act of 1968.” The provision made clear that the Federal payment would not be withheld “if the District is prevented from carrying out its commitment solely because of a court injunction resulting from a suit filed by persons other than the District of Columbia or Federal Government”:

The committee feels strongly that governmental policy should not be hamstrung by the actions of persons who, for reasons of their own, may choose to file suit to block construction of highways or subways. Transportation policy in the Nation’s capital is too vital a matter to be left to such chance and possibly irresponsible actions.

The provision, he added, “will make it possible to begin construction this year of the long-delayed rapid rail transit.”

Former District Committee Chairman Bible said he agreed with Chairman Eagleton about the long freeway-subway impasse. “I think he has come up with the only practical conclusion that could be made in this field.”

Current Chairman Tydings realized that Chairman Eagleton had many difficult choices to make, including the “highly volatile issue, working out the disagreements between those who are willing to sacrifice the subway if they can stop roads and those who, for one reason or another, have almost intractable positions on the issue of roads and subway.” The bill would help bring about the balanced transportation system the metropolitan area needed. “I think this is the vital move if we do not wish the District of Columbia, our National Capital, to become another Los Angeles.”

Senator Cooper said he had intended to introduce an amendment to strike Section 801 from the bill, but had decided not to do so “because the Senate committee has approved the provision and I think it would probably be useless at this time, late on a Friday afternoon, to attempt to strike out section 801.” He realized that striking the section would cause problems when the bill went to conference committee with the House. He did not want to affect the House decision to release the subway funds.

To be honest, however, Senator Cooper wanted to explain that he opposed Section 801. His objection stemmed from his objection to Section 23 of the 1968 Act. After the Senate approved its version of the 1968 Act, they went to conference and “to our amazement found a section in the House bill in which the House of Representatives and the Committee on Public Works of that

body, arrogated to themselves the position of engineers and asserted an authority to take over the functions of the Bureau of Public Roads and of the local government of the city of Washington.”

If they had arrogated to themselves which roads and streets should be laid down in Kentucky, Montana, or anywhere else, “the Congress would not accept it.”

Despite his objections, he realized that agreements had been reached with his Kentucky colleague, Chairman Natcher, to release the subway funds in return for the start of the freeways. “There may be court proceedings, but the political decision has been made.”

Having objected to Section 23, he said of Section 801, “I object to this second act of coercion on the part of the House.” After managing to impose their will on the District to secure work on the Section 23 freeways, here they are again trying to force that construction. “I think that is going too far. It is coercion.”

Although he had withdrawn his amendment to delete Section 801, he asked the Senate to consider a minor amendment to the provision. It would replace “President of the United States” with “Secretary of Transportation.”

Chairman Eagleton explained that President Nixon had been involved in the dispute and continued to be involved. President Nixon’s August 12 letter was proof of his role.

Senator Cooper, saying “I do not wish to appear to be meddling in this situation,” withdrew his minor amendment. He just did not like the way the Congress “thrust the highway system down the throats of the people of the city of Washington.” [District of Columbia Revenue Act of 1969, Congressional Record-Senate, October 3, 1969, pages 28389-28396]

Chairman Proxmire also addressed his colleagues:

The District of Columbia is about to embark on what may be the largest public works program any community in the United States has ever built. It proposes to do this at a time when inflationary pressures are extremely strong. It proposes to do this in the clear knowledge that the proposed subway and highways programs will bid up the price of skilled labor, of building materials, and of construction costs.

He repeated the themes he had expressed during the hearing, including the disparity between the Federal share for Metro and BART. The subway was a good project, but the explosion in the amount for the first year was highly inflationary. “The subway, as badly as it is needed and as meritorious as it is, will nonetheless have an enormous inflationary impact.” He reminded his colleagues that this explosion in Metro expenditures was coming at a time when President Nixon has directed agencies to reduce new Federal contracts by 75 percent. Cities around the country expected to be hit hard, but not the District of Columbia:

We are told by the supporters of the praiseworthy subway system, the huge expenditures for which are very difficult to justify at this time, that we must add at least \$370 million more in highway and bridge projects to the total.

He guessed the estimates were low based on their increased cost over time. He thought the freeways would ultimately cost at least half a billion dollars. He could justify \$2.5 billion for Metro, but it was “impossible to justify another half billion or more for unneeded and unwanted highway projects.”

Congress, he said, justified this massive expenditure at a time when cutbacks were occurring around the country because they, and their friends and employees, “live here, and yet expect the rest of the country to postpone their projects.” He told his colleagues, “Such a double standard has seldom been seen before.” He served notice that, “This Senator . . . will not take part in such a hypocritical undertaking.” To the extent his subcommittee could do so, he would slow down the subway program as the best way to reduce its inflationary impacts. He also would slow highway spending in the city, saying the expenditures were “wasteful and . . . may well destroy the fabric of the Capital city of the United States.”

Section 801, he said, was the second time Congress had tried to force the city to build the planned freeways. “I think the attempt in this bill is no more binding than those of the past.” The freeways could not be built until the city complied with the court order of February 1968, title 7 of the District of Columbia Code, and Title 23 of the United States Code.

Senator Proxmire explained how Section 23 of the 1968 Act tried to get around these restrictions, but in signing the bill, President Johnson had called the provision “the most objectionable feature” of the legislation. He quoted the President’s statement that, “Fortunately, the Congress has called for construction only in accordance with the applicable provisions of the Federal highway law.” He also called for the projects to be “appropriate links in a comprehensive transportation plan for the District.” As the September 30 hearing brought out, “no comprehensive plan for the District highways had ever included these four projects.”

Section 23 was “an affront to the judicial system,” as was Section 801, which also was “a travesty on proper planning concepts, and a hypocritical act by Congress.”

The city had many other needs that would cost only a fraction of the expenditures going to the freeway program and Metro. He considered it a travesty to spend \$240 million on the subway this year, along with hundreds of millions of dollars for freeways and bridges “while the much smaller needs for housing and schools and hospital beds go unmet.” He concluded:

This Senator, for one, will not be a party to such a flagrant act of misplaced values.

As the old saying goes – I believe Sam Goldwyn said it – “Include me out.” [pages 28399-28400]

Senator Tydings responded, beginning:

Mr. President, we have now in Congress, because of our actions, delayed the beginning of the subway for almost 3 years. Every day we delay the beginning of the construction costs \$250,000. Every year that we delay in going forward costs roughly \$90 million.

He pointed out that thousands people in the District of Columbia did not own a car. As the area's economy decentralized, Metro was the key to making suburban jobs available to inner city residents. "A subway is indispensable."

Unfortunately, some "antihighway lobbyists" were "so zealous and sometimes unreasonable" in attacking the highway program that "they are and would be willing to scuttle perhaps the most vital single link in the transportation system, the Metro rapid transit system."

The road system would be financed by gasoline and other highway user excise taxes. "They are mandated to be used in this direction." No matter what the Committee on Appropriations does, they cannot be used for any other purpose.

If construction does not begin this year, the financial plan will collapse and "all the Federal legislation and authorizations and the work of almost 10 years will have gone for naught." As a result, Congress could not run the risk of further delay:

All one has to do is to spend a little time in Los Angeles County . . . to see what happens when government delays and delays and never goes ahead with a rapid transit system. Finally, the authorities find themselves with concrete on all sides and with massive parts of the city in concrete.

Congress has caused the delay in starting construction. Now, the entire mass transit plan "hangs by a slender thread." Any further delay on the part of Congress "would be tragically penny wise, but dollar foolish not to go ahead with the transit system now." If the plan collapses, "the pressures for more and more highways will build inexorably." Meanwhile, as the population increases, "thousands more area residents will jam existing highways and demand new ones."

Construction of the Three Sisters Bridge and study of the North-Central Freeway were the sticking points that the House of Representatives had insisted on, as "evidenced in the 3-year delay in the Metro start." The House refused to fund Metro unless the bridge was built. Therefore, if the Senate blocked the bridge, "Metro will be destroyed."

When the Senate District Committee was working on the Revenue Act, it had to decide what to do about the Broyhill rider. The committee "grappled with this particular provision and all its ramifications." Ultimately, the committee voted unanimously to include it. In citing the reasons why, Senator Tydings said they knew the House would insist on it, regardless of what the Senate did. They did not want to prolong "a continued deadlock over the Metro" funds. Losing Metro would mean "more roads, more bridges, more displacement and infinitely more highway costs." He cited the Oliver Quayle poll as demonstrating support for the highway plan. The city council had voted to support the Section 23 plan.

The Broyhill rider provided "a continuing assurance" that the House would not have another reason to withhold matching funds for Metro. It would assure that the city was "moving ahead at full speed" to build the Three Sisters Bridge and the other freeways covered by the 1968 Act. The city assured the committee that the bridge "will not intrude on Glover-Archbold Park or produce an added traffic burden in Georgetown." Some committee members had reservations

about individual freeways, but recognized that in view of the strong feelings in the House, a vote for the rider was “an indispensable vote for the Metro system, a vote without which the Metro system will collapse.” That would be “a disaster from which this entire urban area might never recover.”

Chairman Proxmire rose to assure his colleagues that he was not opposed to Metro. He was concerned only about the inflationary impact of its construction now at a time when President Nixon was calling for sacrifice to fight inflation:

My argument is that we should not start the biggest public works program in the history of the country, start it here, start it now, start it in such a whole-hog way that we take all the 1969 appropriations and all the 1970 appropriations and spend them now on a project in an area where there is a tight employment situation, where it is clear that this kind of expenditure is bound to result in bidding up prices of labor and prices of material. Much more important is the example that this gives the rest of the country.

He supported a start of Metro construction this year, “but I think it is a matter of degree and a matter of recognizing our own responsibility.” He did not doubt the widespread support for Metro, but that was not a reason to begin as planned in view of “our No. 1 economic problem.” If “we mean anything” about slowing inflation “we should slow it down on this particular kind of project.”

Senator Tydings had the final word, pointing out the views of President Nixon and the Bureau of the Budget in support of getting started. “I would hope that the Appropriations Committee would follow the recommendations of the President of the United States in this matter.”

The Senate approved the bill without a recorded vote or discussion of other issues. The Senate also appointed delegates to the conference committee, including Senators Bible, Eagleton, Mathias, Spong, and Tydings. [pages 28400-28402]

While the Senate was debating District of Columbia Revenue Act of 1969, Roberts B. Owen of Covington and Burling filed the expected suit, *D.C. Federation of Civic Associations, Inc., et al. v. John A. Volpe et al.*, seeking declaratory judgment and injunctive relief. Owen filed the suit on behalf of the D.C. Federation of Civil Associations, the Committee of 100 on the Federal City, Arlingtonians for the Preservation of the Potomac Palisades, and other organizations as well as six individuals. ECTC was not a party to the suit. The individuals named in the suit included the Reverend Channing E. Phillips, the city’s Democratic National Committeeman, and Mrs. Rowe, the former NCPC chairman.

The suit alleged that District and Federal officials were violating:

- Section 7 of the D.C. Code requiring detailed maps and public hearings;
- Section 23 of the 1968 Act that required the city to comply with provisions of Title 23 on corridor and design public hearings and inclusion of the highway in a comprehensive transportation plan; and
- The Section 4(f) prohibition against the use of publicly-owned parks unless there was no “feasible and prudent” alternative.

The suit specifically mentioned only the Three Sisters Bridge, but asked the District Court to rule that the injunction imposed by the U.S. Court of Appeals remained in effect and enforceable.

Reporters asked a spokesman for the groups if they were concerned that Congress might withdraw the subway funds in view of the suit. The spokesman said, “the legal procedures in the lawsuit will not be affected by anything Rep. Natcher decides about funds for the subway. It is up to the courts, not Rep. Natcher, to interpret the law to the Department of Transportation and the District government.” [Basham, William, “3 Sisters Span Target of Suit,” *The Evening Star*, October 4, 1969; Eisen, Jack, “Suit Filed To Block 3 Sisters,” *The Washington Post and Times Herald*, October 4, 1969]

Judge John J. Sirica of the U.S. District Court held an expedited hearing on the request for a

10-day temporary injunction on October 7. Owen stressed that plaintiffs did not seek to block the Three Sisters Bridge permanently. They merely wanted the city and Department of Transportation to comply with pre-construction requirements such as holding public hearings.

Assistant Corporation Counsel Patrick O’Donnell argued that in passing the 1968 Act, Congress’ intent was that the city begin construction of the bridge “immediately” and to do that, suspended further procedural delays. He cited the public hearings already held.

Owen countered that the hearings occurred in 1964, but requirements called for them to take place less than 3 years before expenditure of Federal-aid funds.

On October 8, Judge Sirica found that the plaintiffs had not shown a likelihood they would prevail in court. Owen told reporters after the hearing that he would consult with plaintiffs about appealing Judge Sirica’s decision. [Valentine, Paul W., “Writ Denied to Block Work on Three Sisters,” *The Washington Post and Times Herald*, October 9, 1969]

The *Star* reported on October 10 that on October 7, the day of Judge Sirica’s hearing, the White House complied with the promise to Chairman Natcher in the event of a lawsuit. In a memorandum, Counsel Ehrlichman wrote:

We must vigorously defend any legal action which would prevent the District government from implementing the Federal Highway Act of 1968 . . . .

On behalf of the President I, therefore, ask you to personally direct the federal government’s defense in this case, coordinate the departments immediately involved and make available attorneys from the Justice Department as you deem necessary. This should be considered a matter of highest priority.

Ehrlichtman pointed out that defendants included Secretary Volpe, Secretary of the Interior Walter J. Hickel, and District officials:

This unfortunate action runs counter to the substantial progress which has been made within past months toward achieving a balanced transportation system for the District of Columbia.

As the President indicated in his April 28 message to Congress, he believes that the National Capital needs and deserves a truly metropolitan transportation system that will unify the central city with the surrounding suburbs including both mass transport and adequate highway networks.

It is anticipated that funds will soon be available for a rapid rail and highway construction planned for the District [sic]. Congress has clearly and explicitly recognized that the Three Sisters Bridge is a vital segment of the District's planned highway network. Congress has indicated that the transportation needs of the District will be best served if construction of these projects proceeds concurrently.

The *Star* pointed out that this memorandum "went further" than the President's mid-August promise to Chairman Natcher to provide assistance in helping the District defend itself against such suits. [Horner, Garnett D., "Nixon Presses 3 Sisters Span," *The Evening Star*, October 10, 1969]

## Part 7 Getting Construction Underway

### The Future of NCPC

On October 9, the *Post* and *Star* began following reports about NCPC's future. Discussions about ending NCPC and turning its authority over to city and Federal agencies had begun during the Johnson Administration. However, the idea had been dropped reportedly because of opposition by President Johnson's friend, Chairman Rowe.

Now, the newspapers reported that Chairman Hammer and Executive Director Charles H. Conrad had been meeting with presidential assistant Moynihan on the commission's future. Hammer, the *Post* reported, had been working toward eliminating NCPC, but he would not disclose details of the talks with Moynihan other than to say "some recommendations will come forth." The possible dissolution of NCPC was foreshadowed in the city's request for \$100,000 in its FY 1970 budget to open a planning office. [Downie, Leonard, Jr., "NCPC Asks White House For City Plans Agency," *The Washington Post and Times Herald*, October 9, 1969]

That same day, Chairman Hammer and James Gibson, chairman of NCPC's urban renewal and housing committee, resigned from NCPC in an exchange of letters to further reorganization plans. Hammer, who indicated that the two resigned at the same time to make clear that they strongly supported reorganization, said in his letter of resignation that he had been working with the White House "to produce a sound reorganization plan":

This reorganization process is clearly established and, indeed, it is because of this fact that I can with good conscience now step down, knowing that one of our major objectives [is] on its way to being realized.

Gibson said the reorganization plans were "gratifying to me." They emphasized "the growth of sincere efforts to identify citizen views and to incorporate them into official policies and programs."

President Nixon's letter accepting the resignations indicated that local planning was rightly the responsibility of the District government:

In the District, I have advocated a policy of improving the effectiveness of local government, in preparation for the day when the District will enjoy full self government.

A White House spokesman said the reorganization plan, still in the works, probably would involve an executive reorganization plan that would be submitted to Congress for 60 days of scrutiny. Unless Congress vetoed it, the plan would go into effect at the end of the 60-day period. A White House official emphasized that President Nixon was "really interested and committed" to the reorganization and, unlike President Johnson, was unlikely to change his mind.

NCPC Vice Chairman G. Franklin Edwards, the Howard University sociologist, became acting chairman following Hammer's departure. [Wright, Christopher, "Two Planners Resign From

Capital Unit,” *The Evening Star*, October 9, 1969; Eisen, Jack, “2 Key Members Quit NCPC, Praise Reorganization Plan,” *The Washington Post and Times Herald*, October 10, 1969; Eisen, Jack, “Resignations Freeze City’s Planning Setup,” News Analysis, *The Washington Post and Times Herald*, October 11, 1969]

### **Before Construction Can Begin**

On October 10, as Head Construction Company prepared to begin work, students from Georgetown, George Washington, and American Universities paddled two canoes and two rowboats to the Three Sisters Islands. Calling themselves the Student Committee on the Transportation Crisis, they unfurled a STOP THE BRIDGE sign and announced their intention to spend the night on the islands. [“Assault on Three Sisters,” *The Washington Post and Times Herald*, October 11, 1969]

The next day, they had been joined by about 100 protesters of all ages. Bart Hogan, a psychiatrist from the District who had paddled a canoe to the islands with his wife and small children, explained:

Some of the younger people see it as just destruction of black homes. We see it as part of a bigger problem which no one can win. It’s unfortunate that it’s becoming a black-white issue. The bridge is going to destroy the things which make Washington a liveable place.

A 21-year old photography student at the Corcoran School of Art, John Thornton, said, “I see the bridge as a key link in a freeway system which isn’t a practical or viable way to alleviate the District’s traffic problem.” He added, “I’m in favor of occupying the islands until we get busted.” One of the organizers of the protest, 23-year graduate student Matt Andrew, agreed that they should continue to occupy the site “indefinitely.” [Colen, B. D., “Nearly 100 Bridge Foes ‘Occupy’ Three Sisters Islands,” *The Washington Post and Times Herald*, October 13, 1969]

On October 13, protesters managed to halt the start of construction – briefly. For 2 hours, they prevented workers from loading a crane onto a barge. Protesters also tried to stop installation of drainpipes – each 20 feet long and 6 feet in diameter – in a storm sewer outlet by rushing into the pipes. A supervisor ordered a crane operator to hook one end of the pipe and lift it to shake the protesters out. The operator refused. By 9:15 a.m., NPS police had arrived and, with threats of arrest, convinced the protesters to retreat. All the intended work was then completed. [Weil, Martin, “Bridge Work Starts,” *The Washington Post and Times Herald*, October 14, 1969]

Excavation off the Virginia shore began the next day despite a 2-hour attempt by protesters to halt work. They were joined by Georgetown residents who helped to occupy a construction company tug and stand in front of the crane. [“Protest Delays Bridge Work,” *The Washington Post and Times Herald*, October 15, 1969]

On October 15, hundreds of protesters – “college age men and women, some with children, many from the Georgetown area and many from Georgetown University,” according to the *Star*— appeared at the site from different directions. About 150 of them blocked the access road to the site, shouting “Stop the bridge, free D.C.”

When police threatened to arrest them if they did not disperse, they ran onto the construction site, sat down, and locked arms while chanting “Power to the people.” The police began arresting protesters, while word of the action prompted George Washington University students to march along Canal Road to the site even as police raced to cut them off. By the end, 141 protesters, mostly students but including ECTC’s Sammie Abbott, had been arrested on disorderly conduct charges. [Brandon, Ivan C., “141 Protesters Arrested at Three Sisters Site,” *The Washington Post*, October 16, 1969; Gay, Lance, “Scores Seized In 3 Sisters Bridge Delay,” *The Evening Star*, October 15, 1969]

The *Star* dismissed the “demonstrating college students” as acting out of “a youthful yearning to confront the police once again in the name of high moral principle.” However, when “the basis of protest is as barren as it was in this case,” the editors explained, “the performance forfeits any claim to merit.” The most misleading claim, as stated by a spokesman, was that “We don’t want our homes bulldozed down to make way for 10 lanes of concrete.” Setting the record straight, the editors said the bridge and its interchange “would affect *no housing* whatever” in the District and that the Potomac River Freeway would take “a grand-total maximum of *three homes*, all three, incidentally, in the high-cost category.”

The protesters and anyone else interested in the welfare of the city should also consider that construction of the bridge had persuaded Congress to release funds for the start of construction of the Metro rail system. “The actual subway construction, however, has not yet begun, and it would be a massive disservice to jeopardize that event for a frivolous purpose.” [“Freeway Fever,” *The Evening Star*, October 17, 1969]

Dozens of police officers arrived on Thursday, October 16, to protect the construction site from the protesters who had promised to show up. However, when they failed to arrive, the police dispersed at mid-morning and work on the bridge piers continued. During the afternoon, several protesters arrived with signs, but did not interfere with the work. They left after 30 minutes. [“Police Mass, But Span Foes Fail to Appear,” *The Evening Star*, October 16, 1969; “Sign-Carriers Visit Bridge Site,” *The Evening Star*, October 17, 1969]

On October 17, Judge Sirica again denied a temporary injunction to halt construction of the bridge as requested by the D.C. Federation of Civic Associations. Owens had again argued that the city had not complied with the 1893 District law involving public hearings and the width of highways. The District responded that the “notwithstanding” clause in Section 23 of the Federal-Aid Highway Act of 1968 had waived the 1893 law. Owen indicated that the federation would appeal Judge Sirica’s decision to the U.S. Court of Appeals. [“Judge Denies Bid to Block Bridge Work,” *The Evening Star*, October 17, 1969]

On Sunday, October 19, a crowd appeared at the construction site for a protest rally. Students were in the minority in the mixed crowd of white and black, young and old. The *Post* described one element of the protest:

[The] crowd of blacks and whites stood in the sun on the Washington bank of the Potomac and listened to Sammie Abbott of the Emergency Committee on the Transportation Crisis tell them “the people of the District are fighting not only the

highway department, the Congress of the U.S., but the media – particularly the Star and the Post – which are not only the handmaidens but the prostitutes.”

“I for one am prepared to die” in the fight, the publicity director of the ECTC told the crowd.

Abbott seemed to warm to the crowd as the crowd warmed to him. A physically small man, he seemed to grow as he almost yelled. “Before another inch of these damn freeways gets laid down in the District there’s gonna be flames, there’s gonna be fighting, there’s gonna be rebellion! And I for one . . . .”

He was drowned out by cheers and clapping and raised his fist in salute to the crowd.

Protesters carried signs with statements such as “Ban the Span,” “Let’s Stop Playing Bridge with Natcher,” and “Today the Three Sisters, Tomorrow the Four Horsemen.”

Dr. Michael Halberstam of the Foxhall Village Citizens Association told the crowd, “This protest isn’t the work of a little group of students. They’ve done good work, but Mr. Abbott has done good work, and our lawyers have done good work,” as have other adults. (Foxhall Village is an affluent community adjacent to Glover-Archbold Park and George Washington University.) [Colen, B. D., “Bridge Foes Protest, Plan March Today,” *The Washington Post and Times Herald*, October 20, 1969]

The next day, October 20, the protest began with a meeting on the Georgetown University campus at 2 p.m. One of the leaders, William Treanor, explained, “We’re not going to protest construction of the bridge; we’re going to stop its construction.” The plan was to surround each piece of equipment while assuring workmen that they would not be harmed. As they marched toward the site they were joined by residents of Foxhall Village and other neighborhoods. They chanted “Smash the Bridge” and “Free D.C.” as they marched to the site.

At the site, police blocked the canal towpath in a solid line. Anyone trying to cross the line, the police warned, would be arrested. When protesters tried to outflank the line, the police rushed them, nightsticks swinging. They tackled and grabbed the protesters, who were yelling obscenities and throwing stones at the officers. When the protesters regrouped, the police again warned them to disperse. When they did not immediately leave, the police charged again, tackling and arresting four demonstrators as the rest ran back up the towpath. They returned to the campus at Georgetown University, with some throwing rocks at the police, prompting several more arrests.

In all, the police arrested nine protesters, including Treanor, who had continued shouting slogans into a bullhorn “until he was tackled and smothered into silence,” as the *Post* put it.

Dr. Halberstam told reporters that the protesters had planned a peaceful protest without arrests or violence. “Until,” he added, “the police gave them an issue by bloodying their heads.” He did not support rock throwing, but was more upset with the police “who are supposed to be professionals and trained in this sort of thing.”

Reporters observed Richard Blumenthal of Moynihan's White House staff, at the scene observing the protesters. He declined to comment. He would later tell reporters that he visited the site only because of professional curiosity. [Valentine, Paul W., "Police Club Protesters at 3 Sisters Bridge Site," *The Washington Post and Times Herald*, October 21, 1969; Slight, William, "Nine Arrested In Clashes at Bridge Site," *The Evening Star*, October 21, 1969; "Nov. 16 Protest March On 3 Sisters Span Set," The Metro Scene, *The Evening Star*, October 24, 1969]

The construction site was quiet the next day, October 22, but ECTC protesters were present to hand out anti-freeway brochures. They promised to be there every work morning. ["Demonstrators Fail to Show at Bridge Work Site," *The Evening Star*, October 22, 1969]

The *Post*, in an editorial, said the student demonstrations initially "looked like good clean fun," with students "able to demonstrate their opposition to the city freeway system under agreeable conditions and in pleasant weather." However, the demonstrations had "taken an ugly turn toward the rough-and-tumble confrontations between the students and the Metropolitan Police which, if they continue, cannot add much glory to either side":

Naturally, the city cannot permit the demonstrators to attain their goal by stopping construction which was ordered under way by congressional action.

The "predominantly white demonstrators" had aligned themselves with inner-city blacks "who, they claim, will be displaced by the thousands if the bridge and its cross-town connections are built." The bridge, in their view, was "an illegal link" to their real target which "seems to be the north leg of the so-called inner loop which was routed originally on an alignment with Florida Avenue and U Street NW and the inner city." They were not deterred by the city's shift of the link to a K Street tunnel.

Judge Sirica's ruling denying a temporary injunction was subject to appeal. The students had "a perfect right" to raise their concerns, but they should understand that their concerns "cannot be resolved by a test of strength along the shores of the Potomac." They should await the court's verdict and the results of the congressionally ordered study. ["Three Sisters and the Students," *The Washington Post and Times Herald*, October 23, 1969]

That same day, Deputy Mayor Fletcher announced that the city would hire a private consultant to study the route of the North-Central Freeway. This approach would provide an independent voice on the routing. According to Dana Wallace, deputy highway director, the alignment that had generated many protests was unlikely to be selected. The latest maps indicated the link to I-70S would be carried in a tunnel under K Street, NW. It would displace about 175 people, compared with 6,000 to 7,000 people along the earlier alignment.

The study was to be completed in time for decisions to be made before the 18-month deadline of February 23, 1970, imposed by Section 23 of the 1968 Act. If the city did not submit recommendations by that date, it must begin construction on the earlier alignment. [Green, Stephen, "D.C. Acts to meet Freeway Deadline," *The Evening Star*, October 23, 1969]

Amid the protests, court proceedings, and progress on the freeways, WMATA was planning the groundbreaking ceremony for Metro construction. WMATA invited President Nixon to participate and gave the White House two choices – a ceremony in Judiciary Square or Lafayette Park across Pennsylvania Avenue from the White House. The ceremony was scheduled for December 9 at 3 p.m. in Lafayette Square, as the *Post* explained:

Plans call for a speakers' stand directly across from the White House north portico. From the stand, the President or his representative will activate an auger that will begin to excavate a vent shaft near the southeast corner of the park.

WMATA planned to invite members of the Cabinet, Congress, and Supreme Court, and executive branch officials as well as State and local officials and civic leaders from the area.

In making these plans, WMATA was aware that the ceremony was contingent on Congress passing the District appropriation act, 1970, with the matching funds included. Chairman Natcher had not indicated he was having any doubts, but the activities of his Senate counterpart, Chairman Proxmire, were a continuing concern. The WMATA board had written to Chairman Proxmire explaining how his idea of cutting the appropriations threatened a collapse of the financial structure for Metro. ["Nixon Asked to Assist Metro Groundbreaking," *The Washington Post and Times Herald*, October 24, 1969]

Freeway critics were continuing to explore ways to achieve their goals. At an October 25 press conference on the Three Sisters Bridge site, Mrs. Penny Hogan of Foxhall Village, representing a Citizen's Coalition on the Bridge Crisis, announced that she would present a petition to the Board of Elections asking that a referendum question on the bridge and freeways be included on the November 4 school board election ballot. The petition included more than 2,000 names, including Supreme Court Justice William O. Douglas, who lived at 4852 Hutchins Place near Canal Road and Foxhall Village. The anti-freeway forces also announced a protest rally at the Sylvan Theater on the grounds of the Washington Monument. (The rally would be rained out.)

The Board of Elections denied the petition. Under its rules, a political party may request placement of ballot items on issues affecting the party. However, the school board election was nonpartisan, eliminating addition of ballot issues. ["Bridge Opponents Plan New Rally," *The Sunday Star*, October 26, 1969; "Referendum Denied Foes of Sisters Span," *The Evening Star*, October 28, 1969]

Although the Three Sisters Bridge was the main focus of interest, the city's plans for the South Leg of the Inner Loop Freeway were in transition, according to unnamed sources. The new plan under consideration called for two tunnels connected by a roofless trench generally along Independence Avenue, NW. According to Jack Eisen:

One tunnel would be beneath the Lincoln Memorial circle, swinging in an arc around the west and south sides of the memorial itself. The other tunnel would go beneath the northern tip of the Tidal Basin and extend almost to a surface connection with the existing Southwest Freeway

The plan is similar to one advanced by the highway department prior to 1966 when the planning commission called for a full tunnel. The city's official thoroughfare plan, adopted by the City Council last December, calls for a tunnel.

Eisen reported that NCPC was reviewing the city's proposal in closed session, but an opponent of the idea leaked the information to reporters. "The critic expressed concern that the road would 'split' the park." Although NCPC and the District Highway Department refused to confirm or deny the concept, they both "expressed distress at the leak." [Eisen, Jack, "Highway Dept. Revises Memorial Tunnel Plan," *The Washington Post and Times Herald*, October 30, 1969; "New Plan Urged For South Leg," *The Evening Star*, October 30, 1969]

The day that reports of the South Leg Freeway proposal surfaced, Congress completed work on the District of Columbia Revenue Act of 1969. The conference report on reconciling differences between the House and Senate versions of the bill retained the restriction on the Federal payment as Section 803. The appropriated funds (\$105 million, plus \$5 million for new law enforcement programs) would not become available until the President reported to Congress that the city had begun work on each of the projects listed in Section 23(b) of the Federal-Aid Highway Act of 1968 or, if not, had been unable to do so because of a court injunction issued in response to a petition filed by a person other a city official, agency, department, or instrumentality of the United States.

The Senate and House approved the conference report on October 30 without a recorded vote and without discussion of Section 803. President Nixon approved the legislation on October 31, 1969 (P.L. 91-106). [District of Columbia Revenue Act of 1969-Conference Report, *Congressional Record-Senate*, October 30, 1969, pages 32413-32414; Conference Report on H.R., 12982, *Congressional Record-House*, October 30, 1969, pages 32415-32420]

### **Fighting On**

On October 31, a three-judge panel of the U.S. Court of Appeals denied a preliminary injunction to stop construction of the Three Sisters Bridge. The court found that the city had committed more than \$1.1 million to a construction contract but that no additional contracts were to be awarded before Judge Sirica decided the court case within 60 days. The city might "incur substantial financial penalties in the event that an injunction is now granted." Chief Judge David L. Bazelon and Judges Carl McGowan and Spottswood W. Robinson III did not comment on the merits of the arguments related to the "notwithstanding" clause in Section 23 of the 1968 Act.

Plaintiffs were entitled to a full hearing in District Court, but in the meantime, the city should avoid "further contractual commitments" for the bridge. [Lippman, Thomas W., "Court Refuses to Halt Bridge," *The Washington Post and Times Herald*, November 1, 1969; "Appeal to Bar Bridge Fails in U.S. Court," *The Evening Star*, November 1, 1969]

Bridge opponents were disappointed, but they planned to continue fighting the project. On November 1, for example, 10 Halloween witches appeared on Capitol Hill to put a hex on Chairman Natcher and a "spell of doom" on the Three Sisters Bridge. "Dressed in flowing black

robes and black-and-orange hats, all young women,” according to the *Star*, they displayed a wooden model of the bridge. They chanted “A hex on Natcher, a hex on Natcher,” puzzling passersby who asked reporters what “Natcher” was:

The witches said they are members of the Women’s International Terrorist Conspiracy from Hell (WITCH), an off-shoot of the Women’s Liberation movement.

Assembling in a semicircle on the steps of the Capitol, the witches jumped up and down, waved their arms and proceeded to leap on the wooden bridge model, crushing it.

After the Capitol ceremony, they left to go to a department store where, they said, they would protest “exploitation of the consumer.”

They did not say how they planned to travel, but reporters saw no sign of any broomsticks. [Green, Stephen, “10 Witches Cast Spell on Capitol Hill,” *The Evening Star*, November 1, 1969]

At 5:15 a.m. on November 2, a blaze was spotted on the bridge construction site. Fire fighters found two mobile trailer units on fire from a barrage of Molotov cocktails. The arsonist or arsonists broke a lock on a gate in a chain fence surrounding the trailers. Untouched were four 400-gallon tanks of propane gas adjacent to the most heavily damaged trailer, a 500-gallon tank of gasoline 10 feet from the other trailer, and three 50-gallon oil drums.

The construction supervisor for Head Construction Company, Mendal Wilson, said the fire destroyed two outboard motors, four air conditioners, a large radio console, a refrigerator, blueprints, records, tools such as ax handles and hammers, and 12 cans of beer. Wilson did not expect the fires to delay construction, most of which involved heavy equipment. [“Arson Probed in Bridge Site Blaze,” *The Evening Star*, November 3, 1969]

Having been denied a place on the school board ballot, a group called D.C. Citizens Referendum Committee announced it would place their own ballot boxes in front of all city polling places on November 4. In the informal balloting, citizens would be asked to vote “yes” or “no” on:

Do you favor the construction of the Three Sisters Bridge and its connecting freeway system?

Dr. Halberstam, speaking for the committee, said, “We think the people are against the bridge. We will work to make Congress see the error it has perpetrated” by ordering the city to build the bridge.

He and other speakers at the press conference disowned the firebombing of the trailers on the project site. Some said, however, that they understood the desperation the arsonists must feel. [Weil, Martin, “3 Sisters Foes Plan Poll Today,” *The Washington Post and Times Herald*, November 4, 1969]

The committee managed to place ballot boxes outside about three-quarters of polling places throughout the city except the predominantly African-American wards 7 and 8 east of the

Anacostia River. Most people who voted in the school board election took time to vote outside the polling place on the freeway question. Overall, voters disapproved the freeway system, 9,850 to 1,819, with opposition overwhelming in the Georgetown area. One voter described in the *Post* as an “elderly Georgetown woman,” said, “Good Lord, yes, I want to vote against it.” [Valentine, Paul W., “D.C. Voters Oppose Bridge in Poll,” *The Washington Post*, November 5, 1969; “84 Pct. Polled in District oppose Three Sisters Span,” *The Evening Star*, November 5, 1969]

NCPC intended to consider the new plan for the South Leg Freeway in public on November 6, but the plan was removed from the agenda the day before. District officials requested removal of the item after news of the plan had been leaked to reporters the week before. Now, the city planned only to describe the plan to NCPC, not seek approval.

A spokesman for FHWA said the agency had provided an announcement about the South Leg Freeway for the White House to release the previous week, but it had not been released. It stated that the Department of Transportation and NPS had agreed on the plan. The depressed roadway would not “impair the beauty” of the monument area and would “permit development of the area in line with long-range plans of the park service.”

NPS Director Hartzog described the plan as a “compromise . . . we gave up a few things and gained a few things.” He would not elaborate on that statement when questioned by reporters. As for NPS officials who opposed the plan, he said, “I don’t count hands when I make a decision.” [“Planners Delay Action On South leg Freeway,” *The Evening Star*, November 5, 1969]

On November 6, Leonard DeGast, the highway department’s planning and programing chief, outlined the new plan for NCPC. Robert J. Lewis described the plan in the *Star*:

The District official disclosed that the substitute plan called for two 1,300-foot tunnels, one beneath the Lincoln Memorial and the other under the north projection of the Tidal basin.

Another tunnel section would carry the expressway 2,300 feet roughly along the right-of-way of the present Independence Avenue, from 23<sup>rd</sup> Street to 17<sup>th</sup> Street.

The main reason for the change, DeGast said, was cost. The new proposal would cost \$55 million, compared with \$95 million to \$100 million for the earlier all-tunnel plan. DeGast and Colonel Starobin, who was Mayor Washington’s representative on NCPC, said FHWA, which was providing the funds, preferred the revised version.

As Jack Eisen put it, NCPC members “voiced outrage” after DeGast’s presentation. Former NPS Director Wirth was especially upset. He said, “If you go ahead with this, you will isolate the Tidal Basin and the cherry blossoms and you will commit a national disgrace.” As for the cost comparison, he told DeGast:

I'd like to see the cost figure on the original tunnel under the Tidal Basin. I think you are putting in figures that will make an impression, but I don't think you are giving a proper value to the damage you will do to this monumental area.

Acting Chairman Edward said, "I am deeply concerned that the matter has come back to us" after NCPC had insisted in 1966 on the all-tunnel route. Paul Thiry said, "This is a disgrace . . . it is a national disgrace." [Lewis, Robert J., "Plan for South Leg Draws Bitter Fire," *The Evening Star*, November 7, 1969]

### **Freeway Consideration (or Not)**

While appearing before NCPC, DeGast discussed the path of the North Leg Freeway that would be one of the outlets for the Three Sisters Bridge. "Not content with only one surprise," as the *Star* put it, DeGast told NCPC that a study of the North Leg Freeway would give positive consideration to a route for the expressway along U Street and Florida Avenue, NW:

Freeway foes have long contended that this path, which would lead to the displacement of many households, has been under serious consideration by the highway department, even though department and other city officials denied it.

Mayor Washington, after learning about DeGast's comments, declared the U Street freeway plan dead. The route, Mayor Washington said, would be cited in the study only to meet "the technical requirements of the 1968 highway act," based on the reference in the conference report to the U Street corridor indirectly as the originally adopted route:

We . . . reaffirm in the strongest terms possible . . . that such a route is unacceptable to the city. It has been studied and rejected by the City Council, and National Capital Planning Commission and the Mayor. A principal reason for the rejection . . . was the relatively high displacement of family dwelling units.

The study would consider alternative routes, with public hearings being held before a final decision. [Green, Stephen, "Freeway Opponents Fet An Unexpected Assist," Interpretation, *The Sunday Star*, November 9, 1969; Eisen, Jack, "Mayor Axes U Street Freeway Plan," *The Washington Post and Times Herald*, November 9, 1969]

On November 10, ECTC's Booker took credit for demise of the U Street freeway corridor at a sidewalk press conference outside the Pride office at 16<sup>th</sup> and U Streets. ECTC, he said, would continue to oppose the Three Sisters Bridge and any other routing for the North Leg Freeway, including a tunnel under K Street. Further, ECTC was broadening its scope to include urban renewal and the suburban-oriented Metro lines. They would "investigate the whole urban renewal business in this town," which he suggested consisted of "efforts of white businessmen to get back into the black community." ["Defeat of Freeway Claimed by Group," *The Washington Post and Times Herald*, November 11, 1969; "Front Urges D.C. Riders To Withhold Bus Fares," *The Evening Star*, November 11, 1969]

In Baltimore, the Urban Design Concept Team was considering alternatives for routing the six-lane East-West Expressway through historic Fells Point, established in the 1760s along the north

shore of Baltimore Harbor and the northwest branch of the Patapsco River. Two alternatives involved an elevated six-lane expressway, one 30 feet high and the other about 70 feet highway. Another alternative involved a “bifurcated” road that would include three lanes below ground, and three elevated. The final alternative was a six-lane underground expressway. Opposition to any alternative remained strong as *The Baltimore Sun* reported in article about the Fells Point Fun Fest:

All during the afternoon, a borrowed loudspeaker system broadcast “SOS” messages from “Radio Free Fells Point.

Taking turns at the microphone, volunteers from the Southeast Council Against the Road drummed home their message to city dwellers and suburbanites. The East-West expressway is scheduled to come straight through Fells Point, Highlandtown and Canton.

The expressway would take “230 homes, 900 jobs and thousands of people,” the volunteers cried. “We are being politically courted and legally extorted. Sign the petitions to stop the road” . . . .

One volunteer, Miss Barbara Mikulski, ventured the opinion that “the British couldn’t take Fells Point, the termites couldn’t take Fells Point and we don’t think the State Roads Commission can take Fells Point either.” [Keidel, Janelee, “Expressway Proposals Outlined,” *The Baltimore Sun*, October 26, 1969; Keidel, Janelee, “Thousands Throng To Fells Point Fun Fest,” *The Baltimore Sun*, October 6, 1969]

Wolf Von Eckardt, the *Post*’s architecture critic, wrote that the Baltimore concept team “seems to have found a way out of much the same freeway dilemma that Washington is in.” District highway officials, however, rejected that option. DeGast said, “The Baltimore team hasn’t worked out,” even though FHWA had recently extended the team’s contract for 15 months and \$3.4 million Von Eckardt explained:

The idea of the design concept team is to use the freeway as a means to redevelop rather than maim the neighborhoods it runs through and to do so by employing an interdisciplinary team of architects, sociologists, economists and other urban specialists – in addition highway engineers – to plan and design it.

The idea was initially opposed in Baltimore, but now was helping break “a bitter, 20-year deadlock”:

Here and in Baltimore many freeway opponents call the concept team idea just so much baloney. It is true it hasn’t stopped the freeway in Baltimore.

But it has made the original Baltimore highway proposal a lot more sensible, acceptable and compatible with the social and physical fabric of the study.

Reaction to the concept in Washington was mixed. As noted, the District Highway Department was opposed:

Mayor Walter Washington reportedly believes such a team should be set up for the new study of the North-Central Freeway in Washington which Congress has ordered.

The team may, for instance, find ways to make Brookland a more viable community, strongly linked to Catholic University, rather than have the freeway slice it apart.

City Council Chairman Gilbert Hahn is said to feel however that the North-Central Freeway study should be conducted by the D.C. Highway Department without outside consultants.

Joseph M. Axelrod, Chief Highway Engineer in Baltimore, recognized that critics had the right to fight the freeways:

“But what if you lose?” he asks his opponents. “Why don’t you hedge your bet by helping us do a better job for your neighborhood?”

It is too early to tell how the freeway opponents will respond to this appeal to “realpolitik.” It would obviously be better if all cities had not freeway design teams, paid by that one special interest, but transportation design teams that truly balance all modes of transportation – rapid transit, moving sidewalks, mini-buses and whatnot – in the interest of the city as a whole and under the direction of the mayor . . . .

Some day we will surely take a rational, systematic approach to our urban environment. But the way things are, a good many more miles of concrete will be forced through our cities.

We might as well try to design them intelligently as they begin to do in Baltimore where the highway engineers have now learned to welcome the help of other experts. This city should insist that ours do the same. [Von Eckardt, Wolf, “Baltimore’s Freeway Team,” Critique,” *The Washington Post and Times Herald*, November 8, 1969]

Von Eckardt was back the following day to discuss the first National Register of Historic Places, released by NPS under the National Historic Preservation Act of 1969. It listed 1,100 historic places in the United States that were “not to be destroyed, altered, or maimed by a federal government project,” Von Eckardt explained. The places included 44 historic monuments, buildings, and other places in the District of Columbia. The Lincoln Memorial, the Chesapeake and Ohio Canal, Glover-Archbold Park, and the Georgetown Historic District were on the list:

Just as the National Register of Historic Places 1969 . . . was published, it became known that the D.C. Highway Department finds it too expensive to tunnel its six-lane South Leg of the Inner Loop Freeway under the Lincoln Memorial and Tidal Basin. Part of it is now to be an open trench.

The Tidal Basin was not on the National Register but “ought to be”:

The law says the Register buildings and places are to be protected not only from destruction and alteration but also from “isolation from or alteration of its surrounding

environment, or introduction of visual, audible, or atmospheric elements that are out of character with the property and its setting.”

I should think the highway boys will have to find pretty smart lawyers to convince the Advisory Council on Historic Preservation, which is charged with protecting the registered landmarks, that a freeway trench and tunnel within a few feet of the Memorial doesn't isolate, alter or visually, audibly and atmospherically mess up its environment.

The Council has already successfully kept a freeway from thus maiming the historic Vieux Carre in New Orleans. But in voteless Washington, the highway men in Congress can always defy the Council and sneak in an amendment to get their way, as they did in the case of the Three Sisters Bridge. [Von Eckardt, Wolf, “Historic Omissions From the List of Landmarks,” *The Washington Post and Times Herald*, November 9, 1969]

Von Eckardt was especially worried about recent actions by Secretary Volpe around the country. “The 10-month-long seesaw battle for the heart and mind of Transportation Secretary John A. Volpe seems lost.” In the next few days, he was to announce approval of the North Expressway (U.S. 281), in San Antonio that “would pave some 150 acres of Brackenridge and Olmos Park, the Alamo Stadium, Incarnate Word College, a zoo, the famous Sunken Garden area, hiking trails and other recreation areas.” This was the plan that had prompted Senator Yarborough to introduce Section 4(f) of the Department of Transportation Act of 1966. Moreover, “Just a few days ago Volpe decided to sacrifice Overton Park in Memphis, Tenn.” These actions were “a clear victory for the militant highway builders, led within the Department of Transportation by the uncompromising Frank Turner, the federal highway administrator.”

The problem was that “Volpe is said to be overly susceptible to political pressures”:

Just where Volpe stands on the Washington freeway fight is unknown. While [Secretary] Boyd sided more or less openly with the freeway opponents and the March 1966 report by Arthur D. Little, Inc., the renowned systems analysts, who found Washington's proposed freeway system “inconsistent and incompatible with urban transportation needs,” Volpe has kept his own counsel in his negotiations with Congressman William H. Natcher (D-Ky.) who insists on building the system.

Approval of the San Antonio freeway raised concerns about District parks and historic places. “Now that it is to be routed across the Three Sisters Bridge, Virginia Route 66 [sic] traffic is pointed directly at Glover Archbold Park and the area north of it up to the Beltway.” The District Highway Department had published a plan showing the traffic turning sharply east along the Georgetown Waterfront:

This obviously makes little sense. And people who have watched freeway politics over the last few years predict with some certainty that as soon as the bridge is built, the highway militants will start pressuring for a Glover Archbold route . . . . The loss of Brackenridge Park and Volpe's disregard for Section 4 (f) can only encourage them.

The attorneys fighting in the U.S. Court of Appeals to block the bridge “are optimistic.” They think the “notwithstanding” clause in Section 23 of the 1968 Act “seems too murky a clause to survive judicial scrutiny.” [Von Eckardt, Wolf, “Paving Our Parks,” Point of View, *The Washington Post and Times Herald*, November 15, 1969]

Contrary to Von Eckardt’s understanding, Secretary Volpe announced on December 23 that based on available information, he could not approve construction of the North Expressway through the park. The location would remain under study. He did, however, approve construction of segments of the expressway north and south of the park – the section between Mulberry and Tuxedo Avenues – that would not affect options for bypassing the park.

In a Department of Transportation press release announcing the decision, he said, “The principal focus of the study will be upon an expressway alignment west of Alamo Stadium and along Devine Road”:

I want to make it clear that I have not reached any conclusion. This study is not made to provide additional justification for the present proposal.

It should be a demonstration of what professional engineering could accomplish if in fact the Devine Road configuration were the only location available.

The press release added:

Secretary Volpe said that his decision to approve construction of those portions of the North Expressway lying north of Tuxedo Avenue and south of Mulberry Avenue was based on several factors, including the decision of his predecessor, Alan S. Boyd, that there is no feasible and prudent alternative location for these segments, and that their design included all possible planning to minimize harm to affected parkland; the fact that the Texas Highway Department had already acquired and cleared substantial amounts of necessary right-of-way prior to passage of the Department of Transportation Act; and the severe displacement and hardship which a major realignment would cause.

“San Antonio has waited for the North Expressway too long,” Secretary Volpe said. “I feel that construction should begin without needless additional delay on the approved portions, while we obtain detailed information on a proper design for the segment of the Expressway between Mulberry and Tuxedo Avenues.

“While we are attempting to expedite this project,” the Secretary said, “we are determined to preserve the amenities of San Antonio’s valuable parkland.”

### **Metro Advances in Congress**

Congress was considering the future of Metro. The National Capital Transportation Act of 1969 was the vehicle for approving expansion of the bobtail system to 97.7 miles, and the Federal share of construction costs. However, for construction to begin, as planned, in December, Congress had to appropriate the District’s matching share. Chairman Natcher had agreed to appropriate the funds, but the legislative process had to be completed. In addition, the

Department of Transportation's appropriation for FY 1970 would include appropriations for the Federal two-thirds share of pending Metro costs.

On November 13, the House Committee on Appropriations approved an appropriation of \$43,173,000 in Federal funds for the Department of Transportation's contribution to Metro construction. The subcommittee headed by Chairman Edward P. Boland (D-Ma.), approved the Department of Transportation's request for the funds. The committee's report explains, "The Committee believes that the need for a rapid rail transit system for the National Capital area has been well established and that because of continuing cost escalation, any further delay would jeopardize the construction of the system." The report added that this amount was to pay two-thirds of total cost, with the District responsible for the balance. [Department of Transportation and Related Agencies Appropriation Bill, 1970, Committee on Appropriations, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-642, November 13, 1969, page 31]

The House Committee on the District of Columbia approved the National Capital Transportation Act of 1969 on November 20 to authorize the Federal contribution of \$1,147,044,000 (including the \$100 million previously authorized for the bobtail system) for the 97.7-mile, 86-station Metro system. The bill, sponsored by subcommittee Chairman Fuqua, also called for a study, at a cost not to exceed \$150,000, of extending the system to Dulles International Airport.

The committee's report stressed the urgency of the situation:

The streets and highways of the Nation's Capital and its suburbs are beset by massive traffic congestion during the rush hours . . . . Traffic congestion is extremely serious today. It will become appalling in the years ahead, unless we move forward promptly with the development of an areawide system of exclusive right-of-way, high-speed, high-capacity rapid rail transit, to supplement the already stupendous interstate highway systems channeling traffic to and through the area.

In addition to authorizing the Federal share, the bill authorized the Commissioner (mayor) of the District of Columbia to contract with WMATA for the District's one-third share of construction costs.

WMATA had informed the committee that construction would begin within 75 days after receipt of the construction funds. The schedule called for completing the entire 97.7-mile system by the end of 1979.

The report concluded:

The unique and major Federal interest in Washington and the National Capital region, as well as the Federal Government's direct responsibility for assuring efficiency in the conduct of its own business and in preserving the beauty and improving the quality of the environment of the National Capital, necessitate a Federal capital contribution toward the cost of design and construction of the regional rapid rail transit system, which together with the contributions by the local jurisdictions and the issuance of revenue bonds by the Authority, will assure completion of the regional transit system . . . .

The actions of the Authority and the efforts of the local jurisdictions have furthered the transit program to the point where it is essential that the Congress provide at this time the additional authorizations necessary to assure orderly progress toward completion of the long-awaited rail rapid rail system. Your committee urges that this legislation receive the favorable consideration of the Congress. [National Capital Transportation Act of 1969, Committee on the District of Columbia, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-677, November 20, 1969, pages 3, 6, 13]

Elsewhere on Capitol Hill on November 20, Chairman Natcher's District subcommittee approved the appropriation of \$40,322,000 for the District's one-third share of Metro construction:

Included in this amount is \$18,736,000 requested for fiscal year 1969 which the House did not consider last June due to the impasse existing on the construction of the Freeway System. With the release of Federal funds held in reserve pending the appropriation of the District's share of fiscal year 1969 funds, the appropriations recommended in this bill and the Department of Transportation Appropriation Bill, the Authority will have a total of \$120,967,000 to embark on actual construction of the subway. [District of Columbia Appropriation Bill, 1970, Committee on Appropriations, U.S. House of Representatives, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Report No. 91-680, November 20, 1969, page 22]

Jack Eisen wrote that with these two actions by the Committees on the District of Columbia and Appropriations, "the final pieces of an intricate legislative jigsaw puzzle began to fall into place, virtually assuring metropolitan Washington that it will finally have the rapid transit system that has seemed so elusive." Chairman Natcher had "made good on his agreement" with President Nixon and Secretary Volpe to appropriate the matching funds.

WMATA had begun sending out invitations to officials and others for the December 9 ceremony to be held in Lafayette Park with President Nixon throwing an electrical switch to start the digging. [Eisen, Jack, "House D.C. Unit Backs 98-Mile Metro Network," *The Washington Post and Times Herald*, November 21, 1969]

On November 24, the House considered the two critical bills for the future of Metro. First was the National Capital Transportation Act of 1969, introduced by Chairman Fuqua. He described it as "a bill which makes it possible to realize the long-sought objective of a rapid rail transit system for the National Capital area; a bill which will provide to the Nation's Capital – the one major Capital in all the world which lacks such a system – a modern, high-speed, transit facility."

For 20 years, "it can be seen that a long bipartisan congressional-executive effort has steadily moved forward the cause of rapid transit for the National Capital region." He referred to "some 22 separate, significant congressional acts" that had led to this moment. It was "the fruition of the visionary hopes of the Congress, four Presidents, and the citizens of the eight jurisdictions making up this great National Capital area, for the building of a rapid transit system in the Nation's Capital."

The bill was consistent with the bill the Senate had approved on July 8. It approved the 97.7-mile system at a cost of \$2.5 billion. To pay for it, WMATA would issue \$835 million in

revenue bonds. The eight jurisdictions would provide \$573.5 million. The Federal share would be \$1.147 billion making for a 55-45 local-Federal match.

Representative Durwood G. Hall (R-Mo.) asked if Chairman Fuqua thought the estimated cost of \$2.5 billion would hold. The chairman replied that the committee has carefully examined that very question:

In the projections of the cost they determined by the finest engineering expertise in the country what the total cost would be to build this system today. Then they added a 10-percent contingency fee for items they were unaware of which might develop in construction. In addition, they have added a 5 percent compounded annually increased-cost-of-construction escalation. So, with that added to it, then we arrive at the \$2.5 billion total cost figure. So this has been taken into consideration.

Representative Broyhill provided a lengthy statement in support of Metro. Among many supportive statements, he said, "Mr. Speaker, the case for the approval of this proposed legislation is overwhelming." He concluded, "So, let us get going and get the job done."

Representative Gross, the penny-pinching Congressman from Iowa, responded that "we are today, with this bill, embarking on another trip into wonderland." He did not care how many subways were built in the District, Maryland, or Virginia. "All I want the people of this area to do is spend their own money to build them." If the system had "such a wonderful, rosy financial picture," it would pay for itself. "Why come to the Federal taxpayers?"

He was certain the system would cost more than \$2.5 billion. If anyone on the House floor wanted to stake his reputation on that cost estimate, he wished they would do so "now for the record, so that he can live with it in the days to come." Everyone recalled what happened with D.C. Stadium, by now renamed Robert F. Kennedy Memorial Stadium. The House was assured it would not cost the Federal payers a dime, "but it is costing the Federal taxpayers, and it has every day since it was completed and occupied."

Representative Broyhill replied that they did the best they could to come up with an accurate estimate, using the best information available from experts. "We have no way of guaranteeing to the gentleman or anyone else that it will cost less or more than we anticipate."

Representative Harsha, the highway supporter from Ohio, reminded his colleagues that he opposed National Capital Transportation Acts in previous years. He was concerned, back then, about efforts to curtail the highway program to create passengers for rail rapid transit:

But since that time these problems have been resolved, and I am firmly convinced that if we are going to have an integrated and effective transportation system in the District of Columbia . . . then we need this rapid transit system.

He responded to Representative Gross that because of the Federal Government's impact on the local economy, "we have a responsibility as the Federal Government to participate in this program."

Representative Gross did not agree that taxpayers from around the country had an obligation to spend hundreds of millions of dollars for Metro.

Representative Harsha tried again:

If the Government here is bogged down by inadequate transportation facilities or service, then service to the general public over the whole country suffers, and there would be less service to all concerned than if there were adequate transportation. That is part of the problem.

Representative Charles A. Vanik (D-Oh.) shared some of Representative Gross's concern. In general, he supported proposals for better public transportation:

The thing that concerns me about this bill is that the Federal commitment is so large that I am afraid it will destroy any real hope of getting any comparable kind of support for other mass transit needs in the rest of the country. I feel that this could just become a bottomless pit which could usurp incredible Federal revenues to support the system. I must confess to the gentleman, I do not think [it] is going to be a profitable operation. I must tell the gentleman that I cannot see where the revenues are going to carry the anticipated costs of this program. But if it would, it would be contrary to all of the experience we have had with transportation systems through the United States.

I think we have to assume this is going to be a money loser and we will be confronted with a deferral and a difficult experience in the repayment.

The thing that concerns me is that in getting into this very multibillion Federal outlay, we may be getting ourselves into a situation where we might have to continue to pour more work and more bureaucrats into the Washington area in order to support the subway system. I think we ought to try to decentralize the bureaucracy and remove from Washington the activities that can be carried on more efficiently in other areas.

Representative Broyhill assured Representative Vanik that only 20 percent of Federal employees were in the Washington area and that local communities "involved are guaranteeing that these revenue bonds will be paid. The cost to the Federal Government would be \$1.1 billion, not \$2.5 billion, and the Federal share was comparable to the Federal share for Federal-aid transit projects elsewhere.

Representative Harsha also defended Metro. WMATA "has had the best engineers and the best accountants available, and the most experienced people in the transit business estimating the amortization of this obligation and how the revenues can be realized."

Representative Gross asked for confirmation that \$41 million had been spent thus far. Chairman Fuqua confirmed that amount for preliminary studies and engineering work among other things:

Mr. Gross. So \$41 million has already been expended and not a wheel has moved, not a passenger has been transported anywhere, and not a shovelful of dirt has been turned toward an operating transit system or anything else. Is that correct?

Mr. Fuqua. If the gentleman will come up on December 9, we will be happy to let him participate in moving some of the first dirt, but there have been some soundings made, and there has been some dirt moved.

Mr. Gross. I thank the gentleman and good night.

Representative Nelsen told his colleagues that he and former Chairman Whitener, who had been defeated in his 1968 reelection bid, had been the authors of the original subway bill for the District of Columbia:

I am under no illusion that this will be a system that can be cheaply constructed. On the original estimates, I think many of us were well aware of the fact that we probably missed the mark by a great deal – and we apparently did underestimate the cost at that time . . . .

I think we must view everything we do regarding the District of Columbia in a little different light than when we deal with any other problem for any other city. This is our Federal City, our Nation's Capital, and I think when we look around, we will have to admit there are many areas we have overlooked to which somehow or other more attention should have been given. I am proud to see that in many respects some things we have done are working out. I hope this transit system works out as well as some of the other additions to the District government have worked out.

He introduced a lengthy statement in support of the bill. He recommended approval of the bill to any of his colleagues "who wish to provide a balanced transportation system for the Nation's Capital."

Representative Hogan, the new Congressman from Prince George's County, Maryland, spoke about the need for Metro, and responded to one of Representative Harsha's points:

The distinguished gentleman from Ohio commented that the system was not likely to ever show a profit. That may or may not be the case, but we do not require that our freeways show a profit, and the rapid rail transit system is as essential for the movement of people and goods as is our highway system. We need highways that are adequate to the population. We need rapid transit, and we need adequate bus service. No one mode of transportation can solve the problems of transportation in Metropolitan Washington.

Representative Gross introduced an amendment to strike out the provision authorizing a \$150,000 study of the "feasibility, including preliminary engineering, of extending a transit line in the median of the Dulles Airport Road from the vicinity of Virginia Route 7 on the 1-66 Route of the Adopted Regional System to the Dulles International Airport." He said, "this is an attempt to salvage a little something out of this bill if it is passed, and I hope it will not be passed." He thought they should wait until the bobtail system was completed "and see how it operates before sinking hundreds of millions of dollars" into extending the system:

Taxpayers have already been hit with a huge bill to provide for a four-lane highway from Dulles to the beltway. Ever since that highway was completed it has carried almost no

traffic. I do not know why the taxpayers should be called upon to spend another \$150,000 to find out what use is proposed to be made of this highway.

It is already there. It is usable. What else do they want? It is a mystery to me and I will be glad to yield to anyone right now to tell me why a \$150,000 study is needed when there is a superhighway already running from Dulles to at least the beltway.

Representative Broyhill pointed out that the study was about extending Metro to the airport. The airport, he added, was not for Virginia or Maryland. "We built it for the Federal Government."

Representative Gross was not impressed. "I do not know for whom Dulles Airport was built but it is still losing \$7 million a year." He had thought Friendship International Airport near Baltimore could have been expanded for Federal needs at a fraction of the cost of building Dulles International Airport. "Now you have a white elephant that is costing the taxpayers \$7 million a year and no evidence . . . as to when it will break even, much less pay a dime on the \$100 million dollar investment."

Representative Broyhill countered that "many of us in northern Virginia opposed the airport being constructed." Nevertheless, Congress had insisted on the airport. He did not deny it benefited people in northern Virginia, "but you did build it." Representative Gross interjected, "No; I did not."

Chairman Fuqua pointed out that the study had been initiated by the Senate bill. He did not know if extension of the system to the airport would ever be feasible, but it was widely supported among airport-related agencies and interests.

Representative Gross responded, "I do not doubt that every agency that spends money around here, and can put some more people on the payroll, are for this so-called study. There is nothing easier than the spending of other people's money."

Representative Dowdy interrupted the discussion to point out that Representative Gross may have misunderstood the purpose of the study. It had nothing to do with the Dulles access road. It was about extending Metro to the airport.

Representative Gross thought that subject had been studied already under the \$41 million expended thus far. "In other words, do we not have to spend another \$150,000 to tell us what to do with a super highway?"

Representative Dowdy again pointed out the study had nothing to do with the access road. He said, "this has to do with extending this subway another 25 miles in addition to the 97 miles."

Representative Gross, who apparently had misunderstood the provision, said, "This gets worse by the minute. Someone got away with a lot of money in the \$41 million study if that is the case."

Representative Broyhill agreed that the airport was "somewhat of a white elephant." The study was an effort to see if "we can make the airport more successful and more convenient insofar as

getting more people out to the airport, and in the long run maybe we can get back that \$150,000 through making the airport a going proposition.”

Finally, the House rejected Representative Gross’s amendment by a vote of 52 yeas and 256 nays. The House then voted in favor of the bill, 286 to 23. [National Capital Transportation Act of 1969, *Congressional Record-House*, November 24, 1969, pages 35511-35526]

Later in the day, Chairman Natcher introduced the District of Columbia Appropriations Act for FY 1970. He discussed the many aspects of the bill, including the provisions covering the District’s matching funds for Metro. After reciting the history of the impasse, including the assurances he had received from President Nixon, Secretary Volpe, Director Mayo of the Bureau of the Budget, and Director Airis, he said:

All these acts indicate clearly that we are in complete agreement that freeway construction as provided under the Highway Act of 1968 must proceed with rapid rail transit construction.

I will now recommend that the \$18,737,000 deleted from the supplemental appropriations bill together with the \$21,586,000 in the regular appropriations bill for the District of Columbia for fiscal year 1970 be appropriated for rapid rail transit construction. I will further recommend that the Federal share for rapid transit construction appropriated for fiscal year 1969 totaling \$43,772,000 be released.

He made one point very clear:

The Highway Act of 1968 must be complied with and as long as the freeway system proposed in this act continues underway we will, at the proper time, appropriate funds for continuing the construction of this rapid rail transit system. Mr. Chairman, both systems must continue underway, and if this takes place we are definitely of the opinion that this will be in the best interest of the Nation’s Capital.

Representative Davis joined several colleagues, including Chairman Mahon, in complimenting Chairman Natcher for the bill he had introduced:

I can assure my colleagues that no man worked more carefully or more effectively in order to assure a balanced transportation system for the District of Columbia than has the chairman of our subcommittee. Sometimes it has been necessary for him to be very firm, but anyone who is familiar with the legislative process and who is familiar with the approaches that are taken by people in and out of Government on some matters of this kind, will recognize that only through that kind of firmness, and a great deal of patience that went with it, has the goal and expressed desire of the President for a balanced transportation system for this metropolitan area come into being. I think this is a contribution for which history will properly reward the gentleman from Kentucky for his leadership in this area.

Following discussion of other provisions in the bill, the House voted 305 to 9 to approve it. ["District of Columbia Appropriations, 1970," *Congressional Record-House*, November 24, 1969, pages 35527-35529]

Jack Eisen wrote of House approval of the National Capital Transportation Act of 1969:

The action, so unexpectedly emphatic that it surprised even ardent subway backers, expands the 25-mile rail system, mainly within Washington, that was approved by Congress in 1965.

Because of some technical variances from the Senate bill, the Senate would have to concur before the bill went to the President for signature. "This is only a formality since the bill's Senate managers already have agreed to them."

In addition to discussing approval of Chairman Natcher's appropriation act, and the threat posed by Senator Proxmire, Eisen wrote, "Groundbreaking is scheduled for Dec. 9 in Lafayette Park."

[Eisen, Jack, "House Approval Clears Way For Area Rapid Transit Net," *The Washington Post and Times Herald*, November 25, 1969]

In a statement issued by the Department of Transportation, Secretary Volpe said he was "absolutely delighted by the emphatic support" for Metro by the House of Representatives. Coupled with previous Senate action, the House gave "a hearty impetus to a project which is vital to the well-being of the Washington metropolitan area and I am grateful to those who supported the program." Metro, he said, would "pull this city together":

Cities originally evolved to provide opportunities for their citizens. Today, because they lack good public transportation, most of our cities isolate people from jobs, education, entertainment, cultural activities and community affairs. With the start of the Metro system, Washington begins the road back.

A dream of nearly half a century is now to be a reality.

The Senate acted on the bill on December 2. In a floor speech, Senator Tydings explained, "Now that the controversies and delays are past history, it is time to go full speed toward completion of the full 98-mile system at the earliest possible date." To complete action, Majority Leader Mansfield requested Senate concurrence in the bill; the Acting President pro tempore stated "the motion was agreed to" without a discussion or vote, reflecting its noncontroversial nature.

As the *Star* reported, the last obstacle was Senator Proxmire's vow to reduce spending for the system. [National Capital Transportation Act of 1969, *Congressional Record-Senate*, December 2, 1969, pages 36313-36314; Grigg, William, "98-Mile Metro Is Authorized By Congress," *The Evening Star*, December 2, 1969]

## Considering the Freeways

Although Mayor Washington had rejected the U Street/Florida Avenue corridor for the North Leg Freeway, *Post* editors were skeptical. Comparing the route to “a cat with nine lives,” the editors wrote that the “controversial ghetto route” kept “reappearing to cloud public discussion as an alternative to “the officially favored K Street tunnel as a means of bringing freeway traffic across town.” By confirming the study, DeGast had inadvertently confirmed “the charges of anti-freeway forces that more than 2,000 homes in the inner city would be destroyed by completion of the freeway program.”

The editors thought that if District Highway Department officials were left to their own devices, they “would prefer to use the U Street route because it would be more easily engineered and would cost less than K Street.” Mayor Washington had emphatically rejected the route, calling it “unacceptable to the city.” He even ordered that the routing be removed from official highway planning maps.

“Unfortunately,” the editors speculated, “we have not heard the last of the U Street proposal.” The Federal-Aid Highway Act of 1968 had ordered a study of the U Street routing along with the K Street tunnel and “other alternatives.” The editors urged Mayor Washington to “make it clear to the consultants doing the study that they must find a route other than U Street if they hope to get the North Leg built.” [“The North Leg Again,” *The Washington Post and Times Herald*, November 25, 1969]

City officials had still not decided how to comply with the requirement in the 1968 Act for a study of the North-Central Freeway. With 15 months elapsed since the 1968 Act started the clock ticking on an 18-month study, the city was still planning how to meet the deadline of February 23, 1970. Although the city had solicited bids for consultants to conduct the study, the *Post* reported on November 27:

No decision has been made on the form the report will take, although several private consulting firms have proposed to undertake a feasibility study of the route.

But one city official hinted Sunday that the city may decide not to make a feasibility study at all, but merely report on the freeway to Congress.

One consultant proposal under consideration, by Wilbur Smith and Associates and Alan M. Voorhees, “pledged to examine the location of the route, its cost, its effect on the surrounding community, the displacement of homes and its engineering implications.” Both consultants had been involved in previous studies of the North-Central Freeway:

Some city officials favored the study, while others argued for an in-house study:

But as one federal officials said, having an in-house study would be “like having 50 other children tugging at our coattails. The way it’s being approached here is that we’ll have outside technical assistance.”

City officials recognized that anti-freeway forces considered the Smith and Voorhees firms as pro-highway and, therefore, would consider any study they conduct to be suspect.

Mayor Washington and Secretary Volpe would, in the end, decide whether to hire a consultant or conduct an in-house study.

Appearing on WTOP-TV's "Washington News Conference" on Sunday, November 30, Deputy Mayor Fletcher said that with time so short, "We may well have to do an in-house study with our own people and with the Bureau of Public Roads." The city would have to hold public hearings before submitting its report to Congress by the February 23 deadline. The city, he said, also had to report on the North Leg and South Leg segments of the Inner Loop Freeway. [Price, Richard E., "NE Route Feasibility Study May Be Undertaken," *The Washington Post and Times Herald*, November 27, 1968; "3 Controversial Freeways May Be Studied by District," City Life, *The Washington Post and Times Herald*, December 1, 1969]

On December 3, Mayor Washington and Chairman Hahn announced that the District Department of Highways and Traffic would prepare a study of routes, inhouse, for the North-Central Freeway and the South Leg Freeway. The study had to be completed by the February 23 deadline or, under the 1968 Act, the approved corridor for the North-Central Freeway would be mandated for construction. The scope of the study was uncertain, prompting Director Airis to say:

We'll have to get busy immediately; we don't have much time. Anything we do will have to be quick. We simply don't have time to look at it in depth.

The study would necessarily rely on existing reports, although Airis said the department might hire consultants for small segments of the study.

Airis promised that the city would hold public hearings between January 12 and February 23 before submitting its report to Congress. The hearings would ensure "local participation" in the study while the city provides the "technical end."

At the same time, Mayor Washington and Chairman Hahn announced that they would ask Congress for an 18-month deadline of the time for a study of the North Leg of the Inner Loop. They needed the time because there had been "no thorough studies and no public hearings" on the route. [Green, Stephen, "Delay Asked on North Leg Planning," *The Evening Star*, December 5, 1969; Prince, Richard E., "Deadline Is Pushed On Freeway Study," *The Washington Post and Times Herald*, December 5, 1969]

## **Launching Metro**

On December 2, WMATA announced that the groundbreaking ceremony for the start of Metro construction had been moved from Lafayette Square to Judiciary Square at the request of the Nixon Administration. Neither the White House nor WMATA explained the move, but the *Post* speculated that the security of the White House, across Pennsylvania Avenue from the park, may have been a factor. The capacity of the park may have been another factor. WMATA expected a crowd of about 2,000 people; U.S. District Court Judge George L. Hart, Jr., had limited the park to 500 people in advance of antiwar demonstrations in November.

Whatever the reason, the ceremony would be held in Judiciary Square at 2:30 p.m. Officials did not know if President Nixon would attend, but were hopeful he would. If so, his role would be different. Instead of throwing a switch to start an auger, as was planned at Lafayette Park, he would participate in the more traditional turning of shovelfuls of earth. [“Metro Ceremony Shifted to New Plot,” *The Washington Post and Times Herald*, December 3, 1969]

The day of the announcement, WMATA opened the first construction bids for the G Street section of the subway. An Ohio construction contractor submitted a low bid of \$12.3 million, which was 19 percent above the engineers’ estimate. The bid came from the joint venture of American Structures, Inc., and the Mining Equipment Manufacturing Corporation, both of Youngstown, Ohio. A New York firm submitted the high bid of \$17.4 million.

WMATA’s chief engineer, Roy T. Dodge, said he was “disappointed” by the low bid. All the bids would be studied to ensure the contract was awarded not only to the lowest bidder but the most responsive bidder. The fact that the bids came in higher than expected raised an initial concern that the estimated cost of Metro, on which the financial plan was based, might have to be increased. Dodge said, “We’ll have a better idea after our first year of awarding contracts.” [Eisen, Jack, and Fiske, Phineas R., “\$12.3 Million Metro Link Bid Submitted,” *The Washington Post and Times Herald*, December 3, 1969; Green, Stephen, “Officials Fear 20% Increase in Metro Cost,” *The Evening Star*, December 3, 1969]

On December 3, the Senate Committee on Appropriations released the FY 1970 Department of Columbia Appropriations bill as prepared by Chairman Proxmire’s subcommittee. The bill cut requested funds across the board for the city. With only 7 months left in the fiscal year, he said, “I feel it is unnecessary to fund this bill in full.” In his view, the amount the city requested and included in the approved House bill was inflationary. The Proxmire bill appropriated \$645 million or \$37.7 million less than the House had approved and \$107.6 million less than the city had requested. The bill also cut \$29.7 million in new construction projects from the House plan and \$7.8 million in operating funds. The bill called for a Federal payment of \$100 million.

The report noted that the District of Columbia would receive an estimated total of \$210,328,000 under Federal grant programs. Many other jurisdictions also receive funds under these programs, but “the District fares exceptionally well in almost every category.” The District and capital region also received Federal assistance, other than grants, totaling \$239,414,308. A study of this assistance “indicates that almost without exception it again does extraordinarily well either as to size, scope, or level of funding.” The report cited as an example the difference in Federal-aid for the BART system (8.4 percent of a total estimated cost of \$1.3 billion) and aid for Metro (46 percent of \$2.5 billion).

The report discussed the concern about inflation as reflected in President Nixon’s September 4 message calling for a reduction in Federal construction and for State and local governments to reduce their public works projects. The next section in the report discussed the Metro system, providing a straightforward summary of its history, estimated cost, and financing plan. Although Chairman Proxmire told reporters the project “flies in the face” of the fight against inflation, his subcommittee and the full committee had outvoted him on reductions in appropriations for Metro construction. [District of Columbia Appropriations Bill 1970, Committee on Appropriations,

United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, Senate Report No. 91-564, December 3, 1969, pages 50-51; Levey, Robert F., “Budget Cuts Explained,” *The Washington Post and Times Herald*, December 5, 1969; Grigg, William, “D.C. Budget Slashed by Senate Unit,” *The Evening Star*, December 3, 1969]

Although Congress would not complete the appropriations process for several weeks, the Senate Appropriations Committee’s action ensured appropriation of the District share of construction funds.

On December 9, officials and a crowd of about 2,500 gathered in Judiciary Square at 4<sup>th</sup> and E Streets, NW., for the groundbreaking for Metro construction. President Nixon, who had gone to New York City to attend the National Football Hall of Fame Dinner at the Waldorf-Astoria Hotel, did not participate. (At the hotel, he entered through a garage entrance and did not see the shouting, window-smashing mob demonstrating against the Vietnam War.) Secretary Volpe, representing him, announced that earlier in the day, President Nixon had signed the National Capital Transportation Act of 1969 (P.L. 91-143), making official the full 97.7-mile Metro system.

Four hours before the ceremony, WMATA awarded the first construction contract to a joint venture of Gordon H. Ball, Inc., Danville, California; J. F. Shea Company, Inc., Oakland California; and Norair Engineering Corporation, Washington. The contract involved three-quarters of a mile of subway tunnel from 4<sup>th</sup> and E Streets to 9<sup>th</sup> and G Streets, NW. The winning bid was for \$33.7 million. The joint venture also was a major contractor on the BART line.

Participants in the 45-minute ceremony outside the D.C. Juvenile Court building at Judiciary Square included Secretary Volpe, Mayor Washington, Governor Mandel, U.S. Park Police Chief Grant Wright, and area officials and Members of Congress. Chairman Babson, who planned to retire from public service at the end of the year, was master of ceremonies for the event. Jack Eisen reported:

The ceremony was marked by restrained oratory in which speakers noted the decade of efforts to get started on the rail system and its bright potential, chiefly as an instrument for the region’s social and economic advancement.

The unintentional high points were a side comment by Mayor Washington and a slip of the tongue by Gov. Mandel, accompanied by a slip of technology.

The mayor smilingly began his talk by noting, “I am delighted to be here to cut another ribbon.” This was an obvious reposit to public remarks by Rep. Joel T. Broyhill (R-Va.), a key House sponsor of rapid transit legislation, who called the mayor a fine ceremonial ribbon-cutter but a poor administrator. Broyhill grinned broadly at the mayor’s comment.

Mandel’s prepared speech said he was proud to help “illuminate” a map showing the Maryland part of Metro, but his tongue slipped and he said “eliminate” – and sure enough, the map failed to light when he and Mrs. Spellman threw the switch. An electrician later came successfully to the rescue amid audience applause.

Secretary Volpe said construction of Metro would be a model for cities around the country. President Nixon, he said, had instructed the Department of Transportation to establish a computer databank on construction of Metro to be available to help other cities plan subway systems. He predicted that Metro would “bring new life to Washington, new growth, new development, new improvement, much greater than any of us have realized.”

Those shoveling pre-softened earth were Secretary Volpe, Mayor Washington, Governor Mandel, Chairman Hahn, Chairman Babson, Prince George’s County Commissioner Spellman, and Falls Church City Councilman Lee M. Rhoads. All but Secretary Volpe used traditional shovels:

Volpe used a simple garden spade donated to the old National Capital Transportation Agency in 1965 by local units of the American Automobile Association with the advice to stop talking and start digging. The donation marked an about-face by an organization previously critical, along with others in the highway field, of the subway plan.

“Not content with a single spade full,” Eisen added, “the seven officials dug in time and again, mainly for the benefit of photographers.”

Senator Spong, representing Virginia, and Broyhill had attended the event but had to return to the Capitol before the groundbreaking.

WMATA had lined up 34 gold-painted shovels for the event. Cody Pfanstiehl, WMATA’s director of community relations, shouted, “It’s a do-it-yourself subway,” as he handed shovels to members of the audience. The *Star* reported, “One after another they shoveled to the strains of march music from the U.S. Navy Band.”

Asked about the map glitch, Pfanstiehl said, “I don’t know how much the map cost. I haven’t received the bill yet.”

The ceremony ended as rush hour was beginning, leaving many members of the audience unable to find a taxi. One woman said, “I wish we had the subway now.” [Eisen, Jack, “Ground is Broken on Metro, Job Let,” *The Washington Post*, December 10, 1969; “Angry Mob Mars Nixon Visit to N.Y.,” *The Washington Post*, December 10, 1969; Green, Stephen, “Do-It-Yourself Event Marks Start of Metro,” *The Evening Star*, December 10, 1969]

In a formal statement issued by the Department of Transportation, Secretary Volpe called the start of construction “an excellent example of a metropolitan approach to an urban issue. The approach which exemplified a spirit of cooperation in the highest sense, is one worthy of duplication by urban areas in other parts of the country.” The groundbreaking was “demonstrable evidence of achievement through combined efforts of men of goodwill dedicated to the best public interest.”

### **A Departure and an Arrival**

Deputy Mayor Thomas W. Fletcher, who had been appointed along with Mayor Washington by President Johnson in September 1967, had announced on October 8 that he would leave office on December 15. He was returning to his home State of California to become city manager of San

Jose. In July 1967, he had left his position as city manager of San Diego to drive his family across the country to become Deputy Assistant Secretary in the Department of Housing and Urban Development. The *Post* wrote:

An FBI agent stopped him along the way, put his family in a hotel and put him on an Air Force plane for Washington and a presidential interview. President Johnson had heard about him, wanted him for the D.C. job and put out a nationwide alert to find him

On September 6, 1967, President Johnson had announced his intention to nominate Walter E. Washington as Mayor and Fletcher as Deputy Mayor. As city manager of San Diego from 1961 to 1966, the President said, Fletcher had “won a national reputation as one of America’s outstanding city executives.” His pioneering work advancing city management-budgeting techniques had served as a model for other cities:

He is an innovator. He is experienced, highly respected, and eminently qualified for his new job. He is a man who can make government work for the good of the people it serves.

During the freeway battles, Fletcher had taken the lead, allowing Mayor Washington to remain, politically, above the fray. But as a *Post* article about the resignation pointed out:

One of the low points in his career here came last spring, when word of the negotiations [with staff of the House Committee on Public Works] leaked out and he faced 50 indignant freeway opponents in the City Council chambers.

“You’re a liar, Fletcher, and you’re yellow,” one shouted at him as the meeting broke up.

Fletcher stopped briefly, as if to reply. Then he turned, his shoulders slumped and walked slowly back to his office.

His frustrations over the freeway issue and other aspects of his job seemed to weigh particularly heavy on him during last March and April. He spent a week in the hospital in April when an ulcer he had had for several years flared up.

While Mayor Washington was a political leader, Fletcher’s job was to modernize the city government:

The D.C. government was a relic of the horse-and-buggy era when Fletcher came, a creaky and cumbersome bureaucracy. He brought about a difference, if not a transformation.

The *Star* reported:

He could not read his resignation statement yesterday for fear of breaking down, he said, but he did manage to tell reporters in the District building that the San Jose offer “was a professional opportunity that I could not resist.”

Mayor Washington, in Boston for a speech, told Fletcher and reporters via speaker phone that, “I regard you, Tom, as the top man in the nation in municipal management”:

The mayor cited his right-hand man’s qualities in emotional tones: “Sensitivity, commitment and competency.” Asked about a successor, he said, “I haven’t gotten over the shock of the situation.”

. . . Fletcher, a tall, silver-haired man of 45, stood quietly with reporters as Washington spoke over the phone. “This is the guy closest to me in the city,” the black mayor said of the white administrator before listing the crises they had been through, including the riots of April 1968 and Resurrection City.

The *Post* reported that regarding a successor, Mayor Washington had said, “When you’ve got the No. 1 city administrator in the country, you usually don’t think about who’s No. 2”

President Nixon said he would accept the resignation “with extreme regret, as he has served the nation’s capital with enormous distinction.” [Moore, Irna, “Fletcher Quits City Post for San Jose Job,” *The Washington Post*, October 9, 1969; Milius, Peter, “Fletcher: Man for All Cities,” *The Washington Post*, October 9, 1969; Basham, William, “D.C. Deputy Mayor Leaving Dec. 15,” *The Evening Star*, October 9, 1969]

On November 12, President Nixon announced that he had chosen Graham W. Watt, city manager of Dayton, Ohio, to be Fletcher’s successor. Although a native of Elizabeth, New Jersey, Watt had been raised on Maryland’s Eastern Shore. He had been city manager of Alton, Illinois, and Portland, Maine, before taking the position in Dayton. Fletcher described Watt as a “city manager’s city manager – probably one of the best city managers in the country today.” He had recommended Watt to Mayor Washington.

A *Star* profile of Watt began:

Graham W. Watt is the man credited with changing the direction of this industrial city from a brick-and-mortar government to an era of social concern.

Since coming to Dayton 2½ years ago, Watt had instituted such federally backed projects as Model Cities and the Concentrated Employment Program, both of which he will encounter again as deputy mayor of Washington.

In fact, Watt is no stranger to Washington or its programs. He probably has spent more time in the Capital than anyone else from Dayton except its congressman.

Most of the time, he returned to Ohio with new federal commitments for grants-in-aid. He is well known within the federal agencies as an administrator who can spend federal dollars quickly and visibly.

Watt, the profile stated, was “regarded as a calm, efficient administrator who never lost his cool.”

During a White House press conference, Watt said he would work toward President Nixon's goal of making "this city of Washington not only the first city of the nation, but one of the leading cities of the world." The job was, he said, a "great challenge and more than that a great opportunity."

Mayor Washington expected Watt to play the same role as Fletcher. "We [hope to] develop the kind of Mr. Inside-Mr. Outside relationship based on our own personal relationships that seems to transcend the professional ones."

Watt told reporters that he realized his new job would involve more pressure than his former position. However, he expected "to meet the community on its terms." He said:

I know it sounds kind of preachy, but I believe we have a tremendous job to do to make the cities serve today's people. And I think that whatever it takes to do that job, we've got to do.

Making citizen participation in government decisionmaking effective might be, he said, "the toughest job for a city manager in the country." That was, however, "part of the fascination and the challenge of the job here."

He and Mayor Washington would have to work out their relationship over time. "I'm a successor, not a replacement for Mr. Fletcher. I couldn't try to be anything other than my own man."

He also indicated that he was a registered independent and planned to stay that way. [Horner, Garnett D., "Dayton's Graham Watt Named D.C. Deputy Mayor by Nixon," *The Evening Star*, November 12, 1969; Goldwyn, Ronald, "Watt No Stranger in D.C.," *The Evening Star*, November 12, 1969; Levey, Robert F., "Deputy Mayor Named," *The Washington Post and Times Herald*, November 13, 1969; Moore, Irna, "Graham Watt: Cool Professional," *The Washington Post and Times Herald*, November 13, 1969]

The Senate confirmed Watt's appointment on December 11 as Deputy Mayor Fletcher was saying his goodbyes to the city. The Metropolitan Washington Board of Trade honored Fletcher at the Mayflower Hotel on December 9.

On December 12, he joined Mayor Washington and Chairman Hahn in a farewell meeting with President Nixon at the White House. Before departing for the White House, Fletcher had one last meeting with reporters, an opportunity to fulfil a promise he had made 2 years earlier. He handed out six envelopes that contained jigsaw-puzzle pieces of a report he had withheld regarding the District's juvenile delinquency programs. Fletcher had said 2 years earlier, that "before I leave office, I am personally going to hand you a copy." It had become a standing joke in the District Building, with reporters periodically asking "Whatever happened to the McGee report?" Handing out the envelopes with the chopped up report, he jokingly told reporters to "work together" to reassemble it.

After leaving the White House, he got into his car for the drive to San Jose. [Sarrow, Ronald, "McGee Report Issued In Piecemeal Fashion," *The Evening Star*, December 12, 1969; Moore, Irna, "Fletcher Bids Off Farewell," *The Washington Post and Times Herald*, December 13, 1969]

Graham W. Watt took the oath of office as Deputy Mayor on January 2, 1970.

Watt had met his wife Mary Irish of Baltimore, known as "Bidi," at Washington College in Chestertown, Maryland. They had a son and daughter, 13-year old Terry and 11-year old Laurie. The Watts moved into an apartment in Van Ness North at 2001 Veazey Terrace in the District's Forest Hills neighborhood near Connecticut Avenue and Rock Creek Park.

### **The District's Appropriation Act, 1970**

The District of Columbia Appropriations Act, 1970, had not yet cleared Congress. Chairman Proxmire brought the bill to the Senate floor on December 11. The *Post* expected a floor fight over several issues, including the freeway program. Senators Tydings and Eagleton of the Senate District Committee believed the bill intruded on their jurisdiction:

Proxmire's budget cutting also abolished 252 jobs in the department of highways and traffic – all of them positions used in connection with freeway construction.

The city has been holding those positions vacant for the time when work begins on the entire freeway system. Highway department officials said yesterday they planned to fill at least 50 of those positions in the next few months for building of the Three Sisters Bridge.

If other stalled freeway projects, including the North Central Freeway and the North Leg, are approved soon, all 252 positions would be needed, according to Deputy Highway Director R. Dana Wallace.

Restoration of abolished positions would have to be requested in future city budgets if the freeway program is to be completed. [Moore, Irna, and Jewell, David A., "Senate Floor Fight is Expected Over District Budget," *The Washington Post and Times Herald*, December 11, 1969]

Although several portions of the bill generated lengthy debate, provisions related to freeways or Metro did not. Chairman Proxmire explained that because of the delay in passing the Revenue Act, 5 months of FY 1970 had passed. That, plus the obligation to support President Nixon's efforts to reduce inflation by curtailing new construction starts, resulted in a reduced capital outlay program. The bill "is \$70 million below budget estimates and \$30 million below the House bill."

He also pointed out that the Revenue Act had limited District jobs to 41,500, but his bill reduced that total by 700. The Appropriations Committee "strongly urges vigorous and inclusive study and critical analysis of the District's present and future manpower needs with a first-year goal of reducing by at least 1,000 the total of authorized positions established in this bill."

He explained that the bill appropriated the full amount for WMATA.

The Senators discussed several issues at length, but the expected floor fight over freeways or the unfilled positions related to the freeways did not materialize. The Senate approved the bill, 92 to 0. [District of Columbia Appropriations, 1970, *Congressional Record-Senate*, December 11, 1969, pages 38352-39366; the brief discussion of Metro is on 38354]

A House-Senate conference committee met to reconcile differences between the two appropriations bills, with the *Post* predicting a Proxmire-Natcher clash on several issues, particularly the 252 positions for freeway construction. Chairman Proxmire promised to “go to the mat” in conference over the personnel issue. [Moore, Irna, and Levy, Robert F., “City’s Budget Faces Hill Conference,” *The Washington Post and Times Herald*, December 14, 1969]

The conference committee released a reconciled bill on December 15. As the *Star* pointed out, “In another unusual turnabout for the city’s finances, House-Senate conferees asked congress today to approve a final ‘compromise’ District budget that is smaller than either of the earlier versions passed by the House and the Senate. The bill totaled \$650.3 million, including a Federal payment to the city of \$104.2 million. Funds for FYs 1969 and 1970 for Metro construction and restoration of jobs in the Department of Highways and Traffic were included. [Grigg, William, “\$650 Million District Budget Is Approved by Conferees,” *The Evening Star*, December 16, 1969; District of Columbia Appropriations, 1970, Conference Report, U.S. House of Representatives, 91<sup>st</sup> congress, 1<sup>st</sup> Session, Report No. 91-754, December 15, 1969]

The Senate approved the conference report the following day with brief discussion, none related to Metro. [District of Columbia Appropriation Bill, 1970-Conference Report, *Congressional Record-Senate*, December 16, 1969, pages 39329-39331]

Chairman Natcher brought the conference report to the House floor later in the day. The bill, he explained, restored the positions the Senate bill had cut from the District Department of Highways and Traffic. Most of the positions were “directly connected with the Department’s major construction programs”:

The freeway impasse is finally broken and these positions will be necessary to enable the freeway system program to get underway. The Department has over \$200 million in previously appropriated funds and they are available to fund these positions as well as the contracts for actual construction.

The House approved the conference report without a recorded vote. [Conference Report on H.R. 14916, District of Columbia Appropriations, 1970, *Congressional Record-House*, December 16, 1969, pages 39387-39391]

President Nixon signed the bill on December 24 (P.L. 91-155).

### **Pondering the Bad Options**

As 1969 neared an end, officials looked to February 23, 1970, as a date of reckoning for the North-Central Freeway and the North Leg of the Inner Loop Freeway. Section 23 of the Federal-

Aid Highway Act of 1968 had given the District of Columbia 18 months to study what to do about these two freeway segments:

The government of the District of Columbia and the Secretary of Transportation shall study those projects . . . and shall report to Congress not later than 18 months after the date of enactment of this section their recommendations with respect to such projects including any recommended alternative routes or plans, and if no such recommendations are submitted within such 18-month period then the Secretary of Transportation and the government of the District of Columbia shall construct such routes, as soon as possible thereafter, as required by subsection (a) of this section.

The city council had spent nearly a year of that time fighting Section 23's mandate before reluctantly agreeing on August 9 to comply. Several months passed while officials debated whether to conduct the study inhouse or by hiring a consultant. When the city decided to hire a consultant, Chairman Fallon of the Public Works Committee and Chairman Natcher wrote to President Nixon to object. They said that too much time had been spent talking:

Testimony before the Committee on Public Works indicated that enough money had been spent on endless studies and that positive action was required in order to complete the interstate system in the District of Columbia.

They said the 1968 Act "was not intended as a vehicle for the complete restudy of half the District of Columbia." As the *Post* put it, they "made it clear that they did not want another report challenging the congressional mandate. They apparently felt that a report from the D.C. highway department would not."

The city announced on December 3 that the District Department of Highways and Traffic would conduct the study. The announcement included the intent to ask Congress for an 18-month extension of the deadline for the North Leg, which had not been subject to public hearings. Neither Chairman Fallon nor Chairman Kluczynski was receptive. Chairman Fallon said, "They've had enough time. We gave them 18 months. That's what they asked for and that's what we gave them." With Congress in recess, he did not expect his committee to take up the matter until after January 15. Committee sources told reporters that the city had virtually no chance of an extension, which would require a new law to amend Section 23.

None of the alternatives the city faced was favorable. The North-Central Freeway had been one of the most controversial segments of the city's Interstate System. Maryland and the District had agreed on the alignment along the Baltimore and Ohio Railroad tracks to reduce dislocation of families, but opposition to the route continued. The city's rehabilitation and rental of some of the homes taken for the route had reflected the city council's abandonment of the alignment, regardless of Section 23.

As for the North Leg, two alignments had been identified to provide the link between the Potomac River Freeway and the North-Central Freeway. Mayor Washington had made clear the city would not seriously study one of them, along Florida Avenue/U Street, NW. The alignment had been removed from District Highway Department maps, which now showed the North Leg in

a tunnel under K Street, NW. The city wanted flexibility to consider the best location for the other alternative, possibly to shift it to some other route between K and U Streets.

Chairman Hahn said on December 23 that the city council would make a recommendation after holding a public hearing in January. "I believe we must comply with the law." [Prince, Richard E., "D.C. Freeway Dispute Coming to Head," News Analysis, *The Washington Post and Times Herald*, December 23, 1969; Green, Stephen, "North Leg Decision Planned by Feb. 23," *The Evening Star*, December 24, 1969]

### **The Three Sisters Bridge Battle**

On January 7, Roberts Owen again asked the U.S. Court of Appeals to block further construction of the Three Sisters Bridge. He claimed the District and Federal governments were dragging their feet in U.S. District Court, which had refused an injunction on bridge construction. The *Post* reported:

Government attorneys denied any intentional delay on their part and contended that Owen and his clients had swamped them with various legal motions and demands for documents in preparation for the court suit . . . .

Owen argued . . . not only that the government was stalling but that it was planning to let contracts later this month on the east leg of the inner loop, a segment of the city freeway system of which Three Sisters Bridge is also a part. Government attorneys said the east leg has no direct connection with the bridge and should not be included in the litigation.

The court did not issue a ruling on the request for an injunction. ["Freeway Foes Seek Halt of Bridge Work," *The Washington Post and Times Herald*, January 8, 1970]

Because plaintiffs and defendants filed motions for summary judgment in their favor, the case never went to trial. On January 12, 1970, Judge Sirica granted the Federal and District of Columbia defendants' request for summary judgment and denied the plaintiffs' request for an injunction stopping construction of the Three Sisters Bridge.

The decision turned on the phrase in Section 23 directing that construction proceed "in accordance with all applicable provisions of title 23 of the United States Code." Federal and District officials argued that the requirement applied only to the Title 23 provisions dealing with actual construction, not the planning and public hearing requirements also in Title 23. They also argued that the intent of Congress was to require construction of the bridge, not to impose additional obstacles to its construction. Plaintiffs contended that compliance with Title 23 requirements meant the bridge project was subject to the planning and public hearing requirements.

Judge Sirica found that:

The resolution of this suit thus comes down to a question of statutory interpretation. The court is of the opinion that the interpretation of Section 23 of the 1968 Highway Act proposed by the defendants is the most reasonable. The court has taken into

consideration the fact that the Act was passed soon after the Airis decision, supra, which had held up the construction of the Bridge pending compliance with the planning provisions of the D.C. Code. That this was a factor motivating the passage of this legislation is shown by the opening language of Section 23(a) “[n]otwithstanding \*\*\* any court decision\*\*\*to the contrary.” The intent of Congress is most clearly shown by the provision that work shall commence on the bridge “[not] later than 30 days after the date of enactment.” The court believes that in passing this legislation, Congress intended that the District of Columbia commence construction on the bridge project as soon as possible, and that no further planning or hearing requirements of Title 23 need be complied with. [*D.C. Federal of Civic Associations et al., v. John A. Volpe et al.*, Civ. A. No. 2821-69, U.S. District Court District of Columbia, January 12, 1970]

Owen told reporters he would appeal the ruling to the U.S. Court of Appeals.

The following day, city highway officials submitted their recommendations in response to Section 23 of the 1968 Act to Mayor Washington and Chairman Hahn.

The District Highway Department supported the North-Central Freeway to Silver Spring, but proposed a route that would take 54 fewer residences and 3 fewer businesses. Total displacement would be 223 residences and 121 businesses. The route remained in the Baltimore and Ohio Railroad corridor, but would be shifted further west from 10<sup>th</sup> Street, NE., in the Brookland area. With the shift, the alignment would not affect the homes that had been rehabilitated and rented.

Support for the freeway was based on relief of traffic congestion in the central city, particularly in the parallel 16<sup>th</sup> Street, NW., corridor:

A point that tends to be overlooked is that change in the vicinity of the proposed North Central Freeway is going to occur whether the facility is built or not. The Silver Spring line of the Metro system is programmed for the same general location of the freeway – adjacent for most of the route.

Bruce T. Weaver, president of the Brookland Civic Association, opposed the recommendation despite the shift in alignment to protect the rehabilitated homes. “Freeways are nothing more nor less than a semblance of the plantation philosophy.”

The District Highway Department recommended building the East Leg of the Inner Loop to connect with the Baltimore-Washington Parkway and the South Leg, as revised in response to the objections of the Fine Arts Commission, to connect the Southwest Freeway with the Theodore Roosevelt Bridge. The department also favored construction of the South Leg Freeway with tunnels under the Lincoln Memorial and the north edge of the Tidal Basin, the tunnels to connected with a depressed roadway along Independence Avenue. Airis pointed out that this plan would permit the depressed roadway to be converted into a tunnel.

Airis suggested that the city council ask Congress for an 18-month delay in submitting recommendations on the North Leg of the Inner Loop.

Mayor Washington forwarded the department's recommendations without comment to the city council. Chairman Hahn was doubtful that Congress would approve a request for more time to study the North Leg Freeway, but announced plans for public hearings to begin on January 29 and 30, and February 3 through 9 if necessary. He added that the hearings would be televised by the area's public broadcasting station, WETA (channel 26). No one, he said, would be excluded from the hearings.

ECTC's Booker told a press conference that he had not read the department's report, but could tell from a summary that it did not reflect the views of citizens "because it was drawn up by a bunch of bureaucrats." He joined the D.C. Federation of Civic Association in demanding that the hearings be held at night "so that working people will not be economically penalized for attendance and participation." Booker objected to the plan to televise the hearings, claiming it was "a clear attempt by the D.C. government to circumvent public hearings . . . and a clear attempt to keep the public from voicing its opinions." [Prince, Richard E., "New NE Freeway Plan Takes 54 Fewer Homes," *The Washington Post and Times Herald*, January 14, 1970; Green, Stephen, "Fewer Homes Hit In North Central Freeway Revision," *The Evening Star*, January 13, 1970]

As the *Post* pointed out, WETA also was concerned that the presence of television cameras might affect the witnesses and members of the city council:

Channel 26 officials realize they may run into special problems at the hearing, particularly if those witnesses who have threatened disorder are successful in creating it . . . . Channel 26 may turn their cameras off if they find their presence has dramatically changed the nature of the hearings. ["TV Eye on the Council," *The Washington Post*, January 26, 1970]

*Star* editors considered the District Highway Department's recommendations "a responsible endeavor to comply" with Section 23 of the 1968 Act. The request for an 18-month delay on the North Leg was reasonable because, as a practical matter, the city was nowhere near agreeing on a location for the link in the Inner Loop Freeway. "And the over-all transportation picture might well benefit by giving more study to this most complex of all the projects, while other less complicated projects proceed.

The editors favored the all-tunnel option for the South Leg, even though it was more costly. The all-tunnel option had been created to satisfy NPS officials that impacts on the surrounding park would be minimized. "Since federal dollars will pay the cost in either event, this is a choice which Congress might well desire to make itself."

The editors also supported the North-Central Freeway routing. The highway agency's report "persuasively reaffirms the need to build" the expressway.

Despite these positive thoughts, the editors realized that the report was not the final work. The council would hold hearings that based on experience "are not apt to produce much in the way of constructive suggestions about how to make freeways – any freeways – really work." The proposals would be "assailed bitterly, and in some cases hysterically by critics who broadcast

their intention before the proposals were even disclosed.” After the hearing, Mayor Washington would send his recommendations to Congress, which would have the final say.

The editors hoped city officials would keep two points in mind in deciding whether the freeway system should be completed. First, “Congress already has decided that – in the affirmative.” Second, other provisions in the 1968 Act had liberalized right-of-way rules to reduce the hardship involved in relocation. City officials had not fully explored this liberalization, but if they did, they might find that they could complete their task “with less negativism – and considerably more hope of broader community support.” [“Highway Hysterics,” *The Evening Star*, January 16, 1970]

The *Post*'s editors also were encouraged. The city council faced choices that it must make before submitting its recommendations to Congress by February 23. For example:

The council must choose between reaffirming its endorsement of a freeway route out New York Avenue to Maryland and going back to the discarded North Central Freeway (and its companion Northeast Freeway) along the B. and O. railroad tracks, which both the Highway Department and Maryland favor.

The North-Central Freeway, the editors pointed out, would displace more homes and businesses, “but New York Avenue would be much less convenient and would pour unwanted traffic on the Baltimore-Washington Expressway, the Capital Beltway, and a number of north-south streets in the District, including some that are already congested beyond their capacity.”

The South Leg could be placed in a 5,300-foot tunnel, “entirely out of sight” except for “unsightly ventilating towers above ground.” The editors preferred the option of two tunnels connected by a depressed expressway “provided the proposed landscaping is acceptable to the park people.”

Clearly the North Leg “needs further engineering study” of the K Street tunnel option. The Florida Avenue/U Street option “has been rejected out-of-hand by the city government [and] should not be revived.”

Congress, as usual, would have the last word, but the city council’s recommendations would receive a better hearing on Capitol Hill “if it manages to come up with a workable system for handling the freeway traffic” based on their merits, not “a repetition of the disorders that characterized the hearings last summer.” A repetition of those disorders “would play into the hands of those in congress who couldn’t care less what the council, or the community thinks.” [“The Council, the Congress and the Freeways,” *The Washington Post and Times Herald*, January 18, 1970]

### **Before the Hearings**

Although the city council’s public hearings on the freeways were expected to be a major activity, it was not the only problem area officials had to deal with.

In Montgomery County, officials were dealing with protests against the Northern Freeway, a proposed 4.9-mile freeway the Maryland State Roads Commission proposed to connect the Capital Beltway with the planned Outer Beltway. It also would link with the North-Central Freeway from the Capital Beltway and the District line.

Opposition centered on the fact that the six-lane Northern Freeway would slice through Sligo Creek Park and Wheaton Regional Park. Edward T. Borda, attorney for Citizens to Save Our Parks, referred reporters to Section 4(f) of the Department of Transportation Act of 1966, which generally prohibited the use of parkland for Federal-aid projects unless no feasible and prudent alternative was available. "It is most likely there are many feasible alternatives to this dismal proposal." The freeway, he said, would destroy Sligo Creek Park and damage the larger Wheaton Regional Park. ["Plan for Freeway in 2 Parks Draws Fire in Montgomery," *The Evening Star*, January 6, 1970]

When county officials met on January 7 with the Maryland State Roads Commission and the county's delegation to the Maryland General Assembly, over 200 people showed up to protest the Northern Freeway. The *Post* reported:

Last night's meeting . . . was intended to be a work session . . . . But several times during the session, opponents of the 4.9-mile Northern Freeway stood up to denounce the roads commission's plans. Leading the opposition was Sammie A. Abbott, who had been in the forefront of the movement to kill plans in the District for the North Central Freeway and also the Three Sisters Bridge.

He interrupted Chairman-Director David Fisher several times "and about five police officers were summoned to the building." About 2 hours into the meeting, Abbott rose to leave:

But before doing so, he gave a short statement denouncing the commission and the Montgomery delegation as "criminals and racists. He was ushered from the room by police officers but was not arrested. [Scharfenberg, Kirk, "225 Turn Out to Fight Montgomery Freeway," *The Washington Post and Times Herald*, January 8, 1970]

The *Post* reported that "county and state officials have been stunned in the past month by a mounting public outcry against a plan to use 90 acres of parks for the North Freeway, a six-lane speedway for trucks and commuters traveling into and out of Washington." The strong opposition included a few critics who "are calling into question the basic role of freeways and the automobile in urban transportation."

Carrying on the battle, about 1,500 protesters walked through a section of Sligo Creek Park "to protest the freeway and to view the parkland they say will be destroyed by it." Although the plan called for replacing the parkland, critics pointed out that little land would be available in the congested area of the county where the park was located. [Edwards, Paul G., "Outcry Brings Restudy," *The Washington Post and Times Herald*, January 19, 1970]

On January 19, Walter Bucher of the county commission told 500 opponents that the Maryland State Roads Commission had deferred planning for the Northern Freeway by a year. In addition,

when work resumed, the road would be a four-lane parkway for passenger cars only, not a six-lane freeway as presently planned. The deferral, as the *Star* noted, “means county officials will not be compelled to take action on the controversial project during the current election year.” [Lorman, Alvin, “Northern Parkway Deferred for Year,” *The Evening Star*, January 20, 1970]

On the eve of the public hearings, the District Corporation Council Duncan raised doubts about the city’s authority to use air rights over freeways for housing and other buildings. Duncan, on January 29, issued a formal opinion that Congress would have to grant approval before the District could proceed with its air rights plan, including construction of housing over the North-Central Freeway.

As noted earlier, the city had asked Congress to pass legislation addressing air rights. Congress had approved a bill covering District roads and streets (the District of Columbia Public Space Utilization Act, P.L. 90-598), but not the bill for freeways. The House District Committee informed the city that it already had the needed authorization under Federal-aid highway law. Duncan explained that Federal-aid law allowed States to use freeway air space under State or local laws. The District did not have a local law covering the use of air space over or under freeways.

Duncan’s ruling would not affect construction of a freeway under a Labor Department building at 2<sup>nd</sup> Street and Constitution Avenue, NW., or a major housing project planned over the Center Leg Freeway near H and 2<sup>nd</sup> Street, NW. Other agencies had granted easements for the air rights usage. Construction of a hotel over the 9<sup>th</sup> Street Expressway also would not be affected; Congress had authorized the project in 1961.

Duncan’s opinion was expected to provide another basis for citizen opposition to the freeways. [Flor, Lee, “Air Rights Opinion Puts Housing Plans in Doubt,” *The Evening Star*, January 29, 1970; Eisen, Jack, “Hill Must Approve Air Space Rights,” *The Washington Post and Times Herald*, January 29, 1970]

### **The City Council’s Public Hearings**

The city council’s transportation committee began public hearings in the council chamber at 7:30 p.m. As planned, WETA-TV broadcast the hearings. Fourteen policemen were on hand, ringing the chamber. Other policemen waited outside the chamber in case of need.

As it turned out the security precautions were not needed; the hearing was less fiery than expected. The audience of about 100 cheered loudly the nine speakers who opposed the freeways, but were orderly.

Airis, the first witness, discussed the department’s endorsement of routes for the South and East Legs of the Inner Loop Freeway and its plan for the North-Central Freeway. He explained the routing shift that would reduce the taking of homes and businesses in Brookland.

Regarding the North Leg of the Inner Loop Freeway, he said an additional 18 months would be needed. When Councilman Yeldell asked if Congress would be receptive, Airis replied that, “My informal advice is that an 18-month extension would be acceptable.” Councilwoman

Shackleton asked what a new study would show in view of the city's opposition to the Florida Avenue/U Street routing and the business community's opposition to the K Street tunnel. Airis replied, "Maybe we could hollow out a pair of streets up there," referring to a possible routing north of K Street.

He wanted legislation that would allow the department to use highway funds to build homes when housing was not available for people displaced by freeway construction. "I will hold firm to this: Homes will be available or there will be no work." In the case of the North-Central Freeway, he believed ample lots were available for replacement structures.

The evening included support for the freeways from G. Yates Cook of the Federal City Council and Daniel J. Hanson of the city's Traffic Board and an executive vice president of ARBA.

All the other witnesses opposed the freeways. "As usual," the *Star* reported, ECTC's Sammie A. Abbott and R. H. Booker led the freeway opposition. In the *Post*, Jack Eisen described Abbott's speech:

Abbott's desk-pounding, finger-pointing, 30-minute high-volume presentation was the highlight of the hearing. Airis was his chief target.

At the end of his testimony, Abbott read a letter from the West Montgomery Citizens Association, opposing construction of another beltway and bringing access roads into residential neighborhoods.

"And who is the vice chairman of this organization?" Abbott asked. "None other than Mrs. Thomas F. Airis, the wife of the same Mr. Airis who is desecrating the city of Washington and doesn't even live in this city," he answered himself.

The *Star* continued the narrative. "Even Airis and council members laughed but they quickly became solemn again as Abbott berated them for encouraging 'institutional racism' by retaining an all-white planning staff in the highway department."

Photographs accompanying the articles showed Airis grimly looking on during one of Abbott's finger-pointing moments as police officers lined the chamber wall.

(Airis, like many city officials, lived in the suburbs. His address was 10119 Gary Road in Potomac, Montgomery County, Maryland. Harold Aitken, his predecessor, had lived at 512 Horner Court in Fairfax, Virginia. These addresses were not secret; each annual edition of the *Congressional Directory* contained the addresses during the years they were in office.)

Channing E. Phillips of the Democratic National Committee, urged the city council to tell Congress that "no more freeways or bridges are warranted at this time." George W. Brady of the Federation of Citizens Associations recommended halting freeway construction until the subway system was completed. Henry Bain of the Washington Center for Metropolitan Studies warned that continued freeway construction would lead to the "Los Angeles-ization" of the District of Columbia.

Former Councilman Nevius said that as an attorney, he did not think that recommending an end to freeway construction would comply with Section 23 of the 1968 Act. However, he opposed further Interstate highways in the city, but could support a system of small parkways. [Eisen, Jack, "Roads Start to Wait for New Housing," *The Washington Post and Times Herald*, January 30, 1970; Green, Stephen, "9 of 12 Testifying at Hearing Strongly Oppose Freeways," *The Evening Star*, January 30, 1970]

On January 30, 12 speakers opposed the freeways, while 6 endorsed the District Highway Department's plan. Members of the city council expressed their own reservations, but feared the congressional reaction. The *Star* summarized their view:

Chairman Gilbert Hahn, Jr., Yeldell and other council members suggested that they would either like to seek more time for further study, or recommend no freeways are needed, or implement the thoroughfare plan passed by the council in 1968.

Councilman Yeldell put it this way, "I shudder at the thought of recommending additional study and then having the Public Works Committee urge Congress [to] approve the old routes."

Former Council Vice Chairman Fauntroy testified against construction. "We must state to Congress without fear what we believe. I haven't learned to move to a position of expediency when a question of conscience is involved."

Former Chairman Hechinger urged the city council to adopt the truncated plan approved under his leadership in 1968 without the North-Central Freeway. He was convinced that the 1968 plan met the congressional mandate to build the new roads. Hahn told him, "I may, indeed, in the end follow your advice."

Jerry White, testifying for the Maryland State Roads Commission, supported the North-Central Freeway, but acknowledged that the route still had legal hurdles to clear in Montgomery County.

Witnesses from Montgomery County opposed extension of the North-Central Freeway into the county. Irving Woloch of the Montgomery County Civic Federation said, "Thus, if you should regrettably decide to go ahead with the North Central Freeway, you may well find that the freeway will terminate at a dead end in Montgomery County and we intend to continue to exert every effort to keep that end dead." Montgomery County Councilwoman Idamae Garrott said that during a meeting in Rockville on January 31, she would vote to remove the North-Central Freeway from the county's highway program.

Eisen summarized the day's hearings:

From the line of Council questions, it was clear that members were searching for a way out of voting for the road without angering Congress. [Eisen, Jack, "D.C. Freeway Foes Get Backing in Montgomery," *The Washington Post and Time Herald*, January 31, 1970; Green, Stephen, "Council Members Cool To More City Freeways," *The Evening Star*, January 31, 1970]

Councilwoman Garrett's proposal to remove the North-Central Freeway extension from the county's plan was put to a vote when the Montgomery County Council met on January 31. She said, "It's going to result in depression of our property values, in air pollution, in diminution of transit ridership." Her motion failed to secure a majority vote; the council voted 2 to 2, with Gleason abstaining.

She also opposed the Northern Parkway, which would run parallel to Georgia Avenue, described in the *Post* as "the county's most overburdened artery, now traveled by 60,000 cars daily." The council members made their concerns about the parkway clear. The council voted to remove the parkway from the county's 5-year program, apparently because they learned that if they deleted the parkway entirely, funds would not be available for studying alternatives.

The council also approved an amendment stipulating that "Sligo Creek Park not be one of the routes to be considered." They also voted against having the Maryland State Roads Commission to propose the route to the council within 5 years. The council indicated that the State should hold off until Metro was opened in the parallel Georgia Avenue corridor; Metro might lessen the need for the parkway.

Councilman Feeny summarized the action:

The Council has taken the position that, if it had the authority, it would prohibit the parkway through Sligo Creek Park. And in the absence of this we are strongly hinting to the State Roads Commission that they follow our advice. [Lorman, Alvin J., "Montgomery Refuses Use of Park for Road," *The Sunday Star*, February 1, 1970; Cohen, Richard M., "Don't Build Sligo Route, Council Says," *The Washington Post and Times Herald*, February 1, 1970]

The city council's public hearings resumed on February 3, with all but one of the 16 witnesses opposing the freeways.

Witnesses from two business groups in the vicinity of Connecticut Avenue and K Street testified in opposition to the crosstown North Leg of the Inner Loop Freeway. Stanley O. Sher, an attorney for the Connecticut Avenue Association and the recently formed Committee Concerned for K Street, said the proposed K Street tunnel, would be a "disruptive white elephant." In an area already slated for disruption from Metro subway construction, the North Leg tunnel would not "revitalize, feed, or even serve downtown." The businesses also opposed the Florida Avenue/U Street alignment. Sher suggested that the city council could satisfy the congressional mandate by advising against building the North Leg instead of suggesting an alternative route.

Former NCPC Chairman Rowe said the network threatened "the character and livability of the city." She did, however, support the 24-mile system that NCPC and the city council had endorsed in December 1968. The pattern for that plan, she said, had been set by the roads already built.

Dr. Daniel B. Fisher, whose degree was in cancer research, pointed out that automobile pollution threatened the health as well as the safety of the community. He added that the South Leg of the

Inner Loop Freeway could destroy the famous cherry trees around the Tidal Basin. “We must attack the cause, the overuse of the automobile, for access into the city.”

ECTC’s Charles Cassell, who had just won election to the board of education, addressed the city council on behalf of the Capital East Citizens Organization. He called for “not another inch” of freeways. He said the only people who supported the freeways were business groups and Members of Congress. The *Star* reported that he “thundered” as he said, “How much more technical information must we give you to impress upon you that your major responsibility is to us and not to the Congress of the United States.”

Eisen described a confrontation between Cassell and Councilman Moore:

The appearance of the militant Cassell led to a verbal clash in contrast to the generally calm tenor of the session.

After displaying an enlarged photograph of a freeway, Cassell refused the request of Councilman Jerry A. Moore Jr. that he sit down to continue testimony. Moore presided as chairman of the Council’s Transportation Committee.

For 10 minutes, as tension mounted, sharp words were exchanged, with Cassell insisting that he be permitted to stand and demanding that six armed special guards leave the room.

“Listen to me,” Moore said. “There are just certain things that are courteous.” In the end Moore relented and Cassell remained standing to finish his testimony.

Dr. Yale Rabin, a consultant to the NAACP and the National Coalition on the Transportation Crisis, warned the city council that if the full freeway network were built, the city would be following a proven path of self-destruction. Studies of urban roadbuilding “show a consistent pattern of flagrant disregard for inner city minority groups and for the urban environment.” Displacing approximately 20,000 people was reason enough to halt freeway construction. The *Star* summarized Dr. Rabin’s testimony:

Rabin labeled as “myths” the ideas that new roads provide additional jobs for low income groups and revitalize the downtown area. On the contrary, he said, easier access to the suburbs causes both people and industry to move out of the city, leaving it to those who had neither the skills nor the money for mobility.

Further, citing experience in other cities, he said no city in the country with freeways emptying into the downtown area has found the arrangement capable of producing anything but congestion.

He endorsed the expanded rapid transit system as the only solution to the city’s transportation problems:

The “balanced” transportation system – coordination of highways and subways – envisioned by proponents of the freeways was a “deception,” he said, adding that if road

and Metro lines run along the same right-of-way the roads would seriously undermine Metro patronage, particularly if they are built first.

A spokesman for the Yellow Cab Company was the lone witness in support of the freeway system. [Eisen, Jack, "2 Business Groups Hit Freeway," *The Washington Post and Times Herald*, February 4, 1970; Holden, Constance, "Planner Warns D.C. Council Of Dangers in New Freeways," *The Evening Star*, February 4, 1970]

The hearing the evening of February 4 was similar to previous hearings where critics far outnumbered the lone supporter. The *Star* reported that most of the speakers "seemed impatient with the council for not flatly turning down the Highway Department's plan for an Inner Loop." The members of the city council should not fear congressional reprisal. "Let the blood be on their hands," several witnesses said, referring to Congress.

Several witnesses criticized Section 23 of the 1968 Act. Donald R. Allen of northwest pointed out that the plan required by Section 23 was based on 11-year old statistics and had never been subjected to cost-benefit analysis.

Merle Van Horne, representing Americans for Democratic Action, said, "It would be hard to find a modern urban environmental planner who could say a kind word for freeways in the core city today." The Section 23 plan ignored the idea of people-oriented cities geared to pedestrians, with the automobile existing only by sufferance.

Leslie Logan of Preservation of the Potomac Palisades ridiculed the concept of balanced transportation. No such balance could be achieved if the Federal Government would not subsidize the losses on subway operations. He denied that the two systems had been coordinated, as reflected in the absence of fringe parking that would encourage commuters to use public transportation for trips into the city.

William B. Middleton predicted that freeways into the city would "be obsolete in a few years with expansion to outlying areas." While Metro was under construction, he suggested the use of express buses and commuter trains on existing rail lines.

The *Post* summarized the hearing:

Last night, speakers opposing further freeway construction here attacked freeways for disrupting and isolating neighborhoods, polluting the air, displacing residents from their homes, spawning more traffic problems and creating even more reliance on the use of automobiles for private transportation.

When a pro-highway witness, Washington attorney Harry Wender, pointed out that the city's 10 miles of freeways were already proving to be safer than its 1,070 miles of surface streets, members of the audience heckled him. ["Foes Heckle Advocate of Freeway," *The Washington Post and Times Herald*, February 5, 1970; "Freeway Proposals Draw More Public Criticism," *The Evening Star*, February 5, 1970]

Newspaper coverage of the hearings was shrinking as the next-to-last hearing took place on February 5. In a four-paragraph summary, the *Star* reported that “some speakers began to show impatience with the procedures used by the council.” Councilman Moore argued with Wendell A. Daniel of the Plymouth Congregational Church when he complained that only two members of the city council were in attendance. (Chairman Hahn was present along with Moore.) Another witness, Johnnie D. Wilson, criticized the city council for favoring the rich over the poor. “I think this [hearing] is an exercise you’re going through that doesn’t mean a thing. Chances are you’ve already made up your minds.” [“Freeways Opponent Criticizes Hearing,” *The Metro Scene, The Evening Star*, February 6, 1970]

On the final day of hearings, February 6, Montgomery County Councilman Kenney said the county supported completion of the North-Central Freeway from the District line to the Capital Beltway. It was “absolutely vital,” no matter what opponents said. He had “no doubt” that the county was “fully prepared to support” the freeway. He did not endorse a specific route. He recognized that any freeway route would be controversial, but he was certain the North-Central Freeway would “be of significant economic and social value to the residents of both our areas.”

His views were contradicted by recent actions by other county officials. On February 2, Montgomery County’s delegation to the House of Delegates voted 13 to 3 to strike the Northern Freeway from the State’s highway plans. They favored “immediate study” of transportation needs in the Georgia Avenue corridor. The vote was binding on the Maryland State Roads Commission.

In addition, the Montgomery County Council had voted to delay further right-of-way acquisition in the Northern Freeway corridor to allow study of alternatives. Chairman-Director Fisher agreed to participate in the study of alternative routes for the freeway and ways to alleviate congestion along Georgia Avenue. [“Northern Freeway Postponed,” *The Washington Post and Times Herald*, February 3, 1970]

None of the final day’s witnesses supported the freeway system. Witnesses opposed the North-Central Freeway, the route of the South Leg of the Inner Loop Freeway, and called for a moratorium on all new freeways pending further study.

ECTC’s Sammie Abbott attended the hearing. Despite being warned that he would be thrown out if he said anything, he spoke up when someone else had the floor. The *Star* reported:

Sammie A. Abbott . . . was lifted out of his chair by two policemen and removed from the room . . . . Until he was allowed to return several minutes later, Abbott’s supporters shouted at the councilmen and the police.

Abbott . . . said later that he had been warned . . . [but] “sometimes I find it necessary to comment,” he said.

It was “the first time [the council] had to call upon security forces that have been on hand at all nine sessions.” [“Central Freeway Called Vital,” *The Washington Post and Times Herald*,

February 7, 1970; Robinson, Alma, "Freeway Foe Ejected From Council Hearing," *The Evening Star*, February 7, 1970]

Summing up the hearings, the *Post's* Wolf Von Eckardt noted, "Freeway proponents have lately become as scarce as hawks." City council staff had invited freeway advocates such as AAA and the Rubber and Tire Manufacturers to testify, but they did not appear:

Only the Bethesda Chamber of Commerce, the truckers and spokesmen for several downtown business organizations, notably Yates Cook of the Federal City Council, still favor the freeway "system" this city officially rejected over a year ago.

The community did not want the freeway system that Chairman Natcher was insisting be built, "as some 200 citizens, representing all kinds of persuasions and organizations, patiently told the City Council once more last week in the course of nine sessions of public hearings":

They were not just the urban proletariat, supported by a few intellectual snobs who hate automobiles. The freeway opponents included city planning experts and environmental scientists, and some of them were even more respectable than that. They were suburban commuters.

He cited the opposition to the Northern Freeway in Montgomery County as evidence that suburbanites, too, were "becoming disenchanted with the notion that the way to remedy a mistake is to escalate it."

The opposition also reflected the fact that we "now all know much more about what is happening to our environment than we did when this freeway system was conceived back in 1956." Combine this knowledge with the "almost unanimous opposition" to the District's system, and "it now seems politically as unthinkable for the City Council to consent to completing this system as it would be for President Nixon to re-escalate the war."

Inevitably, the city was "in for a period of difficult negotiations" over a "balanced transportation system," which Von Eckardt said was "about as vague a term as they come."

Recalling that on "one hot August Saturday morning" in 1969, the city council was "forced to surrender," but he argued that "this time the city seems in a much stronger position." He dismissed Director Airis's restudy of the network in support of the freeways, including the North-Central Freeway, as "arrogant intransigence" that would not do the highway cause much good on Capitol Hill and in the Department of Transportation." Von Eckardt did not believe area Members of Congress would "condone blackmail again to protect suburban commuters, because suburban commuters, too, are turning against freeways":

It therefore seems time for this city to call the bluff about "balanced transportation." We have paid our ransom with the Three Sisters Bridge. Now the city must speed subway construction, and press for better bus service, more parking, and the long overdue improvement of the existing street system with grande [sic] separations, synchronized traffic lights and more enlightened traffic engineering.

We are a big city now and need no longer be pushed around by unenlightened self-interests. [Von Eckardt, Wolf, "Tracing the Changing Mood of Freeway System Victims," *The Washington Post and Times Herald*, February 8, 1970]

City Councilman Yeldell agreed. Speaking to the local chapter of the American Society of Civil Engineers, he said that freeway advocates had not made a convincing case that the city needed the full 29-mile Interstate System planned for it. Some more freeways might be needed, but that need would be reduced by the full Metro system. "At that time we would want to discourage the commuter from using the roads." ["Freeway Issue Seen Still Open," City Life, *The Washington Post and Times Herald*, February 11, 1970]

On February 16, the TPB of COG recommended the city support the freeway system, including the North-Central Freeway and I-95/Northeast Freeway. The vote was by voice, but no opposition was expressed. The city councilmen who serve on the board were absent. [Eisen, Jack, "D.C. Freeway Plan Backed by Board," *The Washington Post and Times Herald*, February 17, 1970]

The same day, Secretary Volpe announced during a press conference that "projects of the Department of Transportation will not be approved if they involve the dislocation of people, black or white, unless and until adequate replacement housing has already been built or provided for." He added, "All replacement housing must be fair housing – open to all persons regardless of race, color, religion, sex or national origin." The term "adequate" housing meant "decent, safe, and sanitary." The new policy applied to all projects, including highways, subways, airports, railroads, and Coast Guard activities. (The United States Coast Guard, in those days, was in the Department of Transportation during peacetime; it would join the Department of Defense during war.)

Secretary Volpe said the policy clarified compliance with the provision in the 1968 Act requiring the government to provide housing for displaces "to the extent that can reasonably be required." Now, if adequate replacement housing did not exist, the sponsoring agency would have to build it. "In every case where a family desires housing, they are now absolutely assured of it."

Highway officials in Maryland and Virginia endorsed the policy, but Secretary Volpe could not predict how it would affect specific projects. He said he had met with Mayor Washington and Chairman Hahn to discuss the potential impact on District freeways. However, he emphasized that he intended the policy to be taken literally:

We are determined that the great demand for transportation construction capacity that faces this nation will be met, but that it will be met with full consideration given to the extremely important factors of environment and housing. [Hebald, Anne, "Volpe Ties Road Plans To Housing," *The Washington Post and Times Herald*, February 17, 1970; Green, Stephen, "Volpe Links Road Funds to Housing," *The Evening Star*, February 6, 1970]

The following day, the city council voted 9 to 0 to omit the North-Central Freeway, and the Northeast Freeway branch into Maryland from its recommendations to Congress in response to

Section 23 of the 1968 Act. Traffic on I-95 would travel east on the Capital Beltway 4 miles to the Baltimore-Washington Parkway and enter the city on New York Avenue, NE., until the parallel Industrial Freeway could be constructed.

The Industrial Freeway would take up to 137 houses, depending on routing. The *Post* reported that, “The council suggested that the Industrial Freeway be designed in conjunction with a ‘major industrial park, including a center for truck operation, capable of creating new employment and a tax base for the District.’”

The city council accepted construction of the Three Sisters Bridge and its approaches, but other elements of the plan included:

East Leg of the Inner Loop – The highway department had proposed routing the East Leg from the Robert F. Kennedy Stadium area to the south end of the North-Central Freeway near the Ivy City railroad yard. The city council rejected the freeway plan, favoring construction of the Anacostia Parkway from terminus of the Southeast Freeway at Barney Circle, through the National Arboretum, and connecting with the Industrial Freeway in an interchange at South Dakota Avenue.

North Leg of the Inner Loop – The plan called for tunneling the route across downtown Washington under E Street, NW., or beneath K, L, or M Streets, NW. Councilman Moore said that the 18-month study period that Airis had requested “does not comply with . . . the letter or the spirit” of the 1968 Act.

South Leg of the Inner Loop – The city council rejected both plans for the South Leg, including a tunnel all the way from the Lincoln Memorial to the Tidal Basin or two shorter tunnels connected by a depressed section. The approved plan called for a short tunnel beneath Lincoln Memorial Circle linking Independence Avenue with the stub end of the existing freeway to the north.

Overall, the plan was closer to the plan approved in December 1968 than the plan approved in August 1969.

The *Post* pointed out that the meeting was “marked by a bomb scare attributed to a crank and by unaccustomed bursts of applause from the audience.” The longest ovation from the crowd of about 200 came when the newly appointed Councilman, Dr. Henry S. Robinson, Jr., said that 69 homes in Brookland that had been acquired for the North-Central Freeway should be restored.

(On September 23, 1969, President Nixon had nominated Dr. Robinson to serve the remainder of former Councilman Thompson’s term after he was appointed an Associate Judge. Robinson, 64, was a District native, an orthopedic surgeon, a Republican, and an African-American. He and his wife lived at 1800 Randolph Street, NE. [Griffiths, Harriet, “Nixon Picks Robinson for D.C. City Council,” *The Evening Star*, September 23, 1969]

(Thompson’s term was to expire February 7, 1970, but on March 10, 1970, President Nixon nominated Dr. Robinson to a full term. At the same time, he nominated Councilman Anderson for a second term and the Reverend Carlton W. Veazey, pastor of the Zion Baptist Church, to

succeed Councilwoman Shackleton. Veazey, an African-American and a Republican who worked as a supervisor at the Opportunity Industrialization Center in Cardozo, lived at 230 M Street, SW. On April 10, 1970, General Sessions Court Judge Thompson, the former councilman, administered the oaths of office for Councilmen Anderson, Robinson, and Veazey. On April 23, Mayor Washington appointed former Councilwoman Shackleton to the at-large seat on the District of Columbia Model Cities Commission.)

Although Section 23 appeared to make construction of the North-Central Freeway mandatory, Chairman Hahn and Councilman Moore insisted that the decision complied with the law since the report contained the city's recommendation.

The city council was to forward the plan to Mayor Washington, who could accept it or dissent from it. If he accepted, it would become the city's official plan. The *Star* explained that if he rejected the plan "he will either have to negotiate a new recommendation with the council or produce his own to submit to Congress along with that of the council." Secretary Volpe had said he would make his recommendations after seeing the city's plan.

Eisen reported:

The Council's position is almost certain to arouse substantial criticism, at the very least, from profreeway members of the House Public Roads Subcommittee which originated the 1968 law.

But it is not clear what the freeway advocates can do. They do not have the same handle on the issue that existed last summer when a principal overseer of the city budget, Rep. William H. Natcher (D-Ky.) threatened to withhold money for the Metro subway system if the road system and notably the Three Sisters Bridge across the Potomac, was not built.

ECTC's Booker was less enthusiastic than others in the crowd. He saw the city council's action as a result of ECTC's "unceasing struggle." Sammie Abbott, who had slipped on ice the day before, could not attend. [Eisen, Jack, and Prince, Richard E., "North Central Road Barred by Council," *The Washington Post and Times Herald*, February 18, 1970; Green, Stephen, "Freeway Veto Faces Threat By Natcher," *The Evening Star*, February 18, 1970]

Mayor Washington, Deputy Mayor Watt, Chairman Hahn, and Director Airis were among the top city aides who met with Secretary Volpe, Federal Highway Administrator Turner, and other officials for an hour and a half on February 18 about the District's plan. The goal was to brief the Federal officials on the city council's action, but Hahn acknowledged afterwards that the meeting was inconclusive.

Mayor Washington, who met privately with Secretary Volpe for 10 minutes, told reporters he had not yet read the city council's plan. "It would be impossible for me to give an opinion until I read the documents." Turner also said he had not had a chance to review the city's plans. He said, "We've obviously got a lot of homework to do" in view of the statutory deadline imposed

by Section 23 of the 1968 Act (technically February 23, but since that date was the George Washington Federal holiday, the deadline had become February 24).

Secretary Volpe told reporters that he had not taken a position on the city's plan, but said he would give great weight to FHWA's views. Department sources told reporters that FHWA was almost certain to recommend construction of the North-Central Freeway and the East Leg Freeway north of Bladensburg Road. Although Secretary Volpe said the White House had not pressured him on the issue, he added that the Nixon Administration's recent emphasis on environmental problems would "play a big role in the location of any highway" in the plan.

He had received reaction from Capitol Hill. "Yes, I had a call this afternoon from the Capitol," he told reporters. He refused to disclose the source, but the Congressman was reportedly unhappy with the city council's action. Chairman Natcher, as usual, declined to comment on the city council's decision, but congressional sources told reporters that he will again threaten to withhold District matching funds for Metro if the city repudiates each requirement of Section 23 of the 1968 Act.

The sources also cited the city council's decision to support the Anacostia Parkway, between Barney Circle and the Industrial Freeway, instead of the East Leg of the Inner Loop Freeway, as called for in the 1968 Act. Barney Circle, which is south of Bladensburg Road, was outside the bounds established by the 1968 Act.

(President Nixon had signed the landmark National Environmental Policy Act of 1969 on January 1, 1970, creating new environmental requirements that as of February 1970, were not completely clear to highway officials. A month earlier, the Environmental Protection Agency (EPA) began operations. For more information, see "Addressing the Quiet Crisis: Origins of the National Environmental Policy Act of 1969" on the Highway History Web site.)

Officials of the Maryland State Roads Commission, meeting in Baltimore, expressed their disappointment with the city's actions, particularly the decision to drop the North-Central Freeway. The State planned to open the eight-lane I-95 freeway linking the Baltimore Beltway and the Capital Beltway in 1971. Maryland, the District, and FHWA had agreed on the Y-shaped I-70S/I-95 link, with I-95 carried from the Inner Loop Freeway on the North-Central Freeway before branching off near Gallatin Street, NE., to continue on the Northeast Freeway to connect with I-95 at the Capital Beltway.

Walter Bucher, Montgomery County's representative on the commission, said the city council's plan would create "a hell of a mess" based on simple arithmetic. Traffic would leave I-95's eight lanes to merge onto the Capital Beltway's overcrowded six lanes, travel south onto the four-lane Baltimore-Washington Parkway, before reaching New York Avenue, a non-access controlled facility. Moreover, he said the parkway pavement, without reconstruction, could not absorb the increased traffic even if the NPS continued to prohibit trucks on the facility. [Eisen, Jack, "City Aides, Volpe Meet on Roads," *The Washington Post and Times Herald*, February 19, 1970; Green, Stephen, "Volpe, Mayor Meet On Freeway Issue," *The Evening Star*, February 19, 1970; Eisen, Jack, "I-95 Creates New Planning Crisis," *The Washington Post and Times Herald*, February 22, 1970]

Congressional concerns became clearer on February 20 when Chairman Kluczynski told Eisen that the city would be “in trouble” if its recommendations omitted the North-Central Freeway. The council, he said, would be defying the provisions of the 1968 Act. He added that Chairman Natcher was “upset” by the council’s action. Chairman Natcher did not comment on the situation, but a congressional source recalled the chairman’s November 24 comment that, “The Highway Act of 1968 must be complied with and as long as the freeway system proposed in this act continues under way we will, at the proper time, appropriate funds for continuing construction of this rail rapid transit system.” He added that “both systems must continue under way . . . .” [Eisen, Jack, “Hill Opposition Expected on Freeway Plans,” *The Washington Post and Times Herald*, February 21, 1970]

On February 21, Mayor Washington informed Congress that he supported the city council’s abbreviated highway plan, including the recommendation to remove the North-Central Freeway from the Interstate System. He had given “full and careful consideration” to the council’s recommendations before drawing his own conclusions. He had considered citizen opposition to the freeway, as well as “environmental, socio-economic and housing considerations,” in deciding to endorse the Industrial Freeway alternative parallel to New York Avenue. It would be, he said, “attended with less disruption to the community.”

By then, the city council had amended its recommendations to clarify that the East Leg would be built near Bladensburg Road and that the Anacostia Parkway would run north in a tunnel from there. [“Congress Is Told Mayor Supports Freeway Deletion,” *The Evening Star*, February 21, 1970; Green, Stephen, “Mayor to Support Council On Opposition to Freeway,” *The Evening Star*, February 20, 1970; Moore, Irna, “Mayor Backs Council Plan On Freeways,” *The Washington Post and Times Herald*, February 22, 1970]

The *Post*’s editorial board was not impressed by the city council’s approved plan:

The most that can be said for the city council’s report on the Washington freeway program is that it probably complies technically with the requirement of the Highway Act of 1968 that some such report be made. Beyond that, the alternatives approved by the council are essentially the same ones which the council put forward at the end of 1968 – and which failed then to resolve the controversy over the freeways.

The council’s decision on the North-Central Freeway was particularly troubling. The Department of Highways and Traffic’s original plan “remains the most logical place to put the road since it would go in a transportation corridor already occupied by the railroad and about to be occupied by the subway system.” The alternative routing in the New York Avenue corridor was “really no alternative at all since it will not serve the same part of the city.” The council had also failed “to assess the impact of the proposed New York Avenue routing on the Maryland interstate system, particularly the Beltway.” The best option at this point was to request an urban design study “to permit a team of architects, engineers, urban planners and environmentalists to assess the implications of this route” in cooperation with Maryland and Metro officials. [“The Freeway Debate,” *The Washington Post and Times Herald*, February 24, 1970]

## Secretary Volpe's Decision

The *Post* reported that the Assistant Secretary for Urban Systems and the Environment, former Seattle Mayor James D. Braman, had told the Secretary that the city council's plans for an abridged freeway network were a better fit with the Nixon Administration's environmental goals than the plans proposed by the District Department of Highways and Traffic. Braman said the Department's concerns focused on the South Leg Freeway because of fears about pollution, destruction of trees and parkland, and its appearance in a park-like area.

As for other segments, Braman said, "We were concerned with disturbances to neighborhoods," but thought the city council's plan was a "reasonable response" to the demands of Section 23 of the 1968 Act.

Chairman Fallon disagreed. He said the city council's plan was "nowhere close to the action that Congress took in 1968." He added, "Certainly, they're flouting the will of Congress." He expected Congress to place more confidence in Secretary Volpe's plan than in the city council's proposals. [Prince, Richard E., "Volpe Sets District's Roads Plan," *The Washington Post and Times Herald*, February 24, 1970]

On February 22, Secretary Volpe sent his recommendations to Congress in accordance with Section 23 of the 1968 Act. His letter to Speaker of the House McCormack and President of the Senate Agnew expressed general support of the city council's decisions:

In my opinion, the recommendations of the Government of the District of Columbia reflect a determined effort to comply with the requirements of the Congress as well as to remain sensitive to the expressed concerns of the citizen groups of the District of Columbia. It is necessary to remember in this connection that the time available for preparation of studies and for Government action was considerably reduced by the practical necessity last year to resolve the controversy concerning the relationship of rapid transit and highways in a balanced transportation program for the metropolitan area. Yet the completed freeway network reflected in the District Government's recommendations includes in mileage over 73 percent of the network set forth in the 1968 Cost Estimate. With the New York Avenue addition proposed by the District Government, the total mileage would be 87 percent of the mileage in the 1968 Cost Estimate.

His focus was on the three freeway projects that Section 23 of the 1968 Act had designated for further study, not immediate construction: the South Leg, North Leg, and North-Central Freeways.

He commented on each pending freeway. For the South Leg Freeway, he favored the city council's proposal known as Plan C, as recommended by FHWA, to build a tunnel about 1,400 feet long beneath the Lincoln Memorial grounds returning to the surface on Independence Avenue about 1,000 feet beyond the south tunnel portal. He recommended one change in the city's plan. The vertical clearance in the tunnel section could be reduced to 12½ feet, instead of 14½ feet, "since commercial traffic will not be permitted on this route." That reduced height

would “accommodate all foreseeable emergency needs and other routings are available for the movement of military vehicles requiring larger clearances.”

The tunnel, with a capacity of 60,000 vehicles a day, would reduce impacts on the landscape, avoid the Tidal Basin area, and cost about \$22.5 million, much lower than the cost of alternatives calling for a tunnel under the Tidal Basin. “This plan will do the least damage to the esthetics and monumental character of this area and permit its easy accessibility to visitors and city dwellers alike.”

Secretary Volpe agreed with the city council that the North Leg Freeway required additional study that would take about 18 months. He advised that the study should not be restricted to the alternatives the city had specified (“4-lane tunnel along K Street, 2-lane tunnels along L and M Streets or some combination of these, or as an alternative, a tunnel connecting the E Street Expressway to ‘Downtown’”):

There is a strong possibility that the “E” Street line extension, across the area in the rear of the White House and extending beyond Pennsylvania Avenue, perhaps ultimately to the Center Leg Freeway, can be accomplished. This will be the “release” from the pressure for a traffic service line along “K” Street – and certainly would give relief to the present problem of “just too many cars and too much confusion in [the] area between the White House and the Washington Monument.”

Secretary Volpe hoped that outreach to HUD and others would help solve the relocation problems while the 18-month study was underway. He recommended that “there be prepared within 18 months, in cooperation with the District Government, a final action plan on this segment of the Interstate System in the District.” The key was that the study must not be limited to the city’s proposed alternatives.

He did not adopt the city’s proposal to remove the North-Central Freeway from the city’s Interstate System. “In my opinion, any judgment requiring or precluding this segment is premature.” This section of the city was one of the most heavily traveled, and traffic was bound to increase. The city’s Industrial Freeway alternative in the New York Avenue corridor was not an actual alternative:

The New York Avenue freeway proposed by the District Government as a substitute is not in fact an alternative; it is primarily an east-west corridor and offers little relief to north-south traffic. Nor can possible improvements in managing traffic arterials as suggested by the District Government meet but a part of the problem.

The concept of the North-Central Freeway was to combine northwest, central, and northeast corridors into one central route. As such, it would require “an exceedingly high capacity, 4-2-4 lane freeway with reversible express center lanes”:

The wide swathe needed for such a cross-section with extreme traffic concentrations in the vicinity of the Capitol dictated an arbitrary cutback to a 4-4 lane proposal.

This cutback was “generally recognized as inadequate for future needs,” but two considerations made it acceptable:

First, another outlet to the northwest will eventually be supplied upon completion of the George Washington Memorial Parkway on the District side of the Potomac River from the Three Sisters Bridge to the Beltway, Interstate 495. Although commuter travel over parkways is generally undesirable, it would seem the river valley is too important a resource to be devoted solely to “pleasure” driving.

Second, an outlet to the northeast is possible in two ways. The proposed New York Avenue Freeway via the Kenilworth Interchange and northward on the Baltimore-Washington Parkway to the Beltway may be built. The northeast branch from the North Central corridor to meet Maryland’s Interstate 95 at the Beltway would provide similar service.

Housing had always been a factor in discussing the North-Central Freeway. Ongoing work with HUD might establish new methods of helping relocates. “One possibility is a new goal to provide replacement housing while reconstructing the 1968 riot-damaged areas.”

Cost-per-mile was another consideration. “Coupled with incompletely satisfied capacity needs, the price tag is inordinately high”:

Undoubtedly the Baltimore and Ohio Railroad’s presence adds considerably to the costs. The five underpasses are intrinsically expensive because of the angle of crossing and the need to maintain railroad operations by detour tracks and supports. The proximity of the railroad itself and the future rapid transit lines add to the costs by requiring additional retaining walls and other appurtenances.

Because the railroad had an alternate connection into Washington via Laurel, Maryland, some consideration had been given to acquiring the railroad right-of-way in the North-Central corridor:

Removal of the operating rail line would allow joint development of the transportation corridor by the highway departments in conjunction with the Washington Metropolitan Area Transit Authority.

In addition to making joint development easier to coordinate, acquisition of the railroad right-of-way would accelerate construction plans, improve highway alinement and geometrics, eliminate the need for expensive retaining walls, narrow the highway right-of-way to reduce the number of displacements, decrease tunnel costs and construction time, and perhaps allow for extending I-70S along the existing railroad corridor north to an interchange with the Capital Beltway in the vicinity of Gaithersburg.

Professional staff in the Department of Transportation believed that the Baltimore and Ohio Railroad corridor offered “the most practical and feasible alignment for freeway development in the North-Central area with the least disruption to the community.”

Much additional study and planning for the North-Central Freeway were needed:

- A concerted effort was needed to obtain community involvement and “meaningful citizen participation.”
- Highway planning should be more closely coordinated with comprehensive land use and environmental planning for the community.
- Continuing discussions with HUD were needed “to establish in advance attractive replacement housing alternatives for persons potentially subject to relocation,” consistent with his recently stated policy.
- The study also should consider the option of removing the rail line from the corridor “so that the most advantageous program for joint development of the corridor with the Washington Metropolitan Area Transit Authority can be developed in order to save construction money and time, improve design features, and enhance appearance and utility.”
- The additional time and study would permit officials to clarify “the uncertainty which appears to have developed in Maryland regarding the Maryland connecting links.”

Final judgment should be deferred until these issues could be resolved. He thought the work could be completed in about 16 months.

Although the proposed Industrial Freeway would not serve the North-Central traffic, Secretary Volpe thought it had merit “as an addition or alternate routing for that portion of I-95, which is to be carried jointly with I-70S south of Gallatin Street”:

This section is very heavily loaded because the design was administratively restricted to eight lanes despite the larger traffic load demand. It is further complicated by undesirable weaving movements at and between the inter-changes [sic].

He would be willing to consider adjusting the system to reroute I-95 if other adjustments are consistent with this option.

Secretary Volpe also discussed the status of routes that were underway. He recounted the progress on the Center Leg of the Inner Loop Freeway:

Preliminary design is underway for joint development housing and freeway facilities on a 5-acre site between H and K Street, N.W., on the Center Leg, I-95. The segment of the route between the Southwest Freeway and H Street is under construction and is well along. The mall tunnel is about 50 percent complete. Grading walls and structure for the depressed section between D Street and H Street, N.W., are complete. Paving and stone facing operations are awaiting improved weather conditions.

As for the East Leg Freeway, he explained that the 1968 ICE called for it to extend from I-695 on the District side of the 11<sup>th</sup> Street Bridge across the Anacostia River, along the river to Barney Circle at Pennsylvania Avenue, north past the East Capitol Street Bridge, to the south edge of the National Arboretum, before terminating at Bladensburg Road. As this routing was set in the 1968 ICE, the city is “preparing for construction contract work on the south end of the line described.” He added that the entire segment had received clearance under Section 4(f):

The first section from 11<sup>th</sup> Street to Barney Circle (Pennsylvania Avenue) is partly under construction. Detailed design work is underway for ½ mile east of Barney Circle. Bids were opened January 15, 1970, for a short grading project in this area.

Along the Anacostia River in the vicinity of D.C. Stadium, the alignment was going to be adjusted because of NPS plans for recreational development along the river.

Progress, Secretary noted in one of the shortest sections of his letter, also had been made on the Three Sisters Bridge. “The Fine Arts Commission approved a single span structure design in September 1967.” The 1968 Act had lifted the February 1968 injunction imposed by the U.S. Court of Appeals. Construction of two river piers was underway. The U.S. District Court had rejected recent efforts to enjoin further action, with an appeal pending.

The city had contracted for design of the Potomac River Freeway, but Secretary Volpe reported that FHWA thought “further consideration should be given to the design along the Georgetown Waterfront, particularly the area downstream from Key Bridge.” The 1968 Act had envisioned a tunnel for the eastbound lanes between the Three Sisters Bridge and Wisconsin Avenue, with the Whitehurst Freeway carrying westbound traffic at present. “It is felt that further consideration should be given to an earlier design concept which provided two elevated structures and reserved the area beneath and riverward for park and recreation purposes.” He cited the advantages:

Full development of the Georgetown Waterfront requires the removal of all commercial and industrial activities between the Potomac River and the C&O Canal and the Whitehurst Freeway. Under existing concepts for highway development, the entire cost of acquisition for this land can be financed from the Federal-aid highway fund. The National Park Service would be the logical agency for developing the park and recreational use.

The proposal [as] described permits full and unrestricted access from the entire Georgetown area to all of the Potomac River bank. The tunnel east of Key Bridge creates a severe barrier to access because of the approach grades towards the completed structure at 31<sup>st</sup> Street. The elevated facilities would obviate the necessity for the elaborate construction techniques, ventilation equipment and constricted operations that are the earmark of all highway tunnels.

With additional study needed, the connection between the Three Sisters Bridge and the George Washington Memorial Parkway would have to await final decisions regarding the Georgetown waterfront.

The Department of Transportation issued a news release that was embargoed until noon on February 24 regarding Secretary Volpe’s letter to Congress, making it public. Newspapers reported on Secretary Volpe’s letter on February 25.

Reaction to it was slow in coming, as officials needed time to review it. However, Chairman Fallon made his displeasure clear in a letter to President Nixon on February 27. The study undertaken by the city in late 1969 “went far afield of the Federal Aid Highway Act of 1968”:

The Congress has now received from the District of Columbia and the Department of Transportation their respective reports as required by the act. The reports are for the most part in disagreement with each other and are radical departures from the 1968 act. [District of Columbia Appropriations for 1971, Hearings before a Subcommittee of the Committee on Appropriations, Part 1, U.S. House of Representatives, 91<sup>st</sup> Congress, 2<sup>nd</sup> Session, H181-37, page 385]

He voiced his concerns publicly in an “extension of remarks” on March 2. He said the 1968 Act was intended “to clarify the confusion which had reigned for so many years” regarding the District freeway network. By contrast, the two reports “presented a confusing set of recommendations” that were in “wide variance from what is contained in the 1968 Highway Act.” While these reports were being developed, the city’s freeway program “again showed signs of bogging down and for the same old reasons.”

The Congress, he said, “cannot sit idly by and allow millions of dollars of taxpayers’ money to be wasted in an unending series of studies” that would never result in agreement, much less construction, among the public bodies involved. “Nor can they permit projects to proceed which have only had superficial examinations, and little, if any, factual basis.” Even the Metro system, after “such painstaking effort” to get construction underway, “is subject to delays by the various recommendations.” Reluctantly, he concluded, “it is imperative that the Congress act to insure the Nation’s Capital a proper transportation system.” [The Interstate Highway System in the District of Columbia, *Congressional Record* – Extension of Remarks, March 2, 1970, pages 5554-5555]

The *Star* reported that the city’s recommendations and Secretary Volpe’s report were “unlikely to be taken seriously by the public works committee.” Whether in the Federal-Aid Highway Act of 1970 or a separate bill, “The committee will give the city its marching orders” based on the four freeways that Section 23 of the Federal-Aid Highway Act of 1968 had ordered the city to build. In specifying the four freeways to be built, the “city was given no other option for these roads.”

Secretary Volpe’s comments on the Potomac River Expressway, one of the four Congress had ordered built immediately, were singled out for criticism:

Volpe, according to congressional sources, suffered a serious loss in credibility by offering advice on the building of the Potomac River Freeway – a road that the city already has been ordered to build, with its route spelled out in the 1968 legislation . . . .

The FHA [sic] had long opposed plans – endorsed by Congress – to place the east bound lanes in a tunnel, permitting renewal of the waterfront, including the tearing down of the Milton Hopfenmaier Co. rendering plant.

Even President Nixon, in order to insure subway funds would be released, assured Congress the District would build the Potomac River Freeway and the three other projects ordered in the 1968 law.

Volpe, Congressional sources believe, never would have commented on the Potomac River Freeway, had he realized the full political meaning of his statement. They believe he was the victim of poor staff work. [Green, Stephen, "Congress to Draft Freeway Orders," *The Evening Star*, March 2, 1970]

On February 26, a three-judge panel of the U.S. Court of Appeals heard arguments in the Three Sisters Bridge suit. Roberts Owen, representing the anti-bridge groups, argued that public hearings and other steps required to comply with Title 23, as required by the 1968 Act, had been skipped. He added that Secretary Volpe had never approved the bridge as required by Federal law.

Thomas L. McKeivitt of the Justice Department told the panel that the Johnson Administration and Secretary Boyd had opposed the bridge. However, as reflected in the 1968 Act, Congress supported it. "The administration changed and the whole [attitude] in the Department of Transportation changed . . . . We finally had the administration back in tune with Congress, that's all that happened." He pointed out the "notwithstanding" provision in Section 23 that made clear the congressional intent that construction of the bridge begin immediately regardless of any other law, court decision, or administrative action.

At the same time, 10 national and local environmental groups filed a friend of the court memorandum in the case. They contended that the Three Sisters Bridge "threatens to destroy for all time the scenic and recreational values of the Potomac River Gorge. The bridge would harm parks, traffic, recreational facilities, air quality, and the Georgetown Historic District. [Eisen, Jack, "Environment Groups Ask Bridge Halt," *The Washington Post and Times Herald*, February 26, 1970; "Bridge Suit Sent to Court of Appeals," *The Evening Star*, February 26, 1970]

### **The Washington Plan**

WMATA, on January 22, announced that because of the 14-month delay in securing the District's matching funds from Congress, the opening of the first section of Metro would be delayed about 7 months. Instead of opening in December 1972, WMATA now hoped to open it in July 1973. Other sections of the original bobtail Metro would be delayed for several months, but extensions to complete the 97.7-mile system were on schedule.

James Gleason of the WMATA board commended WMATA staff for the "great achievement" of cutting down the 14-month delay to a 7-month lag in the opening. Lee Flor reported:

Roy Dodge, chief of engineering and operations for the agency, said construction schedules could not be shaved in any other place and said any further delays in appropriations, labor strikes or other delays could not be accommodated by reprogramming to meet the completion date. [Flor, Lee, "Funds Lad To Delay D.C. Metro," *The Evening Star*, January 22, 1970]

On January 26, a new coalition called the Washington Area Construction Industry Task Force, held a press conference at the District building to announce a drive to put black workers into

construction jobs in direct relation to the city's percentage of black population, then at 74 percent. The so-called "Washington Plan" differed from the approved "Philadelphia Plan," which called for an agreed percentage of black workers, not the equivalent of black population in the city.

Clifford L. Alexander, counsel for the coalition and BUF, said, "In a city where the population is three-quarters black, the first two contracts let by Metro to white contractors asked only that they present a plan for the training of 5 percent of the total work force." Calling this percentage a "manifest absurdity," he pointed out that the contracts did not require the contractors to hire black workers who already had the needed skills, that training must cover every skilled craft, and increased involvement of black contractors.

Marion Barry, Jr, of Pride, Inc., said the 20 organizations in the task force concluded that immediate action was needed to ensure hiring of black people. The task force, which he said would monitor Metro projects on a daily basis to ensure its goals are met, was not focused exclusively on the subway work. Barry said the task force's aim was equal employment opportunity in "all of the building trades," including "federal construction projects, FHA and HUD housing projects, those of the District and the work of independent agencies such as the Washington Metropolitan Area Transit Authority."

Alexander agreed that Metro was "only a part of the over-all picture." The task force would "press for the implementation of its objectives on every construction project in this city. The time has come, and long since passed, for the full and fair participation of the black man in every aspect of construction work in this city." Although Alexander threatened court action, the Reverend Douglas Moore of BUF called on black residents to mobilize and "use any damn means necessary" to block Metro if the task force's goals were not met.

The next day, the *Star* reported that the "broadside attack yesterday on alleged racial discrimination in the District's building trades by a new coalition has taken aback the leadership of the city's unions . . ." City Councilman Yeldell, WMATA's chairman in 1970, said the coalition's objections "already are the stated objectives of Metro." He said WMATA was working on programs to hire and train the hard-core unemployed and expected the workforce to include about 70-percent minority workers.

Former Councilman Turner, president of the Greater Washington Central Labor Council, AFL-CIO, considered the task force's attack "just undeserved." He said that organized labor in Washington had the best anti-discrimination record in the country. He also pointed out that Metro was a regional project, not a Washington project. Using the task force's logic, Metro contractors should employ about 22 percent minority workers because minorities constituted

22 percent of the area's population. [Basham, William, "Blacks Ask 74% of Building Jobs," *The Evening Star*, January 26, 1970; Basham, William, "Black Demands For 74% of Jobs 'Stun' Unions," *The Evening Star*, January 27, 1970]

WMATA and the Department of Transportation negotiated with the task force after rejecting the initial proposal to require contractors to hire a workforce that included 74/26 percent black/white ratio.

Secretary Volpe, who had taken aggressive steps from the start of his tenure to increase African-American participation in the upper ranks of the Department of Transportation, announced on February 17 that his department would assume compliance responsibility to assure equal employment opportunity on Metro construction projects:

Metro contractors and subcontractors will be required to take affirmative action which will result in employment of minority group persons throughout their work force. This means that contractors and subcontractors will have to provide for employment of minorities in high-paying, skilled jobs as well as unskilled and semi-skilled jobs. If minority persons are not available for the skilled jobs, programs will have to be developed to train them.

UMTA would work with WMATA to spell out equal opportunity obligations in bid specifications. Secretary Volpe expected UMTA to ensure full compliance:

We expect to have 100 percent cooperation in this effort from all parties interested and involved, including WMATA, the contractor organizations, labor unions, and community organizations concerned with equal employment opportunity. This is a truly metropolitan undertaking and we want cooperation from all quarters.

He expected WMATA to ask contractors already at work to comply with the program voluntarily even though it was not part of their contracts.

WMATA's board of directors agreed to consider adopting an affirmative action plan on its construction contracts. General Graham had suggested that his staff draft a plan, but the board established a committee of its members to do so (Yeldell, Spellman, Councilman Moore, and Carlton Sickles). Gleason expressed concern that an affirmative action commitment might raise the costs of the contractors with the first two contracts who had bid on the basis of specifications that called on them to design their own minority hiring plan.

The authority asked the first active contractor, Gordon H. Ball, Inc., to suggest a more detailed plan than the 5-percent requirement in the contract. The *Star* reported that at the time, Ball had 17 employees on the project in the Judiciary Square area, all African-Americans. He expected to hire approximately 300 workers, and planned to work with Project BUILD, Inc., on its minority hiring plan. ["Subway Agency to Consider Minority-Hiring 'Action' Plan," *The Evening Star*, February 19, 1970]

On March 3, Harold D. Williams, director of UMTA's Office of Civil Rights, ordered a halt to the awarding of further WMATA contracts until the Department of Transportation approves a minority employment program. The order did not apply to the first two contracts, already awarded, or a third contract on which WMATA had just opened bids. It would take effect with

the next bid opening, scheduled for March 18, for construction of the subway between Judiciary Square and Union Station.

General Graham announced the freeze to construction industry representatives after opening bids for the third construction contract. He said there was “no justification for holding up the Metro program for the National Capital Region at this early stage of a 10-year construction program. Last week there were 17 metro construction workers, incidentally all black. By July, there will be only 100 workers total and by a year later 1,000. The maximum employment of 5,000 will not be reached until 1973,” he said, adding that WMATA had 238 additional contracts to award.

WMATA was working on its affirmative action plan, but wanted to canvass all of its political jurisdictions and community organizations before presenting its plan to UMTA. General Graham said, “We recognize the authority of the Department of Transportation in this matter, and are proceeding to develop an acceptable program as rapidly as possible.”

Gleason called UMTA’s action “irresponsible” in view of WMATA’s assurance that it would comply with all fair-employment requirements. WMATA Chairman Yeldell conceded the department’s authority and said “the board has no choice but to abide”:

It would appear to me that there is no insurmountable barrier because the affirmative action program must be worked out anyhow. Perhaps this will put an added spur to get this worked out soon.

Clifford Alexander declined to comment until WMATA’s rules were ready for adoption. He did say, however, that, “We don’t want any delays” on the subway, “but we do want it built with black hands and white hands.” [Green, Stephen, “U.S. Halts Metro Contracts Pending Minority Job Plan,” *The Evening Star*, March 4, 1970; Eisen, Jack, “Metro Told to Halt Bids, Await Fair Hiring Rule,” *The Washington Post and Times Herald*, March 4, 1970]

With negotiations deadlocked, WMATA’s directors met with Secretary Volpe on March 11 to ask him to end the freeze. Chairman Yeldell told reporters that WMATA agreed that an affirmative action program was needed and should be drafted quickly. However, the directors did not believe a freeze that could delay the construction timetable was needed. “We hope that we will be able to resume awarding contracts by March 25,” the date set for bid opening on the postponed contract.

Meanwhile, the task force sent a telegram to Secretary Volpe asking to inspect the plan before it could be approved. “We stand ready at any time to meet with you and consider what you may have developed to meet our stated goal of 70-80 percent minority employment in each tract [sic] having any responsibility with the construction of Metro.” [Green, Stephen, “Volpe Asked To End Metro Bid Freeze,” *The Evening Star*, March 12, 1970]

On March 16, Secretary of Labor George P. Shultz announced that his department would hold hearings on a “Washington Plan” on April 13 and 14. He said his department has been “actively promoting hometown solutions of matters like this and we hope the information we develop will prove useful for such a solution in this area.”

In view of Secretary Schultz's announcement, Secretary Volpe lifted the freeze on Metro contracting on March 17. The Labor Department's proposal to develop a Washington Plan offered "the best answer not only to minority employment problems in the area but also to the critical need for skilled manpower in the construction industry." Another factor in his decision to lift the freeze was WMATA's plan to hire "an equal employment opportunity officer oriented to the interests and problems of minority citizens in the Washington area." The new officer would ensure compliance by contractors and subcontractors with their obligations to make maximum use of minorities in the Metro construction program. The officer also would be responsible for equal opportunity hiring within WMATA and would solicit participation by minority contractors.

With the freeze lifted, WMATA opened the bids for the contract that had been postponed from March 25 because of the freeze. ["Hearings Orders on D.C. Hiring," *The Washington and Times Herald*, March 17, 1970; "Volpe Lifts Metro Pact Ban While Job Plan Is Devised," *The Evening Star*, March 18, 1970; Carter, Philip D., "Ban Lifted On Metro Contracts," *The Washington Post and Times Herald*, March 18, 1970]

Potomac Watch's African-American columnist, William Raspberry, pointed out that although Secretary Volpe said he was lifting the freeze because of the Labor Department's announcement, that announcement offered "a good deal less" than what Secretary Volpe implied. Hearings could be useful, but Raspberry warned against confusing the gathering of information "with the development of a plan, nor even with any real intention of developing a plan." He doubted Secretary Volpe's stated motives. "The suspicion is that Volpe's recantation had nothing to do with Labor's announcement but was a result of pressure from the White House, the Transit Authority and, indeed, from members of his own staff." [Raspberry, William, "U.S. Backs Down On Metro Hiring," Potomac Watch, *The Washington Post and Times Herald*, March 22, 1970]

In any event, the lifting of the freeze was short lived. On April 8, Secretary Volpe ordered WMATA to stop awarding construction contracts in view of the Labor Department's commitment to approve a Washington Plan for minority employment by June 1. Assuming the Labor Department met its new schedule, WMATA faced a 2-week delay in awarding a contract, estimated at \$30 million, for construction of the Metro Center station and a smaller contract for work in the Union Station yards.

Secretary Volpe expected the freeze to cause "minimal disruption to the construction schedule, but WMATA's board members were not happy about this second freeze. Fairfax County Supervisor Herbert E. Harris II responded angrily, "I'm having the worst time understanding this situation. At what point does [WMATA] act like an independent authority and stop acting like a federal agency?" Chairman Yeldell asked staff to reply to Secretary Volpe informing him that the delay in awarding contracts would not only increase the cost of the subway but could hinder WMATA's ability to sell construction revenue bonds. Moreover, WMATA was developing its own affirmative action program to be written into contract specifications. That plan would be used if the Labor Department did not meet its schedule for developing a Washington Plan.

That same day, WMATA announced the hiring of Pete Brown, described in the *Post* and *Star* as "a Negro who lives in Takoma Park" as the first equal employment officer for the agency. At the

time of his hiring, he held a similar job with the Labor Department. [Green, Stephen, "Volpe Again Halts Metro Contracts," *The Evening Star*, April 9, 1970; "Volpe Clamps New Freeze On Metro Jobs," *The Washington Post and Times Herald*, April 10, 1970]

One question that WMATA's directors had was whether the freeze applied to any other Federal contracting in the Washington area. Staff said the freeze applied only to WMATA. On April 13, the Department of Transportation ordered a freeze on the award of Federal-aid highway and airport construction contracts in the Washington area pending imminent completion of the Washington Plan. Richard F. Lally, the department's civil rights director, issued the order while asking the Labor Department to extend the freeze to other federally funded projects in the area. "This is the Nation's Capital," he said. "We should set an example here." The freeze was expected to delay contracts for widening portions of Maryland's Capital Beltway, rebuilding parts of the Shirley Highway, and several non-Interstate roads in the area, as well as two airport projects. ["U.S. Orders Area Freeze on Highway Contracts," *The Evening Star*, April 13, 1970]

After the first day of the Labor Department's hearings, Jack Eisen described the day:

In contrast with similar hearings on a job plan for Chicago last September during which the federal building was ringed by angry white union members who clashed with police, yesterday's session in the department auditorium was so subdued that it verged on the ponderous.

William D. Wright, a vice chairman of the Washington Construction Industry Task Force, walked out after saying he would "disregard these hearings as a useless and invalid attempt to pacify the black community." He did so after his group was denied its request to cross-examine witnesses.

Wright had given Assistant Secretary of Labor Arthur D. Fletcher, the presiding officer, a letter signed by eight black Democratic members of Congress describing cross examination as critical. "What we have here is simply government witnesses talking to each other in public":

Only if the advocates for the community have a right to cross examine and question . . . can we begin to hope that this hearing can result in a complete and accurate picture of employment practices in the construction industry.

Fletcher denied the request, prompting Wright's walkout.

(The eight Democratic signers of the letter were Shirley A. Chisholm (NY), William L. Clay, Sr. (Mo.), John Conyers, Jr. (Mi.), Charles C. Diggs, Jr. (Mi.), August F. Hawkins (Ca.), Robert N. C. Nix (Pa.), Adam Clayton Powell (NY), and Louis Stokes (Oh.))

During the hearing, HUD Assistant Secretary for Equal Opportunity, Samuel J. Simmons, testified that 19 of 28 contractors working on HUD-financed projects in the area were violating anti-discrimination rules. He also said his recent study showed that in 10 skilled trade unions in the area that included 11,700 craftsmen, "fewer than 12 percent were Negro, and the opportunity to enter any of the trades for minorities remains severely restricted." He urged the Labor Department to crack down on such practices.

Chairman Yeldell testified about his concerns that the Labor Department's schedule for producing the Washington Plan would slip, causing delay in construction of the critical Metro Center station. In reply, Assistant Secretary Fletcher promised that if the plan was delayed, the Labor Department would work with Metro "to see if we can't take the pressure off" by helping complete a minority employment action plan to include in the contract so it could be awarded on June 2 in the absence of an approved Washington Plan.

Labor representatives, including former Councilman Turner, defended the unions against discrimination charges. Turner touted Project Building, which he said would train young Negroes and other minority groups to help break down job barriers. [Eisen, Jack, "Area Projects Frozen To Push Black Hiring," *The Washington Post and Times Herald*, April 14, 1970; Green, Stephen, "Negroes in House Press Quizzing of Hiring Witnesses," *The Evening Star*, April 14, 1970.]

On the second day of the hearings, ECTC's Booker, now also chairman of the Washington Area Construction Industry Task Force, staged a demonstration outside the Labor Department. Protestors, totaling between 20 and 40, circled the sidewalk for more than an hour. They criticized for the Labor Department for refusing serious consideration of the task force's demand that minorities receive 70-80 percent of Metro construction jobs. Accompanying Booker, Sammie Abbott explained the relationship between the task force and the "transportation crisis" saying, "To get the subway built, we're going to have to get jobs for blacks."

Assistant Secretary Fletcher invited Booker to testify. Booker declined in the absence of a written invitation and approval of the task Force's executive committee. He added that the task force had not submitted a detailed proposal because its spokesmen were not permitted to cross examine witnesses. "This is just the beginning," Booker said. "Next time we'll be back with 500 people . . . we want you to know we're serious," he told the Labor Department officials who extended the invitation.

Chairman Yeldell sent a telegram to Secretary Volpe warning that the freeze could cost the agency \$84 million in Federal funds. "The June 1 target date may be too late for the Senate to act favorably on our supplemental money request. This . . . could result in Metro having no federal funds, thereby running the risk of the entire transit program being scuttled."

On May 6, Clifford Alexander called for an end to the contract freeze. To avoid peril to the subway, he recommended that the Transportation and Labor Departments allow WMATA to resume awarding contracts that "put the burden on the contractors" to hire minorities while the Washington Plan is completed. The task force would keep a close watch on hiring. [Green, Stephen, "Metro Says Contract Freeze May Bridge \$84 Million Loss," *The Evening Star*, May 4, 1970; "Freeing of Funds For Subway Asked," *The Washington Post and Times Herald*, May 7, 1970]

The pending contract for the Metro Center Station was described at the time as the largest single contract in the construction program. The opening of bids was scheduled for June 3 if the Labor Department released the Washington Plan on June 1 and Secretary Volpe lifted the freeze. WMATA's problem was that to include the plan in the Metro Center Station bid documents, the

plan had to be available by May 21. WMATA had a backup plan to include the new WMATA affirmative action plan if it did not have Labor Department's plan by then. [Green, Stephen, "Metro Awaits Green Light on Pact," *The Evening Star*, May 18, 1970]

Secretary Volpe did not appreciate the criticism he was receiving for the freeze. The final straw was an article, labeled "an editorial," in WMATA's staff publication *Metro Memo*. It stated that "assurance that Metro will continue to move ahead will require almost immediate action by the Departments of Transportation and Labor on the issues of minority hiring." It added that, "any slight delay at this time would place serious strain on the delicately balanced plan for financing the construction of Metro. Substantial delay would render the financial program inoperable."

After seeing the article, Secretary Volpe called Chairman Yeldell. As described in the *Star*:

Volpe . . . said he had been hurt over the criticism of the freeze voiced by area newspapers and radio and television stations.

Volpe said he does not believe it is fair for the authority to promote critical remarks of his order, since he helped the subway agency obtain release of construction funds from Congress last year.

In a letter to Secretary Volpe, General Graham wrote:

WMATA has neither fed self-serving information nor has it promoted for selfish reasons any editorial comment on the existing freeze . . . . Because of my high personal regard for you, I have been distressed at some of the more intemperate criticism, but I am also distressed that you feel WMATA is culpable in this regard. [Green, Stephen, "Volpe Assails Metro On Criticism of Freeze," *The Evening Star*, May 27, 1970]

As promised, Secretary Shultz issued the Washington Plan on June 1, with the plan going into effect immediately. It imposed mandatory quotas for the hiring of minorities on Federal and Federal-aid construction projects in the Washington area. As the *Post* described it:

Under the plan . . . approximately 3,500 minority-group workers must be hired in 11 skilled construction trades here by employers on such federal jobs as construction of the Metro subway system, highway building and federally subsidized housing projects . . . .

The Washington Plan will cover all construction contractors with federal jobs of \$500,000 or larger in the entire Washington Standard Metropolitan Statistical Area . . . . The contractors will be required, by the end of the fourth year of the plan in 1974, to employ between 25 per cent and 43 per cent minority workers, with the percentage range varying from trade to trade.

Secretary Volpe released the freeze on contracting by WMATA, which scheduled bid opening for the Metro Center Station contract for June 16.

On behalf of the task force, Booker termed the plan "unacceptable":

We can't support any plan that doesn't guarantee us at least 90 per cent of all jobs on all levels – 70-to-80 per cent because of population and 10 per cent for reparations. This “Washington Plan” is an insult to the intelligence of the black community.

The Washington Building and Construction Trades Council, representing 20,000 union members, denounced the plan, saying the percentages were unattainable. It was “further evidence of the determination of the Nixon administration to continue to make a whipping boy of the construction industry . . . . We do not see the administration requiring 40 per cent minority employment in any other industry or institution of our society.” Nevertheless, the council committed to complying “to the best of our ability, if we can get the people. We must comply.”

The Construction Contractors council agreed that meeting the targets would “be a problem,” but Executive Secretary John S. Oldfield said, “I think we'll be able to surmount it.” The council's Project Building, which had been established in 1967, planned to place more than 500 minority workers in the industry over the next year. “The doors to union membership for qualified workmen in the building trades of this area are open and have been open. What we need is more jobs!”

The task force held a press conference at the Labor Department to denounce the plan. Booker wanted to hand the letter to Secretary Shultz, but he designated Fletcher, the department's highest ranking African-American, to receive it. The letter claimed the plan was diluted because it included the white Maryland and Virginia suburbs:

It serves little purpose to offer an unemployed but eligible black construction worker residing in D.C. a job in Reston, Va. or some other remote construction site when in his own city the overwhelming majority of jobs will continue to go to whites.

The plan, Booker said in the letter, “appears to reward unions such as the sheet metal workers, which have historically been guilty of the most discriminatory conduct, by applying its lowest ranges to the worst offenders.” Further, the plan contained “an abundance of escape clauses” and probably was “unenforceable.”

The letter repeated the task force's demand for 70 to 80 percent in all crafts for minorities, plus 10 percent for reparations for past discrimination in the construction industry. He was not concerned that the workers might lack the needed skills. “We're talking about black people right off the streets, skilled or unskilled. If they're unskilled, they can be given on-the-job training after being hired. We see no reason why the quality of work would suffer.” That fear was a “smokescreen used by unions and the Labor Department to keep blacks out.” The demands were, he said, nonnegotiable and warned that Washington blacks “will use whatever means are at our disposal” to meet them.

[Downie, Leonard, Jr., “U.S. Sets Quotas for Area Jobs,” *The Washington Post and Times Herald*, June 2, 1970; Green, Stephen, “Shultz Issues Minority-Hiring Order,” *The Evening Star*, June 2, 1970; “Agencies Laud, Task Force Scores Labor Plan on Area Minority Hiring,” *The Washington Post and Times Herald*, June 3, 1970; Meyer, Eugene, “Washington Plan Goals

Criticized,” *The Washington Post and Times Herald*, June 4, 1970; “D.C. Group Demands Construction Jobs,” *The Baltimore Afro-American*, June 13, 1970]

On June 17, WMATA opened the five bids for the Metro Center Station contract, “the single biggest construction contract in the area’s rapid-transit building program,” as the *Star* described it. The apparent lowest, responsive bid, from Peter Kiewitt Sons Inc., of Omaha, Nebraska, was for \$37.9 million, 17.8 percent above the engineer’s estimate. WMATA had been concerned that the first contract awarded had been 17 percent above the estimate, while the second had been 20 percent over. When the third and fourth contracts were awarded below the engineer’s estimate, WMATA’s fears of price escalation had subsided somewhat.

Despite the concern about the bid being nearly 18 percent above the estimate, WMATA awarded the contract to Kiewitt, bringing total construction contracts to \$100 million:

Of 261 workers to be employed for three years on the Metro Center job, 48 iron workers, 9 pipe fitters and 14 electricians will be covered by an affirmative-action plan for minority hiring ordered by the Labor Department.

The Metro Center station will be a double-level, subterranean structure with the G Street subway line to Maryland on the upper level and the 12<sup>th</sup> Street line to Virginia on the lower level. [Green, Stephen, “Bid on Station For Metro 17% Over Estimate,” *The Evening Star*, June 18, 1970; “Extra Metro Costs Seen on G Street,” *The Washington Post and Times Herald*, July 3, 1970]

(Professor Schrag described the origins of the station’s name. “Graham held that it was better to make an imperfect decision than to tolerate delay”:

In one extreme case, WMATA planner William Herman complained that the system’s main transfer station was badly named. He argued that “12<sup>th</sup> and G” was both confusing (several entrances would be on other streets) and too undistinguished for so important a station. Ever reasonable, Graham agreed to let Herman choose a better name. “I’ll let you know,” responded a relieved Herman. “No,” Graham explained, “I’ll give you twenty seconds.” Stunned, Herman blurted out the first words that came into his head: “Metro Center.” “Fine, that’s it, go on to the next one,” replied the general. And they did. [Schrag, page 153])

## **On Appeal**

On April 7, the three-judge panel of the U.S. Court of Appeals ruled, 2 to 1, that the District must comply with Federal requirements in Title 23 on community participation. The ruling reversed Judge Sirica’s finding and returned the matter to his court to ensure compliance with the Appeals Court’s ruling.

As discussed earlier, Judge Sirica had found that in the 1968 Act, Congress had waived the pre-construction requirements of Title 23, including Section 134 (Title 23’s version of Section 4(f)) and public hearing requirements, because it ordered work to begin as soon as possible, but not later than 30 days from enactment of the 1968 Act.

Federal and city attorneys had restated that argument before the three-judge panel, but they disagreed. Circuit Judge Wright wrote:

If we were to accept appellees' interpretation of Section 23, we would be confronted with difficulties possibly of constitutional magnitude.

They did not believe that Congress had "intended to deny the residents of the District of Columbia the protections accorded all United States citizens by Title 23." The environmental provisions "are the essential safeguards which Congress has established, on a nationwide basis, to ensure that massive freeway projects are not constructed unless there has been a good faith effort on the part of the state and local planners to take community needs and resources into consideration."

If the District's and the Justice Department's arguments were valid, citizens affected by road projects would be divided into two classes:

One small group of citizens, the residents of the District of Columbia who will be affected by the Three Sisters Bridge, is deprived of these important rights to participate in planning the future of the community. The other class, consisting of all residents of the 50 states, still retains these federally guaranteed rights to influence all federally assisted road building.

This discrimination was only the starting point of the inquiry. Under the Constitution, many discriminations "are simply benign." The question, then, was "whether this discrimination is based on an invidious classification between groups of citizens which rises to the level of a violation of the equal protection clause of the Constitution." Appellees' interpretation "would endanger its constitutionality." Therefore, "We reject that interpretation to save the statute."

Since the city and the Department of Transportation conceded that they had not held a design hearing, Judge Wright wrote that "the District Court should enjoin further action on the bridge project until (the government) has complied." The ruling also called on Judge Sirica to determine what other requirements were still to be met.

Judge Wright summarized the history of the Title 23 provisions intended to "keep federally assisted highways from encroaching on local parks, from being located except in accordance with an intercommunity scheme of comprehensive planning, and to make sure that state planning officials are apprised of the nature and depth of local residents' feelings about the wisdom of a particular project." The 1968 Act had broadened the hearing requirement, which now involved location and design hearings, and required consideration of economic, social, and environmental impacts. "According to appellees, however, Congress, while broadening (in the Highway Act of 1968) this federally enforced right to a hearing, has at the same time deprived one small group, the citizens of the District of Columbia, of this right to be heard."

Congress would not have insisted on broader citizen participation "unless it intended to expose the road builders quite closely to the direction of participation of citizens in the formulation of their decision." Appellees argued that Section 23 directed District officials to bypass the hearing

process, which would again only “expose community sentiment adverse” to the bridge and that Congress intended construction to begin “irrespective of the wishes of the citizens of the District of Columbia.” Further, a public hearing would delay the start of work that Congress wanted to begin within 30 days, with construction to follow in 90 days:

Such a reading of the statute would condemn it as unconstitutional. A legislature may not constitutionally disenfranchise a group of citizens because of their expected views . . . .

If we were to accept appellees’ reading and interpretation of Section 23, congress would have excluded from the statutory protection only one group, a totally unrepresented and voiceless minority of citizens. Any legislative classification which singles out for invidious treatment a small group of citizens totally excluded from the political process does not meet the usual deference from this court. The usual deference which courts accord legislative and administrative judgments stems from the confidence which courts have that these judgments are just resolutions of competing interests . . . .

Because the resulting classification would deprive only an already voiceless minority of its important personal right to contest disruptive highway projects enjoyed by citizens generally, we conclude that we would be hard pressed to find on this record reasons adequate to sustain the “heavy burden of justification” necessary to support the discrimination which would result from appellees’ interpretation of Section 23.

The panel rejected the argument that this classification was justified by the congressional desire to avoid delay. If that were the intent, Congress could have found a “less burdensome path,” such as directing that the hearings be held “with reasonable promptness.” Whatever the justification or alternatives, “we are convinced that appellees’ position that Congress intended such discrimination is unsupported by the language and history of the statute.”

The panel also rejected the argument that Congress intended Title 23 to apply only to the project’s construction stage, such as the provisions on competitive bidding. The legislative history, including the Senate and House reports and the floor debates, contained no statement by advocates of Section 23 that the planning requirements of Title 23 did not apply to the Three Sisters Bridge or the other three projects mandated for construction. In fact, Judge Wright wrote, the only discussions were to the contrary:

For example, Representative Cramer, a leading proponent of Section 23, explicitly stated that the City Council could hold further hearings to determine route locations and designs, within the broad “corridors” established by Congress. Senator Randolph gave his word to the Senate that Section 317 of Title 23 would be in effect for a specific project mentioned in Section 23(d) of the Act. We also take note of the fact that when the bill was passed the Secretary of Transportation also interpreted Section 23 as we do today. The contemporaneous construction of a statute by one charged with its enforcement is entitled to great weight from this court.

Appellees had argued that hearings would be futile because the statute had prescribed the locations and design plans for the four routes. Congress, Judge Wright pointed out, had referred

to the routes as set forth in the 1968 ICE. “These cost estimates by their own terms did not constitute final route placements. They only located a ‘corridor’ within which roads were proposed.” Therefore, the panel found nothing in the record indicating that a public hearing or other actions required by Title 23 would not serve a useful purpose. Moreover, Section 101 of Title 23 defined “construction” to include many pre-construction stages, including planning, not just physical construction.

In short, Congress had directed construction to begin on a bridge following a general configuration used in the 1968 ICE. In a public hearing forum, “citizens may well be able to offer constructive alternatives” for bridge design and location, including placement of access ramps, that could be adopted. Similarly, the Secretary of Transportation might find “other feasible routes, or a tunnel, [would] destroy fewer acres of valuable park land.”

As for the “notwithstanding” clause, Congress intended to counter the prior ruling by the U.S. Court of Appeals that the District was developing Interstate freeway projects in violation of the 1893 District highway statute. The city, Judge Wright wrote, could have gone back and complied with that 1893 statute’s provisions for the Three Sisters Bridge. Instead of doing so in the case of the Three Sisters Bridge, the city abandoned the project, NCPD disapproved the bridge, and the Secretary of Transportation removed it from the Interstate map. The panel recognized that Congress intended by the “notwithstanding” clause to exempt the four projects from the Appeals Court’s ruling as well as the administrative actions of local and Federal agencies:

But nothing in the statute indicates that Congress intended the Bridge to be built contrary to its own laws. In essence, then, Section 23 amounts to a direction from Congress to the relevant District and federal officials to continue with the bridge and highway plans they had been formulating prior to the Airis decision.

Therefore, the panel held that the Three Sisters Bridge project must comply with all applicable provisions of Title 23. Because Judge Sirica had ruled otherwise, “we remand the case to the District Court for an expedited evidentiary hearing to determine whether appellees have in fact complied with the provisions of Title 23.”

To aid in the District Court review, Judge Wright observed that Judge Sirica, after hearing the evidence, could determine whether the 6-year old hearings, which appellees had referred to, satisfied 23 U.S.C. 128:

The basic requirement is that both a location hearing (held “before the State highway department is committed to a specific proposal) and a design hearing (held “after the route location has been approved, but before the State highway department is committed to a specific design proposal”) must be scheduled. The regulations make specific provision for projects like this one on which some hearings have been held before the effective date of the regulations. Since the regulations apply by their terms and since in promulgating the regulations the Secretary made reasonable provisions for those projects which had been the subject of hearings before the effective date of the regulations, we see no reason not to apply these regulations to this case.

Chief Judge Bazelon, a member of the three-judge panel, concurred “that the case must be remanded to determine whether there has been compliance.” His views were based on the statutory language and legislative history. Therefore, he did not find it necessary “to reach the constitutional questions.” The statutory history revealed “a fundamental conflict”:

Undoubtedly some legislators thought that a statute ordering immediate construction of the Bridge would eliminate the necessity for at least some preliminary procedures. Others contemplated that the statute would simply reverse the District government’s inaction and compel the government to recommence work on the bridge in compliance with the procedures of Title 23. The conflict produced an ambiguous statute, compelling the court to resolve the disagreement.

The plain language of Section 23 directed the city to begin work on the bridge in accordance with all applicable provisions of Title 23 within 30 days. Congress could have expressly exempted the bridge project, and the other three projects cited, from the planning and hearing provisions of Title 23, but did not.

The panel’s interpretation was “further fortified” by avoiding treatment of “District residents less favorably than all other citizens with respect to the federal highway system.” Aside from constitutional or other considerations, “we should not lightly presume that Congress has deprived District residents of an opportunity afforded to all other citizens, at least in the absence of the clearest legislative mandate, which is lacking here.”

In dissent, Judge George MacKinnon disagreed with the majority’s description of the legislative history. A reading of the entire record convinced him that “Congress clearly directed that the Three Sisters Bridge be built immediately and I do not find that such direction was improper or invalid.”

The majority had not found any support in the legislative history for exempting the District of Columbia from complying with the pre-construction phases of “construction.” On the contrary, Judge MacKinnon cited Chairman Randolph’s remarks during Senate consideration of the conference report on July 29. Despite reservations, especially about the Three Sisters Bridge, he said the Senate conferees had agreed to construction of the bridge as long as the project protected Glover-Archbold Park. He also referred to the fact that “design of the bridge” would not intrude on the park. Judge MacKinnon asked, “Does this sound as though the ‘design of the bridge’ was still an open question?” He answered, “Obviously, it was not and Senator Randolph so recognized.”

He dismissed the individual views of members of the House and Senate because what matters was the intent of Congress as reflected in the words of the law. “No disclaimers by individual Senators or Representatives can effect [sic] what the two houses did collectively by adopting the bill *with* the D.C. highway provisions.” Moreover, all discussion of the matter assumed construction of the bridge in the current location and design.

The legislative history cannot be “twisted,” as the panel had, to argue that the Three Sisters Bridge required additional design. Other projects, particularly the Potomac River Freeway, did

require design work, but the bridge “had an approved design” that would affect the design of the freeway.

He also disputed interpretation of Representative Cramer’s comment cited by Judge Wright:

Congressman Cramer said in effect that the D.C. City Council could still hold hearings as to location within the corridors of the *interstate highways* to be constructed. His remarks were directed generally to the House bill *at that time* which directed that “all routes” of the Interstate Highway System in the District be constructed – not just the four projects now contained in section 23.

His comment applied to the Interstate highways generally, not specifically to the bridge. Neither the conference report nor the final version of Section 23 existed at the time he addressed his colleagues on the House floor; his comment could not have general application to interpretation of the enacted provision.

Judge MacKinnon also cited the statement of the House managers contained in the conference report, which Judge Wright had cited but not quoted. The managers had cited NCPC’s prior action, but did not require further action by that agency. The managers clearly were not ordering extensive hearings to be held on location and design, “pre-construction requirement preliminaries which had already been satisfied as the statement observed” by referring to the agreement in early 1966 by all parties as to the location of the Three Sisters Bridge. The statement also pointed out that consultant engineers had completed design, which had been approved by the Commission on Fine Arts on September 20, 1967.

The majority’s remarks referring to all applicable provisions of Title 23 reflected confusion. They failed to understand that the reference to Title 23 applied to four projects in different stages, not just to the Three Sisters Bridge. He summarized the status of the four projects. As reflected in the House statement, Congress directed the city to begin work within 30 days so that the construction contract could be advertised within 90 days.

“Now it is perfectly obvious from this factual situation that nobody in Congress was going to designate what provision of Title 23 did not apply to any particular project because *all provisions applied to some of the projects.*” Instead, Congress referred to each project advancing with applicable provisions of Title 23. If the intention had been that all four projects must comply with all provisions of Title 23, Congress would have deleted “all applicable provisions of” from the statute.

That it did not do so resulted in the logical conclusion that different provisions applied to each project. To test this logic, Judge Wright applied it to the Center Leg Freeway, which was under construction. Applying all Title 23 requirements, including the public hearing requirement, to this project “would be an absurdity and hence the rigid application of *all* Title 23 provisions to *all* the projects must be rejected as unreasonable and obviously not intended.”

He also rejected Judge Wright's application of the U.S. Court of Appeals' decision related to the 1893 law in the District code. Section 23 clearly was intended to "supply the congressional directive to the projects that the court had found to be absent in the first case":

So to permit the same plaintiffs, with the court's concurrence, to obstruct the second congressional directive on grounds they failed to allege in their first action, and to do so under the guise of carrying out the intent of Congress, is not a result that commends itself to sound judicial administration.

As for 23 U.S.C. 128, it requires the State highway agency to certify that it has had public hearings or offered the opportunity for them. FHWA had submitted an affidavit on October 16, 1969, that "is substantially uncontroverted," stating that public hearings had been held on November 22, 1961, and November 24, 1964, and asserting that the city requested project approval on September 21, 1966, within 3 years of the hearings. The affidavit also stated that planning requirements had been satisfied along with consideration of social, economic, and environmental impacts as required by Section 128. Based on the uncontested record, "there is no basis for sending the case back for section 128 compliance hearings. Full compliance shows from the record."

Further, the affidavit demonstrated that in approving the project on August 12, 1969, Secretary Volpe had determined that under Section 4(f), no prudent or feasible alternative existed to the taking of parkland and that all planning had taken place to minimize harm.

Regarding hearings, the majority called for location and design hearings, a requirement contained in the PPM of January 17, 1969, "some *five months after* congress passed the law directing that work begin on the Three Sisters Bridge within 30 days and that within 90 days 'substructure contracts be advertised for construction.'" Clearly, Congress would not require public hearings to change the location and design of a project that it expected to be advertised for construction within 90 days. As a result, the panel's opinion directing such hearings "creates a monstrous result and completely frustrates the express will of Congress."

Further, Congress intended that the only applicable provisions of Title 23 that applied to the Three Sisters Bridge related to physical construction. "Such interpretation of the sentence would be reasonable and would not attribute to Congress an intention to require duplication of prior planning that had already been completed with respect to the Three Sisters Bridge when Congress enacted section 23."

Judge MacKinnon rejected the majority's characterization of the District's residents as a "voiceless minority" being abused by Congress. Their success "in obstructing this project now for onto four years is mute testimony that they are not 'voiceless.'" They had access to the press as well to Members of Congress who lived in the District and nearby suburbs, giving "them more actual influence in Congress than citizens of states."

In fact, the District had developed the Interstate projects in accordance with the same Title 23 provisions that the State highway agencies used in developing their Interstate projects. The District and State highway officials complied with the provisions in existence at the time of their

actions. “There is no showing that amendments to the Federal highway laws were made to apply *ex post facto* to highway projects that had previously passed through particular stages *before* new provisions were added.” He concluded:

I do not consider that the 1968 amendments to title 23 or the 1969 PPM require any project to be backed up for different consideration of planning or construction phases that it had previously passed through. I would affirm. [*D.C. Federal of Civic Associations, Inc., et al., v, John A. Volpe et al.*, 434 F2d 436 (1970), No. 23870), April 6, 1970. Italics in original.]

The same three-judge panel was considering other freeway suits involving the East Leg of the Inner Loop Freeway and the Potomac River Freeway. On April 7, the panel ordered the city not to approve contracts for construction of the East Leg Freeway pending a decision in the case, which plaintiffs had based on the same objections as their case against the Three Sisters Bridge. The Center Leg Freeway, which was under construction, was not subject to litigation.

[Bernstein, Carl, “Review Eyed Of Court Rule On 3 Sisters,” *The Washington Post and Times Herald*, April 8, 1970]

### **Reaction to the Decision on Appeal**

How long a delay would be needed to comply with the ruling was unclear.

After reading Judge Wright’s ruling closely, city officials concluded that the delay in construction would not be lengthy. Judge Wright had not specifically stated that proper hearings had not been held; the court’s majority simply asked Judge Sirica to make that determination. As Judge MacKinnon had stated, two hearings had been held that, in FHWA’s view, satisfied the requirement. For that reason, the three-judge panel had not ordered work on the bridge to stop. That would be Judge Sirica’s decision. If he concluded that needed hearings had been held, as Judge MacKinnon had found and as the city believed, the bridge project could proceed under the current contract.

The city’s concern was stated by Assistant Corporation Counsel Richard Barton, who said “the Court’s language would appear to apply to all other segments of the freeway system. For that reason, he said, the city would seek an *en banc* review (by the nine judges of the U.S. Court of Appeals) of the panel’s decision because “the whole freeway program now is in doubt.”

Attorney Owens said he would seek a preliminary injunction to halt construction of the Three Sisters Bridge if the city did not voluntarily stop work. He declined to say whether he would seek injunction to halt the three other freeway projects that city officials conceded had advanced without design hearings. However, a city “source noted ruefully,” according to the *Post*, “that once the freeway program is enjoined, citizens groups will do everything within their legal power to keep the projects from being built.” [Osnos, Peter, “Hearings Ordered on Three Sisters,” *The Washington Post and Times Herald*, April 7, 1970; “D.C. Aides Don’t Expect Long Halt on 3 Sisters,” *The Evening Star*, April 8, 1970; Bernstein, Carl, “Review Eyed Of Court Rule On 3 Sisters,” *The Washington Post and Times Herald*, April 8, 1970]

The *Star* agreed with Judge MacKinnon that the Wright ruling was a “monstrous” distortion of the clear intent behind Section 23. The question was “whether Congress meant what it said.” Chief Judge Bazelon, in a brief concurring opinion, had said the congressional intent was “ambiguous,” but the *Star* said:

It seems inconceivable that any such ambiguity existed in the minds of the members of Congress. Public hearings on this project, as Judge MacKinnon noted, had previously been held. There was no serious evidence of congressional uncertainty or dissension as to the location or design of the bridge. Congress directed that construction proceed “notwithstanding any other provision of law, or any court decision or administrative action to the contrary.” And it specifically set 30-day and 90-day deadlines during which various stages of progress were to be achieved.

The editors suggested that it was “at least conceivable . . . that in the course laid out by the Wright-Bazelon ruling the situation might work itself out.” They cautioned:

But no one should bank on it. The history of this long dispute has been chiefly distinguished by cleverly orchestrated delays, one leading to another, stalling not only a rational transportation system for the Washington area but jeopardizing the city’s fiscal relationship with Congress as well.

Congress thought it had “broken the stalemate,” but additional congressional action might be needed. In the meantime, the *Star* recommended an appeal to the full Court of Appeals “in the hope of a swift, reasonable redress through legal means.” [“Three Sisters Showdown,” *The Evening Star*, April 10, 1970]

### **Superhighway-Superhoax**

Helen Leavitt, mentioned earlier, was a free-lance writer and civic activist who lived in the Dupont Circle area. She found that her home was in the path of the North Leg of the Inner Loop Freeway, then proposed to run along R or S Street off Connecticut Avenue, NW. What particularly incensed her was the claim that the freeway would help the neighborhood’s development. “I’ve never seen a freeway revitalize a neighborhood,” she told a *Post* reporter, Judith Martin, shortly after her book, *Superhighway-Superhoax* was published in April 1970 (Doubleday and Company).

The book, which she had begun working on in 1967, was a denunciation of every aspect of the Federal-aid highway program, including urban Interstates, the highway lobby, road officials, and the Highway Trust Fund. The “never ending flow of Highway Trust Fund money,” she said, had created “the vast imbalance in our transportation situation.” As a result, “the highway program is simply not subject to the same competitive pressures as other programs.” The Highway Trust Fund and its State counterparts “must be eliminated as an exclusive conduit of money for highways.” [Leavitt, pages 277-278]

One of her central ideas was that transportation “planning” was “guided by funding, not the other way around,” since “there was no money available for alternatives.” [page 277]

As for the since-abandoned route of the North Leg, she said it “would wipe out the core of this neighborhood of people of mixed ethnic, racial, and economic backgrounds. It would not, however, provide any funds to redevelop the blight that exists in the area. [page 18]

Although the book was a denunciation of the national highway program, Leavitt often illustrated her thesis by discussing the District’s freeway program. For example, she discussed Commissioner Duke’s deposition, January 3, 1967, in the lawsuit arguing that the city had not complied with the 1893 highway law. Responding to questions shortly before leaving for Vietnam, General Duke “admitted that no public hearings had been held on the latest alignment of the North Central Freeway.” BPR, he said, had assured him all requirements had been met:

The funds would not be given if they had not met the requirements established by the Bureau of Public Roads . . . . I am confident as I am sitting here that not only have the requirements of the BPR been met with respect to all of these projects, but the interest of the citizenry has been met at the same time.

He explained that if officials believed they could further improve the location of the freeway and reduce adverse effects of the freeway, *then* they held public hearings. But if they felt that the changes that had been made and the appearance of the freeway represented the best possible location and that further public hearings would not result in improvement, then no further hearings would be required. “If we don’t think that constructive suggestions with respect to the improvement of the facility would be forthcoming from a public hearing, we would not hold one.”

Leavitt noted, “That the law required the hearings seemed to elude him.” In any event, he admitted that neither he nor his fellow commissioners read the transcripts of the public hearings.

General Duke was asked if he consulted with Chairman Natcher about withholding funds for Washington’s rail rapid transit system. He replied “. . . I certainly would not deny that in the course of our discussions this problem came up.” [pages 94-96]

BPR and Members of Congress, she wrote, did not admit that freeway opponents had “an intelligent point of view to get across – that highways can do more harm than good.” She pointed out that ECTC’s Sammie Abbott “is summarily dismissed at the Bureau as a fanatic.” [page 182]

She also narrated the history of Section 23 of the Federal-Aid Highway Act of 1968. After Congress completed work on the legislation, President Johnson had been “deluged with letters and telegrams urging him to pocket veto the bill:

On the very day the pocket veto would go into effect if the bill was not signed, Senator Randolph, fearing the President would allow it to expire, hustled to the White House and pleaded with Mr. Johnson to sign the bill. The President went to the Texas White House that night at ten P.M. and took along the unsigned bill. By midnight, Texas time, he signed it.

She quoted President Johnson's statement on why he signed the bill despite his reservations, particularly about Section 23. [pages 222-223]

While writing about the period when Chairman Kluczynski was developing the freeway provision for the 1968 Act, she wrote:

In light of the attitude the newspapers have taken on the freeway issue, it is interesting to note that Washington *Star* vice president John W. Thompson, Jr., and Washington *Post* board vice chairman John W. Sweeterman and vice president Gerald W. Siegel are members of the Federal City Council and weekly receive their dose of freeway promotion to crank into their editorials. [page 107]

She ended her book, which was completed as Owen was going to court for the case that Judge Wright ruled on in on April 6, by recalling President Eisenhower's comments on seeing the plan for the District of Columbia. She recommended strict conflict of interest laws to avoid "the kinds of commingling of interests between public officials and representatives of private interests so prevalent in such organizations as ARBA and the Road Gang." In a discussion that contains material quoted earlier regarding President Eisenhower, she wrote:

In this manner, highway boosters in both private industry and public offices will no longer be able to mislead the public, a feat which they managed to accomplish with President Eisenhower at the time he endorsed the Interstate System in the mid-fifties. This was revealed in 1959 at a White House meeting at which Washington planners presented their proposed regional transportation plan for the city to the President.

After perusing the plan, which contemplated extending numerous interstate freeways into the heart of the District of Columbia, particularly I-95, President Eisenhower commented that he never thought when highway advocates proposed the interstate program to him that freeways would be extended into the centers of cities. He said he understood that the Interstate System would connect to the cities but not enter them.

One of the planners who was present at the 1959 meeting recalls that the President also commented at that time about the heavy commuter traffic he observed during his drives to suburban Maryland's Burning Tree Club for a game of golf. Mr. Eisenhower noted that a large number of automobiles was entering the city, but that most of these carried only one person. He suggested that since those automobiles clog streets and demand precious space for parking it might be feasible to limit the number of automobiles entering the city.

President Eisenhower's doubts and reservations about our highway program were voiced many years ago. They are even more valid today. [pages 298-299]

During an interview with a *Post* reporter, Leavitt pointed out that, "The birds down here look very, very sooty" near her home. "I don't know why they don't have lung cancer." The cause: the automobile, a foe that she and her husband had been fighting since moving to Washington 8 years earlier. "And when Mrs. Leavitt identifies an enemy, she goes after him." She told the reporter:

The automobile just doesn't belong in the urban scene. The time will come when people who feel they have to have an automobile will do what people do who feel they have to town a horse do – buy two-acre lots out in the country, where they can drive their automobiles around and around all they want.

There is a definite policy to make the automobile and the airplane the only means of transportation. They cut off all the other modes, and then say, "But people just love automobiles." I'd like to see the area blanketed with transportation – not just the Metro, but jitney service, adequate bus service in the suburbs, trains. I'd like to see the trolleys run again. They were sacrificed to the automobile.

Leavitt lived with her husband, their two sons who were in public school, and their dog Judy. [Martin, Judith, "Enemy: The Auto," *The Washington Post and Times Herald*, April 10, 1970]

Reviewing the book in the *Post*, Jack Eisen described it as "passionate in tone, selective in content and argumentative in thrust – so much, in fact, that it is guilty of overkill." To accept her thesis, he wrote, a reader must be prepared to believe that every highway supporter "is engaged in one huge conspiracy, motivated by greed or stupidity."

Freeways in many cities, "including over-maligned Los Angeles, perform the task of skimming off through or crosstown traffic (including trucks) and returning the regular surface arteries to their neighborhood residential and commercial purposes." Leavitt sought to dispel such a "notion" at every turn for "it is the automobile traffic itself that she sees as the basic villain. Freeways, she insists, induce unwanted travel to enter urban centers."

The best part of the book, Eisen wrote, is Leavitt's dissection of the "fabled" highway lobby and Members of Congress who support the Federal-aid highway program. Those Members of Congress, working on the Federal-Aid Highway Act of 1970, were, "at this very moment, preparing to extend its life in a form that is not likely to be less lucrative to the builders."

He also commented on his discussion of the freeway battle in the Washington area:

The analysis of Washington's road disputes illuminates some shadows. But Mrs. Leavitt, in common with most local freeway foes, dismisses the very real political threat to our Metro system that was posed by the controversial congressional edict to build the Three Sisters Bridge, among other projects. [Eisen, Jack, "The Freeway Fight," *The Washington Post and Times Herald*, April 20, 1970]

Stephen Green, reviewing the book for the *Star*, agreed with Eisen that her chapter on the highway lobby was "the real blockbuster in this book." Its members had "tried to perpetuate an image of the interstate highway system and its financing trust fund that is akin to motherhood and apple pie":

Many of the allegations made in the book have been well reported in Washington in recent years: urban freeways induce more traffic instead of reducing it; they divide and cripple more cities instead of restoring them to economic health.

Green predicted that when the Highway Trust Fund came up in Congress later in the year during development of the Federal-Aid Highway Act of 1970, “Mrs. Leavitt’s book will provide ammunition for those who oppose the trust fund as it now is constituted:

Her labors may prove more fruitful than those of the city’s louder and more visible freeway opponents, for she has written a damning indictment of the Interstate System and the men responsible for it, particularly that portion which makes up our urban expressways. [Green, Stephen, “Foe of the System Of Building Freeways, *The Sunday Star*, May 31, 1970]

Several other anti-freeway books would be published during the same period, usually citing the Washington freeway battles. For example, Ben Kelley, FHWA’s director of public affairs under Administrator Bridwell, published *The Pavers and the Paved* in 1971 (Donald W. Brown, Inc.) In his insider’s look at the negative world of highways, he wrote:

No catalogue of urban highway grief would be complete without recognition of the District of Columbia’s years-long running war of resistance to freeways – a community-wide movement that has remained alive and vigorous despite heavy-handed maneuvers by road lobbyists and their congressional collaborators to put down more pavement in a city already crisscrossed with more freeway miles per capita and per square mile than any other in the United States, including symbolic Los Angeles. [page 109]

When the city council rejected the Three Sisters Bridge in 1967, the House Public Works Committee reacted “with a mixture of amazement and fury,” turning “with a vengeance to the task of reversing the city’s disposition of its freeway problems.” [page 111]

After quoting extensively from the minority opinion of Representatives McCarthy, Schwegel, and Waldie, Kelley discussed the U.S. Court of Appeals decision on February 15, 1968, enjoining the city for failure to comply with the 1893 District highway law. “The court’s opinion might have been written in vanishing ink so far as the House Public Works Committee majority seemed concerned.” The result was Section 23 of the 1968 Act. Kelley recalled the result from his insider perspective:

Secretary Boyd found himself in a string of meetings with citizen groups opposed to Section 23, as well as with District government officials and members of his own staff who were close to the issue. Finally in mid-August, pressed to give the President a recommendation, he called together his senior staff and top officials from the department’s Federal Highway Administration – including the director of the Bureau of Public Roads [Frank Turner] – for an informal poll. Predictably, the highway agency officials urged against veto, while the Secretary’s policy advisers tended to be for it. It was finally decided that although the District provision was profoundly objectionable, other provisions of the bill, including its broad reform of relocation housing assistance, justified the President’s signature. [pages 114-115]

Kelley’s account ended with the city council’s report to Congress in February 1970.

The Road Gang, which began in 1942 as an informal luncheon forum for the exchange of ideas by public and private executives whose interests were broadly related to highway transportation, invited Leavitt in 1970 to defend her book. *Road Gang Goes for the Gold*, published in 1992 to celebrate the group's 50<sup>th</sup> anniversary. Described the event:

Another "first" was a woman guest speaker, Helen Leavitt, who not only drew a large attendance but sparked some of the liveliest, if not the loudest, discussion in Road Gang experience. In the words of Chairman [Charles W. "Bill"] Day, who even used his horn to help sustain order, the debate was "brisk."

Others remember the meeting as loud, maybe even a bit raucous. [Knight, Don, editor, *Road Gang Goes for the Gold*, A Special Commemorative Newsletter Tribute to the Road Gang, June 25, 1992, page 5]

Despite the Road Gang's views, *Superhighway-Superhoax* has endured as one of the best books of the genre. In 1996, the New York Public Library included Leavitt's book among the Books of the Century. "The book's argument and central paradox, that most superhighways bring increased traffic congestion rather than less, has never been effectively countered." The citation noted some of her criticisms, "most notably, she demonstrates environmental degradation, strangled cities, and ruined public transportation systems." [Diefendorf, Elizabeth, Editor, *The New York Public Library's Books of the Century*, Oxford University Press, 1996, p. 147])

### **Threatening Metro**

Chairman Natcher made his displeasure with the court's ruling known during hearings in April 1970 on the District of Columbia Appropriations Act, 1971. On April 14, Mayor Washington, Deputy Mayor Watt, and other city officials testified before the Natcher Subcommittee on the city's diverse financial needs.

On transportation, Mayor Washington promised that the city would "continue to take important steps forward toward a comprehensive transportation system," including a contribution of \$34.2 million in capital matching funds for the Metro system. "In fiscal 1971, contracts will be let for 16.1 miles of planned subway routes within the District."

As for the city's freeways, he said:

The interstate highway program, which will facilitate the movement of vehicular traffic, will continue to be developed with substantial construction being funded for the Three Sisters Bridge, Potomac River Freeway, the Center Leg Inner-Loop Freeway, the East Leg and Interchange "C." The total District share of this construction costs \$4 million, which will be matched by Federal grants totaling \$38 million. [District of Columbia Appropriations for 1971, Hearings before a Subcommittee of the Committee on Appropriations, Part 1, U.S. House of Representatives, 91<sup>st</sup> Congress, 2<sup>nd</sup> Session, H181-38, page 27]

Congressman Davis asked about the status of the Interstate System. “We keep getting reports in the newspapers of dissension among the officials of the District government and, of course, matters that are pending in the courts.”

Mayor Washington replied that he was not aware of any dissension within the city government. The city was proceeding “with every element that was called for in the 1968 Highway Act.” He asked Hubert B. Pair, principal assistant corporation counsel, to address the court case. Pair said, “We feel we vigorously defended the cases to the point that we prevailed at the trial level.” A three-judge panel reversed the trial court, but the counsel’s office had prepared a petition for a rehearing by the entire court. “We are hoping to overturn the decision of the U.S. Court of Appeals.” Construction, which had not been enjoined, was continuing.

Chairman Natcher questioned whether the city was in compliance with Section 23 of the 1968 Act. Referring to Chairman Fallon’s February 27 letter to President Nixon questioning the city’s compliance, Chairman Natcher told the city officials that he was surprised by the claim the city was in compliance:

I say to you quite frankly as one member of the committee that the District building [sic] is not in compliance with the Highway Act of 1968. That includes the Highway Department of the District of Columbia . . . . That letter has not been contested and that is the law and that is the law under which we intend to operate.

When Mayor Washington said he was relying on the opinion of the office of the corporation counsel, Chairman Natcher pointed out that the chairman of the Public Works Committee and his staff “who know more about this than anyone that I know, say that the District Building is not in compliance. They say that the recommendations from the Department of Highways and Traffic in the District of Columbia are not in compliance.” [pages 103-104]

Chairman Natcher returned to the issue on April 29 when Airis appeared to discuss the Department of Highways and Traffic’s budget. The chairman restated his view that the city needed freeways and a rapid rail transit system “to meet the tremendous day-by-day growth of traffic.” His committee “made every effort” to keep both moving, but had been forced to withhold funds for Metro because of the impasse blocking freeway construction. “After the matter was resolved we did just exactly what we told the House and the people downtown that we would do,” namely release the funds to begin construction of Metro.

President Nixon, Representative Natcher said, had taken a keen interest in the matter:

During the past several months, President Nixon has made every effort to see that this impasse was resolved. I want you to know, Mr. Airis, that he has done everything he told us that he would do. He has made a sincere effort to see that the impasse was resolved. And I say this to you frankly, he is the only President during the last 10 years that has had nerve enough to enter into this matter and try to resolve it. I know what I am talking about, Mr. Airis. I have served with several Presidents and I know the actions of others and I know what he has done. I say to you again, from the standpoint of the best interests of our Capital City, this matter must be resolved.

Chairman Natcher entered into the hearing record a collection of documents covering the attempts to end the impasse in recent years, including the President's letter of August 12, 1969, Chairman Fallon's letter to the President dated February 27, 1970, and his own statement in extended comments to the House.

The chairman said that since the Metro construction funds had been released, "the terms of the Highway Act of 1968 have not been complied with." He said that under no circumstances could he "recommend to this committee that we continue appropriating funds for rapid rail transit construction unless the Highway Act of 1968 is complied with in its entirety."

Since the submission of the reports and the letter to the President, Chairman Fallon and other members of the Public Works Committee had met with Secretary Volpe. "I am reliably informed that as a result of this meeting every effort will now be made to comply with the Highway Act of 1968, and that this will take place before the District budget is approved for fiscal year 1971 by this committee." If so, Chairman Natcher said he would recommend funding for Metro construction. "If not, then I do not intend to recommend construction funds for rapid transit for fiscal year 1971."

Congressman Davis agreed:

I was disappointed, as I am sure you were, to read some of the recent statements that did publicly appear, attributed to the Secretary of Transportation and the officials of the District of Columbia. I think the law is clear and unambiguous. I think the position of this subcommittee is equally clear and unambiguous and we have undertaken to act consistently with the enactments of this Congress. [pages 379-387]

Although the hearings were closed, reporters received transcripts of earlier hearings on April 29, including Chairman Natcher's warning to Mayor Washington about compliance with Section 23 of the 1968 Act. Congressional sources told reporters that Chairman Natcher's comments did not mean the city should ignore the U.S. Court of Appeals' decision on the Three Sisters Bridge project. The chairman was more concerned about the city council's recommendation to convert the Anacostia Freeway to a parkway on the East Leg of the Inner Loop Freeway north of Bladensburg Road and Secretary Volpe's suggestion that the Potomac River Freeway should be built on an elevated structure along the Georgetown waterfront. The Secretary's suggestion reportedly "infuriated" members of the Public Works Committee.

Jack Eisen reported:

As much as anything, however, a Public Works Committee spokesman said, there is concern that the city government is doing as little as it can to abide by the law, and that some officials quietly sympathize with delaying tactics.

The delay was symbolized by the fact that NPS had only recently provided the needed clearance for construction along the Anacostia River shore. [Green, Stephen, "Natcher Threatens New Subway Halt," *The Evening Star*, April 30, 1970; Eisen, Jack, "City Warned Of 2d Metro Fund Cutoff," *The Washington Post and Times Herald*, April 30, 1970]

Learning of the latest threat to Metro funding while the WMATA board was trying to resolve the minority hiring issue, Chairman Yeldell said, "We had no knowledge of this before it appears in the papers." General Graham pointed out that WMATA representatives had received "a fine reception" from Chairman Natcher when they testified.

Board member Gleason said:

I don't know if any organization can stand to be kidnapped time after time. Each crisis just makes the blood pressure rise more frequently and the patient dies. I don't know if transit can survive another crisis.

Vice Chairman Sickles suggested meeting with Chairman Natcher to bolster support for Metro, but General Graham replied that Natcher already knew "about our problems." [Meyer, Eugene L., "Metro, Warned of Fund Cut, 'Can't Survive Another Crisis.'" *The Washington Post and Times Herald*, May 1, 1970]

WMATA appeared before the subcommittee on May 5. Chairman Yeldell submitted a lengthy statement for the record in which he explained WMATA's request for \$34,178,000 to cover District's matching share, complimented the political leadership that resulted in the groundbreaking on December 9, 1969, confirmed the cost estimate of \$2,494,600 as long as Metro stayed on schedule, and assured that the final plan, while complex, was on schedule.

General Graham's statement confirmed the importance of staying on schedule. Despite the delay of 14 months before the groundbreaking ceremony, "we have compressed our construction schedule sufficiently to achieve initial train operations in July of 1973"

Our basic problem was threefold. First, we had to minimize the effect of cost escalation by compressing our schedule. Second, we had to hold the number of contracts in any given time period to the amount which would assure the benefits of contractor competition. Third, we needed to assure the advantages of a stable labor force.

We believe we have accomplished these objectives.

He outlined the work schedule for the 98.7-mile system, concluding:

The final segments will be completed and operational by December 1979 from Chillum to Greenbelt Station; from Silver Spring to Glenmont; from Kenilworth to Addison Road; from telegraph Road to Backlick Road; and along the Franconia Route.

Chairman Natcher was complimentary of the WMATA team:

As you have heard me say, probably on the floor, Mr. Yeldell, the members of this Board, together with the members who occupy staff positions are doing a good job, and I say that to you frankly. You have a lot of good people in this organization, a lot of good people. Mr. Yeldell, I just hope that the future will be such that we will be able to proceed with the rapid transit system.

He did not imply that developments might lead to another threat to the city's Metro matching funds. [Part 2, pages 1010-1026]

Eisen, using *The Perils of Pauline* analogy, wrote that the freeway-subway impasse "has burst back upon the front pages, sending new shock waves through the metropolitan political structure." He repeated Chairman Natcher's warning, but said that this time the chairman had "made clear that he did not really want to use it." Moreover, his ire was not aimed at city officials but at Secretary Volpe, leaving the city "caught helplessly in the middle." This reality explained, Eisen wrote, "the lack of anguished howls from City Hall." The goal was for Secretary Volpe and the city to agree on the East Leg Freeway and the Potomac River Freeway.

The future of the North-Central Freeway was another contentious question. "It was clearly the North Central that Chairman George H. Fallon (d-Md.) . . . had in mind" when he inserted his statement in the *Congressional Record* ("Even the rapid transit system which required such painstaking effort on the part of so many to get under way is subject to delays by the various [freeway] recommendations.")

Chairman Fallon and Chairman Kluczynski were the keys to resolving the issues. Referring to the reports submitted to Congress by Mayor Washington and Secretary Volpe in accordance with the Section 23 deadline, Eisen quoted Chairman Fallon's observation that the two reports were in disagreement with each other and were "radical departures" from Section 23:

These "departures" are what Fallon's ally, Natcher, has undertaken to rectify by invoking the power of the purse, if need be.

Eisen summarized:

One fact is clear: Washington is the nation's outstanding example of blockage of interstate freeways in an urban area, a symbol that heartens road critics and anguishes proponents. [Eisen, Jack, "New Threat Rocks Road Controversy," *The Washington Post and Times Herald*, May 3, 1970]

*Post* editors wondered how Metro became "the king in the decade-old chess game that has gone on over the District of Columbia's highway system." The game was complex, the players changed regularly, and much of it was taking place behind closed doors. If the game did not end soon, one thing was certain:

The king is going to be dead and with the demise of the subway will die the last best chance to make this metropolitan area a decent place to live in the future.

As for Chairman Natcher's threat, "If those funds are withheld, you can kiss the subway system good-bye."

Chairmen Natcher and Fallon did not seem to grasp, the editors wrote, that Metro is not an ordinary public works project:

It has to sell \$880 million in revenue bonds to complete its financing. What investor in his right mind is going to recommend or buy these bonds if the project is turned on and off as part of a political power play?

Congress was at fault, but “the anti-freeway lobby” also deserved some of the blame. Eventually the freeways would be built:

Those who fight against them so adamantly only succeed in depriving the city of a chance to use things like the north central freeway and the northern leg in a way that can help the city’s economic and social development.

Others were at fault as well:

Neither the Mayor nor the City Council has been a tower of strength. The city’s move towards a compromise last winter was made grudgingly, by the best interpretation that can be put on it, and deviously, by the worst. Secretary of Transportation Volpe then stuck in his two cents worth by tacking more ideas on the city’s proposal and sending the Congressmen up the wall in rage.

To further complicate the situation, the District’s freeway program has become the symbol of resistance of cities across the country to the use of freeway construction standards more appropriate in [a] rural area . . . . While it is one thing for the District to be a test case on such a major issue, it is quite another for the subway system to go down the drain while the battle is fought out.

The impasse could be “worked out fairly easily” by negotiation “if the game hadn’t been played out so bitterly for so long”:

It needs action, quickly – and not from men who are acting to please constituencies or pressure groups or to show that they have been right all along, but from men who are acting as responsible citizens trying to solve a difficult problem.

Congressional action to ram freeways through by threatening the subway was “the worst kind of demagoguery,” but the city’s and Secretary Volpe’s actions were “insane” because they “put Congress in the position where it thinks this is the only course of action it has open to justify its past performances.” The editors called for “some sanity and common sense” before the next moves. Otherwise, “the game is likely to end in total disaster.” [“The Game Called Freeways,” *The Washington Post and Times Herald*, May 3, 1970]

*Star* editors saw a way out of the impasse. The city needed to overcome two hurdles. If the good faith efforts to overcome the court challenge failed, the city should hold hearings to dispose of the problem. In addition, the differences between the ideas the city and Secretary Volpe submitted to Congress should be reconciled. This hurdle was more complex than the first one. “The House Public Works Committee, in fact, was sufficiently infuriated by the snarl some weeks ago to lodge a written protest with the President.” Chairman Natcher, while issuing his threat, reported that efforts were underway to work things out. “We trust he is right.”

The region could not afford another subway setback. “And the gravest mistake which Secretary Volpe and Mayor Washington could make would be to ignore the prodding which Natcher is giving them, at this point, in relatively gentle terms.” [“A Word to Wise,” *The Sunday Star*, May 3, 1970]

On May 6, Judge Sirica rejected plaintiffs’ request for a temporary injunction to halt construction of the Three Sisters Bridge. After what the *Post* characterized as “the judge’s rapid-fire rulings,” he cut off Owen’s arguments:

Suddenly, Sirica stopped Owen’s argument to ask whether the civic groups would be able to post a bond in the amount of contracts already let for bridge construction “to protect the government and taxpayers of the District of Columbia.

He concluded that even if he issued the injunction, the plaintiffs would be unable to post the bond, as commonly done. The bond would be an estimated \$1.5 million.

Owen said he would immediately appeal to the U.S. Court of Appeals.

Judge Sirica set June 11 for the start of the trial. [“Judge Refuses to Halt Bridge Construction,” *The Washington Post and Times Herald*, May 7, 1970]

Eisen reported on May 12 that the plaintiffs were seeking to halt construction at least in part on the basis of a deposition that attorney Gerald P. Norton had taken with Charles E. Hall, FHWA’s Division Engineer in the District of Columbia. During an April 28 deposition, Hall said FHWA had not yet approved the design for the bridge, which was being reviewed on orders of Administrator Turner.

Turner, in a March memorandum, had written:

[We are] still concerned that the combination of the adverse geometry of the superstructure, the unconventional design details, the extreme lack of design experience of a structure of this type and the complete absence of this construction experience in this country makes the undertaking extremely hazardous and fraught with danger.

To the best of our knowledge, very little has been accomplished to alleviate this concern.

Hall expressed doubts about whether the graceful, single-span bridge that the Commission of Fine Arts had approved could be built. Instead, he opened a consultant study to display an illustration showing a multi-span design and said that if the design were rejected, the bridge “could look like the pictures we had in this book.”

In a second deposition on May 5, Hall said he understood that Turner was firmly committed to the present design.

Robert Kennan, roads committee chairman of the Committee of 100 on the Federal City, argued that the questions Hall raised about the design were serious enough to justify a halt in construction. John L. Hess of the District’s corporation counsel’s office dismissed plaintiff’s

concern. “Everybody is now agreed, including Mr. Hall, that the bridge approved by the Fine Arts Commission is the one that is going to be built. No question about it.” [Eisen, Jack, “Approved Design of Three Sisters Bridge Is Challenged,” *The Washington Post and Times Herald*, May 12, 1970; quote from Turner memorandum in Green, Stephen, “New 3 Sisters Bridge Design Weighed,” *The Evening Star*, September 2, 1970]

### **Appropriations Action, 1971**

On June 1, the House Committee on Appropriations approved the FY 1971 District of Columbia bill drafted by Chairman Natcher’s subcommittee. The report explained that the committee was “still of the opinion that there is a place for both a freeway system and a rapid rail transit system in our Capital City.” However, freeway construction “must be carried out along with the rapid transit system.” After summarizing the reports submitted in February that contained “certain proposals that are not in compliance with the intent of the law,” the report concluded:

Another impasse has evolved. Until the current impasse on freeway construction is resolved no funds will be recommended for the District’s share of the Washington Metropolitan Area Transit Authority’s fiscal year 1971 construction program.

At the time, the city’s authority to borrow from the U.S. Treasury had expired, requiring congressional action that had not yet occurred. Because the loans were used as an advance on payment for highway projects, the city had not requested appropriations for matching funds for highway development. In the absence of loan authority, the committee recommended appropriating only \$500,000 for construction. It was for the Three Sisters Bridge to “complete the financing of that structure and is available from existing resources.” [District of Columbia Appropriation Bill, 1971, Committee on Appropriations, U.S. House of Representatives, 91<sup>st</sup> Congress, 2d Session, Report No. 91-1135, June 1, 1970, pages 4-5, 17]

WMATA saw the refusal to appropriate the requested \$34.2 million in District matching funds for Metro as a long-term peril if it prevented future contract awards. In the short term, the delay would be less of a problem because construction could continue.

Mayor Washington responded to the report by saying, “I am hopeful that the current impasse can be resolved quickly so that the much-needed subway program can proceed.” General Graham said WMATA had enough funds available to “keep Metro on schedule until the new freeway impasse can be resolved.” He added that the Senate had a pending supplemental appropriations bill that contained \$84 million in Federal funds for Metro. Approval of that bill was “absolutely crucial.”

Secretary Volpe was out of town and could not be reached for comment. Chairman Natcher, asked by Eisen for comment, said, “I have no additional comment other than what’s in the report.” [Eisen, Jack, “House Panel Again Refuses Metro Funds,” *The Washington Post and Times Herald*, June 2, 1970]

On June 4, the *Star* reported that Secretary Volpe had reversed his position on the Potomac River Freeway. In a letter to Chairman Fallon, Secretary Volpe said he now favored building the

freeway in a waterfront tunnel, as anticipated in Section 23 of the 1968 Act, instead of on an elevated structure. The freeway would be an eight-lane split-level facility, with the tunnel carrying the eastbound lanes while westbound traffic used the elevated Whitehurst Freeway:

The eastbound lanes will be built from an expressway stub, now running from 31<sup>st</sup> Street NW to 27<sup>th</sup> and K Streets NW. It will proceed parallel to and just south of the existing Whitehurst Freeway into a more than 4,000-foot-long tunnel starting between 400 and 650 feet west of Wisconsin Avenue.

From beneath the waterfront, the tunnel will continue under the C&O Canal, surfacing on the north side of the canal between Georgetown University and Canal Road. From there it will connect with the eastbound lanes of the Three Sisters Bridge.

From the present Whitehurst Freeway, the westbound lanes will go into a tunnel just west of Key Bridge and run for 1,750 feet to surface north of the C&O Canal. From there it will proceed west past the intersection of Foxhall Road and MacArthur Boulevard to join the westbound lanes of the Three Sisters Bridge.

The *Star* noted that FHWA had favored Secretary Volpe's proposed elevated structure, which in a joint use venture would have a park beneath the freeway. "But plans for redevelopment of the Georgetown waterfront, that include demolition of the Milton Hopfenmaier Co. rendering plant, have hinged on construction of the tunnel."

Secretary Volpe's letter to Chairman Fallon expressed the hope that the "clarification" would help resolve the city's transportation tangle. However, it addressed only one of the issues that Chairman Natcher had cited as the basis for withholding Metro funds. [Green, Stephen, "Volpe Switches on Freeway, Backs Georgetown Tunnel," *The Evening Star*, June 4, 1970]

Chairman Natcher brought the District of Columbia Appropriations Act, 1971, to the House floor on June 4. He explained the committee's support for a balanced transportation system that required construction of freeways at the same time as Metro:

Until the current impasse on freeway construction is resolved no funds will be recommended for the District's share of the Washington Metropolitan Area Transit Authority's fiscal year 1971 construction program. For this reason, Mr. Chairman, we do not recommend at this time the sum of \$34,178,000 for the District's share of the rapid transit construction program costs.

He once again went through the history of efforts to force the District to comply with Section 23, inserting into the record his summary from the April 30 hearing.

In the time since he had last recommended the appropriation of District matching funds for Metro, he said, it was clear "that the terms of the Highway Act of 1968 have not been complied with, and this is the situation we are confronted with today." When the city complies with Section 23 of the 1968 Act, he would recommend the funding.

Virginia's Representative Scott pointed out that his constituents depended on construction of Metro in the city. How, he asked, can the impasse be cleared?

Chairman Natcher again summarized the basis for the impasse, emphasizing that his decision would not affect current construction:

If between now and the time the bill passes the Senate, or at any time the District officials and the Department of Transportation comply with the Highway Act of 1968, I will recommend to the members of our subcommittee, to our Committee on Appropriations and to the full House that we appropriate the \$34,178,000 requested . . . .

But I must say this: As long as there is not compliance with the law passed by this House and the Congress of the United States I will never come to the floor of the House and ask for money to continue construction.

Representative Gude of Maryland said he understood the complexity of the impasse, but added, "I realize that I am one of a very small handful of Congressmen who take exception to a deepseated [sic] feeling in this House that we should not go ahead with funding the transit system unless we have corresponding progress in the expressway system." The freeway system and Metro should each be judged on its own merits. "I do not feel that we should hold one program hostage to the other."

Chairman Natcher simply thanked Representative Gude "for his statement."

Chairman Kluczynski took this opportunity to explain that as chairman of the Subcommittee on Roads, he had included Section 23 in the 1968 Act "to put an end to the years of unnecessary and ridiculous bickering which has gone on in the District of Columbia concerning interstate highway routes for the Nation's Capital." With just a few miles remaining to be built, "It is just intolerable that the city government continues to obstruct and delay and drag its feet on this vital project." He continued:

Where positive action is required all that can be seen is negativeness coupled with a cowering every time a militant voice is raised to object. I read recently that the great Roman statesman and philosopher, Seneca remarked long ago, "that government is ill-conducted, when the mob rules its leader." . . . .

Earlier in the day, Chairman Mahon had said the country must have a National Capital we can be proud of. Chairman Kluczynski said, "We can hardly be proud of unfinished freeways and intolerable congestion which has resulted from a government of indecision."

Representative Broyhill also was concerned about deletion of the Metro funds. "We are all aware of the seriousness of traffic congestion and have agreed to the necessity of a subway system. The more we delay doing something about it, the more it will cost to solve the problem."

Chairman Natcher went through the provisions of Section 23 to demonstrate the city's lack of compliance:

First. Not later than 30 days after enactment of the law, which was signed on August 23, 1968 – almost 2 years ago, work was to be commenced on four specific projects – the Three Sisters Bridge, the Potomac River Freeway, the center leg of the inner loop, and the east leg of the inner loop.

Second. The remainder of the projects would be studied for a period of 18 months and reported back to Congress by February 23, 1970.

With regard to the first step of the act the District government proceeded not only to completely ignore the law but within a period of about 4 months proceeded to remove from the plan three of the four required projects as they were designated by the Congress. Most of the remaining study projects were changed completely from what was indicated in the act.

The District's report to Congress in February, the second step, had been "a warmed over version of the plan which was rejected by the Transportation Planning Board over a year earlier." The Department of Transportation's report to Congress "proposed a still different plan than either that of the District of Columbia or that proposed in the 1968 Act." He continued:

It is my understanding that the Secretary of Transportation has now agreed to conform to the first step of the act but has retained his original position on the study projects.

This appeared to be a reference to Secretary Volpe's support for the tunnel option along the Georgetown waterfront.

We have now reached the point wherein the only thing that has been accomplished since the 1968 Highway Act was passed is to let one small contract on the piers of the Three Sisters Bridge and to begin the design of the Potomac River Freeway. Aside from that all is again in confusion.

In conclusion, he said he would like to recommend "tomorrow, next week, next month" to restore Metro construction funding, but that could happen only when the District and the Department of Transportation are in compliance with Section 23.

Of course, the floor discussion covered many other topics, but in the end, the House passed the bill, absent Metro funding, without a recorded vote. [District of Columbia Appropriations, 1971, *Congressional Record-House*, June 4, 1970, pages 18358-18370]

*Star* editors appreciated the efforts of Representatives Broyhill and Gude, both freeway supporters, to separate the freeway fight from Metro construction. "But what their pleas did reflect was a recognition that the transit program now has reached the critical stage in which a prolonged delay in appropriations could sink the whole business, probably permanently."

The editors could not contest Chairman Natcher's recitation of the history of "broken promises which have left the highway program once again 'in confusion.'" Secretary Volpe and Mayor Washington "should be hammering on Natcher's door in search of an agreement."

In 1969, the impasse had been broken only by President Nixon's intervention. "We see no way out of the present mess short of a repetition of this action, in which a new agreement could be reached in terms of the conditions that exist today." Sadly, Secretary Volpe and Mayor Washington do not seem able, "of their own volition," to reach such an agreement. "But there is no reason to anticipate that they will do so in the absence of a strong push from the boss." ["Those Subway Funds," *The Evening Star*, June 12, 1970]

The Senate Committee on Appropriations approved its bill for the District of Columbia on June 18. Working from the House bill, the Senate committee deleted the \$500,000 appropriated for the Three Sisters Bridge, but recommended appropriating \$34.2 million for Metro construction. Chairman Proxmire realized changes would be a major issue during the House-Senate conference, but said, "It seems to me we have a clear commitment to move ahead with the subway. Once you start work on it, it's bound to be wasteful and increase the cost if you interrupt it." He added, "I think Mr. Natcher and I will be able to arrive at a fair settlement." [District of Columbia Appropriations Bill 1971, Committee on Appropriations, United States Senate, 91<sup>st</sup> Congress, 2d Session, Calendar Nol 939, June 18, 1970; Moore, Irna, "Metro Funds Put Back in Budget," *The Washington Post and Times Herald*, June 18, 1970]

On June 26, Chairman Proxmire brought the District of Columbia Appropriations Act of 1971 to the Senate floor. Referring to the Metro funding, he told his colleagues, "This is the principal difference between the House and the Senate. They did not fund the subway, we did." The Senate approved the bill without discussion of the Metro funding or the freeway impasse. [District of Columbia Appropriations, 1971, *Congressional Record-Senate*, June 26, 1970, pages 21686-21689]

In conference, Representative Natcher prevailed, as explained in the conference report:

The list of projects approved does not include funds for the District's share of the Washington Metropolitan Area Transit Authority's construction program. The managers on the part of the House reiterate their opinion that there is a place for both a freeway system and a rapid rail system in our Capital City. In order to meet the tremendous day-by-day growth of traffic, the freeway program must be carried out along with the rapid transit system. There is no desire on the part of the House managers to halt the subway program and the denial of funds at this time will not stop construction already underway and the managers are determined to do everything they can to enable the Authority to maintain its construction schedule and the integrity of the financial plan. When the current impasse on highway construction in the District of Columbia is resolved, every consideration will be given to a supplemental request for the District's share of the cost of the Washington Metropolitan Area Transit Authority's fiscal year 1971 construction program. [District of Columbia Appropriations, 1971, Conference Report, U.S. House of Representatives, 91<sup>st</sup> Congress, 2d Session, Report No. 91-1267, June 30, 1970, page 4]

According to the *Star*, the phrase beginning "are determined to do everything" was included in the report language at Chairman Proxmire's request. He told reporters

Conferees also retained the appropriation of \$500,000 for the Three Sisters Bridge.

Chairman Proxmire told reporters that Senate conferees understood Chairman Natcher's view on the importance of developing Metro and freeways at the same time. "Proxmire said the Senate conferees felt that unless they took the position they did, a bill might not have been reported out until fall. [James, Betty, "D.C. Budget Cleared by House," *The Evening Star*, July 1, 1970]

On the House floor, Chairman Natcher explained the decision by conferees to remove the Senate's appropriation for Metro. Referring to the language quoted above, he said, "It clearly shows that the other body and this body, and especially the Committee on Appropriations in the House, believes that we must have both a rapid transit system and a freeway system in our Capital City." On June 30, the House approved the conference report without further discussion of the subway funding. [Conference Report on H.R. 17868, District of Columbia Appropriations, 1971, *Congressional Record-House*, June 30, 1970, pages 22158-22156]

Senator Proxmire introduced the conference report in the Senate on July 1. After the report was read into the record, Senator Tydings said he opposed the report because it denied funds for Metro construction. In so doing, he said, "it insults the citizens of the sovereign States of Maryland and Virginia and the District of Columbia; and because it represents an unprecedented and intolerable interference in the local affairs of these States."

He recognized that Senator Proxmire had tried his best to retain the funds, and that the House conferees had forced the deletion:

Mr. President, speaking for the government and the citizens of Maryland, I deeply resent this continued interference with our purely local questions. Nowhere else in this Nation has Congress so abused local governments than as in this case of stalling subway construction for the Washington Metropolitan area. Never has Congress blackjacked local governments as it has attempted to in this case.

What business is it of Congress where Maryland, the District of Columbia, and Virginia decide to put their highways and subways? What right has Congress to jeopardize the Metro program? By what authority does Congress tell the people of Maryland to go without their vital Metro mass transit system because of a highway mess in the District of Columbia?

He hoped the House would "reconsider its strategy of holding the subway hostage for construction of a few particular, highly controversial freeway routes." He did not intend "to stand idly by" in the face of this "gross insult to the people and governments of this area." He would not try to block the pending bill, but if the impasse were not resolved by the fall, he would have to "recommend that we amend this highway financing authority to make it clear that the Metro and the freeway program must be constructed together; that one will not be held hostage for the other; and that funds for the Metro system will be appropriated together with funds for freeway construction" to free both systems "to proceed in accordance with the desires of the people and governments of Maryland, Virginia, and the District of Columbia." He introduced

letters, resolutions, and statements from Maryland State and local officials in support of breaking the impasse holding up Metro funding.

Several Senators, knowing the conference report would be approved without a recorded vote, voiced that agreement with Senator Tydings. Senator Spong and Byrd of Virginia and Senators Eagleton and Clifford Case applauded the Tydings comments.

Senator Proxmire responded that “I agree with virtually everything he has said in his statement. I agree enthusiastically.” He explained:

Again and again in the conference I brought up the point that while there had been some reluctance on my part last year to fund the subway because of the inflationary tendency involved in starting the biggest construction project in the history of the country, it would be enormously expensive to halt it. And for that reason they agreed. And they realize that it would be a disaster if we had to stop construction on it.

We have to be realistic and realize that they can always stop anything we do over here. But there is every likelihood and every expectation that we will be able to resolve that impasse by mid-September.

House conferees were “adamant in reasserting the position advanced by Chairman Natcher.” The Senate conferees countered that maintaining the continuity of Metro construction was vital and that “it was both unreasonable and unrealistic to delay construction during the critical first phase of the project’s construction schedule.” Given the House insistence, the Senate conferees either had to yield or face the prospect of “ending up in a stalemate.”

The Senate approved the conference report with a recorded vote. [District of Columbia Appropriations Bill, 1971-Conference Report, *Congressional Record-Senate*, July 1, 1970, pages 22488-22495]

President Nixon signed the legislation on July 16, 1970 (P.L. 91-337).

### **Volpe Before the Subcommittee on Roads**

On June 10, 1970, Secretary Volpe appeared before the House Subcommittee on Roads to testify on plans for the Federal-Aid Highway Act of 1970. During the question period after Secretary Volpe testified about the needed 2-year reauthorization bill, Chairman Kluczynski asked about a letter the Secretary had sent to Chairman Fallon on May 4. (He sent a similar letter to Chairman Randolph.) It stated:

In the review of the individual State estimates by the Bureau of Public Roads there were identified several system segments on which question exists as to whether the highway can be built. In some cities the responsible officials have declared the highway is not wanted and will not be constructed. In certain instances the Governors have made similar declarations. The cost of completion reported for some sections is so great as to warrant bringing to the attention of the congressional committee.

The letter listed 13 areas with controversial Interstates totaling \$3.9 billion. The areas included Baltimore, Boston, Chicago, Cleveland, Hartford, New York City, Philadelphia, Providence, Seattle, Shreveport, and the District of Columbia. The list also included I-93 through Franconia Notch in New Hampshire and the adjoining segment in Vermont. Secretary Volpe explained that the list provided to Chairman Fallon included “projects on which there has been little or no progress in recent years.” He added:

They cannot be completed if we continue to procrastinate, as is the case in some of the projects, and defer decisions which we believe must be made in the very near future if we are to complete the Interstate Highway System in the time frame which we have been talking about.

The implication was that while the Department of Transportation had included the projects in the latest ICE, Congress may wish to consider removing them. None were “completely essential to an integrated national system.”

Chairman Kluczynski was particularly concerned because the list included the Crosstown Expressway in his hometown of Chicago, a freeway the city and Governor wished to complete. Similarly, Chairman Fallon was concerned about routes in his hometown of Baltimore.

Chairman Kluczynski noted, however, that the list included proposed freeways in the District of Columbia. The letter estimated that completing the District segments (Three Sisters Bridge, North-Central Freeway, Potomac River Freeway, the North and South Legs of the Inner Loop Freeway, and the East Leg, north of Bladensburg Road) would cost \$650 million from the Highway Trust Fund. If these and other controversial routes were not going to be built, or indefinitely delayed, Secretary Volpe thought the apportionment factor resulting from the ICE should be recalculated with these costs deleted. [“Federal-Aid Highway Act-1970,” Hearings, Subcommittee on Roads, Committee on Public Works, U.S. House of Representatives, 91<sup>st</sup> Congress, 2<sup>nd</sup> Session, Report 91-35, pages 954-956; Green, Stephen, “Volpe Casts Doubt on Freeway Future,” *The Evening Star*, June 11, 1970; Secretary Volpe’s letter appears on pages 1038-1039 of the hearing record.]

(Helen Leavitt appeared before the subcommittee on May 12 to testify against the highway program and the Highway Trust Fund. She also opposed a Transit Trust Fund because of her view that transportation decisions should be based on needs, not funding source.

(Representative Harsha questioned her qualifications. He had a copy of her book, which he said provided an incorrect name of his law firm. He asked if she drove an automobile. “Yes,” she answered, “occasionally.” He told her, “Then you contribute to all this pollution you are complaining about.”

(Who supported her study of highway programs? She did not understand, replying, “Who, if any? My husband.” He clarified that he was asking if she received money from any foundations. No, she had not, although she received an advance of \$2,000 from Doubleday.

(As for her criticism of the safety record on the Nation's highways, he said, "taking your suggestion to maybe the ridiculous point, if we did away with all highways, we would not have any accidents." She replied, "Well, we would not have any automobile accidents." He concluded, "Okay. That is all I have."

(Chairman Kluczynski admitted he did not have a copy of her book but would get a copy and read as much as he could before the next day's hearing. "This is one time Big Klu is happy he is not a lawyer, because you would have me quoted in that book of yours, too. [Laughter]" He said, "I admire you for your courage, fighting spirit, and it has been a pleasure to have you before the committee." If she had any more testimony, he encouraged her to send it in. [pages 411-416]

(If he did read *Superhighway-Superhoax*, Chairman Kluczynski would have found that he was mentioned and quoted several times, initially via a quote defending the Public Works Committee's wisdom in promoting the Interstate System in 1955-1956:

When the pressure was at its heaviest, one of the committee members made this remark, "We have heard from everyone except the public." No one can speak adequately for the public except their representatives in Congress. The public has no organized lobby or pressure groups and I am confident that we will give the public proper representation in the consideration of . . . [the proposed highway bill]. [Leavitt, page 50]

(She referred to or quoted him several more times, including his comment at the end of the December 1968 hearings on District freeway problems:

We want that bridge," said Subcommittee Chairman Kluczynski . . . . Serving notice that he expected Boyd to approve the new Potomac bridge by the end of the month, the chairman added, "If he doesn't act, the Congress will. That's a mandate." [page 98]

(In summing up the views of Chairman Kluczynski and his Public Works colleagues, Leavitt wrote, "It would be difficult to describe Kluczynski's committee as sympathetic to *any* criticism of freeways." [page 218, italics in original.]

## **On Trial**

As directed by the three-judge panel of the U.S. Court of Appeal, Judge Sirica convened a trial to consider the Three Sisters Bridge lawsuit on June 8.

In an opening statement, Owen argued that the city had violated planning requirements before beginning construction. He also questioned the design based on the deposition by FHWA's Hall. "The fact is that the District is proceeding with the construction of a bridge which may or may not fall down . . . nobody knows for sure." Construction must be stopped until the city held the required design and location hearings. He said the District Highway Department had signed a certificate approving the location belatedly in "an effort to paper over the crack in the government's case." He added that the city had approved the bridge only after "enormous political pressure" related to Metro funding and, therefore, should be ruled invalid.

John R. Hess, representing the District of Columbia, and McKevitt, representing Secretary Volpe on behalf of the Justice Department, said they would demonstrate that project development complied with applicable laws and regulations.

After the opening statements, Judge Sirica agreed that, “This is going to be a very crucial question, a very important question,” referring to the question of political pressures. [“3 Sisters Bridge Trial Opens With Accusations,” *The Evening Star*, June 8, 1970; “Three Sisters Trial To Include Politics,” *The Washington Post and Times Herald*, June 9, 1970]

The entire second day of the trial consisted of Owen questioning two FHWA officials, Associate Administrator for Planning E. H. “Ted” Holmes, and Rex I. Wells of the Office of Environmental Policy. They had prepared a memorandum recommending approval of the span. That memorandum was given to Secretary Volpe, who approved it in October 1969, about 2 months after Secretary Volpe restored I-266 to the Interstate System. Owen was attempting to demonstrate that the timing was intended to “paper over” legal defects in the approval process.

On June 10, Judge Sirica asked Hess and McKevitt to provide copies of any documents reflecting congressional pressure of Secretary Volpe. He rejected a motion by Owen to subpoena the documents and questioned whether documents could prove that Secretary Volpe was reacting only to congressional pressure when he restored I-266 to the Interstate System.

Owen referred to Secretary Volpe’s deposition in the case, during which he acknowledged talking with Chairmen Natcher, Fallon, and Kluczynski, as well as Representative Cramer about the bridge.

Former Administrator Bridwell testified during the day that his decision to remove the bridge from the Interstate System was not a result of political pressure. Eisen summarized:

He said that he gave “very much” weight to the Highway Act of 1968, in which Congress required building the bridge, and even sought a legal opinion on “the flexibility I had within the statutory language.”

Bridwell said he deleted the bridge at Mayor Walter E. Washington’s request after the National Capital Planning Commission and the City Council adopted a highway plan omitting it.

“It only came to me a few days before leaving office,” he explained, adding. “I acted promptly . . . .” [Eisen, Jack, “Hill Pressure On 3 Sisters Questioned,” *The Washington Post and Times Herald*, June 11, 1970]

On June 11, McKevitt told the court that no documents existed showing political pressure on Secretary Volpe to restore the bridge to the Interstate System. In view of former Administrator Bridwell’s testimony, Judge Sirica called for documents reflecting earlier political pressure by bridge opponents to kill the project during the 6 months between enactment of the 1968 Act and Bridwell’s departure from FHWA.

According to Eisen, the trial “moved slowly as lawyers for the bridge opponents methodically submitted evidence and questioned witnesses in an attempt to prove that federal and District of Columbia officials took shortcuts in required hearings and administrative procedures”:

Charles E. Hall, division engineer for the U.S. Bureau of Public Roads, acknowledged that the bridge now in preliminary construction stages is not the same in proposed design or precise location as the one considered at a public hearing in 1964.

He also testified that he still is not sure the bridge as designed, using a single span of long reinforced concrete, can be built. But he said a bridge of similar design could be built of steel. Whatever is built, he insisted, would be safe. [Eisen, Jack, “Judge Seeks Files on Cancellation of 3 Sisters,” *The Washington Post and Times Herald*, June 12, 1970]

Secretary Volpe took the witness stand for 5 hours on Friday, June 12. He testified that he approached the future of the bridge “with a completely open mind.” He ordered new department of transportation studies of the need for the bridge and its potential adverse impacts. He said that he met with bridge supporters and opponents and that he had considered their views. He was contacted by Chairman Natcher and other congressional leaders. However, he declared, “They know I don’t bend easily.”

In the end, he concluded that the Three Sisters Bridge was needed and that it was essential to the National System of Interstate and Defense Highways. He denied that he had approved the bridge to secure release of the Metro construction funds.

Owen noted that Secretary Volpe’s assertion that the bridge was essential to the Interstate System contradicted his May 4 letter to Chairmen Fallon and Randolph asserting that urban freeways were not needed for the national system although they may be of local importance. Eisen reported, “Questions by Roberts B. Owen . . . failed to resolve the seeming contradiction.” [Eisen, Jack, “Volpe Denies Hill Pressure On 3Sisters,” *The Washington Post and Times Herald*, June 13, 1970; Green, Stephen, “Three Sisters Bridge Vital, Volpe Testifies,” *The Evening Star*, June 13, 1970]

The following Monday, June 15, Administrator Turner told the court that politics and pressure did not play a role in his decision to restore I-266 to the Interstate System. He acted on the merits of the bridge. He had always favored the bridge project, he said, and believed it was needed for traffic relief.

To make their case, Owen and Norton traced the events leading to construction of the Three Sisters Bridge. Bridwell, in one of his last acts, removed I-266 from the Interstate System. Chairman Natcher warned that he would withhold the District’s matching funds for Metro if the city and Department of Transportation did not comply with Section 23. On August 9, the city council agreed to build the bridge. On August 11, Secretary Volpe ordered Turner to put I-266 back on the Interstate System. Turner did so the following day. The same day, Chairman Natcher made clear that his decision depended on actual construction, not promises. President Nixon’s August 12 letter to Chairman Natcher summarized the recent steps in an effort to convince Chairman Natcher to release the funds. “I trust these actions fulfill the criteria that you

set forth.” Once ground was broken on the bridge project, Chairman Natcher released the funds, allowing for the Metro groundbreaking ceremony.

Norton, seeking to have President Nixon’s letter entered into evidence over government objections, said, the letter was “the clearest evidence of the linkage between these two actions [bridge construction leading to subway funds] that there could be.” Judge Sirica admitted the letter in evidence. [Eisen, Jack, “Nixon Letter Cited as Evidence of Pressure to Build Three Sisters,” *The Washington Post and Times Herald*, June 16, 1970]

Director Airis testified in the trial on June 16. He did not recall any pressure to expedite construction of the bridge. He said the implication was that there is something wrong with speeding up the job. “That has always been my goal . . . . I try to do what is in the public interest and is proper.” He added, “All kinds of people give me advice . . . but when something goes wrong, there is the damndest scampering for cover that you ever saw . . . but I can’t dodge.”

He acknowledged that he sent progress reports to Chairman Natcher. Norton showed Airis transcripts of his appearances before Chairman Natcher’s subcommittee during which the freeway-subway impasse was discussed. Airis, however, said he could not recall discussing the political link between the modes.

Norton also asked about a September 2 letter from Airis’s deputy, Gerald I. Sawyer, to FHWA Division Engineer Hall, reading in part, “This will confirm our mutual agreement in the project. This action was taken due to urgency in getting the contract under way.” The copy in Norton’s hand had Hall’s initials and Hall’s notation: “This was to provide a two-week [contracting] period because of the urgency of starting construction at the behest of Congress and the need of D.C. for [Metro] construction money.” Asked about this exchange, Airis replied, “I have no idea . . . I don’t know what he’s referring to.”

Airis returned to the stand the following day, June 18. He testified that he had adhered to all requirements for public hearings and had considered possible social and economic impacts prior to approval. He said he had always acted in “a meticulous manner” in carrying out project development.

Judge Sirica recessed early for the week, at plaintiffs’ request, until Monday, June 22. [Eisen, Jack, “Outside Pressure on Bridge Denied by D.C. Road Chief,” *The Washington Post and Times Herald*, June 17, 1970; “Bridge Plan Legal, Airis Tells Court,” *The Washington Post and Times Herald*, June 19, 1970]

The trial lasted 11 days. As Professor Schrag explained, Owen had a unique strategy:

He had learned that a completed Three Sisters Bridge, with its approaches, would block Sirica’s own commute down MacArthur Boulevard. He could hardly make that argument in open court, so instead he simply laid out the maps, saying, “Judge, I think you need to understand this.” One of the government lawyers broke in, saying, “Ha, ha, ha. Judge, I see what he’s trying to do. He’s trying to persuade you that you will not be able to drive to work if the bridge is built.” Sirica looked stunned, then announced a twenty-minute

recess, during which he scrutinized the maps in the privacy of his chambers. Returning to the courtroom, the judge was much more sympathetic to the plaintiffs . . . . [Schrag, pages 136]

The final day of the trial was June 24. The key issue had been whether Secretary Volpe, Director Airis, and others had skirted statutory and regulatory requirements in moving ahead with the bridge to obtain Metro construction funds that Chairman Natcher had bottled up. At one point in the trial, Judge Sirica had said the issue was not whether political pressure had been applied, but whether the pressure was improper.

With the trial nearly over, Owen said he would ask for a preliminary injunction on the grounds that the safety of the bridge design had not been established. Jack Eisen reported that Judge Sirica said that the legal issues involved were complex and confusing, calling the case “highly emotional . . . on both sides.” Eisen continued, “Sirica, in an informal reply from the bench not included in the trial transcript, said: ‘I’m not going to act on any injunction in this case until I decide it . . . . I’m going to decide it at one time.’” [Eisen, Jack, “Bridge Work Halt Refused,” *The Washington Post and Times Herald*, June 24, 1970]

On August 3, Judge Sirica announced his decision. He did not question the legality of the bridge, which Congress had ordered to construction. “It is not for this court, or for any court to decide whether a bridge across the Potomac in the vicinity of Three Sisters Island is needed, or if the bridge as presently planned is a worthwhile project . . . .” The court’s role was limited to determining if all legal provisions had been followed.

As for political pressure, he found that plaintiffs had not demonstrated “that the actions of Mr. Natcher or any other individuals were in any way dishonest, illegal or unusual under the circumstances . . . . But if these actions had the effect of causing officials to disregard obligations imposed on them by statute, then this court must halt construction of the bridge until . . . statutory obligations [have been met].”

He concluded that Secretary Volpe had approved the bridge “on the merits of the project and not solely on extraneous political pressures.” Moreover, the city and Secretary Volpe had complied with Section 4(f) and other issues plaintiffs had raised, but with one exception. He found that city officials had overlooked the design hearing and acted too quickly in hopes of freeing funds for subway construction:

The court finds that the present design of the bridge is so substantially different from that proposed in 1964 that the public should be given an opportunity to present their views on the project as presently planned.

Last but not least, the cost of the present project is estimated at \$20 million as compared with an estimate of \$6 million in 1964.

He also ruled that no Federal-aid highway funds could be used for preliminary construction work on the bridge until tests took place to determine whether the design was structurally sound.

District officials indicated they were considering an appeal of the ruling; some said they would move fast to an appeal.

Eisen noted that the decision, while based on procedural issues, was a major victory for project opponents. ECTC's Abbott said that the lawsuit had been helpful because opponents "have gained valuable time to marshal their forces and to move on . . . the battle against air pollution."

[Eisen, Jack, "Judge Delays Construction of 3 Sisters," *The Washington Post and Times Herald*, August 4, 1970; Green, Stephen, and Hirzel, Donald, "D.C. Aides Indicate They'll Appeal Halt to 3 Sisters Span," *The Evening Star*, August 4, 1970]

The *Star* said of the decision that another "knot has been added to the District's transportation tangle." Nevertheless, the editors hoped "that the legal twists can be unwound this year and that neither the freeway nor subway projects will be thwarted." The call for public hearings on the bridge project "does not raise an insuperable barrier," but it would delay construction and "that is distressing."

The editors were encouraged that Judge Sirica had not ruled on the merits of the bridge or challenged Section 23 of the Federal-Aid Highway Act of 1968. Section 23's "nevertheless" phrase was "a stern command that has been tortuously circumnavigated in the drawn-out legal hassle over the project."

Regardless, the editors hoped that Chairman Natcher would note that "Judge Sirica is not attempting to foreclose the Three Sisters span, and will move to prevent the Metro from grinding to a halt in its infancy":

He and his committee should take into account that District officials and the Nixon administration both have striven in the best of faith to break the bridge-freeway impasse. The new Potomac crossing, the expressways, the subway are all vital components of a balanced system that is needed to rescue the Nation's Capital from traffic chaos. One component shouldn't be scuttled because another has suffered a temporary setback. ["Three Sisters Delay," *The Evening Star*, August 5, 1970]

After attorneys for the plaintiffs and defendants could not agree on the terms of an injunction, Judge Sirica wrote it himself on August 7. When the city asked for permission to complete the pier contract, Owen pointed out that the U.S. Court of Appeals had ruled that work must be halted unless Judge Sirica found that all legal requirements had been satisfied, and he had not done so. Judge Sirica signed the injunction halting work on the bridge, but included a phrase delaying the effect of the injunction for 20 days to give the city time to appeal regarding the existing contract. ["Bridge Injunction Delayed 20 Days For Appeal by D.C.," *The Evening Star*, August 8, 1970]

After the hearing, Airis told reporters that a 6-month delay in the contract would add \$384,000 to the cost of the bridge; a year delay, \$650,000. The city would reimburse the contractor for expenses at the bridge site. [Eisen, Jack, "Bridge Project Halted—Court Orders Three Sisters

Design Hearing,” *The Washington Post*, August 8, 1970; “Bridge Injunction Delayed 20 Days For Appeal By D.C.,” *The Evening Star*, August 8, 1970]

When the 20 days expired, the city was still deciding on an appeal. The city halted construction of the Three Sisters Bridge on August 27 in compliance with the injunction. Workers left behind two excavation holes they had drilled in the rock bed for support piers for the bridge. [“Work Stops on 3 Sisters Bridge Job,” *The Washington Post and Times Herald*, August 28, 1970; Green, Stephen, “Work Halting on 3 Sisters Bridge Today,” *The Evening Star*, August 27, 1970]

The Justice Department and the District’s corporation counsel advised the city to appeal Judge Sirica’s ruling, but on August 28, Mayor Washington and Secretary Volpe announced they would not do so. Although the decision was in contrast to President Nixon’s assurance to Chairman Natcher that court challenges would be fought vigorously, they concluded that complying with the Judge’s condition was the “most expeditious” way to get back to construction:

Officials said that by going ahead with hearings now, the city and DOT believe they will show Rep. William N. Natcher, D-Ky., that they are attempting to follow his wishes in building the bridge that is opposed by many individuals and civic groups.

City officials said they would let the Department of Transportation handle sensitive negotiations with Congress on how the decision to hold the hearing would affect Metro funding. Reporters called Administrator Turner, who had been designated to negotiate with Chairman Natcher. Turner said, I tried to call him but couldn’t reach him. “I don’t know what his reaction was.” Turner added, “It was the mayor’s decision to go ahead.”

Mayor Washington and Secretary Volpe announced that a hearing on design of the Three Sisters Bridge had been tentatively scheduled for November 17. The goal was “early completion of the Three Sisters Bridge.”

Kennan, speaking for plaintiffs, said they would appeal Judge Sirica’s August 3 ruling.

[Green, Stephen, “November Hearing Set on Three Sisters Bridge,” *The Evening Star*, August 19, 1970; Meyer, Eugene L., “No Appeal Planned On Bridge,” *The Washington Post and Times Herald*, August 29, 1970]

Robert L. Asher of the *Post* editorial page staff, published a lengthy article about the history of the Three Sisters Bridge on August 22, 1970. He began:

For something like 13 years, it has been possible in this town to say two words that can stop, start or totally destroy a conversation about local affairs: “Three Sisters” . . . . For when you see “Three Sisters” in the page one headlines, it refers to a bridge that one cannot see but which one can feel very strongly about. And its implications touch politics, home rule, money, planning, conservation, freeways, subways, housing and Presidents of the United States – among other things.

Asher traced the history of the bridge from the Mass Transportation Survey of 1959 through Judge Sirica’s injunction. After that decision, “Bridge foes and anti-freeway forces cheered,

vowing to renew their battle with vigor – and that’s where Three Sisters sits today, with some early construction equipment idling out there on the old rocks.”

He also pointed out that the North-Central Freeway had seemingly been put on a back burner:

That freeway, once planned through the predominantly white Wisconsin Avenue corridor, had been shifted on the drawing board to a mostly black area of Northeast Washington, running along the B&O railroad tracks through the Brookland-Catholic University area out to Silver Spring.

Leaders of ECTC led the fight against the freeway because they saw it “as destroying communities, removing houses, encouraging more cars, polluting the air and necessitating still more land clearance to park a new onslaught of autos.” They also “decried the action of Congress in doing unto a voteless city what a voteless city was legally powerless to undo: set a local policy and make it stick.”

At least Section 23 of the 1968 Act had called for a study of the corridor, not its immediate construction. Now, in the wake of Judge Sirica’s injunction, the North-Central Freeway was “something that Congress has not forgotten but that city officials would like to.” Congress could insist on its construction, as it did the bridge, whether city officials want to build it or not. Once again, however, the “subway is in new jeopardy with the old Natcher warning . . . . And again, the Metro faces serious construction troubles. And the bleat goes on.”

The White House, Asher wrote, was well aware of the situation “and of the need to do something very soon.” In that regard, he wrote:

There are rumors that (1) the White House will simply announce to Natcher, the city and everybody else that the North Central Freeway is going to be built; (2) that the 1970 Highway Act will emerge with language geared to accelerate the bridge, the freeway and any other problems that the public works committees see in their way; and (3) that the makeup of the city council may in time be changed, by moving some members into judgeships and replacing others when their terms expire.

Yet in this apparently endless, multimasterminded [sic], emotional set of developments over the years, rumors – like real reports – tend to be shortlived and shaky. In this newspaper’s library of clippings, for example, there is one dated Nov. 8, 1967, that begins: “The Three Sisters Bridge is Out.” An astute library assistant has added a succinct commentary in large, red letters all across the item: “DO NOT USE.” [Asher, Robert L., “The Three Sisters—and How They Grew,” *The Washington Post and Times Herald*, August 22, 1970]

### **The Road To Somewhere**

In November 1968, the *Star* reported that a few frustrated motorists, tired of “double crossing,” were using the so-called “road to nowhere” – the unpaved extension of the George Washington Memorial Parkway from the District line to Canal Road at Chain Bridge. NPS refused to pave the road until the District decided on the traffic network around Key Bridge:

Some time ago, some brave souls decided to just drive on the dirt and cinder roadway between the District line and Canal Road, taking a chance they will not be stranded. And since the impasse over completing the road still exists, they are still [driving] over the road in unfinished form.

The dirt road is very dangerous in wet weather, of course, and the deep potholes and tire marks give evidence of many stuck cars.

The report described what city-bound motorists experienced after reaching the District line:

After driving for about a mile after the pavement ends, the motorists come up a slight hill and have to wait for an opening in the stream of cars on Canal Road. Then they have to gun their motors and dart across to continue east on Canal Road NW.

Heading home in the evening, the motorists have little danger from the traffic because they just keep going west at the entrance to Chain Bridge, instead of turning south with the normal stream of traffic.

Commuters using the road were greeted by two signs. One read: "Rough Road, Proceed at Own Risk." The other read, "No Through Traffic, 7-9 a.m." ["It's a Rough Road, But Many Take It," *The Sunday Star*, November 3, 1968]

To dramatize the need to complete the parkway, Representative Gude joined officials of the Washington Aqueducts Division of the U.S. Army Corps of Engineers on September 11, 1968, in "an eels-eye tour" of the conduits under MacArthur Boulevard. "We are having this tour," he said, "because we just have to keep hammering away at the need to get the traffic off the conduit." Officials came equipped with hip boots and long rain slickers for the visitors.

Once in the 9-foot conduit, the visitors walked through about 6 inches of murky, muddy water and a slippery surface. Using his flashlight, Representative Gude pointed at crevices in the ceiling. "These pieces of stone are about to fall." He poked them with a ruler and hunks fell.

Colonel William J. Love said, "Traffic on the surface has caused the top to deteriorate and settle so that now it is only about 8 feet 7 inches in some places." Daniel W. Watt, chief of the Aqueduct Division, told the Congressman that a new road had been built to route traffic away from the most seriously damaged portion. [Christmas, Anne, "Guide Leads Tunnel Tour," *The Evening Star*, December 12, 1968]

The problem had persisted for several years, but an end came in view less than a year later when NPS Director Hartzog and Director Airis of the District Highway Department reached agreement on a solution. On August 19, 1969, Airis told reporters that he had been reluctant to proceed given the uncertainty of the location of the Three Sisters Bridge, Potomac River Freeway, and Palisades Parkway. The agreement became possible when the city council agreed to proceed with construction in accordance with Section 23 of the Federal-Aid Highway Act of 1968.

According to the *Star*:

Only a short distance from the unpaved section Chain Bridge empties Virginia traffic onto Canal Road which runs for three lanes between the bridge and Arizona Avenue. Two lanes are used for District-bound traffic in the morning and two lanes for traffic leaving the city in the afternoon.

Under the agreement between the city and the Park Service, a traffic light will be placed at Canal Road and Chain Bridge.

NPS expected the paving to be completed early in 1970 at an estimated cost of \$100,000, but no one could be certain how much traffic would use the paved parkway segment. Airis said, "We have to be careful that the parkway does not remain the only limited access road to the District from that part of Maryland."

At that point, about 200 motorists a day were taking the risk of using the unpaved roadway. The *Post* reported:

The rutted gravel road to Canal Road is used by some motorists except during the morning rush hour, when it is closed. Most traffic switches over to MacArthur Boulevard at a temporary ramp near the old Glen Echo amusement park.

Closing the "road to nowhere" promised some improvement, as a *Post* columnist explained, but was only a step to a completed network:

When the quarter-mile missing link has been added, this limited-access parkway will carry a heavy stream of traffic between the beltway and Georgetown. Full usefulness of the route will await, however, construction of the Palisades Parkway to carry traffic through Georgetown and into the downtown area. If the Three Sisters bridge controversy has at last come to an end, the construction of the Palisades Parkway and completion of Maryland's connecting Memorial Parkway (some of which is now only two lanes) should be among the first fruits of settlement.

[Green, Stephen, "Bids Sought to Link Parkway to D.C.," *The Evening Star*, August 20, 1969; Eisen, Jack, "Park Service To Close Gap In Parkway," *The Washington Post and Times Herald*, August 21, 1969; Around Town, *The Washington Post and Times Herald*, August 25, 1969]

On October 22, Representative Gude announced that NPS had awarded the \$98,000 contract for the paving. Work was to begin on November 17, with construction expected to take 3 months. ["Contract Let In Last Link Of Parkway," *The Washington Post and Times Herald*, October 23, 1969; "Work Slated To Pave Link Of Parkway," *The Washington Post and Times Herald*, November 13, 1969]

The paving took longer than expected, but at 9:30 on June 16, 1970, Representative Gude cut a ribbon and lead a caravan of cars into the city. The opening was expected to reduce traffic on MacArthur Boulevard, a long-sought goal of the U.S. Army Corps of Engineers that was still concerned about the conduit under the pavement. The newly paved roadway also was expected to reduce traffic on the Virginia section of the George Washington Memorial Parkway with the end of double crossing by Maryland residents bound to or from the District of Columbia.

[Hebald, Anne, "GW Parkway Is Completed, Last Section Paved to D.C.," *The Washington Post and Times Herald*, June 16, 1970]

June 17 was the first day that morning commuters had the full use of the road, but as the *Star* put it:

Motorists on the old "road to nowhere" this morning at last found themselves going somewhere – but very, very slowly.

By 8 a.m., traffic on the parkway had backed up a mile:

Angry drivers had to wait nearly 15 minutes before they were able to go through a new traffic light at Chain Bridge and Canal Road.

Chain Bridge motorists, who usually have a clear shot across the Potomac River, found their progress slowed to a crawl, as, for the first time, they had competition for Canal Road from the parkway motorists . . . .

"It's just not going to work," said Officer A. D. Kidwell of the Park Police. He could tell from first-hand experience since he rapidly was becoming the most unpopular man at the intersection.

Working the traffic light manually, Kidwell kept pushing a little brown button that changed the light from green to yellow to red and back again. All it brought him was verbal abuse from motorists who didn't make it through.

"Give us a break!" shouted one driver who at last managed to go on Canal Road from the parkway. ["Road Goes Somewhere—But at a Snail's Pace," *The Evening Star*, June 17, 1970]

Evening flow out of the city on the former "road to nowhere" went smoothly because motorists could turn onto the paved parkway without crossing a line of traffic.

By the end of June, the District Department of Highways and Traffic made some adjustments to operating rules. Left turns were prohibited from Arizona Avenue, NW., to inbound Canal Road between 7 and 9:30 a.m., Monday through Friday. The left turn also was prohibited from 4 to 6:30 p.m. because Canal Road was made one-way outbound from Foxhall Road to Arizona Avenue. Further, the newly paved segment was made a one-way road outbound during the evening peak period. Traffic moving from Montgomery County into the city would have to use alternative routes. ["Rules Revised To East Traffic," *The Evening Star*, June 25, 1970; "One-Way Rules Set For Section Of GW Parkway," *The Evening Star*, June 29, 1970]

### **The Federal-Aid Highway Act of 1970**

In general, Congress authorized funds for the Federal-aid highway program every 2 years. As Congress began working on the Federal-Aid Highway Act of 1970, many issues were controversial, including efforts to divert Highway Trust Fund revenue to transit, especially rail

transit – to fund their construction and subsidize operations. Members of Congress from large cities and those with existing or perspective rail transit systems strongly advocated diversion. They also were seeking ways to resolve controversies over urban Interstate segments. Often, local officials did not want to build them, but if they did not proceed, they would lose hundreds of millions of dollars in economic stimulus. They would have preferred to keep the funds for use on other projects, particularly rail rapid transit in the larger cities.

The District of Columbia's failure to comply with Section 23 of the Federal-Aid Highway Act of 1968 also was a concern, especially in the House of Representatives, as reflected in the action on the District of Columbia Appropriations Act of 1971. In considering the biennial highway bill, the Senate and House took different approaches.

On July 20, 1970, Sammie Abbott was the next to last witness to testify before the Subcommittee on Roads, with only Chairman Randolph in attendance; Senator Cooper joined shortly after the start. Abbott began with an insult:

The cold climate in this room, Mr. Chairman, does not have as much of a chilling effect on me as the absence of Senators who should be sitting up there listening to testimony in order to arrive at a judgment . . .

Abbott was interrupted regularly as he attempted to present his statement. For example, Senator Cooper asked if Abbott "had experience in this field." Abbott responded:

I don't know. I studied architecture. My experience came in fighting a freeway now for about 10 years. I have read every book on the subject. I think I am an expert, because nobody in the District of Columbia Highway Department or at any level will debate the issue in front of the media or in public. I consider myself an expert; yes.

He referred to an article in that day's *Post*, "20 Billion Dollars a Year for Highways." He said, "The Post belatedly has come around to a realization that the highway trust fund has to be put to solving the problems of the abuses that it has caused." Chairman Randolph interrupted. "Just a moment. You speak very fast, Mr. Abbott. Sometimes it makes it difficult for us to interrupt."

(After Abbott made a fairly long statement about the negative impact of Interstate freeways on cities, especially in Washington, including congestion and pollution, Chairman Randolph asked:

The Chairman. Do you own a car, Mr. Abbott?

Mr. Abbott. Yes; and I was asked once by Congressman Pucinski [sic, actually Congressman Clark], how did I get to a hearing.

The Chairman. I didn't ask you that question. I just asked if you own a car.

Mr. Abbott. Yes, I do.

The Chairman. Do you use the car?

Mr. Abbott. Yes, I do, because I have no other means afforded me, Senator, for transportation.

The Chairman. If you had other means, you would not own a car?

Mr. Abbott. I would do nothing in the conduct or my personal life to visit pollution on somebody else. My liberty to drive a car is being conditioned by the roads upon which it has to travel.

Chairman Randolph was increasingly annoyed by Abbott's testimony. He told him:

I hope you will, as a part of your day-to-day existence, say something good about something, or say something where some person has done something good.

He added:

I think, Mr. Abbott, that you perhaps should take a short course, or a long course, in how to influence people. I think that might be advisable.

Abbott was not deterred. As he ranted against the committee's role in favoring the automobile, he said, "You have made the automobile the master instead of the servant of the people."

Chairman Randolph interrupted, saying "I think that is a good point for you to stop," but Abbott continued his denunciation, concluding:

There is a so-called highway lobby . . . . I think that lobby determines the policy of the present Congress in that respect. I am blunt about it, and I think that Senators and Congressmen have to be servants of the people rather than servants of a lobby.

When the committee of the House met – Congressman Kluczynski's committee – every member of that committee was up there when we testified. And they never saw an unfilled chair in the days that those hearings were conducted, and four key members of that committee received \$43,000 in campaign contributions from the Truckers Association.

How else can we characterize it except by "bribery"? I am blunt about this thing.

The same chairman of that committee, who now has, I think, three members of his committee, working, running his restaurant in Chicago – that is the kind [of] stuff with which I will terminate my testimony in this hearing.

That is the problem we face in this country – this problem and everything else – whether or not the Senate is going to be responsive to deal with the issue, the way the people feel it should be dealt with, and not with special interests.

At one point, Chairman Randolph urged Abbott to continue his testimony with propriety and good taste. Abbott replied, "The manner in which I decide to testify is of my own concern, because nobody was more decorous than I, or soft spoken, until they tried to ram a freeway through my mother-in-law's home, and my own home. In these intervening 10 years, sir, I have lived with this issue night and day."

Earlier, in an exchange with Senator Cooper, Abbott had said:

I am devoting myself to the problem, Senator. You are talking to a man who is devoting himself to the problem, who is working as a citizen, unpaid. I lost one-third of my income last year fighting the freeways. So you are dealing with a man who is devoting himself to the problem on the basis of experience.

[Federal Highway Act of 1970 and Miscellaneous Bills, Part 2, Hearings Before the Subcommittee on Roads, Committee on Public Works, United States Senate, 91<sup>st</sup> Congress, 2<sup>nd</sup> Session, Senate Report 641-36, pages 1039-1052]

Without further comment on Abbott's denunciation, Chairman Randolph simply introduced the final witness, John Carter of the Citizens' Coalition Against D.C. Transit. Carter, an African-American, was there to suggest that the District be allowed to use its Highway Trust Fund share to buy the D.C. Transit System and run it as a nonprofit corporation. However, he immediately antagonized Chairman Randolph by claiming that when a delegation from Charleston, West Virginia, appeared before the subcommittee just before Sammie Abbott, Chairman Randolph had addressed all his questions to white members of the delegation, not to the sole black member, Mrs. Ruth Robinson, chairman of the Save the Triangle Committee. Mrs. Robinson was attempting to save her black community, located between the Elk and Kanawha Rivers, from destruction by construction of a six-lane combined section of I-64 and I-77.

Chairman Randolph denied the claim and suggested, "you would better serve your cause if you gave testimony on the matter about which you came to appear than to—" but Carter interrupted to accuse committee leaders of not conducting the hearings fairly. (The transcript shows that Chairman Randolph asked Mrs. Robinson several direct questions about her rental home at 719 Young Street, her work, and family, but that the other white witnesses provided most of the information about the situation facing residents of her neighborhood.) [pages 1052-1061; The testimony by Mrs. Robinson's panel is on pages 973-1039])

The resulting discussion and the Abbott exchanges prompted the *Post* to describe the appearances as being "sometimes acrimonious." [Weil, Martin, "Roads Funds Urged for Mass Transit," *The Washington Post and Times Herald*, July 21, 1970]

Secretary Volpe and Administrator Turner testified before the subcommittee on July 16, but issues related to the District freeways were not part of the discussion. Director Airis did not testify.

The Senate Public Works Committee reported its bill on September 30. It contained a provision repealing Section 23:

The effect of the enactment of this section would be to place the implementation of the interstate highway program within the District of Columbia on the same basis as in any other State. Repeal would constitute neither approval nor rejection of any particular Interstate System segment in the District.

Senator Cooper, the Ranking Republican on the Public Works Committee, had opposed the provision in 1968. As one of the conferees resolving differences between the House and Senate

bills, he had refused to sign the conference report on the bill because of Section 23 and had voted against the conference report in the final Senate consideration of the 1968 Act for the same reason. Now, he added “Individual Views” to the committee report on its bill. He was, he said, “very pleased” that the bill repealed Section 23, which he believed “contradicted the principles of federalism underlying the Federal-aid highway program.” He explained:

In section 23 the Congress for the first time – and the only time to my knowledge – directly interceded in the process of planning and approving specific projects in the Federal-aid highway program . . . . Local initiative and execution is essential. I said in 1968 that I believed Members of Congress lacked the expertise, experience, and authority necessary to determine the need, desirability, location, and design of specific highway projects. The major objection which I raised was that the section effectively superseded local responsibility and initiative in the District of Columbia and created a dangerous precedent for similar action with controversial highways in the several States.

Section 23 had caused “confusion and dismay” in the District and had been misinterpreted to mean that construction had to proceed “without regard to any local or Federal laws.” Senator Cooper agreed with Judge Wright’s view that the provision caused “discrimination between District residents . . . and all other residents affected by highway projects in their localities.”

Instead of resolving the District controversy, “section 23 has inflamed it.”

He appreciated Secretary Volpe’s February 24 report, but the Department of Transportation had not considered the Interstate segments in accordance with its own requirements under Title 23. “They have, rather, accepted the judgment of Congress, which in this case, in my judgment, is neither qualified, nor authorized by law, to make such decisions.” The committee’s bill, in repealing Section 23, “expresses the principle . . . that it is not the function of the Congress to prescribe and force upon the citizens of a State or the District of Columbia a particular highway construction program.” [“Federal-Aid Highway Act of 1970,” Report of the Committee on Public Works, United States Senate, 91<sup>st</sup> Congress, 2d Session, Report No. 91-1254, September 30, 1970, pages 25-26, 33-35]

The House Committee on Public Works addressed the District of Columbia’s freeway impasse in Section 129 of the bill, adopted October 2. Section 129 directed the District of Columbia to begin work within 30 days of enactment on (1) the East Leg of the Inner Loop, beginning at Bladensburg Road, I-295 (section C4.1 to C6); and North-Central and Northeast Freeways, I-95 (section C7 to C13) and I-70S (section C1 to C2). It repealed authorization for the South leg of the Inner Loop past the Lincoln Memorial and the Tidal Basin and removed its designation as part of the Interstate System. In addition, the bill called on the District and the Secretary of Transportation to study and report to Congress on the North Leg of the Inner Loop in the vicinity of K and U Streets, NW-NE., “with respect to that project including alternative routes or plans.”

The bill also included \$65 million for reconstruction of the Baltimore-Washington Parkway to Interstate standards, including six lanes. “The Committee expects that the Baltimore-Washington Parkway will be turned over to the State of Maryland after the authorized improvements are accomplished.”

The committee explained in its report that “a balanced transportation system including a rapid transit system and a cohesive freeway system is an absolute necessity for the continued viability of this community.” The “morass of public agencies and diverse authorities in the city” held such divergent views that “meaningful progress” appeared “highly unlikely.” The four projects that Section 23 of the 1968 Act directed the District to build “have for the most part been tied up in court actions and administrative foot dragging in the District government.”

Of those projects, the District and the Department of Transportation agreed on only one of them, namely the South Leg of the Inner Loop Freeway – the Plan C tunnel link to Independence Avenue. For that reason, the committee bill directed deletion of the segment from the Interstate System. “The effect of this action is to allow the plan agreed to by the District government and the Department of Transportation . . . to be built as a part of I-66 in the vicinity of the Theodore Roosevelt Bridge and the Lincoln Memorial.”

As for the North Leg of the Inner Loop Freeway, the report said, “There should not be any limitations on the area to be studied . . . . The potentially disastrous effects on many of the businesses on K Street should be given careful consideration . . . .” Joint development of housing above the freeway was also to be considered.

Representatives Schwengel and McCarthy, who had objected to Section 23 of the 1968 Act, also objected to the provision in the new bill. In “Additional Views,” they said that:

1. Section 129 violates the House rules governing the jurisdiction of this committee and creates a precedent that could be used to attempt to compel the construction of interstate highways in cities throughout the United States in the face of citizen opposition.
2. Section 129 attempts to deprive the District citizens of the right to participate in deciding whether interstate highways that drastically affect them should be built.
3. The interstate highway program in the Nation’s Capital will desecrate the city and gravely harm its business [sic] and its people.
4. The interstate highway program in the Nation’s Capital is totally lacking in planning justification and is overexpanded [sic] and unnecessary.
5. Section 129 will provide a basis for continuing to impose upon District citizens an interstate highway system they do not want as the price for their support of rapid transit.

In the course of elaborating on these five points, they urged that, “Congress should not become a party to urban suicide in the Nation’s capital.” They cited the Little Report of March 1966 as “the only independent review of transportation planning in the District” and it “found pervasive shortcomings” in the planning process:

The recommendations of the Arthur D. Little Report should have been followed. They were not followed. There was no valid reason or justification for not following them.

Imposing these freeways on the District was “a national disgrace.”

Representatives Schwengel and McCarthy also denounced the way the Metro system had been “held hostage” for the freeway network. They went through the history of how the city council

had little choice but to approve the freeway network. The comments at the time of those who voted for the resolution “reflect the tragic absence of democracy in the Nation’s Capital.” After quoting several of the comments, the Congressmen said of Section 129:

The blunt truth is that Section 129 of the present bill provides the basis for continued blackmail of the District of Columbia. It directs the District to “commence work” on the north section of the East Leg of the Inner Loop and the North Central-Northeast Freeway within thirty days, regardless of the law and regardless of the needs and wishes of the District citizens. It will be the mechanism for holding the Metro System hostage for the completion of these destructive freeways. Even if there were a demonstrated need or public support for the District Highway Department’s interstate highway program (and there is not), we dissent against this disgraceful blackmail of voteless American citizens.

They concluded their dissent:

Section 129 of H.R. 19504 would impose upon the people of the District of Columbia an overexpanded [sic] interstate highway program that is harmful socially, economically and esthetically, a highway program that lacks both planning justification and essential community support. Section 129 may provide a precedent for equally arbitrary action elsewhere in the country. Worst of all, it will provide a basis for the continued blackmail of the District by imposing this highway program on its people as the price for rail rapid transit. We dissent. [Federal-Aid Highway Act of 1970, Report of the Committee on Public Works, House of Representatives to accompany H.R. 19504, 91<sup>st</sup> Congress, 2d Session, House Report No. 91-1554, October 2, 1970, pages 23-24, 94-108]

### **Congressional Action on the 1970 Act**

The Senate took up the 1970 Act on October 1 and 2. In describing the provisions of the bill, Chairman Randolph came to Section 34 repealing Section 23 of the 1968 Act. Noting that his colleagues were well aware of the District’s freeway controversy, he said, “The committee hopes these problems can be resolved, and interstate construction can be completed in this growth area.” Instead of requiring freeway construction, the committee decided that “highways in the District of Columbia should be considered as highways in States in matters of this type, and there should not be a mandate by Congress that a road go here or there.” Senate conferees to the 1968 Act had yielded on Section 23 because if they had not “we would have had no Federal-Aid Highway Act of 1968.”

Chairman Proxmire of the Subcommittee on the District of Columbia commended Chairman Randolph on inclusion of Section 34. Residents of the District should enjoy “the same prerogatives with respect to highway construction enjoyed by residents in other localities.”

Senator Cooper said he recalled the lengthy conference on the 1968 Act and the reason the Senate conferees had gone along with Section 23 against his better judgment. Now, the Senate had an opportunity to correct that mistake:

In doing so, we are not attempting to approve or disapprove any segment of a highway system in the District of Columbia. We are saying that as a matter of law, as a matter of principle, and as a matter of justice to the people of the District of Columbia, Congress should not attempt to become highway engineers and impose on the District of Columbia, or any State, its idea of a highway system . . . .

I foresee a very controversial conference with the House. I do not know what will be worked out there, but I am very glad that the Senate at least, has expressed its will on this subject.

The Senate, on October 2, approved the Federal-Aid Highway Act of 1970, 51 to 0, with 49 Senators not voting – probably because they were on the campaign trail. [“Federal-Aid Highway Act of 1970,” *Congressional Record-Senate*, October 2, 1970, pages 34732-34733, 34750]

### **While Waiting for the 1970 Act**

Stephen Green, writing in the *Star*, discussed the future of Metro on August 5. He began:

Unless the District freeway controversy is resolved, the Washington area may be left with a subway system that served the downtown commercial area but will not reach many people.

Based on available funds, WMATA could build only about 7 miles of the planned Metro system, “a far cry from the planned 98-mile regional system.” The funds available included \$245 million in Federal funds appropriated for FY 1970 and \$85 million in local matching funds. “The cost of the entire regional system is estimated at \$2.5 billion.”

Judge Sirica’s injunction just 2 days earlier delaying the Three Sisters bridge at least until a design public hearing could be held “clouds the freeway picture and contributes to the uncertainty over the release of subway money.” Chairman Natcher had not made clear which projects the city had to advance before he would release appropriations for the city’s matching funds, but “Capitol Hill sources say the required freeways include the bridge and the controversial North Central Freeway,” as ordered by Section 23 of the 1968 Act. Observers expected the Federal-Aid Highway Act of 1970 to order the city to build the roads.

Green described the status of Metro construction:

With contracts already awarded and several to be awarded shortly, the area will have six miles of rapid transit line running in a semi-circle between Dupont Circle and Rhode Island Avenue NE and an extension running west from Farragut Square, under the Potomac River to Rosslyn.

This network would “provide access between different parts of the commercial area and a relatively small . . . residential section of Northeast, [while] hundreds of thousands of commuters would be left without rapid transit service.”

WMATA said it would not advertise additional contracts after August unless Chairman Natcher released the city's matching funds. [Green, Stephen, "7 Miles of Metro Money," *The Evening Star*, August 5, 1970]

On August 6, General Graham updated the WMATA board of directors during their weekly meeting. Outlining recent events, he said that "one or two or three people [at the White House] are working on this actively." Other sources informed Jack Eisen that "the President's advisers are reluctant to involve Mr. Nixon prematurely."

Later in the day, General Graham and Chairman Yeldell appeared before Senator Bible's Transportation Appropriations Subcommittee. Eisen reported that Yeldell and Graham "were scarcely settled in their chairs at the Senate hearing before the question of the road impasse was raised." Although the subcommittee was not directly involved in WMATA appropriations, Chairman Bible, as one of the authors of the original legislation authorizing rail rapid transit, asked about the stalemate. Chairman Yeldell said:

Being a member of the District government, I feel we have complied with the '68 Highway Act. It's well above our heads to handle . . . . The move to break the impasse will have to be . . . between the President and the chairman of the House Appropriations Subcommittee.

Chairman Natcher's decision to withhold District matching funds affected matching funds from other sources, with the result that WMATA would have to halt contracting in September.

They also explained, as Eisen reported, that "on-and-off financing of the subway by Congress imperils the sale of \$835 million revenue bonds that form a major feature of the 98-mile system's financial plan" for the \$2.5 billion system. [Eisen, Jack, "Need for Nixon's Help On Metro Funds Seen," *The Washington Post and Times Herald*, August 7, 1970]

On September 4, Representative Gude sent a telegram to President Nixon urging him to intervene to secure release of the Metro funds. Referring to "continued obstruction" and the city's failure to resolve the impasse, Representative Gude said the situation required White House intervention. "I strongly urge such action in order to assure commitments of subway money and to prevent further delays and escalating construction costs, if not the total loss of our rapid transit system." [Green, Stephen, "Nixon's Aid On Subway Fund Asked," *The Evening Star*, September 5, 1970]

With Congress planning to recess in October for election campaigning, WMATA officials and city officials saw no solution for the funding impasse in the near future. Unless Chairman Natcher released the District matching funds by October, the Metro construction schedule would have to be revamped. "It's critical now," a spokesman said.

Sources reported that if the city had really wanted to satisfy Chairman Natcher, they would have begun construction of the North-Central Freeway. That would, however, have been contrary to their own judgment and local opposition.

City Council Chairman Hahn said he was “still optimistic” that a solution would be found, although he did not know what Chairman Natcher wanted done. Deputy Mayor Watt agreed that the city did not know what steps were needed to satisfy the chairman. Mayor Washington speculated that Chairman Natcher wanted construction of the freeways to begin “expeditiously.”

Capitol Hill sources indicated that the price for \$34.2 million in Metro matching funds was construction of the North-Central Freeway and the East Leg of the Inner Belt Freeway north of Bladensburg Road, not the city’s planned parkway. Green explained:

The city’s recommendation to scrap the North Central has been especially galling to pro-freeway forces because the construction of it and its Northeast Freeway branch are considered essential to Maryland’s plan to build Interstate Route 95 inside the Capital Beltway . . . .

Pro-freeway forces want the East Leg built north of Bladensburg Road and connected with the Northeast Freeway to provide a complete express route through the city for Interstate Route 95 traffic.

Chairman Natcher, as usual, declined to speak with reporters about the impasse. His acquaintances told Green that Chairman Natcher was not allied with the highway lobby, but believed the city had an obligation to obey congressional wishes. “He also is reported to feel the city misrepresented its intentions about building freeways last year when he agreed to release subway funds” after President Nixon assured him the city and the Department of Transportation, with help from the Justice Department, would defend freeway construction vigorously in court.

Pro-freeway forces also were antagonized by the city’s decision to hold a design public hearing instead of appealing Judge Sirica’s decision. “They fear freeway foes will take advantage of the hearings to interject other issues, besides the design of the bridge, that would delay resumption of construction.” Green concluded:

With no sign of a breakthrough in view, the intervention by Nixon may be the only way to obtain release of money and keep subway construction rolling before current financial and building plans are doomed. [Green, Stephen, “Metro May Again Be Derailed,” *The Sunday Star*, September 6, 1970]

Jack Eisen confirmed that chances were “fading fast that Congress will provide the money this year to keep Metro construction on schedule,” according to “a key Capitol Hill source.” The source thought the impasse could be broken only by presidential intervention.

Another anonymous Federal official who was trying to break the impasse thought the city might try convincing Chairman Natcher that it is vigorously trying to build the freeway network. The official added, “That would be uphill sledding.”

Secretary Volpe, the Capitol Hill source told Eisen, “made the subway financing less likely by deciding not to appeal the recent court-ordered halt of work on the Three Sisters Bridge.” City officials agreed to the hearing, resulting in a halt to construction:

This decision opened an unexpected rift between profreeway lawmakers on Capitol Hill and equally profreeway officials in the Department of Transportation.

Although Secretary Volpe's advisers agreed with his decision, the lawmakers thought the case should have been appealed and taken to the Supreme Court if necessary. "They see the case as a test of the constitutional role of Congress as the lawmaking body for the District of Columbia." The anonymous source added:

Moreover, Natcher is understood to feel that President Nixon violated his public pledge of last year to provide[a] full and vigorous defense of all lawsuits challenging the road system. This, according to his purported view, would include full appeal.

The result was "a backstage debate among prohighway officials over the best strategy to get the road program moving again."

If the impasse could not be broken, WMATA would have to drop its program from the planned \$376 million in FY 1971 to \$178 million:

Of this drop, \$135 million would be in revenue bonds that the Metro hopes to sell and repay from future fare collections . . . . Metro officials privately acknowledge that they are nervous over their ability to market these bonds if the uncertainty over congressional appropriations persists.

The only remaining legislative vehicle for the \$34.2 million in District matching funds was the supplemental appropriation bill, but if it were not passed by the current Congress, the bill would die, and the next Congress would have to decide whether to pursue it and how to address the freeway-Metro impasse. [Eisen, Jack, "Construction Delay Likely On Subway," *The Washington Post and Times Herald*, September 11, 1970; Eisen, Jack, "Natcher Holds D.C. Subway Hostage to Freeway Program," News Analysis, *The Washington Post and Times Herald*, September 13, 1970]

As noted earlier, the House Subcommittee on Roads approved its bill on the Federal-Aid Highway Act of 1970 on September 16. Section 129 ordered the city to build the North-Central Freeway and the East Leg Freeway north of Bladensburg Road, as well as deleting the South Leg from the Interstate System and ordering a study of the North Leg of the Inner Loop Freeway. Chairman Kluczynski said the city must build the North-Central Freeway if it wanted Congress to approve appropriation of \$34.2 million for Metro construction:

If the District government doesn't want to do it, there won't be any subway system. I love this city and I'm trying to do what's best for it. I can't understand why the city council and mayor have listened to a Communist like Sammie Abbott and refused to build the freeway. [Green, Stephen, "Order Central Freeway Built, Hill Unit Asks," *The Evening Star*, September 16, 1970]

Councilman Yeldell, chairman of WMATA's board of directors, was asked about the North-Central Freeway while appearing on WTOP's "Washington News Conference" to be broadcast on September 20. He said that if the city council had no choice but to vote for the freeway to

obtain subway funds, he would resign. If that situation arose, the local government would cease to exist. "It's just not a matter of a freeway anymore . . . the people of D.C. are very tired of getting pushed around by whims of Congress." The government would no longer be "viable" if ordered to build the freeway. "I made my capitulation on August 9, 1969 . . . I don't plan to again." As for the possibility that the impasse might scare off investors in Metro bonds, he said, "If I were an investor, I wouldn't buy the bonds under the present circumstances." [Green, Stephen, "Yeldell Says He'll Resign If Forced to Vote Freeway," *The Sunday Star*, September 20, 1970]

Secretary Volpe was in Boston on September 21, 1970, for the annual meeting of the American Transit Association. In response to a question during a press conference, he revealed that he was again acting to break the impasse over Metro funding. In his first comments since the House Subcommittee on Roads approved its bill with Section 129, he said he and Administrator Turner had met on September 18 with Mayor Washington and other city officials in an attempt to resolve differences between the subcommittee and the city on the North-Central Freeway. He also was reaching out to members of the Committee on Public Works.

Eisen reported that Secretary Volpe ruled out dropping the North-Central Freeway from the plan, but thought there might be room to change its route or design. "It's got to be built somewhere," he said, "but you just can't slam it through without proper consideration."

Given the "delicate stage of the negotiations," Secretary Volpe was hesitant to get into details. "It would do little good to comment . . . on how and what we're coming up with."

In a Washington press conference the same day, Chairman Hahn said the city had complied with Section 23 of the 1968 Act. As far as the city council was concerned, the North-Central Freeway was dead. If Congress ordered it built, he would not even call for a vote; it could not be approved. The city, he said, already was in compliance with Section 23, having recommended deleting the North-Central Freeway from the Interstate System and replacing it with the Industrial Highway.

As he spoke, Sammie Abbott took over the microphone to tell Hahn that "no freeways can be built in the District of Columbia without Council approval. They have the power to tell Congress you can't build these freeways." He also took the opportunity to challenge Councilman Yeldell's statement that he would resign before he would vote for the North-Central Freeway even if it meant securing the subway funds. "He should not say that he is going to resign. He should say we are going to mobilize . . . the council members should fight or get out." ECTC was planning a rally at noon on Saturday, September 26, to protest Section 129. The rally was part of ECTC's efforts to "force the City Council to catch up with the city."

Chairman Hahn did not respond to Abbott, but after the press conference told reporters that under the 1968 Act, the city council had to vote on the freeway plan. He added, "If Congress wants to build a freeway, the Council is powerless to stop it." [Eisen, Jack, "Volpe Seeks to Break Roads-Metro Impasse," *The Washington Post and Times Herald*, September 22, 1970; Basham, William, "Can't Stop Freeway, Hahn Says," *The Evening Star*, September 21, 1970]

## **Broyhill and the 1970 Revenue Act**

Mayor Washington, Deputy Mayor Watt, and other city officials testified before a subcommittee of the House District of Columbia Committee on September 22 to discuss the city's revenue proposals. The proposals included an increase in the city's gas tax to help pay for the freeway program. (The official titles of Commissioner and Deputy Commissioner were used throughout the hearing rather than the informal Mayor and Deputy Mayor.)

In a discussion of sewage disposal, Representative Gude observed that "this upper Potomac intersection relief sewer is not going to be finished, and we are going to get raw sewage overflows in the Georgetown area, until we have the completion of the Potomac River Freeway plans." He added that at the rate of freeway construction in the city, "that sewage overflow is liable to go on for a number of years."

Representative Broyhill took this opportunity to ask if Commissioner Washington was required by the 1968 Act to secure city council approval to comply with Section 23. The commissioner explained that the city was in compliance with Section 23, having acted on every freeway cited in the legislation:

[E]very link that is in the 1968 act is being acted upon except those that are constrained by litigation, the bridge itself, the Three Sisters Bridge, and we have a contract ready for the east leg, which we have been enjoined from moving on. The matter of the north central, which has come forward, is one that was not in the 1968 act in the sense of it being built. The Congress asked us to "study an alternative." We did present an alternative, which was one that involved a link going from the east leg presumably under or at some point developed under the arboretum into New York Avenue, with existing street lines going as an alternative.

He recognized that the House Committee on Public Works was working on a bill that would require construction of the North-Central Freeway, and that litigation was involved, "but I think we have to distinguish between whether we are in compliance, which I think we are, and our lawyers indicate we are, as between something else that the Congress may wish."

Representative Broyhill pointed out that Chairman Natcher did not agree with the city's interpretation. Further, the Virginia Congressman was sympathetic to people, whether in the District or his own district along I-66, who have to move to make way for a freeway, but "at some point the Congress feels that this should move." He asked what Commissioner Washington thought Congress should do "at this point, in order to move this freeway along? Should they let Interstate 95 just die and not come into the Nation's Capital?"

Commissioner Washington replied that, "We talked on the one hand about not driving people out of the City, and where we take a route that goes right through one of our better tax paying neighborhoods." Without going into the history, he noted that the freeway "ended up over in an area that happened to be primarily black, of substantial homeowners." As required by the 1968 Act, the city made a study, found a viable alternative to the North-Central Freeway, and offered it

to Congress. “What I am trying to say is that the difference is the difference in terms of what the Congress wants now, not whether or not we have complied.”

Chairman Fuqua asked what the city was doing to expedite judicial review. Commissioner Washington explained that Judge Sirica had issued an injunction until the city complied with the public hearing requirements on the design and addressed the questions about the safety of the approved design. The city decided to hold the hearing, tentatively scheduled for November 17, instead of going through “a long process of appeal to the Court of Appeals.” The city “felt the straightest way here is to follow what the Court has suggested.”

The current city government, he said, inherited the freeway map and the attendant problems. “There is a problem . . . about protecting the local interests based on what local determination amounts to. That is inherent, and in my opinion something that locally we ought to have some arm room on.” If Congress determines by statute that the city must do something, “then I think the question is no longer relevant. We do that, but until that point, Mr. Chairman, I am saying that there has to be some kind of local consideration.” Every other district in the country has some say in where roads are built.

Representative Broyhill disagreed that the city had not been given adequate consideration. Congress recognized the relocation problem by including a major provision in the 1968 Act on that subject. That same legislation asked the city to consider alternative locations for the North-Central Freeway. “You say you complied with it, but you actually came up with the same plan that had been previously rejected prior to 1968, and thus found unacceptable as a part of the Interstate System.” The Transportation Board of the COG had turned down the Industrial Freeway “and I understand that the Bureau of Public Roads does not feel that it is either economically feasible or practical to build it where you had selected.”

When Commissioner Washington disagreed, Representative Broyhill said he had talked with Chairman Natcher and members of the Committee on Public Works about the suggested alternative. He would think that Commissioner Washington or other city officials would be in “constant communication with Mr. Natcher” to “find out where the misunderstanding happens to exist, because we are not getting anywhere by you and your advisers saying, ‘Well, I have complied’ and yet the Congress says you have not complied.” He added, “In the meantime, we don’t have any highways.”

Commissioner Washington, clearly annoyed, replied:

Mr. Broyhill, don’t you think we have done just that, tried to find out, where no one has told us, specifically now where we are not in compliance, and I say that today no one in this Congress or any place else has told us where we are not in compliance.

Representative Broyhill said that the Public Works and Appropriations Committees indicated that the city had not come up with an alternative that is satisfactory.

Commissioner Washington thought that observation proved his point:

Oh, that is different. That is different. Isn't that different than not complying? What they are saying is that that alternative which was written into the bill is not the one that is acceptable to the Congress.

They disagreed about whether the Industrial Freeway had been rejected before 1968, but Representative Broyhill moved on by disagreeing with the idea that the District of Columbia was not being given the same consideration as other communities. Congress, he said, would have moved on the freeway issue "long ago if they were not very much concerned with the interests of the property owners of the District of Columbia."

Commissioner Washington said again that it was a matter of local determination. The city came up with an alternative to the North-Central Freeway along the Baltimore and Ohio Railroad, but Congress apparently does not agree with that alternative. "You say it isn't acceptable, and that is a different point than whether we are complying." He added that the people in the path of the North-Central Freeway "were hard-working taxpayers with small houses which they could not easily replace, who had been there for some years, and they are the bone of the entire city, and this was the interest here."

Representative Broyhill said that every city was in the same situation as the District of Columbia because BPR "had to be satisfied with the proposed locations." The plans had to meet engineering and cost standards, leading to continuous back-and-forth adjustments. "We are just far behind, that's all."

Commissioner Washington reiterated his point about the difference between compliance and disagreement. He said, "You may disagree with my kind of statement but here is the kind of thing that always hits the voteless."

When Representative Broyhill disagreed that a misunderstanding had occurred, Commissioner Washington asked:

Then what are we faced with? Everything that we have going, including the subway which all of us need, is held hostage. The Revenue bill you are talking about is holding that hostage. Now, where else do you apply that standard in America?

Commissioner Washington was referring to Representative Broyhill's introduction of an amendment to the bill to prohibit release of the Federal payment to the city until it complied with Section 23 of the 1968 Act and any other conditions Congress may impose, starting with construction of the North-Central Freeway.

Representative Broyhill observed, "Well this, of course, is the Nation's Capital," to which Commissioner Washington said, "I know that." The Congressman continued by pointing out Federal funds going to the city, adding, "and, of course, we are financing a subway system at a much higher Federal contribution rate than in any place else in the United States." Meanwhile, the city was lagging behind other jurisdictions. "How much longer do you think the Congress should wait before they commence?"

Commissioner Washington suggested “we should work together” because they “want the same things . . . and hold out for this partnership to be all-embracing.” If there are differences, they could work them out. “I am for that,” but the Congressman replied:

We have the plan that you submitted that was rejected prior to 1968, and the North Central Freeway plan that you rejected, so we have those two extremes. That is all we have. We have nothing in between, so at what point do we move forward?

The commissioner said the city was moving forward on every section of freeway it could, subject to litigation, except for the North-Central Freeway.

Representative Broyhill pointed out that neither the Public Works Committee nor the Appropriations Committee thought the city had complied with Section 23. Commissioner Washington pointed out that the city was talking with Secretary Volpe, who would help answer some of the questions. “I don’t know whether they will fully resolve it,” but the commissioner was hoping for more of a partnership to come out of the discussions. “My concern is that I still don’t know where we are not complying.”

Then, Representative Broyhill observed, since the city felt it had complied, the city should not object to his amendment holding up the Federal payment pending compliance with the 1968 Act. “You feel that you should comply with that Act, don’t you?”

Commissioner Washington said:

I think not only should; would. I have questions just like the President of the United States may have questions, but when an Act is passed we intend to comply.

As the discussion of the freeway impasse neared an end, Representative Broyhill talked about his amendment. No one wanted to hold up the Federal payment to the city, and maybe his amendment would not be adopted in the final revenue act:

We are going to authorize a payment because we feel it is needed, but maybe what will be accomplished by this type of amendment is to give a little higher priority to this freeway construction and thus to clear up this confusion. There is no question in my mind but [that] reasonable men can get together and work out a solution. So, it is not that we want to hold up the Federal payment, nor that we want the District Government to do something that is improper or unfair, but we must bring this deadlock to an end. That is where we stand right now and it is not good. You don’t like it, and the committee doesn’t like it.

He asked if the commissioner wanted to place a bet on whether the language would end up in the bill. The commissioner declined to bet, although he would prefer the language not be included “and depend upon good faith between partners.” But, the Congressman pointed out, since the city was going to comply, what difference would it make if the amendment were enacted. In that case, the commissioner said, “I could just reverse the question and say if I am going to comply why do you put it in there.” The Congressman answered:

Because you haven't complied yet. I think, frankly, that between you, the Secretary of Transportation, and Mr. Natcher and Mr. Kluczynski, this thing will be resolved in the not too distant future. You have some people in the District of Columbia who don't want a highway at all. You are not going to please everybody, I can't do it in my District and nobody else can either, but at some point we are going to have to do what we feel is right, and if you feel that way also . . . . We just have to resolve this problem and we should do it right away. This is all we are trying to do. [Revenue Proposals, Hearings Before Subcommittee No. 4 of the Committee on the District of Columbia, U.S. House of Representatives, 91<sup>st</sup> Congress, 2d Session, September 17, 22, 23, and 28, 1970, pages 143-150]

When Chairman Hahn appeared before the subcommittee on September 23, Representative Broyhill raised the freeway issue again. They went through some of the same issues as the day before with Mayor Washington, but the Congressman said he disagreed with the mayor that the city had complied with the 1968 Act. Further, in view of Mayor Washington's claim that no one had told him how the city had failed to comply, Representative Broyhill had compiled a list of the ways:

Since the Commissioner doesn't seem to agree that you are in noncompliance, and says in fact that you are in compliance, and yet the Congress does not agree, I felt that somebody had better put these facts together so we could use this as a working paper, a fact sheet, and he can check it right back or you can check it back with the Appropriations Committee and Public Works Committee and see if this is in accord with what they feel is noncompliance.

He provided the list to Chairman Hahn:

The District of Columbia has not been in compliance with the 1968 Highway Act at any time since passage of the Act.

From August, 1968 to August, 1969 the District Government position was outright refusal to comply.

From August, 1969 when actions of the D.C. Government and written assurances from the President of the United States implied that the freeway system would proceed, to early in June of 1970 (when House action again deleted transit funds) the D.C. Government has been in non-compliance in the following areas:

Feb, 1970 – D.C. adopted and submitted to Congress a plan which had been rejected in its most essential points by the Transportation Planning Board in February, 1969. Such a plan requires approval of that Board under Section 134 of Title 23, United States Code. D.C. Government never submitted its 1970 plan to the Board and made no attempts to coordinate its plan with the areas outside the District of Columbia boundary.

Feb. 1970 – The D.C. plan for the East Leg of the Inner Loop recommends a tunnel through the Arboretum which is in direct conflict with the direction in Section 23(b) of the 1968 Highway Act to construct the East Leg as far as Bladensburg Road in accordance with the plan contained in the 1968 Interstate Cost Estimate. There has never been any engineering study whatsoever of the route recommended by the D.C. Government for this East Leg routing, and it was further quite obviously never the intent of Congress that the route should penetrate the Arboretum in such a manner.

Feb.-March, 1970 – D.C. Government after advertising a contract and receiving proper bids with an acceptable low bidder for the East Leg of the Inner Loop north of Barney Circle refused to award the contract during a 60-day period when award could have been made. At the end of the 60-day period the courts stopped any contract on the project.

May, 1970 – D.C. Government still had not begun design work on the East Leg between Benning Road and Bladensburg Road. Section 23(b) of the 1968 Act required this work to start within 30 days of the August 23, 1968, enactment date. (This work has subsequently started).

May, 1970 – D.C. Government was still seeking agreement with the National Park Service on the plan for the East Leg between Barney Circle and Benning Road which was directed to be under design by the 1968 Act.

An additional item which begs the question of whether the D.C. Government has any real intent to carry out in its entirety Section 23(a) of the 1968 Highway Act lies in the fact that the reports of the Department of Transportation and the District Government are completely different except for a single project, the South Leg. There was obviously no cooperation between the two as was anticipated in the Act.

The most recent occurrence of bad faith on the part of the District of Columbia was the failure to appeal the Court [decision] on the Three Sisters Bridge. Written assurances to the Congress from the President indicating that all would “vigorously defend” any lawsuit have certainly not been complied with.

In summary, the District of Columbia Government has obviously not made any attempt to vigorously pursue the construction of the Interstate System in the District of Columbia as spelled out in the 1968 Act but has rather taken reasonable opportunity to either drag its feet or inject confusion into the issue. Any reasonable definition of conformance with the Act would begin with a sincere effort to undertake all elements outlined in the Act until they are carried out – this the District has not done.

Chairman Hahn took issue with the list, which he was seeing for the first time. They discussed some of the points, but Representative Broyhill concluded the discussion because other scheduled witnesses were waiting to testify. He summarized:

I just want the subway started now instead of next year. I think every month or every day we delay this project will cost us a great deal more money. It is not my intention nor the intention of any Member of this committee that the District Government be denied any funds for any purpose for which it really needs them. We just want to accelerate – and I am repeating this for emphasis – that getting together that you are going to have to do. I want to be your “squeakiest” axle, so that you will get together and resolve these differences, because I bet you the greater part of this misunderstanding is due to lack of communication. I don’t think contact has been to the extent that the Commissioner pointed out yesterday.

Chairman Hahn offered to answer each point, adding, “If I paid as much attention to my practice [of law] as I have to studying this freeway situation I am sure I would be a wealthier man.” Representative Broyhill declined the offer, saying he preferred that the city address the points with the Committee on Public Works. [pages 153-176]

### **Not Quite Finishing The 1970 Act**

On September 2, 1970, the *Star*’s Stephen Green reviewed the question that had been raised about the safety of the design chosen for the Three Sisters Bridge. He reminded readers that Administrator Turner had “expressed doubt as to the safety of the present design planned for the bridge that calls for the main span to run suspended in air for about 740 feet between two supporting piers near each bank of the river.”

As noted earlier, FHWA’s concerns had been addressed. Officials pointed out that similar structures had been built in other countries. The New York firm that designed the bridge said that Europeans had “built many such structures and have indicated they will offer their construction expertise to contractors if they’d desire it.”

Director Airis also was satisfied that the design was safe:

But he said one or more alternate designs, possibly calling for more than two supporting piers, may be presented at the hearing now tentatively scheduled for Nov. 17 . . . .

Turner’s office will have to give its approval to any bridge design selected by the highway department after the public hearing. [Green, Stephen, “New 3 Sisters Bridge Design Weighed,” *The Evening Star*, September 2, 1970]

On September 23, the *Star* reported that President Nixon had designated Secretary Volpe to seek a settlement to obtain release of \$34.2 million in District matching funds for Metro. As noted earlier, Secretary Volpe had already entered into behind-the-scenes discussions with the city and on Capitol Hill. According to an aide to Secretary Volpe, he had been in regular contact with the White House to discuss the impasse. [Green, Stephen, “Nixon Asks Volpe to Act in Metro Row,” *The Evening Star*, September 23, 1970]

On September 24, the House Committee on Public Works approved a bill for the Federal-Aid Highway Act of 1970. It included a provision requiring the city to build the North-Central Freeway and the I-95/Northeast Freeway, with work to begin on both freeways “not later than

30 days after the date of enactment of this act.” As discussed earlier, the bill also eliminated the South Leg of the Inner Loop Freeway and called for a new study of the North Leg. [Moore, Irna, “House Unit Backs City Freeway Bill,” *The Washington Post and Times Herald*, September 24, 1970]

Mayor Washington and City Council Chairman Hahn held a joint press conference on September 25 to clarify their views on the North-Central Freeway. In a joint statement, they argued:

The City Council . . . and the mayor have approved a comprehensive freeway system for the District [that] is acceptable to its citizens and approved by the officials appointed to direct them. This system does not include a North Central Freeway.

Hahn said, “Freeways exercise such a dominating influence on the life of the city that the choice of location of freeways must be in the hands of the people who live in those cities and those governing officials who direct them.”

The two leaders were, they said, unalterably opposed to the project. At best, Congress should not force construction until the study recommended by Secretary Volpe had been completed. Mayor Washington declined to say what he would do if Congress required construction with subway funds at risk. Such a question was, he said, “speculative.”

Shortly after the press conference, they learned that the Senate Committee on Public Works had acted on its 1970 Act bill that included a provision repealing Section 23 of the 1968 Act. Senate committee members understand that their House counterparts had included a measure in their bill calling for construction of the freeway network. The *Post* reported:

Yesterday’s decision by the Senate Committee was seen as an attempt to prevent a recurrence of the 1968 conference by providing ammunition that the Senate conferees could bring to this year’s negotiations with the House. [Green, Stephen, “Don’t Demand Freeway, D.C. Asks Congress,” *The Evening Star*, September 25, 1970; Moore, Irna, “Road Act Repeal Backed,” *The Washington Post and Times Herald*, September 26, 1970]

ECTC staged a protest on the east steps of the Capitol on Saturday, September 27, urging citizens to engage in civil disobedience to block the North-Central Freeway. Stephen Green described the scene:

More than 150 freeway foes sat on the east steps of the Capitol for two hours. They were told they may have to be willing to break laws and face jail to prevent city officials from agreeing to build the freeway, which would run through Northeast Washington to Silver Spring.

As curious tourists watched, the freeway foes waved signs and sang protest songs in the hot sun . . . .

Julius Hobson called Mayor Washington “a make-believe mayor” and called the city council “spineless.” He predicted they would “knuckle under to Congress.” Freeway foes would “have to go to jail to show it’s not a game.” Charles Cassell added that they must “demonstrate a lack of respect for the fascist system.”

Sammie Abbott told the crowd, “It will have to be the power of the people in the streets” if the city council did not prevent freeway construction.” He announced that ECTC planned to lobby Congress on October 7.

Representative Gude said in a statement that he opposed holding District revenue “hostage to construction of the North Central,” calling Representative Broyhill’s amendment to that effect “blackmail.” Congressional action, he added, to force construction of the North-Central Freeway was “impractical” in view of uncertainty about the Maryland portion of the road.

The night before, appearing on WRC’s “Community Timeline,” Representative Broyhill had said that he and other area representatives would send a letter to President Nixon requesting a meeting to discuss the situation. “We’re at an impasse, obviously,” he said. [Green, Stephen, “Resistance Urged to Bar Freeway,” *The Sunday Star*, September 27, 1970]

When Congress adjourned on October 14 for the 1970 mid-term elections, the House had not acted on its bill, H.R. 19504. Unless Congress returned after the election for a lame-duck session, the Federal-Aid Highway Act of 1970 was dead.

### **Trying to Advance Metro**

Within an hour after Congress adjourned on October 14, 1970, Secretary Volpe announced that he was offering a 6-month loan of \$57 million to keep Metro construction moving forward despite congressional efforts to delay appropriations because of the freeway impasse. In a statement, he said:

I am today directing the urban mass transportation administrator, Carlos C. Villarreal, to entertain an application for an emergency loan . . . to enable the Metro program to go forward uninterrupted by confusion and controversy over particular freeway projects..

The loan would allow Metro to stay on schedule while, city officials hoped, the congressional fund impasse was resolved in a lame-duck session after the election. With the loan, WMATA would be able to continue awarding construction contracts through November.

Secretary Volpe said that he was acting “at the personal direction of President Nixon” to resolve the impasse. President Nixon had not personally approved the loan, but Secretary Volpe had cleared the plan with OMB. Although the Secretary’s aides said they had checked with key Members of Congress prior to the announcement, Chairman Natcher “was reported to be angry over the arrangement.” Before leaving Washington, he had called OMB to lodge a sharp protest, but had not connected with a ranking official.

The offer came after secret talks between Metro Board Chairman Yeldell and Secretary Volpe. Yeldell told the board that the loan would be repaid at 6-percent interest. He added, however,

that the interest could be wiped out if the board invested the principal at a 7-percent annual rate until it was needed to pay contractors.

Metro General Manager Graham had not been informed of the talks because, as Jack Eisen reported, his “long service as an Army Corps of Engineers general and his continuing ties with key lawmakers imbued him too closely with the congressional view of political wisdom.” In fact, Graham would have recommended that the board reject the offer, but he was not asked for his views:

The political risks in the loan scheme were not even discussed by the board until a reporter asked a question and Metro director Carlton R. Sickles, a former Maryland congressman, acknowledged that they existed.

The main risk is that Congress, ever jealous of its prerogatives, will respond to Volpe’s end run by stiffening its refusal to grant the funds that are now being withheld from the Metro. It could also bedevil some programs in Volpe’s Department of Transportation.

Should this occur, the Transit Authority might find itself in the predicament of owing \$57 million plus \$1.7 million interest to the Department of Transportation next spring but having no money to repay it.

On October 15, WMATA approved acceptance of the loan and directed General Graham to file the application with UMTA. Yeldell cautioned, “We all think this will be a key to the resolution of the impasse, but it shouldn’t be mistaken for a resolution of the impasse.”

Later in the day, President Nixon’s press secretary, Ronald L. Ziegler, announced that OMB had approved the loan.

[Valentine, Paul W., “Subway Funds Offered,” *The Washington Post and Times Herald*, October 15, 1970; Eisen, Jack, “Subway Loan Is Accepted,” *The Washington Post and Times Herald*, October 16, 1970; Green, Stephen, “Subway Board Accepts Offer Of U.S. Loan,” *The Evening Star*, October 15, 1970; Green, Stephen, “White House Approves \$57 Million Metro Loan,” *The Evening Star*, October 16, 1970; Eisen, Jack, “Volpe Gambles on Metro Loan,” *The Washington Post and Times Herald*, October 19, 1970]

### **Election Transitions**

Part of the city’s optimism stemmed from the fact that on September 15, 1970, Chairman Fallon had lost his primary election to State Delegate Paul S. Sarbanes and would be leaving Congress in January 1971.

Following the first Earth Day in April 1970, environmentalists had compiled a list of “The Dirty Dozen” Members of Congress based on their environmental records. Chairman Fallon was the most prominent name on the list. He had been Chairman since January 1965 of the Public Works Committee, which the environmentalists referred to as the Pork Committee. His hometown of Baltimore had long-running controversies over its Interstate routes, including I-70 through Leakin Park and a stable minority community and a planned I-95 bridge across the Patapsco

River overlooking historic Fort McHenry. The environmentalists cited his opposition to the use of Highway Trust Fund revenue for mass transit as one example of why he was a “tool of the highway lobby.”

In the Democratic primary, Delegate Sarbanes attacked Fallon for his age, 68, and health, remoteness from his constituents, close ties with the highway lobby, and support for the Vietnam War. After losing the primary, a bewildered Fallon said, “I used to be complimented on the great job I was doing for the highway program. Now that is the thing that is used against me.” As *Fortune* magazine pointed out:

Flushed with their success at knocking off the powerful Fallon, environmentalists have gone on to organize the Highway Action Coalition at the national level to eliminate the federal highway trust fund or stretch the uses to which it can be put. [Cameron, Juan, “How the Interstate Changed the Face of the Nation,” *Fortune*, July 1971, p. 31]

Further, the ranking Republican on the Public Works Committee, Representative Cramer, who had worked closely with Chairmen Fallon and Natcher on District freeway issues, had not run for reelection. Instead, he ran for the seat held by retiring Senator Spessard Holland, but lost in the general election.

In Maryland, Democratic Senator Tydings lost his reelection bid to Republican Representative J. Glenn Beall, Jr., whose father had held the seat before Tydings. As the *Star* put it:

Beall, 43, received massive aid from the Nixon administration including campaign visits by both the President and Vice President Spiro T. Agnew.

“I think the White House helped – considerably,” Beall said in his victory statement.

But the deciding factor, it appeared, was the degree of anti-Tydings sentiment in Maryland – antagonism toward the outspoken 43-year-old liberal which did not show up in pre-election polls that consistently showed Tydings out in front of Beall.

Other Maryland Democrats, including Governor Mandell, won reelection. Senator Tydings conceded, “I guess I was just too liberal . . . or at least they thought I was.” Much of the opposition came from gun rights advocates who opposed his efforts to tighten gun controls. Gun groups had distributed bumper stickers reading: “If Tydings Wins – You Lose.” As a result, the worst thing about his loss was, he said, that, “I suppose it will discourage others from taking on the gun lobby.” [Angle, Martha, “Beall Brings Home the Seat His Father Lost to Tydings,” *The Evening Star*, November 4, 1970]

Among the Senators who also lost their reelection bids was Democratic Senator Albert Gore, who had collaborated with Representative Fallon in crafting the Federal-Aid Highway Act of 1956 that launched the Interstate program. Senator Yarborough, the father of Section 4(f), lost his reelection bid in Texas.

Speaker of the House McCormack had not sought reelection. He wanted to spend time with his ailing wife of over 50 years. They had lived in a three-room apartment in the Hotel Washington

at 515 15<sup>th</sup> Street, NW., but he would stay with her in Washington's Providence Hospital until her death a year later.

Majority Leader Albert of Oklahoma would become Speaker of the House in the 92<sup>nd</sup> Congress.

In 1968, Montgomery County, Maryland, had approved a change in the county charter to create a position of county executive whose powers would be similar to a mayor. County Councilman James P. Gleason, who had been WMATA's first chairman, announced his candidacy for the post. In late September 1970, he announced that he would remain on the council, but would resign from several posts, including the WMATA board, to devote more time to his campaign. In a letter to County Council President Avis Birely, Gleason wrote, "I do not want this action to be construed . . . as lessening my complete dedication and support of the implementation of the mass transit system." However, the post of county executive was "far too important to give less than my full attention to the campaign other than my regular county council responsibilities."

On September 23, the Montgomery County Council elected President Birely to replace Gleason on the WMATA board.

Now, in the first county executive election, Gleason was the victor in a tight race. He took office on December 7. The county council consisted entirely of Democrats. [Taaffe, William, "Gleason Quits Transit Posts To Campaign," *The Evening Star*, September 23, 1970; "Mrs. Birely Gets Transit Job," *The Evening Star*, September 24, 1970; Greenhalgh Concedes in Montgomery," *The Evening Star*, November 9, 1970]

Another election affecting the District would not take place until March 1971. On September 23, 1970, President Nixon had signed a bill giving the District its first elected congressional representative since 1875 (P.L. 91-405). The winner of the election would be a nonvoting delegate to the House of Representatives. President Nixon had proposed the arrangement in April 1969, when he called it a step in an "orderly" road to self-government.

Ultimately, it was thought, an amendment to the Constitution would be needed to give the city a vote in Congress or change the concept that Congress was the city's legislature. The bill President Nixon approved also authorized establishing a 12-person commission on organization of the District's government. The commission would study the arrangement of the present city government to "determine what changes are necessary" to "promote economy, efficiency, and improved service in the transaction of the public business in the departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the District of Columbia."

The commission was nicknamed a "Little Hoover Commission," after a commission headed by former President Herbert Hoover that had advised Presidents Truman and Eisenhower on government organization. Although District officials were not enthusiastic about the Little Hoover Commission, they were elated about the provision establishing a nonvoting House delegate – as a first step.

Mayor Washington was initially seen as the leading candidate for the District's first delegate, but in November he announced he would not run. In announcing his decision on November 14, he cited the District's fiscal condition as the reason. He was focused on working with Congress to secure additional funds for the city; he did not want to divert attention to raising funds for an election campaign. He did not endorse anyone for the position, but said, "He should be someone who is committed, who understands the dynamics, who is going to work as a team."

With the mayor out of the running, Councilman Yeldell, chairman of WMATA, became the leading candidate. He had not announced his candidacy, but was seeking financial backing for a run.

On November 30, Yeldell announced his candidacy for delegate while submitting a letter to President Nixon resigning from the city council. He said that home rule would be one of his top priorities as delegate. He had some connections on Capitol Hill, but said, "it makes [no] sense for the District's delegate . . . to march to the Hill boasting of a host of friends in Congress." The District's congressional friends were in the minority. "Look at our schools, our housing, our unemployment, our public services, our courts, our crime rate, our revenue . . . and I'm sure you will agree with me that the District needs many, many new friends."

His resignation from the city council automatically removed him from WMATA's board of directors. On December 3, Councilman Moore took over for Yeldell on WMATA's board. Because the District had the chairmanship in 1970, the board elected Councilman Moore its chairman for the remainder of the year.

[Prince, Richard E., "D.C. Delegate Bill Signed by Nixon," *The Washington Post and Times Herald*, September 23, 1970; Grigg, William, "District if Cool to Prospect Of Little Hoover Commission," *The Sunday Star*, September 13, 1970; Kalb, Barry, "Mayor Won't Be a Candidate For Delegate, Yeldell to Run," *The Sunday Star*, November 15, 1970; Anders, Michael, "Yeldell Quits Council, Enters Delegate Race," *The Evening Star*, November 30, 1970; Grigg, William, "Moore Follows Yeldell As WMATA Chairman," *The Evening Star*, December 3, 1970]

### **The 1970 Lame Duck Session**

Congress returned to Washington for a lame duck session on November 16, the first held since the early 1950s. Most of the members who had lost their reelection bids returned to complete the 91<sup>st</sup> Congress. A few who lost or retired resigned to allow their successors to fill out the term, thus gaining credit toward seniority in the next Congress.

The Washington area had its share of pending bills, but overall, Congress would be focused on other issues. The *Star* listed the top issues:

Senators first plan to tackle three difficult issues left hanging when they adjourned in October: The women's rights constitutional amendment, the farm bill and a labor-sought industrial job safety measures.

In the House, a restrictive trade bill and a manpower training bill which includes a big program of public service jobs are expected to trigger floor fights.

With the session expected to last about 5 weeks, Congress would have time to consider the District freeway-subway impasse, but it was not most urgent business. [Bullen, Dana, "Party Line Battles Set In Congress," *The Sunday Star*, November 15, 1970]

On November 13, 1970, the District of Columbia and the Virginia State Highway Commission published notice of plans to hold a joint DESIGN PUBLIC HEARING on proposed Interstate 266 (capitalization in the original) in the Department of Commerce Auditorium on 14<sup>th</sup> Street, NW., on December 14 beginning at 10 a.m. and continuing into the evening:

The hearing will be conducted to consider alternative designs for proposed Interstate Route 266 between a point near the intersection of Canal Road and MacArthur Boulevard in Washington, D.C., and a connection with the proposed Interstate Route 66 near Lorcom Lane in Arlington, Virginia, including a proposed bridge across the Potomac River in the vicinity of the Three Sisters Islands.

Additional sessions were tentatively scheduled for December 15 and 16 "if necessitated by a larger number of witnesses than can appear on December 14, 1970." [Notice of Joint Design Public Hearing – Proposed Interstate 266, *The Evening Star*, November 13, 1970]

District officials said they would offer two designs for the bridge at the public hearing. One would be the suspended span of 740 feet between piers near the banks that the Commission of Fine Arts had approved. The other would be a more traditional steel box girder bridge supported by three piers, including one in the middle of the Potomac River.

The purpose of the hearing was to receive comments, oral and in writing, on the two designs, but as the *Star* pointed out, "freeway opponents have indicated they will use the session to voice opposition to any bridge." They would argue that the bridge was not needed and would increase air pollution and harm nearby neighborhoods. [Green, Stephen, "District Highway Officials to Offer 2 Plans at 3 Sisters Bridge Hearing," *The Sunday Star*, November 15, 1970]

While the House Rules Committee was deciding the terms of debate on the Committee on Public Works' version of the Federal-Aid Highway Act of 1970, the House District subcommittee headed by Representative Fuqua was considering the Broyhill amendment to the revenue act to withhold the proposed Federal payment of \$120 million to the District, increased by \$15 million from the previous year, until the city complied with Section 23 of the Federal-Aid Highway Act of 1968 or any subsequent legislation mandating freeway construction. On November 23, the subcommittee voted 7 to 3 for the measure.

Representative Gude voted against it. The newly elected Montgomery County Council had urged him to oppose any legislation that would force construction of the North-Central Freeway. The council's telegram to the Congressman stated that the freeway would be "more destructive than beneficial" to the city and its suburbs. The council favored the provision in the Senate's Federal-Aid Highway Act of 1970 that would repeal Section 23 of the 1968 Act. Without mentioning

Chairman Natcher, the telegram asserted that attempts to link Metro funding to highway construction were “unwise and unacceptable.” The telegram added, “This is particularly true in this period when Secretary of Transportation John A. Volpe has called for an 18-month study of this freeway proposal.”

That same day, Representative Gude testified before the Rules Committee in opposition to the District provision in the Federal-Aid Highway Act of 1970 because it required the District to build the North-Central Freeway to the District/Montgomery County line. Given the growing opposition to the Maryland segment, especially in the county, Representative Gude argued that the District provision could result in “Congress . . . directing the construction of a road to nowhere.”

The District revenue authorization bill included provisions to transfer the District’s prison complex in Lorton, Virginia, to Federal control and to renew the city’s authority to borrow money for construction projects. The subcommittee dropped the city’s request to increase its gas tax by a penny from 7 cents to 8 cents. Representative Fuqua explained that the subcommittee rejected the plan because the members thought the gas tax should be the same as in the surrounding jurisdictions in Maryland and Virginia, which charged 7 cents a gallon. [Taaffe, William, “Fight Against Freeway, Councilmen Urge Gude,” *The Evening Star*, November 16, 1970; Green, Stephen, and Grigg, William, “House Panel Oks Bill Tying D.C. Funds to Freeway Action,” *The Evening Star*, November 23, 1970; Moore, Irna, and Eisen Jack, “Build Freeway or Lose Extra Cash, City Told,” *The Washington Post and Times Herald*, November 24, 1970]

In the House, Chairman Kluczynski brought the 1970 Act to the floor on November 25. In his overview of the legislation, he said of Section 129:

Contrary to what some people might say this is not setting a precedent for this kind of action in other States, nor is it an attempt to substitute congressional action for sound engineering judgment. The committee has heard the testimony and received the reports of the District of Columbia and the Department of Transportation over the last few years and is only acting within the responsibility of the Congress toward the District of Columbia. I hope this body will support this section as it has been reported as you did in 1968, because I assure you gentlemen it is the only way your Nation’s Capital will ever have an adequate transportation system.

Because of the limited time available for debate on the House floor under the House Rules resolution, several Representatives who objected to Section 129 submitted comments to be inserted in the record. Representative Emilio Q. Daddario (D-Ct.), an attorney who had won election to the House in 1958 and was serving his final term after losing his bid to become Governor of Connecticut, objected to Section 129. He recalled that in 1960, Congress had rejected the 1959 Mass Transportation Survey, “plans which are similar to those which would be forced upon the people of the District of Columbia under section 129”:

The plans were unacceptable then and are unacceptable now for the very same reasons: high cost, destructiveness, and lack of demonstrated need for added arterial highway capacity.

He said that rarely had legislation “brought a more vehement and united outburst” from District residents. Forcing these freeways on the people of the District, “without fair and proper hearing, is to deny them the privileges enjoyed by the citizens of the 50 States.”

Representative Edward I. Koch (D-NY), the future Mayor of New York City who was a strong advocate for transit and bicycling while in Congress, mentioned the opposition to the freeways covered by Section 129. He preferred to delete the provision from the bill but offered a *reductio ad absurdum* solution:

I would suggest that if this body insists on retaining it, fairness and consistency demand that we add a provision . . . stating that all expenditures authorized by the Federal Highway Act will be suspended until construction on the District of Columbia system commences. [Federal Aid Highway Act of 1970, *Congressional Record-House*, November 25, 1970, pages 38938, 38958-38959, 38962-38963]

Representative Donald M. Fraser of Minnesota (Democratic-Farmer-Labor), a member of the District of Columbia Committee, introduced an amendment to delete Section 129. The amendment initiated a lengthy discussion. Despite opposition within the city, he said, “now comes Congress saying, ‘Well, the City Council does not know what they are doing,’ and in effect it says ‘No matter what they think or how much they know, we know best what is good for . . . the 700,000 or 800,000 people who live in the District of Columbia.’” At some point, “the District of Columbia ought to be given a voice in what happens to this city.”

This was not the first Congress, he said, that had overruled the city government. The District had complied with Section 23 of the 1968 Act “because we blackjacked them into it” by withholding funds for the subway. “Now we want to add another injustice to this unfortunate relationship between the Congress and the District.”

Another member of the District committee, Representative Brock Adams said, “I cannot stress how unhappy I am. I would use the word ‘bitter’ but probably that is not the proper word to use, but somehow I must manifest my terrible unhappiness over what has happened with this bill.”

He recalled the compromise that allowed release of the subway funds. The city complied and the funds were released. “I stand with it as I have stood with it on platforms in this city where my skin has been taken off in strips because many people of the District have said, ‘We do not want any more highways under any circumstances.’”

Regarding the North-Central Freeway, the city had studied the project in accordance with the compromise and concluded that it should not be built and that the Industrial Highway should be constructed instead. He explained the key difference between the North-Central Freeway and the Industrial Highway:

The difference in the two areas where you build the freeway, one goes through industrial-type lands, and lands that are not homes, and the other goes through a series of homes in the north end. This goes clear back to 1960. This route was shifted from one side of

Rock Creek over to the other side of Rock Creek, and it has been shifted back and forth for years and years.

Now, he had just learned that the District Appropriations Committee was working on a bill that would prohibit appropriation of any funds to the District unless the city complies with the 1968 Act or the present provision:

I just plead with you in the name of common decency that we keep our word as we have required the government of the District of Columbia to keep its word.

If Congress did not approve the Fraser amendment, “we will simply have broken our word” that was given under the previous compromise.

Representative McCarthy concurred, saying:

If you can mandate the construction of controversial highways in the District of Columbia, then you can do it in any State in the Union and in Puerto Rico.

District residents had made their views clear “with virtual unanimity.” He concluded that, “I think it is a basically undemocratic thing for us to force these highways on people who have said they do not want them.”

Chairman Kluczynski responded that the Committee on Public Works “has no intention of dictating to the various States what kind of a highway program it should have or where individual routes should be located.” Congress acted only after the courts had declared that the planned freeways violated the 1893 District highway code. Because only Congress could change the code, Congress acted in 1968 to require the District to build a freeway system that had been developed over a 20-year period and included in the 1968 ICE. “It was sound and was the product of local study and determination. It was not a creature of the Congress as some would have you believe.”

He would not want Congress to dictate highway locations in Illinois or any other State. “But in this case, in the District of Columbia . . . the Congress has the right and the Congress should designate the highways.” He did not mention the Constitution, but he was saying that it gave Congress a unique legislative role in the District that it did not have in the States.

Representative Gude and his Maryland colleague, Representative Hogan, took opposite positions on the Fraser amendment. Representative Gude pointed out that Maryland officials were in doubt about the North-Central Freeway:

At this time the State of Maryland and local government officials in Montgomery County have indicated that they are in doubt or in opposition to building a North Central Freeway. For us to order the immediate construction of a highway to the border of a jurisdiction that has indicated it does not intend to build it is ludicrous.

After discussing the history of the North-Central Freeway, he concluded that for Congress to order its construction in the District would be “sheer folly.”

Representative Hogan appreciated the provision in the bill providing for reconstruction of the Baltimore-Washington Parkway to meet Interstate standards as well as Section 129, which required construction of the North-Central Freeway:

If at this time we change the route of the North Central Freeway, as some are urging, further delays will result. The right-of-way has already been acquired for the proposed route, whereas any change of route will result in additional costs for this purpose. We can probably assume that any alternate route will also be objected to by elements of the community.

Chairman Natcher wanted to make clear to his colleagues that his committee supported a freeway system and a rapid rail transit system in the Nation's capital. He said, "we not only believe this to be true, but are willing to make any and all recommendations which will bring about a proper rapid rail transit system and freeway system for the District of Columbia." He summarized the years of effort to secure this outcome and cited editorial support from the city's newspapers. The Chamber of Commerce and the Board of Trade, he said, supported congressional intervention:

The majority of the people who pay the taxes necessary to operate our Capital City are for a balanced system of transportation. Those people who love and respect this city want this impasse settled and they want it settled now. They do not agree with the statement made several years ago by one of the dissidents that there shall be no more exists [sic] or entrances into our city.

The House defeated the Fraser amendment, 26 to 101. Later that day, the House approved the committee bill, including Section 129, without a recorded vote. A conference committee would be convened to resolve differences between the House and Senate bills. [pages 38978-38990, 38997]

Even as the House approved its version of the Federal-Aid Highway Act of 1970, Maryland opposition to the North-Central Freeway was growing. Governor Mandel wrote to Representative Gude, who had requested clarification of the State's position:

I have no intention to force an expensive improvement on an unwilling community, but before we abandon the North Central Freeway, we should be very certain that there is a real consensus in opposition . . . and that the local spokesmen really appreciate . . . the utter finality of such an action.

At the same time, Delegate Martin S. Becker (D), chairman of the Montgomery County delegation to the Maryland General Assembly, had written to Chairman Natcher. "Our delegation will exert all of its efforts to assure that [the North-Central Freeway] will become a 'no thru street' at the District of Columbia line." Becker urged Chairman Natcher to drop his efforts to force the city to build the freeway. [Eisen, Jack, "House Votes for Disputed N. Freeway," *The Washington Post and Times Herald*, November 26, 1970]

On November 28, *Post* editors took a dim view of congressional actions in an editorial titled "Making the Colony Step and Fetch." The House District Subcommittee, which had increased

the Federal payment by \$15 million, had “reckoned in its wisdom that, sure enough, we probably are entitled to a bit of extra change for the last six months of the budget – that is, ah, if we’re willing to do a few extra favors for it.”

The question was how many favors “because there are so many congressional overseers with so many pet projects.” In return for the additional \$15 million, all the city had to do was build all the freeways in Section 23 of the Federal-Aid Highway Act of 1968 and whatever ended up in the 1970 Act; abandon the penny gas tax increase but impose a 2 percent sales tax on linen services; turn over its Lorton prison complex in Virginia against its wishes; and so on.

While the House and Senate District authorizing committees fought over “the hostages and paraphernalia,” other committees were at work. Of course, the House Committee on Public Works was trying to force the city to build the North-Central Freeway, despite the city’s preference for an Industrial Highway in the New York Avenue corridor and growing opposition in Montgomery County. Meanwhile, Chairman Natcher’s District appropriations subcommittee was withholding Metro funds until the city built all the roads required by the 1968 Act. The Senate opposed the measures favored by the two House committees “but it hasn’t succeeded in getting that subway money for us either.” The editorial concluded:

All this is simply to give you a little peek (or is it pique?) at why the coffer’s a little hollow along about now. It seems like an awful lot of exercise for very little fiscal fitness. [“Making the Colony Step and Fetch,” *The Washington Post and Times Herald*, November 28, 1970]

On December 10, Jack Eisen reported that the House insistence on retaining Section 129 was weakening in conference. After five negotiating sessions, some conferees had told him “that negotiations on the national measure produced enough victories for the House version where its conferees became willing to give up their insistence on an early start of construction on the North-Central.” In return, some Senate conferees (“but not all,” Eisen emphasized) were willing to give up their efforts to retain the provision in the Senate bill repealing Section 23 of the 1968 Act. [Eisen, Jack, “Lawmakers Reported Wavering on Freeway,” *The Washington Post and Times Herald*, December 10, 1970]

As Chairman Natcher had mentioned, the District’s business community supported the freeway network. On December 10, the Federal City Council assembled businessmen representing the Board of Trade, Board of Realtors, D.C. Chamber of Commerce, the Washington Savings and Loan League, and many others to support the proposed freeways, including the North-Central Freeway. The *Post* explained:

They acted yesterday after it had been learned that a compromise may be reached on Capitol Hill that would delay a congressional order to build the North Central Freeway at least another year . . . while additional studies are made . . . .

The House Appropriations Committee, at Natcher’s request, is now refusing to grant \$34.2 million to continue building the subway system until the city complies with present highway legislation.

The business groups, which had supported freeways and rail rapid transit since the mid-1950s, blamed Mayor Washington and the city council for stalling freeway construction and thereby blocking progress on the subway:

The businessmen said they support both the pending House version of the Highway Act of 1970, which would require construction of the freeways, and a rider placed in the D.C. revenue bill Nov. 23 that would withhold \$15 million in city revenue until it complies fully with present and pending highway legislation. [McCombs, Philip A., "Merchants Push City Freeways," *The Washington Post and Times Herald*, December 11, 1970]

(The article in the *Post* about the event prompted Merle J. Van Horne of Americans for Democratic Action to write a letter to the editor. This coalition of business representatives "has consistently sought to inflict the monstrous William H. Natcher Memorial Freeway System on an unwilling city." In view of polls and reactions at public hearings showing "clear and massive opposition," the businesses "cannot plead ignorance or misunderstanding." Any attempt to "inflict such a profound environmental and social change on any city in the face of overwhelming citizen opposition is a despotic act of mind-boggling enormity." It is "more cynically destructive of public faith in the American system than a hundred flag-burnings." Their actions, accordingly, could be attributed only "to malevolence and greed." They "have clearly established themselves as an alien, hostile, pernicious force in this city."

(Mr. Van Horne was one of those arrested on August 9, 1969, during the protest of the city council's approval of the Three Sisters Bridge to secure release of the Metro matching funds. At the request of Chairman Hahn, the U.S. Attorney's office dropped unlawful entry charges on October 9, 1969, in the cases of 14 of those arrested, including Van Horne. [Van Horne, Merle J., "The Freeway Struggle," Letters to the Editor, *The Washington Post and Times Herald*, December 17, 1970; Curry, William N., "Illegal Entry Charges on 14 Dropped," *The Washington Post and Times Herald*, October 10, 1969])

The following day, December 11, the House District Committee dropped the provisions linking the Federal payment for the city to construction of freeways and transfer of the city's prison complex in Lorton to the Federal Government. Committee leaders decided to drop the measures when a coalition of liberals and conservatives, which one committee member called "an unholy alliance," threatened to defeat the bill:

A group of liberal, Northern Democrats and Republicans on the District Committee planned to fight the freeway and Lorton provisions on the House floor. The freeway section, sponsored by Rep. Joel T. Broyhill (R-Va.), would prevent the city from receiving the additional \$15 million until it agreed to build all congressionally ordered freeways, including the North Central freeway called for in the House version of the 1970 Highway Act.

Representative Brock Adams (D-Wash.), a leader of the liberal group, planned to offer a substitute bill that would not include the freeway and Lorton sections.

Conservatives opposed a provision, strongly supported by Committee Chairman McMillan, authorizing a Federal subsidy of up to \$62 million for Georgetown and George Washington Universities' "troubled medical and dental schools." Representative Abernethy, "usually a powerful member of the Committee's Southern conservative leadership," strongly opposed the provision:

Abernethy reportedly offered to support a substitute bill that did not contain Lorton, the freeway provision or the medical school section . . . . According to Broyhill, it began to seem that the bill contained so many controversial sections that a number of congressmen were willing to "burn down the whole barn just to get at their particular rat."

When House members of the conference committee on the Federal-Aid Highway Act of 1970 decided on December 9 to substitute a study for their prior insistence on construction of the North Central Freeway, Representative Broyhill offered to withdraw his amendment. Given the conferees' compromise, withholding \$15 million, he said, "would have been superfluous." Once Chairman McMillan agreed to drop the Lorton provision, Broyhill said, "there would be no opportunity for a general indictment of the bill from both liberals and conservatives." He expected that agreement by the conference committee on the Federal-Aid Highway Act of 1970 would result in release \$34.2 million for the subway, but Chairman Natcher declined to comment. [Moore, Irna, "Roads, Lorton to be Deleted in Money Bill," *The Washington Post and Times Herald*, December 12, 1970]

The provision, Title VIII ("Interstate Routes and the Federal Payment") remained in the District revenue bill until it reached the House floor on December 14. During the debate, Representative Broyhill explained that he had no desire to withhold funds from the District. He had introduced the measure to ensure District compliance with Section 23 of the Federal-Aid Highway Act of 1968 and Section 129 of the 1970 Act, but now a compromise appeared to have been reached by conferees on the 1970 Act that would bring the District into compliance with the law. "If they are in compliance with the law, then this title of the bill becomes unnecessary." In accordance with the agreement reached with Chairman McMillan, the House dropped Title VIII before passing the District of Columbia Revenue Act of 1970. [District of Columbia Revenue Act of 1970, *Congressional Record-House*, December 14, 1970, pages 41399, 41403-41404, 41409, 41415]

### **Design Hearing on the Three Sisters Bridge**

In compliance with Judge Sirica's ruling, the District, in cooperation with the Virginia Highway Department, held 3 days of hearings on the Three Sisters Bridge, which would carry I-266 traffic, including the trucks barred from the I-66/Theodore Roosevelt Bridge, across the Potomac River. The District indicated that 107 witnesses had been scheduled for the marathon sessions scheduled to run from 10 a.m. to 10 p.m. [Eisen, Jack, "3 Sisters 'Trial' Will Start Today," *The Washington Post and Times Herald*, December 14, 1970]

Even before the hearing on the Three Sisters Bridge, ECTC protested the appointment of Julian R. Dugas, the District's Director of Economic Development, as the hearing officer. ECTC argued that the District's 1967 reorganization plan required the mayor and city council to conduct

hearings on bridges and freeways. That meant, ECTC argued, personal participation by the mayor and the city council, not delegation to a representative. [“Group Raps Hearing On 3 Sisters Bridge,” *The Evening Star*, February 8, 1970]

Jack Eisen reported that in the 600-seat Commerce Department Auditorium, the hearing “moved briskly, sometimes as much as 45 minutes ahead of schedule.” He characterized the day’s presentations:

Many witnesses, as expected, expanded their statements into arguments on whether the Georgetown-to-Arlington span should be built. There were 14 presentations in favor, 28 against.

Generally, support came from business, professional and economic development groups and opposition from citizen and environmental protection organizations. However, a downtown organization of small businessmen was among the foes.

Leslie Logan, president of Arlingtonians for Preservation of the Potomac Palisades, was one of the first witnesses. He challenged the legality of the hearings, arguing that they were being held too long after the location hearing in 1964. Since then, Section 4(f) had been enacted to preserve the very resources the bridge threatened. He said it was ridiculous to “erase 31.6 acres of national parkland on the Virginia side . . . and impair the remaining acreage of the Spout Run Parkway.”

The hearing before a crowd that varied during the day and night from about 75 to 150 people was orderly for the most part. What little drama took place followed the decision by Dugas not to let William Buchanan of the Foggy Bottom Association testify when he arrived for his scheduled 11:35 appearance. Because the hearing was ahead of schedule, Dugas had called Buchanan’s name earlier and passed over him:

Sammie A. Abbott . . . loudly protested Dugas’ refusal to hear opposition testimony by William Buchanan . . . .

He yelled, “We’ll get to you, Dugas.” Four guards approached to warn Abbott to remain silent. He did so, but sat quietly with his arms folded.

Buchanan was called to speak a half hour later:

Both he and Abbott were among several who insisted that the hearing and the manner of its conduct were illegal. They claimed a hearing is needed on whether and where the project should be built, and they said they expect the U.S. Court of Appeals to uphold that view in a forthcoming appeal

Robert M. Kennan, transportation chairman of the Committee of 100 on the Federal City College, urged Dugas to call off the hearing on these grounds.

Dugas refused, having previously cited Judge Sirica’s ruling:

After an extended trial, Sirica ordered construction of the bridge piers suspended pending a design hearing but said that Congress in its 1968 law took the question of whether to build a bridge out of the court's hands.

Only one neutral presentation, by Arthur H. Fawcett, Jr., of the Potomac Boating Club, concerned the design of the Three Sisters Bridge:

If the bridge must be built, Fawcett said, the club wants the single overwater arch that has been approved by the Fine Arts Commission, omitting a mid-river pier he called a hazard to boat racing crews.

The plan that includes the midriver pier drew no support. Several opponents of the bridge said the arched design is attractive – one called it a work of art – but claimed it is unnecessary.

The safety of the bridge design came up during testimony by James O. Granum, president of the National Capital Section of American Society of Civil Engineers, which supported the project. Director Airis asked him if he had any concerns about the safety of the approved design. Granum replied, “No, sir.”

ECTC's John Carter was the day's 42<sup>nd</sup> and final witness. He predicted that “turmoil and uproar” would occur if the bridge were built. [Eisen, Jack, “Bridge Hearing Called Illegal,” *The Washington Post and Times Herald*, December 15, 1970; Grigg, William, “Legality of Hearing On Span Disputed,” *The Evening Star*, December 14, 1970]

On December 15, the second day of the hearing, Dugas reminded witnesses that under Judge Sirica's ruling, design of the bridge was the only issue to be decided. Judge Sirica had found that under Section 23 of the Federal-Aid Highway Act of 1968, whether to build the bridge was a settled point. As a result, the testimony thus far relating to whether the bridge was needed would prove useless to District and Virginia highway officials as they consider comments on design issues before advising FHWA and reporting their joint decision to the court.

Nevertheless, as the *Post* put it, the majority of the 38 witnesses “charged yesterday that the Three Sisters Bridge project is unnecessary, will cause pollution and disrupt neighborhood life in Washington.” Most of these opponents also contended that the hearing was illegal because Mayor Washington and the city council did not conduct them in person. By the time the hearing ended at midnight, another seven witnesses had supported the bridge while four did not take a position.

Two former members of the city council were among the witnesses who ignored those words of warning. Polly Shackleton said the council had “lost its soul” when it gave in to Congress by approving the Three Sisters Bridge against its better judgment. “The mayor and Council have ceased to be the heartbeat of the citizens of the District.” Most opposed the bridge, but in reversing course had lost the city council's credibility. Instead of discussing design of the bridge, she said the city should forget about building it.

The Reverend Fauntroy, a candidate for District delegate to Congress, agreed. “This bridge will function only if we pave the whole city. No design of a Three Sisters Bridge can increase the capacity of Arlington or D.C. streets to efficiently carry more traffic.” In short, “Design cannot fit a bridge where it should not be.”

The Reverend Channing Phillips of the District Democratic Central Committee, also a candidate for delegate, said the city council had approved the bridge only because of congressional “blackmail.” Mayor Washington “should take leadership of the District government on this vital issue, stop freeway construction and stop these hearings.” When Dugas asked if he had a preference on the bridge’s design, the Reverend Phillips said he preferred the view of the river and three small islands without a bridge.

A third candidate for delegate, Democrat George Mitchell, said the money that would be used for the bridge “should be spent on people who are going hungry instead of getting commuters in and out of the city faster.”

Former NCPC Chairman Rowe opposed the bridge. It would, she said, encourage trucks to go through the city instead of circling it on the Capital Beltway. The result would be more freeways that would “make North Central Freeway look like a community blessing.”

Harold O. Miller, vice chairman of the Fairfax County Board of Supervisors in Virginia, which supported I-66, pointed out that the Arlington County Board, which opposed I-66, might reopen discussions to cancel the Interstate in the county. “We shouldn’t proceed until we see if a road is going to be attached to it.”

The supportive witnesses cited the benefits of the bridge to Washington economic development. Supporters included representatives of Downtown Progress, the Institute of Traffic Engineers, Loudoun County Board of Supervisors in Virginia, the Virginia Automobile Dealers Association, and the D.C. Metropolitan Subcontractors Association. General Quesada of the Dulles International Airport Development Commission, who had helped pick the location for the new airport, said that a key factor in selecting the site was the expectation that the Three Sisters Bridge would be built. It would allow traffic to drive between downtown and the airport in about 30 minutes.

During the third day of hearings, most witnesses again addressed whether to build the bridge, not its design. Lawrence N. Bloomberg of the Palisades Citizens Association said the bridge would “distract from an open and uncluttered natural view of the Potomac valley and will increase and aggravate the pollution problems now facing Washington and its environs.”

By the time the hearings ended on December 16 at 3:40 p.m., Dugas had heard 130 witnesses. What the *Post* characterized as a “lopsided majority” of the witnesses recommended dropping the Three Sisters Bridge project. Many also questioned the legality of the hearings.

The *Post* reported that Federal rules for design hearings did not require clearance by the mayor or city council. District highway officials could report directly to FHWA. “Airis told a reporter, however, that he plans to clear his recommendations with those officials before transmitting them

to Charles E. Hall, the road bureau's D.C. division engineer." Division Engineer Hall had attended most of the sessions.

[McCombs, Philip, "Hearing for 3 Sisters Soan Develops Into Verbal Battle," *The Washington Post and Times Herald*, December 16, 1970; Grigg, William, "Ex-Councilmen Regret Vote for 3 Sisters Span," *The Evening Star*; "3 Sisters Span Called Stimulant for Dulles," *The Evening Star*, December 16, 1970; "Hearing End On Design For Bridge," *The Washington Post and Times Herald*, December 17, 1970]

### **Approving the Federal-Aid Highway Act of 1970**

Although the House-Senate conferees on the Federal-Aid Highway Act of 1970 had agreed on a study of the North-Central Freeway, instead of construction, one of the unwritten rules of conference committees is that nothing is final until everything is final. On that basis, despite earlier signs of agreement, conferees abruptly adjourned on December 14, unable to resolve differences related to the North-Central Freeway.

In return for agreeing to the study, House conferees asked the Senate conferees to delete the provision in their bill repealing Section 23 of the 1968 Act. The Senators said they would delete the provision if the House would agree to leave all language about District freeways out of the bill. If agreed to, the Senate-proposed compromise would leave the situation where it was, with the city refusing to build the freeway, a study underway on the North-Central Freeway, and Chairman Natcher withholding subway matching funds. [Green, Stephen, "Conferees Snagged On Freeway, Quit," *The Evening Star*, December 15, 1970]

On December 16, after the conferees met again, Chairman Fallon told reporters, "we're still hung up" on the District provisions. Senator Cooper said the Senate conferees were united in offering to drop its repeal of Section 23 if the House would drop the order for construction of the North-Central Freeway. The House was insistent on including a 1-year study of freeway, but the Senate conferees wanted no District of Columbia provisions in the conference report. That would leave Section 23 of the 1968 Act in place. "We've had enough studies," Senator Cooper said of the House offer of the new study. ["Conferees Stalls on Freeway," *The Washington Post and Times Herald*, December 17, 1970]

On December 17, House and Senate conferees completed work on the conference report for the 1970 Act. Section 129 now read:

#### District of Columbia

Sec. 129 (a) In the case of the following routes on the Interstate System authorized for construction by section 23 of the Federal-aid Highway Act of 1968, the government of the District of Columbia and the secretary of Transportation shall restudy such projects and report to Congress not later than 12 months after the date of enactment of this subsection their recommendations with respect to such projects, including any alternative routes or plans:

- (1) East Leg of the Inner Loop, beginning at Bladensburg Road, I-295 (section C4.1 to C6),
  - (2) North Central and Northeast Freeways, I-95 (section C7 to C13) and I-70S (section C1 to C2).
- (b) The government of the District of Columbia and the Secretary of Transportation shall study the project for the North Leg of the Inner Loop from point A3.3 on I-66 to point C7) on I-95, as designated in the “1968 Estimate of the Cost of Completion of the National System of Interstate and Defense Highways in the District of Columbia”, and shall report to Congress not later than 12 months after the date of enactment of this subsection their recommendations with respect to such project including any recommended alternative routes or plans.

Under the compromise, the South Leg of the Inner Loop remained designated as part of the Interstate System. [Federal-Aid Highway Act of 1970, Conference Report, U.S. House of Representatives, 91<sup>st</sup> Congress, 2d Session, House Report No. 91-1780, page 54]

The final bill also retained the authorization of \$65 million to reconstruct the Baltimore-Washington Parkway to Interstate design standards. Under Section 146, no funds could be expended until the Secretary of the Interior entered into an agreement with Maryland highway officials to convey the parkway to the State “without monetary consideration” and the State placed the parkway on the Federal-aid primary system under State responsibility.

The following day, the House approved the conference report, 319 to 11. The floor debate on the report did not include discussion of the District freeway provision. [Conference Report on H.R. 19504, Federal-Aid Highway Act of 1970, *Congressional Record-House*, December 18, 1970, pages 42514-42518]

The Senate, considering the bill on December 19, did discuss the District’s freeway controversies. Reviewing the conference report, Chairman Randolph said that the “most controversial sections” of the House and Senate versions of the 1970 Act concerned the construction of Interstate highways in the District of Columbia. Reconciling the two provisions “occupied considerable time and discussion”:

Behind the original positions of both Houses were strongly held convictions: the Senate – that the District of Columbia should be treated as a State, as the highway law provides, in determining the construction of highways; the House – that nonconstruction in the District of Columbia has seriously delayed completion of the Interstate System.

The conference decision, I believe, was the only one we could reach to avoid an impasse that would have imperiled the national highway program. It is a reasonable compromise in that there is no mandating of freeway construction in the city. The studies which the bill directs in an effort to determine the best way to resolve this very difficult program [sic] could be carried on without specific authorization.

He endorsed the Baltimore-Washington Parkway provision because the parkway “carries a heavy load of traffic, far beyond that which it was originally designed to accommodate” and “is in urgent need of improvement.”

Senator Cooper discussed some of the controversial measures in the conference report, including the question of the District’s highways:

I still consider, as I have for years, that the Congress should not attempt to lay out a highway system in the District of Columbia. On our side, we strove diligently to bring some order to this problem; to put full responsibility back where it belongs, with officials and people of the District of Columbia. We held out as long as we could for the Senate provision, to repeal section 23 of the 1968 act. There was no sign by the House of accepting the Senate provision, and we have ended our work. Perhaps the courts will now look at the proposed District of Columbia highway system. We cannot do it legislatively with any success.

He recalled that he had voted against the 1968 Act because of Section 23. The Senate provision was “especially important” because the House Public Works Committee “went even further than in 1968 in attempting to require the construction of interstate highways within the District – and without the fundamental provision which we were able to attach in 1968, so often overlooked, that all construction must be carried out according to all applicable provisions of title 23 of the United States Code.” The conference report rejected “any mandate for any new highway construction, or for designation or removal of designation of interstate routes” in the District:

The conference agreed to no more than another study by the District of Columbia government and the Department of Transportation of the North Central Freeway, and also of the East and the North Legs. Of course, these routes have been studied before, and a study of the North Central Freeway is now being carried out, and the administration supported the Senate position in this matter.

He introduced a letter dated December 15 that he had received from Secretary Volpe, who said he supported a balanced transportation program for the District, including necessary freeway projects and the subway:

I would prefer that specific highway projects be planned, designed, and constructed in accordance with the same procedures as apply to other cities and states under the interstate program.

If Congress “in its wisdom” repeals Section 23 of the 1968, Secretary Volpe said:

I would nonetheless assure the Committee that work on the construction of the Three Sisters Bridge will proceed as expeditiously as possible within the requirements of the law and the decisions of the courts – both because this Department and the District government are already committed to this project and because I believe it is necessary for a balanced transportation system for the area.

If Congress did not repeal Section 23, Secretary Volpe hoped that Congress would not require any further construction or studies. “As you know, my Department is already engaged in a 16-month study of the North Central Freeway which, again, will continue no matter what the Conference action is because I believe such a study to be needed.”

Senator Howard H. Baker, Jr. (R-Tn.) referred to the District provision as “a highly volatile issue, I dare say as emotional as almost any other issue, if not any issue that has been before the Senate in the past several days.” It was, however, worked out in accordance with “an old Tennessee adage that if no one is really happy with it, therefore it must be very good.”

The Senate approved the conference report without a recorded vote. [Federal-Aid Highway Act of 1970—Conference Report, *Congressional Record-Senate*, December 19, 1970, pages 42714-42723]

President Nixon signed the bill on December 31, 1970, without comment or a ceremony (P.L. 91-605). Secretary Volpe agreed with many observers who considered it the most significant highway legislation since the Federal-Aid Highway Act of 1956. He praised its extension of the Highway Trust Fund, the assurance it provided that the 42,500-mile Interstate System would be completed within the decade, and extension of the Highway Trust Fund revenue to “the very important areas of highway safety and access roads to national forests and public lands.” He added, “It gives the Department of Transportation and the Federal Highway Administration many of the tools we need to tackle the growing social challenges of our nation, especially in our urban centers.” He concluded:

The Federal-Aid Highway Act of 1970, in short, is designed to give Americans better and safer transportation in a manner that will not degrade our environment or threaten our health and welfare.

It indicates a strong awareness of the nation’s transportation needs and demonstrates an ability to approach them in a sane and reasonable manner.

Secretary Volpe did not mention the provision on District freeways, but influential columnist Tom Wicker of *The New York Times* took note. The “magnificent American interstate system” was now “nearing completion”:

On any rational timetable, this is about 10 years behind time, since these great highways essentially were the transportation system most required for the Forties and Fifties. Consequently, the nation also is running 10 or more years behind in developing the modern urban transit and rapid intercity transit systems that are the next necessary stage in American transportation.

Standing against this evolution was “a political juggernaut” that had formed during the Interstate years, namely the “highway lobby,” a phrase he put in quotes, and said it was “a shorthand way to describe the conglomerate of industrial, commercial, construction and political interests that have a big stake in building highways,” despite “a steady building of consumer resistance.” That resistance was nowhere more evident than in and around Washington:

The issue here ranges a high proportion of the voteless and mostly black citizens of the District of Columbia against the white Congressional masters of the District, most of whom represent largely white suburban or rural areas.

In 1969, Wicker continued, Congress had authorized funds for a 98-mile regional subway system, but the House District appropriations committee forced through legislation to force the city to build the freeways:

No one, for instance, has ever demonstrated a clear need for the Three Sisters Bridge over the Potomac to Virginia – the eighth such bridge in this area – but as a condition of letting subway construction begin, the House group forced the District to begin building the bridge. It also insisted on a route called the North Central Freeway, running through the inner city to the Maryland suburbs. By every conceivable gauge of public opinion, the people of the District are overwhelmingly opposed to the North Central Freeway.

In 1970, Congress adjourned without appropriating the District's \$34.2-million share of subway construction costs:

That has the effect of holding up the Federal matching grant of \$68-million, whereupon the State of Maryland refused to put up the \$10-million it owed the project. Almost simultaneously, the subway authority announced that due to inflation, higher interest and Congressional delays in providing promised construction money, the estimated cost of the system had risen by \$510 million to \$2.98 billion. And as if that weren't enough, such uncertainties and setbacks mean that there is little hope of selling this year the first batch of \$835 million worth of subway revenue bonds.

Secretary Volpe, "who bailed out the subway last fall with a \$57 million loan from the mass transit fund," was trying to resolve the problem, but the District was going to have to go back to Congress. "And it is clear that the Congressional purse-holders are going to demand final compliance with their highway mandate – building the North-Central Freeway – as the price for financing the subway."

District officials were divided. Some were proposing a commuter payroll tax for area residents, including those in Maryland and Virginia, to pay for the subway, while others, "including downtown merchants' groups, now want to build the freeway and end the fight, however ignominiously." Wicker concluded:

Washington is, of course, easier prey for the highwaymen than most communities, having no real vote. But other cities planning to upgrade their transit systems had better take note. The highway juggernaut is not easily stemmed. [Wicker, Tom, "The Highway Juggernaut," *The New York Times*, January 10, 1971]

### **Metro Wraps Up 1970**

On December 14, the House approved the District Revenue Act with the additional \$15 million in Federal payment without strings. The *Post* described the approval as "an anti-climax" because the House District Committee had dropped the controversial provisions, including Representative

Broyhill's penalty for not complying with Section 23 of the 1968 Act. The *Post* reported an exchange when Representative Abernethy of the District committee talked about the Broyhill provisions that had been dropped:

“We accommodated Broyhill by putting Lorton in this bill, but he chickened out,” Abernethy said. “And he chickened out on the highways. So he’s just a chicken, and he knows it.”

When Broyhill interrupted to protest that he did not chicken out, Abernethy shot back: “Then you copped out.”

This exchange was deleted from the *Congressional Record*. [Moore, Irna, “House Votes D.C. \$15 Million,” *The Washington Post and Times Herald*, December 15, 1970; District of Columbia Revenue Act of 1970, *Congressional Record-House*, December 14, 1970, pages 41380-41418]

The bill would now go to a House-Senate conference to resolve differences. Conferees completed work on December 19, including a compromise on the Federal payment. The Senate had voted to calculate the payment to equal 30 percent of the District general fund revenue derived from taxes, charges, and miscellaneous receipts. This calculation would have resulted in a payment of \$132 million in FY 1971. The House had rejected the percentage idea and authorized a flat \$120 million, an increase of \$15 million over FY 1970. Conferees agreed on a flat payment of \$126 million, for an additional \$21 million:

It is the position of the managers on the part of the House that the Federal payment authorization provided in the conference substitute is sufficient to cover any expense to the District of Columbia government which may accrue as a result of salary increases for D.C. government employees during the present fiscal year. [District of Columbia Revenue Act of 1970, Conference Report, U.S. House of Representatives, 91<sup>st</sup> Congress, 2d Session, Report No. 91-1789, December 19, 1970, page 13]

The House and Senate agreed to the conference report on December 21. President Nixon signed the District of Columbia Revenue Act of 1970 on January 5, 1971 (P.L. 91-650).

Freeway advocates and motorists received good news on December 23 when District highway officials opened the new extension of the Southeast Freeway to the 11<sup>th</sup> Street Bridge across the Anacostia River at 9:30 a.m. Motorists would no longer have to leave the freeway at 8<sup>th</sup> Street, SE., and drive through narrow streets and stop lights to reach the bridge. The extension was the first part of Interchange “C” to open. The last two segments of the interchange were scheduled to open in early 1971, giving motorists a direct connection with the Southeast Freeway on their trips to or from downtown.

Unfortunately, according to the *Star*'s Stephen Green, the city forgot to let motorists know about the opening:

A sign at the beginning of the extension said “Merry Christmas” from the highway department.

Highway department employees stood in the roadway and waved to motorists.

But most drivers just zoomed right by the extension and as usual left the freeway at 8<sup>th</sup> Street SE . . . .

Thomas Airis, highway department director, said that he expected that the extension will be used more in the afternoon rush hour today. “We’ll have to do some missionary work in the next few days,” he added. [Green, Stephen, “Drivers Ignore D.C. Yule Gift,” *The Evening Star*, December 23, 1970]

Although the District’s freeway impasse was causing WMATA problems, that was only one of the problems Metro construction was facing as the year ended.

The governmentwide supplemental appropriations act was in conference. The Senate had completed work on its bill on December 14, including a unanimous vote to include \$34.2 million for the District’s share of Metro construction. However, on December 17, the conferees agreed to delete the \$34.2 million the Senate had approved. Chairman Byrd told reporters, “We just couldn’t prevail. There was just no way of persuading the House.”

As news accounts explained, the decision would not halt subway construction, thanks mainly to Secretary Volpe’s loan that allowed WMATA to continue about \$100 million in construction contracts. However, it would affect new contracts in 1971, might cause local jurisdictions to withhold their contributions to WMATA, and raise doubts among potential investors when WMATA began issuing bonds to support construction. WMATA, reporters suggested, would have to delay the \$105 million bond sale planned for the spring. [“Hill Rejects \$24 Million Metro Fund,” *The Washington Post and Times Herald*, December 18, 1970; “Congress Tightens Grip On D.C. Subway Funds,” *The Evening Star*, December 18, 1970]

Knowing that nothing is final until everything is final, *Star* editors appealed “to the conferees to have another go at this dilemma before it’s too late.” They acknowledged Chairman Natcher’s dissatisfaction with the pace of freeway development in the city. “And indeed, the transit money had been placed in even greater political jeopardy by a recent Senate attempt to strike any reference to District freeways from national highway legislation.” The editors hoped that before the conference report was drafted, conferees would reconsider in view of the compromise language another conference had adopted for the Federal-Aid Highway Act of 1970. The editors agreed with Chairman Natcher about the need for the freeways, “but it is amply clear that holding the transit funds hostage will not advance that goal.” [“Natcher’s Choice,” *The Evening Star*, December 19, 1970]

Editors at the *Post* were even more blunt, saying Congress “has, in effect, doublecrossed the two million people who live in the suburbs of this city and has seriously jeopardized the future of rapid transit in the whole area.” Congress had been “hornswaggled [sic] by Representative Natcher and his friends, a band of men who are so angry about the freeway situation here that they are willing to dishonor commitments and themselves and Congress in order to demonstrate their power.” True, Congress was providing the Federal funds for Metro, but not the other part of its commitment in the form of the District matching funds. It withheld the funds “because a

group of spiteful men can find no other way in which to impose its wishes on the unrepresented citizens of the Nation's Capital." ["Default on the Subway," *The Washington Post and Times Herald*, December 20, 1970]

Conferees did not reconsider; the matching funds were not restored. President Nixon signed the Supplemental Appropriations, 1971, on January 8, 1971 (P.L. 91-665).

With agreement of conferees on the Federal-Aid Highway Act of 1970 to include a study of the North-Central Freeway, Representative Broyhill said the District would be in compliance with Section 23 of the 1968 Act and Section 129 of the 1970 Act. Chairman Natcher refused to comment.

The uncertainty prompted Maryland officials to say on December 19 that they would hold up the State's \$10 million contribution, due January 2, 1971, for Metro construction until they were certain Congress would release the District's matching funds. Governor Mandel said the conferees acted "at a very inappropriate time." He explained, "Maryland has an obligation and intends to fulfill its commitment to mass transit but before we proceed with such a huge outlay we want to get concrete assurances from the federal government that its money will be forthcoming."

As for the optimism about the 1970 Act compromise, Comptroller Goldstein said, "We've heard that story before and I don't want to take any more chances." [Rowland, James B., and Green, Stephen, "Maryland to Tie Metro Fund To Release of District Share," *The Sunday Star*, December 20, 1970]

On December 29, Goldstein announced that the State would not provide \$10 million to Montgomery and Prince George's County for their Metro share. Goldstein said congressional action in holding up the District's share raised concerns about the viability of Metro; he feared that the two States might be asked to pay the District's share.

As Tom Wicker had stated, the estimated cost of Metro had increased 29 percent to nearly \$3 billion. This change was revealed with release on December 7 of the report of General Graham's testimony in a closed hearing on November 24 before Chairman Natcher's subcommittee.

General Graham testified that the uncertainty about funding was causing planning problems:

Because of the uncertainties with regard to our funding, the initial sale of revenue bonds next year has been seriously jeopardized. In fact, we may find it impossible to issue bonds without additional federal support. We are now exploring this matter further with our financial advisers.

So, it is my painful lot to tell you today, Mr. Chairman, that we are in trouble with our financial plan because of the delays which have beset the transit program.

Our construction and financial schedules are stretched to the breaking point. The off-again, on-again appropriation experience has not been going unobserved.

Consequently, potential contractors are not sharpening their pencils as they develop their bids. We are not able to assess the effects upon the ultimate system cost at this time.

He recognized “that strongly held and divergent position” were delaying resolution of the highway impasse. “But while they are being reconciled, Mr. Chairman, collapse of many years of transit planning can serve no purpose.” He pleaded for a solution

We all seek a balanced transportation system for the National Capital area. In that common purpose, there is no profit or reason in the sacrifice of one element for the other . . . .

Chairman Natcher summarized the subcommittee’s support for balanced transportation and its efforts to secure that balance. He asked if WMATA still believed in its estimate of \$2.5 billion for the 97-mile Metro system.

General Graham replied that WMATA had been engaged for several months in new capital cost studies. Because the studies had not been concluded, he could not provide a precise figure, “but it appears that it will be substantially higher than the \$2.5 billion of costs.”

Chairman Natcher pointed out that he had said all along that Metro would cost more than \$2.5 billion. “General, in all fairness to this committee and to the Congress and to the District of Columbia, won’t this system come nearer \$4 billion than it will \$2.5 billion?”

General Graham explained the assumptions behind the estimate of \$2.5 billion:

We could not foresee at that time that construction costs would go up in this inflationary spiral, largely due to the wage agreements that were not for just one year but extending into the future for two or three years. We could not foresee the rise in the interest rates.

He expected the cost studies to raise the estimated cost by “some few hundreds of millions of dollars.” WMATA was “a long ways from being able to say that some day this may cost \$4 billion.” Ultimately, he hoped the Nixon Administration would “get the rate of escalation under control so we never go anywhere near that figure.”

If, Chairman Natcher pointed out, the estimate went above \$2.5 billion, WMATA would have to come back to Congress for additional authorizations. General Graham agreed. Chairman Natcher summarized the cost estimate increases over the years and the reasons for those increases. However, he favored a balanced transportation system that included the planned freeways:

General, I hope this matter can be resolved. I know you do, and all of your people and associates do, because when you come back for more money, unless there is a change in the over-all situation as I see it today, we may end up with about a 45- or 46-mile rapid transit system, not 97 miles.

If the Congress should simply say with all of the demands that are confronting the American people, we are not going to carry the amount up any more at this time, then we

would have to cut it back. I am hoping that we can resolve this problem and move it on and build this system . . . . This is a serious matter, and one that it will be right hard to take back to the Congress. I would like to have it all settled. It is a serious mistake for anyone to try to block a balanced transportation system . . . . Let me say to you again, I am going to travel the road with you. We are going to solve this matter.

General Graham said, "That sounds great." [Eisen, Jack, "Metro Cost Rises, Could Cut System," *The Washington Post and Times Herald*, December 8, 1970; "Capitol Hill Testimony on Metro's Fate," *The Washington Post and Times Herald*, December 13, 1970]

On December 31, WMATA released the results of the cost studies. A 10-page white paper explained that the estimated cost of the nearly 98-mile system had increased by \$400 million, a 19 percent increase to \$2.9 billion. WMATA attributed the increase to inflation in construction costs, higher interest rates, and delays in securing the District's share of funding as a result of the freeway-subway impasse. Under the existing cost-sharing formula, the contribution from area governments, including the District, to the total system cost would increase by \$150 million to \$725 million and the Federal contribution would grow by \$300 million to nearly \$1.5 billion. Bonds would make up the difference between contributions and costs, but Metro staff suggested that a Federal guarantee of repayment would probably be needed to convince investors to buy the bonds.

The WMATA Board of Directors rejected cost-cutting measures, such as smaller stations, curtailed air conditioning, and fewer escalators, saying they were a "backward step." Instead, the directors vowed to find \$510 million in local tax revenue and congressional contributions to meet the new budget.

Staff also had revamped the 10-year construction schedule. The new schedule projected completion of Metro construction by December 1979, but staff cut the initial section to 4½ miles (Rhode Island Avenue and Eighth Place, NE., through Union Station beneath G Street to the Farragut North terminal at Connecticut Avenue and K Street, NW., instead of continuing to Dupont Circle). It would begin operating in December 1973. [Eisen, Jack, "Metro Costs Rise 19% to \$2.98 Billion," *The Washington Post and Time Herald*, January 1, 1971; Grigg, William, "Metro Costs Up, 1<sup>st</sup> Segment Is Cut," *The Evening Star*, December 31, 1970]

The cost increase and contribution problem prompted the *Post* editorial board to state that the optimism inspired by the groundbreaking a year earlier "has been drained from us." An editorial on January 2 explained:

Indeed, the dream has become a nightmare, full of mischievous and narrow-minded men who care not for the Nation's Capital, for the people who live in its environs, or for the commitments they have made in the past.

The only people happy about the bad news were "Congressman Natcher and his friends on Capitol Hill . . . because these two things complicate enormously the financing of Metro and that, after all, is what Mr. Natcher has been busy doing for the past two years." WMATA should present Congress with a bill for the increased costs that the games Representative Natcher has

played have added to the cost “and see whether Congress has the moral courage to pay for the damage it has caused.”

Maryland Comptroller Goldstein’s stance was understandable, if regrettable, in view of Chairman Natcher’s actions:

This whole mess, of course, grew out of the fight over freeways in the District and the feeling of Mr. Natcher and the House Public Works Committee that they had been doublecrossed on the freeway program. As far as we can tell, the legislation passed this year [1970] has mollified the Public Works Committee. But it seems to have had no impact on Mr. Natcher. It is beginning to look more and more as if he doesn’t want a rapid transit system built at all, despite his often repeated remarks that he’s all for it.

The damage was not limited to the District since it affected Maryland and Virginia as well.

The editorial concluded by listing the other members of the District appropriations subcommittee, “a majority of whom seem eager to strangle this community’s rapid transit system in its crib.” The list:

They are William H. Natcher of Bowling Green, Ky.; Robert N. Giaimo of New Haven, Conn.; Edward J. Patten of Perth Amboy, N.J.; David Pryor of Camden, Ark.; David R. Obey of Wausau, Wis.; Glenn R. David of Waukesha, Wis; Donald R. Riegle, Jr. of Flint, Mich.; and Wendall Wyatt of Astoria. Ore.

Messers Natcher, Giaimo and Patten have residences in the District; Mr. Wyatt lives in Fairfax County, Mr. Riegel [sic] in McLean, and Messrs. Obey, David, and Pryor in Arlington. [“Strangling Metro in Its Crib,” *The Washington Post and Times Herald*, January 2, 1971]

On January 2, after WMATA released its new estimate, Secretary Volpe wrote to General Graham to ask the Metro Board to take no action on its budget until he had a chance to review it and offer possible alternatives for finding the extra \$510 million. He was concerned about “the mounting jeopardy into which the long-range financial plan . . . appears recently to have fallen.”

An aide said the Secretary’s goal was to expedite construction. WMATA officials were encouraged by his involvement since Nixon Administration support was essential to finding a way of keeping the project moving forward. [Eisen, Jack, “Volpe to Review Metro Cost Crisis,” *The Washington Post and Times Herald*, January 5, 1971]

When a jurisdiction did not make its contribution on time, WMATA assessed a penalty. With the District share on hold, other jurisdictions were hesitant to make payments that would end up idle and kept in an account earning 6 percent interest. As of January 1971, penalties totaled \$590,000. The District was incurring a penalty of \$2,000 a day.

In Maryland, the State and counties were arguing over whether the \$10 million payment was a grant or, as the State maintained, a loan. In addition, Governor Mandel, who chaired the three-member State Board of Public Works, added. “Our sources in Washington tell us the price will

be closer to \$4 billion than \$2.9 billion, and this will require a tremendous amount of money from within the State somewhere.” Maryland was not willing to make further payments until WMATA released a long-range spending plan that covered the likely cost of \$4 billion. The public works board, which had to approve all such expenditures, had refused to release the funds without the long-range plan. Comptroller Goldstein, a member of the board, said, “We got to have that information because otherwise our contribution will be a shot in the dark.” [Rowland, James B., “Subway Funds Hit New Snag,” *The Evening Star*, January 24, 1971; Kneece, Jack, “A Way Out of Subway Fund Crisis Proposed,” *The Sunday Star*, January 31, 1971]

The immediate problem was Chairman Natcher. As Professor Schrag pointed out, “Natcher’s thinking remained mysterious” even as he once again withheld subway construction funds:

He refused to talk to reporters, and in both his public statements and private journals he gave shifting, contradictory reasons for withholding the appropriation. At times he expressed concern about cost overruns, predicting a total cost of more than \$5 billion, rather than the \$2.5 billion then projected by WMATA. At other times, he claimed that “there is not a man, woman or child in the city of Washington that is stronger for a rapid rail system than I am,” but he simply felt obliged to defend the honor of the House of Representatives. By 1971, Natcher had convinced himself that support for Metro came mainly from “big banks, large brokerage firms and big law firms,” or possibly the Mafia, who presumably were seeking illicit gain. Daniel Inouye, Natcher’s counterpart in the Senate [having replaced Senator Proxmire as chairman at the start of the 92<sup>nd</sup> Congress], speculated that Natcher simply feared the shame of a headline reading “Natcher Gives In.” Perhaps most of all, Natcher wanted the highway acts enforced as a matter of law and order. He was an old-time southern Democrat, increasingly uneasy in a majority-black city whose residents were gaining political power by the day. Building the highways would prove that “our Capital City is under the jurisdiction of the Congress of the United States and not under the jurisdiction of the looters and the burners who have no respect for this city.” [Schrag, pages 136-137]

Funding aside, WMATA was still trying to resolve concerns about minority contracting, hiring, and training. On September 4, 1970, Jack Eisen had reported that, “Washington’s Metro subway agency and Project Build, a union-sponsored manpower training program, have reached a preliminary agreement on the training of unskilled workers for craft jobs on the subway.” Jack Brown, WMATA’s equal employment opportunity officer, disclosed the plan to the board on September 3. Project Build would provide an 8-week pre-apprenticeship program for 40 workers in skills needed on the project. Contractors would then hire the trained workers. Crafts were carpenters, cement masons, electricians, operating engineers and iron workers. The Department of Labor was providing funds for the training. Under the Washington Plan agreed to with the Labor Department, the hard-core unemployed were to comprise at least 5 percent of the subway work force. [Eisen, Jack, “Unskilled Training Plan Set,” *The Washington Post and Times Herald*, September 4, 1970]

On October 22, WMATA Chairman Yeldell told Brown, “I’m totally dissatisfied” with the lack of progress in involving minority groups in the project. Brown informed the board that only one minority firm had received a subcontract and that was for \$20,000. Further, WMATA did not yet

have final agreement on training of the hard-core unemployed. Contractors were to submit employment plans within 90 days of signing their contract, but none had yet done so. Stephen Green reported:

Yeldell said that unless the minority work situation changes, the entire metro program will be committed to contractors before minorities are involved at all.

Herbert E. Harris of Fairfax and Charles Beatley of Alexandria, members of the subway board, said they “applauded” Yeldell’s position.

“There’s only so much one man can do,” Brown said. Yeldell and Carlton Sickles, authority vice chairman, suggested that Brown ask the directors for help if it is needed.

He said the reason minority firms had difficulty securing contracts or subcontracts was their difficulty obtaining bonding and insurance:

Jackson Graham, general manager of the authority, said that “historically” minority contractors are not interested in heavy construction work. Yeldell replied that they are interested but have been barred from obtaining contracts. [Green, Stephen, “Subway Minority Hiring Inadequate, Yeldell Says,” *The Evening Star*, October 22, 1970]

A week later, Chairman Yeldell had confirmation of the problem for minority contractors. Minority Truckers, a combine formed a few weeks earlier by 21 minority-owned trucking firms to secure contracts on the Metro construction work, informed him that it could not obtain a multi-million subcontract because it was unable to secure bonding within 5 days, as required by the prime contractor, Peter Kiewit Sons, Inc., on a \$38 million contract to build the station at Metro Center. Kiewit replaced Minority Truckers with a white-owned firm that was able to secure bonding. The experience suggested to Chairman Yeldell that WMATA would have to get involved in bonding issues to “break the cycle” that had frozen minority contractors out of the work. [Eisen, Jack, “Bond Blocks Black Group In Metro Job,” *The Washington Post and Times Herald*, October 30, 1970; Green, Stephen, “Blacks Lose Metro Pact Over Bonding,” *The Evening Star*, October 29, 1970]

On November 5, WMATA’s board considered the agreement provided by the U.S. Department of Transportation to make the \$57 million loan official. The agreement required development of a far-reaching plan for involving minority groups in the construction work, as described by Stephen Green:

The department’s plan would have the transit authority train persons to qualify as journeymen in skilled crafts “through appropriate on-the-job and other training in connection with the construction of the Metro subway system.”

It also would have the transit authority work with minority businesses to aid them in obtaining subway contracts.

It also would have the transit authority submit to federal officials a program for the hiring of minority group members on the subway agency staff. [Green, Stephen, "Area Subway Panel Is Told to Develop Minority Job Plan," *The Evening Star*, November 5, 1970]

The Washington Area Construction Industry Task Force, which had focused on hiring for construction work, filed a suit in U.S. District Court charging that WMATA had discriminated in staff hiring and promotion. Joined by black engineer James Samuda, the task force alleged that WMATA "discriminated on the basis of race with respect to the hiring and promotion of professional and nonprofessional members of the staff." Attorney Clifford Alexander called it "outright discrimination" in staff hiring and promotion policies."

WMATA had 236 authorized staff positions. Only 205 were filled at the time of the suit, but of 130 professional positions, blacks held fewer than 10 positions. Of the 75 nonprofessional jobs, blacks held 35. Further, of the 70 staffers earning more than \$20,000 a year, only one was black.

Figures from WMATA identified 20 of 142 professional jobs and 35 of 63 nonprofessional jobs, but defined "minority group members" to include Oriental and Spanish-speaking employees.

Samuda claimed he had been approached in June and asked to apply for a position. He was, the suit claimed, "led to believe that he would shortly be offered a specific position on the authority staff." However, on June 29, his application was rejected "without adequate explanation."

The *Star* reported:

The suit asks for a ruling that WMATA has infringed the rights of the plaintiffs and for an injunction against future such infringement. It also asks the court to order WMATA to submit an affirmative action plan for hiring blacks to the staff in numbers "which shall reflect approximately the percentage of black residents of Washington, D.C.

The suit also sought an order that Metro establish a program to "actively and in good faith . . . seek out and recruit black residents of Washington" until their percentage equaled the black population of the city, about two-thirds of all residents. Plaintiffs also asked the court to prohibit Metro from hiring or promoting any white employees "to eliminate the effects of past racial discrimination." [Kalb, Barry, "Metro Accused of Bias In Hiring for Subway," *The Evening Star*, December 12, 1970; Eisen, Jack, "Suit Assails Metro On Staff Job Bias," *The Washington Post and Times Herald*, December 12, 1970]

A few days later, the *Star* reported that WMATA was working on a plan to set up a special panel of consultants to help black-owned businesses secure contracts. WMATA, by law, had to treat all bidders equally, but by setting up the separate panel, the agency could provide help black contractors overcome obstacles such as submitting competitive bids and securing bonds. "Black-owned firms, so far have received only \$300,000 in contracts from WMATA, compared with a total of more than \$18 million in subcontracts let." WMATA expected that funds for the panel might come from the Federal government or a private foundation. ["Metro Maps Steps to Aid Black Firms," *The Evening Star*, December 19, 1970]

## The Metro Revolt Begins

At the end of 1970, *Star* editors described Metro as being at a critical junction. Virginia's Alexandria, Arlington, and Fairfax Counties had delivered checks to WMATA for their 1971 share. Nevertheless, they shared Maryland's concern about "the incredible performance of Congress" in holding District matching funds "hostage." The editors feared, "The whole subway endeavor could soon come to a standstill."

Only Chairman Natcher can shore up the project. "Surely he perceives the intolerable losses – possibly fatal to the undertaking – that could result from a delay at this critical point." Although Congress had authorized \$68.4 million for the Federal share, the funds could not be used without the District's match. "Success of the program depends on continuance of the finely balanced multi-jurisdictional participation that has been worked out, on keeping ahead of inflationary erosion and avoidance of contracting delays."

Congress had postponed a decision on the North-Central Freeway by ordering a study. "We hope that Natcher will ascertain that there is some motion on the freeway question – all that is immediately attainable – and will turn the subway money loose." ["Critical Subway Juncture," *The Evening Star*, December 30, 1970]

As the 92<sup>nd</sup> Congress arrived in Washington to organize, District officials could contemplate the possibility that Chairman Natcher would leave the District appropriations subcommittee for chairmanship of another subcommittee. Following the 1970 election, rumors had suggested he would do so, thus leaving the post where he had caused so many problems by withholding District funds for the subway to force the city to build its freeway system. However, as committee memberships changed, his retention of his position became clear in early February. He refused to comment.

Representatives Patten and Riegle left the subcommittee, which gained several members: Representatives Louis Stokes (D-Oh.), K. Gunn McKay (D-Ut.), Robert C. McEwen (R-NY), John T. Myers (R-In.), and William J. Scherle (R-Ia.). ["Natcher To Stay As Chairman of D.C. Panel," *The Evening Star*, February 9, 1971; "Natcher Retains Unit Chairmanship," *The Washington Post and Times Herald*, February 10, 1971.

By 1971, Chairman Natcher saw his support lessening in Maryland and Virginia. Both States supported Metro, but the congressional insistence on construction of the North-Central Freeway in the District implied that Maryland would build the increasingly unpopular link between the District line and the Capital Beltway:

As suburbanites turned against that project, their elected representatives turned against Natcher. The vast majority of the Montgomery County delegation to the Maryland legislature proclaimed that the North Central Freeway "involves directly the interests of Maryland and her citizens, more particularly those residing in Montgomery County, and the decision should be made at the state and local levels," not by congressmen from Kentucky and Illinois [Chairman Kluczynski]. One Prince George's County state senator

wondered if it wasn't time for local congressmen to start blocking federal projects in Natcher's home district. [Schrag, page 138]

As Professor Schrag added, the difference between the District of Columbia and its neighboring States was that unlike the District, they, then as now, had representatives in the House and Senate who could vote the interests of their constituents. Representative Gude, recognizing that his constituents had turned against I-70S inside the Capital Beltway, encouraged his colleagues on the District Committee to judge each program on its merits. In Virginia, Representative Broyhill had supported construction I-66 inside the Capital Beltway and the I-266/Three Sisters Bridge:

Through 1970 Broyhill continued to scold the District government for not building freeways, but Broyhill had been burned by Natcher's caprice, and by a close reelection that November in which the freeway issue cost him some votes. Now, in the spring of 1971, even he wanted to separate the issues of subway and freeway construction. [Schrag, page 138]

At the same time, the White House was increasingly frustrated with the stubborn Congressman:

Nixon himself had no desire to get entangled in what he saw as a local issue. But daily liaison between the White House and the District was handled by Egil Krogh, Jr., a young lawyer from Seattle who had taken over D.C. duties from Moynihan. Krogh had fallen in love with the city and had been impressed by the demonstrations against the Three Sisters Bridge. He did not want to see the District surrender to blackmail. [Schrag, page 137]

Moynihan left his post as counselor to the President on December 30, 1970, to return to Harvard.

Within Chairman Natcher's subcommittee, Representative Giaimo, the second ranking Democrat, and a new member, Representative Obey, were planning a revolt. Representative Obey had been a State legislator when President Nixon, in December 1968, selected Representative Melvin R. Laird (R-Wi.) to be Secretary of Defense. In the special election to replace Representative Laird, the 30-year old Obey won. When he took the oath of office on April 1, 1969, he was the youngest Member of Congress and the first Democrat to represent his northwestern Wisconsin district, which included Superior and Wausau. He and his wife Joan, along with their young son, moved to the Washington area where they rented a home in Arlington.

After an initial stint on the Public Works Committee, he was assigned to the Appropriations Committee at the start of the 92<sup>nd</sup> Congress and to Chairman Natcher's District Appropriations Subcommittee. In his autobiography, Representative Obey described the chairman as a "respected, courtly, tough-minded Kentuckian." Although new to the Washington area, Representative Obey quickly sided with subway advocates and those who opposed the Three Sisters Bridge:

Georgetown was already strangling in traffic, and the District Government was resisting the construction of the new bridge . . . . It was also obvious to me that obliterating the

beauty of Spout Run by adding more lanes to the traffic and dumping even more cars into Georgetown's clogged streets was the wrong thing to do.

Representative Obey did not agree with Chairman Natcher's decision to withhold subway funds:

As the most junior member of the subcommittee, I reluctantly acquiesced in Natcher's decision because I felt there was no way I could change the outcome. But when the dispute spilled over into another year [1971], it became apparent that further delay would raise construction costs due to inflation . . . . When Natcher made clear that he intended to continue denying funds for the desperately needed subway system, I decided that, win or lose, I was going to start a fight by offering an amendment to the D.C. Appropriations bill restoring the needed funds.

He decided to approach Representative Giaimo, an attorney who had won election to the House in 1958 and was a strong supporter of Metro. Professor Schrag said of Representative Giaimo:

Giaimo knew full well the customs of the committee. "You be quiet," he was told, "you get along, you go along, you don't make any waves, you certainly don't challenge your sub-committee chairmen and your committee chairman with amendments." Only gradually did Giaimo emerge as a rebel. In August 1969 he wrote a constituent that "the anti-highway people blithely ignored the will of Congress," and that "Congress, not Mr. Natcher," had withheld the Metro funds as a means of overcoming "a noisy militant minority." A year later, at the beginning of the second impasse, he began to tilt. While highways had their place, he wrote, "the citizens of the District ought to be able to set their own public policy – making these crucial decisions in accordance with their own view of their best interests – even if they have to make their own mistakes." And by the spring of 1971, with Metro's future obviously at risk, he was fed up with Natcher's blackmail. "Bill," he told his chairman, "it's unconscionable. We can't hold up the Metro. We're going to need Metro in this town." [Schrag, pages 138-139]

Representative Obey described his discussion with Representative Giaimo:

I called Giaimo and told him that I could not continue to allow Natcher to go unchallenged on the issue. "I intend to offer an amendment unleashing the subway if I have to, Bob," I told him, "but the amendment should really come from you. People will listen to you who don't even know who I am," I told him.

"God, I agree with you," Bob said, "but taking on Natcher is damn near death defying in this place. You don't know him like I do. He never forgets who crosses him, and we will pay a hell of a price if we take him on – especially if we lose – and the odds of our overturning him are damn slim." "I know that," I told Bob, "but a few years from now if Spout run is destroyed and Georgetown is a mess, I will wish to hell I had done something."

They agreed to act fast. Representative Giaimo was leaving for Connecticut, but suggested that Representative Obey arrange a meeting to work out a plan with other members of the subcommittee, the Mayor's office, WMATA, and the White House:

When I made my calls, I found little interest from other subcommittee members. When I called the office of deputy mayor Graham Watt to ask them to send someone to a strategy meeting, they reacted like I had leprosy. "Oh no, we can't send anybody," they said. "We can't risk antagonizing the chairman."

"You have to be kidding," I said. "You want the money; the Subway Authority wants the money; you expect us to antagonize Natcher, but you don't have the guts to do the same thing?" I asked. Then I told them, "Look, the meeting is going to be held whether you come or not. We're sticking our necks out whether you do or not, but if you don't come, I will tell a press conference that the mayor's office is an Uncle Tom operation." The next week they showed up at the meeting.

The White House agreed to send their District liaison, Krogh, and convinced Speaker of the House Albert, who persuaded Chairman Mahon of the Appropriations Committee, regarding the revolt. Representative Giaimo, Obey, and their coconspirators had to await their moment. [Obey, David R., *Raising Hell for Justice: The Washington Battles of a Heartland Progressive*, The University of Wisconsin Press, 2007, pages 136-137]

### **The Metro Revolt**

#### **Advancing Metro**

On Saturday, January 2, Secretary Volpe sent a brief letter to General Graham regarding Metro's financial prospects. Secretary Volpe wrote that he "noted with increasing concern the mounting jeopardy into which the long-range financial plan . . . appears recently to have fallen." He asked General Graham, "Pursuant to my responsibilities in this area, I request that you take no further action on a new financial plan . . . until I have had an opportunity to review [it] . . . and possible alternatives" for finding the extra \$510 million needed to finish Metro construction."

Councilmember Moore, chairman of the WMATA board, replied that he welcomed Secretary Volpe's "review and help." He called on WMATA staff to honor the request. General Graham confirmed that he would comply with Secretary Volpe's request.

Jack Eisen reported:

An aide said Volpe's intention is to expedite the building of the system. A Metro official said he is confident that Volpe would reject any suggestion that the length or quality of the system be reduced . . . .

It was not clear yesterday whether Volpe acted completely on his own initiative, or had been asked to get involved in the Metro problem.

An aide said he understood that the Secretary's assistance was solicited by "a number of community leaders" not otherwise identified. [Eisen, Jack, "Volpe to Review Metro Cost Crisis," *The Washington Post and Times Herald*, January 5, 1971]

On January 6, Maryland's Board of Public Works agreed to release \$10 million to help its two Washington area counties may their \$15 million contribution to WMATA. However, release was dependent on receipt of current construction financing plans and clearance by State Attorney General Francis B. Burch that WMATA had satisfied all aspects of the mass transit bond statute the General Assembly had approved in 1970.

The three board members – Governor Mandel, Comptroller Goldstein, and State Treasurer John Leutkemeyer – expressed concerns about the ultimate cost of Metro and the Federal Government's commitment to the project. Governor Mandell, who suggested the cost could rise to \$3.5 or \$4 billion, wanted "factual figures and accurate figures . . . . I mean honest figures." Although Congress had authorized Federal funds for the present year, it was withholding the District share, prompting a concern that Congress might abandon the project and leave Maryland and Virginia to pay more for it. Goldstein asked, "Is there just going to be a big ditch dug and nothing else happens?"

Gladys Noon Spellman was one of the chief advocates to address the board in support of the funding. She was serving on the Metro board and the Washington Suburban Transit Commission, which was the conduit for the two Maryland counties' contributions to WMATA.

Although she conceded the counties were concerned about the long-term Federal commitment, she argued that the counties should make their payments with confidence that the project will be built.

She disclosed to the Public Works Board that in August 1969, as the District city council was deciding whether to advance the freeway system as a way of securing release of the Metro matching funds, she had warned council members that Prince George's County, where she lived, might pull out of the planned system. If the city council did not comply with Section 23 of the Federal-Aid Highway Act of 1968, county officials would lose confidence in the plan and withdraw from it. [Eisen, Jack, "Md. Acts On Metro Funds," *The Washington Post and Times Herald*, January 7, 1971; "Maryland Acts to Free Its Funds for Subway," *The Evening Star*, January 7, 1971]

On January 14, Carlton R. Sickles of Maryland became chairman of the WMATA board of directors, replacing District Councilman Moore in accordance with the annual rotation specified in the WMATA compact. Jay E. Richs of Arlington became first vice chairman while the Reverend Moore became second vice chairman.

That same day, WMATA staff proposed new minority hiring rules. The plan would require firms with \$500,000 or more in contracts to hire a specific number of minority employees in certain occupation classifications. The highest goal, 43 percent, would be for iron worker jobs by May 1974. Laborers, teamsters, roofers, cement masons, and brick layers would be excluded because local unions for those classifications consisted primarily of minority members. Carpenters, plasterers, and operating engineers also were excluded because they were "demonstrating affirmatively their intention of including minority group members within their ranks."

The staff plan also proposed a job training program for 220 minority members who, upon graduation, would be assured of jobs on the Metro construction project. Unions and the Federal government would fund the training program. [Kneece, Jack, "Minority Hiring Rules Offered For Subway," *The Evening Star*, January 14, 1971; Eisen, Jack, "Metro Acts to Bar Bias," *The Washington Post and Times Herald*, January 15, 1971]

WMATA held a seminar at Airlie House in Warrington, Virginia, with about 160 officials from Maryland, Virginia, and the District of Columbia to discuss the status of Metro. The key issue was how to pay for the 98-mile system. As WMATA Comptroller Lowe made clear, the Wall Street securities firms of Kuhn, Loeb and Company and Dillon, Read and Company had indicated that WMATA would not be able to market \$900 million in revenue bonds without a guarantee from the Federal Government or some tax means of retiring the bonds if revenue from fares were insufficient. The bonds would have to carry a 7.5-percent interest rate, not 5 percent as originally planned.

Officials discussed tax options, such as a payroll tax in the District or a regional tax, to be collected only if farebox revenues were insufficient. However, officials preferred other options, such as a regional gasoline tax or simply the Federal guarantee to make up the difference. Maryland and Virginia officials urged WMATA to pursue the Federal guarantee, but the

District's Chairman Hahn said that neither he nor Mayor Washington favored that approach at the time. They favored exploring tax options on a regional basis.

A week later, during a WMATA board meeting, Chairman Sickles asked about the District's "hard-line position" opposing the Federal guarantee and favoring a commuter tax. City Councilman Stanley Anderson, an alternate WMATA director, replied, "Chairman Hahn together with the mayor, the District WMATA board members and the rest of the District of Columbia Council reject at this time the WMATA staff recommendations."

The same day, however, Chairman McMillan of the House District Committee said he would oppose a commuter tax, which all area Members of Congress from Maryland and Virginia also would oppose. With the chairman of the House District Committee opposed, a commuter tax could not advance, leaving efforts to secure Federal backing of the revenue bonds the only practical option. The House Committee on Public Works would have jurisdiction on the necessary legislation.

Deputy Mayor Watt, a board member who was absent for the meeting, later disavowed Anderson's comments. "So far as I am concerned, as a member of the board, the matter is still very much open."

Aides to Secretary Volpe said he was considering a one-half percent District of Columbia payroll tax as a way to raise funds to back the bonds. The tax would apply to everyone working in the city, including suburban residents. Secretary Volpe was not available for comment.

[Eisen, Jack, "Tax Plan On Metro Hits Snag," *The Washington Post and Times Herald*, January 17, 1971; Kneece, Jack, "Area Subway Tax Suggested," *The Evening Star*, January 17, 1971; Kneece, Jack, "D.C. Opposes U.S. Prop for Subway bonds," *The Evening Star*, January 21, 1971; Meyer, Eugene L., and Eisen, Jack, "Subway Payroll Tax Eyed," *The Washington Post and Times Herald*, January 22, 1971]

Maryland officials received the requested information from WMATA, but it was not sufficient to allow release of the \$10 million to the two counties for their payments. WMATA submitted financial information based on the \$2.5-billion estimate, not the \$2.9-billion estimate. Comptroller Goldstein said the State would not release the funds until it received updated information:

We've got to have that information because otherwise our contribution will be a shot in the dark. It's not the spending of the \$10 million now we're so concerned about, but the future. What about the Federal contributions? Are the subdivisions going to end up having to pick up the entire burden?

Our sources in Washington tell us the price will be closer to \$4 billion than \$2.9 billion, and this will require a tremendous amount of money from within the State somewhere.

[Rowland, James B., "Subway Funds Hit New Snag," *The Sunday Star*, January 24, 1971]

Despite Maryland's explanation for its concerns, WMATA was assessing penalties on Montgomery and Prince George's Counties for failure to make the required payments on

January 2. As of the end of the month, the penalties totaled \$72,000. The District had been assessed \$590,000 in penalties for failure to make its payments on time – largely because of Chairman Natcher’s refusal to appropriate the matching funds.

The penalties were necessary to encourage jurisdictions to make their payments, but as Sickles explained, they served another purpose, too. The subway was investing idle funds for a return of 6 percent. “As you know, sometime we’ll have funds for a year or more before we use them. The interest was earmarked for executive and administrative costs.

The city was hopeful that if Chairman Natcher released 2 years of appropriations by August, the city’s payment of the 1971 contribution late plus the 1972 contribution early would erase all of the late penalties. [Kneece, Jack, “A Way Out of Subway Fund Crisis Proposed,” *The Sunday Star*, January 31, 1971]

### **The Volpe Plan**

On February 14, the *Star* reported that President Nixon had “ordered his staff to work to end the congressional impasse which has held up \$34.2 million in funds for Washington’s subway and has imperiled its financial foundations.” An anonymous White House official told reporters, “We are working on what we consider is a good basis to get decisions made to make funds available to continue work on the subway.” The President hoped the funds would be included in the next supplemental appropriations bill.

The officials “refused to say exactly why the White House thinks Natcher will agree to release the subway money.” However, the White House hoped to help WMATA solve the financial problems caused by the increased cost estimate. [Horner, Garnett D., “Resolve Impasse On Subway Funds, Nixon Orders Staff,” *The Sunday Star*, February 14, 1971]

In an interpretive report, Stephen Green speculated that the situation was similar to 1969, when President Nixon resolved the situation in direct communications with Chairman Natcher. “The willingness of White House officials yesterday to discuss the possibility of a solution to the current impasse problems means that the President again has directly or indirectly been in contact with Natcher or will be in the near future.”

Chairman Natcher “has not always explained exactly what progress will convince him to release subway money.” The controversy over the North-Central Freeway clearly was one of the problems. He believed that Section 23 of the Federal-Aid Highway Act of 1968 ordered the city to begin construction after studying routes. Instead, the city suggested abandoning the freeway.

Green recalled the conference committee on the Federal-Aid Highway Act of 1970 when conferees agreed on a study of the North-Central Freeway. Representative Broyhill thought agreement on the study would convince Chairman Natcher to release the Metro funds:

While House-Senate conferees on the highway bill were agreeing to the additional year’s study of the North Central, Natcher, during a separate House-Senate conference on a supplemental appropriations bill, refused to permit the subway funds to be placed in the measure – the last supplemental money bill of the 91<sup>st</sup> Congress.

This action convinced “many congressmen” that the 1-year study had not satisfied Chairman Natcher. Alternatively, “inclusion of the new study in the highway bill came too late.” Green concluded:

Natcher may agree to include the subway money in the first supplemental appropriations bill to come out of the 92<sup>nd</sup> Congress, but Nixon may have to do quite a convincing job on Natcher.

Natcher has said that District freeways have been studied to death and what is needed is less talk and more action. [Green, Stephen, “Nixon Pushes Subway Replay,” Interpretive Report, *The Sunday Star*, February 14, 1971]

The financial issue had exposed rifts within WMATA between the city and its suburban partners. According to Jack Eisen, Chairman Sickles and other suburban officials “feel the District is taking an independent course without proper advance consultation.” They blamed the rift on Chairman Hahn. Although he was not on the WMATA board, he appointed the city council’s representative. He also had become chairman of COG on January 14. Taking office, he had suggested developing a transportation policy for the 1970s, not the 1950s, one stressing public transit over the private automobile:

The ideas that I have discussed about a transportation plan for the ‘70s come directly from the work that Secretary Volpe is developing in the Department of Transportation. I have been and expect to continue working closely with Secretary Volpe to create a sound transportation policy for the metropolitan area.

He saw COG as the body that can best embody those ideas on a regional basis “even though they may be controversial and may not all agree on the solutions.”

The WMATA board usually heard directly from Secretary Volpe. Instead, he was scheduled to announce his views in a speech on February 16 in a COG-sponsored forum at the District Building. Suburban members were alarmed by this change and the relationship between Secretary Volpe and Chairman Hahn:

They see, in the Volpe intervention, the danger of an impasse developing between city and suburban representatives. For example, because of the city’s special relationship to the federal government, its representatives might, under urging by high federal officials, hold out for support of a payroll tax as a way to solve its financial bind [even though suburban directors] might favor a federal guarantee.

A source in the District Building, demanding anonymity, had told reporters that Secretary Volpe was considering a tax. “At Metro headquarters, this source was assumed to be Hahn.” [Eisen, Jack, “Volpe Metro Plan Eagerly Awaited,” *The Washington Post and Times Herald*, February 14, 1971]

On the evening of February 16, 1971, Secretary Volpe addressed about 200 Washington area government leaders in a speech to COG. He came to the meeting, he said, “with ideas and concepts and dreams.” He explained:

As the President has said so eloquently, now is the time for a driving dream. Now is the time to stop asking what can't be done, and to go out and do what can be done. For what can be done, must be done.

I am tired of studies and projections and more studies and more projections. I am tired of those who consider the means the end, who produce dire predictions because they are unable to produce viable solutions.

In view of President Nixon's "personal commitment," Secretary Volpe wanted to offer his aid "in finding sophisticated solutions to your transportation problems." He would propose ideas that, if adopted, would "turn the Washington Metropolitan area into a transportation model for the Nation." This was more than just a dream because the "realities" were that in less than 5 years, millions of people would descend on Washington for the Nation's Bicentennial Celebration in 1976. Millions of people, he added, would be coming "to an area which barely manages to transport its own citizens to and from work each day."

Secretary Volpe offered a wide range of proposals covering access to Dulles International Airport (including use of air-cushion vehicles on the federally owned Dulles Access Road), creation of a regional airport authority to operate the area's three facilities (Dulles, National Airport, and Maryland's Friendship International Airport), free minibus service downtown, and pedestrian malls on closed city streets.

He wanted to restore a sense of humanism to the city's downtown streets. "The city must be a gathering place for people, not vehicles." To relieve what *Newsweek* magazine had recently called the agony of the commuter, the cornerstone of the plan "must be the encouragement of an assistance to all forms of public transit – the Metro, the bus system and the railroads."

The experimental bus lane on Shirley Highway was "very exciting." Before it began, the AB&W Company carried about 1,900 passengers during the morning rush hour. "With the exclusive use of reversible lanes, plus an additional 1½ miles of busway, the company is now carrying 4,300 passengers in the morning rush hour." The target date for opening the last 2½-mile segment of busway was April 1, 1972.

Service would be improved further with the introduction of "30 new modernized buses." In general, bus service throughout the area must be upgraded. "Accordingly, this Administration supports appropriation action which would bring about integrated operations between the Metro and all the bus companies in the area."

In addition, he encouraged the city to develop "an extensive program of pedestrian malls and plazas in the downtown area and in other parts of the city . . . from which autos are eliminated during daytime hours." He had walked on F Street during its experimental period of automobile restriction in the fall "and it was a most pleasant experience." If the District expanded the idea, he "would be very interested in having the Department help finance a mini-bus system to move shoppers through it."

He suggested:

I would also like to see the long-dormant plans to utilize the little-used or abandoned railroad lines in this area be revived and implemented.

He had asked the Federal Railroad Administration to explore this option in cooperation with COG.

Secretary Volpe also addressed the area's freeway-subway impasse:

In the two years since I have assumed the duties of Secretary of Transportation, I have seen a complete change of attitude on the part of people in our metropolitan areas toward the unrestricted building of freeways.

People were asking "intelligent and important questions about the routes, the designs and purposes of many of our urban freeways." He had been "impressed by the validity of their questions," but he also was "aware of the tremendous contributions highways and freeways have made to the way we live, work and pursue happiness." As an example of how transportation can blend with an urban environment, he said his Department was working with the District government to study alternatives for the elevated Whitehurst Freeway, which might be replaced by a tunnel to restore the scenic waterfront view from Georgetown.

Nearing the end of the speech, Secretary Volpe said, "I have saved for last the most important of our transportation challenges – the new Washington Metro Subway System":

Few things have taken so much of my attention as this new Washington subway. President Nixon has charged me personally to work with Washington officials to help bring the subway into being.

He and his staff had spent "many hours" working with local and State officials as well as Members of Congress to keep Metro construction moving forward. He was pleased that the Department "could lend the Metro \$57 million to prevent work stoppage" in 1970.

Metro faced the long-term problem that the cost was increasing, now up to almost \$3 billion. But immediate problems included the inability to sell \$900 million worth of bonds in the absence of some form of guarantee, such as a tax, to back them. All of those "dedicated to the cause of the Metro . . . are studying the various alternatives. I expect an effective solution can soon be announced."

In the meantime, certain actions were needed to relieve WMATA's short-term difficulties:

I have taken the necessary action to make available immediately \$68 million of Federal matching funds, already appropriated by the Congress.

He also was considering additional short-term loans, including short-term loans from UMTA. "The important thing is that this subway must continue" because the alternative was "strangulation" of the inner city or severe restrictions on automobile use.

Secretary Volpe told the officials that “all the Governments represented here tonight will have to display an increasingly higher level of cooperation.” He had already communicated with the area’s congressional representatives and the two Governors “to urge their cooperation in resolving these Washington metropolitan transportation problems.” They all were, he said, “very responsive.” He concluded:

And so, now it’s time to go to work.

Prior to the speech, Secretary Volpe had spent much of the day on the phone with congressional leaders discussing the area’s mass transit plans. Chairman Eagleton of the Senate District Committee was pleased by the \$68 million offer. He said:

This provides temporary relief to the Metro. I hope that the administration will continue its worthwhile efforts to devise an effective solution to the long range financing needs of Metro.

Jack Eisen noted that in announcing release of \$68 million, Secretary Volpe “did not spell out the degree of political risk it may entail on Capitol Hill.” A source told Eisen that the White House had told Secretary Volpe to release the \$68 million and to disclose his action in the speech. The problem was that the funds could be applied only to the two-thirds Federal share of project costs, not the District’s matching funds. Congressional sources told Eisen that to be legal, the funds “must be followed before the end of the fiscal year on June 30, by the appropriation of the city’s \$34 million.” Appropriations acts typically included a provision prohibiting the use of Federal funds until the local match was in hand.

Eisen reported that Chairman John J. McFall (D-Ca.) of the House Transportation Appropriations Subcommittee, which handled appropriations for Metro, said Secretary Volpe had telephoned the day before the speech to discuss ways to resolve the funding problem, but had not mentioned the \$68 million. Chairman McFall said he would not object to release of the funds, but observed that he agreed with Chairman Natcher that all Federal laws must be obeyed, including those requiring freeway construction.

In the meantime, General Graham said the \$68 million would allow Metro to continue making contract commitments through April. [Kneece, Jack, “Volpe Pledges Metro Funds – Broad Plan for Area,” *The Evening Star*, February 17, 1971; Eisen, Jack, “Subway Money Pledged,” *The Washington Post and Times Herald*, February 17, 1971]

The *Star* and *Post* were pleased by Secretary Volpe’s speech. “If enthusiasm were a substitute for achievement,” *Star* editors wrote, “this region’s transportation problems surely could have been solved by Transportation Secretary Volpe’s address to the metropolitan area Council of Governments.” The tidy sum of \$68 million “had been sitting on the shelf” because of Chairman Natcher’s hold on the matching funds:

Volpe apparently is now confident that his release of the frozen federal funds in this moment of crisis will be followed in due course by a release of the hostaged District appropriation, with no strings on use of the federal money in the meantime.

In view of the White House's anonymous talk of solutions, perhaps Secretary Volpe's optimism was justified. Still, no word had come from Capitol Hill indicating a breakthrough:

In listening to this lengthy speech, however, we had the distinct impression of having heard much of this same kind of talk before, from other high-level public officials, with very little thus far to show for it. Whether the result be any different this time will depend, we suspect, not so much on local activity as on how much continued initiative and enthusiasm for decision-making comes directly from the top. ["Volpe's Responsibility," *The Evening Star*, February 18, 1971]

*Post* editors also appreciated release of the \$68 million, but it "remains to be seen what Congress will do about the District's appropriation." These were short-term solutions. Ultimate solutions "must come from the local governments here, from Metro itself and from Congress." Overall, the editors wrote that "the Secretary did demonstrate – and persuasively – a most welcome concern on the part of the administration for flexible approaches, backed with federal aid." ["Secretary Volpe's Efforts to Help," *The Washington Post and Times Herald*, February 18, 1971]

Chairman McFall, the *Star* reported on February 19, had ordered a staff review of Secretary Volpe's release of \$68 million. He said he had no reason to think the release was illegal; the review was routine. The chairman, who had once served under Chairman Natcher, praised Secretary Volpe's initiative to solve Metro's fund crisis, but praised Chairman Natcher for his support of a balanced network freeways and subways to solve the area's transportation problems.

"Capitol Hill observers" and a "highly placed congressional source" helped reporters understand the actions. They saw Secretary Volpe's announcement as "an administration tactic to pressure Natcher into relenting on subway funds, signaling a new kind of executive-legislative confrontation far more significant than the issue of subway construction."

The source said no precedent existed for release of the funds in view of the "clear intent" that Federal funds be held until the District matching share was available:

The source said Volpe's move threatens to undermine one of the traditional means of congressional leverage – power over purse strings.

"What can we say," asked the source, "if other jurisdictions around the nation now used a District situation as a precedent to request matching funds before making their contribution?"

But the source conceded that the move probably will not be technical illegal until the District fails to produce its \$34.2 million share. Should the District fail to produce its share by June 30, end of the current fiscal year, he added, any irate taxpayer could ensnarl the subway works with a lawsuit.

Asked how he would counter congressional opposition, Secretary Volpe said:

I wish I was Solomon. All I can say is, I found through life that you can get more with honey than molasses.

When I have gone to a congressman – and it takes a great deal of patience at times – and when I have laid before them a proposal on the basis of its merits, and not try to guild the lily, I may not have convinced them the first time, but I’m a pretty . . . stubborn . . . guy and I have gone back.

We are using persistent persuasion. I think that’s the way to do it.

As for the North-Central Freeway, he said:

I have reviewed the North Central Freeway at some length. I’m convinced that you just cannot say that where the route was laid out is the right route for today. It might have been the right route five years ago or longer ago. But I think the Congress acted wisely in giving us an additional 12 months to see whether the railroad right-of-way or some other route is desirable or see whether the North Central Freeway is desirable at all. [Kneece, Jack, “House Staff Probe Asked of Subway Fund Release,” *The Evening Star*, February 19, 1971; Eisen, Jack, “Hill to Study Volpe Move On Subway,” *The Washington Post and Times Herald*, February 20, 1971]

### **The I-66 Problem in Virginia**

A link from Washington, D.C., to Virginia’s Shenandoah Valley had always been part of the Interstate plan. Such a link appears on a map on page 7 of *Interregional Highways*, the 1944 report to Congress outlining the Interstate vision, showing the general location of routes of the recommended highway system. When the first designations took place in August 1947, the route was shown linking Washington to the north-south Interstate through the valley at Strasburg (farther north than shown in the 1944 general location map).

In 1957, when numbers were approved for the Interstate System, it was designated I-66 and the Shenandoah Valley route became I-81, with the two routes linked by an interchange in Front Royal. In the District, I-66 became part of the Inner Loop. As noted earlier, I-66 inside the Capital Beltway crossed the Potomac River on the Theodore Roosevelt Bridge and was to continue past the Watergate complex as the West Leg of the Inner Loop, then the North Leg parallel to New York Avenue, reaching I-95 north of the Capitol Building at the junction with the East Leg Freeway. FHWA’s 1971 *Interstate System Route Log and Finder List* indicated that I-66 was 79.6 miles long, with 75.4 miles in Virginia (the control points being Front Royal, Falls Church, Arlington to Washington). The list identified the District segment as 4.2 miles long.

The Potomac River Freeway carried the designation I-266; the even numbered prefix indicated the route was to connect with the Interstate System on both ends. It branched off of I-66 near the Spout Run Parkway in Virginia, crossed the Potomac River on the Three Sisters Bridge, then followed the Whitehurst Freeway along the Georgetown waterfront to connect with I-66 at K Street, NW.

The Virginia Department of Highways (VDH) built I-66 from I-81 to the Capital Beltway. The last 9.7 miles proved to be the most challenging.

Leland J. White, in an article about the battle over I-66, wrote:

The concept of an east-west highway through Arlington, Virginia, originated in 1938 when the county planner included the road in his “First Report to the Arlington County Planning Commission.”

As planning for I-66 began in the 1950s, the exact routing inside the Capital Beltway had to be decided:

The route through Arlington was similar to that proposed in 1938 by the county planner and later included in the 1941 Arlington Master Plan. In 1942 the Virginia General Assembly had authorized land acquisition along the abandoned Arlington and Fairfax Railroad right-of-way, to begin in 1946. Just a year before the Interstate Highway Act was signed [1956], because being along a highway route was considered desirable, both the Falls Church City Council and the Arlington County Board of Supervisors had asked the Virginia State Highway Commission to be included on the right-of-way for any proposed interstate highway across Northern Virginia.

As Virginia highway officials were considering the routing for I-66, they began to hear the “first rumblings against the highway” at a public hearing in Fairfax County on March 11, 1958. In these years, public hearings were an opportunity for the State to inform the public, not to gather information about potential adverse impacts or answer questions and concerns:

Two hundred people attended and were dismayed that the official had little definite information to give them. Many of those present expressed concern about the vagueness of the proposal, though most did not question the need for the road itself.

Opposition began to solidify later in the year when the Arlington County Board held a public hearing on potential routes:

More than 500 citizens turned out and, as in Fairfax County, their reaction was clear and negative. To repeated questions as to why any highway had to go through Arlington, County Highway Engineer Clifton G. Stoneburner could only reply, “Because if it must connect with the District’s Inner Loop, as the government says it must, then it has to come through Arlington some way.” County Board Chairman Ralph Kaul conceded after the meeting, “This put a new light on things – I don’t think any of us realized just how strong the opposition to this road was.”

The county appointed a Citizens Advisory Committee to analyze the issues.

When VDH held its only planned hearing in Arlington on October 29, 1958, over 800 people appeared to protest each proposed route:

Most of the speakers were concerned about the impact of the road on the property tax base and on the neighborhoods themselves. And, as Joseph Soultener, a member of the Mount Daniel Protective Association, admitted, “One group doesn’t like the route in their backyards and shifts it to another group; the other group shifts the monster back again.”

The Citizens Advisory Committee reported in November that citizens felt powerless because “binding decisions on these matters have been reached by the State of Virginia, the Federal Government, and the Government of the District of Columbia. There will be a Highway 66, and it will traverse Arlington County.” Even if it was a bad idea, “there is no way of securing the reversal of these decisions.” The only question was where it would be located.

The county, recognizing that the committee was right in saying the only question involved location, approved the Fairfax-Bluemont route for I-66 in November:

This road would go through Falls Church and Arlington along the abandoned [Arlington and Fairfax Railroad] rail line and along the right-of-way of the Washington and Old Dominion Railroad, soon also to be abandoned.

The VDH approved the route for an eight-lane freeway in November and BPR accepted it in June 1959. On June 6, 1959, the *Post* declared that BPR’s approval “marked a final breakthrough on Metropolitan Washington’s biggest highway controversy.” As White pointed out, this statement “would later prove to be a monumental case of premature judgment.”

While VDH officials dealt with complicated right-of-way issues involving the abandoned rail lines, citizen opposition continued to mount in the early 1960s. Arlington County officials tried to work with VDH to alter the precise routing to save homes, but they did not believe they had a reasonable chance of stopping construction altogether.

Other factors delayed construction. One factor was the plan to construct one of the planned rail rapid transit lines in the I-66 median:

When delays resulted over the construction financing for Metro, VDH could not complete final engineering plans and design work until it knew whether it would indeed have to accommodate Metro in the median.

Another complication was that trucks were banned from the Theodore Roosevelt Bridge over the Potomac River. Trucks would have to use the Three Sisters Bridge on I-266:

The I-266 spur line and the Three Sisters Bridge, however, ran into opposition on almost every front. Arlington residents and the National Park Service protested the virtual destruction of Spout Run Park, and anti-highway activists in the District attacked the proposal for the bridge, which was supposed to connect to highways they were trying to prevent . . . . The battle over the Three Sisters Bridge resulted in continued design delays for I-66, in part because the number of highway lanes depended ultimately on the fate of the bridge.

By 1970, White explained, “the VDH had acquired most of the right-of-way and was ready to proceed with the final design and construction of I-66 inside the Beltway.” However, NEPA and other environmental laws posed new challenges that VDH officials could not have anticipated:

By 1970 segments of Interstate 66 had been built through western Fairfax County, but the highway came to a dead end at the Capital Beltway. VDH put I-66 on a fast track, hoping to open the road inside the Beltway by late 1973 or early 1974. The state was required to hold one more hearing to allow Arlington residents to comment on the design of the road.

About 700 people filled the Washington and Lee High School auditorium on September 29, 1970:

[They] reacted to officials’ statements with what a reporter from the *Fairfax Sentinel* called “a great roar of righteous indignation.”

James and Emilia Govan were among those in attendance. They lived three blocks from the planned route and had hoped for specifics, such as the location of interchanges and noise walls. But as Jim Govan later told White:

“There was no information available for the public to look at . . . . There were no politicians or elected officials present. The highway officials were condescending and cut citizens off with curt responses. People couldn’t get answers to basic questions. People were very upset when the hearing was over and simply started exchanging phone numbers.” When VDH officials disclosed for the first time that I-66 would be 14 lanes wide in Rosslyn, “the whole thing crystallized for us,” Emilia Govan said.

They used those phone numbers to form the Arlington Coalition on Transportation (ACT) in October 1970 with about 20 other opponents. ACT, which would grow to a peak of about 1,500 members, petitioned the county for another hearing and joined other activists who had planned a walk along the right-of-way. “Much of the corridor was wooded, including the overgrown rail line, which had been abandoned for years.”

Under pressure from county officials, VDH held a second design public hearing on December 7-9, 1970:

The design hearings . . . were even more volatile than the hearing in September. *The Washington Post* reported, “The overwhelming sentiment was against building the road . . . . The highway proponents were booed and jeered by some persons at the hearing, and at one point . . . two men were on the verge of a fist fight over their differing views.” [White, Leland J., “Dividing Highway: Citizen Activism and Interstate 66 in Arlington, Virginia,” *Washington History*, Spring/Summer 2001, pages 53-67]

As would happen a few days later in the hearing on design of the Three Sisters Bridge, most of 27 speakers ignored the design of I-66 and “expressed sentiments on why the road should not be built through Arlington,” as the *Star* put it. The approximately 600 residents of Arlington who attended the hearing “booed and heckled representatives of nearby counties and businessmen as they spoke in favor of Interstate Route 66.” When opponents spoke, “the spectators clapped

approvingly.” [Brockett, Diane, “600 at Hearing in Arlington Boo as Officials Back I-66,” *The Evening Star*, December 8, 1970]

The December hearings prompted two letters to the editor that the *Star* published on January 8. Herman W. Jensen of Arlington felt that “the citizens of Arlington County owe the Virginia Department of Highways an apology for the immature and discourteous actions of a great many persons in attendance.” In view of the “juvenile behavior on the part of so-called adults,” he understood why “many of our young people have so little faith in us.”

He wondered how many of those in attendance woke up the next day and drove to work – and how many used public transportation. “Good public transportation can go a long way toward negating the need for I-66, Four Mile Run Expressway, Bluemont Expressway, Monticello Freeway, the Potomac Freeway and the South 15<sup>th</sup> Street Expressway.”

Mrs. T. L. Cain wrote that she had lived her entire life in Arlington County and was “proud for the strides Arlington County has made in such a competitive race.” In view of the “growing expansion,” State and local officials were “working feverishly (sometimes with limited funds) to accomplish nearly an impossible goal – that of providing adequate accessible roadways and freeways so the resident can arrive at his place of business or at his home without weaving in and around our quiet residential streets.”

She urged I-66 opponents to “take a long hard look at their streets and their routes to their jobs or destinations.” Do they wait for a crowded bus while breathing in a “good gulp of pollution caused by congestion”? She wrote, “Free moving vehicles expel less pollution than those idling along in congestion”:

If we opposed every medium of progress that is aimed at promoting our comfort and safety, some would still be riding horses! We live in the age of speed and, like it or not, we must have highways to accommodate our transportation needs. [“I-66 Hearings,” Letters to the Editor, *The Evening Star*, January 8, 1971]

Commissioner Fugate met with Governor Linwood Holton in mid January to say that abandoning or relocating I-66 through the county was “entirely out of the question.” In a letter, Fugate wrote that “the evidence is overwhelming that I-66 in Arlington County must be built if that area’s transportation needs are to be met in the years immediately ahead.” He added that “every traffic study made by this department, by the Arlington County government, by WMATA, and by the National Capital Regional Transportation Board has supported the need for I-66.”

Virginia has spent \$20 million acquiring right-of-way for the route and had cleared much of the land. He continued “there is a splendid opportunity here to develop I-66 as in many respects the model of urban highway construction, and we do not take this opportunity lightly.” He added:

The commission is aware, of course, of the obvious necessity for careful planning, and has employed probably the finest environmental consultant in the United States to help with design and construction of the freeway. [“Highway Commissioner Bars Interstate 66 Shift,” *The Evening Star*, January 18, 1971]

On January 29, the *Star's* Letters to the Editor column included one from Emilia Govan taking exception to Mrs. Cain's letter. "While I share many of Mrs. Cain's concerns about the quality of life in our community, I believe that construction of I-66 will have an irrevocably destructive effect on the entire metropolitan area." She disputed the notion that I-66 would take traffic off local streets:

By closing off many existing roads, I-66 will bring about intolerable congestion on the streets that will serve as crossover points and on streets which provide access to or from I-66 interchange ramps. Many of the proposed cross-over streets are themselves residential. Vehicles must weave their way through residential neighborhoods to reach cross-over points and interchanges. Also, much of the automobile and bus traffic seeking access to Metro stations in the Wilson-Fairfax corridor will have to cope with congested I-66 crossover streets, thus making Metro ridership an inconvenient proposition at best, and leading to reduced ridership and increased fares.

For three reasons, she considered erroneous the idea that traffic on superhighways produced less air pollution than slower traffic on local arteries. First, during peak hours, traffic on superhighways "will make necessary continuous lane-shifting and lead to inevitable back-up as drivers attempt to get on and off the short, narrow ramps." Second, an environmental consultant's report ACT had commissioned and presented at the design hearing "demonstrated that even assuming free-flowing traffic at 50 miles per hour with vehicles equipped with 1974 pollution control devices, the predicted carbon monoxide levels would be twice as high as recommended HEW [U.S. Department of Health, Education, and Welfare] standards and would constitute a potential threat to the community health." Third, the House Subcommittee on Roads had received testimony "that automobiles traveling at high speeds emit more nitrogen oxides and lead."

Govan concluded:

We have learned from the experience of the 1960s that more roads generate more automobile traffic. Building more roads has not solved transportation problems but aggravated them. A highway such as proposed I-66 will merely worsen the transportation crisis now faced by the Washington metropolitan area. In addition, I-66 will be an environmental disaster for the schools and neighborhoods through which it passes, as well as for the community at large. Is this progress?

Real progress can be achieved only by giving top priority to immediate development of mass transportation modes that move people—not automobiles—and that are protective—not destructive—of the environment. [Govan, Emilia, "Rebuts on I-66," Letters to the Editor, *The Evening Star*, January 29, 1971]

(The catalytic converter, which greatly reduced motor vehicle emissions, would not become standard on new vehicles until the mid-1970s, and was not required on older vehicles.)

The expert that Commissioner Fugate had mentioned in his letter to Governor Holton was John O. Simonds of the Pittsburgh firm of Environmental Planning and Design. Described in the *Post*

as an acquaintance of Fugate's, Simonds agreed to a "cost plus" contract with an "upper limit" of \$275,000 to study the route. Fugate said, "We needed the best expert in the nation and we needed most of his time. This is fairly new, and you get what you pay for."

The *Post* reported that the contract, which was "unprecedented," reflected the cost of environmental designs the public was now demanding "and the increasing responsiveness of officials and bureaucracies to those demands":

So far, there have been nothing unique about Simonds' suggested "environmental" improvements; his ideas closely parallel suggestions made at no cost by citizen opponents of the highway at a series of tumultuous public hearings recently.

Both his suggestions and those made by the citizens include acoustical baffles to reduce traffic din; earthen "berms," or dikes, to mask the sights and sounds of traffic, and trees and fences to soften the harsh geometry of concrete and macadam.

Simonds himself says his chief concern is noise abatement. There presently is little to be done in the design of highways that will abate the high amounts of pollutants that will pour into the air from vehicles using the highway.

He considered I-66 inside the Capital Beltway as "unique" because it involved "helping with the planning of a dual use right-of-way before the final drawings are done." This new public interest in environmental planning was only going to grow around the country. "I see nothing but more interest in the environment and growing feeling that if we don't do it now, when we're building, we'll never be able to recoup." He described the recent public hearings as "bracing," full of "thunder and lightning," but also producing "many good and valuable ideas."

As for the cost of the contract, VDT spokesman Albert W. Coates said, "This is the first time we have tried anything like this, and no state highway department in the country has done this before." In negotiating the contract, VDT and Simonds were guessing at the costs. As for hiring Simonds without advertising for bids, Fugate dismissed the bidding process for consultants:

It would be like asking doctors to bid on taking out an appendix. This is professional work, and ethics don't allow doctors, lawyers or engineers to bid on their services. [Wilkinson, Tom, "Ecological Planner To Work on I-66," *The Washington Post and Times Herald*, January 31, 1971]

(John O. Simonds was a nationally known landscape architect based in Pittsburgh. In addition, he was an author, teacher, and lecturer. From 1966 to 1968, he served on FHWA's Board of Urban Advisors, established in 1966 by Administrator Whitton to prepare a set of guidelines for the planning and design of urban expressways. In 1968, FHWA published the board's recommendations as *The Freeway in the City: Principles of Planning and Design*. Simonds edited the publication. Although FHWA published the report, it was entirely the board's independent work.

(The report, released on May 24, 1968, contained major recommendations that should have the "highest priority for action." As summarized at the time, they were:

- Expand application of techniques of Systems Analysis and Operations Research to problems of planning, locating and designing urban freeways.
- Adopt Systems Concept of an interdisciplinary team approach to urban freeway planning on every level – Federal, State, regional and local. (This design team approach already is underway in Baltimore, Maryland, and Chicago Illinois, and under consideration by several other metropolitan areas.)
- Appoint an independent review board of qualified professionals to serve the Federal Highway Administrator, the Director of Public Roads, the State Highway Engineer, or the City Public Works Chief in an advisory capacity.
- Encourage and aid formal education in urban transportation and highway planning and design.
- Establish a system of regional Urban Design Institutes for advanced research in all related disciplines, sponsored jointly by the Department of Housing and Urban Development and the Department of Transportation.
- Encourage formulation in each state of a total environmental planning commission to represent the legislature, the governor, and those agencies primarily responsible for physical planning in the state.
- Coordinate freeway considerations with the comprehensive planning of every affected community, city and region. Throughout the planning process, information should be made available to government agencies, civic and other organizations to develop public understanding and support. “It has been well said that every freeway is a political statement.”
- Promote the integration of freeways with all other elements of the urban transportation system. These include arterial streets, vehicular parking areas, other transit systems, trains, subways, etc.
- Stimulate more research on better ways of moving people and goods.
- Investigate possibility of giving highway departments authority to condemn and purchase lands adjacent to proposed freeways or interchanges. The states or cities could then sell or lease the excess property as “improved land.” The income benefits resulting would help defray, or perhaps even cover, the cost of the new highway development, offering relief to taxpayers.
- Encourage the multiple utilization of urban rights-of-way. This concept sees the highway as but one occupant of the right-of-way. The use of space beside, below and above the freeway should be planned and designed along with the highway, itself. Its planning, if related to urban renewal, can help restructure the city in a more efficient and orderly way.
- Encourage State and the City Highway Departments to purchase and develop freeway-recreation corridors. Freeways should not only provide access to, but should be considered in themselves as major recreation facilities. These multiple-use corridors would provide, besides the roadway, such desirable features as fishing and boating lakes and streams, golf courses, game courts, riding trails, wildlife sanctuaries and conservation lands.
- Develop and promote the passage by states and Federal Government of advanced highway-related enabling legislation. It suggests creation of a legislative task force to analyze current laws, needs and possibilities.

- Encourage a high level of visual quality in every proposed freeway. Urban freeways should contribute to the beauty of regions through which they pass, from the standpoint of both the users and viewers of the facility. The highway beautification program of the Federal Highway Administration is a very good beginning, the report adds.)

In view of citizen concerns, the Arlington County Board asked Commissioner Fugate for a look at the design plans. He replied by letter that he would show the board members the plans, but not in a public forum. He also indicated that he would not agree to an early board request that he stop acquiring right-of-way for I-66 until the design plans are completed.

Commonwealth Attorney William J. Hassan referred to the proposal as constituting a “backroom conference,” which the board rejected angrily. However, Hassan explained that Fugate was correct about acquisition because State law did not allow condemnation proceedings to be delayed once initiated. “That is a very fair answer on that part.”

Chairman Fisher said, “His response is, from my point of view, unsatisfactory.” The board authorized Fisher to send a “blunt letter” to Fugate demanding that a three-dimensional model of selected portions of the proposed design, as well as drawings, be made available in a “public forum.” [“Arlington Board Rejects Secret Meeting on I-66,” *The Sunday Star*, February 14, 1971; “‘Back-Room’ Talks on I-66 Rejected,” *The Washington Post and Times Herald*, February 14, 1971].

ACT visited Governor Holton on February 16 to ask him to halt development. According to sources, he told ACT that the project was too far advanced to be changed now.

On February 18, the Virginia Highway Commission approved major design features for the I-66 segment from Washington Boulevard to Lynn Street in Rosslyn. The route mainly followed the abandoned Washington and Old Dominion rail line. Approved design features included four lanes in each direction between Glebe Road and Lee Highway as well as three interchanges. The commission asked State highway officials to continue refining the design in cooperation with Simonds. He expected to complete his recommendations in a couple of months. Following FHWA approval, the construction would be ready in the fall.

The State planned to hold a public hearing for the remaining 6 miles of I-66 in Arlington County between Glebe Road and the Capital Beltway. The hearing would be scheduled for late 1971 or early 1972.

In addition, the commission approved the major design features of I-266 along Spout Run Parkway to the Three Sisters Bridge. Fugate explained that the project would convert Spout Run Parkway from “a park type highway to an interstate type highway.” He added that land taken for the spur would be replaced, acre-by-acre, by parkland to be acquired nearby. [Kelly, Brian, “State Panel Okays I-66 Design, Asks Environmental Aid,” *The Evening Star*, February 18, 1971; Wilkinson, Tom, “I-66 Work In Virginia Approved,” *The Washington Post and Times Herald*, February 19, 1971]

ACT, Arlingtonians for Preservation of the Potomac Palisades, and several property owners went to U.S. District Court in Alexandria on February 19 to file a suit seeking to halt acquisition of right-of-way for I-66 until VDH held location hearings. Named in the suit were Commissioner Fugate, Secretary Volpe, and FHWA's Virginia Division Engineer, Harold C. King. The suit also named Martha Sutton, Arlington's recorder of deeds, requesting that she be prohibited from recording sales of land for I-66 right-of-way.

According to the petitioners, VDH had not complied with Federal requirements for "timely public hearings on the need for and location of the highway." The last location hearing took place in 1958 and it concerned only the route of the highway, not its impacts. Further, VDH had not complied with NEPA. Significant social, economic, and environmental changes had taken place in recent years. Changes since then included population and employment shifts to the suburbs and approval of plans for Metro. The proposed Metro line in the corridor raised questions, not asked in 1958, about whether I-66 was needed. The suit claimed I-66 would "cleave" Arlington County in half, heightening racial and class differences between the halves.

Mrs. Govan told reporters, "The environmental factors weren't taken into account in 1958 and the public had not yet been given any evidence that the highway project will not harm the environment in 1971." [Brockett, Diane, "Arlington Coalition Sues for Hearings On Location of I-66, *The Sunday Star*, February 21, 1971; Edwards, Paul G., "Opposition Mounts Against I-66 in Arlington," *The Washington Post and Times Herald*, February 23, 1971]

The *Star's* Jack Kneece pointed out that the Three Sisters Bridge was a key factor in the lawsuit. The approved design "provides for a link at the Three Sisters in the vicinity of 24<sup>th</sup> Street in Arlington":

From near this point, it picks up the Old Dominion right of way and follows it to near an intersection with Fairfax Drive. The rail line loops to the south of the highway route at that point. The I-66 right of way picks it up again at Patrick Henry Drive then leaves it again, at Lee Highway, looping northward to cross the Old Dominion again near the completed portion of I-66 at the Beltway.

The lawsuit argued that because the route had been planned before the Three Sisters Bridge and the Metro line had become realities, the plans were based on data that might no longer be true. "Citizens have complained that the route was approved when there was a universal fixation among highway planners with freeways." Virginia Commissioner Fugate did not agree. He contended that VDH had followed all requirements and was ready to proceed. [Kneece, Jack, "Plans at 3 Sisters Spotlight I-66 Suit," *The Evening Star*, May 31, 1971]

## **The New Delegate**

On December 7, 1871, the District of Columbia's first nonvoting delegate to Congress took office. Congress had reclassified the District as a territory, similar to the western territories that would eventually become States. As such, the District was entitled to a Governor appointed by the President, a legislative assembly, and a nonvoting Delegate to Congress to advocate for the city. General Norton Parker Chipman defeated the former slave Frederick Douglass for the

Republican Party's nomination and went on to win the position. According to John P. Richardson's book on public works boss Alexander Shepherd:

The citywide elections April 20 brought no surprises. Republican candidate and Shepherd ally Norton Chipman, a Union officer who had prosecuted Henry Wirz, commander of the notorious Andersonville Civil War prison camp, easily defeated his Democratic opponent, Richard Merrick, for District delegate to Congress. The elected House of Delegates contained fifteen Republicans, including two blacks, and seven Democrats. Three blacks were appointed by President Grant to the Legislative Council, including Frederick Douglass. [Richardson, John P., *Alexander Robey Shepherd: The Man Who Built the Nation's Capital*, Ohio University Press, 2016, page 94]

Speaker of the House James G. Blaine administered the oath of office. According to James Eisen:

The many bills Chipman introduced and the debates in which he joined have an eerily contemporary ring about them even today. They dealt with public transit (horse-car franchise), bridge and street construction, expansion of the Capitol grounds, court reorganization, regulation of interest rates and, most of all, schools and municipal finance

....

Although entitled to speak on any pending House business, a browsing through the Congressional record of Chipman's 1½ terms indicates that he restricted himself to District matters.

At least once he was explicit in defining his role. The House was warmly debating an expansion of the Capitol grounds to form the central plaza of today, displacing private dwellings and a few saloons frequented, the discussion made clear, by some lawmakers themselves.

The pending measure was, Chipman said, a national bill. But, he told his colleagues, "You are holding the ax" over the affected property owners. "I am speaking now only locally and for the interest of those people most directly interested," he declared. "Either make this purchase now or say it will never be done." The purchase was made.

In 1874, Congress passed the legislation removing the city's territorial status, abolishing the Governor and legislature, and establishing the three-man board of commissioners that survived into the 1960s. President Grant approved the legislation on June 20, 1874 (P.L. 43-337):

Chipman did not fight it. Nor did he, on the record, attempt to preserve his own job. He only sought, however vainly, to make the new system of government more palatable to those it was to govern."

The bill made it through Congress in 2 days. President Grant's signature brought an end to the position of Delegate in 1875. [Eisen, Jack, "D.C. Delegate—100 Years Ago," *The Washington Post and Times Herald*, March 23, 1971]

One hundred years later, the city was going to vote on March 23, 1971, for its second nonvoting delegate. Candidates had many issues to debate, including transportation. For example, The Reverend Channing Phillips said he would promote policies to “get the American commuter to curtail use of his automobile by providing him with an attractive mass transit system – and a tax on all-day parkers in downtown Washington,” according to a position paper summarized in the *Post* on January 3:

In a position paper on transportation issued yesterday, Phillips said he would oppose construction of additional freeways and parking facilities, push for faster construction of the subway and urge that special lanes be allocated for buses. He said he would also work for government subsidies to reduce mass transit fares.

He wanted to shift air traffic from Washington National Airport to Dulles International Airport.

He anticipated that other candidates, such as former Councilman Yeldell, would have similar views on transportation, but it was actions that count. He criticized Yeldell because while he was chairman of the WMATA board of directors, the agency “had failed miserably to give any major contracts to black businesses or even to assure that blacks are employed in sufficient numbers on those contracts.” By comparison, he said, “the Housing Development Corporation of which I am president had a black contractor at Clifton Terrace, 15 of 20 black subcontractors, and 300 black workers.” He also criticized Yeldell for his vote in support of the Three Sisters Bridge.

Yeldell declined to make excuses for WMATA’s hiring and employment practices. As chairman, his focus was on bringing about changes. Further:

He has defended his vote for the Three Sisters Bridge, explaining that the congressional threat to withhold a \$105 million federal payment to the city made it a “responsible” decision. He said he is against new freeway “gateways” to Washington.

Reverend Phillips criticized former Councilman Fauntroy for being “virtually silent” against freeways since leaving the city council:

He repeated his statement that Fauntroy refused to join in a suit to block construction of the bridge.

Fauntroy issued a statement in reply asking, “Where was Channing Phillips?” when Fauntroy and other Council members were speaking out against further freeway construction in 1968, and before. Fauntroy said his “strong opposition” to freeways was a matter of record. [Boldt, David R., “Phillips Rips Foes on Issue Of Freeways,” *The Washington Post and Times Herald*, January 3, 1971]

On January 12, District residents voted in the primaries. They selected Reverend Fauntroy as the Democratic nominee and former Councilman Nevius as the Republican candidate. Julius Hobson would represent the D.C. Statehood Party in the election to be held on March 23.

As the *Star* introduced the results of the March 23 election:

The Rev. Walter E. Fauntroy, who based his campaign on a pledge to reawaken the spirit of Martin Luther King, has been elected overwhelmingly as the District's first congressional representative in nearly 100 years. Winning 58.5 percent of the vote in yesterday's election the 37-year-old moderate Democrat outscored his major opponent, Republican John A. Nevius, by better than two to one.

Julius Hobson, the D.C. Statehood party candidate, ran a weak third with less than 15 percent of the vote while other candidates mustered little more than 3 percent of the total. [Anders, Michael, "Fauntroy Wins 58.5% of Vote," *The Evening Star*, March 24, 1971]

On April 19, Speaker Albert administered the oath of office to Delegate Fauntroy in the well of the House, as Stephen Green described in the *Star*:

Among congressmen rushing up to Fauntroy on the House floor to shake his hand was Rep. John L. McMillan, D-S.C., chairman of the House District Committee.

Fauntroy said McMillan "invited me to come and see him this week."

Elected to the office on March 23, Fauntroy is automatically a member of the District Committee. Although he may not vote on the floor, he may vote in committee.

A packed gallery of some nearly 600 persons and about 70 congressmen present on the House floor gave Fauntroy a standing ovation that lasted for nearly a minute after he took the oath. Outside, by the East Front of the Capitol, additional hundreds of District residents watched as Albert and Fauntroy re-enacted the ceremony . . . .

On the steps, Fauntroy was flanked by a United States flag and a District flag. He was surrounded by family members, friends, including Mrs. Coretta King, widow of the late Dr. Martin Luther King, city officials, including Mayor Walter E. Washington, and members of Congress.

Fauntroy told the crowd he would continue to work for human dignity by attempting to abolish the office he now holds.

"I ask God's help and yours in . . . establishing full representation in the Congress and full self-government for our city which are God-given and constitutional rights of us all," he said. [Green, Stephen, "Fauntroy Sworn In, Gets an Invitation To Visit McMillan," *The Evening Star*, April 19, 1971]

## **Metro Funds**

Secretary Volpe, in his COG speech on February 16, had said he was releasing \$68 million to WMATA "immediately." Since then, the department had never announced that the funds had actually been released. In late March, General Graham admitted that he had never been able to confirm the availability of the funds.

Further, Representative Broyhill remained concerned about the congressional threat to continue withholding the District's matching funds pending compliance with the 1968 and 1970 Acts. In March, he wrote to the White House about the harm that would occur if construction did not resume on the Three Sisters Bridge. After receiving what he characterized as a "thank you for your letter" reply, he wrote a sterner letter. "I warned them I would not put up with a brush-off either" because Congress was "dead earnest" about the Metro funding threat.

He also was concerned about the city's plan to build a model of the bridge to test it for safety. It was, he said, the latest reason for delaying construction. "I think the White House has been trying to use this deliberately as a test confrontation with the Congress on the powers of the executive branch versus the Congress."

Under Secretary of Transportation Beggs met with Representative Broyhill on March 30. Representative Broyhill made clear that he did not believe the Metro funds should be held hostage to construction of the Three Sisters Bridge, but said the majority of House members wanted the city to comply with their legislative wishes before releasing the Metro funds. He asked Beggs to tell FHWA to stop studying a single-span design for the bridge and to order construction of a conventional double-span bridge as a prelude to release of the District's matching share for Metro. Beggs replied that in studying the single-span design, FHWA was complying with Judge Sirica's ruling concerning design of the bridge.

After the meeting, Beggs confirmed that the department had made the funds available. However, the Metro funds would remain in a special account, not released in a lump sum to WMATA. "It is our view that the money is available to permit the authority to move ahead in a meaningful way in advertising for bids. The issue of what will happen if the [Natcher] Committee does not provide the matching funds is one that is long in the future and we're not crossing that bridge yet."

Told of the release, General Graham said, "We hope to start obligating the money promptly on Wednesday morning." However, this response resulted from a misunderstanding of what Beggs was saying. The funds were set aside in the special account until Chairman Natcher released the District's matching funds.

As WMATA officials were trying to figure out whether the funds were available, they received a letter from Secretary Volpe saying he had "approved the release" of the \$68 million, but that the funds could not be used until the matching funds were available. "Your program must, therefore, be structured in accordance with this restriction."

Jack Eisen summarized the consensus:

At first reading this provision appeared to support the interpretation that the money actually was not being made available.

However, Beggs and Jackson Graham, Metro general manager, said Volpe's action means the \$68 million can be used as the basis for inviting construction bids from contractors between now and June 30.

Graham said the Metro cannot invite bids unless it has the money on deposit, which was assured by Volpe. Beyond that, however, it cannot actually agree to pay the contractor [by awarding a contract] until all restrictions on spending the money are removed.

[Kneece, Jack, “White House Orders Talk in 3 Sisters Rift,” *The Evening Star*, March 30, 1971; Eisen, Jack, “U.S. Says \$68 Million Available for Metro,” *The Washington Post and Times Herald*, March 31, 1971; Green, Stephen, “U.S. Can’t Match Metro Funds Until D.C. Share is Released,” *The Evening Star*, March 31, 1971; Eisen, Jack, “Financing of Subway Clarified by Officials,” *The Washington Post and Times Herald*, April 1, 1971]

### **Three Sisters Bridge Design**

On March 31, as part of the response to Judge Sirica’s August 1970 ruling, District highway officials submitted their recommendations to FHWA on design of the Three Sisters Bridge. Having considered the comments during the December hearings, the District’s highway agency recommended the design approved by the Commission of Fine Arts, a three-arch concrete bridge with the long arch across the river without a central support. The design, estimated to cost \$32.3 million, was not only safe but “a monument to man’s esthetic senses.” The 26-page report also rejected claims that the bridge would harm the environment, take parkland, worsen air pollution, spoil natural beauty, or adversely impact neighborhoods in the area:

[The bridge would provide] fast, safe and efficient transportation and relieve neighborhoods of unnecessary traffic while minimizing adverse environmental, sociological and economic effects on the city and the region.

District officials had considered alternatives, including a proposal by FHWA for a six-arch \$25 million steel structure, but rejected them. The city concluded that FHWA’s design “would be less attractive, take more parkland and cut back boating on the river.” The city also rejected proposals to reduce the number of lanes from six to four, build a tunnel instead of the bridge, and provide room for pedestrians and bicyclists.

If the project required parkland, the city would compensate by providing new land or making “needed improvements” to present parks. Noise impacts would be “negligible” because the nearest residence is 240 feet away on 44<sup>th</sup> Street, NW., although noise might be greater for people hiking the C&O Canal or boating on the Potomac. Traffic flowing smoothly across the new bridge would result in less pollution, not more. [Meyer, Eugene, “City Sends U.S. Agency New Design for Arched Three Sisters Bridge,” *The Washington Post and Times Herald*, April 1, 1971]

Jack Kneece, in the *Star*, explained that Administrator Turner now faced a “difficult decision” regarding the design, but “it’s a dilemma of his own making”:

During design hearings, Turner assured Judge John J. Sirica that every effort – including exhaustive tests on the scale model – would be made to assure the safety of an innovative, single-span design recommended by the Fine Arts Commission.

The pledge came back to haunt him when it was learned that there is probably enough data on hand to proceed with that design without testing the model.

Pressure was mounting on FHWA. District highway officials informed the department that the “design can be built now if the department so chooses – a move possibly to force the department’s hand.” Meanwhile, Representative Broyhill was accusing the Nixon Administration of stalling and using the scale model as an excuse:

The model, now being built by the Cement and Concrete Research Institute in Skokie, Ill., won’t be ready for testing until July. Testing, though, may be the wrong word. Eventually, the model will be crushed to death by huge hydraulic jacks, hopefully not breaking until the stress equivalent to a whole bridge full of tractor trailer trucks has been passed.

Engineers, aware that the design had been used successfully in other countries, considered the model unnecessary. Director Airis agreed, as did Fred H. Sterbenz, project engineer for the bridge on behalf of Howard, Needles, Tammen and Bergendoff, and FHWA’s District Assistant Division Engineer, John T. Isaacson:

Sterbenz, however, said perhaps it was wise that a model is being built “in view of all the controversy.”

Turner, Kneece wrote, had recently asked his Chief Counsel, David E. Wells, for an opinion. He replied:

It is not believed that we could approve the present Fine Arts approved structure on the basis of mathematical calculation alone.

You indicated in the court that you are satisfied from those calculations that the bridge could be built and would be safe. However, you further indicated that to be doubly sure and completely satisfied you felt a model should be constructed for testing.

The court indicates in its opinion that, with the novel structure, it believed from testimony that a model had to be constructed and subjected to tests before the standards could be met.

According to Isaacson, the District could begin some work now, regardless of the final design. “Meanwhile,” Kneece concluded, “the seagulls are finding the rusty steel piers of the structure a good roosting place.” [Kneece, Jack, “How Much Crushing Does the Three Sisters Bridge Need?” *The Metro Notebook*, *The Evening Star*, April 3, 1971]

### **Fighting for Metro**

On April 1, Airis appeared before Chairman Inouye and the District Subcommittee of the Committee on Appropriations. Using maps, Airis summarized the status of freeway development.

As defined by the 1968 ICE, the District's Interstate System was 29.5 miles long. Several segments totaling 10.6 miles were in use:

- Theodore Roosevelt Bridge (I-66) and a section of the Potomac River Freeway (I-66 including its connecting E Street Expressway;
- 14<sup>th</sup> Street bridges (I-95) except the new bridge;
- Southwest Freeway (I-95) including its northbound 12<sup>th</sup> Street Expressway and the soon-to-be-opened 9<sup>th</sup> Street Expressway;
- the Southeast Freeway (I-695) to the completed 11<sup>th</sup> Street bridges over the Anacostia River; and
- Anacostia Freeway (I-295).

“All of these elements,” Airis told the subcommittee, “are in heavy usage,” with the 14<sup>th</sup> Street Bridges carrying the highest volumes (144,000 average daily traffic).

Construction was underway on a further 2.6 miles of Interstate freeway:

- Center Leg (I-95) to New York Avenue;
- Southeast Freeway (I-695) between the 11<sup>th</sup> Street Bridges and Barney Circle; and
- Three Sisters Bridge (I-266).

Discussing the Center Leg, Airis pointed out that “this is the leg you see under construction right out here in front of the Nation's Capitol:

It is already covered over and it is indiscernible now to a large extent from the Capitol area, as it is underground – although the Department has yet to finalize the air-right development details with the Redevelopment Land Agency between H and K Streets; the remainder is scheduled for opening in late 1972.

The Southeast Freeway was scheduled for completion to Barney Circle in November 1972. Of course, construction of the Three Sisters Bridge was under injunction. Noting that the District had sent its design engineering report to FHWA, he emphasized that it was “an essential link between the center city and the Dulles Airport and I-66 to the west.”

As for the remainder of the Interstate network, not yet under construction, he summarized:

Technically, the Potomac River Freeway along the Georgetown waterfront (I-266), and the East Leg of the Inner Loop up to Bladensburg (I-295), are in the design stage, but work is slower pending further development and no construction work has started.

The remainder of the system, that is, the North Leg of the Inner Loop, the Northeast-North Central I-70S and I-95 connections, and the extreme upper end of the East Leg require additional study as called for in the 1970 Federal-Aid Highway Act.

Still using maps, he explained the main differences between the Interstate plan and the Major Thoroughfare Plan that the city council had adopted in February 1968:

You will note the main differences, sir, are in the north central area. The Thoroughfare Plan that was recommended by the Council was to have I-95 go out over a New York Avenue alignment and make some type of connection with the Baltimore-Washington Parkway and then via the beltway, to I-95 to the north, eliminating the North Central Freeway. This is the discrepancy that the 1970 Federal Aid Act hopes to resolve.

The Thoroughfare Plan contemplates a 24½-mile system versus the 29 miles [planned for the Interstate System].

Before Airis could continue, Chairman Inouye said that when he received his new assignment, the first call he had received from the District concerned Metro. “And I must confess, that at that time I had no idea what the Metro was.” He asked Airis to “enlighten us as to what is involved in the so-called struggle that includes the Three Sisters Bridge, the highway builders, and the Metro.” Airis responded, “that is quite a large order,” but Chairman Inouye said, “Please proceed.”

Airis provided a lengthy discussion of traffic generators and volumes and steps to relieve congestion, such as imposition of staggered work hours to spread peak periods. In response to the chairman’s specific question, he said, “There is no conflict between subways and freeways”:

The two need to go together . . . They complement each other; they do not conflict. They do not compete with each other, only to a very limited degree because they are serving different purposes. As good as the subway is, as good as the bus transportation is, it will not haul one crate of oranges, not one. It will not make one service call where the man has to carry the beer or carry tools, or doctors’ kits. Those trips are made in rubber-tired vehicles, those and the host of other things that you cannot take care of on mass transportation. That is, if we are going to keep our civilization at its present level, and the well-being of our citizens at the present level. [District of Columbia Appropriations for Fiscal Year 1972, Hearings before a Subcommittee of the Committee on Appropriations, United States Senate, 91<sup>st</sup> Congress, 1<sup>st</sup> Session, pages 780-787]

He did not discuss the impasse Chairman Natcher had created by withholding subway funds until the District complied with the requirements of Federal law.

On April 7, President Nixon released a special message to Congress about the District of Columbia. It was a wide-ranging look at city issues, including home rule. He fully supported Reorganization Plan No. 3 of 1967, which replaced the commissioner system dating to 1874 with a mayor-city council form of government. However, one of his primary goals for the country was “to place local functions under local control, and to equip local governments with the authority and the resources they need in order to serve their communities well”:

To this end I solicit the cooperation of the Congress in transferring many of the routine municipal function it now must exercise itself, into the hands of the District government. Several such functions whose transfer is requested in the District’s 1971 legislative program include the setting of liquor license fees, the execution of long term lease agreements, and the issuance of no cost driver’s permits for use by District police officers

on duty. It is clearly time to stop tying the city's hands, and squandering the Congress' valuable time, by holding on Capitol Hill minor powers that belong in the District Building.

He looked forward to the commendation of the Commission on the Organization of the Government of the District of Columbia, known as the Nelsen Commission after Representative Ancher Nelsen although formerly called the Little Hoover Commission. The recommendations were due in March 1972. He planned to submit legislation extending the commission's life so it can provide its views "on the subject of expanded self-government for the District of Columbia."

City residents had now voted in two presidential elections and election of a nonvoting member of the House of Representatives. "I was proud to personally congratulate the Reverend Walter Fauntroy immediately after his election to this important post two weeks ago." It was, however, only an interim step because the city was entitled to a representative who could vote in the House. "I reaffirm my strong support for a Constitutional amendment granting to the District at least one full voting representative in the House of Representatives, plus such additional representation in one or both houses as the Congress may approve."

Among other issues, he discussed Metro funding and preparations for the Bicentennial. He said that when Metro began operations in 1974, "it will be the Nation's most modern mass transit system" and "should do much to unify the metropolitan Washington community." It would reduce congestion and pollution while stimulating the area's economy:

I am confident that disagreements over implementation of the 1968 and 1970 Highway Acts – now tying up needed METRO funds – can be resolved, and I have urged all of the parties involved to give priority to meeting these legislative obligations.

He also proposed that the Federal Government remove "another major obstacle now confronting METRO" by guaranteeing WMATA's revenue bonds to expedite their sale. The guarantee would allow WMATA to sell its planned bonds "so that METRO construction can go forward at once." The bonds would be taxable as a condition of the guarantee, allowing the Federal Government "to cover 25 percent of the Authority's anticipated interest costs on the bonds, enabling the issuance of \$300 million in additional bonds." In all, WMATA would be able to "close two-thirds of its \$450 million revenue gap, in keeping with the two-thirds Federal and one-third local cost sharing arrangement that has prevailed for METRO funding in general."

As the Federal Government and the District of Columbia prepared for visitors during the Bicentennial in 1976, President Nixon thought that Georgetown, "the District of Columbia's living link to the colonial and Revolutionary eras" merited special attention. Unless steps were taken now "on an overall development and preservation plan for the Georgetown waterfront area," this resource would be lost "by default." He added, "New roads and commercial development threaten to change the waterfront forever, piecemeal." He had asked the District, NCPC, and the Departments of HUD, the Interior, and Transportation "to join with private citizens and move ahead at once in development of an overall plan for the Georgetown waterfront." The goal was to preserve historic buildings, increase parklands, save open vistas of

the river and Roosevelt Island, and “provide for the harmonious development of public, commercial, and residential facilities.”

In putting the full faith and credit of the Federal Government behind \$1.2 billion in WMATA construction revenue bonds, President Nixon overruled Secretary Volpe and Chairman Hahn who favored an areawide payroll tax. Briefing reporters at the White House, Secretary Volpe said, “there are many different types of plans” in considering the financing issue, including the payroll tax, reducing the system, and backing the bonds. The President’s backing for the bonds “was the most prudent way” to “bring success” to the construction bonds and Metro.

He did not suggest a way out of the freeway-subway impasse, but said he had talked to Chairman Natcher. “Once we are able to lay all the facts before Congress, I’m very hopeful that they will be convinced that we mean business and release the money.”

WMATA officials were reportedly “delighted” by the President’s announcement. The three jurisdictions subject to the areawide compact would have to approve the change in financing plans.

Chairman McMillan of the House District Committee expected prompt action because the bond guarantee was “the only way we have to get revenue” for Metro construction. Another promising sign was that Chairman Natcher’s subcommittee would not have a direct role in providing the guarantee.

Although neither the President nor Secretary Volpe suggested a way around Chairman Natcher, Secretary Volpe did tell key Republican members of Congress on April 6 that, as the *Star* put it, he “may ask the U.S. District Court here to authorize a resumption of Three Sisters Bridge construction in an effort to convince Natcher to let go of the subway money”:

Volpe would ask the court to permit construction of two bridge support piers in the Potomac River while a model of a controversial single-span design is built and tested. The testing will not be completed until early July, Volpe told the congressmen.

[Prince, Richard E., “D.C. Plan Pushed By Nixon,” *The Washington Post and Times Herald*, April 8, 1971; Angle, Martha, and Gilken, Stephen, “Home-Rule Study Proposal Hits a Snag,” *The Evening Star*, April 8, 1971; Boldt, David R., “Metro Bond Backing is Seen Likely,” *The Washington Post and Times Herald*, April 10, 1971]

(Representative Nelsen’s Little Hoover Commission report was delayed. The commission’s reports, beginning in May 1972, covered topics such as education; city youth programs; waste due to failure to centralize purchasing, data processing, and paperwork management; public colleges; underfunding the retirement funds for teachers, fire fighters, and police; and the city’s authority to set taxes. The commission also recommended eliminating the presidentially appointed Deputy Mayor, to be replaced by an assistant appointed by the mayor. Based on newspaper coverage, the commission did not address highway development or home rule.)

## **Chairman Natcher Makes His Point**

On April 20, Chairman Natcher assembled his subcommittee for its first meeting of the 92<sup>nd</sup>

Congress. Mayor Washington, and Comer S. Coppie, the District's budget officer, were at the witness stand along with General Graham, Schuyler Lowe, and Roy Dodge representing WMATA, to discuss the second supplemental appropriation act, 1971. The supplemental was to cover several District funding categories, including \$34,178,000 for the city's share of Metro construction costs.

Because the subcommittee included several new members, Chairman Natcher said that before questioning of the witnesses began, "I have a statement I would like to make regarding the current situation as far as the Highway-subway [sic] impasse is concerned." The statement occupied 38 pages of the hearing record, with extensive reproduction of newspaper articles and other documents.

It covered the history of the highway program, emphasizing that local officials, not Congress, had chosen the segments of the Interstate System subject to BPR approval. He listed the 13 freeway segments BPR had approved in the September 1955 Yellow Book (North Central Freeway, Palisades Parkway, Three Sisters Bridge, 14<sup>th</sup> Street Bridge, Potomac River Freeway, South Leg, North Leg (West), North Leg (Central), Northeast-North-Central Freeway, North Leg (East), East Leg, and Intermediate Loop). "Since the adoption of these projects there have been 82 studies made, at a cost of over \$20 million."

He covered the activities that resulted in Section 23 of the Federal-Aid Highway Act of 1968, including the city's failure to use all the Interstate construction funds made available to it each year. He described how Congress had released Metro matching funds in 1966 after NCPC approved the freeway program, only to have NCPC reverse course after the funds became available. A lawsuit was filed in February 1966 to block the freeways. Congress responded with Section 23:

The District of Columbia has not been in compliance with the 1968 Highway Act at any time since passage of the act. From August 1968, until August 1969, the District government's position was simply outright refusal to comply with the act. If the District officials had listened to President Nixon and carried out the advice given to them by the President we would have solved this impasse over freeways and rapid transit many months ago.

He introduced President Nixon's letter of August 12, 1969, along with editorials and articles regarding the issues.

In September 1969, the Appropriations Committee recommended release of the District matching funds for Metro. "Every assurance had been made that both rapid rail transit and the freeway systems would go underway and construction would be completed on both systems." The city awarded a \$1 million contract to construct the piers for the Three Sisters Bridge. However, shortly after construction began, the U.S. District Court ordered a halt to construction.

When, as a result, Congress refused to release \$34,178,000 to the District for Metro, Secretary Volpe loaned \$57 million to WMATA. He pledged another \$68 million in February 1971. This time, the lack of matching funds restricted the use of the funding.

He referred to Representative Broyhill's letter to the White House "concerning the stalling tactics of the District officials" on the bridge":

It developed that in order to continue stalling the construction of the bridge an order was issue directing that an 81-foot model of the proposed bridge be constructed.

Chairman Natcher summarized the history of Metro legislation, starting with the bobtail plan for a 25-mile rapid rail system that would cost \$431 million, with the funds coming from the Federal Government (\$100 million), the District (\$50 million), and revenue bonds. Even before construction began on the 25-mile system, Congress approved a 98-mile system in 1969 based on an estimated cost of \$2.5 billion.

He pointed out his subcommittee's doubts about that cost estimate or that revenue bonds could be retired from fares collected. "The rapid rail transit systems in this country have never been able to retire bonds out of the fare box." Finally in November 1970, WMATA admitted that the 98-mile system could not be built for \$2.5 billion. When he suggested that the cost was more likely to be \$4 billion, WMATA officials held to their own lower estimate.

Despite their assurances, they found that Chairman Natcher had been right about the revenue bonds:

Several months ago the officials of the Washington Metropolitan Area Transit Authority announced that the bonds could not be sold due to the fact that the bankers and brokers in this country would not buy these bonds unless some guarantee was given that the bonds would be retired when they became due. The bankers and the brokers in this country know that bonds such as the rapid rail transit system bonds cannot be retired out of the fare box; therefore, a proposal is now underway to reauthorize the rapid rail transit system providing for additional costs for the 98-mile system and further providing for a guarantee by the Federal Government of the bonds to be issued. Since the overall cost of the 98-mile system exceeds the original authorization, the rapid rail transit system must now be reauthorized and the question of the additional cost of the system and the guarantee of the bonds by the Federal Government must be approved by the Congress.

He pointed out that for FY 1971, the city had requested an appropriation of \$3,495,000 for street improvements and extensions with a total budget of \$12,149,000 for capital outlays by the Department of Highways and Traffic. Because the overall city budget was out of balance for the sixth straight year, the committee "could not appropriate the \$3,495,000 requested for street improvements and extensions due to the fact that there was no available money for this purpose":

[It] was naturally assumed that when the supplemental appropriation bill for fiscal year 1971 was sent to the President by the District officials and then to Congress this bill would contain adequate funds for maintaining and repairing the streets in our Nation's

Capital. Not a dollar was requested for this purpose. Here again we see the District officials not only making every effort to stall the freeway system from going under construction but at the same time refusing to make recommendations for funds for maintaining and repairing the streets in our Nation's Capital . . . .

When it developed that no request would be made for maintaining and repairing the streets, our committee made an inquiry concerning this matter and we were advised by the District officials that it might be possible to secure rebates from the Department of Transportation on the Federal highway system money which could be used to maintain and repair the streets in our Nation's Capital.

(No such "rebates" were possible under the Federal-aid highway program. Federal law prohibited the use of Federal-aid highway funds for maintenance of Federal-aid or other roads.)

He did not know if Congress would authorize assurances for the bonds. "With all of our problems in this country, concerning housing, urban renewal, education, health, pollution and the many other problems that we have existing throughout the 50 States, the fact that we now confront with this impasse is right serious:

We have gone along with you and not a person in this room can say that this subcommittee has not carried out every commitment it has made.

The subcommittee had released the matching funds in 1966 only to have NCPC and the courts reverse course. The subcommittee had again released the funds in 1969:

We met with the President. He carried out every commitment he made . . . . If they had listened to President Nixon, we would not be in this impasse today, we would not be sitting here discussing it . . . . We have the impasse now as far as freeways are concerned and rapid rail transit.

He referred to the most recent court actions and the November 1970 design hearing for the bridge:

Nothing was done about it, and nothing has been done about it up to this time. They are talking in terms of an 81-foot model that, according to my information, was broken by the company with the contract to construct it. More delay and now downtown they say it will be several more months before they can proceed.

We have inquired as to when the bridge and freeway system would start under construction again so we can appropriate the money for rapid rail transit and for our freeway system? We have \$200 million for our freeway system. When are you going to solve this impasse?

Assuring the new members that "we have carried out every commitment," he continued:

General Graham, you know that is true. Why does this impasse exist and why do they not do something about it? The law of 1968 is the law and it must be complied with. The law of 1970 provided for the studies and it must be complied with.

He emphasized that the Appropriations Committee favored a balanced transportation system. “We are for rapid rail transit, we are for the freeway system, and we are for the bus system which will tie in with the two systems.” He concluded his presentation by saying, “I want you to know that we on this committee are for both systems and that is our attitude at this time.” [Second Supplemental Appropriation Bill, 1971, Hearings before the Subcommittees of the Committee on Appropriations, U.S. House of Representatives, 92d Congress, 1st Session, 1971, pages 969-1008]

He then turned to Commissioner Washington, as he would be called during the hearing, to present his statement. He was hesitant to comment in detail on Chairman Natcher’s statement except to say that the chairman had relied extensively on newspaper articles. The facts, Commissioner Washington said, “are well-documented and I am not sure that the newspaper accounts adequately reflect what the situation is.” He said “that, in all candor, the District has attempted to proceed within the bounds of its understanding. Here and there we may have faltered, but on the whole I think we have, to the fullest extent of our ability, tried to resolve the entire matter before us”:

I would like to note at this time that we are building, and some of the complaints around the city indicate this, a good amount of highways; actually \$65 million is being built at this moment in freeways, but that is not really what I am getting at.

The city had made “an honest endeavor to comply with the requirements of the 1968 and 1970 Highway Acts.”

He submitted a status report, prepared by Deputy Mayor Watt, for each of the projects listed in the 1968 and 1970 highway legislation, summarized here:

Three Sisters Bridge, I-266: Enjoined by court order of August 7, 1970, pending safety findings, economic and social effects certification and design public hearing compliance. The hearing was held December 14-16, 1970 and the design report was submitted to the Department of Transportation on March 31, 1971. The environmental statement was under preparation.

Potomac River Freeway, I-266: Per the conference report on the 1968 Act, the District began right-of-way acquisition on October 1, 1969, and ordered the design consultant to begin work on September 9, 1969. “A design hearing would seem to be required and consultant effort is pending towards such a *hearing* in the summer of 1971.”

Center Leg of the Inner Loop, I-95, terminating at New York Avenue: Construction has continued to Massachusetts Avenue south of New York Avenue. The city is awaiting HUD’s approval of the air rights development between H and K Streets before work begins on the segment to New York Avenue.

*East Leg of the Inner Loop, I-295, terminating at Bladensburg Road:* The conference report for the 1968 Act called on the city to direct the consultant for the portion between Barney Circle and Benning Road to resume work. Consultant recommended design in July 1969. The city received bids on the first contract on January 15, 1970, but the U.S. Court of Appeals enjoined the city from proceeding on April 6, 1970.

East Leg of the Inner Loop, I-195, terminating at Bladensburg Road continued: The conference report called for the city to negotiate a design contract for the section between Benning Road and Bladensburg Road. The city signed the consultant's contract on June 5, 1970.

South Leg of the Inner Loop: The 1968 Act called for an 18-month study period to be reported to Congress by February 23, 1970. The city submitted the report on February 20. Congress did not mention the South Leg in the 1970 Act. "This section, therefore, needs further clarification by Congress and others. With concurrence, this project could proceed at an early date."

East Leg of the Inner Loop, I-295, beginning at Bladensburg Road: The 1968 Act allowed for an 18-month study and report period. The city submitted the report on February 20, 1970. The 1970 Act called for restudy and report within 12 months of enactment.

North Central (I-70S) and Northeast Freeways (I-95): Per the 1968 Act, the city submitted a report to Congress on February 20, 1970. The 1970 Act called for restudy and a report within 12 months of enactment.

North Leg of the Inner Loop, I-95: Per the 1968 Act, the city submitted a report to Congress on February 20, 1970. The 1970 Act called for restudy and a report within 12 months of enactment.

He was there "to reiterate, in the strongest possible terms, the District of Columbia's firm commitment to the development of the rail rapid transit system." Construction must proceed "to justify the good faith of so many, particularly our suburban neighbors" and Federal officials who had supported Metro "despite some very serious problems since that hopeful day just over a year ago when ground was broken on this immense project":

The \$34.2 million requested funding is a comparatively small portion of the total present cost. But it is critical in being an inextricable part of a carefully and tightly put together financial and construction plan for the total system.

Further delay "would mean even greater inflationary pressures and more uncertainty regarding the marketability of the necessary revenue bonds – at the very time when President Nixon has proposed a very sound plan for resolving these problems."

He recognized Chairman Natcher's commitment to Metro. "I believe that you, perhaps even more than I, understand what I mean when I say that in my opinion it is the lifeblood of the Nation's Capital." He urged Chairman Natcher to help find a way forward. "This is my concern,

my earnest plea that we do so and that we take out commitments strongly at this time.” [pages 1010-1011; the status report appears in Second Supplemental Appropriation Bill, 1971, Committee on Appropriations, U.S. House of Representative, 92d Congress, 1<sup>st</sup> Session, Report No. 92-187, pages 101-103]

Chairman Natcher asked the new members of the subcommittee if they had any questions for Commissioner Washington. Representative Stokes had no questions but thanked Chairman Natcher for his “well-documented and comprehensive statement.” Representative Scherle agreed with Representative Stokes’ “eloquent statement” and promised to do his homework to catch up with the subcommittee’s work.

Representative McEwen noted that the articles Chairman Natcher had produced for the record gave the impression that “this whole problem was brought about by one man, namely you, sir.” Having served on the Roads Subcommittee of the Committee on Public Works for 6 years, he recalled “some actions taken in that subcommittee and the committee . . . and the entire Congress and signed by the President”:

If nothing else, Mr. Chairman, I would hope that there could be an increased awareness of the fact of what you refer to, that we do have Federal highway laws that were passed, and are law, and it is more than just one or two people who have strong feelings on the need for both mass transit and highways.

Referring to the \$20 million in studies, he said that without exception, the studies “said that there was a need for both mass transit and for a highway system.” He hoped both would go forward.

Representative Myers said he also appreciated the chairman’s statement. He promised to do his best to cooperate with Commissioner Washington. [pages 1011-1013]

General Graham’s formal statement summarized the status of Metro design and construction, concluding:

I cannot too strongly stress the urgency of the appropriation of these funds. We have just revised our operational phases to take into account our financial and construction problems. Our schedule is compressed as far as possible without impacting the completion date of 1979 and further upsetting the associated financial planning.

WMATA Chairman Sickles, who was out of town, submitted a formal statement that referred to the 5 miles of construction that were under contract and mostly under construction. “So you can see, Metro is no longer an abstraction. It is well and visibly underway.”

He summarized the restudy of construction costs undertaken in 1970 as a condition of selling the revenue bonds. The restudy identified an increase of \$500 million. However, financial consultants pointed out that “some form of tax backup or guaranty would be necessary to attract investors.” WMATA’s compact partners had discussed ways to comply with this concern, but time was of the essence:

We are most encouraged by the President's proposal. It promises to provide the means of fulfillment of the objective which the Congress and the metropolitan community has sought for well into two decades. We pledge that with your assistance, Metro will be built – built on schedule – and built with the qualities which will encourage its maximum use and to a standard worthy of the Nation's Capital. [pages 1013-1019]

### **On the Eve of Revolt**

The plan hatched by Representatives Giaimo and Obey, along with Representatives Stokes and Silvio Conte (R-Ma.), was soon to reach the House floor as their colleagues considered the \$6.9 billion second supplemental appropriation act.

On May 6, Chairman Natcher had again prevailed in withholding the District's matching funds in an Appropriations Committee vote behind closed doors. In the majority report, he said he would be willing to reconsider the rejection "at a later date . . . in anticipation that the current highway-subway impasse will be resolved." [Second Supplemental Appropriation Bill, 1971, Committee on Appropriations, U.S. House of Representative, 92d Congress, 1<sup>st</sup> Session, Report No. 92-187, page 13]

In a dissenting minority report, Representatives Giaimo, Obey, Stokes, and Conte said Metro was "a sound and profitable investment" that should remain on schedule. They said, "The District must, of course, comply with congressional directives and we feel that it is in substantial compliance with appropriate directives of the Highway Acts" of 1968 and 1970. They knew they faced an uphill battle, as the *Post* reported:

The basic strategy of the dissenters, one insider said, is to crack the façade of solid support previously enjoyed by Natcher in withholding the subway money. This, he added, could make it easier for Senate conferees to prevail when the money bill goes to a House-Senate conference. [Pages 99-103]

Although the Senate supported releasing the District's share, Chairman Inouye was "reliably reported" to be worried that defeat of the dissenters' plans on the House floor "might make it harder for him to prevail in conference." [Boldt, David R., and Eisen, Jack, "4 Vow House Fight Over Metro Funds," *The Washington Post and Times Herald*, May 7, 1971]

Representative Gude wrote to all his House colleagues in support of the challenge:

There is no sensible basis for holding up these funds any longer, particularly in view of Congress' earlier commitments (1966 and 1969) to fund the subway program . . . . It appears that the District government has complied with all elements of the law and we fear that any further delay in the release of the \$34.2 million will endanger the very life of this vital project. [Kneece, Jack M., "Metro Proponents Challenge Natcher," *The Evening Star*, May 9, 1971]

On Sunday, May 9, Senator Inouye appeared on a local public affairs show, WRC-TV's "Dimension Washington." The Senator could understand Chairman Natcher's position:

In some ways I agree with him. I can't help but feel that certain people in the Department of Transportation have not been pushing this the way they should.

If the White House had come out forthrightly and assured those for a highway system that it would be built, I'm certain the Metro would be built.

In a telephone interview with the *Post*, Chairman Inouye explained that the root of the problem was that the Transportation Department "has been a little slow" in ensuring compliance with the 1968 and 1970 Highway Acts. "Someone has been dragging his feet, and it's noticeable to many, not just to Mr. Natcher." [Prince, Richard E., "Metro Fund Holdup Laid to White House," *The Washington Post and Times Herald*, May 10, 1971]

Editors of the *Star* and *Post* welcomed the challenge to Chairman Natcher. "Finally, after all these years," the *Star* editorial began, four dissenters had broken with "past practice" to set the stage for "a House floor fight – possibly a major fight – when the issue is called up next Tuesday." Clearly, "next Tuesday's revolt will be an uphill struggle [for Metro] . . . which everyone accepts," and it would turn on whether the city and the Department of Transportation, as Chairman Natcher contended, "have failed to comply in good faith with Congress' freeway-building demands."

The *Star* urged the House "to clear the subway funds immediately, and to couple that action with a clear-cut new demand for action on the highway construction previously ordered." Chairman Natcher's conciliatory comment in the majority report "strongly suggests that with a little more effort on the part of Mayor Washington and the White House, an agreement can be reached." ["Subway Revolt," *The Evening Star*, May 8, 1971]

On May 11, the day of the challenge, the *Post* anticipated the vote by calling it a "test both of the attitude of the 92d Congress toward the nation's capital and the ardor of the White House for the transit program here." This was the "first challenge on the House floor against five years of subway fund-withholding tactics" by Chairman Natcher. Representative Giaimo, the leader of the challengers, was optimistic, citing sympathetic House members and national conservation groups. "You don't go into these battles if you're going to lose."

However, some key figures were absent on this day, including the Nixon Administration:

The White House press office did not respond to inquiries on what steps, if any, the administration is taking. A spokesman for the Department of Transportation said that agency "certainly wouldn't get into anything that would infuriate the Appropriations Committee," which voted last week to withhold the subway money.

The office of Minority Leader Ford indicated he would support the committee, while WMATA "steered clear of involvement." The city's involvement had been "quiet." Deputy Mayor Watt had attended strategy sessions, and the city was trying to persuade undecided Republican Members of Congress, but Mayor Washington "left town yesterday for Bermuda on his first vacation since taking office."

The *Post* explained the strategy:

Giaimo is seeking not only the backing of liberal Republicans and Democrats, whose support should be nearly automatic, but also the support of nationally based pressure groups. Giaimo apparently has succeeded in convincing conservation groups that a subway will cut pollution and is therefore an environmental issue.

The Sierra Club and Friends of the Earth were among the supportive groups. Robert Waldrop of the Sierra Club said, “The very name of Natcher increases the pulse rate among antifreeway people across the country 10 times or so.”

The Democratic Study Group, which included more than 100 liberal Representatives, put out a “special alert” to its members, while Representative Gude planned to contact the 30 members of the Republican Wednesday Morning Club. Representatives Gude and Fraser wrote in a joint letter that, “Any further delay . . . will endanger the very life of this vital project.” Delegate Fauntroy had enlisted support from the 13-member House Black Caucus.

Representative Obey informed reporters why he had joined the fight. “I’m much more interested in hospitals and schools. But I don’t want to see the subway lost in a phony controversy. If they have some other objection, let them get it out in the open.” [Boldt, David R., and Eisen, Jack, “Fight is On to Get Metro Funds,” *The Washington Post and Times Herald*, May 11, 1971]

In an editorial that morning, editors of the *Post* acknowledged that it was “probably too much to expect the men and women of the House Appropriations Committee would buck their leaders” by voting in committee for Metro funding. There couldn’t be “a whole lot of political mileage in quarreling with their seniors over a mere \$34.2-million request.” Now, the entire House “will be asked to decide whether this region will have a subway or not.”

The editors praised Representative Giaimo and his cosponsors for deciding to fight their chairman. The traditional argument that Congress would release the Metro funds when it received evidence that the freeways were underway “sounds like a reasonable stance”:

But is it reasonable to ruin a regional transportation system because of a dispute with the city on another count? Is Metro the only club Congress can use to work its will? When the suburban taxpayers refuse to take any more financial risks [by contributing their share for Metro], and when the bonds cannot be sold for the subway – and when we are left with a set of expensive empty caverns around town – will Congress have acted *reasonably*?

Surely Congress could find some other way to show its dissatisfaction than “to kill the subway [and] ruin any chance of arriving at a ‘balanced’ transportation system here.” The editorial concluded:

When the issue comes to a vote on the floor, we hope every congressman will consider the question not out of pique at the District government – but as a matter of vital concern to all the people of this area. [“Does the House Want Metro or Not?” *The Washington Post and Times Herald*, May 11, 1971]

## Day of the Revolt

Chapter III of the supplemental appropriations act for FY 1970, H.R. 17399, covered the District of Columbia. Representative Giaino introduced an amendment that proposed to insert the following:

### Loans to District of Columbia for Capital Outlay

For an additional amount for “Loans to the District of Columbia for capital outlay,” \$34,178,000, to remain available until expended and to be advanced upon request of the Commissioner to the general fund

### District of Columbia Funds

#### Capital Outlay

For an additional amount for “Capital Outlay,” \$34,178,000, to remain available until expended.

He acknowledged from the start that it was “difficult . . . to stand on the floor of this House and try to do something for the District of Columbia which we think is right.” The White House and the Department of Transportation supported Metro wholeheartedly, and yet here he was, he said, asking the Administration and the Republicans “to put their money where their mouth is” by releasing \$34 million in District matching funds that had been blocked for years “because of the impasse in the struggle over the highway system.”

Chairman Natcher, “for whom I have the greatest affection,” supported a balanced transportation system of freeways and subway, but was preventing the District from paying its matching share for Metro even though Maryland and Virginia had paid their share:

I say this is not right. The people who are fighting about the highways – for the highways and against the highways – have their reasons and both have their remedies. They have taken legal remedies and proper remedies. They are in court. The Three Sisters Bridge is being held up by an injunction. There is another ruling against one of the other roads in the freeway system. The fact of the matter is that we, in the Congress – we who hold so much power – should be above maneuvering, forcing, and trying to blackmail the people into compliance.

Congress had voted \$180 million for the subway in the Department of Transportation budget to pay the Federal share, but at the same time “says on the District of Columbia share – the local share, the \$34 million share that we are withholding – Congress says ‘You are not in compliance with the law on highways.’” He added, “We can work out the highway problem, but let us not hold the subway hostage.”

He was concerned that without the District matching funds, WMATA would have to stop construction. “At this late date for Congress to jeopardize the construction of the subway already

authorized and approved by the Congress would be improper and unseemly.” Every delay simply increased the cost of Metro, then estimated to cost \$2.9 billion for the 98-mile system.

Representative Giaimo concluded his initial remarks:

As I said earlier, let the various forces who are fighting the freeway and the subway fight, using their legal means, and if they use some maneuverings and other unethical means, so be it. But let us in the Congress be men – and I say that generically with the gentlewomen present – let us be men in Congress and let us take the high road and say, “We are for mass transit. We are for the subway system. We are not going to hold it hostage any longer.” [Second Supplemental Appropriations, 1971, Congressional Record-House, May 11, 1971, pages 14437-14439]

Representative Broyhill supported the amendment. He thought it “interesting, when we stop to think about it,” that no one was debating the need for the Metro subway. “That question has already been decided” he said, “after so many years” of debate on Capitol Hill. He discussed the dire situation WMATA faced, with all available funds obligated or committed:

Why should we jeopardize the entire project just because of some disagreement or some misunderstanding between the Congress and the District government on another law, on another act, if it has nothing to do with this subway system?

Why should the other communities, the other States, and the people of the Nation, for that matter, be punished by being denied the use of this rapid rail system in the Nation’s Capital simply because someone downtown, someone in the executive branch, possibly, has not done as much as we think he should have done in complying with the law?

There are other ways of making them comply with the law. Holding up these subway funds has not been too effective up to this point. [pages 14439-14440]

Delegate Fauntroy commended Representative Giaimo for “his courage and intelligence” in introducing the amendment:

It makes absolutely no sense to fund the Federal share of the subway system while withholding, with no logical basis, the District’s. I agree that it is unconscionable to hold the subway hostage to force freeway construction, and I further agree that delaying the Metro funding will result in added cost escalation which we can ill afford in this community.

He contended that the District was in compliance with the 1968 Act. It began construction of the Three Sisters Bridge, which was halted by court order:

With regard to the other aspects of the freeway system mandated by the Congress in the Highway Act of 1968, construction is underway or being planned or being studied in accordance with the Highway Act of 1970. Nothing more can be required of the District of Columbia government which has proceeded diligently to comply with the law, despite widespread and deeply felt citizen opposition to several roadbuilding projects.

The subway was vital to the environmental and economic future of the Washington metropolitan area, as Congress recognized when it “gave overwhelming approval to the interstate compact creating the Washington Metropolitan Area Transit Authority” in 1966. He concluded:

I hope as you approach your vote on this amendment that you will vote not because it is safe, not because it is politic, not because it is popular and good, but because it is right that we move on with the construction of our subway system. [page 14440]

Representative Gude picked up on Delegate Fautroy’s final comment, saying, “as to whether it was politic to support this amendment, let me say that it is particularly politic, because by supporting this amendment you are going to save some taxpayers money.” Without the amendment, “the cost of the Metro system will escalate, and our commitment is going to cost more and more.” He cited several factors contributing to Metro cost increases that Congress could not control, including interest rates and a 7-percent escalation factor. The one factor that Congress could control was its own reluctance to let the District pay the share it is required to pay under the interstate compact backing WMATA. Congress could continue to refuse the matching share and contribute to the cost increases or “we can get on with the job of building the Metro system which the National Capital region so sorely needs.” [pages 14440-14441]

Representative Samuel S. Stratton (D-NY), a former mayor of Schenectady who had won election to the House in 1958, supported the Giaimo Amendment. He referred to ping-pong diplomacy that was in the news, referring to an exchange of ping pong players as a step in improving relations with China:

One of the things that we discovered is that even in Peking they have a subway, and a rather modern one, and a rather clean one. They have had one in Moscow for some time. So, if we are going to try to keep up with the Soviets in our Polaris submarines and in building ballistic missiles, I think we ought to at least try to match them in developing a modern, clean, and attractive subway here in the Capital of the free world.

Because of his respect for Chairman Natcher, he was disturbed to read in the newspapers that “one Member of Congress is holding up the financing of the subway.” He thought that the entire Congress should decide this matter, and Representative Giaimo had provided the opportunity.

He did not know the ins and outs of the Committee on Appropriations or the District freeway battles:

Well, I know enough about my own district in upstate New York – in Albany, the capital of New York State, and in Schenectady – that we have just about come to the end of the road on the amount of concrete that we can successfully put in metropolitan areas. Today, the people in Washington are not the only ones who are objecting to more interstate highways being built in their backyards. They are objecting in Schenectady and in the town of Guilderland, and in Albany, and I am sure they are objecting in many of your districts, too.

So let us not make the Metro the hostage of more concrete here in the District of Columbia, and certainly let us not make it the hostage of the Three Sisters Bridge. I drive down the George Washington Parkway each morning, and I would hate to see that beautiful Potomac vista damaged by the construction of another bridge.

In addition to damaging the Potomac vista, the bridge would affect Glover-Archbold Park. “You just cannot have a bridge without all kinds of abutments to it, and one of the very beautiful park areas of this city, which I have enjoyed off and on for 30 years, is destined to be damaged if not entirely destroyed if that Three Sisters Bridge goes up.” [page 14441]

Representative Conte commended Representative Stratton:

The gentleman made mention of ping-pong diplomacy. Let me tell you that the ping-pong game that they have been playing with this transit system here in Washington, D.C., makes the ping-pong game that they played in Red China look anemic by contrast. [page 14441]

After several additional Representatives explained why they supported the amendment, Representative Clarence D. Long (D-Md.), who had represented a district based in the northeastern suburbs of Baltimore beginning in 1963, was the first to oppose it. He was concerned about the increasing cost of Metro. First it was a 23-mile [sic] network estimated to cost about \$400.6 million. Then it turned into a 98-mile system costing \$2.5 billion with two-thirds of the funds to come from the Federal Government. “Now we find that \$2½ billion figure has gone up.” It was up to \$3 billion at this point, but it would probably end up at \$5 billion:

Now, Mr. Chairman, this is just the beginning. There are going to be more readjustments on these figures. I think we are going to find that this subway is a disaster.

He contrasted the Metro plan with the New York City subway:

New York is probably more ideally situated for a subway than Washington because it is a long narrow city where people can get to the local subway easily and go long distances. In contrast, Washington, D.C., is more spread out; most of the people in Washington will be living far from any subway station.

He added that even with a 30-cent fare, the New York City subway cannot support its operating expenses from the fare box, running a projected \$120 million annual deficit. Once Metro opened, it would run an operating deficit, just like the Nation’s other rapid rail systems:

The answer to Washington’s transportation crisis is better traffic management; a ban on cars in the city to force people to ride the buses; a more efficient bus system; and the movement of a large number of Federal installations to office space outside the District and not to move any more Federal activities into the city. We are trying to put too many angels on the head of a pin . . . .

As some of my colleagues have pointed out, the D.C. subway system is the biggest public works project in history – bigger than the SST and four times the cost of the Aswan Dam.

We are throwing \$5 billion away for Washington, D.C., because a lot of Congressmen and their staffs want to have a little extra convenience. They probably will not use the subway, but they think other people will. Traffic will decrease and congressional employees will be able to drive to the Capitol more quickly. [pages 14442-14443]

Representative Bow, the ranking Republican on the Committee on Appropriations, had objected the instant Representative Giaimo introduced his amendment. The amendment was not germane, he said, because amendments had renumbered the sections; chapter III was now Foreign Operations. Moreover, Representative Giaimo “did not show us the courtesy of submitting the amendment to us.”

Representative Bow was overruled, but when permission was sought to allow discussion of Representative Giaimo’s amendment beyond his allotted time, Representative Bow pointed out that he had objected when Representative Giaimo was granted 5 minutes, but he would not object at this time. “My blood pressure has gone down just a little bit” since his previous objection had been overruled.

Representative Bow had lived in the Washington area for years. He had arrived as general counsel to the Subcommittee on Expenditures in the late 1940s and held a variety of posts before winning election to the House in 1950 from a district based in Canton, Ohio. He lived in the Greenbriar, an apartment building at 4301 Massachusetts Avenue, NW. Now, he took just a few moments to say he supported the work of the subcommittee, opposed the Giaimo Amendment, and wanted to defend Chairman Natcher:

This cannot be said to be one man alone who is holding this up. It is the subcommittee and the full committee who have supported the gentleman who is chairman of that subcommittee. I am looking forward to his address to the House this afternoon. I am sure that those who will hear him will agree with him as we will defeat the Giaimo amendment. [page 14443]

That one man, Chairman Natcher, rose to oppose the amendment, repeating much of his recent statement during the subcommittee hearing, including documentation by newspaper articles and editorials.

The committee, he said, had long supported a freeway and rapid rail transit system for Washington. “In order to meet the tremendous day-by-day growth of traffic the highway program must be carried out along with the present rapid rail transit system that is now under construction.” The committee had recommended funding for Metro in 1966 and again in 1969, but “has not approved at this time the request for \$34,178,000 to finance and provide the District of Columbia’s share of the current costs of the construction of the rapid rail transit system.” The \$38,308,000 requested in the regular 1972 budget would be considered at a later time “in anticipation that the current highway-subway impasse will be resolved.” He made clear:

The provisions of the Federal-aid Highway Act of 1970 [sic] must be complied with by the District officials before our committee can recommend to the House of

Representatives that additional amounts be appropriated to continue construction of the rapid rail transit system.

He emphasized that no committee of Congress had selected any of the elements of the District's Interstate network. District officials had selected them and worked out detailed plans for them. "Neither the location for the Three Sisters Bridge nor the location of any highway project was selected by any committee of this Congress."

He recalled the history of the District's freeway plans, starting with BPR's designation in the Yellow Book (September 1955), and including the 82 studies conducted on the routes. He continued:

For instance, on the Three Sisters bridge [sic] we have eight studies and on the Potomac River freeway [sic] we have eight studies. When the footdragging began the studies began and this in the main was a system used to stall the freeway program. There were some people back in the beginning who believed that this was the only method to be used in order to force the Congress to approve a rapid rail transit system in our Nation's Capital . . . .

By virtue of delay and failure to comply with the law set forth in the Highway Acts of 1968 and 1970 the cost of the freeway projects are in some instances more than double our original amount estimated.

The Committee on Public Works had "made every effort possible to see that" the District complied with the September 1955 approvals:

After it was clear that the District of Columbia did not intend to construct the freeway program which it had requested and approved, the Public Works Committee decided that in all fairness to the States of Maryland and Virginia, who had relied upon the system agreed upon in the District of Columbia and in the States of Maryland and Virginia, brought forth the provision in the Highway Act of 1968 calling upon the District of Columbia to construct certain projects of the freeway system which the District had approved.

The two States developed their Washington area networks on the assumption that the District would build its segments:

Along about this time the Emergency Committee on the Transportation Crisis was formed. Statements were issued by members of this committee that there would be no more exits or entrances into our Capital City. The committee proceeded to make every effort possible to destroy the freeway system which had been approved and to stop construction on each and every project in the system.

Section 23 of the 1968 Act had required the District to begin work on the Three Sisters Bridge, the Potomac River Freeway, the Center Leg of the Inner Loop, and the East Leg of the Inner Loop, and to study the remaining segments and report to Congress within 18 months. The

District had not “made any effort” to comply until the Revenue Act of 1969 denied the Federal payment to the District unless the President sent a letter assuring compliance with Section 23:

The compliance at that time consisted of starting the Three Sisters Bridge under construction, commencing engineering work on the Potomac River Freeway, continuing construction on the center leg of the inner loop, and advertising and receiving bids on the first section of the east leg of the inner loop. The District of Columbia had 60 days to award a contract on this latter program but refused to do so before a suit had been filed in court.

The District submitted its report to Congress with a recommendation to extend the East Leg through the National Arboretum “and forced a change in the upper end of the east leg which had already been directed by the act”:

The east leg therefore represented a maze of noncompliance with the 1968 act. The suggestion of going through the National Arboretum was premeditated, of course, and brought about hundreds of letters from fine women throughout this country objecting to extending the freeway system through the National Arboretum. Those who had made up their minds to stop the freeway system in the District of Columbia knew this, of course, and decided that notwithstanding the fact that such a proposal was fraudulent, it might to some extent place them in a position of being able to say that they were complying with the Highway Act of 1968.

The Department of Transportation’s report was in “complete disagreement” with the District’s recommendations, and neither had consulted with Maryland or Virginia highway officials. “In fact the council of governments which must be consulted on these projects had rejected the District’s plan in early 1969.”

Section 129 of the 1970 Act allowed 12 months for further study of the East Leg, the North Leg, the North-Central Freeway, and the Northeast Freeway. “Over 4 months of that 12 month period has elapsed and the District has not as yet begun these studies.”

The Three Sisters Bridge was “a most important part of the freeway system” that was being held up in the courts. He recalled President Nixon’s letter assuring him that the Attorney General and the Department of Transportation’s General Counsel would assist the city in responding to the lawsuit. “At this time they are apparently at odds with each other as to how to proceed.”

He recalled the protests when construction of the bridge began:

Prior to the letting of the contract a group of people appeared before the city council. At the time that this matter was under discussion, a general disturbance took place with ashtrays thrown at the members of the city council and with a number of arrests made. Mr. Chairman, you will recall that a subpoena [sic] was issued and served on me following the arrests of a number of people who for years now have violated every law attempting to stop the freeway system from going under construction and according to the

newspapers some of those arrested were demanding that I appear at the time they were to be tried to explain just why it was that the Highway Act of 1968 must be complied with.

You will recall, Mr. Chairman, what transpired at the time I presented the subpoena to the House. Of course, the House refused to recognize the subpoena and the Highways Acts of 1968 and 1970 are still the law and must be complied with by the District of Columbia officials.

He recalled the protesters at the construction site:

On a number of occasions the District of Columbia police had to be called to maintain order and during the disorders a trailer containing valuable tools and equipment was set on fire and destroyed with the damage amounting to nearly \$100,000.

The Department of Transportation and the District had rejected the advice of the Attorney General and the District Counsel to appeal Judge Sirica's ruling. Instead it completed hearings on the design in December 1970. Four months later, the only thing that had happened was that "someone suggested that an 81-foot model be constructed" to verify the safety of the design:

A contract was let for the 81-foot model and according to my information, Mr. Chairman, several days ago the model while under construction broke and it will require several months before the model will be completed and used. Here again we have nothing but deceit and footdragging, Mr. Chairman.

Meanwhile, the District was paying the contractor \$500 a day damages (\$15,000 a month) for halting work on the Three Sisters Bridge.

Chairman Natcher turned to WMATA's financial difficulties. He pointed out that his committee had been skeptical from the start that the 98-mile Metro system would cost \$2.5 billion. "I believed then and I believe now" that the system would cost at least \$4 billion and might cost \$5 billion. Nevertheless, WMATA officials appeared before the committee to explain that the system could be built for \$2.5 billion. They admitted to a cost increase of \$480 million only during a hearing the previous fall. The District's share of the new estimate would be \$269,700,000 instead of \$216 million.

Investors had refused a year ago to purchase \$835 million in bonds backed by revenue from the fare box. The committee had always maintained, he said, that bonds could not be retired from fare box revenue "and this has been the experience of all other communities operating a rapid rail transit system." The brokers were insisting that the Federal Government guarantee the bonds.

(As explained earlier, WMATA did not attempt to sell revenue bonds in 1970. The agency had consulted with Wall Street firms during the year that indicated investors would not purchase the bonds WMATA planned to offer in 1971 if they were backed only by farebox revenue.)

He called Metro "the largest single public works project in the history of the United States of America." By comparison, the Manhattan Project to create the atomic bomb cost \$1 billion.

None of the individual projects by the Tennessee Valley Authority or the space program exceeded \$1 billion. “Even the Aswan Dam project only cost \$1,200 million.”

Chairman Natcher said:

The Highway Acts of 1968 and 1970 must be complied with by the District of Columbia officials and both rapid rail transit and the freeway system must proceed together. Further delays and footdragging will not be accepted and such action can, if continued endanger completion of the rapid rail transit system.

The Committee on Appropriations had acted “in good faith at all times and we intend to remain in this position.” The committee wanted to release the \$34,178,000 in supplemental appropriations and the \$38,308,000 requested for FY 1972 and all additional amounts for Metro. “Construction work on the Three Sisters bridge [sic] must begin and the provisions set forth under the Highway Acts of 1968 and 1970 must be complied with in full by the District of Columbia.” [pages 14443-14445]

Because he wanted to ensure that his colleagues had a better understanding of the impasse, he introduced for the record his statement at the start of hearings on the Second Supplemental Appropriation Act. [pages 14445-14456]

Following Chairman Natcher’s remarks, other Representatives expressed their views on the Giaimo Amendment. Chairman Mahon of the Appropriations Committee briefly stated, “I want to express opposition to the pending amendment and offer the hope that the amendment will be defeated.” He did not elaborate on his view. [page 14456]

Representative Davis opposed the Giaimo Amendment. An attorney, he had joined the House in 1947 after winning a special election and served until 1953 after losing an election to the Senate. He returned to the House in 1965. He said that “in this drama of the saints and sinners here this afternoon I rise to fully support the role of the alleged chief sinner of the piece, the chairman of our subcommittee, the gentleman from Kentucky.” He wanted to make clear just who was supporting this amendment:

There have been self-cast here this afternoon in the role of the saints, one subcommittee member who attended neither the hearings nor the markup of this supplemental measure; one who offered an amendment to bring the government of the District of Columbia to a halt by an amendment to the District of Columbia revenue bill to deny all federal payments until the freeway system was under way; one who voted against the SST after the authorization and the commitments had been made, but who now argues that we should provide the money because it has been authorized, and there have been commitments made; and two who obviously do not want a balanced transportation system, for they patently revealed their opposition to the bridge and to the connecting freeways.

Those were the same types as the people in the District who want to stop automobile pollution by not funding street repairs:

[In] the appropriation for this fiscal year you will not find one single dime for the repair of the streets in order to keep the automobiles running in the District of Columbia. And those people in the Government did not come back in the supplemental which is now before us for one single dime for that purpose. That is one way you can avoid the pollution of automobiles.

All the committee was doing was insisting that District officials implement the freeway and Metro plans that they agreed on to create a balanced transportation system. The subway funds would be released “on the day that we receive tangible commitments to a balanced transportation system for the District of Columbia.” He added:

We have been fooled and we have been disappointed too many times, to give the go-ahead to one segment of a balanced transportation system until we have assurances that the other facets of that balanced transportation system will be implemented also . . . . And that is the position this Congress has taken time and time again. I do not believe we ought to run away from a position that is well grounded and one that we have consistently taken in the past. [pages 14456-14457]

Representative William L. Scott, whose Virginia district was based in Fairfax County beyond the Capital Beltway, was the biggest surprise of the debate because he opposed the Giaimo Amendment. He explained:

One of the most frustrating things that I face each day when I drive down Interstate 66, and get to the beltway, and then have to find some side road to come on in to the District of Columbia to work.

Thousands of Virginia commuters were similarly frustrated. Metro was to be built in the median of I-66 “and until you have the right-of-way for that road, you cannot have the rapid rail transit in Virginia.” Representative Scott would be the only area Congressman to vote against the amendment.

Representative Koch responded to Representative Long’s comments about New York City. The implication was that New York City wished it did not have a subway generating operating deficits. The truth, Representative Koch said, “is the city of New York could not exist without a subway system. We want an even greater subway system.”

Representative Long interrupted to say he did not intend to say the New York City subway system was not a good system. He had ridden on it and knew it helped shape the city. “I merely want to point this out that never in the history of the New York City system have the people in New York been willing to pay a fare that would even cover its operating expenses; is that not correct.”

Representative Koch did not reply directly. “Let me say to the gentleman that in this country we subsidize everything to some extent, especially municipal services – and rightly so.” Operating subsidies for subways were needed. (He was one of the leaders in the House in trying to open the Highway Trust Fund to provide for transit construction and subsidies.) He emphasized that the

Washington area needed mass transit to reduce bumper-to-bumper traffic that “just cannot move”:

To say that this District does not need assistance to build a subway and that Federal funds for the subway system should be shut off until the citizens of the District withdraw their opposition and accept highways they do not want, is just outrageous.

Representative Giaimo said they were debating the “wrong” issue. Congress had already approved the Metro system and appropriated \$180 million for the Federal share. “The question is whether or not we are going to hold up on an appropriation [for] something we have already approved.” [page 14457]

Representative Obey said that “it is difficult for me to get a sweat up over a subway system” because he was more concerned about hospitals and schools. However, there were four reasons why funds for the District’s share should be released. First, as Representative Giaimo had just pointed out, “it is absurd and it is contradictory for the Congress to oppose with one hand what it is doing with the other.”

Second, the actions the chairman and others objected to regarding freeways “have nothing whatsoever to do with the action of the Metro,” which was “an entirely different entity, and I think we ought to treat it as such.”

Third and most important, withholding the funds was causing the cost of Metro to increase, the very thing some of his colleagues objected to. If, as some said, it was the most expensive public works project in history, delaying it would only add to the cost.

He pointed out that the chairman had assured the House that if the funds were not appropriated now in the supplemental, they would be considered during the regular appropriation:

I submit to you that we have heard that story for 2 years. We have considered this for 2 years, and in the 2 years I have been on the subcommittee we have considered it and considered it and considered it, and we have not released the money. The time for considering has passed.

If any of his colleagues were simply opposed to Metro, they should simply say so:

But let us not hold it up as part of a strained argument with the District as hostage for the construction of highways. We should not do it in that way. If you think the system is too expensive, then you ought to say so. But once the program is on the books, we ought to release the money so that the Metro system can get about its business of doing what the Congress told it to do.

Fourth, several of his colleagues had talked about the District’s noncompliance on highways:

I think it is a strange position, indeed, for the Congress to object on the one hand to the District not being in compliance on highways while our own actions on the Metro system force the District into noncompliance on the Metro system construction. That is what we do if we do not adopt this amendment today. [page 14458]

Representative Conte rose in support of the Giaimo Amendment. He did not wish to oppose Chairman Natcher, “one of the most able Congressmen in the U.S. Congress.” However, as a member of the Subcommittee on Transportation, Committee on Appropriations, he had supported Metro appropriations. “I have voted for the 1970 Federal share of \$82.9 million, the 1971 Federal share of \$180 million and the 1972 Federal share of \$150 million”:

These sums have been approved by the full committee; they have been approved by the House; and they have been approved by the Senate. Thus while Congress has consistently approved the Federal share, it is now being asked to deny the District of Columbia share.

We cannot allow this contradictory set of circumstances to continue . . . .

We are being asked to deny the District of Columbia its right and duty to comply with a congressional directive that it pay its agreed share.

He pointed out the contradiction involved in blocking the city from meeting its obligation to satisfy a congressional mandate by claiming it is not complying with another congressional mandate, namely construction of freeways. “I cannot in all logic support this type of contradiction.”

He agreed that the mandated freeways should be built, but his colleagues should remember that WMATA “has no responsibilities for the building of the highways and cannot be held accountable for their status in any of the three States that are signatory to the compact.”

As for the Three Sisters Bridge, it was being held up by the courts, not the District of Columbia. The design selected to satisfy the Commission of Fine Arts would be the “longest span in the world,” resulting in questions about its safety. Therefore, FHWA had “asked the court that they be allowed to contract for a model of the bridge . . . to bring out all the concrete stresses and strains that the bridge will undergo in the air after it is built”:

That is what is holding it up right now. When this goes in then they will be able to begin construction of the Three Sisters Bridge. So we cannot blame this on the District of Columbia.

He concluded:

The States of Maryland and Virginia have cooperated 100 percent; the Department of Transportation has cooperated 100 percent. Unfortunately we are in this bind here. I think it behooves us as the Congress of the United States to untangle this mess. [pages 14458-14459]

Several other Representatives expressed their views. Representative Wayne L. Hays (D-Oh.), who opposed the Giaimo Amendment, addressed the arguments in its support. First was the argument that the subway would “cure pollution” by shifting people out of cars. True, motorists would use less gasoline, but the subway would require coal to generate electricity for its operation. As a result, “you will have the air around here so full of sulfur fumes and smoke that if you think you have a smog problem now, just wait until you try that.”

The issue was not where to have a subway system. Congress had authorized it and he had voted for it. However, Congress also authorized a balanced system, “and you have a bunch of faceless people downtown who are saying, ‘We will take the money you authorized and build what we want to build, and the parts we do not want to build we will not build.’” What it boiled down to was whether the Congress or those faceless people would decide what the area needed. He said that if you just look at a map of the 98-mile Metro system, “you will see it does not go to where all of the people are.” That is why freeways are needed as well as Metro.

Another argument was that the delay was increasing the cost of Metro. The delay in building the freeways also was causing their cost to rise. “So what you are coming down to really [-] is the Congress going to make this decision or are some people downtown going to make it.”

The only reason all the area residents were here was that the capital was in Washington. Most of its functions could just as easily have been handled elsewhere, such as in his district based in Belmont County, Ohio:

You know, I am up to my knees in crocodile tears now about the citizens of Washington, D.C. What citizens of Washington, D.C.? Why are they here? They are here because the Capital is here and because it is to their profit and interest to be here and for no other reason. You can just bet your bottom dollar they are trying to hold up the freeway, this bunch downtown, because there is more money in it for somebody to build a subway. Do not forget that part of it, either, because I have been around for a long time and have seen them work. I say that we ought to say to them, “You build the balanced system we told you to build or you do not build anything. Take it or leave it.”

According to Stephen Green in the *Star*, “District Del. Walter E. Fauntroy, Democrat, closed his eyes in anguish as he heard Hays,” whose perch as chairman of the Committee on House Administration, which oversaw committee budgets, office expenses, and other housekeeping functions, made him one of the most powerful men in Congress. [page 14459; Green, Stephen, *Metro Vote Lost, Ally Won*, *The Evening Star*, May 12, 1971]

Representative John D. Dingell (D-Mi.), expressed his views. Representative Dingell, who had represented a Detroit-based district since winning election in 1954, complimented Chairman Natcher as “an honest, honorable, and dedicated public servant in every particular.” He continued:

However, Mr. Chairman, I think it is time that the House recognize what we have been doing in the District of Columbia in the last few years is entirely wrong. I think it is absolutely indefensible for this Congress to hold up the construction of a subway over a

quarrel as to highway construction when the issues are as clear and the need is as great, and the requirements of the District of Columbia are as clear as they are.

Given that the “city of Washington is almost entirely paved,” hardly a day passes without complaints about freeway construction:

The only way to abate this highway construction problem is by increasing the availability of public transit. And highways and individual auto transport of large numbers of people are from an economic, environmental, and social standpoint the most wasteful and irresponsible way of moving large numbers of people . . . .

I say it is indefensible for the Congress of the United States to continue to hold the District of Columbia hostage for the construction of highways that the people do not want. I say it is absolutely indefensible for the Congress of the United States to increase the cost of construction of a Metro system of transportation over something as frivolous and as unimportant as the construction of highways which really are not only unnecessary, but are environmentally destructive . . . .

I say it is time to adopt this amendment to give the District of Columbia the money, and the opportunity to go forward on something absolutely necessary to a great city and to the great and dignified Capital of a great nation, an appropriate mass transit system.  
[page 14460]

Chairman Kluczynski was one of the final speakers. During the 1967 hearings on the District’s freeway system, he said, he had learned that \$20 million had been spent over 10 years “studying the system with no tangible results.” In Section 23 of the 1968 Act, the committee authorized construction to get underway. “Since then this program has been tied up in procedural and legal snarls. There has been no real implementation of the congressional mandate.”

No one, he said, wanted mass transit for the District more than he did. “I sincerely mean that,” but “we need a balanced transportation system for the District.” He was optimistic that “we will work this out shortly” with the efforts of the Public Works Committee, the Appropriations Committee, and the Department of Transportation. “I predict that shortly we will have both systems fully underway to help make this a better Capital for all citizens.” He did not say so but the implication was that with resolution of the freeway issues, the District’s matching share for Metro would be released soon. [page 14460]

After 90 minutes of debate, the House defeated the Giaimo Amendment by a vote of 170 to 219. The House bill on the second supplemental appropriations bill would not include the District’s matching funds for Metro construction. [pages 14460-14461]

Because the Senate was likely to include the District matching funds in its version of the legislation, the issue would have to be resolved in a House-Senate conference committee.

The vote, as Jack Eisen reported in the *Post*, “was closer than either side expected”:

It gained most support from House liberals of both parties, spurred by last-minute lobbying by national conservation organizations.

Representatives Giaimo told reporters after the vote that he was surprised that the amendment received more support than expected:

Giaimo said he would have considered 130 votes a strong showing, and noted that a future swing of 35 votes would change the outcome. "I think the result of it is that we are going to get this thing resolved," he told a reporter.

He also "predicted that the vote would strengthen the hand of the Senate conferees."

Chairman Kluczynski was surprised the amendment received more than 90 to 100 votes. He said the whole matter could be resolved within 60 days if Secretary Volpe took a strong leadership role. The 1970 Act had given the District and the Department of Transportation a year to study pending freeways:

Volpe has the issue pending in his department and has not acted, Kluczynski said. The Public Works Committee met privately with Volpe on Monday [May 10, 1971], Kluczynski disclosed. Volpe and his aides "showed up with maps and pointers and all that to give us a briefing," Kluczynski said, "and I told them I've seen enough maps; I said give us some action." [Eisen, Jack, "Subway Fund Bid Defeated," *The Washington Post and Times Herald*, May 12, 1971]

On May 14, Secretary Volpe appeared on NBC's *Today* morning show, where he said:

I believe in the not very distant future – the very near future as a matter of fact – I'm very hopeful that this subway-highway impasse in the District of Columbia will be resolved once and for all, and we'll be able to proceed both with the subway and with those freeways that we believe ought to be built.

The fate of the Three Sisters Bridge was controlled by the courts, but the Department was working on the "other problems." The Secretary said, "I'm hopeful that something might be worked out even before" the Senate votes on the District's Metro matching funds. [Prince, Richard E., "Volpe Plans Report on Freeway Progress," *The Washington Post and Times Herald*, May 16, 1971]

A *Post* editorial said that in view of the unexpectedly narrow vote, "a yellow caution light may have flashed before the senior Appropriations Committee forces who keep punishing Metro, the suburbs and the city because of a side dispute with downtown over freeways." Perhaps "with a push from the White House," enough votes could have been switched to approve the amendment. Instead of relying on Chairman Inouye and the Senate to appropriate the District matching funds, "some dramatic efforts from the administration, through Transportation Secretary John A. Volpe," were needed to prevent "the entire financial structure" of Metro from collapsing:

Assurances are desperately needed from Mr. Volpe that something is being done to demonstrate good faith on the freeway questions, even though we strongly disagree with

the tactic of holding the subway hostage to a freeway dispute. In addition, the White House must lobby among Republican House members, something it failed to do for the latest vote. Only then is there a chance that the rapid transit project will not fall apart at the seams. [“Metro: Where Was the White House?” *The Washington Post and Times Herald*, May 14, 1971]

### **After the Revolution**

On May 13, the Senate Committee on Appropriations approved its FY 2017 second supplemental appropriations bill, which included \$34.2 in District matching funds for Metro. As the *Post* explained the next day, if the full Senate approved the bill as expected, “it would mark the third time in the past fiscal year that the Senate has voted for the \$34.2 million.” However, on the two previous occasions, the Senate had yielded to the House in conference to drop the funds.

Chairman Inouye indicated he intended to talk with Chairman Natcher to initiate “preliminary discussions” on the issue. Another controversial issue, appropriations in the bill to continue development of the SST, might delay conclusion of the conference. [Moore, Irna, “Senate Unit Approves Funds for the Metro,” *The Washington Post and Times Herald*, May 14, 1971]

Under Secretary Beggs, in a May 16 interview, contributed to the growing optimism by saying that the Secretary hoped to report to Congress on the freeways. Beggs said the “other problems” the Secretary had referred to in his *Today* interview were the Three Sisters Bridge, the North-Central Freeway, and the South Leg Freeway near the Lincoln Memorial. “What he’s trying to do is to get all of these issues resolved” before the House-Senate conference on the second supplemental appropriations act.

The report would discuss all the steps the Department and the District had taken to comply with the court order on the Three Sisters Bridge, including construction of a model to test the safety of the design. “I’m not sure that Bill Natcher was completely aware of all we’ve done on Three Sisters.” As for the required study of the North-Central Freeway to Silver Spring, the Department was close to awarding a contract for the study.

The South Leg Freeway issues had not yet been resolved with the NPS, but the department favored the District’s proposal for a 1,300-foot long tunnel under the Lincoln Memorial Plaza. The NPS favored a plan for two 1,300-foot tunnels that permitted more preservation and reduced the number of trees that would have to be removed. Critics, the *Post* pointed out, “attacked a planned 2300-foot depressed roadway with retaining walls that would connect the two tunnels. They said it would be ugly.” [Prince, Richard E., “Volpe Plans Report on Freeway Progress,” *The Washington Post and Times Herald*, May 16, 1971]

Chairman Blatnik of the Public Works Committee, in what Stephen Green called “a surprise move,” announced on May 17 that he try to break the impasse. A former educator and State legislator who had been elected to the House in 1946, he had become chairman of the Committee on Public Works in January following the defeat of former Chairman Fallon’s reelection bid. Chairman Blatnik announced, “This impasse must be resolved, and resolved rapidly.”

His interest partly stemmed from the call in the Federal-Aid Highway Act of 1970 for a balanced transportation system that must include Metro. The other factor was that he supported home rule for the city:

His announcement said he hopes for a breakthrough in the impasse after discussions with Natcher, Secretary of Transportation John A. Volpe, District officials and the chairmen of the House and Senate Appropriations Committees.

Sources said Blatnik hopes Volpe will agree to order some visible action on freeway construction to show Natcher that a serious intent to build the roads exists.

Citing the Taylor Street Bridge, Chairman Blatnik pointed out that freeway and rail rapid transit have much in common. The District had begun renovating the bridge to accommodate the North-Central Freeway, but it must be renovated "so the transit system and planned freeway may use the right of way along the Baltimore & Ohio Railroad tracks." About \$300,000 of the \$1.3 million cost of the project came from WMATA. [Green, Stephen, "Blatnik Joins Fight To Free metro Fund," *The Evening Star*, May 18, 1971]

On May 19, the Senate voted 94 to 0 to approve its version of the supplemental appropriations act, including the District's Metro matching share. Although observers thought defeat of the Metro funds in conference was virtually certain, Chairman Inouye held out hope by telling reporters that he had talked with Chairman Natcher and was "confident that the matter can be resolved in the very near future."

Secretary Volpe, according to sources, was the key to resolving the deadlock:

Those close to the negotiations among Natcher, Inouye, the city government and the Transportation Department, stressed yesterday that a simple status report on freeway projects from Volpe will not be enough to win Natcher's agreement to release the subway funds.

"Volpe has got to offer something hard and dramatic, possibly on the Three Sisters Bridge," one source said . . . .

Some insiders feel Volpe could move to renew work on the bridge's piers, since they apparently would be useful to either of two different designs. This, however, would probably invite new legal steps by the groups trying to kill the project.

"It was disclosed" on May 19 that the Secretary had met on May 7 with Secretary of the Interior Rogers C. B. Morton, who had represented Maryland's Eastern Shore in the House beginning in 1963 until taking office as Secretary in January 1971. The discussion, according to a Morton aide, covered freeway construction through Interior Department land in the District and Arlington, including the status of the Three Sisters Bridge and plans for a freeway tunnel beneath the Lincoln Memorial grounds. [Moore, Irna, and Eisen, Jack, "Hope Seen for Metro Fund Action," *The Washington Post and Times Herald*, May 20, 1971]

The *Post* was cautiously optimistic in view of reports about the pending Volpe report:

Given the years of buck-passing, legislative blackmailing and stalling between downtown and Capitol Hill over what to do about Washington's transportation system, any fresh prediction of a solution within this century has today come to be taken with a grain of salt (and sometimes a pound of flesh). It is, therefore, far too early to tell whether Transportation Secretary John A. Volpe really has a way out of the subway-freeway impasse – but at least he is optimistic.

After quoting Secretary Volpe's optimistic *Today* show comments, the *Post* editorial pointed out that the complicating question was "the awkward fact that no one is really sure at this point specifically what the argument is about." The planned report could help in this regard:

There's no telling whether Mr. Volpe's report will spring the funding, but it could go a long way toward finding out what Congress is still mad about. There is the Three Sisters Bridge, for example, which Congress has ordered built. Mr. Volpe wants to show that the administration has complied with all court and congressional orders to date on this project, and is right now awaiting laboratory tests on a new bridge design. There is also the North Central Freeway, on which a one-year restudy was ordered by Congress last year. Transportation officials now report that a contract for this study is about to be awarded . . . .

It is not necessarily a question of caving in to new demands of Congress, but a more complicated question about the extent to which all sides are acting in good faith. To begin to answer that, all parties need to know precisely what still remains at issue. ["Clearing the Air on Metro and Freeways," *The Washington Post and Times Herald*, May 19, 1971]

On May 20, Chairman Natcher, as in the past, prevailed in conference, and the District matching funds for Metro were not included in the conference report on the supplemental appropriations act. The report explained:

The conferees are agreed without question that there is a need for a balanced system of transportation in the Nation's capital. Since the action of the House denying the \$34,178,000, the Secretary now says that immediate action will be taken to comply with the 1970 Highway Act and that there will be compliance with the Highway Acts of 1968 and 1970. This action will place the Appropriations Committees of the House and the Senate in a position to approve the request in the Supplemental bill of \$34,178,000 along with the \$38,308,000 requested for fiscal year 1972 in the regular District of Columbia Appropriation bill for 1972. [Permission to File Conference Report on H.R. 8190, Supplemental Appropriations, 1971, *Congressional Record-House*, May 20, 1971, page 16189]

When the report reached the House floor later that day, Chairman Natcher explained that "for the first time in over a year the Department of Transportation and the District of Columbia officials, in my opinion, are making a sincere effort to carry out the Highway Act of 1970 and the Highway Act of 1968." When his subcommittee began hearings in the next few weeks on FY 1972

appropriations, he and his colleagues wanted to “be in a position to bring back to this House a bill containing” the Metro funds.

Chairman Mahon thanked Chairman Natcher and tried to move on, but Representative Waldie wanted to clarify what Chairman Natcher had said:

I gathered that the subcommittee will be able to come back in the next 3 or 4 weeks with the appropriation that this bill denies for the completion or the continuation of the subway, depending upon the fulfillment of certain conditions, and I do not fully understand what those conditions are that must be fulfilled before that action could occur.

Chairman Natcher replied that “all we have ever said to the officials downtown is that the Highway Act of 1968 and the Highway Act of 1970 should be complied with.” The city was now completing the design report on the bridge and it would be submitted to the court. In addition, the city was preparing the contracts for the studies the 1970 required:

They are now, in my opinion, making a sincere effort to comply with the law, and they have taken the necessary steps which will bring about the appropriation of both of these amounts if they carry out the provisions of the 1968 and 1970 Highway Acts.

Representative Waldie asked if the steps taken thus far were “still insufficient.” Chairman Natcher replied:

The steps they have taken in the last 5 days and subsequent to the deletion of the \$34,178,000 by the House, leads me, as one member of the committee, to believe that they are now sincere and they are trying to comply with the law, and that is all they have to do.

Rephrasing his question, Representative Waldie asked:

At the present time does the gentleman believe they are attempting to comply but is not satisfied they have complied sufficiently that we can make an appropriation in this bill?

Chairman Natcher said:

The gentleman is correct.

In other words, if they continue as they have started in the last week they will put the Appropriations Committee in the position where only one thing can happen; and that is the recommendation that both amounts be approved.

Chairman Blatnik was the final speaker before the House adopted the conference report. (His comments were probably inserted into the record, not delivered on the floor.) He fully supported Chairman Natcher’s and the committee’s position on transportation in the District. “The position as expressed by our colleague is one of principle and upholds the actions taken by the Congress in the past.” The Public Works Committee had been “clear in their intent” regarding the District freeways. The District needed a balanced system, but freeways had to be part of that system.

Secretary Volpe was now making “what I consider an initial, but most significant forward thrust which, I do believe, will finally ‘get the show on the road.’” He and his committee colleagues would work toward that end. He commended Chairman Natcher and his subcommittee colleagues for their efforts to ensure “the laws of the land are carried out” and that “the deadlock, which gives [us] neither Metro nor highways [will] be broken.” [pages 16192-16193, 16194-16195]

During the exchange with Representative Waldie, according to the *Post*’s Irna Moore and Jack Eisen, Chairman Natcher said he expected his subcommittee to “begin hearings in the next few days” and hoped “to bring back to this House in the next three to four weeks” a bill to restore the subway funds. Stephen Green reported the same wording in the *Star* (“Natcher said he would begin holding hearings on the District budget next week and expected to bring a District appropriations bill before the House in three or four weeks”)

However, Chairman Natcher exercised his right to edit his comments in the *Congressional Record* to indicate that hearings would start in “a few weeks” and to omit the reference to “three or four weeks” for a bill to restore the funds. Although Chairman Natcher would not comment on the changes, a congressional source told Jack Eisen that the chairman had been “a bit over optimistic” in his off-the-cuff remarks. [Moore, Irna, and Eisen, Jack, “New Lag in Metro Forecast,” *The Washington Post and Times Herald*, May 25, 1971; Green, “Subway Block Is Removed,” *The Evening Star*, May 21, 1971]

President Nixon signed the Second Supplemental Appropriations Act, 1971, on May 25

(P.L. 92-18).

### **Trying to Move On**

Although Chairman Natcher had edited his words in the record, reporters had heard them and included them in their articles about the vote. Chairman Natcher’s optimism about progress, they explained, stemmed from a private five-page letter he had received from Secretary Volpe. This letter apparently was the report Beggs had mentioned. The letter had not been made public, but in a News Analysis, the *Post*’s Irna Moore said “the transportation secretary apparently did not propose anything extraordinary and did not order immediate construction of the North Central Freeway”:

It was believed to say that a contract to restudy the North Central Freeway . . . would be signed and that a report would be sent to U.S. District Court saying the court’s order halting work on the Three Sisters Bridge . . . had been complied with.

Volpe might also have admitted, in the letter or orally, that his department has been guilty of some footdragging and that he promised to do better.

Whatever the letter said, it had been enough to prompt Chairman Natcher’s comment about “a sincere effort” to comply with the 1968 and 1970 Highway Acts.

Moore added that most Members of Congress “aren’t sure what the District was ordered to do in those highway acts.” For many members of Congress, she said, “what it all really came down to was a matter of saving face.” Chairman Natcher had said he would not ask the House to countenance the District’s noncompliance, but the narrower than expected vote on the Giaimo Amendment “must have been, as one congressional mixer of metaphors put it, both the handwriting on the wall and the ‘sound of 170 sets of footsteps.’”

It was, in short, a signal that Chairman Natcher might lose his next attempt to withhold the subway funds:

Natcher, by all accounts, is not a man who would like to stand on the House floor and watch his colleagues vote him down the next time.

Then there was Chairman Inouye, who had included the subway funds in his bill, but like his predecessor, had seen it deleted in conference:

Inouye kept a low profile during the negotiations [but] privately referred several times to the concept of “face,” and once pointed out that there was a vast difference between a headline that said “Natcher Gives In” and one reading “City Complies with Highway Law, Subway Funds Released.” [Moore, Irna, “Natcher on the Road to Metro Accord,” News Analysis, *The Washington Post and Times Herald*, May 23, 1971]

Chairman Inouye’s comment that the chance for releasing the funds was excellent also fueled the optimism. “I’d bet on it,” he said. “I’m very confident we’ll get back on the track very soon.” One anonymous House member said privately that Volpe’s letter “is letting Natcher off a hook he wanted to get off of.” [Moore, Irna, and Eisen, Jack, “Subway Money Pledged,” *The Washington Post and Times Herald*, May 21, 1971]

The *Post*’s editors were optimistic, too, but skeptical. An editorial observed that WMATA might soon have money to build the subway. “At least that’s how the wise men on Capitol Hill now read the tea leaves.” No one is quite sure what the basis for Chairman Natcher’s optimism is because “it hinges on a five-page report from the Secretary to the Subcommittee Chairman that hasn’t yet been shared with the public.” Chairman Natcher was known “as a man of his word” and Chairman Inouye “says chances for release of the Metro money in the coming weeks are excellent.” With the start of the new fiscal year just a few weeks ahead, this was “a climactic moment” in the long freeway/subway impasse, whatever the outcome:

The city and the administration have groveled to comply with years of congressional conditions and positions. Undoubtedly, we haven’t seen the end of the highway dispute – but we cannot afford the end of the Metro system. [“Metro: Believe it—Or Not?” *The Washington Post and Times Herald*, May 23, 1971]

The *Star*, too, was cautiously optimistic about an end to “this absurd impasse” since the end “was announced to the House on Thursday by no less an authority than the man responsible for withholding the funds, Representative Natcher.” However, before “anyone floats away on a

cloud of euphoria,” remember “it hasn’t happened yet.” Secretary Volpe’s letter had “obviously broken the ice, for which the secretary is to be strongly commended,” but he should not make the grave mistake of assuming “the ball game is won.” The editorial concluded:

The truth is that the administration, and to a lesser degree the city government, are largely responsible for having reduced the freeway program to a state of total confusion. It is within Volpe’s power to unravel the snarl if he will. [“Subway Release,” *The Evening Star*, May 22, 1971]

The caution proved to be justified when Chairman Natcher announced that hearings on the

FY 1972 District appropriations act could continue into August. As Eisen reported in his article about the editing of Chairman Natcher’s May 20 comments, the schedule “diluted” the optimism that followed the “three to four weeks” estimate on the House floor just 5 days earlier.

The delay also affected the Metro construction schedule:

Jackson Graham . . . said the construction schedule for Metro’s first 4½-mile section is so tight that every day’s delay in financing will bring a day’s delay in providing initial service.

It now appears, Graham said, that service now officially scheduled to begin in December, 1973, cannot now start until March, 1974, “at the most optimistic.” The entire 98-mile system is scheduled for completion in 1979. [Eisen, Jack, “New Lag in Metro Forecast,” *The Washington Post and Times Herald*, May 25, 1971]

District Highway Director Airis confirmed what Chairman Natcher had said on the House floor about the model of the Three Sisters Bridge. The Cement and Concrete Research Institute was building the 81-foot model in Skokie, Illinois, to test the safety of the single-span design the Commission of Fine Arts had approved. However, the test would have to be delayed. A May 22 *Star* report said:

While conceding that something had gone wrong, District and federal officials differed yesterday on just how serious it was.

District Highway Director Thomas F. Airis said that a section of the model had been knocked loose while being cast and that a recasting was required. But he termed this a “very minor thing,” which only caused a few days’ delay.

A U.S. Department of Transportation spokesman, while basically agreeing with Airis on what went wrong and saying it did not involve a flaw in the bridge’s design, said he understood the problem had caused a month’s delay. He said the model, originally to be finished in July, would not be ready until August. [Holmberg, David, “3 Sisters Model Awry,” *The Evening Star*, May 22, 1971]

(On June 5, the Natcher subcommittee rejected a request for \$9 million for the air-cushion system Secretary Volpe had mentioned he wanted to build in the median of the Dulles Access

Road. Representative Broyhill and other Virginia interests opposed the plan because it would be built where they wanted WMATA to build a Metro extension to Dulles International Airport. [“Volpe is Blocked on Transit Plan,” *The New York Times*, June 6, 1971]

On June 8, the District entered into a contract for the studies required by the 1970 Act of the North-Central Freeway, Northeast Freeway, and the North Leg and East leg of the Inner Loop. Airis said the contract called for the partnership of DeLeuw, Cather Associates and Harry Weese and Associates, Ltd., to review previous location and design studies, consider alternative routes and designs, and investigate possible related development (housing, commercial activities, parks, mass transportation, and other community facilities). The contract called for the report to be submitted in time for the District to meet the December 31 deadline imposed by the 1970 Act. [“D.C. Contracts for Restudy of Freeways,” *The Evening Star*, June 8, 1971]

Secretary Volpe sent a request to Congress on June 10 seeking authorization for a Federal guarantee of \$1.2 billion in revenue bonds as part of the plan to finance Metro:

We have thoroughly examined the various alternatives for long-term financing and find that the guarantee of obligations is the most feasible method.

Federal guarantees are particularly appropriate for the Metro system since the federal government is a substantial contributor of construction funds, and because it is the area’s largest employer it will be a substantial beneficiary of the system. [“Volpe Pushes Metro Bonds,” *The Metro Scene*, *The Evening Star*, June 11, 1971; Eisen, Jack, “Metro Bond Guarantee By U.S. Is Requested,” *The Washington Post and Times Herald*, June 11, 1971]

On June 17, WMATA marked the start of the first Metro project in Virginia. The project involved construction of the Rosslyn station, but the site was occupied by a parking lot that was still in use. Unable to conduct the ceremonial start of construction at the site, officials gathered two blocks away on land reserved for I-66. The ceremony brought anti-I-66 protesters to the site bearing signs such as I-66 IS THE ROUTE OF ALL EVIL and METRO YES! I-66 NO!

Representative Broyhill noted the protesters in his remarks by saying that such opposition was “the only threat” to creation of a road-and-rail transportation network. With about 350 spectators looking on, many wearing plastic “hard” hats, Secretary Volpe tried to deliver his 5-minute speech predicting that Metro would soon emerge from its financial and political difficulties, but he was frequently drowned out by jet airplanes flying to or from nearby Washington National Airport. At one point he said, “Somebody in the Federal Aviation Administration is going to catch heck.” He finished his remarks despite the overhead noise. The next and last speaker, Governor Holton, said that in view of the heat, he would forgo his speech.

Secretary Volpe, Governor Holton, and WMATA Chairman Sickles then pushed a dynamite detonator. Because it was not connected to anything, nothing happened except that a Metro official gave a hand signal to workers who opened the back door of two vans filled with 3,000 inflated balloons that drifted aloft as a symbolic groundbreaking. Construction of the Rosslyn Station would begin in a few days.

The event was one of several on Northern Virginia Transportation Day. The day also marked the opening of elevated pedestrian walkways in Rosslyn and the full implementation of the Shirley Highway Expressway. Many participants had arrived in Rosslyn on the new buses that the *Star* described as carpeted, air-conditioned, and with wider, comfortable foam seats. The new buses also had been used to transport State officials from Richmond. Thirty of the buses had begun operating on the expressway that week, with a total of 90 buses planned. [Eisen, Jack, "Va. Metro 'Start' Observed," *The Washington Post and Times Herald*, June 18, 1971; Brockett, Diane, "Metro's Start in Suburbs," *The Evening Star*, June 18, 1971]

(The opening of I-95 between the Baltimore and Capital Beltways had been delayed by what Maryland officials called a severe shortage of asphalt and difficulty in obtaining material for the overhead signs. On July 1, 1971, amid 90-degree heat near Beltsville, Governor Mandel cut the gold-and-black ribbon on the eight-lane, 21.7-mile I-95 link. The opening, he said, symbolized that Maryland was "embarking on a new course in transportation." Federal Highway Administrator Turner told the 300 or so people in attendance that Maryland now had the highest percentage of Interstate completion in the country. Of the planned 357 miles, 91 percent had been opened. State officials expected the new Interstate segment to reduce traffic on the Baltimore-Washington Parkway by about 35 percent and relieve jams on parallel U.S. Routes 1 and 29.)

The city governments of Baltimore and the District were uncertain about the routing of I-95 through their cities, prompting Turner to say, "Interstate 95 extensions into both cities must be completed, and soon, despite any present obstacles." State Highway Administrator Fisher agreed. "The full potential of this highway will not be reached until it is extended into Baltimore and into Washington."

In the absence of a link through the District, Maryland routed I-95 traffic bound for other destinations around the Capital Beltway to connect with I-95/Shirley Highway in Virginia. As the *Post* pointed out, "Curiously, the southbound motorist is confronted by a special 'Washington, I-95' exit as he reaches the Washington Beltway, but all the exit does is make a curve onto the Beltway."

As part of the new course that Governor Mandel mentioned, the Maryland Department of Transportation also began operations that day – the 12th State transportation department in the country. In a ceremony that morning at the department's headquarters, the Governor had called the new department the "most far-reaching, all-embracing transportation program in the country." [Associated Press, "Route 95 Link Due to Open by Mid-June," *The Evening Star*, April 25, 1971; Aschenbach, Joy, "Day for Transportation in Maryland," *The Evening Star*, July 2, 1971; Goldman, Ivan G., "I-95 Leg Opens to Connect D.C., Baltimore Beltways," *The Washington Post and Times Herald*, July 2, 1971]

### **Trying to Break the Impasse**

On May 26, President Nixon announced that he would appoint banker Henry K. Willard II, a Republican whose great-grandfather founded the Willard Hotel, to replace Democratic Councilman Daugherty, whose term had expired in February. The President also reappointed

former council members Margaret A. Haywood (Republican) and Joseph Yeldell (Democrat) to new 3-year terms. These appointments shifted the political balance to six Republicans and three Democrats, with Chairman Hahn and Willard, if confirmed by the Senate, the only white members.

During confirmation hearings before the Senate District Committee, Yeldell and Haywood favored District self government. Haywood said she would be “very happy to step aside as an appointed member in favor of an elected council.”

The 44-year old Willard, according to the *Star*, “startled the senators and audience alike” when he said he did not believe the District was “quite ready” for home rule or full voting representation in Congress.” In response to a question from Chairman Inouye, Willard thought the city would be ready for home rule “sometime in the decade of the ‘70s.” Evidence of readiness would come in the form of “a decrease in the crime rate, an increase in the tax base and a more firm local economy that could pay for itself and not continually turn to you gentlemen for additional financial help.” Chairman Inouye told him, that by those standards “we would have to deny home rule to New York City.”

The Senate confirmed the nominees on June 10. They took their oath of office on June 22. The city council established a new committee for Willard to head: an Environment and Business Development Committee. Chairman Hahn explained the role of the new committee. “The thrust of the new committee for some time will be mainly in environment, but when chances arise to use Mr. Willard’s expertise on business matters, mainly special, smaller problems, then we may refer some matters to his committee.”

In a *Star* profile of the new councilman, Willard described himself as a liberal Republican. “But politics don’t enter into the council job much, it’s more tied in with the localisms of collecting trash, of improving the schools. It’s hard to take a partisan stand on something like that.”

He was sensitive to the charge that he was a white Republican in a predominantly Democratic black city. He said, “Every segment of the community has to be represented on the council.” He wanted to be judged “by what I do,” not by labels.

He said his remarks about home rule had been taken out of context:

I’m not against home rule. I’m for it. It would be a sign that the city has reached maturity and can handle its own affairs. Home rule is an evolutionary thing. We have been gradually getting more control . . . with an elected school board and the non-voting delegate. But you have to remember that this city is a federal city with a strong federal interest. We will always have some checks and balances by the federal government, especially in the budget.

He said reaction to his comments during the confirmation hearing had been largely favorable. “I personally was quite amazed at the number of people, white and black, who have complimented me for ‘telling it like it is’ regarding home rule.” He regretted that the issue had

taken on “racial connotations . . . for most of the time the city has been without home rule it has had a white majority.”

During the confirmation period, he had supported the North-Central Freeway because of its role in reviving the downtown area. Now he admitted, “I haven’t really studied the freeway situation yet . . . but we have two interstate highways coming into the District and none from Maryland. That’s been a bone of contention for 20 years.” He promised to read the city’s report on the North-Central Freeway while trying to look at it “with a practical approach.” Basically, he favored a balanced transportation system “with a limited number of freeways and a fully operating Metro system.”

[“President Appoints Willard To D.C. Council, Renames 2,” *The Evening Star*, May 26, 1971; Angle, Martha, “D.C. Council Nominees Confirmed by Senate,” *The Evening Star*, June 10, 1971; “Willard Heads New Committee,” *The Metro Scene, The Evening Star*, June 16, 1971; Pike, David, “New Councilman Willard Offers Surprises,” *The Sunday Star*, July 4, 1971]

Secretary Volpe began the new fiscal year by issuing a statement on July 1:

As we begin a new fiscal year, I want to state in the clearest possible terms the position of the Department of Transportation with respect to compliance with those provisions of the Federal-Aid Highway Acts of 1968 and 1970 which relate to the highway program in the District of Columbia.

Both the Department of Transportation and the District of Columbia are in compliance to the fullest extent possible with these statutes. Specifically, every project specified in the 1968 and 1970 Federal-Aid Highway Acts is under construction, design, or study, fully in keeping with the Congressional Mandate. In the case of the Three Sisters Bridge, further construction has been enjoined by the courts. This matter is now on appeal to the Court of Appeals and the Court has been asked to expedite the proceedings. As soon as it is legally permissible to do so, the District of Columbia Government, with Department of Transportation aid, will resume work on the project.

A high ranking but anonymous Transportation Department official summed up the nature of the problem by saying, “I sure hope we don’t end up with just a lot of holes in the ground around Washington.” [Kneece, Jack, “Natcher Highway Terms Being Met, Volpe Says,” *The Evening Star*, July 1, 1971]

As Secretary Volpe’s statement indicated, the Justice Department had asked the full U.S. Court of Appeals to speed its hearing on the three-judge panel’s decision and issue a finding in the Three Sisters Bridge case. This action, initiated by Secretary Volpe, was thought to demonstrate compliance with his five-page letter to Chairman Natcher. The letter was still secret, but Jack Eisen reported that he had learned the letter contained “nothing dramatic.” It included, Eisen reported, information about the request to the court and stated that the deadline of December 31 would be met for a report to Congress on the North-Central Freeway.

Maryland and Virginia suburban jurisdictions made their half-year contributions to WMATA, totaling \$29.3 million. With these contributions and \$58.7 million in available matching funds, General Graham said the funds would last about 2 months. [Eisen, Jack, "Agency Prods Court on 3 Sisters Bridge," *The Washington Post and Times Herald*, July 3, 1971]

In addition, during meetings in May, Secretary Volpe's talks with Interior Secretary Morton resulted in an agreement on the South Leg of the Inner Loop Freeway from the Lincoln Memorial to the Tidal Basin. They agreed, subject to public hearings planned for the fall, on a six-lane section of the South Leg to connect with the Southwest Freeway on the District side of the 14<sup>th</sup> Street Bridge. A 1,000-foot tunnel would be constructed under the Lincoln Memorial grounds south of the memorial. It would connect with a depressed roadway leading to a second 1,000-foot tunnel under the north edge of the Tidal Basin. A surface freeway would connect with the Southwest Freeway.

The meeting took place before Secretary Volpe sent his five-page letter to Chairman Natcher. The letter, according to sources, indicated that NPS Director Hartzog concurred in the decision.

Whether the proposal was consistent with Section 4(f) of the Department of Transportation Act remained to be seen. ["Volpe, Morton in Accord on Tunnel Project," *The Evening Star*, July 6, 1971; Eisen, Jack, "U.S. Officials Agree on Basin Tunnels," *The Washington Post and Times Herald*, July 6, 1971]

The *Post* editors saw "nothing new" in the agreement:

The idea dates back to more than two decades ago when, as legend has it, some bright planner, in the flush of excitement over the new blessings of automobility (and before anyone seriously thought of a subway or Metro) drew a circle around the White House and called it "the inner loop freeway."

Over the years since then, "the battle seemed distant to most of us. We did not really believe 'they would do this to us.'" Now, the two Secretaries had agreed on how they would do it:

The engineers who insist that the freeway is essential to move some 90,000 to 100,000 vehicles a day which would otherwise clog the existing roads along this route, have promised to keep lighting and signs "below the eye level of the park visitors" and to keep the concrete spaghetti of road junctions and ramps to a minimum.

Yet, six-lane tunnel entrances are pretty conspicuous holes, a freeway trench is a freeway trench, 100,000 automobiles cause a good bit of air pollution and the whole thing appalls us.

Many other people, the *Post* added, were likely to be upset. "The Mall, after all, was not meant to be a traffic 'connector.'" ["A Trench Is a Trench Is a . . ." *The Washington Post and Times Herald*, July 11, 1971]

*Star* coverage of the agreement noted a new problem, one that District freeway critics had been following closely. On March 3, 1971, the Supreme Court had ruled in the case involving

construction of I-40 through Overton Park in Memphis, Tennessee. The decision turned on Section 4(f) of the Department of Transportation Act of 1966. Justice Thurgood Marshall, who wrote the opinion, said that Section 4(f) "is a plain and explicit bar to the use of federal funds for construction of highways through parks – only the most unusual situations are exempted." The court recognized the place of cost, directness of route, and community disruption in highway routing, but the existence of the statute "indicates that protection of parkland was to be given paramount importance."

Although Section 4(f) did not require a formal, documented finding of a decision to route projects through a protected resource, the Supreme Court ruled that the District Court, in reconsidering the matter, may "require some explanation in order to determine if the Secretary acted within the scope of his authority and if the Secretary's action was justified under the applicable standard."

Justice Marshall's strongly worded decision was a turning point in how FHWA and the State highway/transportation departments considered impacts on the resources covered by Section 4(f). To use a Section 4(f) resource, Federal officials would have to find that alternatives to doing so presented unique problems or unusual factors or that the cost, environmental impacts, or community disruption would reach extraordinary magnitude. Any potential adverse impacts on a Section 4(f) resource, as well as possible uses, must be formally documented during review of the project under NEPA. (The Overton Park issue was resolved when the park routing was abandoned, with I-40 routed along the northern beltway around Memphis.)

### **Hearings on District Appropriations, 1972**

Mayor Washington, Deputy Mayor Watt, City Council Chairman Hahn, and other top District officials appeared before the Natcher subcommittee on June 7, 1971, at the start of hearings on the District of Columbia appropriations for FY 1972. Although the hearings would cover all aspects of the District budget, Chairman Natcher quickly focused on transportation issues. If Secretary Volpe and District officials carried out the actions promised in the Secretary's letter in the next few weeks, Chairman Natcher said he would recommend release of the District's matching funds for Metro for FYs 1971 and 1972. "I hope that the rapid rail transit-freeway impasse is finally over."

He reiterated his long support for a balanced transportation system, but the provisions of the Federal-Aid Highway Acts of 1968 and 1970 were "the law and must be complied with." He recalled the halt of construction on the Three Sisters Bridge and the penalties the District was paying to the contractor – \$500 a day, \$15,000 a month – "which I believe is carried on the books as the amount due for rental of equipment now on the job and for the protection of the piers while the design hearing results are being submitted back to the court."

He pointed out that the suit blocking construction had been filed in 1969 "and with this being June 1971, more than enough time has expired to have this matter settled." If the commitments in Secretary Volpe's letter were not carried out, "and both systems do not proceed together, I do not intend to recommend construction funds for our rapid rail transit system in the bill for fiscal year 1972."

Chairman Natcher expressed his longstanding skepticism about the cost of Metro. "I believe that this 98-mile system will cost at least \$4 billion and may go as high as \$5 billion." He added that "the bonds provided for under the 1969 Authorization Act for rapid rail transit cannot be sold due to the fact that the brokers and the bankers will not buy the \$835 million in bonds which are to be retired out of the fare box." The brokers and bankers wanted the Federal Government to back the bonds and "a bill is now being prepared which will provide for the sale of \$1,200 million worth of bonds to be guaranteed by the Federal Government." Such a guarantee, "of course, would establish quite a precedent." [District of Columbia Appropriations for 1972, Hearings, Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 92<sup>nd</sup> Congress, 1<sup>st</sup> Session, part 1, 1971, pages 2-3]

On July 9, in a long statement when Airis appeared before the subcommittee to discuss his department's budget, Chairman Natcher provided a history lesson on a balanced transportation system for the District. He began:

Mr. Airis, I was a member of this subcommittee in 1955, and made the recommendations that the funds for the District of Columbia's share for the Mass Transportation Survey be appropriated. As you well know . . . under the Mass Transportation Survey, which was presented to President Eisenhower in 1959 I believe, recommendations were made for a rapid rail transit system, for a freeway system, and for an express bus system which would be used in conjunction with both freeways and rapid rail transit.

He went on to discuss Section 23 of the Federal-Aid Highway Act of 1969 and Section 129 of the 1970 Act, as well as the status of the Three Sisters Bridge and problems with the Potomac River Freeway. He absolved Airis:

Certainly you, as an engineer and as the Director of the Department, cannot be criticized at all. I think you have carried out your duties.

That said, the question of compliance with the 1968 and 1970 Highway Acts must be resolved. "We no longer should have an impasse as far as the enforcement of these two laws are concerned":

Mr. Airis, as you have heard me say, I will never, as long as I am a Member of Congress, stand on the floor of the House and ask the House of Representatives to repudiate the Public Works Committees of the House and the Senate, and the Highway Acts of 1968 and 1970. I will never do it, Mr. Airis. I think it ought to be resolved. I think we are nearer a solution. I am hoping that we can include in the bill the \$34.178 million that was deleted from the 1971 budget, and also from the 1971 supplemental.

I am also hopeful, Mr. Airis, that we can include in this bill the \$38,308 million, that is being requested for the fiscal year 1972 construction program. [District of Columbia Appropriations for 1972, Hearings before the Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 92<sup>nd</sup> Congress, 2<sup>d</sup> Session, 1971, Part 2, pages 723-725]

Airis, in his statement to the subcommittee, summarized the status of Interstate freeways in the District:

In the District . . . we have 10.6 miles of the total 29.5 miles Interstate System completed and in use; namely, the Roosevelt Bridge and a section of the Potomac River Freeway

(I-66) including its connecting E Street Expressway, the 14<sup>th</sup> Street Bridges (I-95) except the new center bridge; the Southwest Freeway (I-95) including its northbound 12<sup>th</sup> Street Expressway and the soon to be opened southbound 9<sup>th</sup> Street Expressway; the Southeast Freeway (I-695) to the completed 11<sup>th</sup> Street Bridges over the Anacostia River and the Anacostia Freeway (I-295).

I should mention that the 11<sup>th</sup> Street Bridges were opened for a direct connection between the Anacostia Freeway and the Southeast Freeway last Christmas. It is the last element of the freeway system that has been opened to traffic here . . . .

Approximately 2.6 miles are under construction. These include the center leg of the Inner Loop to New York Avenue, although we have yet to finalize the air-rights development details with the Redevelopment Land Agency for the section between H and K Streets. The remainder is scheduled for opening late in 1972. The Southeast Freeway east of the 11<sup>th</sup> Street Bridges to Barney Circle is under construction and scheduled for completion in November 1972. These two elements should be open for use in 1972.

That brought Airis to the Three Sisters Bridge. Citing the order of the U.S. District Court on August 7, 1970, he said the city had held the required design public hearings in December 1970. The hearings resulted in a March 31 request to the Department of Transportation:

Design approval for an I-266 bridge of the alignment, geometrics, and shape depicted in the three-span alternate presented at the design public hearing.

The request included supporting information demonstrating that the design, a prestressed concrete box girder bridge, would meet “the existing and future traffic needs relative to durability and economy of maintenance.”

Airis continued:

Technically, the Potomac River Freeway along the Georgetown waterfront, and the east leg of the Inner Loop up to Bladensburg Road, are both in the design stage, but work is slowed pending developments. No construction has started.

The remainder of the system, i.e., the north leg of the Inner Loop (I-66), the northeast-north central (I-70S and I-95) connections, and the extreme upper end of the east leg require additional study as called for in the 1970 Federal-Aid Highway Act.

(Airis did not mention the South Leg of the Inner Loop Freeway.)

He added that the system he had described was 29 miles long. In February 1970, the city council had approved a system of only 24½ miles:

The difference, of course, is a very small amount of mileage, but the main difference is the means of getting access to the north. The [city council-approved] system indicates that traffic should go up the Baltimore-Washington Parkway general alinement and then out to the Beltway . . . .

Now the latest recommendation in 1970 did not contain a complete south leg . . . . The original south leg contemplated in the 1968 act and all prior planning was for a full connection between the Potomac River Freeway and the Southwest Freeway.

The City Council, the Mayor, and the Department of Transportation did not include the full length. In other words, the great difference was that they brought the traffic up to surface on the Independence Avenue roadways existing at the present time, and the concept was to continue that traffic on over the Southwest Freeway, on the surface of the park.

The NPS “takes violent exception to this,” Airis said, but the recent agreement between Secretary Volpe and Secretary Morton “follows fairly closely the original concept with the full facility, in two tunnels and a depressed section.”

The I-95 connection had not been worked out via the Baltimore-Washington Parkway. “Nothing has been finalized there. This is just a line on the map.” [pages 760-763]

When WMATA appeared before the subcommittee on July 23, Chairman Sickles took the lead. Chairman Natcher questioned Sickles and General Graham about the cost estimate of \$2,980,200,000 for the 98-mile system. When they confirmed that estimate, he told them:

I have never believed that the 98-mile system could be constructed for the original figure of \$2.5 billion. I do not believe today that you will be able to construct it for \$2,980,200,000 . . . . Certainly I am not an engineer, but based on the costs of other rapid rail transit systems throughout the United States and abroad, I still am of the opinion that this system will cost between \$4 and \$5 billion.

He urged Chairman Sickles and General Graham to keep the public informed as costs increased.

They discussed the Nixon Administration proposal that the Federal Government guarantee the Metro construction bonds. Chairman Natcher summarized the situation:

The brokers and bankers would not purchase the bonds since the bonds were to be retired out of the fare box or out of the income derived from the rapid rail transit system. Now you are confronted with the problem of having the bonds guaranteed by the Federal Government.

Maryland’s two Senators, Beall and Mathias, had introduced the bill as S. 2297, for a guarantee of \$1.2 billion in bonds, but a comparable bill had not yet been introduced in the House. The

Senate had not held hearings on the bill but Chairman Sickles said that WMATA “and the entire community is in favor of it and we are going to make every effort that we can to pass the legislation.”

Chairman Natcher was concerned that the bill, if enacted, would establish a precedent. When Executive Officer and Comptroller Lowe suggested that a guarantee under the Medical Facilities and Construction Act of 1970 had provided a similar bond guarantee, Chairman Natcher was skeptical. “You would have to stretch your imagination” to compare the two bills. He continued:

Unless the matter concerning freeways and rapid rail transit is resolved, in my opinion, you may have some difficulty with this legislation. Personally, as one member of the committee, I hope that . . . you have no trouble with it. You are asking the House and the Senate now to go a long way with this type of legislation. It is imperative that this impasse that we have before us be resolved.

Regarding the impasse, he said:

We do believe on this committee, Mr. Sickles, that the Federal-Aid Highway Acts of 1968 and 1970 are the law and they must be complied with. If we don't take that position, Mr. Sickles, we then repudiate the House of Representatives, the Senate and the President of the United States. I hope that the impasse that we have now is resolved and is resolved quickly for the best interests of our Nation's Capital . . . .

That is the position we are in today and I am hoping that before we report this bill something is done that places us in a position on this committee where we can approve the amounts that are before the committee . . . .

He explained that his subcommittee had never engaged in subterfuge. The subcommittee supported the freeways and Metro:

We even had proposals that you know about as far as one of the sections of the freeway system, which suggested that it go through a portion of the Arboretum. You never heard of anything like that in your life. It just brought forth thousands of letters from people and it was not necessary at all. We have had a number of situations take place along that line.

He added that if recent efforts continued, “we will solve it and we will have no further trouble.”

Representative Giaimo said he had been “talking to some people from the administration just this week who are very much interested in this and they were painting a gloomy picture about what happens if we don't get some fast action.” He acknowledged that the District was “tied up with the overall budget” and added that “I don't know what the timetable is on that because of the revenue problems.” He asked Chairman Sickles if he wanted to comment:

Mr. Sickles. It is a fact of life that we have to face; it is going to hold us up. Even the normal process won't be fast enough to keep us moving.

Mr. Giaimo. Is it something that you can live with?

Mr. Graham. If we knew when this thing would be resolved, when we would have these missing appropriations, we could better answer the question. At this moment we don't see action on these funds for October, final action. Then immediately this means a 4-month delay in meeting our commitments on train operations. The schedule is so tight that at this moment we see no practical way of making up that difference, which means we don't carry out commitments to the eight local governments in exchange for their contributions.

Mr. Sickles. It is something we have to live with. It will have an impact and delay the time of services available and increase the costs.

When Representative Giaimo asked about the cost estimate, General Graham assured him, "We have never expressed any reservations that we can complete it for \$3 billion." The estimate included \$855 million in unknown escalation costs. He added, "If we resolve this funding delay, we still feel that we can build it for \$3 billion."

Chairman Sickles replied as well:

I think this issue was raised once before by the chairman before you got here. I think this may be the first time that I heard it directly in person. I think that one of the statements of the chairman ought to be at least responded to. I think that the inference was that we have a duty to tell the truth and that we have a duty to share our information with the community and with the Congress. I think that you should allow there is no larceny in our hearts; we are just trying to do the job that we are required to do by the compact. We have done just the best possible job that we can in making these estimates.

Representative Giaimo commented, "As you know, I have heard all kinds of figures on this."

Chairman Sickles replied that, "We don't have the luxury of saying anything but what the technicians have come up with and hope they are realistic." He added:

If we were to have major labor problems or major community problems or any of these kinds that cannot be predicted, it would be realistic to assume that it would have an impact on our estimate. [District of Columbia Appropriations for 1972, Hearings before the Subcommittee of the Committee of Appropriations, U.S. House of Representatives, 92<sup>nd</sup> Congress, 2d Session, Part 3, 1971, pages 124-135]

As in the past, the hearings took place in executive sessions without reporters in the room. The report on the hearings would not be released until September.

### **The Ghost Bridge**

On Sunday, July 18, reporter Jack Kneece published a lengthy front-page article in the *Star*, "The Ghost Bridge – 3 Sisters – Dispute Without End." He began with the original legend:

An ancient Indian legend has it that three Indian sisters drowned in the Potomac River and soon afterward three big chunks sprang up where they drowned.

There are now more ghostly remnants near that place in the river – steel pilings for the piers of the proposed Three Sisters Bridge. Already the pilings have a delicate patina of rust and have become a favorite resting place for sea gulls.

The piers were, Kneece wrote, “symbols of one of the most monumental bureaucratic entanglements in the history of the area” and they “could mark the demise of Washington’s fledgling subway system.” The controversy was “so convoluted that even Agatha Christie might have trouble tying up a smooth denouement.”

A Hill committee staffer assured Kneece that “the real reasons for all of this delay and controversy” were not clear from the daily headlines of “Natcher Withholds Subway Funds.” Satisfying Chairman Natcher was the only way the District’s matching share for Metro construction would be released – and the Three Sisters Bridge was the “primary roadblock” to that goal.

When the bridge was proposed in the 1960s, “it became a fashionable cause celebre among the Georgetown cocktail party set” before spilling across “a broad spectrum of society.” It was “a sinister threat to the ecology (all of that pollution from all of those automobiles)” as well as an “an eyesore” that would “deface such a charming area on the very fringe of Georgetown.” It would “block the morning sun from the C&O Canal towpath” and weren’t there enough bridges already? “Where would all of this highway and freeway madness end?” And, “Would the United States eventually topple because it was paved from coast to coast?”

Highway planners countered that the site was the most logical location and that their exhaustive studies demonstrated that there were no “feasible alternatives” (Kneece advised readers to remember that phrase). The “smidgeon of parkland” the bridge would take was insignificant compared with the benefits of the bridge. “For a time it appeared that the cause had lost its fashionableness.”

Kneece traced the battle through the courts and Congress. Judge Sirica had issued the most recent ruling:

After 10 days of hearings, Sirica enjoined construction of the bridge and, on August 3, ordered design hearings on environmental and other issues. The bridge was still on – sort of. Sirica also asked Federal Highway Administrator Frank C. Turner to certify the structural safety of the bridge – a graceful, massive, cantilevered span without a center support.

The citizen groups appealed a portion of the decision and the Department of Transportation appealed as well. The U.S. Court of Appeals had not yet scheduled a hearing.

According to a congressional source, members of Chairman Natcher’s subcommittee were “disgusted at the backbiting and ineffectuality among four sets of government attorneys working on the Three Sisters litigation.” Attorneys for FHWA, the Department of Transportation, the

Justice Department, and the District corporation counsel “reportedly are in discord” in contrast to “the smooth and well-oiled job done by the prestigious law firm of Covington and Burling, retained by bridge opponents.”

The scale model being built to test the safety of the bridge, according to an engineer employed on Capitol Hill, was “a primary cause of delay” and “a useless charade.” German and Japanese engineers, he told Kneece, considered the model “a big laugh” that would not provide any useful data. Enough data on similar bridges around the world was available to certify it a safe design.

Another problem was the relationship between Chairman Natcher and Secretary Volpe. A Capitol Hill source told Kneece that Chairman Natcher “feels that Volpe has been dishonest about the bridge and other highway projects from the beginning.” Publicly, Chairman Natcher appeared “somewhat mollified” by Secretary Volpe’s five-page letter, but actually he was “bitterly disappointed” and “found some parts of the letter to be either untrue, exaggerated or antagonistic to congressional authority.”

The letter had still not been made public, but Kneece had seen a preliminary draft that included the following:

I want also to convey to you my genuine concern about the financial health of Metro, Washington’s new rapid rail transit system. As you know, the Department of Transportation is custodian of the Federal contribution to Metro construction . . . .

Accordingly, my clear responsibility to the Congress is to see that the already substantial Federal investment in Metro is fully protected . . . . It is clear that Metro faces an imminent financial crisis unless additional monies are made available to it in the very near future.

The Washington Metropolitan Area Transit Authority sent [a] letter . . . . The letter and its supporting figures indicate unequivocally that “at this time, all available funds, including those for prior years, have been obligated or committed.” This means that, unless more funds are made available to it immediately, Metro will have to place a moratorium on further contract-letting and suffer serious delays as a result.

This might well be a critical setback. First of all, such delays would bring with them sharply increased construction costs well beyond the escalation already experienced.

Second, and most important, any interruption in the construction schedule at this point would seriously impair investor confidence in the revenue bonds which Metro must sell in order to complete its capital funding program

The import of all this is unmistakable: Metro and all of the money invested in it are now in jeopardy.

This message of doom was in contrast to a May 12 statement by WMATA controller Lowe that “we’re not out of business by any means,” with \$499 million remaining. More recently he had said that Metro had only \$18 million remaining in working capital.

The preliminary draft of Secretary Volpe's letter had described the plan for the Potomac River Freeway, including removal of the elevated Whitehurst Freeway, a concept not covered by Section 23 of the 1968 Act. The plan, Secretary Volpe's draft said, "would permit the immediate demolition of the Whitehurst Freeway and the construction of a facility which would give an unobstructed view of the Potomac River to Georgetown residents and visitors, and it would permit the recreational or other appropriate development of the entire area between the C&O Canal and the river. Initial reactions to the plan from both the Interior Department and the D.C. Government officials have been favorable." Kneece added:

Realizing that he was treading on eggshells in suggesting an idea that would require rewriting of a federal act, Volpe added almost as a not-my-will-but-thine-be-done afterthought that he was merely making the "proposal."

Secretaries Volpe and Morton were "aware of the controversy sure to erupt" as a result of their Georgetown proposal, "particularly among congressmen wedded to the grade-level approach that would leave the Whitehurst Freeway standing." They also realized that their proposal meant another round of design would be needed, and experience suggested that "could become a forum for disruption."

Kneece explained that the present "morass" had many causes "depending on to whom one talks." For example, while Secretary Volpe waited for Judge Bazelon "to get off the dime," some of the Secretary's "bold young attorneys . . . have whispered that Volpe could take unilateral action by simply notifying the court that work would begin on some parts of the pier construction while the court is making up its mind on the legal issues." The result would be a contempt of court citation, an order allowing limited construction, or a speed up of court action.

The Supreme Court's ruling in the Overland Park case was "sure to reverberate like a tuning fork throughout the U.S. court system much like civil rights legislation did in the 1950s." As a result, attorneys on both sides of the Three Sisters Bridge case expected it to end up in the Supreme Court. The court would have to determine if Secretary Volpe had adequately explored all "feasible and prudent" alternatives to the taking of parkland on both sides of the Potomac River.

Kneece also discussed the safety issue:

Engineers say that the 90 percent of this bridge's bulk is merely to support itself, with remaining percentage to support traffic. [sic] But engineers agree that the single-span bridge design is rapidly gaining popularity around the globe because of its complete absence of superstructure.

However, at one point in court hearings on the design Turner and other highway officials entrapped themselves (whether by design or inadvertently is still subject to debate – even within DOT) as they admitted that they were unsure of the safety of the design.

Some said that Turner was trapped only after bridge opponents obtained a confidential memorandum in which he stated:

We are still concerned that the combination of the adverse geometry of the superstructure, the unconventional design details, the extreme lack of design experience of a structure of this type and the complete absence of this particular construction experience in this country make the undertaking extremely hazardous and fraught with danger. To the best of our knowledge, very little has been accomplished to alleviate this concern.

Observers debated whether Turner “may have deliberately provided opponents with ammunition” because he favored a more conventional steel girder structure with a center support in the middle of the river” or “was merely aware that the memo was in the possession of the ‘enemy’ and therefore he simply swallowed his medicine.” Secretary Volpe reportedly believed in the latter theory.

Director Airis had recently asked the Department of Transportation “for permission to begin limited work” because he was satisfied with the current design. He also was frustrated that the construction season was passing without any action on the bridge.

Capitol Hill sources told Kneece that personality factors were involved in the impasse:

They said Volpe – and particularly some members of his staff – have antagonized congressmen on numerous occasions because of their parochial approach and heavy handed attempts at behind the scenes maneuvering. “They still act as if Volpe were governor of Massachusetts and dealing with a state legislature,” said one Capitol Hill committee employe [sic]. “When he (Volpe) agreed at one point to adhere to the plans for the Potomac River Freeway as outlined in the 1968 Highway Act, one of his aides called up and said, ‘Well, we did you a favor so now you owe us one,’” said sources. “We pointed out to them that they merely were following the law and we didn’t owe them a damned thing.”

Volpe’s attempts to bypass Congress on a number of matters – some preceded by telephone calls to key congressman only hours before announcement and ranging from independent release of Metro funds to construction of a tracked air cushion vehicle – rubbed many congressmen the wrong way.

Kneece acknowledged that part of the antagonism resulted from the interaction of a Republican Administration with a Congress controlled by Democrats. “Also there is [a] feeling by many congressmen of every affiliation that Congress has lost the initiative to federal agencies on new and innovative legislation.”

In conclusion, Kneece asked, when will “the Three Sisters, the freeways, Natcher, Volpe, the courts, and the various agencies live happily ever afterwards with construction humming away on all fronts?” He replied to his question: “The answer to that is depressing.” Congress had “grown steadily more impatient with delays,” as well as the reasons for the delays (“all such reasons ring hollow”). This impatience was reflected in the vote earlier in the year with unexpectedly close vote on the failed Giaimo Amendment:

Meanwhile, as all of these factors are working their sluggish way, the rust on the steel pilings grows deeper, and the sea gulls are becoming quite used to perching there and looking over those three chunks of granite.

Maybe the whole thing is part of an ancient Indian curse. [Kneece, Jack, "The Ghost Bridge – 3 Sisters – Dispute Without End," *The Sunday Star*, July 18, 1971]

## **On Appeal**

The U.S. Court of Appeals advised attorneys that it would hear arguments on the Three Sisters Bridge case on Thursday, July 22. Sources predicted a ruling sometime in the winter.

Kneece, writing about the scheduled hearing, added:

In a related development, it was learned that Transportation Secretary John Volpe met with key congressional leaders at a private luncheon Thursday in the Rayburn House Office Building. The meeting – reportedly a "stormy session" – was an attempt to reach accord on the four-year-old impasse, which now threatens the District's fledgling subway system.

The meeting included Chairman Natcher and Representative Bow of the District appropriations subcommittee and Representative Harsha of the Public Works Committee. According to sources, "Natcher was very subdued" during the luncheon, but Representatives Bow and Harsha "were demanding that something be done to remove obstacles to the bridge-subway impasse." They "reportedly were the most outspoken against reasons for the delay," although sources would not tell Kneece what their arguments had been:

However, some Capitol Hill sources did say that more and more congressmen are becoming disenchanted with Natcher's hostage tactics on the issue. Natcher, who was supported on the issue earlier this year by a 20-vote margin in a floor vote, reportedly is concerned that should the issue reach the floor again, he may have difficulty in maintaining that support.

Officials had scheduled another meeting for later in the week. [Kneece, Jack, "Three Sisters Bridge Case Hearing Slated Thursday," *The Evening Star*, July 19, 1971]

On the day of the hearing, Secretary Volpe told reporters that resolution of the Three Sisters Bridge issue was the only obstacle to congressional action to release the Metro funds.

During the 2-hour hearing before a three-judge panel (Judges Bazelon, MacKinnon, and Charles Fahy) of the U.S. Court of Appeals, government attorneys argued for the lifting of the injunction on construction. They argued that whatever design was finally used, it could be erected on the piers already underway. Safety studies would be completed soon and the results known in 2 months, but there was no reason to prevent construction of the piers to resume.

Owen, the opposing attorney, contended that the piers were suitable only for a single-span bridge and that proceeding now would be "inappropriate." The *Post* reported:

Owen argued that the federal Department of Transportation, in its haste to satisfy Natcher's demands, illegally approved construction of the Three Sisters Bridge in the summer of 1969. Owen said the Department failed to determine whether the bridge was part of a comprehensive transportation plan for the Washington area, failed to investigate alternative bridge locations that might do less damage to parkland and allowed the political pressure from Natcher to influence its decisions. [Scharfenberg, Kirk, "U.S. Requests End of 3 Sisters Halt," *The Washington Post and Times Herald*, July 23, 1971]

On July 14, the House approved, 401-12, the Department of Transportation and Related Agencies Appropriations Act, 1972. It included an advance appropriation of \$174.3 million in FY 1973 Federal funds for Metro construction. The Senate approved its version of the bill, 90-0, on July 22, again with an advance appropriation of \$174.3 million for Metro construction in

FY 1973. Congress completed work on the legislation on August 2, and President Nixon approved it on August 10 (P.L. 92-74). The legislation brought the total Federal contribution for Metro to \$690 million. However, \$139 million of that amount could not be spent until the District of Columbia was able to provide its matching share. ["\$174.3 Million Voted by Senate for Subway," *The Evening Star*, July 23, 1971]

On July 25, *The Sunday Star* ran a lengthy feature editorial, "Natcher, Volpe and the D.C. Subway Snarl." It began:

Just two days ago – for the fifth time in little more than a year – the heads of Washington's subway agency appeared before Representative William H. Natcher's House Appropriations subcommittee to urge the release of District of Columbia subway funds which have been held up to exert pressure for progress on the city's log-jammed freeway program.

Previous testimony had been unsuccessful, but "an affirmative response now is vital." WMATA had committed virtually all usable funds for construction and, unless Chairman Natcher released the District matching funds to free the remaining funds, "a construction delay will be inevitable." Such a setback "could trigger other threats to the entire subway program, undermining years of productive regional effort."

Given the uncertainty about Chairman Natcher's pending decision, "President Nixon should step up his own efforts to seek a break in the impasse." Those who think that presidential intervention in what seemed to be a local transportation issue "are out of touch with how the Nation's capital operates":

Local officials are by this time only peripherally involved. The main bout has become essentially a power struggle between the legislative and executive branches of the federal government.

President Nixon's intervention in August 1969 had helped move Metro along despite what "appeared to be an irreconcilable conflict" at the time.

At this point, the freeway program “is entwined in an almost unbelievably complex snarl of engineering, legal, city planning and political arguments.” But it all boiled down to one project, namely the Three Sisters Bridge, and “a single political question: Is the Nixon administration, as represented by Transportation Secretary John A. Volpe, making every effort that it can make to expedite the Three Sisters Bridge, in view of Congress’ explicit edict that it be built?” Given years of “non-performance . . . there is a legitimate cause” for skepticism on efforts to advance the bridge and other pending freeways.

Although the focus was always on Chairman Natcher, the editors pointed out that “whether anyone likes it or not, Natcher’s position steadfastly has been upheld by majority votes in the House.” Thus, blaming the impasse on “one man’s recalcitrance – as frequently is done – is therefore both wrong and foolish.”

In view of several recent actions, perhaps the impasse was not “a hopeless standoff.” First, Chairman Natcher had made an “extremely conciliatory statement” during the May 20 debate on District appropriations, apparently in response to Secretary Volpe’s still-secret five-page letter. The letter, at least based on the draft obtained by reporters, did not contain “much new.”

Although Chairman Natcher continued his “customary silence” on his thinking since then, “congressional sources say his floor statement was intended more to encourage a positive response from Volpe than to reflect much real satisfaction with anything accomplished.”

Second, Secretary Volpe’s July 1 statement indicated that his power was clouded by court restraints. Nevertheless, he pledged to press ahead with the Three Sisters Bridge “as soon as it is legally permissible to do so.”

Third, the government had returned to the U.S. Court of Appeals panel to argue for resuming construction of the piers.

These events were “no doubt . . . less conclusive than the types of action Natcher wants.” They were, however, encouraging at a time when there remains “a great deal of doubt and suspicion on Capitol Hill as to whether Volpe has done all that he could do to satisfy the injunctive requirements.”

Issues remained to be resolved, including the safety question about the design of the single-span Three Sisters Bridge, but the editors hoped the court would allow construction of the piers to resume:

It is not likely that Natcher would – or politically could – sustain a position of demanding illegal actions of any sort from the administration when the question of granting the hostages funds comes up for a vote. But the court is obligated to clarify the law as expeditiously as possible, and Volpe is obligated – both now and later – to comply with it fully.

The accompanying editorial cartoon by William S. Garner showed President Nixon, arms folded, looking down on the Capitol, with subway cars snarled on one side of the Capitol Dome, cars

scrambled on the other side and the dome itself entrapped in bands of freeways and subways. The cartoon was titled: "Gordian Knot."

On July 30, the Coalition for Clean Air released a January 1971 report that it said the District had suppressed. The report involved conditions along the Anacostia Freeway near the 11<sup>th</sup> Street Bridge that appeared to be similar to conditions likely at the site of the Three Sisters Bridge. The report stated that "the levels of (carbon monoxide) are high at all rush-hour periods, but when congestion forces periods of idle engine-running by rows of cars, the emissions become undesirable." Carbon monoxide, even 100 feet from the freeway during average winds, "constituted a dangerous situation." It concluded that, "This limited study . . . shows the environmental inadvisability of congestion traffic patterns at the (location) tested."

James E. Clark of the highway department denied suppressing the report. He said the report simply showed that pollution levels are less when roads were not congested:

He said the department believes the only way to reduce automobile pollution significantly is through the development of pollution-free cars.

The coalition wrote to Secretary Volpe calling on him to order a detailed study of the health impacts of the Three Sisters Bridge. [Scharfenberg, Kirk, "Study Cites Danger of Fumes if 3 Sisters Bridge is Built," *The Washington Post and Times Herald*, July 30, 1971]

As August 1971 began, Metro ran out of money for additional work. WMATA had enough funds only to pay about \$270 million for ongoing construction work. The *Post* summarized an internal memorandum by Comptroller Lowe as saying "the new fund shortage will delay contracts for parts of the G Street line, two segments on the future Alexandria line both in Washington and south of the Pentagon, and two segments of the first line scheduled to serve Southwest Washington." Lowe estimated that the opening of the G Street line, scheduled for December 1973, would now be postponed to late spring 1974 at the earliest.

As Congress left Washington for the August recess, the *Post* explained:

Metro's current tribulations are the product of a decade of controversy over the relationship between the proposed subway system and the interstate freeway network existing and planned in Washington and its suburbs.

The continuing drama prompted at least one county executive, Montgomery County's Gleason, to indicate he might not make further contributions to Metro until Congress assured a steady flow of District funds:

You can't build a railroad like this. I think the time has come for us to get some kind of assurance from Congress . . . . If we can't there'll be a lot of big holes in the District of Columbia. I can't conceive of Congress leaving these holes in the ground without any subway built. [Eisen, Jack, "Metro Funds Run Out," *The Washington Post and Times Herald*, August 2, 1971; Denton, Herbert H., "County Aid to Metro May Halt," *The Washington Post and Times Herald*, August 3, 1971; West, Woody, "Subway Agency Broke Again," *The Evening Star*, August 2, 1971]

A couple of days later, WMATA opened bids for its sophisticated train control and communications systems, only to find that the lowest responsive bid of \$59.6 million, submitted by General Railway Signal Company of New York, was 24 percent over estimates. The next lowest bid was for \$66.6 million. Funds for the contract were available because WMATA had earmarked them before running out of funds. Chief of Engineering and Operations Dodge said, "I'm unhappy. We were hoping for something better."

Jack Eisen explained the system:

Metro officials have said the Washington system's train control equipment is the most sophisticated in the world. It is designed to dispatch trains at established intervals from their terminals, stop and start them at stations and halt them for emergencies.

An attendant in the cab of each train also would observe the track and be able to override the automatic controls.

The contract, if awarded to General Railway Signal, would be the biggest since Metro construction began, exceeding the \$38 million for the subway station at 12<sup>th</sup> and G Streets, NW., involving two track levels and a mezzanine.

The WMATA engineers concluded that the bid overrun was attributable mainly to the communications system included in the contract. The estimate also was in error by \$5 million, according to General Graham. The contract for train controls was separated from the communications system and awarded to General Railway Signal Company for \$42 million on September 2.

As reporter Fred Barnes pointed out in the *Star*, the suburban counties had been upset by the original high bid. In view of Chairman Natcher's withholding of District funds, suburban officials were threatening to withhold further payments to WMATA:

This has prompted some suburbanites to point out bitterly that current subway construction is limited to the District and the suburbs alone are paying for it.

Already some suburban jurisdiction leaders, notably Montgomery County Executive James P. Gleason, have said they might cut off their jurisdictions' funding of Metro because the district isn't paying.

Awarding of the contract did nothing to resolve the "heated dispute" on matching funds, but the suburban jurisdictions were now "less likely to make a hasty decision to stop paying for subway construction." [Barnes, Fred, "Awarding of Metro Contract May Ease Suburban Fears," Interpretive Report," *The Evening Star*, September 3, 1971]

In an August 12 letter to congressional leaders, Secretary Volpe revealed that officials were planning public hearings on three design schemes for the Potomac River Freeway in Georgetown, including one developed by FHWA. The letter was not officially released, but reporters obtained a copy. According to Jack Eisen's account:

In addition to the currently official plan for the road, Volpe said the hearing would offer two other proposals for public discussion.

One would be the concept proposed last year in the Georgetown waterfront feasibility study, prepared by a Private [sic] consultant and partly financed by the National Capital Planning Commission. It calls for putting the freeway in a trench and constructing buildings on air rights overhead.

The other would be what Volpe called “a largely covered low-profile concept developed by the Federal Highway Administration,” part of the Transportation Department. As displayed on a model at a closed meeting of the House Public Works Committee several weeks ago, this proposal calls for building the road on the surface. A platform, providing access to the river, would be built over the road near the foot of Wisconsin Avenue. A building would be built on air rights atop the freeway near the foot of 31<sup>st</sup> Street NW.

Both of these plans would require elimination of the existing elevated Whitehurst Freeway. As contemplated by the Federal Highway Act of 1968, which requires construction of the eight-lane Potomac River Freeway, the Whitehurst would be converted into the new road’s westbound lanes. The eastbound lanes would be sunk in a trench or tunnel between the Whitehurst and the river shore . . . .

Volpe, in his letters, cited the hearing plan as evidence of continued progress on the District’s lagging highway program.

According to Director Airis, the date of the hearing depended on court action on the Three Sisters Bridge. “No date has been set,” he said, adding that “nothing is firm.” [Eisen, Jack, “Volpe Set to Hold Public Hearings on 3 Designs for Potomac Freeway,” *The Washington Post and Times Herald*, August 18, 1971; “D.C. Plans New Freeway Hearings,” *The Evening Star*, August 18, 1971]

By month’s end, WMATA officials had again shifted the schedule for opening the first 4½-mile section of Metro to summer 1974. The change was largely a result of Chairman Natcher’s refusal to release the District’s 2-years worth of matching funds totaling \$72.2 million. Although WMATA had about \$211 million in funds available for Metro construction, the agency could not begin bidding for new contracts in the absence of matching funds. District and WMATA officials were hopeful that Chairman Natcher would release the funds when Congress returned from its August recess. [Barnes, Fred, “Metro Now Predicting Mid-’74 Service Start,” *The Evening Star*, August 29, 1971]

The Metropolitan Washington COG decided to meet on September 9 to discuss ways of freeing the Metro funds and securing the Federal guarantee needed for WMATA bonds. This would be the first regional effort to secure the needed legislation. Francis B. Francois, president of the council and a member of the County Council of Prince George’s, Maryland, told reporters in advance, “An all-out concerted effort is the only way we can move this.” [“COG Session Set on Subway Funds,” *The Washington Post and Times Herald*, September 4, 1971]

On the day of the meeting, the *Post* reported that the transcript of the June 7 hearing that Chairman Natcher had held in executive session had been released. Eisen told readers that Chairman Natcher had “raised the possibility that an all-but-promised \$72.5 million to extend work on the Metro subway system may not be released as expected this fall.” The article quoted Chairman Natcher’s skepticism about the cost of Metro and his comment that unless the commitments in Secretary Volpe’s secret five-page letter were carried out and the freeway and subway systems proceeded together, “I do not intend to recommend construction funds for our rapid rail transit program.”

As Eisen explained about the Volpe letter, “That letter has never been released, making it impossible for the public to pinpoint exactly what Natcher expects as the price for releasing the subway money.”

The *Star* emphasized that Metro officials denied the subway would cost up to \$5 billion. The article cited the dialogue with Representative Giaimo, including Chairman Sickles’ comment that, “I think you should allow there is no larceny in our hearts.” [Eisen, Jack, “Metro Fund Threatened by Natcher,” *The Washington Post and Times Herald*, September 9, 1971; “Natcher Airs New Threat to Metro Funds,” *The Washington Post and Times Herald*, September 12, 1971; Green, Stephen, “Subway Men Deny Real Cost \$5 Billion,” *The Evening Star*, September 13, 1971]

Responding to the June 7 transcript, a *Post* editorial said the “ever-perilous state of Washington Metro” was “worse than ever, for nobody can even explain it anymore.” Each year, Chairman Natcher “concocts an annual highway-subway money drill designed to make the city government jump through a set of hoops of his choosing and who then promptly pans the performance, leaving Metro in an increasingly precarious bind.” The hearing transcript indicated, the editorial said, that he would release the funds if officials carried out promises in Secretary Volpe’s letter to him. “The only catch is, he won’t show anybody what’s in the letter . . . Well, secrecy is one thing, and blackmail another.” If the entire metropolitan area had “to play cute games to figure out the current price of a floating ransom, it gets insane.”

The *Post* called on Chairman Natcher to release the Secretary’s letter and if he would not do so, Secretary Volpe should release it. “Beyond that, President Nixon should step in, call all the parties together and break this disgraceful impasse.” [“The Fate of Metro Now: A \$211-Million Riddle,” *The Washington Post and Times Herald*, September 10, 1971]

During the June 9 meeting, area officials agreed with the *Post* that the time had come for President Nixon to intervene. COG adopted a resolution that asked President Nixon “to call the parties to the impasse together at the earliest possible moment so that negotiations may begin at once to break the impasse.” Initially, Chairman Sickles had urged a “discreet” campaign, but Delegate Charles A. Doctor (D-Montgomery County, Md.) had urged the council to seek help from the President. “I think a little bit of presidential leadership might not hurt,” Doctor told his colleagues. Doctor also suggested that the county call on Governor Mandel of Maryland and Governor Holton of Virginia to “intercede” with their States’ congressional delegations to give unanimous support to release of the District’s Metro funds. The council never mentioned the freeway disputes and mentioned Chairman Natcher “only in passing.”

In addition, the council agreed to launch a lobbying effort by as many as 200 local officials to convince Congress to release the District's funds. Francois said, "We're asking elected officials to contact elected officials." He added, "We're not angry with anyone. We're just angry that the funds have not been forthcoming." [Eisen, Jack, "Area Governments Appeal to Nixon to Help Metro Get Federal Funds," *The Washington Post and Times Herald*, September 10, 1971; Barnes, Fred, "COG Charts Lobbying Drive for Release of Subway Funds," *The Evening Star*, September 9, 1971]

The *Star's* editorial cartoonist Garner used the "dollar-on-a-string" prank to illustrate the situation in a cartoon published on September 11. It depicted Chairman Natcher in the foreground holding a string attached to a bag labeled "Subway Funds" in the background. As a symbolic figure labeled "D.C." reached for it, Chairman Natcher was about to yank the bag out of reach. The caption read: "Try it again – maybe this time I'll let you have it."

Local officials gathered on September 14 for a summit at the suggestion of Montgomery County's Gleason. They adopted a resolution calling on President Nixon, Secretary Volpe, and Congress to find a way to end the impasse, but they considered the resolution a weak response to the situation. Gleason, who had suggested halting all Metro construction to force a showdown, said it amounted to saying the leaders were "against sin."

Several officials were skeptical that the summit had accomplished anything. They had not even managed to figure out what the problem was with District freeway construction. Fred Barnes reported in the *Star*:

Notable at the meeting was the failure of District leaders to spell out exactly what Natcher wants them to do in the way of freeway and bridge construction before he will appropriate the subway funds . . . . Gleason pressed District leaders to reveal "the dimensions" of their conflict with Natcher. "Let's not shove this thing under the table," he said.

But Mayor Walter E. Washington said the matter of District freeway and bridge construction shouldn't be discussed at all. He refused to disclose what has gone on in closed-door hearings by the House District Appropriations subcommittee, of which Natcher is chairman.

The mayor would only say that the District is "in compliance" with the orders of Congress concerning freeway construction and the building of the Three Sisters Bridge.

"Then I must ask, 'Why are the funds being held up?'"

"That's the question we all seek an answer for," responded D.C. Deputy Mayor Graham W. Watt. [Barnes, Fred, "Metro Summit Produces Resolution," *The Evening Star*, September 14, 1971]

Representative Broyhill agreed with COG and other local officials that President Nixon's help was needed. On September 17, he wrote to the President again to request his help. The *Star* said that with the letter, Representative Broyhill "has broken openly with Rep. William H. Natcher, D-Ky., over the subway-freeway impasse." Without naming the chairman, the letter criticized

“the efforts by some to hold up construction of the subway to force” the District to build the Three Sisters Bridge and other Interstate freeways. In the course of the letter, he called the impasse “ridiculous,” “asinine,” and “scandalous,” and said the “public holds all those engaged in this sport in disgust.”

He spread the blame around, telling President Nixon that “unfortunately your administration is being blamed as much as anyone for not taking the leadership required to bring order out of this sea of chaos.” Representative Broyhill asked the President to order Federal agencies and District officials to work together to get construction underway on all projects within 30 days. [Green, Stephen, “Broyhill Asks Nixon for Help on Metro,” *The Evening Star*, September 18, 1971]

Later that month, engineers completed testing the model built in Skokie, Illinois, to test the design of the Three Sisters Bridge. The \$1 million model had been subjected to several load tests, including one that simulated the pressure of 13 tiers of bumper-to-bumper trucks – a load the one-level bridge would never have to sustain. According Dr. W. Gene Corley, manager of the structural research section of the Portland Cement Association, the model passed all the tests “with flying colors.”

In the *Star*, Barnes described the ultimate load test, during which the bridge performed as expected:

A crowd of engineers and officials from the D.C. Department of Highways and Traffic and the Federal Highway Administration gathered to see this one. Hydraulic jacks pulled on the weights in the amount of the service load and nothing happened.

After this came the test for “ultimate load,” the one simulating the weight of 13 layers of trucks. Under this load, supposed to bring the model to the brink of collapse, it cracked in some spots but didn’t buckle. This, too, was what was supposed to happen to a safe bridge, the engineers said. “There were only minor cracks,” said Corley, “fewer than we expected and they were not very wide. When we took the load off, the cracks closed up.

“Now they are very small and hard to see. The model is undamaged. There was no other sign of inelastic behavior or impending failure. The model is in excellent condition.”

How each nook and cranny of the model reacted under the loads was recorded on computers which fed engineers with a steady flow of figures. All the figures were favorable, they said.

The tests created some excitement among knowledgeable onlookers. But “to the outside, it was about as exciting as watching a chess match when you don’t know how to play the game,” said Gerald F. Fox, an engineer with the New York City firm, which designed the bridge.

Most of the engineers involved in the tests did not think they were necessary. The bridge had been designed based on experience in other countries, particularly Germany and Japan, with concrete cantilevered bridges. The design was increasingly popular in other countries where the river to be spanned carried a great deal of industrial traffic. That was not the case with the

Potomac River. Corley said, “The primary reason for choosing this type of span in Washington was its appearance. It will be a very attractive bridge. It will be much better looking than having a lot of supports out in the river.”

The engineers planned one more test:

Now, the engineers are making plans to push the model past the brink. Sometime in the next few weeks, they will increase the weight on the model beyond the ultimate load. “We’re going to see how much it takes to break it,” said Fox. “And finding exactly at what point it breaks will be of further help to use in building other bridges.” [Barnes, Fred, “At Least, It Won’t Collapse,” *The Evening Star*, September 28, 1971]

The District, based on the test results, asked Secretary Volpe on September 29 to issue a formal certificate of safety. “Volpe should do so immediately,” a *Star* editorial advised after discussing the “non-startling finding,” that “confirmed what most highway experts have said all along: The Three Sisters Bridge, as now designed, will be as safe and durable as man can make it – assuming it’s ever built.” The hope was that the results would resolve forever “one of the weirder aspects of Washington’s Alice-in-Wonderland transportation mess.” Secretary Volpe, by issuing the certificate, could lead to resumption of construction of the bridge, and “that development, delayed too long already, will free Washington’s hostaged subway funds.” [“Volpe’s Tinker-Toy,” *The Evening Star*, September 30, 1971]

Barnes, who had covered disputes about Baltimore’s Interstate network while with *The Baltimore Sun*, wrote an Interpretive Report for the *Star* on October 6 about whether the city could resume construction of the bridge without going back to Judge Sirica. All of the court’s requirements had been met. Secretary Volpe, known to be “a strong proponent of the bridge,” was reviewing the District’s request for certification:

Some officials believe that Natcher . . . will release the money when construction of the bridge is resumed. So this provides another incentive for immediate resumption.

While waiting for the ruling of the three-judge panel of the U.S. Court of Appeals, lawyers for the District, the Justice Department, and the Transportation Department were “in a quandary” over whether they needed Judge Sirica’s approval to resume construction or if approval of the Appeals Court would be sufficient. “The bridge matter is so important and has become so delicate that a decision will not be made without the approval of the White House, sources said.” [Barnes, Fred, “3 Sisters Can’t Bridge Courts, Hill,” Interpretive Report, *The Evening Star*, October 6, 1971]

### **The I-66 Lawsuit**

Despite the opposition to I-66 expressed during the December 1970 public hearings, the Virginia Highway Commission was determined to proceed. On February 18, 1971, the commission approved the design for the 3-mile segment between Glebe Road and Lee Highway in Arlington and the approaches at the Potomac River to the Three Sisters Bridge. The estimated cost of the

segment was \$10 million. The commission submitted the plan to FHWA for what the *Post* described as “routine approval.”

With that approval, the Virginia Highway Department would be able to clear the ground for construction. The State’s location and design engineer, P. B. Coldiron, expected the State to request construction bids in the fall. He added that the State would hold a public hearing for the remaining 6 miles of I-66 between Glebe Road and the Capital Beltway “late this year or early next year.” He also said that John O. Simonds would have a preliminary report on his recommendations “in a couple of months.” [Wilkinson, Tom, “I-66 Work In Virginia Approved,” *The Washington Post and Times Herald*, February 19, 1971]

Leland J. White, in his history of the I-66 battles, wrote:

Within days, ACT filed suit in federal District Court seeking to enjoin the Secretary of Transportation and the VDH from proceeding with construction of I-66. Central to their argument was that the VDH had not filed a comprehensive environmental impact statement as required by the National Environmental Act of 1969. [White, page 60]

They also claimed that the plans for the highway, dating to February 1959, were planned at a time when officials and planners were fixated on urban freeway networks. They were based on data that might be out of date. For example, plans for Metro had not been developed at the time, but now the likelihood of rapid rail transit meant that traffic projections were probably wrong. [Kneece, Jack, “Plans at 3 Sisters Spotlight I-66 Suit,” *The Sunday Star*, May 30, 1971]

In March, the *Post* published an article about the growing battle over I-66. It described the segment:

As approved by the Highway Department, I-66 will be eight lanes and between 200 and 250 feet wide between the Beltway and shortly before the top of Spout Run Parkway.

There, it divides as it approaches the Potomac. One leg will run eight lanes through 30 acres of Spout Run Park, the other will widen to 14 lanes and will follow Lee Highway down to Rosslyn Circle on the Virginia side of the Key Bridge.

Spout Run Park, 30 acres of woods surrounding Spout Run, will be virtually obliterated as the freeway moves toward the river and its link with Washington at the Three Sisters Bridge.

In court papers, Commissioner Fugate opposed delaying the 3-mile segment “inasmuch as approval . . . was given in 1959 after a public hearing and no reason has been given by plaintiffs for failure to assert their claim at an earlier date.” He pointed out that the State had acquired extensive right-of-way for I-66, a process that the plaintiffs did nothing to oppose.

Plaintiffs claimed that I-66 would cause irrevocable harm to the community:

Fugate's response to this complaint, taken from papers filed in the lawsuits, is: Inasmuch as the plaintiffs under state law are entitled to full compensation for property taken and relocation assistance where warranted, there is no irreparable harm."

Opponents say it is precisely this sort of laconic bureaucratic assurance that money solves (or removes) all problems that has helped trigger the citizens' opposition, and aided them in casting their dispute as one more battle of the individual against governmental injustice.

The article described Bright N. Springman as a draftsman with the U.S. Geological Survey who had lived in an apartment at 1577 Colonial Terrace in Arlington for 7 years. "At the point where the freeway goes past him enroute to Rosslyn Circle it is planned to be 14 lanes and 350 feet wide." In the course of his research, he had discovered the State's plan to route Spout Run into a concrete culvert that would be a mile and a quarter long. The State had not mentioned the culvert during the December public hearings, but now informed a reporter that it was an engineering necessity. Springman described I-66 as "an atrocity . . . a form of violence against the land and against generations we can no longer allow." [Barnes, Bart, "Major Battle Shapes Up Over Building of I-66," *The Washington Post and Times Herald*, March 7, 1971]

Secretary Volpe and FHWA Virginia District Engineer King filed a joint response to the suit in late March. In response to the plaintiffs' claim that the highway would damage parks, wildlife, race relations, and other aspects of life in Arlington, the officials denied that "the quality of life in Arlington will be diminished or the health and well-being of its residents jeopardized." They also claimed that the suit to block the highway had been filed too late after planning for I-66 began.

Federal officials generally denied ACT's claims without explanation, but Fugate responded in detail. He argued that I-66 would reduce air pollution by allowing traffic to move freely, instead of in stop-and-go congestion. As summarized in the *Post*, the freeway also would "raise property values, provide a habitat for small wildlife on the highway's margin, raise the water table by reducing the total amount of impervious roadways needed in the area, and improve the flow of Spout Run, the principal creek affected by the highway."

Fugate denied that the location of I-66 had not been reconsidered since the 1968 hearing, adding that some changes might occur in the design to accommodate new environmental considerations.

He expected I-66 to enhance the county's tax base, while reducing the county's cost in maintaining its roads as traffic shifted to the freeway. He denied the claim that Virginia would not build the road if FHWA were not providing 90 percent of the funds.

He objected to ACT's request to halt right-of-way acquisition for the freeway. At the time of the filing, 81 percent of the right-of-way needed for I-66 had been acquired. He requested dismissal of the suit because halting acquisition would delay the letting of construction contracts scheduled for the fall. [Edwards, Paul G., "U.S. Virginia Claim Only Good From I-66," *The Washington Post and Times Herald*, March 30, 1971; "U.S. Reply to I-66 Suit Denies Citizens Charges," *The Evening Star*, March 30, 1971]

On June 3, Simonds appeared before the Arlington County Board to present his preliminary ideas for mitigating adverse impacts of the 3-mile segment of I-66. State and FHWA officials, he said, had encouraged him “to make I-66 through Arlington an environmental model for the entire nation.” The goal was to “integrate it into the community in a harmonious way.” In developing the plan, he had considered the suggestions of citizens and State and Federal road engineers. The engineers had contributed much to his design because “we have served as a catalyst” to spark their creativity. The *Post* stated that the proposals, if adopted, would make I-66 “as much a tree-shaded parkway as harsh concrete expressway in its controversial route through Arlington.”

The entire 3-mile segment of I-66 would be depressed to reduce noise impacts. Noise reduction would be aided by the addition of earth mounds, trees, and acoustic walls. Where the roadway would run close to Washington-Lee High School and the county school administration building, Simonds proposed construction of a 1,000-car garage on air rights above the highway along with a 12-court tennis pavilion. To reduce noise near Page Elementary School, Simonds proposed to increase the right-of-way to allow for construction of a park.

According to the *Star*:

Other plans include covered pedestrian walkways and bicycle and pedestrian paths insulated from the road noise, he said. A low-intensity, even lighting system is also being worked on, he said.

In response to a question, Simonds said, “Air pollution in the whole valley will not be too serious” because the valley is wide and new federal controls on vehicles will drastically cut pollution emissions by 1975.

Reporters in the *Star* and *Post* agreed that the proposals were greeted with skepticism, even laughter from the capacity crowd, but according to the *Star* “the volume was low in contrast to earlier tumultuous public hearings on the road.” When Simonds described his plan to build a park near Page Elementary School as the “highway’s gift to the community,” he was “greeted with laughter from the audience.”

Chief Engineer and Deputy Commissioner Harwood, in attendance, said the State highway agency would “go as far as it can in implementing” the proposals, but was doubtful the State “can do it all.” Simonds did not provide a cost estimate, but Harwood estimated it would increase construction costs by 15-20 percent. [Brockett, Diane, “Arlington Given Plan to Soften Impact of I-66,” *The Evening Star*, June 4, 1971; Ringle, Ken, “Arlington Board Shown I-66 ‘Parkway’ Design,” *The Washington Post and Times Herald*, June 4, 1971]

U.S. District Judge Oren R. Lewis held a 4-hour hearing on the suit on August 3. Lawrence J. Latto, representing the plaintiffs, argued that Arlington had changed “so substantially” since the last public hearing 13 years ago that I-66 should be reexamined in a new public hearing. He referred to Section 18 (“Preservation of Parklands”) of the Federal-Aid Highway Act of 1968, which amended Section 4(f) and the comparable Section 138 of Title 23, United States Code, to establish uniform requirements for preservation of publicly owned parklands. As mentioned before, the amended section prohibited the Secretary from approving the use of such lands for

highway projects unless there is “no feasible and prudent alternative,” and if such lands must be used, that all possible planning be instituted to minimize harm to these lands. In addition, the section required public officials with jurisdiction over the parkland to state whether the parkland or other site is of significance for preservation.

The *Post* summarized Latto’s arguments:

He argued that the last location hearings, which were held in 1958, were “stale.” “There does come a time,” Latto said, “when changes in a community . . . are so significant and substantial that the original determination (on the road) becomes vitiated” . . . .

Relying on a recent U.S. Supreme Court ruling that barred the construction of a road through a Tennessee park [Overton Park in Memphis], Latto argued that federal officials should also restudy the I-66 route for its impact on the 22-acre Bon Air Park and 30-acre Spout Run Parkway. The road would take 9.7 acres and 5 acres respectively from those parks . . . .

Latto said further that the plaintiffs were not questioning whether the road “is good,” but argued that federal and state officials should be made to restudy the freeway’s impact on the environment, particularly in light of plans for a subway system and updated figures on population and housing trends.

The article also described the defense:

Justice Department attorney Irwin Schroeder, representing DOT, contended that the I-66 project was exempted from the 1968 law since approval had been given before the federal act was passed.

He added that federal and state highway authorities have reviewed the project and “concluded that no new hearings are required.” He also said he was skeptical that new hearings would result in a route change . . . .

Schroeder contended that the road’s path through the two parks need not be reaffirmed and that the tracts, partially purchased for highway purposes, did not fall in the category of major national, state or local interests as defined by the Tennessee ruling.

Latto, however, countered that while the route may have been approved, construction of the road still has to be reaffirmed by Volpe, who, Schroeder said yesterday, has decided against a review.

Regarding the parkland, Schroeder replied that “the land is of greater significance for highway purposes than for parks.” Judge Lewis agreed that I-66 would endanger only the edges of the two parks, but told Schroeder that under further consideration via a public hearing, “You might end up with moving your road 50 feet.”

Latto also raised a concern about the tape recording of the 1958 public hearing, claiming the failure to transcribe the tape until the present year was a regulatory violation. BPR’s PPM 20-8,

in effect when the hearing was held, required that “a public hearing shall be held and a transcript made thereof.” The PPM was amended on June 16, 1959, to state that tape recordings would not be accepted as a transcript. Schroeder denied the violation and Judge Lewis said the issue “doesn’t intrigue me much.” [Scannell, Nancy, “I-66 Foes Tell Court New Hearings Are Needed,” *The Washington Post and Times Herald*, August 3, 1971; Beckham, Nancy, “Judge Lewis to Study Request For New Route 66 Hearing,” *The Evening Star*, August 4, 1971]

Judge Lewis ruled for the defendants on October 9, 1971, saying “there is no justification or legal requirement for further delay in completing construction of I-66.” He made clear that his decision affected only the 9.7-mile section of I-66 between the Capital Beltway and the Theodore Roosevelt Bridge. He explicitly excluded any judgment on I-266 or the Three Sisters Bridge:

The Three Sisters Bridge is not a part of I-66, neither is the proposed connecting road, I-266. Some adjustments in the I-66/I-266 interchange will be required if I-266 is not built. They have been considered and approved.

In so ruling, he rejected the plaintiffs’ argument that the need for I-66 hinged on whether the District built the Three Sisters Bridge.

He also disagreed that changes in the area necessitated additional review:

The transportation needs of the area have been monitored over the years by the many agencies responsible therefor – and the officials charged by law for selecting the location for I-66 have reaffirmed their choice on numerous occasions up to the present time.

He added that the general location of I-66 had been known since 1961 when it was included in the Arlington County General Land Use Plan; development had taken place with that corridor in mind.

Judge Lewis also rejected the Section 4(f)/Section 138 argument. Plaintiffs had not claimed the requirements were retroactive, but that they cover all work begun after their effective date. To accept that argument would mean that all work on Interstate highways traversing any park would have to be halted, a solution that he said was clearly not the intent of Congress. Moreover, Arlington County had purchased Bon Air Park “for the specific purpose of highway use.” The NPS had agreed to the use of 5 acres of Spout Run Parkway for I-66 and 13.97 acres for I-266 on the condition that the State replace the land with similar parkland. Neither the county nor NPS officials had found that the parkland was of local or national significance for park purposes. Therefore, Judge Lewis said the only inference that can be drawn was the one drawn by the defendants, namely that the land is more important for highway than park purposes.

He also did not accept the argument that I-66 must retroactively comply with NEPA. The route had been approved before NEPA was enacted on January 1, 1970; the only activity since then involved work authorized or approved before then. FHWA issued guidance on November 30, 1970, that an environmental impact statement (EIS) under NEPA would be required only on projects that had not received design approval prior to February 1, 1971. FHWA had approved the EIS for I-66 on January 21, 1971, just before the deadline. Regardless, the defendants stated

they were requiring Virginia to file an EIS before construction approval, and work was underway on the review.

As for failure to transcribe the 1958 public hearing, Judge Lewis dismissed the issue, saying that it “at best constitutes harmless error.”

Commissioner Fugate was “very pleased” with Judge Lewis’s opinion. Fugate estimated that construction would begin on the 3-mile segment in the spring “if we can get some of our environmental designs cranked into the plans” in time.

Emilia Govan said she was disappointed by the ruling but declared, “We’ve just begun to fight. The citizens are not going to allow that highway to be built without challenging every future step.” She said the coalition intended to appeal the ruling. [Scannell, Nancy, “I-66 Suit Quashed By Judge,” *The Washington Post and Times Herald*, October 10, 1971; Beckham, Nancy, and Hutchens, Timothy, “Judge Dismisses I-66 Suit, See No Basis for Delay,” *The Evening Star*, October 9, 1971; *Arlington Coalition on Transportation v. Volpe*, Civil Action No. 59-71-A (E.D. Va October 8, 1971)]

The *Star* was encouraged by recent developments. Judge Lewis’s opinion had removed another “obstacle to progress on this area’s besieged highway program.” The opinion was “a major breakthrough” because it “unequivocally” rejected the plaintiffs’ arguments. It also undercut arguments by opponents of the Three Sisters Bridge who contended that the bridge should not be built “while the future of the freeway that would connect it to the Beltway is still uncertain.”

Maryland, as will be discussed, had indicated it would “press for construction of Interstate 95 to connect the Beltway with downtown Washington.” Moreover, the model of the Three Sisters Bridge had passed its safety test “by a margin so wide as to be astonishing.”

The *Star* understood that these positive signs did not mean construction could begin on any of these projects soon. “Regional highway planners have learned from repetitious experience that when an obstacle falls, another is quite likely to pop up in its place.” However, if construction could begin, “this city’s subway money that is frozen on the Hill will undoubtedly be released.”

Therefore, VDH officials should press for construction as soon as possible, and seek an early hearing if an appeal is filed. Similarly, Secretary Volpe should press for speedy resumption of construction for the Three Sisters Bridge:

Traffic continues to swell and clog, and key legislators continue to sit on the subway money because Congress’ highway-building orders of long ago haven’t been carried out. It’s time for some forceful action to break the costly stalemate. [“Time for Highway Action,” *The Evening Star*, October 11, 1971]

The day after that editorial appealed for action, Judge Bazelon issued the majority opinion on the Three Sisters Bridge, as discussed earlier. His decision encouraged ACT to renew its fight against I-66. About 150 opponents met in the evening of October 13 to discuss their next steps. Latto indicated he had filed a notice of appeal with the Fourth U.S. Circuit Court the day before seeking reversal of Judge Lewis’s opinion. He also planned to seek a temporary injunction

against further condemnations for right-of-way acquisition, which VDH had voluntarily suspended while the court proceedings were underway.

Latto pointed out that many of the points that Judge Lewis had rejected had been upheld by Judge Bazelon as requiring further review. For example, the bridge ruling required consideration of alternatives to the Three Sisters Bridge and its impact on the environment, including parklands, while Judge Lewis found that additional review under NEPA and Section 4(f) was not needed. [Scannell, Nancy, "I-66 Foes Begin New Legal Fight," *The Washington Post and Times Herald*, October 14, 1971]

### **A Blockbuster Ruling**

The I-70S North-Central Freeway and its I-95 Northeast Freeway spur had generated much of the original opposition to the District's freeway network, including from ECTC activists. Since the abandonment of the I-70S/Northwest Freeway in the Wisconsin Avenue corridor and the shift of the Interstate number to the North-Central Freeway, the Maryland links to I-70S and I-95 between the Capital Beltway and the District line had become increasingly controversial.

In early October, Secretary of Transportation Harry R. Hughes, a State legislator since winning election in 1954 who had become Secretary with the start of Maryland Department of Transportation operations on July 1, 1971, wrote to Montgomery County officials to say that the State would not oppose dropping the I-70S link between the Capital Beltway and Fort Totten in the District.

One factor in the State's decision was that I-70S would have to be carried on the Capital Beltway from the Pook's Hill interchange, the present terminus of I-70S, for several miles before linking via interchange with the I-70S connection with the District. Secretary Hughes said this link would cause serious traffic problems without reconstruction of the Capital Beltway. "Maryland does not have the resources, either on its own or in combination with any federal authorization, to overcome this problem." He added that deletion of I-70S between the Capital Beltway and the District line would be contingent on being able to use the Interstate funds on other Interstate projects in Maryland.

At the same time, Secretary Hughes said the State had not abandoned the I-95 link inside the Capital Beltway. The State endorsed upgrading the Baltimore-Washington Parkway to Interstate standards with a link to the city's proposed Industrial Highway in the New York Avenue corridor. These were, however, no substitute for a direct I-95 link from the Capital Beltway through the District:

Interstate 95 is an important link in Maryland's transportation system, providing direct service within the Baltimore-Washington corridor, the fastest growing area of the state. Many significant development decisions, both public and private, have been made over the last decade in suburban Maryland in anticipation that Interstate 95 would be built.

For years, the map of the I-95 extension had shown it passing west of the University of Maryland's College Park campus, running through Northwest Branch Park on an undecided

alignment, and entering the District near Chillum, Maryland. However, the 5-mile extension of I-95 to the District line would be needed only if the city built its portion of the route. The State asked COG for \$1.8 million to study the routing question. [Walsh, Edward, "Beltway, I-95 Leg Pushed," *The Washington Post and Times Herald*, October 7, 1971]

In a resolution dated September 15, the Prince George's county council had protested the routing of I-95. The resolution called the extension "almost a classic example of neighborhoods and park lands being sliced by 'concrete ribbons' to accommodate runaway technology." The county, which had received letters from residents along the proposed route opposing construction, preferred to emphasize Metro service.

At the county's request, COG held a conference on October 8 to consider the routing. A State transportation department representative, Fred Gottemuller, advised officials that the State planned to study routing for the extension but also the no-freeway option. The problem with the no-freeway option was that traffic would overload existing roads or require the State to widen the Capital Beltway between the present terminus of I-95 and the Baltimore-Washington Parkway. The widening would create an "environmental . . . impact of great magnitude."

Gottemuller told conference participants that the State was considering an alignment along a major electric power line in the vicinity of New Hampshire Avenue and another option along the Baltimore and Ohio Railroad's branch line. He indicated that the State was waiting for the report, requested in the Federal-Aid Highway Act of 1970, from the District and Secretary Volpe on the routing of I-95 in the District.

George H. F. Oberlander of NCPC reminded State officials that NCPC and the D.C. city council had adopted a policy of not building major new road gateways into the city. This policy would prohibit the I-95 link that Maryland was studying. [Eisen, Jack, "Plans for Building I-95 into City Stirs Fight," *The Washington Post and Times Herald*, October 9, 1971]

On October 12, the three-judge panel of the U.S. Court of Appeals issued what the *Star* called "a blockbuster ruling." The decision, approved 2 to 1, reversed Judge Sirica's ruling that construction could begin if certain conditions were met. Referring to "the long and sometimes acrimonious imbroglio" over the bridge, Chief Judge Bazelon wrote that Secretary Volpe's approval of the Three Sisters Bridge "must be predicated on compliance with a number of statutory provisions." These provisions included Section 4(f) of the Department of Transportation Act of 1966. In view of the Supreme Court's ruling in the Overton Park case, Judge Bazelon wrote:

Our review of the Secretary's determination is hindered not only by the lack of any formal findings, but also by the absence of a "meaningful administrative record within the Department of Transportation evidencing the fact that proper consideration has been given to the requirements of this section." However regrettable, the failure to provide explicit findings indicating why all possible alternatives to the bridge would be unfeasible or imprudent does not, in itself, invalidate the Secretary's action. But the complete non-existence of any contemporaneous administrative record is more serious. Absent a record, judicial review of the Secretary's action can be little more than a formality unless

the District Court takes the disfavored step of requiring the Secretary to testify as to the basis of his decision. And even the Secretary's "*post hoc* rationalizations," filtered through a factfinder's [sic] understandable reluctance to disbelieve the testimony of a Cabinet officer, will rarely provide an effective basis for review. Furthermore, it is hard to see how, without the aid of any record, the Secretary could satisfactorily make the determinations required by statute. The absence of a record, in other words, simultaneously obfuscates the process of review and signals sharply the need for careful scrutiny.

Secretary Volpe's testimony before the District Court was "on occasion uncertain and inconsistent with the testimony of others" and raised "a serious question whether he considered all possible alternatives" to the use of parkland as required by Section 4(f).

Section 23 of the Federal-Aid Highway Act of 1968 did not overrule these considerations. The provision directed construction of the bridge as specified in the 1968 ICE, but provided that the projects "shall be carried out in accordance with all applicable provisions of title 23 of the United States Code":

If the bridge cannot be built consistently with applicable law, then plainly it must not be built. It is not inconceivable, for example, that the Secretary might determine that present and foreseeable traffic needs can be handled (perhaps by expansion of existing bridges) without construction of an additional river crossing. In that case, an entirely prudent and feasible alternative to the Three Sisters Bridge might be no bridge at all, and its construction would violate §138 [of Title 23, United States Code, i.e., Section 4(f)]. Thus, the Secretary may have disregarded one possible prudent and feasible alternative to the use of parkland and historic sites on the mistaken assumption that that alternative was foreclosed . . . .

What was clear was that Secretary Volpe had been heavily influenced by the need to overcome Chairman Natcher's hold on Metro construction funds. Judge Fahy, who concurred in the decision, was "not entirely convinced that the District Court ultimately found as a fact that the extraneous pressure had influenced the Secretary's decision." However, Judge Fahy had authorized Judge Bazelon "to note his concurrence in my discussion of the controlling principle of law: namely, that the decision would be invalid if based in whole or in part on the pressures emanating from Representative Natcher." Further, "the Secretary must make new determinations based strictly on the merits and completely without regard to any considerations not made relevant by Congress in the applicable statutes." Judge Bazelon continued:

If, in the course of reaching his decision, Secretary Volpe took into account "considerations that Congress could not have intended to make relevant," his action proceeded from an erroneous premise and his decision cannot stand. The error would be more flagrant, of course, if the Secretary had based his decision solely on the pressures generated by Representative Natcher. But it should be clear that his action would not be immunized merely because he also considered some relevant factors.

The loss of subway funding might be a “unique problem . . . of extraordinary magnitude,” but Judge Bazelon wrote:

The Secretary plainly understood that the price of abandoning, modifying, or even delaying construction of the bridge was the loss of appropriations for the District’s subway. He undoubtedly viewed the prospect of that loss with understandable alarm, and may have concluded that the destruction of parkland was inescapable and appropriate in the face of Representative Natcher’s clear and enforceable threat. We cannot agree, however, that a determination grounded on that reasoning would satisfy the requirements of §138.

Judge Bazelon wanted to make clear what he was not saying:

To avoid any misconceptions about the nature of our holding, we emphasize that we have not found – nor, for that matter, have we sought – any suggestion of impropriety or illegality in the actions of Representative Natcher and others who strongly advocate the bridge. They are surely entitled to their own views on the need for the Three Sisters Bridge, and we indicate no opinion on their authority to exert pressure on Secretary Volpe. Nor do we mean to suggest that Secretary Volpe acted in bad faith or in deliberate disregard of his statutory responsibilities. He was placed, through the action of others, in an extremely treacherous position. Our holding is designed, if not to extricate him from that position, at least to enhance his ability to obey the statutory command notwithstanding the difficult position in which he was placed.

The court’s ruling focused on Section 4(f), but concluded that the Secretary’s decision also was inconsistent with the 3C planning requirements. Plaintiffs had argued that in December 1968, NCPC had rejected the Three Sisters Bridge in response to President Johnson’s call for a comprehensive plan for a District highway plan. Defendants pointed out that COG’s TPB, not NCPC, was the official 3C planning agency. TPB had approved the bridge. The court was unwilling to “resolve this dispute by some abstract balancing of NCPC disapproval against TPB approval.” The issue was not whether one plan was better than the other, but that the statute called on the Secretary “to determine whether a particular project will be consistent with sound transportation planning for the region.”

Secretary Volpe had delegated the responsibility for making that decision to Mr. Hall, FHWA’s Division Engineer in the District. Hall had concluded that TPB was the 3C agency, a decision that Judge Sirica had accepted. “But that reasoning cannot do service for the more sophisticated determination required by the statute.” Hall had “apparently” done little more than find that adopting TPB’s decision on the bridge was consistent with comprehensive planning:

Yet that is precisely the determination that the Department of Transportation, taking into account the recommendations of local plans, must make. The statute plainly does not permit the Department to delegate its statutory responsibility to a local planning agency. On remand, the Department must reevaluate the project in light of the purposes of § 134.

The court doubted that Hall's decision, grounded in a misunderstanding of the statute, "could be upheld on the present record even under the constrained standard of substantive review." TPB had approved the bridge in 1967, at a time when NCPC also approved the bridge. However, TPB had not adopted a comprehensive plan at the time:

TPB approved the project not under § 134, but under the Demonstration Cities and Metropolitan Development Act of 1966 [P.L. 89-754, November 3, 1966]. NCPC, on the other hand, developed a transportation plan in response to President Johnson's call for the development of a "comprehensive plan for a D.C. highway system" which would permit the Department of Transportation to determine whether the Three Sisters Bridge and other projects would be "appropriate links" in such a plan; it then rejected the bridge proposal. And even if TPB approval were not – at least on its face – stale, inapposite, and unsupported by any underlying, comprehensive plan, we would still have difficulty accepting the Department's finding without some explanation of how the § 134 determination could be made before plans for the bridge are finalized. Nothing in the record suggests that TPB approval – whatever its other apparent shortcomings – embraced each conceivable design that might eventually be adopted.

Judge Bazelon also raised concerns about compliance with 23 U.S.C. 109(a), which required approval of plans only if the proposed facility will "adequately meet the existing and probable future traffic needs and conditions in a manner conducive to safety, durability, and economy of maintenance." Judge Sirica, in finding that planning for the bridge had not determined if it would be structurally feasible, had called for such planning; the Court of Appeals concurred with that decision.

Plaintiffs, however, had argued that Secretary Volpe had not determined whether riverbed conditions would support the bridge and that an increase in air pollution attributable to traffic on the bridge would not pose a safety hazard. Hall had testified that he could not be certain the planned foundation would be adequate, but said, "there is no question that the piers can be built to support the bridge as presently planned." Obviously, Judge Bazelon explained, the Department of Transportation would not build a bridge if the riverbed was not suitable:

But § 109(a) requires not only that the bridge be safe, but also – and no less important – that its safety be ascertained before the Secretary approved the project. That requirement minimizes the safety hazards and at the same time insures that public funds will not be squandered on a demonstrably unsafe proposal . . . .

We hold that if such questions do exist, the Secretary must take steps to resolve them to the fullest practical extent before granting approval of the project under § 109(a).

As for air pollution, Judge Sirica had concluded that evidence of a potential threat was insufficient to require a special study of the issue. Obviously, Congress did not intend to permit construction of a bridge that would result in pollution that would be a threat to safety. "It does not follow, of course, that air pollution will be a significant hazard in all – or even any – highway projects; Judge Sirica did not find any evidence that the Three Sisters Bridge would pose such a

threat. Nevertheless, the Department of Transportation “has far greater resources and expertise” on this matter than the District Court. Such a study might reveal significant dangers:

Inquiry into this issue cannot be foreclosed merely because the District Court found no significant evidence of air pollution hazards. That determination must be made in the first instance by the Secretary of Transportation.

Judge Bazelon also questioned compliance with the public hearing requirements of 23 U.S.C. 128 (“Public hearings”). Without admitting fault, the city had conducted a design hearing in December 1970; he agreed that the hearing satisfied the requirement for a design hearing. Defendants also contended that a location hearing in 1964 satisfied the requirement for such a hearing. However, of three locations presented during that hearing, the one most similar to the current location was 1,500 feet away on the District of Columbia shore and 950 feet away on the Virginia shore. Interchanges had been substantially redesigned since then, affecting their location:

Accordingly, we remand this issue to the District Court for clarification of the factual basis of its conclusions, and for reconsideration in light of any further location changes the Secretary of Transportation may order.

The court also considered the Act of March 2, 1893. Judge Bazelon explained that the District Court had initially concluded that Section 23 of the Federal-Aid Highway Act of 1968 exempted the project from the public hearing requirements of Title 7 of the District Code. The subsequent Appeals Court ruling indicated that the District must comply with Title 23 provisions, but did not state whether it also had to comply with non-Title 23 requirements, such as Title 7.

Neither the briefs filed in the appeal nor the oral arguments addressed the issue. Section 23 had ordered construction of the bridge “notwithstanding any . . . court decision . . . to the contrary,” but Judge Bazelon pointed out that with regard to the District Code, his reference to the issue in his prior ruling had not been “to the contrary.” Therefore, he deferred judgment on this issue to allow the parties, if they wished, to file memoranda dealing with the question.

The court remanded the case to the District Court “with directions that it return the case to the Secretary for him to perform his statutory function in accordance with this opinion.” The court added:

It seems clear that even though formal administrative findings are not required by statute, the Secretary could best serve the interests of the parties as well as the reviewing court by establishing a full-scale administrative record which might dispel any doubts about the true basis of his action. Accordingly, the District Court is directed to enjoin construction of the bridge until the defendants have complied with the applicable statutory provisions as set forth in our opinion. [*D.C. Federation of Civic Associations et al., v John A. Volpe, Secretary of Transportation, et al.*, 459 F.2d 1231 (1971); underlining in original]

The *Star* called the ruling “startling.” The editors agreed with Judge Bazelon’s reference to this “long and sometimes acrimonious imbroglio,” but “with not much else”:

To the confusion reigning before, the ruling adds some vast new dimensions of controversy, broadening the scope of permissible legal attack on highway projects here and perhaps everywhere else in the nation. The result – particularly in Congress – is apt to be more acrimony, not less. The fate of the District’s hostaged subway appropriations is as unsettled as ever.

Adding to “this dismal picture” was the ruling’s “extraordinary challenge to congressional authority.” The ruling “instructs Volpe to ignore . . . such ‘extraneous considerations’ as a 1968 order of Congress which specifically directed that the bridge be built without delay.” Unless an appeal was planned, Secretary Volpe should immediately comply with the ruling, but it would not be easy because Judge Bazelon “has left no legalistic pebble unturned.”

As for Chairman Natcher, he should release the District’s appropriation of matching funds for Metro in full. His attempt to force the Administration “to proceed in good faith to build the bridge, as ordered by Congress” was moot, at least for the moment. “Volpe is so clearly powerless now to move in that direction that it would be an act of sheer irresponsibility for Congress to penalize the citizens of this region any longer by prolonging the appropriation ban.”

The Three Sisters Bridge would, in time, be built, because the “circulatory needs of traffic demand its construction.” How long it would take “to overcome the new barriers of legalisms” was unpredictable. [“The ‘Acrimonious Imbroglio,’” *The Evening Star*, October 14, 1971]

The *Star*’s news coverage of the ruling pointed out that the fate of the bridge “now appears to rest with” Chairman Natcher because the ruling argued that Secretary Volpe had approved construction without following all requirements in hopes that Chairman Natcher would release the District’s share of funds for the subway, which the Secretary strongly supported:

It has been widely believed that Natcher would be willing to overlook the lack of freeway construction if only the building of the Three Sisters Bridge would begin again. But the court’s ruling appears to put the shoe on the other foot – Natcher must release the money first and then construction on the bridge might be resumed.

Otherwise, Volpe would be hard pressed to argue that he hadn’t taken Natcher’s influence into consideration. The pressure is there. Volpe wants the subway built and there seems to be no way to untwine the two without Natcher taking the first step.

Even if Natcher released the District’s matching funds, Secretary Volpe would still have to follow the steps required by the ruling:

Government officials, still studying the court’s 34-page opinion today, were unsure exactly what these steps are and how they must go about taking them. Likewise, they say they don’t know how long it will take before the steps are completed and construction can be resumed.

They had considered the alternatives Judge Bazelon suggested and dismissed them as unfeasible. “The projected traffic load in the Virginia-District sector clearly calls for a bridge at the Three Sisters site, they contend.”

In addition, construction of I-66 through Arlington would seem to make the Three Sisters Bridge, which would carry some of the resulting traffic as part of I-266, “a necessity, or Arlington would be faced with a mammoth traffic problem.” A specific segment of that I-66 traffic, namely the trucks that were banned from the Theodore Roosevelt Bridge, needed the I-266 bridge to cross the Potomac River. At the same time, Arlington residents had challenged construction of I-66 in court. The outcome could affect the need for the bridge. [Barnes, Fred, and Groom, Winston, “Bridge Decision May Be Up to Natcher,” *The Evening Star*, October 13, 1971]

Representative Broyhill was the first Member of Congress to react to the ruling. He wanted to “get this logjam broken and free money for the subway.” He planned to offer a rider to the District revenue bill when the House District Committee met on October 15. The rider would order the District to resume construction of the Three Sisters Bridge regardless of “any court decision or administrative action or procedure.” He told reporters that Judge Bazelon’s ruling “makes the Congress look ridiculous,” adding:

If you have a judge who is personally against the bridge, then he’ll subvert the law. The only thing is to pass another law or impeach the judge. [“Bridge Move Sought Today by Broyhill,” *The Washington Post and Times Herald*, October 15, 1971]

Chairman Natcher, as usual, refused reporters’ requests for comment on the ruling. The *Star*, however, reported that:

Congressional sources said yesterday the appeals court decision strengthens Natcher’s hand if he again moves to block release of the subway money due to his irritation over the roads.

They explained that the court decision will permit Natcher to tell the House the courts have defied the wishes of Congress by halting bridge construction. This strategy would make it difficult for most members of the House to appear that they were knuckling under to the courts. [Green, Stephen, “Broyhill is Seeking to End Impasse on 3 Sisters Bridge,” *The Evening Star*, October 14, 1971]

The *Post* editorial board used the shoe analogy that the *Star* had also employed, beginning its editorial on the ruling:

The shoe is now on the other foot . . . . If Mr. Natcher wants the bridge built, he must allow it to be built under the terms of the law. If he persists in withholding the Metro funds, he at least ought to be a lot more explicit than he has been so far as to what he wants. He has yet to state precisely what he expects the District and the Department of Transportation to do – again, within the terms of the law – as a condition for their release.

Noting Judge Bazelon’s statement that no one had engaged in “impropriety or illegality,” the *Post* agreed about “illegality,” adding:

But where is the propriety in using appropriations for a subway which is already under construction as a club to beat the federal and city governments into doing anything other than it is required to do by law about a bridge?

Representative Broyhill, the editorial pointed out, thought Congress could pass yet another law ordering construction of the bridge. “But would that exempt the District and DOT from the required review? The question, it seems to us, only invites more litigation.” [“The Bridge and the Metro Funds,” *The Washington Post and Times Herald*, October 16, 1971]

Two days later, in a News Analysis, Jack Eisen wrote that when asked about the fate of the Metro subway, “nobody on either side of Washington’s agonizing subway-freeway dispute . . . can do more than guess an answer.” The area’s congressional delegation, with the exception of Representative Broyhill, had “sidestepped responses”:

Even “informed sources,” those shadowy insiders who sometimes tell newsmen at least part of what they know, profess bafflement.

President Nixon also had declined to intervene. “He is reported, however, to have called aides into his office a few weeks ago for an explanation of what is going on.”

Chairman Natcher maintained his “customary silence” but that did not stop speculation:

Some people feel Natcher might see fit to regard the court decision as the basis for graceful withdrawal from the dispute.

Perhaps so. But less sanguine observers point to what he said in House debate on Aug. 11, 1969, two days after the D.C. City Council agreed reluctantly to build Three Sisters. “I will never come into this House and ask that the Public Works Committee be repudiated and that we void the law of 1968,” Natcher declared. “I do not intend to do it.”

(An interesting sidelight: During that debate, a news clipping shows Natcher remarked that he did not “think there is a judge on any bench in the District of Columbia” who would override the congressional Three Sisters mandate. Natcher apparently edited this remark out of the debate transcript as printed the next day in the Congressional Record.)

He had never lost a fight on the House floor over his Metro fight, despite the close vote on May 11 on the Giaimo Amendment:

That was an internal House debate – all in the family, so to speak. Some now fear that the court decision might be regarded on Capitol Hill as a direct confrontation between the powers of the judicial and legislative branches. [Eisen, Jack, “D.C. Subway Fate is Doubtful Again,” News Analysis, *The Washington Post and Times Herald*, October 18, 1971]

Roberts B. Owen, counsel for the plaintiffs, reacted to the *Star* editorial in a letter published on October 22. He wanted to make clear that Judge Bazelon’s ruling had not “instructed Volpe” to ignore “extraneous considerations” such as Section 23 of the Federal-Aid Highway Act of 1968. Instead, the ruling called on Secretary Volpe to comply with Federal law, including Section 23, which directed officials to proceed “in accordance with all applicable provisions” of Title 23:

Accordingly, when it became clear that the Department of Transportation had not complied with those laws, the court had no choice but to order the department to do so.

The ruling was not, as the editorial had claimed, “an extraordinary challenge of congressional authority.” Instead, it challenged “an unauthorized disobedience (under pressure from one member of Congress) of the federal highway laws enacted by the Congress as a whole.” In calling for Secretary Volpe to proceed with construction of the bridge “in disobedience of federal highway laws enacted by Congress, your editorial itself (perhaps unwittingly) called for defiance of congressional authority.”

Finally, Owens objected to phrases such as “no legalistic pebble unturned” and “legalisms.” He said:

I take it that you are saying that, when congress in its wisdom enacts a law specifying the steps to be taken by the secretary in order to protect the public interest, that federal statute constitutes a “legalistic pebble” and that, when the court requires obedience to the statute, it is engaged in a “legalism.” At the very least your statement reflects a profound disrespect for the laws of the United States.

In an Editor’s Note following Owen’s letter, the *Star* responded that there was “no arguable statutory basis” for the ruling. The recent *Star* editorial had urged Secretary Volpe to comply immediately “despite the superabundance of legalistic pebbles newly turned up.” The note continued:

But the basic congressional intent of the 1968 statutory provision involved here was, in fact, to command the immediate construction of the Three Sisters Bridge. To imply otherwise, or to imagine that this new court ruling has not made compliance with that congressional command immeasurably more difficult than before, is absurd. [Owens, Robert B., “The Court and the Bridge,” and Editor’s Note, Letters to the Editor, *The Evening Star*, October 22, 1971]

On October 22, ECTC held a press conference at the District Building to accuse Representative Broyhill of a conflict of interest in supporting the Three Sisters Bridge. The Reverend Gipson said that Representative Broyhill and his wife had purchased an apartment complex the previous summer at 1600 North Pierce Street in Arlington for \$250,000 and that the Broyhill family owned several warehouses near North Quincy Street in Arlington. The apartment complex, the Reverend Gipson said, “will be torn down and the property redeveloped for a big profit” as a result of construction of I-66. The warehouses, located where I-66 was supposed to cross North Quincy Street, would also increase in value.

“Maybe Broyhill is not as concerned for the people as he is for his own pocketbook,” the Reverend Gipson said. He speculated that the Congressman was supporting construction of the Three Sisters Bridge because the traffic it would handle would necessitate construction of I-66.

A spokesman for Representative Broyhill said his only motive was to free \$72.5 million in Metro matching funds that Chairman Natcher was holding hostage. He did own the apartment complex,

but the Congressman had “no knowledge” of the warehouses. The spokesman characterized the charge as “garbage.” [Barnes, Fred, “Broyhill is Accused of 3 Sisters Span Conflict of Interest,” *The Evening Star*, October 23, 1971; Scharfenberg, Kirk, “Foes Charge Broyhill Stands To Profit From Three Sisters,” *The Washington Post and Times Herald*, October 23, 1971]

ECTC participated in a celebration of the court ruling on October 30 at the site of the Three Sisters Bridge project. Sammie Abbott told 60 or so celebrants that the ruling was “a victory in a long battle which has been declared against the people by the federal government with such programs as urban redevelopment and the highways.” He added, “Without the fear of civil disobedience, we would not have victorious lawsuits and we wouldn’t have the response from political individuals.” He and others who spoke at the rally indicated they planned to begin protesting plans for high-rise redevelopment around Metro stations. [“Foes of Three Sisters Celebrate Court Ruling,” *The Sunday Star*, October 31, 1971]

On November 4, Judge MacKinnon issued what the *Star* called a “blistering dissent” to the majority finding. He explained that governmental authorities “concluded that it is necessary to erect the Three Sisters Bridge across the Potomac River.” The plaintiffs, whatever their views on the need for the bridge, did not “seriously attack the basic merits of the overall program to improve highway traffic congestion.” Instead, they based their “opposition on an alleged failure to comply with certain procedural requirements imposed by statute which are applicable to the planning and construction of the project.”

Thus, the need for the bridge was not at issue in the case. Nevertheless, because Judge Bazelon’s opinion involved “an overly technical, legalistic and impractical interpretation” that contained “gross distortion,” the three-judge panel “exceeded its authority” in ruling against construction of the bridge.

Judge MacKinnon observed that “the Constitution vests Congress with complete control over the entire area of the District of Columbia for all governmental purposes”:

Pursuant to this assignment of responsibilities, Congress and its members have taken cognizance of the need for transportation facilities in the District of Columbia and the surrounding metropolitan area. To meet the area’s transportation needs it has authorized the appropriation of federal funds for the construction of a metropolitan subway system and has also authorized and directed that substantial additions be constructed to the thru-highways in the area. These additions include the erection of the Three Sisters Bridge. In this connection it was the decision of Congress that the subway construction and the additional highways (including the Three Sisters Bridge) would be built contemporaneously. This conclusion follows from the facts of the contemporaneous appropriations and the express congressional direction that work on the Three Sisters Bridge begin within thirty days after the congressional enactment (82 Stat. 815).

The panel’s majority decision negates “the extensive findings of the trial court . . . and the practical trial judge who heard all the witnesses in an extensive 12-day hearing, received 1,025 pages of depositions and then thoroughly documented his findings in an opinion covering 40 printed pages.” As this extensive trial court review suggests, the location of existing

highways and bridges, the area's topographical features, and the desire to alleviate traffic congestion "within the parklands on both sides of the river . . . might compel the conclusion that as a matter of sound *highway* engineering the only feasible project that would correct the congestion would be to erect a bridge in the vicinity of the Three Sisters Islands."

Judge MacKinnon also discussed whether Chairman Natcher forced Secretary Volpe to approve the bridge "without regard to its merits." Judges Bazelon and Fahy concluded that Secretary In that regard, the trial court found that Chairman Natcher indicated he would withhold appropriations until the District of Columbia complied with Section 23 of the Federal-Aid Highway Act of 1968 by getting the freeways underway "beyond recall":

Rep. Natcher was thus merely attempting to see that the laws enacted by Congress were carried out. It is not unusual or improper for Congress to withhold appropriations until its laws are complied with.

Under the circumstances, Secretary Volpe had to consider Chairman Natcher's position, but that did not mean the bridge decision "must necessarily have been improperly influenced by that information." In fact, Secretary Volpe stated that no "outside factors" influenced his decision on the bridge:

Indeed, it would be impossible and contrary to law for any secretary of transportation to pass on any major highway project in the District of Columbia without being familiar with and considering its effect and relationship to the subway construction program.

That is true in this case because the "realities of the situation" are that under the Constitution, Congress "has a wider voice in the affairs of the District of Columbia than it does in the affairs of states or other cities." Under that authority, Congress took "a firm hand" in regard to the District's highway program:

But no Congressman has any weight in such matters beyond his ability to speak for Congress and to the extent that he does speak for Congress he is only calling attention to the expressed will of Congress.

Congress has spoken in this matter. In Section 23 of the Highway Act of 1968 it ordered the erection of the Three Sisters Bridge, not as a single project but as a part of the broad highway improvement program for the Washington Metropolitan area. And Congress and those who speak for it have a continuing interest in seeing that the expressed will of Congress, as clearly enunciated in a statute signed by the President, be carried out.

Judge MacKinnon added:

There is no basis in law or fact to overturn an administrative decision of this nature because of alleged extraneous pressure of this sort. The facts of political life are such . . . that it is idle to pretend that our administrative officials . . . should make their decisions in a vacuum.

He also was critical of the ruling's reference to the absence of an administrative record. Judge Bazelon had ignored "the fact that the Secretary himself made the vital . . . determinations, having personally involved himself":

After all, the statute places the duty upon the secretary to make such determinations and his decision should not be set aside because of the absence of documents which are not necessary or normal when he personally exercises that responsibility . . . .

We respectfully submit that judicial review does not include that which basically amounts to a 'second-guessing' of his determinations.

The ruling's disbelief of Secretary Volpe's testimony reflected Judge Bazelon's "colossal distrust of government officials":

Judge Bazelon . . . reflects an overly suspicious view with respect to the effect of so-called political pressures. An individual's attitude toward this type of question is closely related to his individual trust in human beings – whether he believes a human being can resist improper pressures . . . . As I read Judge Bazelon's opinion . . . it is his individual view that such pressures are irresistible.

Moreover, Judge MacKinnon was skeptical that a lengthy administrative record would have prompted Judges Bazelon and Fahy to change the ruling. If Secretary Volpe compiled such a record retroactively, Judge MacKinnon doubted that the "more extensive administrative record would cause them to believe him in the future."

As for the air pollution question, "It seems obvious to me that the bridge would not create any air pollution and that to the extent that it relieved highway congestion on the present highways in the parks it would decrease air pollution."

Judge MacKinnon's added that Judges Bazelon and Fahy "ignore the fact that the so-called parklands involved on the Virginia side of the river are all in the George Washington Memorial Parkway," itself a product of congressional action. The fact that this elongated park includes a highway "makes it practically impossible for any proposed bridge in this area to be erected without affecting some of its lands." In fact, some of the congestion the Three Sisters Bridge was intended to relieve "is traffic over the automobile highways within the parkway itself."

All things considered, Judge MacKinnon was skeptical that the U.S. Court of Appeals would ever approve construction of the Three Sisters Bridge. He concluded:

A court that has gone to the great extremes that this court has . . . can always find reasons satisfactory to it for avoiding practically any subjective decision required with respect to the bridge. It may well be that the only hope to carry out the expressed will of Congress lies with the Supreme Court. [District of Columbia Appropriations, 1972, *Congressional Record-House*, December 2, 1971, pages 44264-44266; Barnes, Fred, "Span Up to High Court?" *The Evening Star*, November 5, 1971; "Bazelon's View Held Slanted," *The Washington Post and Times Herald*, November 6, 1971; Green, Stephen, and Barnes,

Fred, "Subway Stalled, High Court Plea Hinted," *The Sunday Star*, November 7, 1971, italics in original]

A *Star* editorial put it this way:

Thus, in dissecting findings with which he disagrees, MacKinnon accuses his colleagues – and Bazelon in particular – of “gross distortions,” of “straining at gnats” to “invent new requirements,” of a “partial and slanted view of the facts,” of an “overly technical, legalistic and impractical interpretation” of the law, of electing to disbelieve Volpe’s testimony “for no reason more substantial than their own innate suspicion.”

Judge MacKinnon was, of course, in the minority and his dissent did not alter the ruling. The editorial concluded, however:

Since the Bazelon-Fahy edict came down October 12, Volpe and District officials have been flopping around like fish in a bucket, while the bridge, not to mention the District’s subway funds, remains in limbo. The question of an appeal to the Supreme Court, reportedly under study, should be resolved immediately, in the direction suggested by MacKinnon. [“The Only Hope,” *The Evening Star*, November 7, 1971]

### **Freeway and Metro Linkage Tightens**

The prospect for prompt release of the District’s Metro funding was, according to Chairman Sickles, dimming. He described himself as being “as optimistic as anyone . . . up until the last few days.” The ruling by the U.S. Court of Appeals on the Three Sisters Bridge raised these new doubts.

Jack Eisen explained that according to anonymous sources, Chairman Natcher had changed his reason for refusing to release the Metro funds:

Previously, he has blamed the city and the federal Transportation Department for failing to push ahead with interstate freeway projects, notably the Three Sisters Bridge, that Congress sought to require in the 1968 Highway Act.

After the U.S. Court of Appeals blocked bridge construction in a recent decision that criticized his money-withholding tactics, Natcher reportedly began telling his colleagues that the court has directly challenged the power of Congress.

In Chairman Sickles’ view, Congress would release the funds only if another floor fight occurred, this time with a different outcome. [Eisen, Jack, “Fund Hope For Metro Grows Dim,” *The Washington Post and Times Herald*, November 7, 1971]

Representative Obey agreed that Judge Bazelon’s ruling, which contained “intemperate and gratuitous language” critical of Congress, had inflamed the situation. In a statement issued on November 12, he said “the D.C. subway is . . . virtually dead and can be rescued only by President Nixon.” He continued:

It is my judgment that without direct, obvious and forceful White House involvement, any effort to pry loose the money for Metro will meet with certain House defeat – by a wider margin than before . . . .

Because of excesses in Judge Bazelon’s opinion, the question of money for the Metro system has been converted in some minds from a simple question of the subway to a question of Congress vs. the courts. That is unfortunate and unnecessary and misleading. It has made it more difficult than ever to win enough House support to release federal dollars for Metro.

Eisen, reporting on the statement, concluded his article, “Obey, who lives in Arlington, stressed that he hopes Three Sisters will never be built.” [Eisen, Jack, “Metro Fate Declared Up to President,” *The Washington Post and Times Herald*, November 13, 1971]

Around this time, reporters discovered that in May, the VDH had filed a five-page draft of an EIS on I-266 with the Council on Environmental Quality. The report became public too late for consideration by the Court of Appeals.

The EIS was favorable to I-266 as well as the Three Sisters Bridge. I-266 would improve the environment along Lee Highway in the Rosslyn-Key Bridge area of Arlington “by reducing noise, air pollution and traffic congestion.” In addition to these benefits, “Urban residents will be able to enjoy nature.” Moreover, I-266 and the bridge would have “practically no detrimental effect along the proposed route.”

The EIS acknowledged “the need for acquiring 31.6 acres of parkway land for road construction,” land that would be replaced on an acre-by-acre basis. This taking “cannot be avoided,” but said construction would “only disturb a small portion of the 31.6 acres with the majority of the existing landscaping left undisturbed.” It continued:

Moreover, the proposed system of trails for hiking and biking is entirely compatible with, and will provide access to, the largely undisturbed parklands. Urban residents will be able to enjoy nature . . . .

This route is unique in the fact that it is compatible with the parkway surroundings and enhances man’s environment with the multiple use of the right of way by providing trails and retaining open spaces.

It dismissed citizen objections “focused on the environmental impact of the project relative to noise and air pollution and the use of parklands”:

The relatively low elevation of the I-266 roadway in the Spout Run Valley with respect to adjoining area reduced human exposure to noises emanating from the project. Although additional vehicles are projected in this transportation corridor, the higher and more uniform speeds point to a pollution abatement benefit.

I-266 was a “vital segment” of the area’s transportation system. VDH conceded that this judgment could prove wrong, but I-266 should be built anyway:

The elements which go into highway construction cannot be classified as irreversible or irretrievable commitments of resources. If the facility is no longer needed as a transportation network or if a greater need arises for the area . . . the roadway can be converted to the needed land use.

The EIS did not cite sources or authorities for its claims.

VDH had distributed the short draft EIS in May to at least 18 State and Federal agencies for comment. As of November, when reporters inquired about the newly discovered draft, VDH said that only two agencies, COG and the U.S. Department of Health, Education and Welfare, had replied and neither disagreed with the statement. As of the date of the inquiry, neither FHWA nor EPA had responded. VDH had not prepared a final EIS. [Barnes, Fred, "3-Sisters Bridge Lauded by State," *The Evening Star*, November 11, 1971; Ringle, Ken, "No Agency Challenges State on Plan for 3 Sisters Bridge," *The Washington Post and Times Herald*, November 13, 1971]

(During this period, FHWA and the State highway agencies were adjusting to NEPA's environmental review requirements. Initially, highway officials believed the environmental review requirement did not apply to them, but when they learned that it did, they needed several years to adjust to the law. Efforts such as VDH's five-page draft EIS reflected the uncertainty about the effect of the law as well as the certainty of the road builders in the validity of their work.)

While I-66 appeared to be advancing, prospects for I-95 inside the Capital Beltway in Maryland were dimming. William W. Gullett, Prince George's County's County Executive, declared on November 8 that he would oppose the extension to the District line. He told COG that he hoped a resolution introduced before the county council opposing the route would be approved.

Under State law, each county had to certify its road needs to the General Assembly every 2 years. Gullett acknowledged that the resolution, if adopted, would not legally kill I-95, but he hoped it would exert a strong political influence. "It worked for Montgomery County when it knocked Interstate 70S out of its plan. It could do the same for us."

An affiliate of COG, the Metropolitan Congress of Citizens, had adopted a resolution calling for a complete study of the need for I-95 and whether Metro could provide sufficient service for the affected area. Gullett cited the resolution, adding, "I don't see how we can continue to be cut up by these superhighways."

Although Secretary Hughes had agreed to drop Montgomery County's segment of I-70S from the State's plans, he had declared the I-95 link extension essential. A spokesman for Secretary Hughes said the county's actions would "have no legal effect at all," because under State law, county positions were binding only on non-Interstate roads. He agreed, however, with Gullett that it might result in political fallout. [Eisen, Jack, "Gullett Opposes Extension of Rte. 95 Into D.C." *The Washington Post and Times Herald*, November 9, 1971]

In a News Analysis, the *Post's* Eisen reported on November 14 that Metro, “buffeted from the outset by one crisis after another, is heading into another period of political and financial uncertainty.” Representative Obey declared Metro “virtually dead” and said that only the President’s intervention could save it. Egil Krogh, President Nixon’s deputy assistant for national capital affairs, agreed that Metro was “in serious straits,” chiefly because of congressional interference. The White House, he told Eisen, was undecided on what to do.

General Graham thought “dead” was premature:

“Most of us feel we are going to build a usable system,” Graham said, “but we believe that Congress is making it impossible to build the system in the agreed-upon time (by 1979) for the estimated price,” now \$3 billion . . . .

Money is Metro’s recurring problem. Fund crises have come with such regularity that some Washingtonians, now seeing much of downtown torn up by subway construction, are prone to think someone was falsely crying “wolf.”

The crises were, nonetheless, real. For example, if President Nixon had not intervened with Chairman Natcher to promise construction of the Three Sisters Bridge, “there is doubt the groundbreaking on Dec. 9, 1969, would have occurred.”

As noted earlier, Chairman Natcher and other Members of Congress saw Judge Bazelon’s decision as a judicial challenge to congressional prerogatives:

According to Obey’s statement the other day, this “unfortunate and unnecessary and misleading” interpretation seems to be persuasive.

Thus far, \$586 million had been used on Metro:

According to general manager Graham, the \$586 million now obligated or committed to the Metro program (chiefly in real estate, plans, management costs and construction [sic]) would produce by 1974 a line about five miles long from Rhode Island Avenue NE to Dupont circle. It would have tracks and electrified power rails, but no cars, escalators or station air-conditioning.

There also would be a tube, with neither tracks nor power rails, from downtown Washington beneath the Potomac River to Rosslyn.

Of the money put into Metro so far, \$133 million has been contributed by the Maryland and Virginia suburbs from tax funds and bond-sale proceeds.

This was provided in expectation that the lines eventually will reach out from the city, but the money is actually being spent in the city. A failure to reach the suburbs would create formidable legal and political problems.

Now that construction was underway, another problem had arisen – minority participation in the contracts:

Added recently to Metro's money problem is a growing dissension in the District over demands by blacks for the award of one-fourth of all construction contracts to minority-owned firms. A coalition that includes two members of the D.C. Council [the Reverends Jerry Moore and Channing Phillips, both African-American] threatened last week to lead a physical disruption of subway work if the demands are not met.

This emotion-charged issue confronts the Metro board with "a crisis of no mean proportions" that could affect the financial issue, Virginia director Herbert E. Harris declared.

"We have just had a situation thrown down to us that, if people are unbending, can't be solved," Harris said. This, he declared, provides further ammunition to Metro's opponents on Capitol Hill. Metro Chairman Sickles agreed.

Eisen continued:

The blacks say they have been frozen out of the nation's economic mainstream by centuries of racism, and that they deserve a share of the Metro action in proportion to their numbers in the community. Some say the subway should not be built if it doesn't achieve black economic development.

The white majority on the Metro board and the agency's staff say they want to eliminate all barriers to black participation, but that the elimination of color-blind competitive bidding would be illegal, costly and an invitation to corruption.

With that new issue, congressional blockage of funds, Virginia and Maryland officials threatening to withhold their contributions in the absence of District matching funds, Metro's future was murky. However, "an even bigger financial time bomb" awaited Metro:

The system's completion hinges upon a federal guarantee of \$1.2 billion in the Metro authority's own future bonds. Legislation to provide the guarantee must be passed by the same Congress that is now holding back money Metro says it needs immediately. [Eisen, Jack, "Metro Digs Deeper Into Uncertainty," News Analysis, *The Washington Post and Times Herald*, November 14, 1971]

As Professor Schrag wrote in his Metro history, unemployment was a severe problem in a city with little heavy industry and its commercial streets gutted by the 1968 riots after the assassination of Dr. King. Construction was "the city's largest source of blue-collar jobs, but it had long been dominated by segregated unions." Minorities owned few construction firms:

Metro did little to change this pattern; when WMATA began signing contracts, more than 98 percent of construction dollars went to white-owned firms. And while a sizable majority of workers on Metro projects were black, they were clustered in the lowest skilled positions, laborer and miner. Those few minority firms that did get contracts were mostly employed in the low-paying, unglamorous task of hauling dirt away from excavations.

The Reverend Moore “agreed that Metro should provide jobs and careers for impoverished minorities, even if that meant Metro would cost more to complete.” He wanted at least 25 percent of all contracts to go to minority-owned firms. This idea did not go over well with WMATA. “Politicians from the majority-white suburbs held to the WMATA compact’s requirement that contracts go to the lowest qualified bidder.” They were, suburban officials said, contributing to WMATA for construction of a subway, not social justice for District residents:

They also feared that any weakening of the low-bid procedure might open the door to the sort of cronyism that had inflated the costs of public-works projects since the days of Boss Tweed and before. Both the Maryland and Virginia legislatures rejected bills that would have allowed for the set-asides. The staff also resisted. In May 1970, for example, the Authority’s assistant comptroller warned of a potential “collapse of budgetary integrity” should conflicts over “broad sociological aspects of the District of Columbia” distract the Authority from its “basic mission.”

WMATA sought compromise:

In late 1971 [Graham] established – somewhat reluctantly – an Office of Minority Development to recruit minority firms, with Charles Dowdy, an African American engineer, as its head. WMATA boasted in 1971 that minorities constituted 57 percent of the construction work force.

Despite union claims of having difficulty finding enough skilled minority workers, “Graham’s compromises held, albeit shakily” through 1973. [Schrag, pages 162-164]

On November 18, Representative Broyhill returned to the White House for a meeting with President Nixon. After the meeting, the President issued a statement urging action on highways and the Metro system in the Washington area:

Late in its second century of life as the Nation's Capital, the Washington metropolitan area is suffering severely from hardening of vital transportation arteries. The nearly

3 million people in the District of Columbia and its Maryland and Virginia suburbs are acutely aware of this worsening problem as they struggle to move about the area pursuing business or pleasure or the work of government. So are the 18 million visitors who come here each year from across the country and around the world, expecting magnificence –

and finding it, but finding also, in the simple matter of getting about the city, more frustrations than they deserve in the capital of a nation that has sent men to the moon.

In recent months, though, Washingtonians have also become increasingly aware that something is being done about the transportation tangle. METRO – our superb area wide rapid rail transit system of the future – is already a fact of life for all who use the downtown streets, as construction pushes ahead on the first 8 miles of the project. Streets are dug up, ventilation shafts have been dropped, tunnels are being bored. Over \$863 million has already been committed by the eight participating local jurisdictions and the Federal Government. At the same time, a coordinated interstate highway system for

the region is progressing toward completion, as many thousands of detouring commuters know.

We need these freeways, and we need the METRO – badly. I have always believed, and today reaffirm my belief, that the Capital area must have the balanced, modern transportation system which they will comprise. Yet now, almost incredibly, in light of the manifest need for both of them, the future of both is jeopardized by a complex legal and legislative snarl.

To save them, here is what has to happen:

1. The local highway actions mandated by the Federal-Aid Highway Acts of 1968 and 1970 must go forward immediately.

The question whether the District of Columbia and the Federal Government, in their efforts to carry out this mandate, are presently in compliance with statutory requirements has been the subject of lengthy litigation. The U.S. Court of Appeals for the District of Columbia has recently ruled that they are not yet in compliance in the case involving the Three Sisters Bridge. But I am convinced that they are. Accordingly, I have ordered the Attorney General to proceed with the filing of a motion for rehearing en banc before the Court of Appeals [all the judges instead of the three-judge panel]. I have also instructed him, if that fails, to file a petition for certiorari with the Supreme Court.

2. The METRO system must move toward completion and operation as rapidly as possible.

Not only do delays in METRO work cost taxpayers heavily; they might even erode confidence and cooperation seriously enough to consign the entire project to an early grave, with all the sad consequences that could have for metropolitan development in the years ahead. I strongly urge the Congress, therefore, to take appropriate action at once to end the present delay and to prevent any more such derailments of METRO progress.

We have come to a critical juncture. Obedience to the law is at stake. A huge investment is at stake. The well-being of the Capital area is at stake. It is time for responsible men to join in responsible action and cut this Gordian knot.

Representative Broyhill told reporters that he had been working with White House staff on the statement for 3 weeks. He added:

This is the thing a lot of people have been seeking. I don't know of anything else the President can, or should, or needs to do.

I don't know what else Congress can expect of the chief executive. He can't go out there and put on his overalls and start digging himself.

He hoped the President's statement would inspire another attempt to overrule Chairman Natcher on the House floor.

Chairman Natcher refused to talk with reporters about the President's statement. In closed session earlier in the day, the Natcher subcommittee had again refused to include the District matching funds in its District appropriations bill.

Chairman Inouye, however, said, "This is what I believe Mr. Natcher has been waiting for. I am now more than convinced that the necessary funds to carry on construction of the Metro on schedule will be appropriated in this session of Congress."

Before the President released his statement, Representative Giaimo told reporters he would lead another floor fight, but was not optimistic without support from the President and the Democratic House leadership.

Mayor Washington said, "We are delighted at the President's call for responsible action to permit Metro to proceed."

Senator Mathias also welcomed the President's "strong statement," but thought he had a plan that would bring more immediate results. On November 16, he had proposed to allow the city to issue \$160 million in tax-exempt bonds to cover the city's matching share through 1977 and pay for highway projects. The bond revenue would go into a transportation trust fund that would also receive money from auto registration, excise taxes, and the city's gas tax. He said at the time that his proposal would "extricate the Congress from a legislative snarl which has become as tangled and unhealthy as the city's daily traffic jam."

He added, "We cannot legislate an end to litigation. The current cases and perhaps others yet unfiled will work their tortuous way through the courts whether or not the Metro is being built outside the courthouse door." The Mathias amendment had been included in the Senate's pending District revenue bill.

Senator Spong also was pursuing legislative action. He introduced a rider that he wanted to add to the District revenue bill reiterating the 1966 law guaranteeing the District its matching funds and the National Capital Transportation Act of 1969 authorizing funds for the 98-mile Metro system. "It is a way of assuring the people of this area that . . . the Congress is not going to turn its back on the subway [and] is not going to ignore the obligations it has assumed." [Moore, Irna, "Nixon Urges Hill to Free Metro Funds," *The Washington Post and Times Herald*, November 19, 1971; Green, Stephen, "Nixon Pushing for Bridge, Release of Subway Funding," *The Evening Star*, November 19, 1971; Moore, Irna, "Subway Funding Pushed," *The Washington Post and Times Herald*, November 16, 1971]

The expectation was that Representative Giaimo would introduce his amendment, this time with strong support from the President. According to Schrag, "the White House staff helped Giaimo mobilize a bizarre, bipartisan coalition of liberal Republicans and Democrats, White House loyalists, and the Congressional Black Caucus, all to take on Natcher." [Schrag, page 140]

The *Post* and *Star* welcomed the President's intervention. "Such a strong plea to Congress from the President," a *Post* editorial said, "ought to carry great weight as the Metro funding question comes before the House Appropriations Committee, and eventually to the House floor for a

vote.” While the President’s court actions regarding the Three Sisters Bridge were welcomed, “The next move, in good faith, is up to Mr. Natcher and the Congress.”

The *Star* appreciated the President’s timing. Chairman Natcher’s subcommittee had “decided once again to maintain a strangle hold on District subway funds,” while action in the Senate on the District’s revenue bill “was similarly tied in knots as members of that body considered alternative legislative maneuvers to try to free the subway dollars.”

Because Judges Bazelon and Fahy had “dredged up a host of new legal obstacles against the bridge,” the President’s decision to move on the legal front was an action “only the President could take.” In view of the President’s order to Attorney General Mitchell, “There is surely no possible justification for Representative Natcher and his House colleagues to refuse any longer” to release the Metro funds. Whether the “tortured reasons” of Judge Bazelon’s ruling prevail was impossible to predict, but the President’s actions represented the “clear evidence of good faith” that Chairman Natcher said he was seeking. “His obligation now is to make good his own pledge that in such an event the critical subway freeze would immediately end.” [“The President’s Welcome Moves for Metro,” *The Washington Post and Times Herald*, November 19, 1971; “It’s Natcher’s Move,” *The Evening Star*, November 19, 1971]

One day after the President’s statement, the Justice Department announced that it had begun drafting its petition asking the full nine-judge U.S. Court of Appeals to rehear the Three Sisters Bridge case. Work had begun several days earlier when the White House had informed the Justice Department of the President’s planned decision.

The Senate, by voice vote, approved the District revenue bill on November 20. It included Senator Mathias’s amendment as Title X – Establishment of the District of Columbia Transportation Trust Fund. The Senator told his colleagues that Title X “would place the District’s contributions to Metro on a virtual automatic basis and would end the roadblocks, delays, and uncertainties which have brought this vital mass transportation system to the current perilous point.” The measure, he added, was consistent with the President’s statement the previous day in support of Metro:

It would enable the District of Columbia to obligate local revenues – not Federal funds, but the fruits of local taxation – to pay the District share of the Metro without delay. At the same time, it also insures that, as various essential highway and street projects are approved in accord with applicable laws, the funds for the local share of those projects will also be available. In short, this proposal gives us a new road to the balanced transportation system which the people of this region need and want.

He hoped the Senate would approve the revenue bill, including Title X, because if “we do not get the Metro moving now, it may never roll in our time and perhaps never in our children’s time, nor in our grandchildren’s time.”

The Senate added the amendment that Senator Spong had introduced reaffirming the congressional obligation to ensure the District can participate in financing the Metro system. He explained:

The communities of Virginia and Maryland have put up their money to build the system, and it is not right for the share of the District of Columbia to continue to be withheld. The matter of the Three Sisters Bridge is in the court. It is a matter to be decided by the courts. It is not proper for Metro to be held as hostage for highway construction. ["Additional Revenue for the District of Columbia," *Congressional Record-Senate*, November 20, 1971, pages 42500-42502]

### **Cutting the Gordian Knot**

The Justice Department, joined by the District corporation counsel, filed papers with the U.S. Court of Appeals on November 23 seeking review by the full court of the three-judge panel's decision on the Three Sisters Bridge. Judge Bazelon's ruling, the filing said, had "overstepped the permissible bounds of judicial review," relied on "pure speculation," and made it "virtually impossible to build this bridge as directed by Congress."

Regarding the influence of Chairman Natcher on Secretary Volpe, the Justice Department said:

There is no basis in law or fact to overturn an administrative decision of this nature because of alleged extraneous pressure of this sort. The facts of political life are such . . . that it is idle to pretend that our administrative officials . . . should make their decisions in a vacuum.

Judge Bazelon, in citing the absence of an administrative record, had overlooked the fact that Secretary Volpe's approval was "due to the fact that the Secretary himself made the vital . . . determinations, having personally involved himself . . . . We respectfully submit that judicial review does not include that which basically amounts to a 'second-guessing' of his determinations."

The Bazelon decision, which expressed doubts about Secretary Volpe's truthfulness and impugned his credibility, would "in the extreme, deprive an administrator of absolute control over the lawfulness of his own actions" because those actions would be "vulnerable to circumstances completely beyond his reach." [McCombs, Philip A., "U.S. Attacks Court Ruling on 3 Sisters," *The Washington Post and Times Herald*, November 24, 1971; "U.S., D.C. File Please on 3 Sisters Ruling," *The Evening Star*, November 24, 1971]

While the Appeals Court considered the appeal, officials focused on the pending vote, on November 29, of the House Committee on Appropriations on the District revenue bill. COG was lobbying the Representatives from the Maryland and Virginia suburbs who had voted against the Giaimo Amendment in May. "Many of the congressmen who voted against Metro last time have discovered they're not living on an island," Maryland Delegate Doctor told reporters at a press conference in the District Building. COG president Francois added:

People all across America are watching. This is the ultimate confrontation between the highway interests and those who favor a balanced transportation system.

Asked if the lobbying efforts had convinced any Representatives to support release of the funds, Doctor could not provide a number. "We just feel they've been favorably impressed. The

President's influence has been quite pervasive." [Meyer, Eugene L., "Hahn Tells of Effort for Metro Funds," *The Washington Post and Times Herald*, November 28, 1971]

Despite last-minute lobbying by the White House, the Appropriations Committee voted 31 to 13 to continue withholding \$72 million in subway funds for FYs 1971 and 1972. Reporting on the vote in the *Post*, Irna Moore wrote:

Sentiment in the Appropriations Committee for upholding Natcher appeared to hinge on two elements. One was the feeling, backed by years of tradition, that the Committee is the most powerful one in Congress because it controls all spending and that the precedent of overturning what one Subcommittee chairman wants could lead to withholding projects wanted by other members . . . .

The other element was cited by Rep. George Mahon (D-Tex.), chairman of the Committee, who said he felt that "the will of Congress has been flouted by the District's delay in building freeway projects specifically ordered by earlier acts of Congress.

The vote on the provision was a rejection of Representative Giaimo's attempt to restore the Metro funds. He indicated he would take the fight to the House floor again and predicted his amendment would "do much better than we did in the Committee."

Chairman Natcher told reporters he had "no comment whatsoever."

White House aides, according to Moore, "spent the day talking to key congressmen just off the House floor and outside the committee room." The aides remained optimistic about the floor fight and promised "an all-out effort on the floor, against some of our own leadership if necessary."

This was a reference to Minority Leader Ford's decision to oppose the Giaimo Amendment. Representative Obey told reporters the amendment "hasn't got a snowball's chance in hell unless Ford and the Republicans show some support." The ominous fact was that of the 13 members of the Appropriations Committee who voted for Representative Giaimo's effort to restore the funds in committee, only two were Republicans. They were Representatives Conte and Howard W. Robison (R-NY). [Moore, Irna, "Metro Funds Lose, City Budget Pared," *The Washington Post and Times Herald*, November 30, 1971]

This latest effort "to strangle Metro," a *Post* editorial said, "may end up as the most expensive (and cruel) tribute ever paid to the power of congressional politics." The committee had ignored President Nixon's plea and his "vigorous good-faith efforts" to show District compliance with congressional mandates, the support of nearly 3 million people in the Greater Washington area, and the \$863 million already committed to Metro construction. "Above all, never underestimate the power of a House Appropriations subcommittee chairman."

If Chairman Natcher's "traditional blackmail arrangement" succeeded, "Congress will see no reason to approve legislation to provide a federal guarantee of \$1.2 billion in future bonds for Metro – because Metro will already be a bad risk." Time was up for finding ways "to satisfy whatever it is that Mr. Natcher happens to demand the next time the funding issue comes up."

Somehow, “responsible men and women” in Congress must act to advance Metro. [“The Vote to Strangle Metro,” *The Washington Post and Times Herald*, November 30, 1971]

With the deadline nearing for the District’s and Secretary Volpe’s reports on the District’s expressway network, the consultants hired by the District reported their recommendations on November 29. The team of De Leuw, Cather Associates and Harry Weese and Associates recommended another 11 miles of freeway construction at an estimated cost of \$665 million.

The report recommended abandoning the I-70S portion of the North-Central Freeway into Maryland, where officials had all but abandoned the route. The eight-lane I-95 segment of the North-Central Freeway would follow the planned alignment along the Baltimore and Ohio Railroad tracks north from New York Avenue under Rhode Island Avenue, NE. From there, it would become a depressed freeway decked to accommodate housing, a community center, and parking. It would continue in a depressed alignment in the vicinity of Catholic University east of the railroad and under the new Taylor Street bridge. Crossing to the west of the tracks, it would continue north before re-crossing to the east side of the tracks at New Hampshire Avenue. It would connect with the I-95/Northeast Freeway. This routing, as the *Post* explained, “violates the city council’s policy of building no more road gateways into the city.”

The consultants recommended a six-lane crosstown tunnel under K Street, NW., from Rock Creek to 7<sup>th</sup> Street. From 7<sup>th</sup> Street, the tunnel would run along New York Avenue in a depressed design with a surface deck. The project would include an interchange with the Center Leg Freeway.

The report focused on the Interstate segments identified in the 1968 and 1970 Highway Acts. The consultants identified other routes, not yet open, as “Committed Freeways,” including the Palisades Parkway and the Potomac River Freeway. They also assumed the eventual construction of I-66 in Virginia, I-695 (South Leg of the Inner Loop), and the Three Sisters Bridge, largely because of the congressional commitment reflected in the 1968 and 1970 Federal-Aid Highway Acts. In addition, the report endorsed the Industrial Highway link with the Baltimore-Washington Parkway and U.S. 50 (the Annapolis Freeway).

In this construction work, the report stated, the District should become the first American city to design and construct the roads as a pool for “social, environmental and economic development.” First, the city should solve its residential and employment relocation, planning, and legal problems. In designing the roads, the city should use decking, tunneling, and air rights construction for residential, educational, commercial, industrial, institutional, and park sites.

At the same time, the report estimated that the additional freeways would displace 1,085 families and 3,150 jobs. They also would require the use of 259 acres of land, including 35 acres of parkland.

Director Airis and Federal Highway Administrator Turner were reviewing the report and had no initial comment. Chairman Hahn scheduled 4 days of public hearings to begin December 13. [De Leuw, Cather Associates and Harry Weese & Associates, Ltd., *Summary of Comparison of Alternative Systems, District of Columbia Interstate System 1971*; Eisen, Jack, “Build 11 Miles

of Freeways, City Advised,” *The Washington Post and Times Herald*, November 30, 1971; Green, Stephen, “D.C. Consultant Backs Freeways,” *The Evening Star*, November 30, 1971]

As the House of Representatives began to debate the District of Columbia Appropriations Act, 1972, on December 1, White House Press Secretary Ronald L. Ziegler described the President as “very displeased” by the House Appropriations Committee’s decision to continue withholding the District’s Metro funding. President Nixon, Ziegler said, “wholeheartedly supports an amendment which will be introduced on the floor to restore the whole amount” of \$72 million. He “feels we are in a critical juncture and no further delays can be tolerated.” The White House support was especially aimed at House Republicans, 117 of whom had formed the biggest block voting against the Giaimo Amendment on May 11.

The White House, further, did not support a deal worked out between Chairman Natcher and Minority Leader Ford setting terms for releasing the funds. The two had met on the House floor for a private discussion before the committee’s vote:

According to two well-placed sources, Natcher told Ford he would recommend the release of D.C. contributions to the subway if the full U.S. Court of Appeals panel agrees to, and sets a date for, a rehearing on its order that halted work on the Three Sisters Bridge.

The source said Natcher agreed to make public this recommendation during the floor debate in hope of preventing the withholding of funds from being overturned.

An unnamed White House official dismissed the floor agreement. “Let’s face it, we’ve been down that road before, and it hasn’t produced anything.”

Representative Giaimo was equally dismissive of the floor agreement, but planned to introduce his amendment on December 2. He said, “We need help. If we don’t get help from the leadership, both Democratic and Republican, we won’t get the money.”

A spokesman said Minority Leader Ford still supported the Appropriations Committee’s decision, while an aide to Speaker Albert said he was “cogitating it right now.”

The liberal Democratic Study Group sent a “Dear Colleague” letter to all Members of the House urging them to support the Giaimo Amendment. “No constructive purpose whatsoever can be served by continuing to deny these funds.” The letter was an unusual step for the group, which normally addressed letters only to its members. [“Nixon: Restore Metro Funds,” *The Washington Post and Times Herald*, December 1, 1971]

The *Post* and *Star* left no doubt about their views. A *Post* editorial took its title from Ziegler’s comment, “No Further Delays Can Be Tolerated.” It referred to “deceptive rumblings about some sort of ‘compromise’ that is designed to persuade people” to go along with Chairman Natcher one more time. The idea that Chairman Natcher would release the funds as soon as the full U.S. Court of Appeals agrees to hear the Three Sisters Bridge case might be tempting to those who had not been “following all the complex tribulations” surrounding the funds:

But with Metro now on the verge of financial collapse, another excuse – based on a chancy challenge to the courts on a matter that shouldn't have anything to do with the fate of the rapid transit system anyway – cannot be risked.

What if the full court does not accept the case or does not do so promptly? What if the Supreme Court does not come to a quick decision? “What if Mr. Natcher doesn't like the decision, or decides that something else must happen before the Metro money is released?” The answer, “as the President warned,” is that “Metro will indeed die.” That was why more than 100 District, Maryland, and Virginia officials and business executives planned to be on Capitol Hill lobbying for the funds and why local jurisdictions were threatening to withhold their shares:

The responsible action for the House, then, is clear: Metro must be built, which means just what the White House said yesterday – that “no further delays can be tolerated.” [“No Further Delays Can Be Tolerated,” *The Washington Post and Times Herald*, December 1, 1971]

In view of the President's courageous defense of Metro, the *Star* found it “almost inconceivable – even given the Alice-in-Wonderland atmosphere which pervades the District's subway-freeway snarl – that the President might be deserted on this issue by his principal spokesman in the House, Minority Leader Gerald Ford.” Although “details of this weird political struggle are at the moment so fluid,” Republican Ford appeared to be leaning toward supporting Democratic Chairman Natcher instead of Republican President Nixon.

Although the House floor deal with Chairman Natcher may have seemed reasonable to the Minority Leader, the White House had not been fooled and instead had pledged that the White House staff would vigorously solicit support for the Giaimo Amendment. If House Republicans supported the Republican President, “those fighting for the subway funds feel there is a good chance of success.” In the absence of that support, “virtually no one is optimistic.” [“The President's Stand,” *The Evening Star*, December 2, 1971]

On December 1, President Nixon wrote to Speaker Albert about the pending vote. “I believe it is imperative that the District's contribution to the Washington area rapid transit system be included in that bill.” He summarized his recent actions regarding the court challenge to the Three Sisters Bridge, then said:

Meanwhile, if we are to meet the region's future transportation needs, the Congress must act *now* on the District's contribution to the Metro.

Such immediate action is crucial for two reasons. First, denial of these funds risks losing the cooperation of the seven local governments which have contributed regularly and in good faith to this project – a loss which might well be final and hence fatal to the entire Metro. Second, each week of delay increases the costs to the taxpayers of the region and the nation by at least \$1 million. Besides these increased costs, these delays needlessly postpone the day when this modern subway will begin to serve the area's residents and visitors.

In a reference to the Natcher-Ford floor agreement, the President said, “It is not possible to predict either the timing or the outcome of the court’s action.” With “the well-being of the entire Capital region” at stake, President Nixon urged Speaker Albert “to do all you can to keep Washington’s Metro system alive and moving forward.” [*Congressional Record-House*, December 2, 1971, page 44274, italics in original]

Speaker Albert rejected the direct appeal, instead backing the House Appropriations Committee bill. During his daily press conference, the Speaker said, “the House should not yield to the District or the courts.” He added:

I’m going to be for the subway. I’m also going to push for the building of the Three Sisters Bridge.

Minority Leader Ford also rejected the President’s appeal. “Nothing’s changed,” he said. A spokesman said Ford believed that “Mr. Natcher is an honorable man” who would keep his word on the compromise. House Republicans said they could not recall any other case where Ford had not supported President Nixon. However, the Minority Leader had called Attorney General Mitchell to request that he ask the Appeals Court to announce before the floor vote that it would rehear the Three Sisters Bridge case en banc. The Attorney General reportedly said he could not intervene, telling Representative Ford that the decision on the appeal and its timing were up to the court.

Supporters of the Giaimo Amendment planned to go ahead with the challenge despite these setbacks. Representative Conte said, “I think we’ve got a chance.” As far as he was concerned, “The so-called compromise is as phony as a \$3 bill.”

Representative Giaimo called the leaders’ support for Chairman Natcher “a classic case of the seniority system at work.” He and Representative Gude considered Minority Leader Ford’s call to the Attorney General an improper attempt to influence the judiciary. When Representative Gude spoke with the Attorney General about the matter, Mitchell had indicated that “all appropriate avenues” are being followed regarding the court review.

Senator Inouye promised that if the House rejected the Giaimo Amendment, he would go “to the ramparts” to protect the Senate position on the subway funds in the Senate-House conference.

Representative Giaimo admitted that without Republican support, the prospects for his amendment were doubtful, but he planned to introduce it anyway. [“House Leaders Reject Nixon Metro Fund Plea,” *The Washington Post and Times Herald*, December 2, 1971; Green, Stephen, “Ford Split With Nixon on Metro,” *The Evening Star*, December 2, 1971]

## **The Revolt, Part 2**

On December 2, Chairman Natcher began the discussion of capital outlays for highways in the District of Columbia Appropriations Act, 1972, by repeating his support for a balanced freeway and subway system. “We must have a balanced system of transportation consisting of highways, express buses, and rapid rail transit.” He restated the history of his many efforts over the years to support highways and Metro.

As for Judge Bazelon's October 12 decision, Chairman Natcher said, "the chief judge of the circuit court of appeals went too far in his opinion" on the Three Sisters Bridge:

All through this opinion he sets up a series of hoops through which the Secretary of Transportation must jump, notwithstanding the fact that the Federal Aid Highway Acts of 1968 and 1970 are the law, and clearly indicates [sic] that after his instructions are followed there may be other suggestions made later on which would in effect continue to direct the District officials and the Secretary of Transportation to ignore and evade the Highway Acts of 1968 and 1970.

As a "coequal branch" of the government, "we have no right as members of Congress to stand by and permit the judicial branch of our Government to take over the legislative branch." The restrictions Judge Bazelon placed on the Secretary make it "virtually impossible to build the Three Sisters Bridge as directed by Congress." Respectfully, he said, he had to say that "Judge Bazelon has overstepped the permissible bounds of judicial review and substituted pure speculation which is not supported by the record now pending in his court."

Chairman Natcher quoted extensively from Judge MacKinnon's dissent, then said:

The Highway Acts of 1968 and 1970 must be complied with by the District of Columbia officials and the officials of the Department of Transportation. Both rapid rail transit and the freeway system must proceed together. There is a place for both a freeway system, a rapid rail transit system, and an express bus system in our Nation's Capital. We must have a balanced system of transportation in Washington D.C.

Mr. Chairman, we do not recommend construction funds for the Washington Metropolitan Area Transit Authority. [District of Columbia Appropriations, 1972, *Congressional Record-House*, December 2, 1971, pages 44261-44266]

His committee colleague, Representative Davis, said he was "in complete agreement" with Chairman Natcher's statements. Davis recalled that when the District city council adopted a resolution complying with Section 23 of the 1968 Act, "It looked at that time as if a quarter of a century of dilly-dallying and obstruction had come to an end." He added, "Unfortunately, this was not the case." The 1970 Act mandated studies of several freeways but did not alter the construction requirement of the 1968 legislation for the Three Sisters Bridge, the Potomac River Freeway, the Center Leg of the Inner Loop to New York Avenue, and the East Leg of the Inner Loop to Bladensburg Road.

Judge Bazelon's decision "went beyond the decision of the District in conjuring up obstacles, and singled out by name one of the most honorable and deservedly respected men who has sat in this House." He added that, "to single out Chairman Natcher as some of the newspapers, some of the uninformed egotists of radio and TV, and now the circuit court of appeals has done is an affront to the House in general and to the full Appropriations Committee and to our subcommittee in particular." He reminded his colleagues that the District Appropriations Subcommittee was not "a one-man subcommittee" and that the subcommittee, the committee, and the entire House had approved Chairman Natcher's insistence on a balanced transportation system.

Meanwhile, those who support the subway “are still doing their best to sabotage the freeways, any freeways for the Washington metropolitan area.” He quoted from the recent consultants’ report:

As meetings progressed it became apparent that several factors hindered constructive communication and participation. Many citizens and community leaders had previously taken firm positions against freeways – they did not wish to discuss any new proposals that might weaken their antifreeway stand. In several instances residents who had agreed to hold meetings in their own homes later cancelled the meetings, saying that they had been influenced by those opposed to the freeways. Representatives of organized freeway opposition groups dominated at least two of the meetings that were held.

Representative Davis said that if “we are not going to completely capitulate to the obstructionists,” the freeways and subways “must go forward together.” That is all the subcommittee, committee, and his House colleagues have ever sought:

All we are saying is we must have, as the trustees of the mandate of this House, not just a directive, but assurances that the circuit court of appeals will set a definite date for rehearing, and thereafter that we have an expression of his confidence that the legal representatives will succeed in breaking the obstructive log jams on the freeways by the President of the United States. [pages 44266-44267]

Representative Broyhill asked if the President could do anything that would cause the subcommittee members to release the subway funds. When Representative Davis answered only “No,” Representative Broyhill concluded that the funds depended on action of the court.

Representative Davis clarified that they simply needed a date certain for the full court rehearing. If, Representative Broyhill asked, “Judge Bazelon wants to drag his feet and wants to play cat and mouse a little bit with the legislative branch,” would the House not be waiting for “the whim of the Chief Judge on the U.S. Circuit Court of Appeals in order to get subway funds appropriated”? Representative Davis said they were not “depending on his whim entirely” regarding the rehearing.

Mr. Broyhill of Virginia. So we have to wait on the action of the court, the judicial branch, in order to consider the release of the funds?

Mr. Davis of Wisconsin. We have not said that we have to wait for or to get a decision of the court as a condition here. All we have simply said is that we be notified – that is, that the Circuit Court has set a day certain. I am confident enough that Judge Bazelon’s decision will be reversed by a [sic] Supreme Court. I am simply saying, tell us – we have a date for a hearing.

Representative Broyhill asked about the conditions in “a behind-the-scenes compromise agreement that the funds would be released when a date was set for a hearing.” Representative Davis objected to the reference to “behind-the-scenes” but summarized the compromise as including the setting of a date certain for the hearing and a communication from the President

“that he believes a balanced transportation system is assured and requests the appropriation of funds on that basis.” [page 44267]

Minority Leader Ford intervened to say he supported Chairman Natcher’s position. He considered it “unfortunate, to say the very least” that despite the President’s and the Congress’s efforts “to enforce the several highway acts, we are thwarted apparently by an adamant attitude of one member of the Federal judiciary.” He continued:

It was amusing to me to read some reports in one of the local newspapers of a behind-the-scene secret meeting that the gentleman from Wisconsin, the gentleman from Kentucky, and the gentleman from Ohio, and I had to discuss a way in which we could help get the subway money and also proceed with the highway program.

I do not know how much more open such a meeting could have been held. About four rows behind the Democratic desk over there the four of us sat alongside one another and discussed how we could do our best to get the money available for the subway construction program, and in the best of faith – I guess in the eyes of everybody in the chamber – we came to a suggested program. As I understand that suggested program, the gentleman from Kentucky and the gentleman from Wisconsin agreed that if the Circuit Court for the District of Columbia would agree to a date certain to hold a hearing – just a hearing – that the recommendation would be made by this subcommittee for the release of all funds that have been requested by the President of the United States. I believe that is the understanding that we came to.

Minority Leader Ford understood that Judge Bazelon, as Chief Judge, could call for a hearing by the full court, but if he did not, a majority of the judges could do so:

I do not understand why a small group, or maybe one man in this court will in effect thumb the nose at the House of Representatives. If you ever read that decision by Judge Bazelon, I do not think a single Member of this body would have any respect for that decision. [pages 44267-44268]

Ford’s description of the agreement differed from what Representative Davis had said, leading to a discussion of exactly what the compromise was. The confusion prompted Representative Giaimo to say: “I am somewhat shocked . . . by some of the colloquy which we have just heard in this Chamber.” He disagreed with Judge Bazelon’s ruling and with court intervention in legislative prerogatives. It was, however, equally bad for the Congress to intervene in court affairs. Moreover, citizens have the right to petition the courts for redress of grievances. “As much as we may dislike it, there is nothing we can do about it.” However, Congress was doing something about the bridge and highway system by retaliating against the people of the District of Columbia “by saying, ‘No bridge, no subway,’ even though all of us in this House supported the authorization of the subway.”

Representative Giaimo said he supported the Three Sisters Bridge and the District’s Interstate System, but he could not agree with retaliation “on the defenseless people of the District of

Columbia.” He could agree that the District and the Department of Transportation had been dilatory in compliance with the 1968 and 1970 Highway Acts:

But this argument no longer applies. They are now in compliance. They have done everything that they can possibly do at the present time. The District government is ready to begin construction of the Three Sisters Bridge immediately upon allowance by the court to do so.

The Appropriations Committee had recognized the value of Metro by appropriating the Federal funds for its construction, but then had withheld the District matching funds that would allow use of the appropriated Federal funds:

Mr. Chairman, here we are, my friends, saying once again there is one other hurdle you have to jump before we give you the money for Metro. I will admit that the hurdles are getting smaller, but we are now saying that the appellate court set a date certain for rehearing en banc.

He asked Chairman Natcher and Minority Leader Ford if they insisted on anything beyond the settling of a date for the rehearing. Ford confirmed that was his only condition. Could the court take a year or so to set a date? Chairman Natcher responded, “Yes.”

Representative Giaimo said the problem in that event was the time needed to get another appropriations act through Congress releasing the funds. When the Minority Leader suggested that the delay might not be long – the court could set a date today, Representative Giaimo said “the court could have decided this matter in our favor also” but court actions were unpredictable. He did not want to put the court in the position of being able to dictate congressional actions by setting, or not setting, a date for an en banc hearing. [pages 44269-44270]

Representative McEwen rose in support of Chairman Natcher, saying “too much – far too much abuse – has been heaped on one man in this situation, and I refer to the gentleman from Kentucky.” President Nixon also did not deserve criticism; he was not a culprit:

The ones who are, do not seem to be the ones who get embroiled in it. I refer to the ones who have resorted to every devious trick, and scheme and device they could to thwart the will of this Congress – not the will of my good friend, the chairman of this subcommittee, not the Committee on Public Works, but this Congress and two Public Laws, one enacted in 1968 and one in 1970.

He rejected the notion that the end justifies the means. “We have seen a commission that approved a bridge, and thereby subway funds are appropriated. Then the commission immediately thereafter met and said, ‘No, we reverse our decision.’”

He did not share Representative Giaimo’s view that the District of Columbia was not at fault. The city’s support for balanced transportation, Representative McEwen said, was “like a boy who shot his father and mother, and then threw himself upon the mercy of the court because he was an orphan.”

Representative McEwen had been on the Subcommittee on Roads, Committee on Public Works, for 6 years. From that earlier position, he knew that \$20 million had been spent planning freeways, including 83 studies:

Everyone said we needed the highways, the Three Sisters Bridge, and the subway system and in that way and only that way can we have a balanced transportation system.

Well, I think we are only going to get that if we get the message out of here today, loud and clear, that now it is time for somebody else to move, and when they move – then we will move. I think it is no large price to pay for moving ahead on a balanced system to say that we will come ahead with the funds for the subway just as soon as the court agrees to a day certain to hear this case.

Compared with the courts, was the Congress “a helpless giant?” The 200 million people who voted for the 435 Members of the House “expect us to be concerned for compliance with the laws.” He concluded, “Our greatest strength, our marshals for enforcement, are the decisions we make on appropriations.” He would vote with Chairman Natcher. [page 44270]

Chairman Kluczynski said the Committee on Public Works fully supports a balanced transportation system for the District. (Chairman Blatnik, who had been hospitalized, asked Chairman Kluczynski to speak for him.) The highway and subway networks “cannot be separated one from the other because they were designed to complement each other.” The issue, however, was bigger than highways and subways:

Here we have defiance of the will of Congress. This cannot be tolerated, gentlemen. Where do we stand if we cannot be assured that the laws we passed are going to be carried out. The administrative bungling that has been thrust upon us in this instance is unbelievable. It must be corrected and drastic action is necessary.

They stood firmly with Chairman Natcher. [pages 44270-44271]

Representative Robert E. Jones, Jr. (D-Al.), the Acting Chairman of the Public Works Committee, argued that the city must have a concurrent transportation network of freeways and subway. “If we do not stand behind Mr. Natcher in his position, we are going to further delay, hamper, and destroy the public transportation accommodations for the people of this area.” The goals were clear, there was “no reason for dissidence and misunderstanding.” He hoped the House would “recognize the tremendous burden under which the gentleman from Kentucky has been working during the past few years, and that we will steer ourselves to a better destiny under his leadership.” [page 44271]

After some discussion of other elements in the bill, Representative Myers rose in opposition to the Giaimo Amendment. He had tried to speak earlier, and Representative Giaimo was prepared to yield, saying, “I will be glad to yield to the gentleman who made such an excellent speech against the subway in toto before.” However, Representative Giaimo’s time had expired, leading to Representative Davis’s speech.

Now, Representative Davis yielded to Representative Myers, who noted Representative Giaimo's earlier comment about Myers' opposition to Metro:

I made it very clear. I think the Metro is a fiasco that will cost the taxpayers of this Nation more than \$5 billion by the time it is completed. I cannot see it paying its operating expenses, let alone retiring the debt. However, it is a law and I shall support and vote for funds for that Metro whenever we are assured of a balanced system.

He considered the debate over \$73 million to be "a little sidetracking argument." His real concern was the Federal contribution to the District of Columbia. "I do not see any place else in the United States where there is any similar contribution made in lieu of real estate taxes that might be paid by the Federal Government," certainly not any jurisdiction in his Indiana congressional district. "The hard working taxpayer back in each of our districts are entitled to some consideration and that should not be just the right to spend more of their money here and the responsibility to send more money to Washington." [pages 44272-44273]

Representative Scherle, a member of the District appropriations subcommittee, spoke in defense of Chairman Natcher. The Congressman was deeply grieved "to hear the verbal accusations made against my distinguished chairman simply because he is protecting the law, the very law that this Congress in 1968 and 1970 passed concerning the Federal Highway Act." Chairman Natcher was protecting the interest of every Member of Congress. "This is our colleague and the laws passed were ours."

He then turned to the other provisions of the legislation, noting that as far as he was concerned Washington was a city that "operates extravagantly." If the city hired an efficiency expert, "he would last about 3 days and then he would quit in complete disgust." [page 44273]

Representative Nelsen, the ranking Republican on the District Committee, said he was confused about the compromise reached on the House floor that was discussed earlier. Everyone agreed on the need for a balanced transportation system in the District of Columbia, but whenever the subway issue came up, "there is always a reason given why the funds should not be released," usually because one agency or another is "dragging its feet."

Now, he said, the courts had intervened with the Three Sisters Bridge, which was the key to releasing the District matching funds under the compromise. Representative Nelson admitted he was not a lawyer; he was a farmer. Even so, he thought Bazelon's decision was wrong:

Make no mistake: the majority opinion is mischievous on a grand scale, a personal attack on Members of Congress, and a decision which must, as the President so indicates, be reversed if necessary by petition to the Supreme Court. So in conclusion I say that the Bazelon decision was a travesty. I also say that it is demeaning to have judges engage in personal attacks in their decisions.

In contrast to Judge Bazelon, who was "way out of line," Representative Nelsen commended Judge MacKinnon's dissent, which "clearly marks the majority opinion as not adhering to the

facts, lacking in logic, going far beyond the issues in its holding and generally lacking in reason and commonsense [sic].”

He said he had voted for Metro in 1969. In May 1971, he had voted with “my good friend, Mr. Natcher.” Today, however, “I support funding for the subway,” citing the reasons in President Nixon’s December 1 letter to Speaker Albert. He would vote for the Giaimo Amendment. [pages 44273-44274]

Senator Scott of Virginia supported Chairman Natcher. The area, everyone agreed, needed a balanced transportation system that included freeways such as I-66. It was needed because a Metro line would be built in the median, the freeway would provide access to Dulles International Airport and help people get to the cultural center at Wolf Trap Farm operated by NPS, and would aid commuters. “I find some of those urging that we release the funds without assurance that the highways will be constructed are persons who carried placards against the construction of Interstate 66 in Virginia.”

Neither the city nor the Department of Transportation had complied with the two laws requiring construction of the Interstate freeways in the District. The Department of Transportation was pushing metro while “giving lipservice [sic] to the highway program.”

He also disagreed with Judge Bazelon’s decision:

I remember when he came to Washington. I worked under him down at the Lands Division of the Department of Justice. It was said he was a tax attorney. Now he seems to be an authority on everything.

Judge Bazelon’s decision was a good reason why other Members of Congress should support an amendment to the Constitution that would limit judicial appointments to 10 years, with the right to be reappointed subject to congressional oversight.

Senator Scott was convinced that defeating the Giaimo Amendment was essential. “I hope that those who cry so loud for the subways, whether they are District of Columbia officials, the Secretary of Transportation, or the President, will push as hard for highways as they do for subways and then we can have the balanced system we talk about.” [Page 44274]

Representative Conte returned to the freeway-subway impasse. He said the House faced a rather simple challenge:

Should we fulfill our legislative responsibilities by promptly releasing the \$72 million that represents the District’s share for the Metro project – a project that Congress has emphatically authorized to be constructed and appropriated \$684 million in the DOT appropriation as the Federal share? Or will we continue to flout the legitimate interests of millions of area residents and visitors? Will we continue to indulge the mysterious whims of those who seem bent on creating an empty underground memorial to the second-class status that this city has too long had to endure?

He did not agree with claims that the District had not complied with the congressional mandates contained in the 1968 and 1970 Acts. He inserted into the record FHWA's updated status report as of November 29, 1971:

#### District of Columbia Restudy

The restudy is now complete and all chapters have been sent to the printer. We have been advised by the District that a limited number of copies of the final printed report will become available early this week. FHWA staff is reviewing the draft chapters received to date, and preparing recommendations for the report to Congress

#### Three Sisters Bridge

Last week, at the request of President Nixon, the Department of Justice filed a petition for reconsideration by the Circuit Court of the decision rendered on October 12, 1971, by the three judge panel. The petition seeks review by the full court. Should the petition fail, the case is to be taken to the Supreme Court.

#### Potomac River Freeway

The National Capital Planning Commission is awaiting final concurrence from the consultant and the District's Corporation Counsel on the contract for land use studies and the preparation of a Section Development Plan for the Georgetown Waterfront. NCPC expects to have the contract executed and work under way by the end of this week.

#### South Leg of the Inner Loop (Lincoln Memorial and Tidal Basin Area)

Preliminary drafts of an environmental impact statement and design hearing information reports have been reviewed and returned to the consultant for revisions. The design public hearing is scheduled for January 1972.

#### East Leg of the Inner Loop (RFK Stadium)

The D.C. Department of Highways and Traffic is working with the National Park Service on the joint planning and funding of that segment of the highway which will pass through Anacostia Park.

#### Center Leg of the Inner Loop (West of Capitol)

Work is proceeding on all segments of the Center Leg.

Representative Conte also inserted into the record the petition for a rehearing en banc of the three-judge panel's finding. [pages 44274-44278]

After several other members commented, Representative Giaimo formally introduced his amendment to the District of Columbia Appropriations Act, 1972. He said that in view of the status of all other freeway issues, the "disagreement presently boils down to the controversy over

the Three Sisters Bridge and those highways which are allied with and dependent upon its resolution before they can proceed.” The fate of that bridge would be determined in the courts. “Because of that fact, we as a Congress have taken the position that because you have not started construction – and parenthetically you cannot start because a court has enjoined you from doing so – we are not going to fund the Metro.” At the same time, Congress withheld the District share, it appropriated the Federal share. “This is going to create chaos. We are literally threatening the very existence of the subway.”

Everyone favored mass transit and the Metro to serve the 1.5 million people in the Washington area, “and now we are going to threaten its existence because of the controversy over whether or not we ultimately are going to build a bridge which I want to see built.” Now, he found himself opposing the Minority Leader while agreeing with the Republican President. The courts will rule on the Three Sisters Bridge and it will be built, or not. “I urge you to let us not delay in this matter.” [pages 44279-44280]

Representative Long of Maryland opposed the Giaimo Amendment on five grounds. First, he was convinced that the cost of Metro would escalate to as much as \$5 billion, as Chairman Natcher had predicted. Second was “its probable lack of use. People do not want to use mass transit.” Third, “it is one more case in which people of ordinary means, in your district and mine, are going to be asked to subsidize people of high income in and around Washington, D.C.” The primary beneficiaries, he said, would be Federal employees “already enjoying higher salaries and fringe benefits than the taxpayers back home.”

Fourth, even if he was wrong about the use of Metro, “it is totally gratuitous to plunge into a \$3 billion to \$5 billion program when we have not developed the rapid rail facilities that already exist here and now in Washington, D.C.” Why not use existing rail right-of-way as a cheaper, minimally disruptive plan for rail rapid transit?

Finally, mass transit was not the answer to relieving congestion in the Washington area:

The answer is to stop locating so many government agencies in Washington and decentralizing our government back home – in your district and mine. We are trying to put too many angels on the head of a pin – and most of the angels are not very angelic.

Metro, if it succeeded, “would merely encourage further congestion.” He concluded by quoting Lewis Mumford’s book *Culture of Cities*:

While congestion originally provided the excuse for the subway, the subway has now become the further excuse for congestion. [pages 44280-44281]

Chairman Mahon of the Appropriations Committee said that in this “greatest legislative forum in the world,” they were “engaged in a battle which I interpret to be a battle of principle.” The issue was “a question of orderly procedure, and a question of right or wrong, as I see it.” Let us not, he said, “topple” Speaker Albert, Minority Leader Ford, or Chairman Natcher because they support the committee’s position. “Please let us not kick in the teeth the Committee on Appropriations which has gone into this matter in great detail and overwhelmingly defeated the Giaimo

amendment” in May. Chairman Mahon was understandably “emotional about it,” adding “I hope the Members will pardon me.”

He assured his colleagues that the committee was not trying to kill Metro. “We are just trying to get the will of the Congress carried out.” He did not know if his view would prevail today, but “for better or worse, under the American legislative system, Congress still has the last word.” [page 44282]

Representative Conte engaged in a colloquy with Representative Stratton. Representative Conte argued that the attempt to withhold the Metro funds defied reality. “By any reasonable understanding of the situation, both the District of Columbia and the Federal Government are in compliance with the dictates” of the Federal-Aid Highway Acts of 1968 and 1970. Now, under the latest compromise, leadership agreed to release the Metro funds if the Court of Appeals agreed to hear an appeal of the three-judge panel’s finding. “This latest attempt at political blackmail, which demeans the very integrity of the judicial process, deserves our immediate and forceful rebuff.”

Representative Stratton asked if Representative Conte was aware of any legislation that said Metro could be built only “if built simultaneously, minute-by-minute construction also proceeded on the freeways and the Three Sisters Bridge?”

No, Representative Conte replied. As he had discussed earlier, all provisions of the 1968 and 1970 laws had been satisfied. “The only one left is now in litigation – the Three Sisters Bridge controversy.”

Representative Stratton noted that Congress has required construction of Metro. In that case, “if we are preventing its being built then we are flouting our own will.”

Representative Conte pointed out that not only had Congress authorized Metro, but appropriated \$680 million for its construction.

Representative Stratton hoped that the money would not “go down into the same gullies that we will leave in the heart of Washington if we do not approve this amendment and complete the unfinished Metro system that now marks our city.”

Representative Conte, after thanking his colleague for his comments, said, “I disagree with the decision of the court of appeals, but to hold a gun to the heads of the U.S. court of appeals is not my idea of the responsible manner in which Congress should work its legislative will.” He would not have any part in an intrusion on the constitutional separation of powers.

Now was the time to end “strong-arm tactics” and release the funds. This was fair to the suburban jurisdictions whose “tolerance for our legislative maneuverings is rightfully growing short.” Further, the delays were increasing the cost of the Metro system, a result he considered an “inexcusable waste of the taxpayer’s money.” He also cited the millions of area residents who had acted in good faith through their governments to support Metro. “Our answer to their good faith and patience cannot be – and must not be – an irresponsible action that could in President Nixon’s words, “consign the entire project to an early grave.”

He concluded by saying that what was at stake was “not only the future of this city:

Also at stake was the integrity of the three branches of our government – the integrity of the judiciary, which must remain unfettered; the integrity of Congress, which must remain responsive; and the integrity of the executive branch, which must remain capable of executing projects that have been mandated.

He urged support for the Giaimo Amendment. [pages 44282-44283]

Minority Leader Ford said, “If you vote for the Giaimo amendment, you can say that we are, in effect, undermining the integrity of the House of Representatives and the Congress.” If he had to make a choice, “my choice is clearly with the legislative body of our Government.” He strongly disagreed with Judge Bazelon’s decision, which had “hamstrung the District of Columbia in proceeding with the Three Sisters Bridge.” All he was asking for was “a day in court and the sooner the better.” He considered that “a reasonable request.”

Chairman Natcher again said he supported Metro as part of a balanced transportation system for the Washington area. “Under no circumstances do we intend to come before this Congress at any time, or at any time in our committee, and make any move to stop the rapid rail transit system.” If his colleagues defeated the Giaimo Amendment, “I say this from the bottom of my heart – this will be no personal victory for me – it will be no personal victory for the Committee on Appropriations.” Instead, it would be “a victory for the Congress of the United States – a victory for the legislative branch of the Government.”

The amendment should be defeated:

We should say not only to this judge, but we should say to all of those in the city of Washington and throughout the United States that the legislative branch of the Government is a coequal branch of the Government. [pages 44285-44285]

Representative Broyhill pointed out that the House should not debate the need for Metro; Congress had decided that issue months earlier. In May, when the previous Giaimo Amendment was considered, its opponents complained about “too much foot-dragging downtown.” Now, they “have switched their criticism to the courts,” where the outcome is unknown:

In the meantime the entire subway system is dying. The subway agency is out of money; the suburban jurisdictions, which have already contributed \$125 million, have refused to continue to pay for a system they may never enjoy, located entirely within the District of Columbia, which has become the hostage of forces engaged in a desperate battle for and against highways and bridges.

He said “it makes as little sense to withhold funds for the subway to force the building of highways as it would to withhold funds for the judiciary to force a few judges in the District of Columbia to render a decision.” He wondered why Congress must hold hostages. “In fact all we have accomplished by doing so is to allow a few people to decide whether they want to build either the subway we directed be built or the highways and bridges we directed be built.” He said, “It would be a shortsighted and disastrous disservice to the public interest to force costs still

higher by unwarranted delay or to create the inevitable chaos in the Nation's Capital which would result from its complete abandonment." [pages 44285-44286]

District Delegate Fauntroy said the Congress had taken on "a moral obligation" to the residents of the Washington area in approving the Metro system. "If this House fails to act to restore the \$73 million [sic] request by the President of the United States, we will have nothing to show for our efforts and money but empty, useless holes in the ground."

After delaying year after year, now Congress was contemplating waiting for a rehearing date. "This House cannot delegate to the U.S. court of appeals, as the so-called compromise would do, the decision as to whether the Washington region shall have a subway." He reminded his colleagues of what President Nixon had said: "No further delays can be tolerated." (He favored the amendment, and could speak on the House floor, but he could not vote on it. [pages 44286-44287])

Representative Gude said the House was like a man who tells you he would like to have lunch with you but always has an excuse for not ever doing so. Congress has promised to release the funds "but" first the District should advance the freeways. "The city got such a plan and continues to build freeways, one at the very foot of Capitol Hill and another long stretch just five or six blocks to the south." So Congress said, yes "but" they should build the North-Central Freeway to Silver Spring even though Maryland has decided not to build its portion of the route, "so the District's construction of its section is a moot question."

Next, the Members said they would release the Metro funds "but" the city must begin construction of the Three Sisters Bridge. The city did so. "Unfortunately, the haste and citizen opposition has led to court challenges and an adverse finding that has temporarily halted the work."

Now those same hostage-takers had a new "but," namely the setting of a date for review of the court decision by the full Court of Appeals:

Meanwhile, they are starting to complain that the subway may turn out to cost too much because of the delays which they in part have caused.

If the House did not approve the Giaimo Amendment today, it might as well "start appropriating funds to start filling in the great tunnels that have been built through downtown and Connecticut Avenue." [page 44287]

Representative Hogan of Prince George's County said:

So, if you have a dispute with the District government and with Judge Bazelon, thrash it out with them and do not use a "secondary boycott" to penalize my constituents. They have lived up to their end of the bargain [by contributing their share to Metro] . . . and they have been denied the progress in the construction of the rapid rail transit system that they are entitled to. [page 44287-44288]

Representative John R. Dellenback (R-Or.) asked Representative Natcher for clarification. He understood that two conditions had to be satisfied for release of the District's Metro matching share:

First, that there must be a setting of a time certain for the rehearing before the court.

Second, that there must be a request for a supplementary budget, and that there is no additional condition attached to the release by the House of these funds.

Chairman Natcher said that if those two conditions were satisfied "it will clearly indicate to me, just for a change after a period of about 4 years the courts have decided to move along and pass upon this case." When the supplemental appropriations act comes to the floor in 1972, "I will stand in the well of this House and ask that the money be appropriated."

After several other Members of the House spoke on the subject, Representative Obey quoted a comment from Don Marquis' book *The Lives and Times of Archy and Mehitabel* (1940): "Did you ever notice that when a politician does get an idea, he usually gets it all wrong?" That description was apt for the compromise being discussed during this debate:

You would think from hearing the description of the so-called compromise being discussed here today that we are compromising with the court. The fact is that we are not. You would think we were withholding from the court. The fact is that we are withholding money from the District . . . .

I think it strange logic indeed for people to place as much emphasis as they have upon the issue of noncompliance, when the Congress, by the very act of withholding funds from Metro, will force the District to be in noncompliance on the District contract with the other subdivisions that are signatories to that contract on the Metro. [page 44290]

Representative Conte interrupted to say:

I have a very important announcement, because I think it will put this whole debate in proper perspective. The court of appeals has just refused to review the petition, and therefore all these agreements that have been propounded here are fait accompli. The only appeal now is an appeal to the Supreme Court of the United States, on a writ of certiori.

Representative Obey replied that if that announcement were true, then Congress was faced with a game of "chicken." He explained, "We are going to decide whether we are going to be more stubborn or whether the court is going to be more stubborn."

Representative Davis said he did not think the announcement made any difference as far as the compromise was concerned. It just cleared the path for an appeal to the Supreme Court.

Minority Leader Ford agreed that the announcement "clarifies the situation" because the Justice Department could now go straight to the Supreme Court. He thought the appeal would be

accepted. “It seems to me that this is a very, very important circumstance that would justify their immediate action.”

Representative Davis said he had known the President for 25 years and knew he wants a balanced transportation system. “So when we are told the President wants the subway, I say this: He also wants the freeways, and we are going to give him both and not just half the package.”

Representative Giaimo said his staff had now spoken with Appeals Court staff to confirm the decision and said the White House had informed him that an immediate writ to the Supreme Court was being prepared. He essentially asked Chairman Natcher: what now?

Chairman Natcher said he was not surprised by the announcement. “We are right back in the hands of Judge Bazelon, who has made up his mind for a period of 4 years that the rights and the laws of Congress are not going to be enforced.” No doubt, the case should go to the Supreme Court. “But the funds, \$72 million, should now be refused until the law is enforced.”

Representative Giaimo replied that the House should fund Metro now and then abide by the court’s decision about the meaning of the two Highway Acts concerning the Three Sisters Bridge.

After Chairman Natcher made a last appeal for defeat of the Giaimo Amendment (“I should like to respectfully request the Committee [of the Whole] to defeat the amendment which is now before the Committee”), the House voted. The amendment was approved, 196 to 183. [pages 44291-44292]

According to *The New York Times*, “A roar of approval went up from the floor of the House” as the vote was announced. Chairman Natcher had lost.

As Schrag put it:

The House vote effectively declawed Natcher. For an Appropriations subcommittee chairman to be “rolled” on the floor of the House was a humiliation, one that Natcher was unlikely to risk again. Although he vowed that “we lost the battle but not the war,” and remained a critic of Metro, never again did he use his position to attempt to stall D.C. payments. [Schrag, pages 140-141]

Reporters trying to tell readers why the House approved the Giaimo Amendment found several reasons after speaking with Representatives and aides. Everyone agreed the White House played a key role, starting with the President’s statement and letter, but including lobbying by his staff. The White House effort was needed because the House leadership was opposed. Representative Henry P. Smith (R-NY), who voted for the amendment, said, “I have never seen such a phalanx of power arrayed” against a measure. He met the White House congressional liaison, Richard P. Cook, in the hallway on December 1. Cook asked if the White House could count on Representative Smith’s vote. “I said he could but did he realize he was asking me to vote against my leadership. He told me, ‘That’s right, Henry, but we’re asking you to vote for your Big Leader.’”

Representative Conte agreed. “The President was very effective.” But he and others thought a generational divide also helped. He thought that many younger members were furious about the Chairman Natcher stalling tactics. Representative Gude concurred. “A lot of congressmen were simply worn down.” The *Star* said of Chairman Natcher’s “stunning defeat” that:

Such action is unusual in Congress. But it has been happening with increasing frequency lately as conservative and liberal Democrats continue a see-saw battle over party leadership and a new dictatorship allowed under the House’s seniority system . . . .

Natcher first started withholding D.C. subway moneys in 1966, and his [grip] on the situation remained relatively firm over the next several years as planning continued and some construction was allowed to start.

But in more recent years, Natcher lost support for his position from District officials, and important businessmen, and finally, last May, members of his own subcommittee turned on him and started the move to approve the subway funding over his objection.

These dissidents, rebellious House liberals, President Nixon’s insistence that the subway funds be freed, as well as warnings from Maryland and Virginia that they were fed up with delays, all helped overcome not only Natcher, but also the support he had enjoyed from House Speaker Carl Albert, D-Okla., and House Minority Leader Gerald R. Ford.

Of course, Representative Giaimo and Conte deserved much credit. They had worked throughout the week to gain support and, by one count, had switched about 30 votes to their side.

Representative Gude offered another reason, as described in the *Post*:

Several congressional wives and a number of staff aides, all residents of the area, were urging members of the House to approve release of the funds, he said.

Unlike thousands of projects approved by Congress annually, the members can actually see this one. “They could stand out in front of the Mayflower [hotel] and see something that really is,” Gude said.

Local leaders were “predictably ecstatic.” Mayor Washington said the vote was “of monumental significance” and “essential to the well-being of this capital city and neighboring jurisdictions.” Montgomery County Executive Gleason, who led the revolt that saw subdivisions refusing to make their contribution, said the vote was “the greatest news we’ve had about the Metro system since the transit compact was organized in 1965.” He promised that Montgomery County would “enthusiastically” make its next payment in January 1972. [Scharfenberg, Kirk, “White House Lobbying Credited With Freeing Metro Money,” *The Washington Post and Times Herald*, December 3, 1971; Finney, John W., “Leaders of the House Rebuffed as Subway Funds Are Restored,” *The New York Times*, December 3, 1971; Sarro, Ronald, “Natcher Seen Still Powerful Despite Defeat,” *The Evening Star*, December 6, 1971]

The *Post* editorial following the victory began:

Metro lives – and you may actually be able to step aboard for a ride on the Fourth of July, 1974. Suddenly that’s a prospect instead of a pipedream, thanks to a dramatic demonstration in the House that the powers of reason can indeed upset the powers of congressional tradition when a thoughtless leadership puts petulance before principle. It was a rare, reassuring spectacle to see the top leaders of both parties in the House and the great weight of powerful committee chairmen brought to their senses on this issue, and heaven only knows, they had it coming.

The *Post*, calling the decision a “miracle,” gave credit to the White House:

Mr. Nixon deserves thanks from everyone for acting to cut the “Gordian knot,” as he put it, that had brought about a “hardening of vital transportation arteries” here. The president not only spoke forcefully and often for Metro in the days leading to the House vote, but deployed the White House lobbyists on a full scale follow-up.

Also receiving credit were Representatives Giaini and Conte as well as area Representatives who fought for every vote. The *Post* also cited Representatives Hale Boggs [the Majority Leader] and [Majority Whip] Thomas P. O’Neill, Jr. (D-Ma.), “who parted company with Speaker Carl Albert in a display of real leadership, and Rep. John B. Anderson [of Illinois], who assumed leadership among Republicans.” Many others shared the credit:

In short, the House – as a whole – did itself proud this week, even if some of its leaders did not. Greater Washington, which must look to Congress for leadership in the absence of self-determination, can be grateful for the outcome. [“The Metro Miracle,” *The Washington Post and Times Herald*, December 6, 1971]

The *Star* carried a lengthy feature editorial on the key vote. Congress had fought many larger, more important battles over the years, but “not many have been fought harder – with more gratifying results – than Thursday’s narrowly successful bid to wrest \$72 million in D.C. subway appropriations from the grasp of Representative William H. Natcher.”

The struggle had everything a political drama needed, “including big-name stars”:

President Nixon, aligned with rank-and-file House members of both parties, was largely responsible for making the all-out fight. On Natcher’s side was virtually the entire power structure of the House, including Republican leader Gerald Ford.

Chairman Natcher had described the purpose of the battle as safeguarding Congress’s prerogatives. If the matching funds were not withheld until the required freeways were built, the *Star* paraphrased, “Congress would have no protection against the unwarranted encroachments of a recalcitrant administration and a meddling, irrational judiciary”:

But the outrageous, infuriating aspect of that position was that the effort to sustain the subway freeze had absolutely nothing to do with the merits of the subway – or the grave peril in which that program was placed.

The editors recalled the deal Chairman Natcher, Minority Leader Ford, and others had reached under which the Committee on Appropriations would release the matching funds if the full U.S. Court of Appeals agreed to hear an appeal of the three-judge panel's decision:

But near the very end of the seven-hour-long House debate, word arrived that the full Court of Appeals (perhaps as zealous of its own prerogatives under pressure as the Congress is) would not review. When that occurred, the House leadership deal simply fell apart.

Whether the subway dollars would have been turned loose on Thursday if the appellate court had not been heard from before the vote, no one can know. We are inclined to doubt it. In that event, Natcher might well have won, and the situation then could have had the makings of a prolonged period of subway uncertainty.

The entire region was "indebted to Mr. Nixon and to Representatives Robert Giaimo, Silvio Conte and Joel Broyhill, among many others." But many hurdles remained in 1972, such as the return of WMATA to Congress seeking Federal guarantees for the needed bonds and the city's appearance before Chairman Natcher's subcommittee on the next fiscal year's appropriations act. "Both those requests will be viewed in the light of increasing skepticism about sharply spiraling costs."

Chairman Natcher said he fully supported rail rapid transit, adding that "under no circumstances do we intend to come before the House at any time to stop the program." The editors wrote:

We trust that pledge will be honored, for the strong support which Natcher gave the subway at its inception will be more vital than ever in the months ahead.

While the editors thought Chairman Natcher had been wrong to hold the rail rapid transit funds hostage to construction of the freeways, "he is as right as anyone could be in complaining that Congress' clear-cut directives on freeway construction have been unconscionably and deliberately thwarted by officials of the District, the administration and, most recently, the Three Sisters Bridge decision written by Court of Appeals Chief Judge David Bazelon." With rail rapid transit funding finally moving forward, "Natcher has every reason to expect Mr. Nixon to exert a much stronger leadership in each of those areas."

At no time had planners ever imagined that rail rapid transit could solve the entire congestion problem, or that freeways and buses alone could do so, but the urgent debate over rail rapid transit funding meant that freeways had been "shoved on the back burner":

It is time now that those arguments get the attention they deserve, for they happen to be accurate. The subway, from its inception as a full-fledged system in 1959, was intended to share the regional transportation burden with a new system of freeways – one which in those days was much larger, in fact, than that now contemplated. It was never assumed that the full load could be carried by rail transit, any more than autos and buses alone could do the job.

A good many weird ideas are floating around these days, on that point, about shutting off the access of autos to the central city or making parking resources so scarce or so expensive that motorists would have no alternative but to stop driving. At the moment, of course, such thoughts are pure flights of fancy, for as yet there is no decent transit system. Even if there were, however, the approach is wrong. The government's proper role is not to eliminate such options, but to make public transit sufficiently convenient and economical that it will be used as a matter of choice.

For now, the House had overcome Chairman Natcher's decision to withhold appropriations for the city's matching funds. Recalling the pivotal moment in the debate when the House learned that the full U.S. Court of Appeals would not hear an appeal, the editorial concluded:

That incident, perhaps more than any other, should assuredly serve as a warning that the subway system is too vital to the Nation's Capital, and for all its vast size and cost too intricate a mechanism, to be utilized ever again as an instrument of political blackmail to achieve any other purpose, no matter how valid. The subway and road programs should both proceed, but neither at the expense of the other. ["The Several Side of the D.C. Subway Vote," *The Sunday Star*, December 5, 1971]

### **After the Vote**

On December 3, the Senate approved the District of Columbia Appropriations Act, 1972, by a vote of 85 to 15, with \$72.4 million included in District matching funds for Metro. The issue of matching funds for the Metro was sufficiently noncontroversial at this point that it was not debated.

The conference to resolve differences between the House and Senate bills, however, did not go smoothly. The District matching funds for Metro was not the problem; a measure that appears in both the House and Senate versions of a bill is generally not subject to change. The problem appeared to be the Federal payment. The House bill appropriated a total of \$973 million, including a \$162 million Federal payment, while the Senate appropriated \$882 million with a Federal payment of \$179 million. The higher Senate amount was for Federal City College, welfare payments, expansion of Superior Court, and special education programs.

On December 11, Chairman Inouye walked out of the conference saying the House was refusing to negotiate. "Let's just say the conference is postponed indefinitely. I'll consider going back if they agree to confer. The next step is theirs." He added, "I refuse to return to a conference where I'm threatened by statements saying they're not going to sign anything that has one dime more than \$162 million. This was not a conference."

Representative Davis acknowledged making the statement because he had "strong feelings" about the matter.

Representative Giaimo referred to the stand as "intransigence of the Republican House members who announced they weren't going to budge over \$162 million before we even discussed

anything.” Representative Obey agreed that “a solid Republican phalanx” had taken the same position as Representative Davis.

Although Metro matching funds were not on the agenda the *Post* suggested that, “Natcher is believed to be smarting from his defeat on the House floor last week . . . .” If the conference could not reach agreement, release of the District matching funds could be delayed, and would not be included in a continuing resolution extending current budget levels if needed to keep the city solvent:

The White House, which lobbied hard in support of Metro funds when the House overturned Natcher, expressed displeasure yesterday at the deadlocked conference.

A high administration source said “a continuing resolution won’t do.” If some conferees refuse to agree on the budget, the source said, “that’s a way those who opposed Metro on the floor, and lost on the floor, work their will in committee. The President fought for this and we don’t want to lose it through parliamentary maneuver.” [Moore, Irna, “Inouye Quits Talks on District’s Budget,” *The Washington Post and Times Herald*, December 12, 1971]

Despite this clash, the conferees reached a tentative agreement that Chairman Inouye expected to be approved on December 14. The signatures of at least 7 of the 12 House conferees were needed, but the House delegation refused and walked out without signing the conference report. With the agreement reportedly calling for a Federal payment of \$163 million, Representative Bow said, “there isn’t any agreement because we can’t agree.” He would not sign the tentative agreement. Senator Inouye gave up at 6:30 p.m. and went home.

Speaker Albert said he was “pushing as hard as I can” to get an agreement and had called on the White House for help. Minority Leader Ford was talking with the Republican delegates in an effort to break the deadlock. He was confident that an agreement could be reached. “Things are very tenuous right now, and I’ve been working on this for five hours,” he said in the evening.

Despite the focus on the Federal payment, some observers suspected a different agenda was at play:

But some congressmen have charged that the Republican House members are deliberately trying to deadlock the conference, forcing the Congress to approve a continuing resolution allowing the city to continue spending at last year’s level. Such a resolution would not include \$72 million in subway construction money . . . .

“This is the most petulant thing I’ve ever seen,” Rep. Gilbert Gude (R-Md.) said. “I don’t know whether anyone is going to admit it, but the holdup is an attempt to delay the subway funds.”

Speaker Albert refused to bring up a continuing resolution even though Congress was about to adjourn for the year.

Chairman Inouye said the Senate would not consider such a resolution if it did not provide the District matching funds for Metro. "All I know," he said, "is that the conference is still alive and that I'm leaving Washington for Hawaii at 5 p.m. Wednesday." [Moore, Irna, "GOP Blocks D.C. Budget, Adjournment," *The Washington Post and Times Herald*, December 15, 1971]

With the threat hanging over conferees that Congress would remain in session despite the pending Christmas break, conferees reached agreement the next day. The conference report appropriated \$932,512,700 for the District, with a Federal payment of \$166 million. Although four House Republican conferees still refused to sign the conference report, Speaker Albert and Chairman Mahon secured six Democratic votes and Representative Ford pressured Representative Bow to provide the needed seventh signature. One Democratic conferee, Representative Stokes, had been summoned back to Washington from Cleveland and convinced by the Speaker to sign the report despite reservations that funding levels were insufficient.

Representative Obey told reporters, "If it weren't for the speaker we'd all be here another week. He really stuck hard." Irna Moore, reporting for the *Post*, added, "Other members said they could not recall seeing Albert so determined about anything since he became speaker at the beginning of the year."

Chairman Inouye said, "I'm not happy with it, but under the circumstances, it's about as good a bill as we could hope to get." Chairman Natcher, who signed the report, said, "This bill is fully adequate. It's a good bill." [Moore, Irna, "\$932 Million Fund for D.C. Approved," *The Washington Post and Times Herald*, December 16, 1971]

The Senate approved the conference report by voice vote with little discussion. In the House, Chairman Natcher could not resist raising the issue of subway funding. The District, he said, "must have freeways, express buses, and a rapid transit system" for a balanced transportation network. "The Highway Acts of 1968 and 1970 are the law and must be complied with. Both systems must proceed together." For the record, he inserted President Nixon's letters of August 12, 1969, and April 27, 1971, and his statement of November 18, 1971, calling for a balanced transportation system. Chairman Natcher added:

I believe that President Nixon will carry out the commitments set forth in the letters and the statement and that the Department of Transportation, the Attorney General, and the District of Columbia officials should immediately join with the President in carrying out the mandate of the Congress set forth in the Highway Acts of 1968 and 1970.

Minority Leader Ford said he could "basically agree with the recommendations of the subcommittee, aside from the subway problem." Although it had been "a most unfortunate and regrettable last 48 hours trying to find an answer so that the Congress could adjourn," he thought the House owed Representatives Natcher, Davis, and their colleagues "a real round of applause."

Representative Bow told his colleagues that he had signed the report "with some reluctance." He was not satisfied with every item, but "thought it was rather necessary that we have a conference report and dispose of this matter." However, he resented some of the things said about Chairman Natcher and the Republican conferees:

We have read and seen things in the paper, and heard things on the radio about this House committee that just are not factual. I listened last night to one radio program that said that the distinguished chairman of this committee (Mr. Mahon) and the distinguished minority leader, the gentleman from Michigan (Mr. Ford), and myself were deep in a little room here in the Capitol trying to connive some way to keep the Metro funds out of this bill. There is absolutely no truth in that, absolutely none, because we have all agreed that the House worked its will and the Senate theirs, and the Metro funds are there. Some of us may not have liked that, but it was the will of the House. We never at any time did anything in an attempt to keep the Metro funds out of this bill. So that the irresponsibility of some people who go on the air and make reports of that kind I think should be criticized.

Representative Scherle, one of the conferees who had not signed the report, said, "In good conscience, I could not sign this report." He had listened to testimony about "such reckless, wasteful spending on the part of the District of Columbia officials" that it was "unbelievable." He could not agree to a Federal payment above \$162 million, but offered "my compliments to the District officials for their dexterity and ability in using the old shell game" to secure a higher amount.

Overall, the Metro funding issue was not a major topic of discussion. The House approved the conference report 260 to 92. [District of Columbia Appropriations, 1972 - Conference Report (H. Rept. 92-755), *Congressional Record-Senate*, December 15, 1971, pages 47110-47111; Conference Report on H.R. 11932, District of Columbia Appropriations, 1972, *Congressional Report-House*, December 15, 1971, pages 47139-47147]

On December 15, 1971, President Nixon signed the delayed District of Columbia Revenue Act of 1972 (P.L. 92-196). Among other items, it increased the gasoline tax in the District to

8 cents a gallon, from 7 cents.

He signed the District's appropriations act on December 18 (P.L. 92-202) for a fiscal year that began on July 1, 1971.

A *Post* editorial explained how the city had avoided bankruptcy:

If ever there was a screaming argument for self-government in this powerless colony of Washington, we've witnessed it this week on Capitol Hill. There, a shameful, 11<sup>th</sup>-hour set of shenanigans was passed off as the way to decide how the capital of the United States is to provide vital municipal services to its people for a fiscal year that's nearly half over to begin with. While City Hall sat helpless . . . it took (1) a furious walkout by one sympathetic senator; (2) an ultimatum and follow-up prods by the Speaker of the House and the House Minority Leader; (3) expressions of deep concern from the White House; and (4) the rumblings of Santa Claus in the wings just to get anywhere near agreement on what the District of Columbia should be spending (and for what) . . . .

So you could say that we should bless Scrooge for the change of heart and let it go at that. But we shouldn't because this was the worst performance in years.

No one knew why “the House Appropriations conferees behaved so scandalously in the negotiations with the Senate, especially since they don't ever have to tell us.” Even after their views on the District's Metro funding had been rejected “when they tried to kill off the area's rapid transit system,” they were “still stubbornly insisting that their views should prevail over anybody else's.”

The city may be able to think of “steps the local government might take to perhaps lessen the chances of this dangerous brinkmanship reoccurring,” but the reality was that “as long as the entire, absurd system of colonial overlordship persists, Washingtonians – and even their suburban neighbors – will still be subject to this humiliating and grossly undemocratic treatment once a year.” [“How Washington Avoided Bankruptcy,” *The Washington Post and Times Herald*, December 16, 1971]

The *Star* began its editorial with a sigh of relief:

Even to a city thoroughly accustomed to crises with Congress, yesterday's eleventh-hour approval of a District of Columbia budget – for the year that began last July 1 – was much too close for comfort.

The editors reminded readers that “it might well have been worse.” After all, “with Congress driving pell-mell toward adjournment, certain House members reportedly were still refusing to negotiate a compromise,” without which a continuing resolution eliminating Metro matching funds would have been necessary:

According to some sources, the delaying tactic represented a final, last-gasp effort to revive Representative Natcher's drive to strip \$72 million in District subway funds from the budget.

If true, “the tactic hit a new low in political subterfuge” in view of the House's repudiation of Chairman Natcher's drive only 2 weeks earlier. “It is hard to imagine that the Congress as a whole would have countenanced such an outrage. Fortunately, that eventually never had to be tested.”

The result was, in the words of Chairman Inouye, “as good as could be obtained” – not as good as the Senate bill, but not as bad as the House version, with the Metro funds intact. “It leaves some serious fiscal problems, but the city should approach them with a recognition that both the House and Senate clearly directed that some belt-tightening all along the line is in order.” [“Back in Business,” *The Evening Star*, December 16, 1971]

On December 16, the WMATA board completed work on its spending program of \$186 million, made possible by release of the District's matching share. The plan included construction of the McPherson Square and L'Enfant Plaza stations, a contract for 88 escalators in the first seven operating stations, and contracts for projects and equipment purchases that had been approved before the funds were available but could now move forward. WMATA would now accept bids

for the Pentagon and Pentagon City stations as well as adjacent trackage, and a communications system and the first 300 cars of a planned 556-car fleet.

The board also approved an agreement with Virginia for construction of a transit right-of-way in the I-66 median. The board agreed to pay \$10 million for grading, drainage, and bridge construction to accommodate the rail line between the Capital Beltway and State Route 7 west of Falls Church. [Eisen, Jack, "Metro Allocates New Funds," *The Washington Post and Times Herald*, December 17, 1971]

The Metro board also was looking forward to a hearing in early 1972 on Federal bond guarantees. The board expected to receive about \$300 million in semi-annual payments from local jurisdictions in early January, but the funds would be spent or earmarked by mid-March. WMATA would be broke until the next payments became due in July unless Congress passed legislation allowing the full faith of the Federal Government to back Metro revenue bonds. In the meantime, funding on hand was enough to ensure the opening of the first 4.6-mile section of Metro in July 1974, according to General Graham.

The Senate and House District committees were planning a joint hearing to consider legislation that Senator Mathias and Representative Broyhill had introduced to provide Federal guarantees of WMATA's bonds. ["The Metro Still Goes for Broke," *The Evening Star*, December 17, 1971]

Representative Obey, in his memoir, recalled the end of the Natcher impasse this way:

The day we won, I was holding a "Tom and Jerry" pre-Christmas party in my office in the Cannon building. Few members of Congress even knew what a Tom and Jerry was, but Tip O'Neill did. No self-respecting Irishman was ignorant of the blessings of Tom and Jerry, a Christmas drink of hot water, an egg-based batter spiced with cinnamon, nutmeg, cream of tartar, and allspice, laced with rum and brandy. The party began at 5 p.m. and Giaimo arrived right on time – half to celebrate and half to bemoan our fate in Natcher's doghouse. As he sat on my office couch and sipped his drink, he became more and more melancholy. "Dave, it was a helluva job we did. Never thought we could do it until the end. It was the right thing to do, but nobody will ever thank us, and Natcher will never forget," he said. Giaimo proved to be right on both counts. When the subway was dedicated, I did not even receive an invitation. Jackson Graham, the head of the Subway Authority, never called to express appreciation. And Natcher didn't speak to Bob or me for two years.

Few may remember how the impasse was broken, but Representative Obey said, "I do, and I'm proud of the role I played in jumpstarting the fight that pried it loose." [Obey, page 138]

### **Fighting For/Against Freeways**

As the House of Representatives learned while debating the Giaimo Amendment, the U.S. Court of Appeals voted, 4-3, against reconsidering the three-judge panel's finding on the Three Sisters Bridge. As was customary, the judges did not explain their decision. At the same time, the

three-judge panel voted against reconsidering their finding, again by a 2-1 vote. They also did not issue a statement.

White House press secretary Ziegler said the White House was disappointed by the court's decision. Although approval of the Giaimo Amendment had separated the freeway and subway issues, he said, "We want to see the Three Sisters Bridge built as part of the over-all transportation system in the District." The next step, as the President had pointed out, was to appeal to the Supreme Court.

Although Justice Department officials would say only that they were considering further action, sources told reporters that the Nixon Administration would soon file an appeal with the Supreme Court.

With the freeway issues separated from the subway funding, Secretary Volpe would have an easier time demonstrating in court that if he approved construction of the Three Sisters Bridge, he was not reacting to "undue pressure" from Congress. [Groom, Winston, "U.S. Set to Combat Bridge Delay," *The Evening Star*, December 4, 1971]

The Federal-Aid Highway Act of 1970 required the District of Columbia to submit a report by the end of the year on its plans for completing the Interstate System. The D.C. Federation of Civic Associations and ECTC made clear on December 10 they remained unyielding in their opposition to more freeways. In their view, the city should not submit the required report until the spring of 1972. First, the city should complete an EIS. Ninety days after the city filed it with EPA, the city could hold hearings. Only then should the city submit a report to Congress.

The city had scheduled hearings to begin on December 13, but Sammie Abbott urged the city to postpone the hearings. The additional time would allow citizens to study the consultants' report fully so they could testify intelligently. If the hearings were held as scheduled, Abbott said, many civic groups would boycott them. Whenever they were held, however, they should take place in the evening when working men and women could attend. "We will not be silent slaves and surrender our rights to due process in defense of our environment, homes, community and city from the destructive effects of freeways that only the highway lobby and its political spokesman want."

The two groups promised to seek injunctions to block construction of more freeways. ["Freeway Foes Press Fight," *The Evening Star*, December 10, 1971]

The city moved ahead with the planned hearing the evening of December 13.

Earlier in the day, Lawrence A. Dondanville, who had directed the consultant review by DeLeuw, Cather Associates and Harry Weese and Associates, Ltd., presented the report to the city council. The report, as noted, recommended construction of 11 miles of freeways in the city in addition to the Three Sisters Bridge, including I-95, but excluding the North-Central Freeway into Montgomery County. Building the North-Central Freeway was "preferable" from the standpoint of "traffic service and overall benefits," but the consultants recommended against it because of potential political problems and some operational difficulties.

Dondanville said that a “liberal” or “broad” reading of Federal highway laws would allow the use of Federal-aid highway funds for replacement housing and new business opportunities for those displaced by the construction. He estimated that about \$40 million worth of decks above the freeways could provide room for replacement housing and businesses while screening the freeways from residences nearby.

The team had met with many community groups and found that only the business groups supported the additional freeways. Overall, however, the team said the additional freeways would “improve and enhance community relationships,” enhance “neighborhood continuity” and lead to construction of “community pavilions,” “miniparks,” and “plantings and landscaping.”

Not building the freeways would lead to increased congestion on surface streets, with consequences for neighborhoods. “The deterioration of neighborhoods will be far greater than residents realize if surface congestion is allowed to grow.”

Further, failure to build the freeways would lead to “a gradual attrition” of business. “Without adequate highways, the Metro System could not operate at its maximum efficiency. But service will be slow and irregular,” hindering rapid rail transit passengers access to and from the Metro stations. The absence of the freeways also would endanger the city’s tourist trade by making movement around the city more difficult.

Director Airis told the city council that he still favored including the North-Central Freeway in the city’s plans. Building it would “produce the greatest transportation benefits for the District.” However, he did not plan to make a final recommendation to Mayor Washington until after the city conducted the planned public hearings.

Councilman Willard made his support for the consultants’ plan clear. He charged that opponents “have adopted the narrowly parochial track of wishing to keep things as they are.” The freeways, he said, were essential to the city’s economic future and to generating the revenue needed to solve its social problems. “I say to my fellow councilmen, we must subvert any local vested self-interests to future benefits of the many. Our ruling criteria should be the greatest good for the greatest number.”

Willard was the only city council member to express his opinion on the consultants’ report. Chairman Hahn said only that he would support a plan that dropped the North-Central Freeway and I-95, while Vice Chairman Tucker indicated he had reservations about an expanded freeway network.

The public hearings began that evening. Frederick H. Thomas, speaking on behalf of 50 civic organizations, denounced the hearings as illegal because the council had not provided proper notice of the hearing and failed to seek an EIS of the consultants’ study. Many in the crowd cheered as he denounced the hearing and said that testifying also would be illegal. With that, Thomas led a walkout of about 100 people. They left peacefully while singing, to the tune of “America the Beautiful”:

Oh beautiful for spacious roads

That spread from slum to slum.

The smog is gray, the homes decay

But see the profits come.

The remainder of the song included the line:

Pollute the air,

But they don't care—

They're selling gasoline.

ECTC, which had organized the walkout, vowed to seek an injunction to prevent the city from submitting the consultants' report to Congress by the December 31 deadline.

As the *Post* put it, the walkout “left the packed City Council chambers in the District Building nearly vacant and shortened a potential late-night hearing to less than an hour.” [Barnes, Fred, “Build Roads, Council Told,” *The Evening Star*, December 13, 1971; Scharfenberg, Kurt, “Roads Foes Walk Out of D.C. Hearing,” *The Washington Post and Times Herald*, December 14, 1971; “Freeway Opponents,” Metro Wrapup, *The Evening Star*, December 14, 1971]

(The first two lines of the opponents' lyrics were used by the *Post*'s editorial cartoonist, Herblock (Herbert L. Block), on October 11, 1969. In the cartoon, a choir of highway lobbyists sang the two lines to protest “against cutting U.S. \$4-Billion-a-Year Spending on Highways.” The members of the choir were labeled the Trucking Industry, Road Materials Industries, Gas-and-Oil Lobby, Motoring Lobby, Real Estate Lobby, Billboard Lobby, State Politicians, and Contractors.)

(With NEPA still fairly new, ECTC and other highway opponents around the country were exploring its requirements for ways of halting projects. For example, an editorial in *The New York Times* in December 1971 discussed the Environmental Defense Fund's plan for a suit arguing Secretary Volpe's recommendation to Congress for apportioning Highway Trust Fund revenue should be subject to review in an environmental impact statement to consider the impact on “downtown decay” and “suburban sprawl.” This was a reference to the ICE, which was used to apportion Interstate construction funds. The article continued:

What strains will it put upon the nation's fuel reserves, with consequent invitation to oil spills, strip-mining, and other such scourges? Will it further drain the supply of acceptable air for breathing and perhaps even heighten the racial tensions that result from the flight of the affluent and middle classes to the suburbs?

(The editorial said that putting “so great a burden of blame on highways for the social ills of the day may seem excessive,” but in view of the “vast dimensions” of the program, perhaps the program “should be examined as a whole before more roads are built and still more damage done.” In that light, “the proposed procedure is not far-fetched; it should have been followed right along.” The courts did not go along with this line of thinking, limiting environmental

reviews to project approval of major Federal actions, but as this example illustrates, Thomas's demand for environmental review of the consultants' report was not unusual at the time. ["The Impact of Highways," *The New York Times*, December 17, 1971])

On December 15, during the second day of public hearings, the city council heard from suburban Maryland officials who asked the District to reject the North-Central and Northeast Freeways. Neal Potter of the Montgomery County Council pointed out that Maryland transportation officials opposed the North-Central Freeway. If the city built its portion of I-70S, it would be a "dead-end road" when it reached the Maryland line.

Prince George's County had not decided whether its portion of I-95 would be built, but County Executive Gullett asked the District not to approve I-95. "Don't aim a road at us until we decide what ought to be aimed where." He and Councilman Francois said they wanted a federally financed impact study before deciding, but they said that in no case should the route, if built, follow the path indicated by the consultants.

They emphasized the value of expanded transit choices. Potter said the consultants' report had a "pro-highway bias," arguing that it had "given no attention to the alternate modes for solving our transportation problems":

We feel this is neglectful of our county's needs as well as of the needs of the District of Columbia and most of the metropolitan area. Both the coming of Metro and better bus service have the potential to do more for the commuters and far more for the capacity of the highway system than could any acceptable network of freeways.

Expanded commuter rail service on existing tracks "could do things for us quickly – far faster than freeways and with far more capacity."

Francois predicted that Metro would make new freeways, planned in the 1950s, obsolete.

Council Chairman Hahn told the suburban officials, "Just as I wouldn't want your decisions to impose decisions on us, so I wouldn't want our decisions to impose choices on you." However, Councilman Willard attacked the suburban stance, arguing that the suburban opposition discriminated economically against the District. [Scharfenberg, Kirk, "Counties Ask City to Block 2 Roads," *The Washington Post and Times Herald*, December 16, 1971; Barnes, Fred, "Call for Freeways Is Hit at Hearing," *The Evening Star*, December 15, 1971]

The city council received conflicting testimony on December 17, the third day of the hearing. The Metropolitan Washington Planning and Housing Association said the 11-mile extension of the Interstate network would cost the city \$1 million a year in property taxes and additional losses in income and sales taxes. The *Post* account said:

The Planning and Housing Association showed the Council a number of photographs of the areas that would be affected by the recommended 11-mile network. Small single-family homes beside the proposed new highways, which include an extension of I-95 through Northeast, would be "dwarfed in scale" by a "massive concrete pit," Ralph Fertig, director of the association, told the Council.

Abandonment of houses actually in the right-of-way would invite scavengers and pyromaniacs into the neighborhoods and persons remaining would “live in fear,” Lawrence Stinchcomb of the association board, said.

As for the consultants’ recommendation that new housing could be built on decks above the freeways:

Stinchcomb, who recently completed a 21-city study of mass transit for the Department of Transportation, said that housing on decks, called air-rights housing, is expensive because of the need for special plumbing and utilities design. “Nowhere in the United States has such housing been proven successful or even buildable under (federal) standards for the housing of low- and moderate-income persons,” he said.

They also were skeptical about other recommended freeways. Freeways would divide and isolate communities. The point where the K Street tunnel surfaced at Mount Vernon Square to connect with a freeway in the New York Avenue corridor “is the point where downtown meets a residential community,” Fertig said, “and this is a point at which an ancillary use of the freeway would be to provide a wall between that community on one side and the downtown, which is used by office workers.” The *Post* report continued:

The New York Avenue freeway would, at an interchange, surround Brentwood Village on three sides by freeways, Fertig said. The city’s housing office wants to rehabilitate homes there for moderate-income residents.

The Metropolitan Washington Board of Trade, the D.C. Chamber of Commerce, and local hotels, banking, and savings and loans disputed such characterizations of the consultants’ proposal. Board of Trade spokesman William H. G. Fitzgerald said the 11-mile extension was “needed to complete a balanced (transportation) system, which is necessary to the economic vitality of this city . . . .” [Scharfenberg, Kirk, “Freeway Foes, Supporters Clash at City Council Hearing,” *The Washington Post and Times Herald*, December 18, 1971; Critchfield, Richard, “Business Council Endorses Part of Freeway Proposal,” *The Evening Star*, December 17, 1971]

On December 20, the city council heard from Concerned Committee for K Street, representing 35 merchants operating along the street. Their representative, Stanley Sher, said the proposed K Street tunnel would have a “horrendous” impact on their businesses. He estimated the tunnel between Washington Circle and Mount Vernon Square would destroy 845 housing units, displace 1,050 jobs, destroy a number of firms, cost \$350 million, and provide “astonishingly low service to the city.” [“35 K St. Merchants Fight Tunnel Plan,” *The Washington Post and Times Herald*, December 21, 1971]

The Maryland State Highway Administration (MSHA) had asked the Metropolitan Washington COG for \$2 million to study extension of I-95 through Prince George’s County to the District line. The request stated that all alternative routes “will be considered, including those discussed previously” and new ones. “Alternatives will also be considered which reduce or eliminate the freeway, as well as combinations of transit and highway service which will serve to reduce the impact of the highway.” Unlike some of the other controversial freeway proposals in the area

that had been developed before 1970, the I-95 extension was subject to NEPA and other recent environmental requirements. The State promised a “full and frank” public airing of the issues as well as consideration of simply dropping the extension.

Reporting on the request, Eisen pointed out that FHWA was “reluctant to permit a gap in the principal Maine-to-Florida superhighway in as visible a location as a suburb of the nation’s capital.” However, FHWA’s Maryland Division Engineer, Donald Hammer, pointed out that the State had the power to reject the I-95 extension. “If the State were unable to build it, the federal government is not in the position of trying to force it.” [Eisen, Jack, “Md. Seeks Funds to Study Extension of I-95 to District,” *The Washington Post and Times Herald*, December 14, 1971]

Before the COG could consider the request, Maryland withdrew the application, saying it wanted to revise it. [“I95 Extension Bid Withdrawn,” *The Washington Post and Times Herald*, December 18, 1971]

Reporter Fred Barnes, in an Interpretation published in the *Star* on December 19, thought he detected signs of life for the North-Central Freeway in the hearings:

It wasn’t that anyone argued that the freeway is absolutely essential to the well-being of the District. But assorted officials and experts made it clear that they feel the North Central would be mighty helpful in easing traffic congestion.

The positive comments from Dondanville and Airis were not likely to sway Mayor Washington, but the freeway “might now be looked on more favorably in Congress, which has the ultimate authority to decide if it should be constructed.”

The consultants’ report seemed to be the end of the North-Central Freeway but Dondanville “was singing a somewhat different tune at the city council hearings. “We still,” he said, “recommend consideration of this” because a freeway network with the North-Central Freeway was “preferable from the standpoint of traffic service and overall benefits.” Airis agreed that the freeway would produce great transportation benefits for the city.

According to Barnes, some members of the council, particularly Chairman Hahn, “were astonished at these remarks. They thought the testimony clashed with the recommendation of the study.” Dondanville replied that the study’s position reflected the political and operational problems involved, not because the freeway was not needed. Barnes continued:

Privately, a key official conceded that the political factor – fear that protests triggered by plans to build the North Central might jeopardize construction of any freeways – was the chief reason the North Central wasn’t recommended.

Willard, who favored the entire freeway system, understood that the recommended 11-mile network was a political compromise. “I realize that in something like this you can’t have it all.” [Barnes, Fred, “Signs of Life in Road Plan,” Interpretation, *The Sunday Sun*, December 19, 1971]

Maryland Secretary of Transportation Hughes followed the testimony with a letter urging the city council not to approve the North-Central Freeway and postpone a decision on I-95. Metro and

the Palisades Parkway would fulfill the transportation needs that the North-Central Freeway was intended to satisfy. The State wanted to wait to see how Metro would serve transportation needs in the North-Central Freeway corridor before making further decisions on it. Although the Maryland Department of Transportation was undertaking a new study of the alignment, Secretary Hughes strongly endorsed the linking of the Baltimore-Washington Parkway and the proposed Industrial Freeway in the New York Avenue corridor to carry I-95 traffic. [Critchfield, Richard, "State Asks Delay on Freeway," *The Evening Star*, December 20, 1971]

I-95 would result in major community and environmental impacts in the District and Maryland, according to Rhea Cohen, chairman of the Prince George's Environmental Coalition. She made clear the coalition's objections to I-95 in a letter to the editor of the *Star*. I-95, she said, "is a stab in the heart of Prince George's County." It would "divide neighborhoods and eradicate homes in College Park, Hyattsville and Chillum." It would destroy woodland, streams and wildlife and reduce the recreational value of Northwest Branch Park. It would load the Anacostia River "with more silt, debris and automotive byproducts."

The county already had "a dangerously high level of environmental insults," some of them introduced by the existing I-95 link from Baltimore to the Capital Beltway:

At both the Powdermill Road and Beltway interchanges, it has wasted – at each site – about one hundred acres of vegetation. Vegetation needed for cleaning the air, manufacturing oxygen, absorbing sound, holding down the soil and holding back the flood waters of Little Paint Branch.

I-95 was "not only a menace to public health. It also threatened to compete with Metro." The rapid rail line would work "if it does not have to compete with freeways for the commuter market." The MSHA, Cohen said, "should provide data on all proposed road projects in the vicinity of I-95, and should include alternate modes of travel to serve the transportation corridor." In short, "the agency should demonstrate the need for I-95."

Her letter was followed by another from Kenneth C. Styers, president of Prince George's Civic Federation, which called "on all county and state officials and legislators to stop the construction of I-95." ["Pot-Shotting I-95," Letters to the Editor, *The Evening Star*, December 23, 1971]

On December 20, 1971, District officials celebrated the opening of the 1,600-foot 9<sup>th</sup> Street tunnel that would carry southbound traffic under the National Mall between the Southwest Freeway and Constitution Avenue. It was paired with the northbound 12<sup>th</sup> Street tunnel opened several years earlier. The three-lane southbound tunnel included one lane painted for exclusive bus use:

As Santa Claus, perched on a minicycle, and a contingent of highway department employees looked on, Mayor Walter E. Washington yesterday opened the automated \$11.5 million 9<sup>th</sup> Street tunnel under the Mall . . . .

Those holding the ribbon included city council members Stanley Anderson and Margaret Haywood, Director Airis, and Deputy Mayor Watt. The ribbon-cutting did not go as planned:

Highway director Thomas F. Airis explained to the mayor and television cameramen how it would be done: “Ok, it will be one, two, three and cut the . . .” Before he could finish the sentence, the mayor had cut. “I’m the fastest clipper in the East,” he remarked.

On its south end, the 1,600-foot tunnel had been built under the site of a hotel being built in the L’Enfant Plaza complex in redeveloped Southwest.

The tunnel, which had been under construction since January 1967, was not part of the Interstate System. It carried U.S. 1 and U.S. 50 across the National Mall.

According to the *Star*, the tunnel included “a dizzying collection of electronic devices which will make it more modern than any other tunnel in the country.” These devices included closed circuit television to keep traffic engineers aware of conditions in the tunnel via 11 monitors; a machine to analyze carbon monoxide levels and regulate the tunnel’s giant fans accordingly; and sensors in the pavement that would alert engineers of any traffic backups missed on the monitors.

Chief Engineer John E. Hartley explained, “With the electronic equipment at his disposal, the control room engineer will be able to regulate the flow of traffic in the three-lane tunnel by remote control.” Cameras will allow the operator to zoom in to any blockage to “see if someone is sick or if their car is overheated or if there has been an accident.” He added, “If it didn’t already have enough notable attributes, it also will be the longest tunnel in Washington.” [“Televised Tunnel Opened Under Mall,” *The Washington Post and Times Herald*, December 21, 1971; Barnes, Fred, “Mall Tunnel Opens,” *The Evening Star*, December 20, 1971; Barnes, Fred, “D.C. Getting Last Word in Tunnels,” *The Evening Star*, September 8, 1971]

## **I-66 Hassles**

As noted, WMATA planned to build an Arlington-to-Fairfax Metro line in the median of I-66. The rail line would be a subway through most of Arlington, emerge near the Fairfax border, and run in the median strip about 8 miles to the end of the line. Construction of I-66 was set to begin in the spring of 1972; WMATA had set aside \$10 million to reimburse VDH for work needed to prepare the median for the rail line.

That plan was based on the assumption that I-66 would be built inside the Capital Beltway. Fred Barnes explained:

The problem is that construction of I-66 may not begin on schedule – or at all. A group of citizens is waging a court battle to block a 10-mile section of the road and they have promised to go to the Supreme Court if necessary in their fight.

Should a court bar construction of I-66, subway agency officials would have to make new plans for routing the rapid rail line. That would cause months of delay, an agency spokesman said.

Following Judge Lewis’ decision in October, VDH had resumed right-of-way acquisition, but the U.S. Court of Appeals in Richmond had ordered a halt until the appeal was decided. [Barnes, Fred, “Subway Agency Caught in Hassle Over I-66,” *The Evening Star*, December 23, 1971]

On December 28, ACT released a 57-page document critiquing plans for I-66. The report, sent to 12 Federal and State agencies, was in response to Virginia's EIS. In the report, ACT criticized the VDH for not studying alternatives, which Virginia had suggested were "not realistic." ACT recommended abandoning I-66 in favor of rapid mass transit, or if that did not occur, rerouting the highway to avoid parkland. ACT was not required to submit an EIS, but the report stated, "The major purpose of these comments is to alert reviewing agencies to the highly controversial nature of the proposed highway."

The *Star's* Barnes reported, "It charged that the state document omitted, treated incompletely, failed to document, based on inaccurate information or dismissed without a thorough analysis many important elements of the freeway's environmental impacts." For example, the report challenged VDH's basic assumptions, such as that the crash rate would decline. "The increased traffic congestion on many existing roads near the proposed highway will undoubtedly lead to a higher accident rate on these roads," the report stated.

ACT also challenged VDH's assertion that the freeway's link to the Theodore Roosevelt Bridge would improve transportation in the region:

Analysis of the experience of urban areas throughout the nation would give ample evidence that there are virtually no transportation benefits to be derived from the construction of new urban highways such as the proposed I-66.

ACT questioned the plan to install Metro in the median, stating that "competition with the Metro by an eight-lane highway beside it may well endanger the economic viability of Metro by drawing off potential patrons. Such a loss of patronage will also lead to increased fares and increased travel costs of the rapid rail system." ACT added, "Similar effects will occur in relation to bus service."

As for VDH's assumption that there is no "prudent alternative" to I-66, ACT's report suggested that "such alternatives would include exclusive bus lanes at peak hours on existing roads, an expanded rapid rail system, commuter rail, monorail, bicycle and pedestrian paths, exclusive busways and any other modes that would move people efficiently."

As the *Post's* Jay Mathews summarized:

The report . . . says the 9.6-mile section of highway proposed for inside the beltway would split Arlington County in two, increase rather than reduce traffic congestion, and cause more air and noise pollution than the Highway Department claims.

The report was particularly critical of the Highway Department plans to cut pollution by building brick and earth walls up to 20 feet high along each side of the road.

"Such devices would not only be visually offensive and entirely unacceptable to the adjacent residents, but most important, these devices would constitute a physical, psychological and social barrier – a "Chinese wall" that would divide the community," the report says.

The report says the Highway Department's environmental statement ignored the fact that a limited access highway through a largely residential area would reduce citizens' access to shopping districts and churches and hinder fire trucks and ambulances.

From an aesthetic point of view, ACT claimed, "This massive, ugly gash of concrete with its thousands of cars, trucks and motorcycles, cutting through the center of residential and school areas, has no redeeming aesthetic features." Moreover, the freeway "represents an obsolete and ineffective attempt to solve transportation problems . . . and in utilization would be unacceptably antagonist to the well-being of the residents of the area."

A Virginia highway spokesman said that all groups were welcome to comment on the draft environmental statement, but "It is unusual for comments that detailed to be provided by a citizens' group." [Barnes, Fred, "Environmentalists Rap I-66 Plans," *The Evening Star*, December 27, 1971; Mathews, Jay, "Opponents of Rte. 66 in Va. Issue Critique," *The Washington Post and Times Herald*, December 29, 1971]

In late December, EPA released its comments on Virginia's environmental statement on access to the Three Sisters Bridge. The statement, EPA said, was inadequate because it did not review the entire bridge complex or examine alternatives to building the bridge at a different location or not building it at all. EPA also said the statement did not provide sufficient analysis of the air, noise, and water pollution that might result if the bridge were built at the Three Sisters location.

EPA had intended to release its comments in November, but agreed to delay doing so after initiating a meeting with the U.S. Department of Transportation on November 18. In line with EPA policy, Deputy Administrator Robert W. Fri and other officials wanted to explain that they were about to issue an unfavorable response to Virginia's environmental review. Secretary Volpe's top officials attended, including his aide, Joseph A. Bosco, General Counsel John Barnum, and John A. Hirten, Deputy Assistant Secretary of Transportation for Environment and Urban Systems. Several FHWA officials, including Administrator Turner, also attended.

A memorandum describing the meeting stated:

DOT representatives expressed concern over several factors relating to EPA's comments. Although DOT would be preparing an environmental impact statement [of its own] and would welcome EPA's comments, Mr. Hirten indicated DOT's concern that public release of EPA's comments at this time would add to the public furor over this project and make it difficult for DOT to proceed in resolving the issue.

With the Department preparing its response to the Court of Appeals ruling the previous month, Hirten "asked whether EPA could agree to postpone formal comment until a revised draft could be circulated for review." EPA agreed, subject to agreement by the Council on Environmental Quality to the delay and "the draft statement could be substantially reviewed and improved to assure full compliance with" Federal requirements.

With the council's concurrence, EPA and the Transportation Department planned to work on the environmental statement, but by mid-December, according to the memo, Virginia and District

officials had objected to the idea of withdrawing the impact statement. “They want the EPA comments out in the open. Therefore, DOT is now saying that EPA should sign and send their comments.” [Barnes, Fred, “Memo Bares Effort to Gag EPA on 3 Sisters,” *The Evening Star*, June 27, 1972]

### **The End of the Freeway Trauma?**

On December 28, 1971, a short-handed city council voted, 6 to 1, in favor of 7.8 miles of the remaining Interstate network. Councilman Robinson was out following surgery; Councilman Yeldell had been named director of the Department of Human Resources and the President had not yet nominated a replacement.

The action excluded the North-Central Freeway (I-70S) to Silver Spring and the Northeast Freeway (I-95) to the Capital Beltway. The city council accepted the I-66 freeway in the K Street corridor, but did not decide whether it would be a six-lane tunnel, a depressed roadway, or an expanded surface road. It also supported the Industrial Highway in the New York Avenue corridor and the East Leg of the Inner Loop from Bladensburg Road, NE., to the Southeast Freeway.

Councilman Tucker cast the dissenting vote because he opposed the K Street Freeway, the East Leg, and an interchange near Brentwood Village on Rhode Island Avenue, NE. He feared the construction impacts of the K Street Freeway as well as the displacement of 845 families. “We’ve got to stop moving people from one slum to another,” Tucker said.

Tucker had tried to secure approval to divide the transportation committee report into votes on individual routes so he could vote in favor of those he supported. However, he could not get a second. Councilman Willard, the council’s most avid freeway proponent, also could not get a second when he tried to secure approval to include the Northeast Freeway. He called the freeway a “vital artery” and said “it is in the long-range interest of this city and this metropolis.”

As the *Post* pointed out in its coverage of the city council’s action:

Yesterday’s freeway vote was in marked contrast to two previous Council votes on freeway plans in 1969 and 1970, when Council chambers were filled both with spectators and with building guards. Only about 10 persons attended, and only two building guards were in the meeting room, though more were in adjoining rooms.

The city council forwarded its recommendations to Mayor Washington for consideration as he completed the report to Congress required by the Federal-Aid Highway Act of 1970. Mayor Washington was not bound by the city council’s action. [Prince, Richard E., “2 Freeways Opposed by D.C. Council,” *The Washington Post and Times Herald*, December 29, 1971; Barnes, Fred, “Council Against 2 Freeways, North Central and Northeast,” *The Evening Star*, December 28, 1971]

On December 30, 1971, the District of Columbia and Secretary Volpe sent separate reports to Congress with their recommendations on the future of the District’s Interstate network. Both reports agreed on advancing 7.8 miles of freeways, excluding the North-Central Freeway and

Northeast Freeway. The reports retained the North Leg Freeway (I-66) of the Inner Loop along K Street, NW.; a small strip of the East Leg (I-295), and the Industrial Freeway. Neither report addressed the Three Sisters Bridge or the I-266 Potomac River Freeway, which were not included in Section 129 of the 1970 Act.

Secretary Volpe's report differed from the city's report in recommending that the I-95 Northeast Freeway should not be built "at this time" but "there is enough doubt in our minds that it might be needed in the future." He preferred the Industrial Highway in the New York Avenue corridor to link with the Baltimore-Washington Parkway. However, he did not rule out the Northeast Freeway because he was concerned that the new highway in the New York Avenue corridor might not be able to handle traffic volumes that would be shifted from an unbuilt Northeast Freeway carrying I-95 traffic.

He emphasized the importance of Metro, saying, "the Metro rapid rail system, along with improvements to the arterial street system and bus service innovations plus improved commuter rail service, can provide" the needed transportation service.

He also was concerned about building a six-lane tunnel under K Street to link the approaches to the Three Sisters Bridge with the New York Avenue freeway because of the high cost and disruption. "Therefore, I recommend that a connector facility be built . . . using a design suitable by service, safety and environmental standards."

The Secretary also supported construction of the Palisades Parkway, which was not included in Section 129. It ran along the Potomac River from the Three Sisters Bridge to link with the existing George Washington Memorial parkway in Montgomery County. He recommended early completion "as a necessary link the area parkway system."

Mayor Washington's two-page letter endorsed the city council's recommendations.

At a press conference, Secretary Volpe said the recommended freeways would provide the "balanced transportation system" that President Nixon and many others had favored. When a reporter asked him to predict the congressional reaction, he said, "We'll have to await the 1972 Federal-Aid Highway Act."

With Congress in recess, reporters could not easily secure their reaction to the two reports. However, Chairman Kluczynski told reporters he would not comment until he had a chance to read them. He had scheduled hearings on the 1972 Act to begin in January, with the District freeway situation one of the issues that would receive close attention.

Release of the reports gave the *Star's* Fred Barnes an opportunity to review the status of all the routes covered by Section 23 of the Federal-Aid Highway Act of 1968. Of course, the Three Sisters Bridge was on hold pending an appeal to the Supreme Court. The city could not move forward on the Potomac River Freeway until the future of the bridge was resolved.

Barnes continued:

A section of the East Leg running from the Southwest-Southeast Freeway to the 11<sup>th</sup> Street Bridge has been completed, and construction of another segment is underway to Barney Circle.

But the section from the circle to Bladensburg Road NE, also ordered by Congress in 1968, has been delayed for various reasons.

It is the final part of the East Leg, proposed to run for about a mile along Mt. Olivet Road NE to an interchange near Rhode Island Avenue NE and the B&O railroad tracks, that was recommended yesterday by Volpe and Mayor Washington.

Congress also had ordered the city to build the Center Leg of the Inner Loop along 2<sup>nd</sup> Street, NW., from the Capitol to New York Avenue. Construction was underway. [Barnes, Fred, "Congress Gets Freeway Plans," *The Evening Star*, December 31, 1971; Eisen, Jack, "Volpe Urges Dropping of 2 Freeways," *The Washington Post and Times Herald*, December 31, 1971]

The reports prompted the *Post* to title an editorial: "The End of the Freeway Trauma?" It began:

Could it be that, as we begin the new year, we leave the decade-old National Capital Freeway Hassle behind us?

The reports, the editorial explained, had deleted the controversial North-Central Freeway and the Northeast Freeway, but the "even more emotional issue of the proposed Three Sisters Freeway Bridge was luckily not under discussion." Its fate was "to be decided by the Supreme Court."

As for the failure to comply with the recommendations in the consultants' report, they were "hardly sacrosanct." They were aimed to "advance the interest of their clients." In this case, the client was the city's highway department, which may have favored the highways but serves the interest of the people as defined by the mayor and city council.

Now it was up to Congress:

We are sure, however, that even the pro-freeway forces in Congress will now go along with what we feel is a consensus of the wish of this metropolitan community of nearly three million people. Congress will also understand, we hope, that this 7.8 mile agreement is not a commitment for eternity but, along with the Metro, a sensible solution of the area's transportation problem as far as it can be foreseen in a period of rapid technical and urban change. ["The End of the Freeway Trauma?" *The Washington Post and Times Herald*, January 5, 1972]

Editors of the *Star* were less certain. "A New Year in the District of Columbia devoid of controversy over freeway construction would seem abnormal indeed." The two reports were "hardly calculated to break the pattern." Congress would take up the issue soon enough, but two elements of the reports were likely to "draw sparks of controversy." First was the proposed Industrial Highway to carry I-95 traffic instead of the Northeast Freeway. "The proposition, in our view, is wholly inadequate." Second, the reports called for "still more studies" to resolve issues about the downtown segments.

Still, the reports offered a hope that “this ridiculous impasse” could be nearing an end. Secretary Volpe and Mayor Washington had accepted “the concept of an inner-city freeway network which – if it ever begins – could keep the road builders busy for some years to come.” The pending hearing on the 1972 Federal-aid legislation could “provide a political mechanism – where none existed before – to resolve the uncertainties once and for all.”

Meanwhile, the Nixon Administration had not yet submitted its appeal to the Supreme Court on the Three Sisters Bridge:

That action could improve the over-all political atmosphere immeasurably, and should be taken well before the House hearings begin. [“Freeways: Back to Congress,” The Evening Star, January 5, 1972]

## Part 9 Post-Revolt

### Why Did Chairman Natcher Do It?

As 1971 ended, *The Sunday Star* magazine *Washington* carried an article by Kentucky-based journalist Ward Sinclair trying to explain Chairman Natcher's role in the long freeway-subway impasse. Sinclair recalled the usual feature of 62-year old Natcher's life – his goal as a young lawyer to be part of the U.S. House of Representatives; his safe seat in Kentucky (17 years in the House at the time of the article); his personal life as a teetotaling nonsmoker who avoided social outings; his pork-barrel interests on behalf of the locks, dams, and lakes in Kentucky; his refusal to talk with reporters outside his home district; his failure to accept campaign contributions, including contributions from the highway lobby; and his pride in his perfect voting record:

The trouble with most of the theories about Natcher's recalcitrance, and they abound in these parts, is that the theoreticians try to decipher his motives on their own terms – not on William Natcher's terms . . . . He defies all the popular myths.

He had won a seat in the House in a special election in 1953:

Once Natcher got to Washington, he lost no time in getting to know the right people and doing the right things to cement himself in Congress. He knew the appropriations committee was the right place to be, so he made friends with the late chairman, Clarence Cannon, and later, in 1962, as a favor to Cannon, Natcher accepted the chairmanship of the D.C. appropriations subcommittee, a thankless but necessary task.

Most Members of Congress tried to avoid service on the District committees, much less a chairmanship, which had many challenges and few rewards for their home district or State:

The District of Columbia is a brushfire. With it come two of the most thankless jobs this side of indexing the C&P telephone directory – the chairmanships of the House and Senate appropriations subcommittees for the District. Only an infinitely patient and detail-devoted man, at ease with the line-by-line minutiae of a monumentally boring D.C. budget, could handle the task without (1) going batty or (2) lousing it up completely . . . .

Many of his colleagues consider him one of the more powerful men in the House, by virtue of his No. 2 ranking on appropriations subcommittees for agriculture and labor-health, education and welfare, and by virtue of his close rapport with top men in the Democratic leadership.

Why, then, would this dedicated Congressman take on the abuse that was heaped on him for his refusal to release the subway funds?

Natcher's interminable obstinacy over funding of the metropolitan subway system has earned him more contumely than he probable deserves, but Natcher doesn't mind being a lightning rod for Congress. He would never suggest that Congress as a whole should take the blame. He would never suggest that blame more logically ought to be aimed at the

public works committees. It isn't his way. So, in Northeast Washington, they call him a racist. In Georgetown, the taffeta ladies summon up their highest dudgeon and call him a wretch. The frustrated patriots of Northwest just call him a lousy politician . . . .

In reality, none of these easy epithets will do for Natcher, because he is many other things: exasperatingly stubborn, unforgiving of the treacherous, paranoically suspicious, unrelentingly private, regally indifferent to his critics, maddently self-righteous, possessed of a sense that he is somehow to make history.

Sinclair identified two recurring themes in Chairman Natcher's public statements that "go a long way toward illuminating the basis for his repeated refusals to release the city's portion of the money needed to continue work on the rapid transit system. The first theme was the chairman's "disdain for deception," a view that "a man's word is his word," and a refusal to "play cute semantical games with him." That was how he considered the words and actions of "certain local functionaries":

There were promises to forge ahead with the D.C. freeway system that Natcher so fervently thinks is necessary; and yet, in fact, the system was not forging ahead.

Although the causes of the delays – "slow-moving studies, litigation and injunctions" – may have been beyond local control, Chairman Natcher "tends to think not." He often cites NCPC's reversal of its brief support in 1966 for the freeways as soon as he released the subway funds.

The second theme was Chairman Natcher's "personal view of the majesty and infallibility of Congress." As he made clear before the House voted to reverse his stand, the prestige of Congress as a coequal branch of the Federal Government was really what was at stake. When Congress passed a law, it "must be obeyed without question by all the people." Given his view on this subject, "the freeway question [was] cut and dried":

Congress wants the freeways built – witness the 1968 and 1970 federal-aid highway acts, which decreed that the District of Columbia would do such and such to complete its road system . . . .

He was not swayed by the argument that Congress did not tell Bowling Green, Kentucky, or any other city where to put its roads. He was not swayed by colleagues, such as Senator John Sherman Cooper of Kentucky, that forcing a vast freeway system on a city that does not want it was wrong:

Congress has acted, the law is the law. He remarked in one recent conversation that he would insist the law be complied with "until Congress tells me otherwise . . . ."

From this stance, the only alternative for dealing with those who so blatantly flout the mandates of Congress is not to submit to their vague promises, but to hit them where it hurts – cut off the money they so badly want for the subway. Pinch so hard that they'll have no recourse but to get moving on freeways.

Representative Giaimo admired Chairman Natcher, but had told him early in 1971 “that I couldn’t in good conscience go along with him any more” on the subway funding freeze. When the vote in May sustained Chairman Natcher’s decision by a smaller margin than expected, “He disagreed with what I did, but he didn’t hold it against me. He took the amendment with grace”:

Giaimo tried again this month by moving to restore the subway funds. This time he pulled off the stunning rebuke of the leadership, but only after the White House had deployed its heavy lobbying artillery on the Hill. Presumably, Natcher now understands he had been told “otherwise” by Congress. And if Giaimo is correct in his estimation of his chairman, the subway holdup is a thing of the past. [Sinclair, Ward, “Subways Are For Stalling,” *Washington/The Sunday Star*, December 26, 1971]

### **Clearing the Air**

On January 19, the *Post* carried a letter to the editor from Angela Rooney of the National Coalition on the Transportation Crisis responding to the editorial “The End of the Freeway Trauma?” Rooney, a founder of ECTC, wrote that the “freeway trauma” was not over “if for no other reason than that 7.8 miles of Interstate freeways cannot do anything but worsen an already critical air pollution situation in this metropolitan area.” She wrote that Secretary Volpe, Mayor Washington, and the city council had recommended this mileage to Congress “without recognizing the necessity of making a detailed statement of the environmental impact of the roads as required by Section 102(2)(C) of the Environmental Policy Act.”

As for the editorial’s assertion that the officials were representing the wishes of the community, a review of recent “so-called hearings” would “put the matter straight”:

The Federation of Civic Associations . . . soundly rejected all new freeway construction and called for a boycott of “hearings” because they were not held in accordance with federal laws and regulations. Their anti-freeway position was reinforced by Maryland public officials. In 10 years there has been no public support for more freeways except for certain special business interests, a fact that goes a long way in explaining the Post’s wishful thinking. [Rooney, Angela, “Freeway Trauma,” Letters to the Editor, *The Washington Post and Times Herald*, January 19, 1972]

The Justice Department, with support from the D.C. corporation counsel, submitted a 20-page brief, supported by 219 pages of lower court opinions and legal citations, to the Supreme Court on January 17, 1972, seeking overturn of the U.S. Court of Appeals’ ruling on the Three Sisters Bridge. The brief denied that the Department of Transportation had taken procedural shortcuts in approving construction. The petition raised two issues for Supreme Court consideration:

- (1) Did the planning, environmental, and other requirements of Federal law prevent Secretary Volpe from approving projects before ‘final plans’ had been approved?
- (2) Did the 1968 law, with its “notwithstanding” language, take precedence over generally applicable highway procedures?

The brief made clear:

The congressional directive that this particular bridge be constructed, as planned, without further delay is, we submit, a complete answer to the present litigation.

Further, the “intent of Congress that the Three Sisters Bridge be constructed” and that construction should start within 30 days following enactment of the 1968 Act “has been thwarted by the court of appeals.”

In a footnote, the brief dismissed Judge Bazelon’s contention about the undue political influence on Secretary Volpe. “We . . . do not consider Chief Judge Bazelon’s views on that subject in this petition.” The footnote pointed out that neither of the other judges in the three-judge panel had concurred on this point. [Eisen, Jack, “Ruling Asked on 3 Sisters,” *The Washington Post and Times Herald*, January 18, 1972; Barnes, Fred, “Bridge Plea Taken to High Court,” *The Evening Star*, January 19, 1972]

On January 19, Representative Conte, in extended remarks on the House floor, said the petition “manifests a clear, responsible fulfillment of the administration’s pledge to take all possible legal steps to permit completion” of the Three Sisters Bridge. This action “should satisfy” those who opposed release of the District’s Metro funding “on the grounds that the executive branch was dragging its feet” on the project. The petition represented “a clear, responsible fulfillment of the administration’s pledge to permit completion of the project.”

He placed a January 17 letter he had received from Secretary Volpe in the record citing the two principal arguments in the brief:

First, we contend that the decision of the Court of Appeals, by its requirement that nothing be done until final plans for a project are approved, would frustrate highway planning nationwide. Secondly, we contend that Congress, in enacting Section 23 of the Federal Highway-Aid Act of 1968, directed in no uncertain terms that construction of the Three Sisters Bridge be commenced within 30 days, any other provision of Federal law to the contrary notwithstanding.

Representative Conte expressed his “earnest hope” that the Supreme Court “acts favorably on the Government’s petition and that the Congress will now give its unqualified support to completion of the vitally needed Metro project.” [“Resumption of Work on Three Sisters Bridge,” *Congressional Digest-House*, January 19, 1972, pages 317-318]

The same day, Representative Giaimo addressed a luncheon of the Greater Washington Central Labor Council. He said he expected Congress to approve a bill providing a Federal loan guarantee for Metro bonds. Failure of the bill would “injure the Metro fatally” because its bonds would be impossible to sell. “Frankly, I’m optimistic. I think we’ll be successful,” he said. As for the Three Sisters Bridge appeal, he said, “When the Court rules, then we’ll know whether or not there will be a Three Sisters Bridge, which I want to see constructed.” [Eisen, Jack, “Metro Bill is Predicted by Giaimo,” *The Washington Post and Times Herald*, January 20, 1972]

The *Star*, in an editorial, expressed the hope that the Supreme Court would accept the appeal “and resolve the issues as expeditiously as possible.” The review was “surely warranted” in view of Judge Bazelon’s “tortuous interpretations of law”:

The Justice Department accuses Bazelon of interpreting various environmental and planning safeguards expressed by Congress in a manner that thoroughly distorts and “misconceives the purpose of these provisions.” Its brief asserts: “Compliance with the court of appeals’ view . . . would, in most instances, result in substantial delays and require substantial additional expenditure of public funds and would, in some instances, be almost impossible.”

Congress could be expected to involve itself in the issue again in the pending Federal-Aid Highway Act of 1972. However, the “crucial issues involving the bridge . . . rest now with the Supreme Court, posing roadblocks of national and local significance which urgently need removal.” [“Nixon’s Bridge Appeal,” *The Evening Star*, January 22, 1972]

### **Air Quality Plans**

President Nixon had signed the landmark Clean Air Act (CAA) of 1970 on December 31, 1970. The CAA directed the new EPA to establish National Ambient Air Quality Standards (NAAQS, pronounced “Knacks”) that every State must achieve by 1975. Each State was to develop a State implementation plan to achieve that goal by reducing pollution for sources that were stationary (factories, for example) and mobile (motor vehicles). The plans were due January 31, 1972.

The District’s Department of Environmental Services, the Environmental Health Administration, and the Bureau of Air and Water Control submitted a 354-page State implementation plan to EPA for reducing air pollution. The study, titled *Implementation Plan for the Control of Carbon Monoxide, Nitrogen Dioxide, Hydrocarbons and Oxidants*, found that 95 percent of total pollutants in the city were from motor vehicles. They discharged 19,574 tons of particulates into the air, along with 57,046 tons of sulphur oxides, 279,189 tons of carbon monoxides, 37,338 tons of hydrocarbons, and 39,311 tons of nitrogen oxides.

For mobile source pollution, the District’s plan to achieve its NAAQS was similar to plans from around the country by placing much of the burden on commuters by forcing about 100,000 of the estimated 400,000 commuters in 1975 to use buses instead of cars. To accomplish this 25-percent reduction in commuter use of cars the report proposed several steps:

- Banning on-street curb parking in the downtown area;
- Raising taxes on commercial garage operators to force them to increase their parking fees;
- Impose a “drastic increase” in fees for all-day parking on commercial lots;
- Force an “immediate suspension of subsidy” by District and Federal agencies for employee parking fees;

The city had 140,413 commercial, private, and curb parking spaces; the goal was to reduce this number by between 20,000 to 25,000 spaces. Doing so while increasing costs would “create a

problem for the present commuter using private automobiles” that would force commuters onto public transit. The city proposed to spend \$32 million for new buses to carry those new transit commuters.

The District rejected a preliminary proposal to ban all Maryland and Virginia cars from the city during the day. When news of the idea had been reported, Senator Spong warned Mayor Washington that the plan “would generate substantial ill-will and . . . result in retaliatory action at District residents.” Mayor Washington informed the Senator that the city had rejected the idea “when reasonable alternatives to private automobile transportation are available.”

The city also proposed conversion of government and private fleet vehicles from using gasoline to using gasoline-and-propane or gasoline-and-natural gas for fuel. The report estimated the conversion would cost \$400 per vehicle.

The plan also called for steps to encourage car pools. The present passenger car occupancy in the city was 1.3 people. The steps taken would cause people to form car pools for their work-related trips.

Virginia’s Air Pollution Control Board’s State implementation plan also focused on automobile use in northern Virginia. Development of Metro was “perhaps the best method to cut down air pollution” in the area, but would not have any impact by the target year of 1975. In the interim, Virginia’s Air Pollution Control Board called for increased downtown parking rates, a computerized car pool registry, and more dedicated express lanes such those in use on I-95/Shirley Highway.

Maryland’s Health Department agreed that curbing the automobile was the key to reducing air pollution, but argued to EPA that the problem was not so much cleaning up Montgomery and Prince George’s Counties as cleaning the air over the District of Columbia. Officials argued that achieving NAAQS in the region by 1975 was not realistic; they asked for a 2-year extension on compliance to allow area officials to identify ways to reduce motor vehicle use in the metropolitan area.

Edward L. Carter of the Maryland Bureau of Air Quality Control said the extension was needed because the District had the most polluted air in the region. Reductions in the surrounding counties were possible, but District air did not honor State line boundaries.

Overall, Carter said that changing the habits of commuters was the key:

Some jurisdictions have come up with plans which may or may not be workable depending on whether you can get people to reduce their use of automobiles. Until you come up with measures to force people to use mass transit and reduce automobile traffic, voluntary plans will not have a significant impact on the automobile population. Until you have the power to require that certain things be done, you can propose anything you want.

Maryland's plan was similar to the District's proposals to shift motorists from their cars to transit. The State implementation plan also proposed charging tolls to enter freeways and use congested roads at peak traffic hours, reduced bus fares, and increased gasoline taxes in urban areas, including an annual pollution tax on motor vehicles based on the number of miles driven and the size of the engine.

[Gay, Lance, "D.C. Proposes Steps To Reduce Traffic," *The Evening Star*, February 1, 1972; Scharfenberg, Kirk, "City Clean-Air Plan: Cut Commuter Cars," *The Washington Post and Times Herald*, February 1, 1972; "Suburban Car Ban Rejected by D.C.," *The Washington Post and Times Herald*, January 29, 1972; Landers, Jim, "Virginia Drafts Clean-Air Plan," *The Washington Post and Times Herald*, February 2, 1972; Walsh, Edward, "Md. Asks Delay in Deadline," *The Washington Post and Times Herald*, February 5, 1972]

Almost immediately after the District's plan went to EPA, Chairman Hahn told reporters that the plan was not the city's official plan. Neither Mayor Washington nor the city council had seen it, much less approved it. "I had no idea this thing was going out," he said. "No one on the council saw it. The mayor didn't know it was going out. Councilman Willard's Committee on the Environment would hold hearings on the proposals on February 8 "to try to rectify the damage" release of the report had caused.

Mayor Washington's aide, Julian Dugas, told reporters, "It's a workable proposal forwarded to meet EPA regulations to be eligible for federal grants. But there are a lot of hard policy questions to be considered before we can accept that stuff." In a press release, Mayor Washington's office said that "until the new regulations are adopted by the City Council the plan is an administrative guide – a sort of workable program." The proposals were merely "possible control measures" and that "all developments require careful meshing" to avoid adverse effects on the District's economy. [Critchfield, Richard, "Commuter Plan Hit, Hearing Set Tuesday," *The Evening Star*, February 3, 1972]

*Star* editors picked up on the city's reaction to the "wacky EPA report." After outlining the District's plans for the "miracle" of a one-fourth reduction in automobile commuting through parking restrictions and new buses by 1975, the editors wrote:

Now even the most ardent anti-internal combustionist would have to agree that – clean air aside – that's a devil of a three-year commitment for any modern city government to make. And guess what? The District hasn't made it . . .

But whatever the facts as to that part of the bureaucratic snafu, Hahn's assurances that the absurd proposal to curtail the District's already inadequate parking supply "is not city policy" – and is not apt soon to be – are good to hear. As Hahn, no great friend of the automobile himself, puts it: "You can't cut out parking for people who need to get here until you provide a practical alternative."

The time may come for such drastic tactics, "although frankly we doubt it now," but at this time, the plan's goals remain "largely a dream." The most "attractive, workable transit system" was

Metro, and it had a long way to go before it could provide the needed areawide service to reduce automobile use. [“Clean-Air Foulup,” *The Evening Star*, February 4, 1972]

(Plans for reducing air pollution in cities around the country were greeted with similar doubts and outrage.)

In a February 8 special message to Congress on the 1972 environmental program, President Nixon proposed a range of congressional actions, including one to address sulfur oxide emissions, “one of the air pollutants most damaging to human health and property, and vegetation.” He asked Congress to impose a charge on sulfur emitted into the atmosphere “from combustion, refining, smelting, and other processes.” Beginning in 1976, the charge would be 15 cents per pound of sulphur “emitted in regions where the primary standards – which are designed to be protective of public health – have not been met within the deadline” for compliance with the Clean Air Act. In areas that met the standards but exceeded the secondary national-standard, the charge would be 10 cents per pound. Areas that met primary and secondary NAAQS would be exempt from the charge:

The charge is an application of the principle that the costs of pollution should be included in the price of the product. Combined with our existing regulatory authority, it would constitute a strong economic incentive to achieve the sulfur oxides standards necessary to protect health, and then further to reduce emissions to levels which protect welfare and aesthetics.

The same day as the President’s message to Congress, Chairman Willard held a Committee on Environment hearing on the District’s State implementation plan. In what the *Star* described as an “acrimonious hearings,” Michael Stenberg, deputy chief of EPA’s regional office in Philadelphia, warned that the city was “technically in violation of the law” because the plan submitted to EPA by the deadline had not been approved by the city council or mayor. The city would have until July 30 to submit an approved State implementation plan. If the city did not do so, EPA would design the plan to comply with the Clean Air Act.

Sammie Abbott also participated in the hearing. He pointed out that city children showed levels of lead that were at dangerous levels. He also criticized Environment Committee Chairman Willard, the city council’s most ardent freeway supporter. Abbott said Willard had “as much right to sit in there as Al Capone does . . . on a committee on law order.” [Carper, Elsie, “Pollution Tax Aired By Nixon,” *The Washington Post and Times Herald*, February 9, 1972; Hill, Gladwin, “A Polite Nudge on Environment,” *The New York Times*, February 9, 1972; Fahnestock, Sheridan, “Clean It Up,” Metro Wrapup, *The Evening Star*, February 9, 1972; “U.S. Tells D.C. to Clean Air,” *The Washington Post and Times Herald*, February 9, 1972]

### **President Nixon’s Plans for the Bicentennial in the District**

On February 4, 1972, President Nixon released a Special Message to the Congress Outlining Plans for the Bicentennial Observance in the District of Columbia. The central challenge of the Bicentennial was to plan for the observance “on the move,” he said. “We can best forge such a spirit, the [American Revolution Bicentennial] Commission went on to recommend, by

approaching the Bicentennial as an occasion both for understanding our heritage better and for quickening progress toward our horizons . . . .”

For the District of Columbia, two goals “for forging a better future” were improved schools and building the Metro subway system:

METRO, and all of the other elements which with it will comprise a balanced modern transportation system for greater Washington, are central to Bicentennial plans for the District. We need the pride of achievement in area wide cooperation which the system will give all communities taking part. We need its people-moving capacity to cope with visitor traffic which may average up to 100,000 people daily throughout the anniversary year. I am today renewing the commitment of all the agencies and resources of the Federal Government toward maximum progress on the entire transportation system –

subway, freeways, bridges, parking, and support facilities – before 1976. The action of the Congress in December to support continued METRO funding was enormously heartening to the people of the Capital region; it gave, in fact, a glimmer of hope to beleaguered commuters everywhere. The grim Thanksgiving prospect of a great many excavated streets to fill back in has now become the far brighter prospect of at least 24 miles of operating subway – the most modern anywhere – by 1976. Urgently needed now is prompt approval by the Congress of Federal guarantees for METRO revenue bonds – the next essential step to getting the trains running.

He was particularly interested in construction of a Metro station at Arlington National Cemetery, “for which funds are requested in my new budget.” In addition to providing easy access “from Washington to the Arlington shrine . . . it would offer the arriving visitor one more convenient transfer point from private to public transportation on the way into the Capital itself.”

He had directed Secretary Volpe “to coordinate interagency action plans for supplementing those subway lines in service by 1976 with a cooperated network of other public transportation on which visitors can move from fringe parking areas (to be developed under these plans) to points of interest nearer the city center.”

### **About That Balanced System**

Opponents of the Three Sisters Bridge, represented by Owen and Norton of Covington and Burling, filed briefs with the Supreme Court on February 16 opposing review of the U.S. Court of Appeals’ ruling.

They contended that the issues involved were local in importance “with no national implications of any kind.” The Supreme Court, the brief said, had a “longstanding policy . . . not to review such local decisions.” Further, a Supreme Court ruling would apply only to the bridge case and have little bearing otherwise because the circumstances were “unique in the history of the federal highway program.” The brief explained:

It is inherently improbable that any repetition would ever occur as a practical matter, and it is also the fact that there have been recent developments in the law which make any real repetition virtually impossible.

As a result, the Justice Department and District of Columbia were asking the court to rule on the facts of the case rather than the law.

Owen and Norton also disputed those facts, particularly as to the will of Congress. The governments' petition "inaccurately characterizes the statute as requiring that actual construction commence within 30 days." The fallacy of this interpretation was "readily demonstrable." Section 23 of the Federal-Aid Highway Act of 1968 directed that the District "shall commence work" on four projects within 30 days. "Work" did not mean construction since "much planning and designing work remained to be done before any actual construction work could possibly commence on the bridge."

The brief pointed out that President Nixon had ordered the Justice Department to work with the Department of Transportation and the District of Columbia to appeal Judge Bazelon's ruling to the full Appeals Court and, if unsuccessful there, to the Supreme Court. "While the President's order had the desired effect of placating Mr. Natcher and obtaining release of the subway funds, it also serves to distinguish [the case] . . . from normal government . . . petitions which are filed by the solicitor general on his own initiative." [Barnes, Fred, "Reject Bridge Case, High Court is Asked," *The Evening Star*, February 17, 1972; Eisen, Jack, "Foes of Three Sisters Bridge Oppose Review of By High Court," *The Washington Post and Times Herald*, February 17, 1972]

The President's order was generally thought to have been decisive in securing release of the District's Metro matching funds. Further, according to capital area adviser Krogh, the White House was planning to give the "strongest possible support" to the legislation authorizing a Federal bond guaranty for Metro. "We're approaching this issue with the same degree of seriousness – and perhaps even more – than [sic] we approached the vote on the House floor last December," he told reporters. "We'll go all the way – whatever it takes." [Angle, Martha, "Nixon Set to Push for Bond Guaranty," *The Evening Star*, February 13, 1972]

### **The Joint Hearing on Metro**

The unusual joint hearing of the House and Senate District Committees on the bond guarantee took place on March 1 and 2, 1972. Representative Earle Cabell (D-Tx.), chairman of the Subcommittee on Business, Commerce, and Fiscal Affairs of the Committee on the District of Columbia, and Senator Eagleton, chairman of the Senate Committee on the District of Columbia, were the presiding officers.

Chairman Cabell, a businessman who had been mayor of Dallas (1961-1964) when President Kennedy was assassinated in that city, said that everyone present was "conscious of the need for the construction and implementation of our METRO system." He listed five questions that the hearings were intended to address:

- (1) Has the costly delay in this construction been the fault of the Congress, or the fault of the people of the District of Columbia in this refusal to abide by the provisions of existing law relative to any existing highway laws?
- (2) Can this project be self-liquidating as originally proposed? Will the fare box liquidate these bonds?
- (3) Have the Metropolitan Transit Authority exercised their best judgment in the expenditure of its available funds to this point? Have they been diligent in conserving their funds?
- (4) What is the difference between anticipated revenues, after initiation of operations, and its operating and debt-service costs?
- (5) How many dollars is it anticipated that the U.S. Treasury must pick up in order to meet the bond commitments which they (the Treasury) are guaranteeing?

After brief supportive comments from area Representatives Hogan, Broyhill, and Gude, Secretary Volpe appeared before the joint committee. Since becoming Secretary, he said, he had stressed the principle of “a balanced transportation system, a system which offers a true modal choice to all our citizens.” The Nation’s capital was advancing such a system, with Metro the key to “an efficient public transportation system” for the metropolitan area. “METRO will be the heart of the system. It is the keystone of a coordinated transportation system and essential to the effective performance of the Federal Government.”

Fortunately, the legislative and executive branches were fully committed to Metro. He cited President Nixon’s February 4 special message to Congress outlining plans for the Bicentennial in the District. The President had said that Metro, as part of a “balanced modern transportation system,” was central to the plans because its “people-moving capacity” was essential to coping with the hundreds of thousands of people expected to visit the city in 1976. Secretary Volpe quoted the portion of the statement in which the President committed all agencies to make maximum progress on construction, and urged Congress to approve Federal guarantees for the revenue bonds.

Secretary Volpe was heartened by the physical progress of Metro, with 9 miles under construction and 11 stations under contract. WMATA was addressing a wide range of issues, including what the Secretary referred to in quotes as “people problems” typical of any major construction project in a big city. “Unfortunately, a new problem has arisen, a financial problem which threatens to halt the progress which has been made”:

Having been in the construction industry most of my adult life before I went into public service, I can attest to the fact that the period between 1969 and 1971 was the period of probably the greatest rise in construction prices and construction wages of any period I can remember in the last 40 years. So, it is not anything that could have really been foreseen.

As a result, “WMATA’s financial advisers, securities underwriters, [concluded] that the absence of additional security seriously impaired the marketability of the METRO revenue bonds.” The proposed legislation would “assure the orderly financing of the METRO system.” Despite all the progress to date and the obstacles overcome, “additional help from the Federal Government is necessary.”

In response to a question from Chairman Cabell, Secretary Volpe explained that the role of the Department of Transportation would be to “serve as a conduit between the Congress and WMATA.” He said:

We would be reviewing, on a timely basis, the reports and the progress of WMATA. As the legislation requires, we would not issue or give permission for the issuance of bonds unless we were satisfied that there was a reasonable prospect for WMATA to pay off the bonds.

Aside from a role in assuring the success of WMATA, the Department would serve “as the eyes and the ears of the Congress, to transmit to you any information which we felt you ought to have with regard to this situation – such as financial reviews.”

Representative Nelsen asked if, in view of the support for a balanced transportation system, “the highway part of this system is now moving as it should?” Secretary Volpe replied that the highway system was “moving as rapidly as the Department of Transportation and the D.C. Highway Department, are able to move consistent with the statutes that the Congress has enacted and by which we must abide.” The Department had “done everything we possibly could do to bring about the construction of the freeway system that was feasible and which the Congress asked us to build and, in some cases, asked for our thoughts concerning.”

He offered to submit FHWA’s latest monthly status report on the freeway network. On a national basis, “I am not supposed to look at each individual project’s progress.” However, “this is the Capital City and the President expressed to me on a number of occasions his desire that I give as much time as possible to see to it that progress is continued on all modes of transportation here in the Capital City.”

Representative Nelson appreciated the offer because even if the bond guarantee bill passed the House District Committee, “we still must go out on the Floor of the House” for a vote:

There has always been a great debate as to whether or not there has been foot-dragging, and what can be done and what should be done, in order to move the balanced transportation system, as you indicated.

The FHWA’s report was submitted by E. H. Swick for Administrator Turner on March 1, 1972:

#### *Three Sisters Bridge*

A Petition for a Writ of Certiorari was filed with the Supreme Court during the month of January. Opponents of the bridge filed a brief on February 16, urging the Court to deny the Government’s petition. The Court has not ruled on the matter to date.

#### *Potomac River Freeway*

The National Capital Planning Commission’s consultant, Wallace, McHarg, Roberts and Todd (WMRT) is at work on land use studies for the Georgetown Waterfront. The Highway Department’s consultant, Sverdrup and Parcel, has prepared preliminary engineering drawings for four alternate design concepts, and has provided those drawings to WMRT for its use in preparing alternate corridor development plans. Alternate plans

and a 4(f)/Environmental Impact Statement are to be completed by the end of March 1972 after which a design public hearing will be held and a single development concept selected.

The work of WMRT is being periodically reviewed by the Interagency Coordinating Committee, through which we are represented by Messrs. Hirten and [Asaph] Hall [Special Assistant to Deputy Under Secretary John P. Olsson].

*South Leg of the Inner Loop (Lincoln Memorial and Tidal Basin Area)*

Preliminary drafts of an Environmental Impact Statement . . . have been reviewed and are being finalized. It is anticipated that the Draft Environmental Impact Statement will be released and circulated for comments during the month of March. It is expected that a design public hearing will be conducted during the month of April.

*Center Leg of the Inner Loop (West of Capitol)*

Construction is in progress. Contract PS&E for the K Street bridge have been approved and the project has been advertised for bids. Design is continuing and an environmental impact statement is being prepared for the air rights housing project between H Street and K Street, Northwest.

*East Leg of the Inner Loop (RFK Stadium Area)*

Design studies are in progress.

*North-Central Freeway*

*Northeast Freeway*

*North Leg of the Inner Loop*

*East Leg of the Inner Loop (portion north of Bladensburg Road)*

These segments which were included in the D.C. Restudy are inactive at present, pending review by the Congress.

Representative Broyhill asked when the Secretary expected the Supreme Court to respond to the Justice Department's petition. With I-66 and access to Dulles International Airport partly dependent on I-266 and the Three Sisters Bridge, "it is almost like sitting and waiting for the other shoe to drop."

Department General Counsel John W. Barnum replied that the Supreme Court normally "clears up all such petitions for certiorari before the end of the term" in June, but the Department was hoping for a response "substantially before that." In the certiorari-petition stage, four Justices would have to agree to hear the case, but if that happened, the Supreme Court review would not take place until the fall.

Secretary Volpe added that the Department was working with the city, HUD, and NCPC "on an environmental plan and a layout for the Georgetown water-front which also ties into I-66." They also were working on plans for design hearings on other freeway projects. "So, we are not just sitting still waiting for" the Supreme Court. [Federal Guarantee of Bonds for National Capital Region Subway System, Joint Hearings before the Committee on the District of Columbia of the

United States Senate and Subcommittee on Business, Commerce, and Fiscal Affairs, of the Committee on the District of Columbia, House of Representatives, 92<sup>nd</sup> Congress, 2d Session, on S. 2297 and H.R. 11877, March 1 and 2, 1972, pages 1-3, 16-29]

The next witness was Jack F. Bennett, Deputy Under Secretary for Monetary Affairs, Department of the Treasury. The Treasury Department, he said, fully supported the proposed bill. The margin of safety for \$1.2 billion in bonds was satisfactory:

Over the life of these bonds, it has been estimated that this project will generate, in addition to meeting its cost and repaying the bonds and paying interest, something on the order of \$1.4 billion over and above those requirements. That would be on the order of \$15 million a year in some of the earlier years, rising on up toward \$100 million a year in later years. That is a margin of safety.

Beyond that, you probably recognize the bill itself provides that the guarantee cannot be issued until the Secretary of Transportation is satisfied that the Government is undertaking “an acceptable financial risk to the United States.”

The legislation further provides that if at any time the Secretary of Transportation decides action is necessary to protect the interest of the United States, he can direct such prudent action. [Federal Guarantee of Bonds for National Capital Region Subway System, pages 29-32]

Mayor Washington was scheduled to be the next witness, but had succumbed to the flu. Deputy Mayor Watt read the mayor’s statement. The statement explained the anticipated benefits of Metro:

METRO will mean many things for Washington: new development, both commercial and residential; expanded employment opportunities; improved access to work, business, retail, recreational, entertainment, and cultural centers; and strengthened ties among the various jurisdictions in the Washington area. I believe that METRO will greatly assist our efforts to create a viable regional cooperation which will stimulate our efforts to create a viable regional cooperation which will stimulate the health and vitality of center city and surrounding jurisdictions . . . .

Thus, the legislation before you today is extremely important because it will complete the financial plan necessary for the construction of the METRO system.

The goal was “to assure the orderly financing of the METRO system.” With passage of the legislation, “the system can be completed as projected and at the least cost to the Federal Government and the local participating governments.”

The bill, in Title II, also increased the District’s contribution from \$216.5 million to \$269.7 million, an increase of \$53.2 million. Comparable increases were anticipated for the surrounding jurisdictions. [pages 39-44]

WMATA officials also testified on March 1. After a brief history of the project, Chairman Fisher summarized the status of construction:

To the north of Union Station work is underway on the Rhode Island Avenue station and on the system's yard and shop facilities. South and west from Union Station, a cut and cover section of subway leads to Judiciary Square where a station is taking form under the various courts buildings. Much of the structural work from there to 7<sup>th</sup> and G Streets is nearing completion. Along G street, from that point to the Treasury at 15<sup>th</sup> Street, it is now decked over with work advancing beneath on two stations and connecting sections.

From 15<sup>th</sup> and G Streets, a 150-ton machine has tunneled under the corner of the Treasury property – which we are being sure is properly shored up – and under Lafayette Park enroute to Farragut Square. Mining then proceeds under Farragut Square to K Street.

Beginning at the Rock Creek intersection with the Connecticut Avenue section of the Rockville route, tunneling is moving rapidly toward Dupont Circle. Over a half mile of solid rock tunnel has been mined. To the south of Dupont Circle, Connecticut Avenue is largely decked over as work proceeds on two stations and the subway line connecting with the Farragut Square tunnel

Last June 17<sup>th</sup>, the participating Virginia local governments conducted a groundbreaking ceremony to celebrate the beginning of work in Virginia. Since that time a tunnel running from the system portal near the Iowa Jima statue under Rosslyn to the Rosslyn station is well underway. Tunneling under the Potomac has begun and the subway line along Eye [I] Street to Farragut Square, including two stations, is under construction.

In all, 11 stations and 9 route miles are under construction. And an additional 25 stations and 27 miles are under design contract. So you can see, METRO is no longer an abstraction.

Turning to the financing issue, Chairman Fisher told the joint hearing that the original financing plan depended on selling \$835 million in revenue bonds. Then WMATA found that the cost for the 98-mile system had increased by about \$500 million. Next came the difficulty of selling the bonds:

A second development which became apparent was that the proposed sale of revenue bonds could not be accomplished without additional assurance to the investor. Our financial consultants had concluded that some form of tax backup or guaranty would be necessary to attract investors. An additional problem associated with the sale of bonds involves the current rate of interest demanded by the market. Our original projections were an average of 5 percent on tax-exempt bonds. The current estimate is an average of 7 percent on taxable bonds.

After consulting WMATA's financial advisors and 16 of the Nation's leading underwriters, "it became clear that there was no possibility of marketing our revenue bonds with the existing

conditions.” Further, the interest rate assumptions made in 1968 were reasonable at the time, but “had been proven optimistic in today’s market place.” This change in interest rates meant that the bonds, if sold, would increase the amount of funding needed for interest payments and generate less revenue than expected for construction, thus further diminishing their salability. Although one option was to increase each jurisdiction’s contribution to the project, WMATA realized that “it was obvious that a taxing mechanism could not be arranged soon enough to avoid a hiatus in the funding of construction requirements.”

The pending bill to guarantee the revenue bonds had three advantages:

It will allow the immediate sale of bonds at the most favorable interest rate and thereby avoid any serious disruption to the planning construction schedule. It will allow up to 3 years for the local governments to consummate the necessary legal steps to provide for their increased shares. At the same time, the Federal interest will be protected since the sale of the additional \$300 million in bonds will be conditioned upon the development of suitable matching arrangements to preserve the Federal-local matching formula . . . .

We trust that the Congress will find the proposal consistent with the goals and standards which it has set over the past two decades.

After generally supportive questioning, the hearing ended for the day. [pages 44-57]

The second day of hearings continued the supportive statements from local jurisdictions and agencies.

### **Highway Funding for Transit**

Traditionally, Congress considered reauthorization of the Federal-aid highway program every 2 years. In 1972, consideration began early, but was affected by issues that had been brewing since the mid-1960s when cities began taking over failing private-sector transit companies to maintain needed service. As with early projections for Metro in the Washington area, many cities thought that with efficient operation, they could run the systems with revenue from the fare box. Fairly soon, the cities came to understand that the fare box could not generate enough revenue and that some other source of funds would be needed.

The Highway Trust Fund, with its multibillion dollar balance, was a tempting target for those seeking transit aid, especially for cities trying to avoid tax increase to pay operating subsidies. Highway advocates explained that the balance was not unused money. The balance consisted mainly of highway user tax revenue committed to projects that were going to be under construction for several years. The traditional comparison was to a family checking account with a large balance, but numerous checks written and not yet cashed.

Transit advocates, Members of Congress from big cities, environmentalists, and urban planners were undeterred. By 1972, urban Interstates construction was sufficiently controversial that pro-transit forces argued the funds for unwanted Interstate highways should be used instead for transit, including operating subsidies – the biggest headache for cities.

Secretary Volpe, the former Federal Highway Administrator who had stated early in his tenure that the Highway Trust Fund should be restricted to highways, changed his mind. The Nixon Administration supported opening the Highway Trust Fund to transit in pursuit of a balanced transportation system for the Nation's cities. However, the Administration opposed Federal aid for operating subsidies, which opponents often referred to as "throwing money down a rathole."

The Secretary's proposal, released on March 14, 1972, recommended consolidating all existing urban highway and mass transit programs into a Single Urban Fund, with the exception of the Interstate program and minor transit initiatives. All rural highway programs would be consolidated into the Rural Federal-Aid System and a Rural General Transportation Fund.

Highway interests opposed the plan because it allowed diversion of Highway Trust Fund revenue to transit. Transit interests opposed it, too. Since the funds could be used for highways or transit, they feared that the powerful highway lobby would ensure that highway projects received most of the funds. In the absence of a constituency, Congress never seriously considered Secretary Volpe's bold move, but it reflected his change of thinking and the policies that the Department of Transportation would promote in coming years.

At the same time, the House and Senate Public Works Committees were dominated by road supporters who resisted diversion of Highway Trust Fund revenue. Further, in the Senate, the Committee on Public Works was not responsible for transit. In the early days of Federal-aid for transit, the Federal housing agency administered the funds. As a result, the Committee on Banking and Currency had jurisdiction over transit programs. It retained that jurisdiction even after the Federal-aid transit program was shifted to the Department of Transportation and administered by UMTA.

One of the committee's members, Senator Harrison A. "Pete" Williams, Jr. (D-NJ), was based in Plainfield and was the Senate's chief transit advocate. He had served in the U.S. House of Representatives (1953-1957) before winning election to the Senate in 1958. Early on, he adopted transit aid as an issue that was important to the Nation and his New Jersey constituents.

By 1972, advocates such as Senator Kennedy, Senator Lowell P. Weicker, Jr. (R-Ct.), and Representatives Koch and Bella Abzug (both D-NY) and other members of the New York City congressional delegation were among those introducing bills to create a mass transportation trust fund or a transportation trust fund, with much of the revenue coming from highway users whose revenue currently was credited to the Highway Trust Fund. The problem with a mass transit trust fund was that unlike the highway equivalent, increasing taxes on money-losing transit lines to stock the fund might reduce ridership.

The most influential alternative was the Muskie-Cooper amendment introduced by Senator Edmund S. Muskie (D-Me.), one of the Senate's most aggressive environmental advocates and a potential candidate for the Democratic Party's presidential nomination, and Senator Cooper, both members of the Committee on Public Roads. Their amendment would allow cities to use their Federal-aid urban system funds for traditional highway projects or transit, including rapid rail transit.

Senators Muskie and Cooper and other supporters of their amendment argued that it would allow local officials to use the funds for the projects that best met each area's unique needs. Opponents said that allowing the funds to be used for rail transit would violate the sanctity of the Highway Trust Fund, which was set up for highway purposes, and a betrayal of the highway users who were told their taxes went to the highway program.

The other unusual proposition was initiated by Secretary Volpe's successor as Governor of Massachusetts. Lt. Governor Frank W. Sargent became Governor to complete Volpe's term. Governor Endicott Peabody (1963-1965) had appointed Sargent one of five Commissioners of Public Works, in charge of the Division of Waterways, in 1964. Governor Volpe elevated Sargent in 1965 to be chairman and chief road builder. Shortly after becoming Governor, however, Sargent addressed a crowd of protestors assembled on the Boston Common for "People Before Highways Day" and assured them that he would never put freeways before people. The crowd, which booed when he appeared, cheered his unexpected new attitude.

Governor Sargent, the convert, decided not to build Boston's Inner Loop (I-695) or the extension of I-95 into the city from the southeast, the two most contentious remaining projects. Instead, he would revitalize the Boston area's transit network. The problem was that although no one, not even FHWA, could force the State to build a highway, but if it decided not to do so, the State and the city would lose hundreds of millions of dollars, and the jobs and economic boost that came with the dollars. The only alternative under current law was to shift the Interstate designation to another location that might prove less controversial.

Meanwhile, Governor Sargent did not have any obvious source of funds for the ambitious transit agenda he adopted. By 1972, Governor Sargent and his Secretary of Transportation, Alan S. Altshuler, had identified alternative routes elsewhere in the State, but were seeking a more flexible approach.

In early March, the Subcommittee on Roads of the House Committee on Public Roads began hearings on the 1972 highway legislation. When Secretary Volpe appeared before the subcommittee on March 16 his Single Urban Fund received what by then was the expected skeptical reception.

On March 21, the subcommittee heard from a delegation from Massachusetts, including Secretary Altshuler. He said his "primary purpose" was to urge support for "a very specific provision." At the time, the substitute Interstate mileage was limited to 200 miles, which had been committed by then:

We believe that a sufficiently flexible highway program must be able to accommodate the finding that in some urban corridors it is no longer feasible to carve new rights-of-way – and to do so without imposing harsh financial penalties upon the States involved. In these urban corridors, the States concerned will generally have to undertake large transportation investments, both highway and transit, of a noninterstate nature . . . . In cooperation with AASHO, we urge that Interstate funds be made available for reassignment to meet these needs where such reassignment is compatible with the objectives of the Interstate program.

Secretary Hughes of Maryland testified on the same issue. He said that Maryland had built or programmed 358 miles of Interstate highway. But about 30 miles in the Baltimore area and Maryland's Washington suburbs are unbuilt. This unbuilt mileage included I-95 and I-70S inside the Capital Beltway as well as segments of I-70N, I-83, I-95, and I-395 in Baltimore:

Repeated efforts have been and are being made to resolve the issues associated with [these segments] . . . . However, public opposition, connected to a great extent with environmental impact issues, continues to overshadow the basic need to provide for a high level of transportation service in these corridors.

He cited I-95 in the Washington area as an example:

Recent actions by the D.C. Council and the U.S. Department of Transportation to revise portions of the Interstate System within the District raise questions as to the utility of our plans to study further the proposed I-95 corridor in Prince Georges [sic] County.

Maryland, he said, was studying "what it believes to be a realistic approach toward providing alternate means of satisfying this inter- and intra-state travel demand in the event that these controversial sections are not constructed." Secretary Hughes said:

The State of Maryland will be prepared in July 1973 to demonstrate to the Federal Government that such a revised system can be advanced to the construction stage in 1975 in order that the State does not suffer a loss of Interstate funds and associated system mileage, resulting in an inability to avoid high levels of congestion and to provide for the needs of the motoring public . . . . Maryland proposes to develop a logical system of replacement Interstate facilities, consistent with present Federal Interstate funding commitments, for use in the event certain controversial segments of the program system are not constructed.

First priority would be to identify facilities that replace the function of the missing Interstate segment. Second priority would be "facilities that will provide alternate routings for Interstate movements" to relieve congestion on existing highways. Finally, the State would emphasize facilities that "satisfy Interstate movements that have not been provided for" at present.

The funding authorized for the controversial Interstate segments in the Baltimore and Washington areas would be sufficient to pay for these alternative routes. He asked Congress to allow the State to substitute new freeway routes for the portions that may be abandoned, with the substitution based on cost (about \$1 billion) rather than mileage as under current law.

Secretary Hughes told reporters that substitutes might include an expressway from Baltimore to Annapolis and upgrading of the John Hanson Highway (U.S. 50) between Washington and Annapolis to Interstate standards. He stressed this was not a plan, but simply an illustration of where Maryland might shift the mileage if Federal law permitted. [*1972 Highway Legislation, Hearings before the Subcommittee on Roads of the Committee on Public Works, House of Representatives, 92<sup>nd</sup> Session 2<sup>nd</sup> Session, Committee Print 92-32, pages 541-5553; Eisen, Jack,*

“Permission to Alter Road Plans Asked,” *The Washington Post and Times Herald*, March 22, 1972]

In April, State Highway Administrator Fisher confirmed that Maryland no longer planned to build its portion of the North-Central Freeway. He wrote to Delegate Donald R. Robertson, chair of the Montgomery County delegation to the General Assembly, to say the State was seeking authority to use the funds for another route, such as U.S. 50 to Annapolis or an outer beltway in Montgomery County. [“Freeway Plan Dropped by Md. Agency,” *The Washington Post and Times Herald*, April 9, 1972]

### **Decision on the Three Sisters Bridge**

On March 2, the U.S. Court of Appeals issued a supplementary opinion addressing issues raised concerning the 1893 provisions of the District Code that plaintiffs had argued the District had not satisfied in advancing the Three Sisters Bridge. The Appeals Court found that these requirements did not apply to the Three Sisters Bridge:

The language of section 23, and its history and objective, persuade us that the overriding intention of Congress was also to exempt the project from the necessity of further compliance with these recommendatory and consultative provisions of the local code.

Clearly one of the objectives of Congress was to have the bridge project go forward promptly. The “notwithstanding . . . any law . . . to the contrary” language, construed in light of this objective, and of the history of the project, bears a construction that the provisions of the D.C. Code now considered should not delay or bar the authorities from proceeding.

The supplementary opinion also considered Title 16, United States Code, Section 470f, which required the Federal Agency to consider the impact of projects such as the Three Sisters Bridge on properties included in the National Register of Historic Places, and should afford the Advisory Council on Historic Preservation an opportunity to comment. The Secretary of Transportation is a member of the Advisory Council and may have already complied with this provision (“we understand he may already have done so”), but if not, he should do so.

This supplementary opinion had no bearing on the appeal to the Supreme Court.

On March 27, 1972, the Supreme Court rejected the appeal. Normally, such decisions are made without explanation, but in this case, Chief Justice Warren E. Burger released a concurring opinion:

I concur in the denial of certiorari in this case, but solely out of considerations of timing. Questions of great importance to the Washington area are presented by the petition, not the least of which is whether the Court of Appeals has, for a second time, unjustifiably frustrated the efforts of the Executive Branch to comply with the will of Congress as rather clearly expressed in Section 23 of the Federal-Aid Highway Act of 1968. If we were to grant the writ, however, it would be almost a year before we could render a decision in the case. It seems preferable, therefore, that we stay our hand. In these

circumstances, Congress may, of course, take any further legislative action it deems necessary to make unmistakably clear its intentions with respect to the project, even to the point of limiting or prohibiting judicial review of its directives in this respect.

In effect, Chief Justice Burger neither agreed nor disagreed with the U.S. Court of Appeals' findings, but believed a year's delay in completing Supreme Court review was inadvisable. Instead, the decision left the future of the bridge to Secretary Volpe, who must now ensure compliance with the requirements of the Appeals Court's decision of October 12, 1971.

Secretary Volpe did not have an immediate reaction. However, his spokesman indicated he had conferred with General Counsel Barnum and Administrator Turner.

Representative Broyhill called on the Committee on Public Works to write legislation that would force construction of the bridge. If the committee did not do so, he said, he would. Committee sources indicated that action was not likely and that if Representative Broyhill drafted a bill to initiate action, it would simply be referred back to the committee, which likely would ignore it:

A committee spokesman said the committee would not relish the prospect of holding hearings on a matter "committee members had considered settled."

Sources said the District's recalcitrance on provisions of the 1968 Highway Act, and its opposition to construction of freeways delineated in the act, had caused the committee – perhaps with a few exceptions – to view further legislation as futile.

A Senate Public Works Committee staff member said it was unlikely that that committee will pick up Burger's suggestion. "I see no further need for Congress to say that we really meant [what] we've already said twice before."

Sammie Abbott promised to continue fighting the bridge:

We pledge increased determination to meet the next moves of the pro-freeway forces by every means as we have in the past: Public education and mobilization, political and legal action.

Robert M. Kennan, Jr., transportation chairman of the Committee of 100, which was among the plaintiffs, said, "The way is cleared for a reappraisal of the bridge proposal on its merits." He added, "If it gets that, we are confident the project will be abandoned." [Kneece, Jack, "New 3 Sisters Action is Doubtful This Year," *The Evening Star*, March 28, 1972; Eisen, Jack, "3 Sisters Appeal Rejected," *The Washington Post and Times Herald*, March 28, 1972]

A *Post* editorial following the decision began:

Once again, for the umpteenth time in as many years, the Three Sisters Bridge – the bridge that people can't see because it isn't there, but feel no less powerfully about on that account – is back on page one, complicated as usual and unresolved as ever.

The fate of the bridge “involves politics, home rule, money, planning, conservation, freeways, the Metro rapid transit system, housing, assertions of congressional power, Presidents of the United States and, in this latest round, the Supreme Court.” However, the Supreme Court had neither killed the Three Sisters Bridge nor ordered work to resume. In fact, “the Supreme Court didn’t even want to hear the case.”

Instead, it left the Appeals Court ruling in place, and that ruling had returned the case to Judge Sirica with instructions on how to proceed. The editorial summarized the instructions:

1. District Court Judge John J. Sirica is told to clarify – and possibly reconsider – his finding in 1970 that proper hearings had been held six years earlier on the location of the bridge.
2. The District Court is also told to send the case to Secretary of Transportation John A. Volpe, who is to make several determinations dealing with such factors as the proposed usage of, and impact upon, parkland along the Potomac shore. Mr. Volpe is also instructed to make a documented record of these and other determinations, such as whether the bridge jibes with areawide transportation planning criteria.

Of course, Chief Justice Burger’s “highly unusual concurring opinion” practically invited congressional action that could force construction. That was now a possibility. First, the decision not to hear the case meant the Supreme Court left in place Judge Bazelon’s comments about pressure from Chairman Natcher. “Many congressmen read that as an insult to the legislative branch of the sort that demands retaliation.” Second, the Chief Justice had “managed to fan these flames” by raising the question of whether Judge Bazelon’s ruling had “unjustifiably frustrated the efforts of the Executive Branch to comply with the will of Congress.” The statement then observed that a Supreme Court ruling might be a year off and that in the meantime, Congress could act “to make unmistakably clear its intentions,” even limiting or prohibiting judicial review:

These comments – coming as they do from the Chief Justice of the United States – strike us as peculiar, to say the least. We had not thought it to be the function of the Chief Justice to advise Congress, and still less encourage it, to take particular actions; or to pay quite such close attention to a local dispute largely unrelated to national affairs; or to suggest answers to questions not before the court. Yet he seemed to do all three in pointing out that Congress could now pass still another law requiring the bridge to be built, and could couple it with a provision prohibiting judicial review of its action.

Despite this virtual invitation to legislative relief, perhaps “Congress may have had enough of the whole Three Sisters saga by now, and might be willing to let the matter undergo the same procedures as any other federal highway project.” Perhaps, in truth, what was needed was “a thorough, up-to-date review of this dog-eared plan as it applies to today’s transportation outlook here.” Instead of simply being another “excuse for frivolous delaying tactics,” such a review might “produce a fresh decision with which everyone involved in this ancient imbroglio could live in peace—or at least in something closer to tranquility.” [“Three Sisters: Back to the Drawing Boards,” *The Washington Post*, March 30, 1972]

The *Star* agreed that the Chief Justice had offered several options for resolution, including a legislative solution, an administrative response, “or everyone can forget the whole thing.” The administrative option for Secretary Volpe was not promising:

For no matter what kind of good-faith effort the Department of Transportation might now make to answer the maze of administrative and legal procedural questions raised by Judge Bazelon, our guess is that this inevitably would lead to further inconclusive litigation.

That, as the Chief Justice implied, left the legislative option as the most promising. By law, Congress could make its intentions unmistakably clear. True, Congress tried to do that in 1968 by directing construction to begin. Now, however, it had a new vehicle, namely the biennial Federal-aid highway bill that was to be enacted in 1972. “The merits of the bridge are clear” and President Nixon “is firmly on record” in support, and yet:

If it seems incredible that any dispute over a Potomac River bridge crossing should be occupying the very top echelons of the legislative, judicial and executive branches of the federal government, the fact is that such things happen occasionally in the Nation’s Capital, and have throughout its history. This one will linger on until Congress, with the President’s help, ends it. [“Justice Burger’s Prescription,” *The Evening Star*, March 29, 1972]

### **A New City Council Chairman**

As early as December 1971, the White House had begun looking for a Republican to replace Chairman Hahn when his 3-year term ended on February 1. The *Star* reported:

Hahn, 49, a liberal Republican, has apparently disappointed the White House by successfully forging the council’s limited authority into a controversial weapon of a relatively independent and innovative legislative body.

The White House is reported to feel that Hahn’s bid for independence has sometimes been at the expense of Mayor Walter E. Washington and is a source of disharmony within the city government.

Under Chairman Hahn, the council had “provoked criticism from many quarters. Some elements of the city’s business community have accused Hahn of seeking publicity and issuing self-serving statements.” He had “in a sometimes flamboyant manner . . . turned what might have been a figurehead post into a full-time job.” He had been at odds with the mayor on a number of issues, including whether to provide a subsidy to D.C. Transit System to save the reduced fare for the elderly:

The subsidy, supported by Council Vice Chairman Sterling Tucker, was strongly opposed by Hahn, who argued it would strengthen the position of D.C. Transit’s controversial president, O. Roy Chalk, and delay the company’s acquisition by a public body.

Mayor Washington, after a week’s silence, finally endorsed the subsidy.

Then there was the Three Sisters Bridge:

A particularly sore point has been Hahn's opposition to building the Three Sisters Bridge, against President Nixon's specific endorsement of that project in order to guarantee the flow of subway construction funds from Congress. At one point, Hahn's public declaration against the bridge came during delicate private negotiations and nettled some of the participants. [Critchfield, Richard, "White House Seeks Successor to Hahn," *The Evening Star*, December 22, 1971]

From the start, former Councilman John A. Nevius was the frontrunner to replace Hahn. Since losing the race for the District's nonvoting Delegate to Congress, Nevius had served as Deputy.

On April 13, Assistant Press Secretary Gerald L. Warren announced the decision to appoint Nevius. The President, Warren said, appreciated Hahn's work, but "felt that this was the time for new leadership" of the city council. Warren also announced that the White House would renominate Councilman Sterling Tucker, whose term had expired on February 1 along with Hahn's term. Hahn and Tucker had continued serving in the interim. Like Hahn, Nevius was white, thus maintaining the racial balance on the city council.

The announcement came while Hahn was attending a birthday party for Mayor Washington, who was turning 57. By contrast with the White House's muted announcement of Hahn's ouster, President Nixon sent the mayor a laudatory telegram on his birthday:

I welcome this opportunity to publicly tell you of my deep admiration and very real respect for your years of dedicated leadership as mayor of the nation's capital. We all feel fortunate to have the benefit of your wisdom and experience.

According to the *Post*, White House staff had wanted to nominate Nevius in January, but had been overruled by Attorney General Mitchell:

Mitchell felt Hahn should be permitted to retain his post because of his campaign fund raising efforts on behalf of the Republican party.

However, sources said Nixon decided that he had to be replaced after some members of the House and Senate continued to complain bitterly about him.

The *Post* reported that:

Hahn's outspoken views, his frequently abrasive tactics, his alienation of some elements of the D.C. business community and his inability to get along with some key members of Congress were cited most frequently yesterday for his loss of the chairmanship . . . .

Privately, Council members said they felt Hahn's efforts to make the Council an independent body was the reason his ouster.

"He was forceful," said one. "They want us to quiet down and be a part-time Council."

Hahn's predecessor, John W. Hechinger, struck a similar note in speculating on Hahn's failure to win reappointment. "In his initial charge to us, President Johnson said to act as if we were elected. The varying power structures in Washington – they're not quite used to it."

Or, as the *Star* put it, "Hahn had managed to step on too many toes – particularly in the traditional Washington power base from which he came."

A News Analysis in the Post explained it in terms of balance between Mayor Washington and Chairman Hahn:

In many ways, President Nixon's ouster of Gilbert Hahn Jr. last week from the D.C. City Council chairmanship put the final touch on a four-year rapprochement between Mr. Nixon and Major Walter E. Washington and a four-year downhill relationship between the President and Hahn.

One of the chief reasons given by congressional and administration sources close to the shakeup was that Hahn was ousted because of his many disagreements with the mayor.

Before appointing Hahn, President Nixon had been impressed by the attorney's ideas on crime, court reform, and increasing the number of city judges and police officers. Since the appointment, however, "Mr. Nixon and other key Republicans have increasingly shown a preference for Mayor Washington's moderate, nonpartisan conduct to those of the more partisan, ebullient Hahn."

Representative Broyhill was one of the area Members of Congress who resented Hahn:

Broyhill not only opposed Hahn's moves for independence but more so his efforts to tax suburbanites . . . .

But when the mayor proposed his bold program of 1971, the reciprocal income tax on commuters, the White House kept silent, although the administration probably knew it would go nowhere.

That same year, when Hahn proposed an areawide payroll tax as a way out of the Metro subway system's financial difficulties, the White House publicly overrode Hahn and one of Hahn's best administration friends, Transportation Secretary John A. Volpe, by proposing an alternative.

His battle for a parking tax on workers who drive downtown to work had drawn criticism from Members of Congress from Maryland and Virginia. The tax was described as an environmental measure meant to reduce the number of commuters entering the city by encouraging them to switch to transit or carpools:

However, congressional sources said Hahn's adamant backing of the plan was not the reason for his expected loss of the Council chairmanship.

There has been growing disenchantment with Hahn on Capitol Hill. Especially irritating was the Council's refusal last year, at Hahn's insistence, to enact a 30-cent increase in the local property rate requested by Mayor Walter E. Washington and the President. Instead the Council raised the rate by 10 cents.

Even as rumors that Hahn was about to be replaced, Senators Mathias, Beall and Spong took to the Senate floor on April 12 to attack the plan for a parking tax. Representative Broyhill vowed to defeat the proposal. [Proposed Tax By District of Columbia Council on Automobiles Parked in Commercial Parking Lots, *Congressional Record-Senate*, April 12, 1972, pages 12338-12341]

Some members of the Senate Committee on the District of Columbia privately said they would not vote for Hahn's confirmation if he were renominated:

Some Republican members of the House and Senate also objected to Hahn's personality, complaining to White House officials that he did not know how to deal with them and that he had no sense of public relations. [Green, Stephen, and Scharfenberg, Kirk, "Nevius May Head Council," *The Washington Post and Times Herald*, April 13, 1972]

By contrast, as the *Star* reported in a profile of the nominee, Nevius was seen as a liberal Republican in the mold of Mayor John V. Lindsay of New York City (1966-1973). He was a "cool, rational politician who will never shoot from the hip on an issue and end up blasting off his toes." He was "more apt to be agonizingly slow at time as he deliberately analyzes the issues before drawing up his position."

When the appointment was announced, Nevius said he was "delighted to have a new opportunity to serve the city. I love the city." He would not comment on any issues or offer an opinion on Hahn's chairmanship. He thought he would leave HUD, but was unsure. It depended on whether his work as chairman of the city council would constitute a full-time job.

In an interview, a reporter asked about his balanced style of decisionmaking. Nevius said, "I see no reason to change that approach. My approach to things is to try to analyze them carefully and thoroughly . . . get a good grasp on the pros and cons . . . [which is] the best approach for coming up with the right answer."

This studied style had its critics. One unnamed supporter of Hahn thought Nevius would hurt the city in the long run. "Basically I think Jack's a pretty indecisive guy. He's nice. He's personable. But when push comes to shove, he'll fudge. He is willing to let an issue drift on in hopes of a consensus." The profile cited his stance on freeways while serving on the council as an example:

Once while on the City Council, Nevius side-stepped one of the most controversial issues in the city – whether or not to build new freeways – so well that most people even today do not know his real position on the matter.

Nevius managed this even though he was chairman of the council's committee which was asked to recommend a course of action on freeways – which were unwanted by District residents but favored by Congress.

Instead of one alternative, Nevius sent the council three – then sat back and watched as the remaining eight council members committed themselves to various sides.

When then Council Chairman John Hechinger found himself hard put for a solution, Nevius carefully helped draw up a resolution which put the issues in Mayor Washington's lap.

Then he turned around and voted against the resolution he helped to write. Even though the resolution passed 5 to 4, his position on freeways was still left unclear.

When asked about the parking tax, he did not have a position. "It's a new issue, and I have to do my homework first." [Scharfenberg, Kirk, "Nixon Picks Nevius to Head Council," *The Washington Post and Times Herald*, April 14, 1972; Prince, Richard E., "Nixon's Rapprochement With Mayor Led to Hahn's Ouster," News Analysis, *The Washington Post and Times Herald*, April 17, 1972; Sarro, Ronald, "One Damn Too Many" and Anders, Michael, "In The Lindsay Mold," Hahn and Nevius, *The Evening Star*, April 14, 1972]

In an editorial, the *Star* gave Chairman Hahn credit for taking "a more aggressive role for the still-embryonic D.C. City Council." He can take pride that "the council is not apt again to become as ill-defined and purposeless as it had been" when he took office. However, his "manner of doing business – his personal style – was something else." After summarizing his adversarial approach, the editorial defined his style:

If no one in the local government worked any harder, it is doubtful that anyone else could have rubbed as many people the wrong way in the course of three years.

A White House source had said that in considering a Hahn reappointment, the issue was not dedication. The question was: "how you do business with people to make government work."

In that respect, Nevius was "a good choice." His civic credentials and love of the city were unquestioned, even if his leadership qualities were untested. In his hopeless quest as the Republican candidate for Delegate in a predominately Democratic city, "he ran a good race, and gained a degree of community-wide respect that should be a strong plus in the new post."

The editors concluded that given the demands of the new job, "we trust that Nevius intends to make it, as did his predecessor, a full-time commitment." ["New Leadership," *The Evening Star*, April 15, 1972]

The *Post's* editors thought that President Nixon's decision not to reappoint Hahn "actually says more about this city's peculiar and undemocratic system of local government than it does about the merits of the two men involved." The people, as usual, were not part of the decision:

Many of us have read or heard explanations, of course, but the White House felt no compelling need to share its thinking of its decision with the colonial subjects affected. Instead, the administration left things up in the air for some two and half months after Mr. Hahn's term had officially expired – and then dumped him shabbily . . . .

At the very least, Mr. Nixon might have thanked Mr. Hahn personally and publicly, rather than leaving it up to deputy press secretary Gerald L. Warren to issue a perfunctory statement of appreciation and an empty explanation that it was “time for new leadership.”

The result of this crude handling of a changeover was not only to insult Mr. Hahn unnecessarily, but to cast Mr. Nevius wrongly in the role of Republican pet, content to do the bidding of Mayor Washington, the President and the Congress – and not to annoy any of the colony’s overlords.

The editors conceded that Hahn had “annoyed people in power – mainly because he sought to increase the power of the city council, with the idea that this might help get things done.” In doing so, he “became a thorn in the side of officialdom”:

The cold fact is that the White House and Congress hold the ultimate power over this city, and Mr. Hahn’s attempt to make the city council into something it cannot be under this system – an independent arm of a democratic local government – rested from the start on an unfortunately false premise. This ought not to mean, however, that a council chairman must always be a rubberstamp for the mayor’s policies, or the will of higher authorities. We trust that Mr. Nevius will continue to search for ways in which the council can act where other authorities do not – or will not, however formidable the limitation on its ability to function at all. [“The City Council Shakeup,” *The Washington Post and Times Herald*, April 18, 1972]

The confirmation hearing for Nevius and Tucker took place before the Senate District Committee on April 19. Only Chairman Eagleton was present. Nevius opened his brief statement by saying, “I guess you could say I’m back here because I feel there is so much more to be done.” Tucker recalled that at his confirmation hearing 3 years earlier he had promised to serve the people of the city with diligence, integrity, and determination to “achieve for them the highest possible quality of life.” If confirmed for a second term as vice chairman, he would be “guided by that resolve.

With both men before him, Chairman Eagleton raised questions for them to answer in turn, but the answers were brief with virtually no follow up. In essence, confirmation was not in doubt.

The day before, the city council had voted 5 to 2 on the first reading of the parking tax regulation, but had postponed the second reading until Nevius took office. Chairman Eagleton asked the two men for their views on the regulation. Nevius replied that every big city faced the same problem, namely “the flight of the tax base to the suburbs, beyond the city line, and in our case it is not just the city line, it is a constitutional line”:

The city . . . needs the money of the suburbanite who commutes but by the same token we don’t want to drive that suburbanite out beyond the Capital Beltway forever and his place of employment out there.

The question was one of “balancing these equities.” He had “not had a chance to really look” at the proposed regulation, but described the issue as a “dilemma” for the city. He was “not certain

where I'd come out." He understood that it was an environmental measure, but it also involved the revenue problem:

So I am inclined to think I would be opposed to it but there is one thing I am certain of and that is that if it doesn't have to go into effect until early 1973. There is no need to pass it in early 1972. [sic]

Tucker favored a parking tax, but did not support the current proposal. The key was to find a measure that was fair to the city and suburbs as they "deal with the problem of pollution as it is supposed to, with the problem of revenue being a secondary issue, as it should be . . . ."

As for freeways, they were discussed only briefly:

The Chairman. What is your position with respect to the building of the Three Sister's Bridge [sic]?

Mr. Nevius. I am opposed to it, Senator.

Mr. Tucker. And so am I.

Chairman Eagleton asked about public ownership of the bus system and subsidizing service. This question was, by then, a key issue Congress was facing on a national level as it developed highway legislation amidst calls from urban officials to use Highway Trust Fund revenue for rail transit and subsidies. Nevius said that with the possible exception of Houston, Washington was the largest metropolitan area in the country "still struggling along with a privately owned municipal transportation system." Experience nationwide "has demonstrated the overhead cost of operating such a system has gotten to the point in our economy where the fare box and the rider can no longer support public transportation and that there has to be taxpayer help as we've done in so many other areas." The time had come for the District of Columbia to do so as well.

Tucker replied that "private ownership of public transportation makes about as much sense today as private ownership for public schools would make." Transit was a necessity, and the fare can't keep going up. He would favor a subsidy for public ownership, but not now. He had "no confidence in the present ownership of the public transportation system." He thought the city should purchase D.C. Transit Systems "as quickly as possible."

Other questions concerned home rule, removal and disposition of solid waste, further use of Robert F. Kennedy Memorial Stadium with the departure of the second incarnation of the Washington Senators baseball team after the 1971 season (to become the Texas Rangers), the need for and placement of a convention center, and the need for an Office of Consumer Affairs. [Nominations for Chairman and Vice Chairman District of Columbia Council, Hearing before the Committee on the District of Columbia, United States Senate, 92d Congress, 2d Session, April 19, 1972]

The Senate District Committee approved Nevius and Tucker, 6 to 0, and sent the nominations to the Senate. On April 20, the Senate unanimously confirmed Nevius as chairman and Tucker as vice chairman. Chairman John A. Nevius took office on April 24.

(The push for a parking tax came to an end in June. The original proposal by Councilman Willard was for a \$1 a day tax on parking in downtown. The tax was lowered to 50 cents when it was given preliminary approval on the initial vote, but the required second vote had not taken place, primarily because Chairman Nevius was still studying the idea. Willard called for a showdown vote, but it was postponed indefinitely on June 12 when he accepted Nevius's request not to put the regulation on the agenda for the next session, scheduled for June 20, as the *Star* reported:

Council sources said Willard did not attempt to push the regulation to a vote after Nevius's request because of fears that the mayor – [facing] congressional opposition – would veto the measure if it passes. The sources said Willard apparently felt he did not have enough votes to override such a veto . . . .

Council sources said Nevius “obviously had had enough time” to study the measure and that his action was a stalling tactic. “He’s being less than candid” if he said he has not had enough time, other council sources said.

(Willard, by then, had announced he would leave the city council on June 30 to return to his job at the American Security and Trust Company. With his departure, the city council had lost the two strongest supporters of the parking tax – Hahn and Willard. Similar ideas for a commuter tax would be considered over the years, but never enacted. [Anders, Michael, “Parking Tax Showdown Put Off,” *The Evening Star*, June 12, 1972]

### **I-66 Takes Center Stage**

Arlington County officials, ACT, and other private citizens who opposed construction of I-66 were not aware in early 1972 that EPA had sent a seven-page December 1971 report to State highway officials regarding I-66. The report, which became available only in late March, was highly critical of Virginia's environmental impact review of proposed I-66, which was limited to the Virginia side. The project “could have a significant adverse effect on the environment,” but Virginia had failed to propose alternatives to the highway project. “Location alternatives are given less than a full page of discussion and it appears that no real analysis was made in weighing and considering other corridor location alternatives to the proposed I-66 corridor.” The *Post* summarized possible alternatives:

EPA listed several possible alternatives to construction of the highway, including mass transit, exclusive traffic lanes for buses, more one-way lanes during rush hours, and discouraging automobile commuting by charging high tolls and raising D.C. parking fees.

The report also questioned the State's assumption that I-66 would smooth traffic flow on Arlington County's main thoroughfares:

Past experience with “commuter” freeways . . . has shown that any easing of local traffic congestion during peak hours is temporary at best. A road of this type generates its own traffic, which tempers any benefits to be derived from its construction.

At minimum, EPA said, “air, noise and water pollution impacts of each alternate route and mode of transportation” should be reviewed:

Such an expressway traversing the Washington metropolitan area will impact heavily on the human environment throughout its route. Information should be provided also on measures to protect air quality during the construction of the highway. The statement should discuss the effects of the proposed highway, during construction and use, on the ability of the region to meet current local and-or national ambient air quality standards.

The revised impact statement “should include an estimate of the noise levels at various distances from the highway and anticipated community response to those levels.” EPA dismissed the design changes proposed by landscape architect Simonds:

The EPA statement also attacked parts of a highway department plan to lessen noise pollution from I-66 by lining the road with trees and earthen dikes. “Use of landscape planting to curtail noise would not be adequate, since plantings possess none of the physical properties required of a good sound shield. Plantings are porous to air flow, vibrate easily, and lack density,” the EPA report said.

The EPA report said the earthen dikes on both sides of the highway, even if they cut down on noise, could increase air pollution. “It should be recognized that pollution levels tend to be increased by a channelized roadway,” the report said.

The plans for the trees and earthen dikes were drawn up by John Simonds, a Pittsburgh landscape architect, who received the \$275,00 contract to find ways to limit the highway’s impact.

Further, according to EPA, Virginia’s draft “fails to consider the effects of the proposed highway (including bridge) on surface waters, underground water, community water, supply distribution systems and sources, and community sewerage systems,” as well as “methods to control siltation of waterways during construction.”

Another deficiency, in EPA’s view, was that Virginia had not given any “consideration to the disposal of debris from construction and land clearing activities.” A disposal plan should “consider possible effects on [the] visual environment of the urban and park areas through which the highway will pass.”

Further, the review was “not broad enough to allow a complete assessment of [the] potential environmental impact” of the Three Sisters Bridge or its access roads on either side of the Potomac River. “The environmental statement should include an assessment of the potential effects of the entire length of I-266 in the metropolitan area, including the Three Sisters Bridge.” It should review “alternative routes for I-266 in the state of Virginia, as well as alternative routes for the continuation of I-266 in other parts of the metropolitan area.” The analysis should consider not building the bridge and its access roads and explore non-auto “modes of travel” as better ways to handle the transportation of people in the corridor.

Emilia Govan, learning of the EPA report, said the agency's comments on I-66 "are very much in line with what the citizens have been saying; in fact, they're probably stronger." [Barnes, Fred, "EPA Warns Virginia on Bridge," *The Evening Star*, April 2, 1972; Mathews, Jay, "Environmental Agency Scores Virginia on I-66," *The Washington Post and Times Herald*, April 5, 1972]

On April 5, a three-judge panel of the U.S. Fourth Circuit Court of Appeals in Richmond barred work on what it called "Arlington I-66." The unanimous ruling, written by Judge Braxton Craven with concurrences by Judges John D. Butzner and Joseph H. Young, ordered the State and FHWA to cease all work until they filed an EIS, reviewed the plan to pave portions of two parks, and held new hearings on the impact of the highway.

The court rejected the State's argument that an EIS was not needed because NEPA was enacted after the route had been approved:

Doubtless Congress did not intend that all projects ongoing at the effective date of the Act be subject to the requirements of Section 102 [of NEPA]. At some stage of progress, the costs of altering or abandoning the project could so definitely outweigh whatever benefits that might accrue therefrom that it might no longer be "possible" to change the project in accordance with Section 102. At some stage, federal action may be so "complete" that applying the Act could be considered a "retroactive" application not intended by the Congress. The congressional command that the Act be complied with "to the fullest extent possible" means, we believe, that an ongoing project was intended to be subject to Section 102 until it has reached that stage of completion, and that doubt about whether the critical stage has been reached must be resolved in favor of applicability.

We must stress as forcefully as possible that this language does not provide an escape hatch for footdragging agencies; it does not make NEPA's procedural requirements somehow "discretionary." Congress did not intend the Act to be such a paper tiger . . . .

We cannot, of course, define for all cases the point of completion beyond which Section 102(C) is no longer applicable. We are certain, however, that Arlington I-66 has not yet reached that point: P.S.&E. approval has not been given, construction contracts have not been awarded, and actual construction on the highway itself has not begun.

Virginia did not dispute that it had not complied with Section 4(f) of the Department of Transportation Act or the companion Section 138 of Title 23 in planning to use portions of Bon Air and Spout Run Parks for I-66 right-of-way. The provisions had been enacted after approval for I-66 use of the parks. However, as the Supreme Court had found in the Overton Park case, a project involves several approvals in the course of development, so the date of "approval" was not the criterion for applicability. In view of the Supreme Court's decision, the three-judge panel was "compelled" to conclude that Section 4(f) applied "to a project until it has reached that stage of progress where the costs of altering or abandoning the proposed route would certainly outweigh whatever benefits might accrue therefrom, and that doubts about whether this stage has been reached must be resolved in favor of applicability." Arlington I-66 had not reached that stage of completion.

The panel also rejected the State's argument that the Section 4(f) issue was moot because the State was complying with it voluntarily. Voluntary compliance "does not give appellants full relief." The panel explained:

In the first place . . . suspension of work on Arlington I-66 is necessary if the Secretary's determination under Sections 138 and 4(f) is to be meaningful; continuing investment in the project at its present state of development would render alternatives to use of the parks less feasible and prudent. In the second place, the Secretary's determination with respect to Spout Run Parkway will be meaningful only if made after it is known with reasonable assurance whether the proposed I-266 and Three Sisters Bridge project will be built and, if so, where the bridge will be located. Pursuant to an order of the Circuit Court of the District of Columbia, the Secretary is now in the process of reexamining the proposed location for the I-266 project . . . . Although the district court's finding that "(t)he Three Sisters Bridge is not a part of I-66 – neither is the connecting road, I-266" is not clearly erroneous, it failed to consider the relationship between the projects. If the

I-266 project is not built at all or if the location of the bridge is changed, it is apparent that avoiding Spout Run Parkway for the use of I-66 will be more feasible and prudent because present plans call for I-266 to connect with I-66 in this park.

In addition, the State must hold a public location hearing in accordance with Section 128 of Title 23, United States Code. The 1958 hearing did not satisfy the requirement as amended by the Federal-Aid Highway Act of 1968. The hearing should consider not only the impact of I-66 on the environment and the community's planning goals but the economic effects of the location in view of plans for Metro in the Rosslyn area. Plans for Metro in the I-66 right-of-way had not been anticipated at the time of the 1958 hearing:

From today's vantage point, the economic effects of Arlington I-66 might be significantly different than projected in 1958 – rapid rail service might better satisfy the needs of this area than would I-66. Moreover, Arlington I-66 has not yet reached the stage of completion where alteration or abandonment of the proposed route is impossible. We are certain that Congress intended that if there is a reasonable possibility that a mistake has been made in the planning of a project as expensive, disruptive, and permanent as a highway, and if that project can still be altered or abandoned, the project must be held in abeyance pending determination of whether a mistake has in fact been made.

Contrary to the District Court's ruling, the three-judge panel did not believe that the continuous monitoring of the area by agencies satisfied the public hearing requirement. "Study by experts is not the equivalent of a public hearing, and continuing evaluation of the economic effects of Arlington I-66 based only on such study is, therefore, not consideration within the meaning of the statute.

The ruling concluded:

VI. RELIEF

In summary, we hold that further acquisition of right-of-way and construction of Arlington I-66 must be enjoined until federal appellees have

- (1) filed and considered an environmental impact statement, in accordance with Section 102(C) of the National Environmental Policy Act, and,
- (2) ascertained that there is “no feasible and prudent alternative” to the use of Bon Air Park and Spout Run Parkway (the determination with respect to Spout Run Parkway to be made after the resolution of the Three Sisters bridge controversy) and that the project includes “all possible planning to minimize harm” to these parklands, in accordance with Section 138 of the Federal-Aid Highway Act and Section 4(f) of the Department of Transportation Act, and until state appellees have certified to the Secretary that a new public hearing has been held (or the opportunity for such hearing has been afforded)
  - (1) to obtain information about the social effects of the proposed location, its impact on the environment, and its consistency with the community’s urban planning goals, and
  - (2) to obtain information about the economic effects of the proposed location in light of the planned rapid transit service to Rosslyn.  
and that the information obtained from this hearing and hearing upon the design of the Lee Highway portion of Arlington I-66 have been considered, in accordance with Section 128(a) as amended of the Federal-Aid Highway Act.

On remand the District court will enter an appropriate judgment granting injunctive relief and such other relief as may be necessary.

Reversed and remanded.

Donald S. Burris, who had argued with case with Lawrence Latto, said of the ruling that, “The whole thrust of the opinion recognizes the continued public interest and concern in making decisions on development.”

ACT’s James Govan said:

This is a perfect decision. We won on all counts. This is going to require a fresh look and I don’t see how they can continue to justify the decision [to build I-66]

The ruling was of particular concern to WMATA, which was planning to run a 6½-mile Metro line in the I-66 right-of-way. General Graham estimated that construction of the track would be delayed at least a year. If the State were unable to build I-66, WMATA could build its line, but at greater cost since it would have to acquire the right-of-way.

[*Arlington Coalition on Transportation et al., v. John A Volpe, Secretary of Transportation, et al.*, No, 71-2109, U.S. Court of Appeals, Fourth Circuit, 458 F.2d 1323, 3 ERC 1995, Env’tl. L. Rep. 20,162, April 4, 1972 (as modified May 9, 1972); Mathews, jay, “U.S. Court Bars Work on I-66,” *The Washington Post and Times Herald*, April 6, 1972; Mathews, Jay, “Road Ban to Delay Metro in Virginia,” *The Washington Post and Times Herald*, April 7, 1972]

On April 18, Virginia appealed the ruling and asked the full seven-judge Appeals Court to consider the case. The 15-page petition focused mainly on whether the three-judge panel was correct in applying NEPA and Section 4(f) to a project that had been approved before their enactment. In part, the petition said:

Congress did not intend in its understandable concern for future damage to the environment to give disgruntled landowners ammunition to endlessly delay sorely needed projects which had complied with the laws and regulations as they existed at the time of their planning. [Scannell, Nancy, "Rehear Road Case, Virginia Asks Court," *The Washington Post*, April 19, 1972]

Fred Barnes of *The Evening Star* interviewed James and Emilia Govan, co-chairs of ACT, after the ruling by the three-judge panel. The Govans had been following news about I-66 since moving to their home in Arlington, five blocks from the proposed route, in 1965. (They had moved in 1963 to the Washington area where Jim worked for the Agency for International Development.) First, they told Barnes, they noticed the design was an elevated freeway. "Everybody had thought I-66 was going to be built at ground level or as a depressed road," he said. Then in early 1970, surveyors identified 30 more homes to be demolished in the Maywood section. The Govans started contacting State, county, and Federal officials seeking information, but found it was "impossible" to get information or even to learn when a public hearing might be held.

In 1970, they attended a public hearing where they learned that I-66 would be 14 lanes wide. "It was at that hearing that the whole thing crystallized for us," James said. "There were 600 people there, and 550 of them were against the road." A few days later, they formed ACT:

We just got angry because we had been dealing with these people in Richmond and we got nothing but vague and insensitive responses, and all the while our officials in Arlington were sitting on their hands. We decided that if anyone was going to do anything about this, it would have to be citizens.

ACT hired Environmental Systems Lab, a California company, to evaluate the noise and air impacts of I-66, "but their efforts were to no avail.

They met with Governor Holton in February. Barnes explained:

The Govans and a handful of other citizens met with the governor for an hour, pleading with him to call a moratorium on I-66.

Holton refused; two days later the Virginia Highway Commission approved the final design for the freeway and the next day ACT and several individual citizens sued in U.S. District Court in Alexandria to block construction of I-66.

James told Barnes, "We really had high hopes for Gov. Holton."

Emilia added, "We tried every angle. We went to every agency. We exhausted all of our remedies before going to court."

Aside from agency obstruction, James said the most common obstacle the past 2 years was the “response of people that, ‘Gee, we agree with you about I-66, but its construction is just inevitable at this late date.’” [Barnes, Fred, “They Beat ‘City Hall’ on Interstate Rt. 66,” *The Evening Star*, April 10, 1972]

Representative Broyhill saw the Supreme Court decision on the Three Sisters Bridge and the Appeals Court decision on I-66 as raising the specter of further efforts by Chairman Natcher to withhold District funds for Metro. The Virginia Congressman asked President Nixon to convene “an immediate meeting” with Secretary Volpe, Interior Secretary Morton, and EPA Administrator William D. Ruckelshaus. The President should “bring an end to the ineptness and lack of cooperation their departments and agencies are displaying with regard to the construction of a balanced transportation system in the National Capital area mandated by Congress.” He feared that some Members of Congress who supported Metro “now feel the balanced transportation concept has been abandoned by the administration.”

The *Post* account of Representative Broyhill’s request reported, “It was learned last night” that Chairman Natcher “will again try to block the subway funds if the federal agencies do not move to build the bridge.” Unless President Nixon ensured action to comply with court requirements, “Natcher may be in a stronger position now” than in December 1971 when the House adopted the Giaimo Amendment.

Representative Broyhill blamed the court rulings on the departments and agencies involved in transportation, specifying “their interpretation of administrative laws and regulations promulgated by the departments and agencies” and their “ineptness, red-tape and sloppy administrative work.” The courts had not found that Congress could not order construction of the bridge or other freeways, but if the departments and agencies did not get moving, “We are going to end up with the biggest empty holes ever dug in any nation’s capital.” [Green, Stephen, “Metro Fund Freeze Seen by Broyhill,” *The Washington Post and Times Herald*, April 13, 1972]

The *Post*’s editors were having a change of heart. They pointed out that in 1958, when Virginia began planning I-66 between the circumferential and the Theodore Roosevelt Bridge, “the word ‘ecology’ was a highly specialized, scientific term.” Rail rapid transit and subways for the area were “widely considered an antiquated torture that made living in New York City unpleasant”; the idea of such a thing in Washington “was something of a pipe dream that was not taken seriously by a lot of people until the Metro compact was signed 10 years later, in 1968.”

Now, citizens, notably ACT, had raised questions based on “our new awareness of the ecology and the decision to build Metro”:

Raising these questions will not repeal the automobile, obviate the need to find creative solutions to the problem of traffic congestion or put the Virginia Highway Department out of business. But it does, in our view, justify the ruling of the Fourth Circuit Court of Appeals that further work on this freeway be stopped until these questions have been duly considered and answered.

Although VDH intended to appeal the decision, the editors hoped that, “pending the outcome of this appeal, it will also update its thinking about the basic purpose of its work”:

That purpose is not to build all the freeways that the law and the resources of the Highway Trust Fund will allow. It is, in the end, to make life easier and more attractive for all the people who live and work in the area under its jurisdiction. [“I-66: Fourteen Years Later,” *The Washington Post and Times Herald*, April 15, 1972]

James Govan attended a public hearing at Swanson Junior High School that WMATA had called to gather comments on the location of the East Falls Church Metro station and 2 miles of connecting tracks. In view of the recent court ruling, Govan criticized WMATA for not abandoning I-66 as the location for Metro through Arlington County. “Metro has apparently been avoiding this issue for a year now. I don’t think we can avoid this issue much longer.” He suggested that the year-long delay that General Graham had predicted could be avoided if Metro planned the rail line without the highway.

Metro officials had anticipated the issue and had a prepared statement ready. The statement indicated that “the most expedient course . . . is . . . to move ahead in a manner that will not preclude the highway and will in fact assure a minimum of community disruption with or without the proposed highway.” [Mathews, Jay, “Metro Aides Urged to Scrap Plan for I-66 in Arlington,” *The Washington Post and Times Herald*, April 26, 1972]

ACT led several hundred people on May 1 on a hike along part of the I-66 right-of-way. In a short speech after the hike, James Govan told the group that “his “ideal” proposal was to convert the right-of-way to a 10-mile long park. He tied the idea in with the suggestion of the American Revolution Bicentennial Administration that each State create a park for bicentennial activities in 1976. “There’s a new spirit today,” James said. “It’s the spirit of ’76, not I-66. It says that schools, home, gardens and parklands are much more valuable than concrete.” [Fahnestock, Sheridan, “Park,” Metro Wrapup, *The Evening Star*, May 1, 1972]

On May 4, 1972, Assistant Commissioner and Chief Engineer Harwood said that Virginia would begin construction of a 2-mile section of I-66 in Fairfax County, from the Capital Beltway to State Route 7, which he said was not specifically covered by the court ruling. He planned to hold an informational hearing regarding the plan for construction in Fairfax County. Construction would begin in November.

Assistant State Attorney General Stuart Dunn confirmed the interpretation that the 2-mile stretch was not affected by the court-imposed moratorium on construction in Arlington County. The State had purchased all the right-of-way for the Fairfax County section and as far as he knew, no one had ever proposed an alternate route for this segment.

Initial reaction was unfavorable, as the *Post* reported:

Audrey Moore, a member of the Fairfax County Board of Supervisors, said: “I can’t see any benefits to loading any more traffic onto Rte. 7 if you’re not going to continue the highway on through.”

Lawrence Latto, an attorney representing the highway opponents, suggested construction of the two-mile stretch could create pressure to build the entire road and limit the study of alternatives to the road . . . . Latto said the opponents have no plans as of now to go to court in an effort to stop work on the two-mile, \$20 million stretch. [Mathews, Jay, "Va. Plans 2 miles of I66 in Fall," *The Washington Post and Times Herald*, May 5, 1972]

On May 10, the full Appeals Court refused to hear Virginia's appeal on I-66, but did amend the three-judge panel's finding that work shall not proceed until the Three Sisters Bridge is finally located or abandoned:

Whether Three Sisters Bridge will be built and where it will be located are factors that cannot be ignored in deciding what to do about I-66 and I-266. But our judgment shall not be construed to prevent simultaneous consideration of all three inter-related projects and their probable impact on each other.

The recent court decisions prompted Highway Commissioner Fugate to say he wanted to get "a few things off my chest about I-66" during a speech to the Virginia Chamber of Commerce in Arlington. Delaying construction of I-66 would create "chaotic congestion and . . . an unnecessary toll in tragedies resulting from traffic accidents." Environmental groups blocking the project were forcing delays "to the detriment of the overwhelming majority" of northern Virginia residents:

In my judgment, many of the worthwhile environmental gains of recent years and the aspirations of many serious conservationists and preservationists are being jeopardized by those whose principal interest is to delay, denounce, and delude, who appear bent on obstruction for the sake of obstruction alone.

He added:

Antihighway sentiment, antiautomobile sentiment is a new phenomenon in urban areas. It's almost an hysteria. People shoot from the hip, they don't care why.

As for critics of I-66, he continued:

I am quite certain that those who oppose the construction of Route 66 do not speak for the majority of citizens in Northern Virginia. Motorists now using [U.S.] Route 29-211 between the Beltway and the Potomac River make the trip at peak periods in an average of 29 minutes. They could travel between the same points on Route 66 in 16 minutes. And I believe time is pretty important to most commuters.

Fugate said that, "Elimination of the present stop-and-go driving for motorists who would use I-66 instead of existing roads" would save about \$4.3 million a year in vehicle operating costs. He added that according to a mail survey that Representative Broyhill had conducted, 69 percent of 32,291 residents of Arlington, Fairfax, and Loudoun Counties favored the highway. Only 19 percent were opposed and the rest were undecided.

He rejected EPA's view that freeways such as I-66 create more traffic problems than they alleviate. I-66 would not only improve local traffic problems by shifting commuters to the Interstate, but "could be expected to save four lives and prevent 100 injuries and approximately 300 traffic accidents each year."

As for impacts, steps had been taken in the 1950s to minimize environmental damage. "The location follows an abandoned railroad corridor, and even in 1959, it was clear that its use would minimize the environment impact of the highway because for years . . . it had been a transportation corridor, serving a largely industrial area":

Altogether, 94 percent of the dwellings and almost 99 percent of all business properties needed for the right of way have been acquired (and) nearly 76 percent of the residents and more than 84 percent of the businesses have relocated – all at a cost of more than \$28 million in public funds. [Mathews, Jay, "Road Official Attacks Foes of Rte. 66," *The Washington Post and Times Herald*, May 11, 1972; Barnes, Fred, "Fugate Blasts Foes of I-66 in Arlington," *The Evening Star*, May 11, 1972]

The *Star* editorial team liked Fugate's alliterative description of those who "delay, denounce and delude." No doubt the "'anti-freeway freaks' would respond in kind," and accuse the roadbuilders of wanting to "despoil, depopulate and denude" northern Virginia. This "war of words" would probably escalate, but Fugate, the *Star* said, "has the edge. When words fail him, he can always send in the bulldozers." ["Roadbuilder's Rhetoric," *The Evening Star*, May 13, 1972]

Virginia officials met with FHWA Administrator Turner on May 15 to discuss traffic problems in Northern Virginia. Representative Scott, who was running for the Senate, called the meeting in his office. Fugate attended, along with Dr. Charles Clapp, Special Assistant to the President, Domestic Council Staff, representing President Nixon. Under Secretary of Transportation Beggs attended as well.

After the meeting, Representative Scott told reporters that with I-66 and the Three Sisters Bridge blocked, officials had to consider all possible alternatives to relieve the area's "transportation crisis." The officials considered options such as widening U.S. 50, building service roads along U.S. 50 to reduce local traffic on the main roadway, providing commuter rail service using existing railroad lines, widening the George Washington Memorial Parkway entirely on parkway right-of-way, widening U.S. 29-211, and providing more buses. These alternatives would serve as stopgaps until the State could build I-66.

Representative Scott strongly endorsed Metro's plan to construct its line in the I-66 median:

There's no way to have a subway in Fairfax County unless we also have 66 because the median strip will be used for the subway . . . . We need both the highway and Metro. Can you imagine what a howl we would have if property in Arlington and Fairfax Counties were taken without the highway going along with it!

As a result of the hour and a half meeting, Representative Scott said, Federal and State highway officials agreed to give top priority to the issue. [Quady, Roy, “‘Top Priority’ Promised to Area Traffic Crisis,” *Northern Virginia Sun* (Arlington), May 16, 1972]

On May 16, Virginia announced it would appeal the Appeals Court ruling on I-66 to the Supreme Court. Given the inevitable delay in a response from the Supreme Court and, if the request were granted, a subsequent decision, the State was beginning plans for the hearings the Appeals Court had required. In addition, the State planned to hire a consultant to conduct an exhaustive review of I-66’s social, economic, and environmental impacts. “He will consider alternate locations, and whether there is any need for I-66 at all,” Fugate’s spokesman told reporters.

As the *Post* pointed out, the Supreme Court’s decision on whether to consider the appeal could not be predicted. One thing that was known was that “the road would pass within a mile of the home of Chief Justice Warren E. Burger, who lives at 3111 N. Rochester St., Arlington.” Justice Harry Blackmun lived in “an Arlington high-rise building at 1701 N. Kent St., adjacent to a now little used section of I-66 that would link the road with the Theodore Roosevelt Bridge.” [Mathews, Jay, “Virginia to Appeal I-66 Rule,” *The Washington Post and Times Herald*, May 17, 1972]

The same day as the announcement of the appeal, Virginia highway officials conducted a survey of motorists to determine how traffic would be affected if a 2-mile segment of I-66 were built inside the Capital Beltway to State Route 7. The survey was intended to respond to concerns the Fairfax County Board of Supervisors had expressed about the impact of I-66 traffic on Route 7.

The State had positioned 27 highway department interviewers and two State troopers at the I-66 exit to the beltway:

Under the original plans for the survey, five questions – covering the motorist’s original destination and opinion of the proposed I-66 extension – were to be asked one of every 10 motorists. Each interview was to take about 30 seconds. The complete survey was to run for 12 hours, beginning at 6 a.m.

By 7:30 a.m., the interviews had resulted in traffic being backed up 6 miles in the eastbound lanes of I-66, cars overheating and running out of gas, and motorists cursing and jeering at the troopers directing traffic. The State suspended the interviews at 8:45. Interviews resumed at 11 a.m.:

But at noon, motorists were still complaining as they moved slowly through a narrow lane marked with orange barricade devices. At 3:15 p.m., mostly out of raw frustration, the highway department called off the survey.

“We just goofed with this survey,” Fugate told reporters. “I apologize to the motorists for our lack of planning and good judgment. And I sure hope it won’t happen again.” The department’s resident engineer, Donald Keith, put it this way;

When we were planning this survey, we didn’t know some people would hold up traffic for five minutes while they cursed out the state troopers. We had no idea some motorists

would stop and insist on being interviewed. And I guess we just didn't foresee the problems that would be caused by the crush of 50,000 cars."

Fugate acknowledged that he had requested the survey, but in his own defense, added, "I didn't tell the people how to go about getting the information." He suggested that the wrong technique had been used. [Whitaker, Joseph D., "I-66 'Survey' Causes Huge Traffic Jam," *The Washington Post and Times Herald*, May 17, 1972]

In an editorial, the *Star* took exception to the survey. "Whatever doubts may have lingered in anyone's mind about the Virginia Highway Department's view of itself and the taxpaying motorists it theoretically serves had to be shattered beyond recall" by the survey. The editors understood the "ostensible reason" for this peak period survey. However, instead of conducting the survey by the "placing of little wires across the road – a device the department uses everywhere else," Virginia highway officials decided on "a preposterous rush-hour traffic count." The decision appeared to be "the kind of irresponsible tantrum that only a virtually autonomous agency could conceive of," an attempt to "show its bureaucratic muscle to the motoring public":

These highways, the department was saying, belong to us, and if you peasants get uppity over our plans for you, we'll just put a chain across. Today I-66, tomorrow the Shirley Highway.

This father-knows-best attitude might be more acceptable if it came from anyone but those wonderful folks who brought you the Pentagon Mixing Bowl, now being corrected at enormous cost. Or from the drawing boards of the engineers who stuck an overpass pillar in the middle of the express bus lane of I-95 not long ago.

Things being as they are, maybe it's time someone told the department officials that Virginia's road network is not the Rhine River, and they are civil servants, not robber barons. ["The Robber Barons of I-66," *The Evening Star*, May 24, 1972]

Fugate took exception to the editorial, as discussed in a long letter to the editor the *Star* published on June 7. He again apologized for the inconvenience and unintentional disruptions motorists experienced, but said the study was "an effort to obtain essential traffic information." The editorial was "erroneous and misleading" in implying that the study "resulted from some sinister desire to harrass [sic] citizens."

The "overwhelming majority of citizens" wanted the State to proceed with construction of I-66 when court issues were resolved and funding became available. The Commonwealth of Virginia planned to appeal the Circuit Court's ruling based on requirements that "did not exist during more than a decade of planning and highway right-of-way acquisition for I-66, and although

\$30 million in public funds has been spent, all fully in accordance with state and federal regulations existing at the time."

The "principal purpose" of the traffic survey was to determine the validity of concerns that construction of the 2-mile stretch of I-66 in Fairfax County would create traffic jams on State Route 7. In the State's view:

Such an extension, aside from providing safer, more convenient and more direct access for these motorists, would relieve the heavily congested Beltway of traffic destined for Route 7.

The documentation the survey was to provide would help “resolve this difference of opinion by determining the number of motorists who would or would not use such an extension if it were built.”

As for those “little wires across the road” the editorial had suggested, they were used only to count vehicles; “one cannot expect the wires to learn the destinations of motorists.” The State had distributed cards to motorists to determine their origin and destination, but few were returned and many were thrown out the windows to litter the roadside.

Fugate also responded to the reference to the Pentagon highway network:

The Pentagon mixing bowl, for which your editorial incorrectly credited us, was designed and constructed by the federal government in the mid-1940s. Our files do not indicate that The Star considered it a monstrosity at the time. Six years ago, Virginia assumed responsibility for its maintenance and improvement.

That overpass pillar in the express bus lane “was not a product of faulty roadway design, as you allege.” The pillar was needed at the time to keep the Shirley Highway express lane in operation during reconstruction.

VDH officials “are fully aware that they are civil servants, responsible for providing the highest attainable levels of public service.” The demands on them in a rapidly growing urban area were “enormous,” but Fugate said “an examination of all the facts, not of some facts and some fiction, will indicate that these employees perform exceedingly well indeed.” [“The Robber Barons of I-66, Letters to the Editor, *The Evening Star*, June 7, 1972]

### **District Appropriations Act, FY 1973**

On March 29, 1972, Director Airis appeared before Chairman Inouye’s subcommittee on appropriations for the District of Columbia. Before introducing his formal statement, he summarized his agency’s request:

For 1973, the total operating expense request is \$18,096,500, which represents an increase of \$1.231 million. The major item included in this increase is \$303,200 and

21 positions for operation and maintenance of the Center Leg Tunnel.

The Center Leg Tunnel, sir; as you know, a section of I-95, lies right in front of the Capitol. That is scheduled to be placed in operation for the public late this year or in January of next year. The 21 positions are for the operation of this tunnel, the 9<sup>th</sup> Street Expressway Tunnel which was opened for use last Christmastime, and for the tunnel section of the Southeast Freeway which runs under Barney Circle. Other major increases

are \$100,000 for energy and maintenance for street lights, and \$122,000 for replacement construction equipment.

Airis's statement indicated that of the District's original Interstate mileage of 29.5 miles, 10.8 miles were completed and in use:

These include, within the District, the Theodore Roosevelt Bridge and a section of the Potomac River Freeway (I-66) including the connecting E Street Expressway; the 14<sup>th</sup> Street Bridges (I-95) which now includes the center bridge completed and opened to use by express buses on April 5<sup>th</sup> of last year; the Southwest Freeway (I-95) including the northbound 12<sup>th</sup> Street Expressway and the southbound 9<sup>th</sup> Street Expressway which was opened on December 20<sup>th</sup>; the Southeast Freeway (I-695) to the completed 11<sup>th</sup> Street Bridges over the Anacostia River; and the Anacostia Freeway (I-295). All of these facilities are heavily used.

Construction was underway on another 1.8 miles of the Interstate System:

These include the Center Leg Freeway (I-95 between D Street, S.W. and New York Avenue). Completion of the portion to Massachusetts Avenue is now targeted for early in 1973. A construction contract to bridge K Street over the Center Leg will be awarded shortly. A portion of the East Leg (I-295) is under construction between Interchange "C" and Barney Circle at Pennsylvania Avenue. It is also scheduled to open for traffic early in 1973.

Technically, the Three Sisters Bridge segment of I-266 was under construction, but work had been halted by court order. Airis said the District had satisfied Judge Sirica's court order, but the U.S. Court of Appeals had added requirements. (When the statement was written, the appeal to the Supreme Court was pending. The Supreme Court had rejected the appeal 2 days earlier.)

Airis's statement went through the remaining segments:

The Potomac River Freeway (I-266) along the Georgetown Waterfront is technically in the design stage. A special study commenced on January 26, 1972, to prepare a sectional development plan for the Georgetown Waterfront, which plan is to address the socio-economic and environmental impact aspects of the freeway concurrent with recommending guidelines for future land developments. The study, sponsored by the Secretary of Transportation, is a cooperative effort between the District of Columbia Government, the Department of the Interior and the Department of Housing and Urban Development. It is being administered through the National Capital Planning Commission and includes significant citizen participation.

The East Leg of the Inner Loop to Bladensburg Road is also in the design stage – work is underway to prepare for a design public hearing which is requisite to commencing construction.

The remaining segments were in preliminary status, with the South Leg of the Inner Loop scheduled for a design public hearing early in May. In 1971, the District had conducted additional studies in accordance with the Federal-Aid Highway Act of 1970 on the North Leg of the Inner Loop (I-66), the North-Central/Northeast connections (I-70S and I-95) and the upper end of the East Leg of the Inner Loop. The consultant report by DeLeuw, Cather Associates and Harry Weese and Associates had helped the District of Columbia and Secretary Volpe submit their required reports to Congress at the end of the year.

In response to a question about whether the Potomac River Freeway was in a predesign stage rather than in design, Airis submitted a statement:

The Department of Highways and Traffic commenced design of the Potomac River Freeway on September 9, 1969, after receiving requisite approval from the Federal Highway Administration.

The design which was initiated is that described in the Conference Report for the 1968 Federal-Aid Highway Act. Recent court actions have imposed the requirement to study further environmental impacts and to conduct additional public hearings on other metropolitan area freeway segments, notably the Three Sisters Bridge portion of I-266. The effect of the court rulings is to delay all design and construction activity on those projects.

The Sectional Development Plan Study mentioned in my opening statement is designed to provide the socio-economic and environmental impact evaluations of all alternative plans now under consideration by the community and government agencies. This data is to be used at a public hearing as required by Federal regulation for compliance with Title 23. Subsequent to the hearing, approval of a selected design will allow recommencement of the detailed design activity. [District of Columbia Appropriations for Fiscal Year 1973, Hearings before a Subcommittee of the Committee on Appropriations, United States Senate, 92<sup>nd</sup> Congress, 2<sup>nd</sup> Session, Part 1, S-181-15, pages 871-881, 890]

When Airis again appeared before the Senate committee on April 7, Chairman Inouye asked about the District's request for \$2.345 million for the Potomac River Freeway. "Would you advise this committee what the relationship is between this freeway and the Three Sisters Bridge, if any?"

Airis explained:

The Potomac River Freeway ties into the inner-loop at K Street and about Twenty Sixth Street. Part of the Potomac River Freeway as built goes on down past Howard Johnsons, the Watergate, and on down to E Street Expressway, and also to the Theodore Roosevelt Bridge, the Lincoln Memorial area. That section is completed and in use.

Airis cited his previous statement about the section along the Georgetown Waterfront, then continued:

Now, going on upriver, at a point near the junction of Foxhall Road, and Canal Road, there is the Three Sisters connection as presently planned. Beyond that, on the District of Columbia-Maryland side, there is what is known in planning as the Palisades Parkway, two lanes in each direction. That ties in to the already partially completed George Washington Parkway on the District of Columbia-Maryland side.

Then farther upriver it connects into I-495. That, of course, is in heavy use.

All of these arteries are in partial use at the present time. When and if the Potomac River Freeway is built, it will probably have both of these connections. If it does not have the Three Sisters Bridge connection, then for sure it will have a heavy duty connection on up on the District of Columbia-Maryland side of the river.

Chairman Inouye also asked about the cost per month, \$15,000, of retaining the contract for construction of the Three Sisters Bridge or \$1.2 million. "Now, how long do you estimate we would have to pay this contractor to watch this equipment at \$15,000 a month?"

Airis responded that he had recommended canceling the contract 7 or 8 months ago, but retaining the contract was "a calculated risk." Canceling would save \$15,000 a month, but if the court permitted construction to resume, a new contract would have to be awarded, almost certainly at a higher price than the original contract. "As you well know, construction has been going on up at the rate of 5 to 10 percent a year, and we would face that increase." He had renewed the request to terminate the contract as recently as a few weeks earlier, but the District could not make that decision without concurrence of the Department of Transportation.

Before closing his testimony, Airis wanted to make one additional comment:

Mr. Chairman, I just would like to point out the need for these facilities remains the same and that in the District of Columbia, traffic volumes went up about 3½ percent last year. [District of Columbia Appropriations for Fiscal Year 1973, Hearings before a Subcommittee of the Committee on Appropriations, United States Senate, 92<sup>nd</sup> Congress, 2<sup>nd</sup> Session, Part 2, S-181-16, pages 1348-1349]

Mayor Washington appeared before the House District Appropriations Subcommittee on

April 12. (Chairman Natcher still refused to address him as major, instead using "Mr. Washington" as reflecting the fact that technically he was a commissioner.) Chairman Natcher restated his support for a balanced transportation system:

In order to meet the tremendous day-by-day growth of traffic, the freeway system must be carried out, along with the present rapid rail transit system that is now under construction. The Highway Acts of 1968 and 1970 are the law and must be complied with. Both systems must proceed together.

He entered President Nixon's statements on the subject into the record:

I believe that President Nixon will carry out the commitments set forth in the letters and the statement and that the Department of Transportation, the Attorney General, and the District of Columbia officials should immediately join with the President in carrying out the mandate of the Congress set forth in the Highway Acts of 1968 and 1970.

He wanted to know what the city was doing in view of the Supreme Court's refusal to hear the Three Sisters Bridge case. He also wanted to know what the Justice Department was doing "in regard to defending the suit" and what the Department of Transportation "is doing in complying with the Highway Acts of 1968 and 1970." He added:

I want to know what is happening and whether or not the requirements set forth by Judge Bazelon are being met and, just when we can see some action taking place on this suit.

In response, Mayor Washington submitted a letter to Chairman Natcher on May 2. After recalling the history of litigation on the Three Sisters Bridge, Mayor Washington said the Justice Department, Transportation Department, and the city's corporation counsel had examined Judge Bazelon's opinion and had agreed on the steps to be taken. First, they had to decide whether a new location hearing for the bridge was needed. Judge Sirica had agreed with the District that the location "deviated so slightly from that which was discussed at a public hearing, that a new location hearing was unnecessary." Judge Bazelon "remanded this aspect of the case to the District Court 'for clarification of the factual basis for its conclusion'" because Judge Sirica's opinion had not revealed "a factual basis" for the conclusion that the location was so similar to the location presented at the public hearing as to eliminate the need for a fresh hearing.

Despite "the abundance of evidence which was before the Court of Appeals on this point and the prior record in the case," all parties agreed a new location hearing should be held:

Such a location public hearing can be combined with the location public hearing on the Potomac River Freeway to be held this fall. Plans for the Potomac River Freeway have now progressed to such an extent as to make this possible. Unless a major change in location is found necessary, it is anticipated that the District will be ready for a design public hearing on the Potomac River Freeway a short time thereafter.

In the interim, the environmental statement (under the National Environmental Policy Act of 1969) required by the Court of Appeals decision will be completed and plans for the ramps and approaches to the Bridge will be ready for public comment. This will respond to the Court of Appeals' suggestion that affirmative findings by the Department of Transportation under 23 U.S.C. §134 (pertaining to a comprehensive planning process) and 23 U.S.C. §138 (pertaining to the use of parklands) should be based, to the extent possible, on final plans for the Bridge. The Department of Transportation will be in a position by that time to make these assessments. The information that the Department will have as to noise, air, and water pollution in making its determination under Section 138, should be sufficient to meet the objections of the Court of Appeals to the findings made under 23 U.S.C. §109 (pertaining to safety).

The tests on a model of the Three Sisters Bridge “clearly establish that the proposed Bridge satisfies the safety requirements of 23 U.S.C. §109.” With these steps completed, the Department of Transportation would be able to grant location and design approvals.

As for the four projects listed in the Federal-Aid Highway Act of 1968, he provided a status report that restated the status that Airis had provided to the Senate subcommittee. Mayor Washington concluded his letter:

The District Government and the two Federal departments [Transportation and Justice] have each reaffirmed earlier commitments to comply fully with the Federal-Aid Highway Acts of 1968 and 1970 and are taking the indicated next steps. [District of Columbia Appropriations for 1973, Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, 92<sup>nd</sup> Congress, 2<sup>nd</sup> Session, Part 1, H-181-39, pages 14-20]

Chairman Natcher welcomed Airis before the District Appropriations Subcommittee on April 27. Airis’s formal statement went through the status of the city’s Interstate network, with an updated status on the Three Sisters Bridge:

Since the U.S. Supreme Court has refused to hear the case, construction will likely remain halted until the U.S. Department of Transportation can satisfy the requirements imposed by the courts or until Congress passes additional legislation as suggested by Chief Justice Burger of the U.S. Supreme Court in his recent decision. The recent action of the U.S. Court of Appeals in Richmond halting further progress on I-66 in Virginia places this project in a similar status – the court order even ties it to the status of the Three Sisters Bridge.

In response, Chairman Natcher reiterated his longstanding support for a balanced transportation system involving simultaneous development of a freeway system and rail rapid transit. His subcommittee, he said, had never designated a single freeway or placed the Three Sisters Bridge or any other Interstate segment in a bill. In addition, the Committee on Public Works had not selected these routes. The District had approved all these segments.

“It was this subcommittee, and I think you will agree with this, Mr. Airis, that started the rapid rail transit system.” If the subcommittee had opposed rapid rail transit, “we could have very easily stopped rapid rail transit several years ago.”

He acknowledged he was not an engineer, but:

I would wager anything within reason that instead of \$2½ billion or \$2,980,200,000, which is now the estimated cost for the rapid rail transit system as presented to the committee, this system will end up costing between \$4 and \$5 billion. I again say to you that I am not an engineer but I am just as positive of that as I am that I am sitting in this committee room at this time.

He thought the subcommittee had always “shown good faith on it.”

He asked if Airis had changed his mind about the need for a balanced transportation system in the District. Airis had not, saying that “modern cities must be able to sustain themselves with modern types of transportation.” Each mode has to perform the job it does best:

It is unfortunate that there has been so much feeling and emotion to the point that people are looking at the subway system as a panacea, and I do not believe it is proper to do that. It will be a fine assist in moving commuters, and I am sure it will move a lot of them. But over the years the city has expanded in 360 degrees, in every direction, and it is very difficult to serve all of them without the other adjuncts of the balanced transportation system.

I am talking here merely about the commuter. In addition, of course, to the home-to-work and work-to-home movements, there are all the other movements. If people will think about it, they would realize that after the rail or subway system is built, you won't even handle “one crate of oranges on it.” All those things that are necessary for our urban civilization will be moved over the highways by some type of rubber tire traffic or by rail with rubber tire traffic from distribution points as we did in the old days. No; we have not changed our viewpoint. We have tried to keep up to date on what is happening in other cities and not only in this Nation but elsewhere in the world. I do not think anyone of us have seen anything that changes the central philosophy of a modern balanced transportation system for urban areas.

As for the freeway network, the elements have been subject to change and debate, but “I would like to go ahead and build that system. I think the area needs it and we should go ahead and do it.” [District of Columbia Appropriations for 1973, Hearings before a Subcommittee of the Committee on Appropriations, House of Representatives, 92<sup>nd</sup> Congress, 2<sup>nd</sup> Session, Part 2, H-181-40, pages 306-312]

On May 31, 1972, the Committee on Appropriations submitted its report to the House on the District of Columbia Appropriation Bill, 1973. Regarding WMATA, Chairman Natcher did not attempt to block funding:

The Committee recommends the \$33,498,000 requested for the District's share of construction of the rapid rail transit system in 1973. Included in the amount is the actual share of \$32,738,000, \$260,000 for the construction of the Rhode Island Avenue pedestrian bridge, and an additional \$500,000 for the cost of modifying the north access to the Gallery Place Station. [District of Columbia Appropriation Bill, 1973, Committee on Appropriations, U.S. House of Representatives, 92<sup>d</sup> Congress, 2<sup>d</sup> Session, H. Report No. 92-1106, page 30]

When Chairman Natcher presented the committee bill to the House on June 6, he again explained his support for a balanced transportation system, inserted the President's letter and statement in the record, and included Mayor Washington's letter on compliance with the Federal-Aid Highway Acts of 1968 and 1970. He did not, however, elaborate on compliance as he had in recent years. [District of Columbia Appropriations, 1973, *Congressional Record-House*, June 6, 1972, pages 19830-19834]

Representative Gross asked about the Three Sisters Bridge. He had searched “in vain” for any sign of activity at the bridge site:

It was the position, I thought, of the Congress that in providing funds for the boondoggling subway[,] objection would be removed to the bridge construction. The gentleman [Giaino] played an active part in getting Federal assistance for the subway. I would like to ask him what has happened to the bridge that is supposed to be under construction, and what about finishing the other freeways that are only partially constructed and on which work has stopped? Drive out of this city toward Baltimore, and you are dumped off a segment of freeway that goes nowhere. Can the gentleman explain why?

Representative Giaino said he strongly supported the Three Sisters Bridge, but the U.S. Court of Appeals had blocked construction. All parties involved were trying to comply with the decision, but “until they go that route they are enjoined by the decision of the circuit court of appeals from proceeding with the bridge.”

Representative Gross asked, “what happened to the quid pro quo that was implicit in the deal whereby Congress released subway funds.”

Representative Giaino said he was hesitant to ask this question of Representative Gross, but “what quid pro quo” was he referring to. “I am not aware of any quid pro quo.”

Mr. Gross. Every dollar you have in this bill for the subway system.

Mr. Giaino. It has nothing to do with the bridge and the highway system. Each stands on its own.

Time expired for the discussion, and Representatives Gross and Giaino never clarified the quid pro quo question. [District of Columbia Appropriations, 1973, *Congressional Record-House*, June 6, 1972, page 19836]

However, Representative Myers, a member of the Committee on Appropriations, also wanted to discuss the contrast between Metro and the Three Sisters Bridge. He understood that construction was tied up in the courts, but he wanted to address a few points. Litigants claimed that the Three Sisters Bridge “was an environmental hazard to our community.” It was going to “deny certain access to the river” and “was going to be less than desirable as far as aesthetics [sic] are concerned.” Some opponents even “made such statements that they will be making a platform of concrete clear along the river; all of the Potomac will be covered by concrete.”

At the same time, WMATA was planning bridges in the vicinity of the 14<sup>th</sup> Street bridge, tunnels under the river, and another bridge across the Anacostia River:

But how many people have you heard raising objections to the building of these two Metro bridges? It is rather strange that objections are only brought up when we are going

to build a highway bridge, and yet the Metro system will be building two more bridges across these beautiful rivers, and yet no objection is raised to them.

As for all the families that would be displaced by freeway construction, “have you heard any objection about the many families that will be displaced by the construction of the Metro system?” According to Metro, 744 families would have to be relocated. “Yet has there been any big hue and cry about that? I have not heard the first word of protest by the media.”

Representative Myers also took exception to some aspects of the court rulings, such as the concern about the taking of much needed, valuable parkland. “I actually wonder how much parkland is going to be taken for the building of a couple of bridge piers, possibly a few hundred square feet.” Meanwhile, almost “\$11 million in value of parkland is being taken by the Metro system.” This parkland included the line “running north alongside of this beautiful area in front of the Arlington Cemetery.” He added:

That system over there will be running above ground through this beautiful parkland. Where are the environmentalists who came in here and cried so much about the highways being built across the Potomac? And we are told that through this beautiful parkland they are going to run a railroad. Then consider the fact that in the future there is always the possibility that the Metro system might be a failure, but once you get a railroad right of way you can store boxcars up there along this beautiful parkland. Where are these environmentalists when this is being done? We have not heard the first word of objection.

He recognized the need for Metro, but he thought it was “very clear that they are not using the same standards for the construction of the Metro system that are being required today for the construction of a highway system as part of the balanced transportation system that this Congress has authorized be built.”

His time expired but Representative Davis, who likely was enjoying Representative Myers’ tirade, granted an additional 5 minutes.

Representative Myers wanted to point out “a few things concerning the Metro system that have gone unnoticed.” The system, he said, was going to use a lot energy, at least “90 million kilowatt hours requiring 35,000 tons of coal.” He asked where that coal was going to come from:

It will require more than 500 coal cars per month to operate just the Metro system alone. This city and this area are being threatened when we need an additional 35,000 tons of coal to run the Metro system alone, plus all the other electricity we require.

Where, he asked, were the environmentalists when this topic was raised:

Where are they today? How much information concerning this has been given to the Congress? This electrical energy that is going to be required to run the Metro system alone is enough electricity to supply the States of Alaska or Wyoming, yet this electricity is going to be required just to run the Metro system here in the District of Columbia.

The District had “some very real problems, this is very true, but sometimes we are unable to secure the true facts.” He added, “I think it is high time that this body, this city, and the Nation know how our tax dollars are being spent, and there are a number of cases of double standards.” [page 19387]

During debate on June 7, Maryland’s Representative Long inserted a statement expressing his well-known concerns about Metro. He opposed the \$33.5 million in the District appropriations bill and construction of the Metro subway. He stated his five reasons. First, based on the estimated cost of \$3 billion, the same amount could be used to buy a new home “for every one of the 150,000 families in the average congressional district.” Counting the other 13 metropolitan areas planning subways, “the costs are going to run between \$50 and \$75 billion.”

His second reason was the “probable lack of use” of Metro. “People do not want to use mass transit.” Crime was one reason. “If in New York City 3,200 police ride shotgun on the subways to keep law and order, imagine what it is going to be like in Washington, where we have a higher crime rate per capita than they do in New York City.” However, the real reason people “are loathe to take subways is that they just do not find it convenient to use mass transportation.”

Third, Metro would be used mainly by people of high income, but people of ordinary means would pay for it:

The beneficiaries will be most Federal employees already enjoying higher salaries and fringe benefits than the taxpayers back home . . . . What they have in mind, I think, is to let the poor people use the subway and keep their cars at home so that the well-heeled can get through the streets faster with their own automobiles.

Fourth, why spend up to \$5 billion on new rapid rail facilities in Washington “when these already exist.” He was referring to existing railroad right-of-way throughout the areas:

Why does the District of Columbia not undertake this quick, cheap, minimally disruptive program? Probably because it does not cost enough, there is no profit for the engineers, the designers, the contractors, the equipment manufacturers, and the investment bankers.

Finally, he did not think mass transit was the answer to congestion in Washington or other large cities. “The answer is to stop locating so many Government agencies in Washington and to decentralize our Government back home – in your district and mine.” [District of Columbia Appropriations, 1973, *Congressional Record-House*, June 7, 1972, pages 19907-19908]

That same day, the House approved the bill 302 to 67.

On June 12, the Senate Committee on Appropriations issued its report on the District of Columbia Appropriation Bill, 1973. The Senate bill, like the House bill, appropriated \$33,498,000 for the District’s matching share for subway construction.

Without explanation, the bill did not appropriate funds for several freeways:

- North Leg, west section, inner loop

- North Leg, central section, inner loop
- East Leg, inner loop freeway
- 9<sup>th</sup> St. expressway
- Interchange “C,” inner loop
- Center Leg, inner loop freeway
- Central Potomac River Bridge crossing (Three Sisters Bridge)
- Northeast, North-Central Freeway
- South Leg, inner loop
- North leg, east section, inner loop

The one exception was \$2,345,000 appropriated for the Potomac River Freeway, the same amount as in the House bill.

The committee’s report did include one reference to a freeway issue:

#### Three Sisters Bridge

The committee notes with frustration that funds continue to be utilized to maintain the existing contract for the construction of the Three Sisters Bridge. This burden has hampered the District for the past two years at a cost of \$15,000 a month. Only 10% of that amount is paid out of the City’s funds, the remainder being from the Department of Transportation, but the fact remains that good money is being spent to maintain a contract that will have to be substantially renegotiated before construction is continued. In addition, there is no real indication when construction will be allowed to resume by the courts. If the relocation hearings tentatively scheduled [sic] for this fall do not satisfy the courts, there may be indefinite delays and a continuing drain on the City’s resources. To scrutinize the budget as we have tried to do and to have this sort of uncontrolled waste, makes our efforts seem futile. The committee hopes that the District officials will do all that is in their power to see to it that either the construction is resumed as soon as possible or the contract is terminated to be renegotiated when the project is finally approved by the courts. District of Columbia Appropriation Bill, 1973, Report to Accompany H.R. 15259, Committee on Appropriations, United States Senate, 92d Congress, 2d Session, Report 92-844, June 12, 1972, pages 11-12]

The Senate debated and approved the bill on June 14, 1972, by a vote of 78 to 0. During the debate, the issues surrounding the freeways and Metro were not discussed. [District of Columbia Appropriations, 1973, *Congressional Record-Senate*, June 14, 1972, pages 20839-20848]

The House-Senate conference to resolve differences between the two bills completed work on June 27. The bill included WMATA’s matching funds of \$33.4 million.

When the conference report came before the House on June 30, Chairman Natcher pointed out:

The other body in marking up their bill approved the same amount that we approved for our rapid transit system of \$33,498,000. For some reason or other the highway

construction projects were deleted on the other side and, Mr. Speaker, everyone [sic] of those projects is back in this bill.

He continued:

Mr. Speaker, as you well know, the Highway Acts of 1968 and 1970 provide for the construction of the Three Sisters Bridge and the freeway program. These two laws will be carried out, Mr. Speaker, and as we have stated from the very beginning, we intend to complete our rapid transit system. The District of Columbia budget subcommittee appropriated the funds that started the rapid rail transit system and our action placed the Metropolitan Washington Area Transit Authority in a position to begin construction of this part of our transportation here in our Nation's Capital.

The House approved the conference report without a recorded vote.

President Nixon approved the District of Columbia Appropriations Act, 1973, on July 10, 1972 (P.L. 92-344).

### **A Landmark Event For The Nation's Capital**

As Congress agreed without delay or controversy to appropriate the District's matching funds for Metro construction, WMATA was continuing its work. With construction underway, WMATA was finding that its path would not be smooth.

As Representative Long had mentioned during his anti-Metro statement, WMATA was planning for a fifth span to carry Metro in the 14<sup>th</sup> Street Bridge complex. It was to be located in the complex of spans between the Penn Central Railroad bridge and the Rochambeau Bridge, which carried Virginia traffic into the city.

On March 2, NCPC refused to endorse the crossing. Instead, it called for detailed estimates for a tunnel crossing and an explanation why the Penn Central Railroad bridge could not be widened to accommodate Metro. Jack Eisen explained:

The proposal for a fifth bridge within view of the Jefferson Memorial was made by Metro officials in 1967, but got little attention largely because of widespread doubt the Metro ever would be built.

Originally, Metro officials expected to build the transit span downstream from the Penn Central crossing. However, the committee was told on Tuesday that engineers encountered problems of routing tracks around the National Park Service regional office on the Washington side of the Potomac and the Marriott Twin Bridges Hotel on the Arlington side.

The Metro line will run from 7<sup>th</sup> Street in downtown Washington via L'Enfant Plaza to the Pentagon station where trains will continue on a line to and beyond Alexandria . . . . The L'Enfant Plaza line will run in an underwater tube beneath the Washington channel

surfacing in East Potomac Park to cross the bridge, then will go into a subway on the Virginia shore to pass beneath Shirley Highway Interstate Rte. 95).

Two NCPC members, architect Paul Thiry and administrator C. C. Johnson, Jr., of the American Public Health Association, “voiced concern yesterday over the prospect of a fifth bridge that, they said, would clutter the area” – even though the bridge had been on Metro maps since 1968. The *Post*’s Around Town column dismissed their concern about clutter:

So it would – roughly in the manner in which another bale would clutter a messy haystack. To make that additional slender bridge as invisible as possible amidst the profusion of freeway bridges, Metro’s planners would now place it between the Rochambeau Bridge and the Penn Central railroad bridge . . . .

So, let’s stop fussing and get along. If the Planning Commission wants to improve the aesthetics of the 14<sup>th</sup> Street clump of bridges, it might ask Penn Central to simplify its bridge by taking those ugly trusses off. [Eisen, Jack, “Planners Balk Metro Bridge Proposal,” *The Washington Post and Times Herald*, March 3, 1972; “A Fifth Bridge,” Around Town, *The Washington Post and Times Herald*, March 6, 1972]

At the end of the month, the WMATA board received a surprise from Edward Waddell of the construction staff. Construction of the line along G Street, NW., was 10 months behind schedule and would cost an extra \$1.4 million to \$4 million. Work on the Metro Center station was 303 days behind schedule. Waddell explained that the problem was that some merchants in the 1100 block of G Street had resisted alterations to their store front. Eisen explained the problem:

As Metro staff officials described it, the main problem on G Street is that the street is narrow and the underground Metro Center station arch must occupy its full width.

To permit the sinking of pilings, store display windows and signs that protruded into so-called “public space” above the sidewalks had to be removed and reconstructed flush to the building fronts. Also, the Machlen National Bank building at 11<sup>th</sup> and G Streets had to be underpinned.

Jackson Graham, Metro general manager, said District of Columbia government policy permitted some merchants to delay long enough to hold up subway work.

The exact cost of the delays would have to be determined through negotiations with the prime contractor, Peter Kiewit Sons Company.

Cleatus E. Barnett, Montgomery County’s member on the board, said, “I am shocked . . . and the figures are pretty shocking, too.”

When Chairman Fisher suggested that staff should have informed the board sooner, Construction Director William Alldredge admitted that “looking back,” Fisher probably was right.

Three board members from Maryland prepared a memorandum denouncing the District for letting four of the 36 businesses in the vicinity of 1100 block of G Street to “determine when and

under what conditions they would remove their building protrusions” over the public sidewalk. “That policy brought Metro months of delay and millions of dollars in extra costs.” They urged all local jurisdictions to prevent similar situations.

The board would soon learn that the line between Dupont Circle and Rock Creek Park would cost \$3-\$5 million more than expected. The problem was poor rock conditions that had not been anticipated when the project was bid. The rock was laced with fractures and veins that preliminary borings had not detected. Engineers preparing the PS&E for the contract had expected that only 10 percent of the three-quarter-mile tunnel would require steel bracing arches and a fast-drying concrete coating sprayed from hoses. Instead, the contractor found that 90 percent of the section would require bracing.

The WMATA board voted to pay the contractor, S. A. Healy Company, for the additional costs.

[Eisen, Jack, “Metro Is 10 Months Behind Schedule,” *The Washington Post and Times Herald*, March 31, 1972; Eisen, Jack, “Bracing Forces Up Metro Tunnel Cost,” *The Washington Post and Times Herald*, April 14, 1972]

On April 10, Secretary Volpe announced a \$3.1-million grant to COG for the first major mass transit study since the 1959 Mass Transportation Study. He called the study “the most unified planning for transit improvements ever conducted in the Washington area.” Eisen reported:

The study is intended to bring improved bus routes and schedules, the erection of bus shelters and stations, the addition of more bus-priority traffic lanes leading into Washington and possible operating subsidies to hold down fares and prevent threatened service cutbacks.

Volpe said the program will integrate “all transit planning studies and projects” by 12 public agencies in the city and its Maryland and Virginia suburbs “into one unified, comprehensive transit development program.”

The study also, Secretary Volpe said, would carry out President Nixon’s “directive for coordination of local programs and for development of a balanced transportation system in the Nation’s Capital.”

The grant consisted of \$3 million for primarily short-range actions and improvements that would be consistent with the long-range plans and objectives, the planning of which would be undertaken with the remainder of the grant, \$133,300. The total grant would cover two-thirds of COG’s costs for the study, with local funds and staff services providing the remaining one-third.

UMTA Administrator Villarreal said the total was the largest technical study grant in the history of UMTA’s technical study grant program:

With this grant, we are again demonstrating the commitment of the Department of Transportation to improving mass transit in the Nation’s Capital. We feel that this immediate action program will help the Washington area qualify for two-thirds Federal

capital grant assistance for needed transit improvements, within the first months of the program.

He was referring to the fact that at the time, Washington qualified only for 50-percent Federal transit funding because the area lacked a regional transit development program of the sort that would be developed under the grant.

With Metro scheduled to open service in stages between 1974 and 1979, the 33-month “study will consider bus service through suburban corridors that will not have Metro routes and other corridors that will have Metro service only in the later” stages of construction:

The decision by Volpe to finance a single program followed a series of meetings last year by a COG-sponsored committee. It reported itself unable to reconcile the sometimes competing efforts of the 12 agencies, including Metro and COG itself. [Eisen, Jack, “Transit Study Slated,” *The Washington Post and Times Herald*, April 11, 1972]

At the same meeting where the board agreed to additional pay for a contractor that had encountered unstable rock conditions, the board heard a staff recommendation in support of construction of a Metro bridge in the 14<sup>th</sup> Street bridge complex. General Graham had told the board that the tunnel suggested by NCPC would cost \$20 million to \$60 million more than the bridge, an additional cost that could not be justified.

On April 20, the board voted unanimously to build the bridge. In doing so, it ignored NCPC’s concerns. As Eisen put it, “Although the commission’s role in the bridge issue is advisory, federal law requires that its advice be sought and given.” Any agency rejecting NCPC’s advice was required to explain the decision in writing.

NCPC Executive Director Conrad charged, “They are actually end-running the planning commission and short-circuiting its comprehensive planning procedures.” He added, “We assumed that no further action would be taken [by WMATA] until the planning commission meets [on May 4]. This is not saying the commission would not have gone along” with the bridge plan. [Eisen, Jack, “Metro Board Approves Bridge, Snubs Planners,” *The Washington Post and Times Herald*, April 21, 1972]

Meanwhile, construction work on Metro came to a halt after truck drivers in Local 639 of the Teamsters Union walked out of negotiations on May 12 for work on Metro and other projects in the area. Work on Metro continued initially, but contractors could not get material trucked in or debris removed from their sites after the drivers went on strike. With most Metro construction in the downtown area, sites did not have space to store the excavated material for any length of time. By May 20, General Graham told reporters, “Our jobs are largely shut down. Our contractors are going to have at least 2,500 of their 3,200 workmen off the job Monday [on May 22].”

Work on Metro was at a virtual standstill for 3 weeks until the drivers approved a new contract and began returning to work on June 8. Resumption of construction would not be overnight, because the first order of business was to remove accumulations of dirt and debris that had been

left on site when the strike began. In addition, contractors who had laid off their workers would have to reassemble crews before resuming work.

Cement truck drivers who had walked out on May 15 were still on strike. The strike “has had the effect of dashing hopes of opening the first 4.6-mile section of Metro in downtown Washington on schedule on July 4, 1974,” as Fred Barnes wrote in the *Star*. A WMATA spokesman said, “We’re not out of the woods yet by a long shot.” [Eisen, Jack, “Metro Asks Exemption in Driver Strike,” *The Washington Post and Times Herald*, May 19, 1972; Eisen, “Most Work on Metro Shut Down,” *The Washington Post and Times Herald*, May 21, 1972; Barnes, Fred, “Some Subway Work Resuming,” *The Evening Star*, June 8, 1972]

Cement truck drivers settled on June 22, but hundreds of laborers worked off the project on July 3 shutting all major Metro construction except on two tunnels where the contractors or subcontractors had entered into interim agreements with the Laborers District Council of Washington and Vicinity.

On July 10, unionized laborers ended their strike that had begun shortly after the truck drivers settled their disputes. The laborers were seeking protection for their jobs in jurisdictional disputes with other unions, as Eisen explained. “Recently, most such disputes have been with the carpenters, over such things as who should install beams required in Metro construction.” The laborers also were seeking a 5½ percent annual increase over the present \$5.77-per-hour pay, but Eisen described that as “not being a major issue”:

Told of the back-to-work order, Jackson Graham, general manager of the Washington Metropolitan Area Transit Authority, exclaimed, “That’s great!”

“I took a tour of our largely idle construction sites today,” Graham said. “The water pumps have been kept busy, but that’s about all.”

Dating to May 12 when the truckers walked off the job, Metro lost about 2 months in labor disputes. “Graham said it would take perhaps three more weeks to estimate the final effect of the strikes on the scheduled start of subway service.” Contractors returning to work would have extended time to complete their contracts, but not increased payments. Whether later contracts would cost more because of inflation during the delay remained to be seen. [Eisen, Jack, “Construction Walkout In D.C. Area Is Ended,” *The Washington Post and Times Herald*, July 10, 1972]

At the same time, Congress was moving forward on the bill to provide a Federal guarantee for WMATA bonds. On June 20, the House Committee on the District of Columbia released its report on the National Capital Transportation Act of 1972. Debate in the House on June 26 was largely supportive. Representative Gross expressed concerns about the likely cost increases in the cost of Metro and that “Uncle Sucker” would ultimately be responsible for repaying the \$1.2 billion in bonds, leaving the District residents to take a “free ride.”

Representative O’Konski agreed with Representative Gross that the final cost of Metro would far exceed current estimates:

[Here] we are again with a broken record. I have heard it time and time again in the years I have been a member of this House. This is all it is going to cost. This is all it is going to cost. This is all it is going to cost. How many times have we heard this refrain? What we are actually engaged in is a deception. We are again deceiving the taxpayers of our Nation. Time and time again we have engaged in gross deception. But this Metro system is the grossest deception of all time.

Nevertheless, the bill passed by a vote of 280 to 75. Chairmen Mahon and Natcher were among those who voted against District matching funds for Metro in December but who voted for the bond guarantee. Neither commented during the flood discussion.

With support likely in the Metro-friendly Senate, Representative Gude said after the vote, “We’re over the hump. Taken together, that vote [in December] and this one were crucial.” [National Capital Transportation Act of 1972, *Congressional Record-House*, June 26, 1972, pages 22389-22407; [Eisen, Jack, “Hill Votes Guarantee Of Metro,” *The Washington Post and Times Herald*, June 27, 1972]

The *Post* and *Star* editors shared Representative Gude’s optimism. A *Post* editorial began:

We don’t mean to get ahead of events or lull anybody into a false sense of security but it actually begins to look as if one of Greater Washington’s longest running, always-on-the-brink crises is over: There is honest-to-goodness light at the end of the Metro tunnel, thanks to a grand vote in the House this week. With nary a word about the Three Sisters Bridge and by a lopsided 280-to-75 vote, the House approved the granting of a federal guarantee for bonds to complete the entire 98-mile Metro system that has been so long in the making.

Although action by a supportive Senate was still needed, the House was “where for years the fate of this delicate regional subway project had been unfairly entangled in a web of congressional pique and power.” Even Chairman Natcher had joined the majority, “having lost a big round last December that could have killed the project if more responsible members had not prevailed.” This success “was due to vigorous, responsible efforts by sympathetic members of the House – and to strong and effective support from President Nixon.” [“Metro Makes It,” *The Washington Post and Times Herald*, June 29, 1972]

The *Star* thought that saying the House vote “was a landmark event for the Nation’s Capital understates the fact.” The vote “virtually assures the orderly completion of this region’s ultra-modern 98-mile subway system by providing the financial underpinning it must have to avoid costly delays”:

One of the most gratifying votes, furthermore, was that of Representative Natcher, who previously had delayed subway appropriations in attempts to break Washington’s freeway logjam. The highway controversy had no legitimate involvement with this legislation, and rightly was held apart to be resolved on its own merits, at a later date. [“Green Light for Metro,” *The Evening Star*, June 29, 1972]

The Senate Committee on District of Columbia released its report on June 28. The committee adopted the House bill without change, meaning Senate approval would end congressional consideration of the bond bill. The Senate passed the bill with minimal discussion and without a recorded vote on June 29. [National Capital Transportation Act,” *Congressional Record-Senate*, June 29, 1972, pages 23309-23310]

On July 13, President Nixon signed the National Capital Transportation Act of 1972 (P.L. 92-349) “with special pleasure.” Metro, he said in a statement on July 14, “moves a long step toward successful completion with this new law”:

Late last year, when it appeared the METRO might die altogether because of a complex legislative and judicial tangle, I appealed to the Congress for responsible action to cut the Gordian knot. The metropolitan Washington community was enormously heartened when such action was forthcoming . . . .

But as METRO construction now moves forward at a quickening pace with solid Congressional support, there is reason to hope that the lessons learned en route to completion of the world’s most modern subway for our National Capital area may also mark the beginning of a new and more effective Federal-local partnership in District of Columbia government. This Administration is committed, and I am committed personally, to furthering that result by every means available to us.

The legislation had several components. Of course, it guaranteed the Metro revenue bonds. It also authorized an increase of nearly 25 percent in the District of Columbia’s contribution to Metro (to \$269.7 million, up from \$216.5 million). In addition, it broadened the Metro compact relating to labor, permitted WMATA to operate Metro directly or under contract, and called for local jurisdictions to make up the difference between the normal fare and reduced fares for any class of riders (such as students or seniors) within their borders.

On August 10, 1972, Secretary Volpe, Mayor Washington, and WMATA Chairman Fisher signed documents assuring payments for Metro construction:

- Secretary Volpe and Chairman Fisher signed an agreement by the Federal Government to guarantee \$1.2 billion in Metro construction bonds to be repaid from fare collection.
- Mayor Washington signed an amendment to the interstate compact, previously signed by Governor Mandel and Governor Holton following State legislative action, permitting public operation of a unified rail and bus transit system if Congress passed legislation allowing a takeover.

The agreements allowed WMATA to proceed with the sale of \$225 million in bonds in September. The sale, as Jack Eisen observed, freed “Metro from future dependence upon congressional appropriations that repeatedly have been delayed.” Chairman Fisher reflected this change in status by saying, “I’m almost tempted to say it’s downhill. It’s not that. It’s over the hump.” [Eisen, Jack, “Documents Signed Assuring Payment For Metro System,” *The Washington Post and Times Herald*, August 11, 1972]

## Across the Lincoln Memorial

On June 18, the *Star* reported that Minority Leader Ford, “acting on orders from President Nixon . . . is working quietly to obtain legislation which would order construction of the Three Sisters Bridge without judicial interference.” A Ford spokesman confirmed the Minority Leaders’ actions, and said that he was only following Chief Justice Burger’s suggestion.

Representative Broyhill was pleased by Ford’s efforts. “This is where it should be done. Keeping it in limbo like it has been is unfair to opponents and proponents.” He said it was “like waiting for the other shoe to drop.” He added that, “Construction of the bridge will help resolve the I-66 controversy.” [Kneece, Jack, “Rep. Ford Pushing 3 Sisters Bridge,” *The Evening Star*, June 18, 1972]

The *Post* visited the site of the Three Sisters Bridge in early April and found that peace had settled in:

Birds flock to the sycamore trees at Three Sisters as before, traffic hums in the distance and the Potomac laps gently against the rusted pilings. Jets using Washington National Airport mar this peace, as does Sebastian, a toothy German shepherd whose bite is even worse than his bark. Let a visitor approach the Three Sisters Bridge construction site, a small compound of shacks and equipment just north of Georgetown, and Sebastian begins a fearful snarling and rattling of chains.

He and his fellow watchdog, Rex, mean business. As the only permanent residents of this acre or so of Washington, they take their responsibilities seriously.

Since work was halted by court order, the city had paid approximately \$275,000 to keep the two dogs, a construction superintendent, and two guards on duty. The city also had paid \$1.2 million to the contractor, who had completed only 90 days of the estimated 400 work days before the project came to a halt in August 1970.

The construction superintendent, Carlton Hudson of Head Construction Company, said “We work for the court. If they say work tomorrow, we start work tomorrow.” He and Frank den Outer of the District highway department worked out of a trailer on the site, keeping busy with maintenance of small boats, a tug, and a crane anchored by the shore. In addition, Hudson kept the lights working on a pier frame standing 20 feet out of the water—the only visible part of the project. [Levy, Claudia, “Peace Reigns Over Three Sisters Site,” *The Washington Post and Times Herald*, April 11, 1972]

On April 7, 1972, Airis had told the Senate District Appropriations Subcommittee that the contract for building the piers for the Three Sisters Bridge should be “discontinued” in view of the Supreme Court’s decision not to hear the case. The city’s inaction prompted Chairman Inouye to send a “sharply worded” letter dated August 2 to Mayor Washington about the funds wasted by paying the contractor mostly for not working on the bridge. Senator Inouye pointed out that if construction work resumed, the contract would have to be renegotiated anyway, thus minimizing the value of retaining the contractor on site.

The letter reinforced Airis's views, which had been strengthened when Hurricane Agnes (June 14, 1972 – June 23, 1972), one of the worst in East Coast history, dumped 10-14 inches of rain on the area. The hurricane flooded the Potomac River, Rock Creek, and part of the National Zoo, and damaged the bridge site as Eisen described:

When the bridge work was halted, the contractor, Head Construction Co., built the steel framework for a cofferdam to protect the pier excavation near the Washington end of the bridge from Potomac River water. However, no outer skin was attached to the framework, and the two-pier excavations have largely been filled with rock and silt, Airis said.

During the flood that accompanied tropical storm Agnes in June, the framework was snagged by driftwood and swept downstream where it is lodged near the 14<sup>th</sup> Street Bridge . . . .

“I concluded that there was not much reason to continue the contractor on the site,” Airis said. “I hasten to add that it [the cancellation] will have no effect on the construction of the bridge” if the decision is made to resume work.

On August 4, shortly after receiving Chairman Inouye's letter, city officials agreed to cancel the contract. [Eisen, Jack, “3 Sisters Contract Canceled,” *The Washington Post and Times Herald*, August 5, 1972]

While canceling the contract for its controversial bridge project, the city revived plans for building the six-lane I-695/South Leg Freeway, one of the projects the Federal-Aid Highway Act of 1968 had ordered the city to build. As in the past, the plan called for two tunnels connected by a half-mile-long depressed roadway an average of 30 feet below ground. One tunnel would run on the Potomac River side of the Lincoln Memorial while the other would cross under the northern tip of the Tidal Basin. The depressed section would be crossed by a grassed overpass that would provide pedestrian access between the Reflecting Pool in front of the Lincoln Memorial and West Potomac Park.

The city argued that the plan would neutralize criticism from national conservation groups and local anti-freeway activists because it would increase park land by 1.7 acres by replacing existing surface-level roads, particularly the section of Independence Avenue parallel to the I-695 alignment. Jack Eisen summarized the benefits cited in the city's prospectus:

In its prospectus, the highway department claims the road is needed to serve traffic between Northwest Washington and the growing, congested Southwest employment area.

Trying to channel all the traffic through the surface road network would cause more congestion and harm in the park areas than building the freeway, the department asserts.

The city scheduled a public hearing on the project to begin on September 6, saying it would “be on the proposed corridor for the freeway and its design, but not on whether the project should be built.” [Eisen, Jack, “D.C. Revived Proposal on Potomac Park Road,” *The Washington Post and Times Herald*, August 9, 1972]

*Post* architecture critic Von Eckardt did not wait for the public hearing to denounce this “slash across the monumental heart of the nation’s capital.” The issue at the heart of the debate was not how to cope with traffic “for in time we will surely develop techniques for reconciling the convenience of private transportation with the dictates of public health and amenity”:

The issue raised by this South Leg Freeway, more than by any other highway built or proposed in this city, is simply whether or not we want to preserve and perhaps enhance the beauty and dignity of the national capital we have inherited. Despite assertions to the contrary, this freeway . . . seriously threatens that beauty and dignity at its very heart – the Mall, its parks and its great monuments, which more than 15 million people come to see every year.

What people will see, if this freeway is built, are tunnel entrances, gaping caverns, more than 100 foot wide [sic], some 200 yards on either side of the Lincoln memorial, replacing marvelous old trees. The tunnel entrances will exude noise and fumes. At night, the harsh light needed to make the tunnel safe, will surely detract from the glory of the illuminated memorial. Another pair of such holes will spoil the serenity of the Tidal Basin and its cherry trees. True, you won’t see the depressed road itself and there is to be a grassed overpass so visitors can, on that one point, cross from the Mall to Potomac Park where the Franklin D. Roosevelt Memorial is to be built, and to the river.

Visitors may not see the road, but “most likely” they will “see its protective bannisters, flood wall and, most likely, high fences to keep vandals from throwing rocks at the cars.”

The city’s “prospectus and its rather Pollyanna Environment [sic] Impact Statement” referred to the freeway as a “strategic” link between I-66 and I-95/Southwest Freeway and that it would separate commuter traffic (“mainly Virginians who work in the new offices in the Southwest”) from tourists who visit the Mall by car.” It also claimed “the road would actually enhance the park by removing the growing number of automobiles.”

Von Eckardt questioned the name:

Despite the freeway’s name, the statements [sic] no longer refer to the Inner Loop, the vital northern segment of which has aroused so much opposition, that it is no longer publicly mentioned.

But does a “south leg” make sense without the rest of the loop?

He did not want to debate traffic estimates (“loose guesses – and that is all they can ever be”), but did want to decry “those awful tunnel entrances,” with their “ventilation stacks some 50 feet high,” and the loss of many trees, “particularly some of the old elms along the Reflecting Pool.

He did not object especially to inclusion of “the so-called 17<sup>th</sup> Street Drive,” which would be used by tourists in buses and cars (“it would be folly to try to deprive them of this pleasure”).

That one concession, however, did not mean “the park should be allowed to succumb to America’s waning passion for speedy, automobile travel.” The law on this point, specifically

Section 4(f), was “quite clear.” An alternative link between I-66 and I-95 on the Virginia side of the Potomac offered one possible “feasible and prudent alternative”:

As regards the Mall, however, the law is evidently on the side of what I would consider to be common sense, a livable environment and – I would not want to abuse this word – patriotism. [Von Eckardt, Wolf “A Freeway That Shouldn’t Be Built,” *The Washington Post and Times Herald*, August 18, 1972]

On the same day as Von Eckardt’s column, the *Post* carried an editorial against the proposal. The editorial board had “consistently favored a balanced transportation system” for the area. The paper “wholeheartedly” supported the Metro rapid rail system and keeping Amtrak “on the track,” and had questioned “the concept of an exclusive Highway Trust Fund.” Despite the advantages of the private automobile, “we believe it was a grave mistake to favor the car to the point where public transportation has badly deteriorated and commuting and railroad travel has become in many cases something of a nightmare.”

The editorial did not advocate eliminating the automobile, even as a means of commuting, but rather favored curbing “the zeal of highway builders and the powerful industries that support them.” Freeway battles around the country and in Washington had prompted the cancelation of “over-ambitious freeway plans on the grounds that our new concern for environmental values must take precedence over the actual or presumed convenience of motorists and truckers.”

These comments, the editorial continued, were meant to put the South Leg Freeway in perspective. “For it is another such long-standing, over-ambitious project.” The editors thought the Von Eckardt’s column on the editorial page made “a compelling case against it.” The editorial concluded, “It is not necessary to be against all additional freeways to see why this particular project should be dropped.” [“Washington’s Lincoln Tunnel,” *The Washington Post and Times Herald*, August 18, 1972]

A few days later, the *Post* published a letter from ACT’s James Govan criticizing the original *Post* article about the South Leg Freeway proposal. “Despair,” he said, was “the only word to describe my reaction” to the article, Govan began. The District’s plan “symbolizes, in a dramatic way, the continuing insensitivity of politicians and the highway engineers to the genuine desire of urban residents to see the end of massive freeways which desecrate their cities.”

He pointed out that the environmental impact statement claimed the plan would preserve and enhance the Lincoln Memorial and make possible policies to restrict cars in the center city. “Both claims are outlandish.” Further, the statement revealed that “nothing is held sacred by the highwaymen.” He referred to the claim that some cherry trees would have to be removed, but that they could be replaced:

With such logic we could temporarily relocate the President while the White House is torn down to make way for a freeway and then rebuild it. Cherry trees, White House, black communities – all seem vulnerable to the determination of highwaymen to serve the needs of the more important one passenger per car commuter.

Govan also considered the *Post's* characterization of the planned public hearing as an error:

According to Federal regulations issued by the U.S. Department of Transportation, this public hearing must permit public comment on “the need for, as well as the location of a Federal-aid highway” such as this proposed freeway.

Citizens did have the right to challenge the need for the freeway and he hoped they would.

Perhaps, Govan speculated, politicians who advocated freeways “must be made to understand that, while it may be true that most Americans cherish their cars, there are some things they cherish more – their homes, their parks, their national monuments.” Perhaps this latest proposal would “finally bring freeway foes and advocates together to say: this is one mile of freeway we can do without.” [Govan, James L, “Despair Over Another Highway,” Letters to the Editor, *The Washington Post and Times Herald*, August 23, 1972]

While officials, critics, and citizens debated the merits of the South Leg Freeway, NPS took action on a longstanding goal: to remove traffic from Circle Drive between the Lincoln Memorial and the Reflecting Pool. On August 22, NPS closed the drive to motor vehicles except during the morning peak period, 6 a.m. to 9:30 a.m. Beyond those hours, the drive was open only to pedestrians and bicyclists. On the first day, the morning and afternoon went smoothly until the evening peak period. The result was what John E. Hartley, the District Highway Department’s chief traffic engineer, called “a fantastic backup.” George Berglacy, the NPS Park Police’s spokesman, said, “I must admit, I now know what it’s like to be on the receiving end of an obscene telephone call.” Defensively, he added, “That was never meant to be a commuter route in the first place.”

The *Star* editors were less kind. “What has occurred . . . is a wholly predictable nightmare of congestion for motorists both leaving and entering the city.” In the early days after the closure, “cars have been backed up for more than a dozen blocks, in turn snarling other rush-hour traffic routes.” Protests were “steaming in,” and the editors expected the evening peak period ban to end soon. Perhaps a permanent ban was desirable, but will be needed for it to work was “the rational freeway pattern long proposed to divert traffic around that area—not the creation of makeshift bottlenecks.” [Kneece, Jack, “Tours 1, Motorists 0,” *The Evening Star*, August 23, 1972; “Calculated Congestion,” *The Evening Star*, August 25, 1972]

The experiment lasted until mid-January 1973 when Russell E. Dickinson, director of National Capital Parks, ordered removal of the barricades through the end of winter when tourist visits to the Lincoln Memorial were limited. The barriers would be restored in April because, Dickinson explained, the traffic streaming around the monument caused “extreme congestion and danger to visitors during the peak tourist season.” [“Circle Drive to Open,” *The Washington Post and Times Herald*, January 12, 1973]

With the South Leg Freeway hearing a week away, Peter S. Craig and Robert M. Kennan of the Committee of 100 on the Federal City wrote to ask Mayor Washington to cancel the event. As planned, the hearings “violate applicable federal highway administration regulations,” and District law. They contended that the agencies charged with planning highways were NCPC and

the city council. Neither the mayor nor the District Department of Highways and Traffic were the equivalent of a State highway agency or those two local bodies:

If the hearing proceeds as scheduled, it will be futile. Any decision to construct I-695 which is made on the basis of that hearing will be subject to certain reversal by the courts. In order to avoid further acrimonious litigation involving the District's proposed highway program, we urge you to cancel the hearing . . . ." [Griffin, James, "Freeway Heading Called Illegal," *The Evening Star and Washington Daily News*, August 31, 1972]

(As of July 12, *The Evening Star* and *The Washington Daily News* merged, creating a new combined masthead, soon changed to *The Washington Star-News*.)

The first day of the public hearing on September 6, held at 7:30 p.m. in the vast Commerce Department auditorium, opened with only about 100 people in attendance. Airis presented four South Leg alternatives, with emphasis on the preferred routing:

Our proposal is to remove Independence Avenue and to relieve the surrounding Memorial area of the sight and sound of city traffic.

Airis estimated that between 75,000 and 90,000 cars would use the South Leg connector between the Theodore Roosevelt Bridge and the Southwest Freeway by 1990. He told the audience that if the project is approved, it could be completed in early 1976 in time for the Bicentennial celebrations.

Sixteen witnesses testified on the first day. The *Star* estimated that "only about one fifth supported the proposed six lane freeway." As in the past, anti-freeway speakers denounced the hearing format and the authority of Colonel Starobin, whom Mayor Washington had appointed the presiding examiner. Peter Craig, as though preparing for a lawsuit if the city advanced the South Leg as proposed, took the lead:

Warning city officials that citizens groups already had successfully brought three lawsuits against other freeway and bridge plans, Peter S. Craig, an attorney with the Committee of 100 on the Federal City, declared that only the D.C. City Council could legally hold hearings on the proposed freeway and that the mayor had no legal authority to appoint a hearing examiner.

"The mayor-commission-whatsoever [has no role] other than to veto action by the council . . . it is the council not the mayor who is the equivalent of a state highways [sic] department here."

The *Post's* Jack Eisen also found the claims familiar, but said, "there was an added ingredient, the road's location in an area that constitutes one of the nation's most beloved shrines." Angela Rooney, representing the National Coalition on the Transportation Crisis, said, "Shafting the Lincoln Memorial in behalf of speed and tourists is a triumph of greed over logic." Former Representative Eugene D. Keogh (D-N.Y), chairman of the Franklin Delano Roosevelt Memorial Commission, recommended that the roadway, if it must be built, should be placed entirely in a

tunnel to avoid impacting the area for the planned memorial, which would be located on either side of the trench section.

The city's environmental agency offered lukewarm praise for the proposed freeway:

William McKinney, deputy director of the city's Department of Environmental Services, said his agency was "opposed to any proposal that would increase the level of traffic in the rush hours."

However, he did not oppose the project. He called the highway department's recommended design preferable and offered to help find ways to curtail downtown parking, provide reserve bus lanes, and do other things to reduce traffic downtown.

Eisen also found that the hearing was "tranquil," in contrast to "stormy opposition at freeway hearings in the past decade." He added:

While applause from the audience of 100 was generally restrained, it was apparent that most opposed the road.

Support for the project came from spokesman [sic] for Downtown Progress, the Washington Board of Realtors and the Metropolitan Washington Board of Trade.

Starobin, in response to a question from James Govan, said that Mayor Washington and the city council would "pay heed" to the opposition expressed during the hearing. [Griffin, James, "South Leg Debated at Highway Hearing," *The Washington Star-News*, September 7, 1972, Eisen, Jack, "Citizen Groups Attack Plans for Freeway," *The Washington Post and Times Herald*, September 7, 1972]

On the second and final day of the hearing, national conservation groups attacked the plan. As Eisen put it, the Wilderness Society and the National Wildlife Federation "fired broadsides" at the plan, according to the *Post*. They joined critics from local conservation groups:

"The south leg proposal is of much more than local interest," declared James G. Deane, executive editor of the Wilderness Society's publications. Attacking the highway department's insistence that the road will clear unwanted surface traffic from the park and Mall areas, Deane called the road "not remotely a park improvement; a freeway simply doesn't belong there."

Despite Secretary Volpe's agreement with Interior Secretary Morton, the Interior Department could not legally permit freeway encroachment on parkland, according to Robert M. Kennan, Jr., general counsel of the Wildlife Federation. Airis defended the plan by saying the freeway was intended mainly for tourists and business visitors, not "one-to-a-car commuters." [Eisen, Jack, "Conservationists Attack proposed I-695 Leg Near Lincoln Memorial," *The Washington Post and Times Herald*, September 8, 1972]

An editorial in the *Star* took an almost weary tone, stating that the scenario of the hearings "was as familiar as that of a well-loved theatrical drama. Supporters thought the tunnels would unsnarl

congestion while opponents considered it an esthetic disaster – and nothing will “shake, by as much as an inch, the advocates of either position.” Unlike the many other freeway controversies in the District, this one came down to a single issue, namely “the impact of the project on one of the nation’s most hallowed park areas.”

After all, the traffic was already there in the vicinity of the Lincoln Memorial, “bumper-to-bumper in rush hours,” as anyone “with eyes” could see. No families or businesses would be displaced and the proposal was not so much a new freeway as a link between existing freeways.

The tunnel proposal was not initiated by highway officials “but by the National Park Service itself, as a means of eliminating surface traffic from the park.” The editors thought the tunnel plan would do exactly that and that the NPS would support the new plan. The plan probably could be improved:

But there was no room for this sort of sensible, logical criticism in the emotional atmosphere of controversy that pervaded last week’s . . . hearing sessions. And that was an unfortunate loss. [“Return Engagement,” *The Washington Star-News*, September 14, 1972]

Later in the month, NCPC released a highly critical report on the proposal, calling it “insensitive” to potential aesthetic and environmental impacts. After reviewing the city’s draft EIS, NCPC questioned whether alternatives had been considered:

What alternatives, if any, have been studied for reallocating or reducing the traffic demand on the South Leg? For example, how many of these vehicles have both origin and destination on the east side of the Potomac River and how many could perhaps be accommodated on the Virginia side . . . ?

Can arterial streets such as Constitution Avenue carry part of the load on the District side, or can the Jefferson Davis Highway (U.S. Route 1) and/or the George Washington Memorial Parkway accommodate all or part of the Virginia traffic assigned to the South Leg?

NCPC also asked:

Has consideration been given to moving people rather than automobiles by public transit alternatives such as the Shirley Highway express bus system?

NCPC also disputed the city’s view that the tunnels would do little permanent damage to Potomac Park:

This view overlooks the encroachment of the project on the Washington Monument grounds, the reduction in the size of grounds and the almost complete separation of the Washington Monument, in some alternatives, from the Tidal Basin area.

In addition, NCPC said the proposal contained few details in map or text form, “making it difficult for anyone to fully compare and evaluate the planning, urban design and environmental impact of each alternative”:

This whole matter should be reanalyzed, clarified and the results documented in order to determine the new gain or loss in public park and open space. [Taylor, Walter, “Freeway Plans Criticized,” *The Washington Star-News*, September 20, 1972]

EPA also was critical of the draft EIS, calling for “much more evaluation and quantification” of the freeway. Robert J. Blanco, EPA’s regional chief, sent a letter to Leonard A. DeGast, assistant director of the District Department of Highways and Traffic, stating that, “The routing of through traffic into the urban core seems inconsistent with the goal of decreasing vehicles miles traveled in the core area.” The final EIS “should make an appraisal of the regional air pollution impact of the various alternatives.” EPA called for more information on traffic projections, the mix of trucks and automobiles that would use the freeway, right-of-way dimensions, and pollution from tunnel vents would affect building and plant life.

Blanco asked for more information on the timetable for highway and Metro construction, mass transit’s role in the regional system, alternatives to the proposed South Leg Freeway, and how the freeway would affect traffic patterns and parking in the city. Noting that the West Potomac Park area did not have separate storm sewers, Blanco asked for detailed information on surface drainage and design details for tunnel construction in the Tidal Basin area. He also wanted more information on noise potential and minimization, stating that “there should be a specific design noise level . . . rather than being content with the philosophy that a proposed project is merely quieter” than the current noise level. [“EPA Asks Details For ‘Inner Loop,’” *The Washington Star-News*, October 1, 1972]

### **I-66 Flounders**

In March 1972, EPA had told Virginia that I-66 “could have a significant adverse effect on the environment.” EPA was concerned about increasing traffic congestion and air pollution; it criticized Virginia highway officials for not considering alternatives such as rail rapid transit.

As the State completed a new EIS, EPA applied a new rating system to I-66 in June. The project received a rating of 3 on a scale of 1 to 4, the next to lowest rating. A rating of 3 meant that I-66 needed “major revisions or major additional safeguards to adequately protect the environment.” Virginia, EPA stated, should consider alternatives such as rail rapid transit. [“EPA Gives

I-66 Plan Next to Lowest Rating,” *The Washington Post and Times Herald*, June 22, 1972]

WMATA was concerned that delays in approval of I-66 would affect the agency’s plan to build a Metro line in the freeway’s median from just west of Glebe Road in Arlington to Nutley Road near Vienna, a distance of about 6.5 miles. On July 6, the board of directors decided to build the line in the right-of-way, which the State had already acquired, regardless of I-66’s fate.

In fact, WMATA’s assistant planning director, Mathew Platt, told the board that building Metro in the right-of-way would cost less if I-66 were never built inside the Capital Beltway. If I-66

were not built, the Metro line would not require retaining walls and other features to ensure safe, efficient operation between two sets of freeway lanes. The Metro line would cost \$108.6 million if the freeway were built, but \$102.1 million if it were not. Director Harris of Fairfax said, "Quite obviously, the public facility that comes in late would have to pay the added cost." General Graham agreed. "This is the position we would take." Still, VDH owned the right-of-way, regardless of the freeway's fate, resulting in Metro having to negotiate to use the land. "That," Chairman Fisher put it, "will be an interesting negotiation."

The board did not literally approve use of the right-of-way. Its approval was in the form of approving two Metro stations, East Falls Church and West Falls Church, and the adjacent alignment in the highway corridor. ["Subway Route Set In I-66 Corridor," *The Washington Star-News*, July 7, 1972; Eisen, Jack, "Arlington-Vienna Metro Route Set," *The Washington Post and Times Herald*, July 7, 1972]

The State appealed to the U.S. Supreme Court on August 8 seeking to overturn the injunction blocking I-66. The appeal contested the decision of the 4<sup>th</sup> U.S. Circuit Court of Appeals that new Federal environmental laws should be applied retroactively to I-66 because it had not reached a point of completion that made construction inevitable. The State contended that planning for I-66 had reached a point before enactment of NEPA and other environmental laws that the location was virtually irreversible:

The likelihood of a substantial change with respect to the present plans for the project even after expenditure of seven to eight hundred thousand dollars for the study is extremely slight.

Land, the appeal pointed out, had already been acquired at a cost of \$28.6 million, with 76 percent of affected families relocated. [Associated Press, "Va. Appeals Injunction On I-66," *The Washington Post and Times Herald*, August 9, 1972; Barnes, Fred, "Original I-66 Engineers Chosen for Impact Study," *The Washington Star-News*, August 22, 1972]]

In August, VDH decided to postpone construction of the 2-mile section of I-66 between the Capital Beltway and State Route 7. A Fugate spokesman said the concern was not that construction might violate the court order blocking construction in Arlington County, but that opening the short stretch before the rest of the highway might create traffic snarls by dumping traffic on State Route 7 in Fairfax. The *Post* reported:

The spokesman said "preliminary indications are that the adverse effects would be greater than we originally thought" and that the department would decide within a month whether to proceed with the two-mile section early next year. Another highway department source indicated Fugate was leaning toward delaying construction of the section at least a year until a court-ordered review of the impact of the highway in Arlington is complete.

James Govan speculated that VDH's review of the 2-mile section "should indicate that they might have problems at a lot of points." James Collis of a Fairfax group thinking about going to court to block construction in the county said, "I would guess when they ran into some

opposition they thought to make sure of their groundwork.” [Mathews, Jay, “Va. Defers I-66 Link, Study Set,” *The Washington Post and Times Herald*, August 19, 1972]

On August 22, Virginia highway officials announced that they had hired the consulting firm of Howard, Needles, Tammen & Bergendoff to conduct the court-ordered study of I-66 in Arlington County. The State estimated that the study would take a year to 18 months. John Simonds’ Pittsburgh firm of Environmental Planning and Design would also participate in the study.

The fact that Howard, Needles, Tammen & Bergendoff’s findings in the 1950s led to the routing of I-66 in the county along the abandoned railroad right-of-way prompted immediate criticism. ACT’s Emilia Govan called the selection “very inappropriate at the very least.” The firm was being called on to reevaluate its own study. She recommended selection of a firm that was not previously involved with the freeway plan.

Fugate announced that he had appointed five officials to “monitor” the study:

- Martha V. Pennino, chairman, Metropolitan Washington COG;
- Joseph Alexander, head of the Northern Virginia Transportation commission;
- Joseph Fisher, chairman, WMATA;
- A. Leslie Phillips, vice chairman of the area TPB; and
- Jimmie Singleton, head of the Northern Virginia Planning District Commission.

Emilia Govan denounced the group for being predominantly pro-highway. “Representatives of our organization and other citizens groups and commissions concerned with I-66 and related transportation and environmental issues (should) be immediately included in the membership of the monitoring committee. [Barnes, Fred, “Original I-66 Engineers Chosen for Impact Study,” *The Washington Star-News*, August 23, 1972]

After so much negative publicity about I-66 in recent years, supporters of the project formed Citizens for I-66 to advocate for the route. Funded by businesses and private citizens, the group flooded Arlington and Fairfax Counties with 16,000 leaflets and 20,000 red-white and blue bumper stickers extolling the route. The leaflet called I-66 “an outstanding example of progressive transportation planning,” with its small parks, bicycle trails, and platform for tennis courts.

Other groups joined in support, including the chamber of commerce for the two counties and the Highway Users Federation for Safety and Mobility. The federation’s Robert Justice said, “I’m convinced that the area is going to die as a viable economic entity if I-66 is not built. The area is going to strangle to death in traffic.” Rudolph G. Seely, a real estate developer in Fairfax, said he participated in the effort to respond to highway opponents who were “terribly well-organized, vociferous, and well able to put forth their point of view.” By contrast, he said, “I feel that the users of motor cars and the traffic planners have not been adequately heard in the controversy over I-66.” [Mathews, Jay, “I-66 Friends Launch Drive Backing Plan,” *The Washington Post and Times Herald*, August 25, 1972]

When Mrs. Govan wrote to Fugate with questions about how he selected the consultant, he replied that, "I can see nothing to be gained in answering detailed questions you list as to the consultants. Both firms are nationally recognized as having the highest competence for carrying out transportation and environmental studies such as the one the Highway Commission is now undertaking in the I-66 corridor."

As for her interest in attending a September 5 meeting, Fugate said it was limited to "representatives of the Highway Department and members of [I-66 advisory] committee." He added that, "Later, groups such as yours will have full opportunity for participation." Fugate said the purpose of the meeting was to establish guidelines for the study.

Mrs. Govan was disturbed by the reply:

This is ridiculous. If the citizens aren't allowed in at the first stage of discussions of the study, the scope of it will have been determined before any citizens have any input into it. We feel they must do a study of non-highway alternatives. [Griffin, James, "Fugate Refuses I-66 Answers," *The Washington Star-News*, August 26, 1972]

The Justice Department announced on August 29 that it had decided not to join the State in asking the Supreme Court to review the U.S. Fourth Circuit Court of Appeals' April 4 decision blocking I-66 in Arlington County. The *Post* reported:

Deputy U.S. Solicitor General Lawrence G. Wallace said yesterday government attorneys felt construction of the highway might begin sooner if the federal government did not ask the Supreme Court to review the lower court ruling . . . .

Wallace said Solicitor General Erwin N. Griswold decided not to challenge the court of appeals ruling after considering the affect [sic] of the case on other environmental suits in progress and the likelihood of a favorable Supreme Court.

An attorney for the Virginia Highway Department understood the decision in the context of the pending presidential election. "It's an election year and it's an environmental suit . . . . I can see that the administration does not want to come down on the wrong side of a popular issue." He summed up by saying that based on his discussions with Justice Department attorneys, "They're thinking about a nation-wide problem, and we're thinking about a statewide problem." [Mathews, Jay, "U.S. Quits Fight on I-66 Plan," *The Washington Post and Times Herald*, August 30, 1972]

Solicitor General Griswold went a step further in late September by asking the Supreme Court to turn down Virginia's request for a hearing. His memorandum to the court referred to the Circuit Court's ruling as "somewhat vague" and potentially "troublesome" as the government defended other highway decisions. "Reopening the hearing process with respect to the thousands of federal-aid highway projects under way throughout the country would cause significant administrative difficulties and, in our view, was not required by Congress." He continued:

However, because of the particular facts of the case, including the possibility of very substantial changes in the relevant factors since we believe the decision [by the Court of

Appeals] does not establish a precedent of sufficiently general applicability to require further review by this Court.

The *Post* reported:

A spokesman for the Virginia highway department expressed surprise at the Griswold action. Federal attorneys “have been telling us this decision would give them trouble in the rest of the country,” the spokesman said.

Sources close to the state highway department feel the federal government is simply reluctant to take firm action against environmentalists in an election year.

Attorneys for ACT and other I-66 opponents said they were pleased with the action. [Mathews, Jay, “Bid to Review Ban on I-66 Snagged,” *The Washington Post and Times Herald*, September 30, 1972]

The Solicitor General’s action reduced the likelihood that the Supreme Court would consider the State’s appeal. On November 6, that expectation was realized when the Supreme Court declined, without explanation, to review the U.S. Court of Appeals’ ruling. With four votes needed, only Chief Justice Burger and Justice Lewis F. Powell, Jr., voted to take up the case. Donald S. Burris, an attorney for the citizens groups fighting I-66 said the court’s decision “represents total victory for the aspects of the case we are litigating,” while Emilia Govan said:

The conclusion is very good for those of us who want them to re-evaluate the whole thing. It puts the burden on the highway department, which is as it should be. [Mathews, Jay, “High Court Backs Delay of Rte. 66,” *The Washington Post and Times Herald*, November 7, 1972]

Virginia’s public meeting at the Kenmore Junior High School a week later did not go well, as the *Post* recounted:

About 250 persons came to a “public participation workshop” on the proposed Interstate Rte. 66 last night to say that the Virginia Highway Department’s approach to public involvement is “totally unacceptable.”

Loud applause frequently interrupted Emilia Govan, co-chairman of the Arlington Coalition on Transportation, as she castigated highway officials as “nonelected bureaucrats (who) veto any decisions made by the citizens, a (highway department) consultant team or elected officials . . . .”

“To give policy-making power to highway officials and to deny it to citizens and elected officials is totally unacceptable – not only because the highway officials are irrevocably committed to I-66 as planned, but because these officials are not directly responsible to the people,” said Mrs. Govan to a burst of applause at last night’s meeting.

She suggested that the State’s steering committee be revised to include elected officials from the affected communities and the District of Columbia, the road’s terminus.

Other speakers affirmed support for some of her statements, while about 40 people shouted out opposition [to them].

Some also objected when Mrs. Govan called for audience adoption of three criteria to form the basis for all subsequent phases of the study: “To maximize the use of mass transit for commuting and other travel purposes; to prevent degradation of the natural and human environment, and to move the greatest number of people in the most efficient economical and convenient manner.”

County Supervisor Alexander, a member of the steering committee, objected that, “We should not have a plebiscite tonight.”

Mrs. Govan countered that, “This is billed as a public workshop and it’s the only forum we have to express our opinions.” The audience overwhelmingly approved her three criteria. [“Va. Highway Officials Blistered on I-66 Plan,” *The Washington Post and Times Herald*, November 15, 1972]

### **The Federal-Aid Highway Act of 1972**

On March 16, 1972, Secretary Volpe appeared before the House Subcommittee on Roads, during its hearing on the planned Federal-Aid Highway Act of 1972. Representative Harsha, during his question period, asked the Secretary to respond in writing to a set of questions, one of which was:

Question 18. Do you believe if we had completed the freeway system in the District of Columbia, that the congestion problem experienced in the Capital of the Nation would be as severe as it presently is?

Answer. In some respects, yes, because in the Washington area the congestion problem is related to the peak hour commuting problem. The planned freeway system is related to the peak hour commuting problem. The planned freeway system was planned only to serve a portion of peak hour traffic (such as motorists without alternative means of transportation, car pools, trucks, buses and taxis) and general traffic throughout the day.

A portion of the problem may have been alleviated by the planned freeway system had it been completed. However, the remainder [of the problem] would not have been because much of this demand really could be better served by an improved public transportation system. The private automobile is a relatively inefficient method of meeting peak hour demand in densely settled urban areas, particularly since the average ridership levels is so low in this country. In addition, new freeway capacity can influence land use patterns and induce new traffic growth, so a reduction in congestion is often short lived. Thus, new road capacity in and of itself to accommodate more automobiles alone will not solve the problem of peak hour congestion in such areas.

In an earlier report to Congress, I recommended a freeway system which is adequate to meet the general traffic needs as well as a portion of the peak hour traffic of the District of Columbia. You should note my emphasis on continued support to the METRO system

and integration with the existing bus companies to meet the overall transportation needs of this area.

In the long run, I believe that the peak hour commuting problem can be met only by providing a balanced transportation system for the D.C. metropolitan area. This would include reliance on the METRO system presently under construction, the new freeways which I recommended for the District of Columbia, a fully coordinated and integrated bus system, and better utilization of existing street capacity. The Shirley Highway [express bus lanes] project is an example of the latter approach. I strongly believe that the proper combination of the above elements offers the best hope for reducing commuter traffic congestion. [1972 Highway Legislation, Hearings before the Subcommittee on Roads of the Committee on Public Works, House of Representatives, 92<sup>nd</sup> Session 2<sup>nd</sup> Session, Committee Print 92-32, pages 508-509]

On March 21, the subcommittee heard from a delegation from Massachusetts, including Secretary Altshuler. With the full support of Governor Sargent, he said his “primary purpose” was to urge support for “a very specific provision.” At the time, Federal-aid highway legislation recognized that Federal law authorized 200 miles, known as Howard-Cramer mileage after the House sponsors, for alternative routes if States decided not to build an Interstate highway. With that mileage already committed to routes around the country, Secretary Altshuler favored an alternative that would allow city officials to cancel unpopular Interstate highways without losing the millions of dollars – based on the 1972 ICE – associated with them:

The provision that we desire is part of the official program that shall be presented tomorrow by the American Association of State Highway Officials (AASHO). The language of the AASHO recommendation in which we are so urgently interested provides that, where it is determined that previously approved Interstate links cannot be constructed, the responsible officials at all levels of government should be authorized:

To negotiate a compromise solution, satisfactory to the Secretary, that will satisfy the intent of Congress of completing a connected system aid, furthermore, that in arriving at a compromise and negotiated solution, the amount of funds included in the present cost estimate for the section of interstate highway involved, and not the mileage, should be the controlling factor.

This recommendation was endorsed by the chief administrators of the Nation's State highway departments by a vote of 42-4 in the official AASHO balloting on the 1972 legislative program – that took place last month.

Its implementation would require no more than the alteration of two numbers in the so-called-Cramer-Howard amendment of 1968 (Public Law 90-238).

Secretary Altshuler explained:

We believe that a sufficiently flexible highway program must be able to accommodate the finding that in some urban corridors it is no longer feasible to carve new rights-of-way –

and to do so without imposing harsh financial penalties upon the States involved. In these urban corridors, the States concerned will generally have to undertake large transportation investments, both highway and transit, of a noninterstate nature . . . . In cooperation with AASHO, we urge that Interstate funds be made available for reassignment to meet these needs where such reassignment is compatible with the objectives of the Interstate program. [pages 541-548]

After Secretary Altshuler, Secretary Hughes of Maryland testified on the same issue. He said that Maryland had built or programmed 358 miles of Interstate highway. But about 30 miles in the Baltimore area and Maryland's Washington suburbs were not built. This unbuilt mileage included I-95 and I-70S inside the Capital Beltway as well as segments of I-70N, I-83, I-95, and I-395 in Baltimore. Like Altshuler, he asked Congress to allow the State to substitute new freeway routes for the portions that may be abandoned, with the substitution based on cost (about \$1 billion) rather than mileage. "Public opposition connected to a great extent with environmental impact issues continues to overshadow the basic need to provide for a high level of transportation service in these corridors."

He endorsed the AASHO amendment and informed the subcommittee that Maryland "proposed to develop a logical system of replacement Interstate facilities, consistent with present Federal Interstate funding commitments, for use in the event certain controversial segments of the programed system are not construction." To correct "travel deficiencies" caused by the inability to construct certain routes, Maryland would proceed on a priority basis:

First priority in the replacement system will be given to facilities that serve to replace the function of a missing segment in a nearby location in order that a continuous Interstate routing is possible.

Next, priority will be given to facilities that will provide alternate routings for Interstate movements in order to relieve existing Interstate facilities that will receive additional, heretofore unanticipated travel demand.

Finally, facilities will be proposed to satisfy Interstate movements that have not been provided for in the presently programed system. These facilities will tend further to provide alternate routings for Interstate movements as they will interchange with the existing system.

This system of replacement facilities will be developed so that each project meets Interstate System criteria, contributes to the formation of a local network of freeways to serve Interstate movement, and is capable of construction within a reasonable time frame. [pages 549-552]

Secretary Hughes told reporters that substitutes for the controversial urban routes might include an expressway from Baltimore to Annapolis and upgrading the John Hanson Highway (U.S. 50) between Washington and Annapolis. He stressed this was not a proposal, but simply an illustration of where Maryland might shift the mileage if Federal law permitted. [1972 Highway

Legislation, pages 541-548; Eisen, Jack, "Permission to Alter Road Plans Asked," *The Washington Post and Times Herald*, March 22, 1972]

On March 28, the subcommittee heard from Francis A. Porter, president of Porter Associates, Inc., in Landover Hills, Prince George's County, Maryland. He testified, however, as executive secretary of the Committee for a Balanced Transportation Policy in the county. The committee supported Metro, but also I-95 through the county and the District of Columbia, as well as the necessary support roads and public transportation. His prepared statement stated:

Our concern dates from the adoption last Dec. 28<sup>th</sup> of the District of Columbia City Council's report on the Interstate Freeway System in Washington . . . . The report declares that the New York Avenue Industrial Freeway should be constructed to a connection with a greatly improved Baltimore-Washington Parkway as a "realistic alternative" to I-95, implied in the decision is belief that this route will handle adequately trips with a Washington destination, and that interstate through traffic will use the Beltway. [sic]

He objected to the current study in Maryland of I-95 within the county, as well as statements by the District's city council that it did not want to force "repugnant" decisions on the county by pursuing its segment of I-95. Opponents suggested that Metro and improvement of existing highways would be able to handle the traffic:

Opposition was climaxed by a hot fight over a bill (which fortunately failed) in the State legislature that would have denied the Maryland share of the proposed study, thus killing the entire project. The astounding thing is that the opponents, both in the District and in Maryland, have given no indication of understanding the relationship of I-95 to Metro although rapid transit is the keystone of their argument against completion of the highway.

He pointed out that Metro was supposed to occupy the I-95 right-of-way from the vicinity of New York Avenue to 2 miles beyond the District line in Maryland. WMATA was planning to place two Metro station on air rights over the highway, with Metro occupying the I-95 median strip for the first 2 miles after leaving the District. Metro costs for the line are all predicated on right-of-way acquisition, engineering, and construction of I-95:

Metro officials I have talked to literally shudder when asked what additional money must be programmed for this line. And they state flatly that elimination of I-95 will substantially delay and possibly eliminate the entire segment from Union Station to Greenbelt. On the other side of the coin, they admit that simultaneous construction of Metro and I-95 – which has not been planned – would probably bring substantial savings in the two projects and offer an advanced service schedule for Metro.

He acknowledged that construction of I-70S through Montgomery County to the District was dead. However, the committee did not consider any alternatives to construction of I-95 to be acceptable. The committee thought that the I-70S funds should be shifted to I-95. Porter

recommended the Committee on Public Works include a provision in the 1972 Act that would restore I-95 to the District's freeway system and:

1. Recognize that I-95 through Prince Georges County and the District of Columbia is an essential part of the transportation network serving the entire East Coast and guarantees adequate access for all of the nation's citizens seeking to visit their Capital City.
2. Recognize that large amounts of taxpayers' money can be saved by the simultaneous construction of I-95 and the Rhode Island-Prince Georges Plaza segment of Metro.
3. Recognize that construction of I-95 through the urban sections of Prince Georges County and the District of Columbia should meet every possible criteria contributing to the reductions in disruption of neighborhoods, and impacts on environmental factors. This should include standards for compensation for unavoidable noise pollution to neighboring properties, as well as improvements in the present system of compensation for properties affected by public construction projects. [pages 825-831]

On March 28, the subcommittee heard from Grosvenor Chapman and Gardner Palmer of the Citizens Association of Georgetown regarding the Three Sisters Bridge. Palmer, who chaired the association's Committee on Legislation, cited the Supreme Court's decision not to hear the appeal:

We are not here to kick a dead horse. In fact, we do not believe it is really a dead horse, and that is why we wish to present testimony before the subcommittee, and we feel that there are two difficult situations that must be faced.

One situation was the provision in past Federal-aid legislation requiring construction of the bridge, with Secretary Volpe and the District now required to go through the whole review process again, which would "cause a great deal of unnecessary anguish throughout the city of Washington, and throughout Arlington County."

The other situation was a "Government-authorized study and a mining study in the historic district of Georgetown's waterfront." At President Nixon's direction, the Federal Government was financing the study partly to preserve the historic waterfront "but also as part of the 1976 Bicentennial Exposition and celebration." Georgetown, as he mentioned, predated the District of Columbia's creation as the Nation's capital.

Palmer said that much of the debate was on the bridge itself – "you might say one abutment of the river bank to the other" – without enough attention paid to the effect of the traffic after it reaches the District. "We have taken the position that if we must accept it, we must accept it," but he added, "all we ask is that it be planned with the greatest delicacy . . ." He pointed out that since enactment of Section 23 of the Federal-Aid Highway Act of 1968, "traffic has not grown in the way that it was predicted it would grow, so that even more so today it would appear that the bridge is not going to be necessary."

He urged repeal of Section 23, which the prepared statement called "a colossal mistake," to allow planning to proceed without the bridge dictating six lanes of traffic through Georgetown. Even

with Section 23 still a law, the Three Sisters Bridge “should not be built and, in all probability, will not be built.” In view of court rulings, it probably could not satisfy Title 23 and other relevant laws. Residents of the District and Arlington County did not want the bridge. Further, if built, it would interfere with solutions to the traffic problems in Georgetown by funneling six lanes of traffic through the area.

When the association completed its opening statement, Chairman Kluczynski agreed to place their lengthy formal statement in the record. He said that before inserting Section 23 in the 1968 Act, “I was very interested in that, and drove out there, and I saw three rocks sticking out of the river and they wanted to name it that, and there is quite a history to it.”

When Chapman said he had not been able to cover the specifics of the Georgetown waterfront and the effect of the added traffic, Chairman Kluczynski interrupted to say he had to be on the House floor in a few minutes for a vote. “You could give the story to our engineer-consultant here, and we will have it in the record in its entirety.” [pages 897-908]

The subcommittee concluded its hearings on April 12, 1972. The report on the hearings contained statements and letters received beyond the hearings themselves on many issues, including several on the District’s freeway controversy. One was an April 12 letter from Robert F. Koch of Bethesda, Maryland to Chairman Kluczynski. Koch, speaking as an individual, wanted to go on record as supporting the freeways in the DeLeuw-Cather report. He said that the people of Montgomery County also supported the North-Central Freeway, notwithstanding the State’s recent decision to drop the freeway “in apparent ignorance of the strong public support” for it.

He enclosed a copy of his letter to Senator Mathias stating that “any talk of ‘balanced’ transportation in this area is a joke.” The Metro subway “enjoys a sacred status,” but I-66, the Three Sisters Bridge, the North-Central Freeway are “in serious trouble after years of delay” while the Northwest Freeway was dropped. “Everyone seems to forget that Metro runs on tracks and requires a complete road system to supplement and support it.”

Koch told Senator Mathias that the “well-publicized opposition of organized groups” had led to the “popular fallacy” that the public opposed freeways. This “completely false” impression may stem partly from the turnout at hearings. While the public “stays away in droves” and relies on the wisdom of its elected representatives, the hearings “are usually packed with objectors, who impress these same officials with their vehemence and create a completely false notion of a ‘popular mandate’ to do away with freeway planning.”

He illustrated “the monumental injustice of all this” by citing the example of the North-Central Freeway. When Representative Gude polled his constituents in mid-1971 on construction of the North-Central Freeway, 54 percent favored the freeway. The 1969 Quayle survey found that two-thirds of District residents favored the 1968 freeway system. “Obviously it is time for some statesmanlike action on the part of our elected officials to get the job done in spite of the obstructionists.”

In his letter to Chairman Kluczynski, Koch observed that he had chaired the Transportation Committee of the Bethesda-Chevy Chase Chamber of Commerce:

I have observed the steady deterioration of highway planning in this metropolis over the past ten years, thanks to a parade of Johnny-come-latelys in the NCPC and local governments, who have done a great job of cutting, slashing, changing, delaying, etc. The attrition continues today, with the D.C. City Council, DOT, HUD, EPA, and various courts all thwarting the people's needs and the will of Congress expressed in the 1968 Highway Act.

If we are to get the roads we so badly need here, only Congress can override the messy situation and get the job done. [pages 897-901, pages 1025-1026]

Dr. Leslie Logan of Arlingtonians for the Preservation of the Potomac Palisades, one of the litigants in the Three Sisters Bridge case, submitted a statement to the House Subcommittee on Roads later in the month. He urged repeal of Section 23 of the Federal-Aid Highway Act of 1968, although his primary concern was the Three Sisters Bridge. He questioned whether additional capacity was needed in view of recent traffic studies:

On May 19, 1971, there were no more commuters at the morning peak hour from Virginia to Washington than there were in 1964-65, despite population growth.

Aside from need, the Three Sisters Bridge “would destroy the beauty of the Potomac River gorge and adversely affect the national parklands along the Potomac River for several miles.” On a practical level, “it would be a large source of air and noise pollution.” Further, Section 23 and the bridge itself “are probably contrary to law,” as determined by the courts.

The statement pointed out that NPS Director Hartzog, in June 1965, had identified viable alternatives to the proposed bridge:

These alternatives include greater use of the bridges already built by reconstructing approaches and providing additional capacity on Chain Bridge and Key Bridge, widening George Washington parkway roadway from Spout Run to Theodore Roosevelt Bridge from four to six lanes, and providing connections between Highway 50 and Jefferson Davis Highway to facilitate the movement of traffic to the 14<sup>th</sup> Street bridges and points south.

He also pointed out the opposition to the bridge in Arlington County:

The bridge would not be consistent with Arlington's plans for the future; a bridge has two ends – it cannot be consistent with local planning on one side and not on the other. [pages 897-901, pages 1048-1050; Barnes, Fred, “3 Sisters Alternative Asked,” *The Evening Star*, April 20, 1972]

In addition, Douglas M. Parker of the law firm of Lankler and Parker provided a letter to Chairman Kluczynski on behalf of the Connecticut Avenue Association and the Committee Concerned for K Street. The groups opposed the location of the proposed North Leg of the Inner

Loop along K Street, NW. In response to Section 129 of the Federal-Aid Highway Act of 1970, the District of Columbia and Secretary Volpe had recommended an alignment along K Street. In doing so, however, they had “ignored the expressed view of Congress in this matter and failed to provide a sound basis for Congressional action.”

The 1968 ICE included a North Leg “in the vicinity of T and U Streets, N.W.” and that was the route specified in Section 23 of the Federal-Aid Highway Act of 1968. In the District’s Department of Highways and Traffic report dated January 12, 1970, the city rejected the alignment along T and U Streets:

At the same time, however, the report pointed out that a tunnel under K Street “would require serious business disruption during the construction period.” The District of Columbia City Council also received testimony on February 3, 1970, to the effect that (a) a tunnel under K Street could not serve as a traffic distributor; (b) the cost of a K Street tunnel would be prohibitive (c) [sic] the construction of a K Street tunnel would produce an enormous, perhaps fatal, amount of disruption to the business community in that area, and (d) a large number of families would be displaced by a K Street tunnel.

Parker wrote that the two organizations he represented presented this testimony to the city and that it “was not challenged by a single witness.”

Nevertheless, on February 17, 1970, the city council had recommended a tunnel under K, L, or M Streets. Further, the council’s report “stated that no route north of M Street was acceptable and that a tunnel connecting the E Street Expressway with Downtown was the only acceptable alternative to K, L, and M Streets.”

Quoting the House Report on the Federal-Aid Highway Act of 1970, Parker cited the call for “careful consideration” of the “potentially disastrous effects” that tunnel construction would have on K Street businesses. Section 129 of the legislation called for study of the North Leg of the Inner Loop and reports to Congress by the District and the Secretary regarding the project “including any recommended alternative routes or plans.”

Despite the expressed concerns, the District’s consultant recommended the K Street alignment for the North Leg and the city council endorsed the recommendation. Secretary Volpe concurred in part by stating that there should be “a connector facility along the K Street corridor” but expressing reservations “as to the type of facility.” He noted the cost and potential community disruption along the corridor, but “offered no plan as to how such problems might be overcome” beyond further consideration of alternatives such as “a surface improvement concept with or without grade separation.”

Parker concluded:

It appears that neither the consultants, the District of Columbia, nor the Secretary of Transportation have observed the Congressional mandate to explore fully all of the available alternatives. Accordingly, we submit, Congress should now reject the K Street

alignment in explicit terms and direct the further study of the remaining alternatives.[pages 1037-1038]

### **The 1972 House Bill**

On September 14, the Subcommittee on Roads approved a provision as part of the Federal-Aid Highway Act of 1972 (H.R. 16656) that would prohibit any court from halting construction of the Three Sisters Bridge:

#### Three Sisters Bridge

Sec. 139. No court shall have power or authority to issue any order or take any action which will in any way impede, delay, or halt the construction of the project described as estimate section termini B1-B2, and B2-B3 in the 1972 Estimate of the Cost of Completing the National System of Interstate and Defense Highways in the District of Columbia and as estimate section termini 02-03 in the 1972 Estimate of the Cost of Completing the National System of Interstate and Defense Highways in the Commonwealth of Virginia, in accordance with the prestressed concrete box girder, three-span design approved by the Fine Arts Commission, known as the Three Sisters Bridge. Nor shall any approval, authorization, finding, determination, or similar action taken or omitted by the Secretary, the head of any other Federal agency, the government of the District of Columbia, or any other agency of Government in carrying out any provisions of law relating to such Three Sisters Bridge be reviewable in any court. [H.R. 16656, 92d Congress, 2d Session, in the House of Representatives, September 14, 1972, pages 107-108]

The committee's report on September 25 explained that the history of the Three Sisters Bridge had been "one of intense emotion, countless years of planning and dispute, court action and literally millions of words in the press and other media." The committee, by enacting Section 23 of the Federal-Aid Highway Act of 1968, but "no one moved toward construction of the bridge until late in 1969," when "other circumstances produced a change in attitude and the bridge was started." Construction was halted by "endless court suits," resulting in Chief Justice Burger's explanation that the Supreme Court would not consider an appeal "solely out of considerations of timing." The Chief Justice noted that the Court of Appeals' decision "unjustifiably frustrated . . . the will of the Congress." In view of his opinion that Congress could act on the matter "even to the point of limiting or prohibiting judicial review of its directives." The committee was acting "accordingly." [Federal-Aid Highway Act of 1972, Committee on Public Works, U.S. House of Representatives, 92d Congress, 2d Session, Report No. 92-1443, September 25, 1972, page 17]

A spokesman for Chairman Kluczynski reaffirmed that role of Chief Justice Burger's invitation to congressional action:

Subcommittee sources said the measure is aimed at U.S. Court of Appeals Judge David Bazelon, who in ruling in favor of the citizen groups said that Volpe, in deciding to build the bridge, should not have considered the pressure of Natcher and other House members to force freeway construction in exchange for subway money.

Representative Schwengel had not been present for the vote on the provision but said at the time that he would attempt to block the measure when the full committee takes up the bill:

I'm disturbed that the subcommittee completely ignored the wishes of the people of the District. We treat them like foreigners. In every other area we have state highway commissions listening to what the local community wants. [Green, Stephen, "Amendment Would Halt Court Action on Bridge," *The Washington Post and Times Herald*, September 15, 1972]

Despite efforts by Representatives Schwengel and Abzug, the committee retained the provision in the final bill.

The bill's Section 140 also was related to the District freeway disputes:

#### District of Columbia

Sec. 140. None of the provisions of the Act entitled "An Act to provide a permanent system of highways in that part of the District of Columbia lying outside of cities", approved March 2, 1893 (27 Stat. 532), as amended, shall apply to any segment of the Interstate System within the District of Columbia.

The committee's report explained that:

This 79 year old Act is still applicable to the nation's capital today. At a time when a vast modern highway system has been developed throughout the nation, there is always the possibility in the District of Columbia that the application of this Act can in some manner impede the need to develop a modern highway program for Washington.

No city in the United States needs a full scale highway program greater than does Washington, D.C. to whom hundreds of thousands of tourists flock every year to visit its scenic and historic wonders.

The Committee feels that to allow such an Act the continuation of which might even remotely prevent the development of a full scale highway program for the nation's capital is a disservice to the city of Washington, to its citizens, and to the American public across the country, and for this reason urges it repeal in this section, with respect to the Interstate System only.

The report pointed out that, for example, the 1893 Act "prohibits the construction of a highway within the nation's capital at a width great than 160 ft."

As for the provisions in the 1968 and 1970 Federal-Aid Highway Acts, the committee stated, "The reports received by the Committee . . . have been deficient, and for this reason, the Committee now states that under Section 23(a) of the Federal-Aid Highway Act of the 1968, the entire Interstate System in the District of Columbia should be built forthwith." The exception was the South Leg of the Inner Loop, "on which recent hearings have been held by the District of Columbia which should produce a satisfactory plan for its construction." [page 18]

The bill also addressed the District Interstate controversies in Section 110 on “Federal-Aid Systems.” In recent years, Congress had tried to speed completion of the Interstate Construction Program by imposing deadlines for submitting PS&E for all remaining segments. If a State did not submit the documentation on time, the Secretary of Transportation was to remove Interstate designation for the segment. Section 110 extended the due date by 2 years to July 1, 1977. Committee members recognized that the deadline would give District officials an easy way to kill the city’s remaining Interstate segments by simply not submitting the documentation. Therefore, Section 110 exempted the District of Columbia from this provision. (The Senate included a similar provision in its version of the 1972 Act, but did not exempt the District of Columbia from the deadlines.) [page 32; Green, Stephen, “Amendment Would Halt Court Action on Bridge,” *The Washington Post and Times Herald*, September 15, 1972]

Secretary Volpe had written to Chairman Blatnik on September 18, before the committee vote, to say the Nixon Administration strongly opposed the provision on the Three Sisters Bridge. In general, Secretary Volpe said, the administration believed that congressional attempts to exempt individual projects from Federal requirements or court review “are not desirable.”

Further, “if the purpose . . . is to expedite the processing of the Three Sisters Bridge project, it is our opinion that it does not achieve that purpose.” Because “the provision is prospective,” Section 139 “would leave the existing court order standing.” Department of Transportation attorneys believed that “processing the Three Sisters Bridge without complying with the existing court order may lead to contempt proceedings against the secretary of Transportation [sic].” The committee, as the *Star* pointed out, ignored the letter in taking final action on the bill.

Martha Angle, reporting for the *Star*, pointed out that the committee received Secretary Volpe’s letter before voting on the bill, but “members apparently ignored his objections. A much more vigorous debate is likely when the measure reaches the House floor next week.” She added that even if the provisions related to District freeways survived the House debate, “they could be eliminated in conference with the Senate.” [Angle, Martha, “Volpe Scores House on 3 Sisters Action,” *The Washington Star-News*, September 23, 1972]

The bill also authorized Interstate construction funds through FY 1979 and approved use of the 1972 ICE for apportionment of funds in FYs 1974 and 1975. Secretary Volpe had submitted the ICE to Congress on December 29, 1971. The report stated that the previous ICE had estimated the total cost of the Interstate System would be \$69.870 billion (Federal share: \$62.5 billion). The 1972 estimate was \$76.3 billion (Federal share: \$68,26 billion), “without allowance for possible escalation in future program years.” As in past years, the difference in cost since the 1970 ICE could be attributed to Interstate additions and major adjustments, unit price changes, new legislation added increased emphasis on social considerations, added costs for preliminary engineering, right-of-way acquisition, and construction items.

[A Revised Estimate of the Cost of Completing the National System of Interstate and Defense Highways, Communication from the Secretary of Transportation Transmitting a Revised Estimate of the Cost of Completing the National System of Interstate and Defense Highways,

Pursuant to the provisions of Section 104(b)5, Title 23, United States Code, Committee on Public Works, U.S. House of Representatives, 92d Congress, 2d Session, Committee Print 92-29, February 1972, pages 13-14]

On September 25, 1972, the House Committee on Public Works released a report on its version of the Federal-Aid Highway Act of 1972.

Representatives Abzug, Schwengel, and Charles B. Rangel (D-NY) submitted additional views, totaling 11 pages, opposing both D.C.-related provisions:

We believe that local highway officials and local citizens should have the opportunity to be heard with regard to highway construction projects, and that they should also have the right to a day in court if they believe that such a project is in violation of law. To prevent them from having that say, and that day in court, as section 139 attempts to do, violates basic principles of American democracy and may be unconstitutional . . . .

In addition, we oppose section 140 of the bill, which we feel would wreak havoc with any further Interstate highway planning and construction in the Nation's Capital.

The bulk of their statement was divided into four lengthy segments:

I. SECTION 139 WOULD PERMIT AN INTERSTATE HIGHWAY IN VIRGINIA AND FEDERAL-AID HIGHWAYS THERE AND ELSEWHERE TO BE CONSTRUCTION UNLAWFULLY

Although the District of Columbia has a unique status under the Constitution, the Commonwealth of Virginia was a sovereign State. Congress might have the authority to direct construction of the Three Sisters Bridge in the District, but had never exercised such authority in Virginia or any other State. "The citizens of Virginia and the other States, acting through their duly authorized officials, have had authority to decide whether, where and in what manner Interstate highways should be construction." By ordering the District to build the Three Sisters Bridge, which touched down in Virginia, Section 139 would deprive Virginia's citizens of that authority, thereby creating "a dangerous precedent" for the Federal-aid highway program.

The prohibition of judicial review went even further, but was unclear as to exactly which elements of Title 23, United States Code, or related laws, such as NEPA, would not have to be satisfied because citizens could not go to court based on noncompliance. "We do not know the answers to these questions, for section 139 does not tell us."

Further, the Constitution provided for a court system, headed by the Supreme Court. The three Representatives had "serious doubt as to the constitutionality" of Section 139, which deprived citizens of their right to due process of law in the courts.

II. SECTION 139 UNWISELY AND UNNECESSARILY INTERFERES IN A LOCAL HIGHWAY CONTROVERSY IN THE DISTRICT OF COLUMBIA AND NORTHERN VIRGINIA

Of Section 23 of the Federal-Aid Highway Act of 1968, the Representatives said, “No legislation has evoked a more anguished or unanimous cry of protest from the people in the Nation’s Capital.” Opposition to the provision was widespread and intense “both within the District and throughout the country,” with President Johnson referring to it as “the most objectionable feature in this bill” and “inconsistent with a basic tenet of sound urban development – to permit the local government and the people affected to participate meaningfully in planning their transportation system.” The Representatives quoted extensively from President Johnson’s statement on why he signed the legislation, including his point that he did so only because Section 23 called for construction in accordance with Federal highway law.

They described the history of court cases involving the Three Sisters Bridge. “Some have said that the U.S. Court of Appeals’ decision ‘defied’ the will of Congress. That is not correct.” Section 23 directed construction of the bridge “in compliance with all applicable provisions” of Federal-aid law. Evidence revealed during the litigation demonstrated that Federal and local officials acting “under extreme pressure by-passed procedural requirements and ignored substantive protections which had been imposed by Congress,” citing Representative Natcher and the Metro funding. Far from defying the will of Congress, the court “was directing that the will of Congress be obeyed as written.”

The courts had correctly raised questions about the safety of the proposed design of the Three Sisters Bridge. They quoted from Administrator Turner’s March 1970 memorandum stating that the unconventional design and the lack of experience with it in the United States “make the undertaking extremely hazardous and fraught with danger.” They referenced the test of the scale model, citing the report that it had been broken before testing began. They did not believe Congress should mandate construction of a bridge in the Nation’s Capital that was “extremely hazardous and fraught with danger.”

### III. THE THREE SISTERS BRIDGE AND OTHER FREEWAYS IN THE DISTRICT OF COLUMBIA ARE OPPOSED BY THE COMMUNITY

The Committee on Public Works had not held hearings on Sections 139 or 140. In fact, the committee had not held hearings on the District freeway impasse since April 1968. During hearings on the Federal-Aid Highway Act of 1972, only one witness, representing the Citizens Association of Georgetown, had testified on the subject and he had urged repeal of Section 23 of the 1968 Act:

The singular and overriding fact that emerged from this committee’s hearings in April, 1968 was the unanimity of civic opposition to the present District of Columbia highway program. Never in the history of this committee has there been such an outpouring of civic protest against a highway program.

The Representatives listed the many groups opposing the measures and recounted the history of protests, beginning with opposition “in Northwest Washington where proposals to destroy Rock Creek Park, Glover-Archbold Park, and Northwest residential neighborhoods evoked unanimous opposition from civic groups in that area.”

In recent years, they said, opposition had centered on the Three Sisters Bridge. They cited the informal referendum in November 1969 during which 84 percent of voters opposed the bridge.

The Representatives concluded their summary of the history of opposition to the freeway network by writing:

The Interstate highway program embodied in section 23 of the Federal-Aid Highway Act of 1968, and particularly the Three Sisters Bridge, has no community support. Without that community support, the Congress should not further interfere in the highway controversy in the District and northern Virginia by enacting section 139 of H.R. 16656.

#### IV. SECTION 140 WOULD WREAK HAVOC WITH ANY FURTHER INTERSTATE HIGHWAY PLANNING AND CONSTRUCTION IN THE DISTRICT OF COLUMBIA

In repealing the District of Columbia Highway Act of 1893, as amended, for Interstate highways, Section 140 “does not contain anything to replace these provisions, thereby leaving a total void in District laws relating to planning and construction of Interstate highways.” Section 140 “would sweep away all these provisions with respect to Interstate highways – public hearings for affected property owners; public notice to affected property owners from detailed maps and plans; the right of property owners to use their property until condemnation begins.” The Representatives compared this action with repeal of statutes in Iowa, New York, or Oklahoma. “It takes little imagination to foresee that the result will be utter chaos in planning, approving and constructing Interstate highways in Washington, D.C.”

They acknowledged complaints by some Members of Congress about the District’s failure to complete its Interstate mileage. They pointed out, however, that many segments, including the Three Sisters Bridge, “appear to be misconceived.” Some may not be, but Section 140 was “an open invitation to the District government to plan nothing, approve nothing and construct nothing in the foreseeable future.” The provision led to many unanswered questions, such as who was responsible for planning highways in the District of Columbia, were public hearings necessary and, if so, who should hold them, are public notices necessary for Interstate highways, can District officials trespass on private property for survey purposes? “Even those not intimately familiar with the conduct of District government affairs can confidently predict that several years could be consumed in attempting to find answers to those questions.”

The Committee on Public Works “is obviously not equipped by jurisdiction or experience to review and, if necessary, revise the District of Columbia’s highway laws.” Repealing the 1893 District highway law “would be foolhardy and fruitless . . . without replacing them and providing the best possible framework for informed local decision-making.”

In conclusion, they pointed out that Section 139 was “an awkward attempt to assure construction of a project that is overwhelmingly opposed by the communities on both sides of the Potomac River. And by abolishing the District’s highway laws in relation to the Interstate System, Section 140 “would have chaotic consequences for the Nation’s Capital. Both sections “should be deleted from the bill.” [pages 83-93]

With the House preparing to debate the bill, Secretary Volpe released a statement on October 3 covering many of its provisions. Among other views, Secretary Volpe favored a provision that eliminated mileage restrictions on Interstate segments chosen to replace those deleted from the System. He also favored the Muskie-Cooper amendment that would allow funds from a deleted Interstate segment to be shifted to the Federal-aid urban system where they could be used for non-Interstate projects, including rail rapid transit. The provision was not in the House committee bill, but Representative John B. Anderson (R-Il.), Secretary Volpe pointed out, would introduce “a similar amendment providing \$700 million to the Highway Bill.”

He recommended deletion of both provisions on District freeways.

On October 4, a *Post* editorial opposed the Section 139 prohibition on court action regarding the Three Sisters Bridge. The editorial began:

Three Sisters Bridge, the bridge that isn't there but will not go away, is back. And it is back in the worst of all places, on Capitol Hill – more precisely, in the highway bill which has just emerged from the House Public Works Committee.

This was the same committee that, as “bridge-fight aficionados will recall,” had crafted “the peremptory 1968 law” ordering construction of the bridge. It was now “trying again to ram those lanes of freeway across the Potomac between Georgetown and Arlington, by simply bulldozing aside whatever happens to be in the way – including the federal courts, a few federal laws, the Nixon administration, the District government, and the possibility that the area’s transportation needs have changed.”

Virtually everyone else had accepted the ruling by the U.S. Court of Appeals, including the Supreme Court. “But now the Public Works Committee has blasted the interval of calm in a most disruptive, mischievous way, intent on turning back the clock to 1968.” After listing the provisions, the editorial summarized them:

In other words, no more public hearings, no more detailed reviews, no reconsideration on the merits, no enforcement of environmental protection laws, no due process for citizens with legitimate grievances and constitutional rights. Damn the torpedoes, damn the courts, and build the bridge.

The action that the committee was taking reflected the “highly injudicious and gratuitous suggestion by Chief Justice Burger.” Congress had the right to do so, “But the wisest thing for Congress to do about the Three Sisters Bridge would be nothing at all.” Instead, the House had stirred the issue up again. The editorial hoped that the eventual House-Senate conference committee would “bestir themselves to delete this objectionable provision from the highway bill.” [“The Bridge That Isn’t There—Again,” *The Washington Post and Times Herald*, October 4, 1972]

During the October 5 consideration of the bill on the House floor, Representative Abzug introduced an amendment striking Section 139 from the bill. She said that “even if the bridge is

the greatest thing that could happen for transportation in this area,” she opposed the provision because it created an exception to NEPA and deprived citizens of the United States “of their right to have access to the courts for redress of their legal grievances.” She cited the many organizations, including the *Post*, that had called for deletion of the provision:

The project has not complied with the law in numerous respects, there is doubt as to whether it is safe, and is opposed by the community. I urge the adoption of my amendment to delete section 139 from this bill.

Representative Broyhill confused the situation by offering “a perfecting amendment” that would add a section (b) stating that:

This section shall take effect upon the final determination of the route of Interstate Highway I-66 from its present terminus in Virginia at I-495 to its connection with a bridge or bridges (presently constructed or to be constructed) across the Potomac River.

The confusion stemmed from whether he was amending Representative Abzug’s amendment of Section 139. Representative Broyhill clarified that he was amending the provision, Section 139, that Representative Abzug was trying to strike from the bill. He said he favored I-66 as well as the Three Sisters Bridge, as did his constituents.

Minority Leader Ford agreed that the language in the bill was strong, but pointed out that “the language has come at the suggestion of a per curiam decision or memorandum from the Chief Justice of the Supreme Court of the United States.” Representative Ford read the statement into the record, then explained that the provision in the 1972 Act was a direct result of the Chief Justice’s suggestion and that the Chief Justice “fully concurs in the proposal by inference, if not directly, in this bill.”

Chairman Natcher spoke in opposition to Representative Abzug’s amendment. After inserting into the record another lengthy recounting of his efforts to achieve a balanced transportation system for the city, he concluded:

The provision set forth above concerning the bridge complies fully with the suggestion made by Chief Justice Burger of the Supreme Court. The amendment should be voted down and the provision in the bill pertaining to the Three Sisters Bridge project and the District of Columbia projects sustained.

Representative Gude, a cosponsor of the Abzug amendment, said “Section 139 must be removed from this legislation.” The question was not support or opposition to the bridge:

Supporters of this amendment are on both sides of that issue. Along these lines I might point out that enactment of this section might well mark the opening of a whole new round of legal actions which could well cause not only great confusion but as a result, further impede the orderly review and construction processes already established. Adoption of this section could well further delay, rather than hasten construction of the Three Sisters Bridge.

He also was concerned that Section 139, if approved, would set “a very clear precedent for future back-door attacks on the carefully constructed processes established by NEPA and enforced by the courts.”

He cited opposition to the bridge and the provision from “virtually every citizen’s association, and conservation organization in the area, as well as from many national conservation groups.” He also quoted from Secretary Volpe’s letter to Chairman Blatnik.

District Delegate Fauntroy spoke in support of the Abzug amendment. Regardless of the merits of the Three Sisters Bridge, Section 139 “would be a blatant denial of basic civil liberties and a corruption of the American political system.” Congress had established Title 23 and other laws that applied to all Federal-aid projects. “Why should not the citizens of the community have an input into the policy determinations that give rise to this sort of project?”

Section 139, he said, would have these negative impacts but “it does not build the bridge. It is prospective. It addresses itself to events that will occur in the future.” As Secretary Volpe had said in his letter, “the section is inapplicable to any preexisting court decision.” Delegate Fauntroy closed his statement by quoting an editorial on WTOP radio:

Barring citizens from asking for redress in the courts, even though their own taxes and their own communities are at stake, would be a corruption of the American system. No bridge – not even the Three Sisters – is so important.

Minority Leader Ford pointed out that the bridge had been in controversy for 6 years. In 1968, after 2 years, Congress said, in essence, “That is enough.” Four years later, “there have been repetitive legal actions taken to stymie the intent of the Congress, culminating in a decision by the Supreme Court in which we had the words of the Chief Justice giving us some guidance as to what we could do to get the bridge built.” He again quoted the Chief Justice’s language, then said, “The Court is telling us we should do something of this kind, as reflected in this section, in order to stop the kind of litigation which has frustrated the Congress and the people of this area for better than 6 years.”

Representative Abzug responded to Minority Leader Ford by saying that after listening to the views of her colleagues, “I am more convinced than ever that this is one of the most scandalous provisions I have ever seen in a piece of legislation.” The principle that citizens could be stripped of their right to petition the courts “does not affect only the Three Sisters Bridge area; the principle affects every single place in the country.”

She also responded directly to Representative Ford:

So far as the comments of Chief Justice Burger are concerned – by the way, they were purely an aside and certainly do not have the force of law – this provision goes way beyond even what he said. Even though he is a judge, his comments may have been injudicious. He did not suggest that we should restrain or should prevent any citizen from doing anything at all as to the enforcement of any provision of law relating to the Three

Sisters Bridge. He did not say we should make it unreviewable by any court. Members are distorting it by constantly saying that is what the Chief Justice said.

In any case, his statement is not a part of the law, and it was not a part of the decision. In fact, the decision sustained the lower [court], which had ruled that the bridge could not be built unless certain conditions were remedied. We must recognize that what is involved here is a complete denial of due process to any citizen who pays taxes in this area or in every other area of this country, and no responsible body, no legislature, could possibly agree to that and believe any words in the Constitution.

She also urged the House to reject Representative Broyhill's amendment to Section 139.

Representative Broyhill again sought to clarify that if the House adopted the Abzug Amendment, but then approved his amendment, Section 139 would be reinstated.

Regardless of the clarification, the House rejected the Broyhill Amendment to Section 139, without a recorded vote. The House then rejected the Abzug amendment, 125 ayes to 173 noes. [Providing for Consideration of H.R. 16656, Federal-Aid Highway Act of 1972, *Congressional Record-House*, October 5, 1972, p. 34130-34141]

Representative Anderson introduced his amendment to incorporate the Senate's Muskie-Cooper amendment allowing cities to transfer Federal-aid urban funds, including funds from deleted Interstate segments that would be transferred to the urban account, for transit, including rail rapid transit. With help from Minority Leader Ford, nearly two-thirds of Republicans opposed the measure, despite President Nixon's support for it. As Ford explained, the measure broke faith with highway users who paid taxes into the Highway Trust Fund for highway purposes only. Moreover, the proposal was a camel's-nose-under-the-tent. "Make one exception and the floodgates will be opened. Do this and someone will say, let's divert funds from the airport trust fund." [page 34069]

The House killed the provision by refusing to consider it when the House parliamentarian ruled that the amendment was not in order. The House voted 200 to 168 not to waive the point of order, thus not voting on the amendment itself but killing it nonetheless.

The House went on to approve the Federal-Aid Highway Act of 1972, including Section 139 (renumbered 140) and 140 (now 141).

### **The 1972 Senate Bill**

The Senate had approved its version of the Federal-Aid Highway Act on September 19, 1972. It did not contain any provisions related directly to the District of Columbia freeways. However, it did contain several controversial provisions that could affect the District. The approved Senate bill included the controversial Muskie-Cooper provision authorizing local officials to use urban system funds for mass transit, including rail transit. The bill also included a measure, promoted by Massachusetts Governor Sargent and Secretary Altshuler, for eliminating urban interstate segments without losing the money that came with them. According to the measure, at the request of a Governor and the local officials concerned, the Secretary could withdraw the

segment from the interstate system and transfer the funds intended for its construction to the urban system. The funds then, under the Muskie-Cooper provision, could be used for any highway or transit project eligible under the category.

In addition, if local governments in an urbanized area established a metropolitan transportation agency with authority to develop and implement transportation plans, the State was to “pass through” the urban system funds attributed to that area based on population for use by the agency in accordance with the 3C planning process.

The Senate bill also contained a highly controversial provision that worried opponents of the remaining District Interstate freeways. Section 147 of the Senate committee bill authorized termination of Federal-aid status for the project to build the U.S. 281/North Expressway through Brackenridge-Olmos Basin Parklands in San Antonio. The State had begun the project with Federal-aid funds, but was blocked by a June 1971 ruling by the U.S. Court of Appeals in New Orleans that required the project to meet the new environmental requirements, including Section 4(f). Texas and San Antonio officials had proposed to proceed without Federal-aid highway funds, but the court declared that the project had proceeded beyond the point of no return on Federal-aid status.

Senator Lloyd Bentsen (D-Tx.), a member of the Committee on Public Works, and Senator John Tower (R-Tx) proposed the measure to remove Federal-aid status from the freeway so it could be built without complying with Section 4(f) or other inhibiting Federal laws and regulations. Senator James L. Buckley (Conservative Party, NY), a chief opponent of their amendment, was one of four Senators who had voted against the amendment in committee. He said at the time that he believed Congress “should not become involved in weighing the pros and cons” of such disputes. “This has occurred once in the past, in the case of the Three Sisters Bridge in Washington, D.C., with unfortunate consequences.” As Fred Barnes explained in the *Star*:

The North Expressway case is similar in some respects to the two most publicized highway disputes in the Washington area, those involving the Three Sisters Bridge and Interstate Route 66.

In the 1970 highway bill, Congress ordered that construction of the bridge should begin within 30 days. Construction did begin, but it was later halted by a court order. Whether the Three Sisters Bridge will ever be built is unclear today.

“If Congress establishes the president [sic] of exempting specific projects from federal laws,” Buckley said, “the usefulness of those laws will be whittled away.” [Barnes, Fred, “Freeway Foes See Texas Precedent,” *The Evening Star and Daily News*, August 29, 1972]

During Senate debate on the bill, Section 147 was one of the most controversial provisions, but on September 13, 1972, the Senate defeated the Buckley amendment to delete Section 147, by a vote of 24 ayes to 49 noes.

As the House and Senate designated members to participate in the conference committee to resolve differences between the two bills, leaders of the House Committee on Public Works were

determined to delete any Senate provision that would allow the use of Highway Trust Fund revenue for nonhighway transit.

(For a detailed account of the history of the Federal-Aid Highway Act of 1972, including the debate on the San Antonio provision, see “Busting the Trust: Unravelling the Highway Trust Fund 1968-1978” on this Web site.)

### **The Conference Goes Down to the Wire**

With the House determined to hold its ground on the integrity of the Highway Trust Fund, and the Senate determined to “bust the trust” for rail rapid transit, the conference discussions were among the most contentious participants could recall. While conferees grew increasingly frustrated with each other’s refusal to compromise, developments continued outside the Congress.

*The Baltimore Sun* had reported that the Maryland Department of Transportation had begun on August 3, 1972, to study alternatives to construction of the I-95 extension through Prince George’s County to the District line. The department had formed a Study Steering Committee consisting of 60 citizens, elected officials, business and environmental groups, and agency representatives. The committee was using \$600,000 in Federal and State funds to finance the study.

Hal Kassoff, who was directing the study for MSHA, said:

It is the first study to consolidate highways and transit together, and it is a departure in terms of making an intensive effort to involve the community in a fair way.

He said the alternatives to be studied included “the possibility of building I-95, but range beyond it to transit improvements,” as well as not building I-95. He predicted that the study would be completed in the spring 1973.

He added that planning for the 6-mile extension of I-95 had been halted after the District’s city council and Mayor Washington recommended that the I-95 extension from New York Avenue to the Maryland line not be built. [“Road Unit Opens Study on I-95,” *The Baltimore Sun*, August 3, 1972]

On the day the House voted for its version of the Federal-Aid Highway Act of 1972, the *Sun* reported that the Maryland Department of Transportation was “quietly planning a system of highway segments to substitute for controversial interstate highways” in the Baltimore and Washington areas. In an interview, Secretary Hughes said the main reason for devising alternative routes was to retain the more than \$800 million authorized for the controversial current routings. The routes in doubt were I-70S and I-95 inside the Capital Beltway, totaling 8.5 miles, and much of the Baltimore area’s remaining 22.5 mile expressway system.

If these routes were not built, the State would lose the funds unless it had alternative segments ready for Interstate designation:

Mr. Hughes said that a 5-mile section of Route 46 from I-95 to Friendship Airport, a 19-mile segment of the Arundel expressway from the Baltimore Beltway to Route 50 outside Annapolis and a 20-mile segment of Route 50 itself from Washington to Annapolis were among the proposals his department was considering to qualify for federal interstate funds . . . .

“It looks like I-70S is not going to go,” the transportation secretary said yesterday, with regard to the first of the three controversial highways. “It represents \$100 million in interstate funds. We could do a lot with that. We could build the whole Arundel expressway.”

The second disputed road, I-95 into Washington, is the subject of a study that is unique in Maryland transportation planning . . . . [It] will determine whether a road, a rail line or nothing should be built in the corridor. [Dilts, James D., “Substitute Highways Being Planned by State to Preserve U.S. Road Funds,” *The Baltimore Sun*, October 5, 1972]

On October 10, WMATA entered the bond market, offering \$225 million in bonds at an interest rate of 7.3 percent. Merrill Lynch, Pierce, Fenner and Smith, heading the underwriters, reported the public sale, but found the public reception cooler than expected. Investors apparently wanted a return between 7.4 and 7.45 percent. [Jones, William H., “Investors Shy Away from Metro Bonds,” *The Washington Post and Times Herald*, October 12, 1972]

On October 13, local newspapers reported that House-Senate conferees were close to agreeing on the Federal-Aid Highway Act of 1972. The main issue was the Muskie-Cooper amendment opening the Highway Trust Fund to rail rapid transit. Chairman Kluczynski offered a compromise. If Senate conferees would drop the Muskie-Cooper amendment, House conferees would not only support a provision introduced by Senator Harrison Williams providing \$8 billion over 3 years for transit from the general Treasury, but would increase it.

That was the main obstacle to agreement, but the provision on the Three Sisters Bridge also was an obstacle. “Senate conferees,” the *Star* reported, “are prepared to see the entire highway bill go down the drain this year rather than yield to the House on several crucial issues, including the bridge.” [Angle, Martha, “3 Sisters Bridge Issue Stalls Highway Bill,” *The Washington Star-News*, October 13, 1972; Braestrup, Peter, “Hill Nears Agreement On Road Act,” *The Washington Post and Times Herald*, October 13, 1972]

The conferees were working against a deadline of October 18 when Congress would adjourn so all Representatives and one-third of the Senators could join the presidential candidates on the campaign trail for the November election. Despite predictions that the conference would break down, conferees reached surprise agreement on October 18. They agreed on a 1-year extension of the Federal-aid highway and safety programs to prevent States from running out of Federal-aid highway funds while the 93rd Congress addressed the controversial issues the conferees could not resolve. To please the House conferees, the bill dropped the Senate provision allowing use of urban system funds for rail rapid transit. To please the Senators, the bill dropped the House’s priority primary system funds, which many considered an extension of the Interstate System, but directed the Secretary to study the matter and report to Congress.

The Interstate withdrawal and substitution provision of the Senate bill that allowed remaining funds to be transferred to the urban system did not survive the conference. However, the bill included \$3 billion for the UMTA capital program, with a Federal share of 80 percent, and \$100 million for operating subsidies the first year plus \$300 million the following year, all out of the general Treasury. The Highway Trust Fund was not breached, but the Nixon Administration had made clear it would veto any bill that funded operating subsidies. [The conference report can be found at *Congressional Record-House*, October 18, 1972, pages 37115-37133]

The provision on the Three Sisters Bridge had been dropped but the exemption of the District's Interstate System from the 1893 District law, as amended, survived into the final bill, as did the provision allowing Texas to repay Federal-aid funds used on San Antonio's North Expressway so construction could begin as a State-funded project.

The Senate approved the bill by voice vote that evening before adjourning for the year.

In the House, consideration of the Federal-aid bill was interrupted for a vote on another bill.

When debate returned to the Federal-Aid Highway Act of 1972, Representative Myers raised a point of order that a quorum was not present. When a roll call was ordered, only 156 Members of the House were present. In the absence of a quorum, Speaker Albert adjourned the House *sine die*, without completing action on the Federal-Aid Highway Act of 1972. The legislation was dead. [*Congressional Record-House*, October 18, 1972, pages 37199-37200]

Representative Myers did not explain his action at the time or in coming days. The *Post* reported:

Myers was unreachable last night. But Republican House sources said he was angry because the bill no longer contained a House-passed provision barring any court interference with construction of the Three Sisters bridge, now stalled by environmental lawsuits.

House Minority Leader Gerald Ford (R-Mich.) later said he had no part in instigating the Myers move. Other GOP members said White House lobbyists had no hand in it.

However, several administration lobbyists spoke earlier in the day of trying to persuade a congressman or senator to kill the measure, to save the President from a politically painful veto aimed at the mass transit subsidies provision. [Braestrup, Peter, "Highway Bill Dies in Congress," *The Washington Post and Times Herald*, October 19, 1972]

This explanation appeared likely because Republicans had refused to respond to the roll call, thus killing the bill.

(Representative Myers had not addressed the House during debate on the Abzug amendment, but supported the Three Sisters Bridge during debate earlier in the year on the District of Columbia Appropriations Act, 1973. He voted against Representative Abzug's measure.)

Despite these developments, the U.S. Department of Transportation was still considering the Three Sisters Bridge in response to Section 23 of the Federal-Aid Highway Act of 1968.

Assistant Secretary Hirten confirmed that the study was underway, but added that Secretary Volpe had not yet decided whether to proceed with the project as part of the Interstate System.

Jack Eisen wrote:

The highway bill died in the final days of Congress last week in a disagreement between House and Senate conferees over Three Sisters [sic] and the use of highway money to finance rapid transit nationally.

Hirten said the potential schedule for Three Sisters construction is part of an effort to resolve the fate of all pending freeway projects in the nation's capital. "We're trying not to the prejudice [Volpe's decision], but to coordinate," Hirten asserted.

If Volpe approves the bridge project in the coming several weeks, Hirten said it would be reviewed by a committee on historic preservation in December. Public hearings on the location and design of the bridge would be held in January. The National Capital Planning Commission, now officially opposed to the bridge, would review the plans in March.

That would permit the award of a construction contract by August and the opening of the bridge to traffic early in 1975, Hirten said. [Eisen, Jack, "Three Sisters Span is Still Considered by Federal Agency," *The Washington Post and Times Herald*, October 24, 1972]

According to an editorial in the *Star*, this report of Department of Transportation activity "created about as much stir around here as a pebble tossed into the Atlantic, for understandable reasons." Nevertheless, the editors hoped that reports that Secretary Volpe would soon make a decision were true. "If such efforts by DOT and other agencies lead only to further obstructions, and more unconscionable delay, no one will have to wait long to find out." President Nixon had "on numerous occasions" supported the bridge. "It is time those pledges were honored."

Moreover, Secretary Volpe's decision would affect more than the Three Sisters Bridge:

No final resolution of a Georgetown waterfront redevelopment plan can be reached, for example, until the fate of the bridge is decided once and for all. Nor can the Interior Department's Palisades Parkway finally be designed. And those plans, in turn, involve the reconstruction of the C&O Canal, which ought to proceed as rapidly as possible.

Whatever the decision would be, "the administration's clear responsibility is to end the stalemate." ["Volpe and the Bridge," *The Washington Star-News*, October 23, 1972]

Whatever Secretary Volpe might decide, anti-highway leaders were certain that the House Committee on Public Works would continue their efforts to force the District to build the bridge in the 93<sup>rd</sup> Congress. Peter Craig told reporters, "The bridge has utterly no justification," arguing that every study in the past 15 years demonstrated that it was not needed. Sammie Abbott said:

We view the House action on the highway bill as the handwriting on the wall for the highway lobby. The use of the Highway bill for mass transit funding is a certainty for the next session. [Griffin, James, "3 Sisters Span Left in Limbo," *The Washington Star-News*, October 19, 1972]

## **Problems Building**

Secretary Volpe was in Lexington, Virginia, on October 26 to address the 25<sup>th</sup> Annual Virginia Highway Conference. Jack Eisen reported:

Before making his formal speech, Volpe told some of the road builders who infiltrated a press conference that it would be to their benefit to support the transit plan.

“The fewer miles of expensive urban highway you build,” Volpe asserted, “the more miles of less expensive rural highways you will get.”

If more money had been spent in past years on transit in the Washington area, Volpe said, it may have been unnecessary to spend \$56 million on the complex “mixing bowl” interchange on Shirley Highway (Int. 95) near the Pentagon.

In his speech, Secretary Volpe defended the plan to open the Highway Trust Fund to transit. Governor Holton, the next speaker, altered his prepared speech to endorse Secretary Volpe’s comments. The governor said that using highway funds for transit “may one day soon be the prevailing view. He challenged the road builders “to use your considerable influence to get a better balance” between the private automobile and public transit.

Commissioner Fugate also addressed the group, but avoided the controversial topic of highways versus transit. Instead, he pointed out that Virginia would be one of the hardest hit States if, contrary to expectations, Congress did not complete work on a new Federal-Aid Highway Act before the start of FY 1974 on July 1, 1973. Virginia was using Federal-aid highway funds as fast as they became available, and did not have a cushion to sustain the program if funds were cut off on July 1. [Eisen, Jack, “Change In Road Aid Seen,” *The Washington Post and Times Herald*, October 27, 1972]

Fugate was well respected in highway circles. As president of AASHO in 1970, he had testified before the House and Senate Committees on Public Works as they prepared the Federal-Aid Highway Act of 1970. In Virginia, however, his reputation depended on which part of the State was polled, as reflected in this *Post* headline of a Fugate profile on October 19, 1972:

### **Fugate is Ogre in Northern Virginia But a Hero Elsewhere in the State**

The profile began:

In the Virginia suburbs of Washington, where major state officials from distant Richmond are rarely seen, heard or recognized, Highway Commissioner Douglas B. Fugate has become something of a celebrity.

A “Douglas B. Fugate Balloon-Busting Contest” at a recent Earth Day festival drew hundreds of Arlington residents eagerly aiming darts at bright-colored symbols of the commissioner and the proposed I-66 highway he wants to build through their neighborhoods.

A Reston newspaper suggested:

He – and someone should remind him of this after getting his attention with a two-by-four – is a public servant, not a dictator of public policies.

At 66, “the short, wiry civil engineer” had been with the highway agency since 1927 and had no plan to retire:

The drive and impatience that have made him one of the most active and successful highway officials in the country have at times only worsened his relations with environmentalists and elected officials north of Richmond. The idea of not building a road seems foreign to him.

In Emilia Govan’s opinion, his popularity in other parts of the State had produced “a habit in him of doing whatever he feels like doing, without anybody stopping him.”

FHWA’s top Virginia official, Harold King, praised Fugate for having one of the best records in the country for immediate use of available funds. This rapid response to funds was one of the reasons for his lack of popularity in northern Virginia, at least among those who oppose Interstate highways and believe rail rapid transit and exclusive bus lanes were the answer to the area’s traffic congestion:

When Fugate pushed for a beginning of work on I-66, I-266, and I-595 in Northern Virginia, the antihighway ranks solidified. When, despite a court order blocking construction of I-66 in Arlington, Fugate announced plans to go ahead with an adjoining two-mile strip in Fairfax, antihighway groups sprang up in Fairfax and Falls Church. When Fugate suggested closing the highly successful exclusive bus lanes on I-95, local bus commuters became apoplectic.

Fugate has since backed off from his earlier stands on the two-mile section of I-66 and the I-95 bus lanes, but he maintains that in the case of I-66, first planned in 1958, “if we’d had the money and built it 10 years ago when we had the present plan, there would have been no opposition.”

The *Post* quoted from the “much-heralded speech” in Arlington during which he came down on critics, saying they were “bent on obstruction for the sake of obstruction alone,” among several choice critiques. Mrs. Govan said, “I get the feeling that he’s enjoying the battle with us, that he’s relishing it.” [Mathews, Jay, “Fugate is Ogre in Northern Virginia But a Hero Elsewhere in the State,” *The Washington Post and Times Herald*, October 19, 1972]

Earlier in the year, WMATA was told that construction of Metro in the I-66 right-of-way would be less costly if the freeway were not built. In July, Fugate dashed WMATA’s hopes. In an interview with Jack Eisen, Fugate explained that the State had condemned the land for the right-of-way by certifying that it was needed for highway purposes. A State law was then approved allowing construction of Metro in the median of I-66. “If there is no highway,” Fugate told Eisen, “there is no median . . . . As I interpret the law, I don’t see how we could use the property for transit . . . . It would require a pretty drastic change in the law.” He added that the law

requires that if the State did not use the right-of-way for I-66, it should be sold back to its original owners.

WMATA officials had hoped to begin construction of the line in 1974, with trains beginning to run in 1977. The delay caused by the court order blocking advance of I-66 made that schedule unlikely. Deputy General Manager Quenstedt, having discussed the matter with Fugate, told Eisen, "What this seemed to do is to lock our construction schedule into the fate of I-66. Of course, if the decision ultimately is made not to build the road, then we would promptly file our own condemnation papers." WMATA could not do so as long as the State owned the right-of-way. [Eisen, Jack, "Va. Metro Path Hits Blockage," *The Washington Post and Times Herald*, July 23, 1972]

On November 30, WMATA asked Virginia Attorney General Andrew P. Miller if Metro could be built in the median of proposed I-66 while the project was in the courts:

The action by the Washington Metropolitan Area Transit Authority yesterday followed the disclosure that Joseph L. Fisher, board chairman, has urged Virginia Gov. Linwood Holton to ask the General Assembly to pass special legislation during the next session to permit Metro to build its line along the six miles of uncompleted I-66.

With I-66 under court-ordered studies that could take up to 18 months, Metro was concerned "that the delays in constructing the highway also may delay the proposed opening of the Metro system in April 1977."

The *Post*, reporting on these developments, added that "at least one ecology group," ACT, supported Metro's proposal to begin construction regardless of the fate of I-66. Mrs. Govan said that ACT supported Metro construction despite the court fight over the highway. [Griffin, James, "Metro Requests Ruling on Rail Line on I-66 Site," *The Washington Star-News*, December 1, 1972]

WMATA had other problems to address. In early November, WMATA had revised its schedule for Metro service. It still intended to open the initial 4.5-mile section in downtown by December 1974 and to complete the 98-mile system in December 1979, as previously announced. However, service on suburban lines was now to be delayed by up to 2 years, as Eisen summarized:

Train service to Takoma Park has been put back from 1974 until 1976; to the Bethesda area from 1976 until 1978; to Alexandria and to the New Carrollton area of Prince George's County from 1975 until 1977, and to the Falls Church area from 1976 until 1977 . . . .

A new construction and operations schedule has been anticipated for two years, but the extent of some changes surprised Metro board members.

The delays were blamed on "past financial problems, construction strikes, flooding of work sites during tropical storm Agnes in June, and both past and present planning and land-acquisition problems." Disagreements with local jurisdictions on stations and routes also

delayed plans. As one Metro official told the *Star*'s James Griffin, "They're trying to re-invent the wheel":

Sixty of Metro's planned 98 miles of track and half its 86 stations will be in Virginia and Maryland. Route alignment hearings, station design hearings, "impact reviews," formal and informal, are cropping up all over the place, and for many suburbanites they are like too-early blooms in a spring that was thought of as far away.

And always, the casual observer can hear, "Fine, fine, but not in my backyard."

Griffin found that race was one of the factors delaying the suburban lines:

All of this has much to do with Metro, despite official pronouncements that questions of race do not enter into this oft-touted largest construction project the world has ever seen. Indications so far are that Metro will merely reinforce the situation which exists today –

with a more than 70 percent black population in the District and the only exodus going to Prince Georges County which has substantially lower-cost housing than either Montgomery County or those of northern Virginia.

"The suburbs will say to the blacks, in effect, that blacks can get out here easily enough via Metro, so you don't really have to live out here," says one northern Virginia official. "It may perpetuate the ghetto situation."

The officials pointed out that it was unlikely many blacks would move to Montgomery County or the northern Virginia counties because of the prohibitively high cost of homes. He said the recent years of the black exodus from Anacostia in D.C. into Prince Georges would probably expand.

Griffin also found a fear of reverse commutes by black District residents to jobs in the suburbs. "He reported that, "white workers may feel threatened by a diminishing job market there, although census figures seem to indicate that jobs in suburbia are increasing at such a rate that there may be jobs still going begging." [Eisen, Jack, "Metro Sees 2-Year Delay In Suburbs," *The Washington Post and Times Herald*, November 3, 1972; Griffin, James, "Metro Runs Into Trouble in Suburbs," *The Washington Star-News*, November 12, 1972]

### **WMATA's Bus Takeover**

As WMATA dealt with unexpected costs, delays, and other challenges, D.C. Transit Systems was experiencing problems of its own, as Professor Schrag explained:

According to the original plans, Chalk's buses were none of WMATA's business. The compact prohibited the Authority from operating a bus service and even required it to contract out the operation of its trains – a provision added in response to the union uproar over the 1963 bill. So at first, the Authority swatted Chalk away. By the late 1960s, however, D.C. Transit's finances began to melt, and WMATA had to consider a takeover more seriously. Metro needed a healthy, attractive bus system to deliver commuters to

rail stations, but a bus takeover would cloud the Authority's finances at a vulnerable time. Caught between these imperatives, the Authority awaited congressional instruction.

The waiting lasted until the spring of 1970 when District of Columbia leaders, whose constituents made up the vast majority of bus riders, pushed to give the Authority the ability to operate both buses and rail service and, if necessary, to acquire private transit companies . . . .

By then Chalk was desperate. As one observer put it, "declining ridership, increasing fares, and widespread deterioration of service combine to produce unmistakable symptoms of impending death." [Schrag, pages 175-176]

On January 17, 1972, Secretary Volpe suggested combining the Metro rail line and the D.C. bus system under a single authority. "I think the . . . interests of Washington would be best served if there were one operation. It could be private or public." [Dash, Leon, "Volpe Backs Central Agency To Direct Metro, Bus Firms," *The Washington Post and Times Herald*, January 18, 1972]

The possibility that WMATA would take over the bus system had been building for years. The perennial battles over fare increases for bus service had taken their toll on the company's revenues and sustainability, as Jack Eisen summarized in an April 6 *Post* article:

The D.C. Transit System is running on a shoestring and should take steps to add \$12 million in investment capital, a financial consultant recommends.

The bus company also should sell at least \$3.6 million worth of idle real estate and collect another \$3 million it has lent to related firms, using this money to slash its debts, consultant Pasquale A. Loconto reported to the Washington Metropolitan Area Transit Commission.

The commission, the bus regulator, had sought the report from Loconto, of the New York firm of Touche Ross and Company, while considering the company's request to increase the bus fare from 40 cents, the level since 1970, to 50 cents. Loconto found that O. Roy Chalk had invested only \$500,000 when he purchased the company in 1956, and had not invested further funds since then. Stockholders were the principal investors. Debt now exceeded their equity by the sum of \$18 of debt per \$1 of investment. For that reason, Loconto's report called for reducing debt levels. The company, in his view, was relying too heavily on short-term loans to finance its long-term debt. He found that loan repayments and interest were costing the company \$6.7 million per year.

The company had not responded to that suggestion at press time, but a consultant to the firm, John Curtin, said, it would be "foolish . . . to expect any informed investor to put any money into a business like this." [Eisen, Jack, "Transit Firm Said to Need More Capital," *The Washington Post and Times Herald*, April 6, 1972]

With the commission set to decide on the fare increase by May 26, Deputy Mayor Watt and Chairman Hahn testified before Chairman Cabell's subcommittee of the House District

Committee. Speaking on behalf of City Hall and the White House, Watt and Hahn proposed a way to avoid a fare increase. The city would use Federal grants to buy the company from Chalk at an estimated cost of \$18 million for D.C. Transit System's 1,058 buses, then lease the buses back to the company to operate for a token \$1 a year for maintenance and operation. Hahn suggested that the company would use the money to retire indebtedness on equipment and to

improve service. As Eisen explained:

The proposal would relieve the company of about \$3 million in depreciation and related costs of the buses, which could be subtracted from the company's operating expenses.

With these bus costs removed, the company would then receive a subsidy to keep its basic city fare at 40 cents for the present.

The proposal was presented as an interim measure to keep the buses running, at the current fare, until public ownership of the company could be achieved.

Chairman Cabell was skeptical. He said, "we've been stopgapping for a long time," suggesting the time for a permanent solution had arrived. He also questioned whether the company would perform as well as Watt and Hahn implied. "There's a lot of difference between feeding your own horse and a horse that's stabled in your barn." [Eisen, Jack, "City Rein Urged for Bus Lines," *The Washington Post and Times Herald*, April 14, 1972]

With the company expected to lose \$3.3 million if the commission did not approve the fare increase, the commission appealed to Congress for a stopgap \$3 million subsidy for D.C. Transit System. With that subsidy, the commission could leave the fare at 40 cents.

On May 8, the House rejected the subsidy contained in H.R. 14718 by a vote of 50 to 270, effectively killing the measure. According to an account in the *Post*, the vote came after "an emotional debate of nearly two hours," even though the outcome was never in doubt.

Minority Leader Ford set the tone by arguing that Washingtonians who had received a sharp increase in per capita income could afford the higher fare. Delegate Fauntroy argued for fare-free bus service, but after he spoke, "not one word [was] spoken in favor of the bill."

Representative John E. Moss (D-Ca.) labeled the company "this strange miniature Penn Central here in D.C., with valuable real estate benefitting only its owners."

Chairman McMillan apologized for bringing the bill to the House floor, saying the committee did so only at the commission's request.

Chairman Cabell thought the subsidy might actually work, but said of Chalk, "If I ever saw a sweetheart contract, he's got it. But it exists . . . [and after the subsidy] something more permanent and . . . more equitable has got to be worked out." He asserted the subsidy was needed on an emergency basis, but Representative Conte responded that a subsidy would be like "throwing corn down a rat hole." [Green, Stephen, and Eisen, Jack, "House Kills Subsidy for

D.C. Transit,” *The Washington Post and Times Herald*, May 9, 1972; District of Columbia Bus Subsidy, *Congressional Record-House*, May 8, 1972, pages 16151-16167]

On May 19, the commission made the front pages of the *Post* and *Star* by rejecting the fare increase and adding conditions before it would reconsider. As Eisen pointed out:

It was the first time since 1966 – when the commission first warned of the company’s eroding financial foundation – that the commission turned down a D.C. Transit application for a rise in its basic city fare. However, approved increases usually have been less than the company wanted.

The commission agreed that the cost of operating the system was higher by over \$3 million than the fares collected. However, Commission Chairman Jeremiah C. Water said in a statement:

We found that the financial condition of the company is extremely unstable, posing the possibility that the company will not be able to provide the full service required of it.

We also found that a fare increase alone will not solve the financial problems. In these circumstances, we felt that the company should be required to correct the condition of financial instability before we would ask the bus rider to pay higher fares.

The specific conditions we have set is [sic] that D.C. Transit must produce \$6.4 million in funds from sources other than the fare box before we will agree to authorize higher revenue from the bus rider.

The commission wanted the company to use the \$6.4 million to reduce the company’s debt (\$4 million) and to purchase 85 new buses (\$2.4 million). To raise the funds, the commission suggested that D.C. Transit Systems sell idle real estate, insist that affiliated companies repay loans, and seek additional capital from stockholders:

If these funds are produced and applied in the manner we have indicated within 90 days, we will then proceed to the question of whether and in what amount the fare should be increased. If the funds are not so applied in that time, the record in the fare case will be closed.

The commission warned, “What we see in the future if we increase the fare and do nothing more is continued instability and a deterioration in the level and quality of service.” The company had exhibited “less than efficient management” in its debt buildup. As a result, a fare increase would be “unjust and unreasonable.”

The commission described the congressional rejection of the subsidy bill as “a failure of government to respond to the needs of the community. Until that failure is remedied, the spectre of high bus fares and their destructive impact will be with us.”

Waterman denied that the commission’s actions were an attempt to force consideration of public ownership. He added, however, that “my feeling is that eventual public ownership is probably the only answer over the long term.” [Barnes, Fred, “Bus Fare Rise Is Rejected,” *The*

*Washington Star-News*, May 19, 1972; Eisen, Jack, “Bus Line Is Denied Fare Rise,” *The Washington Post and Times Herald*, May 20, 1972]

Editors at the *Star* and *Post* were surprised and pleased by the commission’s decision. The *Star* editorial began:

It may be remembered as the local surprise of the year. No one we know of expected the Washington Metropolitan Area Transit Commission to sock D.C. Transit as hard as it did last Friday, in denying the bus fare increases.

Such a total rejection is unparalleled in the commission’s history, but there’s another first in this action that is even more significant: The WMATC set severe preconditions that must be met before it will even consider the fare hikes again.

The commission deserved applause for its action, but “everything is still up in the air.” Whether D.C. Transit System could raise the funds within the time the commission set was unclear, but the decision provided “even more reason for congressional haste to authorize public ownership of the company.” Legislation for that purpose had passed the Senate 2 years earlier, but never received a vote in the House. Current bills remained on hold in the House District Committee. “We hope that this period in which a fare hike is being withheld will be used by the committee to act affirmatively on that bill, and hurry it along for floor action. [“D.C. Transit on the Spot,” *The Washington Star-News*, May 24, 1972]

The *Post* editorial began by pointing out that “the whole town is elated” that O. Roy Chalk did not get a fare increase:

For the first time in years, the authorities didn’t just wring their hands and nod approval to a fare boost; they said no to the bus company, and threw in a stiff lecture on finances, corporate management and the public interest. The surprise is worth savoring.

While uncertainties remained, what was “clearer and more urgent than ever now is the need to end this devastating arrangement by which Mr. Chalk always winds up with his fare increases: Congress should authorize public ownership of the bus lines.” Only if Congress met this issue head on “will the Washington area be able to concentrate on the business of providing efficient public transportation – instead of having to wrestle with stop-gap measures to bail out a failing system.” [“Score One for the Bus Riders,” *The Washington Post and Times Herald*, May 26, 1972]

Initially, D.C. Transit System threatened to implement the fare increase on May 27 in spite of the commission’s action. It decided not to do so in view of pending court action on an injunction. [Barnes, Fred, “Bus Fare Raise Delayed Temporarily,” *The Washington Star-News*, May 27, 1972]

While the focus was on the bill backing WMATA revenue bonds, WMATA and the White House were not eager to bring up yet another transit bill. However, the Nixon Administration strongly boosted the concept of public ownership on July 26 when Secretary Volpe wrote to Chairman Cabell to call on Congress to “move forward rapidly to prevent any further

deterioration in the area bus system.” [Eisen, Jack, “Nixon Moves To Take Over Area Buses,” *The Washington Post and Times Herald*, July 27, 1972]

Chairman Cabell introduced a bill on August 1. The House and Senate Subcommittees on Business, Commerce, and Fiscal Affairs of the District committees held joint hearings on the measure on August 14-16. [Bus Systems Acquisition by WMATA, Joint Hearings Before the Committee on The District of Columbia of the United States Senate and the Subcommittee on Business, Commerce, and Fiscal Affairs of the committee on the District of Columbia, House of Representatives, 92d Congress, 2d Session, on H.R. HR.16119, August 14, 15, and 16, 1972]

Senator Mathias introduced a takeover bill on September 7, followed by a hearing on September 25. [Federal Payment For Additional Rapid Transit Facilities, Hearing Before the Committee on the District of Columbia, United States Senate, 92d congress, 2d Session, on S. 3966, September 25, 1972]

During the joint hearing, Chalk estimated the sale value of D.C. Transit Systems to be \$75 million (\$40 million to \$50 million for buses and other equipment, plus \$25 million for garages and other real estate). WMATA estimated the value to be around \$45 million. While the discrepancy was likely to lead to difficult negotiations if Congress authorized WMATA to condemn and acquire the property, the important point was that Chalk seemed to accept the inevitable loss of his company. [Eisen, Jack, “Chalk Asking \$75 Million For Transit,” *The Washington Post and Times Herald*, August 16, 1972]

Over the next few weeks, the bus acquisition bill and a District home rule bill became entangled in congressional infighting. On October 12, the House defeated the bus bill, 226 to 129, short by 11 votes of the two-thirds majority needed because the bill was under suspension of the rules that prohibit amendments and limit debate. The unpopularity of Chalk was cited as a primary reason for the shortfall. The Senate approved the bill on October 14 by a unanimous voice vote. [National Capital Transit Act of 1972, *Congressional Record-House*, October 11, 1972, pages 35021-35031; National Capital Transit Act of 1972, *Congressional Record-Senate*, October 14, 1972, pages 36200-36204]

On October 14, the House reversed itself and approved the bill, 184 to 60, sending it to the White House for signature. After the Senate had passed its bill, supporters in the House convinced Speaker Albert to bring the Senate bill to the House floor for a vote. White House lobbyists joined with Representatives Broyhill and Gude to convince their colleagues to approve the Senate bill. Representative Fraser summarized what Senator Mathias had said earlier in the day. If Congress did not approve the bill, it would return in January to face “a real disaster . . . a total collapse of bus transportation this area.” [Bus Systems Acquisition by WMATA, *Congressional Record-House*, October 14, 1972, pages 36427-36431]

President Nixon approved the National Capital Area Transit Act of 1972 on October 21 (P.L. 92-517). He issued a statement on his signing of this bill and five other District bills. About the transit legislation, he said:

I am especially pleased to approve the National Capital Area Transit Act of 1972. Nothing is more essential in making a city livable than a regional transportation system which enables people to move easily among their homes, their places of employment, their leisure time pursuits and tourist attractions. During the last 4 years, Washington has taken long strides toward the development of such a system. Construction of METRO rapid rail transit system is progressing well [sic], as is the improvement of the regional highway system. The transit act signed today is a necessary complement to these steps. It opens the way for acquisition of the area's four major bus companies by the Washington Metropolitan Area Transit Authority, and thus for the efficient coordination of bus and subway services when METRO begins operation in 1974.

WMATA planned to take over operation of District Transit System and the three other private bus companies in January 1973. In doing so, WMATA expected to experience large deficits that would require growing government subsidies in coming years. It expected to lose the \$3 million that the bus company had anticipated losing, but projected that annual loss to be \$13.6 million in 1977. Under the circumstances, subsidies were the only way to retain the current fares.

Secretary Volpe and Chairman Fisher had testified before the joint hearing of the Senate and House District Committees on August 14 that subsidies would not be needed. Eisen reported:

At one point, Volpe . . . declared: "I would say that if they [Metro] gave [improved bus] service . . . that they could achieve possibly a break-even point. If there were a deficit, it would be very small . . . ."

Rep. Thomas G. Abernethy (D-Miss.) asked Volpe "if there is any intention or design set forth in this legislation which would authorize the subsidizing of fares either by the District government or the area government or the federal government?"

"There is not, sir," Volpe replied.

Abernethy pressed on. "There is none, and such is not contemplated?"

"No, sir," Volpe said.

Later that day, Abernethy asked Fisher . . . "whether or not a subsidy would be necessary to successfully operate this [bus] facility?"

Fisher responded: "It is our intention to operate the buses and integrate them with Metro [the subway] as Metro comes in without subsidy."

By September, when WMATA submitted its preliminary application to UMTA for \$70.8 million to acquire the lines, the authority was projecting operating losses. However, General Graham anticipated that the deficits would decline when major portions of the 98-mile Metro system opened in the late 1970s. The combined rail-bus network would then be able to pay for itself from fares, according to Graham. [Eisen, Jack, "Metro Sees Bus Deficits, Big Subsidies," *The Washington Post and Times Herald*, November 16, 1972]

Although the plan had widespread public support, many observers worried that WMATA would face the same problems that had proven the downfall of the private companies. WMATA held a week-long series of public hearings throughout the region in early December, during which citizens and public agencies expressed what Eisen called “deep concern that the Metro subway agency may not do enough to meet community needs.”

Several witnesses, including former City Council Chairman Hechinger and Sammie Abbott, argued that WMATA should not charge any bus or subway fare or should reduce fares. The WMATA board should be solely responsible for determining fares. For now, the board planned to retain current bus fares. [Eisen, Jack, “Public Support of Bus Takeover Mixed With Concern Over Service,” *The Washington Post and Times Herald*, December 9, 1972]

### **After the Election**

In the presidential election, President Nixon scored a landslide victory over Senator George McGovern of South Dakota to win a second term. In the wake of his victory, he asked his entire Cabinet to submit their resignations. Initially, Secretary Volpe seemed to have escaped the purge, but instead was offered the post of Ambassador to Italy. The shift was announced on December 7.

Secretary Volpe had been reluctant to accept the new position, despite the fact that it was a dream assignment for a man who was proud of his family’s Italian heritage. He felt he had unfinished business as Secretary of Transportation. He was proud that during his term, he had overseen efforts to achieve “real balance and environmental parity” among the modes. His biggest disappointment, he said, was that he had not secured legislation that would open the Highway Trust Fund to rail rapid transit. [Morison, Robert F., “Lack of Urban Transit Action Dismays Volpe,” *The Journal of Commerce*, December 20, 1972]

His successor would be Claude S. Brinegar, a 45-year old senior vice president of Los Angeles-based Union Oil Company. (His name rhymed with “vinegar.”) He had never served in government and had never met President Nixon before their interview about the position. He had contributed only \$50 to the reelection campaign. [“Charlton, Linda, “Oilman Will Get Transportation Post,” *The New York Times*, December 8, 1972]

According to a news account, colleagues described Brinegar as a “precise, able administrator who doesn’t waste words and is an expert at statistics.” He was the “type of administrator who must find things out for himself.” One colleague said, “With most people, you can give them a mathematical equation and they’ll use it, but Claude’s got to derive the equation before he’ll use it.” An engineering colleague said, “He’s considered one of the extremely good statisticians. He handles statistical analysis better than anyone I’ve ever run into. He also handles every problem from the standpoint of logic . . . and he’s a very thorough grammarian.”

Brinegar had limited experience with transportation, and that was mostly as a consumer:

Brinegar’s experience in transportation appears limited to what he has experienced at Union Oil – and that’s mostly pipelines. He told a Los Angeles news conference

yesterday that he has gained an extensive familiarity with transportation problems because he has flown one million air miles. He also pointed out he is a daily commuter on crowded Los Angeles freeways.

Another transportation link was his service on the Board of Directors of International Speedway Corporation, which operated stock car tracks in Daytona Beach, Florida, and Talladega, Alabama. His service on the board was not because he was a car or racing buff, but because Union Oil owned 25 percent of the firm and was the official fuel supplier for the National Association for Stock Car Racing. [Aug, Stephen M., "Brinegar Known for Management," *The Washington Star-News*, December 8, 1972]

Secretary Volpe, in a year-end news conference, said he would turn over the fate of the Three Sisters Bridge to his successor. The Department had not yet completed the court-ordered review of the proposed bridge. He said, "Two, three or four months of additional work is needed to come into compliance with the court order." [Eisen, Jack, "Volpe to Hand Over 3 Sisters Problem," *The Washington Post and Times Herald*, December 14, 1982]

While the Three Sisters Bridge remained on hold, officials were making progress on the Baltimore-Washington Parkway.

In February 1971, Maryland highway officials indicated that they planned to again seek designation of the Baltimore-Washington Parkway as part of the Interstate System. The \$65 million authorized by Section 146 of the Federal-Aid Highway Act of 1970 covered upgrading only the Federal portion of the parkway from the District line to Maryland Route 175 near Fort Meade. If that section were widened to six lanes and Interstate standards, the Maryland State Roads Commission would have to widen the northern state-owned portion from Fort Meade into Baltimore. Chairman-Director Fisher explained:

We have had some discussions with federal highway officials, and believe \$65 million is fairly close to the amount needed to do the job. We probably won't be able to sit down and work out a specific agreement until after the General Assembly here adjourns [on April 13]. It's necessary, though, that we also can improve the 14-mile road that goes from Route 175 into Baltimore, and widen it to six lanes. Otherwise, we'll eventually have a six-lane highway feeding into a four-lane highway."

With Interstate designation, he anticipated, Maryland would have 90-10 Interstate funds for reconstruction of the northern end. [Rowland, James B., "Interstate Designation Sought for Parkway to Baltimore," *The Evening Star*, February 8, 1971]

Negotiations between NPS and Maryland about takeover of the parkway did not go smoothly. Appearing before a House Appropriations subcommittee, FHWA Administrator Turner explained why his agency's budget for FY 1973 did not include the authorized funds for construction of the project. "Maryland has so far refused to enter into an agreement on the project." He said that "some planning and design work" were underway, but construction would not begin in FY 1973. A Maryland Department of Transportation spokesman explained that the State could not agree to maintain and police the project while construction was underway if the

Interior Department owned the road. The Interior Department did not want to use its resources on a road that was to be turned over to the State as soon as the widening was completed.

FHWA Executive Director Edgar H. Swick added that “the program is not getting off the ground as well as we had hoped”:

We have had problems between the Department of Interior and the state of Maryland as to who will assume the responsibility for maintenance and policing during construction. We have had three or four meetings with the two parties and so far the problem has not been resolved. We are still working on it.

Representative Conte, hearing Turner’s and Swick’s testimony, said, “This is a shame because it is really needed more than anything else around here, I would say.” [Barnes, Fred, “Parkway Widening Delayed by Hassle,” *The Evening Star*, May 9, 1972]

On June 7, NPS, the State, and FHWA found a compromise. Maryland would take over maintenance as each section of the road went to construction, with the contractor responsible for maintaining the section and controlling traffic as part of the bid price. The cost would be borne entirely by the Federal Government. NPS would continue police control of the entire parkway until construction was completed in 4 years. The agreement also called for completion of construction as quickly as possible, with final contracts to be awarded within 48 months of the first contract. Administrator Fisher said, “We will try to schedule it within the time period subject to the availability of funds for it.”

Assistant Director Raymond L. Freeman signed the agreement for NPS on June 7. Fisher and Turner signed it on June 8. [Barnes, Fred, “U.S. State Draft Parkway Accord,” *The Evening Star-News*, June 4, 1972; Lewthwaite, Gilbert A. “State, U.S. Agency Agree on Widening D.C. Parkway,” *The Baltimore Sun*, June 8, 1972]

The MSHA had submitted an application to the Regional Planning Council for \$4.3 million in Federal funds to begin preliminary engineering for reconstructing the parkway to Interstate standards. The council approved the request in November, subject to several conditions, including designation of the parkway and its State highway extension as an Interstate route connecting with I-95 in Baltimore. The council also called on Maryland to evaluate the environmental impacts of the project. The funding was subject to FHWA approval.

The project would involve widening to six lanes, reconstructing interchanges, and perhaps adding interchanges. If all went well, construction could begin in 3 years and would take about 5 years to complete at a total cost of \$115 million. The parkway section would be able to use the \$65 million authorized by the Federal-Aid Highway Act of 1970 for 100 percent of costs. The extension into Baltimore would use Federal-aid highway funds plus State and local matching funds.

Roland M. Thompson, the MSHA’s chief location engineer, said, “The two projects are going to be pretty staggering. It will wind up as a complete rebuilding of it.”

In approving the application, the council members acknowledged that the opening of I-95 between Baltimore and Washington had relieved congestion on the parkway. However, as State chief transportation planner William Okert put it, the parkway was still operating “near its capacity”:

Mr. Ockert said after the meeting that if the parkway were upgraded to interstate standards, trucks would be allowed on the entire length. Mr. Thompson said that was one of the questions to be taken up in the engineering study . . . .

Mr. Thompson said that the average daily traffic on the parkway at the district line was 73,000 cars [with trucks prohibited]; that at Friendship Airport, the road was carrying 52,000 vehicles a day; and that near the Baltimore city line, the traffic was 45,200 vehicles a day. [Dilts, James D., “Parkway Proposal Advances,” *The Baltimore Sun*, November 18, 1972]

By December, the *Star* could report on the Study Steering Committee’s action on the I-95 corridor in Maryland. The committee was studying five broad transportation proposals:

One would involve widening the Baltimore-Washington Parkway to eight lanes from the D.C. line to the Beltway and constructing a connector between the existing I-95 and the parkway in the vicinity of the Outer Beltway.

The connector would be designated I-95. The eight lanes of the parkway inside the Beltway would be divided among three northbound and three southbound lanes, with two reversible express lanes in the median for express commuter buses and car pools. Beyond the beltway, the parkway would narrow to six lanes.

The second highway alternative calls, in essence, for construction of the long-delayed North Central Freeway from I-95 and the Capital Beltway into the District. The highway would be generally within the PEPCO [Potomac Electric Power Company] right-of-way, entering D.C. near Gallatin and Galloway Streets NE. Short tunnel sections and depressed open-cut construction would be used to minimize adverse environmental impact.

The last highway alternative would make even more use of the PEPCO right-of-way, extending a six-lane I-95 south to New Hampshire Avenue, then along New Hampshire to the B&O railroad in the District.

Other options included using existing transportation lines to their maximum capacity, using Metro rapid transit funds planned for the Greenbelt line along with a comprehensive bus system and commuter railroads, to create a “mixed modes” approach of highway and rail improvements.

The committee also was considering the “no build” option. [Griffin, James, “I-95 Link to Parkway Being Studied,” *The Washington Star-News*, December 31, 1972]

In the spring of 1972, the District had completed a 1,600-foot segment of the Center Leg of the Inner Loop Freeway. It was six lanes wide, cost \$2.2 million, and was a freeway to nowhere,

with a wall of dirt and concrete 25 feet high at Massachusetts Avenue in the north and a hole in the ground for a subway tunnel at the south end at D Street. As it sat there, unusable, workers in the area began to clamor for its use as a parking lot. Jack Hartley of the District highway agency said, “So we responded to pleas to relieve the critical parking shortage.” The city calculated the space could accommodate 500 parking spaces, which it distributed among Federal City College (200 spaces), metropolitan police department (200), and Georgetown University Law School (100).

As the year ended, the *Post* surveyed the result, noting that despite this orderly distribution of parking permits, “things got a bit out of hand”:

The lot is so crowded that traffic police are issuing tickets (\$5 fine for parking in a reserved space) to poachers.

Part of the problem may be traced to Georgetown, where the would-be lawyers found, in the loose agreement with the city, a loophole big enough to drive hundreds of cars through.

We’ve sold about 600 decals,” for the 100 spaces, said Dan Hurley, a student and assistant to the dean. “It was a deliberate oversell – it gives you a license to hunt.”

Charging \$1.50 per decal, the law school took in \$900, making a profit beyond the city’s \$600 assessment for painting lines to create the parking spaces:

City officials don’t quite see it that way. “They did what?” shrieked Hartley . . . . “That’s not part of the deal,” continued Hartley. “We didn’t think it would be a money-making proposition.”

When the city would replace the Center Leg parking spaces with traffic was unclear, but a likely target date was the summer of 1973, possibly in August:

Even when, or if, the parking lot is abandoned, the Center Leg highway is destined to be somewhat of a crippled limb of a nonexistent inner loop.

The south end eventually will connect with the Southeast and Southwest Freeways. The freeway ends at Massachusetts Avenue on the north side, but a connector road will be built to New York Avenue. [Baker, Donald P., “New Use for a Freeway,” *The Washington Post and Times Herald*, December 16, 1972]

As 1972 came to an end, the District lost \$66 million in Interstate construction funds. Based on apportionment of Interstate funds, the District had accumulated entitlement to \$267 million in unprogrammed funds, but the funds came with time limits. An unnamed District highway official told the *Star*, “We haven’t been able to go ahead with Three Sisters Bridge, the Potomac Freeway along the Georgetown waterfront, the east leg of the Inner Loop, the upper end of the Center Leg and the south leg of the Inner Loop.” These projects, despite congressional mandates, had been stalled by environmentalists, anti-highway programs, and court battles.

(The Federal-aid highway program operates on a reimbursement basis. The FHWA informs States and the District of the funds available to it by category each year, but the funds remain in the Highway Trust Fund. As the State or District expends its own funds on eligible projects, it submits vouchers during the course of project development for reimbursement. At that point, FHWA pays its share of the State's expenditures. In the case of the Interstate construction funds, FHWA may have taken back the unused funds (which had never left the Highway Trust Fund), but the District remained entitled to funds equal to 90 percent of the cost to complete its Interstate network. The annual apportionment would continue to reflect the cost to complete the Interstate System in the District. Thus, in later years, the apportionment would continue to reflect the unbuilt segments as long as the program continued.)

Virginia, by contrast, had obligated 100 percent of its Interstate highway funds, bringing the program to a "virtual standstill," according to Fugate, until Congress approved new Federal-aid highway legislation. The State had 11 Interstate highway projects ready to use \$142 million in Federal matching funds but could not proceed with them. One of the delayed projects involved widening the Cabin John Bridge on the Capital Beltway to eight lanes. Virginia highway officials considered it ironic that their efficiency in using Interstate funds resulted in the State being penalized in the wake of the congressional failure to approve the Federal-Aid Highway Act of 1972.

Maryland, with its many controversial Interstate highways in Baltimore and the Washington suburbs, had \$296 million in unspent highway funds. [Griffin, James, "Road Funds Periled," *The Washington Star-News*, December 30, 1972]

### **Awaiting Congressional Action in 1973**

With prospects for construction of the North-Central Freeway declining, the District decided to auction off 34 row houses in its path. The 34 two-story, three-bedroom brick homes were on the west side of 10<sup>th</sup> Street between Rhode Island Avenue and Franklin Street, NE. The city hoped they could be rehabilitated and occupied by the families evicted 5 years earlier. With shifts in the alignment of the proposed freeway, these homes were no longer needed but the remaining dwellings of the 69 homes acquired were still in its path.

The city disclosed its plans in a letter seeking NCPC's approval. In the letter, Deputy Mayor Watt said the 34 homes "have been the subject of prolonged citizen concern because of the decay and crime affecting the Brookland community as a result of unoccupied structures . . . for over five years." NCPC's transportation committee endorsed the plan, but asked NCPC to withdraw any hint of support for the North-Central Freeway. [Eisen, Jack, "City to Sell Homes It Acquired," *The Washington Post and Times Herald*, January 3, 1973]

In Virginia, as noted, supporters of I-66 had organized to counter ACT and other opponents. Three western Fairfax County groups formed Citizens for I-66 and issued a fact sheet stating:

The issue is not concrete versus trees but people versus chaotic congestion and air pollution . . . . Travel time from the Capital Beltway to Washington would be cut nearly in one-half.

The group, formed by the Greenbriar Republican Club, Navy-Yale Community League, and the Centreville Lions Club, planned to distribute BUILD I-66 NOW bumper stickers and to submit a petition to Fugate urging him to “press for resumption of the I-66 project at the earliest possible date.” Spokesman Paul Alwine said motorists had been the “silent majority too long.” The fact that the freeway would follow an abandoned railroad right-of-way for about 6 miles “lessens the environmental impact” and by eliminating stop-and-go traffic on other roads “would cut down on air pollution also.” [Crosby, Thomas, “Start Firing Up I-66 Support,” *The Washington Star-News*, January 17, 1973]

The supporters’ impact was felt at a public debate held at George Marshall High School in Fairfax County sponsored by Howard, Needles, Tammen and Bergendorf under the contract to study the impacts of I-66. Turnout of about 400 people was nearly double attendance at the consultant’s public participation workshop on November 14, 1972, with many of the newcomers being Fairfax County residents who attended to support construction.

State Delegate James R. Tate, who represented a Fairfax County district, said:

Those of us who live outside the beltway and must commute daily into the District of Columbia have a very serious problem. The cost to Virginia [of abandoning I-66 inside the Capital Beltway] would be astronomical and the effect disastrous.

James Govan of ACT asked the consultant to “help us break this vicious cycle of more roads and more cars.” He argued that the extension of I-66 would increase air pollution, noise and traffic congestion.

Jay Mathews, in the *Post*, reported that the “nearly equal volume of applause and cheers for speakers on both sides of the issue was in marked contrast to November’s workshop . . . [when] the audience was almost entirely antihighway.”

A member of the consultant team told him, “The people came on so strong in November that it rankled the proponents and they made up their minds to prove that there were more people in favor.” As John Fowler of the consultant team put it, it was “unfortunate but many view these community workshops as public hearings and use this as the forum for expressing positions.” The consultants had hoped the workshops would provide “for extensive informal question and answer periods,” but instead he “sat down and quietly listened to nearly two hours of speeches.” [Mathews, Jay, “Supporters, Foes of I-66 Debate,” *The Washington Post and Times Herald*, February 2, 1973]

On March 13, the consultant released the results of a telephone survey, conducted by the nonprofit Bureau of Social Science Research, showing strong support for I-66:

Of 1,027 telephone customers polled at random in Arlington, Fairfax and Prince William counties and the city of Falls Church, 70.8 per cent said they approved of the proposed road, 22.1 per cent said they disapproved and 7.1 per cent said they didn’t care, the firm said . . . .

Even in north Arlington neighborhoods, where organized citizen opposition to the six- to eight-lane freeway has been strongest, 53 per cent approved of the road, against 38 per cent who disapproved . . . .

Along with the 70.8 per cent support for I-66, 92.7 per cent supported Metro, 83.1 per cent supported more express bus lanes, and 62 per cent supported construction of the Three Sisters Bridge connecting Arlington and the District, according to the survey.

The consultants released the results at another workshop, during which I-66 opponents pointed out that those polled actually favored alternatives to highways more than they supported I-66. In contrast, Horace Mann of Citizens for I-66 thought that “without a doubt,” the poll would speed final approval for the highway. [Mathews, Jay, “I-66 Backed in Va., Survey Shows,” *The Washington Post and Time Herald*, March 14, 1973].

Later that month, the Secretary Hughes of the Maryland Department of Transportation killed plans to build I-95 between the Capital Beltway and the District line through Northwest Branch Park in Prince George’s County. He called for study of a routing alongside a PEPCO transmission line parallel to New Hampshire Avenue:

I am in no way convinced that this option is feasible or desirable in terms of the ultimate outcome of the study. There are several compelling reasons, including legal considerations, for its inclusion [as an alternative].

He took these actions after a 6-month study while meeting with the Western Prince George’s Transportation Alternatives Study.

The steering committee had voted 31 to 26 against the PEPCO alternative and preferred four other alternatives. Secretary Hughes adopted those four alternatives for study, but felt the PEPCO alignment should have a public hearing. He also wanted to ensure consideration of all reasonable alternatives as required by NEPA.

Overall, Secretary Hughes adopted the steering committee’s four other plans for transportation development in heavily populated Prince George’s County inside the beltway and north of the Baltimore-Washington Parkway. Eisen summarized them:

All but possibly one of the five schemes would shift the location of the planned Metro rapid transit route to Greenbelt, would call for the widening the parkway [to eight lanes] and increase commuter service on the Baltimore & Ohio Railroad tracks that bisect the area . . . .

Metro’s current plans call for building its tracks on the now-scrapped I-95 median strip between Fort Totten in Northeast Washington and the Prince George’s Plaza shopping center at East-West Highway in Hyattsville.

Under various of the new proposals, the Metro line would be shifted from its right of way alongside the B&O tracks to alignments closer to the University of Maryland campus at College Park. Two of the proposals would shift the terminal from Greenbelt westward to

the point at which I-95 now ends at the Capital Beltway. [Eisen, Jack, "Officials Kills I-95 Route Into D.C.," *The Washington Post and Times Herald*, February 23, 1973; "New Plan Sought for I-95 Link," *The Baltimore Sun*, February 24, 1973]

## **Metrobus**

At 2 a.m. on Monday, January 15, 1973, WMATA took over O. Roy Chalk's two bus lines: D.C. Transit System, which served the District and Montgomery County) and the WV&M Coach Company (Virginia routes, including express bus service across the Potomac River). After negotiations with Chalk did not reach agreement on a purchase price, WMATA had seized the operating assets and rights through condemnation.

On February 4, WMATA acquired the assets of the area's two other bus companies, the AB&W of Virginia and WMA of Prince George's County. According to Professor Schrag:

These two companies, which together serve about 20 percent of the region's bus riders, had been in slightly better financial health, but they too were losing passengers. Rather than compete with a publicly owned bus system, they requested a takeover and were purchases by negotiation rather than condemnation.

He continued that "by purchasing assets rather than whole companies, WMATA had avoided taking over the companies' financial debts." For the Chalk properties, WMATA filed \$38.2 million with the U.S. District Court as collateral for the eminent domain takeover of the companies. The collateral represented WMATA's final offer to Chalk, who had rejected it. The court would settle the dispute.

Without fanfare, WMATA dispatched all 1,119 buses on their scheduled morning runs, and 1,116 for the evening peak period runs. On that first day, WMATA had managed to replace the former companies' names on some of the buses with the new name of the combined bus service spelled out in red, white, and blue: Metrobus. The "M" was identical to the "M" to be used on the Metro rapid rail service. Inside, the buses carried a sign informing riders that for the first time, "This Is Your Bus." [Eisen, Jack, "Metro Starts Inventory of Buses In Advance of Sunday Takeover," *The Washington Post and Times Herald*, January 13, 1973; Eisen, Jack, "No Fanfare Marks Bus Line Takeover," *The Washington Post and Times Herald*, January 14, 1973; Crosby, Thomas, "Metro at Helm of D.C. Transit, WV&M," *The Sunday Star and The Washington Daily News*, January 14, 1973; Schrag, Page 176]

WMATA understood that Metrobus would operate at a loss, projected initially at \$2.2 million to operate Metrobus in 1973. Based on a formula recommended by the WMATA board, the District would be responsible for \$1.1 million of the loss, with the Virginia suburbs (\$700,000) and Maryland suburbs (\$400,000) responsible for the remainder. The agency expected to use its borrowing authority initially to cover Metrobus losses.

Jack Eisen recalled that WMATA officials and Secretary Volpe had testified that they expected fare revenue to allow the bus service to break even:

Volpe said later that he based his prediction on information supplied him by Metro. Metro officials said they meant to indicate that the buses eventually would pay their own way after the Metro subway system goes into operation and the buses are converted mainly into a feeder service to subway service.

Apparently concerned over congressional or Nixon administration reaction, both Watt and City Council Chairman John A. Nevius have insisted at recent Metro board meetings that the agency's official references to the certainty of deficits be watered down.

In its formal adoption of a bus takeover plan, the board accepted Nevius' language that "public bus transit today is not necessarily . . . profitmaking" and that the future level of service and fares depends on a "willingness to assume or develop funding sources" to pay for "possible operating deficits."

Although local governments recognized that they would be responsible for deficits, they were hopeful that Congress would authorize a subsidy for Metrobus, even if the Nixon Administration opposed transit subsidies for the country's money-losing transit public operators. [Eisen, Jack, "Metro Lacks Subsidy in Bus Takeover," *The Washington Post and Times Herald*, January 7, 1973]

On February 17, during a meeting to work out a regional agreement to allow Metrobus to acquire 620 new buses, WMATA Comptroller Lowe revealed that losses in 1973 would be 20 percent higher than expected – \$3 million instead of \$2.5 million. Lowe added that cumulative losses for the first 5 years would be nearly \$40 million instead of \$35.8 million as previously predicted.

Eisen reported:

The main reasons for the higher loss estimate, Lowe said, were the Metro board's decision to eliminate extra transfer charges for rides between the city and the suburbs and to grant a discount to elderly bus riders throughout the region.

District Councilman Robinson, hearing the prediction, said "we may have trouble" getting Congress to approve the city's share of the deficit. "But we're going to fight for it," he told the officials. "I think we're going to get it." [Metrobus Losses in 1<sup>st</sup> Year To Run 20% Over Estimate," *The Washington Post and Times Herald*, February 18, 1973]

On February 1, Deputy Mayor Watt resigned to head the Office of Revenue Sharing in the Department of the Treasury. The White House did not name a successor. On January 11, 1975, Mayor Washington appointed his closest advisor, Julian R. Dugas, the city administrator, the new number two post in the city government. [Kiernan, "Mayor Picks Dugas As Top Assistant," *The Washington Star-News*, January 11, 1975]

### **The Senate Takes Up the 1973 Act**

Because of the failure of the Federal-Aid Highway Act of 1972, many States needed a new apportionment of Federal-aid highway funds. They also needed a new apportionment of Interstate funds that had been frozen when the provision approving the 1972 ICE apportionment

factors had died with the bill. Congress, therefore, turned to the subject early in 1973, beginning new rather than simply reconsidering the 1972 bill that had died at the end of the previous Congress.

All the issues from 1972 remained to be resolved, including what to do about the controversial Interstate highways, particularly in urban areas, that appeared unlikely to be built. In addition, the fight over legislation ending the Federal status of the North Expressway in San Antonio grew stronger, with many opponents citing concerns that it would set a precedent for congressional action on other controversial projects. What to do about the unbuilt District freeways was another concern.

The Senate Subcommittee on Transportation began hearings on S-502 on February 7, 1973. As the hearings began, Senator Bentsen, chairman, introduced the bill, which contained his provision allowing Texas to repay Federal-aid funds and build the North Expressway with State funds. It also dealt with controversial Interstate segments by allowing States to substitute other Interstate routes to be built under the Interstate Construction Program, with Federal funds limited to the cost of the withdrawn routes.

Secretary Brinegar was the first witness. He generally supported the ideas Secretary Volpe had proposed in 1972, but was still new to transportation policy and was unable to elaborate on many points.

Senator William L. Scott, who had defeated Senator Spong in November 1972, was now a member of the subcommittee. One of his top legislative priorities was completion of I-66 from the Capital Beltway to the Theodore Roosevelt Bridge. During his question period, he expressed his frustration about delays in building I-66 into the city. "I hate to think that our Government is so ineffective that we cannot build a highway." He knew about the court action delaying the route, but he wanted to know what the Secretary could do to expedite construction – "without telling us why it cannot be built." Secretary Brinegar noted that he now lived in Virginia (at 4056 41<sup>st</sup> Street North, Arlington, near the intersection of Chesterbrook Road and North Glebe Road, distant from the I-66 routing) and was aware of the problems of getting into and out of the city. However, "I have to admit I have not yet gotten to I-66." He promised to look into the issue. [*Federal-Aid Highway Act of 1973*, S. 502, Hearings, Subcommittee on Transportation, Committee on Public Works, United States Senate, 1<sup>st</sup> Session, 93<sup>rd</sup> Congress, Serial No. 93-H2, 1973, pages 108-109, 113-114]

When the National Wildlife Federation's counsel, Robert M. Kennan, Jr., testified later that day, he addressed many issues and submitted a detailed statement. He called the exemption of the North Expressway in San Antonio "a shameful precedent" but expressed relief that S. 502, unlike the House bill in 1972, did not contain any "ill-conceived provisions that would have confounded the confusion resulting from the Congress' first foray into the District [of Columbia] highway matters in 1968." [page 193]

The federation's statement elaborated on its concerns about the Three Sisters Bridge. The statement commended the Senate for resisting repeated attempts by the House to force the District to build the bridge, but acknowledged that the issue was likely to come up in 1973. After

quoting Section 139 from the House version of the Federal-Aid Highway Act of 1972, the statement said:

We are not constitutional lawyers, but this language would appear to be if not outright unconstitutional, at least downright dictatorial. Denying the public access to the third branch of government is denying the public the protection of the checks and balances which our constitution set up.

The statement mentioned Secretary Volpe's observation that he would be held in contempt of court if he obeyed that provision. The House Committee on Public Works had not released its version of the 1973 Act, but the statement emphasized that "it is time the Congress stopped intervening in this dispute." As with the North Expressway provision, a section on the Three Sisters Bridge, if enacted, would set a precedent for congressional interference:

Further, the bridge is the keystone to the freeway system which includes the ill-conceived South Leg – which would desecrate the Lincoln Memorial, Tidal Basin and whole monumental park area. Is nothing sacred? We urge the Senate once and for all to try and persuade the House to get out of the business of designing highways and back to the tasks for which the Members were elected by their constituents. [pages 888-889]

On March 1, the Senate Public Works Committee rejected, 6 to 8, the Muskie-Baker amendment, formerly the Muskie-Cooper amendment, to open Federal-aid urban system funds to rail transit. (Senator Baker of Tennessee has replaced retired Senator Cooper as the cosponsor.) Despite the committee rejection, Senator Muskie was optimistic that the amendment would be approved on the Senate floor. Recalling the 48 to 26 vote approving the Muskie-Cooper amendment in 1972, he said, "We had a good margin last year and I hope we do as well this time." ["Mass-Transit Backers in Senate Lose Bid to Tap Road Fund But See Eventual Win," *The Wall Street Journal*, March 2, 1973]

However, the committee approved other key provisions related to the urban Interstate debates around the country:

- At the request of a Governor and the local governments concerned, the Secretary could withdraw approval of any Interstate segment if the route is not essential to completing a unified and connected system within a State. Dollar-for-dollar substitution of an essential connection would be permitted without restriction on length. The existing 200-mile limit for substitute routes, known as Howard-Cramer mileage, would be repealed.
- If a substitute connection were not needed, or if the cost of the connection would be less than the cost of the original route, the total amount of the difference would be available for use on the Federal-aid urban system or for local public transportation purposes under Section 142 of Title 23.
- States must notify the Secretary by July 1, 1974, of their intent to build remaining Interstate segments. By July 1, 1975, States must submit a schedule for completing their remaining segments (including alternate segments). Otherwise, segments would be removed from the System.

As the Committee on Public Works completed work on S. 502, Senator Scott introduced an amendment requiring completion of the draft environmental impact statement for I-66 by October 1 as well as completion of all notices, reviews, and final consideration by the Secretary of Transportation by December 1, 1973. The committee adopted the amendment. After summarizing the history of the I-66 controversy, the committee report issued on March 13 stated:

The bill would direct the Secretary to complete the draft environmental impact statement on this I-66 project by October 1, 1973, and to circulate it to all interested public agencies for comments within 45 days after issuance of the required notice. By December 31, 1973, the Secretary would have to complete his consideration and review of all comments and information from the hearing, file the final version of the environmental impact statement, and make the other final determinations required by law before construction could proceed. The Secretary's determination on all issues of fact would be conclusive.

It should be pointed out that the Committee recommendations would have no effect on judicial decisions made pertaining to the procedures used for selecting the route for this highway nor would it bar future litigation of any kind. To the contrary, in order to expedite those procedures, the bill would establish a schedule to be followed by administrative agencies charged by law with reviewing the environmental impact statement and making final determinations. [The Federal-Aid Highway Act of 1973, Report, Committee on Public Works, United States Senate, 93d Congress, 1<sup>st</sup> Session, Report No. 93-61, March 13, 1973, pages 23-24]

After the committee adopted the I-66 amendment on February 28, Senator Scott told reporters:

"The highway will be built. I'm confident that it will be," said the senator, smiling broadly as he left the closed-door Committee meeting. "You can be assured that I'm going to bird dog this thing. I'll go to the White House" . . . .

Scott said he has no worry but that all the reviewers will ultimately determine that the highway is needed. What he is concerned about, he said, is that the studies will drag on unduly.

Scott interpreted his amendment as follows:

"It in effect does say, let's build a highway. Let's do what the law [court order] provides, but let's build a highway."

According to Senate aides, he had initially considered an amendment that would exempt I-66 from environmental, economic, or social studies required by law and subject to court review:

His choice of the more moderate strategy of tight review schedules came, Scott said, as a result of "compromise" in the Senate Public Works Committee.

Although Senator Scott said Virginia highway officials assured him the schedule in the amendment could be met, Fowler of the consulting firm preparing the environmental document said the firm was 1 month behind the September contract date. Completion was now looking

more “Octoberish.” He said, “It’s not beyond the realm of possibility that we could make the time up but I’d say that’s pretty remote, in all candor.” [Denton, Herbert H., “Measure to Build I-66 in Arlington Passes Senate Unit,” *The Washington Post and Times Herald*, March 1, 1973]

The Senate took up the Federal-Aid Highway Act of 1973 on March 14 and 15. On March 15, the Senate considered the provision freeing the San Antonio’s North Expressway from Federal oversight. As in 1972, Senator Buckley introduced an amendment to delete the provision from the bill. He acknowledged that supporters of the expressway had made the case that due to the unique circumstances of the case, the provision would not be a precedent for congressional action to resolve other highway disputes. “Notwithstanding,” he said, “it does provide a very large precedent and one which will be cited time and time again”:

What it is saying, in effect, is: Go ahead and reach out for that Federal money and when your hand gets caught in the environmental cookie jar, offer it back and proceed.

It is my understanding that there are over 30 cases, certainly not on all four’s with this one, where equivalent arguments could be made for elimination of Federal protection. There was one matter offered in committee by the Senator from Virginia relating to the exemption of I-66 in Virginia. He understood arguments against this kind of legislation and, therefore, he resubmitted an amendment which would contemplate the full environmental procedures, only provided that there would be special priority granted to the consideration of the impact statement once submitted.

Senator Bentsen addressed the issue of precedent earlier when he said:

Senator Buckley speaks of all these interstate projects waiting back here in the hills and in the wings which will be seeking relief. This is not an interstate project. I have not heard any State offers to build a 90 percent federally-financed interstate system with local funds. Just name one. Even if a State wanted to build one, Congress could not wash its hands of such a project. Interstate highways have been designated as part of a national system. What we have in San Antonio is local people wanting to build a local road with local funds.

After a lengthy debate, the Senate rejected the Buckley amendment, 43 to 50. [Federal Aid Highway Act of 1973, *Congressional Record-Senate*, March 15, 1973, pages 8184-8193]

As the Senators discussed provisions of the legislation in sequence, Senator Scott inserted comments into the record on the I-66 provision. He explained that when the 93<sup>rd</sup> Congress convened, he asked to be included in the Committee on Public Works because of his interest in transportation and specifically completion of I-66 inside the Capital Beltway:

For this reason, I was glad to be assigned to the Senate Committee on Public Works and asked to serve on the Roads Subcommittee – now the Transportation Subcommittee. At our organizational meeting on January 18, as members of the committee will recall, I discussed my interest in the prompt completion of I-66. Further, on the opening day of hearings on this bill on February 7, I expressed an interest in the immediate construction

of I-66 to Secretary of Transportation Brinegar – as I had done in former years with Secretary Volpe, and in fact with President Nixon.

Section 152 of the pending bill is one which . . . I developed with the assistance of the chairman of the committee (Mr. Randolph) and the ranking minority member (Mr. Baker) – one which we agreed would not conflict with either the requirements of the National Environmental Protection Act [sic] or the section 4(f) parkland procedures of the Department of Transportation Act. It is carefully designed not to affect any court action, but simply to insure that the administrative requirements and determinations which must precede construction take place in an orderly and expeditious manner, so that further unnecessary delay does not occur . . . .

When a matter has been under construction [sic] for 17 years and the road still is not built, then it seems reasonable to me that some dates for administrative action should be taken so that the highway can be constructed. [pages 8216-8217]

The provision did not warrant discussion or any opposition. It remained in the bill when the Senate approved it later that day, 77 to 5, as did the North Expressway provision. [page 8232]

### **The House Gets to Work**

The House Subcommittee on Transportation, as the former Subcommittee on Roads was now called, began work on the 1973 Act in March. After Senate action on S. 502, the Subcommittee held hearings on March 19 through 23 regarding future highway needs. The subcommittee had not yet released a Federal-Aid Highway Act of 1973 bill, but Chairman Kluczynski hoped the witnesses would help the subcommittee “cope with the questions presented in S. 502 which has passed the Senate, and also the administration bill, which I introduced at the request of the administration on March 5.” (The Administration bill had not addressed Interstate freeway issues in the Washington area.)

Because of the “emergency of the issue on mass transit,” he said the subcommittee had invited witnesses from “the entire spectrum of the mass transit program,” including operators, manufacturers, and unions. He added that the Committee on Public Works was “highly in favor of mass transit as it is for highways,” including “the proper financing of these two complementary systems of transportation.” The witnesses would help the subcommittee find “a proper solution to the problem and not one which represents a hastily contrived and partial answer which will only promote further confusion.” [*1973 Highway Legislation (Future Highway Needs)*, Hearings before the Subcommittee on Transportation, Committee on Public Works, U.S. House of Representatives, 93<sup>rd</sup> Congress, 1<sup>st</sup> Session, Report 93-5, March 19-23, 1973, page 1]

As in the Senate Committee on Public Works, the hearings covered many issues, but occasionally covered issues relating to highways in the Washington area. Thomas Airis was president of AASHO in 1973, but testified only on the association’s positions. He did not comment on and was not asked about District freeway construction. [pages 548-564]

On March 21, Robert Kennan appeared before the subcommittee on behalf of the National Wildlife Federation. As had been the case during his testimony before the Senate Subcommittee on Transportation, Kennan objected to the attempts to exempt San Antonio's North Expressway from Federal requirement:

We deplore this committee's proposal last year to exempt the San Antonio North Expressway from Federal environmental laws by special legislation. It would be a shameful precedent for similar action elsewhere in the country.

He also objected to the provisions in the committee's 1972 bill on District freeway issues. He cited Section 139 on the Three Sisters Bridge, Section 140 exempting the Interstate freeways from the 1893 District highway law, and Section 110 exempting the District from the provision requiring deletion of Interstate segments if the Secretary of Transportation did not receive a satisfactory schedule for construction:

We urge the committee to resist any proposal to include provisions specifically relating to District of Columbia highways in the 1973 Federal-aid legislation.

The District highway controversy is extraordinarily bitter and complex. This committee has [now] first-hand information about current public sentiment; no congressional hearings have been held on the subject since April 1968, 5 years ago.

Since this committee took an interest in the controversy, we have witnessed a revolution in the attitudes of people living in the Maryland and Virginia suburbs toward solutions to this area's transportation problems.

Kennan cited Representative Gude's opposition to District highway legislation since it might affect I-70S inside the Capital Beltway, and construction of the Metro system, now well underway:

Most people who live and work in the Washington metropolitan area would apparently prefer rail transit and express bus service rather than more Interstate highways, to meet their future transportation needs. The proposed highway system this committee considered in 1968 is now almost universally regarded as a relic of the past.

It would be contrary to principles of proper planning and public participation in vitally important transportation decisions for this committee to compel the construction of any remnant of that antiquated system.

Representative Abzug asked Kennan:

Do you feel that all District of Columbia highways in this Federal-aid legislation should be left to local consideration?

Kennan said the federation agreed, added, "We think this is true across the country." Federal-aid legislation was "no place" for Congress to "resolve these very difficult local matters, and this is

true of the District of Columbia, as well as the controversies in Minneapolis, Seattle, Memphis, San Antonio, and elsewhere.”

Representative Abzug, observing Kennan’s objections to the San Antonio and Three Sisters Bridge provision in the 1972 legislation, said, “Perhaps we will have a bit more success, I think so.” [pages 479-491]

The next witness was John Lagomarcino of the National Recreation and Park Association. He focused his testimony on provisions in the 1972 House bills. The association objected to the provision on the North Expressway:

Such legislation would be a dangerous precedent with serious national ramifications. Congress will have begun the task of undercutting, on a case-by-case basis, its own environmental safeguards.

The association also objected to the provision on the Three Sisters Bridge, citing its similarities to the San Antonio situation. He asked, “will the Congress, on a case by case basis, attempt to substitute its judgment for that of responsible authorities, citizens, and the courts *in an individual case?*” The provision in the 1972 bill would have deprived Virginia residents of access to the courts “if state officials should abuse or exceed authority relative to transportation projects of all types, including the Three Sisters Bridge.” [pages 492-497]

On March 22, Cynthia Wilson appeared before the committee on behalf of the National Audubon Society. She began by opposing the S. 502 provision allowing North Expressway to advance without complying with Federal requirements. Aside from the concern about the impact on Brackenridge-Olmos Basin Parklands, she was concerned about the precedent:

To vote to allow one State to wriggle out of compliance with both section 4(f) and NEPA is a vote against both of those landmark statutes and will be viewed as just that by the people. Congress can, if it wishes, overturn judicial decisions, but in doing so Congress seems to be saying, “We really didn’t mean it when we voted to protect public parks; that was all rhetoric . . . .”

You have seen the result of congressional meddling in the Three Sisters Bridge dispute; this is a horse of the same color. One exception will beget another; and this committee could become bogged down in a myriad of requests from different parts of the country.

She said the society had long opposed construction of the Three Sisters Bridge:

The language in the House bill last year not only deprived the citizens of the District of Columbia and Virginia of judicial review, it also would have set a precedent depriving all citizens of judicial review in highway cases.

As Kennan had said, Wilson acknowledged that the society did not consist of constitutional lawyers, but considered the language “to be if not outright unconstitutional, at least downright dictatorial” in denying citizens of the area access to judicial review. She urged Congress to stop

interfering in such disputes, which take on national significance because they involve the Nation's capital:

Further, the bridge is the keystone to the freeway system which includes the ill-conceived south leg – which would desecrate the Lincoln Memorial, Tidal Basin, and the whole monumental park area.

Is nothing sacred? We urge this committee to reevaluate its past decision and stop forcing this bridge on the people of Virginia and Washington.

During the question period, Representative Abzug commented:

Well, I remember, of course, that in the last session of Congress, we did concern ourselves with some of these like the Three Sisters Bridge, and I think that the committee will have to take very seriously the question of these special involvements in special areas.

The Three Sisters Bridge did receive some considerable opposition on the floor of the House, in view of the fact, particularly to those of us who are constitutional lawyers, that it presented some very dangerous precedents, not only for highway legislation, but for legislation in general. We will try to defeat it again this year.

Representative Jim Wright (D-Tx.), a leading figure on the subcommittee, engaged in a brief dialogue with Wilson:

Mr. Wright. Mr. Chairman, very briefly, with regard to the San Antonio Expressway, an effort is underway on the part of proponents and opponents locally in the San Antonio area to try to find some mutually amicable resolution of this problem. If they can, it would relieve Congress of the responsibility.

Ms. Wilson. We think that would be the best solution if the local people could find an answer among themselves, that would be the best solution of all.

Mr. Wright. To the end that this might be encouraged, both proponents and opponents have merely filed testimony for the record, feeling that conversation may exacerbate rather than relieve the problem. [pages 606-609]

The next witness, ACT's Emilia Govan, submitted a statement covering several issues, but primarily focused on I-66 inside the Capital Beltway in northern Virginia. She cited the poll showing that area residents preferred mass transit to highways. For example, when asked to rank four options (Metro, reserved express lanes, improving existing highways, and building I-66), Metro was the first choice for 62 percent of respondents. Only 15 percent chose I-66 as the first choice.

She said ACT opposed any provision that would overturn a court order requiring compliance with Federal law, including the provisions in S. 502 on the North Expressway and the measure in the 1972 House bill on the Three Sisters Bridge. Legislative provisions such as these were

“unnecessary and undesirable.” Federal-aid legislation should legislate broad national policies, applied consistently around the country. “Special-purpose legislation on highway segments is unnecessary, because all the legal requirements imposed upon administrative agencies by the Congress and applied by the courts are reasonable.” Congress, therefore, should not “be wasting its time” considering the merits of such projects.

She urged the House not to include Senator’s Scott’s amendment to S. 502:

The setting of arbitrary deadlines for the required study and consideration of a complex and controversial matter may well prejudice the objectivity and thoroughness of such consideration, and adversely affect the citizen participation aspects of the process.

She cited the U.S. Court of Appeals ruling, the Supreme Court’s decision not to hear an appeal, the study underway by the VDH’s consultants, and the department’s statement at the first “Community Workshop” that the study would take 12 to 18 months, but no arbitrary deadlines would be set. She also quoted Fowler, who had stated that, “Predicting the actual time it will take to fully consider all aspects is unusually difficult to do.” She also pointed out that after Senator Scott’s amendment had been adopted, Fowler told John Frece of the *Reston Times* that finishing the study by October was “pretty improbable.” Being forced to complete the study by then meant short-changing public involvement, adding, “There’s no sense to do it (the study) if we don’t react to the response.”

Further, Senator Scott’s provision was based on the assumption that “the inevitable conclusion of the study and of the required environmental considerations will be that the I-66 project should be constructed.” Such an assumption misconstrued the purpose of the environmental review. The study would be “superfluous if the original action proposed by the highway agency is the only one with any possibility of being implemented.” The provision also implied that “the legal requirements imposed by Congress and applied by the courts are nothing but mere paper-shuffling formalities to be gotten out of the way as quickly as possible so that the project may proceed as planned.”

Govan added that the Senate committee had adopted the Scott amendment after the committee’s hearings. As a result, the Senate did not hear testimony on the provision:

However, several Northern Virginia citizen organizations did express their opposition to any special legislation relating to I-66, in a telegram to members of the Senate Public Works Committee . . . .

Representative Abzug said that similar controversies were occurring around the country. Hearing from groups such as ACT was important because it would help committee members understand that “we have to have a more realistic and social view toward the old questions of transportation, and also a more orderly way of solving the conflicts . . . .” [pages 609-614]

On April 3, the Committee on Public Works met to consider S. 502. Representative Wright offered an amendment to substitute H.R. 6288 for the Senate bill following the enacting clause. H.R. 6288, which was essentially the 1972 House bill, covered the wide spectrum of highway

and highway-oriented transit measures, as well as provisions involving specific projects, including:

- “Federal-Aid Systems” (Section 110) – exempted any Interstate segments referred to in Section 23 of the Federal-Aid Highway Act of 1968 from timetable requirements.
- “Termination of Federal-Aid Relationship (Section 113) – allowed Texas to repay Federal-aid highway funds used on the North Expressway and complete the project with State funds.
- “Three Sisters Bridge” (Section 138) – Prohibits courts from issuing any order or taking any action that would in any way “impede, delay, or halt” construction of the bridge.
- “District of Columbia” (Section 139) – exempted the District’s Interstate highways from the 1893 act on a permanent system of highways for the city.

As the committee began considering Representative Wright’s motion, Representative Abzug raised a point of order:

Rule 11 of the Rules of the House provides that it shall not be in order for any bill providing general legislation in relation to roads to contain any specific provision for any specific road. I have read the gentleman’s amendment, and it seems to me it definitely violates this rule.

A great majority of the provisions in the bill refer to roads and related transportation in general, but Sections 113, 129, 131, 138, 140, 223 and 224 contain specific provisions for roads and related individual projects all across the country.

Chairman Blatnik sustained her objection.

Representative Wright replied:

I accede to the point of order, which I think was properly raised and has been properly sustained, notwithstanding the fact that all this material was encompassed in the bill that this committee approved and the House bill passed last year.

His original motion having been ruled out of order, he offered a second motion to substitute a new version of his bill minus the provisions Representative Abzug had cited. The committee approved the change.

Although committee members tried to reinsert their specific provisions, Representative Abzug’s point of order was sustained later in the process. The result was that most of the deleted provisions were left out of the S. 502 bill the committee approved on April 10. One provision that survived was contained in Section 139, exempting the District’s Interstate freeways from the 1893 law. The House committee report on the bill repeated the language from the 1972 report on the exemption.

The approved bill also exempted the District from the deadlines requiring submission of a schedule for completing the Interstate routes (July 1, 1974) and submitting PS&E for all unbuilt segments (July 1, 1975). The exemption applied to any segment of the Interstate System cited in

Section 23 of the Federal-Aid Highway Act of 1968. [Federal-Aid Highway Act of 1973, Report on S. 502, Committee on Public Works, U.S. House of Representatives, 93d Congress, 1<sup>st</sup> Session, House Report No. 93-118, April 10, 1973, pages 11, 27, 56]

In addition, the members approved a measure, Section 145, that addressed the timetable for completing environmental impact statements on a State Route 18 bridge over the Raritan River in New Jersey and I-66 in northern Virginia. The I-66 measure was essentially Senator Scott's provision.

The next step was for the Committee on Public Works to present the bill to the Committee on Rules, which would establish the rules for House consideration. Members of the Committee on Public Works appeared before the Rules Committee on April 12. According to a transcript of the hearing, Representative Wright told the Rules Committee:

We have asked for a waiver of points of order in certain provisions of the bill which would be subject to points of order . . . . Those provisions in the bill that would be subject to points of order relate to specific highways and a general highway [sic] and we would ask you to waive points of order. However, if a member wanted to make an amendment to knock out one of those, he should be entitled to do it. [Stenographic Transcript of Hearings on S. 502, Federal-Aid Highway Act of 1973, Before the Committee on Rules, U.S. House of Representatives, April 12, 1973, Reynolds Reporting Associates, Inc., page 8. (The House did not publish reports on the discussions in the House Committee on Public Works or the Rules Committee. Transcripts were found in the subscription service, ProQuest – Legislative Insight.)]

As requested, the Rules Committee adopted a rule, House Resolution 356, for considering the Federal-Aid Highway Act of 1973 that among other measures, waived all points of order on amendments addressing specific highways in general legislation. On April 17, after brief debate, the House of Representatives adopted the rule. [Federal-Aid Highway Act of 1973, *Congressional Record-House*, April 17, 1973, pages 12793-12796]

The House began debate on the Federal-Aid Highway Act of 1973 on April 18. As committee members discussed each section of the bill, Representative Abzug took her turn to discuss several of them, including Section 139 regarding Interstate highways in the District of Columbia. The provision, as she noted, was identical to Section 140 in the 1972 legislation that failed. She did not intend to offer an amendment striking Section 139 from the 1973 version, but wanted to clarify one point:

The committee's report suggests that section 139 refers only to a provision in the act which prohibits construction of a highway at a width greater than 160 feet. That statement is not correct. Section 139 would, by its terms, repeal all the provisions of the 1893 act in relation to interstate highways in the District.

She referred to her statement of additional views on the 1972 legislation and entered it into the record of the debate. [Federal-Aid Highway Act of 1973, *Congressional Record-House*, April 18, pages 13116-13117]

Representative Stanford E. Parris (R-Va.), a lawyer from Fairfax County who had won election in 1972 to now-Senator Scott's former House district, commented on Section 145 affecting the timetable for review of I-66. His comments were extended remarks, not delivered on the House floor:

I firmly believe that approval of this section of the bill will constitute a great public service, not only to those who daily commute from Virginia to the District of Columbia, but also to the many visitors who annually arrive in our Capital City.

He explained that I-66 was "an integral portion of our nationwide system," but had been delayed for the past 17 years "in spite of the fact that all traffic studies which have been conducted point out the urgent need for I-66 as part of a balanced transportation system for the Metropolitan Washington area." He had been "particularly pleased" that the Senate included a comparable provision in its bill, and he strongly urged his colleagues "to do likewise." [Federal-Aid Highway Act of 1973, *Congressional Record-House*, April 18, page 13106]

The House passed the bill on April 19, 1973, by a vote of 292 to 93. The final bill retained the provisions affecting the District of Columbia and I-66 in Virginia. [Federal-Aid Highway Act of 1973, *Congressional Record-House*, April 18, 1973 (pages 13097-13145) and April 19, 1973 (pages 13224-13276)]

### **While Congress Worked**

On March 9, 1973, the Interior Department wrote to the District Department of Highways and Traffic regarding plans to build a freeway tunnel under the Lincoln Memorial plaza. In the draft environmental impact statement, the letter stated, the District had failed to justify the plan, saying "... this department finds it premature to consider this project" while others are in limbo, including I-66 and the Three Sisters Bridge. The letter recommended that the District consider alternatives that "could be less disruptive and/or more compatible in this highly sensitive National Capital area." Interior suggested review of an alternative of building the freeway on the Virginia side of the Potomac River or dropping the South Leg altogether in favor of improving existing roads.

The *Post* summarized Interior's comments:

- The highway department failed to provide enough information on the impact of the freeway on parkland or to support its contention that the project would actually add parkland by eliminating some existing roads.
- The highway department statement failed to analyze the impact the project might have on water resources in the Tidal Basin.
- The question of the aesthetic impact of the project is analyzed in "a fragmentary and elementary way."
- The highway department failed to analyze the impact that vibrations from traffic might have on the Lincoln Memorial.
- The highway department failed to support its conclusion that the construction of the freeway would improve air pollution conditions.

The *Post* mentioned that in October 1972, Russell E. Train, chairman of the Council on Environmental Quality, had written to Secretary Volpe to suggest that only “minimum improvements” be made to existing roads. The plan would not solve all problems but Train thought it would “serve most anticipated traffic” until officials can determine how Metro would affect traffic volumes. [Scharfenberg, Kirk, “D.C. Freeway Unjustified, U.S. Asserts,” *The Washington Post and Times Herald*, April 6, 1973]

Thomas Crosby, in the *Star-News*, reported on May 10 that the Department of Highways and Traffic had submitted the final design plans for the South Leg to the city council and Mayor Washington. The 84-page design report described the South Leg Freeway (I-695) as a six-lane, 1.5-mile freeway connecting the District side of the Theodore Roosevelt Bridge with the Southwest Freeway:

The final design calls for the freeway to be composed of three 13,000-foot long tunnels and two 25-30 foot deep, 550-foot long depressed roadways which could later be converted into a single mile-long tunnel.

Floodgates would be provided across from the Bureau of Engraving and Printing [on 14<sup>th</sup> Street, NW.] to handle any overflow of the Potomac River, which highway officials say would occur only once every 50 years.

The report stated that “all of the structures subjected to water pressure are thoroughly waterproofed.” The result, as Airis had said during the hearings, would be that the freeway would make an extra 4 acres of land available for park use. “What other highway project,” he asked, “has ever given land back to the park service?”

The city council, Crosby said, “has gone on record as favoring the freeway, which originally was requested by the National Park Service to alleviate traffic and provide additional park area.”

The report addressed concerns expressed by NCPC, the Interior Department, and others about the plan:

The planning commission said alternate routes should be explored, and the final report says both Constitution Avenue and Jefferson Davis Highway (U.S. Route 1) were inadequate to handle the 67,000 cars which now use Independence Avenue daily.

The Interior Department said the draft environmental statement lacked “specificity and quantification” and suggested another draft be drawn up and circulated for comment.

The final design report stated that all adverse environmental impacts were “confined principally to the [three-year] construction period.” The final environmental impact statement had not yet been released to the public, but Airis assured reporters that it addressed the concerns expressed by the Federal agencies.

Airis called the \$110-million project a “high priority objective” that must be approved quickly if construction was to be completed in time for the rush of visitors for the 1976 Bicentennial

celebration. [Crosby, Thomas, "Freeway Decision Due," *The Washington Star-News*, May 10, 1973]

A *Star* editorial expressed skepticism that delivery of the report on the South Leg Freeway to the city council and Mayor would lead to construction. It sounded simple enough. "If the mayor and council approve, the project goes to the Department of Transportation and gets built. If not, it dies. Right?"

The editorial answered that question: "Not necessarily." The concept of tunneling under the Lincoln Memorial plaza and the Tidal Basin was "eminently sound," but "something – a policy switch or a financial hitch or a rash of new esthetic objections – always has seemed to go wrong." Just getting automobiles out of sight of park visitors would be "a significant aesthetic gain for the whole area":

Perhaps, as the highway people believe, the plan's latest refinements – responsive to specific criticisms voiced last year – finally will be sufficient to avoid another of the unforeseen setbacks that so persistently have materialized in the past.

With our fingers crossed, we hope they're right. ["Highway Merry-Go-Round," *The Washington Star-News*, May 15, 1973]

As if to demonstrate the editorial's point, Conrad Wirth, the former NPS Director and NCPC member, took strong exception to Crosby's article:

It is hard to believe that anybody – even a highway engineer – would make such a recommendation as that advanced by the District Highway Department; that is, to put a six-lane interstate highway through this nation's great memorial Mall and the stretches of cherry blossom trees of West Potomac Park. It is even harder to give credence to the proposal for putting it through the area set aside by Congress to memorialize President Franklin Delano Roosevelt. And to follow the suggestion with a sarcastic and self-righteous statement that four acres of land are being given in exchange is simply to add insult to injury.

Wirth said the statement that the NPS had requested the freeway was not correct. "The only thing the service tried to do was to get the traffic past the Lincoln Memorial underground, and into Independence Avenue." Wirth favored the NCPC proposal for a tunnel the entire length from the Theodore Roosevelt Bridge to a junction with the Southwest Freeway east of the railroad tracks near 14<sup>th</sup> Street.

As for the claim that adverse environmental impacts would be confined mainly to the construction period, Wirth asked, "How in the world can anybody make such a statement about a six-lane interstate highway going through the nation's great memorial area?" The construction period was the least of the problems; its impacts can be corrected. "But those heavy-traffic roads, operating twenty-four hours every day, would constitute a pollution, beyond all imagination, of our air, hearing, and scenic and historic heritage. The idea is frightful."

He also was skeptical about the added 4 acres parkland that Airis had cited. “What four acres?” If he was referring to land on Independence Avenue from 14<sup>th</sup> Street to the Potomac River, the NPS already owned the land. As a result, “the highway group doesn’t have it to give away.” Was it the area of fill in the Tidal Basin that they were proposing be built? “That would be as destructive as is the six-lane interstate highway they propose to build”:

But I guess we can’t expect anything very different from people who have spent their lives building highways. They don’t seem to have much interest in anything else. Thank goodness, that is not true of all engineers. [Wirth, Conrad L., “The Southwest Leg,” Letters to the Editor, *The Washington Star-News*, June 2, 1973]

By then, Administrator Turner had retired a year earlier at the end of June 1972. After a long delay, former Nebraska Governor Norbert T. Tiemann took office as Federal Highway Administrator on June 1, 1973.

After winning election in 1966, Governor Tiemann adopted an activist role to deal with Nebraska’s fiscal problems. He worked with the State legislature to create a tax base that provided the revenue the State needed to function. He also secured approval to enter into bonded indebtedness to pay for road improvements, with the debt backed by motor vehicle license fees and fuel taxes. In addition, Nebraska undertook the first broad reorganization of the Department of Roads, issued the first bonds for highway construction, established a 20-year plan for expressway construction, initiated the first mandatory driver examinations and motor-vehicle inspection programs, and closed the Omaha Gap on I-80. He served a 4-year term before losing his reelection bid in 1970.

Administrator Turner, whose entire career had been with BPR, had been a traditional road builder. Governor Tiemann, a banker and politician, brought a new perspective to the role. He embraced the new philosophy of balanced transportation, with each mode doing what it did best. He made this perspective clear in his first speech, on June 18, 1973, to the Western Association of State Highway Officials. He said, “we have arrived at a point where we must reduce dependence on private cars in urban areas – particularly during the rush hours – and convince commuters to either form carpools or use public mass transit facilities.” Highway officials could no longer think of transportation modes as “independent entities, each with its own constituency and indifferent to the problems and the needs of the others”:

The point is, we must now think in terms of overall TRANSPORTATION planning, and the role of each mode in that plan. The modes cannot be competitive in our highly complex society of today—and tomorrow—instead, they must be complementary.

### **Facing Chairman Natcher**

Chairman Natcher remained concerned about the District’s lack of progress on its Interstate freeways, as he made clear when Mayor Washington, Airis, and other officials testified on April 11 before his subcommittee regarding the District of Columbia Appropriations Act, 1974.

He began his comments on balanced transportation with a discussion of the origins of the Metro rapid rail transit system, a subject he had discussed many times before:

In 1955 I made the motion that started the rapid rail transit system in the city of Washington. The request for the District of Columbia's share for the metropolitan area transit survey came before this subcommittee. The cost of the survey was \$561,000 to be paid by the State of Virginia, the State of Maryland, and the District of Columbia. I sat next to the chairman of the subcommittee at that time, Louis Rabaut, who said, "This would be one of the biggest mistakes we have ever made. I won't make the motion." I said, "Mr. Chairman, I think you are wrong. We need to have a rapid rail system in Washington together with an express bus system along with an adequate freeway system." I made the motion and the District of Columbia's share was appropriated and paid. This is the subcommittee, Mr. Washington, that in 1969 appropriated the money that started the rapid rail transit system under construction. After that, we had the law suit [sic] halting freeway construction and the enactment of the 1968 and 1970 Highway Acts ordering a resumption of construction. I believe that the acts must be complied with. We were for rapid rail transit in 1955. I am for it today.

When the \$1.2 billion worth of rapid rail transit bonds, which are guaranteed by the Federal Government, come due the Federal Government will retire every one of them. Not a single one of them will be retired out of the fare box. They are guaranteed by the Federal Government and the Federal Government will have to pay off every one of them . . . .

Chairman Natcher was especially concerned about construction of the I-95/Center Leg Freeway behind the House Rayburn Building. It was, he said, "nothing but a disgrace," adding, "That is the only category you can place it in." Construction had been underway for 7 years:

All of the people working in the three House Office Buildings and the Capitol that drive in from the southwest freeway have seen 18 and 20 men, who work for the construction company that has the contract, standing on the curb each morning to see how the girls were dressed, standing there by the hour. We complained about the idleness of the contractor's employees and the delay in the completion of the project to Mr. Airis and he related the complaint to the contractor. The contractor wrote me a letter and said the reason for the great delay in the project was due to the fact that there were so many changes in the contract, trying to blame city officials.

He told Airis that "if every contract that you have the size of that one is going to take 7 years to complete, we ought to quit."

Mayor Washington replied, "I would agree," but according to the transcript of the hearing, neither he nor Airis explained the delay or promised that the contract would be completed promptly.

Chairman Natcher went through the history of the freeway controversies, once again inserting the documentation of letters and newspaper articles that he had inserted in previous hearing records and during House floor debates.

He asked Corporation Counsel C. Francis Murphy to send an update on what the city had done regarding the Three Sisters Bridge lawsuit to comply with the provisions of the Federal-Aid Highway Acts of 1968 and 1970, "and tell us whether or not an environmental statement for one thing has ever been prepared and submitted and just what has transpired." He also requested an update on the status of all the remaining freeway segments.

On May 12, 1973, Mayor Washington replied to Chairman Natcher's request. Mayor Washington began with the Three Sisters Bridge:

With respect to the legal and legislative matters which you inquired about, Mr. Murphy advises me that, in view of the fact that the Supreme Court has refused to grant a writ of certiorari, further litigation of the substantive issues involved in the lawsuit has been precluded.

Mayor Washington mentioned Chief Justice Burger's unusual comment about the possibility of congressional action to limit judicial review. He pointed out that the unsuccessful Federal-Aid Highway Act of 1972, with Section 139 designed to do just that, did not clear Congress. The House Committee on Public Works considered including the provision in the 1973 Act, but did not do so. "Absent such legislation, this project as well as all other interstate projects must be processed in accordance with the provisions of title 23 of the United States Code."

Mayor Washington then provided the status of the city's remaining freeways:

1. The south leg of the inner loop was part of the study report to the Congress in February 1970. In September 1972, a combined corridor and design public hearing was held. In preparation for the hearing, a draft environmental impact statement was prepared and circulated to concerned agencies. The Department of Highways and Traffic in cooperation with the Federal Highway Administration is now ready to submit the final environmental impact/4(f) statement to the Department of Transportation. Recommendations of the Department of Highways and Traffic are now being reviewed by the city council and my office prior to submission of the District's final design and location recommendations to the Department of Transportation.
2. The Three Sisters Bridge was placed under construction [in] October 1969 but activity was halted by court action in August 1970. Since the U.S. Supreme Court refused to hear the case, construction cannot be resumed until there has been compliance with the requirements imposed by the courts.
3. On the District of Columbia end of the bridge, the related project is the Potomac River Freeway portion of I-266. This segment was placed in a design status in 1969 with the concurrence of the Federal Highway Administration. The purchase of right-of-way recommenced and all properties have now been acquired between 31<sup>st</sup> Street extended and Key Bridge. Because of court actions the Department of Transportation has required additional environmental assessment studies leading to public hearings. In addition, a

Georgetown Waterfront Sectional Development Plan study was commenced on January 26, 1972. The study is being conducted in three phases. Phase I is a review of alternative freeway plans, development of compatible preliminary land use plans, and assessment of environmental impacts of the alternatives. Phase II and phase III of the study were designed to prepare a sectional development plan and program for the Georgetown waterfront area consistent with the selected alternative highway plan. The phase I report was published in November 1972. The District government is now preparing for public hearings required by title 23 and is utilizing phase I data in the preparation of appropriate public hearing documents. It is planned to schedule the public hearing for later this year. In Virginia, Interstate Route 66, between the Capital Beltway and the Theodore Roosevelt Bridge is now the subject of an intensive multidisciplinary study by the Virginia Department of Highways. The study is scheduled for completion in the fall of this year with the objective of final evaluation through the public hearing process at an early date.

4. Construction of the center leg of the inner loop has continued northward to Massachusetts Avenue and this portion is now scheduled to open in August of this year. The K Street overpass will be completed this fall. Completion of the remainder of the center leg, the covered section between H and K Streets and the temporary ramps northward to New York Avenue, is awaiting final environmental impact assessment. The final statement is scheduled to be submitted to the Department of Transportation before July 1. This project should be ready for advertisement this fall.
5. The segment of the east leg between interchange "C" and Barney Circle at Pennsylvania Avenue is nearing completion. The outbound section was opened to traffic on May 2. The inbound section will be opened to traffic this summer. Northeastward of Barney Circle, additional public hearings are required in order to advance this project to the construction stage. Experience with the conduct of such hearings has indicated the need for more definitive air quality analysis as part of the environmental impact/4(f) assessment. This is the principal cause for the delay of the hearings suggested in last year's statement. Preparation for a combined corridor and design public hearings [sic] is now underway with a hearing date anticipated for the fall of this year.

Mayor Washington added a paragraph on I-95:

With respect to I-95, the Maryland Department of Transportation embarked on a transportation alternative study in August 1972. Phase 2 of the study is examining five mixed-mode transportation alternatives. Four of the alternatives contemplate alignment tying into the proposed Industrial Freeway along New York Avenue in the District. The phase II analysis is now nearing completion and will be presented through a public meeting process in mid-June. A public hearing to consider any resultant highway recommendations will be scheduled as soon as practicable thereafter. [District of Columbia Appropriations for 1974, Hearings, Subcommittee on District of Columbia Appropriations, Committee on Appropriations, U.S. House of Representatives, part 1, pages 26-39]

When General Graham and other WMATA officials appeared before the subcommittee on May 2, Chairman Natcher briefly discussed the need for a balanced transportation system, dating to his 1955 motion. He then asked if General Graham still thought Metro construction would

cost \$2.980 million. General Graham said that “indications are pretty good, Mr. Chairman, that we can complete it for substantially that cost.” He thought the program was maybe \$35 to \$45 million over that estimate, but said, “It’s quite difficult to look down the road and see whether that is going to get any worse.”

Chairman Natcher pointed out that from the start, he did not think the final cost would be \$2.5 billion:

I said to you, and I still say to you this morning – and I hope I am just as wrong as I can be – that it’s going to cost you about \$4 billion to build this rapid rail transit system in the city of Washington and the surrounding metropolitan area. I was positive you couldn’t do it for your original estimate of \$2.5 billion. I am hoping now that you do stay within this present estimate of \$2.98 billion.

Next, Chairman Natcher asked if General Graham believed the \$1.2 billion in bonds, backed by the Federal Government, could be retired out of the farebox, or “do you agree with me, General Graham, that the Federal Government will pay every dollar of the \$1.2 billion worth of bonds?”

General Graham acknowledged that this was “a difficult question to answer.” The financial plan was based on assumptions about farebox revenue and ridership:

At this time we are prepared to stand by that financial plan, which says that not \$1.2 billion worth of bonds but approximately \$882 million worth of bonds can be repaid. If you will recall, about \$300 million was added in the form of an interest subsidy by the Federal legislation.

He cautioned that the WMATA board of directors “has indicated a willingness . . . to try to hold fares level.” The financial plan was based on the expectation that fares would go up as operating costs of the rail system increased:

If they take the same view on the rail system after we are in operation that they have taken on the bus system thus far, then there will have to be under present circumstances a subsidy from the local governments to make up that difference. [pages 939-942]

On May 14, Airis returned for additional hearings before the subcommittee. Airis, in his opening statement, included a status report on Washington area freeways, including a summary of those open and the Maryland transportation alternatives study. Of the 29.5 miles of freeway originally contemplated, a total of 10.8 miles had been completed:

These are the Theodore Roosevelt Bridge and portion of the Potomac River Freeway

(I-66) including the connecting E Street Expressway; the 14<sup>th</sup> Street bridges (I-95) including the new center bridge which was opened to use by express buses 2 years ago; the Southwest Freeway (I-95) including the northbound 12 Street Expressway and the southbound 9<sup>th</sup> Street Expressway; the Southeast Freeway (I-695) to the completed 11<sup>th</sup> Street Bridge over the Anacostia River; and the Anacostia Freeway (I-295) . . . .

Approximately 1.8 miles of the system are now under construction. These include the center leg freeway (I-95) between D Street SW., and Massachusetts Avenue NW, now scheduled for completion in August of this year.

The K Street structure over the center leg is the first contract in the portion between Massachusetts Avenue and New York Avenue. That is 40 percent complete.

A segment of the east leg (I-295) is under construction between interchange "C" and Barney Circle at Pennsylvania Avenue.

I should also mention that the outbound movement on that segment was completed and put into operation on May 2. The inbound will be finished sometime this summer.

He cited the court action delaying the Three Sisters Bridge and the study underway along the Georgetown waterfront. Design of the Potomac River Freeway (I-266), he said, was "tied to some extent to the resolution of the Three Sisters Bridge problem and, indeed, to the resolution of I-66 in Virginia."

The Department of Highways and Traffic's recommended alternative for the South Leg was construction of three 1,300-foot tunnels west of the Lincoln Memorial and under the northern neck of the Tidal Basin:

This plan can ultimately be converted into one long tunnel which will make the area west of the Tidal Basin fully usable as a park-visitor complex.

This can be accomplished at the time the requirements of the Clear Air Act of 1970 become effective. The facility as we have designed it, even with the two short sections of open, depressed portions, we felt can be justified from a park standpoint alone, as it turns back 4 acres of land that is now occupied by surface roads to the Park Service.

The city was "at the threshold of submitting a final environmental impact statement and the combined corridor and design recommendations to the U.S. Department of Transportation," subject to final review by the city council and Mayor Washington.

The East Leg of the Inner Loop north of Barney Circle to Bladensburg Road was in design status. "Work is now underway to assess the environmental consequences of this segment and to prepare for a combined corridor and design public hearing that is needed in view of past court orders on this project."

The remaining routes were "in a preliminary study status." The Federal-Aid Highway Act of 1970 had called for study of these routes, namely the North Leg (I-66), the Northeast-North-Central Freeway (I-95 and I-70S), and the upper end of the East Leg. Mayor Washington and Secretary Volpe had submitted their reports to Congress as required:

I should point out that the main difference in the system which was recommended by the Mayor, the Secretary of Transportation, and the City Council are [sic] that the North Central Freeway along the alignment of the B & O Railroad, was eliminated and a

substitute was made in the corridor of New York Avenue and the Penn Central Railroad, going past the Fort Lincoln development. We feel that it is a political decision and we support it. It will certainly be of great help to the city if it can be worked out with Maryland and something can finally be constructed.

Chairman Natcher returned to a subject he had raised earlier, namely construction of the Center Leg Freeway near the Rayburn House Building. He pointed out that the project had been underway for 7 years and that, according to Airis's statement, the completion date had changed from January 1973, the date provided in 1972, to August of the current year. It was, he reminded Airis, "nothing but a disgrace." He recalled the idle workers and the contractor's excuse about contract changes. He said that if this project was representative of projects in the District, "it certainly does not speak well for any that will be started in the future or those that are underway."

Airis responded by saying the "6 to 7 years is one heck of a long time." The city had dealt with the problem of the idle workers but "it probably has recurred to some extent." The project was nearly complete, subject to several claims filed by the contractors, some of which "we feel dubious about":

Nevertheless, this project is one of a kind. A project of this scope and size had not been attempted before with the air rights projects. We have probably the world's outstanding air rights project on the Labor Building alone. We had a very complicated reflecting pool that had to go over the Freeway, with all of the problems of waterproofing that go with it.

On the south end we have a HEW Building [Department of Health, Education, and Welfare] that also is an air rights project. The length of the tunnel structure is about two-thirds of a mile and it requires very complicated and very meticulous air ventilation for it to work properly. The visual problems that go with designing and take off [sic] inside a tunnel were imposed on the Department as a result of where this project was to be built and the manner in which it was to be built.

In addition to those, at a rather late date the Department had to accommodate the subway across the project at D Street, and the Metro works is not yet completed. Between D Street and E Street we have a Tax Court building under way, and there has been considerable discussion over a canopy to go across the freeway. All of these add up to a very, very complicated project. These are the principal reasons that this project had not been finished in the time that we would like to have accomplished it; that is, 3 or 4 years instead of 6 to 7 years. [District of Columbia Appropriations for 1974, Hearings, Subcommittee on District of Columbia Appropriations, Committee on Appropriations, U.S. House of Representatives, part 2, pages 862-874]

Later, Chairman Natcher launched into what the *Post* called "an off-the-cuff statement that lasted 15 minutes." He asserted his support for a balanced transportation system for the District, referred to his 1955 motion, and pointed out that the Subcommittee on Appropriations for the District of Columbia had not selected a single freeway, all of which were selected by the District in cooperation with BPR. Similarly, his subcommittee had not drafted either provision of the

Federal-Aid Highway Acts of 1968 or 1970 that had resulted in the freeway-subway impasse of recent years.

He recalled Chairman Rabaut's warning that the motion that launched the Metro rapid rail system was a mistake. "I didn't believe it then; I don't believe it today." However, he was concerned about the cost, recounting several exchanges with General Graham on the subject in recent years, including the discussion earlier in the hearing. He quoted General Graham, who was not present, as having said that he expected the system to be built within the \$2.98 billion projected budget, with only minor overruns at present:

Mr. Airis, one of these days – and you are going to live to see this day . . . when they are going to come back to this subcommittee and my friend, Mr. Myers, or one of these other members, will be chairman, and they are going to say, "Yes, it is going to cost \$4 billion."

When just for a change they start telling the truth about it, Mr. Airis, so the people in the city of Washington will have all of the facts, then they are going to say \$4 billion.

Now, Mr. Airis, I am still in favor of the Rapid-Rail Transit System.

He mocked Members of Congress who had called for WMATA to take over the private bus companies. "You know, they complained for several years about the operation of the buses. Certainly I am one of those members of this committee who believes we should have had better bus service in our Nation's Capital." He was just thankful that his colleagues did not want WMATA to take over Amtrak:

Now, Metro has taken them over, and at a cost of over \$100 million. What is the first thing they are saying to us? "Subsidy." They say it is going to be about \$6 million. Over the next 4 years it is going to be many times that amount.

That is in addition to the subsidy for transporting the schoolchildren. I am in favor of the school transit subsidy, which is in this bill now for about \$4 million. It has come up from a little over \$2 million to a little over \$4 million at the present time, and represents the difference between the 10 cents they pay and the regular 40 cents fare. Mr. Airis, as one member of the committee, I am in favor of making that payment. But I say to you on the record, I am not in favor of any \$6 million subsidy or for any amount in the future for the operation of the bus company, over and above the subsidy for the schoolchildren.

Then he reiterated his discussion with General Graham about the Federal guarantee of the Metro bond issuances. The bankers would not buy those bonds initially. "Because the fare box does not retire bonds." He had voted for the bill authorizing \$1.2 billion worth of bonds, backed by the Federal Government:

Mr. Airis, as I said in the beginning and I say to you again, as a matter of placing it in the record, that every bond will be retired by the U.S. Government. Not a single bond will be retired out of the fare box; not a single bond will be retired by the District of Columbia. They will all, under the guarantee made by the Government, be paid for by the Federal Government.

So, Mr. Airis, just as a matter of being truthful, decent, and honorable about these things, why don't they tell the truth to the people in the city of Washington. Down through the years you have read articles in the paper that are intended to sound good. Well, just for a change, don't you think it is time to start telling the truth to the people?

Mr. Airis, I am in favor of completing the system regardless of the cost, but at the same time I think we should tell the people the truth about the cost and the fact that the bonds cannot be retired out of the fare box.

As far as subsidy for the rapid transit system is concerned, that will be one of the major problems in 1976 or 1977 after it is completed. They will have to have a subsidy to operate it and they might as well start telling the people in the District of Columbia that that day is coming. If you want to start telling the truth about it, you ought to tell the people who pay the taxes what the situation is going to be.

The District would face many transportation problems in coming years, Chairman Natcher said, "and the best way to solve them, as we go along, is to just be honest and decent and tell the people the whole story":

You know that is the best way to live, Mr. Airis, the other way to live is to just say nothing, refuse to give all the facts and just color and distort them, and that is what has been going on for years.

Now is the time to start telling the truth about it . . . .

With what is going on in our Nation's Capital – the day will come, Mr. Airis, when the people in the city of Washington who pay their taxes, the ones who remain, are going to start saying, "Stop doing anything else in the District. Let's have something done for the District."

The transcript shows that at that point, Chairman Natcher and Airis had a discussion "off the record." [pages 895-899]

Jack Eisen asked General Graham about Chairman Natcher's comments. Graham denied not telling the truth about the cost:

"We'll build the rail system for \$3 billion if the President and Congress will get together on a program for controlling inflation," Graham told a reporter yesterday. "But we can't if prices continue to go out of hand as they have in [President Nixon's] Phase III" economic plan. [Eisen, Jack, "Rep. Natcher Opposed to Bus Subsidy," *The Washington Post and Times Herald*, May 15, 1973]

The *Post* took exception to Chairman Natcher's comments about operating subsidies for Metrobus. WMATA needed subsidies to avoid raising fares. "Certainly his opposition to a bus subsidy could spell serious trouble for Metrobus."

The editorial board had to concede that his complaint about officials not being honest about deficits was “not without foundation.” They had chosen their words very carefully. After explaining the comments by former Secretary Volpe and WMATA Chairman Fisher, the editors continued:

Metro officials have said that a stopgap bus subsidy will be essential until the combined bus and rail transit system is about to pay its own way. This is what apparently enraged Mr. Natcher – and what needs to be explained. First, despite Mr. Volpe’s good intentions in coming to the aid of Metro, his statement did not reflect the view of the system officials about the need for subsidy. In turn, Mr. Fisher’s response focused on how the subway-bus system would operate – not on how the buses would be financed until the subway is completed.

In short, a subsidy was needed. “This is what Metro officials should have said all along, and what city officials ought to be saying, too.” Any subsidy from the city would be part of the city budget, “and the city budget, like it or not, is a responsibility of Mr. Natcher. Mr. Natcher doesn’t like to be misled.”

For now, Chairman Natcher had made his point:

In fact, the debate should no longer be over whether a subsidy is needed to keep fares at their present levels, but whether the subsidies should be large enough to make fare *reductions* possible. Now that O. Roy Chalk and the other private bus owners have left, the opportunity for a forthright discussion of this course should not be lost in an attempt to placate Congress. [“Rep. Natcher’s Bus Subsidy Complaint,” *The Washington Post and Times Herald*, May 25, 1973. Italics in original]

The *Star*’s editors referred to his doubts about the cost estimate for constructing Metro, “and he may well be right.” He was, as everyone knew, “thoroughly irritated, with every justification, at the snail-paced progress of road-building in the city.” However, when it came to his opposition to subsidizing the bus system, “the gentleman from Kentucky could not possibly be more wrong.” Chairman Natcher and Metro officials disagree on whether WMATA and its supporters misled Congress on this point, but “nothing could be more fruitless” than trying to parse the debate:

What’s important is that the provision of the subsidies is vital to the public interest, and their inevitability was asserted clearly in the past on dozens of occasions . . . .

The Washington area is not alone in electing to subsidize transit. Virtually every other urban center in the nation has turned to the policy out of necessity, because the alternative was unacceptable.

That alternative involved increasing fares and reducing service, or both, to balance costs and income. “That, in fact, is precisely what occurred under private ownership” and that, in turn, was “what largely motivated the campaign for public ownership.”

The editors gave area officials credit for agreeing “to an equitable allocation of their own local funds – not federal funds – for this purpose of subsidizing bus service.” If Chairman Natcher refuses to appropriate the District’s share, the result “would surely result in another disruptive political confrontation in Congress that Natcher would be hard put to win, and which we trust he will not precipitate.” [“Natcher’s Doubts,” *The Washington Star-News*, May 18, 1973]

### **Awaiting the 1973 Act**

On June 9, 1973, Mayor Washington proposed a \$1.1 billion construction program for the next 6 years, including \$400 million for Metro construction. The budget included funds for 19 miles of freeway projects that the city council had not yet approved. The city council was expected to take up one of the freeways, the South Leg of the Inner Loop Freeway, during the summer. [Scharfenberg, Kirk, “Mayor Seeks \$1.1 Billion in Construction,” *The Washington Post and Times Herald*, June 10, 1973]

In Maryland, the citizens’ steering committee in Prince George’s County, after a 10-month, \$675,000 study, recommended in June that the State drop plans to extend I-95 into the District of Columbia. Delegate Ann R. Hull, the committee chairwoman, announced the decision during a public hearing on June 16. While opposing the extension, the steering committee favored:

- Widen the Baltimore-Washington Parkway to six lanes;
- Designating the parkway as I-95 inside the Capital Beltway with eight lanes and building a connector road through Laurel between the parkway and I-95;
- Shift the proposed Metro line planned to run east of the University of Maryland to the west of the College Park campus along University Boulevard with a station near Byrd Stadium and its terminus moved to the existing interchange of I-95 and the beltway instead of at Greenbelt Road; and
- Adjust Metro’s line to Greenbelt, including a terminus north of the intersection of the beltway and the Baltimore and Washington Railroad tracks.

Only about 75 people attended the hearing in the university’s Tawes Fine Arts Theater. Jack Eisen reported:

Almost everybody who spoke favored improved transit and better commuter service on the area’s Baltimore & Ohio Railroad line; some favored the extension of I-95, and a larger number, like Mrs. Hull’s committee members, would eliminate the superhighway extension. [Eisen, Jack, “Panel Urges Md. To Drop Plan for I-95,” *The Washington Post and Times Herald*, June 17, 1973; Crosby, Thomas, “Transportation Alternatives Argued by Public,” *The Sunday Star and The Washington Daily News*, June 17, 1973]

On July 12, Secretary Hughes officially dropped Maryland’s plan to extend I-95 into the District of Columbia. Although the I-95 extension was a planned part of a Maine-to-Florida route, it “must be judged primarily in terms of service to the Washington Metropolitan area. This department,” he said, “has not been convinced of the need for extending I-95 south of the Beltway on any new alignment.” He was addressing the 60-member steering committee. He had previously rejected the alignment through the Northwest Branch Park, but now he also was

rejecting the alignment along the PEPCO power line. If the city proposed a joint public hearing on I-95 inside the Capital Beltway, Secretary Hughes said, “the department will not express a preference for extending I-95 south of the Beltway on the Pepco power line in any joint hearing.”

As Eisen reported, “In an action that seems sure to stir a new controversy, Hughes indicated support for a connector freeway to link I-95 with the Baltimore-Washington Parkway.” It was, Hughes said, “an important link” to prevent the Capital Beltway from being inundated with I-95 traffic bound to or coming from Washington.

In addition, Secretary Hughes endorsed the steering committee’s proposal on the Metro line into Prince George’s County. He also supported a network of bicycle paths serving the University of Maryland campus, improved commuter service on the Baltimore and Ohio Railroad line, and additional bus service. He called for a study of express bus service along New Hampshire Avenue (State Route 650) and feeder bus service to the railroad line and Metro stations.

Eisen called the decision “a crippling and perhaps fatal blow” to the I-95 extension, and “a major victory for community groups that have been fighting since the mid-1960s against plans to extend the road inside the Beltway.” Including the District’s segment, known as the Northeast Freeway between the District line and the North Central Freeway. With Maryland having previously killed the State’s segment of the North Central Freeway south of Silver Spring, Secretary Hughes’ decision effectively ended the North Central Freeway north of New York Avenue. Or, as James Dilt wrote in *The Baltimore Sun*, the scrapping of I-95 killed the extension into the city “for all practical purposes.” [Eisen, Jack, “Md. Vetoes I-95 Extension Into District,” *The Washington Post and Times Herald*, July 13, 1973; Dilts, James D., “Plan for I-95 leg to D.C. Dropped in favor of better mass transit,” *The Baltimore Sun*, July 13, 1973]

During this period, efforts to develop I-66 in Virginia were running into roadblocks. A telephone poll, conducted at random in Arlington, Fairfax, and Prince William Counties, showed strong support for construction of I-66 inside the Capital Beltway. The results were revealed at a public workshop on I-66 on March 13. The *Post* summarized the results:

The survey while revealing overall support for I-66, also showed how much stronger opposition to the freeway is in the inner suburbs that I-66 would cut through.

Residents beyond the beltway, who expect I-66 to speed their trips into the District, approve the road by 81 per cent. Only 64 per cent of residents living inside the beltway approved it.

While the strongest opposition – 38 per cent – came in North Arlington, the weakest opposition – 8 per cent against, 92 per cent approval – occurred in Fairfax’s Centreville district, far beyond the beltway.

Along with 70.8 per cent support for I-66, 92.7 per cent supported Metro, 83.1 per cent supported more express bus lanes, and 62 per cent supported construction of the Three Sisters Bridge connecting Arlington and the District, according to the survey.

Asked about the area's most needed transportation improvement, respondents identified bus service (37 percent), Metro (26 percent), upgrading existing roads (15 percent, and combining bus and rail (8 percent). Four percent did not think any transportation improvements were needed.

The nonprofit Bureau of Social Science Research had conducted the telephone poll of 1,027 residents for the consultants preparing the court-ordered environmental review of I-66. The bureau said the margin of error for the poll was 3 percent. The study was one of several VDH had begun in the fall of 1972 after losing the court case.

Rival groups saw the results as supporting their perspective. Paul Alwine, of Fairfax County Citizens For I-66, said, "It shows that more people favor the highway than are against it." Harrison Mann of Citizens for I-66 was convinced the results would, "without a doubt," lead to approval for construction.

By contrast, Emilia Govan issued a statement pointing out that when asked to list, in order of personal preference, their choice of transportation, the ranking was: Build Metro, reserve more express bus lanes, improve existing highways, and build I-66. More people favored Metro (92.7 percent) than favored I-66 (70.8 percent). [Mathews, Jay, "I-66 Back in Va., Survey Shows," *The Washington Post and Times Herald*, May 14, 1973; Brosby, Thomas, "I-66 Gets Backing in Survey," *The Washington Star-News*, April 9, 1973]

In June, the Govans, on behalf of ACT, accused Fugate of attempting to blackmail the Fairfax County Board of Supervisors. A week earlier, Fugate had said that a proposed 12-mile high-speed toll road along the Dulles International Airport access road could be built only if I-66 were constructed. With the board already on record in support of the toll road, the Govans wrote to urge Chairman Jean Packard and the board to "spurn any Virginia Highway Department tactic to force the Board to support I-66." Fugate's statement was, in the Govans' view, "but another of many pressure tactics being used by [VDH] to force construction of this highway.

In our view, his statement . . . amounts to a form of 'blackmail' on the Fairfax Board to induce the board to exert influence in favor of construction of I-66." The Govans told Packard that the toll road might help alleviate a "serious transportation problem in the growing Reston-Vienna-Herndon corridor," but urged Fairfax County not to try to solve its problem by creating one in Arlington County.

Chairman Packard, in response, said any attempt to use the toll road plan to force the board to support I-66 was "disgraceful." She planned to ask Fugate for clarification.

Although Fugate was not available for comment at press time, a spokesman assured reporters that the commissioner was expressing only his personal view that without I-66, the toll road would not collect enough tolls to support itself. "I'm certain he's not engaging in any blackmail."

Previously, ACT had written to Governor Holton to warn him that VDH was exerting "improper and intolerable pressure" on the consulting firm leading the environmental review of I-66. The issue involved VDH's decision to deny the firm's request to extend the contract beyond the

completion date of September 18. VDH official A. K. Hunsberger told a reporter that the department was insisting that the consultant complete the study by the September 18 contract date. No “extenuating circumstances” justified an extension. In the absence of an extension, project manager Fowler said the consultants had “quickened the pace of the study.” ACT and other I-66 critics opposed that “quickening,” which they feared could reduce citizen input and result in an inferior product. [Crosby, Thomas, “ACT Charges Blackmail,” *The Washington Star-News*, June 28, 1973; Mathews, Jay, “Arlington I-66 Foes Charge Blackmail,” *The Washington Post and Times Herald*, June 29, 1973]

The five-member Arlington County Board was not on record on I-66. Two board members, Everard Munsey and John W. Purdy, were ACT members who intended to support an anti-highway resolution when it was offered, possibly in the fall. One board member, Dr. Kenneth M. Haggerty, had said he would oppose an anti-freeway resolution. The two other members, Joseph L. Fisher and Joseph S. Wholey, had not taken a position.

Nevertheless, the board had written to the consulting firm to express concern that the tight schedule “may provide too little time for the careful consideration of alternatives” to the eight-lane freeway. Fisher and Dr. Haggerty had supported sending the letter, but said they did so only because the consulting firm was rushing them to provide data on county parkland affected by the highway. Munsey and Purdy thought the deadline should be extended 3 to 6 months because the consultants needed more time to determine the impact of strong air quality controls, like parking surcharges, EPA had proposed for the area.

Given the deadline, project manager Fowler was philosophical. “At some point, you have to say this is our best judgment of what the real world situation would be and go forth.” [Mathews, Jay, “Arlington Board Hints At I-66 Stand,” *The Washington Post and Times Herald*, July 28, 1973]

### **Completing the 1973 Act**

The conference to resolve differences between the House and Senate versions of the legislation proved contentious, with the conference report delayed until July 27. The final bill retained the District and Virginia measures, including exemption of the District’s Interstate System from the 1893 Act on a permanent system of highways. The conference report included the provision on the North Expressway in San Antonio, as well as project-specific provisions on the Alaska Highway, Route 101 in New Hampshire, I-93 through New Hampshire’s Franconia Notch, construction of the Highland Scenic Highway in West Virginia, and relocation of U.S. 25E through a tunnel in Cumberland Gap National Historical Park

However, the section that most affected the freeway battles in the Washington area was one that had emerged from similar controversies in Boston. Governor Sargent and Secretary Altshuler had promoted a way to cancel controversial urban Interstate highways and use the funds instead for the Governor’s ambitious but unfunded transit plans. Section 135 of the Federal-Aid Highway Act of 1973 provided that mechanism. It allowed a Governor and local governments in an urbanized area to submit a joint request to withdraw a controversial Interstate segment. The Secretary of Transportation could withdraw approval of the segment if it was not essential to completing a unified and connected Interstate System and the State provided assurances that it

did not intend to construct a toll road in the traffic corridor. The left-over Interstate mileage could be used to designate an Interstate segment in any other State.

With the Secretary's approval, responsible local officials could advance nonhighway public mass transit projects, including construction of fixed rail facilities and the purchase of passenger equipment, including rolling stock for any mode of mass transit, or both. The Federal share of the nonhighway transit project was limited to the cost of the withdrawn route as shown in the 1972 ICE, but the funds would come from the general Treasury, not the Highway Trust Fund. The Federal share would be the same as for projects advanced with UMTA funds or up to the limit of substitution funds.

As Governor Sargent had anticipated, this provision contained the solution to the dilemma of mayors and local officials in Boston and around the country. They did not want to build a controversial Interstate segment, but they also did not want to lose the hundreds of millions of dollars in economic stimulus that would come their city's way if the segment were built. Before enactment of the 1973 Act, the only way to retain the funds was to resist citizen anger about building the highway segment. Now, after several years of debate in Congress, mayors and local officials could have the funds, but use them for popular nonhighway mass transit, including rail rapid transit, instead of the unpopular freeway.

The Senate took up the conference report on S. 502, the Federal-Aid Highway Act of 1973, on August 1. In introducing the bill, Senator Bentsen said:

Mr. President, this conference report represents months of very arduous work by both the Senate and House conferees . . . . I can report that the conference held to reconcile the differences between the two bills was a very difficult one . . . . We were in conference over 2 ½ months. The conferees met 29 times, and the House and Senate conferees met among themselves several times to try to work out solutions to our most difficult problem, the question of diverting money from the highway trust fund for the use of transit. I believe we have emerged with a strong bill which preserves the essence of the Senate position on the highway bill.

He explained that conferees had begun with 110 points of difference in the two bills, but had resolved all but 13 of them by May 17, and those 13 remained unresolved for the remaining 2 months. On the key issue of the Muskie-Baker amendment, Senator Bentsen said:

From May 17 until we reached a final agreement on July 18, there were no fewer than 10 proposals and counterproposals to reach a solution on this question. I believe that the solution that we ultimately reached was an eminently fair one . . . . In the compromise, Mr. President, I believe both sides have given substantially. The Senate gives up rail mass transit from the trust fund until fiscal 1976, although general fund moneys can be exchanged for trust funds for these purposes in both 1974 and 1975. The House gives up its absolute insistence that no funds shall be diverted from the trust fund for nonhighway related projects.

As for mass transit operating subsidies, Senator Bentsen said:

Faced with the unrelenting opposition of the administration, which indicated that operating subsidies in any form would invite a veto, and the skepticism [of] the House conferees, the Senate conferees agreed to drop operating subsidies from the bill.

He said the bill did not ignore transit, but included \$3 billion in additional funds for transit capital grants, as well as the breakthrough agreement on the Muskie-Baker amendment. The Interstate transfer provision also could benefit transit. In the Senate bill, any funds left over following a withdrawal “would have gone to the account of the urban area to be used for highways or any mode of mass transit.” The conference agreement modified the Senate bill to prevent the use of Highway Trust Fund revenue from withdrawn Interstates for mass transit. The “traded” funds would remain in the Highway Trust Fund for highway purposes, while an equal dollar amount of general Treasury funds would be made available for the transit project. [“Authorization of Appropriations for Construction of Certain Highways—Conference Report,” *Congressional Record-Senate*, pages 27194-27196]

The Senate approved the bill 91 to 5. Senators Biden, Case, Proxmire, Williams, and William V. Roth, Jr. (R-De.) voted against the bill. [page 27221]

On August 3, Representative Wright called up the conference report on S. 502 for consideration. The report, he said, “has been hammered out on the anvils of mutual compromise with the other body.” It was “a good bill, a sound bill, and undoubtedly the best bill that could have been achieved under the circumstances.” Conferees encountered “strong feelings” from their Senate counterparts, but also “conciliatory and harmonious” gestures. “I think it is impossible to say that either House predominated more than the other.” He urged a resounding vote of approval. [“Conference Report on S. 502,” *Congressional Record-House*, August 3, 1973, page 28089]

The House approved the legislation, 382 to 34, on August 3. [page 28110]

### **The 1973 Act Becomes a Law**

For President Nixon, July and August 1973 were difficult months. On July 16, 1973, Federal Aviation Administrator Alexander P. Butterfield, a former deputy to top White House aide H. R. Haldeman, revealed to the Senate Select Committee to Investigate Campaign Practices (also known as the Senate Watergate Committee) the existence of a taping system in the White House. As *The New York Times* explained, “The recordings became the immediate focus of the central investigation by the Senate panel into the role President Nixon may have played in the Watergate cover-up.” [Naughton, James M., “Surprise Witness,” *The New York Times*, July 17, 1973]

On August 6, Vice President Agnew revealed that he was under investigation by the United States Attorney in Baltimore, George Beall, for possible violations of criminal law. Initial media reports indicated he was suspected of extortion, bribery, and tax evasion related to a kickback scheme involving contractors, architects, and engineers employed on Maryland projects. He denied the charges (but would resign on October 10, 1973).

On August 13, the *Times* reported that Federal investigators were planning to go through the records of the Vice President’s 2 years as Governor of Maryland and those of Jerome R. Wolff,

Agnew's appointee as chairman-director of the Maryland State Roads Commission. "In the new phase of the far-reaching investigation – which has all Maryland agog even though the state had become all but accustomed to seeing its political figures face criminal charges – Mr. Beall appeared to be concentrating on highway construction and engineering contracts." [Waldron, Martin, "Agnew Term as Governor Under U.S. Scrutiny Today," *The New York Times*, August 13, 1973]

(Wolff, after being confronted by Beall's team, became a cooperating witness against Vice President Agnew and during the trials of other Maryland officials. Wolff, as it turned out, had kept meticulous records – including diaries and detailed notes on his day-planner – of the schemes he helped to carry out and the kickback payments made. Due to his cooperation, Wolff was never charged with a crime. He lost his engineering license but it was restored in 1978 on a legal technicality and worked as a hydraulics consultant for the rest of his working life. He died at the age of 98 in 2014. [Kelly, Jacques, "Jerome B. Wolff, former state roads chief who testified in case against Agnew, dies," *The Baltimore Sun*, August 30, 2016]

Later that day, as President Nixon signed the Federal-Aid Highway Act of 1973 (P.L. 93–87), standing behind him were Senators Randolph and Baker, Secretary Brinegar, Federal Highway Administrator Tiemann, Urban Mass Transportation Administrator Frank C. Herringer, who had taken office in February, and freshman Republican Representative Hanrahan, whom the White House President wanted to aid in his reelection campaign. In a formal statement, he called it "a significant extension and reform of the Federal highway program," which he described as "the strong tradition of Federal-State cooperation in building American highways." This was, however, more than just a highway act:

One of its most significant features is that it allows the Highway Trust Fund to be used for mass transit capital improvements. This landmark provision is one that I have urged for some time and one that I recommended with special emphasis in four different messages to the Congress this year. Under this Act, for the first time, States and localities will have the flexibility they need to set their own transportation priorities. The law will enable them at last to relieve congestion and pollution problems by developing more balanced transportation systems where that is appropriate rather than locking them into further highway expenditures which can sometimes make such problems even worse.

He highlighted "the \$3 billion I requested for funding the Urban Mass Transportation Act" and the provision allowing State and local officials "to substitute mass transit projects for certain urban Interstate highway segments which are controversial and non-essential." He also pointed out that the 1973 Act earmarked urban highway funds for areas with populations over 200,000 and "cuts red tape and improves efficiency by giving more authority to the States and by increasing planning funds." He added:

I am pleased that the bill also designates several links of the Interstate network forming a coast to coast route as the Dwight D. Eisenhower Highway, a fitting tribute to the father of the Interstate highway system.

He regretted that the bill exceeded his budget proposals and included “a number of special narrow categorical grant programs at a time when it is particularly important for us to trim back on the budget and the bureaucracy.” However, he recognized that funding levels had been cut back from earlier versions “and I am gratified that certain other elements, particularly an anti-impoundment provision and mass transit operating subsidies, were eliminated from the final version.”

Overall, he said, the legislation reflected “a spirit of constructive cooperation between the Congress and the Administration and I am confident that the Act can be properly administered so as to not violate my commitment to a non-inflationary budget.” He concluded:

The legislation I sign today represents an important forward step for our country, not only in providing for better and more balanced transportation, but also in related fields such as environmental protection, highway safety, energy conservation, and community development. I am gratified that it includes important proposals to which I have long given high priority.

I sign S. 502 with confidence that it will contribute significantly to the strength of our American economy and the quality of American life.

Informally, the President had observed that, “the dullest thing in the world is to spend a day on a superhighway.” He added, also informally, “Let me say after these two smog alerts we’ve had in Washington, let’s have more mass transit.”

After the ceremony, Secretary Brinegar and Melvin R. Laird, the former Defense Secretary who was now the President’s counsellor for domestic affairs, briefed reporters. Secretary Brinegar said:

Both in terms of dollars and numbers of separate programs, this is the single most important piece of legislation that the Department of Transportation has been called upon to administer.

He highlighted the urban transportation features of the 1973 Act, which gave “urban transportation planners immediate flexibility in the uses of the Highway Trust Fund dollars that are allocated to urban areas.” He said:

No longer must these planners think “just highways.” Now they will be able to consider trade-offs to such alternatives as buses, exclusive bus lanes, and rapid rail systems. We do not see such flexibility as a “busting of the trust,” but rather as a sensible broadening of its uses. Approximately \$2½ billion is authorized for this “flexible” urban usage.

In closing, he praised the conference committee that had drafted the final bill “in a spirit of constructive compromise.” The result was “a good bill—one that will go a long way toward providing our Nation with the balanced, total transportation system that it needs.”

Reporter Lou Cannon, writing in the *Post*, said:

Two emerging and related administration themes dominated the ceremonies and announcements surrounding the bill signing. One is the developing White House praise for Congress on non-Watergate issues, the other the reiteration of administration belief in its own ability to govern.

Cannon quoted Laird as saying during his briefing, "It is important to bear in mind that we are moving forward on the domestic agenda for America." [Cannon, Lou, "Nixon Signs \$22 Billion Highway Bill," *The Washington Post and Times Herald*, August 14, 1973; "President Signs Highway Bill With provisions for Mass Transit Assistance," *The New York Times*, August 14, 1973]

Senator Randolph issued a statement after the ceremony:

We deliberated the provisions of this bill in conference for more than 120 hours. The result is a measure that responsibly meets transportation requirements in large cities, small towns and rural areas.

Enactment of the 1973 Act gave Jack Eisen an opportunity to summarize the impact of the law on the District freeway controversies. The only provision specifically about the District of Columbia's freeway network was Section 135 (titled District of Columbia):

None of the provisions of the Act entitled "An Act to provide a permanent system of highways in that part of the District of Columbia lying outside of cities", approved March 2, 1893 (27 Stat. 532), as amended, shall apply to any segment of the Interstate System within the District of Columbia.

Eisen summarized the "stunning judicial setback" the city received in 1968 when the U.S. Court of Appeals blocked the Three Sisters Bridge and the North-Central Freeway because they did not comply with the 1893 law. The ruling resulted in the "notwithstanding" provision of the 1968 Act, itself blocked in court.

Now, the 1973 Act exempted the District's freeways from the 1893 law's restrictions. The provision "eliminates the legal basis for the court order in 1968 that brought the city's interstate freeway program to a virtual halt, except for projects that were then well underway."

A "little noticed provision" of the 1973 Act renewed the congressional mandate for construction of the Three Sisters Bridge and other controversial freeways. Section 110 required the Secretary to remove from designation any Interstate segments that did not meet deadlines (July 1, 1974, to notify the Secretary that the State intends to construction the segment, and July 1, 1975, for submitted a schedule of expenditures), but added:

This subsection shall not be applicable to any segment of the Interstate System referred to in section 23(a) of the Federal-Aid Highway Act of 1968.

By exempting the District from the requirement, Eisen explained, "it leaves in force a section of the 1968 Highway Act that says the District and federal governments must build the Three Sisters Bridge and other unbuilt interstate freeway links in the city." The impact would not be

immediate because the freeway projects needed administrative or judicial resolution. “The new legislation could make it harder for the city to drop any projects it might want to cut from the road system and make it harder for citizens to sue to keep those projects from being built.”

A spokesman for the House Committee on Public Works called the provision a “housekeeping action” to maintain the status quo and avoid complications:

The District is proceeding in good faith to meet the congressional will and this leaves the 1968 Act intact . . . . We did not want to complicate or change the mandate. Obviously this is a sensitive matter.

Title III of the 1973 Act was titled the Urban Mass Transportation Act of 1964, which authorized funds to:

. . . assist States and local public bodies and agencies thereof in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation or lease or otherwise, in mass transportation service in urban areas and in coordinating such service with highway and other transportation in such areas. Eligible

facilities and equipment may include land (but not public highways), buses and other rolling stock, and other real or personal property needed for an efficient and coordinated mass transportation system.

Section 301(a) of Title III increased the Federal share for projects eligible under the 1964 Act to 80 percent, up from two-thirds. However, Eisen pointed out that the 1973 Act, while increasing the Federal share to 80 percent for Federal-aid transit projects around the country, left the Federal share for Metro at two-thirds, as provided for in the National Capital Transportation Act that “continues to contain the old formula.” WMATA Comptroller Lowe estimated that if Congress increases the Federal share to 80 percent for Metro, local governments would save an estimated \$142 million in local matching shares for the \$3 billion system.

Eisen advised readers that the next test of the District’s freeway plans would be the report by the city council’s transportation committee on the South Leg Freeway. The committee expected to issue its report in September.

Eisen recalled the “volatile political and social” debates over the past decade:

The issue has spawned angry confrontations between citizens and officials, demonstrations at road project locations and a series of successful legal challenges to construction plans.

Initially, opposition to the roads came from an unusual coalition of lower- and middle-income city dwellers whose neighborhoods would be bisected by the freeways and conservationist groups worried about preserving the unique monumental character of the capital city.

The chief villain of both groups was the suburban automobile commuter. “White men’s roads through black men’s bedrooms” was one rallying cry.

More recently, however, city dwellers have been joined by Maryland and Virginia suburbanites who also oppose freeways in their neighborhoods.

For example, plans for I-66 in northern Virginia were on hold by court order pending an environmental review. “If the freeway plan is abandoned, it would reduce and possibly eliminate any justification for the Three Sisters Bridge.”

The Maryland Department of Transportation had “dropped plans for extending I-70S and I-95 inside the Capital Beltway, making the District’s long-planned North Central Freeway a road to nowhere. It, too, has been dropped”:

Instead, Maryland has proposed to build a connecting road between its existing segment of I-95 and the Baltimore-Washington Parkway near Beltsville, north of the Beltway . . . .

Under Maryland’s new plan, the Washington end of the parkway would be widened from four to six or eight lanes and would be brought up to freeway standards as already authorized by federal law. It would be linked to a new Industrial Freeway paralleling badly congested New York Avenue NE within Washington.

This would provide a continuous route for Washington-bound I-95 traffic in Maryland and permit the District to comply with requirements of the 1968 highway law.

Eisen added, that, “Opposition to the parkway widening already has cropped up in Prince George’s County.”

Based on information from Airis, Eisen wrote:

As the District’s interstate freeway program now stands . . . . it has only the 14<sup>th</sup> Street and Theodore Roosevelt bridges, the Southwest-Southeast Freeway south of Capitol Hill, the Anacostia Freeway and an isolated fragment of the Potomac River Freeway in Foggy Bottom in current service.

At this point in the freeway battles, the city’s program “leaves the residential northern half of the District without any active freeway proposals.” An accompanying map depicted the North-Central Freeway (I-70S) and the Northeast Freeway (I-95) as “Eliminated.” The South Leg was shown as “Proposed” and “Plan pending.” The Industrial Highway was identified as “Crosstown North Leg tunnel is proposed but planning is dormant.” Eisen explained, “Nothing currently is being done about the proposal for a crosstown freeway that would carry Three Sisters Bridge traffic and tunnel under K Street NW to connect with the proposed new extension to the Baltimore-Washington Parkway.”

Outside the city, the map depicted Maryland’s plan for a freeway connecting I-95 east of the Capital Beltway with the parkway, depicting the link as “Proposed to connect with widened parkway into D.C.” In Virginia, I-66 was identified as “Court-ordered restudies under way on

I-66 and Three Sisters Bridge.” [Eisen, Jack, “Congress Renews Mandate on Three Sisters Bridge,” *The Washington Post and Times Herald*, August 21, 1973]

*Post* editors lauded Congress for including the provision in the 1973 Act that allowed cities to withdraw controversial Interstate segments and substitute rail rapid transit. The editorial picked up on Eisen’s theme:

The Act renews the congressional order of 1968 that we essentially complete a freeway system that was proposed 27 years ago by the D.C. Highway Department’s consultants, J. E. Greiner Company of Baltimore and De Leuw Cather & Co. of Chicago. The consultants concluded their 1946 recommendation for an “inner loop” and radial freeways into the suburbs with the statement that there was “little likelihood that Washington will ever need a rail rapid transit system.”

In contrast, of course, “we are building a rail rapid transit system now. It is the biggest public works project in the country”:

We also know a great deal more than we did in 1946 about the disruptions and social costs of urban freeways (which inevitably breed more freeways), about the health hazards of automobile-caused pollution and about the essential coordination between transportation planning and urban planning in general. Because of this new knowledge, there is also a great deal more public interest in and opposition to the conventional highway builders’ wisdom that freeways ought to run *through*, rather than *to* urban concentrations. Yet, Congress continues to insist that we stick to this outdated wisdom and build the Three Sisters Bridge to bring Virginia’s I-66 into the city, and a radial freeway to connect with Maryland’s I-70S and I-95 and that we complete the “inner loop,” of which one portion, the Southwest Freeway, has already been built.

Due to court orders, the 1973 Act would not “immediately unleash the bulldozers” for the Three Sisters Bridge. As a result, “those lyric little rocks in the Potomac, just upstream from Key Bridge, known as the Three Sisters, are likely to be left in peace for a while.” Other proposed freeways, including the Industrial Freeway, were not ready for construction.

The exception was the South Leg Freeway, the “innocent name” for the six-lane freeway the city wanted to build, partly in tunnels, across the Lincoln Memorial grounds and the Tidal Basin:

To contemplate what this surgery will do to the green center of the Nation’s Capital requires little imagination on the part of anyone who has ever walked, breathed and tried to enjoy nature (to say nothing of history) along a six-lane freeway. The justification for this vandalistic operation is, in part, that there is now far too much automobile traffic on the Mall, particularly along Independence Avenue as it winds its way across the Tidal Basin.

Many of those cars would disappear, the editorial explained, with the construction of Metro and a visitor center at Union Station north of the Capitol. “But that does not answer the Highway Act’s mandate – completion of that 1946 ‘system.’”

The *Post* recommended that the city and NPS “desist from digging up the Mall . . . until the future of all the other mandated projects is decided”:

We are optimists. We still hope that in time and with full respect for the law, Washington’s planners can come up with something better than the old Greiner-De Leuw Cather “system,” something that will satisfy environmental sense, traffic needs and the highway-minded congressmen. [“Washington and the 1973 Freeway Act,” *The Washington Post and Times Herald*, August 27, 1973]

### **The Center Leg Freeway Opens – In Part**

In early August, the *Star* alerted readers to the imminent opening of the Center Leg Freeway, the eight-lane, 1.4-mile section of I-95 that would connect the Southwest-Southeast Freeway and Massachusetts Avenue and Third Street, NW. The freeway was depressed for its entire 16-block length, running in a tunnel under the reflecting pool in front of the Capitol building. It passed under the new Labor Department and U.S. Tax Court building which was still under construction in the air rights over the freeway.

The District had intended to open the freeway on August 8 but “finishing touches” delayed the opening until later in the month. By then, most of the parking spaces provided on a temporary basis on the freeway would be eliminated:

Airis said the Center Leg opening “is a fine thing for the city. It will provide a more efficient means for traffic to get into center city and it will relieve traffic on several side streets.”

. . . . The Center Leg has been planned to connect with the New York Avenue Industrial Freeway, which has yet to be designed or built, but work is continuing on an uncompleted three-block section of the Center Leg between Massachusetts and New York Avenues. [Crosby, Thomas, “Center Leg Freeway to Open This Month,” *The Washington Star-News*, August 8, 1973]

Although Airis had expected the Center Leg Freeway section of I-95 to open in August, the opening had been delayed until October, when the *Post* reported:

Scheduled to open at the end of this month, the freeway comes with rebroadcast machines, saturable core reactors, impact attenuators and other gadgetry, all of which contributed substantially to its cost of \$70 million. It is 1.4 miles long and, yard for yard, the city’s most expensive road.

The unique features included in the freeway made it highly sophisticated:

Sophisticated equipment will permit emergency vehicle radios to transmit and receive while in the tunnel, as well as end interruptions to civilian radio programs when autos go underground.

Impact attenuators at abutments were designed to absorb vehicle impacts to minimize injuries. A city traffic engineer, George W. Schoene, said:

It's the latest concept in preventing personal injury. Damage will still be done to the vehicle, but any serious injury to the driver will be minimized. When the car hits the attenuator, the black cells with mushroom-like tops pop one at a time, spraying water everywhere.

Safety features included "the preprogrammed saturable-core reactors that dim or brighten lights gradually as motorists enter and leave the highway-tunnel." According to the city, the tunnel included 7½ miles of fluorescent light using 3,865 tubes. Twenty-eight chain-driven fans would keep the air in the tunnel clean while closed-circuit televisions and other features would allow officials to monitor traffic. "The lighting," Schoene said, "is the most unique in the city. Most of the other systems are 220 volts, this system is 2,000 volts."

Reporters viewed the exhaust system:

Visitors to the blower room of the tunnel were dwarfed by the big exhaust and fresh air fans that are part of the ventilation system.

There are 28 chain-driven fans in the facility, 16 to pull in fresh air and 12 for exhaust.

In addition, the tunnel featured:

Two closed-circuit televisions, 44 emergency phones, four cameras (eventually there will be 30 cameras located at the access and exit ramps from portal to portal) and a computer hooked to detectors on the roadway will be able to count vehicles, measure speed and give all this information to a control center

Airis said, "Some commuters will use it, but it is designed to provide a better way of moving service delivery vehicles around downtown street traffic." He said, "The main objective of the facility is to remove traffic from the surface of the mall area in front of the Capitol . . . part of a long-range park service and planning commission plan."

Despite all these benefits, "it will create problems for others," namely those parkers who would have to make new arrangements for their vehicles. [Wells, Major C., "Sophisticated District Freeway to Open Soon," *The Washington Post and Times Herald*, October 14, 1973]

Finally, on November 5, 1973, at 11:20 a.m., Mayor Washington cut a red ribbon stretched across the two northbound lanes and the freeway was opened. He said the connection would "add viability to the inner city" by taking traffic off side streets.

The first person to drive through the tunnel was 25-year old Spec. 5 1.C Lennie Firsina, who told a reporter, “Actually, I’m making history because of a mistake. I took a wrong turn back there.”

One problem was that even though hazardous cargo was prohibited, several gasoline trucks used the tunnel on the first day:

“That’s our first headache,” said Stuart Cross, a District traffic engineer. Trucking associations and bulk plants for oil companies will be told to route hazardous cargo vehicles around the freeway, Cross said.

Hundreds of trucks used the freeway yesterday and Airis said, “That’s what we wanted. The freeway is designed to take trucks out of the Mall area and off residential streets.

Construction to link the Center Leg Freeway with New York Avenue was underway with the goal of completion in 1974. [Crosby, Thomas, “Yep, It’s Open . . . At Last,” *The Washington Star-News*, November 6, 1973]

### **The Flow of Oil**

From October 6 to 26, 1973, Egypt and Syria were at war with Israel. Known as the Yom Kippur War or the Arab-Israeli war, the battle ended with a decisive victory by Israel.

On October 17, 1973, 11 Middle East nations, all members of the Organization of Arab Petroleum Exporting Countries (OAPEC), proclaimed a progressively increasing monthly cut in exports of oil to the United States and other nations perceived as unfriendly to Arab goals. The cut soon became a boycott until March 1974. The OAPEC and the Organization of Petroleum Exporting Countries (OPEC), which included non-Arab countries, used the boycott as an opportunity to raise the price of their oil after the boycott.

Historian Daniel Yergin described the reaction:

What better recipe could there have been for panic prices than the oil supply situation in the memorable final months of 1973? The ingredients included war and violence, cutbacks in supply, embargoes, shortages, desperate consumers, the specter of further cutbacks, and the possibility that the Arabs would never restore production. Fear and uncertainty were pervasive and had a self-fulfilling effect: both oil companies and consumers frantically sought additional supplies not only for current use but also for storage against future shortages and the unknown. Panic buying meant extra demand in the market. Indeed, buyers were scrambling desperately to get any oil they could find. “We weren’t bidding just for oil,” said one independent refiner who did not have a secure source of supply. “We were bidding for our life” . . . .

The age of shortage was at hand. The prospect, at best, was gloomy: lost economic growth, recession, and inflation . . . . Moreover, the United States, the world’s foremost superpower and the underwriter of the international order, had now been thrown on the defensive, humiliated, by a handful of small nations . . . .

In the United States, the shortfall struck at fundamental beliefs in the endless abundance of resources, convictions so deeply rooted in the American character and experience that a large part of the public did not even know, up until October 1973, that the United States imported any oil at all. [Yergin, Daniel, *The Prize: The Epic Quest for Oil, Money & Power*, A Touchstone Book, 1993, pages 615-616]

Journalist and author David Halberstam described the immediate impact:

The American economy and the American people were completely unprepared for the change. The squandering of oil was built into the very structure of American life. Everyone had become dependent upon cheap energy. Almost all American cars, for example, had automatic transmissions, which used 25 percent more gas than the old manual transmission. With many American brands of car, if a buyer wanted a manual shift, he had to say so in advance so it could be ordered from the factory. By the time of the Yom Kippur War, 85 percent of the job holders in America drove to work every day –

and as a result, public transportation had atrophied. Suddenly gas was expensive and scarce. In a short time it went from 36 cents a gallon to 60. People lined up for hours at every service station. There were fights as drivers tried to jump the line, reports of bribes, and even one murder committed in a struggle for gas. In the neurosis created by the boycott there was a new craze called “topping off,” which was an attempt to keep one’s tank perpetually filled. At one service station in Pittsburgh a motorist came in and bought 11 cents’ worth, and the attendant spit in his face. The Boston police department came up with an interesting statistic: The number of cases of automobile arson went up dramatically, from 149 to 330, in the year when the gas prices jumped; most of those torched cars were gas guzzlers. In the first quarter of 1974 the use of gas dropped

7 percent in the United States instead of rising the normal 7 percent. [Halberstam, David, *The Reckoning*, William P. Morrow and Company, 1986, pages 458-459]

In an address on November 7, 1973, President Nixon advised the Nation that the energy crisis was “a problem we must all face together in the months and years ahead.” The Federal Government, he said, would take several steps, such as preventing industries and utilities that use coal from converting power plants to use oil, reducing the number of flights as well as the supply of heating oil for homes and offices by 15 percent, reducing the temperatures in government buildings, and speeding up the licensing and construction of nuclear power plants. He asked State and local officials to take appropriate steps, including:

How many times have you gone along the highway or the freeway, wherever the case may be, and seen hundreds and hundreds of cars with only one individual in that car? This we must all cooperate to change.

Consistent with safety and economic considerations, I am also asking Governors to take steps to reduce highway speed limits to 50 miles per hour. This action alone, if it is adopted on a nationwide basis, could save over 200,000 barrels of oil a day – just reducing the speed limit to 50 miles per hour.

In addition, the President indicated he would direct his staff to work with Congress on emergency energy legislation. It would make daylight savings time a year-round provision, relax regulations to balance environmental interests with energy requirements, impose energy conservation measures such as restrictions on working hours for shopping centers, authorize full production in Naval Petroleum Reserve #1 (Elk Hills, California) and the exploration and further development of other Naval Petroleum Reserves, including Naval Petroleum Reserve #4 in Alaska, and give the Federal Government authority to reduce highway speed limits throughout the Nation as well as the power to adjust the schedules of planes, ships, and other carriers.

These were all short-term measures. For the long term, he outlined measures his Administration would take, such as launching a campaign to free the country from reliance on oil from other parts of the world. He was convinced the Nation had the reserves, as well as the technology to meet this goal. He cited the Manhattan Project and President Kennedy's pledge to put a man on the moon in 10 years:

Let us unite in committing the resources of this Nation to a major new endeavor, an endeavor that in this Bicentennial Era we can appropriately call "Project Independence." Let us set as our national goal, in the spirit of Apollo, with the determination of the Manhattan Project, that by the end of this decade we will have developed the potential to meet our own energy needs without depending on any foreign energy sources.

Let us pledge that by 1980, under Project Independence, we shall be able to meet America's energy needs from America's own energy resources.

Yergin said of Project Independence:

To call this plan ambitious was a considerable understatement; it would require many technological advances, vast amounts of money, and a sharp swerve away from the new road of environmentalism. His staff had told him that the goal of energy independence by 1980 was impossible, and suggested that it was thus silly to proclaim. Nixon overruled his staff. For energy was now both a crisis and high politics.

Nixon fired his energy czar, John Love, and replaced him with Deputy Treasury Secretary William Simon:

Telling the Cabinet about Simon's new post, Nixon likened it to Albert Speer's position as armaments overlord in the Third Reich. Had Speer not been given the power to override the German bureaucracy, Nixon explained, Germany would have been defeated far earlier. Simon was somewhat discomfited by the comparison. Nixon further said that Simon would have "absolute authority." But that was one thing he surely did not have in fragmented, contentious Washington. [*The Prize*, pages 617-618]

In coming weeks, the country would endure drastic shortages of gasoline, turn to carpooling, give increased emphasis to mass transit and the bicycle, and see freeways as encouraging wasteful use of oil.

## What To Do About The South Leg

Robert M. Kennan, Jr., age 35, died on October 29, 1973 of an embolism after gall bladder surgery. Kennan, who lived on Broad Branch Road, NW., east of Connecticut Avenue not far from Rock Creek Park's Beach Road, was general counsel of the National Wildlife Federation and a trustee of the Committee of 100 on the Federal City at the time of his death.

Obituaries in the *Star* and *Post* described his work in the anti-freeway battles. In the Washington area, he had provided his legal expertise to lawsuits blocking the Three Sisters Bridge, Potomac River Freeway, and extension of I-66 in Arlington County. At the national level, he had been involved in efforts to keep Interstate highways out of Florida's Big Cypress Swamp and the Sandia Crest Mountains in New Mexico. His most recent case involved litigation to open FHWA's NEPA procedures to public view. One of his lawsuits had in prompted FHWA, which wanted to exempt 1,000 highway projects that had been initiated before NEPA from its requirements, to require compliance.

The *Star's* obituary was titled:

Robert Kennan, 35, Dies;

Opponent of Freeways

He was survived by his wife and son Alexander. ["Robert Kennan, 35, Dies; Opponent of Freeways," *The Washington Star-News*, October 31, 1973; "Robert M. Kennan Jr., Wildlife Federation Aide," *The Washington Post and Times Herald*, October 31, 1973]

On November 14, 1973, the city council's transportation committee circulated its draft report on the South Leg of the Inner Loop Freeway. The committee had considered proposing to abandon the project, but rejected that idea:

We have . . . reached the conclusion that auto traffic through the south leg corridor cannot as a practical matter be eliminated or diverted and, hence, must be provided for. Not to build the south leg would result in environmental degradation in the project area.

The report recommended that the South Leg Freeway include more tunneling than the Department of Highways and Traffic had proposed. The reported stated that, "If any roadway is to exist – under any set of assumptions . . . the necessity for a roadway seems clear – a subsurface one is clearly preferable."

Eisen indicated that the report called for more tunneling than previously proposed:

As revised by D.C. highway department planners, the new proposal calls for putting about 48 per cent of the length of the 1 ½ mile, six-lane road in tunnels at the outset, with provisions for complete tunneling later. The original plan called for shorter tunnel sections with the balance in depressed ditches out of sight of most park visitors . . .

The freeway project would include the removal of Independence Avenue, now a busy commuter artery, in West Potomac Park, to be replaced by local park roads.

Director Airis indicated the South Leg Freeway would include reserved lanes for buses.

The plan was consistent with the plan that Transportation Secretary Volpe and Interior Secretary Morton had agreed to in May 1971, but Eisen added:

By a touch of irony, the project is being proposed for approval at a time of a major shortage of petroleum-generated energy and when public policy emphasizes mass transit over highways. [Eisen, Jack, "Inner Loop South Leg, Tunneling Urged," *The Washington Post and Times Herald*, November 15, 1973]

On November 17, Delegate Fauntroy issued a statement denouncing the planned project. "It's a silly way to spend \$110 million," he said. "This is a road that nobody needs and nobody wants. It would be enormously destructive to the entire area."

He acknowledged that he had supported the South Leg Freeway as a four-lane tunnel in 1968 when he chaired the city council's transportation committee. Now, he said, the proposal was "much worse" than the earlier plan, in part because "conditions have changed dramatically since then." He explained, "In view of the energy crisis, the last thing we need to do is to encourage new freeways."

Three other council members from that earlier period also assailed the new proposal. Former Chairman Hechinger pointed out that the freeway was intended to handle increased downtown traffic generated by I-66 in Arlington, the Three Sisters Bridge, and a Potomac River Parkway in the Canal Road corridor. All three projects, he pointed out, were stalled and probably would never be built. Hechinger thought that if the city council decided to advance the freeway, it should at least hold a public hearing on the project.

Former Councilwoman Shackleton pointed out that, "Without the Three Sisters Bridge and the other roads, this freeway makes no sense." Feinberg, Lawrence, "\$110 Million Road Project Is Assailed," *The Washington Post and Times Herald*, November 18, 1973]

Councilman Tedson J. Meyers, a member of the transportation committee, had voted against the report in a 2 to 1 vote. President Nixon had nominated Meyers, 43 years old, in January 1972 to fill the seat held by former Councilman Yeldell, who had resigned on November 30, 1971, to become Director of the District Department of Human Resources. Because Meyers, like Yeldell, was a Democrat, his appointment had not changed the political balance of the city council. Meyers was, however, white, thus changing the racial mix. Meyers, who took the oath of office in March 1972, was a communications attorney with the firm of Sullivan, Beauregard, Meyers, and Parkson. He and his wife live with their two children, ages 4 and 2, at 1828 Wyoming Avenue, NW., in the Adams Morgan neighborhood.

Meyers issued a nine-page minority report opposing the freeway and urging the city council to set a date for a public hearing. The goals of the freeway, his report stated, were unclear. He said, "The Environmental Impact Statement clearly admits that no survey has been taken analyzing the

source of traffic and its destination” along the proposed route. “We have only the projections of the proposing agency. There is very little – if any – balance of data.”

In the absence of a traffic survey, Meyers had taken a 2-hour helicopter ride a few days earlier to monitor Friday morning traffic. “For a good part of that time, we just hovered at about 500 feet and took a long look.” He used a stop watch to measure traffic flow per minute. He observed that “a relatively small percentage of the traffic flowing onto Independence Avenue arrives in this city over the interstate freeway source [Theodore Roosevelt Bridge] for which I-695 is proposed as a relieving link.” He explained, “It appears that the largest source of south or southeast bound traffic entering the center city from the west in the morning rush is not the I-66 interstate highway at all [Theodore Roosevelt Bridge], but Rock Creek Parkway.” His estimate was that the parkway provided “at least 50 percent” of westbound traffic on Independence Avenue.

In short, “There is no showing of need” for the South Leg as planned. “Thus, as an urgently needed connection between I-66 and I-295, the case for the South Leg Freeway is by no means clear,” he said. “We should demand more proof.”

In his view, the flow of the largest traffic volumes, from Rock Creek Parkway, could be eased with a few interchanges and overpasses to reduce crossroad delays. Further, the coming of Metro was another reason for delay because until its impact on traffic was known, the city could not say with certainty that additional freeways were needed. “Moreover,” he said, “the immediate fuel shortage, and the poor long-range prospects for the petroleum sources, suggests that now is not the time to build another freeway.”

Councilman Rockwood H. Foster, whom President Nixon had nominated to the council on September 21, 1972, was noncommittal. Foster was a former foreign service officer and member of the city’s board of education who lived in a Georgetown condominium at 3047 West Lane Keys. He had not read Meyer’s report. “I’ll have to wait and see what happens” when the city council meets on November 19 to decide what to do. [Eisen, William A., “South Leg Freeway Decision Postponed, *The Washington Post and Times Herald*, November 19, 1973; “Civic Leaders Protest Plans for the South Leg,” *The Washington Star-News*, November 19, 1973]

The city council had been expected to add the project to its agenda for November 19 and 20. However, Chairman Nevius decided on the evening of November 18 to remove it from the agenda. He took the action in concurrence with the Rev. Moore, chairman of the transportation committee. Moore said the delay was appropriate to permit “further deliberations,” although he did not explain how they would be conducted. Chairman Nevius explained, “The decision was made sometime Thursday to take it off the Tuesday agenda. Several people have injected new thoughts on the plan, and we want to look into it more deeply.”

Vice Chairman Tucker thought that instead of considering the South Leg Freeway, the council should take an overall look at freeway plans. In that way, the council could decide which should be killed.

Councilman Foster was disappointed by the postponement. If given a chance to vote, he told a reporter, he might vote against the freeway.

Despite the decision to call off the vote, about 50 people gathered in the wide hall outside the city council's chamber on November 19 to protest the South Leg Freeway in front of local television cameras. They had been summoned by Hechinger, who had invited many familiar names, including Sammie Abbott, Marion Barry, Jr. (then chairman of the Board of Education),

Reginald Booker, Grosvenor Chapman, Julius Hobson, Angela Rooney, and former council members Polly Shackleton and Stanley J. Anderson. Helen Leavitt, author of *Superhighway-Superhoax* was there (Eisen said of the book that it "has become a textbook for freeway fighters across the land").

Eisen described the protest:

They were black and white, Georgetowners and ghetto dwellers and a sprinkling of suburbanites, people of affluence and others of modest means, joined together in a cause that perhaps above all others has unified Washington civic leaders . . . . Nothing else, except threatened increases in bus fares that were opposed by many of the same people, seemed to excite so much attention.

A series of court decisions and governmental actions killed some of the freeway projects and put others in cold storage. As a cohesive group, the antifreeway coalition fell apart . . .

As antifreeway rallies go, the whole affair yesterday was rather subdued and could prove to be anticlimactic. For the freeway foes already had won a tactical victory.

The victory was the city council's postponement of the vote.

Hechinger, who had supported the freeway plan in 1968 as a victory for anti-freeway forces, said "there is no longer a reason to assume that the D.C. recommendations of the 1960s" were valid in the 1970s in view of Metro construction, current gasoline shortages, and growing air pollution. Freeways such as the South Leg Freeway were going to destroy Washington. "The time to put this on the shelf is now."

Anderson said the South Leg "may be obsolete by the time it's finished with the trend taking place in the country today as a result of the energy crisis."

Several protesters, Eisen reported, said "the road should be killed as a useless monument to a disappearing age of automobile commuting." As for those Virginia and Montgomery County commuters who favored the freeway, they should use transit:

The bluntest comment on the road project was voiced by veteran civic activist Hobson, who is suffering from a currently arrested case of spinal cancer. Getting out of his wheelchair and standing erect, Hobson said of the road: "To hell with it – we don't want to see it built." [Elsen, William A., "South Leg Freeway Decision Postponed," *The Washington Post and Times Herald*, November 19, 1973; Eisen, Jack, "Antifreeway Campaigners Reassemble," *The Washington Post and Times Herald*, November 20, 1973

“Civic Leaders Protest Plans for the South leg,” *The Washington Star-News*, November 19, 1973]

In an editorial, the *Post* agreed with the decision:

Much more thought is needed on all these points [raised by Meyers] before giving a go-ahead to dig up the Mall on the basis of outdated studies and questionable assumptions. The council should take a fresh look at all freeway plans, not in light of what looked right even five years ago, but what will meet the latest traffic needs and environmental considerations. As we have said previously, we continue to believe that, in time and with full respect for the laws that still bind this city’s ability to act, Washington’s planners can come up with more satisfactory answers to the region’s transportation problems. [“Freeways Again,” *The Washington Post and Times Herald*, December 1, 1973]

Members of the city council were not impressed by the anti-freeway rally. They saw it as a prelude to political fights that would erupt if home rule legislation pending in Congress was approved, with the result being elections for the city’s leaders. “The people,” Vice Chairman Tucker said, “ought to understand the nature of some of the attacks.”

Referring to the statements by former council members Anderson, Hechinger, and Shackleton, the Reverend Moore said, “It’s a sort of warmed-over crowd that came down here to deal with warmed-over issues left over by them.” He and Chairman Nevius noted that the three former members had supported the South Leg link not that long ago.

Hechinger could not be reached for comment, but former Councilwoman Shackleton acknowledged that she would like to run if an elected council were approved under the home rule legislation. However, she denied that political ambition had anything to do with her statements at the rally:

Whether home rule or not home rule, I think we would have gone ahead with this [freeway] issue because it is one we have all been involved in. If they want to call it political, everything is political; it’s the name of the game.

She pointed out that the 1968 plan that the three former members had supported contained more freeways than she supported, but they did so to free the funds to get Metro construction underway:

As John Hechinger said at the press conference, time have changed since 1968. We have air pollution problems and a fuel crisis that we didn’t have then. It just doesn’t make any sense to build more freeways. [Eisen, Jack, “Attacks on City Council Held ‘Political,’” *The Washington Post and Times Herald*, November 21, 1973]

*Post* editors commented on the change in attitude:

Nary a local official had said the word aloud in some time, and little wonder – for nothing in umpteen years has managed to set off as much united community clamor as the mention of *freeways*. But, sad to say, the word was back in circulation last week, as was

the old familiar core of vocal antifreeway crusaders. Subject of this latest alert was a revived plan for a proposed superhighway, known technically as Interstate Route 695 and less affectionately as the South Leg of the Inner Loop Freeway.

Recalling that the history of the route dates to the 1960s “or maybe even back to 1946,” the editors explained that what had brought it before the city council was “the question of approving a design, which has been dubbed ‘Plan A (modified),’ and which has yet to be seen in model form.”

They praised Councilman Meyers for his insight into the need for the freeway:

Having monitored the traffic flow from a helicopter on two recent mornings, Mr. Meyers found reason to believe that the largest flow of traffic – from Rock Creek parkway – might easily be improved with a few interchanges and overpasses “costing far less than \$111 million” needed for the South Leg.

The editors agreed with Councilman Meyers that now, in the midst of an energy crisis was “not the time to build another freeway.” The city council should take a fresh look at the need for the South Leg Freeway “before giving a go-ahead to dig up the Mall on the basis of outdated studies and questionable assumptions.” The editors concluded:

As we have said previously, we continue to believe that, in time and with full respect for the laws that still bind this city’s ability to act, Washington’s planners can come up with more satisfactory answers to the region’s transportation problems. [“Freeways Again,” *The Washington Post and Times Herald*, December 3, 1973, italics in original]

On December 29, Mayor Washington wrote to Chairman Moore of the transportation committee to rescind approval of the South Leg of the Inner Loop Freeway. He did not ask the city council to kill the project, only that the project “not go forward at this time.” His primary stated reason for withdrawing support was concern about disruption to the park area during the Bicentennial:

Among the issues that have been raised during Council consideration is whether the project can be completed in time for the bicentennial observance. I must report that it is not now possible to give such an assurance for the whole project.

The first phase of the freeway project, the tunnel under the Lincoln Memorial grounds might “under tight scheduling” be completed by January 1, 1976, but Mayor Washington was uncertain even of that schedule. “It is vital that no part of this area be torn up by construction during this period, if that can be avoided.”

Concern about Bicentennial visitors was, Mayor Washington wrote, fortuitous because “it will provide an opportunity to consider other issues which have arisen recently which could affect the South Leg project.” The energy crisis and EPA’s air quality requirements were on his mind:

We can expect major shifts of persons from automobile use to mass transit because of transportation strategies which we must follow in order to meet air quality standards and other environmental considerations.

He ordered Director Airis “to explore, in consultation with interested federal agencies, possible surface road improvements” in the park.

The *Star*’s article on the letter contained a heading over the title asking:

### Death of Freeway?

One “council source” said that Mayor Washington’s letter “kills what was already a dead issue with the Council.” Since Chairman Nevius had postponed consideration of the South Leg Freeway on November 20, the city council had not taken any action on the South Leg Freeway. Chairman Moore said, “The best way to describe where that freeway issue sits now is in limbo.”

Councilman Meyers called Mayor Washington’s letter “a step backward in the right direction.” Former Councilwoman Shackleton said, “It looks like the end of that one. It’s good news. The citizens have accomplished their purpose.” ECTC Chairman Booker also was pleased. “We’re glad he dropped it,” but he doubted the stated reasons, saying “we think it’s mainly for political considerations, with home rule impending. He wants to make himself attractive to voters and sees tremendous opposition [to freeways] in the black community as a political reality.” [Eisen, William A., “Mayor Drops Support for Freeway Leg,” *The Washington Post and Times Herald*, December 30, 1973; Braeden, David, “Mayor Orders South Leg Delay,” *The Washington Star-News*, December 30, 1973]

(Part 10 will discuss the pending home rule and the desire to appeal to voters.)

*Star* editors, writing on January 3, 1974, were not happy about Mayor Washington’s letter, calling it “regrettable.” His argument was “at least an arguable basis for reversing his prior pro-construction position.” Under the circumstances, completing it before the Bicentennial was unlikely. As a result, “it is prudent to put the whole thing in deep freeze.”

The editors, however, gave Mayor Washington little credit for ensuring the park would not be torn up when visitors arrived in 1976:

There is, of course, a further reason why any tears shed by the mayor on this occasion are of the crocodile variety: The anti-freeway forces had threatened to make a political issue of the West Potomac Park freeway in the District’s forthcoming local election campaigns – and indeed city council members already were back-pedaling from their own previous positions of support. Given that scenario, it is unlikely that Mayor Washington is unhappy to see the issue neutralized.

What galls us, though, is how thoroughly this project has been made the victim of an emotional wave of generalized anti-freeway sentiment.

After all, highway builders had not designed the plan; it was proposed by NPS officials. “Among its harshest critics today are former city council members who not so long ago had supported its construction.

As for Mayor Washington's instruction to the Department of Highways and Traffic to explore surface roadway improvements, "there is virtually nothing of consequence in that context to explore." The editors concluded:

A plan of potential benefit to the city has been allowed to slip down the drain, and it's too bad.

The title of the *Star* editorial was "End of the Road."

The *Post's* editorial board, which had abandoned the newspaper's long-time advocacy for freeways, began its editorial:

Score one for Washington's vigilant and vocal anti-freeway brigade: You won't have the South Leg to kick around anymore.

It agreed with Mayor Washington's stated reason for abandoning "this long-planned desecration." If his "political antennae" had something to do with it, "we can only say that it is an excellent example of how the right to elect our local government ought to affect the decisions made in city hall." Nevertheless, his decision "should not be attributed solely to political considerations":

It is a recognition that this city needs to take a fresh look at all freeway and transportation plans, not in light of what looked right even five years ago, but what will meet the latest traffic needs and environmental considerations . . . .

We continue to believe that, in time and with full respect for the laws that bind this city as well as the desires of its voters, Washington can come up with satisfactory answers to the region's transportation needs. ["Freeways – And Political Inroads," *The Washington Post*, January 7, 1974]

(In 1974, the *Post* removed *Times Herald* from its name and returned to its original name, *The Washington Post*.)

On January 14, 1974, the city council voted to shelve plans for the South Leg Freeway for an indefinite period. "Without one word of debate," Eisen reported, the city council acted after Chairman Moore of the transportation committee repeated Mayor Washington's words.

The impact of the decision was unclear because, in theory, the city council could revive the freeway it was shelving only at this time. [Eisen, Jack, "D.C. Council Shelves Plan For Freeway," *The Washington Post and Times Herald*, January 15, 1974; "Council Shelves South Leg," *The Washington Star-News*, January 15, 1974]

### **In Virginia, I-66 Moves Forward**

The parallel battle in Virginia over I-66 continued as the entrenched opposition pursued every option to force the entrenched VDH to kill the Interstate freeway inside the Capital Beltway.

Even the plan to provide at least \$1 million for park improvements as mitigation for construction of I-66 drew criticism. The freeway would require acquisition of five park parcels totaling about 22 acres. Compensation for that parkland might be more than the total acreage and the projected \$1 million. Just weeks before the deadline for the consultant report, however, Chairman Munsey of the Arlington County Board, said, "I wish they'd give us those kind of [park] funds directly rather than trading them for a miserable road."

The idea that highway officials would find substitute parkland alongside I-66 prompted questions about whether such parkland would be usable. ACT's James Govan said, "It would be like picnicking next to I-95. Who wants to?"

Nevertheless, Charles H. Russell of Citizens for I-66 said that highway officials were "not going to short-change the citizens of Virginia." Referring to the State slogan, he added, "Virginia is for lovers, and what that means is lovers of beauty." [Mathews, Jay, "I-66 Park Fund Termed Both Benefit, Bribe," *The Washington Post and Times Herald*, September 1, 1973]

Two weeks before the deadline, a public opinion poll conducted by the Bureau of Social Science Research for the consultant study reported on public attitudes in the District of Columbia about transportation. The poll, a companion to the earlier study of northern Virginia residents, suggested that a plurality of District residents (37.6 percent) favored construction of I-66 in Virginia, while 17.3 percent opposed it and 55.1 percent said they did not know or care about I-66.

However, the new survey revealed that for District residents, I-66 was not a high priority. Over 60 percent of the 284 residents surveyed had not heard about I-66 or the Three Sisters Bridge, and 24 percent had never heard of the Metro rapid rail system. Only 2 percent of District residents said road improvements were most important, while 72 percent put bus and rapid rail transit at the top of their priority list.

According to the *Post*:

The 102-page report on the public opinion survey . . . looks at attitudes on the long delayed highway by seemingly every imaginable population group: liberals, moderates and conservatives; bus riders and automobile drivers; those living inside the Beltway and those outside the Beltway. Although nearly every group polled produced a majority or plurality in support of the highway, liberals, bus riders and those living inside the Beltway were the least enthusiastic about I-66.

In northern Virginia, 58.6 percent of those polled "said they would or probably would switch to buses or rapid rail transit if those forms of public transportation were improved to their satisfaction."

The Govans claimed the results was "not valid." Emilia noticed that "people who never heard about I-66 were asked to express an opinion." People who are unconcerned about the highway, she pointed out, were more likely to favor it. James said, "If the poll means anything at all, it means that the public has made a clear and overwhelming choice in favor of mass transit."

Because of the small sample size, the bureau said the results could be off by as much as 10 percent. [Mathews, Jay, "D.C. Citizens' Support for Rte. 66 Lukewarm," *The Washington Post and Times Herald*, September 14, 1973; Crosby, Thomas, "I-66 Project Found Unknown to Many," *The Washington Star-News*, September 13, 1973]

Howard, Needles, Tammen and Bergendoff missed Virginia's deadline for the environmental report and the deadline of October 1 imposed by Senator Scott's amendment to the Federal-Aid Highway Act of 1973. Project manager Fowler told reporters he knew of no penalties for missing either deadline, but thought the report could be completed by the end of October. [Crosby, Thomas, "I-66 Ecology Study Deadline Missed," *The Washington Star-News*, October 3, 1973]

The U.S. Department of Transportation, according to a spokesman, also acknowledged that as a result of the delay in Virginia, it would miss Senator Scott's deadline for completing its review by December 31. ACT praised the Federal officials for not trying to meet the statutory deadline. If they had tried to do so, James Govan said, "There would be just that much less time for public reaction" to the EIS. The *Post* pointed out:

Although the Scott amendment sets out strict deadlines for various stages of a court-ordered highway review, it provides no penalties if the deadlines are not met. [Mathews, Jay, "Late Report Delays Action on Inside-Beltway I-66 Leg," *The Washington Post and Times Herald*, October 6, 1973]

On November 16, about 2 months late, Virginia released the consultant's 400-page draft EIS. In the *Post*, reporter Jay Mathews summarized the options studied:

- (1) The base case, the existing transportation system plus Metro and some exclusive bus lanes;
- (2) The transit option, more bus lines to Metro stops;
- (3) The highway option, essentially I-66 with some other road improvements;
- (4) The multi-mode/new facility option, a combination of the first three options; and
- (5) The multi-mode/road improvements options, a combination of the first two options with widening of some other roads or partial construction of I-66.

The report stated:

The evaluation of the alternatives shows that I-66 would be of significant benefit to both users and nonusers traveling within the corridor. However, the other options also would have significant benefits.

Although the report, as Mathews put it, found "significant benefit" from I-66 if constructed, it painted a "dark picture . . . of I-66's air pollution, destruction of scarce parkland and 'major disruptive impacts' in Arlington County." I-66 would cut travel time in half and reduce traffic on the George Washington Memorial Parkway and many streets in the District. "Its beneficial impact on local streets is most significant in Falls Church, where I-66 adjacent to the city would serve as a bypass for through trips."

The report also noted the results of the opinion survey. “Community sentiment as measured by the community attitudinal survey indicates a consensus in favor of constructing I-66.”

By contrast, Mathews observed:

Yet notations of the road’s disadvantages appeared far more frequently throughout the six-pound mass of maps, graphs and colored charts that made up the impact survey.

The highway would improve accessibility, but “would result in more heavily congested conditions” than any option except one (the present situation plus Metro). “Street intersections adjacent to highway interchanges would experience congested conditions due to the large numbers of turning movements that would occur.” The highway would produce significantly larger noise impacts than the other options, except no-build. “Air pollution impacts – in terms of both emissions and ambient concentrations – are predicted to be higher for the highway option than for any other option” and would “have significant deleterious impact on the lands in the vicinity of the I-66 facility.” With reduced energy consumption now a national priority, the report said that mass transit options, minus I-66, would produce the highest energy savings.

The report also considered whether the coming of Metro would eliminate the need for I-66:

Analyses . . . indicate that the construction of the Vienna Metro line generally will absorb the growth of radially oriented travel demand if I-66 is not built.

However, automobile use would not decline, with congestion on other roads continuing during peak periods if I-66 were not built.

The report stated that I-66 should not be built unless the Three Sisters Bridge was built:

The additional river capacity is required to accommodate the traffic which would use I-66 and the roadways connecting to I-66 and I-266 (a spur connecting I-66 to Three Sisters) as currently envisioned.

Mathews considered the report “at least a limited victory” for ACT, an assessment that ACT shared. Emilia Govan said, “I’m delighted. I had hoped the study would show that mass transit can do the job, do it better than I-66 and with fewer adverse social and environmental impacts, and that’s what it seems to show. [Mathews, Jay, “I-66 Report Mixed,” *The Washington Post and Times Herald*, November 17, 1973]

By a 4-1 vote, the Arlington County Board adopted a resolution expressing “clear-cut opposition” to I-66, describing the route as “seriously detrimental to the welfare of the county.”

The crowd of about 100 citizens cheered the vote. The only dissenter, Dr. Kenneth Haggerty, would be replaced on January 1, 1974, by Ellen Bozman, who had campaigned against I-66.

The vote took place at a hearing where 50 speakers addressed the board. Only four favored construction of I-66. “Most speakers,” according to the *Star* account, who opposed the extension “warned about excessive noise and air pollution from the freeway and urged instead that more

mass transit be provided in the corridor where the I-66 segment is planned.” [“Arlington Board Votes ‘No’ on I-66,” *The Washington Star-News*, December 5, 1973; Shaffer, Ron, “Arlington Board Votes Against I-66,” *The Washington Post and Times Herald*, December 5, 1973]

VDH held a week of public hearings on I-66, beginning December 17 in the 700-seat ballroom of the Ramada Inn in Rosslyn at 1900 North Fort Myer Drive. The hearings were to begin each day at 8 a.m. and, with breaks, end at midnight or after 3:00 a.m. Those asking to testify were assigned days and times. According to VDH, about 240 speakers and organizations had been scheduled, with individuals assigned 15 minutes and organizations given 30 minutes.

For example, a Federal planner who had “waited for months to speak at the final scheduled public hearing on the extension of I-66” was assigned 15 minutes on December 19 at 3:30 a.m. “It’s very disappointing. I believe the state could do better in scheduling the speakers. I may just mail my speech in.”

Ashton C. Jones, Jr., of Citizens for I-66 said the late-night scheduling was “unfortunate,” but declined further comment. Jim Govan of ACT was more open:

I’ve never heard of such a thing; it’s just ridiculous. What working person is going to show up at a public hearing at 2 a.m.? To me this is a way of the highway department saying, “We don’t care whether you come or not.” [Shaffer, Ron, “Late Night Hearing Set On I-66,” *The Washington Post and Times Herald*, December 12, 1973]

Before the proceedings, Citizens for I-66 held a news conference to make the point that their group represented thousands of people, while the antihighway forces consisted basically of individuals. Spokesman John Hoerner said, “Any two housewives can get together and say ‘we’re for clean air’ or something like that.” In response, Emilia Govan told reporters, “That’s just ridiculous.” Both groups claimed about 1,200 dues paying members.

The first day included 22 speakers against the highway and seven in favor. The *Post* described the first day:

A week of nearly nonstop public hearings on the proposed extension of Interstate Rte. 66 through Arlington got under way yesterday with generally restrained presentations by factions for and against the highway despite their violent clash of convictions.

As expected, prohighway people stressed the need for a faster route from the outlying suburbs to the District of Columbia, and those against the highway extension said it would provide for a far less efficient use of energy than would mass transit development.

The feelings of speakers did occasionally “boil over,” as when Sammie Abbott addressed the hearings:

“This hearing should be held in an insane asylum,” speaker Sam Abbott screamed at the dozen highway department officials and consultants sitting somberly before him. In light of the energy crisis, Abbott yelled, “it would be insane to consider the slightest increase in the use of the automobile.”

Abbott, for years the area's most vocal freeway foe, was thanked for his presentation by chairman Jimmie H. Singleton, an adviser to the highway department, and gaveled to silence after he berated the highway officials for failing to take up his invitation for questions.

Emilia Govan criticized the highway officials for not providing adequate notice of what she considered a rushed hearing. She also charged that VDH had prejudged the outcome in favor of the "multimode option." She argued that if VDH chose that option, the highway officials would build I-66 and wait for others to provide the transit option that might never materialize.

She added that contrary to supporters' claim that commuters on I-66 would save 30 minutes, the savings would be more like 15 minutes, about the same as for transit with less pollution and energy consumption.

To prove her point about prejudging the outcome, she submitted letters that Virginia Secretary of Transportation Wayne Whitham had sent informing two Arlington residents that barring a court order, VDH would build I-66. She told the hearing:

We have evidence that the Commonwealth of Virginia has made a decision to build I-66 before considering the views expressed at the court-ordered public hearing and before the final impact statement has been prepared.

Whitham responded, "I have favored I-66 and my position hasn't changed. The requirement of the court having been fulfilled, I believe that's also the policy of the [highway] commission." Fugate added, "The commission has adopted I-66."

James Govan pointed out that the multimodal option was not really an alternative to I-66 because it included construction of the Interstate highway.

Opponents did not expect to convince VDH to abandon I-66. Rather, they contended transit was a feasible alternative. In that case, Section 4(f) would prevent Secretary Brinegar from approving the taking of any parkland.

Arlington County Board Chairman Munsey expressed concern about noise impacts that seven schools along I-66 would "suffer," possibly causing them to close. Mass transit, he said, would be safer, just as fast, and reduce congestion better than the highway.

Virginia State Senator Omer L. Hirst (D-Fairfax County) said:

Northern Virginia is automobile dependent and there is no . . . expert opinion that contends that counties like Fairfax, Loudoun and Prince William . . . will be able to do away with the personal automobile.

He predicted that I-66 "would do more to relieve the present congestion on various streets and roads in Arlington and Fairfax counties . . . than any other construction."

The Reverend Gipson, the long-time freeway opponent representing the Upper Northeast Coordinating Council in the District, said construction of I-66 would simply funnel more vehicles onto the District's already overcrowded roads. "We're very concerned about any proposal that brings more roads at us." [Shaffer, Ron, "Start of Hearings on I-66 Is Calm," *The Washington Post and Times Herald*, December 18, 1973; Kast, Heilah, "I-66 Decided On?" *The Washington Star-News*, December 18, 1973]

During the December 18 hearing, I-66 supporters dominated the testimony. Citizens for I-66's Jones argued that building I-66 would save gasoline because it would eliminate much of the stop-and-go traffic on area streets. He said that I-66 would relieve congestion on the George Washington Memorial Parkway and State Route 123 while providing an improved link to the Dulles Access Road. As for the impact on Arlington schools, he said they "have had ample time to prepare" for the highway.

Another member of Citizens for I-66, John Hoerner, took exception to the anti-highway argument that freeways induce traffic to the point of congestion, making transit the best option. He argued that, "The trains run empty during off hours in every transit system. This wastes tremendous energy."

The group's chairman, Harrison Mann, supported the multimode option. The combination of I-66, Metro, and feeder bus lines to the Metro stations would result in more passenger-carrying capacity than the highway or transit alone.

Some critics testified. James B. Sullivan, director of the Center for Science in the Public Interest, accused consultants of "seriously underestimating" the air pollution that would result from construction of I-66. The *Star* summarized a related line of attack:

Twenty economists from the Public Interest Economics Center criticized the study because "it under estimates the cost of the proposed transportation options while overestimating their benefits.

The economists said nothing but the so-called "base case" – the existing transportation for foreseeable improvements – would be justifiable in cost.

As the *Post* and *Star* pointed out, the spur of I-66, namely the I-266 Three Sisters Bridge, also was in the news that day. Judge Sirica held a hearing to consider a request by the plaintiffs for the government to pay their fees. Assistant Corporation Counsel Thomas C. Bell of the District of Columbia told Judge Sirica the city still planned to build the bridge, but was awaiting approval for the project from Secretary Brinegar. Judge Sirica asked, "Why has it taken so long?" Bell did not have a clear answer, but referred to new Federal environmental requirements that were being applied to the bridge project. "It's very slow progress . . . . We are mandated to build this bridge by Congress."

After the hearing, a Department spokesman told a reporter that Secretary Brinegar would not decide whether to approve the Three Sisters Bridge until the fate of I-66 is decided. "We're in a holding pattern until the hearings are complete," the spokesman said. [Kast, Shielah, "I-66

Backers Dominate Hearing,” *The Washington Star-News*, December 19, 1973; Shaffer, Ron, “Adversaries Over Route I-66 Coexist,” *The Washington Post and Times Herald*, December 19, 1973; “DOT Delays Decision on 3 Sisters Bridge,” *The Washington Post*, December 19, 1973]

On December 19, ACT accused Virginia highway officials of having decided to build I-66 before the week-long hearings began. “From the evidence we’ve seen,” Emilia Govan said, “the decision has already been made at the state level to build the highway, and if that’s true, that’s contempt of the court order.” She also wondered whether highway officials would take the time to read the voluminous transcript of the hearings and what weight would be given to critical comments.

With a reporter in listening distance, VDH’s A. K. Hunsberger, cochair of the hearings, told her that he favored building the multimodal option. That was not the official position, as Fugate made clear to the reporter. State highway officials were “going to reevaluate” their decision to build I-66. “The Highway Commission will review the question very carefully and come up with another decision on the matter.” Highway officials assured the reporter that each member of the Virginia Highway Commission would receive a copy of the transcript and the testimony “will be read.” Meanwhile, Hunsberger pointed out that he was simply stating “my opinion” and that he had “an open mind” on all the options under consideration. He added that critical issues raised during the hearings “would be responded to” by the State’s consultants before any decision is made.

Attendance at the day’s hearing was sparse, with no more than 60 present in a ballroom at the Rosslyn Ramada Inn that could seat 700:

In yesterday’s testimony, Martha V. Pennino, Fairfax County Supervisor from the Centreville District, said the arrival of the Metro system in the suburbs will not reduce the need for a highway from western Fairfax County to the District. “As this area continues to grow, so will the use of the automobile,” she said.

Other prohighway speakers said the road extension is necessary to stimulate development in the Northern Virginia suburbs beyond the Beltway. Opponents said the extension would not relieve total traffic in Arlington as proponents maintain, but would generate even more traffic. [Shaffer, Ron, “Foes of I-66 See Plans as Already Set,” *The Washington Post*, December 20, 1973]

By December 20, the “seemingly endless flow of speakers for and against” I-66 was “suffering occasional interruption now.” Speakers, pro and con, were repeating the same points, as the *Post* summarized: “The highway will ruin the environment, shorten commuter time, waste energy, promote business activity.” During a brief recess for lack of a speaker, Singleton characterized the 53 hours of testimony thus far:

There’s a day-time and a night-time population. The night-time opponents are completely prepared with technical expertise. Their main objective I’m afraid is to render the consultants’ expertise inaccurate. They say you are going to increase pollution and congestion and destroy the quality of life.

The proponents have not done so much from the technical sense; they seem to say that common sense says we need it. I think the “pros” are representing many more people in Northern Virginia.

By his calculation, the hearing thus far had included 111 speakers in favor of I-66, and 106 against its construction.

Reflecting the pace, a police officer on security duty described the hearing as “drag time.”

A member of ACT, Kathy Freshley, said her group was calling people “on our side who couldn’t come so they can at least submit their statements for the record.” She added, “It’s an extraordinary time for a fight five days before Christmas, but if you didn’t testify it would be railroaded right through. We’ve got to be counted.”

Pro-I-66 forces wanted to respond to Emilia Govan’s claim that State highway officials had decided to build the highway even before the hearings began. Citizens for I-66’s Mann called that claim, “Pure poppycock” and said that Govan was making “self-serving charges to use in further delaying tactics through the court.”

When printed copies of his statement were being distributed, Govan commented “we can’t even get our statements typed. We just don’t have the money to do that.” She added, “There’s a difference in style between our groups.”

The two sides had taken rooms, for \$23 a day, at the Ramada Inn. Emilia Govan explained:

On our side it’s been a spontaneous grass roots effort with very scrimpy financing. We are operating on a shoestring. I was hesitant to get a room here, but it turned out to be a necessity. We had to have a place to work.

As the *Post* pointed out, pro and con speakers may have fallen into repetitive arguments, but the sides differed in the accommodations. By contrast with ACT, the pro-highway forces’ suite was “filled with people drinking coffee they had bought from the hotel management and enthusiastically describing the hearings as ‘sort of a little political campaign’”:

The differences between the two groups were apparent: the proponents had two electric typewriters, the opponents had an old manual; the proponents rented two tables at \$109 a day in front of the ballroom, the opponents have only one. [Kiernan, Laura A., “Views on I-66 Resolved to 4 Key Points,” *The Washington Post and Times Herald*, December 21, 1973]

On the fifth day of the hearings, WMATA Deputy General Manager Quenstedt testified that failure to build I-66 inside the Capital Beltway would result in “extremely high additional costs” for the Metro line to Virginia. He insisted he was not endorsing I-66, but simply urging officials to decide the fate of the highway as soon as possible so Metro could proceed accordingly. “We are committed to construct this route as expeditiously as possible, whatever decision is made on I-66.”

If I-66 were built, Metro and the highway builders could proceed at the same time. If I-66 were not built, Metro would “have to implement extensive design changes that will result in an extremely high additional cost.” The current design was based on grading, draining, retaining walls, site elevation, and bridge lengths with construction in the median of I-66 in mind.

Quenstedt also pointed out that the right-of-way for I-66 cost about \$22 million, but if I-66 were not built, the land would revert to the original owner. If Metro had to buy its own right-of-way, the cost would be far higher in the current market. “But if we have to go back through the process of condemning and buying once again, we’ll do just that, because the board has already decided we’re going to go down that corridor.”

Pro and con forces responded to Quenstedt’s testimony. Mann said the testimony was “vitaly important and shows that Metro regards I-66 as complementary to the Metro system.” Emilia Govan said, “I was afraid of something like that. His remarks indicate that the people who run Metro have always been in bed with the highway boys and are not interested in providing good rapid transit for this area.” She pointed out that the Federal-Aid Highway Act of 1973 would allow Virginia to request withdrawal of I-66 inside the Capital Beltway from the Interstate System in return for funds for rail rapid transit, thus addressing Metro’s cost concerns. [Oman, Joanne, “Metro Aide Backs I-66, Cites Costs,” *The Washington Post and Times Herald*, December 22, 1973; “Metro Rail Tied to I-66,” *The Washington Star-News*, December 22, 1973]

By the end of the 5-day I-66 hearings, the *Post* said that, “339 speakers representing individuals, civic organizations and governmental bodies spoke during the 84 hours of hearings . . . . 170 endorsed the 10-mile expressway, 168 opposed it, and one agency, the Fairfax County Park Authority, took no position.” The record covers 1,700 pages of testimony and included 760 letters and 21 petitions with 11,000 signatures.

In the end, the hearing was “gaveled to conclusion in an almost empty meeting hall big enough for 700 persons at the Rosslyn Ramada Inn in Arlington”:

At the conclusion of the hearings, Austin K. Hunsberger, director of engineering for the Virginia Department of Highways, said that he and his two top officials in the department will review the hearings and make recommendations on building the road to the highway commission.

If the commission approves construction, its recommendation will be passed on to U.S. Secretary of Transportation Claude S. Brinegar for a final decision. [Edwards, Paul G., “339 Talked in 6 Days of I-66 Hearing,” *The Washington Post and Times Herald*, December 23, 1973, cited in White, page 60]

As cited in Leland White’s article about the I-66 controversy, the *Fairfax Globe* said the hearings “had all the earmarks of a political convention”:

Different factions passed out buttons, stickers, and reams of propaganda, while their leaders huddled in upper-floor hotel suites, plotting strategy and polishing speeches . . . . Staring impassively, chomping on cigars, pipes and toothpicks, the men from the VDH

heard environmentalists call I-66 everything from a “concrete monster” to an “unspeakable obscenity” to “the rape of Arlington.” [Davies, Frank, “The I-66 Hearings: The Last Hurrah,” *Fairfax Globe*, December 27, 1973; White, page 61]

During the hearings, no one had objected to Metro. According to Donald Appel, who headed the study team that prepared the draft EIS, the question was, “What constitutes a balanced transportation system?” In other words, “how much mass transit and how much automobile.” Hunsberger saw the issue in the same terms:

One group is advocating a balanced transportation system. The others advocate abandonment of one form of transportation and insertion of another.

James Govan, of course, was in the latter group when it came to balance:

The day of choice in commuting to work, a single person in a car, is going to end in this decade. Restrictions on gas, parking charges and transportation control measures are going to at least require car pooling. [Kast, Sheila, “How Many Cars, How Much Transit,” *The Washington Star-News*, December 23, 1973]

## **Part 10**

### **The End of the Road**

#### **Fighting Words**

In summing up the District's freeway issues, Thomas Crosby wrote in the April 7, 1974, issue of the *Star*:

The surest way to draw a hostile crowd in Washington these days is to propose a new super highway. This area has become a hotbed of anti-highway sentiment, and untiring citizen activists have caused the demise of several big and expensive highway projects.

Dust, he said, was gathering on the drawing boards for the remaining freeways, delayed by "suits, public hearings media blitz campaigns and even unruly demonstrations." The message was loud and clear: "no more big highway projects at the expense of neighborhood environments."

In summary:

The result has been highway officials charging freeway foes are misguided zealots who don't realize the failure to build more highways could have a disastrous long-term effect on the area's goal of a balanced transportation system employing buses, rapid rail and highways.

But highway foes argue that the wave of the future – especially in light of the energy crisis – is emphasis on mass transit, both Metrobus and the coming 98-mile regional rapid rail system.

Only history will prove which group is correct.

Crosby went through each of the planned freeways. In view of citizen opposition, he wrote, Mayor Washington had withdrawn his support of the South Leg tunnel plan between the Lincoln Memorial and the Tidal Basin. "It now appears dead."

Maryland had killed I-95 between the Capital Beltway and the District line. The State planned to widen the Baltimore-Washington Parkway to Interstate standards.

The U.S. Department of Transportation was studying the Three Sisters Bridge "but appears to be in no hurry to reach a conclusion." Crosby added, "The bridge has been so vigorously opposed by District and Virginia citizens that on at least two separate occasions bridge foes have been arrested."

The Industrial Freeway in the New York Avenue corridor "which would connect with I-95 in Maryland and the new Center Leg in downtown Washington, is under active consideration" by District highway officials. "However, highway officials are afraid to announce their plans because of the current anti-highway fervor and because the freeway would require the razing of nearly 600 Washington homes."

Crosby described I-66 in Virginia as “still alive and kicking,” but the pending decision by Secretary Brinegar on the \$181 million highway would not be the conclusion. A court challenge was “a virtual certainty no matter what Brinegar decides,” meaning that “the I-66 controversy is likely to be around for some time.” [Crosby, Thomas, “Them’s Fighting Words,” *The Washington Star-News*, April 7, 1974]

Although Crosby described I-66 as “alive and kicking,” the highway got off to a bad start in 1974, largely based on the draft EIS prepared by Howard, Needles, Tammen, and Bergendoff and released in November 1973. The Council on Environmental Quality and EPA came out against I-66. The council found “little justification” for I-66, saying a mass transit option that included Metro was “clearly . . . preferable.” EPA Deputy Administrator John Quarles issued a position paper on I-66, saying “it does not seem prudent from the standpoint of attaining clean air.” Because highway construction would result in more automobile traffic, EPA concluded that the route was “environmentally unsatisfactory.”

Emilia Govan, learning of the EPA report, said “If reason and logic prevail, this is the death blow for I-66.” She added that if VDH defied Federal law, it “would invite considerable litigation.”

Harrison Mann of Citizens for I-66 said of the report, “Apparently many environmentalists haven’t discovered that people too are part of the environment and that their needs are paramount to other factors, like trees, squirrels’ homes, flyways for migrating birds and stuff like that.”

On January 11, the *Post* and *Star* reported on a Department of Transportation report, prepared in the office of General Benjamin O. Davis, Jr., Assistant Secretary for Environment, Safety and Consumer Affairs. Construction of I-66 would be unnecessary and illegal. “Based on the highly questionable need for the highway and also on the substantial environmental impacts,” the report said, “it would appear doubtful” that I-66 “would meet requirements of applicable law.”

The highway was not needed to handle peak-hour projected traffic loads in 1995. Two other options in the study, the “base case” and “transit option,” would provide adequate capacity. As a result, the report could find “no justification” for building I-66 as a six- or eight-lane freeway.

Moreover, the freeway option “would appear to be inconsistent” with the area’s plans for complying with Clean Air Act requirements. Further, none of the I-66 options could be approved because they did not satisfy Section 4(f) in their impact on parkland.

In transmitting the report to FHWA’s Virginia Division Engineer, Harold King, General Davis indicated that at this point, approval of I-66 appeared doubtful. Department of Transportation spokesman H. Davis Crowther told reporters that the staff paper did not necessarily represent Secretary Brinegar’s views and that General Davis may take a different position after reviewing the final EIS.

King pointed out that the final decision rested with Secretary Brinegar, not a staff paper:

King said yesterday that Davis’ office did not have access to all the information available on I-66 and thus should not have indicated a preference. He said he had received but “not

accepted” the report and would send a response to the report to assistant secretary Davis’ office.

King added that he did not think “anyone in DOT should make a preference. We are still studying the whole picture. I haven’t made a final decision and I don’t like anyone else to.”

ACT’s James Govan responded to the report by saying, “There’s not much more to be said about the fate of the highway when a DOT department takes a position like this.”

[Shaffer, Ron, “I-66 Plan Opposed By EPA,” *The Washington Post*, January 7, 1974; Gay, Lance, “EPA Requests Delay on I-66,” *The Washington Star-News*, January 7, 1974; Shaffer, Ron, “Federal Report Opposes I-66,” *The Washington Post*, January 11, 1974; Griffiths, Harriett, “I-66 Leg Illegal, DOT Report Says,” *The Washington Star-News*, January 11, 1974; Shaffer, Ron, “Federal Report Opposed I-66,” *The Washington Post*, January 11, 1974; Shaffer, Ron, “3d U.S. Panel Criticizes I-66,” *The Washington Post*, January 13, 1974; “The Unwinding of I-66,” *The Washington Post*, January 15, 1974]

On January 13, Mayor Washington responded to a letter he had received in December from I-66 opponents: former NCPC Chairman Rowe, now chairman of the Committee of 100 on the Federal City; Dr. Ellis Haworth, president of the Federation of Citizens Associations of the District; and F. H. Thomas, vice president of the District of Columbia Federation of Civil Associations. They urged him to encourage Director Airis to vote against I-66 as a member of TPB when the issue came up for a vote. If I-66 were abandoned, they argued, about \$200 million would become available for transit under the Interstate withdrawal-substitution provision of the Federal-Aid Highway Act of 1973.

The mayor replied that “the uncertainty of this provision of highway legislation” raised some concerns. Action should not be taken hastily. He urged TPB to examine carefully whether the substitution funds would be made available before deciding what to do about I-66.

TPB was scheduled to consider a motion introduced by Arlington County Board’s Munsey to reject I-66 and the Three Sisters Bridge. Because of uncertainty about the transfer program, Munsey anticipated that TPB might postpone the motion. “I think there is some uncertainty about it, but I don’t know how we are going to know if it will work or not without going ahead and trying it.”

James J. Bosley, COG’s general counsel, agreed with Mayor Washington about proceeding cautiously. The interim regulations on the withdrawal-substitution provision “say if the situation is right they should go ahead and not wait for the [final] regulations to come out.” At that point, the Department “will give them guidance.”

Director Airis was skeptical of the withdrawal-substitution provision, which he called “very difficult and unclear.” No one had tried it as yet. He said, “It is in its infancy. The feeling seems to be there’s got to be more guidance set up, probably through further legislation.”

He declined to say how he would vote on the TPB motion. He agreed “there is a heavy need for a connection between Washington and the Dulles area and I-66 would provide this connection.”

At the same time, he did not appreciate Munsey's decision to bring a Virginia problem to the TPB:

The Virginia folks ought to wrestle with the problem themselves. I think it is improper at this time to ask TPB to rule on this when they can't make their own minds up. [Kiernan, Laura A., "Hasty I-66 Action Opposed by Mayor," *The Washington Post*, January 14, 1974; Duvall, Owen, "I-66 Rejection Could Cost Transit Cash, Mayor Says," *The Washington Star-News*, January 14, 1974]

Summing up these developments in an editorial on January 15, the *Post* noted, "You would think that these recent developments would be enough to close the case once and for all – but there is yet another crucial round in the offing this week," namely the TPB action:

The effort is important because it would put the entire region on the record against both projects – a move viewed as a lethal blow to chances for federal approval.

As for Mayor Washington's concern that "premature rejection of the plans could jeopardize chances to use the federal money for mass transit," the editorial stated:

Unlike Virginia Gov. Mills E. Godwin, who wants I-66 built, the mayor has not said he favors the freeway projects; it's just that he's not sure they should be killed until it can be established that the federal funds can be transferred to mass transit.

Amidst these pending uncertainties, "We probably ought to withhold our applause until the final curtain officially comes down, but it looks as if Greater Washington's oldest running road show – 'Freeway Follies of '48,' featuring the Three Sisters and assorted legs – may at last succumb to the critics and close." They concluded:

I-66 and the Three Sisters Bridge are not merely local issues anymore – if they ever were. The federal and local decisions on these projects will serve as signals to the entire nation about the seriousness of governments in regard to mass transit needs at a time of intense concern over the energy situation. If nothing else, mere prudence dictates against going ahead with huge highway projects now. The mayor, the Council of Governments and the Secretary of Transportation should take all steps necessary to ring down the curtain on the I-66 and the Three Sisters Bridge. ["The Unwinding of I-66," *The Washington Post*, January 15, 1974]

On January 18, HUD expressed "grave concern" about I-66 based on the draft EIS, largely because of "major disruption to neighborhoods and schools" and "significant and adverse" problems in residential relocations. In a letter to VDH, Robert Duckworth, HUD's assistant area director for planning, wrote that the project would require the relocation of 161 households. (Virginia had acquired about 85 percent of needed right-of-way; HUD was referring to the remaining acquisitions.) "With Fairfax County's latest building moratorium, it could be concluded that the highway option is not in step with current local land use policy efforts." HUD favored the mass transit option, which would require the taking of only 35 households.

The *Post* summarized the housing issue:

Relocating households is a problem, HUD said, because Arlington has a low vacancy rate and “one for one replacement will be extremely difficult at least for the next several years.” There is concern, HUD said, that the number of households uprooted by I-66 would create problems in meeting the Uniform Relocation Act of 1970, which requires federal assistance in relocating families within the same general area where they were displaced by a federally-funded project.

Duckworth wrote, “From a HUD point of view, that’s a major, significant impact – adverse.”

I-66 was “not prudent and realistic . . . from an environmental perspective.” The central question, according to HUD, involved a choice: whether to support travel modes that “are wasteful and inefficient energy users, or creatively seek . . . new travel patterns which are less wasteful and more efficient.” The decision on I-66 would “point in the direction the federal government will take” in deciding highway versus transit issues. For HUD, the mass transit option was “significantly superior” to the options involving I-66.

The *Star* explained that highways encouraged diffuse development, while rapid transit encouraged concentrated development surrounding transit stations:

By diffusing development, the highway would interfere with the “edges and corridors” pattern of development for the metropolitan area, the report said.

The HUD letter also indicated that the EIS had not fully addressed the impact of I-66 on the District of Columbia. The study, however, “does indicate” that the transit option would generate less traffic in the city than the highway option. [Shaffer, Ron, “HUD ‘Concerned’ By Impact of I-66,” *The Washington Post*, January 19, 1974; Kast Sheilah, “HUD Joins I-66 Opposition,” *The Washington Star-News*, January 19, 1972]

Notwithstanding those negative views, Douglas Fugate made his well-known views clear when he appeared before the Senate Rules Committee of the General Assembly on January 31:

I am convinced that if this badly needed highway . . . is lost by default, the transportation system of Northern Virginia will suffer a mortal blow impossible to correct in the foreseeable future. I don’t see how the consultants can recommend other than to build I-66.

Delegate Mary A. Marshall of Arlington said his remarks were an “outrage to the citizens, another opportunity to be ignored.” Another delegate from Arlington, John L. Melnick, said, “It shows there is not impartiality.” Emilia Govan agreed. “Apparently the court decision and the laws of the United States are irrelevant to Mr. Fugate.”

Project supporters saw no outrage. “I don’t see any impropriety,” said Senator Adelard L. Brault of Fairfax. “He’s fully informed about the impact.” Paul Alwine of Fairfax County Citizens for I-66 responded, “It doesn’t bother me any more than all the environmental groups who are prejudging, too.” [Bredemeier, Kenneth, “I-66 Backed By Virginia Roads Chief,” *The Washington Post*, February 1, 1974]

The consultants completed their work on February 15 by recommending the multi-mode new facility option: construction of I-66 with Metro rail partly in the median and partly parallel to it. They also recommended construction of I-66 to accommodate I-266/Three Sisters Bridge. The bridge was “inextricably linked” to completion of I-66 as the outlet for truck traffic banned from the I-66/Theodore Roosevelt Bridge. However, the report added that I-266/Three Sisters Bridge was “not absolutely essential to the implementation of I-66.”

They rejected the option of combining rail rapid transit and expanded bus service. Nevertheless, they recommended several elements of the transit alternative, including extension of Metro to Dulles International Airport, a comprehensive feeder bus system for the Metro stations, an increased numbers of preferential bus lanes. In fact, the EIS stated, unless funding can be found for Metrobus operating deficits, northern Virginia might find itself “without any transportation relief.”

The EIS, in any event, argued that the automobile was the key to suburban development, serving job centers, recreational facilities and housing over a wide area not easily served by transit. Building only Metro, the document said, would leave the rapidly growing area without “a fully balanced and flexible transportation system.”

As for common criticisms, the cover letter to VDH acknowledged “negative environmental attributes” to build the \$181-million I-66. Those impacts could “be ameliorated or mitigated in the final design process.”

The EIS pointed out that the planned corridor was the “only feasible and prudent” location for I-66. Because VDH had acquired 98 percent of businesses to be relocated and 75 percent of homes, much of the community disruption had already occurred. If I-66 were not built, the EIS stated, the property acquired would revert under State law to the former property owners. WMATA would have to acquire the property at a higher price if it wanted to place Metro in the corridor.

As for the possibility of securing funds for transit under the withdrawal-substitution provision of the 1973 Act, the EIS warned that in the absence of precedents or clear guidance, if officials rejected I-66, they might not have the highway or the funds for transit.

Concerns about impacts on traffic in the District of Columbia were overblown; traffic in the I-66 corridor accounted for only 15 percent of vehicles entering the District, and that traffic was dispersed among the city’s roads.

Additional abatement features should be incorporated into the project to address concerns about noise. The consultants argued that the air quality issue was “impractical to address” in the absence of universally accepted standards for measuring potential air impacts.

The *Post* summarized:

The consultants said their recommendations would reduce traffic on city streets in all jurisdictions, decrease the rush-hour travel time between the Capital Beltway and the

Potomac River bridges from 30 to 15 minutes, improve their travel times significantly, and would offer better traffic service on the Beltway and Potomac River bridges than any other option.

Emilia Govan said that in producing the EIS, the consultants were “sacrificing professionalism for the dollar [by] supplying conclusions that its client wanted and paid for.” A spokesman for the consultants declined to comment on Mrs. Govan’s remarks, but added, “It is foolhardy for anyone to suggest that you can coerce a reputable engineering firm into recommending anything.”

VDH would now submit the final EIS to FHWA for a decision by Secretary Brinegar. [Shaffer, Ron, “Consultant Firm Backs I-66 Project,” *The Washington Post*, February 16, 1974; Crosby, Thomas, “Consultants Back I-66,” *The Washington Star-News*, February 15, 1974]

The EIS also addressed the Section 4(f) issue by questioning whether transit was a “feasible and prudent” alternative to I-66. However, the highway would require 55 acres of parkland. The Section 4(f) question was one of the “substantial legal, policy, and political problems involved in the decisionmaking process that are beyond our purview to assess or resolve.” The Section 4(f) issue was “a legal and administrative problem which must be solved by the Secretary of Transportation.”

Shortly after release of the EIS, the Department of the Interior addressed that point in a position paper endorsing the mass transit alternative to the highway because of the “severity of the environmental impacts” of I-66. Interior had no intention of releasing the Section 4(f) properties. The Capper-Cramton Act provided that the 36.6 acre Spout Run Parklands could be used for nonpark purposes only with the consent of the Arlington County Board, the State of Virginia, and NCPC. Two of those agencies would never consent.

Interior funds had been used to develop the Four Mile Run Bicycle Trail; about 1,500 feet of this trail crossed the I-66 right-of-way between Roosevelt Street and North Powhatan Street. The trail would have to be relocated for I-66, a shift Interior would not concur in without the improbable consent of the Arlington County Board. This requirement was not statutory, but was a policy.

Virginia, Interior pointed out, had “overlooked the fact that the road is aimed at some major historic properties on the other side of the river.” I-66 and I-266 would “severely impact” the historic, recreational, and aesthetic values of the Georgetown Historic District and the Chesapeake and Ohio Canal National Historical Park. More information would be needed about the impacts on these and other areas that may be eligible for inclusion in the National Register of Historic Places.

Bruce Blanchard, director of Interior’s Office of Environmental Project Review, put it this way:

What we’re saying to the highway department is that you guys have got some problems that have to be resolved, and until they are, the Interior Department cannot approve the

highway. [Shaffer, Ron, "Ecology, Procedural Snags Seen," *The Washington Post*, February 17, 1974]

More bad news for I-66 occurred on February 20 when TPB voted overwhelmingly for the Munsey resolution stating that I-66 was "not compatible with regional goals and objectives, including the redevelopment of mass transit and achievement of adequate air quality." Under a weighted voting system reflecting each jurisdiction's population, the final tally was 8.0 to 1.8. The District of Columbia's representatives voted for the resolution and the only Maryland jurisdiction to vote against it was from College Park. The Virginia vote was split, with the cities of Fairfax and Falls Church, Prince William County, and VDH voting for the highway. Arlington, Fairfax, and Loudoun Counties and the city of Alexandria approved the motion.

VDH Deputy Director John Harwood, a member of TPB, had tried to postpone the vote, saying it should not be held until the Virginia Highway Commission voted on I-66. Other members preferred to let the commission know TPB's views in advance of that vote.

Approval of the Munsey motion was an informal "expression of sentiment," not a final TPB action. That action would come if, as expected, the Virginia Highway Commission approved

I-66, Secretary Brinegar approved it, and VDH sought to include funds for the work in the area's 3C plan. Under metropolitan planning requirements, Federal-aid highway funds cannot be used on a project unless it is included in the plan developed under the 3C process by the MPO, in this case TPB. The vote on the motion was an indication of TPB's likely action on such a request.

As Madeleine Schaller, staff attorney for COG, put it, the vote erected a legal barrier that could be undone only if TPB members reversed their positions. David E. Wells, FHWA's Chief Counsel, told reporters that the effect of the vote was less clear than Schaller had suggested. True, Federal-aid highway funds may not be used on a project that is not in TPB's plan, but the complexities of the lawsuit that the current process grew out of made predictions difficult.

Following the vote, the audience of about 75, many wearing "Block I-66" buttons, applauded. Munsey said, "I am delighted." Emilia Govan called the vote "fantastic," and "the most significant thing that's happened so far." [Eisen, Jack, "COG Planners Oppose I-66 Leg," *The Washington Post*, February 21, 1974; Crosby, Thomas, "COG Board Opposes I-66," *The Washington Star-News*, February 20, 1974]

Despite these setbacks, the nine members of the Virginia Highway Commission unanimously approved I-66 without debate following a 45-minute presentation by VDH. Fugate told the commissioners:

If the interstate highway system had been dependent on the whims of local governments or changing political climates, then we wouldn't have the fine interstate system we have. I am convinced that completion of I-66 is an essential part of the interstate system and is necessary for a balanced transportation system in Northern Virginia.

The commission also endorsed the development of mass transit in northern Virginia, including extension of Metro to Dulles International Airport. With the commission's approval and

Governor Godwin's prior endorsement, the next steps were for the consultants to complete the final EIS and for Secretary Brinegar to decide the issue.

In a news conference, Fugate acknowledged many legal and environmental obstacles to be overcome before construction could begin. However, he said, "if the Secretary of Transportation approves the highway then we can sit down and tackle the problems. They can all be worked out." He also disagreed with EPA's opinion that mass transit would be a "feasible and prudent" alternative to I-66.

Ten members of the Virginia's congressional delegation had written to Secretary Brinegar in support of I-66. In addition, Chairman Randolph of the Committee on Public Works and Senator Baker, the ranking Republican on the committee, also wrote to the Secretary stressing that I-66 was an important link in the Interstate System and part of a balanced transportation system for the Washington area.

Both sides in the debate expected a court challenge. If Secretary Brinegar approved I-66, ACT would pursue its legal challenge. If he turned it down, VDH would go to court to challenge the basis for his decision. [Shaffer, Ron, "Va. Highway Unit Favors Extending I-66," *The Washington Post*, February 22, 1974; Crosby, Thomas, "I-66 Issue Heading for Court," *The Washington Star-News*, February 22, 1974]

On February 28, a *Post* editorial titled "The End of the Road" predicted that "the long drawn-out debate" over I-66 had finally come to an end with TPB's vote. "This, in our view, gives U.S. Transportation Secretary Claude S. Brinegar no other sensible choice, as we read the law, than to disapprove the 90 per cent expenditure for the freeway." Under Federal law mandating the 3C planning process, TPB's vote was "the final word":

Mr. Brinegar could, of course, yield to highway lobby pressure and either try to pressure the Transportation Planning Board to reverse itself or seek some interpretation of the complex highway planning procedures that would revive the hassle. But that would inevitably take the controversy into court and the courts have repeatedly ruled against highway builders . . . .

The editorial urged Secretary Brinegar "to write the final act speedily and unequivocally." Then, under the Federal-Aid Highway Act of 1973, Virginia and local officials could secure substitution funds for transit improvements. "All the governor has to do is fill out his application." ["The End of the Road," *The Washington Post*, February 28, 1974]

### **The Unusually Permanent End of the Road**

Mayor Washington announced on May 12 that the Three Sisters Bridge, long considered dead, actually was dead. He said the U.S. Department of Transportation had informed the city it could employ the withdrawal substitution provision of the Federal-Aid Highway Act of 1973 to remove Interstate designation from the bridge and the K Street Tunnel in exchange for comparable funding for Metro (\$344 million, according to Mayor Washington) and city street and bridge improvements (\$49 million). As the *Post* put it, the bridge "was killed for the third or fourth

time yesterday. This time it looks unusually permanent.” [Feaver, Douglas B., “Three Sisters Highway Project is Killed – Again,” *The Washington Post*, May 13, 1974]

By then, WMATA staff had informed the directors that the cost of Metro had increased to at least \$3.5 billion, largely because of inflation and delays. Noting Chairman Natcher’s repeated predictions about cost, Jack Eisen wrote:

Yesterday, to the obvious discomfort of Graham, D.C. Metro director Henry S. Robinson Jr. speculated that the cost might reach a level mentioned by Natcher.

Graham later grudgingly acknowledged that total might be reached, but insisted that the main reason would be inflation nobody could have foreseen.

Forecasts had been based on an inflation rate of 7 percent that was running about 10 percent in the wake of the energy crisis:

Joseph Elward, Metro’s director of program control, told the board that inflation, storms, strikes, governmental red tape and indecision were to blame for rising costs.

The sharpest increases came when the Nixon administration relaxed economic controls last year. With all controls now off, Elward said it is anybody’s guess what will happen.

The only optimistic outcome from the report, board members hoped, was that “candor should help win public support.” [Eisen, Jack, “Metro Cost Estimate Rises to \$3.5 Billion or Higher,” *The Washington Post*, May 3, 1974]

By August, the estimated cost had increased to nearly \$4 billion. Elward attributed the increase to the same factors as cited in May, in addition to the unanticipated cost of installing provisions for the handicapped in Metro cars and stations:

But the bulk of the increase, Elward said, is because of Metro construction projects that are still either in a general planning stage or a preliminary planning stage. The costs for these items won’t be known, he said, until a design plan for them is completed.

WMATA board’s Fisher was concerned about public reaction. “We’ve got to let the public know these increases are due to rising costs of labor and materials – things which we have no control over. Otherwise, they’ll think the rising costs are due to our mismanagement.” The board adopted his recommendation that WMATA issue a report to the public on the reasons for the increases, but General Graham said the report would take 3 months to compile. [Daniels, Lee, “Metro Cost Jumps to \$4 Billion,” *The Washington Post*, August 9, 1974]

In July, Virginia highway officials forwarded the final EIS adopting the multimodal option to FHWA’s Division Office in Richmond. The proposed plan included eight lanes and a double-decked segment 10 stories high and 3,500-feet long between Spout Run Parkway and adjoining apartment buildings. Metro would be built in the median.

A. D. Harris, a Virginia highway department engineer, acknowledged that the double-decked segment was “a monstrosity,” but said the design was necessary because Arlington County opposed the use of parkland for I-66. “We hope Arlington County realizes what they’re doing to us by not letting us use this little parkland. We hope we can sit down with them and have some kind of agreement that is pleasing to them instead of the monstrosity.”

County board member Munsey said accommodation was not likely:

We won’t let them use the parklands because we’re trying to block the highway altogether. But the real problem is that the Virginia Highway Department is trying to ram the road down our throats whether we want it or not.

He agreed, however, with Harris’s description of the segment. “It’s absurd,” Munsey said, “Can you imagine glancing out of the third story of your apartment and seeing a Mack truck roll by?”

Harris acknowledged that the segment would not meet Federal noise requirements:

There’s no way we can abate the noise level unless we put an ugly wall around it and the thing is going to be ugly enough already. [Shaffer, Ron, “Way Cleared for Decision on Rte. 66,” *The Washington Post*, July 12, 1974; Shaffer, Ron, “I-66 Plan: 10-Story Highway,” *The Washington Post*, August 22, 1974]

On July 29, 1974, Governor Godwin and other Virginia officials met with Secretary Brinegar in Senator Scott’s office to support I-66. Representative Parris told reporters that everyone “put in our 2 cents worth.” He added, “If we don’t continue to let our concerns be known, he can only assume that nobody’s interested.”

Governor Godwin said after the meeting:

The project has already been delayed for two years while the state highway department conducted a complete restudy in accordance with the ex post facto requirements of federal law. Enough studying has been done . . . project is long overdue. I hope we can get on with it.

He noted that preliminary stages had cost \$30 million and that “95 per cent of the dwelling units and 98 per cent of the businesses in the right-of-way have been acquired”:

It seems to me this matter should now be decided in accordance with the democratic process that favors the wishes of the majority over those of a few, who however sincerely motivated, now stand in the way of progress.

He thought the meeting went very well. “Brinegar was most polite and receptive and indicated it would be as much as two months before there’s a final decision.”

FHWA, which was still reviewing the EIS, had returned the document to VDH for expansion of the section on citizen comments. Secretary Brinegar’s spokesman Robert Beasley told reporters:

Either way we decide we're probably going to get sued. This was probably a perfect loophole for the environmentalists to sue us because the environmental statement wouldn't be complete without more on those comments.

Fugate assured reporters that VDH would provide the requested information and return the EIS in about a week. "I'm very optimistic the secretary will approve the highway. I don't see how he can do otherwise." [Omang, Joanne, "I-66 Ruling Expected In 60 Days," *The Washington Post*, July 30, 1974]

Opponents met with Secretary Brinegar on September 13. They excluded the press and outsiders from the meeting because, as Munsey explained, "It was in the interests of a frank and meaningful discussion to meet privately."

After the 1-hour meeting, Alexandria City Councilman Melvin Bergheim said, "I got the strong impression he had not committed himself at all." Along the same lines, Munsey reported that, "He said he had not previously had any material before him on I-66."

The *Post* summarized:

The group . . . told Brinegar they opposed the highway because it would cost more, lead to more traffic congestion, and have a greater adverse effect on the environment than a mass transit option favored by the group for the I-66 corridor.

"We made it clear that the transportation philosophy in Northern Virginia is toward mass transit solutions rather than more highways," said Rufus Phillips, a Fairfax County supervisor and member of the Northern Virginia Transportation Commission.

He added that the group emphasized that VDH's latest estimate of \$219 million "grossly understates what the real cost will be," when inflation was taken into account. [Shaffer, Ron, "I-66 Construction Held Not Imminent," *The Washington Post*, September 14, 1974]

In September, FHWA returned the plan to I-66, objecting particularly to the 10-story high, double-decked section. In a letter to Fugate, Administrator Tiemann called for measures to "further ameliorate the impact of the project on Arlington and Fairfax Counties." In addition to objections to the double-decked section, Tiemann asked Virginia to reduce the number of lanes from eight to six and prohibit truck traffic on the I-66 extension to the Potomac River, where trucks were prohibited from the Theodore Roosevelt Bridge. The changes, Tiemann wrote to Fugate, were needed to achieve "greater acceptance on the part of the communities and the people who will be directly affected."

VDH officials were optimistic that they could address FHWA's concerns. Deputy Commissioner Harwood said the letter left VDH with the optimistic view that Secretary Brinegar would approve the extension after the changes were made. "I don't see how the Secretary can do anything but approve it."

Administrator Tiemann's letter did not encourage opponents. Munsey called FHWA's letter "a last desperate effort of the proponents of the highway oriented transportation solutions to save a

transportation policy that has been exposed as fallacious.” James Govan said, the suggested revision “in no way satisfies us,” adding, “I’m not celebrating at all.” He suggested that Administrator Tiemann was “reacting to pressure” and characterized the letter as a “desperate attempt to save the road.”

In an interview, Tiemann said he hoped the changes would win over opponents because I-66 would not be “just a slab of concrete but be like the George Washington Parkway.” The changes would not only reduce the number of lanes but reduce air and noise pollution levels, while VDH could add “grass shoulders, shrubs, flowers for beautification purposes.

Tiemann, who lived at 8440 Brook Road in McLean, Virginia, said this was the first time in his 16 months as Administrator that he had turned down a highway proposal. VDH had made a “conscientious and painstaking effort” to mitigate or eliminate environmental impacts but “additional effort” was needed. He anticipated that VDH would need about 6 months to revise the design.

While the reduction to six lanes would reduce some impacts, it could cause other problems. The plan to build Metro in the median would have to be reviewed to determine if that were still possible. Further, eliminating the double-deck section would mean that retaining walls would have to be built next to Spout Run Park. [Shaffer, Ron, “U.S. Urges 6-Lane I-66 in Arlington,” *The Washington Post*, September 20, 1974; Crosby, Thomas, “I-66 Seen O.K. With Revisions,” *The Washington Star-News*, September 20, 1974]

### **Metro vs. Metrobus**

After WMATA took over the area’s bus systems to create Metrobus, the combination was uncomfortable, with problems left over from D.C. Transit System’s management of the buses. On June 28, 1973, the U.S. Court of Appeals ruled that the Washington Metropolitan Area Transit Commission, which had jurisdiction over bus fares until WMATA initiated Metrobus, had improperly approved fare increases to ensure D.C. Transit System could operate at a profit. Noting that the company owned several properties such as bus barns and office buildings, the court concluded:

We cannot avoid concluding that, performing its burdensome functions, the agency has throughout acted on the erroneous postulate that it was compelled – no matter to what level it must raise the fares, how substantial the fall in ridership, and how financially sick Transit might be – to set the fare so that Transit could always earn a profit,

The company had a right to earn a fair return, but “it was not for the commission to insure a return.”

Chalk had taken some of the properties acquired with the company out of transit service:

Nothing . . . suggests that Congress intended that Transit’s investors would automatically pocket, at the expense of the fare-payers, the expectable increment in value [of those properties] . . . .

We cannot believe that Congress contemplated such an outright gift to Transit's investors, who would not have done anything to earn or deserve it . . . .

The ruling also pointed out that while WMATA had acquired the company's assets, "its corporate existence outlives that event, and so also do its unassumed liabilities." Arguing that the commission "was not a substitute for competition," the ruling called on the commission to determine a formula to determine how much funding the company collected improperly and how restitution should be made.

WMATA, which was solely responsible for setting fares, had agreed to freeze the basic fare at 40 cents; the remnant of D.C. Transit System was responsible for making up the difference in past fare increases beyond 25 cents. Nevertheless, WMATA, like public transit authorities around the country, was searching for ways to subsidize losses. Chairman Natcher had made clear that he opposed spending District funds for Metrobus subsidies. At the same time, UMTA Administrator Herringer said Chairman Natcher's opposition would not be permitted to block Metro construction. Herringer said UMTA would not authorize further government-backed construction bonds unless the District provided a good faith assurance that it would do everything it could to obtain subsidy funds.

Chalk appealed the decision to the Supreme Court, which rejected the appeal on February 19, 1974. [Robinson, Timothy, "Old D.C. Transit Told To Return Fare Boost," *The Washington Post and Times Herald*, June 29, 1973; Eisen, Jack, "25-Cent Metrobus Fare Next Target for Hahn," *The Washington Post and Times Herald*, July 3, 1973; "Decision Upheld On Chalk's Profits," *The Washington Post*, February 20, 1974]

The problems left over from D.C. Transit System compounded, as Professor Schrag described. Even as Chalk was in the final stages of transferring his company to WMATA, he averted a strike of his alienated employees by guaranteeing cost-of-living adjustments every 3 months:

With labor accounting for close to 85 percent of the bus system's cost (typical for the industry), and with inflation ever increasing, this concession meant that operating expenses would automatically increase for years. Moreover, because both D.C. Transit managers and workers made the move to WMATA, so did their mutual dislike, which grew even worse as former D.C. Transit employees saw buses playing second fiddle in a subway agency. Despite the raises, in May 1974 bus drivers struck. Old WMATA hands were no happier: the Authority's payroll had grown from 300 to 4,000 employees overnight. No longer could Graham expect to know each employee's name; no longer was everyone focused on the single goal of building a rail system. [Schrag, page 178]

Shortly after that court ruling, the oil boycott sent the price of fuel soaring. In January 1974, at the peak of the oil shocks, Jack Eisen reported:

A record-breaking cost-of-living wage increase for bus employees and a sharp ride in the price of diesel fuel yesterday added another \$2 million a year to the projected deficits of the Metrobus system . . . .

For the entire fiscal year, starting next July, the \$31.8 million deficit that was forecast just two weeks ago will reach at least \$33.8 million

WMATA board member Joseph Alexander told his board colleagues, “I know this is a bad thing to say . . . . We are faced with a tremendous increase of costs and perhaps we ought to do something about it.” Board chairman Jerry Moore and Montgomery County’s Idamae Garrott, who favored keeping the fare at 40 cents, or lowering it, halted discussion of a fare increase. [Eisen, Jack, “Metrobus Fuel, Pay Costs Soar,” *The Washington Post*, January 4, 1974]

Nevertheless, with WMATA’s takeover, ridership of Metrobus stabilized while route coherence was improved in ways that were not possible when buses were operated by four independent companies. These gains could not resolve the inherent problems, as Professor Schrag explained:

But with fares frozen and wages automatically rising, by November 1974 the fare box was paying only half of bus expenses. Soon, a board committee reported, “local government officials, private citizens of the area, editorial writers and, on many occasions, Metro Board Members” began speaking of “mushrooming, runaway, spiraling, out-of-control” deficits.

WMATA recognized that it was providing a public service, but costs had to be met:

The bus takeover, however necessary, was a disaster for WMATA. By showing just how hard it was to raise fares, the takeover threatened the financing of the rail system – by July 1973 the Nixon administration warned that its backing of rail bonds would depend on the jurisdictions’ willingness to subsidize bus operations. Moreover, the bus takeover, and the resulting deficits, strained regional cohesion. Thinking of their constituents, many of them poor and carless, District of Columbia board members generally supported high subsidies and lower fares . . . . Suburban members, particularly those representing Virginia, knew that their voters would swallow a fare increase better than a tax increase, so they fought to keep deficits low by raising fares.

He added that, “the bus takeover directly threatened WMATA’s image as the public champion”:

When the Authority first considered a takeover, in 1970, Pfanstiehl warned that it “would be about the worst community relations calamity possible.” He was right. In buying Chalk’s buses and hiring his managers and employees, WMATA also acquired much of his unpopularity. The worst insult came from the head of a citizens’ group organized to fight air pollution, who disparaged the WMATA chairman as “a public O. Roy Chalk.” For him and others, the takeover had raised expectations beyond what could be met. [Schrag, pages 178-179]

Through mid-1974, Chalk and WMATA were still battling in court about the price WMATA would pay for D.C. Transit System. WMATA had deposited its estimate of \$38.2 million with the court hearing the condemnation case, but Chalk had asked for \$63.6 million. On July 26, 1974, U.S. District Judge Gerhard A. Gesell approved Chalk’s and WMATA’s split-the-difference compromise price of \$44.9 million.

Jack Eisen explained that WMATA would have to pay only an additional \$1.3 million:

The difference is \$5.4 million that D.C. Transit owes Metro for such items as pension funds, the redemption of fare tokens and a share of revenues from advertising inside the buses that formerly was sold by another firm controlled by Chalk. [Eisen, Jack, “\$44.9 Million Price Set for Transit Firm,” *The Washington Post*, July 27, 1974]

As estimated Metrobus deficits mounted along with the cost of Metro construction, WMATA struggled to find a new formula for sharing amid jurisdictions whose board members felt their residents were being unfairly overcharged. Professor Schrag wrote:

Nasty surprises, inflation, and the bus takeover required a rethinking of Metro finances. When, in the fall of 1974, that rethinking took place, the accountants reported some very bad news.

A record cost-of-living wage increase, effective October 1, 1974, had shattered deficit projections. For FY 1975, the Metrobus deficit now was expected to be \$40 million, with a deficit of \$56.8 million projected for FY 1976:

In January 1970 the WMATA jurisdictions signed a Capital Contributions Agreement that, among other things, required the Authority to update its financial estimate within five years. So, in November 1974, the Authority produced a “Net Income Analysis,” an official estimate of total capital cost and likely operating costs and revenues. The staff replaced the capital cost estimate of \$2.98 billion with a new figure of \$4.454 billion, attributing almost all the increase to inflation. Moreover, it predicted that fare-box revenues would not cover operating expenses, much less pay off bonds.

The Office of Management and Budget (OMB, successor to the Bureau of the Budget in 1970) asked WMATA to consider shorter rail systems to reduce the cost:

WMATA staffers sketched out various shorter systems, including one limited to the forty-seven miles then under construction. Even with the \$3 billion already promised by the federal government and local jurisdictions, WMATA could build at most seventy-six miles. Such a system would eliminate the Mid-City trunk and Anacostia branch, along with extensions past Silver Spring [Maryland] and Huntington [Virginia]. This plan, the staff argued, would eliminate service to the region’s poorest neighborhoods, force all sorts of operational improvisations to compensate for missing yards, and, in the long run, prove more expensive, should the ninety-eight-mile system eventually be completed after several years of inflation. Perhaps most seriously, no suburban jurisdiction would pay its share unless it got its promised lines. As OMB later noted, “local financing is a house of cards, each jurisdiction expecting METRO to be constructed as advertised in the 1960’s.”

Even a hint of truncation might blow the house down. [Schrag, pages 179-180]

Chairman Natcher was one of the least surprised people in Washington. General Graham and other WMATA had repeatedly assured him that their estimate of just under \$3 billion was as accurate as they could make it. On November 25, 1974, he released to reporters a letter that he

had sent to General Graham. After reviewing past assurances about the cost, Chairman Natcher wrote of the new estimate:

Gen. Graham . . . [\$4.5 billion] will not complete the 98-mile rapid rail transit system, and again I would like to urge that you and members of the authority take another look at the cost of this system . . . .

Simply tell the people who will have to pay the taxes to carry this burden that the system will ultimately cost of \$5 billion and unless there is some change the figure could go as high as \$6 billion.

Responding to inquiries from reporters, General Graham said he had not seen the letter, but thought that Chairman Natcher's estimate was premature:

In hindsight he was right, because inflation occurred at a greater rate than anybody could have imagined . . . . It is one hell of a time to try to be setting the cost of a project as big as this one. [Eisen, Jack, "Natcher Puts Metro Cost At \$6 billion," *The Washington Post*, November 26, 1974]

WMATA "faced the music" in December 1974 by asking OMB to allow an additional \$1.26 billion to cover the new estimate.

## **The New President**

Following the resignation of President Nixon, Vice President Gerald R. Ford became President on August 9, 1974. In reaching out to him, WMATA knew that he "had less enthusiasm for Metro than did his three immediate predecessors, as Professor Schrag explained;

As House Minority Leader he had been one of Natcher's greatest allies in 1971, and some, including Graham, believed he still held a grudge. As a congressman from auto-building Michigan, he had generally been cool to federal support for transit. In 1973 his biggest break with the Nixon administration had been to oppose legislation allowing cities to transfer some Interstate highway funds to mass transit. He later softened on that issue, but within weeks of ascending to the presidency, he announced his dismay that federal policies had skewed local transit planning toward subway construction. Ford also lacked his predecessors' fondness for the District of Columbia. Although he had spent a quarter-century in Congress, since 1955 he had lived across the river in Alexandria rather than in the District itself.

(Until September 1975, Vice Presidents had lived in their private residence. In 1951, Representative Ford and his family moved to 1521 Mount Eagle Place in the Park Fairfax apartment complex in Alexandria, the same rental community where the Nixons had once lived. They moved to 514 Crown View Drive in the Clover neighborhood of Alexandria in 1955. The home is near King Street (State Route 7), a main commuter road between U.S. 1 (Jefferson Davis Highway) on the east and Henry G. Shirley Highway, soon to become I-95, then I-395). The Fords had built the four-bedroom, two-bath colonial house on a quarter-acre lot. When Representative Ford became Vice President on December 6, 1973, following the resignation of

Vice President Agnew, the Secret Service improved the home's security, installing bulletproof glass and adding steel rods under the driveway to support the Vice President's armored limousine, among other changes. From this home, the Secret Service escorted him along the Shirley Highway to the White House for his oath of office as President of the United States.)

In addition to White House skepticism, WMATA also faced revolts in the suburban jurisdictions:

Suburban officials began worrying that they would never get the extensions for which they had already paid. In Maryland, transportation secretary Harry Hughes threatened to cut off further contributions until more ground was broken in his state, and Montgomery board member Idamae Garrott proposed that some lines be built from the periphery toward the center to guarantee their completion. Prince George's County worried it would never see Metro. Throughout the region, county and city governments began tightening the leashes on their WMATA representative, making sure they cleared their votes at the county seat before casting them at WMATA headquarters. As one suburban councilman observed, the jurisdictions dismantled as an independent, decision-making body and turned it into a United Nations. [Schrag, page 180]

### **A New Era in the District**

On December 26, 1974, Mayor Washington announced that Thomas F. Airis, 68 years old, would retire after 45 years of government service. He had directed the District highway agency since 1964, a holdover from the days when the District was governed by three presidentially appointed commissioners. He was reluctant to leave, and had resisted the temptation for 3 years, but with retirement incentives increasing, "I just could not afford not to take advantage of it any more." His annuity would be 80 percent of his \$36,000-a-year salary, plus a boost in cost of living adjustments. The first year of his pension also would be tax free. If he did not retire, he would lose the cost-of-living boost in his pension under a government incentive program to encourage retirements.

In an article about the retirement, the *Post* wrote as if the District freeway battles were over:

Airis is best remembered for supporting the construction of controversial freeways in the city and for advocating the building of the Three Sisters Bridge between the District and Virginia.

The question of how many freeways to build within the city reached its height in the early 1970s when Rep. William H. Natcher (D-Ky.), head of the House District Appropriations Subcommittee, threatened to cut off money for the construction of the Metro subway system until the freeway network was completed.

At the time, citizens were regularly demonstrating against freeway construction, contending the roads would add to pollution and disrupt neighborhoods.

More than one-half of the system was eventually built, and yesterday Airis pointed to this as one of the major accomplishments of his administration.

The *Star* described Airis as “the bane of freeway fighters and a boon to area commuters, having built major portions of more than half a dozen freeways in the city”:

While director of the D.C. Department of Highways and Traffic, Airis saw parts of his plan for an inner ring of highways chopped up by freeway foes. In addition, Airis lost a bitter and prolonged battle over construction of the Three Sisters Bridge between Georgetown and Northern Virginia. The bridge was supposed to link the city with Interstate Route 66, which remains under heavy fire from highway opponents there.

Despite the Three Sisters loss and the scuttling of plans for the South Leg – a part of the inner ring to run in a proposed tunnel in front of the Lincoln Memorial – Airis was successful in getting several highways built.

He said he takes pride in having helped with construction of the Southwest-Southeast Freeway, the new Theodore Roosevelt Bridge, the Potomac River Freeway, two new 14<sup>th</sup> Street bridges, a major portion of the Anacostia Freeway, two new 11<sup>th</sup> Street bridges and a 1.4-mile segment of the Center Leg in front of the U.S. Capitol . . . .

In addition to the freeways he helped build, Airis [was credited with installing] new sodium vapor lights, and has developed better paving techniques for highways.

In discussing his accomplishments, Airis added developing the concept of air-rights construction that including the HEW building over the Center Leg and part of L’Enfant Plaza over the 9<sup>th</sup> Street expressway. He added:

The city’s streets are not yet in the condition we hope to get them, with a lot of resurfacing and striping still to be done. If funding continues, the streets should be in good condition by the Bicentennial.

Despite his support for freeway construction in the District, Airis “rides the express bus almost every day between his home in Potomac, Md., and his downtown office.” This was not a contradiction, as he told reporters covering his announcement. “I’ve advocated mass transit and pushed for it.”

Mayor Washington took the opportunity of Airis’s retirement to announce that he would establish a Department of Transportation that would oversee the Department of Highways and Traffic or possibly replace it. Several officials were vying to head the new agency, but “sources” indicated that Douglas Schneider, Mayor Washington’s special advisor on transportation, was the likely choice. [Bowman, LaBarbara, “City Highway Chief Planning to Retire,” *The Washington Post*, December 27, 1974; “Airis Retires As Chief of D.C. Traffic,” *The Washington Star-News*, December 26, 1974; Crosby, Thomas, “Airis Retires as D.C. Traffic Head,” *The Washington Star-News*, December 27, 1974]

In the meantime, Mayor Washington appointed Deputy Director Bernard J. O’Donnell acting director.

If the articles gave the impression that the freeway battles were over, that the critics had won, and that the chief freeway advocate was now gone from the District government, that was a good summary of the situation. Details remained to be worked out, but the battles over the District's freeway network were largely a thing of the past.

### **Home Rule At Last**

The change went far beyond Airis's departure because in January 1975, a new District government, the first elected by the city's residents, took office under the District of Columbia Home Rule Act, which President Nixon had approved on December 24, 1973. He signed the bill without ceremony, but issued a statement in which he referred to himself as "a longtime supporter of self-government for the District of Columbia":

I first voted for home rule as a Member of the House of Representatives in 1948, and I have endorsed the enactment of home rule legislation during both my terms as President.

His political philosophy was "to place responsibility for local functions under local control and to provide local governments with the authority and resources they need to serve their communities effectively." This new law was "a significant step in achieving this goal in the city of Washington":

It will give the people of the District of Columbia the right to elect their own city officials and to govern themselves in local affairs as the Nation approaches the 200<sup>th</sup> anniversary of its founding. It is particularly appropriate to assure those persons who live in our Capital City rights and privileges which have long been enjoyed by most of their countrymen.

The new law established the machinery for election of local officials, but "also broadens and strengthens the structure of the city government to enable it to deal more effectively with its responsibilities":

For example, this legislation transfers to the city government control over certain quasi-Federal agencies: the Redevelopment Land Agency, the District of Columbia Manpower Administration, the National Capital Housing Authority, and the local planning functions of the National Capital Planning Commission. These steps are in accord with the recommendations of the Commission on the Organization of the Government of the District of Columbia, known as the Nelsen Commission. By making such transfers, the bill will end the fragmentation of authority over the city's physical planning, housing, community development, and manpower programs, steps which are essential to the development of the city's neighborhoods, to the health of its economy, to the effective coordination of its public services, and to the overall success of self-government.

Home rule also provided a "broad revenue raising authority for the city, enabling the people through their elected representatives to determine how to pay for the services they require." This

authority was not total because the law provided for “final Congressional review of the District’s appropriation process is retained under this measure.”

At the same time, the law covered the Federal payment:

The bill . . . provides for an increasing multiyear authorization for Federal payments to the city, giving greater predictability to the Federal payment than has previously existed. As the principal employer in Washington, D.C., the Federal Government recognizes its responsibility to pay its fair share of the operations of the District government.

The measure I sign today also empowers the city to issue its own obligations, while providing financially sound limitations to its borrowing authority comparable to those which exist in most other municipalities in the United States.

President Nixon’s statement concluded:

The District of Columbia is a unique combination of Federal and local concerns, each of which must be satisfied. All in all, I believe this legislation skillfully balances the local interest and the national interest in the way the District of Columbia governed. I am pleased that the bill has enjoyed bipartisan support throughout the Congressional deliberations, and I am proud to join the Congress in pledging the full support of my Administration to make self-government a success in the District of Columbia.

The success of the home rule legislation was directly related to the departure of its chief opponent – dating to the Truman Presidency, Chairman McMillan of the House Committee on the District of Columbia. Professor Lewis explained:

McMillan and his fellow southerners might have lost on civil rights in 1964 and on voting rights in 1965, but they still could deny Washingtonians full citizenship and the right to elect voting representatives to Congress. Over the years they had thwarted nine home-rule bills; indeed, only one, Lyndon Johnson’s, got to the floor of the House for a vote, where it was defeated. “Washington is a federal city,” McMillan declared in one of his committee reports, “established exclusively for the benefit of, and as a home for, the federal government.” Most of those who “swarmed here” were “intruders” and “not vital” to its operation.

Republicans and liberals had begun to combat Chairman McMillan by 1970, gaining some victories in weakening his total control, including approval for a nonvoting District delegate.

Back home, in South Carolina’s Sixth Congressional District, Chairman McMillan had an assured seat, having not faced a serious opponent in years:

But in the summer of 1970, when a young black physician mounted a challenge, Washington’s civic activists sent their money south along with Walter Fauntroy, the District’s newly elected nonvoting representative, and a chartered bus of civil rights and home-rule supporters to get out the black vote. The strategy backfired when McMillan went on TV for the first time in his life and said, “This is a South Carolina election and

we don't need any advice from people in Washington." Two years later, the seventy-six-year-old faced a younger, better organized, and white primary opponent. The activists stayed home but gave money to fund the defeat of the longest-serving representative in South Carolina's history.

State Representative John J. Jenrette of Myrtle Beach won the primary, but lost the general election to Edward Lunn Young, a former Democrat, now a Republican who had served in the State legislature:

Ungrateful to the end, McMillan complained that he lost because "the colored people were brought out." When they heard the news, Walter Fauntroy and the residents of Seventh Street celebrated with a parade.

At the end of his last term, John McMillan wrote his final report as chair of the District of Columbia Committee. It included a delusional epitaph of his reign. "He remains the best and most effective friend the Nation's Capital has ever had." [Lewis, pages 419-420]

Representative Charles C. Diggs, Jr. (D-Mi.), became chairman in 1973, taking the oath of office on January 27 to become the 52<sup>nd</sup> chairman of the House District Committee. Chairman Diggs was an African-American from Detroit where his family operated the largest black funeral home, known as the House of Diggs. Journalist David Maraniss, in his book about Detroit in the peak year of 1963, described the family:

The Diggs family had been in the undertaker business for more than four decades. Charles Diggs Sr. had started it all in a first-floor funeral parlor on Russell Street near the local headquarters of the United Negro Improvement Association, founded by Marcus Garvey, the pan-African redeemer whose teachings the mortician once followed. The elder Diggs eventually expanded his business into a vast enterprise that included burial insurance and diversified the family's interests into politics, gaining election to the Michigan State Senate and paving the way for Junior's rise to Congress, as well as setting a father-son pattern of stellar civil rights activism intermingled with problematic political ethics. The Diggs name was among the most prominent in black Detroit.

In 1963, the family "accentuated the year's boom with the grand opening of its nouveau classic Boulevard Chapel. It was "conveniently located on Detroit's growing east side":

More than seven thousand visitors toured the new funeral chapel one Sunday afternoon, lured by door prizes (silver tea set, AM-FM radios, and ladies' wristwatches) and a live broadcast of the House of Diggs Radio Hour featuring the congressman and the Voices of Tabernacle choir. Myrtle Gaskill, a face in the crowd as the women's editor of the *Michigan Chronicle*, reported that she and other visitors were "awed by [the chapel's] magnificence," with its accents of Moorish and Mediterranean detail, its oriental décor, and its lush carpet of lavender, turquoise, aqua, lilac, emerald, and absinthe green. [Maraniss, David, *Once in a Great City*, Simon and Schuster, 2015, pages 96-97]

In 1954, Chairman Diggs, a licensed mortician, had been the first African-American elected to Congress from Michigan – increasing the number of African-Americans in the House from two to three. He supported efforts under the leadership of The Reverend Martin Luther King, Jr., including the Montgomery Bus Boycott, and was one of the founders in 1969 of the Congressional Black Caucus and its first leader.

After becoming chairman, he revamped the House District Committee in ways that favored home rule, including subcommittee chairmen who had not been on the committee under Chairman McMillan, with one exception (Representative W. S. Stuckey (D-Ca.)). He fired all but two of the committee's Democratic civilian employees from the McMillan era.

As early as January 16, 1973, Chairman Brock Adams of the D.C. Operations Subcommittee, announced that the committee would hold hearings on home rule. The goal was a home rule bill that would give the city self-government, and that could pass Congress. Chairman Adams said, "We're going to try to produce a damn good bill." He did not expect immediate action, but said, "we're all aiming to get this job done as soon as possible. We have plenty of commitment to get this job done . . . deep commitment."

Chairman Diggs confirmed the difficulties ahead:

I'm just being very practical about chances of passage. If we could report out a bill tomorrow, I say flatly the self-determination measure would be defeated on the floor 2 to 1.

[Hamilton, Martha M., "Diggs Revamps D.C. Committee," *The Washington Post and Times Herald*, January 16, 1973; Hamilton, Martha M., "House D.C. Unit to Push For Early Home Rule Bill," *The Washington Post and Times Herald*, January 17, 1973; Hamilton, Martha M., "Diggs Fires Aides Of D.C. Committee," *The Washington Post and Times Herald*, January 20, 1972

By May, he could predict that the city would have home rule in time for the Bicentennial celebration in 1976. He said, "the people of the District will join that celebration not as members of the 'last colony' but having at least become full citizens with all the rights and responsibilities that home rule will bring":

For 171 years, Washingtonians have been bartered and manipulated. For 171 years, Washingtonians have been tokenized and homogenized.

Now come the changing of the guard, when Washingtonians will be the masters of their own fate. [Hamilton, Martha M., "Rep. Diggs Predicts Home Rule by 1976," *The Washington Post and Times Herald*, May 4, 1973]

Under the resulting law that President Nixon signed on December 24, the city's voters would decide on a May 7 charter referendum that gave them the choice of retaining the current presidentially appointed government or an elected mayor and 13-member city council. If the votes chose election of the mayor and city council, the city would hold primary elections on September 10, 1974, and general elections on November 5. The new government was to take office on January 2, 1975.

The provision that most troubled local leaders was that the bill gave Congress veto authority over the city's laws. With a vote of the House and Senate, Congress could veto local action. In addition, city authorizations were still subject to congressional action on appropriations.

Mayor Washington, who had taken the oath of office for his third term on February 22, 1973, said, "It is not the whole loaf but we got a large piece of self-determination. It is worthy of celebration after 100 years."

## **1974 Transitions**

President Nixon had won reelection in 1972 by a landslide, but in 1974, with Republicans weighed down by investigations into assorted Watergate-related controversies, voters nationwide turned the off-year elections into a landslide for Democrats.

In the Washington area, the elections changed the landscape for transportation choices. The *Star* began its article:

At the end of a lackluster race that produced as many surprises as a Brigitte Bardot-Twiggy swimsuit contest, District voters all but ignored political neophytes and chose experienced candidates to run the city's home rule government.

Mayor Washington won his election, as did Delegate Fauntroy. Sterling Tucker won election as chairman of the city council.

The home rule legislation had provided that no political party could nominate more than two candidates for the four at-large seats on the city council – a provision to ensure Democrats would not hold all the seats in the overwhelmingly Democratic city. As expected, Democrats won all the seats they were eligible to compete for. The Reverend Jerry Moore was the only Republican to win a seat. Julius Hobson, the Statehood Party candidate, won the other non-Democratic seat. The two Democratic at-large seats went to Marion Barry and The Reverend Douglas Moore. The biggest upset came when Democrat William Spaulding defeated incumbent Dr. Henry Robinson, a Republican.

In Virginia, the Democratic tide defeated Representative Broyhill after 22 years in the House of Representatives. Arlington Board Member Joseph L. Fisher won the 10<sup>th</sup> congressional district. The *Star* listed some of Representative Broyhill's accomplishments:

Broyhill's bills – or his legislative efforts – produced the latest three bridges spanning the Potomac River between Virginia and the District. His efforts also resulted in the Dulles Interceptor Sewer, the area-wide planning agency that drew up the blueprints for the Metro subway system, a new veterans hospital here, federal and district government pay raises and a panoply of fringe benefits for government workers, plus the limited Home Rule bill six years ago that gave the District its first elected school board in 94 years.

District officials were not sorry to see Representative Broyhill's defeat. The *Star* reported this exchange:

“Ahh, Joel is leaving us,” said Bishop Smallwood E. Williams, the powerful pastor of Bible Way Church.

“I guess you will pray for Joel,” said Mayor Walter E. Washington.

“I’ll pray that he never comes back,” the bishop said.

An impromptu farewell celebration was being held in the District for Virginia Republican Joel T. Broyhill last night.

“It’s fantastic,” said elections board official Walter Pozen, learning of Broyhill’s defeat by Democrat Joseph L. Fisher.

“Hallelujah,” said mayoral aide Kathy Ross.

“Wonderful,” said Brent Oldham, another top mayoral aide, who added, “I never could stomach that guy.”

In Virginia’s 8<sup>th</sup> district, Herbert E. Harris II, a Fairfax County Supervisor, defeated one-term Republican Representative Parris. President Ford, whose private home was in Parris’ district, had made his first appearance for his former Representative at a fund-raiser, to no avail.

In Maryland, what the *Star* called the “National GOP Bloodbath” did not affect the congressional delegation. Senator Mathias, a Republican, won reelection, defeating Democrat Barbara A. Mikulski, a social worker and member of the Baltimore City Council, who had risen to prominence as one of the anti-highway crusaders in Baltimore.

In House races, Maryland reelected three Republican incumbents: Gilbert Gude, Marjorie Holt, and Robert E. Baumann. In Prince George’s County, Democrat Gladys Noon Spellman won the 5<sup>th</sup> district seat. Montgomery County reelected Republican James P. Gleason as county executive, defeating Idamae Garrott. [From articles in the November 6 issue of *The Washington Star-News*.]

One result of the elections was that 6 members of the 12-member WMATA board of directors would be replaced, as Jack Eisen described:

Both voting directors from Virginia, Herbert E. Harris of Fairfax County and Joseph L. Fisher of Arlington, were elected to Congress. William W. Gullett lost his Metro directorship from Maryland by failing to be re-elected Prince George’s County executive. D.C. City Council Chairman John A. Nevius is retiring.

The leadership changes were important because WMATA faced several challenges:

In the coming months, the new board must grapple with financing the completion of the Metrorail system (as the subway is called) in the face of inflationary increases that have pushed the cost from under \$3 billion to at least \$4 billion. It also must deal with

growing bus deficits. [Eisen, Jack, "Half of Metro Board Will Be Replaced," *The Washington Post*, November 7, 1974]

As 1974 ended, officials were debating how to address the new cost estimate for the Metro rapid rail system and the Metrobus operating deficits. About 40 miles of track in the District in close-suburbs were under construction, but the future for the remaining 58 miles was uncertain. Officials, however, were committed to their construction.

On November 21, 120 area officials and 70 Metro staff members gathered at Airlie House near Warrenton, Virginia, to discuss how to finish the Metro system. The question was where to find an additional \$1.5 billion. If that gap could not be closed, 1975 would bring "Doomsday" for the Metro system. Even the mileage under construction could not be completed.

Officials agreed on a solution. They would ask Congress to authorize another \$1.3 billion, possibly by issuing bonds, to be matched under a new sharing formula by \$134 million collected from the eight city and county governments that are partners in WMATA. This plan involved congressional agreement to increase the Federal share from the normal 66 percent to 80 percent, as Congress had approved for other transit systems in the Federal-Aid Highway Act of 1973. The plan also involved making the change in matching share retroactive to July 1, 1973, a change that would increase the Federal contribution by \$720 million, leaving \$671 million to be raised to meet the higher estimated cost. The local jurisdictions, which had been contributing to the construction pot while seeing little construction in their jurisdictions, would have to go back to voters for new bond referenda.

Although Metro officials were reluctant to discuss what would happen if Congress rejected the plan, Jack Eisen pieced together the "bleak picture" they discussed with him. Suburban governments "might be expected to start curtailing their payments, forcing WMATA to decide which projects would have to be cut back to stay within the available funds:

A contract for work on a line into Prince George's County is due to be let soon, so the possible truncated subway network would provide only minimal service there and in Montgomery County and no service at all in Alexandria or Fairfax County.

Metro's budget director, William E. Boleyn, reported that OMB had not endorsed the plan. "They've listened, they've discussed, but they've not committed themselves."

The compact governments outside the District of Columbia were committed to pay interest and help retire \$1.2 billion in Metro construction bonds, but beyond that, they could refuse to pay for what they did not receive. Without the suburban lines, Metro would operate at an even larger deficit. "This could leave the District holding the bag."

And if all went well to account for the estimated \$4.5 billion cost of Metro, the cost could continue rising "if inflation does not begin to stop by the end of 1975, or if there are delays in construction due to any problems including a lag in funding."

John F. Herrity of the Fairfax County Board of Supervisors, "a persistent critic of Metro," according to Eisen, told the gathering that the gradual cost increases for Metro were like the

drop-by-drop water torture. He urged Metro to admit that the final estimate would be about \$5.5 billion, but General Graham said that projection was much too high. [Eisen, Jack, "Alternative Is Halved System: Massive Aid Held Needed For Metro," *The Washington Post*, November 23, 1974; Eisen, Jack, "Cost Estimate Almost Doubled, Now Stands at \$4.5 Billion," *The Washington Post*, November 24, 1974]

Representative Brock Adams, who had helped get Metro started in 1969, doubted Congress would provide the desired \$1.3 billion. The District Committee would consider any legislation to authorize the funds, but Chairman Natcher's subcommittee would have to approve the appropriation – an uncertainty in both cases. After Chairman Natcher's prediction that the cost would escalate to \$6 billion, Representative Adams agreed that Metro officials had "consistently underestimated the costs." He thought Metro would have to eliminate some of its 98-mile system.

Chairman Diggs of the District Committee said he had ordered a staff analysis "but I am not prepared to make a judgment on this matter" at the time. Representative Gude, who was to be ranking Republican on the committee, thought Congress would understand that Metro is dealing with the same inflation that was affecting all public works projects. "To bobtail or to truncate it at this time would be penny wise and pound foolish," he said.

Delegate Fauntroy agreed. He would "discourage any talk of curtailing the system. It was rationalized to meet the needs of the entire area and should be built." [Eisen, Jack, "Rep. Adams Asks Metro to Cut System," *The Washington Post*, November 28, 1974]

### **Winding Down the Freeways**

A *Post* editorial described the situation as 1975 began:

Now and in the weeks ahead, the survival – or fiscal strangulation – of Greater Washington's Metrorail system depends on a series of make-or-break decisions by President Ford, Congress, the Maryland and Virginia state legislatures and every local government in this region. The problem . . . is inflation; and the danger, which we believe is real, is that seemingly sensible but short-sighted decisions to back away from awesome financial obligations will bring about a far more costly collapse of a nationally significant and locally necessary transportation project . . . .

Metro has effectively progressed beyond the point of no return. To stop the system dead in its tracks at this point, or even to build a bobtailed system, would leave some jurisdictions with nothing except grounds for demanding their money back – and others with impossible financial obligations for a project they couldn't begin to justify or sustain.

Increased State and local contributions were a possibility. Another option would have to be considered:

Ultimately, the search for new ways to meet local, state and federal costs of Metro should include a harder look at the possibilities of using money originally planned for expensive highway projects that this region doesn't need.

Experts predicted "there may be up to \$1.9 billion in federal and local funds currently tied to freeway plans for the area." In May 1974, Massachusetts, appropriately, was the first State to take advantage of the Interstate withdrawal-substitution provision of the 1973 Act that Governor Sargent had championed. The State had received more than \$600 million in general Treasury funds in substitution for Interstate construction funds intended for I-95 and I-695:

There may be arguments here about which area highway projects ought to be formally eliminated, but we have a strong hunch that many taxpayers would perk up at the prospect of trading in costly, unwanted segments of highway for better mass transit services.

Already, "exploratory study" was underway by regional officials. The prospect may raise "delicate political considerations as well as specific legal steps" before substitution could be accomplished. "Nevertheless, the extreme financial strains on governments and taxpayers, coupled with the urgent need to make the Metrorail system a workable reality for the national capital area, point up the necessity of exploring every way possible to stretch the region's transportation dollars. ["Finding Ways to Pay for Metro," *The Washington Post*, January 20, 1975]

According to sources, the U.S. Department of Transportation was "desperately trying to find money for Metro." The obvious source was the withdrawal-substitution provision. Key targets were the South Leg of the Inner Loop and the North-Central Freeway. The department was, in late January, excluding the Three Sisters Bridge, the Potomac River Freeway, and the extension of I-66 into the city – all technically active projects. The *Star's* Thomas Crosby reported that, "DOT officials are uncertain how much money would be involved, but it is possible the entire \$1.4 billion that Metro needs could be made available."

City Council Chairman Tucker, when told of the study, told Crosby, "My personal view is we need no more concrete jungles through the city but the situation must be assessed." He opposed more freeways, but completing some projects might be needed to "make some kind of sense" of the city's freeway network.

Mayor Washington also said the idea had "substantial potential and we are studying this matter. We expect to be able to take advantage of this alternative." [Crosby, Thomas, "U.S. Ponders Canceling Freeways to Pay for Metro," *The Washington Star-News*, January 23, 1975]

While District officials debated which freeways to withdraw, Maryland's actions essentially determined the fate of some of the freeways. On February 25, 1975, Governor Mandel requested the withdrawal of I-70S (soon to be renumbered I-270) and I-95 between the Capital Beltway and the District line. If, as seemed likely, those segments were withdrawn, the District's continuations of the routes to the District/Maryland line would truly be "roads to nowhere."

The Maryland withdrawals were under separate provisions of Title 23, United States Code. Maryland proposed to withdraw I-270 inside the Capital Beltway under Section 103(e)(4), the Interstate withdrawal-substitution mechanism included in the 1973 Act.

Maryland proposed to withdraw I-95 between the Capital Beltway and the District line under Section 103(e)(2), known as the Howard-Cramer Act. As noted earlier, this 1968 law authorized 200 miles as a supplement for cases where the Secretary agreed, at the request of a State, to withdraw a segment of the Interstate System; the State could combine the withdrawn mileage and a portion of the Howard-Cramer mileage for another designated route (23 U.S.C. 139 – Additions to Interstate System) as long as the total would not cost more than the withdrawn segment. The Federal-Aid Highway Act of 1973 increased the Howard-Cramer mileage to 500 miles.

On May 12, 1975, City Administrator Julian R. Dugas informed the transportation and environmental committee of the city council that the District would use the Interstate withdrawal/substitution mechanism to shift funds to Metro. The city planned to request withdrawal of 7.6 miles of controversial Interstate segments: the Inner Loop Freeway segment of I-66 planned as a tunnel under K Street, NW.; the North-Central Freeway (I-70S); and the Northeast Freeway (I-95). Dugas added that several other projects were being kept alive for exploration of alternatives. Eisen listed them in his account of the announcement:

Among the projects kept alive are the Three Sisters Bridge and a connecting tunnel alongside the Georgetown riverfront; a freeway along the west bank of the Anacostia River passing and serving the Robert F. Kennedy Stadium; the south leg of the Inner Loop Freeway through West Potomac Park, and a freeway link between the center leg of the Inner Loop near 4<sup>th</sup> Street and New York Avenue NW generally northeastward to 9<sup>th</sup> Street NE . . . .

Dugas emphasized that the city had no plans to build these highway segments. Officials wanted to reserve the \$800 million earmarked for them until final decisions are made on their fates. For example, Dugas said the freeway along the Anacostia River might be built as a parkway with its traffic flow reversible to serve stadium events, such as games by the area's football team.

At the moment, WMATA had only enough funds for one more major construction contract. WMATA was hoping for approval of a bill in Congress that would allow \$1.5 billion worth of projects to advance, with the Federal Government paying \$1.3 billion of that amount:

At present, about 40 miles of route[s] are under construction, including 25 miles in Washington. Without the added money, Metro officials have warned that the 98-mile system would have to be slashed to about 48 miles.

Dugas told the transportation committee that the initial substitutions would make about \$500 million available for Metro. It "will not solve the Metro financing need," he said, but would allow construction to continue until "a realistic financial plan for completion" could be developed. WMATA Comptroller Lowe appreciated the thought, but was concerned that the funds would not become available in time to help Metro's immediate need.

Sammie Abbott said after Dugas's announcement, "The most charitable thing you can say is that [it] is a cowardly evasion of the problem." [Eisen, Jack, "Road Funds Shift to Metro Sought," *The Washington Post*, May 13, 1975]

Committee Chairman Moore scheduled hearings in late June to discuss further withdrawals from the Interstate System under the 1973 Act provision. City planning officials told the committee that they favored transferring funds from the remaining proposed freeways – including the I-66

K Street tunnel and the I-266 Three Sisters Bridge – to mass transit. Ben W. Gilbert, director of the planning office, said he supported the shift of funds to mass transit, but wanted the city council to "reserve sufficient funds" to study and develop the Industrial Freeway from 9<sup>th</sup> Street, NE., to the District Line. Planners considered the freeway a way to spur a small industrial complex in the New York Avenue corridor. It was, he said, "an opportunity for diversified employment in the District."

Councilwoman Shackleton, who had long opposed the Three Sisters Bridge, favored removal of the freeways and inclusion of the Industrial Freeway in the Interstate System. The *Post* described Abbott's reaction to the discussion of the Industrial Freeway:

Sam Abbott, a member of the Emergency Committee on the Transportation Crisis, challenged both Gilbert and Mrs. Shackleton about their support of the freeway.

"What they call citizen involvement is a phony," Abbott said. "People in the area will tell you they oppose the freeway." He accused Mrs. Shackleton of being "misguided" in her support of the freeway "because it's not going through Georgetown," a portion of her ward. [Jones, Linda Newton, "City Aides Back Transfer of Funds to Metro," *The Washington Post*, June 27, 1975]

On June 27, 1975, Mayor Washington submitted a formal request for withdrawal of I-70S and the unbuilt portion of I-95 inside the District of Columbia.

By then, Secretary Brinegar had left office. When President Ford announced his intention to seek election to the post in 1976, Secretary Brinegar decided to resign rather than be part of a political campaign. He had never been a political person.

On January 14, 1975, President Ford announced that he would nominate William T. Coleman, Jr., an African-American attorney based in Philadelphia, as the fourth Secretary of Transportation. Supreme Court Justice Marshall, Coleman's associate from the Civil Rights era, administered the oath of office in a White House ceremony on March 7, 1975. During his tenure, he would live in McLean, Virginia, at 1100 Crest Lane, near the George Washington Memorial Parkway. (Former Attorney General Elliot L. Richardson, Coleman's closest friend since their days at Harvard, had "offered us the use of their house on the bluffs overlooking the Potomac River," Coleman explained in his autobiography. [Coleman, William T., with Bliss, Donald T., *Counsel For the Situation: Shaping the Law to Realize America's Promise*, Brookings Institution Press, 2010, page 214]

Unlike his methodical predecessor, Coleman would prove to be a confident and quick decisionmaker who would address several freeway crises, including the fate of I-66 in Virginia, as will be discussed.

On July 28, 1975, Administrator Tiemann and Acting UMTA Administrator Judith T. Connor approved Maryland's request to withdraw I-270 (formerly I-70S) and I-95 inside the Capital Beltway. Their cosigned letter to Governor Mandel addressed the withdrawals based on the different provisions of Title 23, United States Code, that Maryland had cited in its request. The approved withdrawals under Section 103(e)(2) and (4) were subject to three conditions:

1. That Maryland, Virginia and [the] District of Columbia agree to the routing of I-95 via I-495 in order to maintain System continuity for I-95, and that AASHTO concurs in such routing.
2. That Maryland agrees to provide an appropriate Interstate connecting link inside I-495 under the provisions of Section 139 of Title 23 in the event that the District of Columbia proposes, and FHWA approves, the New York Avenue-Industrial Freeway Corridor as an addition to the Interstate System under Section 103(e).
3. That evidence of Takoma Park, Hyattsville and College Park concurrence in the withdrawal is furnished as required by paragraph 476.304 of the June 12, 1974, regulations; or that documentation is furnished indicating that under Maryland State law these jurisdictions are not "Local Governments Concerned" (LGC) as defined by paragraph 476.2(b) of the regulations.

Section 139, added to Title 23 by the Federal-Aid Highway Act of 1968, authorized the Secretary to approve Interstate designation for routes that would be a logical addition or connection to the Interstate System, meet or will meet all Interstate standards, and have been built or will be built without Interstate Construction funds – "shall create no Federal financial responsibility" except that the State may use its apportioned Federal-aid primary system funds for the route if it wishes.

Paragraph 476.304 of Title 23, Code of Federal Regulations, required that withdrawals under Section 103(e)(4) be submitted jointly by the Governor "and local governments concerned, with the concurrence of responsible local officials."

Tiemann and Connor approved alternative Interstate segments under Section 103(e)(2), subject to specified conditions:

- (a) The Baltimore-Annapolis Interstate route is approved with the understanding that the final location (Anne Arundel Expressway, Route 2 versus Patuxent Freeway, Route 3) will be determined when the results of the Baltimore-Annapolis Transportation Study are available, and that an appropriate connection to the Baltimore terminus will be provided under Section 139 for System connectivity.
- (b) U.S. Route 50 between the Capital Beltway and Annapolis is approved subject to your furnishing, with respect to the portion of this route located within the District of Columbia urbanized area, documentation of consultation with the responsible local officials (WASHCOG/TPB) and with local governments concerned (Prince Georges County) as required by paragraph 476.206 of the regulations. It is understood that the

specific Annapolis terminus of the route will be determined after the specific location of the Baltimore-Annapolis route is established.

Paragraph 476.204 explained how a State may seek withdrawal of a designated Interstate segment outside the context of the withdrawal-substitution mechanism. Further, under paragraph 476-206, “A State highway department may request use of the mileage withdrawn under § 476.204, or of the additional [Howard-Cramer] Interstate mileage authorized by 23 U.S.C. 103(e)(2), or both, for a substitute or additional segment.” For segments in an urbanized area, the request was to be submitted jointly by the State highway department and the local governments concerned and responsible local official officials.

- (c) The Route 3 connector between U.S. 50 and Route 32 is approved with the understanding that the northern terminus of the route will be determined when the specific location of the Baltimore-Annapolis route is established.
- (d) The proposed extension of Route 46 from U.S. 1 to the Baltimore-Washington International Airport is approved.
- (e) The outer belt segment from I-270 to the proposed Shady Grove Transit Station is approved:
  - (1) Subject to the construction of the Metro Line and proposed extension to serve the Shady Grove area; and the construction of the transit station, access road, and related facilities.
  - (2) Subject to your furnishing evidence of consultation with the city of Gaithersburg on this proposed addition, or evidence that Gaithersburg is not a LGC.
  - (3) With the understanding that the entire cost of the spur, including the I-270 interchange, will be constructed with substitute funds.

With respect to the proposed System additions under Section 139, we are today approving the portion of the airport spur (Route 46) from I-95 to U.S. 1. This approval under Section 139 complements the Section 103(e)(2) approval action indicated under Item (d) above. We are also granting an interim approval of the extension of the Baltimore Beltway to an intersection with the proposed Baltimore-Annapolis route. This action, which is consistent with Item (a) above, will provide temporary System connectivity in the Baltimore area. Final approval of this link and the remaining proposed addition under Section 139 will be deferred pending clarification of the segments involved and a final determination of the location of the Baltimore-Annapolis route.

The *Post* summarized Maryland’s plans:

The state proposal calls for using \$36.2 million . . . to extend the projected Rockville rail line three miles to Shady Grove Road, near Gaithersburg, and \$50.1 million to divert the Greenbelt rail line from the east side of the University of Maryland’s College Park campus to its west side, generally into the old I-95 corridor . . . .

One other suburban Washington project that would be financed with the transferred interstate funds would be a segment of the proposed Outer Beltway from I-270 to the projected new Shady Grove Metrorail terminal.

Among the highway projects to be financed from the fund transfer is the widening and upgrading of U.S. Rte. 50, the John Hanson Highway, between the Capital Beltway and Annapolis . . . . Other road projects approved yesterday by Tiemann as part of the Maryland package are an access road from I-95 near Elkridge to the Baltimore-Washington (Friendship) International Airport and a freeway from Baltimore to Annapolis, entailing a reconstruction of Maryland Rte. 3 connecting with a new freeway on the west side of the Severn River through the Crownsville area of Anne Arundel County.

According to Professor Schrag, Maryland added the extension to Shady Grove “to avoid placing rail yards in Rockville.” City officials also were concerned about possible congestion at the terminus in the Rockville station. The extension of Metro to Shady Grove Road increased the Metro system to 103 miles. [Eisen, Jack, and Dewar, Helen, “Transfer of Freeway Funds Approved,” *The Washington Post*, July 25, 1975; Eisen, Jack, “Rockville and Greenbelt Lines Are Funded by U.S. for Metro,” *The Washington Post*, July 27, 1975; Schrag, page 231]

Despite the approval, Tiemann and Connor said they were “very concerned . . . over the current financial problems of funding the Metro’s 98-mile Adopted Regional System”:

Our action with respect to the Section 103(e)(4) elements of your proposal is therefore limited to an approval of the withdrawal with the reservation of an appropriate amount of substitute funds for future implementation of substitute transit projects. Before the Urban Mass Transportation Administration can approve specific project applications for Lines connected to the Metro System there must be reasonable assurance that these Lines will, in fact, be connected to a constructed Metro System. To approve these projects without such assurance would not be to our mutual interest.

In other words, if financial cutbacks prevented construction of Metro to Rockville, the extension to Shady Grove would not be eligible for substitution funds from the general Treasury.

Section 125 of the Federal-Aid Highway Amendments Act of 1974 (P.L. 93-643, January 4, 1975) revised the way the amount of substitution funds under Section 103(e)(4) would be calculated. The base cost in the most recent ICE would be increased or decreased based on variations since then in the cost of construction as of the time of the withdrawal/substitution action. Maryland had estimated that with the escalation factor since the 1972 ICE, its withdrawal requests would result in about \$270 million becoming available for substitute projects. However, because FHWA had not yet released guidelines for calculations under the 1974 amendment, officials could not calculate the precise amounts that would become available for the proposed substitution projects.

Tiemann and Connor ended with a compliment:

In closing, we compliment you and the officials of Montgomery and Prince Georges Counties for coming forth with positive transportation proposals, employing the provisions of the 1973 Federal-Aid Highway Act which provide the flexibility to resolve major Interstate issues while meeting the transportation needs of the urbanized areas. We

are confident that with the System related activities currently under way in the District of Columbia, an integrated transportation program which best serves the needs of the entire metropolitan area will be achieved. You may be assured that we will work closely with you and other jurisdictions involved towards that achievement.

The District's request drew White House attention, in part because of President Ford's past positions. As President, he was aware of President Nixon's support of Metro as a unique Federal responsibility and wanted to honor President Nixon's commitments, but "was appalled by the cost overruns, which he blamed on WMATA's failure to get tough with bus unions," according to Professor Schrag. He had asked Secretary Coleman to develop a sound financing plan for Metro, but he also "feared that a generous payout to WMATA would set a national precedent":

White House aides concluded that "the Metro cost overrun issue [is] controversial and a no-win matter. We should move quickly to put some distance between it and the President," delegating decisions to the secretary of transportation. Nevertheless, in June 1975 Ford himself chose Interstate transfers as the centerpiece of a Metro financing plan. [Schrag, page 181-182]

On October 3, Secretary Coleman announced that Administrator Tiemann and UMTA Administrator Robert E. Patricelli had approved the District's request to withdraw the unbuilt

I-70S and I-95 from the Interstate System. A grant of \$286,560,000 would go to WMATA for Metro construction. The press release announcing the approval included a statement from Secretary Coleman:

Regional and Federal officials acknowledged last spring that the first priority must be to meet Metro's immediate financing needs. Today we are doing that.

He hoped the move was only the first step in "an effort by all the area jurisdictions to draw on available resources to meet Metro funding needs."

Administrator Patricelli said that the substitute transit projects represented the largest grant that UMTA had approved. Counting local matching funds, the grant amounted to \$358 million for

11 construction contracts, track work, and graphics contracts for which final design and engineering had been completed or were rapidly nearing completion. The contracts were in the District, Maryland, and Virginia. The funds would allow Metrorail construction to remain on schedule through most of FY 1976.

(Patricelli, 35 years old, had taken the oath of office as UMTA Administrator on August 6, 1975. He had served in the Department of Health, Education and Welfare, but since 1971 had been living in his home town of Hartford, Connecticut, where he was vice president of Greater Hartford Process and Greater Hartford Community Development Corporation. Returning to the Washington area for the UMTA post, he relocated his family to 7721 Desdemona Court in McLean, Virginia, with the intention of commuting by bus to Department of Transportation headquarters. When he learned how inconvenient bus commuting from McLean would be, he switched to driving his car and parking it in the Department's four-level underground garage. He

had never held a job related to transit, but thought the job would be an “exciting challenge.” [Crosby, Thomas, “Brand New U.S. Mass Transit Boss Misses the Bus,” *The Washington Star*, August 7, 1975])

To WMATA officials dealing with the financial crisis, the new funding was “manna from heaven,” as Professor Schrag quoted:

With the administration allowing D.C. and its suburbs to transfer money at a faster rate than could other urban areas, WMATA soon became the nation’s heaviest user of highway transfer funds, and by January 1976 WMATA was counting on \$875 million. [Schrag, page 182]

The withdrawal of the District’s unbuilt portions of I-70S and I-95 and the use of substitution funds for Metro in and out of the District raised unexpected problems. One involved the difference between the District’s plans and those of Maryland and Virginia, according to Professor Schrag:

For one thing, they [the complications] threatened the symmetry of the compact. The unbuilt highways in the District were by far more extensive, more costly, and less popular than the unbuilt segments in Maryland and Virginia. Moreover, though Maryland and Virginia were willing to scrap certain controversial segments (such as I-95 within the Beltway and the Three Sisters Bridge), unlike the District they had other roads they wanted to build. The District therefore would make a greater financial sacrifice than its neighbors, and Mayor Washington could be accused of selling out to the suburbs. Conversely, the District’s eagerness to transfer funds led the Ford administration, Graham, and the suburban WMATA representatives to worry lest the District claim to own the football and make the rules. [Schrag, page 182]

Professor Schrag also pointed out that the reliance on substitution funds “threatened Metro’s special status as a federal ward.” Unlike rail rapid transit programs in other metropolitan areas, Metro had received Federal loan guarantees and more Federal funds than other systems “in absolute terms” because of its unique status – but was still subject to the local matching requirement of one-third instead of the 20-percent required in other areas under the Federal-Aid Highway Act of 1973. To protect Metro’s special status, General Graham had cautioned against national transit aid:

By asking for highway transfer funds, WMATA bit that apple. Metro’s friends in Congress immediately gave up on trying to save the system with special legislation, and the Urban Mass Transportation Administration asserted its obligation to assure “that Departmental METRO decisions are reasonably consistent with nationwide mass transit policy.” Having surrendered its claims to special status, Metro now shared a fate with San Francisco Bay Area’s BART, Atlanta’s MARTA, and every other urban transit system in the nation. [Schrag, Page 182]

In short, Metro could no longer count on special treatment by Congress.

(In the early 1970s, AASHO and FHWA wanted to change Interstate numbers to eliminate alphabetic directional suffixes (N, E, S, and W). On April 18, 1975, FHWA approved Maryland's request to change I-70N (Frederick into Baltimore) to I-70 and I-70S (Frederick into Washington) to I-270. At the time, I-270 continued via an interchange with the Capital Beltway into the city along the North-Central Freeway, but that would soon change. Today, I-270 terminates at the Capital Beltway with a "Y" connection – with a southwesterly leg connecting with the Capital Beltway near Bradley Boulevard and the other extending southeasterly to the Pooks Hill interchange. AASHO's Route Numbering Committee approved the change during its meeting on November 14, 1975.

(Eisen reported that the N/S designations were a compromise dating to the numbering of the Interstate System in the late 1950s. "Rather than choose between favoring either the nation's capital or its busy seaport neighbor, highway officials labeled the Washington branch 'S' for south and the Baltimore branch 'N' for north.

(According to Maryland State Highway Administrator Bernard Evans, FHWA initiated the change because it considered the designations I-70S and I-70N confusing to motorists who, while trying to drive west or east had to choose between routes with north and south suffixes. The District's Thomas Airis had blocked the change of I-70S to a three-digit number because he believed the Nation's capital deserved two-digit status. With his retirement, the change became a reality. According to Evans, "Our only problem is that quite a few people will have to relearn a little bit, but we don't think that amount of relearning is unbearable." Signs alerting motorists to the ROUTE NUMBER CHANGE, began appearing in March. [Eisen, Jack, "Route I-70S in Maryland Quietly Becomes Known as I-270," *The Washington Post*, March 2, 1975])

### **Searching For a Metro Plan**

In early 1975, the Ford Administration was searching for a solution to Metro's funding problems. OMB Director James T. Lynn had summarized his views in a memorandum to President Ford on April 16, 1975. At the time, 40 miles were under construction, mostly in the District, and 30 miles were under final design:

If all existing commitments – Federal and local – toward the \$3.0B plan were met, 76 miles of the system could be built. However, WMATA believes a Federal decision not to provide additional funding toward a \$4.5B cost estimate would collapse existing financing arrangements to the point that only 47 miles could be built (at a cost of about \$2.4B).

After describing the Metro system, the reasons for the cost increases, and the options for controlling costs, Lynn concluded that support for full funding was "not justified in our view because of the high marginal cost of the transportation benefits received." That would leave funding available for a 76-mile Metro system, but only if Maryland and Virginia jurisdictions agreed on highway decisions resulting in substitution transfer funds "which may be difficult to achieve."

Referring to a recent UMTA policy on alternatives analysis for new rail rapid transit systems, Lynn wrote:

It is probable that if WMATA were applying for Federal assistance for the unbuilt lines for the first time through the regular UMTA program, some of their proposals might not withstand the test of cost-effectiveness and would not be funded by UMTA.

In contrast, however, the Federal involvement during the inception and development of METRO, the Federal stake in some kind of successful outcome, plus the good faith efforts of the local jurisdictions make it undesirable to take a position that no further Federal assistance should be forthcoming. Such a position would probably not be agreeable to the Congress.

He presented four alternatives, the first of which were:

Alt. #1. The Federal Government to pay 80% of the increased costs plus 80% of the costs since July 1, 1973. (The date on which the national mass transit program went to 80-20.) Local officials on November 21 voted unanimously to seek this arrangement. It would entail additional Federal contributions of \$1,257M and additional local contributions of \$135M.

Alt. #1A. To ease the near-term Federal outlay impact, WMATA has proposed that the Federal Government authorize the sale of \$1.257M in taxable bonds for which the Government would pay the principal and interest over a 40-year period. Annual liquidating appropriations would be \$88M, with a \$14M tax recapture for a net annual Federal cost of \$74M.

Alt. #2. No further special Federal financing. Any additional funds would come from a combination of local funds, interstate substitution funds, and perhaps, the UMTA nationwide mass transit program late in the decade. The current UMTA funding assumptions do not include any planned coverage for METRO. This alternative assumes the localities would repay existing bond obligations, but some contingent Federal liability of up to \$997M already exists due to the Federal guarantee.

Lynn favored Alternative #3:

Reliance on Interstate Funds with accelerated payments. Funding would come from money available through Interstate transfer. Legislation, in the form of an amendment to the National Capital Transportation Act, would be submitted soon to provide for such a mechanism.

This mechanism would allow local officials to choose between highway mileage and mass transit. Until final local decisions on highway substitutions are made, it will not be known if such funds will be adequate to complete the system. If these funds are not adequate, or if fiscal uncertainties cause a failure to issue the remaining bonds, a decision on possible additional Federal assistance will be needed. However, any consideration of this question should not be required until all highway substitution decisions are made and resultant funding substantially committed, in two to three years.

Lynn explained his choice of alternative #3 in the memorandum's evaluation and recommendation section:

Full local use of interstate transfer funds and their accelerated availability should make possible completion of the system. It would provide the maximum incentive to local officials to make good their bond guarantees, reducing possible Federal liability for almost \$1B in already issued bonds. This proposal would offer a solid alternative to area officials and, if agreed to, prevent a separate appeal to the Congress.

Secretary Coleman has been briefed on the details of this memorandum. He strongly supports the effort to meet the METRO construction schedule and agrees that among the financing alternatives available, the use of the interstate transfer provisions is the best means of meeting increased METRO construction costs while minimizing the total impact on Federal expenditures.

In summary, Alt. #3 – while subject to some uncertainties – appears to be the most desirable course at this time.

In an appendix to Lynn's memo, Secretary Coleman opposed "either a slowdown in the pace of METRO construction or cutbacks in the mileage of the final system":

At a time when the Administration is attempting to cut back fuel consumption, when construction delays mean substantially increased costs, and when cutbacks in the METRO system would greatly reduce service to low and moderate income areas of the District, such a position would not be tenable.

He agreed that the Interstate withdrawal-substitution provision was "the best available means of meeting increased METRO construction costs," but he did agree with the mechanism OMB proposed involving an amendment to the National Capital Transportation Act:

The Department's recommended approach for managing the interstate transfer provision throughout the Nation as well as in D.C., would provide for control of the rate at which funds are obligated without the need for new legislation. Furthermore, the DOT recommendation would permit management and funding decisions on the substitute transit projects to be made in the context of the national transit program, rather than being dictated by an unrelated highway distribution formula. [Gerald R. Ford Library, <https://www.fordlibrarymuseum.gov/library/document/0047/phw19750416-01.pdf>]

In August, Mayor Washington announced that Douglas Schneider would become acting director in October of the District's new Department of Transportation. The new department incorporated the Department of Highways and Traffic, the Department of Motor Vehicles, and the Office of the Mayor's Transportation Systems Coordinator.

Four years earlier, Schneider had begun riding his three-speed bicycle from his home in Glover Park to his job as executive director of the Washington Metropolitan Transit Commission, which was located at 1623 I Street, NW. Three weeks later, he switched back to taking the bus. "The major problem," he explained, "was the automobile traffic. I didn't feel safe and when I got to

work I needed a shower badly.” Despite this early experience, the “athletically trim 43 year old” remained a bicycling enthusiast. [Crosby, Thomas, “Pedalling Transit Chief Plans 75 Miles of New Bikeways,” *The Washington Star*, August 7, 1975; “Schneider to Head New D.C. Agency,” *The Washington Star*, October 30, 1975]

While working for the transit oversight commission, Schneider had fought for WMATA’s takeover of the area’s bus systems. He also had been a member of the TPB as it worked against the city’s planned freeway network. Now, as the new director, he agreed with those who favored using the withdrawal-substitution mechanism in the Federal-Aid Highway Act of 1973 to secure funds for Metro.

City Council Chairman Tucker favored freeing about \$1.25 billion by wiping out all the freeway mileage that was not yet underway. Further, the decision to kill the remaining Interstate would show that the District was finally in control of its own destiny. Doing so, however, would help fund the system, but the transfer would also “drive a final stake through the heart of the freeways and the bridge,” as Professor Schrag wrote.

Timing was another factor. All the substitution funding was not needed immediately. By spacing out the withdrawals, Metro would gain more substitution funds from the general Treasury under the new calculation process required by Section 125 of the Federal-Aid Highway Amendments Act of 1974. [Schrag, pages 181]

During a press conference on October 8, Chairman Tucker discussed the disparity among Maryland, Virginia, and the District in the use of substitution funds. The District had shared its substitution funds with Metro, but Virginia refused to spend highway revenue on Metro while Maryland was using only a small part of its transfer funds for Metro, which now included the extension to Shady Grove that increased overall costs. With the city contemplating what to do with remaining substitution funds, Tucker said, “There should be some movement on the part of Maryland and Virginia.” The city’s failure to allow additional funds to be shifted to Metro at this time, could bring construction to a halt. “I’m saying to them [Metro officials] ‘Don’t count that \$250 million yet,’ until we see every reasonable effort of Maryland and Virginia to put money in the general pot.” [Lynton, Stephen J., and Bowman, LaBarbara, “City Eyes Holdout on Metro,” *The Washington Post*, October 9, 1975]

Virginia’s General Assembly had included \$15.2 million in its budget from highway user tax revenue to help Alexandria, Falls Church, Arlington, and Fairfax County with their share of Metro costs. It had been considered a coup for the region; the *Star* headline at the close of the session told the story: “Northern Va. Delegates Bring Home the Bacon”:

Northern Virginia’s lawmakers went home triumphantly yesterday with a \$15.2 million transit fund assured for their area . . . and authorization of a toll road running side by side the limited access highway to Dulles International Airport . . . .

Despite efforts to take the funds from general revenue, the General Assembly finally designated that the funds were to come from the State’s highway trust fund:

While the \$15.2 million falls somewhat short of the \$20 million the Northern Virginia Transportation Commission sought for Metro rapid rail construction costs over the next two fiscal years, the approved sum was triple the \$5 million proposed in former Gov. Linwood Holton's budget message two months ago.

It was, the area's legislators believed, their "major accomplishment." [Kelly, Brian, "North Va. Delegates Bring Home the Bacon," *The Washington Star-News*, March 11, 1974]

(In 1974, VDH was incorporated into a new VDHT, which included rail and public transportation in its jurisdiction. The General Assembly turned down creation of a Virginia Department of Transportation, while adding transportation planning to the VHTD. In approving legislation to create VDHT, the General Assembly declared:

It is hereby declared to be the policy of the Commonwealth of Virginia that the present and future welfare and mobility of the citizens of Virginia require a balanced transportation system, consisting of coordinated private and public facilities and services, provided and administered to assure adequate, safe, economic, and efficient transportation.

(The transportation system should "stimulate economic growth, provide access to employment, health, educational, recreation, and other activities for all . . . citizens, facilitate the flow of commerce, encourage efficient allocation of human and economic resources, and preserve the inherent advantages of each mode, while utilizing inter-modal advantages to the fullest extent."

(According to a history of Virginia transportation:

The department's job in the planning of air, rail and waterway facilities was limited by the General Assembly to one of coordination. The authority of other state and local agencies and the private sector was kept intact.

Still, precisely what would be the state government's role in the planning, development and administration of highways, rail transportation, air travel, urban mass transit, ports and waterways remained a question in the minds of department officials.

(The General Assembly reconstituted VDHT as the Virginia Department of Transportation in 1986 "to reflect the increased emphasis on diverse modes of transportation." [*A History of Roads in Virginia: "The Most Convenient Ways,"* Special Centennial Edition, Virginia Department of Transportation, 2006, pages 53-54, 67)

In early October 1975, the *Post* and *Star* reported that in VHTD's budget for the next 2 years, Fugate had not included \$15.2 million that the General Assembly had approved in 1974 for transit in northern Virginia.

Fugate's decision not to draw on the funds for Metro in VHTD's 2-year budget was seen as a betrayal of the compromise needed to secure approval of the funds in 1974:

“I told him that he had broken faith with the House Appropriations Committee and with me particularly,” said House Majority Leader James M. Thomson (D-Alexandria) after Fugate told him of the exclusion Friday [October 3].

Thomson said that Fugate agreed to incorporate \$15 million for Metro construction in his own budget in 1974 “with the full understanding that this was a continuing program.” Thomson said Fugate also understood that the state was eventually to “fund 65 or 70 per cent of Northern Virginia localities’ share for Metro capital construction.”

State Senator Hirst called Fugate’s decision “an outrageous neglect of our needs.” He vowed to “fight tooth and nail” to convince Governor Godwin and the General Assembly to reinstate the funds.

Fugate explained that he had excluded the funds because of a lack of funds for State roads and a decrease in State revenues. He did not believe he had authority, despite the 1974 legislation, to use gasoline tax revenue for anything but highway construction and maintenance. His spokesman explained that Fugate was “not the foe of mass transit as he sometimes comes out seeming. But where is the money going to come from when we’ve all these other problems.” [Yeager, Deborah Sue, and Lynton, Stephen J., “Va. Road Unit Excludes Aid for Metro,” *The Washington Post*, October 5, 1975]

Fugate appeared on October 9 before northern Virginia legislators at a budget conference in Richmond. He explained that the 1974 appropriation of \$15 million conflicted with State law on how highway trust funds could be used. In reply to a question, he said, he was “prepared to see the law changed” to allow use of the gas tax revenue for transit if the General Assembly came up with additional funds and “can develop an equitable division of funds.”

Delegate Vincent F. Callahan, Jr., of Fairfax said, “I took it as an oblique commitment to cracking the road fund for transit.” However, Delegate Dorothy S. McDiarmid, also of Fairfax, said, “I think he will support use of the money for transit, although he was a little wobbly about it at points.” [Edwards, Paul G., “Fugate Won’t Oppose Aid to Mass Transit,” *The Washington Post*, October 10, 1975]

*Star* editors admitted that Fugate’s “freshest exercise in government gamesmanship” was not a surprise. After all, Governor Godwin had referred to Metro as a “boondoggle.” Not, the editors stated, that Fugate needed encouragement from the governor. Fugate “had been awaiting an opportunity to show the rambunctious urbanites of Northern Virginia who has the clout.” His exclusion of the transit funds “looks vindictive” and like “mischievous harassment.”

The result was that northern Virginia legislators would have to “expend time and energy at next year’s session in another of the rural-urban skirmishes that annually are a main event down there,” where rural legislators took tax revenue from heavily populated northern Virginia to build roads elsewhere in the rural parts of the State:

But Mr. Fugate has expressed his pique effectively. As the protests roll in from jurisdictions along the Potomac River, he probably is humming the song from the movie

Nashville that goes, “It don’t worry me . . .” [“Mr. Fugate’s Mischief,” *The Washington Star*, October 10, 1975]

Governor Godwin appeared to endorse Fugate’s view during a press conference on October 10. He said he had not decided whether to include the \$15 million in his budget proposal to the General Assembly in 1976. However, the *Post* reported that “he endorsed the position of his top transportation adviser, Douglas B. Fugate, that the General Assembly will have to change existing law before Fugate can recommend transit spending in his Highway and Transportation Department budget.” He said he was “not aware of any agreement” between Fugate and legislators in 1974 “to carry forward the mass transit appropriation” in the recently submitted VDHT budget.

As for Metro, he said:

It must be pretty evident to everybody that rail transit in the Washington area is almost a financial disaster. The cost is unbelievably high. It may cost as much as \$6 billion to build, even more, together with an operating budget of staggering proportions.

He added that, “The people all across Virginia may not want to support it” since it would not benefit anyone outside northern Virginia. [Edwards, Paul, “Godwin Hints No Metro Aid,” *The Washington Post*, October 12, 1975; Associated Press, “Godwin Sees an End to Budget Cutbacks,” *The Washington Star*, October 12, 1975]

On October 14, the *Post* and *Star* interviewed Theodore C. Lutz, Deputy Under Secretary of Transportation with oversight of Metro’s finances. He said that Secretary Coleman planned to send a plan to the White House that involved using Federal highway funds to cover most of the

\$1 billion cost overrun for Metro. The plan, which involved finding additional funds to help finance principal and interest payments on long-term bonds, was designed to remove financial obstacles to paying the \$4.6 billion cost of Metro.

The Interstate withdrawal-substitution mechanism was one of the chief sources of new revenue:

Shifts of U.S. money from highways to the Metro subway are regarded by federal and some local officials, nevertheless, as the easiest means of solving Metro’s multibillion dollar troubles, partly because such transfers do not require legislation.

One estimate predicted the transfers would amount to \$1.5 billion, but Lutz pointed out that the Federal-Aid Highway Amendments of 1974 had, in response to the energy crisis, revised the substitute funding entitlement. The base cost of a withdrawn route under the most recent ICE would be increased or decreased in accordance with variations in the cost of construction:

Lutz said this could mean a 60 per cent increase nationally and as much as a 300 per cent boost in the District of Columbia’s federal highway money because of faster rises in construction costs here.

The Department was still working on calculations of the impact of the provision, but Lutz thought the “amount may be sufficient to cover Metro’s \$1 billion overruns in construction costs,” as the *Post* summarized:

Among other points, Lutz noted that the department will ask Metro officials to carry out “hard-nose construction cost economies” to save money and avoid further overruns. He said the department probably will offer to pay for a study of possible local tax measures to help finance the Maryland, Virginia and D.C. governments’ shares of anticipated operating losses and revenue bond payments. Some officials already have suggested regional gasoline, sales or other taxes to help finance these costs.

He added that WMATA needed to let the public know about the cost savings. “Metro has got to show the public it is making some cost savings to offset the ballooning of the economy.”

General Graham had established a special committee to find savings. Thus far, the committee had identified a potential \$40 million in savings, but they had not yet been presented to WMATA’s board of directors.

Debt service also had to be addressed. WMATA estimated that service on its 40-year bonds would reach \$90 million a year by 1984. The *Star* pointed out that “Metro officials originally hoped to repay the bonds out of the fare box, [but] they now concede it will not be possible.”

As noted, the District, Maryland, and Virginia had different priorities:

Virginia has refused to shift federal highway money to aid mass transit. Maryland has agreed to such transfers, but only to modify Metro routes in Maryland. D.C. officials have threatened to block further shifts of highway funds unless Virginia and Maryland accept similar moves. [Lynton, Stephen J., “Ford to Get Plan to Keep Metro Alive,” *The Washington Post*, October 15, 1975; Crosby, Thomas, “Tough Decision For Area: Highways or Subway,” *The Washington Star*, October 15, 1975]

Metro’s financial strain prompted varied reactions among the partners in its construction. First, WMATA had increased the cost estimate to \$4.6 billion, leaving a \$1.5 billion gap since the previous estimate of nearly \$3 billion. Then they admitted what almost all observers had said, namely that fare receipts could not cover the estimated \$2.5 billion in principal and interest payments on the long-term bonds. As the *Post* pointed out, “Another source of money is needed to repay the debt.” These problems were compounded by the losses WMATA was experiencing on Metrobus:

The subway is expected to lose more than \$100 million in its first five years. The bus system is expected to lose almost \$52 billion this year and the annual deficit is projected to rise to \$86.5 million by 1980.

One option was an annual increase in subway fares, “already regarded as likely to be the world’s highest.” Such increases might be necessary, but “almost certainly will face political opposition.”

Nevertheless, Metro was “pressing ahead, with a display of determined optimism . . . . Work is underway on almost half the planned system, some of it virtually completed, and new construction contracts soon will be let.” General Graham had told the board earlier in October, “There’s no question that we’re moving relentlessly – like a giant flywheel.”

In the District of Columbia, “the skyrocketing Metro costs are adding a new burden to an already-strained city budget.” They favored a regional tax to finance construction and authority to tax nonresident commuters for the services they received in the city.

Maryland had “poured millions of dollars into the Metro system,” but was now facing shortfalls in its gasoline tax revenue in the aftermath of the energy crisis. The State also had to address “mounting financial troubles over Baltimore’s proposed rail system.” The result was that State officials warned “they are running low on funds to bail out Metro.” Maryland officials had not been convinced by Metro’s assertions that it eventually would stop losing money. Governor Mandel said, “I think there’ll be an operating deficit and I think that operating deficit will increase every year.”

Montgomery County Executive Gleason, who had served on the WMATA board, called the outlook “perilous,” if not “chaotic.” He said, “This has shaken the confidence of a lot of people.”

Virginia Governor Godwin had once called Metro a “boondoggle,” but “suburban county and city governments are so worried by its rising costs that they have asked for a delay in the start of subway service, now scheduled for January, unless the financial problems are solved.” Arlington County Manager Bert Johnson said, “I look upon these increases in cost as inevitable – and inevitable means horrendous.” The counties in northern Virginia had their own take on the situation:

Arlington County officials warn that the county already is spending more for Metrobus service and subway construction than for police. Fairfax County officials say that, while Fairfax can more easily absorb the Metro costs, they are still big, comparable to county spending for fire protection. Fairfax City officials say Metro costs are now equivalent to 20 cents on the city’s real estate tax rate and will rise to 31 cents by 1980. [Lynton, Stephen J., “Metro’s Problems Are Baffling,” *The Washington Post*, October 20, 1975]

Metro officials met with Secretary Coleman on October 23 to discuss options for addressing the financial shortfalls. After the meeting, Chairman Alexander of the WMATA board, said, he was “very optimistic” that solutions will be found.

Governor Godwin remained skeptical. He had heard estimates that Metro could cost between \$6 billion and \$7 billion and had learned of fears in northern Virginia jurisdictions about meeting their obligations for construction of rail rapid transit. He said, “For Virginia to try to bail out Metro, we can’t do that.” He added, “It would be awfully nice if we could afford it,” he said. “But it would be awfully nice for everybody in Virginia to have a turkey every day and a Cadillac.” As for operating costs as high as \$200 million a year, he said, “There is no way as

governor of Virginia that I can commit the resources of this state to a project containing such a projected deficit.”

A delegation of northern Virginia officials had met with Governor Godwin and VDHT Commissioner Fugate to request that any unspent funds for I-66, should they materialize, be spent in northern Virginia. The local officials came away with the impression that the Governor agreed to keep the funds in their jurisdictions. He even seemed to indicate some of the funds resulting from a withdrawal-substitution action might be used for Metro construction. He made clear, however, what he did not support:

I am opposed to taking the I-66 money and just flopping it over and adding it to Metro, because we have other problems there [in northern Virginia]. [Kelly, Brian, “Godwin Appears To Ease Stand On Metro Funds,” *The Washington Star*, October 24, 1975]

Although Secretary Coleman delayed submitting a plan to the White House for completing Metro, reports indicated he was considering a plan based on a cost of \$4.65 billion to complete Metro. The *Post* reported on October 24 that the plan would provide 80 percent of the funds needed to solve Metro’s problem:

It is uncertain, however, whether Coleman’s proposals will be accepted by the White House, Office of Management and Budget and Congress.

Two sources, who asked not to be identified, said this week that Coleman believes U.S. aid should be provided to finance 80 per cent, or \$2 billion, of some \$2.5 billion due in principal and interest payments on long-term Metro bonds. Local governments would be required to pay the remaining \$500 million.

A “knowledgeable source” indicated the Department “now believes that federal highway money should be used to finance all current cost overruns on construction of the planned \$4.6 billion, 98-mile Metro subway systems,” amounting to about \$1 billion. [Lynton, Stephen J., “Coleman Favors U.S. Aid to Metro,” *The Washington Post*, October 24, 1975]

One thing that Secretary Coleman and Governor Godwin agreed on was that Metro construction costs should be held to \$4.6 billion. On November 5, they met in Richmond to discuss the governor’s concerns about the financial problems. Secretary Coleman told reporters, “We have agreed that whatever happens in Metro, the \$4.6 billion should be it.” The figure, he said, included “normal inflation,” so any additional overruns could be avoided.

Earlier that day, General Graham disclosed in congressional testimony that the cost had increased by \$200 million to \$4.65 billion. [Lynton, Stephen J., “Metro Subway Cost Estimate Raised Again,” *The Washington Post*, November 6, 1975; Taaffe, William, “Guess What! Price Of Metro’s Up Again,” *The Washington Star*, November 6, 1975]

These matters were very much on Chairman Natcher’s mind as he greeted District officials on November 13, 1975, for hearings on the District of Columbia appropriations for FY 1976. Mayor Washington and Chairman Tucker as well as budget and other city officials were present, but this panel did not include a representative of WMATA or the highway agency. After

discussing other issues, Chairman Natcher, who now referred to Mayor Washington by his elected title, asked, "Mr. Mayor, can you tell me what the rapid rail transit system will cost?" Mayor Washington tried to defer an answer until WMATA could respond at a later hearing.

Undeterred, Chairman Natcher asked if Mayor Washington had "any idea, as to a guess at this time." The mayor replied that the costs were "highly speculative and there are some assumptions," but he would prefer to defer an answer. He added:

Now, Mr. Chairman, I am well advised that each year you have calculated the cost, and I must say, each year you have come closer and closer, as the costs have escalated. I might want to ask you what your current figure is.

Chairman Natcher was not at all hesitant. "I am going to tell you, Mr. Mayor, the current figure was the same that we gave you in November of last year, \$6 billion." He then launched into a long discussion of the escalating cost estimates and his warning that "you have heard me say a dozen times, you could not retire a single bond out of the fare box." His litany included newspaper articles such as a Jack Eisen article from a year earlier that began:

Representative William H. Natcher (Democrat-Ky.), whose prediction of the rising cost of building Washington's rail rapid transit system initially outraged Metro officials but later proved more accurate than theirs, has come up with a new figure: \$6 billion.

[Eisen, Jack, "Natcher Puts Metro Cost at \$5 Billion," *The Washington Post*, November 28, 1974]

After a presentation on the issue that takes up about 13 pages in the hearing record, Chairman Natcher concluded:

Again, I want to say to the Mayor of our Nation's Capital and the officials of the Washington Metropolitan Area Transit Authority that the figure of \$4.65 billion will not construct the rapid rail transit system consisting of 98 miles and the Washington Metropolitan Authority should take another look at the cost of this system and simply tell the people who will have to pay the taxes to carry this burden that this System will ultimately cost over \$5 billion and will probably go as high as \$6 billion. [District of Columbia Appropriations for 1976, Hearings before a Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 94<sup>th</sup> Congress, 1<sup>st</sup> Session, Part 1, General Operating Expenses, pages 28-41]

During testimony on November 18, Richard W. Gutmann of the GAO informed the House Committee on the District that the cost of Metro construction would be at least \$4.8 billion and could be considerably more. In response to questions from reporters after the hearing, Gutmann agreed that it could possibly increase to \$6.1 billion. "I think it's possible that could happen." General Graham disagreed, saying the current estimate was \$4.65 billion, with a contingency factor of \$467 million that would increase the total estimate to \$5.1 billion. [Lynton, Stephen J., "Cost of \$6 Billion Forecast for Metro," *The Washington Post*, November 19, 1975]

On December 5, General Graham, Chairman Alexander, and other members of the WMATA board appeared before Chairman Natcher's subcommittee. Before the witness testimony began, Chairman Natcher once again went through the history of cost increases that he had predicted and introduced news reports and editorials in support of his predictive abilities.

At the end of this recitation, he recalled a letter that General Graham had sent on November 20, 1974. In it, General Graham stated that the latest estimate was \$4.454 billion. He referred to the conference at Airlie House on November 21-23, 1974, stating that area officials were gathering to consider the cost increases "with the objective of providing additional funding on a schedule that will keep construction moving at the maximum possible rate so as to minimize escalation, which in the latest estimate now amounts to \$1,856 million."

Chairman Natcher recalled that he had replied on November 21, 1974, to suggest:

General Graham, the figure of \$4,454,000,000 will not complete the 98-mile rapid rail transit system, and again I would like to urge that you and the members of the Authority take another look at the cost of this system and simply tell the people who will have to pay the taxes to carry this burden that the system will ultimately cost about \$5 billion and unless there is some change the figure could go as high as \$6 billion. [pages 1385-1386]

Speaking to General Graham, Chairman Natcher said, "I think this would be a good time to tell us whether there is an estimate of an increase in cost since your letter to me of November 20, 1974."

General Graham introduced his prepared statement, which described the progress of Metro, current activities, and plans for the next year. As for the total cost, his statement indicated the current estimate was \$4,650.7 million.

Regarding the Interstate transfer plan, he said that the escalated value of withdrawn routes thus far was \$592.1 million:

Of this, \$286.6 has been approved by the Urban Mass Transportation Administration for construction purposes in fiscal 1976. A second increment is being processed and discussed with UMTA prior to submission to the District of Columbia government in the escalated amount of \$305.5 million. These highway funds totaling \$592.1 million matched by local funds of \$147.9 million, together with Federal and local matching grants of \$102 million would produce a total funding of \$842 million in fiscal 1976. However, approximately \$697 [million] of this total will be committed during 1976 with the remainder of \$145 million applied to the fiscal 1977 construction program.

General Graham testified briefly about the status of work before the day's hearing ended for the weekend. [pages 1354-1369]

When the hearings resumed on Monday, December 8, General Graham responded to Chairman Natcher's discussion of cost increases on December 5:

You put your evaluation on the matter and there is no doubt you have shown a great ability at crystal balling our costs. I don't know how you achieved this; how you foresaw the inflation of 1973 followed by the stagflation of 1974, but in any case, we recognize your record of prediction.

As for WMATA's year-old estimate of \$4.5 billion, General Graham pointed out numerous changes that had occurred since then resulting in the new estimate of \$4.650 billion. He said, for example, "At the time we made the \$4.5 billion estimate, we were thinking a decision would be made on I-66." That decision, which would affect the cost of constructing Metro whether the highway was built or not, was still pending. Another delay affecting the estimate was occurring because of location issues on the Branch Avenue line, relating to its terminus, and the Greenbelt route, relating to the location change approved on July 28, 1975. He said, "it looked as though we could proceed into final design, hearings had been held, but that was not to be":

We are hopeful by July of 1976 there will be some decision as to a road in that corridor, I-66. We have added 18 months of delay to that estimate. We have added 18 months of delay for the Branch Avenue and Greenbelt routes.

General Graham pointed out that other major projects also experienced significant increases, including the Interstate System. He cited a statement by Administrator Tiemann, who said that even with 87 percent of the Interstate System open, 30 percent of the estimated total cost remained to be funded. Tiemann had added, "And this does not take into account the effects of the last 21 months' inflation," which could mean that about 37.6 percent of the cost was unfunded.

He concluded his testimony by promising:

We will continue to try to give you the most accurate financial estimate for the Metro System. We feel we owe the Congress and the local governments that consideration so they can fix their planning. But it is extremely difficult to look ahead.

Chairman Natcher had only a few comments and questions for General Graham, beginning with:

I hope that is a firm figure and we will be able to complete this system. As you have heard me say at other times, I think it is going to cost \$6 billion. I hope I am wrong.  
[pages 1375-1397]

Perhaps the lack of aggressive questioning was the result of General Graham's decision, announced on December 4, to step down as General Manager. Professor Schrag discussed the reasons:

Jackson Graham saw his job falling apart. He was disgusted by any suggestion of studying alternatives to the complete system, arguing that a truncated system could never lure commuters out of their cars, and that additional studies would only delay construction in some counties, which would then envy their more decisive neighbors. He was frustrated with his deteriorating ability to control WMATA's fractious board, which

was forming executive committees to steal some of his power. He was dismayed that President Ford was less supportive than his predecessors. He was sixty.

He had assembled an excellent staff and held them together through all the controversies afflicting rail construction and operation of the bus system:

He had gotten the first, and more difficult, half of the system under construction and brought the first 4.6-mile segment to where only a lack of working rail cars stood between it and operation. He had brought Metro within sight of the Promised Land and was ready to leave it at that. [Schrag, pages 183-184]

He had submitted his resignation to the board on Thanksgiving Day 1975, but did not announce his decision until December 4, attributing his decision to “personal reasons.” The *Post* quoted a rhyming comment in his Thanksgiving letter of resignation: “My quest after some rest and fest is to test a nest in the West.”

In discussing his decision, he “hinted yesterday that the timing of his announcement was partly linked to the skyrocketing subway costs.” He said he hoped his retirement would help Metro win additional congressional support.

His departure, set for January 31, 1976, prompted WMATA to launch “a worldwide scramble – and I mean worldwide” to find his replacement, according to WMATA spokesman Pfanstiehl. [Lynton, Stephen J., and Klaidman, Stephen, “Graham Quits Subway Post,” *The Washington Post*, December 5, 1975]

Now, after the brief questioning on December 8, Chairman Natcher concluded:

I have no further questions, but before yielding to Mr. Young, I want you to know, General Graham, that all through the years it has been a pleasure dealing with you. You have established an outstanding record not only in the Corps of Engineers but as a man. It has been a pleasure dealing with you, and being just as frank as I can be, I am sorry to see you retire and leave the Authority. [page 1398]

### **The Fading Freeways**

On May 7, 1975, U.S. District Judge Gasch had ruled that the District of Columbia must pay \$350,000 to Head Construction for its work on the Three Sisters Bridge before the stop-work order. The payment included reimbursement for work completed before the order, interest on that amount while the suit was pending, and \$106,000 in possible profits the company lost because it was unable to complete the contract.

The District had disputed the claims for work done and the company’s “anticipated profits”:

Judge Gasch rejected the claim that the city was not liable for the lost future profits, saying the city “knew full well that there was controversy surrounding the Three Sisters bridge. It knew that pressure had been exerted upon the District of Columbia City Council to concur in the building of the bridge.

“It knew that the bridge had already been the subject of litigation seeking an injunction. Yet it went forward with this contract without making any specific provision” that future legal action might halt the project.

Since the delay resulted from the failure of the U.S. Department of Transportation to follow its procedures, Judge Gasch anticipated that the Federal Government would pay 90 percent of the award, as it would have paid for construction of the bridge. [Robinson, Timothy S., “Court Tells District to Pay for Bridge,” *The Washington Post*, May 8, 1975]

With that action, the Three Sisters Bridge was, in effect, dead.

On December 18, Acting Director Schneider, Acting Deputy Director O’Donnell, and other transportation officials appeared before the subcommittee. Chairman Natcher pointed out his longstanding support for a balanced transportation system in the District that included freeways and rapid rail transit. He reminded Schneider of the prediction that the cost of Metro would go to \$6 billion and said of the freeway network:

Nearly all of the freeway projects that you people in the District government – I would say the people in the District government at the time the Interstate Highway System was developed – asked for have been stricken. Nearly all of them are no longer in the program. They did not get underway, and are not even being considered for construction . . . You only have one project under the original freeway system underway.

Schneider confirmed that only the Center Leg was actively being worked on.

Chairman Natcher asked for the status of freeways in the District. Schneider replied:

Mr. Chairman, the I-70-S and I-95 connections from Maryland, the North Central Freeway and the Northeast Freeway have been deleted. The Secretary of Transportation took the action to take those off the system in October. The District’s Federal entitlement amounting to \$286,000 [sic] has been transferred to Metro, which is the money Metro is using to keep construction going from last June, or July, when their money ran out. We also requested that the K Street tunnel be deleted . . . because – there are a number of reasons. One is it would have a very disruptive effect on the businesses along the alinement.

He continued his status report:

### Three Sisters Bridge

Now the Three Sisters Bridge . . . no longer has a connection, even if they are going to build something in the I-66 corridor. The latest word is if there is going to be a road in there at all, it is going to be less than full freeway standards. In any case, the plan apparently no longer contemplates the spur to the Three Sisters Bridge.

That indicates to us that the Three Sisters Bridge is no longer necessary and we probably will want to take the position that that ought to be deleted.

## Potomac River Freeway

The Virginia situation also has affected the Potomac River Freeway, I-66.

That is the one that would connect from the Three Sisters Bridge down to the south leg. That was planned to be an eight-lane tunnel. We have been talking about reducing that to a four-lane tunnel because of the fact that it no longer would connect to the Three Sisters Bridge and it would not serve the same kind of traffic demand. We have been even considering that perhaps a tunnel would not be a wise choice. That is because while the tunnel takes the traffic away from sight, it is a very, very expensive matter to maintain.

## Center Leg Freeway

The center leg is costing us something in the neighborhood of a million dollars a year for maintenance. I think in these days of austerity that that is probably something we had better take a very close look at, because we would have that maintenance problem in perpetuity. That is one of the reasons we thought the K Street tunnel was no longer well advised, again another \$1 million annual cost possibly.

## South and East Leg Freeways

The south leg has been tabled because, while we were preparing to go ahead with the construction on that, it was felt it would cause a disruption during the Bicentennial, in a very sensitive spot for the Bicentennial visitors. So that was shelved.

The east leg and the south leg are under review at the moment but not under very active review. Within the new Department of Transportation, we are still in the process of getting our priorities organized. I expect that we will have a full-fledged review of the south leg and of both sections of the east leg for purposes of determining their need and whether or not we ought to build full freeways in those corridors.

## Industrial Freeway

Now, we have also suggested to the City Council that the Industrial Freeway, which is not now on the system, is on our local plan for highways and streets, but it is not on the interstate system. We have suggested that it be put on the interstate system for purposes of preserving the entitlement to Federal funds it would cost as a freeway. However, we don't expect a full freeway in that corridor is going to be either necessary or called for.

Our main problem, as we see it there, is to furnish a facility for rapid movement of mass transit vehicles – in this case it would be buses – and also trucks.

That corridor out there is the prime candidate for redevelopment as an industrial park, for light industrial use. It is our feeling that we ought to try to provide some priority access for trucks into that facility so that industrial users will be attracted to the area.

We want to try to provide an advantage for moving goods in and out. We are talking about not really an industrial freeway, but a busway, truckway kind of facility and perhaps an upgrading of New York Avenue to better accommodate the automobile traffic. So I guess my answer to the question is that in general we are reviewing the whole situation to see where our special needs are, where we are going to need freeway facilities, where we are going to need something less than that and how it all fits in with the emerging Metro system.

Questioning moved on to other aspects of the new department's general needs, but near the end of the session, Representative Claire W. Burgener (R-Ca.) asked if the route west of the Rayburn House Office Building was I-95. Schneider confirmed that it was and elaborated on the city's plans:

The original [plan] was designed to tie into the freeway system that would come down the north central and northeast, which have been deleted; then another section of the so-called north leg which has not been constructed. I think ultimately that center leg will be tied into this industrial freeway corridor that we are talking about, not a freeway, but some kind of a specialized roadway for buses and trucks and some automobiles; it will tie into the complex but probably not to another freeway. [District of Columbia Appropriations for 1976, Part 2, pages 976-1030]

By then, Maryland, Virginia, and the District of Columbia had agreed on a series of Interstate changes to provide connectivity within the metropolitan area despite the absence of planned freeways:

- Eliminated I-70S from its terminus at the intersection of I-95 in the District to the intersection of the Capital Beltway (I-495) in Maryland.
- Eliminated I-95 as an Interstate route from the intersection of I-295 in the District to the intersection with the Capital Beltway in Maryland.
- Redesignated I-95 as I-395 from the intersection of the Capital Beltway in Virginia to the intersection of I-295 in the District.
- Relocated I-95 onto the Capital Beltway from the intersection of I-95 and I-495 in Virginia, then northeasterly along the eastern portion of I-495 to the intersection of I-95 and the Capital Beltway in Maryland.

At Maryland's request, U.S. 50 from the Capital Beltway to Annapolis was designated I-68 (this number would later be shifted to the National Freeway from Cumberland, Maryland, to Morgantown, West Virginia; U.S. 50 was redesignated I-595, although Maryland does not display the Interstate number).

These changes provided an imperfect connection for I-95 traffic. Northbound and southbound traffic on I-95 could remain on the East Coast's main street by looping through interchanges with the Capital Beltway in Maryland and Virginia that were not designed for the traffic. In coming decades, Maryland and Virginia officials would periodically reconstruct the interchanges to handle the traffic more efficiently. The problems were especially acute in Virginia where the

interchange of I-95, I-395, and I-495, known as the Mixing Bowl, had to sort streams of Interstate traffic, traffic using high occupancy vehicle lanes, and traffic bound for local destinations.

Links between I-95 and the District were more problematic. In Virginia, renumbered I-395 (still part of the Shirley Highway) within the Capital Beltway provided an easy route into and out of the city. However, I-395 was a spur in the city that would eventually end on New York Avenue without a freeway connection to northern areas of the city. From Maryland, motorists could enter the city by exiting the I-95/I-495/Capital Beltway onto the Baltimore-Washington Parkway. The parkway ends where motorists had a choice of using New York Avenue to reach I-395 in the city or congested District Route 295 leading to I-295 east of the Anacostia River, with interchanges into the city. New York Avenue took motorists into the city on a congested roadway; the Industrial Highway conceived by city planners was never built to divert bus and truck traffic from the avenue. Neither option was ideal, even with subsequent upgrades to New York Avenue and Route 295, but they have had to suffice ever since.

On December 29, 1976, Mayor Washington asked Secretary Coleman to withdraw the Three Sisters Bridge (I-266) over the Potomac River to the Virginia State line and the I-66 K Street Tunnel between I-266 and I-395. The two routes totaled 2.5 miles. Mayor Washington said the request was based on future Metro rail capabilities. FHWA Administrator William M. Cox and UMTA Administrator Charles F. Bingham approved the request to withdraw these routes from the Interstate System on April 29, 1977.

This withdrawal released \$392 million for substitute projects. About \$344 million was to be used for Metro construction, with the balance going to other road and bridge improvements in the city. In reporting this information, the *Post's* Douglas B. Feaver used a phrase he had used a few years earlier:

The Three Sisters Bridge, a once locally famous proposed Interstate highway project . . . was killed the third or fourth time yesterday. This time it looks unusually permanent.

Announcement of the death of a project that had long-since been regarded as abandoned by highway officials came from Mayor Walter E. Washington. [Feaver, Douglas B., "Three Sisters Highway Project Is Killed – Again," *The Washington Post*, May 13, 1977]

This time, the phrase "unusually permanent" was accurate. I-266 and the Three Sister Bridge were dead.

On August 7, 1978, Mayor Washington asked Secretary of Transportation Brock Adams to withdraw portions of the East Leg (I-295) and North Leg (I-395) freeways, a total of 4.7 miles. Mayor Washington's letter explained that the change to I-295 would leave a gap that the city had not yet decided how to close:

The withdrawal of the upper section of the East Leg Freeway likewise will not interfere with the connectivity of the Interstate System. It remains for us, however, to determine which of several options we will implement to provide a permanent terminus of I-295. A

connection, for example, of I-295 with Kenilworth avenue would close a gap in our existing expressway network and provide for a logical terminus of I-295.

FHWA Administrator Karl S. Bowers and UMTA Administrator Richard S. Page approved the request on September 8, 1978.

On December 19, 1979, the TPB essentially killed the Potomac River Freeway in Georgetown and the South Leg Freeway in front of the Lincoln Memorial across the Tidal Basin to a connection with the Southwest Freeway (I-395). The *Star* pointed out that:

The fate of the proposed highways, which had been debated for almost two decades, was resolved in less than two minutes by the Metropolitan Washington Council of Government's Transportation Planning Board. It voted unanimously against building the roads.

The formal burial will come next year when the D.C. City Council and the mayor officially request that the \$550 million set aside by the federal government to build the two roads be used for Metrorail construction.

Director Schneider said a recent restudy showed "major new highway capacity is not necessary" in the two corridors. (The *Star* added that these days, "The District has an avowed anti-automobile and pro-transit policy.")

The assistant director, James E. Clark, said of the TPB's vote that, "It's a very clear indication that there won't be any more freeway construction in the city." He anticipated that the substitution funds "will put Metro on a firm financial footing for several more years, construction-wise." [Crosby, Thomas, "D.C. Kills 2 Highway Proposals," *The Washington Star*, December 20, 1979]

The District's second elected leader, Mayor Marion S. Barry requested the withdrawal of a

1.7-mile segment of the South Leg Freeway portion of I-695 between I-66 and I-395 on April 30, 1980. On August 27, 1980, FHWA Administrator John S. Hassell and UMTA Deputy Administrator Lillian C. Liburdi approved Mayor Barry's request.

These actions left a few very short Interstate segments to be withdrawn. On January 27, 1982,

Mayor Barry acted to withdraw the westerly 0.6-segment of I-266/Potomac River Freeway between the planned Three Sisters Bridge terminus and I-66/Key Bridge. FHWA Administrator Ray A. Barnhart and UMTA Administrator Arthur E. Teele approved the withdrawal on June 28, 1982.

Mayor Barry proposed withdrawing the final segments of the Interstate System on May 19, 1983, namely the remaining .52-mile segment of I-266 and a .25-mile segment of I-66 within the interchange area of I-66 and I-266. On August 19, 1983, Administrator Barnhart and Acting UMTA Administrator G. Kent Woodman approved the withdrawal.

Overall, the estimated base value at the time of withdrawal for the District's freeways was nearly \$2.197 billion, with \$1.963 billion going to transit projects.

With these withdrawals, the District of Columbia's designated Interstate network was 13.71 miles long consisting of:

I-66 – 1.48 miles

I-95 – 0.11 miles (the portion of the original Woodrow Wilson Memorial Bridge on the Capital Beltway crossing the southern tip of the District of Columbia across the Potomac River)

I-295 – 7.25 miles

I-395 – 3.48 miles

I-695 – 1.39 miles.

### **Completing the Center Leg Freeway**

One of the city's main remaining Interstate actions was to complete the Center Leg segment of

I-395 between its terminus at Massachusetts Avenue and New York Avenue. The city had completed the segment to Massachusetts Avenue in 1973. Work on the extension came to an end due to runaway inflation in 1978 when the District ran out of funds to install lights in the tunnel, put tiles on the walls, and pave the road with asphalt. The Center Leg tunnel extension gained the nicknames "Highway to Nowhere" and "The Pit."

Unable to complete the segment, the District used it as a parking lot for city employees. Half of the tunnel was allocated to NPS as parking for tour buses that were banned around the same time from Pennsylvania Avenue near the Capitol and White House. The *Post* described the situation in 1982:

The other half of the tunnel, with space for more than 100 passenger cars, also is fenced off with an "Authorized Personnel Only" sign. Here, employes [sic] from the parking bureau two blocks away pull past the gate in their blue and white patrol cars – or are dropped off by coworkers – each afternoon to exchange the vehicles for their own cars, which they park there for free in the morning . . . .

Located near the closed road are police headquarters, the courts and many other local and federal government offices. For many people who work there, every delay in transforming The Pit into the highway is a blessing.

By anyone's measure, the parking fee is practically a gift: 25 cents for three hours, the only such long-term rate in the downtown area. But a count this week showed that more than half the 200 parking meters originally installed on the six-lane lot are missing. [Bruske, Ed, "D.C. Freeway to Nowhere: Free Parking," *The Washington Post*, April 10, 1982]

The District revived the Center Leg project in 1984 with \$6.5 million in city and Federal-aid funds. The Federal-aid funds had long been available, but the city had not set aside its \$650,000

share. The city planned to open the tunnel in April 1986, but “it was delayed in part because a water pipe burst last winter, heavily damaging electrical equipment needed to operate tunnel lights and exhaust fans,” as the *Post* explained.

By December 1986, the asphalt pavement was in place and white ceramic tiles had been installed. Work on the light fixtures and ceiling panels was underway:

On top of the tunnel, a long-planned housing project is rising. The \$9 million, eight-story structure, sponsored by Mount Carmel Baptist Church, is to include 133 apartments, some of them available to low-income families at federalized subsidized rates.

The [housing] project is due to open in June. [Lynton, Stephen J., “After 8-Year Wait, Last Segment of Center Leg Freeway Nears Completion,” *The Washington Post*, December 10, 1986]

On December 15, 1986, the city opened the southbound tunnel between Massachusetts Avenue and New York Avenue at 11 a.m. Southbound motorists would no longer have to turn left from New York Avenue to take Fourth Street, NW., to the open Center Leg segment – passing the entrance ramp to the Highway to Nowhere. [Baker, Peter, “Center Leg of I-395 No Longer ‘Highway to Nowhere,’” *The Washington Times*, December 15, 1986]

The northbound lanes opened on February 7, 1987, completing the \$36.5 million project. The city planned to remove the barriers in the morning, allowing several hours for workers to paint new pavement markings. The city did not hold a ceremony to open the tunnel. [Lancaster, John, “D.C. Freeway Stretch Will Open Today,” *The Washington Post*, February 7, 1987]

## **The Death of I-66**

In September 1974, FHWA had asked the VDHT to “further ameliorate” the adverse impacts of I-66, particularly the 10-story section, on the local community. FHWA also wanted the State to reduce the number of lanes to six (from eight) and prohibit trucks from I-66 between the Capital Beltway and the Theodore Roosevelt Bridge.

According to Rex Wells, chief of FHWA’s Environmental Development Division, FHWA would approve I-66 if the State redesigned the freeway in accordance with the three objections. He predicted that the redesign would take between 6 months and a year. One question to be studied was how diverted traffic would affect parallel U.S. Routes 50 and 29/211.

The trade association for truckers, the Virginia Highway User’s Association, strongly objected to the truck restriction. Executive Vice President E. H. Williams said, “The trucking industry pays more than its fair share of taxes to support the interstate system, and no one should prohibit their use on an interstate highways.”

He questioned whether such a restriction was legal for the Interstate System and if any other Interstate segment had such a restriction. According to FHWA, the restriction would be legal if

truck traffic could use a parallel route. Such a restriction had been approved for I-680 near Berkeley, California.

Emilia Govan told reporters that FHWA's request for the modifications "has demolished the proponents' own justification for the highway." In her view, the changes meant that I-66 would no longer provide one of its supposed benefits, namely reducing commuter traffic on local streets. [Shaffer, Ron, "Suggestion of Limiting I-66 to Cars Angers Truckers," *The Washington Post*, September 21, 1974]

On September 25, 1974, TPB voted to remove I-66 inside the Capital Beltway from the regional transportation plan. The board voted to remove I-66 despite testimony by VDH Deputy Commissioner Harwood that failure to construct the freeway would increase the cost of Metro by \$50-54 million. Arlington County Board member Munsey said those figures were "fanciful – no one knows what those costs might be." Any additional cost for Metro could be met by transferring funds via the withdrawal-substitution provision from I-66 to Metro. The remaining substitution funds could be used for an expanded bus system and other mass transit improvements that would get commuters between the Capital Beltway and Washington just as fast.

Harwood pointed out that if Secretary Brinegar approved withdrawal of I-66, the substitution funds would be used mainly on other Interstate highways in Virginia, such as completion of I-264 and I-664 in the Tidewater area.

TPB Member Lee M. Rhoads of Falls Church said, "That sounds like a threat to me." Citing the State motto ("Sic Semper Tyrannis," Latin for "Thus Always to Tyrants"), he told Harwood, "We will not be stepped on . . . the people will make this decision." Harwood replied that he was not making a threat, but simply describing the situation.

Munsey did not think Governor Godwin would react in a punitive way, as if to say "Sorry, boys, you did not let us have our road and therefore we're not going to do anything about meeting the transportation needs of Northern Virginia." The vote, in essence, formalized the TPB's February 1974 "expression of sentiment" against the highway. However, Munsey could not guarantee the result would be what those voting for the measure wanted. "It's not a package deal . . . . Given the fact, as everyone in this room knows well, that we're having some trouble paying for our current Metro commitments, there is some doubt that the transit elements of that package would ever be built."

Metro Deputy General Manager Quenstedt told TPB, "Have courage, gentleman. We're going to build it, if it should be built. Have faith."

Actually, no one was sure what the action would mean. The TPB could not request withdrawal of I-66; under the law such a request would have to come from Governor Godwin, a strong I-66 supporter. He also would determine what to do with the substitution funds. At the least, Munsey argued, the vote would at least strengthen the position of I-66 opponents. In any event, "Laws say what the courts say they mean, when you're all done." [Shaffer, Ron, "COG Board Votes to Remove I-66 From Region Transportation Plan," *The Washington Post*, September 26, 1974;

Kast, Sheilah, "On-Again, Off-Again I-66 Now Off of COG's List," *The Washington Star-News*, September 26, 1974]

The District of Columbia's representatives had voted with the majority to remove I-66 from the regional plan. Mayor Washington said he supported their action.

Meanwhile, Delegate Fauntroy wrote to Secretary Brinegar to urge rejection of I-66 to "protect the environment and the welfare" of the city. Construction of I-66 inside the Capital Beltway would "lead to an intolerable level of traffic on our streets and bridges." It also would "ruin our scenic parkland and seriously increase air pollution in the District of Columbia." [Shaffer, Ron, "Fauntroy Urges I-66 Rejection," *The Washington Post*, September 27, 1974]

Fearing Federal rejection, State highway officials developed a "fallback" strategy of building I-66 as a toll road without Federal funds. State Senator Omer L. Hirst of Fairfax County prepared a bill for that purpose for consideration in the 2-month 1975 session of the General Assembly. Because the General Assembly had demonstrated support for I-66, he predicted "no problem with the General Assembly. I feel they will pass this bill." Anti-I-66 Delegate Melnick of Arlington feared his colleague might be right. "A lot of people [in the General Assembly] are prohighway," he said. "If a bill came up to pave over Northern Virginia it would probably pass."

Senator Hirst said he prepared the bill, in part, with Metro in mind. If I-66 were not built, Metro would have to acquire its own right-of-way through Arlington County, relocate utility lines, and pay for grade separation structures with cross roads. The cost, he said, was "incalculable at this time but obviously it is a very substantial sum of money." Virginia highway officials acknowledged on December 19, 1974, that they had refused to review Metro's design plans between East Falls Church and Vienna in the absence of a decision on I-66.

Munsey objected, arguing that Hirst's bill was "an attempt to subvert the normal transportation planning process and federal environmental impact requirements." James Govan called the bill "a Gestapo-like tactic." Hirst countered, "I'm sure some people will read sinister things into this bill, but it is simple: Let's build the road with state funds if we can't with federal ones, but let's build it." [Crosby, Thomas, "Virginia May Build I-66 As Toll Road Without U.S.," *The Washington Star-News*, December 20, 1974; Shaffer, Ron, "Arlington Toll Road Urged," *The Washington Post*, November 22, 1974]

VDHT submitted its new design to FHWA in late November. "We've done what they've asked us to do," Harwood told reporters." The *Post* described the redesigned facility:

Under the new design, a slight shift southward in the highway right-of-way, a response to the elimination of the double-deck segment along Spout Run Parkway, would require the destruction of a four-story building in the Ancient Oaks complex at 2515 n. 20<sup>th</sup> Rd.

This would force the relocation of about 150 people, mostly moderate-income families, according to the new design study.

Munsey's immediate reaction was that, "We don't need to lose any more moderate-income housing in Arlington; we have moderate-income people who need to be housed."

Emilia Govan called the new design “a last resort. And it’s still unacceptable.” [Shaffer, Ron, “Modified I-66 Design Razes Apartment, Eliminates Deck,” *The Washington Post*, November 30, 1974]

In early 1975, Delegate Melnick revealed that he had discovered a flaw in the toll plan. The Interstate withdrawal-substitution provision of the Federal-Aid Highway Act of 1973 included a condition requiring the Governor and cosigned to commit not to build a toll road in the corridor. If the State attempted to build the route as a toll road, it would lose up to \$180 million in Federal-aid Interstate funds, and not receive the substitution funds for other purposes. Delegate Melnick wrote to inform Governor Godwin of this loss. [Flor, Lee, “Va. Warned on I-66 Plan,” *The Washington Star-News*, January 4, 1975]

On January 29, Senator Hirst withdrew his bill authorizing a toll road in the I-66 corridor. He said he did so because he found that Virginia already had the authority to build the toll road. [Kelly, Brian, “Va. Senate Oks No-Fault; Toll Road Bill Withdrawn,” *The Washington Star-News*, January 30, 1975]

As noted, the delay while officials awaited Federal action on the new I-66 design also held up VDHT’s review of Metro’s design for use of the median. In the meantime, the delay was costing WMATA an estimated \$37,500 a day or \$13.5 million a year. The *Star* explained the basis for this calculation:

The money problem arises because both Metro and the Virginia Department of Highways felt that work on I-66 would begin on Dec. 15. Metro then calculated this date into its construction schedule and because of the delay it is expected that service to Metrorail stations at East Falls Church, West Falls Church, Dunn Loring and Vienna will not begin before 1980.

According to General Manager Jackson Graham, Metrorail plans will have to be “put on the shelf” until a final decision is made on I-66.

Further complicating the picture is a study ordered by the Fairfax County Board of Supervisors not to build in the I-66 corridor but instead divert the Metrorail line to the Tyson’s Corner area. If such a shift eventually is approved, it could save Metro money because of the mounting costs caused by the delay in the I-66 decision.

The board voted to send a telegram to Secretary Coleman, who was just about to take office, to alert him to the issue.

Arlington County Board member Munsey saw VDHT’s delay in reviewing the Metro design as continued “blackmailing” to get I-66 approved. VDHT, he said, was “using every bit of leverage they can to get this road approved.” [Crosby, Thomas, “Va. Delay Costing Metro a Bundle,” *The Washington Star*, March 7, 1975]

(Beginning February 21, 1975, the newspaper was renamed *The Washington Star and Daily News*, with *The Washington Star* its main banner.)

On March 17, 1975, President Ford was in South Bend, Indiana, in part to discuss the country's energy needs. He met with a group of Governors, including Governor Godwin. According to an account by Fred Barnes:

Godwin, a strong supporter of I-66, complained to Ford about environmental concerns that have held up construction of the road for years. In particular, Godwin said the Transportation Department was tardy in filing its final environmental statement.

Ford responded that he had supported the building of I-66 when he was a member of Congress. He voted to construct the Three Sisters Bridge across the Potomac River near Georgetown, but the President made no offer to take any steps in favor of I-66 now.

Later that month, the White House clarified that while the President favored construction of I-66, he would leave the decision to Secretary Coleman. Press Secretary Ronald Nessen said, "The President is just going to stay out of the whole thing. It is a matter that belongs in the Department of Transportation." [Barnes, Fred, "Ford to Keep Out of Ruling on I-66," *The Washington Star*, March 31, 1975]

In late May, Secretary Coleman announced he would hold a hearing on I-66 on June 21. It would be a 4-hour hearing. During the first hour, he would hear from elected officials who favor I-66 while elected officials opposing I-66 would speak during the second hour. After a half-hour intermission, he would hear from project supporters during the third hour and from opponents in the final hour. According to the *Star*:

Speakers are to be limited to 10 minutes each. If each group cannot agree on who will speak, Coleman said, names will be drawn from a hat. He said the first six drawn will be heard with the rest submitting written comments.

Reaction to the planned hearing was negative. James Govan of ACT said, "We have a gut reaction that anything with the title (public hearing) should be open to one and all." Representative Harris, who favored I-66, said, "That's no way to run a hearing."

Representative Fisher, an opponent, said, "People don't like to be put in a hat and be drawn out." The format would not "allow for a meaningful dialogue." He also pointed out that he been trying for a month to get a meeting with Secretary Coleman to discuss the issues. Secretary Coleman explained that such requests were why he decided on a public hearing:

Starting about a month ago I began to get telegrams, calls and letters from elected officials and private citizens, each of whom wanted to come in and talk to me . . . I didn't know when I could cut it off.

He also was concerned about the appearance of spending more time with either faction.

As for the format, he was thinking like the attorney he was. He said the format was fair because "the Supreme Court of the United States can have the most difficult case and they don't hear more than an hour or two hours" of testimony. If the hearing did not work, "I'm going to try some other method before I make decisions to see if I can't get people involved." [Crosby,

Thomas, "Sec. Coleman to Hold I-66 Hearing June 21," *The Washington Star*, May 31, 1975; Stone, Sue, "Still Another I-66 Hearing," *Fairfax Journal*, May 29, 1975]

Secretary Coleman held the hearing in the Departmental Auditorium at 1301 Constitution Avenue. He told the audience of about 300 that in addition to this hearing, he would accept written statements until June 28 and legal position papers until July 10. He would decide the fate of the proposed 10-mile segment of I-66 by August 1. He emphasized that although President Ford had recently asked him to find \$1.5 billion to complete Metro construction, his decision on I-66 would not be influenced by Metro's financial problems. "It's a separate decision and I want it not to be affected by (the fact that) the deletion of I-66 could be a source of money for Metro."

The *Post* reported:

The hearing yesterday brought out some 60 speakers about evenly divided between pro- and anti-highway stands. Sitting alone on stage in a high-back chair flanked by a map of the proposed I-66 route[,] Coleman questioned the speakers[,] instructing their spirited supporters that he came "to gather information first hand not to listen to applause."

. . . Coleman asked supporters and opponents to supply information on whether the Theodore Roosevelt Bridge was built on the assumption that I-66 would be constructed, whether that bridge could handle the traffic generated by I-66, whether local government can legally override planning decisions made by previous local governing bodies, and what effect the highway would have on the District.

Governor Godwin told Secretary Coleman, "I am convinced beyond all doubt that we must complete this highway." Citing its value for access to Dulles International Airport and western Virginia, he added, "If we had to wait for everyone to agree on every highway project we wouldn't have gotten so much built over the years." As for the withdrawal-substitution option, he said he would find it "extremely difficult . . . to take the position that the funds earmarked for this project should be diverted to mass transit." He said he was more likely to transfer the Interstate funds to routes in the Tidewater area.

State Senator Hirst said that State and Federal airport authorities had told him the route was needed to shift long-distance flights from Washington National Airport to Dulles International Airport.

Munsey of the Arlington County Board told him that, "Because of congestion in rush hour I-66 would be no improvement."

District Councilwoman Shackleton said, "We have reached the saturation point; our streets and parking lots are clogged, our air is foul, our lungs and our skin are burning and still the flood rolls in every morning unabated." All the District connections with I-66 beyond the Theodore Roosevelt Bridge were "in limbo." As a result, "for all practical purposes, I-66 would become one huge parking lot."

Representative Fisher said that 16 years earlier, "highway building was unquestioned; new ribbons of concrete were viewed as solutions to transportation problems." That view was no

longer valid. He said “we have learned” that highways cause problems such as air and noise pollution and the waste of gasoline.

The Reverend Jerry Moore said he was heading a drive to transfer the District’s remaining Interstate funds to Metro. He was “deeply disturbed” that Virginia “continues to ignore this option and to push a transportation facility that will encourage more, rather than less, automobiles.”

Harrison Mann, chairman of Citizens for I-66, pointed out that I-66 had been approved many times over the years. It should not be rejected now by “no-growth people, extreme environmentalists, and ‘automobile-is-outmoded’ enthusiasts.” He complained, “They would have us plow up our existing highways and plant them in daisies.”

Norman Worthington, executive director of the Arlington Chamber of Commerce, suggested that much of the I-66 traffic would be headed toward jobs in Rosslyn and Crystal City, not Washington.

WMATA Chairman Alexander told Secretary Coleman that if I-66 were not built, building Metro in the corridor would cost between \$50 and \$100 million more. However, State Senator Clive L. DuVal II indicated that an amendment to State law would allow WMATA to use the abandoned right-of-way without it being offered back to the previous owners.

Speakers differed on whether the public supported I-66. Several pro-I-66 speakers referred to the polls showing that 70-80 percent of northern Virginia residents supported the highway, but Emilia Govan pointed out that those polls were “open to various interpretations.” Referring to the U.S. Court of Appeals ruling in ACT’s suit, she described I-66 as “an idea whose time has passed.”

Secretary Coleman, a newcomer to the area who had only recently stopped driving from his rented home in McLean to Philadelphia on weekends, needed the map behind him because he had little knowledge of the geography of northern Virginia. The *Star* reported that, “Local Virginia officials spent part of yesterday’s five-hour hearing . . . coaching Secretary William T. Coleman Jr. about points of interest in Northern Virginia.” At one point, he asked, “Springfield, that’s on I-66, isn’t it?” No, Fairfax County Supervisor Herrity told him, “it’s on I-95,” adding that Springfield was where all the traffic that would use I-66 goes instead to connect with I-95. Fairfax City Manager Nathaniel Young needed several minutes to direct Secretary Coleman’s eye to the city’s place on the map (“No, in farther, sir, where Route 50 crosses 236”). Fairfax County Supervisor Martha V. Pennino, after helping Secretary Coleman find Centreville, said, “We welcome you to come anytime and ride with the commuters to the bottleneck at the Beltway and I-66.”)

The *Post* concluded its article:

Coleman, who ran the heavily guarded auditorium like a courtroom, commented little, except to say that he was “utterly impressed” with both speakers and audience. The difference between hearing their arguments and reading the “massive record” on his desk

“is the difference between night and day.” [Shaffer, Ron, “I-66 Completion Decision Set by Coleman for Aug. 1,” *The Washington Post*, June 22, 1975; Kast, Sheilah, “Coleman Comes to Grips With I-66 Problem – Just Where Is It?” *The Washington Star*, June 22, 1975]

By mid-July, a dispute had erupted over what would happen to right-of-way acquired for I-66 if the highway were not built. In legal briefs filed with Secretary Coleman in anticipation of his decision, Virginia Attorney General Andrew P. Miller said the State would have to sell the property, including property acquired for construction of Metro, back to the original owners.

Latto, the project opponents’ attorney, challenged Miller’s opinion. The *Post* explained:

Miller’s opinion appears to step up state government pressure for the road by making the six-mile Metro segment a legal hostage of the expressway. Much of the right of way for I-66 was acquired by the state Highway and Transportation Department before 1965 and 84 per cent had been acquired by the time work on the road was enjoined in 1971.

The rights of way would be sold back to their former owners for the original acquisition prices. The price Metro would then have to pay to buy the land for transit purposes would be much higher since the owners could take advantage of higher current market prices.

“There is no question but that this puts pressure on Mr. Coleman,” Metro spokesman Cody Pfanstiehl said in a telephone interview. “There is no doubt that it would cost us more money and create a long delay if we had to reacquire the right of way.”

Latto, however, did not think the resale issue was a “particularly important problem” because “it is clear that this won’t be necessary . . . .”

Miller and Latto cited identical sections of Virginia law in reaching opposite conclusions about what the law says on resale of land acquired for joint highway-transit purposes.

In general, State law allowed a State agency to hold land intended for highway use for 15 years (not counting litigation delays) before it must be resold, without interest, to any original owner who asks for return of the property. However, State legislation in 1973 (the amendment DuVal had cited) approved Metro’s use of the I-66 right-of-way if “construction of rapid transit shall conform with highway plans and that construction procedures shall be reviewed and approved by the state highway commissioner.”

Miller argued that, “The entire statute contemplates the existence of a highway. Without Interstate Route 66, there can be no median strip and thus no area for mass transit facilities.”

Latto, by contrast, said, “If the highway is disapproved, the only sensible interpretation of this provision is that it would be rendered ineffective by the disapproval of I-66 so that technical compliance with this requirement would no longer be necessary.” The only reason the General Assembly had inserted the conditions in 1973 was to ensure Metro would not interfere with

operation of I-66. If the road were not built, the possibility of interference would disappear, meaning the required approvals by State highway officials would not be an issue.

Latta added, moreover, that the General Assembly could change the vested rights of prior property owners. In fact, he pointed out, State law had been changed in the last session of the General Assembly to allow VDHT to hold the right-of-way without building I-66 for 15 years, instead of 12 years under previous law. Thus, even if Miller were correct in his interpretation of the 1973 amendment, he could be overruled. "If the right of repurchase can be postponed, there is no reason why the legislature cannot modify it further by providing, for example, that the repurchase right will not arise if the land is used for some other public purpose, such as construction of rapid transit facilities or for a public park." [Edwards, Paul G., "I-66 Right-of-Way Question a Possible Snag for Metro," *The Washington Post*, July 15, 1975]

The *Post* came out against I-66 in an editorial on July 24, just days before Secretary Coleman was scheduled to announce his decision. The decision had "already been decided by the elected representatives of the people most directly affected," despite the "fanatical tenacity by the Virginia State Highway Department in Richmond." Since no one claimed I-66 was essential to national defense, the only arguments justifying its construction were that it was essential to interstate commerce and that it was essential to the regional transportation system.

FHWA's proposal to ban heavy trucks meant I-66 was basically a commuter road because "you can't very well serve interstate commerce without trucks." Moreover, the area's TPB had determined that I-66 inside the Capital Beltway was "inconsistent with regional goals and objectives" and removed it from further regional transportation plans:

The basic issue, of course, is whether to continue on the road of recklessly uncontrolled "automobility" or whether Mr. Coleman and the Ford administration are serious about restoring a sensible balance between public and private transportation.

The editors dismissed the argument regarding resale of the right-of-way as having "little legal validity." Building Metro in the former I-66 right-of-way "would no doubt be somewhat more expensive" than building it in the I-66 median:

But the additional cost is in no proportion to the gain in parkland, much needed housing and livability that the final demise of the I-66 project would provide. This is not a decision that can be compromised. A little bit of inadequate freeway makes no more sense than all 10 destructive lanes of it. It is too much to ask the Secretary of Transportation to stand for. His office can afford to risk the wrath of a state highway department in the cause of advancing an emerging, new national transportation policy and of protecting the environmental interests of the people who live in the immediate vicinity. ["I-66: Mr. Coleman's Choice," *The Washington Post*, July 24, 1975]

True to his word, Secretary Coleman announced his decision on August 1, 1975. After describing FHWA's recommended six-lane I-66, with heavy trucks prohibited and Metro in the median, he said:

On the basis of the record and after consideration of the relevant issues of law, fact and public policy, I have decided to disapprove FHWA's recommendation to construct this segment of I-66 under the proposal submitted to me for approval. My reasons for disapproval are that (1) the improvement of existing roads and highways in the corridor and the extension of a Metro line to Vienna constitutes a prudent alternative that will meet the transportation needs of the metropolitan area in a manner which is more consistent with metropolitan development goals and planning objectives, and has fewer long term adverse consequences, and (2) the changed circumstances, including the probable end of the plans to build the Three Sisters Bridge and the adoption of the plan to build Metro, make the plans to build this segment of I-66 as an Interstate Highway no longer suitable.

This has been a difficult decision, which I have made reluctantly, because I have great respect for the important role of state governments in the Federal-aid Highway Program. The VDHT has done a creative and thorough job in designing a proposal for a modern multi-modal facility. But this is simply the wrong time and the wrong place for an otherwise excellent project.

I-66 was part of the Interstate System "– a system designed to connect principal metropolitan areas, cities and industrial centers and to serve national defense." The proposed route did not serve these purposes, "must be considered primarily a commuter road designed to serve people in the Washington metropolitan area," and was "no longer essential to completion of a unified and connected Interstate System." I-66 might alleviate congestion on Arlington streets, but "improved mass transit would provide a greater overall relief from congestion because it would not be a major artery inducing cars onto the Theodore Roosevelt Bridge." If the Three Sisters Bridge were not built, traffic crossing the Theodore Roosevelt Bridge would confront "greatly increased congestion."

Moreover, after reviewing the final EIS, "I have not been convinced that the construction of a six-lane highway would be substantially more effective in meeting the community's transportation than would be some of the alternatives." Moreover, the time "saved by commuters through use of I-66 does not outweigh the adverse impact of the highway's construction."

He pointed out the opposition of local bodies, the District of Columbia, and Federal agencies, including EPA ("it would result in concentrations of CO exceeding standards at various points of concentration"), the Council on Environmental Quality ("the need for the highway is not sufficiently established in view of the substantial adverse local and regional environmental impacts"), and the Federal Energy Agency ("would be inconsistent with the national goals of reducing our reliance on imported petroleum").

He acknowledged the dispute over what would happen to the right-of-way acquired for I-66, but did not consider it a major issue:

Since the estimated cost of the Vienna Metro line is in excess of \$350 million, costs related to I-66 do not appear to be a major part of this total. Over the long term, the presence of an Interstate highway serving the same corridor would divert operating

revenues from Metro, and compete with the objectives of a financially sound mass transit system that will be used by increasing numbers of commuters as they see the advantages of fast, safe, and efficient service.

He added that he had considered the benefit of I-66 to Dulles International Airport:

While construction of I-66 might improve trip time to Dulles Airport, the reduction in time would not be great (probably less than ten minutes) and there is doubt whether there will be any significant improvement during peak commuter hours.

He instructed FHWA to work with State, local, and Metro authorities to review alternative way to improve access between downtown in the District and the airport.

In conclusion, therefore, I disapprove the VDHT-FHWA proposal to build this segment of I-66. I instruct the FHWA to provide every possible assistance to the VDHT in developing any additional proposals, supplementing the “base case”, to improve transportation facilities in the corridor.

He listed several followup actions, including FHWA’s activities to improve access to Dulles International Airport. He also stated:

This decision is without prejudice to any further consideration on the part of the VDHT of the need for a non-Interstate commuter highway in the I-66 corridor if, after consultation with appropriate metropolitan authorities, the state finds it in the best interest of the metropolitan area to build a highway in the corridor, and if the proposal meets all the appropriate legal tests.

He also asked Deputy Under Secretary for Budget and Program Review Theodore “Ted” Lutz to “undertake a review of the financial requirements needed to complete the Metro line to Vienna and report to me on whether there are any impediments to completion of this project and whether the timetable for its completion may be accelerated.”

In addition, he directed UMTA to work with WMATA, TPB, and Virginia officials “to determine whether Federal assistance for any additional mass transit improvements would help to alleviate congestion in the I-66 corridor and make recommendations to me on this issue.”

Secretary Coleman, in his autobiography, discussed the I-66 decision, the “first controversial case I faced.” Although Virginia had submitted “a comprehensive environmental impact statement,” the proposal faced “a lot of opposition to the highway from within the District of Columbia and close-in Arlington County, Virginia, and a lot of strong support from the further-out suburban communities whose residents faced increasing congestion in their commute to jobs in the capital.”

He also had to consider the District’s decision to use the Interstate withdrawal-substitution mechanism of the Federal-Aid Highway Act of 1973 for the Three Sisters Bridge and other unbuilt Interstates, as well as the 1973-1974 energy crisis and the coming of Metro.

“Clearly there were disconnects in the planning of the two neighbors,” the District and Virginia:

On June 21, 1975, I held all-day public hearings and heard arguments by elected officials and organizations both for and against the proposal. After the hearing, I reviewed the extensive record and wrestled with the decision. I asked Don Bliss [Special Assistant Donald T. Bliss] to prepare two written decisions, one approving the project and one disapproving it. I outlined the issues for each and scheduled a press conference to explain my decision. The preceding evening, still at the office near midnight, I called in Don and told him I was going to disapprove the proposal. Although it was a well-designed proposal, this was simply the wrong place and the wrong time to build it. I was concerned that constructing a major new highway to serve peak-hour commuter traffic to an urban center was inconsistent with emerging policies on energy conservation, air quality, noise, conservation of public parks, and the quality of urban living. I was also concerned that an eight-lane highway would generate additional traffic congestion in Washington and promote land-use patterns that would increase reliance on the automobile at a time when we were promoting the use of public transit.

I told Don to add several qualifications to my decision of disapproval. The first was to direct the department to recommend ways to improve access to Dulles International Airport from downtown Washington and to improve public transit alternatives in the corridor that would alleviate congestion. The second was that my decision would be without prejudice to any further modified design proposal by the commonwealth of Virginia to build a highway in that corridor that would meet the environmental and other concerns raised in my decision.

Don pointed out that if I invited Virginia to submit another proposal, I probably would have no choice but to approve it. It simply was not fair to ask the Virginia Department of Transportation to expend millions of dollars in designing a new highway proposal and to disapprove it a second time. I told him that the condition was essential. I would not reject the eight-lane highway proposal without it. [Coleman, pages 259-260]

As he recalled, “reaction to my decision ranged from extremely favorable to extremely hostile.”

Deputy Commissioner Harwood said:

I really feel the people of Northern Virginia are going to be the losers. We’ve been accused of wanting to build a road for the sake of roads, but we felt we needed a facility there.

As for the issue of how Metro could acquire the right-of-way, he said, “This is going to be a right sticky legal question.” It was complicated by the fact that Metro did not need the full width of land acquired for I-66 – it needed only a 50-foot wide strip.

Harwood rejected Secretary Coleman’s suggestion that the State could build a commuter road in the corridor. “The idea of being able to finance a facility that would cost in the vicinity of \$200 million is just out of the question. We just don’t have the money.”

Governor Godwin deferred comment until he had reviewed Secretary Coleman's decision. However, he did not back off on his stated position that if I-66 were withdrawn from the Interstate System, he would use the substitution funds for Interstates in the Tidewater area.

Representative Fisher called Secretary Coleman's statement "a splendid, well-justified decision." As for Governor Godwin's view on the use of substitution funds, Representative Fisher said, "It looks too much like a narrow, spiteful action to peevishly take the money from the part of the state that it was planned to be spent in."

The decision revived talk of the toll option of financing construction without Federal funds. Fugate, however, did not favor that option. "We have a limited amount of state funds and our plans don't include building a road in the corridor without Interstate funds." The only thing he would say of the toll option was that it was "a possibility." One thing was clear: he did not want to use the Interstate withdrawal-substitution mechanism to benefit Metro construction. "Interstate highway money should be used for Interstate construction."

The funds should be transferred to other Interstate projects in the State. Fugate pointed out that the Department of Transportation had transferred Interstate funds earmarked for withdrawn Interstates in Maryland to other Interstate projects in the State. He pointed out gaps in the Tidewater area, such as gaps in I-264 between Norfolk and Portsmouth and I-664 between Hampton and Portsmouth. "The people who live in those areas are intensely interested in getting mileage to fill those gaps. They want it and want it badly." His position was "absolute," but he could not predict what the Virginia Highway Commission would decide.

Chairman Alexander of the WMATA board said, "Taxpayers in the area are getting tired of paying more and more for Metro. The obvious alternative . . . is to shift the funds earmarked for I-66 to the Metro system."

WMATA's Quenstedt pointed out that for years, the issue had been whether to build I-66. Now that the issue had been decided, "Now you get into all the technicalities."

Alan H. Magazine of the Northern Virginia Transportation Commission agreed:

One of the biggest problems in the state of Virginia is the fact that Fugate is a czar when it comes to highway planning and highway money. I think it's time someone should do something about removing him or get checks and balances for his decision-making powers. He's an appointed bureaucrat who has more power than most elected officials in Virginia, and I think it's absurd.

Deputy Undersecretary Lutz pointed out that Virginia, Maryland, and the District had about \$1.7 billion in Interstate construction funds that could be transferred to Metro as a partial solution to WMATA's financial problems. Ultimately, however, the decision was a State prerogative:

We can't say "no, you can't do that because we'd rather see the money transferred to Metro." We can't legally do that. Clearly the (state) government under the federal highway aid statute has tremendous power. If he [Governor Godwin] wanted to thumb

his nose at a certain part of the electorate in Northern Virginia, he could just about do that.

As for ACT, Emilia Govan, one of *Washingtonian* magazine's 10 Washingtonians of the Year in 1974, recalled how she and her husband had begun fighting I-66

We knew the highway was coming, but we didn't know its impact. We began to find we couldn't get any information on it. We asked the highway department about the noise, and they said, "Well, we'll put up a chain link fence," and we said that's not enough, and they said, "We'll cover it with ivy." That's the kind of insensitivity we faced.

An unnamed ACT member said of the Coleman decision, "We could have written it ourselves. And we probably did."

(In addition to Emilia Govan, the 1974 Washingtonians of the Year included Senator Eagleton, Mayor Washington, *Post* journalist William Raspberry, and the local radio team of Frank Harden and Jackson Weaver.)

[Shaffer, Ron, "Coleman Bars I-66 Between Beltway and Potomac," *The Washington Post*, August 2, 1975; Kast, Sheilah, "I-66 Rejection: More Problems Than Solutions," *The Washington Star*, August 2, 1975; Lyons, Douglas C., "Revenue Bond Toll Road Eyed For N. Virginia," *The Washington Post*, August 4, 1975; Shaffer, Ron, "Va. Aide Wants

I-66 Funds held From Metro Use," *The Washington Post*, August 5, 1975; Kast, Sheilah, "Ruling on I-66 Uncovers Some Strange Bedfellows," *The Washington Star*, August 7, 1975]

An editorial in the *Post* said that Secretary Coleman had turned down an I-66 roadway "that would have dumped still more combustion engines and their poisonous exhausts on an area that is already choking and smarting and has clearly reached the automotive saturation point." Now that "this seemingly endless freeway controversy is settled," the highest priority was to build the Metro line to Vienna. The Interstate withdrawal-substitution mechanism in the Federal-Aid Highway Act of 1973 offered the means "to help speed Metro":

So far Gov. Mills E. Godwin has declined comment on the use of highway funds for Metrorail construction. On reflection, however, the governor will surely not want to deny the citizens of his state the benefits – in jobs and other economic advantages, to say nothing of relieving highway traffic and air pollution – that speedy completion of the North Virginia Metro line would bring about. ["The Good News About I-66," *The Washington Post*, August 4, 1975].

Commenting editorially on the decision, the *Star* recalled the long history of the I-66 controversy. During that 20-year period, public attitudes had changed, leaving "a dearth of middle ground" on the project:

On one side, like Horatius at the bridge, has stood Virginia's powerful highway commissioner, Douglas Fugate, adamantly supporting the completion of I-66; opposing him with increasing muscle has been a coalition of citizen and government forces that has

grown into an effective lobby. The Interstate-66 issue, even more than the heated dispute over the Three Sisters Bridge, has become a classic chapter in the assault on the dominance of the automobile.

The *Star*, as the editorial acknowledged, had long supported I-66:

But now that the project has been deep-sixed – apparently for good – we can only hope that the rejection will galvanize transportation officials in our cross-jurisdictional territory: The lack of cohesive planning and action is leading this area to major trouble. It is not the notion of a madman that, in the foreseeable future, much of the metropolitan area could be turned into a waste-sink for air-borne pollutants – witness our severe air-quality problems right now.

As for State officials calling for the I-66 funds to be transferred to other Virginia Interstate projects, the *Star* agreed with Representative Fisher's comment that Governor Godwin's leaning in that direction "looks too much like a narrow spiteful action to peevishly take the money from the part of the state it was planned to be spent in." The *Star* hoped FHWA would consider the area's transit needs in considering what to do with those Interstate funds. "Metro must have a quick infusion." ["Unlinking Interstate 66," *The Evening Star*, August 6, 1975]

On August 7, Governor Godwin met with legislators from northern Virginia to discuss how I-66 substitution funds would be used. They wanted the funds to stay in northern Virginia. After the meeting, Governor Godwin told reporters, "The state has formulated no position on the matter." He said he would look for ways to use the Interstate funds from the Highway Trust Fund in northern Virginia before agreeing to the transfer of equivalent general Treasury funds to Metro. "If all of this money is diverted to Metro, it would leave Northern Virginia's traffic problem unsolved."

He said he told the delegation that State officials were "trying to approach the problem on every sound basis we know," adding, "But we want to keep our options open," as Associated Press explained:

Godwin noted that the Tidewater area "would love to have it" and Fugate said it could be used to expand the beltway now only partially complete around Richmond.

The governor said one alternative might be to try to use the money in Northern Virginia to either improve existing highways or build new ones. But he added that it would take congressional action to alter the existing disbursement formula under which federal interstate highway funds are made available.

The problem, Fugate pointed out, was that the Interstate withdrawal-substitution provision "clearly does not permit use of interstate highway funds for any other kind of highways." A change in the Federal law would be needed. As for that, Governor Godwin said, "I suppose anything is possible, but that would seem to be a remote possibility."

In response to the Governor's position, State Senator Leroy S. Bendheim of Alexandria, said, "It is clear that we are whistling in the dark if we think all of that money is going for Metro. Maybe

some of it, but certainly not all.” [Edwards, Paul G., “Godwin to Try to Use I-66 Funds in N. Va.,” *The Washington Post*, August 8, 1975; “Godwin: No Stand On I-66 Funds Yet,” Associated Press, *The Washington Star*, August 8, 1975]

The death of I-66 prompted the *Post* to interview the freeway’s chief opponents, Emilia and Jim Govan. In the 5 years of their freeway battles, Emilia said, “I’ve lost the use of a lot of space in the house,” which was located in Arlington at 1423 North Buchanan Street, five blocks from the rejected freeway. “Books, papers, boxes of papers, they’re everywhere. We got so we had to have two electric typewriters around just to keep up with the work.” With I-66 dead, she was hoping to reclaim some of the space.

Jim joked, “We couldn’t take it for two more years. We don’t have any more room to store our propaganda.” In a more serious tone, he added, “It was a very worthwhile effort. We obviously had results.” The accompanying photograph showed them in front of their home holding one of their large placards that read: ACT OR BE PAVED. I-66 NO!

The Govans met at Columbia University while pursuing graduate studies in political science. She was “the gregarious girl with the Brooklyn accent, he the Midwesterner with the flat voice from Harrisburg, Ill”:

He is a prematurely grey bespectacled man of 38, introspective and professorial. An official in the African bureau of the Agency for International Development, he is low key and soft spoken . . . .

Emilia Govan (37) attracts more attention. She is dark, engaging, volatile, quotable. A mother of two, she was working on her Ph. D. dissertation, a project she soon dropped when the I-66 fight arose. I-66 thrust her into the spotlight as it disrupted their peaceful suburban life.

They were unprepared for what they encountered during their successful battle against I-66:

“We’ve both taught political science in college (he at Williams College, she at Trinity College in Washington) but what we ran into is totally different from what we taught our students,” James Govan says.

“In the classroom, you teach what the laws are. But the fact that there is a law on the books doesn’t mean that’s the way things work. There’s no way to learn in a text book, for example, that the highway commissioner runs the state of Virginia. What we’ve dealt with are the innards of the system – the rules and regulations, the bureaucrats who run things on a day to day level.”

They found unresponsive bureaucrats, officials unwilling to take stands, and information hard to come by. At the start of the fight, Emilia said, “It was like citizens had never asked for this kind of information before [and] we were basically viewed as a public nuisance.”

As the *Post* recalled, they had been called “gooks,” “radicals,” and “misguided environmentalists” who “want to stop everything that moves.” Horace Mann of Citizens for I-66

described them as “no growth people, extreme environmentalists who think the automobile is outmoded . . . . They would have us plow up our existing highways and plant them in daisies.”

“Balding and bespectacled” Deputy Commissioner Harwood, 59 years old, had been with the State highway agency since 1935. Although he lived in Richmond, he had become so closely associated with the freeway, the *Post* said, that he was known as Mr. I-66. Harwood said:

I’ve spent a lot of time on it [I-66] and on studies and in the Washington area. We tried to cooperate with people but it was frustrating because we ran into so many roadblocks.

During public hearings, he chose his words carefully. “Despite heavy pressure from the highway’s opponents, Harwood never lost his temper. Instead, his face would grow dark as he carefully marshalled his words when replying to the sometimes heated attacks on the highway.”

A few days before the Coleman decision killed I-66, Harwood told the *Post* that I-66 was “almost a must if you are going to have any decent mobility in that area. All those communities are so committed to Metro that they can’t think rationally.”

In the end, he regretted that highway officials had “waited years for Metro to see if they wanted to go down the median. If we hadn’t waited we could have had this highway construction underway by now.” Thinking back, he said, “If we had it to do over again, we wouldn’t have been so cooperative.”

Still, the Govans had earned his grudging respect. On the one hand, they “represent a very small, but vocal minority. They seem to have an obsession with I-66. They think we’ve been unresponsive because we don’t hold the same view as they do.” On the other hand, he had to admit, “They’ve certainly put up a strong fight. I don’t think we’ve ever run up against anyone so persistent. They just don’t give up.”

As Harwood had said, the Govans had a different view. Emilia said, “This simply is not a good transportation facility to be building in the 1970s. We’ve reached a cross roads. This is the time when we have to say, ‘Stop building highways.’”

A reporter asked her what advice she would give to others trying to fight a planned highway:

The question catches her off guard. She mulls it over for a full minute, sitting in an old chrome and red leather chair in the living room. She glances at her husband across the room. Finally, she says:

“You have to tell people they have to be persistent.”

The important point was that I-66 inside the Capital Beltway was dead.

[Shaffer, Ron, and Nunes, Donnel, “5-Year Fights Ends in Victory for I-66 Foes,” *The Washington Post*, August 2, 1975; Peterson, Bill, “For the Govans, the Road To Victory Is Unpaved,” *The Washington Post*, August 21, 1975]

## **Upgrading the Baltimore-Washington Parkway**

When Maryland and the District of Columbia decided to withdraw I-95 from the Interstate System between the Capital Beltway and North-Central Freeway/Center Leg Freeway, they expected that I-95 traffic would access the city using the Baltimore-Washington Parkway. One way of making the connection was for traffic to link with the parkway via the Capital Beltway, which might have to be widened in Prince George's County to handle the traffic volumes. An alternative was that Maryland would build a connector between I-95 in the vicinity of Laurel and the parkway. Both options were based on plans to upgrade the Baltimore-Washington Parkway to Interstate standards while the District built the Industrial Parkway in the New York Avenue corridor to carry Interstate traffic between the parkway and the Center Leg Freeway. Through traffic on I-95 that did not need to go into the city would stay on the Capital Beltway between the Maryland and Virginia interchanges.

Section 146 of the Federal-Aid Highway Act of 1970 had authorized funds from the Highway Trust Fund, not to exceed \$65 million, "for reconstructing to six lanes the section of the Baltimore-Washington Parkway in the State of Maryland under the jurisdiction of the Secretary of the Interior to the geometric and construction standards for the National System of Interstate and Defense Highways." The funding was contingent on the Secretary of the Interior and the State highway department entering into an agreement that "upon completion or reconstruction the Secretary . . . will convey without monetary consideration" the parkway to the State. In addition, the State was to put the parkway on the Federal-aid primary system before expending the funds under Section 146. (The Interstate System is part of the primary system.)

As noted earlier, to reach agreement, Maryland and NPS officials, with FHWA's help, had to resolve issues such as: Which agency would provide police service and maintenance during construction when NPS would still own the highway that Maryland was reconstructing?

On June 9, 1972, NPS, Maryland, and FHWA completed an agreement under Section 146. The agreement provided for:

Maryland would place the parkway on the Federal-aid primary system and proceed with reconstruction in accordance with Federal-aid requirements;

Maryland and FHWA would agree on scheduling of work and other details;

All parties would pursue the project "expeditiously with the intention of completion of the entire Federal section within 48 months from the date of the award of the first construction contract";

FHWA would reimburse Maryland for all costs from the sums Congress authorized;

NPS would be responsible for maintenance of the parkway until construction and maintenance contracts were awarded, at which time "maintenance responsibility of the National Park Service for that segment of the Parkway shall terminate";

NPS would police the Federal section of the parkway “until such time as all or part of the Federal section is conveyed to the State of Maryland,” at which time the State would assume police jurisdiction;

Upon completion of reconstruction, NPS would convey the parkway to Maryland.

(The agreement also provided that NPS would transfer “all right, title and interest of the United States in the Suitland Parkway” to Maryland upon enactment of legislation authorizing the transfer, providing funds for reconstruction, and concurrence by the State on “the nature, extent, and standards” for reconstruction. This provision, not included in Section 146, was not carried out; the Suitland Parkway remains an NPS facility.)

The plan required comparable upgrading of the State section of the parkway in the vicinity of Baltimore to connect with I-95 in the city.

Maryland planned to engage a consultant to study two schemes for the Federal section of the parkway. Under one scheme, the parkway would be upgraded to full Interstate standards. Under the other, the parkway would be upgraded but only to the limits that the authorized \$65 million would allow. The contract would cover the environmental review and public hearings. However, the State did not award the consultant contract for 2 years.

On July 3, 1974, the Maryland Board of Public Works approved a \$1.2 million contract awarded to a team headed by Systems Design Concepts, Inc., which was headed by former Federal Highway Administrator Lowell K. Bridwell. The consultants would undertake preliminary engineering and other studies to determine how many lanes the reconstructed facility would have, including one option of six lanes with two reversible lanes in the middle.

Assistant State Transportation Secretary David H. Fisher, who had been involved in difficult negotiations about the parkway for 4 years, considered the contract a major step forward. Aside from the reconstruction to Interstate standards, he acknowledged that the project would address the main complaint about the parkway. The joints between concrete segments had sprung; the bumps and potholes turned the parkway into what Fisher called “one of the poorest roads” in the State from “an overall service point of view”:

The present concrete sections of roads are really in bad shape. The parkway needs major structural improvements. But we very much want to maintain the parklike nature of the road. The real problem is deciding how to do it.

He could not predict how long the consultants’ studies would take, but reconstruction would not begin until the late 1970s, at the earliest. [Rascovar, Barry C., “Baltimore-Washington Parkway Study Approved,” *The Baltimore Sun*, July 4, 1974; Barbash, Fred, “Widening of Parkway Is Projected,” *The Washington Post*, July 4, 1974; Rowland, James B., “Parkway Widening Pact Okayed,” *The Washington Star-News*, July 4, 1974]

On November 6, the MSHA held a “project initiation meeting” to allow the public to ask questions about plans for the parkway. M. Slade Cartrider, MSHA’s district engineer for the Washington suburbs, told the 100 or so people in the auditorium of Greenbelt Junior High

School, about the consultant's study of alternatives ranging from major widening to leaving things as they were.

As Jack Eisen put it, "A long-dormant proposal to widen the Baltimore-Washington Parkway . . . encountered a hostile reaction last night." Officials of towns along the parkway – Bladensburg, Cheverly, and Greenbelt – "conceded that some improvement to the 25-year-old parkway may be needed, but said the road should not be widened or opened to truck traffic." Mayor Susanna Cristofane of Bladensburg said "the parkway was a victim" of the decision to kill the extension of I-95 into Washington. Cheverly Councilman Joseph B. Jochum said the widening "would constitute a serious threat . . . because of the resulting air and noise pollution." Gil Weidenfeld, mayor pro tem of Greenbelt, said, "If . . . widening is necessitated by the proposal to use the parkway for I-95 traffic, such a use is opposed."

James Repace of the Prince Georges Environmental Coalition, called on MSHA to establish a citizen's advisory committee. MSHA should initiate "a rollback of the study to the beginnings" in July; that is, to start over.

Eisen characterized the comments as "subdued in their tone of delivery," but added, "not one of perhaps two dozen questioners indicated support for the project." [Eisen, Jack, "Parkway Widening Opposed at Meeting," *The Washington Post*, November 7, 1974]

The *Sun*'s James D. Dilts, who had reported extensively on the Baltimore freeway controversies, concluded after a similar project initiation meeting in Linthicum that another "highway battle is brewing" over the parkway proposal. He interviewed one of the opponents, Rhea L. Cohen of the Sierra Club and executive coordinator for the Regional Transportation Study Committee, who said the committee's purpose was "to force the local and state agencies to look at transportation planning on a regional level." She told Dilts that 32 highway lanes connect Baltimore and Washington – in Prince George's County alone. "We want the parkway to be improved – the on-off ramps and safety factors." She thought access into Washington was adequate, especially in view of the planned rail rapid transit for the area.

State Highway Administrator Bernard M. Evans did not agree with Cohen that adequate access was available for the Washington area. "There are more cars on [the parkway] than it wants to handle – furthermore, it is dangerous." The consultants were studying a range of options, adding that the last thing MSHA wanted to do was "turn [the parkway] into a Ritchie highway mess instead of the gorgeous parkway that it is."

(According to a 1987 two-part article in the *Sun*, Ritchie Highway, named after former Governor Albert Ritchie (1920-1935), was "envisioned as a pleasant, tree-shaded boulevard" between Baltimore and Annapolis. It opened on April 26, 1940, "with a grand parade of military bands, marching units and floats through the streets of Annapolis":

Barely six months after Ritchie Highway opened, a State legislative council report complained of "a conglomeration of structures," and "commercial and residential exploitation of the roadside" that was threatening "the state's newest road."

(In the absence of access control, every parcel fronting the highway had access to it. The result was that by 1987:

Ritchie Highway has become a nightmare of neon, fast food, malls and exhaust fumes. The traffic lanes are crammed with lines of cars and trucks that stretch out and squeeze together like the bellows of an accordion as they crawl from one light to the next . . . .

The State Highway Administration . . . ranks Ritchie Highway as one of the most dangerous roads in the State. [McCord, Joel, "Ritchie Highway: Showpiece Is Now a Nightmare" and "Creeping Commercialism Spelled Doom for Ritchie Highway's Boulevard Look," *The Baltimore Sun*, February 15, 1987])

Bridwell told Dilts the study would take about a year, after which public hearings would be held. If the parkway were widened by one lane in each direction, Bridwell pointed out, MSHA would not have to tear down the steel and reinforced concrete bridges faced with natural stone that contributed to the parkway design. [Dilts, James D., "Battle Brews on Widening of Baltimore-D.C. Road," *The Baltimore Sun*, December 9, 1974]

On April 6, 1975, Bridwell's team recommended that in addition to the plan simply to resurface the parkway without widening, MSHA should consider five proposals:

Reconstructing it into a triple roadway, with a six-lane arterial, plus a two-lane busway in the middle;

Widening the entire parkway to six lanes for all traffic, including automobiles, buses, and trucks (at present, only the section from Annapolis Road/Maryland Route 450 into the District had six lanes);

Widening the parkway to six lanes for automobiles and buses, but not trucks, with special bus lanes added south of Maryland Route 450;

Widening the parkway by two lanes and permitting trucks, without special bus lanes; and

Widening the parkway by two lanes, permitting all traffic, while adding special bus lanes to Maryland Route 450.

The MSHA planned to present the recommendations at two workshops to receive public comments. Eisen concluded that the proposals "seem sure to generate controversy." [Eisen, Jack, "5 Plans Offered for Parkway Widening," *The Washington Post*, April 7, 1975]

As Eisen predicted, the workshops were attended by what the *Sun* called "an audience of nonbelievers":

. . . citizens challenged the "credibility" of the road planners. They also disputed the need for two parallel interstate highways, Interstate 95 and the parkway . . . .

“We’ve been lied to all down the garden path before,” said a Linthicum man who refused to give his name . . . . Citing Prince Georges county residents’ successful battle against extending I-95 inside the Capital Beltway, several citizens said the widening plan represented an effort to turn the parkway into “the major north-south artery” between Baltimore and Washington as well as the route for “East Coast traffic.” [“Plan to Widen D.C. Parkway Stirs Protest,” *The Baltimore Sun*, April 19, 1975]

The *Star*’s editors joined the citizens in opposing the reconstruction project:

The Maryland highway people seem intent on transforming the Baltimore-Washington Parkway, one of the few roadways in this area that has aesthetic merit, into another barren concrete apron – like Interstate 95. That would be an abomination. At some point in our slavish accommodation of the automobile, we must begin to balance values, and very soon.

The editors favored simply resurfacing the parkway or improving the present four lanes to Interstate standards of interchange and safety design. “However, other proposals are grotesque.” They “would be nothing less than a despoilation, a bureaucratic vandalism.” NPS, which “has been anxious to shed jurisdiction over its 19 miles of the parkway for years,” would accept almost anything Maryland proposed. “But the federal government will be grossly negligent if it accepts a ravaging of the parkway’s splendid pastoral sweep as the price for ridding itself of an inconvenience.”

The editorial concluded:

By all means resurface the parkway; by all means upgrade safety features. But isn’t it clear by now that trying to solve traffic problems by adding more lanes to more roads is not the answer? We fear the end result may recall Tacitus’s comment about the rapacious surges of the Roman Empire on its frontiers: “Where they make a desert, they call it peace.” Substitute “Progress” for “peace” and worry for the future of the Baltimore-Washington Parkway. [“Threat to the Parkway,” *The Washington Star*, April 23, 1975]

While Maryland officials decided how to proceed, Congress agreed in December to a proposal by Representative Long to appropriate \$5.7 million to resurface the Federal parkway to accommodate Bicentennial traffic. The work, which began in April 1976, included paving repairs with a surface of asphalt over the existing concrete, all-weather shoulders, and some new guardrail. NPS planned to maintain two-way traffic throughout the construction period, but only one lane would be open in each direction for much of the day. The exceptions would be peak periods, Sunday afternoons, and holiday weekends. Repaving would be completed in October 1976.

In June 1976, MSHA decided to study three of the alternatives in greater detail:

- (1) Rehabilitate bridges and roads, plus safety improvements, without new lanes (\$46.3 million, but increased to \$104 million if new interchanges were included);
- (2) Retain four lanes for most of the parkway, but extend the six lanes section from

- Maryland Route 450 to the Capital Beltway (\$162 million); and
- (3) Widen the entire parkway by two lanes, with some of the added capacity restricted to buses and carpools (\$204.2 million).

In addition, MSHA had asked Congress to appropriate \$6.9 million of the authorized \$65 million to begin the reconstruction. The House Committee on Appropriations turned down the request. Its report on the Department of Transportation and Related Agencies Appropriation Act, 1977, stated, "Since work on . . . resurfacing is currently under way, the committee does not feel there is an urgent need to reconstruct the parkway." [Eisen, Jack, "Parkway Rebuilding: 1 Step Forward, 1 Back," *The Washington Post*, June 10, 1976]

MSHA announced in July 1976 that it had decided not to allow truck traffic on the parkway. Instead, MSHA officials had narrowed consideration to three plans that they said would cause the least damage to the parkway's wide scenic median: (1) a "no build" alternative that would upgrade the parkway to current design and safety standards; (2) widen to six lanes only the section of the parkway outside the Baltimore and Capital Beltways; and (3) widen the parkway to six lanes between Baltimore and the Capital Beltway, allow trucks between Baltimore and the Baltimore-Washington International Airport, and widen the parkway to eight lanes between the Capital Beltway and the District.

The *Sun* explained:

Extensive truck service on the 22-year-old road was rejected in the consultant study because of the congestion problems it would cause and also because trucks can now operate on the under-utilized section of Interstate 95, which parallels the parkway.

The consultants also discounted plans for widening the parkway to eight lanes because it would add further congestion to local Washington roads, would divert traffic from I-95 and would severely damage the parkland portions of the route.

Systems Design Concepts estimated that the draft EIS would be completed in April 1976, with the final EIS scheduled for September 1976. MSHA estimated that construction of the selected alternative could not begin before 1979 or 1980. [Rascovar, Barry C., "Parkway Plans Narrowed," *The Baltimore Sun*, July 5, 1976]

The MSHA was unable to resolve the conflicts involved in converting the parkway to Interstate standards. However, MSHA could not use the \$65 million authorized in 1970 for any other purpose. Accordingly, on August 18, 1978, while the Senate considered the pending Federal-Aid Highway Act of 1978, Senator Mathias introduced an amendment:

#### Baltimore-Washington Parkway

Sec. 146. Section 146(a) of the Federal-Aid Highway Act of 1970 is amended (1) by striking out "to six lanes" and (2) by striking out "for the National System of Interstate and Defense Highways" and inserting in lieu thereof a comma and "agreed upon by the Secretary of Transportation and the Secretary of Transportation of the State of Maryland, which preserve the Parkway characteristics."

Senator Mathias informed his colleagues that this amendment reflected an agreement FHWA had worked out with the Maryland Department of Transportation:

The 1970 legislation stated that the roadway was to be rebuilt to interstate standards, which meant a significant widening of the roadway and interchanges, additional lanes, and a high cost. This would mean a substantial change in the character of the Parkway.

Subsequent planning, environmental reviews, and citizens [sic] participation concerning the rebuilding of the Parkway led highway planners to conclude that the parkway-like setting should be retained. As many of my colleagues know, the Baltimore-Washington Parkway is one of the more pleasant roadways linking Baltimore and Washington with its green spaces, trees, and buffers from the adjacent urban areas.

His amendment “simply authorizes” FHWA and MSHA to decide on the appropriate standards to apply to reconstruction “in keeping with the parkway nature of the roadway.”

Two leaders of the Committee on Environment and Public Works endorsed the amendment. Senator Bentsen, manager of the Senate bill, called the amendment “an admirable thing to do” to protect “a beautiful parkway.” Chairman John H. Chafee (R-RI) said:

Mr. President, let me say this is not only an excellent amendment, but it makes one wonder why it is necessary, why we are so bogged down in bureaucracy that in order to maintain a beautiful highway like the Baltimore-Washington Parkway, we have to have a special act of Congress in order to retain its beauty and yet have it deemed an interstate road. It makes us wonder about some of the procedures around here.

I commend the Senator from Maryland for his amendment. I am delighted that the beauty of that road can be preserved.

The amendment was adopted without objection. [Federal-Aid Highway Act of 1978, *Congressional Record-Senate*, August 18, 1978, page 26943]

The provision survived as Section 130 of the Surface Transportation Assistance Act of 1978. President Carter signed the legislation on November 6, 1978 (P.L. 95-599).

In early January 1980, Caltrider, by then the State Highway Administrator, and FHWA were discussing the scope and costs of a proposal for parkway improvements. However, the most comprehensive proposal under consideration would cost about \$150 million, with MSHA then responsible for maintenance costs of as much as \$100,000 a year after NPS transferred the facility to the State. This option, favored by MSHA, involved widening and resurfacing the Federal segment, strengthening and paving shoulders, and rebuilding some interchanges for safety reasons. Caltrider emphasized that this option would retain the facility’s “parklike setting.” The additional lanes would be built in the median, which he said had been graded to accept additional lanes when the parkway had been built.

The no-build option was still under consideration, along with the minor improvement option (widening the Federal parkway to six lanes, resurfacing it, and making safety improvements such as lengthening merging areas for interchange access).

The *Sun* reported:

The state highway administrator said yesterday that he has told federal officials “unless we can get a full-scale rejuvenation, I’m not in favor of taking it over.”

He added that the maintenance costs would be “a drain on Maryland taxpayers” and that he considered “voiding the take-over agreement.” [Trammer, Monte I., “Option on Take-Over of Parkway Studied, *The Baltimore Sun*, January 31, 1980]

By then, the United States was experiencing its second energy crisis. It began in February 1979 following the revolution that replaced the Shah of Iran with Ayatollah Ruhollah Khomeini. He transformed the country into an Islamic Republic. The change disrupted the flow of oil from Iran, previously the second largest oil supplier to the world. The Iran-Iraq War, which began in September 1980 and lasted until 1988, also cut oil production in Iraq. With the oil shock of 1973-1974 in mind, oil companies bought oil to stockpile in excess of immediate need while motorists began forming long lines at gas stations as prices increased. As had happened in the previous oil crisis, conservation efforts reduced gas tax receipts at the Federal and State levels.

According to an internal 1982 FHWA briefing paper, Caltrider’s position in January 1980 was that the State would not accept ownership of the Federal parkway unless the reconstruction “was of sufficient scope to preclude the need for further capital improvements for at least twenty years,” as reflected in MSHA’s preferred option. “In May, 1980, Maryland revised their position, indicating they were no longer willing to accept ownership regardless of the scope of reconstruction.” [Underlining in original]

Caltrider reiterated MSHA’s position regarding ownership in February 1981, and stated it formally on July 29, 1981, in a letter to NPS Regional Director Manus J. Fish, Jr., and FHWA’s Maryland Division Administrator, Emil Elinsky. The letter began:

Over the past year, we have participated in a number of meetings and have exchanged correspondence concerning the future of the Federal section of the Baltimore/Washington Parkway. The purpose of this letter is to confirm the position of the State of Maryland that we will not assume jurisdiction over the Federal section of the Baltimore/Washington Parkway. Based upon our most recent discussions, it is my understanding that the National Park Service and the Federal Highway Administration understand and can accept the basis for our position.

He recalled the 1972 agreement and the legislative change in 1978 calling for retaining the parkway character of the facility. Studies thus far indicated the cost of rebuilding the Federal parkway to Maryland’s satisfaction would exceed the \$65 million authorized in 1970:

Depending on the specific alternate which may have been selected, such a project could range in cost somewhere between \$200 and \$300 million for the Federal section alone.

Many have expressed the opinion that such a cost would be excessive, especially in light of the close proximity of the major parallel facility of Interstate Route 95 north of the Capital Beltway.

As a result of severe financial constraints, the State can not assure that the level of maintenance effort required to preserve the aesthetic character of the Parkway on an ongoing basis is affordable within an extremely tight maintenance and operating budget situation, particularly when landscaping projects and mowing frequency are being severely reduced on other State Highway facilities.

Traffic was inevitably going to increase on I-95 and the parkway. Therefore, Caltrider recommended that NPS undertake "3R" improvements (resurfacing, restoring, and rehabilitating) to the Federal section to supplement the stop-gap measures undertaken in anticipation of the Bicentennial.

Caltrider concluded:

In sum, we look forward to continuing to work cooperatively with the Federal Highway Administration and the National Park Service toward actions which will (1) result in "3R" improvements on the Federal Section of the B/W Parkway; (2) amend the existing legislation and agreements in such a manner that the Federal Government will continue to maintain jurisdiction over their portion of the B/W Parkway; and (3) provide for long-term improvements to the B/W Parkway at key interchanges where connections to the State system warrant.

Former Secretary of Transportation Harry S. Hughes had become Governor of Maryland on January 17, 1979. When his Secretary of Transportation, James J. O'Donnell, retired in 1981, Governor Hughes appointed former Federal Highway Administrator Bridwell to the position of Secretary. He assumed the post on November 1, 1981. Bridwell, who lived in Columbia between Baltimore and Washington, had been part of the task force that created the Maryland Department of Transportation, while his firm, System Design Concepts, Inc., had performed consultant work on numerous State transportation projects, including the Baltimore-Washington Parkway study. [Linthicum, Tom, "Former Federal Official Named State Transportation Secretary," *The Baltimore Sun*, October 3, 1981]

The FHWA briefing concluded:

The NPS and FHWA initiated joint efforts to develop both the necessary legislation to assure adequate funding and continued NPS ownership and a preliminary plan for RRR improvements. However, this effort was suspended soon after Mr. Lowell K. Bridwell's [sic] was appointed as Maryland's Secretary of Transportation to provide him an opportunity, if interested, to review Maryland's position. To date, Mr. Bridwell has not indicated any position on the matter.

Section 156 (Release of Condition Relating to Conveyance of Certain Highway) of the Surface Transportation and Uniform Relocation Assistance Act of 1987, approved on April 2, 1987

(P.L. 100-17), stated that notwithstanding Section 146 of the 1970 Act and any agreement entered into under the provision, “no conveyance of any road or portion thereof shall be required to be made under such paragraph or agreement to the State of Maryland and the State of Maryland shall not be required to accept conveyance of any such road or portion. Funds authorized by such section may be obligated and expended without regard to any requirement of such paragraph or agreement that such conveyance be made.”

In April 1984, FHWA’s Eastern Federal Highway Division completed its study for NPS on improving the parkway. It then began administering design and construction activities in cooperation with NPS.

In Section 1069 (Miscellaneous Highway Project Authorizations) of the Intermodal Surface Transportation Efficiency Act of 1991, approved December 18, 1991 (P.L. 102-240), Congress authorized \$74 million to be appropriated for renovation and reconstruction of the Baltimore-Washington Parkway in Prince George’s County, with a Federal share of 100 percent.

Sections 1601 and 1602 of the Transportation Equity Act for the 21<sup>st</sup> Century, approved on

June 9, 1998 (P.L. 105-178), authorized the Secretary to allocate \$11.25 million to carry out an earmarked project, “Reconstruct Baltimore-Washington Parkway at Route 197, Prince Georges County,” again with a 100-percent Federal share. [Baltimore-Washington Parkway, *A Guide to Federal-Aid Programs And Federal Projects*, FHWA, Publication No. FHWA-IF-99-006, May 1999, pages 125-126]

On June 4, 1984, a ceremony took place near the parkway’s intersection with Maryland Route 450 in Cheverly to unveil a large wood and stone marker:

This Parkway Dedicated  
To  
Gladys Noon Spellman

On October 31, 1980, Representative Spellman was campaigning for reelection when she suffered a heart attack that left her in a coma. Speakers recalled Representative Spellman’s efforts on behalf of the parkway, which was the road she used to commute between her home in Cheverly and Capitol Hill.

A second marker was placed on the other end of the Federal parkway. Maryland had previously renamed its segment the Gladys Noon Spellman Parkway.

(Former Representative Spellman never awoke from her coma. She died on June 19, 1988.)

Subsequent efforts to widen the parkway met the same fate as the effort initiated by the Federal-Aid Highway Act of 1970. Each effort was confronted by strong opposition from citizens and local officials. The Federal portion of the Baltimore-Washington Parkway remains four lanes, except for the six-lane segment approaching the split terminus into Washington via New York Avenue or DC 295/I-295 to Virginia. The parkway is heavily congested during peak periods and many off-peak periods, but its parkway design and safety features have been enhanced over the

years. During the fall, motorists can enjoy a beautiful drive amidst the changing colors of the leaves.

### **Metro – Open At Last**

As 1975 ended and 1976 began, Metro's financial problems had become a major challenge as WMATA was forced to acknowledge an increased cost estimate, prompting local jurisdictions, confronting their own fiscal problems, to resist paying their increased share. Professor Schrag offered several reasons for the cost increases. First, the original estimate of \$2,494.6 million, including \$535.4 million in contingency costs, "was never terribly realistic." Its precision, down to the last hundred thousand dollars "should have shown that it was not meant as an accurate estimate," because no project of this size could be estimated to that degree so early in its development. "Jackson Graham's own assistant suspected that Graham had pulled the figure out of thin air."

Second, construction was harder than expected at the time of the original estimates:

Underground construction is always full of surprises – rock that is too hard, earth that is too soft, all those unmapped utilities. Strikes, storms, and lawsuits could delay construction and add to the cost . . . . When the Authority was able to offer contracts in 1969 and 1970, it was dismayed at low bids up to a third higher than its engineers had expected.

Third, changes needed to "mollify agencies, businesses, and citizens drove up costs." While changes were sometimes needed and may have benefited the region, "they destroyed engineers' projections."

Fourth, wrote Schrag, "and by far most significant, were the interlinked issues of inflation and delay." The original estimate in 1968 was based on possible inflation up to 5 percent, but increases would escalate due to factors well beyond WMATA's control, including the Vietnam War and the oil embargo of late 1973 and early 1974. Inflation hit 12 percent early in 1975, affecting the cost of materials and labor and the interest required for construction bonds. [Schrag, pages 171-174]

In theory, WMATA could have raised planned fares to address the cost increases. "Indeed," Professor Schrag wrote, "from the early 1960s through the early 1970s this was the official plan . . . . As late as January 1972, the Authority predicted that the fare box would pay all operating and some capital costs. If costs went up, fares would simply be raised by the same percentage, neutralizing inflation."

That was only in theory. "That idea died in 1973, with WMATA's takeover of the metropolitan area's buses." As noted, O. Roy Chalk had granted pay increases to his union employees, recent fare increases had been overturned in court, and the private sector bus managers and public sector Metro officials shared, as noted earlier, a "mutual dislike." With revenue from fares covering only half of bus costs by November 1974, WMATA realized that raising fares would be difficult

and that doing so could conflict with the public service the agency was created to provide.  
[Schrag, page 178]

As General Graham retired from WMATA at the end of 1975, WMATA had to address a new report by Damian Kulash of Jack Faucett Associates. Commissioned by the Congressional Research Service, the January 1976 report rejected WMATA's passenger projections, arguing that ridership would be only half the predicted level:

Given these concerns, the report suggested that the federal government deny funding to any segments beyond the forty-one miles then under construction until it had undertaken "a thorough alternatives analysis" that would consider cutting Metro down to sixty-eight or even forty-one miles.

Kulash felt that he had merely put into print what everyone familiar with the project had been whispering in the hallways, but even that action had consequences.

Representative Conte, the Massachusetts Congressman who had helped defeat Chairman Natcher's final effort to withhold District matching funds for Metro, cited the Faucett report "as evidence for truncation," a solution many local officials considered as an alternative to finding the additional revenue to complete the Metro system. Representative Gude, however, said, "If there are interests who wish to kill this system, we can't think of a better way to do it than to stop in mid-stream for a re-study." [Schrag, page 184]

In this context, the opening of Metro service was a looming bright spot. "At the time of the ground breaking, WMATA officials had still hoped to have the first segment of Metro in operation by July 1973 and the system complete by the end of 1979." Several factors rendered those dates obsolete:

Natcher's final round of blackmail in 1971 destroyed that hope. Interruptions in funding, indecision over Union Station, strikes, hurricanes, and court-ordered public hearings all had pushed back the opening date. Ironically, when WMATA finally had all the track and stations ready for the first 4.6-mile segment, it still had to wait for working rail cars. The Rohr company, an aerospace firm that was also building cars for BART in the San Francisco Bay Area, had found the rail business more difficult than it had anticipated and was soon in trouble on both coasts . . . . In Washington, the company delivered its first pair of cars in January 1975, half a year late and creaking with defects. The emergency brakes tended to go on unexpectedly, the air conditioning was noisy, and the cars swayed violently. For the next year, WMATA worked to coax forty working cars out of Rohr's Georgia factory and underneath Washington's streets, while Rohr coped with close to

\$50 million in losses on the contract. [Schrag, pages 184-185]

On Saturday, March 27, 1976, WMATA finally opened a 4.6-mile segment of Metro to front page articles in the *Post* and *Star*. The segment linked the Farragut North and Rhode Island Avenue stations – or as Chairman Eagleton of the Senate District Committee put it, a line from "nowhere to nowhere."

The opening “Metro Here and Now” dedication ceremony, staged in the parking lot of the Rhode Island Avenue station, included speeches from local dignitaries and figures from out of the past, including Darwin Stolzenbach, Walter McCarter, and General Graham.

Maryland Governor Mandel acknowledged the existence of “a lot of doubters and a lot of skeptics, and there still are today. This system is going to be completed – and we are going to make sure.” Governor Godwin declined an invitation to the event, but his representative, Secretary of Transportation Whitham, said, “We do have a strong feeling that it’s important for the Metro system to be completed, and we hope the economics make it possible.”

UMTA Administrator Patricelli assured the crowd of continued Federal support. “We want to see it completed. We have indicated that it can and should be completed . . . with prudent management of the resources that are available.”

Mayor Washington also acknowledged the “doubting Thomasas” who thought the subway would never open. “The Metro will bind us all in the metropolitan area closer, bring us all together at our jobs and in understanding each other’s cultures, to a point at which we know and understand each other better.” He added that this day “will be your last free ride – and that’s no stage joke.” Fares would be collected after Saturday.

City council and Metro Board Chairman Sterling Tucker told the 3,000 spectators that they should “doubt no more that Metro is here – 96 miles more is very much on the way.” He added, “it is time to stop talking and start riding.”

Joined by the other officials, Tucker cut a ribbon to open the first Metro line.

On Saturday, 51,260 people rode the 4.6-mile line on opening day, with many riders enduring waits of up to 4 hours to get on the train. So many people crammed into each car that many of them stalled because the doors could not shut properly. [Eisen, Jack, “Metro Opens; Crowds Stall Some Trains,” *The Washington Post*, March 28, 1976; Crosby, Thomas, and Axelrod, Susan, “Metro Era Begins: 51,260 Free Riders Swamp System,” *The Washington Star*, March 28, 1976]

The line was closed on Sunday, but reopened on Monday at 6 a.m. to carry about 10,000 fare-paying customers until closing time at 8 p.m. Peak period trains ran every 5 minutes, with passengers charged 55 cents. Off-peak trains were on a 10-minute cycle, with fares of 40 cents. Because the computerized fare collection system had not been delivered, Metro had to collect fares in the traditional fare boxes common on Metrobuses.

Carlton Sickles, who had been involved with Metro from the start, was one of the passengers. He told Eisen that while working on the project in the 1950s, it seemed to be an unfulfillable dream. Now, he said, “I’m enjoying every minute of it after years of waiting.” Eisen called Sickles among “the most delighted passengers yesterday.”

Although the Monday ridership was higher than expected, the trains operated smoothly, with only a few exceptions, as Eisen reported:

Metro operated 188 of a scheduled 224 round trips during the day according to Cody Pfanstiehl, community relations director. Most of the 36 lost trips resulted from disruptions shortly after noon and in the early evening shortly before service was ended for the day, Pfanstiehl said . . . .

Service began at 6 a.m. from the Rhode Island Avenue station at the outer end of the line, and ran almost like clockwork until the noon hour. A balky switch at a track junction delayed the start of outbound service from Farragut North by 15 minutes, and the first train departed at 6:20 instead of 6:05.

The day's longest delay – 53 minutes – came about 12:30 p.m., when a train developed brake problems while switching to reverse direction on track north of the Rhode Island Avenue Station, Pfanstiehl said. No passengers were aboard, but other trains backed up behind the stalled one. [Eisen, Jack, "Metro Use Surpasses Estimate," *The Washington Post*, March 30, 1976]

During the first week of paid service, Metro carried more than 100,000 passengers. Because that number was more than expected, officials wondered if it was accurate. Metro spokeswoman Marilyn McGinty said, "The fare attendants have been taking the count by hand." She thought they might be clicking the hand-held clickers too many times. "The only way to really tell how well we did is after we count the money." [Crosby, Thomas, "Metro Can't Believe Its Own Body Count," *The Washington Star*, April 2, 1976]

Nevertheless, encouraged by the results, Acting General Manager Quenstedt said that officials were considering running Metro on weekends for tourists and shoppers. [Eisen, Jack, "Metro Riders Top 100,000 in Week," *The Washington Post*, April 3, 1976]

Professor Schrag summarized what the results meant:

On Monday, 29 March, the Authority began actually charging money for rides, yet it still attracted 25,000 riders a day to the tiny stub of a rail line. The subway was a hit.

The elation did little to distract WMATA officials from the gun pointed at their heads. Despite the crowds each day WMATA spent \$75,000 more to run the system than could be collected from fares. On Independence Day, the long-awaited Bicentennial, WMATA was humiliated by its failure to marshal enough buses to serve the crowds of fireworks spectators on the Mall. A few days later, it released a new cost estimate of \$5.512 billion, including \$487 million in contingency funds.

Meanwhile, within the administration, officials from the Department of Transportation and OMB had agreed on a \$4.65 billion ceiling for the project. If the entire system could be built for that amount, fine. If not, OMB indicated "shrinking the system to stay within that commitment." Secretary of Transportation William Coleman, warmer toward Metro than OMB budget hawks, moderated that position only slightly, announcing that any federal assistance for a system costing more than the ceiling would only come after WMATA demonstrated "extraordinary efforts to contain costs."

In short, Metro was at least \$800 million in the hole. [Schrag, page 186]

Secretary Coleman, in his autobiography, discussed his efforts to address the funding shortfall:

The Washington Metropolitan Area Transit Authority, or Metro, plan had been carefully designed to serve the District of Columbia and the Maryland and Virginia suburbs in a way that would ensure community and financial support from each jurisdiction. Two federal dollars would be provided for every local dollar contributed. Construction of the first lines was under way. In 1969 the initial projected cost was grossly underestimated at about \$3 billion. By the time I took office, the projection was up to almost \$5 billion . . . . The Nixon administration had guaranteed about a billion dollars in bond financing to build the subway, but as the cost projections escalated, this proved to be woefully inadequate.

With the skillful assistance of my budget director Ted Lutz, my deputy John Barnum, and my general counsel's office, and with the wise advice and cooperation of Walter Washington, mayor of the District of Columbia . . . we proposed to use newly authorized congressional authority to transfer interstate highway funding to the transit authority for subway construction. This meant that portions of the interstate system planned for the District of Columbia would never be built and that Metro would be an essential method of commuting from the suburbs to government jobs in the city.

Secretary Coleman and his team expected the transfers would raise almost a billion dollars, but that would not be enough:

We had made a proposal to the Office of Management and Budget for an additional \$1.26 billion, which Jim Lynn, director of the agency, thought was overly extravagant. In fact, he viewed the transit authority's ninety-eight-mile subway plan as far too expansive and expensive. It would be the largest public works project since the interstate highway system. Conservatives had criticized Metro as an exorbitant display of big government in Washington using the taxpayers' money to be a monument to itself. They referred to the proposal as the biggest boondoggle in the history of mankind. Instead, Lynn proposed a truncated forty-one- or sixty-eight-mile system.

As explained in Secretary Coleman's autobiography, he continued working with local jurisdictions to find ways to "serve the entire metropolitan area fairly, facilitate the commute for the many government employees who lived in distant suburbs, and provide a first-class transportation system for tourists and visitors to the nation's capital from all over the world, comparable to the grand systems in London, Paris, or Moscow." In short, "I was not about to give up on the ninety-eight-mile plan."

He scheduled a meeting with President Ford, who had recently called on Lynn to find ways to cut the Federal deficit:

The atmosphere was tense as Ted Lutz, Don Bliss, and I entered the Oval Office on a Monday morning. Director Lynn argued eloquently for the scaled-back plan, making a

number of points that resonated with the fiscally conservative president. I explained the importance of sticking with the original plan to which all the local jurisdictions had committed. I didn't appear to be making much headway with the president, so I ratcheted up the argument.

Cities, he pointed out, were in crisis because they were "facing financial distress, racial unrest, high unemployment, rising crime rates, and the scourge of drug addiction." Instead of "citadels of our civilization," cities were "becoming increasingly isolated, segregated urban ghettos, as the middle class flees to the suburbs":

Having worked in the Washington area for many years, the president perked up a bit. He was all too familiar with the deterioration of many parts of Washington, the urban dead spots between the Capitol and the White House. I argued that the Metro system would knit together the entire metropolitan area as the interstate highway system had knit together the entire country. With hubs and spokes reaching out to distant suburbs, the city center would once more flourish as a magnet for entertainment, sports, and culture.

The president asked some direct questions of each of us. He then paused, puffed on his pipe, and said, "Bill is correct. We should build the ninety-eight-mile systems. Let's find the money, Jim."

Secretary Coleman knew it was "not an easy decision" for the President:

But it was the right decision. We continued to place stringent conditions on federal funding and imposed a \$4.7 billion cap because we were concerned about questionable design features and cost overruns that had plagued construction. Studies to consider more efficient alternatives continued. [Coleman, pages 224-226]

Reality did not cooperate with the cap.

On May 28, 1976, Secretary Coleman wrote what Jack Eisen called "an unusually stern letter" to WMATA Chairman Tucker. The letter was in response to a secret estimate that Metro would cost more than \$5 billion. Eisen reported that the secret estimate was "contained in the newest periodic updating of cost estimates made by Metro's office of program control, but not officially presented yet to the Metro board":

Such periodic revisions were required by the General Accounting Office, an arm of Congress, starting in 1974, as a response to Metro's now-discredited policy of officially maintaining cost estimates for completing the system long after they were outstripped by rising prices.

The old practice had given ammunition to critics such as Chairman Natcher, who "repeatedly estimated, despite Metro's denials, that the project's cost would run between \$5 billion and \$6 billion. The latest figure confirms Natcher's lower projection."

Acting General Manager Quenstedt told reporters that “the new estimates reflect more realistic schedules for completing the system.” He added, “there are no unjustified features or frills” in the secret estimate.

Secretary Coleman’s letter was addressed in friendly terms to “Dear Sterling” and signed “Bill.” In addition, Secretary Coleman referred to “my strong support for the completion of the entire 100-mile system.” Friendly gestures out of the way, he continued:

I am concerned that [Metro officials] may not have taken extraordinary measures to achieve design changes necessary to build the system at the \$4.7 billion figure . . . .

You should know that the department’s willingness to participate in funding proposals . . . in excess of \$4.7 billion will depend upon your showing of truly extraordinary efforts made, and substantial success achieved, to keep construction costs to a minimum consistent with safety and operational requirements.

Secretary Coleman directed UMTA Administrator Patricelli to assist Metro in finding ways to reduce costs and “to oversee cost controls consistent with this letter.”

Eisen added:

A Department of Transportation source, explaining Coleman’s decision to send the letter at this time, said the department repeatedly told Metro in soft tones – sometimes in public statements – that significant cost escalation could not be tolerated. The new cost estimate above \$5 billion seemed to defy that policy, the source said. [Eisen, Jack, “Metro Cost Of \$5 billion Alarms U.S.,” *The Washington Post*, May 30, 1976]

On September 24, 1976, Patricelli addressed a special WMATA/COG/TPB meeting at the Mayflower Hotel intended to seek solutions to Metro’s financial problems. He said that the Department of Transportation was demanding cuts of more than \$300 million to the Metro cost estimate. According to the *Post*:

In arguing for more than \$300 million in cost cutbacks, Patricelli said that a study of some Metro projects by his agency showed that costs could be reduced by about 15 per cent. The study recommended as cost-trimming measures a series of changes in construction techniques, almost certain to prompt objections from Metro officials.

These included elimination of concrete walls and ceilings in some subway tunnels, construction of some underground stations closer to ground level, reductions in the size of retaining walls and bridge abutment walls, and use of other steel alloys in the electrified third rails.

He also reconsideration of about 24 miles of three subway lines that he thought could, potentially, be abandoned or served by express buses: The section between Huntington Avenue south of Alexandria to the currently planned terminus at Springfield-Franconia; the Silver Spring to Glenmont section of the line in Montgomery County; and the line between Anacostia and Branch Avenue in Prince George’s County. Patricelli said ridership on those segments may be

less than on other lines and could be served by alternative to rapid rail. He indicated that UMTA would pay for the studies, which were to be performed outside WMATA, possibly by COG's transportation planners.

The *Post* reported:

Patricelli also raised the prospect of further re-evaluation in the future of a proposed subway route from Arlington County's Glebe Road station to Vienna, in Fairfax County. The route is already in doubt because of continuing controversy over proposals for building I-66 from the Capital Beltway to the Potomac River. The planned subway line would run along the highway's median.

Patricelli said that future Federal funds would depend on local officials finding a way to fund subway and bus operating losses as well as repayment of revenue bonds totaling about \$2.5 billion in principal and interest. Metro always had claimed the bonds could be repaid from the fare box, but no one now believed that would be the case. "Patricelli left uncertain whether the federal government will agree – as officials indicated it would almost a year ago – to underwrite 80 per cent, or \$2 billion, of the bond payments."

As the *Star* put it, "UMTA apparently has started to require Metro to meet the same criteria as other U.S. transit systems because of congressional pressure for more review of UMTA grant proposals."

Patricelli called on WMATA to draft a financial plan by November 1977 that covered completing the system, subsidizing operations, and possible truncation of the system. The region "will have to come to grips [by then] with the questions of new financing mechanisms for operating costs, including regional taxes."

Professor Schrag summarized Patricelli's message:

After expressing general support for Metro, Patricelli reiterated the administration's insistence that the system's capital cost be capped at \$4.677 billion, the March 1976 estimate, including inflation. "We must pick a figure and stay with it," he argued. "No financing plan can be constructed around a moving target." Most important, he invoked the "alternatives analysis" policy, which since 1975 had applied to every other new transit system in the nation. Standing before the assembled representatives of the region, he ordered just such an analysis – including "a full range of rail and non-rail alternatives" – of the forty miles of Metro not yet under construction. Everyone understood such a study meant that the administration was considering truncation. [Schrag, page 187]

The reaction to Patricelli's speech was that he had "thrown into turmoil" the longstanding plans for Metro. The *Post* reported:

Patricelli's insistence on a \$4.67 billion ceiling came as a jolt to Metro officials partly because Secretary Coleman himself had taken an apparently more flexible stand last May. In a letter to Tucker, Coleman had urged that costs be held to \$4.7 billion – slightly more than Patricelli's ceiling – and qualified this by saying any increase above that limit would

be contingent on a “showing of truly extraordinary efforts” by Metro officials to keep costs “to a minimum.”

Chairman Tucker called the new demands “a very bitter pill that we’re going to have to swallow.” Quenstedt said, “I am quite pessimistic.” William Boleyn, Metro’s executive officer and comptroller, said, “My off-hand view is that it can’t be done”:

Montgomery County Executive James P. Gleason replied, “It’s a bad deal, Mr. Patricelli,” and described the DOT announcement as “a dagger right into the heart of this (Metro) system – because it just won’t be built.” [Lynton, Stephen J., “Cut in Metro Cost Ordered,” *The Washington Post*, September 25, 1976; Crosby, Thomas, “U.S. Orders Analysis of Need For 3 Metrorail Suburb Lines,” *The Washington Star*, September 24, 1976]

A few days after the speech, Jack Eisen interviewed Patricelli. The article about the interview began:

Robert E. Patricelli, the federal transit official who touched off a controversy by demanding cost reductions and possible cutbacks in Washington’s Metrorail system, said this week that his first goal – of finally being taken seriously by Metro officials – already has been met.

Metro officials had ignored “several pointed and well-publicized warnings” to keep costs down. “I did a little bit of shouting to be heard,” he said. He told Eisen that UMTA would not be rigid about the November 1977 deadline if WMATA was making significant progress by then.

He knew that WMATA and local officials were not pleased with his message. “As I saw it, it was a question of who would take the first step. I don’t know, frankly, if we were right on this, but I think we were.”

The Ford Administration fully supported the use of Interstate withdrawal-substitution funds for Metro. During his speech, he had announced that the Department of Transportation would soon release \$112.5 million in transfer funds.

In releasing the funds to the District and WMATA on October 4, Secretary Coleman had said that “making good use of this additional source of funding is a significant indication of their dedication to the completion of the METRO system.” The funds were based on withdrawal of portions of I-95 and I-270 in the District. Withdrawal of these segments had resulted in the transfer of \$286.6 million to Metro in October 1975. Administrator Patricelli said:

UMTA will continue to process Interstate transfer grants for METRO construction through Federal [sic] Year 1977. Approximately \$475 million more has been budgeted and appropriated through the course of Fiscal Year 1977, an amount that will permit critical construction to continue without delay.

In the interview, Patricelli wanted to clear up a misunderstanding:

Patricelli, in the interview, said many people feel the federal government should continue transferring highway funds to Metro as long as they are still available.

This is wrong, the officials said. Just because the interstate highway program is being conducted without any final cost figure being set “doesn’t mean that such a wrong policy should be carried over to mass transit projects,” Patricelli declared.

He contended that Metro partisans have overlooked the likelihood that the system’s biggest problem will be getting local, rather than federal funding.

He insisted that keeping costs below \$4.7 billion was attainable:

I do believe – I didn’t for a while, but I do now – that over \$300 million can be saved in the construction of the system. It’s not my intention to require [Metro] to accept our engineering judgment. But we do want to board to have the best possible information.

Although he understood the rivalries among local jurisdictions, he hoped to establish a joint steering committee to oversee the studies. [Eisen, Jack, “Patricelli’s ‘Bit of Shouting.’” *The Washington Post*, October 9, 1976]

The WMATA board of directors met with COG and local political leaders to discuss Patricelli’s challenge. Early in the meeting, Jerome M. Alper, Metro’s general counsel, described a proposed regionwide tax on wages. At 1 percent of earnings, it would bring in at least \$175 million a year, far more than Metro’s projected deficit of \$100 million by 1978. When that idea was tabled, Montgomery County’s James Gleason suggested consideration of a “dedicated local tax” that each jurisdiction could impose to support operations within its borders. Debate of the proposal was heated and included a brief shouting match between Gleason and Chairman John F. Herrity of the Fairfax County Board of Supervisors. In the end, COG adopted the suggestions.

The District had been leading the push for a regional tax, but District officials denied the change in plans was a setback. Chairman Tucker said he was “very satisfied with the result of that vote,” and suggested he may propose a tax on wages earned in the city. Congress had always rejected such taxation of District and suburban residents who worked in the city, but Tucker suggested the outcome might differ this time because the tax revenue would support Metro, unlike previous proposals aimed at supporting the District government.

The leaders rejected a regionwide tax to pay for rail and bus deficits, although political officials agreed to consider imposing local taxes that would be earmarked for the same purpose. At the same time, they decided to ask the Federal Government to drop the demand for shortening the Metro system.

District planning director Gilbert suggested that local taxes might work if the revenue were put into a common fund for systemwide subsidies. That possibility had not been raised during discussion. But Herrity, described as “an acid-tongued critic of Metro policies,” said there was no possibility that local jurisdictions would give up control of their tax revenue to Metro. As Eisen pointed out:

Northern Virginia came closest in the region to achieving a transit tax this year. The General Assembly approved a 4 per cent regional sales tax on gasoline. It was not imposed because Fairfax City refused to join in what, by law, needed to be a unanimous action by the affected three cities and two counties.

Delegate Robert E. Harris (R-Fairfax) had opposed the legislation in the General Assembly and predicted that the chances were slim for further consideration of the idea in 1977, an election year for State and local offices in Virginia.

In a separate action, Prince George's County Executive Winfield M. Kelly, Jr., introduced a proposal to ask the White House to drop study of alternatives involving truncation. His proposal suggested that the study should proceed pending a White House decision. He explained the contradiction by saying, "We are going to take a very strong stance, with our feet firmly planted on both sides of the fence." The proposal was adopted. [Eisen, Jack, "Regional Metro Tax Rejected," *The Washington Post*, October 16, 1976]

In November, COG and the Metro board established a 12-member committee of elected and public officials to study alternatives to several Metro extensions as demanded by Administrator Patricelli. Based on his list of lines to be studied, the committee agreed to study several options as summarized by Eisen:

Construction of the line as now planned from National Airport through Alexandria to Huntington station in southeastern Fairfax County, but eliminating a branch from the proposed Metro car storage yard and shop in Alexandria, to Springfield-Franconia. However, a partial construction of the latter line, as far as Van Dorn Street, Alexandria, also will be considered.

Termination of the Branch Avenue (Suitland) line at the Anacostia station, or at some station beyond, possibly Naylor Road.

Inclusion of the Vienna line, westward from the Glebe Road station in Arlington, regarding of whether Secretary of Transportation William T. Coleman Jr. decides to approve Virginia's construction of Interstate Rte. 66. Metro would occupy the I-66 median. Consideration will be given to termination the line at Glebe Road or at West Fall Church.

He added:

The regional committee endorsed a request by the Montgomery County government that the subway from Silver Spring to Glenmont, which was on Patricelli's list, be exempted from the study. The line from downtown to Silver Spring station is scheduled to open next November.

If the exemption request is turned down, the study will consider terminating the line at Silver Spring or extending it as far as Wheaton. The idea of ending it at Forest Glen will not be considered.

As technical coordinator, the steering committee appointed George V. Wickstrom, COG's director of technical services. [Eisen, Jack, "Metro Sets Cutback Study," *The Washington Post*, November 20, 1976]

### **I-66 – Back From the Dead**

As Leland White pointed out in his history of the I-66 dispute, the anti-highway forces, in the elation at their seeming victory, had overlooked Secretary Coleman's statement that, "This decision is without prejudice to any further consideration on the part of the VDHT of the need for a non-Interstate commuter highway in the I-66 corridor." In short, Secretary Coleman had not ruled out the possibility that a road of some sort could be built in the corridor. [White, pages 62-63]

The distinction was not lost on Commissioner Fugate or Governor Godwin. Although Fugate considered the Coleman decision "a grievous mistake for the commonwealth," he saw the Coleman caveat as inviting some type of road in the corridor, if not an Interstate highway. In an interview, Fugate said, "I haven't given up the idea of building a highway in that corridor no matter what kind of highway you call it":

I refuse to believe that the secretary didn't mean what he said and wouldn't go a long way to ameliorate the situation [because of] what he sees is the need for a highway in the corridor. Now he must be prepared to tell us that will be done. We don't have the money.

Secretary Coleman's executive assistant, Don Bliss, told the *Post* that the Secretary "does not want to prejudge anything; he has to decide the issues when the facts are presented." He had rejected I-66 as presented to him, but "was not trying to establish priorities in the corridor for all time." However, by turning down I-66, Secretary Coleman had rejected the use of Interstate construction funds in the corridor.

Arlington County Board member Munsey, informed of Fugate's statements, said, "I regret that the state authorities are still pursuing a lost cause. I would hope they would come around to the point of view of [what] the governments and people of Northern Virginia want." [Shaffer, Ron, "Va. Insists On Some I-66 Road," *The Washington Post*, August 22, 1975]

To clarify Secretary Coleman's intent, Governor Godwin and Fugate met with him on September 11, 1975, for an hour and 15 minutes. The *Post* reported that they asked the Secretary to reconsider his rejection of I-66:

Virginia Highway Commissioner Douglas B. Fugate . . . said from home in Richmond last night that Coleman "agreed he would reconsider his decision if the governor submits a petition for reconsideration. Fugate said Coleman was "not specific about what any new plan should include . . . ."

Gov. Godwin said after the meeting that "I can't conceive of anything but a chaotic situation unless I-66 or some alternate road is put in that corridor."

Governor Godwin added that Fugate and his staff would consider ways of modifying the highway proposal “that might be feasible . . . and see how that ties into Metro rail.” As for whether Secretary Coleman encouraged the prospects for reviving I-66 or a modified highway, Governor Godwin said, “Well, he didn’t tell us we couldn’t write him.” [Shaffer, Ron, “Gov. Godwin Asks Coleman to Review Funding for I-66,” *The Washington Post*, September 12, 1975]

Governor Godwin’s letter to Secretary Coleman was released on September 18. The letter informed Secretary Coleman that reversal of his decision on I-66 was “warranted, among other reasons, because of changed conditions occurring subsequent to submission of the environmental impact statement, as well as the increasing likelihood that the Metro line will not be constructed in the commonwealth as presently planned” in view of WMATA’s financial troubles. I-66 was the “only feasible” way to relieve the area’s “critical transportation problem.” [Edwards, Paul G., and Ritchie, Joe, “Godwin Says Full Subway Is Unlikely,” *The Washington Post*, September 19, 1975; “Va. Urban Mass Transit Pressed,” *Metro*, *The Washington Star*, September 19, 1975]

Beginning in early October 1975, as noted earlier, Governor Godwin, Fugate, and northern Virginia officials were in a dispute involving the \$15.2 million in gasoline tax revenue the General Assembly had voted for use on Metro. In a meeting with northern Virginia officials in Richmond on October 23, Governor Godwin and Fugate appeared to ease opposition to the use of Interstate substitution funds for Metro. The governor was willing to spend the funds, if they materialized, in northern Virginia, but he cautioned that he opposed “putting it all” or “just flopping it over” to “bail out” Metro. The State had other problems, too.

Fugate suggested that the Northern Virginia Transportation Commission work on proposals for mixed use of the I-66 funds for Governor Godwin to present to Secretary Coleman at their next meeting, scheduled for November 5. Governor Godwin, who said he did not believe Metro alone would solve the area’s traffic problems, suggested the commission consider low-density, commuter-road uses for the I-66 corridor, including exclusive bus lanes and local road access to the Metro line in the right-of-way.

Rail rapid transit advocates were relieved by Governor Godwin’s apparent commitment to diverting I-66 funds to other northern Virginia projects, including some Metro construction work.

That same day, October 23, northern Virginia officials, including I-66 opponents, established a committee to consider new highway designs, such as a four-lane expressway for buses and carpools, as a way of freeing Federal funds for Metro. Covering the decision, the *Post* reported that the decision was the “first public movement” since Secretary Coleman rejected I-66 and Governor Godwin refused to use the Interstate withdrawal/substitution to shift funds to Metro rail construction in the corridor:

The rapid agreement by the northern Virginians to explore a compromise indicated that the plan to reopen consideration of a highway in the corridor might have been agreed upon informally before today’s meeting. [Kelly, Brian, “Godwin Appears To Ease Stand On Metro Funds,” *The Washington Star*, October 24, 1975; Edwards, Paul G., “Panel to Study I-66 Alternate,” *The Washington Post*, October 24, 1975]

The ad hoc committee quickly agreed to an Arlington County proposal to build a two-lane highway for buses and carpools between the Glebe Road Metro station in Arlington County (scheduled to open in July 1978) and planned Vienna station (to open after 1980) near the Capital Beltway. Arlington County Board's Munsey explained the plan: "We want to get people to get in the habit of riding the rail system."

The committee did not address the use of the expressway during non-peak periods. The goal was to free I-66 money not needed for the expressway to be shifted to Metro. The facility was considered temporary because the busway would be removed as Metro opened in the right-of-way.

The committee wanted three-fourths of the substitution funds reserved for Metro construction. Arlington County Board's Munsey said, the road would "be torn up as Metro advances westward." Delegate Harris of Fairfax doubted Governor Godwin would accept the proposal, but added:

We can't ignore the needs of the people on the west side of Fairfax County where growth has saturated existing roadways. There must be a compromise between Fairfax's needs and the impact on Arlington. [Yaeger, Deborah Sue, "2 Lanes Urged for I-66 Route," *The Washington Post*, October 30, 1975; "A New I-66 Alternative," Metro, *The Washington Star*, October 30, 1975]

In a meeting with the commission on October 31, Fugate made clear that he and Governor Godwin preferred the six-lane I-66 that they still hoped Secretary Coleman would approve – to the busway. Governor Godwin, Fugate said, was "very reluctant to put even \$1 of highway funds into Metro . . . . He considers Metro a bottomless pit as far as costs, and he was appalled by the estimate of operating costs deficits the people of Northern Virginia will have to pay."

Fugate also doubted a two-lane busway, or even a four-lane busway, would be adequate "considering the traffic need has been set at eight lanes." A four-lane busway might suffice if residents were "willing to continue with a great deal of congestion" on parallel roads.

The *Star* account of the meeting concluded:

As the 90-minute conference ended, State Sen. Omer L. Hirst, D-Fairfax, was politely insisting that any compromise should be based on Metro, and Fugate was quietly answering that a compromise should begin with the I-66 design and move on from there.

Their courtly exchange gave no hint of the demand of Virginia House Majority Leader James M. Thomson, D-Alexandria, that Fugate should resign. Thomson made his irate demand in a letter to Fugate earlier this month, after charging that Fugate had reneged on a promise to allot \$15 million in highway funds for Metro construction this year.

Yesterday, Thomson accused Fugate of misleading the General Assembly on mass transit funding, adding, "His usefulness as a commissioner has ceased." [Kast, Sheila, "Godwin Cool to Busway in I-66 Corridor," *The Washington Star*, November 1, 1975]

Fugate said that Thomson's charges had "no substance whatsoever," adding that, "I certainly made no commitment to any continuing program of aid to the Metro system and I was in no position to make such a commitment" in view of State law governing the highway trust fund. As for Thomson's demand, Fugate said "there's no question about my ever resigning." Fugate, 69 years old, acknowledged that he had talked with Governor Godwin about the possibility of retiring before his four-year term ended. [Associated Press, "Va. Highway Chief Rejects Demand That He Resign," *The Washington Star*, November 9, 1975]

On November 4, residents of northern Virginia went to the polls. Arlington County voters rejected several bond issues, including a \$25 million bond to pay the county's immediate share of Metro construction. It was the first time a local jurisdiction had rejected a bond issue for Metro construction. Board Member Munsey, who did not seek reelection, called the defeat "tragic" because it endangered the tenuous funding agreement. "Everyone is waiting for everyone else to make a firm commitment to the system. One would have thought that Arlington County, which has 10 of 11 Metro stations under consideration, would have been at the forefront, affirming that the subway is essential and that we have to pay for it." Arlington County, he said, would consider other options. "Paying for Metro out of current taxation would mean a startling tax increase."

A Metro spokesman downplayed the defeat. It would not "endanger the completion of the system. Arlington has contracted to pay for [its share] of Metro construction, and it will just have to find another way to raise the money." General Manager Graham saw the rejection of the revenue bonds as "reflective of the economy," not a rejection of Metro.

In Fairfax County, I-66 backer John Herrity was elected chairman of the board of supervisors. He saw the vote as one of the first "mandates of the people" for construction of I-66. In January 1974, the board had voted, 5 to 4, to oppose the Interstate, but the majority included two members who had been defeated, including Chairman Packard. Herrity pointed out that one factor in Secretary Coleman's rejection of I-66 was local government opposition. He predicted that Fairfax County would reverse its position once the new board took office.

*Post* editors agreed that Arlington County remained committed to paying its \$25 million by some means. "But the question now is how the result will be interpreted by other governments of the region as they continue to try to meet their shares of the Metrorail costs in the future." The vote was in contrast with 1968 when "Arlington's voters backed it overwhelmingly." While the Federal Government was seeking ways to pay its share, "the local jurisdictions – including Arlington County – must find ways to meet their obligations to support a comprehensive, regional Metrorail system." [Yeager, Deborah Sue, "Arlington Voters Reject Metro, Six Other Issues," *The Washington Post*, November 5, 1975; Seaberry, Jane, "Herrity Sees Reversal on

I-66," *The Washington Post*, November 6, 1975; "The Defeat of the Metro Bond Issue," *The Washington Post*, November 6, 1975]

Secretary Coleman ventured to Richmond for an hour-long November 5 meeting with Governor Godwin and Fugate. After the meeting, Secretary Coleman told reporters that his rejection of I-66 was not irrevocable, but he would need concessions from the State that he did not disclose.

At the same time, General Graham was on Capitol Hill where he revealed that the cost of completing Metro had increased by \$200 million, largely because of inflation, and could rise as high as \$5 billion. He stated that WMATA would not seek Federal-aid beyond the estimated \$4.65 billion. He added that due to problems securing subway cars, Metro would have to postpone the opening of the first segment to January 1976.

Secretary Coleman assured Governor Godwin that the Federal Government would not let the cost of Metro exceed \$4.6 billion. [“Stymied I-66 May Have New Chance,” *The Washington Star*, November 6, 1975; Lynton, Stephen J., “Metro Subway Cost Estimate Raised Again,” *The Washington Post*, November 6, 1975]

During an interview with *Post* reporters in early December 1975, Secretary Coleman suggested a compromise highway-subway combination in the I-66 corridor as part of a financial package for Metro. He said:

I know this is going to make my environmentalist friends unhappy, but in Northern Virginia there’s a great need for some method of moving traffic and cutting down the traffic jams on U.S. 50 and the George Washington Parkway. Secondly, we’ve got to build a highway to move traffic swiftly from Washington to Dulles Airport.

He did not think Metro rapid rail transit was the sole answer:

“Maybe we should build Metro first and see what happens,” he said. But then,” he added, “No. I at least think Metro and a highway should go forward together.”

He used the phrase “high-speed” to describe the type of highway he had in mind.

In the meantime, he was holding up his report to President Ford on Metro financing until he resolved the status of Interstate highways and possible substitution of funds towards completion of the full Metro system. He had talked with Virginia and District officials and planned to talk with Governor Mandel:

Coleman seemed to be saying that he would need guarantees that such transfers would be made before he would go forward with the rest of his plan. According to informed sources, Coleman also favors legislation that would provide 80 per cent federal funds to retire the revenue bonds.

Coleman also said that he expected some kind of audited guarantee that the construction cost [of Metro] would not exceed \$4.6 billion. “We have to put a lid on it somewhere,” he said, adding he felt that was enough money for any contingency . . . .

Referring to local officials, he added, “It’s their move”:

If area jurisdictions do not provide guarantees of maximum cost and transfers of highway funds, Coleman said, “These municipalities are on the hook. They’re going to be paying for bonds, and not have a Metro . . . .”

Coleman also said he was convinced that Metro could substantially ease the movement of traffic and people in the area “if they build Metro right and provide the right kind of parking lots” at outlying Beltway stations. Then, he said, the subway can be successful “if we have elected officials who have the guts to tell people they can’t drive into the city.”

A spokesman for VDHT said its staff was working with FHWA and UMTA on options for the I-66 corridor. “It’s important to recognize that any highway plan will have to rely on federal interstate system funds because that’s the only money there is.” [Feaver, Douglas B., and Lynton, Stephen J., “Highway, Metrorail Suggested in I-66 Corridor,” *The Washington Post*, December 12, 1975]

On December 18, Chairman-elect Herryty met with Governor Godwin and Fugate to discuss a highway-subway compromise. Under the proposal, VDHT would shift \$50 million in I-66 substitution funds to Metro while providing a four-lane commuter highway in the I-66 corridor. Herryty had discussed the idea with Chairman-elect Ellen Bozman of the Arlington County board. Although she was willing to discuss the idea, she saw little difference between a four-lane and eight-lane highway. “With a four-lane highway, there is no guarantee it will not become a six or eight-lane highway.” She thought her county might be more receptive if the road ended at the Glebe Road Metro station, but State officials opposed that option.

The *Post* reported:

Fugate said yesterday that although Richmond still wants a completed eight-lane Interstate 66, he has told Northern Virginia representatives that “if they come up with a compromise that sounded reasonable, we could discuss it with” Secretary Coleman. [Feaver, Douglas B., “Accord Sought On I-66,” *The Washington Post*, December 18, 1975]

A few days later, on December 20, the Arlington County Board voted unanimously to reject a compromise highway-subway facility as suggested by Secretary Coleman. The board also rejected paying for Metro construction or operation if its construction was predicated on construction of I-66. The resolution expressed the board’s “willingness to seek a genuine compromise” involving the upgrading of roads near the I-66 corridor. [Yaeger, Deborah Sue, “Arlington Voters Reject Metro, Six Other Issues,” *The Washington Post*, November 5, 1975]

The four-lane compromise appealed to some officials in Arlington and Fairfax Counties. Outgoing Arlington County Board Chairman John W. Purdy said that compromise was still possible, despite the board’s recent rejection of Secretary Coleman’s suggestion. “I think it’s time for the state highway department to come forward with a new proposal,” such as Herryty’s four-lane proposal. It would, Purdy said, establish “two new extremes between which there is a possibility for negotiation.” [Yaeger, Deborah Sue, “Arlington Board May Shift on I-66,” *The Washington Post*, December 24, 1975]

Herryty, in his inaugural address as chairman on December 31, acknowledged the county’s fiscal difficulties. The county would have to cut back, impose a stricter hiring freeze, and revise its

commitment to Metro. “I want to see a balanced transportation system of highways and rails in this area . . . but I have not seen any plan for building it that does not rely on the tooth fairy to bring us a half billion dollars.” He promised to ask the board “very soon” to approve a “compromise” I-66 proposal – a four-lane highway with Metro in the median. [Rosenfeld, Megan, “Herrity Urges I-66 Compromise,” *The Washington Post*, January 1, 1976]

As he had predicted, the Fairfax County Board of Supervisors endorsed, by a 6-to-3 vote on January 5, a four-lane highway in the I-66 corridor for peak-period buses and carpools. Supervisor Audrey Moore of Annandale, who voted against I-66 on the previous board, voted for the compromise, saying:

I still oppose the concept. However, I see a tremendous need for express bus lanes, particularly as we may not be able to complete the Metro bus [sic] system because of its costs. I don't see any other alternative except to support it.

Supervisor Alan H. Magazine of Mason voted against the busway compromise. He warned that “if a four-lane highway is built, pressure will be there from the day the ribbon is cut to open it up to commuter traffic.”

Herrity planned to meet with other northern Virginia jurisdictions, Virginia highway officials, and the U.S. Department of Transportation to advance the plan.

Fugate said of the January 5 vote that he was “gratified that the board has recognized the need for an interstate-type highway in the corridor,” adding that the board’s support “would certainly help to influence the Secretary.” [Seaberry, Jane, “Fairfax Shifts, Votes 4-Lane I-66,” *The Washington Post*, January 6, 1976; Green, Mary Margaret, “Fairfax’s Flip-Flop Puts I-66 Back in the Picture,” *The Washington Star*, January 6, 1976]

(On January 10, Chairman Herrity, 43 years old, suffered the first of two heart attacks and was admitted to Fairfax Hospital. They would keep him away from board activities for 2 months. Vice Chairman Martha Pennino assumed Herrity’s responsibilities as chairman of the Fairfax County Board of Supervisors.

(When Chairman Herrity returned to work on the board on March 29, he was welcomed back with what the *Post* described as “flowery speeches and flowers” (the flowers and a corsage were for Pennino), after which he quickly angered board members by attempting to convince them to withhold the county’s \$1.7 million payment to Metro, due in January 1977. The \$1.7 million was in the county’s proposed FY 1977 budget, but was not funded; a bond referendum would be required to secure the funds.

(After a lengthy presentation by WMATA, Herrity argued that the authority should do a complete reevaluation of the county’s rapid transit needs and the location of Metro stations based on current population and projections, instead of the 1968 data used to develop the present alignment. WMATA officials said such a review, which might result in changing station locations, would take a year to complete.

(Supervisor Alexander was infuriated, saying, “I am ticked off! I am really ticked off! His timing is really atrocious.” Alexander was to meet with Governor Godwin on March 31 to encourage him to support General Assembly bills giving northern Virginia \$10 million for Metro and authorizing area jurisdictions to impose a 4-percent “piggy-back” gas tax on top of the State gas tax to pay for Metrobus deficits. “I will cancel our meeting with the governor on Wednesday if this passes. I’ve had it.” He explained, “I don’t see any point in going down. If you’re not willing to pay for this thing [Godwin is going to say], obviously, you don’t need the money. I’m serious!”

(Supervisor Magazine was angry, too. “If this passes it is an obvious decision not to continue Metrorail.” The *Post* continued, “a raft of Metro executives had beaten a hasty retreat after watching the Board come close to voting to withhold the county’s share of Metrorail construction costs.”

(After the meeting, Herrity told reporters in the lobby, “This has nothing to do with the meeting with the governor.” Moreover, he said, “I think he’d be more impressed with a conservative attitude toward Metro.” The *Star* reported he said “cautious” instead of “conservative.” The *Post* observed, “In another corner of the lobby, Alexander fumed.” [Seaberry, Jane, “Herrity’s Condition Is Called Serious,” *The Washington Post*, January 12, 1976; Rosenfeld, Megan, “Herrity Is Welcomed Back, Then the Fighting Begins,” *The Washington Post*, March 30, 1976; Green, Mary Margaret, “Herrity: First Flowers, Then Brickbats,” *The Washington Star*, March 30, 1976])

Internal pressure on the Arlington County Board of Supervisors came from the county’s director of highways, H. S. Hulme, Jr. He warned board members not to gamble on winning their fight against I-66. “You can’t say whether the dice are going to roll box cars or sevens,” he said. The county would win if I-66 were not built, but if it is built without county input, county officials will miss an opportunity to shape the facility. He cited the reversal in Fairfax County:

Hulme said that Arlington should do the same thing. He added that although there never will be a firm guarantee that the road will stay four lanes – critics of I-66 say it will grow to an eight-lane monster – skilled planning maneuvers by Arlington could virtually assure a four-lane wide commuter highway. [Axelrod, Susan, “Arlington Board Warned: Endorse I-66 Compromise,” *The Evening Star*, January 15, 1976]

A *Post* editorial summarized Secretary Coleman’s original decision, then said, “Nothing has happened since to change the validity or wisdom of this argument. Yes, there is suddenly talk of a ‘compromise’ in a situation that cannot logically be compromised”:

The construction of a highway in the I-66 corridor is either prudent or not prudent, whether we are talking about an eight-lane, six-lane or four-lane freeway . . . .

Mr. Coleman himself has encouraged this “compromise” talk, first in a hedged reference to the legality of a state-financed “commuter highway” in his original statement last August, and secondly in an off-hand remark to the same effect to a Washington Post reporter a few days ago . . . .

The reason that the I-66 controversy has flared up again (and that both Mr. Coleman and some Fairfax supervisors seem to have changed their minds) is not that there was anything wrong with the original decision, but that the Virginia Department of Highways and Gov. Mills E. Godwin still want their freeway and can wield a powerful club to get it. The state has the legal right to refuse to transfer all or part of the \$190 million earmarked for I-66 to help provide Metro rail transportation.

Metro was “in dire need of money and is draining the budgets of all counties in the region.” The *Post* agreed with former Arlington County Board Chairman Purdy “that the Virginia counties should seriously negotiate with the Virginia State Highway Department for all or a good portion of the money they hold in ransom.” At the same time, the Fairfax County board’s “opening acceptance of a vague and dangerously bad bargain is a poor way to start serious talks.” [“The Revival of I-66,” *The Washington Post*, January 9, 1976]

Governor Godwin addressed the opening session of the General Assembly on January 14, 1976. Stressing the State’s dire fiscal situation, he said his budget proposal would not call for new taxes, general bond issues, or money for Metro rail. The *Post* reported:

Godwin spoke with skepticism of rail transit as a solution to urban transportation, citing the high cost of Metro and other systems.

While denying direct aid to Metro, however, he gave the clearest indication yet that he would support transfer of some money earmarked for completing Interstate Rte. 66 through Arlington to Metro if local officials agree to a reduced version of the expressway.

The *Post* added that the denial of Metro funding bills “brought forth immediate vows from area legislators to get the money into the appropriations act on their own.” [Edward, Paul G., Godwin: No Money For Metro,” *The Washington Post*, January 15, 1976]

*Star* editors speculated that “Virginia state officials, ensconced in their Richmond offices, apparently think Northern Virginia is run by dumbos.” The editors could understand if the reason for Governor Godwin’s refusal to fund Metro was based on the State’s very real fiscal problems. “But it appears that a major reason is that the governor and state transportation officials simply aren’t sold on the idea of building subways in Northern Virginia.” They were, as a result, second guessing local officials on local needs:

If Gov. Godwin and state transportation officials have a better idea on how to move commuters in the Washington area more efficiently, it’s about time they imparted that wisdom to Arlington, Alexandria, Fairfax and Falls Church.

So far, all state officials seem to be interested in is getting a highway built in the I-66 corridor, a project that has been stymied for years by protests from citizens and local governing bodies.

The editors thought that some sort of highway, possibly the four-lane compromise commuter road, would be built, but the problems in the area should not be “viewed in a single dimension.” The planned Metro line was “essential, in our opinion, if the metropolitan area is to have a

balanced transportation system.” Metro’s escalating cost was threatening the line’s viability but “the foot-dragging of Virginia officials has added to the problem.”

They urged northern Virginia’s delegates to the General Assembly to fight for Metro funds, if allowing only local jurisdictions to add a 4 percent tax on gasoline sales for the purpose:

We hope that Gov. Godwin and Mr. Fugate will support the local tax proposal, although we’re not too encouraged that they will. It also would be helpful if they would reconsider and include some Metrorail construction funds in the new budget. [“Virginia Reneges on Metro,” *The Washington Star*, January 15, 1976]

Governor Godwin made his views clear during a press conference on January 20. He opposed the use of State funds for Metro, which he called “an apparent financial disaster.” He also opposed giving local governments piggy-back taxing authority to pay for Metro or bus service (both were “obviously hopelessly deficit operations”). He said, “There is not a rail transit system in the country that is making money.”

However, his budget, released on January 19, included the \$15 million in highway funds for transit-related highway improvements, such as bus express lanes and fringe parking lots. This was the funding the General Assembly had approved in 1974 for northern Virginia. [McAllister, Bill, “Godwin Still Against Aid For Metro,” *The Washington Post*, January 21, 1976; “Money Hopes Dashed,” Metro, *The Washington Star*, January 21, 1976]

After meeting with Secretary Coleman on February 25, 1976, Governor Godwin said the Secretary asked the State to submit an I-66 plan “on a scale of lesser dimensions than the original proposal . . . that would not harm the environment.” Fugate said the State’s proposal would follow Herrity’s compromise of a four-lane I-66 limited to buses and carpools during peak periods. During peak periods, the restrictions would apply only in the direction of the flow of rush-hour traffic. An exception would be made for traffic going to and from the Dulles International Airport Access Road. I-66 would be open to all traffic at non-peak times, although Governor Godwin suggested that “heavy equipment” traffic might be curtailed. Fugate expected to submit the plan “in about 10 days.”

According to Deputy Commissioner Harwood, the new plan was tailored to meet Secretary Coleman’s principal objections to the earlier I-66 proposal. Opponents complained that the new concept of a four-lane highway could be widened as originally designed to six or eight lanes. The State’s proposal would not include a prohibition against widening, but Harwood said that the roadway would be so narrow in some locations that adding another lane would require additional right-of-way. He expected opponents to file a lawsuit to block the compromise roadway.

The proposal also did not say what would happen to the funds saved by constructing four instead of eight lanes. Northern Virginia officials wanted that funding to be made available to Metro and Metrobus needs.

The *Post* reported:

Coleman said in an interview last night that “Obviously any state has the right to propose a new highway,” and said he promised Godwin a quick decision if a new proposal for

I-66 were made. Coleman said several times that nothing in the conversation could be interpreted as indicating that he would “favorably prejudge” a new application . . . .

Coleman said he told Godwin that “In my judgment there would have to be better access to Dulles” at some point in the future. “He kept saying I-66; I never used the word.”

Godwin said he believes Coleman “has the necessary authority to act on an alternate plan” without the drafting of a new environmental impact statement. But Coleman said that any new road project would require a new statement.

Godwin also said that both he and Coleman would like to have the concurrence of all local governments in the new plan, but the governor added, “I did not get the impression he feels that is absolutely necessary.”

During the press conference, Governor Godwin indicated he might accept a regional gas tax hike along the lines of a bill the House of Delegates had approved on February 20. He explained that the gas tax revenue went into a special highway trust fund, and was not available for other purposes. “But if that’s the way they [northern Virginia] wish to help fund some of the problems they have, then we have to consider whether it ought to be permitted or not, and I’ve not ruled that out.”

The *Star* reported that northern Virginia legislators thought they had worked out a deal. If area officials supported Governor Godwin’s four-lane proposal, he would make \$20 million available for Metro for the next two fiscal years. The funds would come from the savings resulting from building a four-lane, instead of an eight-lane, highway. Governor Godwin did not mention such a deal, but “Northern Virginia legislative sources claim a tri-cornered deal involving I-66, metro, and the Godwin administration has been agreed upon.” [Edwards, Paul G., and Feaver, Douglas B., “Godwin Sees Hope for Modified I-66,” *The Washington Post*, February 26, 1976; Kelly, Brian, “A Deal in Virginia: State Aid for Metro In Return for I-66,” *The Washington Star*, February 26, 1976]

(Governor Godwin appears to have been promising to secure withdrawal of I-266, including the Virginia approaches to the Three Sister Bridge, from the Interstate System to secure substitution funds for other purposes. Local officials apparently thought that the savings from building a four-lane I-66, instead of a six- or eight-lane facility would become available, but that was not the case. Contrary to a common misunderstanding by highway opponents, the reduction in the number of I-66 lanes did not result in the use of leftover Interstate Construction funds – or an equivalent amount of general Treasury transfer funds – for Metro.

(The Interstate System was built on a cost-to-complete basis. BPR and later FHWA provided 90 percent of the cost of completing each segment to full Interstate standards. If the final cost was less than the amount shown in the most recent ICE, the leftover funds remained in the Interstate Construction account for use on other Interstate highways. The balance could not be shifted to

transit or other highway projects. The transfer funds from the Interstate withdrawal and substitution program existed only when, instead of building the Interstate route, the Governor and local officials decided to withdraw it from the Interstate System instead of building it.)

On March 8, Virginia formally submitted the compromise four-lane proposal to Secretary Coleman. At an estimated cost of \$140 million, I-66 would be restricted during peak periods in the primary direction to four-person carpools, buses, and Dulles International Airport traffic. Heavy trucks would be banned at all times to create what State highway officials called “a parkway-like facility.” This cost was \$47.3 million less than the estimated cost of the earlier eight-lane I-66 proposal.

The plan replaced the double-deck roadway in the Spout Run Parkway area with a four-lane roadway in a 25-foot deep trench-like structure south of Spout Run Parkway. The new highway included bicycle trails, park development, and other environmental features. It would not encroach on Westover playground and would “reduce by more than one-half the encroachment on Bon Air Park.” It also included a 4.6-acre neighborhood park with a pond in Arlington near Quincy Street. “The four-lane proposal will reduce the number of additional families to be displaced from 161 to 105.”

Metro would run in the median for about 6 miles from the Beltway to Harrison Street in Arlington. The project would be designed so that the highway project would cover all Metro costs except placing ballast, rails, and Metro stations in the median. In VDHT’s view, the depressing of the four-lane highway and elimination of trucks meant that Metro operations would generate most of the noise resulting from the facility.

Deputy Commissioner Harwood expected Arlington County to continue to oppose any highway in the corridor. The State still favored its earlier version, but he added, “Four lanes is better than nothing.” [McAllister, Bill, “Va. Asks Approval of Four-Lane I-66,” *The Washington Post*, March 9, 1976; Kelly, Brian, “Virginia’s Trying Hard to Reduce the Noise Over I-66,” *The Washington Star*, March 9, 1976]

When the Virginia Assembly completed its 1976 session, Governor Godwin criticized it as “not one of the more praiseworthy sessions of our legislature.” In answer to questions from reporters, he expressed doubts about two northern Virginia mass transit aid bills. The bills appropriated \$10 million in State gasoline tax revenue for Metrorail and provided authorization for northern Virginia jurisdictions to impose a 4-percent sales tax on gasoline purchases. The estimated \$11 million annual revenue would be used to help pay for rail and bus operating deficits.

Governor Godwin said that both bills had been “flagged for mature consideration.” The *Post* reported:

[He] said that he will not be able to sign two Northern Virginia mass transit aid provisions that he did not propose until he makes a basic policy decision about the direction the state government should take in supporting county and city transit programs.

“We have to bear in mind how much of this money is going for Metrorail construction,” he said, “and we have to see how much of a precedent we are setting. If we approve this, the city of Richmond might come in next year and ask for funding of its downtown toll roads.” [Edwards, Paul G., “Godwin Attacks Assembly Record,” *The Washington Post*, March 18, 1976]

(This was an apparent reference to the Richmond-Petersburg Turnpike, which carried I-95 through the two cities.)

On May 12, Governor Godwin vetoed the bill appropriating \$10 million in State aid for Metro construction. His veto message stated:

Until there is a firm and reliable estimate of ultimate costs of Metrorail and a clearer delineation of the funding responsibilities of the federal and local governments, I do not believe the state should become further involved in this threatened financial debacle.

He approved the bill allowing local jurisdictions in northern Virginia to piggy-back a 4-percent gas tax on the State gas tax. The bill required all five jurisdictions to approve the added tax before it could take effect.

In one of those jurisdictions, the seven members of the Fairfax City Council said they would oppose the 4-percent gas tax unless some of the revenue were returned to the city for uses on other purposes. [Rosenfeld, Megan, “Godwin Vetoes Subway Aid,” *The Washington Post*, April 13, 1976; Nunes, Donnel, “Fairfax City Will Oppose New Gas Tax,” *The Washington Post*, April 14, 1976]

On April 14, Governor Godwin accepted Commissioner Fugate’s resignation. Fugate had joined the Virginia highway agency in 1927 as a surveyor after graduating from Virginia Military Institute. The agency had been his only employer. He had been appointed Commissioner by Governor Albert S. Harrison in 1964. Eisen said of Fugate:

Fugate achieved a reputation as a sternly honest administrator with a sense of mission toward road projects. Despite a 1973 law that permits the shift of road funds to transit projects, Fugate told an interviewer last year that he took the “absolute” view that “interstate highway money should be used for interstate construction . . . .

A wiry man whose voice retains the twang of his native hill country (he was born in Pulaski County in southwestern Virginia), Fugate is both outgoing and modest, and possessed of a strong sense of humor . . . .

He has insisted that he is not opposed to mass transit, but rather to spending road money on transit when so many road needs remain unmet. This position has brought him strong support from rural areas and small towns.

“I make decisions quickly and on the spur of the moment,” Fugate once said of himself. “Sometimes I don’t look at the background enough, but a lot of them turn out all right anyway.”

Governor Godwin selected Deputy Commissioner Harwood to become Commissioner when Fugate retired on July 1; Harwood would fill Fugate's remaining 4-year term, which was to end in 1978. In a telephone interview, Harwood said, "I'm not too far away from the philosophy of Mr. Fugate and the governor" on Metro. He thought Metro would "be a good thing for the city of Washington," but failure to follow through with plans for intensive development around Metro lines in northern Virginia made the line impractical. [Eisen, Jack, "Fugate to Retire As Va. Roads Chief," *The Washington Post*, April 15, 1976; Edwards, Paul G., "Fugate Deputy to Get Va. Roads Job," *The Washington Post*, April 23, 1976]

(In retirement, Fugate worked as a consultant in Richmond. He died of cancer at the age of 82 on December 11, 1988.)

While Virginia was trying to decide what to do about I-66, Congress was working on a 2-year, \$17.5 billion highway reauthorization bill. The Federal-Aid Highway Act of 1976, which President Ford signed on May 5, provided the relief that Virginia highway officials, and officials elsewhere, had been seeking. Section 110 amended the Interstate withdrawal/substitution mechanism to allow funding of highway projects on the Federal-aid primary, secondary, or urban systems in lieu of a nonessential Interstate link.

With Mayor Washington having asked the city council to approve withdrawal of I-266/Three Sisters Bridge and the K Street expressway from the Interstate System on May 1, Harwood said on May 19 that Governor Godwin was prepared to transfer \$30 million from Virginia's portion of I-266 to Metro construction. This amount would be in addition to the estimated savings of \$45 million if Secretary Coleman approved the compromise I-66 plan. According to Jack Eisen, Harwood's statement "was apparently the first time the prospect of a direct interstate fund transfer by Virginia to Metro had been mentioned publicly." He added that Secretary Coleman had said he was willing to "approve enough interstate funds to complete Metro only if Maryland and Virginia both followed the District's lead with similar transfers." [Eisen, Jack, "Va. Bridge Funds May Go to Metro," *The Washington Post*, May 20, 1976]

Virginia officials were preparing a draft EIS for the compromise I-66, which the statement indicated would reduce the loss of parkland, displace fewer residents, and decrease air pollution. It would increase noise levels, but impacts would be reduced because the plan prohibited heavy trucks and, during peak periods, single-occupant vehicles. Only 67 households would be displaced compared with 166 residences in the original plan. The estimated cost was \$160 million, resulting in savings of \$45 million for Metro. [Kiernan, Laura A., "4-Lane I-66 Plan Impact Weighed," *The Washington Post*, June 7, 1976]

Virginia highway officials held a 7-hour public hearing on the proposal at the Marriott Key Bridge Hotel in Arlington on July 10-11, 1976. About 50 witnesses spoke, with the *Post* estimating that "a slim majority" opposed construction. Arlington County Board Chairman Bozman said, "The road would disrupt neighborhoods in a very small, fully developed community, both during and after construction using large amounts of land from a very small community." In addition to damaging homes, schools, parks, and neighborhoods, the scaled-down I-66 "would generate noise that would exceed federal standards and increase concentrations of pollutants in the air, especially carbon monoxide."

Herrity commented on the familiar arguments:

This is a rerun of the hearing last time. You should play a tape recording from the last hearing and save a lot of money that could be put in Metro or I-66.

As reflected in Bozman's comments, opponents opposed any version of I-66, preferring that the funds be used for Metro. Proponents mainly came from Fairfax County and cited shorter commuting time that would reduce energy consumption by taking slower moving cars off the stop-and-go streets of Arlington.

During the second day of hearings, the *Post* estimated, "The number of proponents of the four-lane \$160 million highway who spoke during the second day of hearings . . . held a slight edge over the road's opponents." Opponent Ellen Pickering of Alexandria asked, "If we're going to have more roads, how in Sam Hill are we ever going to maintain air quality standards?" She called the proposal a "road that is without a cause" and urged talk of it to end. "It's just like feeding a baby. The more you feed the baby, the more he keeps spitting up. After a while, the more you keep feeding us I-66, we're going to keep spitting it up."

James Govan of ACT told highway officials, "You have come back with a retread of the same old plan." The *Star* reported that, "Govan, a longtime active opponent of I-66 in any form, was joined by the large majority of speakers at the all-day hearing in criticizing the plan."

Marian K. Agnew of Fairfax told Secretary Coleman, "You have already heard what we're going to say on both sides of the issue. The real issue now is whether I-66 has become an anachronism," referring to problems such as energy conservation and air pollution that were not a concern when I-66 was put on the Interstate map.

Supporter Peter Halpin, also of Alexandria, said, "It's very clear from the nature of the opposition that their arguments against I-66 are no better than before." He said he wanted to apologize for them. "How many of them said they were going to ride mass transit?" He asked, then made a zero sign with his left hand.

Michael M. Burns, representing the Greenbriar Civic Association, supported the proposal. Opponents, he said, "are looking for a perfect solution to all our transportation problems." As for the I-66 proposal, "We view it as a practical solution to a very real problem." [Brown, Doug, "Testimony Begins on Scaled-Down I-66 Plan," *The Washington Post*, July 11, 1978; Seaberry, Jane, "7-Hour Hearing Held on New Rte. 66 Proposal," *The Washington Post*, July 12, 1976; Middleton, Lorenzo, "The War of I-66 Resumes in Hearing," *The Washington Star*, July 11, 1976]

The District of Columbia City Council voted 13 to 0 on July 27 for a resolution introduced by Councilwoman Shackleton opposing the I-66 compromise plan. The resolution restated the city's opposition to more freeways and said "it is precisely this position" that had prompted the city to transfer millions of dollars to Metro construction. The city wanted Virginia to transfer all the I-66 funds to Metro. The vote ensured that the four District votes at a July 30 TPB meeting would oppose I-66; with 12 members on the board, the outcome was uncertain. [Eisen, Jack,

“I-66 Future Opposed, May Hurt Metro Plans,” *The Washington Post*, July 29, 1976]

The Virginia Highway and Transportation Commission unanimously approved the modified I-66 proposal on July 29. [Edwards, Paul G., and Eisen, Jack, “Va. Highway Agency Approves I-66 Plan,” *The Washington Post*, July 30, 1976]

The District’s solid opposition did not prevent the TPB from restoring I-66 to the regional transportation plan. In the fractional voting system in effect, the TPB approved the action by “the razor-thin tally of 6.112 to 5.749 votes,” as Jack Eisen explained to *Post* readers:

Joseph S. Worley, vice chairman of the Arlington County Board, led opposition to the road. It would be, he asserted, “a waste of public funds, a waste of tax money” and would disrupt neighborhoods while increasing air pollution.

D.C. City Councilman Jerry A. Moore Jr., supporting Wholey, called the city’s position one of “voting in favor of Metro and against I-66.”

Fairfax County Supervisor Marie B. Travesky, who made the motion to approve the I-66 restoration, disputed that interpretation. “If the bell tolls here for I-66, it also tolls for Metro in Virginia,” she said.

The COG’s legal counsel, John J. Bosley, warned that not restoring I-66 to the official map “could make the project vulnerable to successful legal attack.”

Eisen continued:

The decision yesterday of Alexandria City Councilman Robert C. Calhoun to cast his 0.329 vote to support I-66 was probably decisive. Before doing so, he won approval for a provision that the transportation planning board would keep some control over the future use and possible expansion of I-66 facility.

Opponents of I-66 vowed to oppose restoration when the issue “comes before the COG board of directors in a different procedural form next Wednesday.” [Eisen, Jack, “I-66 is Restored to Regional Road Plan,” *The Washington Post*, July 31, 1976]

The opponents, however, were unsuccessful before the COG board on August 4. By a weighted vote of 66½ to 54½, the board endorsed the scaled-back I-66 after what Eisen called “a sometimes bitter debate.” This vote was the final local action needed before Secretary Coleman’s decision.

City Councilman Douglas E. Moore, chairman of the District’s Budget Committee, threatened to withhold the city’s Interstate substitution funds from Metro construction in the suburbs. “The money is all the leverage we have,” he said, to avoid an influx of Virginia traffic that would be “an infringement on the rights of our people.” As for how serious a threat this was, Councilman and COG board member Jerry A. Moore, Jr., said “Doug Moore spoke only for himself.”

Eisen pointed out the paradox of the weighted voting:

The vote on the key motion yesterday was conducted under a voting system reflecting the relative populations of 15 local governments that hold COG membership. Actually, 21 persons cast the 121 votes.

If both supporters and opponents had not called for the weighted voting, which is optional, the outcome of the key motion apparently would have been reversed – 11 against the road, 10 favoring it.

Supporters were chiefly Maryland jurisdictions and those in Virginia outside the Capital Beltway, except for Loudoun County, which opposed the plan. Opponents were Arlington County, Falls Church, Alexandria, the District of Columbia, and Gaithersburg.

Montgomery County split its votes, with County Executive James P. Gleason's 10½ votes cast for I-66 and the County Council's 10½ votes opposed.

While voting to support the I-66 plan, COG members were concerned about its impact on air quality and Metro ridership. They called for additional documentation on how I-66 would affect the region's compliance with EPA's air quality standards.

The District's planning director, Ben Gilbert, "insisted that I-66 and Metro would be competitive, and that building the road would doom the success of the rail line." Herrity disagreed. "I'm not telling you the Metro line will be built, but . . . I can assure you that under existing circumstances it will not be built" if I-66 is not built. He added that Governor Godwin supported the Metro line only if I-66 is built.

Eisen summarized the issue by saying the "two hours of debate clouded rather than illuminated the effect that building I-66 might have on completing the Metrorail route that is proposed to occupy the highway median from Glebe Road in Arlington to Vienna." [Eisen, Jack, "Small-Scale I-66 Wins COG Backing," *The Washington Post*, August 5, 1976]

Secretary Coleman announced on August 30 that he would hold a public hearing on the scaled-down I-66 in the Departmental Auditorium on October 2, 1976. The press release included his explanation for the hearing:

In light of the considerable interest and controversy which has surrounded the issue of construction of I-66 and the fact that I personally conducted a public hearing on the matter when it was previously presented to me and issued a decision on it, I shall now conduct a public hearing on the new proposal.

This hearing was organized to hear from public officials in the morning and civic groups in the afternoon.

Overall, he listened to about 80 presentations from officials and civic representatives who were "evenly divided for and against the highway," by the *Post*'s count. Governor Godwin was one of the witnesses. He said, "I have had more information available to me and more advice and more opinions expressed to me about this problem than perhaps any other in either of my

administrations.” (He was the rare Virginia Governor, in a State that prohibited its governors from succeeding themselves, to serve two non-consecutive terms (1966-1970 and 1974-1978).):

Gov. Mills E. Godwin . . . testified that construction of the metro line down the median strip of I-66 would save Metro about \$45 million in construction costs, since grading, preparation and overpasses needed for the roadway could also be used by the rail line. In addition, Godwin said that building I-66 would “open the way” for the transfer of over \$30 million in interstate highway funds [from I-266] to the financially troubled rail system.

However, in an interview, Godwin said he would “feel no obligation to transfer” road money to Metro if I-66 is not built. “That money was allocated to a highway,” Godwin said, “and we’ve got other projects in Virginia that need to be built” if Coleman decides against I-66.

Secretary Coleman made clear that he had some concerns about the EIS:

He questioned them about certain statements he found “troubling” in the environmental impact statement accompanying the proposal as well as about Metro.

“It would be easier for me if I knew that if I-66 were built Virginia would commit itself to doing everything it can to build Metro to Vienna,” Coleman told John H. Harrison, a representative of For I-66. “I’d be interested in that. Unless there is a guarantee that Metro is going to be built, you may have the situation that I-66 will be built without Metro in the median strip and then in four or five years it will be overcrowded and there will be pressure for more lanes.”

Coleman also directed a great many of his questions to assertions in the environmental impact statement that I-66 would only divert about 100 riders from Metro to the highway and that the highway would reduce the amount of in-bound traffic crossing the Theodore Roosevelt Bridge rather than increase it. Coleman asked those appearing in opposition to the highways to address themselves to these assertions and to submit comments to him in writing.

In addition, Coleman asked the speakers “what am I to do with the statement that Metro could only carry 20 per cent of the ridership” into the District and that there was another 25 per cent of commuters who were “in need of some kind of road.”

“Who’s going to put information on the record that deals with the information in the environmental impact statement?” Coleman asked Arlington County Board member John W. Purdy who, with the majority of the Arlington Board, opposes I-66. “Has anyone been to the Virginia Highway Department and asked them for the back-up material? I take it that’s something I’m supposed to do.

He also was concerned that guarantees about ridership could be obtained to ensure the road would be used as proposed, as well as what would happen to the right-of-way if I-66 were not built.

When Chairman Herrity testified, Coleman observed that new highways were soon clogged with traffic. Herrity replied, “I don’t believe in the Oedipus highway complex that highways procreate cars and traffic. Other decisions do that.”

District Director Schneider, while testifying on behalf of Mayor Washington, addressed one of Secretary Coleman’s concerns. “I simply do not believe,” he said, that fewer cars would enter the city if I-66 were built. He considered it a “folly” to build Metrorail in the median of I-66 while operating Metrobuses on the highway, “with both systems losing money.”

After hearing from both sides, Secretary Coleman said the testimony helped him understand “the concern of the people that the proposed highway will not be changed once it is built, the extreme feelings of the people in Arlington who don’t want it and the reasons why people want Metro completed.” [Darling, Lynn, “Coleman Explores I-66, Metrorail Relation,” *The Washington Post*, October 3, 1976; Crosby, Thomas, “I-66 Dispute Drones On At Hearing Before Coleman,” *The Washington Star*, October 3, 1976]

While Secretary Coleman decided what to do, the WMATA board learned from a staff report on July 8 that the cost of building Metro had increased by \$227 million to \$5 billion. Eisen explained:

Metro comptroller, William E. Boleyn, said one of the largest items in Metro’s rising cost can be traced to “a lack of timely decisions” by citizens, planners and politicians.

Because stretching out construction inevitably resulted in increased costs, the lack of a decision on I-66 was an example.

The increase meant that local jurisdictions would have to find revenue to make up the difference. The District would have to find an additional \$65.9 million. In Maryland, Montgomery County would need \$32.7 million more while Prince George’s County’s additional share would be \$30.5 million. The additional cost would be shared in northern Virginia by multiple jurisdictions:

Alexandria: \$15.9 million  
Arlington: \$42.2 million  
Fairfax County: \$40.5 million  
Falls Church: \$300,000

[Eisen, Jack, “Metro to Cost Area Jurisdictions \$227 Million More, Staff Says,” *The Washington Post*, July 12, 1976]

Secretary Coleman asked the WMATA board for its views on I-66. The board, which included members from multiple jurisdictions, was internally divided on the freeway, as the jurisdictions were. Eisen summarized the response:

The board refused to say “yes” or “no” to the road, but did spell out the potential cost of its rejection. Its letter, signed by Sterling Tucker, chairman of both the Metro board and

the D.C. City Council, was couched in such neutral terms that it did not even say the increase was harmful or troublesome.

“. . . it would appear,” Tucker’s letter said, “that the current I-66 proposal would result in a reduction in Metro construction cost, excluding real estate, of \$34 million” from the earlier proposed version of the road with unrestricted traffic . . . .

A “no I-66” situation would result in considerable redesign effort with a resulting delay of 18 months during which time we would be subjected to additional escalation cost.”

He did not specify an amount, but a table attached to the letter indicated that a 1-year delay would cost \$14 million. Thus, an 18-month delay would appear to cost at least \$20 million.

Actually, as Eisen explained, the actual difference between building or not building I-66 added up to \$70 million:

The \$70 million actually is composed of two separate elements. Metro has said it would cost at least an extra \$34 million to build the rail line if I-66 is not built. And unless the highway is approved, Virginia Gov. Mills E. Godwin has said he will refuse to release more than \$30 million of interstate highway funds to Metro.

This \$70 million gap between costs and resources is one factor that U.S. Secretary of Transportation William T. Coleman Jr. must weigh in deciding whether to approve the state’s latest proposal for the road . . . .

Given the choice between building I-66 to the District line or losing \$70 million for a Metro line in the corridor, District officials were willing to lose the money rather than have I-66 traffic flowing across the Potomac River onto already congested city streets:

District officials testified against the road and Godwin testified for it at a recent hearing conducted by Coleman . . . . Douglas N. Schneider Jr., director of the District’s transportation department, told interviewers over the weekend that the Virginia funding problem is political and has nothing to do with transportation matters.

If Virginians were as serious as District officials about completing the 100-mile Metro system, he declared, the problem would evaporate. He described himself as unconcerned over the funding problem, a position similar to that taken by other District officials. [Eisen, Jack, “I-66 vs. \$70 Million for Metro,” *The Washington Post*, October 28, 1976]

## **Rebirth of I-66**

On November 2, 1976, former Governor Jimmy Carter of Georgia defeated President Ford in the presidential election. The President-elect chose Representative Brock Adams to succeed Secretary Coleman as Secretary of Transportation.

In Washington area races, 43-year old Representative Paul S. Sarbanes, who in 1970 had defeated the powerful chairman of the Committee on Public Works, Representative Fallon,

defeated Senator Beall in a landslide with 57 percent of the vote. In Virginia, Senator Byrd won his race. The three Representatives elected in 1968 won reelection – Representative Spellman of Maryland and Representatives Fisher and Harris of Virginia. Representative Gude retired after 10 years in the House, succeeded by Republican Newton I. Steers, Jr., a 59-year old State Senator.

In the District of Columbia, Delegate Fauntroy won reelection to his nonvoting position in the House with 78 percent of the vote. Most city council members running for reelection were successful. Winners were Marion Barry (at-large), The Reverend Jerry Moore, John Wilson, Arrington Dixon, and Willie Hardy. Councilman James E. Coates was the exception; he lost to Wilhelmina J. Rolark.

One of the many repercussions of Governor Carter’s election was that Secretary Coleman was a lame duck. His predecessors, in their lame-duck weeks, had tried, with mixed results, to resolve remaining controversies in their final weeks. Now it was his turn.

In an interview with the *Post* on December 29, Secretary Coleman said he expected to decide on I-66 before leaving office “in such a way that the full Metro is going to be built”:

I think that if the Washington community and the [national] administration doesn’t support Metro, in 15 years we all will regret it.

He knew that Secretary-designate Brock Adams had been a consistent Metro supporter in the House of Representatives.

In view of Governor Godwin’s oft-stated concerns, Secretary Coleman added that, “The only way Metro is going to be built is to get the Commonwealth of Virginia back of it.”

As for I-66, he said, “it’s a really tough call . . . everybody outside the Beltway wants it very much, but inside it [the opinion] is mixed.” He cited one problem with restricting the road to carpools was that it might take passengers away from Metro, while sorting out traffic to and from Dulles International Airport would be difficult.

Eisen wrote:

Reminded that he has sharply criticized aspects of Metro, Coleman maintained that the managers of the program failed to keep costs under control.

Despite the increase of cost projections from the original \$2 billion to \$4.7 billion and a potential \$5.5 billion, Coleman said, “nobody gets upset . . . nobody does a damn thing [about it]. We ought to finally recognize there is a limited amount of public money, and we have got to insist that public servants spend it more wisely.” [Eisen, Jack, “Coleman Links Route 66 to Full Metro,” *The Washington Post*, December 29, 1976]

On January 5, 1977, Secretary Coleman announced:

I have decided to approve the multi-modal transportation concept including the four-lane Interstate Highway 66, as proposed to me by the Virginia Department of Highways and Transportation. This interstate segment will provide direct east-west access between the Nation's Capital and Interstate 81 and will thus benefit the entire northern portion of Virginia. In addition, the highway as proposed – with peak hour restrictions to buses, carpools and traffic to and from Dulles in the peak direction – will benefit the immediate metropolitan area by providing an efficient commuter facility to supplement the capacity of the existing network of commuter roads. The proposal will also provide the right-of-way, significant cost savings, and other financial support for construction of the “K” line [to Vienna] of the Metro rail transit system in the median of the highway for part of its length.

He was aware of the divided views on the proposal, a reality that made it a difficult decision:

On balance, however, I have concluded that the multi-modal solution proposed by VDHT will best meet the transportation needs of northern Virginia while fulfilling the environmental, social and economic objectives of the local communities and the Federal Government.

He had a concern related to the Metro line:

I realize that it is impossible to obtain, at this time, a legal commitment by the Governor of Virginia or the Washington Metropolitan Area Transit Authority (WMATA) to complete the Metro “K” line. Nevertheless, in view of this decision to approve I-66, I will expect the Governor, the agencies of the Commonwealth, and the Virginia legislature to honor the moral obligation to advance the completion of Metro. Such a moral obligation is, in my judgment, eminently fair . . . .

To this end, I ask that the Governor commit both the manpower and financial assistance necessary to the planning and construction of the Metro “K” line. Such assistance must include the financial commitments contained in the I-66 submission and the transfer of

I-266 funds to Metro, in accordance with the stated intention of the Governor [during the October 2 public hearing], but should not be limited to these actions. I expect that the full range of financial resources available to the Commonwealth, including taxation powers, bonding, or any other suitable revenue mechanisms, will be considered to fulfill this commitment. [*Secretary's Decision on Interstate Highway 66, Fairfax and Arlington Counties, Virginia*, U.S. Department of Transportation, January 5, 1977, pages 7-8]

Secretary Coleman, to be absolutely clear, specified the conditions of his approval:

Specifically, I approve the request for Federal aid for I-66 subject to agreement by the Commonwealth of Virginia that it will:

- Provide right-of-way in the median for Metro without cost, and “assist the Metro system through complete construction of the median to the point that rails could be placed by the Washington Metropolitan Area Transit Authority with minimal construction expense”,

and provide other assistance to Metro construction, all as set forth in the Final Four Lane Supplemental EIS;

- In accordance with Governor Godwin’s announced intention, transfer the funds previously allocated to I-266 in Virginia to Metro, under the “interstate transfer” provisions of Federal statute;
- Restrict the use of the highway lanes in the peak direction, during the peak hours, to buses, carpools of four or more persons, emergency vehicles, and vehicles bound to or from Dulles International Airport. These restrictions can be removed by VDHT or the Commonwealth of Virginia, only with the concurrence of the U.S. Secretary of Transportation, the authorized transportation planning body for the metropolitan Washington area, and WMATA. In addition, the restrictions can be removed by the U.S. Secretary of Transportation after consultation with these same parties. In either case, all environmental requirements would have to be met before the restrictions could be removed;
- Exclude heavy duty trucks (two-axles, six-tired or larger) from the facility at all times;
- Submit a plan within the next 60 days for DOT review and acceptance, detailing the enforcement approaches and resources which will be committed to assure compliance with the traffic limitations set forth above, including a plan for identifying automobiles bound to and from Dulles;
- Not construct any highway lanes in the I-66 right-of-way beyond the four which I am now approving;
- Include the design elements and other features intended to minimize and compensate for adverse social and environmental impacts of the highway as set forth in the Final Four Lane Supplemental EIS, and this document, including specifically those set forth in Section V of this document (in other words, so far as possible, construction should be similar to the George Washington Parkway); and
- Provide assurances that all construction will be carried out in a way that provides apprenticeship opportunities, skilled training and jobs for substantial numbers of minorities, and significant opportunities for the participation of minority-owned enterprises. [pages 8-9]

In a section on design, Secretary Coleman described the approved I-66 as “a four-lane divided, limited access highway with provision over part of its distance for Metro rail in the median.” It would have two 12-foot wide lanes in each direction, plus acceleration/deceleration lanes at interchanges. The highway would be depressed below grade extensively to minimize right-of-way and community impacts. The design speed would be 60 miles per hour, with a posted speed of 55 miles per hour, reduced to 50 miles per hour between Glebe Road and the approach to the Theodore Roosevelt Bridge. In addition:

Overpass and underpass structures would be designed for the four highway lanes and Metro (where the latter is in the median). Where the highway passes under structures, there would be 8-foot shoulders on the inside lanes and 30-foot “clear zones” beyond the outside lanes.

Other design features included continuation of bicycle and pedestrian trails from the Rosslyn/Spout Run area along I-66 to North Roosevelt Street near the planned East Falls Church Metro Station:

Also of particular importance is the commitment of VDHT to heavy landscaping, multiple use of space, and noise abatement structures to assure compatibility with the surrounding neighborhood. Approximately 60,000 linear feet of noise abatement walls would be constructed along the highway, approximately 60 percent of the two sides of the total alignment of I-66 inside the Beltway. [pages 24-25, 58]

In a conclusion, Secretary Coleman stated:

The proposal, as approved, with conditions, will result in improved mobility; an incentive and a great opportunity for increased carpooling, particularly over the longer run, as a basic tool of urban transportation policy in this metropolitan area; substantial support for the construction of an improved mass transportation system in this corridor, another basic element of a sound urban transportation policy; and improved access to Dulles Airport. These benefits will be achieved at some costs, but the “costs” have been reduced considerably and compensating features will be provided by major design improvements which the proposal includes and which are conditions of my approval.

The decision has also been particularly troubling because I know how deeply felt is the opposition to this project, how informed and reasoned much of the opposition has been, and how much sincere effort has gone into it. Many will be tempted to believe that their views were not considered. I want to emphasize that the views of the opponents, as well as the proponents, were carefully considered, and I hope that consideration is reflected, at least in part, in this document. But after considering the views of both sides, I can only choose one, and I have made that choice as objectively as I can, based on the record and information before me. [pages 70-71]

In his autobiography, Secretary Coleman recalled the decision:

Less than a year [after his initial rejection], Virginia proposed a new, redesigned highway. My staff worked closely with the commonwealth, the Federal Highway Administration, and the Metropolitan Planning Organization . . . to come up with a design that was compatible with regional transportation planning, a proposal that I approved. [Coleman, page 260]

ACT members, who had played a key role in securing the court order that blocked I-66 construction in 1972, felt “deeply disappointed” by the Coleman decision, according to James Govan. “Six years of effort have finally been proven a waste of time.” Secretary Coleman, Govan said, “has approved a project that simply doesn’t stand on its merits. The argument for it hasn’t been made.” The decision “forces a highway down the throats of Arlingtonians in the name of Metro for a pittance of \$30 million.”

He added that ACT would decide in the next day or two whether to file another suit:

It's certainly subject to legal challenge, but it would mean raising funds. Hopefully we don't have to do that. I hope that when Brock Adams gets into office, he will be willing to review the decision and deal with the project.

Attorney Latto said, "On the face of it, Coleman's opinion looks very thoughtful," but it had a "legal Achilles Heel." In Latto's view, Virginia had overestimated the number of carpools that would use I-66 during peak hours (3,525 carpools in one year), while ACT believed the number would be closer to 1,300. Coleman had noted in the decision that some of the State's estimates appeared valid, but others "may be optimistic." In other words, Latto said, Coleman was basing his decision on a "guess. It may not be simple to persuade a court of that, but it's possible." He was reviewing the decision before advising ACT on whether to return to court.

As usually is the case with nominated Cabinet members, Representative Brock Adams did not want to express a view on I-66. A spokesman told reporters that counsel for Representative Adams would study Secretary Coleman's recent decisions "to see which ones are reviewable or not." It was too early to say whether Adams would be taking another look at I-66.

Chairman Tucker of the District City Council stressed that in the wake of the decision, "the District remains firm in its conviction that even in its modified version, I-66 is unnecessary." Like Govan, he was optimistic that Secretary Adams, after he takes the oath of office, would review the decision. "My guess is that with opposition so strong here and in parts of Northern Virginia, the I-66 issue will be subject to review by the new administration."

Representative Fisher was "disappointed" because "building more highways is a dead end, not a solution to transportation problems." The conditions Secretary Coleman placed on the new highway were not "stringent enough" and were "nothing more than what proponents of the highway had already agreed to."

Governor Godwin said he was "of course, pleased" with the Coleman decision. VDHT Commissioner Harwood was hopeful that construction could begin in about 10 weeks. The State, he said, was thinking of going back to the U.S. District Court in Alexandria to argue that VDHT had met the conditions of the 1972 decision:

I would hope that after all the work that has gone into this thing, court suits, the gathering of voluminous information, the very difficult decision by Coleman, the assistance to Metro, the minimizing of environmental impacts, I just hope everything will wind down and people will let us get on with it.

Chairman Herrity, who had suggested the model for revived I-66, called the Coleman decision "a great victory for a lot of people in Fairfax County." He was convinced that without the reversal he had engineered in the position of the Fairfax County Board of Supervisors, "this would have never happened."

The *Post's* report on the decision concluded with this anecdote reflecting Secretary Coleman's challenge in making the decision:

DOT officials originally announced that Coleman would release his decision on I-66 in December, but at the last minute, a press conference was canceled. Coleman said later that he had two decisions ready to go on Dec. 19, one in favor of the highway, one opposed. A half hour before the printers were to arrive with the decision, Coleman said he decided to postpone announcing it. "I just wasn't happy with the one I had."

[Crosby, Thomas, "I-66 Ruling Has Foes in Quandary," *The Washington Star*, January 7, 1977; Darling, Lynn, "4-Lane I-66 is Approved in Arlington," *The Washington Post*, January 6, 1977; Edwards, Paul, "Godwin Says He's 'Pleased' By I-66 Ruling," *The Washington Post*, January 6, 1977]

The *Post* editorial on the decision began:

With almost as many reservations as Washington's hotels have on Inauguration Day, Secretary of Transportation William T. Coleman Jr. has approved construction of I-66 . . . .

The deal reflected in Secretary Coleman's decision came about because Governor Godwin "had all the cards" and "had him over a barrel." Secretary Coleman faced a dilemma: "Either approve I-66 – or watch the Metro rail system suffer," he said in essence:

Thus it is a case of a governor forcing a federal decision, which is then written with "conditions" that attempt to cushion the damaging effects, including a stipulation that the governor must agree to do what he threatened not to do unless he got his way: help Metro with the median and transfer those other highway funds.

The editors were skeptical about the merits of the scaled-back I-66. Secretary Coleman, they pointed out, had stated that "the transportation benefits which I-66 would provide in conjunction with Metro, combined with the extensive efforts to be undertaken to minimize the adverse impacts, outweigh the net adverse social and environmental effects of the proposal":

So, after more than 20 years on the drawing boards, the I-66 corridor may not be on its concrete way to becoming what surely ought to be named the Mills Godwin Highway. ["The I-66 Deal," *The Washington Post*, January 7, 1977]

*Star* editors also noted the key role of Governor Godwin's obstinacy, but were hesitant to predict what would happen next because "the project has had so many ups and downs that it's hard to say whether construction will now go forward." Still, a decision had been made:

We hope that citizens who have fought the highway project will not continue their resistance . . . . We also hope that incoming Transportation Secretary Brock Adams will not upset Mr. Coleman's decision. Mr. Coleman has studied the matter for many months and has concluded, correctly in our opinion, that construction of the highway is needed in a balanced transportation system. ["Green Light for Route 66," *The Washington Star*, January 10, 1977]

In Secretary Coleman's autobiography, he looked back on his decision:

In recent years there have been proposals to widen certain parts of I-66 to facilitate the ever-increasing congestion of commuter traffic. Members of Congress have asked me whether my initial decision would preclude any changes to the highway design, and I have told them of course not. Congress or the secretary of transportation can always adjust the decisions of their predecessors to accommodate changing circumstances. Nevertheless, I believe the approach I took to the I-66 decision remains valid today. We cannot simply build highways willy-nilly. We need coordinated regional transportation plans that preserve the quality of urban life, conserve energy, and reduce air pollution, including that from the new threat of greenhouse gas emissions. [Coleman, page 261]

### **Confirming I-66**

Brockman “Brock” Adams had graduated from the University of Washington at Seattle and Harvard Law School. After several years in private practice, he served under President Kennedy as U.S. Attorney for the Western District of Washington (1961-1964). In 1964, he was elected to the House of Representatives, part of the Democratic wave that swelled the 88<sup>th</sup> Congress with supporters of the Johnson agenda. In 1975, he became chairman of the Committee on the Budget. He resigned from the House on January 22, 1977. He lived with his family in a home at 3002 Albemarle Street, NW., in the District’s Forest Hills neighborhood not far from Connecticut Avenue.

On January 7, 1977, the Senate Committee on Commerce held a confirmation hearing for Secretary-designate Adams. Senator Wendell H. Ford (D-Ky.) asked whether Adams would reconsider Secretary Coleman’s approval of I-66. Adams replied that he would review agreements and promises on transportation made by the Ford Administration. He would not make firm recommendations before taking office, but said he would “review all we’re entitled to review.” He added, “That particular one is a question of whether the time runs out on the 30-day period before we are entitled to review it.” [Nominations – Secretaries – Departments of Transportation and Commerce, Hearings before the Committee on Commerce, United States Senate, 95<sup>th</sup> Congress, 1<sup>st</sup> Session, Serial No. 95-1, pages 41-42; the hearing for Secretary of Commerce-designate Juanita Kreps took place on January 10.]

The committee submitted questions to Secretary-designate Adams for replies in writing. One of them about I-66 was mainly a question about similar controversies around the country: What priority should be given to developing Interstate highways systems in urban areas and should State and local governments be given a greater voice in the design and development of urban transportation systems? The segments, Adams replied, involved tough decisions, but the Interstate withdrawal-substitution process helped with the decisionmaking process because it “allows state and local officials to make a new decision on plans for interstate highways which perhaps date back to the mid-1950’s.” They can develop transportation networks that are “better tailored to present day needs.” As for I-66, he said:

In the case of I-66, present status of the matter in the District of Columbia is that the highway will not be built as originally designated in the District. The State of Virginia is now reviewing its options for development of the I-66 segment lying within its jurisdiction. The plan now under review at the Council on Environmental Quality calls

for a highway of substantially reduced size and for active measures to match highway demand and capacity. I agree with these steps in concept. If a final decision on I-66 is mine to make, I will review the proposal closely and assure myself that all environmental and community impact factors have been taken into the fullest account in whatever plan the State of Virginia puts forward, and that the transportation considerations provide for a reasonable balancing of highway and mass transit capacity in the corridors affected.  
[page 16]

Secretary-designate Adams was not, at this time, fully committed to the rapid rail transit system in the Washington area or elsewhere. He supported a 100-mile network, as he had in the House of Representatives, “but not necessarily 100 miles of rail.” He felt that bus service might be an acceptable, less costly substitute for some parts of the rail network. He said that with a price tag now pegged at \$5.5 billion, only about 64 miles were currently funded – and less expensive options might be worth considering for the additional miles.

Secretary Coleman, asked by reporters if he thought Secretary-designate Adams would promote the full, 100-mile Metro system, replied, “I feel intelligent people, when they review all the facts, tend to reach the same conclusion. Brock’s an intelligent person.” He added that when New York, Philadelphia, and Chicago each built its system, many people thought they were making a mistake. Those cities, however, “would be in bad shape” without their subways. Referring to Metro, he said, “Anyone who views history 15 or 20 years from now will say we made a mistake” if the full network is not completed. [Crosby, Thomas, and Aug, Stephen M., “Adams Hedges On Metro; Plans To Review I-66,” *The Washington Star*, January 8, 1977]

In a letter to the editor, ACT’s James Govan said that the *Post* editorial “hit the issue squarely,” particularly in citing the role of Governor Godwin. “Clearly, Mr. Coleman had a hard time making up his mind, and that suggests Gov. Godwin’s intransigent position was even more decisive in tipping the scales.” Unfortunately, the decision had not “settled the basic issues”:

Rather, his decision left open the critical issues of I-66 competition with Metro and the adequacy of the carpool usage projections upon which the entire analysis of I-66 are based. In view of such issues, he could have just as easily decided that Metro can be completed in the corridor alone, and the need for a highway assessed after Metro’s impact can be seen. Such a decision might, in the long run, save us far more in public funds than the \$45 million Virginia promises to save Metro in construction costs.

The only “silver lining in the cloud of I-66” was the possibly that Secretary-designate Adams might reverse the decision. Govan knew that many Washington insiders would advise Secretary-designate Adams to avoid extending the issue. “What a comment on the new administration if it appears that significant issues such as this one are to be avoided rather than faced.” True, the new Secretary would be unpopular with pro-I-66 interests if he reversed the Coleman decision, but “that is not the important consideration”:

What is important is that Mr. Adams will make a nationwide impact by reconsidering I-66 and approving a solid mass-transit alternative. He will make abundantly clear the Carter administration’s commitment to urban mass transit . . . .

There is more at stake in the national impact of this decision than is at stake in upsetting Gov. Godwin who cares little for the area's transit problems and who has less than a year to serve as governor. ["I-66: Peace and Quiet Now, or More War?" Letters, *The Washington Post*, January 17, 1977]

(Governor Godwin, once again term limited, would leave office on January 14, 1978.)

On January 13, Governor Godwin wrote to Secretary Coleman to reaffirm his acceptance of the eight conditions the Coleman decision had imposed on approval of the scaled-down I-66 design proposal. Governor Godwin confirmed that Virginia would:

- Provide the right-of-way to Metro, without cost, for construction of the Vienna line;
- Use the Interstate withdrawal-substitution mechanism to withdraw I-266 and substitute general Treasury funds for Metro;
- Restrict the highway during peak periods as stated in the Coleman decision;
- Exclude heavy-duty trucks;
- Submit a plan within 60 days of January 5, 1977, for the Department of Transportation's review and acceptance on enforcement approaches to ensure compliance with the restrictions, including a plan for identifying Dulles International Airport traffic;
- Not construct highway lanes in the I-66 right-of-way beyond the four Secretary Coleman approved;
- Incorporate design elements to minimize and compensate for adverse social and environment impacts, including construction, insofar as possible, to be similar to that of the George Washington Memorial Parkway; and
- Ensure that all construction will be carried out in ways that provide apprenticeship opportunities, skilled training and jobs for the participation of minority-owned enterprises.

Within 2 weeks of Secretary Adams' anticipated compliance, State and Federal officials planned to go to court to ask relief from the earlier injunction against I-66. Construction could begin as early as April, according to Harwood.

Vice Chairman Pennino of Fairfax County also was ready for I-66 to be built. She warned Arlington County residents and officials that if they tried to block I-66 again, she would go to court. "I would like the citizens of Arlington to know Martha Pennino has talked to some very able lawyers." Several citizens had volunteered to participate in the suit as the damaged parties. Arlingtonians, she said, "who have held this project up for a decade," should know the time had come "to get on with it." ["Gov. Godwin Agrees to I-66 Conditions," *The Washington Post*, January 19, 1977; "Any Delay in Extension of I-66 Will Draw Lawsuit," Says Pennino," *The Washington Star*, January 19, 1977]

The Senate confirmed Secretary Adams on January 20 on the same day that President Carter took office. On January 23, President Carter took part in the ceremony in the East Room of the White House as 12 members of his Cabinet, including Secretary Adams, took their oaths of office. Chief Justice Burger administered the oaths. Introducing each Cabinet member, President Carter referred to Secretary Adams as "the best congressman I've ever known."

Opponents of I-66 saw the change in Secretary as another opportunity to block the freeway. By a 3 to 1 vote, the Arlington County Board approved a resolution urging Secretary Adams to review and reverse Secretary Coleman's decision. The member who voted against the resolution, Walter L. Frankland, said, "The claims that only the Metrorail system . . . can solve the area's transportation needs is no longer a valid premise on which to attempt to block all further highway development." Board Chairman Joseph S. Wholey indicated he would try to arrange a meeting with Secretary Adams, Mayor Washington, and Representative Fisher.

About 60 opponents of I-66 watched the board's discussion. One of them, Raymond L. McGovern of ACT said, "I place most of my hope in Adams' known support for mass transit." [Hamilton, Martha, "Arlington County Board Urges I-66 Review," *The Washington Post*, January 27, 1977]

According to White's history of the I-66 struggle, ACT did everything it could to secure a reversal of the Coleman decision:

After the change in administration in January 1977, ACT picketed the White House twice and pressed President Jimmy Carter's new Secretary of Transportation, Brock Adams, to review and reverse Coleman's decision. [White, page 64]

However, on February 2, Secretary Adams "gave final approval" to the Coleman decision. He had, according to the announcement, "instructed federal attorneys to file a petition with the United State District Court for Northern Virginia seeking the dissolution of a federal injunction that poses the final block to construction of the highway."

He said a key factor in his decision was the desire to complete the regional Metro system and for the need to make final decisions on longstanding transportation issues. I-66 had been unresolved for 15 years:

It was clear to me from a review of the facts and the arrangements arrived at between my predecessor and Governor Godwin only last month that failure to give the go-ahead would result in grave damage to the future of the Metro system.

If we are to make any progress at all in solving the transportation problems of this area we have got to stop this endless wrangling over the Gordian knot that Metro/I-66 has become. The whole issue was too important to the overall transportation needs of the region. It had to be solved.

Referring to Governor Godwin's January 13 letter to Secretary Coleman, Secretary Adams said, "the Governor has reaffirmed to me his acceptance of the eight conditions originally imposed, and he has indicated to me his full support and continuing cooperation in completing the Metro rail system in Virginia."

In talking with reporters, Secretary Adams said the decision was a "very difficult" one, adding that if he had been responsible for the decision "from the beginning, I might have decided it differently." At this point, he thought "it's been a very long process, it's gone on too long, and I think that's what's wrong in government decision-making."

He knew of the groups on both sides of the issue, but had not consulted with groups on either side. Doing so, he thought, “would taint the decision,” and result in another round of public hearings. As it was, he said he would not be surprised if the Coleman decision ended up in court.

Secretary Adams said, “My commitment is to the Metro system. If [I-66] produces a Virginia commitment to Metro, then we should demonstrate our willingness to meet them halfway.” Funding was available for 64 miles of Metro, but the funding for the remaining 36 miles was uncertain. At UMTA’s request, a study was underway to determine if some of Metro’s suburban lines could be changed to another less costly form of transportation, such as express bus lanes. If the study supported the 34 miles and local governments came up with an additional \$200 million, Secretary Adams committed to providing the Federal share:

I can’t tell you the amount of money because I have to get that from . . . the Metro people . . . [but] our recommendations are going to be towards getting the system completed. I am an advocate in this process with the Office of Management and Budget, the President, and Congress . . . .

With Metro in mind, Secretary Adams had telephoned Governor Godwin, who had “indicated to me his full support and continuing cooperation in completing the Metrorail system in Virginia” and that I-66 would never be wider than four lanes.

Reaction to the decision was predictable. James Govan had not expected such a quick decision:

Mr. Adams has approved a bad project that will cost the taxpayers more than just the Metro system would. It’s very unfair to the citizens. They voted for Metro, they voted to pay for it, but they didn’t vote for this highway.

Chairman Herry praised Secretary Adams. “It’s an absolutely fantastic victory for the people of Fairfax and Northern Virginia.

Governor Godwin refused to confirm his full support for Metro, as claimed by Secretary Adams. The governor’s press secretary summarized the call with the secretary:

John H. Wessells, the governor’s press secretary, conferred with Godwin and then said the governor’s position on Metro is set forth in a letter to Adams’ predecessor, William T. Coleman.

That letter, dated Jan. 13, emphasizes Godwin’s inability to make any future commitment for the state and promised no support for Metro beyond a recent agreement to use about \$75 million in aid in order to win U.S. approval of construction of Interstate Rte. 66 from the Capital Beltway through Arlington to Washington.

An aide to Secretary Adams recalled the telephone call differently:

[David] Jewell said Adams understands Godwin to promise that he “would do everything in his power to complete the entire Metro system in Northern Virginia. Wessells said

Godwin would not comment on his conversation with Adams except to say that he is “grateful that he approves of the I-66 project and hopes construction can soon begin.”

[Darling, Lynn, “I-66 Extension Reaffirmed by Brock Adams,” *The Washington Post*, February 2, 1977; Crosby, Thomas, “DOT Secretary Adams Reaffirms Decision on I-66,” *The Washington Star*, February 2, 1977; Edwards, Paul G., “Godwin’s Stance on Metro Unchanged,” *The Washington Post*, February 3, 1977]

The *Star* accepted Secretary Adams at his word that the future of Metro was his primary motivation in reaffirming the Coleman decision:

Mr. Adams’s decision may not mean the end of the controversy, however. Opponents of the highway are threatening to go to court again to block the project.

The opponents have had their day in court, in fact several days. The project has been delayed while costs skyrocketed. If the opponents proceed with further litigation, the courts ought to require them to post bond to cover increased costs if the highway finally gets built. [“I-66 and Metro,” *The Washington Star*, February 7, 1977]

The District of Columbia was among those considering going to court to block what they expected would be a flood of cars into a city that could not accommodate them. Chairman Jerry Moore of the city council’s transportation committee wrote to Mayor Washington urging him to seek court action. The city, Moore wrote, “does not have the present capacity to accommodate any new influx of private automobiles.” Parking was simply not available for all those I-66 cars.

Chairman Moore, with support from Council Chairman Tucker, suggested the city consider a municipal parking authority. As discussed earlier, Congress had considered, but rejected, proposals a decade earlier to create a municipal parking authority that would expand parking spaces. The idea had long been controversial. The public authority would compete with private interests that presently provided parking, but in the city’s view, more cars meant more congestion and pollution.

In fact, the city had been looking for a way to reduce the number of cars, in part by reducing parking spaces and urging Federal agencies to eliminate free or subsidized employee parking. Director Schneider said, “I’m afraid it might add to the problem by making more parking available. I think we’re better off concentrating on Metro, and on making parking unnecessary.” [Shandler, Phillip, “D.C. Fears I-66 Traffic Jam, Looks to Parking Authority,” *The Evening Star*, February 7, 1977]

Judge Lewis dissolved the 1972 injunction on February 14. During the 1-hour hearing, he said, “We are not here to retry I66. It seems to me if they have done A, B, C, D they can proceed to build it.” Shortly after Judge Lewis signed the order dissolving the injunction, Virginia highway officials asked FHWA for approval to advertise for construction bids. [Seaberry, Jane, “Judge Removes Obstacle Barring Building of I-66,” *The Washington Post*, February 15, 1977]

ACT, which had been a party to the lawsuit from the start, did not contest Judge Lewis's action. However, ACT attorney Latto informed reporters that he was preparing a new lawsuit targeting the U.S. Department of Transportation.

On March 11, ACT and other groups filed suit to block construction of I-66 in U.S. District Court before Judge Sirica, known for his work on freeway lawsuits in the District of Columbia but by then one of the most famous judges in the country because of his work on Watergate-related cases. In an echo of the earlier claim that Secretary Volpe's approval of the Three Sisters Bridge had resulted from Chairman Natcher's pressure on Metro funding, the suit claimed the Coleman decision was partly a "political deal" in return for Governor Godwin's support of Metro construction. They also claimed the decision violated NEPA, Section 4(f), and the National Historic Preservation Act.

James Govan told reporters, "we've come a long way since 1971," when officials were planning an eight-lane superhighway through Arlington. However, "the road they are pushing now will still be an environmental disaster for the District of Columbia, a blight on the neighborhoods through which it will run and a foot in the door for future highway expansion." [United Press International, "Area Groups Sue to Block I-66 Aid," *The Washington Post*, March 12, 1977]

Judge Sirica ruled on April 14 that the case was virtually the same as the one heard by Judge Lewis and directed that the case be sent to the District Court in Virginia. "Because of his greater familiarity with the background of this particular program, he likely could render a quicker and more certain decision than could be obtained here," Judge Sirica said. He added that another reason for the transfer was that I-66 would have a "far greater effect" on northern Virginia residents than those in the city. ["I-66 Suit Transferred to Alexandria," *The Washington Post*, April 15, 1977]

ACT and its co-litigants asked the U.S. Court of Appeals to order Judge Sirica, not Judge Lewis, to hear arguments in the case.

While the case worked its way through the courts, VDHT awarded a contract to James Julian, Inc., of Wilmington, Delaware, on June 21 for the first construction contract – for a 1.4-mile segment from the Capital Beltway to State Route 7/Leesburg Pike in East Falls Church. The company had submitted a bid of \$9.6 million. [Edwards, Paul G., "Low Bid on I-66 is \$9.6 million," *The Washington Post*, June 22, 1977]

Judge Sirica's ruling stood and the ACT lawsuit ended up before Judge Lewis. On July 15, he ruled that VDHT's contractor could move equipment into place but could not begin construction until he issued a ruling. During the hearing, Judge Lewis said, "you're not going to delay this road forever. There comes a time when the good citizens of Northern Virginia and the good citizens of the District – I'll put them all together – have a right to know the finality of [I-66]."

He heard arguments in the case on July 26. A *Post* article about Judge Lewis, 75, indicated he "Enjoys the Grouchy Side of Justice," summarized some of the dialogue:

At a recent hearing in a suit seeking to block the controversial Interstate Rte. 66 construction, attorneys for a District civic association wanted the Virginia Highway Department to answer a number of questions, a process estimated to take about two weeks, the lawyers said.

But Lewis asked for the questions, and asked them himself in open court.

The lawyers also said they wanted to spend several days reviewing state and federal documents concerning their case. Lewis told them to go to Richmond early Saturday morning and spend the weekend researching. "Enjoy Richmond. It's a beautiful city," he said.

The lawyers then said there were certain state highway officials they would need to interview. Lewis told them to talk to anybody they wanted. "I don't even object to [interviewing] the governor, if knows anything." Lewis laughed. ["Judge to Decide On Building I-66 Inside Beltway," *The Washington Post*, July 27, 1977; Seaberry, Jane, "'They Get a Trial With a Personality'" *The Washington Post*, August 8, 1977]

On Friday, August 5, Judge Lewis denied an injunction blocking construction of I-66. He found that, "The secretary's 71-page decision is quite exhaustive . . . . The court finds that the Secretary made a good faith judgment after considering all relevant factors . . . . The plaintiffs' charge of unlawful political pressure is too nebulous to warrant discussion." Secretary Coleman, in short, had "acted within the scope of his authority" to make a decision that "was neither arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law."

Latto said the ruling was "hardly a surprise. Judge Lewis fairly well indicated at the trial two weeks ago what he expected to decide. I am certain he'll be reversed on appeal again." He explained:

I have a déjà vu feeling about this. When we brought our earlier case [in 1971] Judge Lewis denied our suit. We sought an injunction pending our appeal, and he denied it. Then the court of appeals granted our injunction. We seem to be following the same procedure . . . .

ACT's James Govan agreed the decision was not a surprise. "Judge Lewis ruled against us in 1971, so in Round 2 this is not a surprise, to say the least. We'll take the next steps that are necessary to seek court action to prevent any construction activity pending our case being at the appeal level." In addition to seeking to reverse the ruling on appeal, opponents planned to try to convince the White House to oppose I-66. "I think there may be people who think Coleman's was a bad decision and the question is when are they going to rectify the bad decision." He explained that, "It wouldn't be the first time a decision on I-66 was changed."

Latto explained his plans:

We'll go before him bright and early Monday morning. If the earlier script is followed, he'll turn us down, and we'll go immediately to the Court of Appeals in Richmond. I

continue to feel rather optimistic. I think we have rather sound arguments and I hope we'll get a favorable decision.

[Boodman, Sandra G., "Judge Gives Virginia Go-Ahead to Build Rte. I-66," *The Washington Post*, August 6, 1977; Holt, Brad, "Judge Gives I-66 a New Go-Ahead," *The Washington Star*, August 6, 1977]

On Monday, August 8, the attorneys approached Judge Lewis seeking an injunction. He said he would grant the injunction if the groups opposing I-66 posted a \$500,000 bond to cover cost increases due to the delay. Latta told reporters, "I think Judge Lewis recognized we were incapable of raising \$500,000." Instead, papers requesting an injunction were "being hand-carried to Richmond right now." He hoped for a decision later that day but admitted it "might well be several days."

Moments later, "a four-man crew started chain saws and toppled trees just outside the Beltway where the superhighway now abruptly ends." A VDHT spokesman said, "We hope to be in full swing later this week. Maybe by then the contractor will begin moving in heavy equipment." Harwood told reporters, "I don't intend to stop unless ordered by the courts. This is the farthest we have ever got." [Boodman, Sandra G., McAllister, "Virginia Crew Starts Clearing Path for

I-66," *The Washington Post*, August 9, 1977; "Workers Clear I-66 Pathway as Protests Fail," *The Washington Star*, August 9, 1977]

The appeal to the Fourth U.S. Circuit Court of Appeals stated that the plaintiffs could not raise the \$500,000 bond required by Judge Lewis and argued that "contrary to Judge Lewis' ruling . . . [plaintiffs] began to suffer irreparable injury as soon as construction commenced." The appeal also argued that Secretary Coleman and Secretary Adams had exceeded their powers in approving I-66, as the *Post* summarized:

Coleman was accused of "horse trading" in the brief by conditioning his endorsement of the plan on Virginia Gov. Mills E. Godwin's promise to transfer \$30 million of unused interstate highway money to the Metro subway system in Washington. "Here . . . it is evident that Interstate 66 was the price extracted by Gov. Mills E. Godwin for completion of the Metro subway system in Virginia," the brief said.

With unusual speed, the appeals court scheduled the hearing on the injunction in Richmond for the following day. [McAllister, Bill, "Appeals Court Will Consider Rte. 66 Plea," *The Washington Post*, August 10, 1977]

According to the *Post* coverage, the plaintiffs left the hastily assembled three-judge appeals panel "baffled and incredulous today at suggestions that they should, for a second time, block construction of Rte. I-66." Judge Donald S. Russell, "who seemed to be puzzled by the dispute," asked, "You think they ought to close off all entrances to the city? Why do you not want more people to have easier access to your city?"

The *Post* continued:

He wasn't alone. "Something's wrong here," snapped Judge H. Emory Widener, Jr., the only Virginian on the three-judge panel. What was wrong, Widener made clear, was not the state's proposal to build the four-lane, limited access road . . . . What was wrong, he said, was the suggestion by the road's opponents that Virginia not build the road and turn over the highway construction costs, about \$200 million, to the Washington Metro subway system. "They don't build Metro with highway funds, you know that," he told Gary D. Williams, lawyer for the four civic groups fighting the highway.

(The Post pointed out that under the Interstate withdrawal-substitution mechanism, that was essentially what happened, with equivalent funds coming from the general Treasury.)

Overall, "Wilson's argument found little, if any sympathy from the three judges who had been hurriedly assigned to the case late yesterday." The three-judge panel did not issue a ruling initially, but "their comments and critical questions left little doubt that the state will be free to continue building the road until at least October" when the appeal of Judge Lewis's full ruling would be heard. By then, VDHT was expected to have advertised for bids on the second 1.75-mile section of I-66.

Nevertheless, Wilson tried to remain optimistic. "I hope on reflection they will change their opinion."

On August 12, the three-judge panel found that VDHT could continue construction pending a ruling on the appeal. Having denied the injunction, the U.S. Circuit Court of Appeals put the case on an expedited schedule for a hearing in October. [McAllister, Bill, "I-66 Dispute Seems to Baffle Appeals Judges," *The Washington Post*, August 11, 1977; "Court Gives Go-Ahead for I-66," *The Washington Post*, August 13, 1977]

By then, as Leland White put it, "ACT was running out of ammunition." Nevertheless, the *Star's* Thomas Crosby stated in an August 1977 retrospective, "Neither side is willing to say 'uncle.'" [White, page 64; Crosby, Thomas, "I-66 – Anatomy of an Embattled Highway: 19 Years Later the Fight Rages On," *The Washington Star*, August 16, 1977]

On March 15, 1978, the 4<sup>th</sup> U.S. Circuit Court of Appeals in Richmond unanimously upheld the decision by Judge Lewis. The court's ruling noted that construction of I-66 had been halted in 1972 because of failure to comply with environmental laws. Now, the court found that, "The secretary of transportation has complied with all of the applicable environmental protection statutes in approving the final I-66 proposal." The court also rejected the argument that in view of UMTA Administrator Patricelli's directive for reconsidering rail lines in Virginia, Secretary Coleman had not considered that Metro might not extend past Glebe Road. The court said that FHWA "properly concluded" that the truncation was not likely enough to merit detailed discussion in the EIS. The court also found no merit in the argument that the EIS had not sufficiently discussed four options the plaintiffs identified as reasonable alternative to I-66.

Hank Levine, an attorney for ACT and its co-plaintiffs, said, "We think the decision is legally weak in several respects." ACT's Sue Bachtel said, "I think it is a disastrous decision." The group was considering whether to pursue its only remaining judicial recourse: an appeal to the

U.S. Supreme Court. [“I-66: Another Court Victory,” *The Washington Post*, March 16, 1978; Knight, Athelia, “Civic Groups to Decide On I-66 Appeal Soon,” *The Washington Post*, March 23, 1978]

Meanwhile, construction companies on I-66 were experiencing vandalism, as reported in the *Post*:

Paint-filled balloons have been thrown on machinery, tar has been spread on tractor seats and windshields, door handles have been removed and trash has been stuffed in exhaust pipes and air intakes, according to Charles Scott, project management for Expressway Constructors, Inc. Once, Scott said, the chains and binders holding down a load of logs on a flatbed truck were removed and taken.

James Govan rejected such tactics:

Our organization has never, ever advocated any irresponsible behavior. We have consistently acted within the system . . . . But it wouldn't surprise me that some of this vandalism would go on. Emotions in the community are running very high. [Grubisich, Thomas, “Vandals Harass Contractor Doing Work on Rte. I-66,” *The Washington Post*, March 31, 1978]

ACT decided against an appeal to the Supreme Court, but on April 18, the District of Columbia's city council voted unanimously to pursue one more appeal: to President Carter. The council's resolution asked him to block continued construction because I-66 would generate excessive traffic on the city's congested streets. [“D.C. Council Opposes Extension of I-66,” *The Washington Post*, April 20, 1978]

By this point, *Post* editors concluded that, “Though some opponents are still fighting, I-66 is being bulldozed through Arlington and is not likely to be stopped.” The real question was “what President Carter and Transportation Secretary Adams should do to relieve commuter congestion in the I-66 corridor and the region as a whole.” Construction of the Metro rail line to Vienna was a “strong point of the I-66 compromise,” but was undermined by Secretary Adams' demand for reconsideration of the rail line as part of a new financial plan for the system.

The Federal Government also should do more as the area's largest employer to promote mass transit. The commuter-oriented I-66 was likely to have only a marginal effect on congestion:

According to a formidable heap of studies, if the Virginia suburbs grow as planned, the morning auto traffic will keep getting worse – even with Metro and I-66. Before long, the Potomac bridges will be unable to handle the crush.

The editors hastened to add, “this is not an argument for more bridges and roads”:

For as most area governments now see, long-term relief can be gained only by getting more commuters out of their cars and modifying working hours to ease the crush on buses and trains as well as roads. Mr. Carter should set such goals for the federal establishment

– and start toward them by raising federal offices’ parking fees and making wider use of flexible working hours, four-day work weeks and the like.

These types of changes would be tough. “But if Mr. Carter really wants to curb air pollution and urban traffic snarls, there is no better place for strong federal leadership than here.” [“I-66 and Beyond,” *The Washington Post*, March 25, 1978]

On June 9, 1978, Federal District Judge George L. Hart, Jr., dismissed a suit by a coalition of environmental groups known as Continued Action on Transportation and Environment, Inc., arguing that I-66 would violate the Clean Air Act. [“I-66 Challenge Fails In U.S. District Court,” *The Washington Post*, June 10, 1978]

Although the courts would not again block construction of I-66, protests would continue. During a June 3 meeting of the Arlington County Board, an opposition group called Contact charged that VDHT was clearing enough land for an eight-lane highway. Contact members arrived in the hearing room wearing t-shirts that proclaimed: “Stop I-66: We’ve Just Begun to Fight.” Although the Arlington County Board agreed to investigate, Director of Public Works Hulme was dismissive. “People see a lot of clearing and associate that with eight lanes, but utility lines have to be put in and the retaining walls take up a lot space.” State Delegate Elise B. Heinz, a Contact coordinator, was not so sure:

The right of way was condemned years ago when the plans called for eight lanes and today they are clearing that whole space. The most charitable thing you can say is that they’re building a four-lane highway with a very big median. [Washington, Adrienne, “An Eight-Lane I-66 in the Making?” *The Washington Star*, June 4, 1978]

Representative Fisher requested a meeting with President Carter to appeal the decision to proceed, as well as Contact’s claim. The *Post* reported on President Carter’s preparation for the June 28 meeting:

Carter called Adams yesterday morning and asked him if the project was being closely monitored by the Federal Highway Administration and was being built within the terms of the agreement.

“I assured the President that it was,” Adams said. He said that his department has been carefully studying the I-66 design and construction practices and that “we have no reason to suspect it isn’t being done precisely by the numbers.”

Carter told Fisher that I-66 had been a “close call” along with a number of other national highway projects, the Fisher spokesman said.

However, he would not reopen the decision. [Feaver, Douglas B., “Carter Declines to Reopen I-66 Case, Fisher Says,” *The Washington Post*, June 29, 1978]

By then, the controversy had become almost tiresome to observers such as reporters and editors who, because of their job description, could not look away. A *Star* editorial on February 2 had been headlined: “The I-66 Bitter-Enders”:

Is there no end to what Secretary of Transportation Brock Adams once called the “aimless wrangling” over construction of Interstate 66 through Arlington?

This project has been fought for more than 15 years through the courts, the county boards and other local government agencies, the state legislature, the federal Department of Transportation, from soap boxes and sound trucks. Finally, the legal debris was cleared away, proper clearances were obtained from federal transportation officials, and work was begun last year.

But the opponents won't concede defeat . . . . State and federal officials have determined that I-66 is needed as part of a balanced transportation system. Surely the courts and state officials must be getting tired of the bitter-enders' efforts to kill the project. [“The I-66 Bitter-Enders,” *The Washington Star*, February 2, 1978]

The weariness also was reflected in a *Post* editorial on July 1 that began:

In our dog-eared copy of *The Greater Washington Anthology of Seemingly Endless Planning Controversies* – near the fat chapter called “The Tale of Three Sisters, and How They Grew” – there's an action-packed yarn under the title “I-66.” It's the story of a Northern Virginia highway corridor . . . and the nip-and-tuck, 20-year effort either to build or to block the freeway strip.

The argument that the right-of-way was wider than necessary was the “last gasp from the road's opponents.” After recounting Secretary Adams's comments and the President's response to Representative Fisher, the editorial concluded:

For the benefit of anyone who may still be clinging to some hope of killing I-66, the word is . . . Give up . . . .

We trust that the monitoring will go on until the work is done. But the fight is over. A deal's a deal: Name it the Mills Godwin Highway, in honor of the former governor who drove the I-66-for-Metro bargain that let the road be built and let officials get on with the business of financing and promoting mass transit – and doing whatever else it can to ease the daily traffic in this corridor. [“No More Kicks on I-66,” *The Washington Post*, July 1, 1978]

On January 30, 1978, Governor John N. Dalton submitted the request to the U.S. Department of Transportation to withdraw all of the 0.4-mile route of I-266 in Virginia. FHWA Administrator Karl S. Bowers and UMTA Administrator Richard S. Page approved the withdrawal on August 16, 1978. They indicated:

The current amount of Federal funds authorized by this withdrawal for substitute projects serving the Washington urbanized area is \$38.3 million. This amount is based on the 1977 cost estimate of \$35.6 million (Federal funds) adjusted for changes in construction costs through the first quarter of 1978. The amount of \$38.3 million is subject to further adjustment in accordance with the provisions of Section 103(e)(4) and any required refinements in the 1977 cost estimate base amount.

Governor Dalton's letter had indicated that WMATA would submit the substitute projects to be implemented and asked that FHWA and UMTA approve the projects at the same time as the withdrawal. The two Administrators advised him that, "We note that the Urban Mass Transportation Administration has received a draft application from WMATA for the substitute transit projects to be approved under this withdrawal." However, approval at the same time as the withdrawal was not necessary. Action on the substitute projects "will be taken when the projects are ready for approval."

On July 1, 1982, Governor Charles S. Robb requested withdrawal of the remaining 0.84-mile segment of I-595. FHWA had approved the route as part of the Interstate System on January 18, 1971. The official description was:

In Arlington, from a junction with Interstate Route 95 at its intersection with the Jefferson Davis Highway [U.S. 1], southerly to the Washington National Airport Viaduct Connector.

The idea was to provide an Interstate alternative to the George Washington Memorial Parkway for motorists driving between Shirley Highway (then I-95) and Washington National Airport. The *Post* described the idea:

Most National Airport traffic to and from Washington currently uses six-lane George Washington Memorial Parkway. State highway officials said they expect much of it to be diverted to I-595 when the project is completed.

Under the [Virginia State Highway] commission's plans, Rte. 1 will be expanded from four to six lanes along a one-mile stretch from the existing overpass leading from National Airport to the point where Rte. 1 connects with I-95 at the Pentagon.

Thus, traffic would flow from the airport, along the overpass, through the Crystal City complex on the improved Rte. 1, into the Shirley Highway-Pentagon network and across the 14<sup>th</sup> Street Bridge.

The highway is to be made limited-access by cutting off most existing streets and driveways. Service roads would be provided, along with interchanges at 15<sup>th</sup> and 23d Street.

Construction was to begin in mid-1972, take about 2 and a half years, and cost over \$20 million. [Dewar, Helen, "Airport Access Seen Aided By Widening of Va. Rte. 1," *The Washington Post*, April 20, 1971]

(The official description was changed on June 28, 1976, to reflect the change in designation of the Shirley Highway from I-95 to I-395.)

As often was the case, the proposed Interstate highway was delayed by criticism from local officials, area residents, and businesses that would be blocked from access they enjoyed along U.S. 1. The Arlington County Board suggested that VDHT consider alternatives to the proposed Interstate highway. Residents with homes near U.S. 1 formed the Jefferson Davis Corridor

Transportation Coalition and threatened to go to court if VDHT did not consider alternatives such as:

The Jefferson Davis group, during a county board hearing last month on I-595 [March 1972], proposed an alternative to the eight-lane elevated road, making the existing highway one way south and widening Ball Street (parallel to Route 1) to four lanes for north-bound traffic. [Brockett, Diane, "With I-66 at Standstill, Arlington Eying I-595," *The Sunday Star*, April 16, 1972]

VDHT issued an EIS for the project in June 1973. According to the EIS, the elevated, six-lane Interstate highway was needed to relieve congestion between I-95 and the airport, but would raise noise levels above government standards, displace 15 businesses, and increase air pollution – at least until the Federal Government required emission control devices on all vehicles. The EIS discussed four alternatives – (1) widening U.S. 1, create a one-way pair with U.S. 1 and either (2) Ball Street or (3) Eads Street, and (4) do nothing.

Donna Jensen of the Aurora Highlands Civic Association criticized the EIS because it did not consider a mass transit alternative and for requiring a waiver of Federal noise requirements for the preferred alternative. Emilia Govan called the EIS a "piecemeal fragmented approach" to transportation planning and recommended that VDHT consider the entire U.S. 1 corridor in Alexandria and Fairfax County. [Crosby, Thomas, "Wide Rt. 1 Battle," *The Washington Star-News*, June 8, 1973]

Although VDHT approved the design for an elevated six-lane highway, construction had still not begun in 1975. A VDHT spokesman said, "All systems are not go, and we are not ready to construct. It still has to have federal review, and it still has to have some money. The whole thing is still several years off." The Arlington County Board had tentatively approved the project in 1972, but in 1975, member Everard Munsey said, "I personally view the thing as far from a settled issue." Given changes in the economy and the price of gasoline, "I think we ought to look at the whole matter again." [Kast, Sheilah, "The Design's O.K., But I-595 Still is Way Down the Road," *The Washington Star-News*, July 20, 1975]

In August 1976, VDHT awarded a contract to Slattery Associates, Inc., of Maspeth, New York, for construction of the controversial six-lane elevated highway. Construction, which was to begin in a month, would be completed by October 1, 1978. Within days, however, three citizen associations and two hotels filed suit in U.S. District Court in Alexandria, to halt the project. The general manager of Hospitality House at 2000 Jefferson Davis Highway explained that building the elevated roadway would "be like putting up the great China Wall," making the hotel inaccessible to the Crystal City area.

Judge Albert V. Bryan, Jr., granted an injunction on November 24. The EIS, he found, "was too limited" in scope. "It's arbitrary and capricious not to extend the area under consideration beyond the south end of the project at least as far as the Monroe Avenue Bridge." He also questioned public involvement during the environmental review. "Public notice was wanting," he said. Two hearings should have been held, not just one. "Solicitation of views leaves much to be desired and the report following the hearing was inadequate."

Judge Bryan cautioned plaintiffs that while he approved the injunction they sought, “all you may have accomplished is a delay.” If VDHT prepared a revised EIS and held a second public hearing, “I have a feeling the project may be approved.” [Crosby, Thomas, “Elevated Route 1 Gets Green Light,” *The Washington Star*, August 21, 1976; Crosby, Thomas, “Neighbors Try to Block 6-Lane Road,” *The Washington Star*, August 25, 1976; Holt, Brad, “I-595 Construction Stopped by Judge, At Least for Now,” *The Washington Star*, November 25, 1976]

VDHT kept the I-595 project alive until February 1979, when officials finally scrapped plans for the six-lane elevated highway linking I-395/Shirley Highway and Washington National Airport. Harold King, FHWA’s former Virginia Division Administrator who was now VDHT commissioner, said, “There was no way we could change the plan without tearing out half of Crystal City for alternative interchanges.” Instead, VDHT would pursue upgrades to existing U.S. 1. [Boodman, Sandra G., “Va. Changes Design for Interstate,” *The Washington Post*, February 22, 1979]

The northerly 0.29-mile segment of I-595 connecting U.S. 1 to I-395 was built and opened to traffic.

On August 27, 1982, FHWA Administrator Ray A. Barnhart and UMTA Administrator Arthur E. Teele approved withdrawal of the remaining section of I-595. The estimated cost shown in the 1981 ICE was \$22.6 million. The previously opened 0.29-mile segment was removed from the Interstate System.

As finally calculated, the full value of Virginia’s only two Interstate withdrawals was \$78.2 million. The State directed \$51.7 million to transit projects.

(On August 7, 1981, *The Washington Star* ceased publication.)

## **Completing Metro**

When General Jackson Graham retired at the end of January 1976, the Metro rapid rail system was 2 months from opening its first segment—but its schedule and financing were, effectively, beyond the control of WMATA.

The success of the five-station short line could not hide Metro’s financial problems; the line cost \$75,000 more to operate each day than WMATA received in fares. [Schrag, page 186] Area officials were trying to find a way to address deficits and multimillion dollar losses for combined Metrobus and Metrorail construction, operation, and maintenance. The *Post* reported:

Key District of Columbia and suburban officials, troubled by Washington’s deficit-ridden transit system, are moving toward a major revamping of Metrobus management and possible curtailment of the planned 98-mile subway network . . . .

Prince George’s County Councilman Francis B. Francois, who became chairman yesterday of the Metropolitan Washington Council of Governments, used his opening statement to launch a new study of possible, major cutbacks in the planned subway

system because of “staggering” Metro costs that, he said, could bankrupt local governments.

Coming from a transit advocate, his call for reconsideration was significant:

I hope that this proposal of mine will bring into the public arena many of the off-the-record comments of concern we have all heard from our fellow elected officials over the past months.

All officials hoped for relief from the Federal Government to avoid retrenchment, but the Ford Administration had been less supportive than the Nixon Administration. On January 27, Secretary Coleman had joined General Graham for speeches before the Federal City Council:

Graham, speaking first, criticized Ford for failing to reaffirm the federal government’s commitment to building the entire system.

While there is \$875 million in interstate highway funds that can be transferred for Metro construction, Graham said, unless Ford takes a leadership role, local governments will not approve matching shares so the money can be used for Metro.

The situation is such that “everyone in town can say no, only one guy can say yes,” Graham said.

Graham’s criticism “seemed to strike a responsive chord in Coleman.” He said he would “violate the rule that as a public servant you do not commit yourself.” His prepared remarks had not mentioned completion of the entire system. However, he abandoned those remarks to say, for the first time, that the Federal Government should help the Washington area complete the network. He said that failing to do so would “be a breach of faith to the people in this district.” He added that he needed to get together with officials in Maryland and Virginia to secure the necessary Interstate transfers. [Crosby, Thomas, “Coleman Says U.S. is Obligated to Help Finish Metro System,” *The Washington Star*, January 28, 1976]

On the day he left his position, General Graham was blunter. He said his resignation stemmed from President Ford’s abandonment of the 100.6-mile rail network:

“It’s a personal objection on my part,” said Graham, adding that he has been worrying about presidential support ever since Watergate “distracted” Metro’s supporters “at both ends of Pennsylvania Avenue.”

. . . “The contrast is just dramatic” between President Nixon’s pre-Watergate efforts on Metro’s behalf and Ford’s “fence-straddling,” Graham said.

He pointed out that President Ford, while in the House, had never supported mass transit. Minority Leader Ford had suffered a “bitter defeat” in December 1971 when the House voted to overturn Chairman Natcher’s withholding of the District matching funds for Metrorail construction:

“I don’t think the President has ever quite forgotten it,” said Graham, who predicted the President eventually would take a public stand in support of Metro.

Thus far, the Ford Administration and Secretary Coleman had favored using the Interstate withdrawal-substitution program to pay WMATA’s \$1.6 billion overrun:

“There’s been no scandal or corruption . . . after the obligation of some \$2.2 billion, in the most scandal-sensitive place and era in all history,” Graham said.

“It’s another question of whether the U.S. can keep its promises. In France and other European countries they say they will build something and then go ahead and do it. Washington is a symbol not only for this country, but the world and we’re bogged down over a subway,” Graham said.

In a presidential election year, with former Governor Ronald Reagan of California challenging President Ford in the primaries from the right, Graham did not expect a solution in 1976:

Without Ford’s support Graham said he could not endure “another 10 to 12 years with all the bureaucratic crap Metro will be in with the Urban Mass Transportation

Administration and the U.S. Department of Transportation.” [Crosby, Thomas, “Why Metro Chief Quit: Ford ‘Fence-Straddling,’” *The Washington Star*, February 1, 1976]

Secretary Coleman, in abandoning his prepared remarks, had made a commitment that the Administration in which he served was not prepared to keep.

By mid-year, WMATA had a new cost estimate for the entire system of \$5.512 billion, including a contingency of \$487 million. As noted earlier, the Ford Administration had agreed internally on a ceiling of \$4.65 billion. If WMATA could not build the full planned rail network for that amount, it would have to finance the difference in some way or shrink the system. Secretary Coleman moderated that position somewhat by suggesting that if WMATA used “extraordinary efforts” to contain cost, he might accept a higher cost. [Schrag, page 186]

WMATA chose 31-year old Deputy Under Secretary of Transportation Theodore Lutz to be the new general manager. Professor Schrag described his qualifications:

After getting a master’s degree in management from Syracuse University’s prestigious Maxwell School in 1968, he had found a job at the Bureau of the Budget (later, OMB). Among his other duties, he was given the task of reviewing the District’s budget, so he found himself working with Mayor Washington and other local officials. Lutz’s work also impressed Nixon staffer Egil Krogh, responsible for D.C. affairs at the White House. When, after the 1972 election, Krogh moved to the Department of Transportation, he brought Lutz – still only twenty-seven – with him as deputy under secretary of

transportation for budget and program review. In this capacity, Lutz had chaired a committee on Metro financing, in effect becoming a federal representative on the WMATA board, despite the compact negotiators' early decision not to have one. In 1975 he had compiled the department's report on Metro funding.

Lutz was no Jack Graham. He was not an engineer, he had never managed more than a dozen people, and he was a generation younger than the many veterans of World War II who had done most of the work bringing Metro from idea to reality. But the board understood that Metro no longer needed a builder as much as it needed a bean counter. Board members had found him to be skilled, well connected, and, as a Minnesota native, neutral among the jurisdictions. His skills as diplomat and financier would soon be put to the test. [Schrag, page 186]

A *Star* profile reported:

When Metro's selection committee asked Lutz to be a general manager candidate, he cleared it first with Coleman.

He left little doubt that he would take the up-to-\$60,000-a-year job saying, "I am heavily driven to perform public service. My father thinks I'm crazy . . . (but) I'm driven by that psyche."

Since coming to Washington in 1968, Lutz and his wife [Willa] have lived in a two-bedroom townhouse in Southwest Washington [at 743 Third Street, SW]. For the last three years Lutz has walked to work at DOT where he puts in 10 to 12 hours a day and often takes work home on weeknights and weekends.

"The one vice that gets me out of work early once a week in the summer is playing softball," Lutz said. "I'm a softball freak."

A deacon in Trinity Presbyterian Church in Arlington, Lutz plays on the church team. Both he and his wife teach a Sunday school class for fourth and fifth graders.

Willa and Ted Lutz soon moved to 2647 North Powhatan Street in Arlington. In looking for a home, the couple had two goals. It be near their church and near a bus stop. He commuted to work by bus, trying to keep his work to 5 days a week. The couple had only one car, a new Ford Fairmont they bought to replace their aging Ford Pinto.

(Krogh, caught up in the White House plumbers aspect of the Watergate scandal, left the Department of Transportation in May 1973.)

Even as WMATA announced his appointment on September 24, 1976, UMTA Administrator Patricelli was addressing the joint meeting of WMATA, COG, and TPB to reiterate the \$4.6 billion cap, as discussed earlier.

Lutz, vacationing in California before assuming his new position, told reporters, he would like to build the entire system "if at all possible," but did not think Metro officials should be "oblivious" to concerns about the rising cost. "I don't think Metro can just stick its head in the sand and say, 'Bet lost.'" He added, "Everything's not immutable."

He would face the funding challenges realistically. The Metro financial plan “should convince the public it’s not business as usual and that Metro is not gold-plating the system right out the window.” He added, “I feel the key to making Metro work is that local governments must take action in regard to automobile usage so as to make their tremendous investments productive.” [Lynton, Stephen J., “Cut in Metro Cost Ordered,” *The Washington Post*, September 25, 1976; Crosby, Thomas, “New Metro Boss Lutz Vows Completion of Area Rail System,” *The Washington Star*, September 25, 1976; Feaver, Douglas B., “Lutz: Stint at Metro,” *The Washington Post*, November 8, 1978]

Two months later, former Georgia Governor Jimmy Carter (1971-1975) defeated President Ford and took the inaugural oath on January 20, 1977. The new President was a seemingly easygoing former Navy officer who had served under Admiral Hyman G. Rickover in his fledgling nuclear submarine program. A Christian, peanut farmer, State legislator, and Governor, Carter’s image of honesty, decency, and intelligence was a welcome contrast to “Tricky Dick” Nixon, corrupt Spiro Agnew, and the amiable Gerald Ford whose highest aspiration had been to be Speaker of the House. Former Senator Walter F. “Fritz” Mondale of Minnesota was the Vice President.

When it came to rail rapid transit in general and Metro in particular, new Secretary Adams took an even harder line than Patricelli, based on the new President’s views. He took his views from President Carter, who sent a hand-written memorandum to the White House on March 21, 1977:

I suspect that many of the rapid transit systems are grossly oversized. We should insist on (a) off-street parking, (b) one-way streets, (c) special bus lanes, (d) surface rail-bus, as alternatives to subways. In some urban areas, no construction at all would be needed if a, b and c are required. J. Carter [Mollison, Andrew, “Adams in Search of New Transportation Policy,” *Atlanta Constitution*, July 24, 1977; Schrag, page 187. Underlining in original]

In September 2018 e-mail, Mortimer L. Downey III, who at the time was Assistant Secretary for Budget and Programs, U.S. Department of Transportation, recalled the arrival of Carter’s handwritten note:

Exec Sec Linda Smith brought it into the morning staff meeting with copies for everyone around the table, and by the end of the day it was in the hands of Congress and the media. This gave a real push to alternatives analysis” for proposed rapid rail systems. [Downey, Mortimer L. III, e-mail to Richard F. Weingroff, September 19, 2018]

Asked about President Carter’s message, General Manager Lutz said, “I hope this isn’t taken solely in light of budget cuts but is taken in the light that [people in mass transit] should find out how to do the best job possible.” [Behr, Peter, “Carter Faults Mass Transit,” *The Washington Star*, March 29, 1977]

In May 1978, the joint committee of WMATA, COG, and TPB that former Administrator Patricelli had addressed completed its alternatives analysis. It had considered each of the remaining lines, took public comments, and studied variations, with a result that Professor Schrag summarized:

With the reports in hand, on 11 May 1978, the joint committee met and recommended some changes. The biggest was to reroute the Green Line's "F" branch in southern Prince George's County [Maryland], from the original terminus at Branch Avenue to a more westerly route to the Rosecroft racetrack. (Ironically, this, the largest change of the alternatives analysis, was later reversed by a court decision.) The committee also slightly modified alignments on two other branches, and increased parking at a few stations. Other than that, the 1968 system was intact.

In short, the report reflected the idea that "while Metro was indeed very expensive, it was not necessarily a bad value." [Schrag, page 189]

(As Professor Schrag noted, the terminus of the Green Line in Maryland was reversed in court. The controversy on this line delayed completion of the Green Line, leading to complaints that white communities in Maryland, Virginia, and the District were receiving service before the predominantly African-American population along the projected Green Line in the District and county. The final link to the terminus at Branch Avenue opened on January 13, 2001, completing the 103-mile, 83-station Metrorail system, as planned to that point.)

The alternatives analysis and similar reviews had little impact because, first, local officials were committed to the full system. Despite all the political winds, they were convinced that in the end, the Federal Government would pay two-thirds of the cost of construction. "Even Frank Francois, who in early 1976 had called for a reevaluation of Metro, believed that that task had already been completed by the time of Patricelli's mandate in September of that year."

According to Professor Schrag, "The second reason the studies had so little impact was that Metro had been planned as a whole, both physically and financially." If a community on a rail line suddenly became the terminus of a truncated route, the impacts could be significant:

[It] was not easy to turn a more central station into a terminus. As Lutz explained, "several communities have never envisioned themselves as being a terminal point, and all of a sudden if that was the decision, the idea of a big parking structure . . . will be over their dead bodies and they will use every tool they have to stop it."

As for finances, Metro's red, orange, yellow, green, and blue lines were like colored wires on a B-movie time bomb: clip one and the whole thing explodes. Deleting any route would provoke the affected jurisdiction to demand tens of millions of dollars back from the Authority, with interest. It was easier for WMATA to keep borrowing, especially since each cut would only save a small percentage of the system cost.

He added a third reason that vindicated all who had promoted Metro over the decades:

The third reason that the studies failed to harm Metro was that by 1978 Metro was enormously popular. Even in the dark days of 1975, polls showed that local residents still supported completing the 100-mile system, even if it required more local funds. With real trains running, that popularity grew. In July 1977 Phase II had opened from RFK

Stadium to National Airport. Congressmen could now get from the Capitol to the airport in less than half an hour, regardless of congestion on the streets above.

Fourth, alternative transportation modes could not compete with a dedicated rail line:

Fourth, and most important, the studies compared a completed Metro with possible alternatives, and no study could offer a serious alternative to heavy rail as a mode of transit. Buses, light rail, and even cars could provide better numbers in the right economic models, but not in the real world.

Finally, the Nation was in the midst of its second energy crisis, giving renewed emphasis to the value of transit. The public remembered the first crisis that began in October 1973, but had adjusted to the resulting increased oil prices. When President Carter announced an energy initiative on April 18, 1977, calling for the “moral equivalent of war,” he seemed out of touch with public attitudes, congressional concerns, and the conventional wisdom in Washington and elsewhere.

The second energy shock began in January 1979 with the Iranian revolution under Ayatollah Khomeini in January 1979:

Oil companies and motorists around the world panicked, driving oil prices from \$13 to \$34 a barrel, while American refineries tuned to Iranian crude struggled to adjust to oils from other sources. By spring, drivers around the country found themselves on hour-long lines when they sought to fill their gas tanks. In Washington, tens of thousands of frustrated drivers tried mass transit (bus as well as rail) for the first time. By June 1979 four out of ten Virginia commuters to Washington used transit, up from three out of ten in 1977, and average weekday ridership surged from 250,000 to more than 275,000 per day. In this context, a rapid transit system whose electricity could be generated from good old domestic coal began to look increasingly attractive.

For all these reasons, the alternatives analysis proved to be a dud . . . . Local politicians crowed that the study had affirmed the region’s wish for a 100-mile system in the most emphatic terms possible. [Schrag, pages 189-193]

The cost continued spiraling upwards in the face of high inflation, delays, and increased oil costs:

By the spring of 1979, the cost estimate was up to \$6.8 billion, \$7 billion if the federal government dribbled out its contribution slowly, or \$7.4 billion if interest costs, system add-ons, and handicapped facilities were thrown in.

Use of the Interstate withdrawal-substitution mechanism that Secretary Coleman had seen as a fallback for construction cost increases had reached its end, with about \$2 billion in transfer funds from the general Treasury going to WMATA for Metro construction. [Schrag, page 193]

As of mid-1979, however, Secretary Adams was withholding about \$1.2 billion of the substitution funds from WMATA. The delay had begun a few years earlier while UMTA Administrator Patricelli awaited the alternatives analysis. The Carter Administration held the

funds while WMATA decided which routes would be advanced with the funds. Administration officials wanted WMATA to speed up construction of the Green Line through Anacostia, southeast, one of the lower income parts of the city.

On July 11, Secretary Adams announced that he would release the transfer funds based on Metro's new construction schedule for completing about 40 miles of the rail line in early 1990. The Green Line from the L'Enfant Plaza hub station to Anacostia was scheduled to open in mid-1985; to Southern Avenue later that year; and to Rosecroft Raceway, then the terminus of the line, in late 1986.

In a letter to Metro Board Chairman Jerry A. Moore, Secretary Adams said, "we are prepared to use your schedule as the basis for approval of the transfer funds," but with three conditions that the *Post* described:

Metro must sell \$76.5 million in real estate that it purchased with federal assistance and that the federal government considers excess.

Metro must pursue cost-cutting construction methods, including the elimination of vaulted arch stations underground. Additionally, Metro must review its plan to put the Yellow-Green Line through Fort Totten Park in a tunnel. That is a potentially explosive issue in the Fort Totten neighborhood of Northeast Washington, where Metro's original plans called for a cheaper elevated line.

Metro and the federal government must reach a final agreement on how to retire the interest and principal on \$1 billion in revenue bonds sold to raise construction funds. An agreement in principle on a draft already exists.

Secretary Adams added that, "We recognize that a new congressional authorization will be necessary to fund completion of the system."

Metro's general manager, Richard S. Page, said of the Adams letter, "This is the best news from the federal executive branch for Metro in three years." [Feaver, Douglas B., "U.S. Will Release Millions in Metro Building Funds," *The Washington Post*, July 12, 1979; Washington, Adrienne, "Metro Funds Release Pledged by Adams," *The Washington Star*, July 12, 1979]

(Theodore Lutz had resigned as general manager in April 1979, saying he was "burned out." Page, former executive director of the Municipality of Metropolitan Seattle (METRO, a transit and water pollution control and planning agency), had served as UMTA Administrator under President Carter (1977-79) before becoming general manager of Metro. On September 25, 1979, President Carter nominated Lutz to be the new UMTA Administrator, a post he held through the end of the Carter Administration in January 1981.)

Based on the latest estimates, Secretary Adams's release of \$1.2 billion in transfer funds meant that Metro would need about \$1.7 billion more funds for completion. Congress was already at work on providing that funding.

On July 15, President Carter returned from a secretive stay at Camp David to deliver his “crisis of confidence” speech, often called the “malaise speech” although he had not used that word. Many factors had undermined the Nation’s confidence in its government, he said. One problem was the energy crisis. To fight it, he proposed several plans. Among other items, he called for mandatory conservation and authority to ration gasoline if needed. He also proposed an extra \$10 billion to strengthen public transportation systems over the next decade:

I’m asking you for your good and for your Nation’s security to strengthen our public transportation systems. And I’m asking you for your good and your Nation’s security to take no unnecessary trips, to use carpools or public transportation whenever you can, to park your car one extra day per week, to obey the speed limit, and to set your thermostats to save fuel. Every act of energy conservation like this is more than just common sense – I tell you it is an act of patriotism.

To revitalize his presidency, Carter fired several Cabinet members, including Secretary Adams, who left office on July 20. His successor would be Mayor Neil E. Goldschmidt of Portland, Oregon, who would take office on August 15 and serve until January 20, 1981.

At the start of the 96<sup>th</sup> Congress in 1979, Representative Harris of Virginia had introduced a bill, cosponsored by Representative Fortney H. (Pete) Stark, Jr. (D-Ca.), authorizing \$1.7 billion for Metro, \$197.7 million in operating subsidies, and adoption of WMATA’s outstanding debt. Professor Schrag explained:

Rather than even trying to change minds at the White House, he instead planned to outflank the administration. He compiled a list of the hundred or so remaining members of Congress who had voted against Natcher in 1971, and wrote each a letter addressed, “Dear Father of Metro.” One recipient was Robert Giaimo himself, now powerfully positioned as the chairman of the budget committee. When Carter’s representative approached Giaimo to ask him to oppose Harris on grounds of economy, Giaimo responded, “Good Lord. I’m the father of Metro. How can I fight it?”

Representative Harris gained additional support by convincing Representatives in transit-heavy areas that his bill meant that Metro would no longer compete with their jurisdictions for scarce Federal-aid transit funds.

The House prepared to consider the bill on July 16, the day after the Crisis of Confidence speech, despite what the *Post* called “an unexpected last-minute effort by the Carter administration to defeat it.” An unnamed spokesman said the White House “wants to pull back and reassess” how the Metro bill fit in with President Carter’s \$10 billion plan announced the day before. The *Post* added, “The White House opposed the bill on the grounds that it gives too much money to a single city.”

Secretary Adams’s view of the bill was unclear even as he clung to his job. A Department spokesman had said Secretary Adams “favors the Metro funding bill,” but White House lobbyist Bill Cable said the Secretary’s letter to Chairman Moore about release of \$1.2 billion “indicated that some legislation is need,” not necessarily the current bill.

Nevertheless, the House passed the bill, 261 to 125. Chairman Natcher voted against the bill but did not address his colleagues on the subject. Chairman Ronald V. Dellums (D-Ca.) of the House District Committee said, "I feel the president will be embarrassed tomorrow morning" when he sees the lopsided vote.

Before the vote, the *Post* pointed out that the renewed energy crisis could not have come at a better time for Metro:

In the last few months, a sophisticated lobbying campaign has transferred what some have criticized as a pork barrel project for the Washington area into something hailed as significant energy legislation that could serve as a model for the nation. [Baker, Donald P., "Congress to Vote on Biggest Metro Bill Since 1971," *The Washington Post*, July 16, 1979]

A *Post* editorial called the margin of victory "stunning." It "gave Metro a boost it desperately needed," speculating that the margin of victory reflected "common sense and a feeling of responsibility toward a mass-transit system it has nurtured from the beginning." As for the White House, the editorial concluded:

The opposition of the Carter administration to this arrangement, which came to light only yesterday morning, must have come from the anti-Washington strain in President Carter's Sunday night speech, not his pro-mass-transit strain. Otherwise, it is inconceivable that the administration could have opposed this bill. ["A Stunning Win for Metro," *The Washington Post*, July 17, 1979]

On August 22, the Carter Administration clarified the \$10 billion program the President had called for in his "Crisis of Confidence" speech on July 15. Vice President Mondale announced details of the plan during a speech in a historic train depot in Hoboken, New Jersey. The President's mass transit proposal had increased to \$13 billion based on congressional approval of a requested windfall profits tax for crude oil. Without the added revenue, the Vice President said, "there will be no dough," adding, "Without the windfall profits tax, all this is just rhetoric." *Better Roads* summarized the proposal outlined by the Vice President:

The administration initiative proposes to add \$13 billion over a 10-year period to UMTA's normal projected appropriations of \$27.5 billion and a projected \$9.5 billion of state/local match to provide a \$50 [b]illion 10-year capital funding program for transportation . . . . The intended goal is to increase public transportation capacity by up to 50% and accommodate up to 15 million more passengers per day by increasing local bus purchases, stepping up the pace of rail modernization, and expediting completion of new rail starts which already have been approved. [Nickel, William J., "Transportation Energy Program Needs \$16.5 Billion 'Initiative,'" *Better Roads*, October 1979, page 14]

Speaking to the American Public Transit Association on September 25, President Carter called for a "quantum jump" in public transit investment to \$50 billion and said, "We will reclaim and revitalize America's transit systems." However, as *The New York Times* put it, the proposal "has less to it than meets the eye and is predicated on several conditions, one of which seems questionable at the moment":

[The] only new Federal money in the plan is the \$13 billion a year that Vice President Mondale mentioned last month in Hoboken, and even that amount is dependent on passage of the “windfall” profit tax on crude oil. It has become increasingly doubtful in recent days that Congress will approve a tax that would raise as much revenue as the Carter Administration wants.

The bulk of the transit plan would be old money, such as the \$27.5 billion, with an anticipated 5 to 7 percent yearly increase, that the government was going to spend anyway. And an estimated \$10 billion would not be Federal money at all, but would come from state and local governments.” [Holsendolph, Ernest, “Mass Transit: Carter’s Plan,” *The New York Times*, September 27, 1979]

The Carter Administration announced on September 26 that it would now support the Harris-Stark bill. The reversal was important because supporters feared that White House opposition might sway votes in the Senate. The energy crisis and the lopsided vote in the House were reportedly factors in the White House decision to support the measure. [Baker, Donald P., “Carter Drops Opposition to Metro Funding Bill,” *The Washington Post*, September 27, 1979; Shelton, Isabelle, “Policy Shift on Metro is Hailed,” *The Washington Star*, September 27, 1979]

Assistant Secretary Downey confirmed the reversal in his testimony on September 28 to the Subcommittee on Governmental Efficiency and the District of Columbia, United States Senate. After discussing the President’s recent announcement and former Secretary Adams’s release of Interstate withdrawal funds, Downey said, “The administration supports the authorization of additional funds for Metrorail in the form of a separate authorization.” He had a caution that qualified the support:

[We] wish to make it clear that appropriations under this authorization must be considered within the context of our Nation’s total transportation needs. By this I mean that the administration will integrate WMATA’s needs for capital funding with the total transportation needs of the other areas of the country and the total resources available to meet those needs . . . .

[We] recommend that the authorization be in a lump sum of \$1.7 billion as opposed to an annual schedule. The lump-sum authorization will provide the flexibility for annual appropriations actions at levels consistent with actual construction needs, the needs of other areas of the country, and the total resources available to meet those needs.

[National Capital Transportation Amendments Act of 1979, Hearings before the Subcommittee on Governmental Efficiency and the District of Columbia, Committee on Governmental Affairs, United States Senate, 96<sup>th</sup> Congress, 1<sup>st</sup> Session, page 55; the entire testimony, including questions, is on pages 54-65]

Downey also advised that the White House opposed operating subsidies.

Congress completed work on the bill on December 20, 1979, with the Senate voting 66 to 23 after eliminating funding for operating subsidies that the Carter Administration opposed. The House then approved the revised bill, 190 to 144, again with Chairman Natcher voting nay.

During House debate, Representative Delbert L. Latta (R-Oh.) reserved the right to object to the bill, commenting:

Mr. Speaker . . . I can remember some time back that the gentleman from Kentucky [Mr. Natcher] made the statement that the Metro was going to cost the taxpayers something like \$6 billion, and there were a lot of people in this House at that time who said, "Oh, no, it couldn't happen." I would like to ask . . . how close is the gentleman's estimate of a \$6 billion taxpayer contribution for the Metro System?

Representative Harris avoided saying a specific number, observing that the only figure that mattered was the amount in the bill, \$1.7 billion. He added that the financial reanalysis of Metro construction cost conducted in 1978 "was as close and as tight a figure I think as the human mind can come up with. I think it is right on the button myself and I think we can come in under it."

Representative Latta persisted, pointing out that he had seen figures of \$6 billion and \$7 billion. He added, "Whatever it is, it is too high and I am glad I did not support it."

Finally, Representative Harris said:

Let me say if, in fact, all past and previous contributions to the Metro System are added together you will come to a total system cost of approximately \$7.2 billion.

Having secured an answer, Representative Latta withdrew his reservation of objection and the House soon approved the bill. [National Capital Transportation Amendments of 1979, *Congressional Record-House*, December 20, 1979, pages 37298-37299; Schrag, pages 193-194]

President Carter signed the National Capital Transportation Amendments of 1979 on January 3, 1980 (P.L. 96-184), in the Cabinet Room of the White House. As the ceremony began, President Carter noted that Mayor Marion Barry, as usual, was late, delaying the start of the ceremony by 15 minutes. The President asked, "Mr. Barry, you didn't come on the Metro, did you? [Laughter]." Representative Spellman told him the Maryland representatives had used Metro.

Representative Harris handed the President a Metro farecard and suggested he use it when he delivers the State of the Union Address. The President thanked him but said he would give the card to Mayor Barry "so he'll be here on . . . [laughter]."

President Carter began:

This is a very good day, I believe, in the lives of the people who live in this entire Washington, D.C., region and also of those who work in the Federal Government, and I'm doubly grateful, as President, to be able to participate in this ceremony.

The bill, he said, "will complete the financial commitment of the Federal Government to the completion of the Metrorail system."

He talked about Metro's origins:

The prospect of urban decay, the adverse impact on the quality of the air that we breathe, the excessive compacting of traffic during rush hours on our highways, the need to conserve energy, all were factors many years ago in the making of a final decision about

the construction of this rapid transit rail system. This is a good result of close cooperation between government at various levels and the private sector of the American economy.

The system was, he pointed out, carrying 300,000 passengers. Metro was now open on weekends, likely leading to increased numbers. “These are 300,000 people who would ordinarily have been using their automobiles, with a very heavy drain on the energy reserves of our country and with an adverse impact on the quality of our life.”

With the signing of the bill, State and local officials would be responsible for providing the additional funds to complete, operate, and maintain the Metrorail system. The Federal Government would continue efforts, such as encouraging carpooling and increased parking fees, that would support use of Metrorail:

My belief is, my conviction is that in the future every changing factor will make more valuable the Metrorail system that is in the process of being built. It would have been tragic to interrupt the completion of this system because of inadequate financing or inadequate commitment from the Federal, State, or local government agencies or governments. This is an important step forward.

While using multiple pens for the signing, President Carter handed the first pen to Representative Harris.

President Carter then asked several officials if they wanted to comment.

REPRESENTATIVE SPELLMAN: I frankly think that Herb should [group agreement].

THE PRESIDENT: Everybody—there seems to be an acclamation.

REPRESENTATIVE HARRIS: I did give you the fare card, Mr. President.

THE PRESIDENT: It’s the first bribe I’ve had this year. [Laughter] Thank you, Herb. Will you say a word?

Representative Harris said:

I speak for so many people that have worked for so many years to accomplish this. And so many of them know who they are – this obviously goes back for 20 years of effort, of community effort – those that broke the bottleneck in ’71 and those that helped us move it along this year to share the completion of a system that can mean so much in transportation and in environment, but also in community, Mr. President.

And I think Metro has brought us together, sometimes to get along and sometimes to fuss, but it’s brought us together. And it has meant a great deal, I think, to all of us, to community, and means a great deal to the future.

I want to just make a special word. We wanted this bill passed this year. I do not think this bill would have been passed this year if it had not been for the work and the effort of this administration and this President. They did it; they did it in a very real way

I’d like for all of us that have just a special thing with regard to Metro, with what it will bring to our community, to say in unison. “Thank you, Mr. President.”

THE GROUP: Thank you, Mr. President.

Senator Mathias pointed out that this was a tough time to allocate \$1.7 billion for a project affecting only one urban area. “But we felt that it did affect more than one city, one community, that this is a symbol of what this Nation is doing to improve life in urban America, to meet the crisis in energy, and that we have wrapped up in the act, which you have completed today, a piece of legislation which is important to all Americans everywhere.

Senator Sarbanes was grateful for the bill and the President’s support, but thought “it ought not to stop here.” He thought comparable systems should be built in other metropolitan areas. “So we see this as not the end of something, but the beginning of bringing mass transit across the country.”

Representative Spellman said, “today is really a dream come true.” People “who go into the stations see just beautiful, beautiful stations representing Metro, but those of us who worked on it from its very inception see it in all of its components, every little thing that had to go into place.” The most remarkable thing, however, was the multi-jurisdictional support for Metro. “We were able to sublimate our own little special pet projects in order to work together, in order to make the whole system jell.” She added:

And to have a President come in at this point who understands all that went on before and understands the need for making this project whole at a time when there was talk of truncating the system is, I think, the culminating aspect of it all. It’s just a dream come true, and you’ve made that dream come true. We thank you.

President Carter replied, “Knowing everything that had gone on before, it was not one of the most delightful experiences.” The White House transcript added: “[Laughter]”

After several other Members of Congress provided similar comments, President Carter asked Mayor Barry to say a few words. Calling this “a great day for all of us,” Mayor Barry said, “the District is totally committed,” as reflected in the Interstate substitution funds the city had transferred to Metro. “And this is really an example of what we can do, working with the Federal sector, the private sector, the local governments to make this region a better place for all of us to live.” Referring to the farecard, Mayor Barry added, “And I occasionally ride Metro myself, so that fare card was not new to me.” [Feaver, Douglas B., “Carter Approves \$1.7 billion for Metro Completion,” *The Washington Post*, January 4, 1980; Crosby, Thomas, “Metro Aid Bill Signed by Carter,” *The Washington Star*, January 4, 1980]

In return for Federal funds, the bill required local jurisdictions to establish a “stable and reliable” revenue source to provide matching funds to complete construction. The eight WMATA jurisdictions, including the States of Maryland and Virginia and the District, had been unable to agree on a single source, such as a regional sales tax, leaving each jurisdiction to patch together its own payments to WMATA, as Professor Schrag explained:

In 1977 both Transportation Secretary Adams and General Manager Lutz endorsed either a regional sales or payroll tax, in large part to end the yearly uncertainty over whether each of the eight jurisdictions in WMATA would actually pony up. But the jurisdictions

could not agree on a uniform tax, in part because their financial structures were so distinct.

Under the mandate of the new bill, the jurisdictions could not agree on a single source, instead responding to the “demand for ‘stable and reliable’ revenues with a hodgepodge of measures, including gasoline and other excise taxes at various amounts depending on the jurisdiction.” [Schrag, page 194]

In later years, WMATA faced many funding challenges, as Presidents changed, Members of Congress came and went, and the economy and other factors affected the availability of the funds authorized by the National Capital Transportation Amendments of 1979. Nevertheless, Professor Schrag considered it “an important transition.” Instead of looking at Metrorail as a “deficit-creating monster,” as a member of the Arlington County Board called it, the bill reflected the fact that “federal and local leaders decided that the monster was worth nurturing.” Any questions about “the system’s basic legitimacy” had been answered. [Schrag, page 195]

In the e-mail cited earlier, Downey commented on the Stark-Harris bill:

On the issue of Metro and the Stark-Harris bill, there is some back-story. Carter, having lost some fights about the design and cost of the MARTA system, was generally negative on rail projects – as evident from the handwritten note he sent to Brock early in the Administration. Secretary Adams, who had served on the House DC Committee and was a Metro supporter, had to take on the President and his staff to get support for the full system. WMATA was a hard sell, and it was my job to make it happen. I finally closed the deal at the White House with a strategy to assure that our exposure was only for capital expenditures. This led to my testimony in which I said we would support the Stark-Harris construction funding if the locals had a source of “stable and reliable funding” to assure operation and maintenance over the long haul. We got that promise, but were later sold out by the Reagan Administration which actually entered into the first contract under Stark-Harris. Under pressure from the locals, DOT issued an opinion that the existing funding arrangements were “stable and reliable,” in that they required the compact parties to make up any budget deficits. Of course, since the WMATA Board was essentially the same local officials, there was really no protection against underfunding. What we had in mind was some form of dedicated tax that was controlled by WMATA, but that has eluded the transit system even up to today . . . .

By January 13, 2001, when regional and Federal officials gathered to open the final Green Line stations in the District and Prince George’s County, Maryland, they congratulated and thanked each other:

Perhaps the most striking aspect of the ceremonies was their focus on the completion of the five-station stretch of line. For WMATA had finished not only the Branch Avenue line, not only the Green Line, but the 103-mile regional system, a system not terribly different from the 98-mile system authorized more than thirty-one years earlier. Yet to dwell on the completion of the 103-mile system would be to suggest that Metro was finished, its form forever settled. That was not the case. [Schrag, page 273]

The focus had been on honoring existing commitments by completing the 103-mile rail network, but officials were already thinking of new lines, such as the Silver Line through heavily congested Tyson's Corner, Virginia, to Dulles International Airport. The Silver Line, the first to open since the Green Line, opened its first five stations on July 26, 2014.

Professor Schrag looked back on what Metro meant for the region:

Metro is a public thing. It is public transportation, public works, public policy, public investment, and, since its opening, public space. It is a monument to confidence in the public realm . . . .

As a symbol of urbanity, a preserver of neighborhoods, a work of beauty, a political unifier, a shaper of space, and a meeting ground for all Washingtonians, Metro makes Washington that much more the great city dreamed of by visionaries from . . . L'Enfant forward, and it makes America that much more the Great Society envisioned by Lyndon Johnson and the liberals of the 1960s. The visionaries have not and never will achieve perfection, but Metro shows that even in pragmatic matters of planning, idealism has a place. [Schrag, page 283]

### **The Georgetown Metro Station**

Considering Georgetown's role in fighting Interstate freeways and bridges, it was a logical location for a Metro station. But that station does not exist. Instead, Georgetown is between the Foggy Bottom-GWU Station in the District of Columbia and the Rosslyn Station across the Potomac River in Virginia. The Metro line between the two stations crosses the river north of Roosevelt Island in a tunnel between the two stations, without crossing under Georgetown.

Professor Schrag discussed the situation:

Now, as in the 1970s, there is a legend about Metro among the people of Washington. Many believe that WMATA planned a station for Georgetown, then withdrew its plans in response to opposition from politically influential residents who feared that the subway would bring undesirables – the poor, the criminal, the nonwhite, and the tacky – to their exclusive neighborhood. In fact, although Georgetown residents did oppose a transit station, their attitude was essentially irrelevant, for a Georgetown station was never seriously considered.

From an engineering standpoint, a subway line under Georgetown “would have been difficult.” The proximity of the Potomac River to Georgetown's commercial center at the intersection of Wisconsin Avenue and M Street was the problem:

Any tunnel under the Potomac (such as the one that today connects Foggy Bottom and Rosslyn) would have been so deep at the river's edge as to render a station there impractical.

NCTA planner John Insko Williams sketched a Georgetown station in 1963 that depended on a highway-transit bridge across the river. In an interview with Professor Schrag, Williams explained why the idea never went beyond his sketch:

According to Williams, highway planners, not Georgetown residents, vetoed this option. Moreover, Williams's map shows that the curve up to Georgetown could not have followed the street grid, but would have to be bored under private property. And "if you get under buildings," planner Thomas Deen recalled, "you get into all kinds of problems, digging under foundations, and settlement, and liability, and lawsuits."

Of course, engineering challenges could be overcome, but for WMATA, a Georgetown station was not a priority. Metro was designed with commuters in mind, "which meant connecting suburban parking lots, bus nodes, and clusters of apartment buildings with dense collections of office buildings in downtown Washington and Arlington":

Georgetown lacked apartments or office buildings or parking, and much of the area within walking distance of Wisconsin and M is under water. "We were building the system for the commuters," planner William Herman recalled, "and there were not many people commuting to Georgetown. So why spend money on something that didn't meet our goals?"

In comparison with the freeways that Georgetown residents opposed, Metro's early maps "seemed to be an entirely benign alternative . . . . Few would object to a thin line and small dot on a map, one that promised easy access to the rest of the metropolitan area." Even so, Professor Schrag found "a kernel of truth" to the rumors about why Georgetown did not end up with a Metro station:

Still, there were whispers of conflict even at that point. As planning progressed, and condemnation notes caught the attention of previously placid neighborhoods, complaints spread. A 1971 study reported that "everyone [wants] feeder buses to be nearby, but to stop in front of somebody else's house." The same could be said of rapid transit; everyone wanted a station close, but not too close.

Residents feared the disruption of construction. These concerns did not reflect class or racial divisions, "for the protests were common to black neighborhoods and white, to poor neighborhoods as well as to rich ones":

A rapid transit system that had promised to spare neighborhoods by obviating freeways now found itself fighting many of the same people who had protested those roads.

For example, Professor Schrag cited Representative Giaimo, who had led the fight against Chairman Natcher in 1971 – the pivotal moment for Metro. For his Washington home near the Capitol, "WMATA rewarded him with an eight-foot ditch two feet from the front of his house, but he took it in stride."

Another fear was the access that Metro stations would provide for lower-income people who might have crime on their minds, "and in suburban Washington that means blacks":

Idamae Garrott, a Montgomery County representative, told a reporter, "A lot of people here are scared to go into the District. Now they think that rapers and muggers will be able to get on the subway for very little money, rape and mug me, and get on the subway

and go back. I can't guarantee it won't happen, although it's puzzled me why more criminals don't come out here now in cars." [Schrag, pages 155-156]

In 1977, *Post* columnist Bob Levey went to Georgetown to see how residents felt about never getting a Metro station:

So the land of begonias and bistros and brick becomes Metro's first orphan community. If that seems puzzling, it seems more puzzling that Georgetown's orphanhood was brought about by Georgetown residents. It would be hard to fault their motives.

They did not want years of construction, the noise or dust it would bring, the "space-age entryway built beside an 18<sup>th</sup> century town house," or "the exploding shopping centers and apartment houses that Metro will surely bring elsewhere."

During his visit, he found that "tears are hard to find among the great old oaks" of Georgetown in the absence of a Metro station:

The Georgetown community leaders who took part in the 1962 decision to bend aside the Metro line crossings from Rosslyn to Foggy Bottom do not regret their decision.

A position paper at the time by the Citizens Association of Georgetown said, "A line through Georgetown would lead to nowhere but deficits." Eva Hinton, the association's long-time vice president, recalled those words for Levey. "What it means," she told him, "is leave us the hell alone":

The chief concern in 1962, Mrs. Hinton recalled, was the extra-hard rock on which Georgetown sits. To burrow a subway into it would have required extensive blasting. The foundations of many gingerbread Georgetown homes might not have survived.

Mrs. Hinton and her association also wanted to avoid packing Georgetown's commercial strips more than they are packed now. "If you think we need another single soul here at lunch hour or on Saturday, you are mistaken."

In addition, many residents considered Metro to be a redundant commuting tool. For those who work downtown or on Capitol Hill, "Georgetown is honeycombed with bus routes that go crosstown, and has been for years. They are popular, and they wouldn't be popular if they weren't at least somewhat efficient."

Like Professor Schrag, Levey found that community concerns aside, WMATA had only briefly considered a Georgetown station:

It wasn't just Georgetowners who couldn't see the wisdom of Metro in the early sixties. According to Charles H. Conrad, executive director of the National Capital Planning Commission, only one staff study ever included a Georgetown stop, and it bit the dust early.

“A subway would have wrecked Georgetown,” said Conrad. “It was not so much a transit decision as a historic and land use decision.”

Veteran Metro staffers report that a Georgetown stop was rejected by them equally early. Not only were the buildings frail, but tunneling would have been staggeringly expensive, and the River Road corridor would not have fed as many suburban customers into a key Northwest Washington line as the Rockville Pike corridor that was chosen.

The congressionally designated historic status of Georgetown was another factor. “There was also considerable doubt about whether a subway would have been legal” because it would not blend architecturally with those already there.”

It was good, Levey thought, that WMATA listened to community concerns in Georgetown and other locations:

Actually, a tip of the cap is due Metro for paying such careful attention to community will. It would be offensive to have a subway – and subway construction – shoved down the throat of a community. At least, for a change, the boys with the money and the power listened.

But what has Georgetown done to itself? Have business and citizen groups perhaps been penny wise and pound foolish?

The long and the short of it is that no Metro in Georgetown will mean more cars in Georgetown. That may, in turn, cause economic and environmental damage. And nobody at either Metro Center or Wisconsin and M ever intended that. [Levey, Bob, “Metro’s Not Coming to Georgetown – and Nobody’s Crying,” Bob Levey’s Potomac Journal, *The Washington Post*, June 30, 1977]

## **Completing I-66**

When the last 10-mile segment of I-66 opened on December 22, 1982, the *Post* interviewed Emilia Govan. She recalled 1970 when she and her neighbors learned about plans to build I-66 over the nearby intersection of Glebe Road and Washington Boulevard:

“You couldn’t even see [the intersection] from our driveway,” said Emilia Govan recently . . . . “And it would not have done anything to our home. But we felt it would have an impact on our neighborhood and the community.”

They and their neighbors found themselves “running a bureaucratic obstacle course,” as the *Post*’s Nancy Scannell put it. Scannell explained that Arlington was “a largely affluent and sophisticated community filled with middle- and upper-level employes [sic] of the federal government.” Their “sophistication and inside-the-bureaucracy experience” gave ACT a “decided advantage” in fighting the highway.

Nevertheless, I-66 became a reality. Govan, “who abandoned work on her doctoral dissertation to fight the highway and is today a lawyer,” saw some benefits from the battle. Govan said:

It enhanced Arlington's sense of community. It brought together many, many talented, concerned citizens and, through their efforts, showed them and government officials that it is possible to have meaningful citizen involvement in decisions which in the past were made behind closed doors.

The fact that I-66 was completed did not mean the Govans, ACT, and other opponents had not had a major impact. Without their efforts, "we would have had a highway twice as big, much uglier and much more intrusive in the community." Saving Spout Run Park was a "significant accomplishment," as was "changing the governmental decision-making process":

Govan said she still views the road as a "concrete gash through a residential community . . . . It was never built for Arlington, but to get people through Arlington."

But "we pointed out some of the problems years ago," she said, "and now we'll just have to wait and see what happens." [Scannel, Nancy, "Finding Victories in Defeat," *The Washington Post*, December 22, 1982]

Leland White, in his history of the fight against I-66, wondered if ACT would have been more successful in blocking I-66 construction if they had adopted the non-violent tactics of the Civil Rights Movement or the aggressive actions of the anti-war groups of the 1960s or ECTC and the District freeway fighters. He cited an article from the March 1972 issue of *Smithsonian* magazine about freeway battles:

According to journalist Rice Odell, they "reasoned that since all segments of the area's highway network were to be connected, construction of any one segment would increase pressure to build the others . . . it led to a situation in which residents of white affluent Georgetown worked against the North Central freeway and blacks from the other side of the city [were] in the forefront against the Three Sisters Bridge." Their motto, "White Men's Roads Through Black Men's Homes," was a visceral and effective rallying cry.

Sammie Abbott thought so, as White reported:

Washington anti-highway activist Sammie Abbott thought that ACT did not go far enough. Shortly after the battle over I-66 was lost, Abbott told a Post reporter that "Virginia people didn't put up the type of fight we did in the city. It's that suburban mentality, that sense of decorum. Once you are committed to a sense of decorum, you're screwed." Emilia Govan said that ACT considered but rejected more militant tactics. At the time they believed that such an approach would likely have backfired in Virginia. She contended that civil disobedience ultimately might have alienated the white, middle-class professionals that formed the backbone of their effort and would have scared off a number of their political allies. [White pages 66-67; Odell, Rice, "To Stop Highways Some Citizens Take to the Streets," *Smithsonian Magazine*, March 1972, page 27; Feaver, Douglas B., "No New Freeways for District," *The Washington Post*, October 30, 1978]

According to Keith A. Argow, VDHT's environmental consultant, the project had changed from an eight-lane superhighway to "an elongated park" that he hoped would be "a prototype for a lot of highways in the future." Although it was too late to change the project, opponents became more aggressive:

Despite the major changes made in the I-66 plan to accommodate opponents, when construction of the last stretch began, crews encountered an "enormous amount" of local resistance, according to one contractor. Residents sprayed anti-I-66 graffiti on equipment and trailers. In some cases, they poured sand into machines' fuel tanks. As a result, several contractors hired security guards, and at least one says he has filed a claim with the Virginia Department of Highways and Transportation (VDH&T) for the cost.

Children climbed into trees to prevent workers from cutting them down to clear the right-of-way. Such incidents and vandalism are to be expected in this day and age, according to one contractor, who spoke of "a normal kind of vandalism." ["Community-Group Clout Influences Design," *Engineering News-Record*, December 10, 1981, page 33]

White argued that the battle should not be judged by the fact that I-66 was built, although in a scaled-down version. Emilia Govan told him in 1997, "We were not just fighting the highway. For us, increasing public participation in the process was just as important." She and her husband Jim also were fighting the monolithic State highway machine. Jim Govan told White, "VDH had no culture on how to deal with the public."

The Govans, White found, "felt somewhat vindicated when the road failed to alleviate the area's crushing traffic." He added that, "More important, though, was their belief that they had helped to raise environmental consciousness and increase the level of citizen participation in the city they continued to call home." [White, page 67]

### **The Barney Circle Connector**

The Sammie Abbott quote about ACT's tactics was from a three-part 1978 series by the *Post's* Douglas B. Feaver on the difficulties of completing the Interstate System around the country. In the second part, about the District freeway revolt, Feaver wrote:

By the time District of Columbia and Maryland highway officials are through with their erasers, they will have wiped out a larger percentage of urban freeways than any other metropolitan area in the United States. Only 10.7 miles of a planned 36.4 actually will be built.

Only in Virginia are most of the once-planned interstate freeway miles completed or under construction and even in that state there has been some regression from the once-extensive dreams of the roadbuilders.

In referring to 36.4 miles, Feaver was double-counting alternatives such as those for the North Leg – the K Street tunnel and the Florida Avenue alignment. An accompanying map included the New York Avenue industrial highway, which was never a designated part of the Interstate

System. Based on tables in the ICE over the years, the official total of Interstate mileage in the District of Columbia reached 30 miles (1970-1975) but by the final ICE in 1991 had declined to 14 miles. Today, the official total is 12.27 miles.

Based on his calculation, Feaver called the District statistics “mind-boggling”:

By not building 17.2 miles of Interstate freeways, D.C. has:

- Saved from destruction between 1,000 and 1,200 homes and apartments.
- Saved from displacement about 3,000 jobs that might well have left the city.
- Made available for Metro construction more than \$1 billion that would otherwise have been spent on highways.

He quoted Abbott.

“There will be no more freeways,” said Sammie Abbott. “It’s over. It’s over because from the very beginning we refused to concede defeat.”

Feaver gave Abbott considerable credit for blocking the North-Central and Northeast Freeways and the Three Sisters Bridge:

It was Sammie Abbott who coined the campaign slogan, “White men’s roads through black men’s bedrooms,” and his slogan was absolutely accurate. For while the final routing of the North-Central Freeway was through Northeast Washington along the B&O Railroad tracks, it had been moved there from the original route through Glover-Archbold Park and out Wisconsin Avenue, where influential white people live.

It was Sammie Abbott who led his coalition in 1970 to stand in front of the bulldozers at the construction site of the Three Sisters Bridge – the planned Potomac crossing above Key Bridge. After several days of media events, some shoving, hollering and a few arrests, the construction project was shut down by court order. It never started again.

Feaver pointed out that Abbott’s tactics were not appreciated by highway officials:

Abbott’s tactics were disliked, if not respected, by Frank Turner, then the administrator of the Federal Highway Administration. At the height of the freeway wars, Turner recalled recently:

“Abbott and Reginald Booker (another activist) came in and laid down the law to (Secretary) Volpe. They were rude. They chewed him out. They talked about how blood would flow, maybe even in the Department of Transportation building, if the highway was built. Some of the groups with Sammie even tried to shut him up . . . .”

“Criticism and emotion have swung the pendulum to the extreme,” Turner said.

“Sometimes the District of Columbia is going to have to have that north-central, northeast freeway, and the money isn’t going to be there.”

Such criticism did not concern Abbott, who told Feaver that fighting highways was “basically social warfare. There’s no definitive victory or defeat. Momentum picks up . . . .”

Feaver summarized:

Whatever the causes, the highway building program in the District of Columbia was slowed and finally stopped, despite directions from Congress that it be continued and despite the fact that appropriations to build Metro were held hostage by Congress to force highway construction.

The last project to survive Sammie Abbott’s attack is nearing completion in the center of the city. It is a quarter-mile of what once was to be Interstate 95 through the heart of Washington. It is known, inelegantly, as the Center Leg of the Inner Loop and will complete the existing 3<sup>rd</sup> Street tunnel west of the Capitol between the Southwest Freeway and New York Avenue NW.

The quarter-mile construction project would cost \$35 million, and the “entire Center Leg, all 1.4 miles of it, will cost \$164 million.” In all, “340 homes and apartments were razed to make way for the Center Leg and 150 businesses were displaced and relocated.” [Feaver, Douglas B., “No New Freeways Slated for District,” *The Washington Post*, October 30, 1978]

Abbott was wrong about one thing. The city was not completely done with freeways.

As mentioned earlier, Mayor Washington’s letter of August 7, 1978, to Secretary Adams seeking withdrawal of the North Leg and East Leg segments of the Inner Loop (from East Capitol Street to the junction of I-395), had mentioned that the city was considering how “to provide a permanent terminus of I-295.” The official definition of I-295 was:

From the District of Columbia-Maryland line in the vicinity of Oxon Creek northerly via an intersection with FAI Route 695 to a junction with FAI 395.

He speculated that a connection between I-295 and Kenilworth Avenue Freeway (District 295, the non-Interstate portion of the I-295 Anacostia Freeway) “would close a gap in our existing expressway network and provide for a logical terminus of I-295.”

This speculation was an early reference to what became the proposed Barney Circle Freeway.

Barney Circle was located at the intersection of Pennsylvania and Kentucky Avenues and 17<sup>th</sup> Street in the southeast quadrant of Washington in a residential area on the west bank of the Anacostia River. The neighborhood had grown as a result of a trolley-line extension along Pennsylvania Avenue, SE., in 1901 to a terminus and turnaround point. The *Post* explained:

By the 1930s, Barney Circle was populated by employees of the nearby Navy Yard and a smattering of white-collar workers. The rowhouses built to serve them were correspondingly modest; most have two stories, two or three bedrooms and a couple of bathrooms, small yards, and low porches . . . .

When Eleanor Hill and her husband, Theodore, moved to Barney Circle in the late 1950s, the neighborhood was largely white and working-class. “We were the first African Americans on our block,” said Hill, now in her late 70s.

That changed after the 1968 riots. Barney Circle turned over completely and became almost 100 percent African American. But it remained a cohesive community. “We looked out for one another,” remembered Hill. [Abrams, Amanda, “A Historic Battlefield, of Sorts,” *The Washington Post*, March 3, 2012]

(The circle was named after Commodore Joshua Barney, who commanded the Chesapeake Bay flotilla in the War of 1812.)

When Administrators Bowers and Page approved the withdrawals on September 8, 1978, they commented:

We note that you propose to investigate several options to provide a permanent terminus of I-295 and to finalize a suitable I-395 terminus at New York Avenue. We urge the early implementation of the necessary studies in order to provide logical termini for the remaining portions of these spurs.

Although FHWA records identified the I-295 terminus as East Capitol Street, the goal was to cross the Anacostia River parallel to the Pennsylvania Avenue railroad bridge to connect with the Kenilworth Avenue Freeway (the link between the I-295 Anacostia Freeway and the Baltimore-Washington Parkway) and end the route at the East Capitol Street Bridge. The crossing would have solved a longstanding problem that was known even before the Anacostia Freeway opened in August 1964, as the *Star* pointed out at the time:

The new Anacostia freeway, which is to be opened to traffic Friday [August 7], is going to have several built-in booby traps for commuters. . . . [Any] motorists from Prince Georges County will find that several commuting routes they have grown accustomed to will vanish.

If they are used to coming down the [Kenilworth] freeway to Pennsylvania avenue or Eleventh street S.E. to turn west to reach downtown, they are going to discover their last turnoff now will be at East Capitol street. If they miss this turnoff, they will become “freeway captives” and will have to go on, across the Woodrow Wilson bridge to Virginia.

Or they will have to turn east, get off the freeway, hunt around for a detour turnaround on the Anacostia street system, and then head back west to reach downtown.

Joseph Rice, a division chief with the District’s Traffic Engineering and Operations Bureau, said a strategic guard rail would be restored to the median strip of the freeway near Pennsylvania avenue this week. This will knock out a detour that has permitted motorists to get off the freeway there and go west to downtown. [“New Anacostia Route Closes Popular Cutoffs,” *The Sunday Star*, August 2, 1964]

NPS had been unwilling to yield property in Anacostia Park for the ramps needed to provide the direct connections into and out of the city.

In the absence of a direct connection, most motorists took the ramp onto eastbound Pennsylvania Avenue, rode away from their destination until they could make an illegal U-turn, then headed west into the city. Similarly, outbound traffic could not reach the northbound route without a detour onto local streets.

As the District Department of Public Works planned hearings on the Barney Circle link in May 1988, the *Post* described the plan adopted in the final environmental impact statement in September 1983 and approved by FHWA in the Record of Decision on April 4, 1984, concluding the NEPA administrative review:

As proposed, the freeway extension would begin at Barney Circle SE, run along the west bank of the Anacostia River in Anacostia Park, and cross the river on a new four-lane bridge alongside a Conrail span, between the East Capitol Street (Whitney Young) and Pennsylvania Avenue (Sousa) bridges. The road would then lead through the eastern portion of Anacostia Park and feed into the Anacostia Freeway.

In addition, a two-lane parkway would be built from Barney Circle on the western side of the East Capitol Street Bridge.

The purpose is to end the flow of commuter traffic through residential neighborhoods in far Southeast and Capitol Hill, where motorists often clog side streets . . . .

In exchange for ceding land for the freeway, the National Park Service would receive

\$15 million worth of improvements for Anacostia Park. New playing fields, restrooms, tennis courts, a canoe launch, and a fishing pier would be built, and the waterfronts on both sides of the river would be widened by moving access roads inward.

The new bridge would provide access to a large part of the park that currently is unreachable because it is bound by railroad tracks, the river, and the Anacostia Freeway . . . .

Bicycle and pedestrian trails would be built on the East Capitol Street and Pennsylvania Avenue bridges, as well as the proposed bridge. On both ends of those bridges, spiral ramps would be added to allow bicycles and pedestrians to reach the parkland below . . . .

If the roadway plan is adopted, the city also would move the Southeast Freeway's Third Street SE entry ramp to Seventh Street SE, and make road improvements to Kenilworth Avenue NE . . . .

The plan, which was adopted in 1983, has required extensive city negotiations with the federal Departments of Transportation and the Interior. It would cost \$130 million to \$150 million, require no demolition of buildings and at this point include no limits on

truck use of the proposed road and bridge. [Simpson, Anne, "Hearings Planned SE Freeway Link," *The Washington Post*, May 5, 1988]

A group called Stop It Again formed to oppose the plan. Co-chairs Christopher C. Herman of the Congressional Cemetery Association and Janet Wintermute had written a column opposing the plan the previous December. The plan was "bad news for almost everyone." It would carry almost 20,000 vehicles per lane daily, meaning "it would instantly become the District's most congested freeway."

They wrote, "The inescapable fact is that there's no more room during either rush hour." The city, instead of trying to divert motorists from local streets onto a new freeway "might well 'divert' [them] to the Green Line if the District could find money to finish it." They concluded, "There are better ways to help commuters and communities deal with their problems than by repackaging the failed panaceas of the past." [Herman, Christopher C., and Wintermute, Janet, "You Thought the 'East Leg' Was Dead? Welcome to Barney Circle," *The Washington Post*, December 20, 1987]

In May 1990, the *Post*'s popular Dr. Gridlock column by Ron Shaffer, a reporter who had covered the later stages of the freeway battles, included a question from a Washington resident about the missing link:

Is there EVER going to be a connecting road between Interstate 295 and Interstate 395 (Southeast-Southwest Freeway) in the District? I would be willing to become politically active for the first time in my life if you would direct me to the proper action group.

Dr. Gridlock's reply began:

No need to join an action group, apparently. After many years of study, the District is planning to begin construction next year of the so-called Barney Circle Freeway, an interstate segment that will connect these two roads via a new bridge to be built north of the Sousa Bridge. The project is scheduled to take three years and cost \$180 million. Afterward, it will no longer be necessary to make gymnastic loops and use side streets to go north from I-395 to I-295, or south from I-295 to I-395. ["Shaffer, Ron, "Interstate Connector," Dr. Gridlock, *The Washington Post*, May 11, 1990]

In 1990, FHWA approved the plan for inclusion of the Barney Circle Freeway in the 1991 ICE, the final one prepared. Inclusion meant that the Barney Circle Freeway was eligible for Interstate construction funds on a cost-to-complete basis at the usual 90-10 Federal-District matching ratio.

By then, the eastern terminus had changed because of concerns that ending the freeway extension at Kenilworth Avenue would provide neither a safe flow of traffic nor adequate capacity. On June 1, 1990, FHWA's Division Administrator in the District, Arthur J. Hill, described the needed design changes:

Three lanes of through traffic are necessary for southbound Kenilworth from East Capitol Street to the Barney Circle – Anacostia Freeway. The traffic entering northbound Kenilworth at East Capitol St. and Benning Rd. should also be provided with a collector

road on the left side and brought on to the freeway as a free flow lane. In addition, northbound traffic from the Anacostia Freeway and Barney Circle must have three lanes of capacity from the Barney Circle branch to the exit at Nannie Helen Burrough[s] in order to provide for a free flow entrance. However, this particular design change will entail the relocation of an existing railroad bridge north of the Benning Road.

We believe that the above mentioned design changes will provide for a safer transition as the Interstate facility diverges and merges with the urban arterial. Therefore, we are requesting that the Interstate construction limits for southbound Kenilworth be moved from the north abutment of the railroad bridge to north of the East Capitol Street exit. Northbound, the Interstate construction limits should be established just south of the Nannie Helen Burrough[s] exit.

Hill estimated that these design changes would add \$15-\$20 million to the cost of the Barney Circle Freeway. The 1991 ICE reflected his recommendations.

In June 1992, the Department of Public Works was nearing construction of the freeway, as the *Post* reported:

Red surveyors ribbons now blaze a trail along the Anacostia River, and the blunt stub of a new highway ramp alerts passersby that the long-awaited and disputed Barney Circle Freeway is moving toward reality.

The department hoped to begin construction in 1992, “even as a spokeswoman for

Mayor Sharon Pratt Kelly said she has staffers looking into concerns about the plan.”

Planners believed that providing the “missing link” in the traffic network was important to end the maneuvering through nearby neighborhoods:

But many residents have fought the freeway line for years. And as city officials prepare to put the project out to bid and environmental issues take the forefront worldwide, opponents of the freeway have turned up the volume and found some sympathetic ears.

The Barney Circle Freeway is a nightmare they say: an interstate that not only will cut through the heart of the city, but also pave over prized national parkland along a fragile riverbed.

Brent Blackwelder of Friends of the Earth said, “This is something that should never happen, an environmental horror story.” It was, he said, “a vestige of the old mentality: jam freeways in wherever you can”:

Opponents said they thought the Barney Circle issue had been settled in the 1960s when an interracial coalition stopped most of the “Inner Beltway” that was planned for the city, including an east leg that would have sliced from Takoma Park along some of the same Anacostia route, said Chris Herman, of the Citizens Committee to Stop It Again, which is

spearheading the latest Barney fight. “Now we’re condemned to repeat history,” Herman said.

Charles Gorley of the D.C. Sierra Club recalled the earlier freeway battles, including those involving the East Leg Freeway:

He said opponents of the Barney Circle Freeway today are mostly from Anacostia and the less-affluent eastern fringe of Capitol Hill, and they seem to have less voice and clout.

Gorley said that unlike other roads in the failed freeway plan, which would have taken houses and businesses, “all this does is swallow up parkland. Parks don’t vote. Squirrels don’t vote.”

City officials “bristle at the criticism.” Project manager Tom Burke “denied that the department is ‘freeway mad.’” He pointed out that former Mayor Barry had helped defeat the Inner Loop but had supported the Barney Circle Freeway. The Public Works Department planned information meetings during the summer to counter what Burke called “untruths”:

In the meantime, he said, construction bids will be sought in three to six months. And officials are so sure of getting the freeway link built that they ordered that one ramp leading to the Barney Circle Freeway be started during renovation work on an I-295 overpass.

“In any project, once approved, you only hear from the opponents. But it’ll take a lawsuit to stop it now,” Burke said.

Several members of the city council had expressed concerns about the freeway. One of them was Councilman Harold Brazil:

But Brazil said that though he would like a reassessment, “there is nothing I can do about it . . . . This is a train that has already left the station.”

The council must “pick its fights,” a council aide said, and it’s unlikely to throw down the gauntlet over “a project that has received so little publicity.”

Herman was not about to give up. “We will win,” he said. As for the city’s plan to advertise for bids, he said, “Like the process of getting hanged, it concentrates the mind.” [Weiner, Elizabeth, “Freeway Moves Along,” *The Washington Post*, June 4, 1992]

At the time, Jack Kent Cooke, owner of Washington’s National Football League team, was planning a new stadium on the site of Robert F. Kennedy Memorial Stadium, the team’s home field. The Barney Circle Freeway would improve access to the stadium site. City Council Chairman John A. Wilson claimed the freeway was part of the deal Cooke had negotiated with the city before committing to pay for the 78,600-seat stadium. However, Corporation Counsel John Payton, one of the negotiators, said the freeway “was not involved in the memorandum of understanding we reached with Jack Kent Cooke; it is not mentioned in the document.”

Chairman Wilson had introduced a resolution in February 1993 granting necessary approvals for the freeway. “Without it,” he said, “we would not be where we are today and the stadium might not have been built” on the old stadium grounds.

He was convinced that Mayor Kelly would approve the freeway, but she had not announced a position. Public Works spokesman Richard Hebert said, “The mayor is going back to the community. She is not going to force this issue down the throats of the community.” [Harris, Hamil R., “Barney Circle Project Would Aid Cooke, Anger Residents,” District Weekly, *The Washington Post*, March 18, 1993]

(In the face of neighborhood opposition, criticism from environmental groups, and difficulty concluding a deal with the city, Cooke built his new stadium in Prince George’s County, Maryland. Jack Kent Cooke Stadium opened in 1997, named in honor of the owner who had passed away on April 6, 1997. The current owner of the team sold the naming rights in 1999, renaming it FedEx Field.)

On July 22, 1993, FHWA Executive Director E. Dean Carlson wrote to Director of Public Works Betty Hager Francis regarding the delay in advancing the project:

From September 1990 through September 1992, we approved plans, specifications, and estimates and authorized the taking of bids on three projects totaling \$104 million in Interstate Construction (IC) funds [i.e., not counting the District match]. However, none of the projects has been advertised for bids.

The contracts were for:

**Section 2-** New Anacostia River Bridge, contract authorized on September 12, 1992 (estimated Federal-District cost: \$38.5 million). This section extended from the west abutment, where it tied into section 1, to the east abutment across the Anacostia River where it tied into section 3.

**Section 3** – Construction of the Freeway Bridge to Kenilworth Avenue, construction authorized on September 29, 1993 (estimated Federal-District cost: \$35.3 million). This section tied the new freeway bridge to I-295 at Kenilworth Avenue.

**Section 4** – Parkway, construction authorized on September 17, 1990 (estimated Federal-District cost: \$28 million). This section tied section 1 to the East Capitol Street Bridge via a two-lane parkway section.

The obligation authority reserved for the District could have been provided to States with projects ready to go. As a result, Carlson said he would direct Division Administrator Hill to withdraw authorization for bids on the three projects and de-obligate the IC funds. He also would not obligate IC funds for the project at Barney Circle that had been scheduled for authorization before the end of this fiscal year:

**Section 1** – West End Tunnel, contract authorized on September 26, 1991 (estimated Federal-District cost: \$43 million). This project extended from Barney Circle and the John Philip Sousa Bridge to the edge of Congressional Cemetery.

He added:

I want to stress that the District would not lose the funds if we take these actions. Instead, the de-obligated IC funds would be added to the District's unobligated balance of IC funds.

He pointed out, as he had during a recent meeting with Director Francis, that the Surface Transportation Assistance Act of 1978 prohibited the withdrawal and substitution of additional Interstate routes:

Although other Interstate segments have been withdrawn in the District under this provision, the option to withdraw and substitute under Section 103(e)(4) was limited to requests submitted prior to September 30, 1983 . . . . The withdrawal-substitution provision has not been extended to other Interstate segments except when special legislation initiated by a State has been enacted.

As I also indicated, if the I-295 projects at Barney Circle are not constructed, Federal funds previously expended for them are subject to repayment provisions of the State-Federal project agreements for the projects under which the Federal funds were expended.

In July, Mayor Kelly told 200 people attending a public forum that the project was "worthy of consideration," but she insisted it was not a *fait accompli*. Director Francis told the crowd:

"The good of this project far outweighs the bad. I'm tired of trying to get from Kenilworth Avenue to Pennsylvania Avenue and doing the Minnesota Avenue Dance," she said in describing the most popular commuter route from far Northeast Washington to downtown via Pennsylvania Avenue SE, which is to exit Minnesota Avenue.

Funding was an issue, with the city having invested \$25 million in developing the plans. A top city official said, "financially this thing has to keep going." If not, the city would have to return the Federal-aid funds already spent and lose access to the remaining funds because of the prohibition against new Interstate withdrawal-substitution actions. Mayor Kelly also pointed out that the "most compelling reason" for the project was the 8,000 jobs it would bring to the city at a time when the jobless rate was 10 percent. [Harris, Hamil R., "Kelly Favors Freeway," *The Washington Post*, July 29, 1993]

On August 12, Ms. Francis replied to Carlson. She acknowledged the need for a timely advertisement date:

As you know, Mayor Sharon Pratt Kelly wanted our citizens to have one more opportunity to express their support for or concerns with the project. We therefore held community meetings in late July, and are pleased with the expressions of support for the project that were articulated. We are now prepared to move forward with the construction phase of the projects.

She listed the city's advertisement schedule:

Section 2 on September 15, 1993;  
Section 4 on October 18, 1993; and  
Section 1 on October 18, 1993.

Section 3 would be advertised in early 1994.

Director Francis added that Mayor Kelly wanted to ensure that at least 51 percent of all jobs on the project would go to District of Columbia residents.

In reply on August 27, Carlson indicated that in view of the city's commitments, he would not direct Hill to de-obligate IC funds for the Barney Circle project. He added that "following through with these commitments is essential to ensure that the funds will not be jeopardized."

Carlson mentioned that Mayor Kelly had written to Secretary of Transportation Federico Peña on July 20 regarding the employment of District residents on the project. The letter was under review, but Carlson said the answer would be dictated by Federal law and regulations. He did not say so, since the Secretary had not signed a reply, but those requirements called for competitive bidding, with award to the lowest responsive bid. They did not allow restrictions for local hiring.

On September 15, Mayor Kelly announced her approval of the Barney Circle Freeway. She acknowledged the opponents, but pointed out that more than half of those who spoke at two special hearings in July supported the project. She also cited the construction jobs the project would bring to the city. The project would cost about \$200 million, with Federal-aid highway funds covering \$190 million of that total.

Mayor Kelly's decision allowed the project to move forward but did not end the debate, as the *Post* pointed out:

City officials said the freeway connection, under consideration for almost two decades, will draw motorists off clogged streets east of Capitol Hill.

Opponents, including civic and environmental groups, argue that it would simply funnel more traffic and pollution to the heart of the city while gobbling up parkland. The project calls for ramps to cut through Anacostia Park.

The Committee of 100, an influential group of lawyers, architects and planners that previously had backed the Barney Circle project, withdrew its support last week, citing traffic and environmental concerns. [Castaneda, Ruben, "Construction to begin in '94 on Anacostia-SR Freeway Link," *The Washington Post*, September 16, 1993]

The District met its schedule for advertising sections 2 and 4, but section 1 was delayed due to a hazardous waste issue that had not yet been resolved. Hazardous wastes had been found in the north parking lot for the planned Cooke Stadium as the city continued negotiations on how to split infrastructure costs for the new facility, including mitigation for the loss of 612 parking spaces.

On May 12, 1994, a coalition of civic activists and environmental groups went to court to block the project. The Sierra Club Legal Defense Fund took the lead for the groups in filing the lawsuit, which accused government officials of covering up the presence of hazardous wastes along the route. The suit also questioned the “environmental justice” of the project, claiming it would mainly benefit Maryland commuters and affluent Capitol Hill residents, but would hurt the African-American neighborhoods in southeast Washington.

According to the plaintiffs, the city had conducted tests in 1992 to confirm the lead-contaminated soil, but had not divulged it. The suit called for the city to take a second look through an additional environmental review. Eleanor Hill of Barney Circle Neighborhood Watch asked reporters, “Would you want hazardous waste in your front yard?” She added, “We are angry because there was no intention to tell the neighbors.”

The city denied trying to hide anything. Officials said they heard about the problem 2 years earlier and wanted a full report on the contamination and the best way to get rid of it:

The pollution, which probably came from an incinerator ash in an old landfill, may require excavation of up to 59,000 tons of dirt, enough to cover a football field 24 feet deep, according to city studies . . . . City officials said 59,000 tons is a worst-case figure and contended the waste poses more hazards now, seeping into the groundwater, than if excavated and removed.

Attorney Roberts B. Owen indicated that a second group might sue as well if they conclude the city did not consider all alternatives to the freeway. They had in mind such alternatives as expanded highway ramps or traffic management measures such as changing pairs of area streets to one-way operation. [Cohn, D’Vera, “Suite Seeks to Stop D.C. Plans to Build Connector Highway,” *The Washington Post*, May 13, 1994]

This second group filed suit on May 18 based on the claim that the city did not consider all reasonable alternatives as required by NEPA. [“Second Suit Seeks to Block Barney Circle Connector,” *The Washington Post*, May 21, 1994]

District officials had hoped to begin construction in a few weeks, but on June 8, FHWA delayed the start until at least October 1 to allow time for Judge Harold Greene to review the first lawsuit. Ted Zukoski, an attorney representing the Sierra Club Legal Defense Fund, told reporters the environmental coalition hoped FHWA and the District would “use that time to do the right thing, which is a supplemental environmental impact statement” to assess the hazardous waste issue. [Neufeld, Matt, “Barney Circle Project Stalled by Federal Suit,” *The Washington Times*, June 9, 1994.

During a District Court hearing on August 17, FHWA indicated that it would perform an environmental assessment on the issue of hazardous materials. Such an assessment is an interim document that would allow FHWA to determine whether a more detailed EIS was needed or the issue could be settled with a Finding of No Significant Impact. Plaintiffs considered the decision a “partial victory.” Defense Fund attorney Howard Fox said, “We are delighted that they are

proceeding with this first step.” [Neufeld, Matt, “Barney Circle Plan Up in Air,” *The Washington Times*, August 18, 1994]

Later that year, a column by Bill Rice in *The Hill* newspaper discussed Owen:

Roberts Owen has been fighting highways in Washington for a generation. As a young lawyer in the 1960s, he successfully represented opponents of the Three Sisters Bridge over the Potomac just north of Key Bridge. It was part of a grand scheme that would have built freeways through Capitol Hill, Brookland, Dupont Circle, up Glover Archbold Park and Wisconsin Avenue to Maryland and elsewhere, destroying the commercial and residential fabric of the city.

Now . . . Owen represents some of the same citizen groups, using some of the same legal arguments to stop the Barney Circle Freeway, a vestige of the same old highway plans.

Rice discussed the two sides of the argument, but said that ultimately, “Barney Circle will be a political decision.” In conclusion, he asked and answered a question about the project:

Where is the momentum? The Three Sisters battle was a defining issue for land use in the city. There were arrests, it was a key stop to District home rule and a new law was created. The Barney Circle is almost invisible in comparison, but opponents seem to be slowly gaining, building on the previous freeway battles. As Capitol Hill resident and statehood activist John Capozzi puts it, Barney Circle backers “think that they’re going to reduce traffic by building more highways. This mentality is dead.” [Rice, Bill, “Barney Circle Freeway: A Dead Mentality,” *Inside Ward Six, The Hill*, November 10, 1994]

By August 1995, the environmental review was ready for public comment. The *Post* described it:

During the last 20 years, the project has been reviewed and debated at more than 130 public hearings and in at least two lawsuits and two environmental reports. The latest report, released last week, is as thick as a telephone book and contains 17 colorful maps . . . .

The report essentially ratifies the findings of a 1983 environmental assessment and concludes that there are no significant new factors that would require more . . . study or alter the earlier decision to build the bridge and highway-linking project.

Opponents, of course, disagreed:

Opponents of the project still maintain that a series of less-expensive ramps that would cut through Anacostia Park would resolve the same problems the Barney Circle Freeway is meant to address, destroy less parkland and avoid problems that a commuter highway would bring to the residential neighborhood it would traverse.

Capozzi, a resident of the Barney Circle neighborhood and the District's "shadow" representative to Congress, said that he was as determined to stop the project as city and Federal officials are determined to build it. He told a reporter:

"This is a political battle with no end," he said. "We outlasted Barry and then Kelly. In D.C., the strategy is to outlast people. The road was a bad idea since the beginning. I have been working on this constantly for six years. I can't believe, in the end, people will allow it to be built." [Wheeler, Linda, "D.C. Freeway in Limbo," *The Washington Post*, August 21, 1995.]

(Unlike the District's nonvoting Delegate, a "shadow" representative is not a Member of Congress. Instead, the city elects the "shadow" representative to advocate District statehood in the House of Representatives, as in the days when territories sought statehood.)

In November 1996, with the project still held up in court, the Department of Public Works decided to bring the first phase of the project before the city council – a \$15 million contract to improve access to the stadium. City Engineer Gary Burch explained that he hoped the city council's support would "encourage the judge to reach some kind of decision."

He recognized, however, that compromise was not likely. "Some people have realized that it is a positive project, and others have maintained the position that it is not. If the courts rule in our favor, we could start construction in a couple of months. But if the courts rule in favor of the opponents, we have to do some rethinking about the project."

Opponents were not fooled by the focus on one small element of the project. Jim Dougherty of the local Sierra Club said, "this is a referendum on the entire project. The government always wants to piecemeal these projects, but we are focusing on the big picture. We are going to file an injunction if we have to stop the bulldozers." [Harris, Hamil R., "Barney Circle Freeway Controversy Flares Anew," District Politics, *The Washington Post*, November 8, 1996]

On December 3, 1996, the city council voted to reject the \$15 million contract, despite the warning that the city would have to repay the \$30 million in design costs for the Barney Circle Connector project. Councilman Harry Thomas, Sr., chairman of the public works committee, explained, "We are going to wait for the courts to settle this issue." Following the vote, Dougherty recommended that the Federal funds be used for Metro construction. "The real sin of this project is that it would have worsened traffic in the city, and for 15 years it was held out as a panacea." [Harris, Hamil R., "Their Last Hurrah?" District Politics, *The Washington Post*, December 5, 1996]

That action effectively killed the Barney Circle Freeway project.

On March 4, 1997, Delegate Eleanor Holmes Norton (D), who had succeeded Delegate Fauntroy as the District's nonvoting member of the House of Representatives on January 3, 1991, declared the Barney Circle Freeway dead at a meeting in Anacostia with community representatives and EPA officials. Her comments stemmed from the city council's rejection of the contract the previous December, according to the *Post*:

That action spurred Norton to pursue alternatives with D.C. Mayor Marion Barry (D), council members and federal highway officials.

“The Barney Circle opposition, after 15 years, has been successful,” Norton said yesterday in an interview. “The \$200 million is still ours. I am looking at—and talking with the District about—the best use to be made of the money.”

Delegate Norton made clear that she would pursue transfer of the Interstate construction funds to other purposes despite termination of the Interstate withdrawal-substitution process. She knew that Congress had approved exceptions, including two in the Surface Transportation and Uniform Relocation Assistance Act of 1987 (to allow a substitute fixed guideway system in lieu of additional general lanes on I-110 in the Los Angeles area and substitution of a light rail transit system for added lanes on I-205 in Portland). The Intermodal Surface Transportation Efficiency Act of 1991 contained a third exception to allow substitute transit projects instead of added lanes on I-94/East-West Transitway in Milwaukee and Waukesha Counties, Wisconsin. With these precedents in mind, Delegate Norton said, “It’s my job to go for it, although the city would have to determine the substitute projects.”

As an alternative, Mayor Barry directed the Department of Public Works to study whether adding two ramps to connect the Sousa Bridge with I-295 in either direction would be feasible.

Capozzi released a letter he had received from FHWA Acting Administrator Jane F. Garvey listing the congressional exceptions to the end of the Interstate withdrawal-substitution provision. She also informed him that FHWA would not seek return of the funds used for preliminary engineering if the city scrapped the project for “valid issues and concerns.”

He was not, however, ready to declare victory. “We don’t give up until we see the money spent somewhere else.” He added that he supported the ramp concept offered by project opponents. “I love the ramps. I’ve always felt the ramps are the solution.” As for the legislation needed to use the Interstate for substitute projects, he said, “It’s just, like, one sentence in a bill . . . . It’s our money anyway.”

Other project opponents were divided on whether to celebrate. City Councilman Kevin P. Chavous declared that the Barney Circle Freeway “is absolutely dead, and it’s a victory – a major victory.” Councilman Thomas also welcomed Delegate Norton’s initiative. “We’ve got some potholes and some streets within the city that federal money now doesn’t take care of,” he told a reporter. He added that he had a long list of alternative projects for Mayor Barry to consider.

Fern L. Shepherd, an attorney for the Sierra Club Legal Defense Fund, said:

I’m leery to say that the project is dead. It seems to have more lives than an alley cat. But if the money is taken away, then that really is the death knell for this project. I think it’s a really wonderful development that [Norton] has taken this step.

The Sierra Club’s Daughterty also was skeptical. “It’ll be dead when the mayor says it’s dead. The heart is still beating.” [Loeb, Vernon, “Norton Declares Barney Circle Freeway a Dead

End,” *The Washington Post*, March 5, 1997; Spellman, Karyn, “Barry Controls Fate of Barney Circle,” *Traffic Stops, The Washington Times*, March 10, 1997]

In June 1998, Congress completed work on legislation reauthorizing the Federal-aid highway, transit and safety programs. President Bill Clinton signed the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21) on June 9, 1998 (P.L. 105-1780). Delegate Norton, a member of the Committee on Transportation and Infrastructure, had secured agreement to include a provision making the Barney Circle Freeway eligible for Interstate withdrawal-substitution. Delegate Norton called the pending provision a “tremendous windfall” for the city, about \$173 million that she said could be used to improve major thoroughfares or transit. However, the conference committee to resolve differences between the House and Senate versions of TEA-21 left the provision out by mistake. (Delegate Norton, who could vote in committee, but not on the House floor, was not included in the conference committee.)

Chairman John H. Chafee (R-RI) of the Senate Committee on Environment and Public Works was committed to correct the oversight. [“City Could Reap Millions for Roads,” *The Washington Times*, June 3, 1998]

Congress corrected the error and other technical glitches by including the Norton amendment in the TEA-21 Restoration Act as Section 9001 of the Internal Revenue Service Restructuring and Reform Act of 1998, approved by President Clinton on July 22 (P.L. 105-206). Among other corrections to TEA-21, the provision restored the Barney Circle Freeway provision as Section 1225 of TEA-21. It began:

APPROVAL OF PROJECT.—Notwithstanding any other provision of law, upon the request of the Mayor of the District of Columbia, the Secretary may approve substitute highway and transit projects under section 103(e)(4) of title 23, United States Code (as in effect on the day before the date of enactment of this Act), in lieu of construction of the Barney Circle Freeway project in the District of Columbia, as identified in the 1991 Interstate Cost Estimate.

Capozzi told a reporter for *The Washington Times*, “This proves that boondoggle projects can be stopped in this area. I think that anything besides the freeway will be good.” He was still promoting the idea of using the substitution funds for ramps on the 11<sup>th</sup> Street and Sousa bridges to provide the missing link. He planned to remain vigilant to see how the funds would be used.

Dougherty also was happy. “We finally get to dance on the grave of Barney Circle.”

Not everybody was happy. Bob Grow of the Greater Washington Board of Trade said:

It’s a shame that it’s not being built. It would have provided much better access for the District of Columbia to the suburbs, particularly Prince George’s and Montgomery counties. It would have meant better job offers, more job opportunities. It’s . . . access that’s sorely need now. [Siew, Walden, “Freeway Funds Get Freed Up,” *The Washington Times*, July 7, 1998]

The District of Columbia used the substitution funds for a major project to resurface city streets and improve the Anacostia Freeway. The resurfacing project began on June 6, 2002, when Delegate Norton and Mayor Anthony A. Williams (D) helped a crew pour concrete on Congress Place, SE. [Metro: In Brief, *The Washington Post*, June 7, 2002]

As of May 21, 2002, the city new District Department of Transportation began operations.

### **Closing the Missing Link**

By 2005, the situation had changed. The Montreal Expos baseball team moved to Washington to become the Nationals. From 2005 through 2007, the team played at refurbished Robert F. Kennedy Memorial Stadium, which was served by Metro Stadium-Armory Station. However, Mayor Williams, who had fought hard to secure the baseball team, encouraged the city to build a stadium for the team along South Capitol Street in Southeast, an area on the verge of recovery from decades of decline.

Nationals Park opened in time for the 2008 baseball season. By then, the area was bustling with activity. The U.S. Department of Transportation moved its headquarters from Seventh Street, SW., to two buildings along M Street, SE., in the spring of 2007 (the address is 1200 New Jersey Avenue, SE.). New apartment towers and commercial enterprises were open or planned. (Many commercial projects were delayed by the difficulty of securing loans after the fall 2008 economic collapse, but moved forward when the situation eased.)

By 2005, Mayor Williams and the city council supported a plan to replace the 11<sup>th</sup> Street Bridge, built as part of I-295 in the 1960s. The city would build three freeway bridges to separate local and freeway traffic at an estimated cost of \$390 million. According to a District Department of Transportation brochure:

The new freeway bridges also provide the missing Interstate connections between I-695 (also known as the Southeast-Southwest Freeway) and DC-295, fixing a long-standing deficiency that forced motorists to use local streets to connect to and from both freeways.

The brochure stated:

The \$295 million first phase provides three new bridges; a new 14-foot-wide pedestrian and bicycle sidewalk on the local bridge that connects to the Anacostia Riverwalk Trail; drainage and other environmental investments to treat all storm water within the project area; an additional evacuation route; and design accommodations for the future streetcar system.

Construction began in December 2009. On September 7, 2013, the District opened the 11<sup>th</sup> Street Bridge along with direct connections between the Anacostia Freeway and the Southeast-Southwest Freeway, finally accomplishing one of the goals of the Barney Circle Freeway project by diverting traffic from local roads.

Mayor Vincent C. Gray (D) said, "This bridge is a great way of connecting east and west. We need to do more of that in this city."

The brochure continued:

Because of the success of Phase I, FHWA authorized DDOT to proceed with the remaining 20 percent (Phase II) of the project at an additional, estimated budget of \$95 million. Phase II of the 11<sup>th</sup> Street Bridge Project will further improve connections along the I-695 (aka SE/SW Freeway) and lay the groundwork for its reconstruction to a level Boulevard between 8<sup>th</sup> Street, SE and Barney Circle (Pennsylvania Avenue). Phase II construction started in **July 2012** and is scheduled to be completed in **mid-2015**. [Bold in original]

Phase II includes:

- Replace the dilapidated, two-lane I-695 outbound flyover bridge (over M Street) with a new, three-lane bridge.
- Provide better access to Capitol Hill and Historic Anacostia via new ramps on 11<sup>th</sup> Street from the I-695 (aka SE/SW Freeway) and Boulevard.
- Raise the SE/SW freeway approximately 20 feet between 8<sup>th</sup> and 13<sup>th</sup> Streets to re-designate it as a Boulevard.

Perhaps to the surprise of some observers, the new bridge was part of I-695, a long-dormant designation that had survived the Interstate withdrawal-substitution purge of District freeways, but had never been used on street signs. As discussed earlier, the official description of I-695 had varied over the years:

1960

695 – Portion of south leg of inner belt from FAI Route 95 to FAI Route 295.

1961

695. South leg of Inner Belt from FAI Route 66 at the east end of the Theodore Roosevelt Bridge to FAI Route 295 in the vicinity of 11<sup>th</sup> Street, S.E., excluding the coincident section of FAI Route 95.

1964

695 – South leg of Inner Belt from FAI Route 66 at the east end of the Theodore Roosevelt Bridge, to FAI Route 295 in the vicinity of 11<sup>th</sup> Street, SE., excluding the portion coincident with FAI Route 95.

1966

695. From FAI Route 66 at the east end of the Theodore Roosevelt Bridge eastward to a junction with FAI Route 295, excluding the portion coincident with FAI Route 95.

1969

From a junction with FAI Route 95 southwest of the U.S. Capitol eastward to a junction with FAI Route 295 in the vicinity of 11<sup>th</sup> Street, Southeast.

In 1984, the District had secured approval of several changes in Interstate numbering:

Redesignation of I-395 as I-195

Redesignate as I-195 presently designated I-395 between the intersection of present I-695 in Washington D.C. and the present terminus at the intersection of New York Avenue.

Redesignation of I-695 and I-295 as I-395

Redesignate as I-395 presently designated I-695 from the intersection with present I-395 to the intersection of I-295. Also, redesignate as I-395 presently designated I-295 from the intersection with I-695 to East Capitol Street.

The changes to I-695 were in anticipation of the Barney Circle Freeway project.

Now, with work underway on the 11<sup>th</sup> Street Bridge project, the District Department of Transportation pursued changes in numbering of affected Interstate routes in 2008. The proposals were in two stages submitted at the same time, the first involving I-295:

I-295 begins at I-95 in Maryland near the Woodrow Wilson Bridge. It runs north into DC where it turns west at an interchange with DC 295 to cross the Anacostia River via the 11<sup>th</sup> Street Bridges. On the west side of the river, I-295 turns north at an interchange with I-695 and extends to its terminus at Pennsylvania Avenue at the Barney Circle. The planned route for I-295 continues north from Barney Circle to East Capitol Street near RFK Stadium, and then northwest through the city to an interchange with other unbuilt freeways near New York Avenue. The segment of I-295 north of East Capitol Street was withdrawn in 1978. The unbuilt portion between Barney Circle and East Capitol Street was never officially withdrawn. Because I-295 was not completed, the system ramps that provide route continuity from the 11<sup>th</sup> Street Bridges to Barney Circle are operationally obsolete and have been closed to traffic for several years. The District is requesting de-designation of 2.05 miles of I-295 from the interchange with DC 295 to East Capitol Street. This includes 1.24 miles of existing I-295 and 0.81 miles of unbuilt I-295. After de-designation, I-295 will become a continuous freeway with DC 295, which will serve to rationalize the interstate system in the District. The portion of I-295 between I-695 and Pennsylvania Avenue will be converted to an urban boulevard with connections into the neighborhood street system. The future disposition of additional right-of-way no longer needed for highway purposes will be determined by the District and FHWA. The portion of I-295 between DC 295 and I-695 will be redesignated as I-695 under a separate request.

The second request concerned I-695:

The purpose of this request is to redesignate the 0.61 mile portion of I-295 crossing the Anacostia River to I-695 to maintain system continuity. I-695 (Southeast Freeway) begins where I-395 turns north into the 3rd Street tunnel in Southwest Washington, and continues for 1.39 miles to the interchange with I-295 at 11th Street in Southeast Washington. In 1984, the District received approval from AASHTO [American Association of State Highway and Transportation Officials, successor to AASHO] to redesignate I-695 to I-395, and to redesignate the portion of I-395 through the 3rd Street tunnel as I-195. However, this approval was contingent on extending I-695 across the Anacostia River and connecting to DC 295 north of Pennsylvania Avenue. Since this connection was never completed, I-695 was never redesignated. This original application will be abandoned with approval of the current request. With the pending de-designation of a portion of I-295, I-695 will no longer connect to an interstate highway at its eastern terminus. Because of this, the District is requesting to extend I-695 across the Anacostia River on the de-designated I-295 alignment to a new terminus at the end of I-295. This change will serve to rationalize the freeway system in the District and provide for interstate connections at both ends of I-695.

By regulation, FHWA retained approval of Interstate numbers, but by protocol, awaits action by AASHTO. Therefore, the District submitted the two requests to AASHTO, which forwarded them to FHWA on April 6, 2009. AASHTO Executive Director John Horsley summarized:

Enclosed for your review and approval are two applications from the District of Columbia Department of Transportation to eliminate a portion of I-295 in Southeast Washington, DC and extend I-695 to maintain system continuity between I-395 and I-295/DC 295. The facility is currently open to the public.

He requested a reply in time for the May 15 meeting of AASHTO's Special Committee on U.S. Route Numbering. On May 12, FHWA Associate Administrator for Planning, Environment and Realty Gloria M. Shepherd replied that action would be deferred to allow time for the District to consider right-of-way implications and review other issues:

Eliminate I-295 from I-695 to Barney Circle (Pennsylvania Avenue)

The FHWA is currently reviewing the District of Columbia's request and therefore does not concur with the request for route number elimination at this time

Renumber a portion of an existing Interstate highway from I-295 to I-695.

As noted above, the FHWA is currently reviewing the District of Columbia's request to eliminate a portion of I-295 which will have a direct impact on rationalizing the need for this renumbering request. Therefore the FHWA does not concur with the renumbering request at this time.

AASHTO's numbering committee approved the change on May 15, 2008, subject to FHWA approval.

The issue delaying FHWA approval involved the possibility that the District would have to repay FHWA for right-of-way acquired for I-295. The request was suspended while the city considered the potential costs. FHWA held periodic discussions with District officials before learning that

the city was finally ready to proceed in 2012. On August 23, 2012, Federal Highway Administrator Victor M. Mendez wrote to Director Terry Bellamy of the District Department of Transportation to approve the two actions. The approvals formally relinquished the right-of-way to the District, with the understanding that if any properties were disposed of to developers or private parties, the city would use the proceeds on eligible Federal-aid highway projects.

### **Unresolved Battles, Unanswered Questions**

As discussed earlier, the revolt against freeways in the Washington area was similar to battles in other cities. In the District, as elsewhere, the story began in the 1940s with confident officials working with a renowned city planner to develop an expressway, freeway, or thoroughfare plan to address transportation problems for years to come. BPR worked with State highway officials, the planners, and local officials to study traffic patterns and conduct surveys of residents in each city to lay out the Interstate masterplan for the metropolitan area.

The planners and BPR assumed that transit would be provided by private companies, as in the past, and that the decline in patronage that begun after the surge in ridership during World War II would continue (the surge itself was a war-driven aberration in declining patronage since the 1920s). That was not their concern as they drew inner, outer, third, and even fourth circumferentials and arterial connectors on their maps following the *Interregional Highways* model.

The planners depicted lines of service in heavy traffic areas, sometimes in the form of elevated, double-decked freeways through congested downtowns or along decaying waterfront warehouses. At times, the freeways were routed through parks to minimize the taking of homes and businesses. Officials and planners believed these new freeways would not only relieve congestion but reverse suburbanization, restore city tax bases, and revitalize cities, especially in the decaying areas around downtown where inner loops would be built.

Cities that began construction in the 1940s and early 1950s opened freeways with relatively little controversy. But by the late 1950s, as State highway agencies began building urban Interstate freeways under the program launched by the Federal-Aid Highway of 1956, citizens in many cities began to revolt against the freeways. In San Francisco, Boston, and elsewhere, the protests often began with citizens whose homes or businesses would be displaced, whose neighborhood communities would be divided by what became known as “Chinese walls,” or whose parks would be taken. This first generation of citizen opponents wrote letters to editors, appeared at city council meetings, and ensured their loud voice was heard. Critics formed citizen groups to focus efforts on fighting city hall. The groups communicated with their counterparts in other cities to find out what had worked elsewhere that could be adapted for local use.

In these early years, the officials planning the highways were often dismissive of citizen objections. The officials believed that the public did not understand the master plan for urban revitalization that the freeways represented. Because opponents, in short, missed the point, officials launched public relations campaigns such as National Highway Week to recognize “the vital role of highway transportation in our way of life,” as President Kennedy proclaimed in declaring the first such week (May 21-27, 1961). It was an opportunity for ribbon cutting,

reaching out to local media, and addressing myths such as the oft-stated claim that road builders wanted to “pave over America.” Road officials urged critics to wait until the complete urban freeway network was in place; then these critics would not only see how effective it would be, but would forget they opposed it!

The lack of interest in the objections spurred greater citizen anger, intransigence in demands to kill the freeways, and support for transit or traffic operations alternatives such as paired one-way streets and synchronized traffic lights.

The battle against urban freeways shifted in the 1960s. As the new freeways failed to deliver the promised benefits and air pollution worsened, protests increased. The opponents saw new models in contemporary protest movements for civil rights, against the Vietnam War, and other causes.

In addition, the environmental movement took hold in the country, usually dated to publication of Rachel Carson’s 1962 bestseller, *Silent Spring*. Her book had nothing to do with highways, but was an examination of how chemicals such as DDT that were used to solve problems often had unintended consequences on nature. *Silent Spring* helped people understand how human actions such as highway construction, however well intentioned, sometimes affected the environment adversely.

Congress responded with a series of environmental laws, culminating in the National Environmental Policy Act of 1969. It provided for environmental impact reviews of major Federal actions, including Federal-aid highway projects, with public involvement to ensure citizens could not be ignored, brushed off, or bulldozed out of the way.

Highway officials and engineers were slow to embrace environmental awareness. Initially, they doubted that NEPA applied to highways. Moreover, opponents were already delaying highway projects and now these new laws, officials complained, were adding further needless delays in securing the promised benefits in traffic relief, safety, and economic opportunity. The early NEPA reviews typically were brief, used the same canned language as other reviews around the country, and dismissed any adverse impacts by citing the traffic and safety benefits of the project. When complaints continued, officials tried to satisfy critics by offering to build the freeways in tunnels, use air rights above the freeways to replace the housing and businesses acquired for the projects, or provide room under elevated freeways for other public purposes.

Gradually, highway officials realized they could not stop critics through boilerplate arguments, through release of “facts” or rebuttals of “myths,” or by patronizing or ignoring them. Officials discovered, instead, that they now had an accepted framework in the NEPA review for addressing citizen concerns and adverse impacts that could be mitigated or eliminated as part of the construction project. They learned that the fastest way to begin construction was to take time to address concerns about it.

The nature of the opposition also changed. The legislation encouraged established environmental groups to get more involved in the battles against freeways because failure to meet the new requirements could be contested in court under the Administrative Procedure Act of 1946. Citizens would continue to protest, but as happened in the battle against the Barney Circle Freeway, the established groups increasingly provided the formal opposition, especially in court.

Cities around the country faced the same problems as the District of Columbia by the early 1970s. The Federal Government was willing to pay 90 percent of the cost of building the Interstate freeways the cities could not build on their own and, increasingly, did not want to build. At the same time, cities did not want to lose the money that could be used only for what they did not want to do.

If NEPA was the first great shift in the freeway wars, the Federal-Aid Highway Act of 1973 was the second. It contained the mechanism to break the “Gordian knot” facing local officials who wanted the freeway money but not the freeways. The Interstate withdrawal-substitution mechanism, inspired initially by protests against Interstate freeways in Boston, proved to be the relief valve that gave local officials a way to avoid building controversial urban freeways while retaining access to equivalent funds for more popular transit and eventually highway alternatives.

While the program was in effect through September 30, 1983, FHWA and the Department of Transportation processed 50 actions involving the withdrawal of 343 miles of Interstate highways with an initial base cost of \$9.771 billion. These actions took place in 32 withdrawal areas in 21 States. (The totals do not include actions, such as withdrawal of the Barney Circle Freeway, authorized by special legislation after the September 1983 conclusion of the program.)

[Interstate Substitution-Withdrawal Program Legislative History and Related Information, Part V, *Engineering Data: The Dwight D. Eisenhower System of Interstate and Defense Highways*, FHWA, July 1998, page 3,

<https://www.fhwa.dot.gov/highwayhistory/data/page05.cfm>]

The D.C. freeway revolt followed the standard model in many ways. It was, however, unique in other respects.

The District of Columbia is different from all other cities because it is not part of a State. This difference meant that as District officials increasingly turned against freeways, they did not have to answer to a State highway agency determined to build them. In the absence of a State highway agency, District highway officials routinely dealt directly with BPR/FHWA officials on Federal-aid highway issues and had established good relationships with them over the years.

At the same time, the District had a unique status under the Constitution that left it subject to Congress in ways that other cities were not. Before the launch of the Interstate construction program in 1956, Congress, which had to authorize and appropriate funds for major road and bridge construction projects in the city, often was swayed by objections from Federal agencies such as NPS that city officials rejected. The Theodore Roosevelt Bridge was an example. After 1956, the city could proceed with construction of designated Interstate freeways if it could overcome objections, but Congress had to authorize and appropriate the 10-percent matching funds. As a result, Congress through its Committees on the District, Appropriations, and Public Works, intervened extensively on freeway and transportation issues as on every other aspect of the city’s budget.

In other cities, Members of Congress did not have a constitutional basis for intervening in local freeway battles. As happened with the freeway fight in San Antonio, they sometimes cooperated with local officials in seeking special legislation. In the District, controversial projects often involved detailed negotiations with Members of Congress before projects could advance. Even

after local officials turned against freeways, congressional leaders such as Chairman Natcher felt they had not only the authority but the responsibility to assert their own judgment of what was best for the city. No other city faced similar, repeated intrusions.

Further, the city was handicapped in fighting such intrusions in a way faced by no other city, all of which had voting Representatives and two Senators to protect their State's interests. Even after the District received a delegate in the House of Representatives, he or she could not vote on the House floor; the city was not represented in the Senate. The Leveys, in their *Washington Post Magazine* article about the freeway battles, said of Chairman Natcher that his attitude was: "When it came to the District of Columbia, the will of Congress would be done." [Levey, page 17]

That sentiment, embodied by the phrase "the will of Congress," was cited repeatedly on Capitol Hill during the D.C. freeway revolt. This view was shared by leaders of the House Committee on Public Works and, to some extent, their Senate counterparts. Chairman Fallon, for example, had dedicated his congressional career from its earliest days in 1945 to highways; he worked closely with the Federal highway leaders, respected them, and agreed with them on the importance of highways generally, the Interstate System specifically, and the District's freeway network in particular.

When District officials agreed with the citizen protestors, Chairman Fallon, Chairman Kluczynski, and their colleagues thought Congress should act in their stead. These views of a city that must do what Congress wanted resulted in the provisions of the Federal-Aid Highway Acts of 1968 and 1970 requiring construction of District freeways. No other city faced such frequent, intrusive, and comprehensive action, contrary to the views of city leaders, during the years of freeway battles nationwide.

The fact that the District of Columbia housed the Congress was another unique factor. For much of the year, Senators and Representatives lived in the District, Maryland, or Virginia, often with their families. They traveled in the city, their children went to local schools, they formed local friendships, and built relationships with local chambers of commerce, boards of trade, universities, and other similar local institutions. For example, except for those from Texas, they might not have ever been to San Antonio while that city's freeway battle was under debate in Congress. However, Members of Congress knew the Washington area in ways they did not understand other cities, even in their own State, where similar battles were taking place.

This knowledge was another reason why Members of Congress felt entitled to assert their will over the wishes of local officials and citizens, as in the case of plans for routing a highway through Glover-Archbold Park. The disadvantage of this familiarity was that some Members of Congress did everything they could to get those freeways built, while others tried to block them and many Members of Congress fought hard to create the Metro rapid rail system while others such as Chairman Natcher tried to block those efforts. This battle of District overseers came to a head in December 1971 when the House of Representatives finally overturned Chairman Natcher's efforts to hold Metro hostage to freeway construction.

The road builders and their supporters also had to face a bureaucratic opposition that was unique to the area. NPS and NCPC had been fighting the road builders long before President Eisenhower signed the Federal-Aid Highway Act of 1956. As freeway activities accelerated, NPS, NCPC, and other organizations and associations unique to the Washington area exerted greater efforts to protect their interests.

The citizen revolt led by ECTC in the District (and by the Govans and ACT in the I-66 battle) followed a common pattern of highway opposition seen in other cities. In many cases, one or more strong personalities stood out. For example, one of the anti-highway crusaders in Baltimore was a social worker named Barbara A. Mikulski, whose notoriety during the freeway battles led to her becoming a member of the city council, the U.S. House of Representatives, and the Senate where she became the longest serving woman in the Congress before retiring in January 2017.

ECTC, of course, had Sammie Abbott, whom the Leveys correctly characterized as “a firebrand of the old school.” [Levey, page 14] No one who came in contact with or observed Sammie Abbott during the District freeway revolt, or any of his other crusades, was likely to forget him. Informed about the preparation of this article for FHWA’s Highway History Web site, a retired FHWA urban planner, Kevin E. Heanue, immediately stated, “Sammie Abbott,” the name he most closely associated with the freeway battles and the challenges they posed for highway officials in the area.

Abbott could not be intimidated, embarrassed, silenced, or convinced to back down; going to jail was a part of his action plan, and being unreasonable was a valuable tactic that he would never yield in the anti-freeway fight or any other battle. Members of Congress who tried to put him in his place during testimony found that he would do the same to them. He had many allies, black and white, but he stood out as the loudest and usually most outrageous voice in any crowd.

Abbott was elected mayor of Takoma Park three times (1980-1985), during which time he brought the community into the national political arena by denouncing U.S. war policy and opposing nuclear weapons; at his instigation, Takoma Park declared itself a nuclear-free zone. At the same time, he “leveraged the creative energy of activists, musicians, and artists to create traditions like the Takoma Park Folk and Street Festivals, reinvigorating the community and its sense of identity.” [Takoma Park, pages 105-106]

After he died on December 15, 1990, at the age of 83, the *Post* obituary described him as “a colorful man of controversy as well as conscience . . . . Strident, confrontational, acerbic, cantankerous, even abusive – all were words used to describe him.” He claimed to have been arrested 40 times. His ECTC colleague, Reginald H. Booker, said of him:

Most of us don’t have that kind of dedication. Most of us are seeking the comfort of a job, a title or a position. Sam was not seeking that. He didn’t have a hidden agenda like so many other politicians.

People, Booker said, “always asked me if Sam was a communist. I wasn’t interested in his political philosophy. I was interested in stopping the freeway.” Abbott, he said, “had tremendous political insight and instinct. He could build a superior organization, and he

understood human nature.” At the same time, “He didn’t want people to feel that he was a white man manipulating a black man. He would always defer to me.” In short, as the Leveys put it, Abbott was “the spark plug, the strategist, and one who supplied and piled passion on demand”:

When Abbott died, in 1990, at the age of 82, he had never received any formal recognition for his role in blocking freeways. But his former colleagues on ECTC know that he was essential. “When people fly into Washington, they marvel at how pretty it is,” says Angela Rooney, who helped found ECTC. “Well, it wouldn’t look that way if not for Sammie Abbott.” [Leveys, page 17]

He was survived by his wife Ruth, a son, two daughters, and four grandchildren. [Leveys, pages 13, 15, 17; Armao, Jo-Ann, “Legendary Takoma Park Mayor Dies,” *The Washington Post*, December 18, 1990; Hill, Retha, “Takoma Park’s ‘Angry’ Mayor Remembered,” *The Washington Post*, January 6, 1991]

As with the Govans, freeway battles sometimes were limited to one urban freeway rather than an entire network. In the District, Abbott and others opposed the entire network and focused on all mileage not yet built – and were remarkable in blocking much of what they opposed. City officials, as they gained increased authority under President Johnson’s reforms and home rule under President Nixon, embraced the anti-freeway philosophy, and at least part of the reason was that they had learned from the freeway critics.

One of the earliest freeway fighters was attorney Peter Craig, an insider who knew how to use his powerful connections. When the Leveys interviewed Craig, he still lived in the Macomb Street house he had purchased in 1957 in Cleveland Park. All he had wanted to do was fix up his new house:

One day, late in the summer of 1959, someone knocked on his door. She was carrying a petition urging residents of Macomb Street to oppose a cross-park freeway.

I said to her, “What in hell is the cross-park freeway?” Craig recalls. The woman explained that highway planners intended to drive a superhighway from the Georgetown waterfront up the spine of Glover-Archbold Park and out Wisconsin into Bethesda, where it would join what is now Interstate 270.

“It sounded pretty awful, so I signed the petition,” says Craig.

The more he learned of the freeway plans, the more determined to oppose them he became. Craig and two other lawyers became the legal wheels behind the Northwest Committee for Transportation Planning, eventually a key support group for ECTC.

His analyses impressed Congress and the courts, with highway officials struggling to counter them. That was because, as Heanue point out, Craig’s data analysis was correct:

My take, BPR was during this period engrossed in the system nationally and was looking on the District to specify their system and the District was relying on [consultant] Wilbur Smith. This was all before FHWA became much more sensitive to residential and environmental impacts and responsive designs to mitigate the impacts.

Enter two citizens who without any portfolios became in one case the voice and in another the analytical rationale for the freeway revolt. Sammie Abbott was a classical citizen activist who coined the phrase "white men's highway through black man's bedrooms" and Peter Craig, a lawyer, with no engineering background did a simple calculation that showed that every currently registered vehicle in the area which traveled about 10,000 miles per year and when adjusted for growth would have to travel 20,000 miles per year to generate the travel on which the plan was based. Wilbur had been caught at a time when he could only assign survey traffic to the system and if a link was overloaded, the speed was reduced and the traffic rerouted. This moved the traffic further out and increased vehicle miles of travel. His application of capacity constraint, without feedback, resulted in absurd travel per vehicle. Several years later trip distribution models like the gravity model were developed and provided feedback so that congestion resulted in shorter trips.

I had a chance a number of years later to meet Peter Craig and commend him on the fact that, he a lawyer, identified a key metric of the transportation analysis that the planning community had missed. He told me that he only became interested in the topic because his home was potentially impacted by the Connecticut Avenue freeway corridor.

Craig retired in 1989 after 37 years as a lawyer, many of those years as general counsel to the Southern Railway and Amtrak. "I got tired of moving money from one deep pocket to another," he told the Leveys:

I wasn't a tie-myself-to-a-tree kind of person. Still, I feel that, while I've done a lot of things in my life, this has made the most difference. [Leveys, pages 17 and 26]

Former Delegate Walter Fauntroy, who represented the city in Congress through the later stages of the freeway revolt, but could not vote on the House floor, told the Leveys how he became involved. "They were just going to pave the District of Columbia over. We couldn't allow it. We just couldn't":

The vindication of the effort was that today, we have a rational subway system that is complete. When I get on that subway, with all those people, I wonder, "What would it have been like if we had *not* had that subway?" That's my reward. We have made it a little better for both races. [Leveys, page 26]

The Leveys also interviewed ECTC's Booker, who died at the age of 72 on July 19, 2015. As ECTC chairman, he had adopted the look and language of the Black Power movement that was just then transforming the nonviolent Civil Rights Movement:

To a large degree, protesters were victorious because they planned carefully, says Reginald H. Booker, 59, who chaired the anti-freeway coalition, the Emergency Committee on the Transportation Crisis. "And race was a major part of it," he says.

Booker was always quick to use the slogan for which ECTC became known: "White Men's Road Through Black Men's Homes." However, he is just as quick to point out

that the anti-freeway forces would probably have been defeated if whites had not rallied to the cause.

“The whole theory was to appeal to homeowners, no matter what race they were,” Booker says. “Our movement was unique. It was blacks and whites in a common effort, an integrated group, working in their own interests. That was the significant thing. It was an issue that united people.” [Leveys, page 13]

Booker was working for the General Services Administration (GSA) as a clerk. He was often on television and quoted in the newspapers. “A lot of my coworkers were scared of me”:

So were his bosses. One day, after he referred to the D.C. Council on television as “President Johnson’s ranch hands,” Booker was called into the office of the GSA administrator. He was told that his picture would henceforth be posted in the GSA security office so guards would know who he was. He was criticized for “embarrassing the president.” The administrator, Lawson B. Knott Jr., suggested that Booker might be “happier elsewhere.”

So Booker resigned. Since then, he worked for a law firm and as a foster care administrator for a social services agency. He ran twice for the D.C. school board and lost both times. He says that a caution he received in the 1960s has proved to be accurate.

“Julius Hobson [a well-known activist of the day] said to me, ‘Reginald, you will never win the Man of the Year Award for what you’re doing.’”

The Leveys added that when the U Street-Cardozo subway station opened in 1991, City Councilwoman Hilda Mason, who had invited Booker, introduced him to the small crowd as a leader in securing the subway:

There was brief applause, but nothing more.

It was the only public recognition Reginal Booker has ever received.

When Angela Rooney died at the age of 96 on August 20, 2016, the *Post* included her brief obituary in a collection of “Notable Deaths in the Washington Area.” Born in Leighton, Pennsylvania, she had moved to the Washington area in 1955 where she became “a civic activist in the 1960s and 1970s.” The obituary stated that she was a founder of ECTC “that waged a years-long protest against the North Central Freeway, arguing that it would destroy D.C. neighborhoods and amounted to ‘white men’s roads through black men’s homes.’ The freeway was canceled in 1977.” The obituary added, “In the 1980s, Mrs. Rooney was a manager for the Kennedy Center’s Theater Chamber Players.” [“Notable Deaths in the Washington Area,” *The Washington Post*, September 13, 2016]

In 1997, she had given an interview to Chris Niles for *Intersect! A Weekly Fax News Bulletin for the Washington Metropolitan Region* (May 5, 1997). The printed interview began with a discussion of how she, a white woman, became involved in the fight against the planned freeways:

I think the first thing that struck me was the social inequality of ramming a huge freeway through a largely black section of the city which would have just ripped up neighborhood after neighborhood, community after community. It was just a massive attempt to destroy half of Washington DC. Better connected whites in Northwest simply said no way are you going to ram a freeway down Wisconsin or Connecticut Ave or anywhere else in Northwest. So the highway department went back and redrew it and said, “wow, we can go through Northeast, they don’t have any clout.” But the idea that this was going to be imposed on the city without any real opportunity to be heard from was to me an outrage.

Rooney attended a public hearing in Takoma Park where “I found the people I wanted to work with.” They “were immensely advantaged by having a guy named Sam Abbott who was at heart and soul a great union organizer to focus and understand what was really going on.”

The Federal-Aid Highway Act of 1956 had created “an enormous lobby” of people supporting freeway construction:

They had little respect for anyone who got in their way and they were astonished that anybody like me, a white woman living in a largely black neighborhood would get up and testify strongly, mincing no words.

She emphasized that ECTC members were careful to stay within their constitution rights to protest:

Everything that we did was within the law. Still, what came down was the heavy, heavy boot of the FBI and our newspaper (the Washington Post). The Post called us everything from communists to pinkos to “that little band of discontented people . . . .”

She also formed a low opinion of BPR/FHWA, although her recollection attributed to BPR/FHWA activities that were the city’s responsibilities:

The Federal Highway Administration was in fact breaking its own laws left and right. They would not hold the proper hearings, they would not publish advance notice of meetings. We had to force the government to obey its own laws and regulations. The more you saw of how criminally they behaved, the more you learned the importance of learning what they were up to all the time. You tracked the organizations that supported the highways, that greased the wheels. You also learned another important thing: Always know where the money is coming from and where it is going.

We eventually succeeded in networking a large area that included the suburban areas of Maryland and Virginia and the whole of the District of Columbia. The idea was to create a political climate of understanding of what was being done so that the lawsuits that were brought and the lawyers who had joined us – there were not many but there were some brilliant ones – would be judged in a political climate that understood the social injustice and the terror that was being visited upon this city and the suburbs.

She spoke of ECTC’s most famous slogan:

Our first rallying cry was: “No White Men’s Roads Through Black Men’s Homes!” We had to do that as offensive as it was to some people because it was absolutely the truth. It was indeed Black men’s homes and businesses that were being confiscated.

It was a personal insult to find out “your home could be gone just like that”:

The highway proponents felt no compunction about this. I don’t remember whether it was the highway lobby men or the representatives from FHA [sic] but they would say, “yeah, we built this road and we didn’t even have to give them the moving money. They didn’t know they were supposed to get it . . . .”

The other rallying cry was “Freeways No! Metro Yes!” That was, she recalled, the focus of everything ECTC did:

If they built I-95, the inner loop, the outer beltways and all the other roads, there was no hope for a Metro being built because there would be no money. So we fought long, long and hard for years to break open the trust fund for other kinds of transportation . . . .

The key was the Interstate withdrawal-substitution program. “I truly believe that the money was shifted because the freeway people realized that they were operating in a city that made it impossible for anybody to be elected unless they were against the freeways – including Barry.”

Members of ECTC were used to being watched. Rooney described the “agent provocateurs” they had to deal with:

We expected them to be at mass meetings. We learned to look at the shoes to see if they were shined. We learned not to be deceived by anyone who wore fake dashikis – there were lots of those. We learned to study the people who brought unnamed camera crews.

The provocateurs usually tried “to force the crowd into some kind of action that would force the police to interfere”:

We knew our phones were tapped, all the time. We received a lot of phone calls from so-called innocent people just asking how many people did you expect to turn out, or offering to provide coffee and donuts. They would also say that they were writing books and wanted to know if we thought this country was really worth saving. We knew people who worked at the FBI and they saw our files.

She received calls from white people who wanted to protect her. They would ask, “why do you associate with those people? They don’t even use good grammar?” They warned her that the people she was associating with were “pinkos”:

I would say “why don’t you stop worrying about the style of their speech and listen to the content.” Ten years later, we won a lawsuit against the FBI for harassment.

Rooney summarized the lessons she had learned from her experience:

I think one of the most important lessons that came out of our efforts is that there is no compromise unless there are equal advantages on both sides. Otherwise it’s not compromise. What are activists giving up when they compromise? Nothing. What are

the highway people getting? Everything they wanted. It's really important to understand this because people are always being asked to be reasonable. There is no such thing as being reasonable when somebody is putting your head on a chopping block. People are deceived all the time: "Let's get a few of you together and talk it over, we're all reasonable people." You are dead in the water if you buy that. Never go in small groups. Take everybody. Let everybody hear what the highway proponents are up to.

When former NCTC Chairman Elizabeth Rowe died on March 11, 1991, at the age of 79, the *Post* obituary highlighted her efforts to block freeways. When President Kennedy appointed her to NCPC, she "came to the appointment already outspoken in her opposition of ambitious highway plans, then threatening to carve up the city." She warned, "If we build the inner loop, we are not going to have any central city left":

As a proponent of mass transit and of neighborhood preservation, Mrs. Rowe was one of those in officialdom who was outspoken as an increasingly broad coalition campaigned to kill the highway projects. [Levy, Claudia, "Elizabeth Ulman Rowe Dies; Former Chairman of NCPC, *The Washington Post*, March 12, 1991]

Emilia Govan, 62, died of cancer on June 29, 2000. Her obituary highlighted her work with ACT opposing I-66, but added that she had resumed her education when that effort ended. "She was a 1980 cum laude graduate of Georgetown University law school, where she also had been a law review editor."

Her post-I-66 career involved public service and private sector work:

She worked for the Congressional Office of Technology Assessment from 1975 to 1978, then spent two years in the Department of Energy, where she was a senior environmental adviser and became acting director of the environmental, health and safety division in the office of the assistant secretary for fossil energy.

In the 1980s, she was a Washington telecommunications lawyer with the law firm of Pepper, Hamilton & Sheetz. In 1989, she returned to the OTA, where she worked until 1995, becoming director of the energy transportation and infrastructure program. She then did consulting work for the Energy Department and was a vice president of JK Research Associates in Arlington until 1999.

She was survived by her husband James and their two sons. Emilia and James had become well known for their hobby of collecting creches. ["Emilia L. Govan; Lawyer, Educator," *The Washington Post*, July 2, 2000]

The success of ECTC and its counterparts can be observed by travelers as I-395 (formerly I-95) ends in an awkward ground-level connection with New York Avenue, still congested despite several remakes. It also can be seen in the Maryland and Virginia interchanges that carry I-95 motorists along their ramps onto and off the portion of the Capital Beltway that is designated I-95/495.

And it can be seen in the Metro rail system. Construction of the initial 103-mile network cost \$10 billion, of which about \$2 billion came from trading in Interstate freeways, mainly in the District, for the rapid rail network.

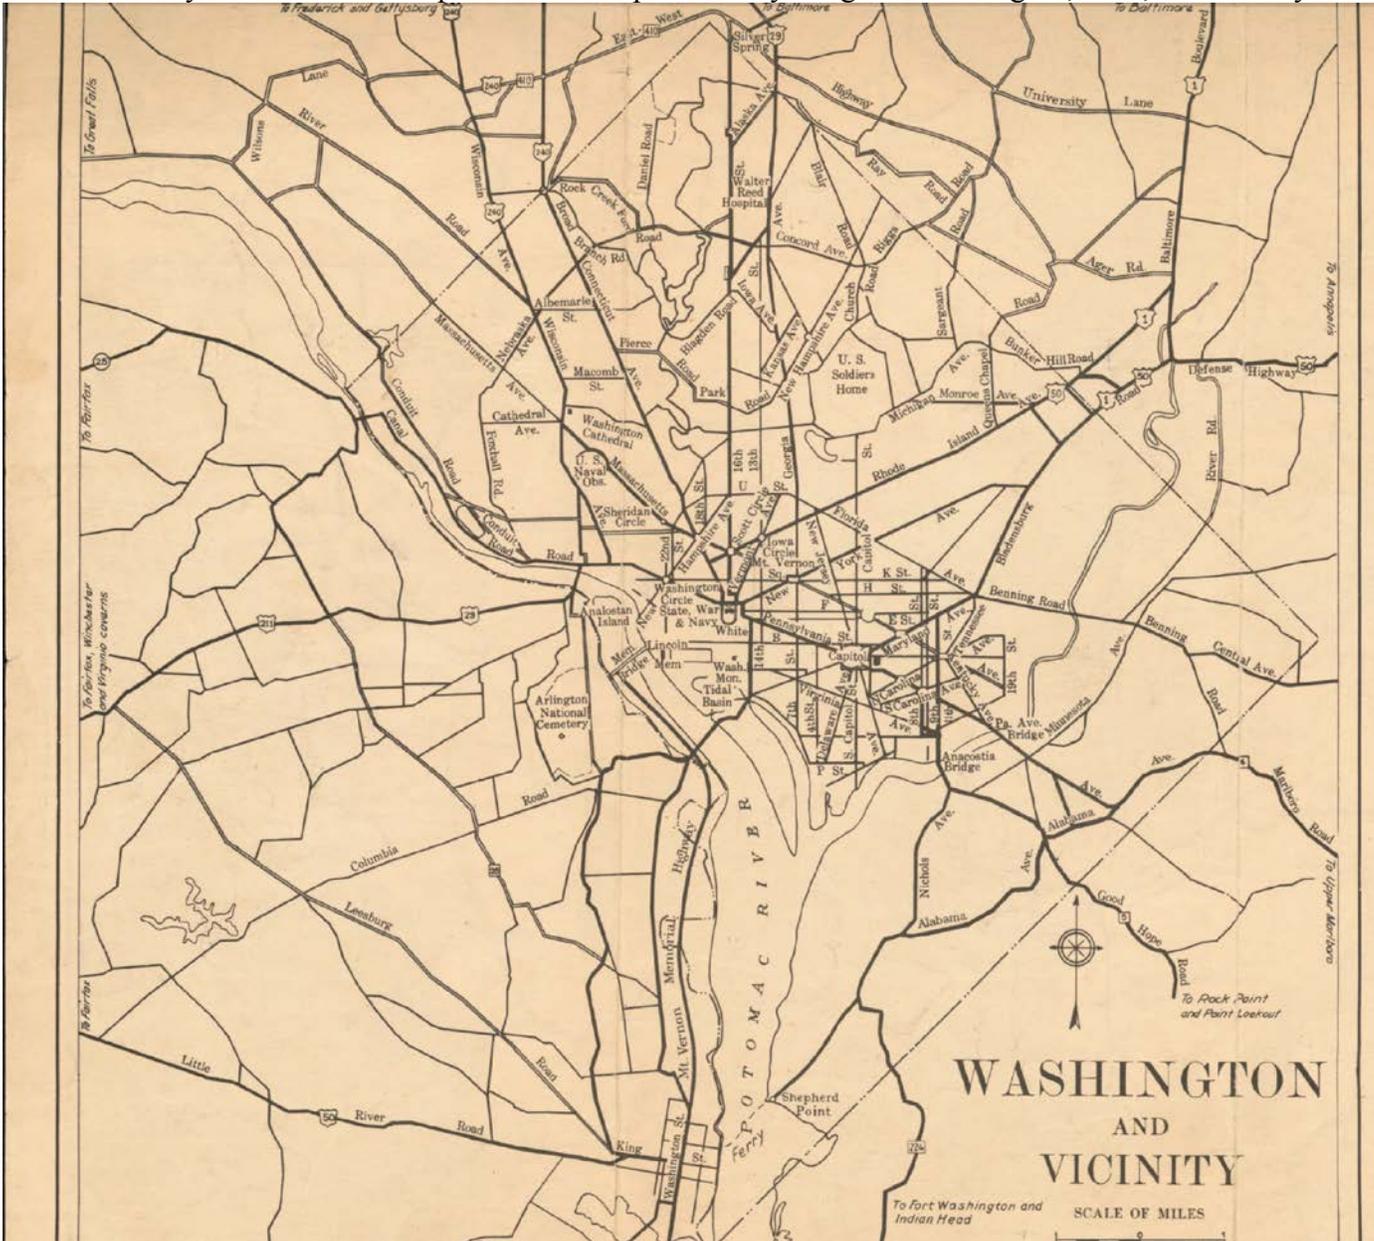

The Leveys found a 33-year old woman living near the Brookland Metro Station who had never heard of the freeway revolt:

The visitor asks if she knows that a 10-lane freeway called the North Central was once close to being built right where she's sitting. Does she know that her house was boarded up in the early 1970s, in anticipation of being torn down? Does she know that protestors, led by Reginald Booker, were arrested when they ripped the boards off?

"A freeway here?" [she asks] "Not here! Not possible!" [Levey, page 26]

The 1932 Maryland State road map included this pre-freeway image of Washington, D.C., and vicinity.

Source: Maryland State Roads Commission

The National Capital Park and Planning Commission published this map in 1950 showing the commission's proposed Regional Thoroughfare Plan. It featured an inner loop around the central area, a middle loop called Fort Drive just within the city limits, and an outer circumferential in the general location of today's Capital Beltway.

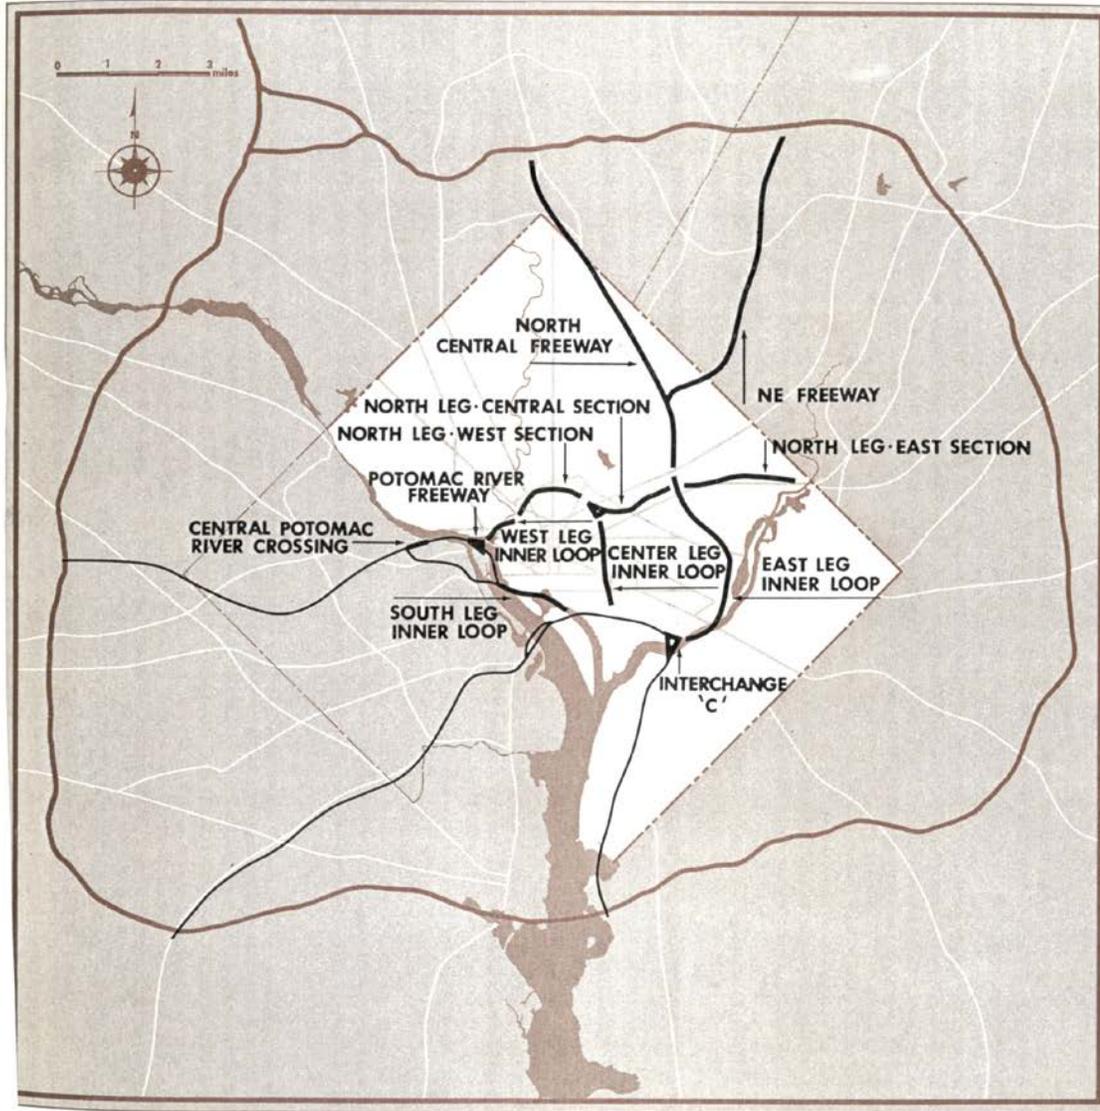

MAP 1

After designating the rural segments of the Interstate System in August 1947, Federal highway officials worked with State highway agencies and local officials to establish the outline of urban freeways around the country. The routes designated in September 1955 were shown in maps published in *General Location of National System of Interstate Highways* (nicknamed The Yellow Book because of the color of its cover). The map of Washington, D.C., showed inner and outer loops as well as arterials in the suburban communities of Maryland and Virginia. With the exception of a freeway along the Potomac River into Maryland, the city's northeast and northwest quadrants were free of Interstate highways, as would be the end result after two decades of controversy.

The District of Columbia hired consultant Arthur D. Little, Inc., to review of the city's transportation planning. The consultant's highly critical March 1966 report, *Transportation Planning in the District of Columbia 1955 to 1965: A Review and Critique*, included this map showing the proposed highway system.

From 1975 to 1983, the District of Columbia requested withdrawal of nearly 16 miles of Interstate freeways under the Interstate withdrawal-substitution provision of the Federal-Aid Highway Act of 1973. This series of maps shows the mileage withdrawn in each of six stages.

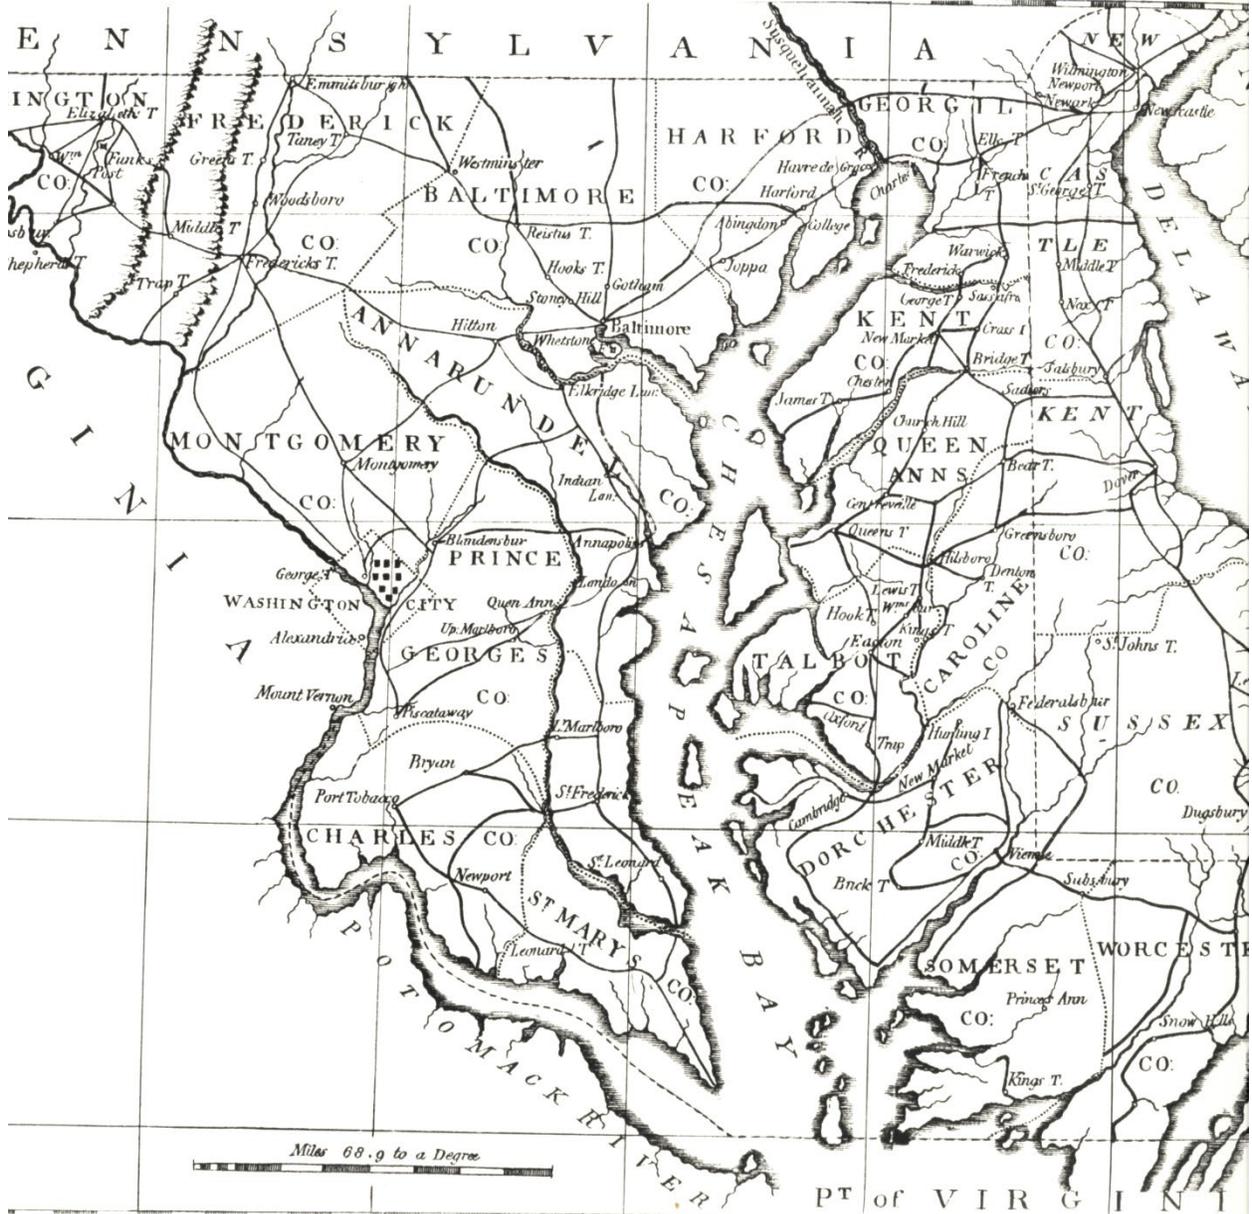

The Federal Highway Administration prepared this undated map for internal use. It showed the local names of the District of Columbia's freeway network.

## **U.S. 50: The Roads Between Annapolis, MD, and Washington, DC**

By  
Richard F. Weingroff

### **From the Early Days**

Even before the District of Columbia opened as the Nation's capital in June 1800, travel had begun between Annapolis, the capital of Maryland since 1694, and the area.

Alexandria, established in the 1690s, was an important tobacco warehouse area and landing along the Potomac River. Georgetown, also a tobacco landing, became an officially platted village in 1751. Bladensburg, Maryland, just outside the future District's line, was a commercial center for the area's farmers as well as the location where six roads converged, including the "Main Post Road" between Baltimore, Georgetown, and Alexandria.

As early as 1751, George Washington was an occasional visitor to Annapolis, crossing Maryland to watch the horse races there and for other more practical purposes. For example, after the Revolutionary War, he traveled from New York to Annapolis, the temporary seat of Congress, to resign as Commander in Chief of the Army on December 23, 1783. An account of the trip reports that he was eager to return to his wife Martha and his cherished life at Mount Vernon in time for Christmas. On one urgent occasion, he had covered the distance between Annapolis and Mount Vernon in a single day, but that was not possible on December 23 after the formalities ended around 1 p.m. As soon as they were over, he walked outside and began the ride home, racing across the State on horse and arriving at Mount Vernon on December 24. [Tebbel, John, *George Washington's America*, E. P. Dutton and Company, 1954, pages 32, 429-430]

The map of Maryland's roads before 1776, printed in the Maryland Geological Survey's 1899 report, showed a "Main Post Route Between North and South, 18<sup>th</sup> Century" running from Annapolis to Alexandria. [*Report on the Highways of Maryland*, Maryland Geological Survey, volume III, plate XIV, following page 156]

By 1796, a map of Maryland showed a road from Annapolis to Bladensburg, more or less on a straight line, just outside the outline of "Washington City." [*A History of Road Building in Maryland*, following page 16]

### **The Old Stage Road**

With the new capital city under construction, Maryland considered improved communication between Annapolis and the new capital to be important. In 1796, the Maryland General Assembly approved a resolution establishing a commission "to lay out a direct route between the two points." The commissioners selected what became known as the "Old Stage Road" from Annapolis to Washington via Camp Parole, Collington, and Bladensburg.

In a 1916 article, *The Evening Star* reported that having selected the route, the commissioners were authorized to “open, clear and grub” the road, with “grub” referring to clearing and removing tree stumps and other vegetation. From year to year, they failed to complete the work:

The fatality of incompleteness thus fixed upon it in the early days has followed this old road to the present time, so that it is among the last to feel the finishing touch of modern road improvement . . . .

The “Old Stage road” at the present time is in a deplorable condition, so much so that there is very little travel between the National Capital and Annapolis over it. As a result that section adjacent to it has not developed to the extent that it should have. There are several roads from the National Capital, but they are longer and over varied road conditions.

Meanwhile, the State had improved the road to Solomons Island south of Annapolis:

By connecting this road with the road from Washington via Upper Marlboro in Prince Georges County, it completed the link that joined the two capitals. As this answered the purpose of joining the two cities, no further improvements were considered. There is, however, at the present time about eight miles of roadway badly in need of improvement between Hill’s bridge across the Patuxent river, and Lothian, where the state road turns in the direction of Solomons island. The road at this time between the National Capital and Hill’s bridge, a distance of about twenty miles, is an excellent macadam and concrete highway, ideal in every respect. It is the only hard surfaced section between Washington and Edgewater. At Edgewater a concrete road extends the remainder of the distance into Annapolis. The distance over this route from Washington is 42.7 miles. [“‘Old Stage’ Road Is Favored Route,” *The Evening Star*, March 1, 1916]

Through much of the 18<sup>th</sup> century, mail would have been carried by horse and rider; no coaches ran south of Annapolis until after the Revolution. The first stagecoach line between the two capitals began in April 1800. Valentine Snyder, who operated the stage from Annapolis to Baltimore, and Henry Cook, were the lowest of four bidders for the Washington-Annapolis mail contract. The winning bid was \$350 a year.

Oliver W. Holmes described the operation of this initial stage line for the Columbia Historical Society. It ran on looping southern route:

The line ran through Upper Marlboro, and at first went but once a week, leaving Caton’s Tavern in Annapolis Tuesday mornings at 7:00 and McLaughlin’s City Tavern in Georgetown at the same hour Thursdays. The fare was \$3.00. In September, 1802, this line commenced running twice a week. This increase of service may have been hastened by the establishment in March, 1802, of a rival line by John Smith to run from Annapolis to Washington by the northern route, passing through Bladensburg. Smith’s line also left Caton’s Tavern in Annapolis. It went at first to the Union Tavern in Georgetown, but later advertisements showed that it had shifted to the Indian King, kept by Joseph Semmes, who had become a partner with Smith in the undertaking. This line began with

service only once a week also, but it, too, advertised that on the first of September, 1802, it would increase its trips to two a week. A month later an announcement was made of service three times a week. No notice, however, of this northern line is discovered after 1803. Henry Cook continued through the first decade of the century to hold the mail contract, and his stage continued to run through Upper Marlboro . . . . [Holmes, Oliver W., "Stagecoach Days in the District of Columbia," *Records of the Columbia Historical Society of Washington, D.C.*, 1948-1950, volume 50, Columbia Historical Society, 1952, pages 16-17]

The coming of the railroad to Maryland reduced the need for stagecoach service:

The stage line to Annapolis three times a week was continued to 1841, when, Annapolis being provided [sic] by railroad, the stages henceforth went only to Upper Marlboro. In 1853 the service to Upper Marlboro was increased to six times a week. This route was continued at that frequency until after the Civil War. [Holmes, page 31]

Traffic to or from Alexandria crossed the Potomac River on the ferry at Georgetown until 1809 when the toll Long Bridge opened in the vicinity of today's 14<sup>th</sup> Street Bridge complex. Stagecoaches immediately switched to the new bridge, bypassing Georgetown entirely and confirming the fears of Georgetown businessmen about the new structure:

The lines to Annapolis and Leonardtown continued for many years to start from Georgetown, it is true, but they picked up their main mails in Washington and also many of their passengers. [Holmes, pages 23-24]

Mary Bagot, wife of the first British diplomat posted to the United States after the War of 1812, traveled the road on March 18, 1816, between Annapolis and Washington via Bladensburg. Her day had begun before daybreak, although her party did not leave Annapolis until 9 a.m. in a variety of vehicles. She described the trip in her journal:

Each carriage was driven four in hand by a black driver & the horses were sent from Washington. The day was so intensely cold that I never in my life before had felt any at all to be compared with it. The roads were actually worse than ploughed fields & we went down such precipices & up others & into such holes that we expected every moment to be overturned. However, our drivers brought us safely to our journeys end without accident – stopping only once at a log house about half way between Anapolis & Washington for half an hour to bait the horses. The country struck me as wild, dismal & dreary & our road was thro' a sussion of never ending forests of pine, cedar, oak & c. –

the only cultivation we saw being occasional spots cleared for the sowing [of] maize . . . .

Aside from a few African-American field hands "crawling across a barren tract," she did not see any signs of population until her carriage reached Bladensburg. Along the way, however, she admired the scenery as her party crossed South River:

We crossed a ferry across the south river about five miles from Annapolis which struck me as very beautiful from the beautiful sweep of the river & the craggy cliffs that arise perpendicularly from its borders covered with cedars & pines.

They arrived at Crawfords hotel in Washington at about 6:30, having traveled a distance she estimated at 36 miles. [Hosford, David, "Exile in Yankeeland: The Journal of Mary Bagot, 1816-1819," *Records of the Columbia Historical Society of Washington, D.C.*, Volume 51, 1984, pages 33-34]

## **Central Avenue**

The two stagecoach routes – the northern route to Bladensburg and the southern route via Upper Marlboro – remained the two options for the trip between the cities. By 1900, the southern road to Annapolis followed East Capitol Street/Central Avenue (roughly MD 214 today). The Maryland Geological Survey's 1899 report commented on the road in Prince George's County:

One of the best improvements made by the county was the extension of Central Avenue, necessitating the building of 2 miles of new road, thereby forming a direct route from Halls' Station to Washington. This is also the direct road between Annapolis and Washington. A dirt road has been made in which a special feature is the extensive amount of grading on the westerly portion where embankments 10 to 12 feet high have been built.

The larger portion of the road, however, still requires much grading to put it in good shape. The heavy grading necessary on the western portion took most of the funds, leaving only enough to clear and shape the easterly portion. This piece of work cost in the neighborhood of \$5000.00, about one-half of which was paid for land damages. [Maryland Geological Surface, Volume 3, 1899, pages 244-245]

The county was still working on the road when the Maryland Geological Survey issued its report in 1902:

This is the direct road from Washington to Annapolis and is one of the most important roads leading from the District of Columbia into Prince George's county. Near the District it is hilly and the surface is in bad condition. In places on the hills the road has been washed [sic] and in the hollows it is sandy. The survey of the Highway Division extended a little more than two miles. The plans call for the reduction of the grades and surfacing with the best gravel obtainable in the vicinity. One hill to be graded crosses the District line, and it is hoped the District Commissioners will cooperate with the County Road Commissioners in doing this part of the work, which has therefore been postponed for the present. The Road Commissioners advertised for bids . . . but only one was received, namely 30 cents per cubic yard for excavation and 50 cents per cubic yard for gravel spread on the road. The Commissioners considered these prices too high and have undertaken the work by day-labor. [Maryland Geological Survey, Volume 4, 1902, page 158]

By the third report, the Maryland Geological Survey reported that the county's work resulted in a reduction of the grade from 7 and 8 percent to 4 percent at a cost of \$588.10, "which includes graveling about 1000 feet of road." This work to reduce the grade led the District of Columbia "to improve the continuation of the road within the District so that now there is a continuous stretch of good road from the county into the City of Washington." [Maryland Geological Survey, Volume 5, 1905, pages 183-184]

### **Maryland's Good Roads Movement**

In the late 19<sup>th</sup> century and early 20<sup>th</sup> centuries, the country experienced the Good Roads Movement, spurred initially by the popularity of the bicycle and then the automobile. The growing interest in improving the Nation's rural roads prompted State and Federal officials to consider their role in the effort.

In 1896, Maryland created the Maryland Geological and Economy Survey Commission to investigate natural resources. It also was to furnish, when requested, free expert advice and technical assistance to the State's towns and counties on road matters. As noted earlier, the commission published periodic summaries of road conditions throughout the State.

Maryland's counties began seeking ways to improve their roads. Beginning in 1901, Baltimore County was the first county in the State to employ a trained road engineer.

On April 2, 1904, Maryland enacted the State Aid Road Law (chapter 225 of the Acts of 1904, approved April 2, 1904) to help the counties improve their roads. With an annual appropriation of \$200,000, the State provided 50 percent of eligible costs. The Maryland Geological Survey was the State's road builder, with Walter Wilson Crosby, former road engineer of Baltimore County, as chief engineer. This legislation was commonly referred to as the Shoemaker Law, after Samuel M. Shoemaker of Baltimore County – a prominent figure in dairying and agriculture who drafted and promoted the bill.

The State-aid program was to go into effect on January 1, 1905, but was delayed by a court challenge to the program's constitutionality under Maryland's constitution. A provision in Maryland's constitution of 1851 addressed internal improvements. Like many States, Maryland had borrowed funds during the prosperous 1830s to invest in internal improvements such as the Chesapeake and Ohio Canal and the Baltimore and Ohio Railroad that were expected to drive economic development by connecting the State to the west. However, after the onset of the devastating economic Panic of 1837, the State could not afford the interest on the debt despite raising taxes.

To address the issue, Section 22 of Article III ("Legislative Department") of the constitution of 1851 prohibited the legislature from approving any debt in the absence of approval of an annual tax or taxes sufficient to retire the interest and principal. It continued:

The credit of the State shall not, in any manner, be given or loaned to or in aid of any individual, association or corporation, nor shall the General Assembly have the power, in any mode, to involve the State in the construction of works of internal improvement, or in

any enterprize [sic] which shall involve the faith or credit of the State, or make any appropriations therefor. And they shall not use or appropriate the proceeds of the internal improvement companies, or of the State Tax now levied, or which may hereafter be levied, to pay off the public debt, to any other purpose, until the interest and debt are fully paid, or the sinking fund shall be equal to the amount of the outstanding debt . . . .

While the State Aid Road Law was under consideration in the General Assembly, legislators had drafted an amendment to the constitution to exempt the new program, but they had not pursued it. The question raised by a taxpayer in Baltimore County, Frank A. Bonsal, was whether a public road was an internal improvement within the meaning of the Maryland constitution.

The *Sun* reported:

The constitutionality of the Road Law was sustained by Judge N. Charles Burke, at Towson, Baltimore county, December 16, 1904. He decided that the ordinary public roads belong to the State, and it was its business to maintain them, that duty being delegated to the counties from motives of convenience in the administration of road affairs, and that the section of the Constitution relating to works of internal improvement was intended to apply solely to State appropriations for railroads, canals and similar undertakings of a quasi-public nature, which were conducted for profit.

On February 9, 1905, the Maryland Court of Appeals at Annapolis upheld Judge Burke's ruling, allowing the State Aid Road Law to begin operations. ["The Road Law And the Amendment," *The Baltimore Sun*, February 8, 1905; "State Aid To Roads," *The Baltimore Sun*, February 10, 1905; Rees, Charles A., "Remarkable Evolution: The Early Constitutional History of Maryland," *University of Baltimore Law Review*, Winter 2007, page 263]

An Act of 1906, known as the Hill Law (chapter 312, Acts of 1906), authorized the State to acquire the Baltimore-Washington Turnpike. The law authorized \$30,000 for each of fiscal years 1906 through 1908 to improve the road, while providing for the use of convict labor on the project. By 1908, about 12 miles out of 30 had been widened, straightened, and provided with a macadam surface, with additional funds needed – estimated at \$150,000 if the road, known as State Road No. 1, was to avoid grade crossings of the steam railroads in the corridor. The General Assembly authorized \$120,000 in 1910 and continued to fund the improvement.

The gradual progress was occasionally marred by incidents such as one described in the combined annual reports for 1908 through 1911. One serious problem was caused by "the entrance by various parties within the limits of your roads for physical work of their own." The report illustrated the problem with an incident disturbing the section between the District of Columbia line and Bladensburg that would eventually be shared with the roads to Annapolis and Baltimore:

For instance, a section of the Baltimore-Washington Road, between the District of Columbia line and Bladensburg, has been practically ruined in spite of all this Department could do, by the construction of a railway track along the section in defiance

of the plans, rulings and orders of your Commission, and with wanton disregard for the rights of the users of the public highway . . . .

The Washington Spa Spring and Greta Electric Railway Company desired to extend their tracks from the District of Columbia line northeasterly along the Baltimore-Washington Road to Bladensburg, a distance of a little over a mile. Their charter permitted such construction, but under the various acts your [Board's] prescription of certain details of construction was necessary. This section of the Baltimore-Washington Road had been improved under the State Aid Law in 1905-6, and was in good condition.

The application of the Railway Company was referred to your Chief Engineer for a report. He recommended that granting of the permit be based on certain conditions as to location, grades, etc. Your Board approved his recommendations and granted a permit with such conditions as a part of it.

The Railway Company thereupon performed their construction ignoring in almost every detail the conditions of the permit. Their action was reported to your Board by your Chief Engineer and your Board personally at different times has inspected the results. As yet, however, no action resulting in a remedying of the obnoxious conditions so caused has been taken by your Board. The existing condition of this section of an important road is a nuisance, if not a danger, to the traveling public and must occasion, if nothing worse, severe criticism of the road authorities responsible for this road. It is the judgment of your Chief Engineer that the existing condition should be remedied at once even if the expense now of so doing is large. [First, Second, Third, and Fourth Annual Reports of the State Roads Commission for the years 1908, 1909, 1910 and 1911 to the General Assembly of Maryland, May 1912, pages 75 and 104]

Governor Austin L. Crothers (January 8, 1908 – January 10, 1912) won election on a good roads platform. He introduced good roads legislation that passed the General Assembly after considerable debate and controversy. He signed the legislation on March 25. A contemporary summary described it:

In its general features this law provides for an issue of 3½ per cent. State bonds to the amount of \$5,000,000 for highway improvement; a State Highway Commission to consist of six members – the Governor, two members of the State Geological Survey, and three other members to be appointed by the Governor – together with a secretary and the necessary force of engineers and office contingent; all records are to be made public; the roads to be improved must be designated by May 1, 1909; and the work on them is to be completed by July 1, 1915; the work is to be prosecuted either under the direction of the Geological Survey or under competitive bidders; trees are to be planted and guide posts erected along the highways by the commission, and the roads improved are to be permanently maintained by the State. [“State Highway Legislation for 1908,” *Good Roads Magazine*, April 1908, page 140]

Governor Crothers announced his gratification at passage of the legislation:

I sincerely believe that it carries with it, if honestly and efficiently administered, more benefit to more people than any other legislation that could be passed. It will do more to advance the interests of the whole State than anything else; it will increase the value of property; it will attract the tide of immigration, a greater percentage of which has heretofore passed through Maryland; it carries lasting benefits to every taxpayer in the State, who for years have out of their hard earnings paid their tax bills, and have not been able to see in such a tangible way the benefits that flow to them . . . .

He was going to take his time to pick the best men for the new Maryland State Roads Commission (SRC):

This is a work that the public is interested in and wants to see carried out most efficiently and economically, and I think that the old rule of the place seeking the man, and not the man the place, should be applied rigidly in the selection of the commissioners for the administration of this act. [“Will Sign It Today,” *The Baltimore Sun*, March 25, 1908]

The SRC, based in Baltimore, began operations on April 30, 1908, with the swearing in of the members:

Chairman John M. Tucker of Cecil County, former State Fire Marshall;  
Samuel M. Shoemaker of Baltimore County, author of the 1904 good roads law;  
Francis C. Hutton of Montgomery County, a civil engineer;  
Dr. Ira Remsen, president of Johns Hopkins University;  
Dr. William Bullock Clark of the State Geological Survey.

Governor Crothers served ex officio on the commission.

The members elected W. W. Crosby, chief engineer of the Maryland Geological Survey, to be the SRC’s chief engineer, in a joint arrangement that avoided duplication of effort. The survey paid two-fifths of Crosby’s salary.

Much of the SRC’s early work involved designating a system of main, connected roads, as described in its annual report collection:

To aid the Commission in reaching its decision hearings were held in every county of the State and in Baltimore City at which the citizens were requested to appear and present to the Commission their views as to the best roads to be adopted for improvement. Large and enthusiastic gatherings were held and in this way the Commission obtained a good idea as to what the people desired. The Chief Engineer was instructed to locate on the detailed road maps of the Geological Survey the roads suggested for improvement at the hearings and when these were finally computed they were found to aggregate more than 2,500 miles, much more than the Commission was justified in selecting under the Act. The mileage of the roads was therefore cut down materially by the Commission until finally a total of about 1,200 miles was determined on. This represented a connected, main-artery system by means of which the county towns were connected as well as other leading shipping points. After the system had thus been tentatively selected, hearings

were held at the office of the Commission in Baltimore, at which many delegations appeared. A few changes were ordered but the system remained substantially the same as that already adopted. In this system were incorporated 38.19 miles of State Aid roads already built by the Geological Survey so that the main-artery system began with these roads to its credit. [First, Second, Third, and Fourth Annual Reports of the State Roads Commission for the years 1908, 1909, 1910 and 1911, page 12]

On July 23, 1908, the SRC tentatively approved State roads for Prince George's County:

Beginning at the Charles county line, near Mattawoman, and running to Clinton, to Camp Springs, to Silver Hill, to the District of Columbia.

Camp Springs to Upper Marlboro, to the Anne Arundel county line at Harden.

Beginning at the District of Columbia line, near Benning, and running to Brightseat, to Largo, to Hills, to Harden. ["Routes for State Roads," *The Baltimore Sun*, July 24, 1908]

The choices in Anne Arundel County were debated until November 30, when the SRC agreed on the county's State roads, as reported in the *Sun*:

Main road – Starting at the Calvert county line, near Owings, by way of Birdsville, South river bridge and Parole to Annapolis; from Annapolis and Parole, going west over the same route to a road three miles west of Parole and then northerly by way of Crownsville, Gate, Waterbury, Severn, Benfield, to Glenburnie, to Brooklyn, and entering the city [Baltimore] by the Light street route.

One of the cross-county routes decided upon is as follows: Annapolis to Parole, to Chesterfield, to Priest Bridge, at the Prince George's county line, there connecting with the Washington road.

Another cross-county route which will be built is as follows: From a point on the road to Annapolis two miles north of Birdsville, to Davidsonville, to Hardesty, which is on the Prince George's county line.

The SRC adopted the State road system on April 1, 1909, in Anne Arundel, Prince George's, and other smaller counties. Controversies continued in the larger counties – Baltimore, Carroll, Frederick, Harford, Washington, and Montgomery – where the selection task was made more difficult by the presence of turnpikes in main lines of travel and disputes among residents, businesses, and politicians over competing routes. ["State Roads Up Today," *The Baltimore Sun*, April 1, 1909]

Final actions took place on April 17, when the SRC made a few additions to the State road networks in Baltimore and Carroll Counties. Governor Crothers, who had been involved throughout the selection process, said:

Now that the roads in the counties are settled, it is extremely gratifying to the commission at the manner in which these selections have generally been received.

It is also gratifying that the real work is about to commence. I, as well as the other members of the commission, am anxious that the residents of the State should co-operate and help us in this work, and they can do it if they will.

It is really the people's work, and is not a matter of profit. Those who are fortunate enough to have the State roads come by or through their property can help if they will by not interfering with the proper drainage of the roads. They can aid by being willing to straighten their fences or change them without objection. The willing removal of a pile of stones and small things like this will help a great deal. It is in these and other little ways that the people can co-operate, and they owe it to themselves to do so. ["More To Be State Roads," *The Baltimore Sun*, April 18, 1909]

On June 1, 1910, the SRC took over constructing and maintaining State roads from the State Geological and Economic Survey.

### **Promoting the National Defense Highway**

In 1915 and 1916, the State legislature began considering construction of a National Defense Highway between Washington and Annapolis, home of the U.S. Naval Academy established in 1845. With Europe at war, road advocates around the country conceived many military or defense highways, on the theory that the national purpose of defense would encourage the Federal Government to pay for them – a view that Congress did not share.

In Maryland, bills were introduced in both houses of the General Assembly to advance a National Defense Highway. Senator Frank Duvall of Anne Arundel County introduced a joint resolution on January 25 directing the delegations of Anne Arundel and Prince George's Counties to draft a bill providing for improving the Old Stage Road. The resolution limited the cost to \$160,000. The *Post* reported that, "There is already a State road from Annapolis to Baltimore and one from Baltimore to the National Capital and this line, if built, would complete the triangle of the three cities." Quick action was asked because of the need for "a military road with a view to the defense of Baltimore, Annapolis and Washington." ["Federal Road to Annapolis," *The Washington Post*, January 25, 1916]

Representative Sydney E. Mudd (R-Md.) introduced a similar bill, H.R. 11959, in the U.S. House of Representatives on February 21, calling for the Federal and State governments to contribute \$250,000 each. The funds were "to be expended by and under the direction and supervision of the Secretary of Agriculture," home of the U.S. Office of Public Roads and Rural Engineering (OPRRE). Further, "no part of said sum shall be expended until the Secretary of Agriculture is satisfied that the State of Maryland has made provision and authority for the expenditure of an amount equal thereto toward the construction of said highway." The Federal Government would not be responsible for maintenance "except to the extent of a proportionate amount of any appropriation that may hereafter be made by Congress in aid of the States for a general system of highways." No toll would be charged for use of the road.

The SRC would be responsible for construction of the highway in Maryland, "but the Secretary of Agriculture may make or cause to be made, such inspection and examinations of said highway

as he shall deem necessary, and prescribe what reports shall be made to him in relation therefore, when they shall be made, and the subject matter thereof.”

The *Post* reported on Representative Mudd’s discussion of the bill:

I am introducing this bill because I am convinced that the time has come when the Federal government should take a definite step in the direction of anticipating the future by building strategic highways wherever necessary for use by the armed forces of the country in defending it against a foreign enemy in case of invasion or threatened invasion.

First of all, the National Capital, the heart of the nation, should be provided with every adequate means of proper defense, and to prevent a repetition of what occurred during the war of 1812, when British forces landed on the shores of the Chesapeake Bay and marched overland to Washington, where they burned the Capitol building and the White House.

State roads have been built from Baltimore to Annapolis and from Baltimore to Washington. There should be a road, equally as good, linking up Washington with Annapolis. In case of a threatened attack on Annapolis[,] troops could be rushed with heavy guns over the State road from Baltimore to Annapolis, and at the same time troops could be sent out from the National Capital to form a juncture with them in defending Annapolis, and at the same time protecting the National Capital.

The war in Europe has provided some most valuable object lessons. One of the most important of these is the value of strategic highways, which have been used in supplementing strategic railways, as facilities for the movement of troops, supplies and heavy guns.

Military experts have testified that in strengthening the army for the national defense we should have a mobile army. The strategic highway contemplated in the measure will contribute wonderfully to the mobility of the forces that may be called upon to defend Washington. [“For Defense Highway,” *The Washington Post*, February 21, 1916]

For several years, Congress had been considering Federal assistance for road building. In 1916, Congress was about to take up the legislation to create a national Federal-aid highway program involving a 50-50 financial partnership with State highway agencies; in February 1916, as before, Congress was not going to consider bills for individual roads. Like all such bills introduced in the House of Representatives, Representative Mudd’s bill was referred to the Committee on Roads where it died. President Woodrow Wilson approved the Federal Aid Road Act on July 11, 1916 (see *Creation of a Landmark: The Federal Aid Road Act of 1916* on this Web site at <https://www.fhwa.dot.gov/highwayhistory/landmark.pdf>.)

In the General Assembly, the State bill came up for consideration in February. The *Star* described the bill:

The bill as drafted authorizes and directs the state roads commission to construct an improved modern road from the state road at Camp Parole, Anne Arundel county, Md., to

the state road at Bladensburg, Prince Georges county, Md., along the lines of the old stage road from Annapolis to Washington, which road was laid out in 1796, so as to connect the two capitals by a direct improved road, and provide for a bond issue to pay for the construction of the road by the state of Maryland, providing for the repair and upkeep of the road after its construction, and to be known as the National Defense highway.

The route from Annapolis is from the present state road at Camp Parole, in Anne Arundel county, thence following the line of the old stage road by the Annapolis water works to Chesterfield, to the Patuxent river, dividing the two counties, thence via Bel Air, Buena Vista, Lanhams station, to Bladensburg, the continued line of the old stage road where it meets the boulevard from Baltimore, the entire distance being about twenty miles. The estimated cost of the road was \$250,000. ["Legislature to Vote on Defense Highway," *The Evening Star*, February 14, 1916]

Senator Duvall introduced the bill on February 22 as a companion to the Mudd bill in the U.S. House of Representatives, as reported in the *Post*:

Senator Duvall has introduced a bill appropriating \$250,000 for the construction of a State road from Camp Parole along the line of the old stage road to Chesterfield, thence to the Patuxent River, dividing the two counties, and across the same and thence via the Belair, Buena Vista, Lanhams station in Prince Georges county to Bladensburg, where it meet the State road from Baltimore to Washington . . . .

The chief object of the road would be its military value for the defense of Annapolis, Baltimore and Washington in case of a naval attack from the Chesapeake Bay, which is practically without fortification.

The bill directed the SRC to complete the road by June 1, 1916, with the State's share of the work to be financed with revenue from a bond issue. ["Bill for Annapolis Road," *The Washington Post*, February 23, 1916]

On February 29, the Committees on Finance and Ways and Means held a joint hearing on the bill in the Senate chamber. The meeting had been scheduled to take place in the committee room, but so many people wanted to attend that, according to the *Star* account, "it was impossible for the members to get inside the door." The committee shifted the meeting to the Senate chamber.

The first speaker was Caleb C. Magruder, clerk of the Court of Appeals, in support of the Bladensburg route instead of the Central Avenue route via Upper Marlboro. He discussed the history of the route back to 1796 "and dwelt on the fact that it had not been improved." He said no bridges would have to be built and the route was shorter than the southern road. "The route which he urged, via Collington, and connecting with the boulevard at Bladensburg, he said, would bring Annapolis nearer to Washington, and he appealed to the committee as a taxpayer and in justice to the people of that section of the state."

He was interrupted several times by a resident along the central road "who evidently intended entering objections to the selection of the old stage route." Chairman Cooper insisted that he

remain quiet and show respect to the committees holding the hearing. The crowd greeting his remarks with shouts of "Put him out, put him out." Order was finally restored.

Other speakers were supportive of the project as well, favoring the Collington-Bladensburg route.

Thomas Fell, president St. John's College, spoke in support:

He said that the government was in favor of increasing the army and navy, and doubted if any one present would object to building the road . . . . Army and navy experts, he said, informed him that if these two branches of the service were increased good roads were necessary to move them about. He alluded to the lessons already taught by the European war.

We have high-powered automobiles, rapid motor cycles and motor trucks, and we should have some ready means of access between the two capitals. He told of the interest being taken by residents of the two counties and also spoke from an economic standpoint, notwithstanding the fact that taxes would have to be slightly increased if the roadway is built.

One speaker, City Councilman Ridgely P. Melvin of Annapolis, indicated that with the introduction of Representative Mudd's bill providing for an appropriation of \$250,000 and the appropriation of a similar amount by the General Assembly, the State would be getting the highway at half price. ["Defense Highway Topic At Hearing," *The Evening Star*, February 29, 1916]

The *Star* summarized the two alternatives:

One of the routes from the National Capital is via Benning, Central avenue, Capitol Heights, Largo, Halls, Davidsonville, crossing the South river at Edgewater; thence to Camp Parole, and terminating at the state capital. The other route, which is being favorably indorsed in various quarters, is via Bladensburg, Lanham, Buena Vista, Collington, Chesterfield, Camp Parole and Annapolis.

The latter route is urged because it is the old Washington-Annapolis stage road, and, besides being an all-dirt route, is the most direct from the National Capital. The route has been repeatedly recognized by the state and its legislature since 1796, and it is claimed it would be the most economic road to construct. This route, it is said, would serve at least ninety square miles, which are absolutely dependent upon it as the only means of travel.

The Benning-Capitol Heights route, it is said, is not quite so direct and, besides, would require the construction of a drawbridge across the South river at Edgewater, which would cost in the vicinity of \$220,000. The bridge would be constructed, with the consent and would be under the supervision of the War Department at Washington, and this one expense alone would be nearly enough to construct the entire road over the Collington route. The bridge across the Patuxent river, which is not more than forty feet in width at White Marsh, on the Collington route, would not cost more than \$12,000.

It is also claimed that it would be necessary to condemn about four miles before the road could be opened and that it would only serve less than thirty square miles and would parallel an existing state road about five miles distant. [“‘Old Stage’ Road Is Favored Road,” *The Evening Star*, March 1, 1916]

### **Battle of the Letters**

The Mudd bill did not specify the route of the National Defense Highway. The Duvall bill in the State Senate had specified the Old Stage Road.

On March 14, the *Sun* published a letter from “Taxpayer,” based in Baltimore, who wanted to let legislators considering the Duvall bill know that “a road has already been built by the State from Washington to Hill’s Bridge, on the Patuxent river, and all that is necessary is the building of about six miles of road from Hill’s Bridge to the Mount Zion Crossroads, which would connect at that point with the state road leading from Solomons Island to Annapolis, and on to Baltimore”:

Could there be anything more preposterous than the building of two State roads between two noncommercial cities, and could there be a more reckless waste of the taxpayers’ money, and would the Legislature consider for a minute a proposition to build another road between Baltimore and Washington?

He thought the answer was no. Taxpayers from the two counties “would protest against any such useless waste of the State’s money”:

The people who are asking for this appropriation are the same, I imagine, who were beaten by the Roads Commission, and later by the courts, in their efforts to build by a former appropriation this same old stage road. The road would be used entirely by pleasure seekers, and, is, therefore, not a necessity. The other road, nearly completed, is only a matter of a few minutes farther, and pleasure seekers have plenty of time. [“Says The Proposed Road Is In The Interest of Pleasure Seekers,” *The Baltimore Sun*, March 14, 1916]

Taxpayer’s comment about the courts referred to what was called the “Old Stage Road Case.” The case, initiated in 1914, turned on the fact that the SRC had identified several roads in Prince George’s County for inclusion in the State highway system: (1) from Charles County to Washington; (2) a road from Upper Marlboro to Washington, (3) the Central Avenue road from the District of Columbia to Queen Anne or Hardesty; and (4) the Old Stage Road from Bladensburg to Annapolis. After improving or letting contracts for the first three, SRC had let \$63,000 in contracts for a 3-mile road from Meadows to Camp Spring and the road from Upper Marlboro to Hills Bridge. The plaintiffs from Anne Arundel and Prince George’s Counties, including Judge Magruder, sought an injunction to require the SRC to improve the roads in the original order, with the Old Stage Road being next. Plaintiffs contended that the two roads the SRC was planning to improve were secondary in importance to the Old Stage Road.

Judge Joseph R. Brashears of the Anne Arundel Circuit Court denied the injunction on December 18, 1914, finding that the SRC had the discretion under State law to decide the order of road improvements. Plaintiffs appealed the ruling to the State Court of Appeals, which ruled on April 7, 1915, that Judge Brashears had ruled properly. [“Roads Commission Upheld,” *The Baltimore Sun*, December 19, 1914; “Right To Make Decision,” *The Evening Star*, December 18, 1914; “Wait on A Decision In Road Work Suit,” *The Sunday Star*, December 7, 1915; “Road Commission Upheld,” *The Baltimore Sun*, April 8, 1915]

In the Letters to the Editor column, the *Sun* carried a letter on March 18 from “Another Taxpayer,” this one from Fort Howard in Baltimore County along the lower Patapsco River on Chesapeake Bay. In Another Taxpayer’s view, the road Senator Duval proposed “is a most urgent necessity and those advocating it are not prompted by pleasure-seeking motives”:

Pleasure seekers can more easily spare the “few minutes” required to travel the additional 11 miles via Hill’s Bridge than the people along the Stage road, who need a highway that will serve their sections of the counties concerned, and need it badly.

As for the Old Stage Road Case, Another Taxpayer agreed that advocates for the road were “beaten” by the SRC and later in the courts:

In the first instance the term “beaten” may be construed literally, and in the second the court ruled adversely because the law gave such discretionary powers to the commission that it could and did ignore the natural route for a road connecting the cities of Annapolis and Washington, and constructed the one mentioned via Hill’s Bridge, which increased the distance to be traveled by about 11 miles. [“Contends The Road From Bladensburg To Annapolis Is Badly Needed,” *The Baltimore Sun*, March 18, 1916]

“G.S.M.” of Lanham also objected to Taxpayer’s views. If Taxpayer had been in Annapolis in late February, “he would have seen the greatest number of horny-handed, red-necked sons of the soil that ever came together in advocacy of a single agricultural question.” Over 500 farmers from Anne Arundel and Prince George’s Counties had come to the State capitol representing “a vast tract of Maryland’s fertile soil, comprising more than 90 square miles, protesting that present conditions made their only road to their markets closed for four months of every year.”

In G.S.M.’s view, Taxpayer had lost sight of a simple fact. Improving the route via Hill’s Bridge would open it to so much traffic that the SRC would be compelled to reconstruct the South River bridge, “which alone the State Roads Commission has already estimated will cost the State more than the construction of the old stage road in its entirety.” G.S.M. concluded:

I, too, am a taxpayer and have been one for nearly 40 years, and I live on the most damnable road in all Maryland, and I am also one of those horny-handed, red-necks who had outlived his patience and now demands justice: something for my taxes besides permission to exist. [“Not For Pleasure-Seekers, But For Horny-Handed Sons Of Toil,” *The Baltimore Sun*, March 20, 1916]

The original Taxpayer from Baltimore replied by letter published on March 21. It began by noting that Another Taxpayer thought the improved Old Stage Road was “badly needed,” but gave no reasons why:

If it is so badly needed now as a State road, why was it abandoned years ago (as I have been informed it has been) as a county road. The first State road built in Prince George’s county was from the county seat, Marlboro, to Washington, and all that is needed now to complete the road to Annapolis is the link from Hills Bridge to the State road in Anne Arundel county, a distance of about six miles, and which has already been surveyed.

Why, then, go back to Bladensburg, a distance of 16 miles, to build a road across Prince George’s county almost parallel with the one already built, and only at an average distance of about eight miles apart.

Another Taxpayer misunderstood Taxpayer’s meaning in saying that those advocating the Old Stage Road were doing so for pleasure-seeking motives. As far as Taxpayer was concerned, “the road would be used almost exclusively by pleasure-seekers. The road could be of no public benefit.”

He added that “those behind the scheme are asking this enormous appropriation for no other purpose than to build a road that will enhance land values along the promised road.” He concluded, “If the Legislature is so unwise as to make the appropriation asked for, the Governor should promptly eliminate the item from the appropriation bill.” [“Says The Road Is Not Needed,” Letters to the Editor, *The Baltimore Sun*, March 21, 1916]

C. C. Magruder, who had spoken in support of the Old Stage Road before the Committees on Finance and Ways and Means, took exception to Taxpayer’s claim that the road had been abandoned as a county road. In a letter published on April 23, Magruder wrote, “It has never been abandoned as a county road” as reflected in a quote from the SRC’s answer when the Old Stage Road Case reached the State Court of Appeals:

In answer to the second paragraph of said bill of complaint, the defendants neither admit nor deny the allegation that the construction of the “Old Stage Road” will be a great public benefit to the taxpayers of Anne Arundel county, but put the complainants to the proof thereof. The defendants deny that it is their intention not to construct any part of the Old Stage road at any time and to abandon it altogether, but state that it is not their intention to construct it at the present time or out of the funds now applicable for road construction in Prince George’s county. [“Mr. Magruder Contradicts An Assertion by ‘Taxpayer,’” *The Baltimore Sun*, March 23, 1916]

On March 24, the *Sun* published a response to Taxpayer from Daniel B. Lloyd, who identified himself as a third generation reader of the *Sun* who lived in Glendale, Prince George’s County. Like Magruder, Lloyd contradicted the idea that the Old Stage Road had been abandoned as a county road. Instead, it “has been and is now being used both night and day for the purposes of a large traffic, and is, indeed, notwithstanding its chronically bad condition, one of the most largely traveled roads in our county.”

Lloyd also challenged Taxpayer's notion that those supporting the Old Stage Road were doing so to increase real estate values:

I beg indulgence to state but one of the main reasons why the road should now be constructed: It was selected as a part of the State roads system by the original Crothers Good Roads Commission of citizens of the two counties through which the road runs and a most careful consideration by them of the subject. Its construction would be but an act of tardy justice. ["Thinks The 'Old Stage Road' Should Be Converted Into 'The National Defense Highway,'" *The Baltimore Sun*, March 24, 1916]

In a letter published on March 27, Taxpayer admitted he had not anticipated that his original letter "would evoke so much adverse criticism." If the *Sun* would give him "space for a parting shot I will promise not to bother you again on this subject."

This time, he wanted to reply to G.S.M's letter citing agriculture as the reason for creating the National Defense Highway along the Old Stage Road. Taxpayer agreed that any section of Prince George's County is as entitled to a State road as any other. Those advocating the Old Stage Road "are those who are immediately adjacent to the road and a few politicians":

But if we undertake to build roads to Washington, or to any other city in the State for the agriculturists, we will have a network of roads and the State would become bankrupt. This road is solely advocated in the interest of Prince George's countians and they do not care a rap for Annapolis. All they want is a road to Washington. Annapolis had to be named, but Prince George's has no interest in Annapolis. If could not help them commercially or otherwise. If the matter could be submitted to the voters of Anne Arundel county and Prince George's county, or all of Southern Maryland for that matter, it would be overwhelmingly defeated.

In my humble opinion, no more iniquitous appropriation bill was ever introduced in the Legislature of Maryland and, if passed, no more iniquitous law could be placed upon the statute books of the State. If by any chance it should be passed we will submit to the Governor a map to show the utter uselessness of the road. ["The State And The Old Stage Road," *The Baltimore Sun*, March 27, 1916]

Taxpayer's "parting shot" prompted a "parting shot" from Daniel Lloyd. He challenged the assertion that support for the Old Stage Road comes only a few politicians and those living along the road:

Though I have some familiarity with road building both in this country and in Europe, I have heard of no country ever having been bankrupted by that means. I have sufficient confidence in the sense of fairness and justice of our fellow-Southern Marylanders to believe that the great majority of them favor our proposition. We in Prince George's county are honestly and enthusiastically in favor of a good road to the capital of our State as well as out of our county to the capital of the nation.

Lloyd, in considering the likelihood that the Governor would sign the bill, invoked Mark Twain's comment about the funeral of a man he disliked. If Twain wrote in *Roughin' It* (1872) that if he were in the territory when the funeral took place, he would "postpone all other recreations and attend." In the same sense, Lloyd wanted to be present when Taxpayer submitted his map to the Governor. ["Still Fighting For A Good Road," *The Baltimore Sun*, March 29, 1916]

Although Taxpayer and G.S.M had taken their parting shots, a new correspondent, E.M.K of Mitchellville in Prince George's County wanted to reply to G.S.M. E.M.K. doubted that G.S.M had ever worked a farm:

There are no farms around Lanham, and I don't think he can find over one or two from Buena Vista to Collington. All you will find after leaving one farm the other side of Collington is a barren section from there to Chesterfield.

If "G.S.M." will take a trip over Central avenue from Capitol Heights to Annapolis via Largo, Hall, Hardesty and Davidson, he could go home and tell friends he had been through a farming district – a road where 50 times as much produce is hauled to market as over the old stage road.

He wondered if G.S.M. could name a dozen farmers using the Old Stage Road. "How many of you tillers of the soil around Lanham own a horse?" The people living in Hyattsville, Bladensburg, all the way to Buena Vista were not tillers of the soil. Instead, "all the people in this section are office-holders":

And if it is not for pleasure seekers and to enhance the value of their land, what is it for? And in regard to the State construction of a bridge across South river, saying it will cost as much as the old stage road, the State will have to build this bridge, anyway, as the State road from Annapolis to Solomons Island crosses this bridge. ["No Farms There, He Says," *The Baltimore Sun*, April 3, 1916]

### **The Legislature Moves On**

The General Assembly approved the highway bill on April 4, 1916, as the session was coming to a close. Governor Emerson C. Harrington (January 12, 1916 – January 14, 1920), who had promised in his 1915 election campaign to construct the highway, approved the bill. It designated the "Old Stage Road" as the route and provided an appropriation of \$125,000, to be raised by a bond sale, contingent on Congress passing a companion bill providing a similar matching amount. ["Legislature Passes Defense Highway Bill," *The Evening Star*, April 4, 1916]

On April 6, Senator John Walter Smith (D-Md.) introduced S. 5401 in the United States Senate to fund the National Defense Highway. The bill authorized \$250,000 for the project, with the funds to be made available through the Department of Agriculture. As in Representative Mudd's bill, the State highway commission would be in charge of construction, but the work would be subject to inspection by the Agriculture Department. The bill was referred to the Committee on

Post Offices and Post Roads, which did not act on it. ["Bill Provides \$250,000 Toward Maryland Road," *The Evening Star*, April 6, 1916]

The *Post's* short article on the bill stated:

All members of the Maryland delegation in both houses of Congress are in favor of the plan, and it is exceedingly popular among residents of Maryland and the District. It also has the approval of officials of the War and Navy departments because of its value in time of stress for use as a military highway. The construction of an exceptionally good highway connecting the national capital and Annapolis was actually first favored by Federal leaders in 1796, but the plan has never been carried out. ["Annapolis Road in Favor," *The Washington Post*, April 7, 1916]

A few weeks later, Representative David J. Lewis (D-Md.) extolled the benefits of the Smith bill:

I am strongly in favor of Senator Smith's bill to have the government share with the state the cost of building the Washington-Annapolis highway. I voted for the Shackleford [Federal-aid] bill, giving government aid to the building and improvement of post roads on the line of the Shoemaker road law in Maryland. But the Smith bill particularly appeals to Marylanders, and ought to appeal to people generally on account of both its historical and direct military importance to the seat of government. The national wealth now is \$2,000 per capita and exceeds that of any other country by about 60 per cent. I do not know of any better use we can make of our surplus wealth than to put a part of it into the roads of the country, which, like Aaron's rod, striking the rock of our potential resources will respond with even greater wealth for our people.

Reporting on this statement, the *Star* observed:

Representative David J. Lewis of Maryland is proving to be as alert to the advantages of good roads, say motorists, as he is to the benefits of good telephonic, telegraphic, parcel post and express service for the country at large. ["Advocate of Good Roads," *The Sunday Star*, April 30, 1916]

Representative Mudd had put his bill aside while work on the Federal Aid Road Act was clearly moving toward a successful end. He realized that the dozens of bills for specific roads around the country would never emerge from committee. Instead, he expected that the general funds the new program would make available to Maryland provided the best opportunity to pay – at the Federal share of 50 percent of eligible costs – for the proposed road between Washington and Annapolis.

On July 20, Representative Mudd headed a delegation that met with the SRC to promote the combination of Federal-aid and State bond funds for the National Defense Highway. He had also visited Logan W. Page, director of the OPRRE, to promote the project. Mudd suggested that Page launch an experimental project – a common OPRRE activity – to improve the road. ["Mr. Mudd Is Working For Maryland Roads," *The Evening Star*, July 21, 1916; "Will Study Fast Ferry," *The Baltimore Sun*, July 21, 1916]

Maryland, according to the *Sun*, expected to receive \$44,000 in 1917 from the Federal Aid Road Act of 1916. Supporters urged the State to use this amount along with funds from the State's \$125,000 bond issue to build about 8 miles of the National Defense Highway. Future Federal-aid funds could be used in a similar way. The Reverend Michael Hogan of the Church of the Ascension in Bowie urged the SRC to use the funds for this purpose:

If the work is undertaken, Father Hogan has agreed to furnish free of cost all the gravel that will be needed to build 10 miles of the road, and to furnish gravel for the remainder at a nominal figure, say 10 cents a yard . . . . This offer would cut down the cost of building the road materially. An abundance of excellent sand, he says, can be had along the line of the proposed road for practically nothing; so that for 10 miles of the road, at least, the material cost would be only for cement. ["To Promote Highway," *The Baltimore Sun*, July 28, 1916]

### **Lost in the Lowlands**

On July 25, 1916, the *Star* dispatched its automobile editor, Howard S. Fisk, on a ride "to secure accurate information as to the mileage, condition, etc., of the roads between the National Capital and Annapolis, Md." Although Fisk knew that "conditions were far from being ideal," he thought the information might be helpful to motorists interested in touring. However, the main purpose was "securing information that might later aid in the improvement of the roads in this section of Maryland." Fisk's companions were D. Brailey Gish, who was the primary driver, and Louis Ledyard Kaess, in a Haynes "Light Six" automobile.

Fisk summarized the journey in his opening paragraph:

"Lost in the lowlands of Prince Georges County in a cloudburst" would be an excellent title for a story of a trailblazing trip made a few days ago under conditions that would tear the heart strings of the most hardened motorist. It is hard to find words that would tend to describe the real road conditions encountered and the experience which the members of the pathfinding party went through. While the condition of the road was partially to blame for some of the strenuous experience, the heavy downpour put the finishing touches to the trip and came near causing a sad ending. Much delay was caused by being imbedded in an embankment, and, after being extricated, progress was extremely slow over the water-covered roads.

When the trio began their trip, "the weather was bright and clear." Beginning in northeast Washington, they drove to 15<sup>th</sup> and H Streets, NE., where they turned onto the Baltimore-Washington boulevard and headed toward Maryland. At the District line, they took "a good concrete road" to Bladensburg, 6.5 miles from their starting point.

Their plan was to follow the Old Stage Road, the long-established, direct route between the two capitals. Turning off the boulevard "at the blacksmith shop," they found "a good gravel highway, but this later turned into a red clay road." In several places, the road was "filled with water from the recent heavy rains," but they were not deterred. Taking the left fork at 9.5 miles, they followed the telegraph wires along "a typical country road" paralleling the Pennsylvania Railroad

tracks. At the Lanham post office, they turned to the right, crossing a bridge over the railroad tracks, then turned sharply to the right “with another set of telegraph wires,” and took the road that they “were informed leads to Bowie.”

Their first taste of the troubles to come came at 12.3 miles where “we saw two wooden rails about three inches above a broad expanse of muddy water which was rushing in torrents down stream.” They could tell that a bridge was between the rails, but were not certain of how high the water was above the bridge deck; they could not even be sure the deck was still there. Fearing the worst, they nevertheless “picked our way through the swift-moving torrents in the center of the two rails and when we felt the machine rolling over the wooden floor of the bridge the water came up to the floor boards.” They feared “a ducking,” but “came through safely on the other side.”

They found a “fairly good gravel road,” but as they continued they encountered a red clay surface. At 13.8 miles, the trio crossing the bridge over the tracks of the Baltimore, Washington, and Annapolis electric line near a station known as Buena Vista. They came to a fork in the road, with the right leading to Bright Seat and the left to Glendale.

At this point, the downpour began:

Side curtains were broken out and, with the rain beating in torrents against the windshield, we proceeded cautiously through the thickly wooded road ahead. It was almost impossible to see three feet ahead of the car on account of the rain. At 14 miles we crossed a wooden bridge, and at 14.5 miles kept straight ahead at the crossroads. We had proceeded just one mile, or 15.5 miles, to be exact by the odometer, when we were groping our way along the road, which had become darkened by the heavy clouds, that we cut off part of an embankment, hidden with underbrush, and landed in a ditch. And there we remained just exactly one hour and a half.

They saw no point in trying to extract their car from the ditch while the pouring rain continued to shift the mud around them.

The article was accompanied by a photograph of their plight. The caption read: “It was owing to the almost completely hidden road due to heavy shrubbery and underbrush that the Haynes chopped off the side of a hill and was ditched just beyond Glen Dale, Md.”

When the rain finally let up, the trio had a stroke of luck. While Gish and Fisk tried to dig the wheels out of the mud, Kaess went looking for help – preferably help with horses:

Luckily, the mishap occurred a short distance from the home of Judge Caleb C. Magruder, clerk of the court of appeals of Maryland.

Judge Magruder, with his son, came to our rescue and sent a farm hand along to assist the digging-out process. Armed with spade and hoe and two horses, block and tackle, all hands set to work, and within a short time the machine was back in the center of the road and preparations made for resuming our journey. Judge Magruder is one of the foremost

advocates for the national defense highway, which when completed will pass over the very road we had traveled, if it is constructed.

After their long delay, they made good progress following the telegraph wires, reaching Collington at 18.6 miles from their starting point:

Inquiry elicited the information that the road straight ahead led to Priests Bridge and Annapolis; to the right to Mitchellville and to the left to Bowie. Collington is about midway between Washington and Annapolis.

After a few forks in the road, they reached Priest Bridge at 22.1 miles, where the Patuxent River is the dividing line between Anne Arundel and Prince George's Counties. "We could hear the waters rushing beneath the bridge, showing that the heavy rains had caused the stream to swell considerably, as could be seen by the flooded lands on all sides."

They proceeded "through a thickly settled stretch of woods, and as the glaring electric headlights cast their shadow through the darkness all we could see everywhere was water, water, water." They would have turned back but a reversal was out of the question because "the road was scarcely wide enough for our machine to pass through beneath the overhanging trees, which surrounded us on all sides."

They had no way to know what problems they might encounter, but "there was nothing else for us to do but to risk it and shove on":

Dropping into low speed, we moved along cautiously, following the slight traces of the roadway, which we could see on the far shore from us and following an imaginary road line through the water.

In a few minutes, they reached "terra firma" and breathed a sigh of relief.

They crossed several bridges "and proceeded [sic] up a stiff gravel hill, taking the right fork at 21.8 miles. It was just beyond this last fork that we wandered through a water-bound section of the country and lost our way." They drove around trying to find the right road or the railroad tracks or the telegraph wires. "It is useless to specify the various forks and turns and crossroads from this time on, because we felt that we were retracing some of the road we had already gone over. In fact all roads looked alike to us that night."

They finally found telegraph wires that led to a railroad that led them into Millersville at 34.8 miles from their starting point:

We had been looking for the two hours previous for the town of Chesterfield. We are still looking for it but up to the present time it hasn't put in its appearance.

Giving up on their trip to Annapolis, the trio headed to Baltimore via the Baltimore-Annapolis boulevard. After enjoying a much-needed midnight supper in Baltimore, they returned home on the Baltimore-Washington boulevard. They had experienced several hours of rain-free travel, but rain returned, slowing their return trip.

Nevertheless, they finally reached Washington. “But as all had gone well, no accidents had occurred and no one felt any the worse for their experience, congratulations were in order”:

The Haynes stood the trip remarkably well, notwithstanding the fact that for miles and miles it was necessary to use low speed in order to get through the deep mud, which frequently covered the axles. The car was spattered with mud from stem to stern, and there was hardly an inch that was not hidden beneath the mud and clay from Prince Georges and Anne Arundel counties.

Fisk’s conclusion was:

As stated before, this trip is not intended for a pleasure trip for motorists, and anyone who takes it might meet with the same fate and not come through as lucky as did our run. There are lots of people who think that trailblazing is a “joy ride,” but this trip will soon convince them that it is far from being one. The writer has covered many thousands of miles of roads, but the Fredericksburg road through Chopawamsic swamp, below Dumfries, is a boulevard compared with the roads which we encountered on the trip just described. We hope that some day we will be able to ride over a fine state highway through this section, and then we will advise the motoring public of that fact. [Fisk, Howard S., “Blaze the Trail for Military Road,” *The Sunday Star*, July 30, 1916]

(The Fredericksburg road through Chopawamsic swamp was notorious during this era for impassability on the main East Coast road that would be combined into U.S. 1 in 1926.)

### **Getting to Construction**

On August 19, 1916, the SRC held a hearing for a large delegation from Prince George’s and Anne Arundel Counties in Maryland and the District of Columbia regarding improvement of the road between Washington and Annapolis. Speakers included members of the State legislature, Judge Magruder, representatives of the Automobile Club, prominent Washington attorney Thomas P. Littlepage, and Father Hogan, who repeated his offer of free gravel for 15 miles of road.

All stressed the need for a better, shorter road between the cities, particularly as part of the war preparedness program. During the presidential election, President Wilson campaigned on keeping the United States out of the European war, but the need for preparedness had prompted Secretary of the Navy Josephus Daniels to write to the commission in support of the proposed project.

Although the new State law was contingent on securing an equal amount of funds from the Federal Government, the speakers understood that the bills introduced in the House and Senate would not be considered in view of enactment of the Federal Aid Road Act of 1916 a month earlier. Maryland’s total funding over the course of the multi-year bill was estimated at \$650,000. The focus, therefore, was on securing as much of this Federal-aid highway funding as possible for the National Defense Highway. The *Sun* summarized the speakers’ views:

The delegation which appeared before the Roads Commission asked that part of Maryland's share of the Federal funds be applied to the road. The State will receive \$44,000 in 1917 and \$88,000 in 1918 and larger installments each year thereafter until the total apportionment to the State is exhausted. The application of those sums to the road, plus such sums as the State could apply, would complete the roads within a couple of years.

The *Star* published excerpts from Littlepage's speech:

No single road is of more importance to the state of Maryland, the government of the United States or the city of Washington than the old National stage road. It connects the capital of the United States with the capital of Maryland, where is located the United States Naval Academy, which has in charge the training of all of the United States naval officers. In case of a European war the defense of the army of the United States is of no more importance than the defense of the United States Naval Academy, where the United States sailors are trained.

If the European war has demonstrated one thing over another it has shown that next to preparedness of its citizens is the preparedness of the means of quick transportation, both from the standpoint of public roads and railroads. If one thing more than another can be pointed out for the success of the Germans, so far, in the present war it is their modes of transportation and the movement of armies and artillery from one place to another.

Aside from all the questions of national importance, however, is the importance of this road to the state of Maryland. No nation or state can excel whose rural population does not succeed, and while it is boasted throughout the country today of the back-to-the-farm movement, the fact remains, nevertheless, that for every individual who goes back to the farm there are ten that leave the farms for the cities.

The high cost of living will be an ever-increasing problem until the suburban and rural sections are better developed. The standard of American citizenship depends not so much upon the cities as upon the rural sections which furnish the food supply to those cities, and the time has come when the American citizen will not live in the country unless he has at his command the average means of transportation.

For this reason no state can hope to stay long at the top of the list of progressive states, with high citizenship, that does not realize the supreme importance of the improvement of public roads.

The *Sun* summarized the commission's response:

The Roads Commission promised to give the matter careful thought. Chairman [Frank H.] Zouch pointed out that there would be demands from all sections of the State for part of the Federal funds, and that there are other demands for the shares of Anne Arundel and Prince George's county in the State funds – from which shares any State aid to the road would have to come. But, notwithstanding these facts, the commission

seemed impressed deeply with the arguments made for the road. [“Defense Highway Urged,” *The Baltimore Sun*, August 20, 1916; “Highway For Defense to Annapolis Urged,” *The Evening Star*, August 19, 1916]

The *Sun* supported the National Defense Highway in an editorial on September 2. The idea “has much to commend it”:

The road is sorely needed, and its condition is now such that it is almost impassable; and there is no question but there should be a good road, available not only for military use in time of stress between the capital of the nation and the great school of the navy at Annapolis, but also for ordinary traffic in times of peace.

The editors commended Representative Mudd and Senator Smith for introducing bills in Congress to fund the road. “These bills have little or no chance of passage in view of the action of Congress in passing the Shackleford Good Roads bill.” They agreed that Maryland’s share of the funds should be used for the road “unless some legal technicalities should be set up to prevent [it]”:

If it should be done, it would provide a highway much needed in the territory between Washington and Annapolis and a valuable addition to the State’s system of roads. The State Roads Commission should give this matter careful consideration. [“The National Defense Highway,” *The Baltimore Sun*, September 2, 1916]

On September 6, Representative Mudd gave a short speech indicating he would renew his efforts to secure passage of his National Defense Highway bill, as well as a bill he would introduce when Congress returned in December linking Washington with the big smokeless powder manufacturing plant at Indian Head, Maryland, via the Indianhead Military Road (H.R. 17768). The *Sun* summarized:

Mr. Mudd declared that there were abundant precedents for Federal aid in the building of the highway. He cited cases of the Federal Government constructing military roads from large centres [sic] to national cemeteries. He also pointed out that the proposed Washington-Annapolis military highway would not only connect Washington with the Chesapeake Bay but would give the Government a splendid boulevard from Washington to Indian Head, where the Government has spent millions.

“The State of Maryland has certainly done its part in road work,” said Mr. Mudd, “having spent upward of \$20,000,000 in build a system of magnificent turnpike roads throughout the State, covering the main arteries of its territories.” [“To Renew Fight For Roads,” *The Baltimore Sun*, September 7, 1916]

Neither bill was considered in Congress and they died when the 64<sup>th</sup> Congress ended on March 4, 1917.

The OPPRE released regulations for administering the new Federal-aid highway program on September 1, 1916. Given the failure of the National Defense Highway bills in Congress, advocates could only speculate on whether the wording of the State law enacted earlier in the

year would allow the State funds from the bond sale to be matched by Federal-aid highway funds authorized for general highway improvements by the 1916 Federal-Aid law, but not specifically for the National Defense Highway.

Leon E. Greenbaum, the SRC's counsel, offered an opinion that use of the Federal-aid funds with the State match would be warranted by the State law. However, Chairman Zouch did not think the matching of the Federal-aid funds with the bond issue funds would be necessary. Sufficient State funds were available under the State's general road law:

He says that there is no question but that the Government would approve of the spending of the \$44,000 on the National Defense Highway and that there is now available \$109,000 of the allotment of State road funds to Prince George's county for the construction of that part of the highway that lies in the county. He has ordered immediate surveys made of the road and it is the plan, unless something unforeseen happens to prevent [it], to begin the construction of the road next spring. The road, it is expected, will be well under way by the time the next Legislature meets, and at that time, it is believed, the Legislature will be willing to remove the conditions from its appropriation of \$125,000 for the highway and allow it to be used for the completion of the road. ["Backing New Road Plan," *The Baltimore Sun*, September 16, 1916]

On September 27, the SRC agreed to use half of the State's Federal-aid highway funds on the National Defense Highway. Governor Harrington, who was present, endorsed the plan, calling the highway a necessary link in the State's arterial system of highways. Although supporters had brought pressure on the SRC to use all the Federal-aid funds on the highway, the commission concluded that dividing the funds would be best. The members were satisfied that sufficient funds would be available as needed for the multi-year construction project.

The SRC, which had not yet completed the survey, expected to build the highway with a concrete pavement. It would be wider than the average State road, with a thicker pavement to accommodate the passage of heavy military traffic if the country went to war. The project was expected to cost \$15,000 a mile. ["For Defense Highway," *The Baltimore Sun*, September 28, 1916]

Chief Engineer Henry G. Shirley – formerly chief engineer in Baltimore County, he was a national figure who had served as president of the American Association of State Highway Officials (AASHTO) during the first 2 years after its formation in 1914 – stated:

Under the recently enacted federal aid road law, the state of Maryland will receive about \$600,000 of federal funds in the next five years. The principal road upon which it is expected that these funds will be expended is one leading from Washington to Annapolis. It is known as the Old Stage Road, or the National Defense Highway, and is about 25 miles long. The estimated cost is \$375,000. [Shirley, Henry G., "A Resume of Maryland Highway Work," *Good Roads*, November 4, 1916, pages 184-185]

Reflecting the importance of the National Defense Highway, Governor Harrington and two State road commissioners, Chairman Zouch and John E. George, drove an automobile over the route

on Friday, December 8, 1916, a day free of the rain storms that had disrupted the *Star*'s trip in July. *The Sunday Star* described the trip:

The journey was one of inspection, and the governor expressed pleasure not only at the practicability of the route as a defense measure, but also at its possibilities for development of the remoter sections [sic] of Anne Arundel and Prince Georges counties.

The State now estimated the road, to be paved with concrete, would cost \$500,000, to be split 50-50 with the Federal Government under the new road program. The 30-mile road was equally split between the two counties. However, the cost of construction was expected to be higher in Anne Arundel County than in Prince George's County because, as the *Sun* put it, "Anne Arundel is honeycombed with hills, which will require much grading." The cost will be reduced because "there is already a Government road from Annapolis to Camp Parole, a distance of about 4½ miles," thus leaving only 10½ miles to be built:

Rights of way will have to be secured in many places, particularly in Anne Arundel, because to follow the old stage coach road, which has many curves and grades, would be more costly than to obtain new rights of way. It is presumed that exorbitant prices will not be asked, for a highway of this kind would be of great advantage to the farmers. There are thousands of acres of arable land which are now going practically undeveloped, owing, it is said, to the lack of transportation facilities.

The lack of railroad facilities is one of the reasons why the highway will prove an expensive proposition. There is no railroad which touches the proposed highway in Anne Arundel. Material will have to be hauled from Camp Parole to points of distribution. Prince George's is better off. There are three lines – the Rogers Creek branch of the Pennsylvania Railroad, at Collington, the main line of the Pennsylvania at Lanham and the Baltimore and Ohio, at Hyattsville – which can transport materials.

Governor Harrington stopped to see Judge Magruder, who offered refreshments for the group. "Mr. Magruder rode with the Governor to Hyattsville and introduced him to various citizens there, all of whom expressed approval of the new road plan." ["Governor Studies Road," *The Baltimore Sun*, December 9, 1916; "Defense Highway Route Is Given an Inspection," *The Sunday Star*, December 10, 1916]

In view of these comments, "A Taxpayer" from Mitchellville questioned the decision to upgrade the Old Stage Road. (Whether this Taxpayer was E.M.K. from the earlier letter exchanges is unknown.) In a letter to the editor of the *Sun* dated December 11, he wrote:

In the spring of 1916 I was a member of a delegation of 100 men which went before the Governor in behalf of Central avenue [as the] State road between Washington and Annapolis. I heard Governor Harrington promise that all roads which had been begun would be completed before any State money was put in new ones. Central avenue, the shortest route between Washington and Annapolis, passes through the most fertile farming districts of Southern Maryland. The old State [Stage] road passes through one of the poorest sections, and many of the people are office holders, traveling on electric cars,

and are not farmers. Central avenue is completed from Washington to Largo with fine concrete, and with only 14 more miles would link with concrete road at South River, completing the highway to Annapolis.

Hundreds of thousands of dollars could thus have been saved. Excellent gravel beds are along this road, which crosses the Pennsylvania railroad at Hall's Station, providing facility for transportation. If Central avenue is the shortest and most practical road, why was the old stage road selected? The only conclusion the taxpayers of Southern Maryland can come to is that the Governor and the State Roads Commission are ruled by a few politicians and have selected the old stage road to please these politicians. ["Did Governor Harrison And State Roads Commission Show Good Judgment In Selecting The Old Stage Road?" *The Baltimore Sun*, December 15, 1916]

In early February, the SRC met in Baltimore, with Governor Harrington in attendance, to formally select the projects to be advanced under the Federal-aid program. The *Star* described the National Defense Highway as the "most important road" between the "splendid concrete road" from Annapolis to Camp Parole and the "macadamized roadway from Bladensburg to this city." ["Governor of Maryland Is Interested in Roads," *The Sunday Star*, February 18, 1917]

Two months later, on April 2, 1917, President Wilson appeared before a joint session of Congress to announce his decision that the United States must join Great Britain and France in the war against Germany and its allies. "It is a fearful thing to lead this great peaceful people into war, into the most terrible and disastrous of all wars, civilization itself seeming to be in the balance. But the right is more precious than peace."

The new Federal-aid highway program ground to a near halt. Engineers and construction workers enlisted in the war effort, while the railroads were needed to ship war materials rather than road materials. Funds and official attention were diverted to the war. According to *America's Highways 1776-1976*:

By July 1918, the OPRRE had approved 572 projects, totaling 6,249 miles in length, estimated to cost \$42.28 million, of which \$16.05 million was Federal aid. However, only five projects, totally 17.6 miles, had actually been completed. [*America's Highways 1776-1976*, Federal Highway Administration, page 100]

Although Maryland had to put off construction of the National Defense Highway, State Senator Oliver Metzertott of Prince George's County introduced a bill in early March 1918 urging immediate construction of the road. The *Star* reported:

It provides that the work of construction be commenced at Bladensburg, where the road will connect with the Washington-Baltimore boulevard, and Camp Parole, where it will connect with the Annapolis-Southern Maryland pike. ["Metzertott Bill Calls For Annapolis Highway," *The Sunday Star*, March 24, 1918]

In May 1919, citizens and officials in Prince George's County decided that the planned National Defense Highway should be dedicated as a memorial to the war dead from the county. "A

calvary cross, 20 feet high, will be erected at Bladensburg and the names of the county heroes will be inscribed on a bronze tablet.” John H. Riggles, head of the National Defense Highway and Memorial Cross Association, and Mrs. Edgar Brown, head of the women’s committee for the memorial, expected a dedication ceremony in July 1919. They were inviting Governor Harrington, Secretary of War Newton D. Baker, Secretary of the Navy Daniels, and other dignitaries. [“Highway To Be Memorial,” *The Washington Post*, May 26, 1919; “Prince Georges Plans War Memorial Cross,” *The Evening Star*, June 2, 1919]

(Riggles, a first class at Washington’s Navy Yard, was president of the Prince George’s County Good Road Association. In the years ahead, he would regularly urge the SRC to advance the National Defense Highway – often announcing SRC’s plans to reporters.)

Although the bill was not approved, the State had awarded one contract for the highway by the war’s end with an armistice approved on November 11, 1919. The SRC advertised a contract in April 1919 for the 1.63-mile section between Bladensburg and Bailey’s House. In early May, the State awarded the contract to Pier Construction Company of Baltimore. The new section near Bladensburg would be 16 feet wide, straight, with grades no higher than 4 percent. The project, to be completed in 90 days, also would eliminate Simon’s Hill, which the *Star* called “the terror of automobilists.”

The article added that:

Two years ago, \$125,000 was appropriated for the beginning of the highway from Bladensburg to Annapolis, but that sum was diverted to road work on the eastern shore.

The *Post* began its article about the contract optimistically:

After a twelve-years fight for the “Defense Highway,” from Bladensburg to Annapolis, by the American Automobile Association and others, the project is now at the eve of fulfilment. [“Defense Highway’ Soon,” *The Washington Post*, May 1, 1919]

However, the Washington Suburban Sanitary Commission (WSSC) delayed installation of sewer and water pipes needed prior to the start of construction. By the time the highway work could resume in the fall, the State had added nine-tenths of a mile to the contract. In addition, the SRC advertised a contract for construction of the section from Camp Parole in the direction of Chesterfield.

The *Star* added, “Gov. Harrington has given assurances that this highway will be constructed without delay and its friends are hoping . . . the highway [is] completed before cold weather sets in.” [“Road Bids To Be Opened,” *The Sunday Star*, August 24, 1919]

## **Moving Forward**

By January 1920, the State had made little progress on the National Defense Highway. As the *Star* put it, despite designation of the road as part of the State road system in 1909, work had not begun on the project until the spring of 1919 “for one reason and another.” Even then, the initial Pier contract had been delayed by a “scarcity of labor and one or two other unforeseen

conditions.” In the fall, Pier was able to undertake only the most preliminary work on the initial contract. The second contract, for construction of a 1-mile section west of Camp Parole, also had been delayed into the new year.

Work resumed in earnest on March 10, 1920, with the hope that construction would reach Lanham, Maryland (just beyond the modern day Capital Beltway) by year’s end.

Governor Harrington’s term ended in January 1920, with his successor, Governor Albert C. Ritchie, taking office. He would remain in office for 15 years, leaving on January 9, 1935, after losing his 1934 reelection bid. According to the SRC’s official history:

For his chairman of the Roads Commission the Governor selected John N. Mackall, the career-man who had been made chief engineer just two years before . . . . The nine years of the Mackall administration were the boom years for Maryland and America – the Boom that preceded the Bust. [*A History of Road Building in Maryland*, page 69]

Early in the year, Governor Ritchie received a letter from Navy Secretary Daniels urging construction of the National Defense Highway. Secretary Daniels wrote that expansion of the Naval Academy necessitated “much more travel and the carrying of greater quantities of supplies, [making] the construction of this road one of interest to the Naval Academy as well as to the people of your state.” He hoped that “construction of this road may be undertaken and speedily carried on under your administration.” [“Bladensburg-Annapolis ‘Defense’ Road May Reach Lanham in 1920,” *The Evening Star*, March 11, 1920; “Road Bids To Be Opened,” *The Sunday Star*, 1919; “Mr. Daniels Urges Early Finishing of Defense Road,” *The Sunday Star*, March 21, 1920]

John Riggles also pressured Governor Ritchie to complete the highway. Riggles wrote, “As you know, the National Defense Highway from Bladensburg to Annapolis has been dedicated to the heroes of our world war.” He urged Governor Ritchie to use his influence to complete the highway as far as Seabrook. Riggles also planned a formal protest to the governor for failure to award a contract for another 2 miles of the highway that could be completed before winter. He also invited the WSSC to explain its delay in laying water mains along the route of the highway. [“Asks Road Be Extended,” *The Evening Star*, June 1, 1920; “Plans Road Protest,” *The Evening Star*, August 30, 1920]

With the war over and the Federal-aid highway program beginning to function normally again, Maryland was able to increase the pace of construction on the National Defense Highway.

In April 1921, the SRC awarded a contract to Horace A. Brown and Company of Baltimore for improving a little over a mile of the National Defense Highway from Bladensburg toward Lanham. At the same time, the SRC awarded a contract to continue improvement of Central Avenue for over a mile toward Halls Station. [“Begins Defense Highway,” *The Evening Star*, April 30, 1921]

After continuation of this incremental approach, the *Star* reported in April 1924:

At present about nine miles of the road have been paved with concrete, leaving a dirt span of seventeen miles . . . . The Defense highway begins at Bladensburg and if paved would cut the distance from Washington to Annapolis by automobile almost in half. At present motorists are obliged to travel forty-two miles via Upper Marlboro to reach the Maryland capital as the unfinished span of the Defense highway is impassable in winter.

The occasion for this summary was a statement by Riggles indicating that the SRC planned to award contracts in early spring to pave 2 miles on the Washington end and 4 miles on the Annapolis end of the National Defense Highway. [“Defense Highway Link To Be Paved,” *The Evening Star*, April 13, 1924]

## **Completed**

In February 1925, the Anne Arundel County commissioners “voted to divert the county’s entire proportion of the lateral road funds for this year toward completion of the National Defense Highway.” As the *Post* reported, county officials hoped this action would advance the project to completion 2 years earlier than the SRC planned.

The SRC accepted the county’s decision and decided to devote its Federal-aid highway funds to completing the road in the two counties. [“Will Hurry Building Of Road To Capital,” *The Washington Post*, February 18, 1925; “Defense Highway Work Speeded Up,” *The Evening Star*, Marcy 12, 1925]

In July 1925, the road took an important step forward with completion of the Priest Bridge structure over the Patuxent River. The new bridge was a 216-foot reinforced concrete girder bridge, consisting of six spans. It would carry the National Defense Highway and Robert Crain Highway (Baltimore to Bowie) over the river. A mile of concrete roadway also opened on the Annapolis end of the National Defense Highway. [“Patuxent River Bridge Is Opened,” *The Evening Star*, July 26, 1925]

(The 32-mile Robert Crain Highway, named for an attorney from Charles County who was its chief advocate, “set out boldly on a direct route to connect Baltimore with deep Southern Maryland.” Construction of the highway between Benfield in Anne Arundel County and Mattawoman in Charles County began on September 30, 1922, “with ground-breaking ceremonies at Upper Marlboro, where a monument was erected by private interests to commemorate the event.” Designed by Baltimore architect Howard Sill, the Crain Highway Monument was erected by the Southern Maryland Society and the Merchants and Manufacturers Association of Baltimore. Standing about 30 feet high, the monument is located in an oval median at the intersection of Marlboro Pike, Old Crain Highway, and Main Street.)

(The SRC completed the project in 5 years at a cost of \$1,250,000. On October 22, 1927, the Robert Crain Highway “was opened with pomp and ceremony befitting the occasion – said to have been the most elaborate road opening conducted by the Commission before or since.” Governor Ritchie clipped a ribbon at Priest Bridge and led a caravan of automobiles to the dedication ceremony held at the Marlboro Fair Grounds where an estimated 18,000 people listened to speeches by Governor Ritchie, Chairman Mackall, and Robert Crain. At Benfield, the

new highway connected with the General's Highway to Baltimore, creating a 75-mile link. The Crain Highway was included in U.S. 301. [*A History of Road Building in Maryland*, page 72-73; "18,000 Marylanders Join In Dedication Of New Crain Road," *The Washington Post*, October 23, 1929)]

In February 1926, SRC Chairman Mackall responded to a petition from local officials who were concerned that no funds were available to complete the road. The SRC, he explained, could not proceed until the 1927 State legislature appropriated road funds. On May 18, Anne Arundel County commissioners adopted a resolution loaning \$100,000 to the SRC to build 2.41 miles of the National Defense Highway in the county. The SRC agreed to the loan with the understanding that it would return the county's funds as soon as funds became available. Ultimately, James A. Walton, president of the Annapolis Bank and Trust Company, and other leading citizens took out a personal loan of \$100,000 to complete the highway. ["Road Fund Exhausted," *The Evening Star*, February 28, 1926; "County Provides Fund For Defense Highway," *The Washington Post*, May 19, 1926]

This help spurred leading citizens of Prince George's County to borrow \$80,000 on personal notes and transferred the funds to the SRC to complete the National Defense Highway later that year. In all the county's contributed \$180,000 to complete the road.

The SRC completed the roadbed on November 26, 1926, but it would remain closed until December 22, 1926, to allow the concrete to settle. The final 5.47-mile section in Anne Arundel County intersected the Robert Crain Highway near the new Priest Bridge structure. The entire 24.08-mile project cost \$840,000 or \$35,000 a mile. Because of the time of year, the SRC opened the route near Christmas without ceremony.

Actually, the new road included a detour at Collington where construction of a grade-separation bridge had not been completed over the Pope's Creek branch of the Pennsylvania Railroad. The detour was over "a cinder road in good condition."

The *Star* recalled the contribution of Judge C. C. Magruder, who had died at the age of 84 on June 2, 1923:

The late C. C. Magruder, clerk of the Court of Appeals at Annapolis for many years, was the first to advocate the building of a direct road connecting the National Capital with the seat of the United States Naval Academy.

Mr. Magruder first sought to have the State Legislature pass a bill appropriating the money to build the road, and, failing, he later tried to get the Congress of the United States to grant the necessary funds.

When this gesture also proved unsuccessful, he took the matter before the State Roads Commission and finally succeeded in having that body agree to apportion a certain amount of the annual allotment of State roads funds to Prince Georges and Anne Arundel Counties for the construction of the road.

The *Star* also noted the county contributions:

Had not the counties advanced the money necessary for the work this Fall, the opening of the road would have been delayed for more than a year. No appropriation from the State Treasury could have been made until next June. ["Work is Completed on Defense Highway," *The Washington Post*, November 27, 1926; "Defense Highway Completed Will Be Opened December 23," *The Sunday Star*, December 12, 1926; "12 Miles Saved By New Highway," *The Evening Star*, December 19, 1926]

With the opening of Defense Highway, the route along Central Avenue to Upper Marlboro ceased to be the main road between Annapolis and the District of Columbia. This change in status was reflected in the decision to designate the National Defense Highway as part of the U.S. numbered highway system. When AASHO approved the original routes and numbers in November 1926, the Defense Highway became part of U.S. 50, a road from Annapolis to a junction with U.S. 40 in Wadsworth, Nevada (the original termini). Defense Highway/U.S. 50 met the Baltimore Pike/U.S. 1 at Bladensburg, with the combined routes following Bladensburg Road into the city.

AAA's District edition of *American Motorist* called the opening of Defense Highway "an epochal event to the Washington motorist" because "it cut the distance in this favorite playground nearly in half and has reduced the driving time to three-quarters of an hour." Construction had its share of challenges:

The swamps presented the gravest problem and are the reason for the apparently slow construction of the highway. These places had to be filled in with logs and ground; and then the engineers had to wait patiently for the settling of the fill-in material. Several bridges and the elimination of grade crossings boosted the cost of the project.

In addition, the article cited the funding crisis that would have delayed construction by another year if the two counties had not loaned the needed funds to the State in 1926, without interest, to keep construction going.

The magazine described the drive:

At places the road runs through almost virgin forest and what seem to be impenetrable swamps. But this ribbon of concrete rises and falls, twists and turns and virtually pushes its way through forest and swamp until it emerges upon the slope leading toward the Severn River and the Chesapeake Bay.

Somewhat bare in winter but by no means colorless because of its scattered evergreens and holly, the Defense Highway will be one of the most beautiful drives out of Washington during the spring, summer and fall.

However, the magazine noted some safety problems:

Because of the nature of the country through which the road runs the highway is not by any means devoid of curves. This factor, however, helps to make the drive exceedingly interesting . . . . Motorists who go over the road at the present time should be careful of the shoulders and the curves. The sandy soil of this particular territory is extremely

heavy, so that it is the part of wisdom to keep one's wheels on the concrete. Guard rails have not yet been constructed on the curves, so that it is also wise to approach these cautiously. ["A Capital at Each End" and "Where the Defense Highway Ends," *American Motorist*, District of Columbia Edition, January 1927, pages 8F, 8G]

Maryland and District of Columbia officials staged the formal dedication of the National Defense Highway on July 16, 1927. The event took place on the portico of the Pigeon House Tavern near the new Priest Bridge. Former Governor Harrington, who had signed the legislation authorizing the road, explained that the World War had delayed construction:

This highway is dedicated to public service and not only is it a direct road to Washington and Annapolis, but it brings the tidewater counties of the Maryland Eastern Shore closer, with its many advantages of seashore and agriculture. The road will stimulate increasing trade with the National Capital. The farmers of the Eastern Shore already have a healthy market in the District.

Rear Admiral John Halligan, representing the Navy Secretary, said the road not only brought the Naval Academy in Annapolis and the Navy Department in Washington closer, but would make Annapolis and the academy closer for tourists.

District Commissioner Proctor L. Dougherty described the history of Annapolis dating to 1650 and the Battle of Bladensburg in 1812. The Defense Highway was well "named, running through country replete with historical interests":

The new road connects two of the most important capitals, and will bring the people of Maryland and the District of Columbia in closer harmony with each other and to their mutual advantage as years go on.

Several participants paid tribute to C. C. Magruder; his son Hampton was the master of ceremonies. The *Post* summarized his speech:

Hampton Magruder declared that the occasion was eminently fitting, as it was on March 21, 1791, that George Washington left Philadelphia for a tour of the Southern States, and followed from Annapolis to Washington the old stage road, which is practically the same route followed today by the Defense Highway, with the exception of a few cuts.

He described how the bill creating the artery was introduced in the Maryland Legislature by Senator Frank Duvall, of Anne Arundel County, and the signing of the measure by Gov. Harrington . . . .

Magruder expressed deep regret that his father, who worked so zealously for the highway, passed away before he was to realize his life's ambition.

(President Washington's southern tour – from the capital at Philadelphia, Pennsylvania, to Augusta, Georgia – brought him to Annapolis on March 25-26, 1791, after a harrowing trip across Chesapeake Bay and along the Severn River during a storm. Leaving Annapolis, he traveled to Bladensburg accompanied by Governor John Eager Howard and others, with a rest

break about 13 miles from Maryland's capital. He spent the night at the Indian Queen Tavern in Bladensburg, before traveling to Georgetown for meetings about the country's new capital. The tavern, located at Baltimore Avenue and Upshur Street, is now known as the George Washington House.)

After these and other speeches, a caravan of vehicles carried participants to a dinner at Carvel Hall in Annapolis, led by an escort of Maryland and District motorcycle police. Three buses carried guests, such as the Women's City Club, the Washington Board of Trade, and the Washington Chamber of Commerce. The *Star* described the entrance into the city:

The streets of the old town were decked in flags, in honor of the visitors and the occasion, and the United States Naval Academy Band, seated under the maples in the academy grounds, gave a special concert.

About 300 people enjoyed dinner. Representative Stephen W. Gambrill (D-Md.), one of the post-dinner speakers, discussed his efforts in the House of Representatives to secure a \$1 million appropriation to widen the new highway; he would introduce the bill again in the next Congress.

E. C. Graham, president of the Washington Board of Trade, said the new road made the two cities neighbors but visualized that eventually the road would be transformed into a 50-foot wide boulevard lined with houses.

After the dinner, many participants strolled to the harbor for a fireworks display. The day's events ended with a dance in the St. John's College Gymnasium. ["Defense Highway Formally Opened," *The Sunday Sun*, July 17, 1927; "Annapolis and Capital Join To Open New Defense Road," *The Washington Post*, July 17, 1927]

### **The Peace Cross**

In Bladensburg, as mentioned earlier, the cross road of Defense Highway and the highway to Baltimore, Prince George's County residents wanted to erect a war memorial in the form of a Calvary cross in memory of county residents who died in the war.

A few weeks before the armistice, they held dedication exercises on September 28, 1919, presided over by John Riggles of the good roads and memorial committee, consisted of speeches and breaking ground for the highway and the cross. According to the *Star*:

Secretary of the Navy Daniels paid high tribute to the people of Prince Georges county at the dedication exercises held at Bladensburg, Md., yesterday afternoon as being the first to actually erect a memorial in honor of those who fell in the war . . . .

Mrs. William Farmer, mother of George Farmer of Company F. 115<sup>th</sup> Infantry, 29<sup>th</sup> Division, the first soldier of the county to fall in France, broke the ground for the monument. Ground for the highway was broken by Mrs. Martin Redman, mother of William Redman, the first county boy serving in the Navy to give up his life for his country.

Two thousand people attended the ceremony. [“Prince Georges Praised,” *The Evening Star*, September 29, 1919; “Begin Work on Memorial,” *The Washington Post*, September 29, 1919]

By 1920, the private committee raising funds for the cross had been forced to halt work on the unfinished memorial. Over the next few years, the partially built memorial was widely considered “an eyesore to every ex-service man and to the public generally” at the junction of the roads to Annapolis and Baltimore. [“Incomplete Condition of Memorial Criticised [sic],” *The Sunday Star*, January 8, 1922]

Through the fund-raising efforts of the Snyder-Farmer Post of the American Legion, based in Hyattsville, the war memorial was completed in July 1925 and dedicated on July 12.

Representative Gambrill delivered the dedication address:

Where we of the past generation have failed to prevent war, perhaps you young men of the American Legion or the mothers who gave their sons to the conflict may succeed. You men of Prince Georges county fought for the sacred right of all to live in peace and security and by the token of this cross, symbolic of Calvary, let us keep fresh the memory of our boys who died for a righteous cause.

Mrs. Bradley A. Snyder of Bladensburg, assisted by John H. Hiser of the legion post, unveiled the 40-foot tall cross. An American flag at the base was removed, revealing a bronze tablet

inscribed with the names of 49 county residents who had lost their lives during the war. The bottom of the tablet contained the words of President Wilson on April 2, 1917, before a joint session of Congress urging approval to enter the war in Europe:

The right is more precious than peace: we shall fight for the things we have always carried nearest our hearts – to such a task we dedicate our lives.

The *Post* added:

On the four sides of the base of the monument are the words “Valor,” “Endurance,” “Courage,” “Devotion.” Each arm of the cross measures 5 feet and the base is 12 feet square. It was constructed at a cost of \$10,000 by John D. Early, of this city, sculptor and architect. The material is a mix of concrete and marble. At a distance it resembles sandstone, having about the same color, light brown with a reddish brown border. It faces down the Baltimore pike toward Washington and an American flag flies from a staff to one side. [“Legion Dedicates Bladensburg War Memorial Cross,” *The Washington Post*, July 13, 1925]

In the late 1930s, when the Writers’ Program of the Works Progress Administration was preparing its American Guide Series volume on Maryland, the writers said of the Peace Cross that, “It is surrounded by filling stations, billboards, and hot dog stands.” [*Maryland: A Guide to the Old Line State*, American Guide Series, Oxford University Press, 1940, page 472]

In March 1961, the Snyder-Farmer-Butler American Legion Post transferred the Peace Cross to the Maryland-National Capital Park and Planning Commission. The cost of maintaining the symbol had become too costly for a private organization. The SRC gave the commission the deed to the property holding the Peace Cross. [“Planning Group Gets Peace Cross,” *The Washington Post and Times Herald*, March 12, 1961]

In 1985, the planning commission completed a \$100,000 renovation of the Peace Cross, which had deteriorated due to weather. [“Peace Cross Memorial Rededication Plans Set,” *Washington Informer*, October 30, 1985]

On September 8, 2015, the National Park Service included the Peace Cross in the National Register of Historic Places.

Over the years, the Peace Cross has been the subject of court challenges based on the First Amendment’s establishment clause (“Congress shall make no law respecting an establishment of religion”). In March 2018, the full U.S. Court of Appeals for the 4<sup>th</sup> Circuit upheld the finding of a three-judge panel of the court that the use of taxpayer funds to maintain the cross “excessively entangles the government in religion.” The majority found that, “Nothing in the First Amendment empowers the judiciary to conclude that the freestanding Latin cross has been divested of this predominantly sectarian meaning.” The Appeals Court suggested that the issue could be resolved if the cross were shifted from public land or its arms were removed.

This finding returned the case to the District Court that had found the monument served a “secular purpose.” Defenders of the Peace Cross appealed to the U.S. Supreme Court. [Marimow, Ann E., “Court Upholds Ruling Against Cross Memorial,” *The Washington Post*, March 4, 2018; Barnes, Robert, and Marimow, Ann E., “Supreme Court Will Take Case on Constitutional Challenge to Maryland’s Peace Cross,” *The Washington Post*, November 3, 2018]

On June 20, 2019, the Supreme Court found, 7 to 2, that the cross may remain in place. In an opinion by Justice Samuel A. Alito, Jr., the court cited several factors weighing against a violation of the establishment clause of the First Amendment. Citing “the simple wooden crosses that originally marked the graves of American soldiers killed in the [first world] war,” Justice Alito wrote that the cross had taken on “an added secular meaning” when used in memorials:

Not only did the Bladensburg Cross begin with this meaning, but with the passage of time, it has acquired historical importance. It reminds the people of Bladensburg and surrounding areas of the deeds of their predecessors and of the sacrifices they made in a war fought in the name of democracy. As long as it is retained in its original place and form, it speaks as well of the community that erected the monument nearly a century ago and has maintained it ever since. The memorial represents what the relatives, friends, and neighbors of the fallen soldiers felt at the time and how they chose to express their sentiments. And the monument has acquired additional layers of historical meaning in subsequent years. The Cross now stands among memorials to veterans of later wars. It has become part of the community.

The opinion dismissed arguments that the memorial, erected by a group that includes a Jewish veteran, left off the names of Jewish and black soldiers killed in the war or reflected the heightened racial and religious animosity of the period when it was erected. “We can never know for certain what was in the minds of those responsible for the memorial, but in light of what we know about this [dedication] ceremony, we can perhaps make out a picture of a community that, at least for the moment, was united by grief and patriotism and rose above the divisions of the day.”

Moreover, “it is surely relevant that the monument commemorates the death of particular individuals. It is natural and appropriate for those seeking to honor the deceased to invoke the symbols that signify what death meant for those who are memorialized.”

Justice Alito concluded his opinion:

The cross is undoubtedly a Christian symbol, but that fact should not blind us to everything else that the Bladensburg Cross has come to represent. For some, that monument is a symbolic resting place for ancestors who never returned home. For others, it is a place for the community to gather and honor all veterans and their sacrifices for our Nation. For others still, it is a historical landmark. For many of these people, destroying or defacing the Cross that has stood undisturbed for nearly a century would not be neutral and would not further the ideals of respect and tolerance embodied in the First Amendment. For all these reasons, the Cross does not offend the Constitution.

We reverse the judgment of the Court of Appeals for the Fourth Circuit and remand the cases for further proceedings.

Following the ruling, Maryland Governor Larry Hogan said:

Today’s ruling ensures that this memorial – a dignified tribute to those who came before us and made the ultimate sacrifice – will stand tall and proud for the ages.

American Humanist Assn. et al*; Barnes, Robert, “Supreme Court Rules That Maryland ‘Peace Cross’ Honoring Military Dead May Remain on Public Land,” *The Washington Post*, June 21, 2019; Gresko, Jessica, “Court Upholds Cross on Md. Land,” *The Baltimore Sun*, June 21, 2019]

### **The Future of the Defense Highway**

The Defense Highway had been obsolete almost from the beginning, as reflected in the *American Motorist* article cited earlier.

Safety was a major problem, as reflected in a letter to the *Post*’s editor on August 25, 1927, from “T.P.M.” It began:

In the interest of humanity, it occurs to me that you might be interested in giving further publicity to the “Suicide Lane,” Defense Highway.

On Sunday, August 14, he had driven from Annapolis to Washington in a heavy rainstorm. He saw five wrecked cars:

I don't believe that in any instance it was due to careless driving, but due 100 per cent to the narrowness of the road and to improper sidings. As a matter of fact, the sidings are causing all of the accidents. It is almost impossible not to go off the siding an inch or two in allowing other cars to pass and when this is done it makes a drop of an inch or two and throws the front end of the car diagonally cross the road. If the rear end drops, or if the front end drops, then its natural course is to go to the right into the ditch.

He had made 18 trips on the road in August. "I have seen one complete wreck every day, due solely to the improper sidings." The road was, in short, "a distinct blot on the good, clean reputation of the State of Maryland, and with full knowledge of that, the State officials are daily sending to destruction visitors from other parts of the country as well as the residents, causing untold loss in property damage, with many serious injuries as well as fatalities." ["A Suicide Highway," *The Washington Post*, August 25, 1927]

On February 16, 1928, the House Committee on Roads received testimony from Representative Gambrill on his bill to authorize \$1 million to widen the highway. SRC Chairman Mackall testified along with the Congressman in support of the bill. Mackall said the road left the District by Maryland Avenue. "It turns off the Washington-Baltimore Highway at Bladensburg, which is the first turn [at the Peace Cross war memorial] after you leave the District line." He described the area the road passed through:

The road runs through for the most part a very sparsely settled territory. In Anne Arundel County there are 10 miles which run through an almost undeveloped section of the country. Except for the demand of the road to connect the Capital and the Naval Academy, I don't believe that the Maryland program would have built a road through that sparsely settled country.

Mackall said the State had spent approximately \$900,000 on the project, of which "perhaps \$300,000 or maybe \$350,000" had been State funds:

The Federal-aid participation was limited to a maximum cost first of \$20,000 and then of \$25,000 a mile. The cost of this road ran very considerably over that. In some sections it was as much as \$50,000 to \$55,000 a mile. So, by and large, Maryland's allotment of its own funds has been about two-thirds and the Federal-aid allotment to Maryland has been about one-third.

He added that of the Federal-aid highway funds apportioned to Maryland, all of the funds for the two counties were used on the Defense Highway. Even so, the road was completed only because "the people of Prince Georges and Anne Arundel Counties advanced to the State the money to construct it in 1926." The counties provided the loans in a public-spirited way, "and they have donated their interest as their contribution to having the road completed four years earlier than it would normally have been completed."

Mackall said the road consisted of a 15-foot, two-way paved area on a 25-foot graded area. The State's goal was to pave an additional 15 feet:

It we had constructed it twice as wide, it would certainly have taken us 16 years. I think that for normal purposes a road constructed right away [sic] 15 feet wide is a lot more to be desired than one 30 feet wide to be completed eight years later . . . . I would like to have built it wider. But I believe that a minimum width of road over the whole distance is much more desirable than a road twice as wide for half the distance.

Representative John M. Nelson (R-Wi.) asked Mackall what emergency existed or what benefit to the United States justified the expenditure of \$1 million to widen the highway. Mackall replied:

I don't know that there is any immediate necessity for it. I believe, however, that we ought to use as much foresight as we can. The expression is, "Prepare for war in time of peace." It is certain that a road of greater width than it is now is highly desirable even at the present time for the large numbers of people who go from Washington to Annapolis, especially for week ends, at the present time. [Roads, Hearings before the Committee on Roads, U.S. House of Representatives, 70<sup>th</sup> Congress, 1<sup>st</sup> Session, part 2, 1928, pages 474-479]

The efforts of Representative Gambrill and Chairman Mackall proved in vain. Congress did not provide a special \$1 million authorization to widen the road.

In 1935, the Maryland State Planning Commission cited the Defense Highway as an example of bad planning: "It was adequate only for the traffic at the time it was built; almost at once it was found exceedingly unsafe." To overcome this deficiency and other "examples of waste," the commission called on the State to completely rebuild the primary highway system, often on new location. [*A History of Road Building in Maryland*, page 116]

As the U.S. Bureau of Public Roads (BPR) began planning the Interstate System based on traffic surveys in the 1930s, its landmark report, *Toll Roads and Free Roads* (1939), and its successor, *Interregional Highways* (1944), included maps of the projected network, but they did not include a road between Annapolis and Washington. (For many years, Annapolis would be one of the few State capitals not linked to the Interstate System.)

In the late 1940s, the State began planning an aggressive program of freeway construction, including a limited-access expressway on new alignment to carry U.S. 50. Officials considered some of the freeways for development as turnpikes (Annapolis-Washington, Baltimore-Frederick, and Frederick-Washington). During this pre-Interstate period, the success of the Pennsylvania Turnpike, the first section of which had opened in October 1940, inspired many States to consider turnpike financing in the period before funding for the Interstate System was assured in 1956. Initially, Maryland avoided using Federal-aid highway funds on these routes because Federal-aid law prohibited the use of funds on toll roads. Eventually, Maryland decided to build the new Annapolis-Bladensburg expressway without tolls. [Federal-Aid Highway Act of

1950, Hearings before the Committee on Public Works, U.S. House of Representatives, 81<sup>st</sup> Congress, 2<sup>nd</sup> Session, No. 81-12, 1950, page 430]

The *Star*, in an editorial, supported the project, describing Defense Highway as “dangerously inadequate now in serving a rapidly expanding residential area in Prince Georges County as well as the heavy traffic between Washington and the Maryland shore.” Speaking about the planned Annapolis road and the proposed Baltimore-Washington Parkway, an editorial said the “two fine high-speed automobile roads . . . will do so much to relieve dangerous congestion now on the Baltimore pike and the Defense highway.” [“Two Needed Highways,” *The Evening Star*, July 15, 1948]

(In November 1948, AASHO approved Maryland’s request to extend U.S. 50 from Annapolis to Ocean City on the State’s Eastern Shore. At the time, U.S. 50 became a transcontinental route from Ocean City to San Francisco, California.)

In September 1949, the SRC awarded a contract to C. J. Langenfelder and Son of Baltimore for construction of a 6-mile segment of dual highway from near Annapolis to U.S. 301 (Robert Crain Highway). The State also was advertising a contract for a new bridge across the Severn River for a northern bypass of Annapolis as part of the expressway that would provide a good road from Washington to the Eastern Shore via the Chesapeake Bay Bridge. (Construction of the bridge began in January 1949; the bridge would open on July 30, 1952.)

By 1953, a 10-mile section of dual highway connecting Collington near U.S. 301 with Defense Highway at Parole was open for traffic, although without exits except at either end. The missing link between U.S. 301 and the District line at Kenilworth was scheduled for completion by 1958. [McAler, Charles A., “Annapolis Freeway Expected to Be Finished by ’58,” *The Evening Star*, November 27, 1953]

On August 12, 1954, SRC Chairman Russell H. McCain announced that the Washington-Annapolis Freeway would be called the John Hanson Freeway. Hanson, on November 5, 1781, became the first “President of the United States in Congress Assembled,” following ratification of the Articles of Confederation in March 1781. Maryland had been the last State, on March 1, 1781, to ratify the Articles to begin the “perpetual Union of the thirteen states of America.” Hanson’s selection as the country’s first President, as he is sometimes inaccurately referred to, may have been a reward for his efforts to secure Maryland’s approval of the governing document.

The position was mainly a ceremonial post that he held for 1 year, the term the Articles had set. An article about his service stated:

In his capacity as first president of Congress of the Confederation, Hanson established the first cabinet, consisting of secretaries of war, finance, foreign affairs, and state.

Ironically, Hanson’s first use of the “Great Seal of the United States” was on a 1782 commission authorizing George Washington to exchange war prisoners. Just days before he was to relinquish office, he issued a proclamation authorizing America’s first national Thanksgiving Day to be celebrated the last Thursday of every November.

Hanson had been in poor health during his 1-year term. He retired after leaving office and died on November 15, 1783, in Prince George's County at Oxon Hill Manor, site of his nephew's plantation. He was 62 years old. [Gay, James Thomas, "Americans: 'first president of the united states,'" *American History*, June 1999, pages 12-14]

(Today, Hanson is largely forgotten outside the Washington area. Even within the area, his historical significance is little known. However, Hanson's name survives on a school, a savings bank, other facilities and, of course, the Washington-to-Annapolis Freeway. [Associated Press, "Annapolis Highway Called John Hanson After 1776 Leader," *The Evening Star*, August 12, 1954])

By then, Maryland had begun construction of the freeway from U.S. 301 to MD 704 (George Palmer Highway, named after a banker and community leader from Seat Pleasant) and was planning to let a contract in 1955 for the stretch from MD 704 to the District line at the planned Kenilworth interchange. This major interchange would link the new Annapolis freeway, the Baltimore-Washington Parkway, Kenilworth Avenue, and River Road in Prince George's County, with a link to the East Capitol Street Bridge (which would open August 30, 1956), New York Avenue, and South Dakota Avenue. The interchange project, once awarded, would take 2 years to complete. [Beveridge, George, "Maryland Plans \$59.1 Million For Area Roads," *The Sunday Star*, January 2, 1955]

On October 25, 1957, Governor Theodore R. McKeldin participated in the opening of the Kenilworth Avenue interchange. Commissioner Charles D. Curtiss of BPR and District Highway Director John N. Robertson joined Governor McKeldin in the ribbon cutting. ["First Section Dedicated Of Circumference Road," *The Evening Star*, October 25, 1957]

On October 7, 1961 AASHO approved Maryland's request to transfer the U.S. 50 designation to the new expressway:

This routing will be over new high-type facility, beginning at the junction of present U.S. 50 and U.S. 301 west of Annapolis thence westerly and southwesterly to the Maryland-District of Columbia line at the end of the ramp connections of the Kenilworth Interchange joining with the Washington-Baltimore Parkway.

AASHO also approved the U.S. 50 routing in the District of Columbia:

This routing will be over New York Avenue extended from the District of Columbia-Maryland State line west of the Kenilworth Interchange and will run thence westerly along New York Avenue to junction with present U.S. 50 at Bladensburg Road.

Defense Highway became MD 450.

By that point, the final gap in the John Hanson Freeway, between the George Palmer Highway and the Kenilworth interchange, had remained in place since 1957. After winning election in November 1958, Governor J. Millard Tawes appointed new members of the SRC who made completion of the 4-mile gap a priority.

In October 1961, with completion of the highway just a few months off, the *Post* referred to the “last agonizing four miles of bottlenecks and bumper-to-bumper traffic.” Completion was important “for the hundreds of motorists who have zipped along the Freeway almost to within sight of Washington only to be dumped at the end of it onto two-lane secondary roads.” Particularly in the summer, those last 4 miles could take an hour or two on a Sunday evening when Washingtonians return from the beaches on Maryland’s eastern shore. [“Annapolis-D. C. Freeway To Be Completed Soon,” *The Washington Post and Times Herald*, October 20, 1961]

Finally, Maryland opened what was known as the Ardmore-Kenilworth section on November 21, 1961. Calling the last 4 miles “an annoying gap,” Governor Tawes told the crowd that, “Today, we forge the final link in Maryland’s ‘Golden Triangle,’” referring to the roads connecting Annapolis, Baltimore, and Washington:

It has been predicted that by the year 2000 a total of 10 million people will live in this triangle or regions surrounding. By proper land use, wise location of industry and commerce, by sensible development of water and sewerage systems, by sound and adequate school construction, by well-planned establishment of a transportation network, by intelligent reservation of land for recreation and park facilities – things which this administration has actively supported and will continue to support – this area will realize its full potential as a golden triangle.

He added that his limousine ride from Annapolis on the new 33-mile, \$26.4 million highway was a “wonderful experience.”

Governor Tawes also joined with leaders of the John Hanson Society of Oxon Hill to unveil a plaque honoring the highway’s namesake. [Hope, Paul, “D.C.-Annapolis Freeway Opened As Final Leg of ‘Golden Triangle,’” *The Evening Star*, November 21, 1961; Velsey, Victoria, “Last 4 Miles Of Maryland Road Opened,” *The Washington Post and Times Herald*, November 22, 1961]

On July 28, 1975, as part of a series of Interstate System actions in Maryland and the District of Columbia, the Federal Highway Administration (FHWA) approved designation of a portion of Maryland’s U.S. 50 as part of the Interstate System:

U.S. Route 50 between the Capital Beltway and Annapolis is approved subject to your furnishing, with respect to the portion of this route within the District of Columbia urbanized area, documentation of consultation with the responsible local officials (WASHCOG/TPB) and with local governments concerned (Prince Georges County) as required by paragraph 476.206 of the regulations. It is understood that the specific Annapolis terminus of the route will be determined after the specific location of the Baltimore-Annapolis route is established.

On November 11, 1975, FHWA approved numbers for the series of Interstate shifts, including U.S. 50 as I-68. FHWA and the American Association of State Highway and Transportation Officials (AASHTO, as AASHO was now called) had some doubts about the use of “68” for the route, as expressed in FHWA Administrator Norbert T. Tiemann’s approval letter:

We concur with your position that proposed I-68 be considered a spur route to be numbered 595, 795, or 995. It would not seem desirable to number it I-595 because of the close proximity of the National Airport access road in nearby Virginia which is already numbered I-595. Thus, I-795 would be an acceptable alternative.

It was to remain signed as U.S. 50 until reconstructed to Interstate standards, work that was completed in 1995.

On August 27, 1982, FHWA Administrator Ray A. Barnhart and Administrator Arthur E. Teele of the Urban Mass Transportation Administration approved withdrawal of the remaining section of I-595 in Virginia from the Interstate System. FHWA approved the use of I-795 for a route in the Baltimore area on October 20, 1978 (from a junction with the Baltimore Beltway, I-695, northwest of Baltimore northwesterly to a point new Dolfield Road in Owings Mills). These actions made I-595 available in the Washington area while eliminating I-795 as an option for U.S. 50.

In western Maryland, the State was building an 80.3-mile freeway, known as the National Freeway, from Hancock to the State line, where the road would continue to Morgantown, West Virginia, as a replacement for U.S. 40 through the area. With West Virginia's concurrence, Maryland agreed to shift the I-68 designation to the new freeway while renumbering the Washington-Annapolis as I-595.

On June 7, 1989, AASHTO agreed to designation of U.S. 50 between the Capital Beltway and the terminus in Annapolis as I-595. At the same time, AASHTO approved I-68:

Redesignate as I-68 presently designated U.S. Route 48 from the intersection with I-79 southwest of Morgantown, West Virginia to the intersection with I-70 at Hancock, Maryland.

Although AASHTO was intermediary between the State departments of transportation and FHWA, final designations for the Interstate System required FHWA approval. This approval of I-68 and I-595 came on June 3, 1991. In the approval letter, FHWA Administrator Thomas D. Larson noted:

On November 14, 1975, AASHTO assigned the number I-68 to U.S. 50 between the Capital Beltway and Annapolis, Maryland. While approving the shift of I-68 to U.S. 48 in 1989, AASHTO assigned the number I-595 to former I-68. This action has never been officially reflected in our Interstate records. We are, therefore, advising you that we are today also approving the following route description for I-595:

FAI 595 – From I-95 near Washington, D.C., to east of MD 70 near Annapolis, Maryland.

Despite the redesignation, Maryland chose not to install I-595 signs along the freeway. In the Washington area, the freeway is sometimes referred to as the John Hanson Highway or Hanson Highway, but mostly as U.S. 50 or Route 50.
