The original tunnel terminated at the south borderline of Independence Avenue, and as a result of this conference, they extended the tunnel to C Street, Southeast, so that the area west of the Rayburn Office Building is free for whatever future planning there might be  
.....

Returning to the District’s status on Interstate completion, Whitton recalled, as he had in previous settings, that the District, unlike the States, lacked rural areas. The city could not complete large amounts of rural mileage, as the States could, while the urban segments were in dispute. That difference, he said, “accounts in my judgment for most of the cause, maybe all of the cause for their being behind in the development of the interstate program in the District.”

Senator Metcalf introduced a letter from the Midtown Business Association, dated June 16, that picked apart many aspects of plans for the Inner Loop. After 10 numbered criticisms, the association said that instead of wasting money on the Inner Loop, the funds could better be spent

on the President's plan to modernize Pennsylvania Avenue. By contrast, Senator Metcalf introduced a letter from the National Capital Downtown Committee (Downtown Progress), dated June 18, in strong support of the Center Leg Freeway. Having not seen either letter, Whitton deferred comment.

Senator Metcalf indicated he was "pleased that this proposed tunnel, if it is built, will extend beyond Independence Avenue and pass the Rayburn Office Building." [pages 8-16]

Senator Cooper wanted to understand the designation process for the Center Leg as part of the Interstate System. Whitton and Barnett explained that the Inner Loop, including the Center Leg, had been designated in general terms in the September 1955 Yellow Book. The District then submitted a map showing its proposed beltline facilities and radial routes. BPR's Division Engineer for the District had given tentative approval, but the routes were not fixed in relation to existing roads and buildings. Final approval was dependent on a public hearing, full consideration of the material collected during the hearing, and review of economic effects. The District held the public hearing in September 1963. The next step was a District submittal to BPR for final approval.

Barnett said that Whitton had indicated that while BPR was satisfied with the location of the Center Leg, he would not approve it until Congress passed the legislation allowing construction of the tunnel, ensuring that it could be built as planned. "That is the reason for the bill in front of you now."

Did the District commissioners approve the plans? Barnett was not certain, but he assumed so "or they wouldn't have proposed it to us." Are Interstate funds available? Yes, Federal Interstate funds are available. Does the District have matching funds available? Whitton did not know. Have detailed plans been prepared? Plans had been prepared in sufficient detail for BPR approval, but the District would have to say whether more detailed plans, essentially the PS&E, were ready. Had officials considered a longer tunnel rather than a depressed highway beyond the present limits? Barnett replied, "No, sir. Of course, when you extend the tunnel the cost mounts up."

Senator Cooper wondered how Whitton could say, as he had, that the tunnel would not affect the appearance of the Capitol Grounds when he had not seen detailed designs. The Senator thought the committee had a responsibility to judge that point from models or plans. Whitton acknowledged he had not seen either.

The Senator said he was "very much interested" in General Duke's statement that he could not provide specific information on these points or state the cost of the tunnel. "Wouldn't that be a fundamental fact that the Bureau would know?" The project, Whitton replied, had not proceeded to the stage where a precise estimate would be possible. The District estimate of \$71 million was based on experience in other cities with similar tunnels, but until detailed plans were prepared, estimates were "going to be rather vague but I think close enough for us to determine that the project is justified."

Senator Cooper wanted to know about access roads at the tunnel ends. Whitton expected some kind of interchange near the north and south ends of the tunnel. Would that result in much noise at the entrances? Based on tests, Barnett said there would be “very much noise but not more noise than there is on the streets of the District today.”

What about fumes in the tunnel, Senator Cooper asked. Barnett replied that the tunnel would require artificial ventilation, adding “there is nothing mysterious about that.”

Senator Fong asked what would happen to the Interstate funds if some routes had not been built by the 1972 deadline. Whitton told him:

At that time if the interstate highways are not completed by October and the money paid as we understand it by October 1972, then the law becomes nonexistent, and we revert back to the status before the Congress passed the law in 1956, and all roads then will be completed on a 50-50 basis as we understand it now.

In that case, Senator Fong was under the impression the District would lose \$70 million. Whitton confirmed the amount. What about asking Congress to extend the program beyond 1972? Whitton replied:

My personal opinion is that I don't think we ought to talk about extending it. If we talk about extending the law then some States are going to let up on their push to get the job done, and I just won't talk about it.

(Senator Fong said he asked about the 1972 deadline because he was worried about the Interstates in Hawaii, which was not a State in 1956 (statehood became official on August 21, 1959). On August 29, 1960, BPR had approved three Interstates (designated H-1, H-2, and H-3) for the new State. The Senator thought that because of the delayed approval, Hawaii might be entitled to an extension of the completion date because it was going to be very difficult to meet the current schedule. Whitton replied only, “I hope you keep that position.” [pages 17-22])

Chairman Rowe of NCPC was the next witness. She told the subcommittee that NCPC had approved “the general concept of the center leg of the inner loop, but we have never taken any action on its precise alinement”:

There has been a great deal of concern in the Planning Commission because of its effect on the Capitol Grounds and on the city as to just how the center leg should be designed and where exactly it should go.

Most recently, NCPC's review of the city's capital budget resulted in a statement that NCPC cleared the budget with the understanding that before the city advertised for bids, NCPC wanted to see a model of the project showing an architectural treatment of the Center Leg. She added:

Now as far as this particular tunnel is concerned, perhaps this is the best location, but the Commission hasn't had an opportunity to review it. Our concern is not limited just to where the tunnel might go under the Mall itself, but what is going to happen on either end.

NCPC was concerned about the aesthetics of the approaches to the Capitol and how the Center Leg might affect area residents:

We can't determine it when we have no precise information on just where and how extensive the proposed route is going to be.

Senator Randolph said that as subcommittee chairman, he understood the present bill was permissive. "It does not force the construction or alinement if the other responsible agencies do not approve the specific alinement." [pages 22-24]

Senator Metcalf said he also was concerned about the exits and entries to the tunnel. Rowe said that was one of the reasons that NCPC wanted to see a model "to determine just what a road is going to look like." NCPC did not want to delay planning, so it approved the funds needed to date, but wanted to be sure of the plan before the District advertises for construction bids. The Senator commented, "Apparently you are in the same position as the Bureau of Public Roads in not having seen the final plans." Rowe agreed. [pages 24-25]

The next witness was William Walton, chairman of the Commission of Fine Arts. He cited the two tunnels already under the Mall, "both of which we think are a great addition to the beauty, because they divert traffic from the surface." He continued:

In general we feel this about the center leg, that in principle it would be a step toward preserving the surface beauty. There are already long lines of trucks thundering across the Mall at Sixth and Fifth Streets.

If those were to be underground we think it would be a great improvement. However, we have severe reservations about the design of a tunnel as close as this proposed one is to the Capitol, and in considering it we think one of the great difficulties is the flaw in the planning process. We as the Commission of Fine Arts never see a plan until it is so advanced that we couldn't modify anything but superficial details such as railings and the tailings of ramps and other things on the ground that so many millions have already been committed to a project that any change was impossible. We have a strong feeling that we should be consulted much earlier in the process, not at great expense to the agencies involved, because the submission of preliminary sketches, or discussing locations, because a hole or trench visible on either side of the Capitol is definitely an unesthetic sight that affects the entire landscape.

Senator Cooper wanted to know if the District commissioners or highway officials had sought the commission's advice on design of the freeway and tunnel. "Not on the design, no." The commission feels it is consulted too late to make a real difference, is that right? Yes, and it has been the commission's general experience. Did the commission have any concerns about the freeway being very close to the Capitol grounds. Walton replied:

From what I have seen in the press and so forth, I would say that the length of the tunnel south somewhat solves the problem, but the north approach looks to be like a very bad

one, an open cut that with access highways would have a very negative effect on the Federal landscape. The tunnel should be probably longer if they must have one.

Senator Cooper said that like the commission, he felt the subcommittee was being consulted too late to do anything, “and we are asked to approve the design without knowing what it is.” Walton commented, “We should jointly prevent that.” [pages 26-33]

General Duke and Director Airis were the hearing’s final witnesses. General Duke emphasized the city’s coordination with NCPC, which had “recommended favorably” the center leg, conditioned on review of the design via a model showing the architectural treatment. “This will certainly be done as one of the first steps of the design contract.” He was certain NCPC would concur.

Similarly, he was confident that the District would coordinate with the Commission of Fine Arts “at a very early date, and here again I really have no reason to believe that we will not be able to reach complete agreement on the beauty of this area that must be preserved.” The city also had coordinated with the Architect of the Capitol, NPS, and GSA. Moreover, the Center Leg was included in NCTA’s transportation plan. [pages 33-34; General Duke submitted letters and statements of support for the record, pages 34-44]

Senator Metcalf asked what would happen if the city did not get NCPC’s final approval “that you are so confident of getting.” General Duke was confident of approval; “we have always been successful in getting this approval.” If not, “so far as I know, sir, we wouldn’t proceed with this project.” The Senator asked if that would be the end of the project under the statute. General Duke was not certain whether NCPC, under statute, could kill the project, but said, “We plan to get the approval of the Planning Commission and we will get it.” If necessary, the city would adjust the project to get the approval.

General Duke emphasized that the Center Leg was an important element of the main north-south Interstate route on the East Coast, but also served local needs. By permitting downtown distribution of local and long-distance trips, the Center Leg would relieve local streets of substantial traffic volumes. The tunnel would carry large amounts of traffic from the Southwest and Southeast Freeways under the National Mall to destinations to the north. It also would eliminate the continuous flow of traffic on U.S. 1 along Third Street, just as the 12<sup>th</sup> Street Expressway under the Mall removed some 16,000 daily trips from surface streets. For these and other reasons, the District considered passage of the present bill to be essential because it would allow the city to secure Federal funds to design and ultimately construct the tunnel segment.

Senator Metcalf asked if the city would have an Interstate System if the Inner Loop were built without a Center Leg. General Duke replied that if the rest of the Inner Loop were built, including the North Leg, he would agree that “we could in fact have an Interstate System.” However, the Inner Loop was planned with a Center Leg to provide “that balance of transportation between Maryland and Virginia and the urban area of the District of Columbia required for proper balance of the transportation requirements.”

Senator Metcalf summarized several points:

- The relocation of people for the Center Leg,
- “the fact that you are going to have an open ditch that will cut the city of Washington—the Capital of the United States—into two parts,”
- The cost of \$71-\$72 million, and
- The fact that Whitton said an alternative existed involving an extra amount of mileage.

Despite those factors, “you still feel that the center leg is an important component of this transportation system.”

General Duke replied, “I definitely do.” The city was “quite conscious of the adverse effect of the construction of any public improvement in the District of Columbia.” Recognizing these effects, the city “reluctantly” approved construction, “and I can assure you that the Board, after due consideration of all these factors, unanimously are of the opinion that this leg should be built.” He added that “you should feel confident that the inherent beauty of this area will be protected by the modus operandi in the design of these projects.” NCPC, NPS, and the Fine Arts Commission would assure that (“I should say of all the places in the country where the procedures are designed to insure beauty and insure a proper outcome, the District of Columbia probably would rank one on the list.”)

Of all the north-south legs of the Inner Loop, General Duke said the Center Leg “has encountered the least opposition.” The others had nowhere near the agreement on alignment or architectural treatments.

Senator Metcalf asked if the District had considered boring the tunnel instead of using the cut-and-cover method. General Duke said that at about \$71 million, the cut-and-cover tunnel was already an expensive project. Changes such as boring the tunnel would increase the cost considerably. He said, “one of the basic problems involved in this project is blending the beauty and the inconvenience on one hand with the cost of the project on the other hand.” If Congress approved the bill, the city would immediately hire a consultant to “decide answers to some of these questions right now with respect to the length of the tunnel, the type of the tunnel and this sort of thing . . . .” The consultant also would prepare a model of the facility. The District had not reached that stage because highway officials did not want to hire a consultant for detailed work before receiving permission from Congress for crossing under the Capitol grounds.

Senator Metcalf had to leave the hearing before he completed his questions, but he summarized his concern:

I think that we too would like to have a little more information before we give you permission to trespass on our property. I don’t want to get into a chicken or the egg sort of a situation, but it would seem to this Senator that we would have some sort of an idea as to what kind of approaches and how many acres are going to be taken and what the ramps are going to look like and things of that sort that are very difficult for us who are not professional engineers to conceive.

I think some of the concern that we have is because we don’t feel that your plans are quite established and full enough so that we can give permission for trespass. [pages 45-50]

Senator Cooper introduced a letter from Admiral Phillips, who could not be present to testify, but wanted to express the views of the Committee of 100 on the Federal City. The committee “strongly supports the concept of tunneling beneath the Mall but is gravely concerned about the location and design of the freeway north of Constitution Avenue”:

The Committee of 100 believes that tunneling is imperative for such freeways as must be built in the heart of the Nation’s Capital. We can ill afford more Chinese walls such as the Southwest Freeway or the E Street Expressway now under construction. The proposed tunneling beneath the Mall is an important first step, but the rest of the city’s core, no less than the Mall, deserves like treatment.

Therefore, the committee hoped that Congress, if it approves the bill, will amend it to require that “any continuation of the freeway north of Constitution Avenue likewise be tunneled so as to minimize or eliminate the undesirable features that would otherwise result from the open-trench design.” [pages 50-51]

Senator Cooper suggested that if the tunnel were extended the length of the Center Leg, the number of people displaced would be reduced and the taxable property involved would not be lost. General Duke replied that while such a project would be technically possible, he would question whether it “would be practical and feasible” to prevent relocations or destruction of businesses.

Senator Cooper replied that he wanted to be sure that the idea of extending the tunnel was at least considered by the District and BPR. “Will that be done?” General Duke replied, “Absolutely, sir,” adding that the current plan was “a very rough thing,” subject to review by NCPC and the Fine Arts Commission “from the standpoint of the beauty of the area and the aesthetics of the area.” The tunnel would be extended “to the proper length with these factors in mind.” However, he did not think those agencies “would necessarily indicate that the tunnel would be extended even further than the esthetics might require, for the express purpose of preventing relocation.”

Will the District consult with the Fine Arts Commission? Absolutely. Was it not strange that NCPC withheld its approval until seeing the design and model of a freeway that Senator Metcalf called “a ditch”? “No, sir.” Should Congress not have the same advantage of seeing the design and model before voting on the bill? General Duke understood Senator Cooper’s and Senator Metcalf’s concern, but “I can assure you that the design of the center leg will, I am sure, relieve your mind of such concern.” The city was following the same procedures, in cooperation with BPR, as every State.

Senator Cooper reminded General Duke that there is a difference. “This is the Capital City . . . . I think there is a great deal of responsibility for preserving the beauty not only for today but for the future, and you have responsibility to do that under your job.” He was concerned that the city expected Congress to approve “a bill which would give you carte blanche to do whatever you want to do, and that we would have no authority to do anything else about it.” He thought that if the hearings had accomplished anything, it was the assurance that the city would consult with the Fine Arts Commission and produce plans for NCPC to review “because these agencies are

concerned not only about the construction of the center leg, but the effect upon the beauty of the city.”

Senator Randolph pointed out that General Duke had testified during the previous hearing that the city intended to do those things. The Senator did not object to having these commitments put on the record, “but I would want to point out that we haven’t had to pull this out of General Duke, because he said it before.” General Duke pointed out that Section 2 of the bill addressed this very subject by requiring the permission of the Architect of the Capitol and would be subject to any conditions he prescribed.

Senator Randolph said that he, like every member of Congress, was concerned about the beauty of the Nation’s capital. However, “there is the process of change which must necessarily be part of our life.” When he bought a residence in the District (at 4608 Reservoir Road, NW., in Foxhall Village near Glover-Archbold Park), it was “a rather quiet location, somewhat removed from the hurry of the city.” This condition changed over the years, “and now the cars are constantly moving by this residence, and sometimes backed up for blocks.”

The congestion he saw every day was basically a reflection of the area’s transportation problems. “I could conceive of nothing worse for the District of Columbia than to allow ourselves to bring about insufferable congestion . . . by prolonged consideration of projects that are vital to the fulfillment of the Interstate System.” He added, “I say this with due deference to the needs here of the preservation of the beauty and integrity of the Capitol Grounds themselves.”

Senator Randolph wanted the record to reflect that “this is a matter of concern to be sure. It is also a matter of immediate need. It is also a matter of consultation and counseling.” He was confident that General Duke would ensure all consultations are conducted and that construction would not begin “until the answers to the questions that Senator Cooper and others have advanced are clearly enunciated.”

The hearing came to an end. [pages 52-55]

The *Star* and *Post* recognized that obstacles had been placed in the path of the bill. Lee Flor wrote that General Duke “came under a barrage of cross-examination about the freeway” from Senators Cooper and Metcalf. The hearing “also brought rumbles of protest” from NCPC and the Commission of Fine Arts. Jack Eisen wrote that although the bill moved a step closer to approval, the “hearing didn’t make it sound that way.” He also mentioned the “unusual parliamentary situation” of the bill, which the subcommittee had approved with the condition that the full committee would not act on it. Senator Randolph said he held the subcommittee’s additional hearing “to let his colleagues develop a hearing record, presumably to oppose approval.” [Flor, Lee, “D.C. Engineer Quizzed on Freeway Planning,” *The Evening Star*, June 19, 1964; Eisen, Jack, “Tunnel Under Mall Moves Step Nearer to Senate Approval,” *The Washington Post and Times Herald*, June 20, 1964]

On June 22, General Duke wrote to Whitton in response to the Midtown Business Association’s criticism of the Inner Loop. General Duke did not reply sequentially to each of the association’s 10 points, which he said were “somewhat repetitive.” As for the value of the Inner Loop, it was

similar to inner loops in other cities, had received BPR approval, and would “serve to distribute traffic destined for the District into the downtown area, thereby relieving the city streets from the choking traffic congestion which otherwise will continue to worsen.” It will “be of value to Washington businessmen and residents.”

All highway construction was financed by user taxes, such as the gas tax, so the association’s assumption that Washington residents and businesses would have to pay for freeways that would primarily benefit suburban commuters and others from out of town was in error.

The association was correct that a few organizations opposed the Center Leg, but “the overwhelming majority, including all of the official agencies responsible for transportation planning, have been in favor of the project.”

As for the prospect that the Inner Loop would result in tax loss from acquired properties, the association’s assertion was contrary to experience in other cities “and it is specifically contrary to our experience to date in areas adjacent to our Southwest Freeway and the so-called ‘Foggy Bottom’ area adjacent to elements of the Potomac River and E Street Expressways.”

General Duke agreed with the association that the city had a number of serviceable arterial streets, “but there is no refuting the fact that they are presently heavily congested with traffic and will become more so unless proper additional facilities are authorized and built.”

The association also had referred to the families and businesses that would be displaced as a result of the Inner Loop. The city was dedicated to keeping such losses to a minimum, in part by considering alternative routings. “Once the route is adopted, however, we will lessen the impact on those affected by all means at our disposal.” The city saw great potential for relief in the use of air rights over freeways.

Finally, he pointed out that the Washington Board of Trade, Downtown Progress, and other organizations representing downtown businesses supported the Inner Loop. The city was “convinced that this improvement is definitely in the overall public interest.”

Whitton submitted the letter to Senator Randolph for the hearing record on July 1. [pages 14-15]

### **Final Action on the Center Leg Vehicular Tunnel**

On July 1, the Senate Committee on Public Works approved H.R. 10392. The committee’s report described the project, discussed the hearings, provided a section-by-section summary of the bill, explained the traffic relief it would provide, and offered “Committee Views.” The committee, the views section stated, was satisfied that the Center Leg was an integral part of the Inner Loop and of I-95, and would relieve traffic on city streets.

The bill, the views section continued, was concerned only with the segment that would be built under the Capitol and U.S. Botanic Garden grounds, not any other part of the Inner Loop. Construction was to begin in early 1965 and take 2½ years. The committee saw “no detriment to the esthetic values of the Capitol Grounds and surroundings.” The city would consult with NCPC and the Commission of Fine Arts on final design of the tunnel and approaches. Before the

end of construction, the city would restore the grounds to the satisfaction of the Architect of the Capitol.

The report included Senator Cooper's individual views. "I oppose approval of H.R. 10392 because I do not believe Congress has received adequate information and justification at this time for such legislation." Neither the city nor BPR had prepared detailed plans for the Center Leg even though the tunnel constituted 25 percent of its length. NCPC had approved the general concept, but was withholding final approval until it could review the detailed plans:

It seems to me that the Commissioners of the District of Columbia, in asking the Congress to approve a tunnel under the Capitol Grounds before it has developed detailed plans for the entire project and before it has secured the approval of the National Capital Planning Commission is putting the cart before the horse [sic].

The Committee on Public Works did not have the authority to dictate alignments, but it did have the responsibility to protect the use and beauty of the Capitol grounds. Although the Center Leg would be placed in a tunnel under the grounds, "the segments at either end of the tunnel would be in an open cut below the ground level." Additional roads would be necessary at the exits to accommodate traffic. "There is no way of knowing now what the impact of these additional roads immediately adjacent to the Capitol Grounds would [be] upon the use or beauty of these grounds."

Senator Cooper acknowledged General Duke's commitment to consult with NCPC and the Commission of Fine Arts "but the record shows that no model or detailed plans have yet been submitted to either of these agencies." The Senator was concerned about encroachments on the Capitol Grounds "and a lack of concern by the Congress about the effect of construction projects, both private and public, upon the beauty and use of the Capitol Grounds and the Federal City itself." He urged Congress not to approve the bill "until we have more adequate information." [District of Columbia-Interstate Highway Program Center Leg of the Innerloop [sic] Freeway System, Committee on Public Works, United States Senate, 88<sup>th</sup> Congress, 2d Session, Report No. 1161, July 1, 1964]

When the Senate sought unanimous consent to take up the bill on July 2, Senator Cooper objected, thus postponing the debate, for parliamentary reasons, for a week. The *Star* reacted to the maneuver by saying that if the Senator was worried about esthetics on Capitol Hill, "he is barking up the wrong tree." The reason the segment would be in a tunnel was "to get it completely, totally, forevermore out of sight," with the side benefit of removing a lot of traffic congestion that "makes Capitol Hill today anything but attractive."

Senator Cooper said he would like to see the completed plans and maybe a model of the proposal "before approving the simple bill authorizing the District to cross two little tips of land under the jurisdiction of Congress." The fact was that a model would be prepared early enough to be changed to the satisfaction of NCPC, the Commission of Fine Arts, the Architect of the Capitol "or anyone else in authority." First, the District needs congressional approval of the tunnel before securing Federal-aid funds to begin detailed design.

With the House and the Senate Committee on Public Works having approved the bill, the editors hoped Senator Cooper would not make any further trouble on the Senate floor:

He has no need to. It is [a] safe guess, that this project will be under closer scrutiny from Congress, at every step of the way, than any road in Washington history. [“Unnecessary Roadblock,” *The Evening Star*, July 6, 1964]

The Senate considered the bill on July 8. Introducing the bill, Senator Randolph explained its provisions. Inviting the attention of Senator Cooper, he said the tunnel would not have any adverse impact upon the Capitol grounds, saying “on the contrary, it would enhance the Capitol, so far as it would siphon underground much of the transient traffic that now crosses the Mall in areas immediately adjacent to the Capitol.” He emphasized that the bill was “permissive; it is not prescriptive.” It allowed District authorities to construct the tunnel at the designated location. “It would not designate the alinement of the center leg, nor would it authorize the construction of any other segments of the inner loop freeway system.”

For those still concerned about the results, Senator Randolph quoted from the hearing transcript about the District’s commitment to coordinate detailed plans and a model with NCPD, the Fine Arts Commission, and the Architect. In short, “General Duke has given every assurance of his intention to cooperate fully with other responsible agencies on this matter . . . . He can do no more until the Congress . . . grants the authority to construct the tunnel under the Capitol Grounds” and funding becomes available for the next steps.

After Senator Randolph and other members of the Committee of Public Works engaged in supportive colloquies, Senator Cooper introduced a motion to recommit H.R. 10392 to the committee “with instructions to report the bill back to the Senate not earlier than the beginning of the next session of Congress (or Apr. 1, 1965).” In some ways, H.R. 10392 was a minor bill affecting only the District and the Capitol Grounds. “It is rather difficult to arouse much interest in a bill of this type.” However, “there are important questions connected with the bill.” Approval would commit the Federal Government and the District to spend about \$71 million even though in the absence of detailed plans “we will enact a bill without knowing how it will affect the use and beauty of the Capitol Grounds.” Congress ought to be more concerned about appearances. Some intrusions were innocent, “but sometimes we wake up to find out that something has happened to the Capitol Grounds, or to the city, and we have made it possible.” He said that Administrator Whitton had testified that BPR had not considered any alternatives to the tunnel alignment.

He referred his colleagues to a model exhibited in the rear of the Senate chamber. It had been prepared, not by the District or BPR, but “by a business group in downtown Washington.” It will give the Senators a conception of what the Center Leg will look like (although he emphasized that neither the District nor BPR had approved the model).

Senator Cooper was concerned that if Congress agreed to the bill before detailed plans were prepared, before an official model was made, before NCPD, the Fine Arts Commission, the Architect, and others had a chance to see it, “every agency will be told, ‘Look, we have secured

the authorization from Congress. Now you must approve this center leg' for the estimated cost of \$71 million.”

If the District prepares detailed plans and BPR approves them, “and if these plans were reasonable, and preserved the use and beauty of the Capitol Grounds, I believe that the Congress would approve them.” His objection was to being asked to approve the plans before they are prepared in detail and to the satisfaction of appropriate authorities.

Senator J. William Fulbright (D-Ar.) interrupted to ask if he heard correctly that no alternatives had been considered. When Senator Cooper said that was correct, Senator Fulbright asked why not since surely some alternative must be possible. Senator Cooper assured his colleague that alternatives were available, including tunneling the entire Center Leg.

He was concerned about the general tendency of Congress to approve projects before final plans were available. He cited examples such as the Senate Office Building, the Rayburn Office Building, and Lafayette Square where the Court of Claims wanted to tear down several old structures for a new court building even though the building could have been built anywhere in the city.

He referred to Chairman Rowe’s testimony that NCPC had approved the Center Leg in concept but would not give final approval until it had a model to review. “If the National Capital Planning Commission can demand a model, it seems to me that the Congress can demand a model also before it approves this construction.”

Senator Clifford Case agreed with Senator Cooper. “We in Congress must assume greater responsibility than we have assumed up to now, not only with respect to structures affecting the capitol area, the area in which the Capitol Building and surrounding buildings are located, including the park, and so forth, but also with respect to the whole city.” He did not want a stone turned, a building destroyed, a building erected unless it was in conformance with “a well-designed plan for all public works in the city.” He added, “That is particularly true with respect to highways”:

When we drive out to the airport, for example, and cross onto the southeastern loop—I believe that is what it is called; it is the only part that has been constructed—we are appalled to see what the construction of that small segment of the particular highway project involved has meant to a great area of this city.

Considering that each leg of the Inner Loop has no meaning without the others, he said:

. . . we should not put another penny into the planning and certainly not into the execution of the highway system of this city until we know what the completed job will be like; and we should not go along, authorizing it little by little, bit by bit, each bit of which will be used as an argument for the creation of the next segment, with the result that the whole city will be destroyed.

(In describing his trip along the Southwest Freeway to Washington National Airport, Senator Case apparently was not aware that the widespread destruction of the southwest quadrant of the

city was the result of redevelopment plans, not the freeway. The Senator, based in Rahway, New Jersey, where many constituents likely worked in New York City, lived at 1236 30<sup>th</sup> Street, NW., between M and N Streets several blocks west of Rock Creek Park.)

Senator Fong observed that funds for the Center Leg would remain available through 1972, while Senator Cooper was asking for a delay of only 10 months at most. “I believe the Senator should be accorded the 10 months’ delay.”

The Senate rejected Senator Cooper’s recommittal amendment, 26 to 39. With the amendment rejected, the presiding officer ordered a third reading, the final parliamentary step before passage of the bill.

Senator Thomas H. Kuchel (R-Ca.), who had voted in favor of the amendment, interrupted the procedure to say that he and many other Senators had missed the debate because they were attending an all-day hearing. He asked to be reminded of the issues under discussion.

After further debate, Senator Kuchel introduced a motion to recommit the bill to committee. A parliamentary discussion ensued about whether the motion was in order after the Senate had rejected Senator Cooper’s amendment to recommit only 10 minutes earlier. The new motion was ruled in order because Senator Cooper’s amendment included instructions about timing and the new motion was a straightforward recommittal.

The subsequent debate reiterated the issues. Senator Dirksen, the former chairman of the House District Committee and the Senate District Committee, offered his view:

Mr. President, no one shall say that I have been indifferent to the affairs and needs of the District of Columbia . . . . But this matter is not so world shaking that nations are going to rise and fall by having the project delayed for a little while. After all, \$71 million is not hay, even in Washington; and that evidently is the amount here involved.

We had better make up our minds that if we ever start on this project, there will be scaffolding and construction tools and mountains of earth and excavations all over the place, and that will probably be our “dish” for a matter of 4 or 5 years. I would rather not venture into this matter so lightly.

He cited Virginia Avenue, which he used daily in his commute (from Broad Run Farms, Sterling, Virginia). “It has been so torn up that one must zigzag in and out.” He said he “was content to wait a little while until there is complete and well rounded advice on the question.”

Senator Kuchel’s motion was rejected 25 to 39. The presiding officer then completed the third reading and declared the bill passed. [Vehicular Tunnel Under Parts of the U.S. Capitol Grounds, *Congressional Record-Senate*, July 8, 1964, pages 16106-16115]

On July 14, the District commissioners approved the route of the Center Leg between the Southwest Freeway and New York Avenue, NW. The *Star* described the route:

From its connection with the Southwest freeway, the Center Leg will tunnel under the Mall at Second and C streets S.W. to near Third street and Constitution avenue NW. Congress recently approved the legislation to authorize this tunnel which edges onto Capitol property, and it is now awaiting signature by President Johnson.

After emerging from the tunnel, the Center Leg will follow a corridor between Second and Third streets N.W. until it reaches K street, where it will veer over into the corridor between Third and Fourth streets N.W.

Use of this route will save some major church buildings, but will require the razing of the Miles Memorial Church building at L and Third streets N.W.

Churches which had been threatened but are now spared by the new route are Holy Rosary Catholic Church, Third and F streets; Bibleway Church, Third and L streets N.W., and the Mount Carmel Memorial Church, Third and I streets N.W.

The plan would require demolition of small commercial establishments, apartment houses, and single family homes displacing about 1,200 people.

The commissioners' approval meant that District highway officials could begin developing detailed plans for the freeway. General Duke told highway officials "to work in the early stages with the Fine Arts Commission and the Planning Commission to insure that a proper aesthetic treatment is given."

The commissioners regretted that Congress had not approved the legislation requested in 1963 authorizing the District to pay relocation costs up to \$200 for an individual or family and up to \$3,000 for a business. The Senate had approved the bill. However, Representative John V. Dowdy (D-Tx.), chairman of the House District subcommittee handling the bill, said the bill "got so badly messed up" with his District urban renewal investigation that it became sidetracked. Chairman Dowdy was not sure when his subcommittee would act on the bill. "I had hoped to have it in the urban renewal bill," presently awaiting House action.

Commissioner Tobriner and General Duke referred to the bill as "vital." Maryland and Virginia had such laws. General Duke said that "this means all we can do is pay a property owner the fair market value of his property under eminent domain. We will not be able to pay relocation or moving costs. Therefore we would like to reiterate our support for the legislation which would permit us to pay these relocation expenses." [Pierce, Charles D., "D.C. Approves Central Leg of Freeway," *The Evening Star*, July 14, 1964]

President Johnson approved the bill, known as the Capitol Grounds Tunnel Authorization Act, on July 21, 1964 (Public Law 88-381), without comment.

### **The Georgetown-Rosslyn Bridge**

During the first half of 1964, the consulting firm of Howard, Needles, Tammen and Bergendoff was studying two alternative sites for the Georgetown-Rosslyn Bridge. By June, Representative

Broyhill was increasingly impatient. On June 29, 1964, he wrote to Engineer Commissioner Duke to protest the “confusion and delay” in selecting the site:

It is well over a year ago that a new trial balloon was inflated on a site between Key Bridge and Theodore Roosevelt Island. I feel I speak for all in now demanding that an end be put to such a ridiculous situation.

Broyhill recalled the December 11 meeting in 1963 when District, Virginia, and Federal officials “agreed that the need of a prompt resolution of the question would be recognized by a continuing sense of urgency in all further actions.” Nevertheless, another 6 months had passed “and there has yet been no announcement of any decision on the site for the bridge.” He told General Duke:

The December meeting was held in response to a strong expression by a tired and irritated public calling upon their officials to end the delay. Our citizens had been too long subjected to announcement of first one site and then another and still another with controversies springing up after each new proposal.

Albert Grant, the District Highway Department’s planning chief, told reporters the consultant’s report would be ready in August. It would cover a location downstream of Key Bridge, opposed by Virginia officials, and one upstream. Colonel John Israelson, assistant to General Duke, said that District officials shared Representative Broyhill’s impatience, but fund limitations had prevented an earlier reporting date. When officials receive the report, he said, it will be submitted to the Policy Advisory Committee for review.

Representative Broyhill recommended that when the report is ready, all officials involved should meet to decide on the site and “prevent additional trial balloons from being shot down.” [“Broyhill Protests Delay in Selecting Bridge Site,” *The Evening Star*, June 29, 1964; “Broyhill Prods District On Potomac Bridge Site,” *The Washington Post and Times Herald*, January 30, 1964]

*Star* editors agreed that Representative Broyhill was raising “a timely inquiry,” since after the December 11 meeting, officials expected the study to take 3, maybe 4 months. Now, nearly 8 months had passed. “No consultants’ report. No decisions. No nothing.” The editors recalled how excited General Duke had been when the Policy Advisory Committee “had at least conceded the need for *some* new bridge at *some* future time in *some* location near Key Bridge.” That, however, was merely a victory in one skirmish in a long war. “It is time now to move on the next battlefield.” [“Good Question,” *The Evening Star*, July 3, 1964; italics in original]

A month later, Mr. Leslie Logan, president of Arlingtonians for the Preservation of the Palisades, reported that he had learned from a reliable source that the consulting firm was studying three sites for the bridge, not two as everyone had thought. The three sites, he said, were clustered near the mouth of Windy Run on Arlington Bluff above Three Sisters Islands. Logan’s organization opposed any bridge between Spout Run and Windy Run. He said a bridge between those points would “bury their homes and park land under concrete.”

Facing criticism for this possible intrusion on the Palisades, Arlington County Manager Johnson reluctantly told the Arlington County Board that the consultants were studying only three sites, including the two known sites upstream and downstream of Key Bridge, and one that would touch the Palisades upstream from Three Sisters Islands. He knew this because he had seen a rough draft of the report, which county officials were fact-checking. The final report had been delayed until September after BPR suggested the third site. He refused to divulge the specific locations under study, claiming that at this point the report was technically the consultants' property.

Johnson told the board that the consultants were analyzing only the three sites as well as their potential traffic, economic, social, and aesthetic impacts. Their report "will not be a coercive document and will not express a preference for one location."

In response to Logan's claim that the board had secretly taken a position on the location, Vice Chairman Richards said:

I reiterate and emphasize that no stand has been taken, and no stand will be taken until the consultants' report is available. [Kelly, Brian, "Third Site Being Studied For New Potomac Bridge," *The Sunday Star*, August 9, 1964; Lescaze, Lee, "Bridge Site Eyes North Of 3 Sisters," *The Washington Post and Times Herald*, August 9, 1964]

Officials finally released the consultants' 97-page report on September 18. As Johnson had said, it did not identify any of the sites as superior to the others. The estimated cost of each bridge was in the range of \$53.4 million to \$59.5 million. This "comparatively slender" difference in cost, the report said, should not be a factor in the final choice.

The *Star* and *Post* summarized the findings. According to the *Star*, site 1 downstream from Key Bridge "would have engineering and traffic problems around Rosslyn":

Plan 1 would require tunnels under Rosslyn plaza, extensive reworking of the George Washington Memorial parkway [sic], and apparently would create a "mixing bowl" whereby different streams of traffic would have to weave back and forth at full speed. Costly construction with difficult grade problems would be necessary to eliminate this dangerous weaving, they said.

The *Post* added:

The site below Key Bridge would require "a considerable length of ten-lane highway" on Interstate 66 between Lee Highway in Arlington and Rosslyn Circle.

A route with ten lanes in Virginia, they added, would create operational difficulties and would send the cost of retaining walls on both sides of the Potomac up to \$5 million.

The bridge itself, in this location, the consultant said, "competes esthetically with the monumental Francis Scott Key Bridge" next to it, but would mean "practically minimum disturbance to the Virginia and District shores."

They also said the route would mean demolition of most of the Whitehurst Freeway, which the other plans would retain as the westbound segment of the new Potomac Freeway.

The second site, as described in the *Star*, was north of Key Bridge:

The consultants said that since this would not require building extra freeway facilities through Rosslyn, the plan is much simpler than Plan 1. Maintaining traffic in Rosslyn would be simpler and much of the difficult weaving problem in Plan 1 would be eliminated.

In addition, westbound trucks on the Potomac Freeway would be able to get onto the new bridge only from the left, high-speed lane. Cost construction problems would be involved if merging of high-speed traffic going in different streams were to be avoided on the Virginia side.

For aesthetic reasons, the consultants included two tunnels bored through the high cliffs on the Virginia side of the river. They would be “relatively expensive,” but are feasible.

The *Post* added that this alternative, a few hundred yards north of Key Bridge, would “require only six lanes for I-66 east of the approach to the new river crossing.” The tunnels, according to the consultants, could be built by cut-and-cover techniques, but boring the tunnels would reduce public objections.

The *Star* said that site 3, the alternative that BPR had suggested, called for “a short freeway spur through a high-class Arlington County residential area, with a bridge crossing the river west of the Three Sisters Island in a general line with O street in the District of Columbia.” The *Post* added:

The route, near the Reservoir, would provide “the best distribution of traffic” between I-66 and I-266 (the designation for the new bridge and its approaches), the consultants said, because the two routes would be entirely separated from each other.

But this plan, unlike the other two, does not contemplate a Potomac River Freeway connection with Foxhall rd. and MacArthur Blvd. on the District side. It would also involve an open cut through the Palisades on the Virginia side.

The *Post* summarized:

Under all three proposals, highway officials said, Key Bridge traffic would not be able to get onto the Potomac River Freeway and vice versa. The present connections between Key Bridge and the Whitehurst Freeway, they said, would be eliminated.

Further, the consultants concluded that the crossing, whenever built, would be critically needed even with “an improved mass transit system in location.”

Each site would require relocations:

- Site 1 – 600 people, including families in 90 single-family houses.
- Site 2 – 650 people including families 106 single-family homes.
- Site 3 – about 700 people, including 139 families in single-family homes.

“Most of the relocations would be necessary in Arlington,” Flor wrote.

### **Reactions to the Bridge Report**

The Policy Advisory Committee met for 2 hours to discuss the report. General Duke told reporters after the meeting, “We don’t want to give anyone the impression, by any stretch of the imagination, that the committee has any preconceived views.” The committee would not decide on the location until after a public hearing in November. He anticipated that the committee would complete its decision by the end of the year. [Flor, Lee, “3 Rosslyn-D.C. Bridge Plans Analyzed, but None Indorsed,” *The Evening Star*, September 18, 1964; Lardner, George, Jr., “3 Choices Offered for Bridge Site” and “Committee Will Await Public Reaction Before Deciding on Site for Bridge,” *The Washington Post and Times Herald*, September 19, 1964]

Arlington County Board Vice Chairman Richard said he was “appalled by all three” alternatives and explained that “the two upriver locations do serious damage to the Palisades and the lower one is such a mass of concrete that it will be unacceptable in Rosslyn.” He added, “I do not think our community will find any of these acceptable.” Chairman Roye Lowry said he would “reserve judgment” but was concerned. Under one plan, he said, “there’s at least one place where there would be 17 lanes of concrete marching up Route 66 out of Rosslyn.” The county was planning public outreach opportunities as the board developed its official position.

Arlingtonians for Preservation of the Palisades did not wait for public outreach. Its executive committee held a meeting on September 19 before issuing a statement opposing all three alternatives. “The consequences of the projected crossing would be calamitous to us and to Arlington County.” The report, Logan said, had not convinced the group of the need for a link between I-66 in Virginia and the Potomac River Freeway in the District:

The widespread acceptance of the [Capital] Beltway has destroyed the validity of all traffic surveys made prior to its recent opening and has resulted in a complete transformation of the traffic pattern for the area. [Flor, Lee, “Arlington Has Chance To Protest Bridge Plan,” *The Sunday Star*, September 20, 1964; “Arlingtonians Renew Bridge Fight,” *The Washington Post and Times Herald*, September 20, 1964]

A few days later, the group issued a report saying that Virginia and District highway officials justified the new bridge primarily by saying the crossing was needed for trucks that were barred from the Theodore Roosevelt Bridge. The new bridge would not be needed, the report stated, if officials lifted the truck ban, which was based on advice from President Eisenhower to keep trucks away from the Lincoln Memorial area. If there were any question about repaying Interstate funds to BPR, Congress could answer it with special legislation. The report also recalled NCTA’s statement, in its report of November 1, 1962, that the additional bridge was not needed, a recommendation the group claimed was still valid. [“Let Trucks Use Roosevelt Span Citizens Urge,” *The Sunday Star*, September 27, 1964]

On October 13, 26 officials, including members of the Policy Advisory Committee, toured the three sites from a fireboat transporting them along the coast. On shore, participants visited the sites by bus. As they inspected the upstream site that would take the route through the Virginia Palisades, Elmer K. Timby, the primary author of the consultant report, assured the officials that, “Properly done, it could be just as unobtrusive as the George Washington Parkway.”

Returning to the bus, they passed M. B. Matlack of 2700 North 25<sup>th</sup> Street. Although I-266 would not take his home, it would pass alongside his property. He told the officials, “Most of us back here hate to express ourselves on the bridge because we get profane.”

NCPC Chairman Rowe said she had questions about the traffic justification for the bridge and how many lanes would be needed at the site downstream from Key Bridge. Director Airis assured her, “This is what the tour is for – so you can raise questions and get answers now.” [Lardner, George, Jr., “Officials Inspect Proposed Bridge Sites,” *The Washington Post and Times Herald*, October 14, 1964; “Officials Inspect 3 Proposed Sites For New Bridge,” *The Evening Star*, October 14, 1964]

On November 5, District and Virginia highway officials held a briefing for the Arlington County Board and the Arlington County Planning Commission. The public was invited to attend but this was an opportunity for county officials, not the public, to ask questions and comment on the plans. Highway officials unveiled a 14-page report on Potomac River traffic forecasts for 1985 when the Washington area was projected to have a population of nearly 4 million people. Virginia’s suburbs would increase from 613,000 at present to nearly 1.3 million. Even with the new Georgetown-Rosslyn Bridge and the addition of a span for the 14<sup>th</sup> Street Bridge, the total lanes across the Potomac River would fall 5,000 vehicles an hour short of the 35,700-an-hour design capacity needed in each direction in 1985. These were, the report stated, conservative projections; population growth since 1960 already exceeded predictions.

The traffic projections considered operation of mass transit at peak load, but in the absence of congressional action, the shape of mass transit could not be predicted. Traffic management techniques, such as carpools and staggered work shifts could reduce peak demand, but “some additional cross river capacity” would be needed to make up the difference.

The report covered traffic moving between the Virginia suburbs and the District. It excluded the Cabin John and Woodrow Wilson Memorial Bridges from the calculations because they were “bypass routes.”

Chairman Lowry asked if the traffic justification for the new bridge was primarily because President Eisenhower “had determined not to allow trucks to use the Theodore Roosevelt Bridge.” He wondered if the new bridge could be avoided if the bridge were opened to trucks. The report addressed this question. The new I-266 bridge “is not planned solely to bring trucks into the District.” In fact, the report stated, trucks would constitute only 8 percent of expected cross-Potomac traffic volumes. As a result, allowing trucks on the new Theodore Roosevelt Bridge would not change the need for the additional crossing.

In conclusion, highway officials stressed that “highway department and transit agencies cannot accomplish these objectives by themselves. Regionwide community understanding and cooperation is essential.”

In advance of the meeting, Arlingtonians for Preservation of the Palisades held its own meeting. The association voted to oppose the upstream site “unalterably.” [Lardner, George, Jr., “D.C., Virginia Squabble Over Bridge Plans,” *The Washington Post and Times Herald*, November 5, 1964; Flor, Lee, “Plan for New Bridges Is Viewed as Inadequate,” *The Evening Star*, November 5, 1964]

On the day of the briefing, NCPC approved the concept and location of a \$12 million two-way, four-lane bridge as part of the 14<sup>th</sup> Street Bridge to replace the span closed in 1962. Construction would begin in 1966. The vote was unanimous, taken without opposition or debate. However, some commissioners saw the vote in the context of the proposed Georgetown-Rosslyn Bridge. Commissioner Walter C. Louchheim, Jr., told Engineer Commissioner Duke, “Until we can fully appreciate the new facilities, it would seem that we should postpone action on alternatives up the river.”

Chairman Rowe said she voted for the additional span for the 14<sup>th</sup> Street Bridge in the hope that it would render the upriver bridge unnecessary. Like Louchheim, she argued that if the city replaced the abandoned bridge at 14<sup>th</sup> Street, trucks could use the new span, thus making unnecessary the new upriver crossing, which advocates said would be used by trucks that were banned from the Theodore Roosevelt Bridge. She pointed out that 14<sup>th</sup> Street was “closer to the warehouses and employment centers” in the District. “I’ll vote for your bridge,” she told General Duke, “if you’ll vote against the one upriver.”

General Duke replied, “I’m for both. That’s one of the inevitabilities of life—death, taxes and Duke for bridges.” He realized that approving the 14<sup>th</sup> Street span would “lead to extensive debate” about the need for the bridge near Three Sisters Islands, but said, “I’m willing to take the risk.” He added that he had “complete confidence in the objectivity of the commission regarding the proposal.” He responded to the truck issue by saying that “there’s very little interplay” between the traffic crossing the Potomac at 14<sup>th</sup> Street and the traffic upstream. [Lewis, Robert J., “Planners Approve Span at 14<sup>th</sup> Street,” *The Washington Post and Times Herald*, November 6, 1964; Lardner, George, Jr., “NCPC Backs New Bridge At 14<sup>th</sup> St.,” *The Washington Post and Times Herald*, November 6, 1964]

(Commissioner Louchheim, who had moved to Washington in 1934, was a financial consultant, Democratic Party figure, and patron of the arts. President Kennedy appointed him to NCPC in 1961, a post he held through most of the Johnson Administration, serving as vice chairman for much of that period. He and his wife lived at 2824 O Street, NW., in Georgetown. [Eisen, Jack, “Planning Chief Post May Go To Louchheim,” *The Washington Post and Times Herald*, November 2, 1961; Crawford, Kenneth G., “Walter C. Louchheim, Civic Leader,” *The Washington Post and Times Herald*, February 1, 1973])

On November 6, County Manager Johnson provided a report to the Arlington County Board recommending construction of a Potomac River bridge near Three Sisters Islands. Of the three

alternatives, it was, “the best and only suitable location.” It would require twin tunnels beneath the Virginia Palisades and would connect I-66 with the Potomac River Freeway, with direct connections with MacArthur Boulevard and Foxhall Road. The report suggested shorter, straighter tunnels because they would “save virtually all the houses” in Arlington that were threatened by the original concept. Johnson warned that if a bridge were not built, Arlington County would suffer from more congestion and crashes that would “reduce Arlington’s and Northern Virginia’s competitive position as a desirable place to live, to work and to do business.”

At the same time, Peter Craig of the Committee of 100 on the Federal City released a report attacking the proposed bridge. The report claimed that traffic projections used by District and Virginia highway officials were too high. Only when northern Virginia reached 2.5 million residents would the area reach the traffic levels cited by highway officials. “Such a population is not expected until well after the year 2000, if ever.” Commuters could do without any new bridges for at least 12 years. Craig’s report added that providing new bridges would discourage motorists from shifting to the rapid transit system that was inevitable.

District highway planner Grant disputed Craig’s claim. “Our bridges are up to capacity now. How can they be adequate?” He added, “We can’t continue to stick our heads in the sand.” [Lardner, George, Jr., “Arlington County Manager Urges a Three Sisters Bridge,” *The Washington Post and Times Herald*, November 7, 1964; Flor, Lee, “Span Near Three Sisters Urged in Arlington Report,” *The Evening Star*, November 7, 1964]

*Star* editors, discussing the three alternatives, said of the debate in Arlington County that “the bridge war has taken a sudden diversionary tack.” Instead of focusing on which location would be best, “several vocal, well-organized citizen groups are challenging the need for any new bridge, under any circumstances, along any route.” Arlington County had asked for facts, and the highway officials had provided them. “The results leave no room for reasonable doubt as to the need for the bridge.” The only question was whether one bridge would be enough.

Facts were one thing. “None of this, of course, will deter angry citizens from pressing their attack at public hearings next week before the county planning commission and the County Board.” The editors hoped that county officials would “confine the testimony, as far as they are able, to the job of finding the most desirable route.” [“Decision in Arlington,” *The Evening Star*, November 7, 1964]

All the witnesses at the Arlington County public hearing on November 9 opposed any new bridge. The bridge was not needed, they said, and if built would ruin the Potomac Palisades. They did not trust traffic projections. Mrs. Milton E. Wertz of the North Highlands Citizens Association said, “The overriding need has not been established . . . . The loss of property is therefore not in the public interest and is wholly unacceptable to us.” Mrs. George B. Green of Arlington County Cultural Heritage testified that the Potomac Palisades were part of the county’s heritage and the setting for Arlington National Cemetery and the national monuments in Washington. Her organization was not willing to sacrifice the Palisades for yet another bridge.

Many supported rail rapid transit instead of a new bridge. The Arlington Civic Federation called for a halt to planning for the bridge “until a full mass transit system is approved and designed.”

Too much emphasis had been placed on automobile traffic, with a “great lag in mass transit planning.” The group urged officials “to restore balance in transportation planning.”

Robert K. Gray, who lived on Courthouse Road, agreed, especially in view of likely technological advances:

We resist “one more bridge” proposals which delay the day when we will give rapid transit a chance. In the 1970s, we may be using air cars, vacuum-driven subway tubes, or a method of rapid transit undreamed of today. [“Proposed Span Arouses Critics in Arlington,” *The Evening Star*, November 10, 1964; “Arlington Group Hits Lag in Transit Plans,” *The Evening Star*, November 11, 1964]

The Arlington County Planning Commission held a public meeting on November 12 to question planning staff. It then recommended a moratorium of 3 to 5 years before the county should decide on an I-266 bridge:

Another bridge will tend to slow down the effort to secure rapid transit for the area. While rapid transit may not solve all our problems, we believe that, when a halt is called to the construction of more roads and bridges, we can expect more acceleration for a rapid transit system.

Although population would inevitably increase, the commission did not believe the increase in northern Virginia would “carry with it a similar ratio of increase” in motor vehicle crossings of the river.

In what the *Post* called “a cautiously worded amendment to its recommendation,” the commission said that if the Arlington County Board decided a bridge was needed, a bridge near Three Sisters Islands would be the “least damaging” of the three studied. [“Arlington Planners Propose Delay on Bridge Decision,” *The Washington Post and Times Herald*, November 13, 1964]

In the District, the Democratic Central Committee agreed with those who wanted a moratorium until rail rapid transit was given a chance. In a statement, Lewis H. Ulman, the committee’s deputy planning and housing chairman (and brother of NCPC Chairman Rowe), said:

Sound planning requires that the full impact be first measured of an integrated transportation system with fully operational rail and bus rapid transit. You can’t make adequate traffic forecasts until you’ve got actual mass transit in operation—both rail and express bus.

Despite the numbers invoked by District and Virginia highway officials, another bridge would only “accentuate an already serious imbalance between public and private transportation.” Moreover, a rail rapid transit system would be able to carry 35,000 to 40,000 passengers an hour, approximately the same amount carried by existing bridges during peak periods. Ulman said, “You can’t forecast what the change in commuting habits will be once a subway’s in operation without actually having it there.”

The committee also did not agree that highways and transit were complementary. It wanted a showdown, which it was confident transit would win. ["D.C. Democrats Put Rapid Transit Ahead Of Proposed Bridges," *The Washington Post and Times Herald*, November 13, 1964]

On November 13, the *Star* printed a letter to the editor from Leslie Logan responding to the "rude shock to Arlingtonians" contained in the editorial "Decision in Arlington." Citizens groups in the county, Logan wrote, were proud of the Arlington County Board for "heeding the voice of their constituents and of taking sensible action in asking for full justification for the proposed expenditure of millions of dollars from public revenues." That the bridge was not wanted was reflected, he said, in the November 3 election when candidates favoring preservation of the Potomac Palisades were elected.

Logan also took exception to the reference to "several vocal, well-organized citizen groups" that opposed any bridge anywhere:

We challenge only haste in making decisions based on jerry-built statistics, and in making decisions which are a mockery of the democratic process.

His organization was not anti-highway in general or even anti-bridge. The group strongly supported the new span for the 14<sup>th</sup> Street Bridge complex, as well as improving and enlarging existing bridges. "We concur in the intent of the Congress to provide a balanced highway-rapid transit system for the metropolitan area."

As Chairman Lowry had stated, Arlington County had nine major arterial highways, with I-66 planned to be the tenth. "Under existing methods of financing highway programs," Logan quoted Lowry as saying, "we can be buried in concrete at no cost to ourselves. But such a free burial is not a community objective of Arlington County."

The *Star* added an editor's note after printing the Logan letter:

Mr. Logan's letter implies that the members of the Arlington County Board are firmly opposed, as he is, to the construction of any new bridge in the Palisades area, and that the board requested the new study in order to bolster the opposition. If this is Mr. Logan's belief, we think he is wrong on both counts." ["Decision in Arlington," Letters, *The Evening Star*, November 13, 1964]

Lowry had written to NCTA's Darwin Stolzenbach seeking clarification on whether the agency stood behind its November 1962 claim that the Three Sisters Bridge was not needed.

Stolzenbach replied:

Our resources and full effort have . . . been devoted to preparation of a rail rapid transit proposal, and we have not, and are not, presently able to up-date our earlier studies to a point where meaningful judgment can be expressed concerning bridge requirements.

Since that 1962 recommendation, "there have been a number of significant developments which must influence any subsequent judgments." One development was that he had signed the unanimous Policy Advisory Committee statement in November 1963 that I-266 should be built

across the river at a location upstream or downstream of Key Bridge rather than at Three Sisters Islands. He added that NCTA concurred generally with the District Highway Department's "methods of forecasting" traffic.

As Lee Flor summarized, the letter "may be used by both supporters and opponents of the bridge." [Flor, Lee, "Agency Letter May Add to Bridge Dispute," *The Evening Star*, November 14, 1964]

By a 3-0 vote, the Arlington County Board agreed with the Arlington County Planning Commission by adopting a resolution rejecting all three study locations for the Georgetown-Rosslyn Bridge. The resolution, which said the bridges threatened the "natural beauty" of the Potomac Palisades, argued that the "real need" was rail rapid transit. The members of the public in attendance, many representing civic associations, applauded loudly.

Chairman Lowry and Vice Chairman Richards considered voting against the resolution, primarily because of traffic projections presented by highway officials. However, they decided to abstain so the resolution would be unanimous when it was presented at the joint public hearing on November 24.

The board voted after a public hearing where only three people favored the bridge: representatives of the Arlington County Chamber of Commerce and the Northern Virginia Advisory Board for AAA, and Arlington resident Paul Neff. Leslie Logan led the many opponents. "There is a puzzling intermingling of figures" in the consultants' report. He questioned the validity of their report because the consultants started with the bias that a bridge was needed. He urged the board to oppose all bridge options until a "balanced mass rapid transit highway system is worked out for the whole metropolitan area." [Lescaze, Lee, "Arlington Leaders Vote Against New Bridge on Potomac," *The Washington Post and Times Herald*, November 15, 1964; Kelly, Brian, "Rosslyn Bridge Plans Rejected by Arlington," *The Sunday Star*, November 15, 1964]

George Lardner, Jr., writing in the *Post*, summarized the situation by saying:

Washington is in the midst of another fight over a subway that hasn't been started and a bridge that hasn't been built. In a town addicted to Grand Plans and Monumental Delays it was perhaps too much to expect anything else.

The anti-bridge brigade has taken center stage for the moment. They want a subway before any more bridges. Highway officialdom is making a show of biting its lip and looking brave. But perhaps it can afford to. The subway has yet to get a penny for construction. Congress has already apportioned money for the bridge substructure.

After months of study of alternatives to the Three Sisters Bridge, "the leading candidate . . . seems to be one very near the old one, between the Three Sisters Islands and Key Bridge."

Without the incentive of the pending vote in the House on Chairman Whitener's bobtail subway plan, some of the Policy Advisory Committee members "seem to be shying away from the 'unanimous' stand" that President Kennedy had found "particularly gratifying." NCPC chairman

Rowe said, "Nobody said the bridge was needed. The statement was very carefully worded." The committee had agreed to delete a sentence stating explicitly that the crossing was needed. The highway supporters on the committee, including Administrator Whitton, went along with the deletion in the interest of unanimity. After all, they reasoned, "surely the statement that a bridge should be built amounted to a statement that one was needed."

Lardner recalled the discussion when NCPC approved the new 14<sup>th</sup> Street span on November 5. Chairman Rowe and Commissioner Louchheim saw it as an excuse to delay a decision on the new bridge near Three Sisters Islands. As discussed earlier, Mrs. Rowe maintained that in view of the new bridge in the 14<sup>th</sup> Street complex, "further study" of the Georgetown-Rosslyn Bridge was needed. In any event, Lardner wrote, Mrs. Rowe also felt that rapid rail transit should be given favored treatment by downplaying highways. Asked if her attitude might hurt the subway by antagonizing the highway interests, she replied, "I don't know how important an element that was in the past or will be in the future."

Rowe also had not let up in her opposition to the North Leg, which NCTA had recommended for replacement with "express streets." The advisory committee had sidestepped the controversy by calling for as much tunneling as possible.

As reflected in Stolzenbach's recent letter to Lowry, the NCTA Administrator "is standing mute." Lardner explained:

NCTA appears to be caught in the middle. The House turned the agency down last year, for a host of reasons ranging from labor policy to who should run the rail transit system. But the noisy freeway-vs.-transit fight was not mentioned as an issue.

Now, however, the fight is popping up again.

Stolzenbach is apparently fearful of offending highway officials on the one hand and fearful, on the other hand, of offending some of his most vocal supporters who still contend that to fight for mass transit means to fight against highways.

Peter Craig, chairman of the Committee of 100's roads committee, was continuing his fight:

Craig, a long-time freeway critic, contends that the bridges we have now across the Potomac should stand commuters in good stead for at least 12 more years. Rush-hour traffic isn't really bad, he said.

An attorney who described his freeway fighting as "a part-time hobby," Craig produced for publication today an 80-page report packed with statistics against bridges. The report challenges in exhaustive detail the traffic estimates cited by the Virginia and District Highway Departments in support of their bridge proposals.

By now, District highway officials just sigh when asked about Craig's statistics. Which seems to prove something about statistics, whether Craig's, the District's, or anybody else's.

District planner Grant pointed to the city's traffic projections for cross-river traffic in 1985. These projections showed that cross-river traffic would be congested in 1985 despite the coming of rail rapid transit and the 10 additional planned lanes of bridge crossings. [Lardner, George, Jr., "Battle Between Subway, Highway Interests in New Round," *The Washington Times and Times Herald*, November 15, 1964]

### **The Joint Public Hearing**

On the eve of the joint public hearing, the *Post* took on Chairman Rowe. Under pressure from the White House, she had signed the report to President Kennedy unanimously agreeing on potential sites for the new bridge. Now, she had returned to opposition "with the absurd quibble that she only agreed to the bridge's location; she did not agree to building it." Her alternative, at least for trucks, was curious, the editors said:

Instead of a new bridge from Arlington to Georgetown, she would run the Route 66 traffic down through the riverside parks. Trucks and all, it would pour across the parks, in front of Arlington Cemetery, the Kennedy tomb, and the Pentagon, to the 14<sup>th</sup> Street bridges. There is altogether too much long-distance traffic on those parks now, and this unwarranted invasion of irreplaceable parkland must be firmly resisted.

She and "the misguided Democratic Central Committee" were convinced that people would use rapid transit "if driving becomes sufficiently inconvenient." The editors pointed out that I-66 would largely serve traffic originating in western Fairfax County, which NCTA's current transit plan did not touch. "The campaign against the bridge merely continues a totally profitless stalemate over the city's planning." ["City Nonplanning," *The Washington Post and Times Herald*, November 23, 1964]

The hearing on November 24 took place at the Marriott Twin Bridges Motel in Arlington. The the crowd, as judged by their reaction to the presentations, was mostly opposed to any I-266 river crossing.

Airis began with a prepared statement arguing that without the bridge, the existing streets of Arlington and Georgetown would be overloaded. He also pointed out that cities with rapid transit systems were still building "suitable highway networks," including bridges to support them. He cited New York City, which had "the world's largest and probably best subway system and yet also has large and extensive freeways under construction." He pointed out that just a few days earlier, on November 21, the city had opened the Verrazano-Narrows Bridge as a link between Staten Island and Brooklyn in a city.

Albert Grant cited the traffic forecasts demonstrating that the region's highway system was planned to accommodate 1985 traffic "remaining after full projected diversion to mass transit." "We are proposing a highway system which will be totally inadequate if the mass transit system is not built." Highway plans had been cut back "to an irreducible minimum" in view of projections of diversion to the planned rail rapid transit system.

Arlington County Board member Joseph L. Fisher, who had drafted the approved resolution, summarized why the board opposed any of the bridge locations. The board had studied the traffic statistics “but is not convinced that they demonstrate a need for this route at this time.” The board had expressed “emphatic opposition” to the bridge because “the people of Arlington overwhelmingly do not want this route and its bridge.” He added that, “The damages to Arlington will far outweigh the benefits, not only to Arlington but to outlying areas to the west.” I-266 and the bridge would carve up neighborhoods, cut tax revenue, and hurt the Potomac Palisades and commercial property. “In return for these losses, there would be one more bridge to carry cars and trucks into the metropolitan center, which already is choked with vehicles, many of them in futile search of places to park.”

Peter Craig, representing the Northwest Committee for Transportation Planning, said his organization wanted to “defend Northwest Washington and the Central City against this unwanted and totally unnecessary intrusion” by the proposed bridge. The committee opposed all three sites the report had studied. “They are like asking the city whether it wishes to die by the guillotine, the electric chair or the gas chamber.” Based on the estimate that cross-river traffic would amount to 97,000 peak hour trips in 1985, the bridge would be the wrong solution. That would justify a second rail transit line across the river.

Former Representative Robert Hale (R-Me.), representing the Committee of 100 on the Federal City, worried that officials might overlook “the fact that no necessity has been shown” for a new bridge. The District’s traffic projections, he said, had been “wholly discredited.” He said the Year 2000 Plan, which President Kennedy had approved, emphasized that “every attempt should be made to encourage rush-hour use of transit.” More bridges, such as the I-266 crossing, would “destroy this policy by encouraging even greater automobile commuting than exists today”:

Many people speak as if a man’s right to drive to his work all alone in his Cadillac or Continental was a basic American right guaranteed by the Constitution, like the right to life and liberty. This is nonsense.

In what George Lardner described as “politely phrased dissension,” another member of the Committee of 100, Irving C. Root, said he supported the bridge. A former superintendent of National Capital Parks (1940-1950), Root said that neither he nor other supporters on the Committee of 100 had been consulted. He supported rail rapid transit and the District’s freeway system, but said that “needless and mutually destructive contention” had hindered both options.

Leslie Logan said the proposed bridge would “undoubtedly cause the air pollution problem of the metropolitan area to worsen.” He asked, “Who’s going to live here anyway? People or automobiles?” The Federal-Aid Highway Act of 1962 called for a cooperative areawide planning process before major highway or bridge decisions were approved. The opposition of the Arlington County Board should disqualify the bridge. (The 3C planning process would not go into effect until July 1, 1965.)

On behalf of the District’s Democratic National Committee, The Reverend E. Franklin Jackson said that building the bridge would be “putting the cart before the horse.” He recommended improving bus transit and providing rail rapid transit before adding bridges. If additional

highways had to be built, he urged officials to find a solution to relocation problems posed by the North Leg.

Delmer Ison of the area's bus regulatory commission pointed out that "even with rail transportation, rubber-tired vehicles can be expected to be the dominant means of transportation for commuters in the Washington area." Except for New York City, he said, "no metropolitan area has yet devised a public transportation system, rail, bus or a combination thereof, which has been able to attract more than approximately 25 per cent of the commuters."

Robert K. Gray of the North Highlands Association reiterated his view that highway planners were shortsighted:

A study of technological development in the United States supports the very strong possibility that by 1985 the automobile as we know it may be as outmoded as the buggy whip two decades after Henry Ford.

Near the end of the hearing, with many spectators filing out, several pro-bridge witnesses testified. Worthington H. Talcott of the Joint Committee on Transportation for Metropolitan Washington said, "Anyone who says that Washington does not have a disastrous rush-hour traffic snarl is either blind, misguided or a resident of some other city." He had thought the hearing was held "not to determine whether or not a bridge should be built but rather where it should be built." The location decision should be left to "responsible engineers." (The committee represented the Metropolitan Washington Board of Trade, Federal City Council, National Capital Downtown Committee (Downtown Progress), and the Washington Board of Realtors.)

S. A. DeStefano said the Arlington County Chamber of Commerce believed a bridge in the Spout Run Valley would "offer the greatest service to and has the least impact on Arlington."

On behalf of the Fairfax County Chamber of Commerce, Robert W. Grow urged "the earliest possible practicable construction of I-266," with a preference for the site near Three Sisters Islands. ["Few at Bridge Hearing Support Any of 3 Sites," *The Evening Star*, November 24, 1964; Lardner, George Jr., "Bridge Opponents Ask Subway, Clean Air First," *The Washington Post and Times Herald*, November 25, 1964; Flor, Lee, "Hearing Record on Rt. 266 Span Open to Dec. 8," *The Evening Star*, November 25, 1964]

(Admiral Phillips was not pleased by Irving Root's dissenting voice at the public hearing. During the Committee of 100's December 4 meeting, he said, "the overwhelming majority" of members opposed the bridge. That official view had been stated during the hearing. "To give the impression to the public that a steamroller is operating here is most damaging," he said. Root, who had retired from NPS in 1953 to establish a private practice as a landscape architect and planning consultant and lived on Hillcrest Place in Chevy Chase, defended himself, saying:

We need the very best mass transit and the very best highway system we can have. I'm sorry you consider it such an unsavory report.

(With only a few dissenting votes, the Committee of 100 prohibited public pronouncements of minority views after the Committee takes a stand. Members wishing to dissent may do so, but

they should use their own names without citing their membership in the committee. [“Anti-Bridge Faction Muzzles Opposition,” *The Washington Post and Times Herald*, December 5, 1964; “Irving Root Dies; Was Parks Chief,” *The Washington Star-News*, December 12, 1973])

The *Star* editors again took on the “several small but well-organized groups” that had diverted attention at the public hearing from the point: choosing the best location for the crossing. “But you would never know it from the testimony.” Their idea was to build a full regional rapid rail system. “Then see if the bridge is needed.”

First, the bridge was needed now. Without it, the “carefully-planned freeway systems” in the District and Virginia “cannot possibly function effectively.” Second, the “relatively conservative forecasts of traffic” demonstrate that the new bridge was based on “a firm assumption that the transit system *will* be built—and that only through a balanced combination of freeways and transit can the massive traffic volumes predictable in the future be handled at all.”

NCPC Chairman Rowe, the editorial said, had led a similar campaign a few years earlier, with the support of the District Democratic Central Committee, in the belief that delaying freeways would promote the transit system. “It didn’t. It touched off a feud between highway and transit advocates which brought both programs to a virtual halt.” The White House intervened to “restore the sensible concept of a balanced transportation approach—including, incidentally, the new Potomac bridge.” As for the latest efforts, the editorial ended:

Now Mrs. Rowe and her friends, by their latest irrational attacks, are recklessly threatening once again to reopen the same old wounds. If they have any real concern for the transit program, they should stop before it is too late. And if they fail to do so voluntarily, the White House should again step in and stop them. [“Phony Bridge Issue,” *The Evening Star*, November 27, 1964; italics in original]

Two weeks later, NCPC voted against the District’s budget request for the Three Sisters Bridge, as well as the related request for funds to continue the Potomac River Freeway west of 31<sup>st</sup> Street, NW., in Georgetown. Unnamed sources told reporters that NCPC thought officials should wait until the new 14<sup>th</sup> Street Bridge is completed before approving another Potomac River crossing. The commission also took into account Peter Craig’s criticism of the District’s traffic forecasts. One unnamed commissioner said the city had “not answered” the critique.

For the North Leg Freeway and North-Central Freeway, NCPC okayed the budget request for “emergency” funds for right-of-way acquisition, but said the city would have to seek NCPC approval before spending any of the funds.

The exact impact of NCPC’s actions was unclear because on budget matters, its actions were only advisory. The District commissioners, the Bureau of the Budget, and President Johnson could overrule NCPC’s actions. However, NCPC’s actions often proved influential with Federal officials. [“Planners Oppose 3 Sisters Bridge,” *The Sunday Star*, December 13, 1964]

## The Freeze

The 5-year moratorium Craig had helped secure in the National Capital Transportation Act of 1960 to block construction of the Northwest Freeway was successful. The problem for highway officials was how to get I-70S traffic from Pooks Hill on the Capital Beltway to the Inner Belt in the District.

On a map, the logical entry point was the Wisconsin Avenue corridor. George Lardner, in his column about how different parts of the city protested freeway intrusions, offered some reasons why residents of northwest Washington objected:

- The Wisconsin Avenue corridor would nick the Chevy Chase Club.
- The Wisconsin Avenue corridor would displease some members of the Establishment.
- The Wisconsin Avenue corridor raised the prestigious hackles of the Metropolitan Washington Board of Trade, the Federal City Council, Woodward & Lothrop and the chairman of Riggs National Bank.

These critics favored a riverside link through northwest for I-70S, but that proposal was “subsequently bogged down mainly because of difficulties with parkland.”

Lardner recalled that when the Mass Transportation Survey considered the Wisconsin Avenue corridor:

All the chaps at the Chevy Chase Club had to do, for example, was wait for the late District Commissioner David B. Karrick to show up for a round of golf to tell him what they thought. An old-line Washingtonian, Karrick was not about to preside over the club’s dissolution – or even rearrangement of its golf course.

After two years of hot community debate, Karrick and Engineer Commissioner A. C. Welling outvoted Commissioner Robert E. McLaughlin in April of 1959 to kill the Wisconsin Avenue corridor.

“Boom Boom” Welling (he liked to open new projects with cannon shots) had undoubtedly been cautioned extensively by then to hold his fire on freeway projects through Northwest Washington.

Harland Bartholomew, during his tenure as NCPC chairman, revived the idea, which BPR embraced as the shortest, most direct, practicable alternative for getting I-70S into the city:

That brought out the big guns. Four committees of Congress jumped into the dispute. The upshot was a five-year Congressional freeze on freeway construction through the Northwest west of 12<sup>th</sup> st., nw.

BPR reversed its position after coaxing from the White House, leaving the option of a less direct alternative as eligible for Interstate 90-10 funds. Maryland officials saw a route along the western edge of Rock Creek Park as the best choice, but NPS and park supporters blocked that option.

In 1962, NCPC and NCTA recommended shifting I-70S from the Wisconsin Avenue corridor to Silver Spring to enter the District in the North-Central Freeway corridor, with a link to the I-95 Northeast Freeway. After I-70S and I-95 came together, they would continue on a single alignment to the Inner loop. BPR had accepted the switch for ICE purposes. The Maryland State Roads Commission had hired J. E. Greiner Company to study alternatives for the North Central corridor. Traffic would travel along the Capital Beltway between Pooks Hill and Silver Spring where the interchange for I-70S would be built. [Lardner, George, Jr., "The Game in Upper Northwest," Potomac Watch, *The Washington Post and Times Herald*, December 28, 1964]

As discussed earlier, concerned Members of Congress from Maryland launched an attack on the freeze to revive the more direct routing for I-70S. The failure of the bobtail plan on December 9, 1963, appeared to give new urgency to lifting the freeze. With Senator Brewster's bill in hand, the Senate District Committee wrote to area agencies on December 20, 1963, seeking their views. ["Views Asked On Freeway Thaw in NW," *The Washington Post and Times Herald*, December 21, 1963]

On January 6, Senator Mansfield, the Majority Leader, announced he would not oppose lifting the freeze as long it did not revive the Glover-Archbold Parkway project. By that point, only one agency had responded to the Senate District Committee's letter. The National Capital Regional Planning Council endorsed the bill. ["Mansfield States Stand On Freeways," *The Washington Post and Times Herald*, January 7, 1964]

The Metropolitan Washington Council of Governments (COG) endorsed the bill on January 23. The freeze was "an undue restriction on the planning process."

On January 25, BPR Administrator Whitton reversed the agency's position that Federal-aid planning funds could not be used to plan freeways in the freeze zone. Jack Eisen wrote:

Whitton touched the administrative blowtorch to the controversial freeze following a new ruling from the general counsel of the Bureau of Public Roads. It held that planning funds could be spent seeking a general route, but not funds for preparing construction blueprints.

Eisen emphasized that the reversal did not mean "a highway through the Northwest to Bethesda actually will be built." [Eisen, Jack, "Metro Unit Hits 'Freeze' On Freeway," *The Washington Post and Times Herald*, January 24, 1964; "U.S. Planning Funds Are Ruled Usable on N.W. 'Freeze' Route," *The Washington Post and Times Herald*, January 26, 1964]

### **Getting I-70S into the City**

Regardless of the fate of the freeze, Chairman Funk was awaiting results of the Greiner study of Maryland's proposed 10-lane North-Central Freeway. With the Potomac River, Wisconsin Avenue, and Rock Creek Park corridors blocked, the new alignment east of the park in the Baltimore and Ohio Railroad corridor seemed the best alternative.

The study, expected to take 6 months when the contract was awarded in mid-1962, was still not completed in September 1964. However, on September 30, 1964, Lardner reported:

District and Maryland highway officials have been sitting all summer on a long-awaited report on the North Central Freeway that seems sure to touch off a storm in Silver Spring . . . . Ordered more than two years ago, the report is still in preliminary form.

Officials had received the report in June, but after saying they would release it without delay, had postponed announcements about its content:

Concern by Maryland road officials over the suburban stretch apparently has caused most of the delay. A review committee of highway officials has been working with the consultants on the report's final version.

Officials refused comment on the recommended alignment. Airis said, "It's not ripe yet," and refused even to say how many lanes the freeway would contain. He promised to make it public on November 5. He indicated that the report had been delayed because "we've had trouble nailing down the [Inner Loop] system in the District." Funk would say only that the freeway in Maryland would tie in with the Beltway "east of the B&O tracks."

Nevertheless, Lardner saw a clue in the numbering of Capital Beltway interchanges:

Interchange 21 is at Georgia avenue and Interchange 23 is at Colesville road (U.S. Rte. 29). In between is Sligo Park Golf Course and Holy Cross Hospital—but no interchange 22.

Funk did say that officials planned to hold a public hearing, tentatively scheduled for December 14 in the Silver Spring Armory, before making a final proposal. "It looks to me like most of the pros and cons will develop concerning the county location. It's a much more difficult problem there than in the District." [Lardner, George, Jr., "Freeway Report May Touch Off Suburban Storm," *The Washington Post and Times Herald*, September 30, 1964]

Chairman Funk joined Airis for a press conference at the District Building on November 9, 1964, to announce the results of the study by J. E. Greiner Company. Greiner had identified an 8.8-mile corridor, known as "Railroad-East, Sligo," for a 10-lane freeway that would include reversible middle lanes that could eventually be used exclusively for express buses or a rail transit line. The recommended route was the best of the 18 corridors studied for the route.

In the District, the freeway would begin at the Inner Loop near Rhode Island Avenue, NE., to the north of Union Station, just east of the railroad tracks. It would run east of the railroad tracks (13<sup>th</sup> Street, NE., to Michigan Avenue, NE.) and continue east of the tracks to Buchanan Street, NE., staying east of Catholic University, but cutting through Catholic Sisters College. On the way to the District-Maryland line, the corridor followed the tracks to Kansas Avenue, NE., before cutting away from the tracks to parallel North Capitol Street. The report estimated that the 3.54-mile segment in the District would cost \$75,053,000.

From the east side of North Capitol Street, it would cross the State line into Maryland while turning west to pass north of Montgomery Junior College to Colesville Road. The freeway would run along the north edge of the railroads tracks before curving northward east of 16<sup>th</sup> Street extended. At the intersection of 16<sup>th</sup> Street and Georgia Avenue, the freeway would

begin curving toward the Capital Beltway at Sligo Park Creek before continuing on the west side of the park to University Boulevard. The estimated cost of the 5.31-mile segment in Montgomery County was \$53,151,000.

The North-Central Freeway would have an interchange with I-95, known as the Northeast Freeway, east of South Dakota Avenue in Fort Totten Park between Galloway and Gallatin Streets. The two routes would continue on a combined freeway to the Inner Loop.

The freeway would require the taking of the homes of 1,310 families, the fewest of the 18 routes studied, in part by running parallel to the Baltimore and Ohio Railroad tracks wherever possible.

The District's new relocation agency, authorized by Congress in legislation signed on October 6, 1964 (Public Law 88-629), would help those displaced by the freeway to buy or rent new quarters. In addition, Greiner pointed out that the Housing and Home Finance Agency's mortgage program for low and middle income families could help provide replacement housing.

Based on normal turnover, Greiner predicted that displacees would be able to find housing within 10 blocks of their former homes in no more than 2 years. Speaking of District residents, the consultant report stated, "Relocating of displaced renters could be accomplished in about a year by utilizing existing housing." Greiner recommended construction of housing near the freeway to provide for relocatees as well as to replenish the city's housing stock. "Planning for such construction could be performed sufficiently in advance of the Freeway construction to allow for direct relocation."

Some of the loss of taxable property would be made up by the use of airspace over the freeway, which also would be used to provide housing for displaced families. New housing, with affordable rents, could be built over the freeway. The report singled out a 6¾-acre site for air space housing at Kearny, Monro, and 10<sup>th</sup> Streets, NE. Another promising location for air space housing was a 4¾-acre site at Eastern Avenue and North Capitol and Underwood Streets.

At the press conference, Funk said the construction of freeways was "a sign of the times. We hope that it will be approached as being a difficult problem that has to be solved . . . nothing can be done today that won't hurt a few people." He was keeping his options open in the Wisconsin Avenue corridor, but was not expecting such a "massive artery" as planned for the North-Central Freeway. "It seemed better to move over here and do this first. Then we'll see what happens."

Airis added, "we see nothing in the foreseeable future in the District portion of Wisconsin Avenue." He expected the North-Central Freeway would relieve pressure from traffic for another freeway in the Wisconsin Avenue corridor. Regardless of what might happen in the Wisconsin Avenue corridor, Funk and Airis hoped the proposed alignment could be advanced without the fierce fighting other District freeways had faced.

Lardner's account of the press conference ended:

Hundreds picked up summaries of the Freeway recommendations in the District and Silver Spring yesterday. Civic groups said they wanted to study the report before taking any stand.

[Flor, Lee, "D.C. Hopes to Get Freeway Accord," *The Evening Star*, November 10, 1964; Lardner, George, Jr., "Northeast Freeway Urged Here," November 10, 1964, and "Relocation Stressed As First Freeway Job," November 11, 1964, both: *The Washington Post and Times Herald*]

Reactions were not long in coming. William Hammond Thomas, president of the D.C. Federation of Civic Associations, said his predominantly African-American group could not accept the plan:

Not only are we opposed to it because of the displacement, but also because of the additional tax burden that will be imposed. We're already suffering from the flight of many of our high-bracket taxpayers to the suburbs. Construction of freeways tends to accentuate this deficit.

He acknowledged the material in the Greiner report about relocation and housing:

That all sounds pretty rosy, but I don't know if it's practical. So far most builders have maintained they have been unable to build housing for low and middle income people in the city. If housing were made available, of course, most of my objections would not obtain. But it's something that remains to be proven. There is a housing shortage already.

The predominantly white organization, D.C. Federation of Citizens Associations, offered a qualified okay. Its president, John Immer, said, "Some sort of access from the north and northwest is needed." The recommended route was "probably the best available, particularly in comparison with, let's say, Wisconsin Avenue which is already overcrowded with local traffic." [Lardner, George, Jr., "D.C. Civic Official Says Freeway Plan Ignores Displacees," *The Washington Post and Times Herald*, November 12, 1964]

Editorially, the *Post* and the *Star* endorsed the plan, but with some caveats. The *Post* pointed out that the North-Central Freeway had been on transportation maps for years, at least as far back as the Mass Transportation Survey. "It is generally viewed as the irreducible minimum of new highway construction from central Washington into Montgomery County." It must be built, but "designers have a heavy responsibility to extract the greatest possible benefit from a price that will inevitably be very high both in dollars and in disruption."

The editors were concerned that it would "take an excessive amount of park land in Montgomery," where in some locations the right-of-way would be wider than Sligo Creek Park. It would displace 1,300 families and dozens of businesses employing 3,000 people. "Firm decision" were needed on what would happen to these people and how air rights might be used "before construction begins, because the buildings' foundations ought to be laid when the road is first begun."

With these issues requiring more study, the *Post* editors were concerned about the plan to hold a public hearing on December 15. Considering that highway officials held the Greiner plan for

months (“until the election had passed”), “they can hold up the hearings until the citizens have a chance to consider the proposal.”

The *Star*’s editorial, “Freeway No. 1,” said the northern suburban area was “in greatest need of immediate commuter traffic relief.” As a result, District and Maryland officials should give the North Central Freeway a high priority.

The recommended route “seems clearly to be the best of the 18 alternative routes studied,” but “several other considerations” should be discussed before a final decision. Officials should be more specific about housing plans for relocatees, including use of air rights (“a concept which is not widely understood”). Officials should address whether the 10-lane freeway could accommodate all projected traffic, especially since the southern end would also carry I-95 traffic on the “so-called ‘third route’ to Baltimore.” The editors asked, “Can that be done without creating an intolerable traffic jam near the southern terminus of the freeway?”

If the freeway carried I-70S, the editors were concerned about the Wisconsin Avenue corridor. Because a freeway was virtually impossible, officials wanted to delay consideration of the corridor until the North Century Freeway and a rail transit system were completed:

If their proposal is followed, however, the need for early construction of the rail transit system becomes more imperative than ever. And so do necessary highway improvements serving the western part of Montgomery County—including especially along the George Washington Memorial Parkway along the Maryland side of the Potomac, the completion of which has been permitted to drag on interminably for no good reason.

[“The North Central Freeway,” *The Washington Post and Times Herald*, November 12, 1964; “Freeway No. 1,” *The Evening Star*, November 14, 1964]

The Maryland State Roads Commission and the Maryland-National Capital Park and Planning Commission had scheduled a public hearing on the Maryland section of the North-Central Freeway for November 16, 1964. District highway officials planned to hold a public hearing on their section of the freeway in January.

### **The Emergence of Sammie Abbott**

Even as Maryland officials planned their public hearing, the public was organizing to reject the plan. The center of rejection would be Takoma Park.

Takoma Park was one of the suburbs that began along the Baltimore and Ohio Railroad’s Metropolitan Line. Developer Benjamin Franklin Gilbert purchased land in 1883 along the District-Maryland border. “Of all the suburbs of Washington,” an advertisement claimed in 1886, “none is lovelier in its Natural Scenery, none more healthful, none more accessible.” The advertisement added:

Malaria is Unknown

And Malarial Patients Visiting the Park are Speedily Cured

As with all the early suburbs, access to downtown was critical:

Takoma Park is but six miles from the Capitol, and may be reached (in ten minutes by express) via trains on the Metropolitan Branch of the B. And O. Railroad, there being 19 trains daily, and Sunday church trains, day and evening . . . .

Another highlight of the new community:

The streets and roads are graded and graveled, a force of men being constantly at work keeping the grounds in order.

By 1888, the new town had 1,000 residents served by a train station on the southwest side of the railroad crossing. Takoma Park was incorporated in 1890. The town was located in Maryland, although development spilled across the border into the District where the community became a neighborhood called Takoma. [Historic Takoma, Inc., *Takoma Park*, Images of America, Arcadia Publishing, 2011, pages 7 and 13]

As the *Star* mentioned in its November 16 article about the upcoming public hearing in Maryland, “In opposition to the freeway, a Save Takoma Park Committee has been organized.” One of the organizers, Norman Malakoff of 7417 Holly Avenue, said the committee would meet on November 19 to discuss ways to delay the public hearing until “we can mobilize sentiment for eliminating the highway and substituting a mass transit plan.” [“Hearing Set In Maryland On Freeway,” *The Evening Star*, November 16, 1964]

On November 19, 1964, about 300 residents attended a meeting to discuss strategy for blocking the freeway. Takoma Park Mayor George M. Miller told them that blocking the freeway would not be easy:

Just from a casual perusal of the plan, I can tell you they have the answers to everything you can think of . . . . We can’t attack the plan on the basis that “It’s going through my back yard.” We must say: “It’s not feasible at this time, not proven, not necessary.”

The immediate goal was to convince Maryland officials to postpone the public hearing until late January, considered the “absolute minimum time necessary” for proper study of the plan.

A member of the committee identified as “Sam Abbott” told the crowd that “our only salvation is in subways, rapid transit, monorail.” [“Takoma Park Residents Air Opposition to Freeway Plan,” *The Evening Star*, November 20, 1964; “Freeway Plan Gets Backing In Wheaton,” *The Sunday Star*, November 22, 1964]

Sammie Abbott, as he would more often be called, would emerge as an outspoken, at times outrageous, leader of the anti-freeway movement. In a 1978 interview, he told the *Post* one of the reasons: “I’m a perpetually mad person.” He continued:

“I hate injustice. As far as I’m concerned, I’m living to fight injustice. I’m living to fight the goddamned thing. I’m too mad to sleep.”

Abbott was the grandson of Arab Christians who had fled Syria to escape persecution. Raised in Ithaca, New York, Abbott dropped out of Cornell University in the early 1930s, radicalized by the Depression, to become a union organizer. He and his family moved in 1940 to Takoma Park, Maryland, where, unlike Takoma residents across the nearby State line, he could vote. (District residents could not vote in presidential elections until ratification of the 23<sup>rd</sup> Amendment to the Constitution in 1961 gave the District three votes in the Electoral College that selects the President.)

After World War II, he fought for desegregation and was a peace activist for the Bertrand Russell petition seeking a commitment from the United States never to use atomic weapons again. His activities aroused the interest of the FBI and the House Un-American Activities Committee. When the committee called him to testify, he lost his job in commercial art, was blackballed for more than 2 years, and started a freelance commercial art business. [Levey, Bob, and Levey, Jane Freundel, "End of the Roads," *The Washington Post Magazine*, November 26, 2000, pages 14-15; Armao, Jo-Ann, "Legendary Takoma Park Mayor Dies," *The Washington Post*, December 18, 1990]

Now, the Maryland State Roads Commission had targeted, unintentionally, the Abbott home at 7308 Birch Avenue in Takoma Park for the North-Central Freeway. He became publicity director for the Save Takoma Park Committee. In 1966, the committee would become one of the founding members of the Emergency Committee on the Transportation Crisis (ECTC), the best known of the groups in the D.C. freeway revolt. ECTC, which combined white communities, such as Takoma Park, with African-American communities in northeast Washington, including the Lamond-Riggs Citizens Association, the Brookland Civic Association, and the South Manor Neighborhood Association. Abbott would serve the umbrella organization as publicity director.

Peter Craig should have been pleased that he and his neighbors had saved Cleveland Park, but that was not the case, as Bob Levey and Jane Freundel Levey explained in a November 2000 article about the freeway fights in *The Washington Post Magazine*. Based on an interview with Craig, the Leveys wrote:

But he soon realized that the ban only shoved the specter of freeways onto poorer, blacker neighborhoods. In fact, on official city plans, the cross-park [Northwest] freeway soon was replotted as the North Central Freeway, linking Silver Spring and Capitol Hill—the road that would have led to the razing of 4,000 homes, most of them occupied by black families.

"I couldn't be parochial. I had to oppose the whole thing," he says. Especially after Sammie Abbott called him out of the blue one night and said: "All you care about is the rich white folks west of the park."

"He said to me that I was being pretty provincial," Craig says. "He guilt-tripped me, and being a good Quaker, I fell for it. [Levey and Levey, page 24]

Another anti-freeway activist, Reginald H. Booker, was an African-American in his 20s whose family moved from Philadelphia to Washington in 1950 when he was 9 years old. They lived in

a rental at 360 N Street, SW., until it was bulldozed along with much of southwest for redevelopment. “Ever since,” he told the Leveys, “I think I’ve been involved in every issue in the black community on the front lines.” The family moved to Luray Place near Howard University.

In the 1960s, Booker, a clerk with the General Services Administration, met Abbott, then in his late 50s, at a meeting in Prince George’s County to protest living conditions at an apartment complex along Eastern Avenue. Booker, who did not live there, addressed the tenants, advising them of the importance of organizing and staying vocal. A white man, whom Booker thought looked a little like the nearsighted cartoon character Mr. Magoo, approached him saying, “I liked the way you handled yourself.” Booker and Abbott would be the core of ECTC, with Booker emerging as its president. [Leveys, pages 13-15]

As Maryland officials prepared for their public hearing, the Save Takoma Park Committee was one of several groups organizing for the event.

### **Public Hearing on the North-Central Freeway**

On November 18, the Woodside Park Civic Association in Silver Spring voted overwhelmingly to oppose any of the alternatives for the North-Central Freeway. They recommended postponing the public hearing to allow more time for study. Instead of the recommended route through Silver Spring from 16<sup>th</sup> Street across Georgia Avenue toward Sligo Creek Park, the association urged officials to shift the route to continue along the Baltimore and Ohio Railroad tracks to the Capital Beltway. Debate lasted 3 hours. [“Citizens Hit Freeway in Woodside,” *The Evening Star*, November 19, 1964]

By contrast, the Wheaton Chamber of Commerce announced “strong support” for the freeway. The chamber recommended extending the freeway beyond its planned terminus at University Avenue in Silver Spring. [“Freeway Plan Gets Backing In Wheaton,” *The Sunday Star*, November 22, 1964]

Although officials planned a wide median that could accommodate rail rapid transit, NCTA said, as the *Post* put it, “thanks-but no thanks.” NCTA, with its reduced staff, was planning a new proposal for consideration when the new Congress convened in January 1965. With enactment of the Urban Mass Transportation Act of 1964 on July 7, 1964, and presidential support, NCTA officials had developed a \$431 million proposal that included a route from a Woodside station northwest of the 16<sup>th</sup> Street Railroad Bridge in Silver Spring along the railroad right-of-way to Union Station, where the line would become a subway. They decided that the rail line would provide better service in its alignment along the railroad tracks instead of in the freeway median. District planner Grant said the median could still be used as reversible lanes for peak hours and to accommodate express buses. [“Rail Transit on Freeway Opposed,” *The Washington Post and Times Herald*, November 22, 1964]

The *Post* also had concerns about a freeway that an editorial said “clearly ought to be built.” Editors were concerned about “expansive grassy borders and median strips, rolling carelessly through neighborhoods in which space and housing are in very short supply.” They did not think

rural standards should be applied to an urban freeway. They hoped the public would ask why officials planned “to condemn a swath 300 to 500 feet wide to accommodate 10 lanes of traffic each 12 feet wide.” Citizens also might ask “why it is necessary to take large acreages for long-radius exit ramps, so that cars can drive at 45 miles an hour into local streets where the speed limit is 25 miles an hour.”

Officials claimed that a narrower right-of-way would require concrete retaining walls and overhead trestles that “everybody” opposed. “If narrow margins mean cutting in half the amount of land to be taken, and the number of homes and businesses, this hypothetical ‘everybody’ may turn out to be hardly anybody.” Even as BPR encouraged “the most imaginative innovation in highway design,” the editors had “seen little of it, unfortunately, in this one.” They urged highway officials “to respect the communities through which they must pass.” [“Roads Through the City,” *The Washington Post and Times Herald*, November 22, 1964]

The mention of BPR’s encouragement of imaginative innovation in design was a reference to the agency’s promotion in recent months of human and aesthetic values. Administrator Whitton had released a circular memorandum on March 1, 1963, to BPR’s field leaders acknowledging that BPR and nearly all the State highway department had “given serious consideration in the location and design of highways to the many elements included under the general concept of esthetics.” Despite “criticism from several sources” of highway engineers, he commended them “for their excellent work in these regards.” In view of the pressure of the deadline for completing the Interstate System, he was concerned that officials might tend to lessen their attention to esthetics in designing the final mileage:

Make no mistake about it. A pleasing result is a very important element of our highway program. In the final analysis we will be judged by the appearance of our highways as much as by any other factor. Their adequacy and efficiency are likely to be taken for granted by the driving public. They will give no thought to the thickness of pavement underneath their vehicles but they will know when the pavement is rough, the roadsides scraggly or the view ahead depressing and monotonous.

To give motorists “a keen sense of the beauty and compatibility of the highways they drive,” officials can take several steps, such as fitting the highways to the landscape and designing structures so they have architectural excellence.

These efforts were particularly important in urban areas where location was “limited by high land costs and existing culture and the appearance of the areas along a highway may be unsightly beyond control of the highway engineer.” Highway engineers should not be deterred. They should “observe a design or a detail which improves the appearance of a highway” and take “all of the other steps in the development of highways that this extra effort in insuring pleasing appearance will add greatly to a highway system of which we can all be proud. [“New Conservation in Cities and Along Highways,” *Congressional Record-Senate*, May 20, 1965, pages 11095-11096]

The *Post* editors were referring to a widely covered speech that Whitton gave on December 7, 1964, during AASHO's 50<sup>th</sup> annual meeting in Atlanta. Addressing the Committee on Administration, he urged his colleagues to pay more attention to human and esthetic values:

Unfortunately, the highway builder is widely accused as the despoiler, cutting a swath through the scenery with slide rule and bulldozer. You and I know it isn't so. We're not ignoring the people's needs and desires, their rights and privileges. But are we really doing everything we possibly can?

He pointed out that only 22 State highway agencies qualified for Federal-aid to pay for moving costs of those displaced by highway construction:

Some states still seem to lack sufficient advance scheduling so that right-of-way can be acquired at a deliberate pace. Families and businesses certainly should be entitled to specific information, patient explanation and sympathetic understanding, ample time and help to find new quarters and fair and prompt-payment.

I am sure many of the stories we hear from displaced people are exaggerated, but some indicate rather casual if not calloused treatment at the hands of public officials.

Referring to the circular memorandum of March 1, 1963, he said:

I still see too many roads and structures that look as though they were cranked out of a machine. Esthetics should be one of the basic elements in the design of new highways.

He elaborated on this theme:

We have vastly broadened our concepts of the purpose and effects of our work: the swift, safe, uncongested movement of traffic; comfort and convenience of the traveler; economic growth of areas, states, and the Nation; urban area rebirth and development; attention to human values.

And the last is by no means least. We must never forget that we are building for people, not vehicles.

He added:

In getting from here to there, by highway, we have to keep our eyes open. Let's give them feast instead of famine. [Tyson, Remer, "U.S. Pushes Help for Families Displaced by Roads," *Atlanta Constitution*, December 8, 1964; Steif, William, "Roads Ignore Human Angles, States Told," *Pittsburgh Press*, December 7, 1964; "AASHO Celebrates Golden Anniversary; Looks to Future," *Better Roads*, February 1965, page 14]

On November 23, Chairman-Director Funk responded to requests for postponement of the public hearing. In an address to the Allied Civic Group at the Silver Spring office of the Maryland-National Capital Park and Planning Commission, he announced that the December 15 public hearing, scheduled to begin 9 a.m., would be a "preliminary" hearing. Maryland officials would

join with the District for a second public hearing in January. In addition, he announced that Greiner would open an office on December 1 in the planning commission's headquarters for a 30-day period to hear citizen suggestions.

He said that a decision on a freeway location "takes guts—a lot of them":

Let us be brutally frank and admit that a \$128 million project piercing 8.8 miles of highway in urbanized Washington will hurt some existing communities.

Nevertheless, population growth in Montgomery County made the freeway the "most critical present need of the Maryland portion of greater Washington." He added:

I firmly believe that strong partnership must exist between both mass transit and freeway system, to provide the transportation mobility which a great city needs.

He told his audience, "Assuming no unusual problems, a decision of route [sic] should be reached during the next six months." In that case, the freeway could be in use by late 1970. [Flor, Lee, "Two Hearings Set On New Freeway," *The Evening Star*, November 24, 1964; "2 Hearings Open to Foes Of Freeway," *The Washington Post and Times Herald*, November 25, 1964]

Mayor Miller of Takoma Park vowed to oppose the freeway "at every opportunity," including Maryland's December 15 public hearing and the joint Maryland-District public hearing scheduled for February 4, 1965. In a letter published in the newsletter of the Save Takoma Park Committee, he said, "We shall use every legitimate means available to us to remove or reduce the impact of the freeway." He pointed out that the Maryland-National Capital Park and Planning Commission had recently developed a master plan for Takoma Park that did not show the freeway.

The newsletter also indicated that the committee had established headquarters in the city Municipal Building at 8 Columbia Avenue. The committee also had selected its permanent officials, including Roderick F. Davis as chairman. Sammie Abbott was listed as chairman of the publicity subcommittee. [Flor, Lee, "Takoma Park Mayor Vows to Fight Freeway," *The Evening Star*, December 9, 1964]

Senator-elect Joseph D. Tydings was already hearing about the controversy. Tydings, an attorney and the adopted son of former Senator Millard Tydings, had served in the Maryland House of Delegates and as U.S. Attorney before running for the Senate in 1964. Given his base in Baltimore and Harford County, residents of Montgomery County wanted to let him know about the issues that concerned them.

At the end of a series of town meetings around the State, he attended a meeting at the planning commission's headquarters in Silver Spring. The 100 citizens in attendance raised a number of issues, including the North-Central Freeway. Mary Ann McGuire and Joseph Ferrier of the Save Takoma Park Committee addressed the freeway, with Ferrier telling him:

Not since 1814 when the British burned Washington has there been an attempt to wipe out a city. Now 150 years later someone is trying to do it within the law.

McGuire, saying the freeway would endanger students at five schools, asked him to seek a postponement of the public hearing because the freeway should be delayed “until a mass transit system has been given a chance.”

Thomas Oyster of the Wheaton Chamber of Commerce, told Senator-elect Tydings, “We’re very much in sympathy with the people of Takoma Park, but some people are going to be disturbed by any route that is selected.” The recommended alternative would uproot the fewest people and help relieve congestion in Wheaton. “I know it’s bad when homes are taken, but there are adequate legal avenues for the people.”

Joseph C. Kordella, the county’s public works director, asked the incoming Senator to work to lift the freeze on freeway construction in the District’s northwest quadrant. Kordella and J. Newton Brewer, Jr., emphasized the need to combine highways and rail rapid transit. [“Tydings Hears Pro and Con On North Central Freeway,” *The Evening Star*, December 10, 1964; “Tydings Given Full Bill On Problems of Suburbia,” *The Washington Post and Times Herald*, December 10, 1964]

Senator-elect Tydings followed up by asking Funk and Chairman William J. Stephens of the Maryland-National Capital Park and Planning Commission to postpone the public hearing until January and to schedule it in the evening when “working people” could attend. Because a second, joint hearing was scheduled for February 4 in the District, the Senator-elect said the postponement would not delay the project. Commission vice chairman Byron Sedgwick told reporters, “I see no reason to postpone it.” The record would be kept open for 60 days, he said, and written statements “will carry just as much weight” as statements during the hearing. [“Freeway Hearing Delay Asked,” *The Washington Post and Times Herald*, December 13, 1964]

With the public hearing just days off, the Save Takoma Park Committee decided not to take a stand against the freeway. This decision was in keeping with the committee’s position that the public had not had enough time to study the proposal. Instead, the committee called for “large numbers” of citizens to appear and to “actively protest.” The committee had hired an attorney, James P. Gleason, to testify at the hearing about the lack of sufficient time.

On December 14, about 350 people responded to the committee’s call for an “emergency meeting” to plan for the hearing. In the girls’ gym of Montgomery Blair High School, the crowd heard Chairman Davis say the committee had decided on “a change of tactics,” as described in the *Post*:

Davis and Committee attorney James Gleason asked opponents of the proposed freeway route to turn out for a massive show of opposition Tuesday but not to testify at the public hearing . . . .

Gleason and spokesmen for civic groups in Woodside, Woodside Park and Woodside Forest plan to testify at the hearing also to seek another hearing later to present a detailed case.

State officials had 3 years to develop the freeway proposal, Gleason said, while citizens had only a month.

They asked citizens to arrive at 8:45 a.m for a formal protest carrying picket signs to “demand their rights” in the mode of what Gleason called “passive resistance.” Some of the picket signs were displayed in the gym:

- Stop the Concrete Octopus
- Keep Takoma Park the Azalea City
- Meeting Rushed, Plans Hushed. Why?

[“Big Turnout Urged to Fight Freeway Plan,” *The Evening Star*, December 14, 1964; “350 Persons Plan Protest Of Freeway,” *The Washington Post and Times Herald*, December 14, 1964]

On December 15, 1964, opponents made their presence felt before the public hearing. A picket line formed early with about 50 people carrying signs, including:

- Fight Funk’s Folly
- Funk Will Meet His Waterloo
- In A Blue Funk?
- A Freeway Helps Only The Highway Lobby
- We Want To Fight Funk With Facts

Lee Flor described the audience inside the hearing as “relatively quiet and well-mannered,” but most of the 700 people opposed the North-Central Freeway. Opponents began to boo when Funk arose to explain the purpose of the hearing. The Maryland State Roads Commission and the Maryland-National Capital Park and Planning Commission wanted “every interested citizen and civic group to have ample time to examine engineering reports and testify on the freeway.”

He added, “Nevertheless, we should realize this is an automobile age.” The audience replied “No” and booed. He said that Montgomery County was one of the wealthiest counties in the country and that many families had three cars. “Baloney” someone shouted over a chorus of boos. Funk pointed out, “I’ll bet most of you came here today in cars or buses,” to which the crowd jeered. Saying, “I’m not scared of booing,” he told them that if a referendum were held to force people to stop using their cars to commute, it would be defeated overwhelmingly. The audience jeered.

Gleason, representing what Flor described as the “most highly-organized group opposing the freeway,” argued for more time to review the Greiner report. He said that officials had the report as far back as June, according to news accounts, but citizens were given only a month before commenting. Citizens “cannot participate in these proceedings until a fair opportunity has been given them to properly evaluate the issue.”

Mayor Miller said he agreed. He wanted to make “an official objection to the lack of time permitted for us to study.” He referred to the Takoma Park master plan that had been developed over 6 years in cooperation with the planning commission that did not mention construction of a freeway through the city. Takoma Park, he said, had hired a consultant to analyze the Greiner report. This review was needed because “the impact of the freeway proposal on our city is startling and the ramifications too great for quick and easy analysis.”

In response to a request from Commissioner Brewer, officials agreed to keep the public hearing record open until March 1. This decision meant that officials would not be able to decide how to proceed until at least March – or at least to announce a decision until then. Funk also indicated he hoped to have a meeting or hearing in Takoma Park to give citizens another opportunity to testify.

Freeway supporters also testified. The Silver Spring Board of Trade and the Wheaton Chamber of Commerce spoke in support. Washington Cleveland of AAA’s District Division supported the freeway because the area would face “intolerable congestion” without it.

Some speakers offered suggestions. C. Edward Nicholson of the Woodside Forest Citizens Association recommended that officials forget the “birdwatchers and nature lovers” and consider a route through Rock Creek Park. William F. Hickey of the Woodside Civic Association urged an end to the freeze on freeway construction in northwest when it expired. The Allied Civic Group agreed that a “high speed transportation facility” was needed, but questioned the regional planning for the North-Central Freeway. E. Blair Lee, a former planning commission member, suggested bypassing Takoma Park by crossing the District line near Montgomery Junior College.

Despite the opposition, Funk “had his day,” as Flor put it:

Toward the end of the hearing, in a dramatic confrontation, he stood up from the hearing table, walked around to the witness microphone and calmly told the audience:

“Please! Let’s keep some dignity in this meeting.”

“You brought this problem to us,” because so many people today own so many automobiles, Funk told the audience. “We didn’t bring it to you.”

The consultants for the North-Central Freeway have had a special public relations office in M-NCPPC offices . . . for 15 days, but not more than 40 persons had asked the consultant questions, Funk said.

“I hope this freeway question does get you stirred up, so you get down to work, ask questions and get information,” Funk told the 700 persons. Funk had been booed earlier in the hearing, and was booed once again.

As the *Post* summarized, “The controversial North-Central Freeway won qualified approval from business groups and total disapproval from affected residents yesterday at an all-day hearing in Silver Spring.” [Barnes, Bart, “Noisy Citizens Jeer Plans For North Central Freeway,” *The Washington Post and Times Herald*, December 16, 1964; Flor, Lee, “Freeway Foes Boo Funk At

Silver Spring Hearing,” *The Evening Star*, December 15, 1964; Flor, Lee, “Takoma Park Citizens Win Freeway Fight Concessions,” *The Evening Star*, December 16, 1964]

As an editorial in *The Evening Star* put it:

At Tuesday’s public hearing on the new North-Central Freeway, Maryland Roads Commissioner John Funk casually remarked that “this is an automobile age.” He should have ducked. He was virtually drowned in a chorus of boos.

The reaction, the editorial acknowledged, was predictable:

One section of boo-leaders, for example, was burned up, and rightly so, at the brief time given citizens to prepare for the Maryland hearing. The complex new freeway proposal is contained in a consultant report which took years to develop, but was released only last month. There was no need for such haste in calling a hearing.

Another large contingent of dissenters came from Takoma Park. Their property is directly affected by the freeway. They want the route somewhere else—as every neighborhood always wants every freeway somewhere else. Their reaction was thoroughly normal.

Something else was happening during “Tuesday’s noisy demonstration which was quite out of the ordinary and reason for considerable concern”:

For the fact is that an increasing number of people seem to be working themselves into a belief that maybe, after all, this isn’t an “automobile age”—that traffic congestion really isn’t so bad, and that if people would only stop talking so much about ways to alleviate it, maybe the problem would go away.

This odd notion is being nourished, within the National Capital Planning Commission and elsewhere, by a small group of people whose basic purpose is to halt freeway construction wherever and whenever they can. When they are pushed, they offer the rationale that any degree of future transportation problems can be handled by a mass-transit system. Just the other night, one civic leader proposed telling highway officials that “they won’t get any more roads until they get together with the mass transit people and we have some coordinated action.”

The editorial saw this view as ironic since all government officials supported construction of a rail-transit system as soon as possible. “Indeed, their freeway proposals depend upon the existence of adequate transit facilities to handle future traffic.” Further, the individuals and groups attacking the North-Central Freeway, the Inner Loop, I-66, and the new Potomac River crossing were “not merely hampering these projects. They jeopardize, as well, the prospects for congressional authorization of the transit system.” The editors called on President Johnson to include support for both programs in his January message to Congress on the District budget, and to do so “in terms strong enough to head off a new highway-transit battle.” [“Mr. Funk’s Freeway,” *The Evening Star*, December 16, 1964]

The *Post* recalled Administrator Whitton's words in Atlanta, quoting his references to roads cranked out of a machine, about esthetics in highway design, and never forgetting "that we are building for people, not vehicles." The editorial concluded:

The distance between the Federal Bureau of Public Roads and the District Highway Department is measured in light years. Mr. Whitton has indeed been talking for some time about the need to consider the communities through which the big interstate roads run. He can produce a number of examples of highways ingeniously adapted to urban areas. None of them is to be found in Washington. ["Highway Esthetics," *The Washington Post and Times Herald*, December 19, 1964]

Business and civic interests met in Bethesda on December 17 to consider reviving the Wisconsin Avenue corridor. Opening the meeting, Robert W. Lebling of the Bethesda-Chevy Chase Chamber of Commerce said he hoped the assembled representatives would secure support from their organizations to form a "transit-western" expressway committee. He acknowledged that development might reduce prospects for the corridor, but if the groups supported freeway construction for western Montgomery County, experts might be able to identify freeway options.

Donald Gingery gave what Flor called "a fiery lecture about the history of freeway disputes." Gingery said that in producing the Mass Transportation Survey, officials had built in safeguards against "the kooks and nuts" who would oppose the findings. He blamed NCTA's anti-freeway stance for a 2- or 3-year delay in freeway construction. He thought that a freeway, with a rapid transit line in the median, might still be possible in the Wisconsin Avenue corridor recommended in 1960. [Flor, Lee, "Wisconsin Avenue Area Freeway Drive Reopens," *The Evening Star*, December 18, 1964]

With 1964 nearing an end, Airis appeared on WWDC's "Report to the People." He predicted that construction of the North-Central Freeway could begin in 19 months. He acknowledged the objections by the people living in the "line of march," but said, "I think reason will prevail." One reason was the legislation allowing the District to pay not only to acquire right-of-way but to help relocate displaced families and businesses.

Citizens criticized the width of right-of-way for freeways, but freeways had to be built not only for present needs but with room to expand to meet future traffic increases. The Mass Transportation Survey and the Year 2000 Plan, he said, recommended freeway corridors in the northwest, northeast, and north-central part of the city. "We boiled it down and we can go through one at a terrific savings to homes and businesses." With construction of the North-Central Freeway, he did see a need for additional northern freeway connections.

(Airis also predicted construction of the Potomac River Freeway and an I-266 river crossing in the Key Bridge area, despite NCPC's objections, to link with I-66. "It's unthinkable to bring all those lanes into Arlington without a connection.") ["Airis See 1967 Start on Freeway," *The Washington Post and Times Herald*, December 27, 1964]

Two days later, the D.C. Citizens Committee on the Freeway Crisis hosted over 150 Washingtonians for a rally at Plymouth Congregational Church at North Capitol Street and

Missouri Avenue. Dorothy M. Maultsy, a member of the District Democratic Central Committee, was chairman of the committee, which had been formed 2 weeks earlier to coordinate opposition to the North-Central Freeway. She told the group that the North-Central Freeway was “neither needed nor wanted by citizens of the District.” She questioned the accuracy of population projections, homes to be acquired, and other data the planners had used to support the freeway. The citizens committee had formed several fact-finding subcommittees to prepare for the next public hearing, scheduled for February 4. She circulated petitions urging “immediate construction of a rail rapid transit system for the District and adjacent areas” and opposed “any freeway in or out of the District of Columbia.

Sammie Abbott, representing the Save Takoma Park Committee, attended the meeting along with attorney James Gleason. Richard Williams represented the Northwest Committee for Transportation Planning. [“Residents Organize To Fight New Freeway,” *The Evening Star*, December 29, 1964]

George Lardner, in his column comparing protests in the affluent Wisconsin Avenue corridor and the less affluent North-Central Freeway corridor, suggested that both corridors made sense:

Both may be needed one day. Even Gen. Braddock thought the Wisconsin avenue corridor the best way to get to Rockville and that was in the French and Indian War. The North Central, on the other hand, would serve the more populous Silver Spring and Wheaton areas, among others.

Naturally no one wants a freeway to come barreling through his living room. Members of the Establishment have just as much right to object to one as the families in the path of the North Central.

Lardner, however, thought District highway officials should look critically at the decision to make the freeway ten lanes wide “precisely because they say they are going to leave Northwest Washington alone”:

The North Central should be able to stand on its own feet. But it seems unfair to ask residents along the route to make room for ten lanes in order to buy time for the Northwest. Property owners there should one day have to face up to traffic demands in their neck of the woods, too. [Lardner, George, Jr., “The Game in Upper Northwest,” *Potomac Watch*, *The Washington Post and Times Herald*, December 28, 1964]

As the year ended, John Immer, president of the D.C. Federation of Citizens Associations, wrote to Engineer Commissioner Duke on December 29. If the District did not change its plans for the North-Central Freeway, the federation would oppose the plan. First, the District should ensure housing is available for the more than 700 families the freeway would displace. Because most of the families would not be eligible for public housing, Immer proposed “that immediate plans be prepared for certain portions of the proposed freeway to be made ready for development by private developers.” In addition, the route should be rerouted to avoid schools and playgrounds, the destruction of which would obliterate the character of affected neighborhoods. Further, the proposed width of 300 feet was “unconscionable.” He wrote, “This right of way must be pared

back to realistic dimensions,” adding that a six-lane freeway “should be ample for all non-rush-hour traffic.”

The *Post* illustrated its article about Immer’s letter with a front and back view of Sammie Abbott’s homemade Christmas card, which he said he had mailed to 500 friends, local government officials, Congressmen, and city planners and architects around the country. On the front, he had drawn a depressed Santa, with the words:

It’s not a very Merry Christmas to just find out . . .  
that a ten-lane freeway will go right through our home—

On the back, he had drawn picketers, each identified by name. Their signs read:

Susan – Don’t Bury D.C. in Concrete  
Nancy – Must People Move So Cars Can Move?  
George and Malvina – Stop the Concrete Octopus/Save Takoma Park From Bulldozers  
Ruth Abbott – Don’t Use Federal Funds to Desecrate the Federal City!  
Sammie – Build Rail Rapid Transit – D.C. Needs a Subway Now!

In the drawing, Abbott was scurrying to catch up with his wife, who looks back to tell him, “Step lively.” [“Citizens Group Demands Changes Before Pledging Freeway Support,” *The Washington Post and Times Herald*, December 30, 1964]

### **“For the Foreseeable Future”**

The National Capital Transportation Act of 1960 had imposed a deadline of January 10, 1965, for NCTA to send the President “for transmittal to Congress, its recommendation as to whether any such freeway or parkway should be built” in northwest. George Lardner pointed out that, “NCTA officials would much rather say nothing at this point. They need all the support they can muster . . .” for the transit plan they wanted Congress to approve in 1965. But as NCTA Deputy Administrator Quenstedt put it, “It’s a mandate from Congress. And we’re law-abiding citizens.”

On January 8, 1965, Stolzenbach wrote to inform President Johnson that NCTA and highway officials in the District and Maryland had accepted the North-Central Freeway (I-70S) along the B&O Railroad tracks as the substitute location for the Northwest Freeway (I-95). Montgomery would have a second connection to the District via a parkway along the “east bank of the Potomac River.” He continued:

The agency has also been informed that both highway departments believe these major additions to the present highway network will be adequate for the foreseeable future without any additional freeway or parkway in Northwest Washington.

The agency concurs with the highway departments.

Stolzenbach added that officials in the District, Maryland, and Virginia were creating the 3C process required by the Federal-Aid Highway Act of 1962. This new process would be “available in the event future questions arise” over additional freeways in the area.

Quenstedt told reporters that Stolzenbach's letter on NCTA's findings was "not intended to be an affirmative endorsement of the North-Central Freeway. We simply are trying to stay out of the controversy." He did not want NCTA to get in the middle of alignment disputes, either. NCTA had recommended an alignment along the Baltimore and Ohio Railroad tracks in 1962, but he said, "We are not in a position to comment" on the Greiner report.

While waiting for the President's reaction, District and Maryland highway officials released an "information supplement" to Greiner's report on the North Central Report. The supplement concluded that if the North-Central Freeway had been open in 1962 and 1963, highway deaths in the District would have been reduced by an estimated seven while injuries would have declined by 700. "One of the most important and least considered advantages of the urban freeways is the reduction of traffic accidents, injuries, and deaths," the supplement pointed out. It explained, "On freeways, head-on collisions, opposite direction sideswipes and vehicle-pedestrian accidents have nearly been eliminated." [Asher, Robert L., "Seven Deaths Laid to Lack of NE Freeway," *The Washington Post and Times Herald*, January 11, 1965]

President Johnson forwarded Stolzenbach's views to the Congress in a brief letter on January 14:

I transmit herewith a copy of a letter dated January 8, 1965 to me for transmittal to Congress by the Administrator of the National Capital Transportation Agency in accordance with the provisions of Section 204(b)(2) of the National Capital Transportation Act of 1960.

I know the Congress will be pleased, as I am, to note the consensus of the Highway Departments and the Administrator that, with the contemplated construction of the George Washington Memorial Parkway [in Maryland] and a north central freeway, no additional highways need be constructed in this quadrant of the District for the foreseeable future.

His letter, as reporters pointed out, perpetuated the freeze on freeway construction in northwest without an end date or a date for reconsideration. It also gave new emphasis to the North Central Freeway and the parkway link along the Potomac River.

Chairman Funk told reporters:

There is a strong possibility that when the North-Central Freeway is completed there will be a substantial reduction of traffic in the Wisconsin [Avenue] corridor. But how much it will be and how it will affect the need for additional facilities we don't know.

Montgomery County is heading toward a million population, which means an increasing need for radial movement of traffic. We will have to wait and see. [Aarons, Leroy F., "Johnson Rules Out NW Area Freeway in 'Foreseeable Future,'" *The Washington Post and Times Herald*, January 15, 1965; Flor, Lee, "Johnson Favors Abandoning Wisconsin Ave. Freeway," *The Evening Star*, January 14, 1965]

The President's letter prompted reactions from groups on either side of the freeway battle. Dorothy Maultsby said she was hoping to meet with Charles Horsky about the President's

endorsement of the NCTA letter. Her group had determined that 95 percent of the residents who would be displaced by the North-Central Freeway were African-Americans. John K. “Bus” Rector, chairman of the Planning and Housing Committee of the Democratic Central Committee, also wanted to meet with Horsky to seek clarification of the President’s views. Joseph Rauh, now chairman of the central committee, questioned whether President Johnson actually endorsed the North-Central Freeway, even though “it might have seemed that way on the surface to some.”

Mayor Miller and all city council members from Takoma Park sent a telegram urging President Johnson “to have compassion upon the people of Takoma Park and to require the freeway to follow the railroad” as it crossed the State line. Otherwise, the North-Central Freeway would “convert a lovely city into a concrete jungle.” They told the President, “You have been misinformed, in that the freeway does not follow the railroad tracks but takes a quite unnecessary swath inward to fractionalize our city.” They added, “You can avoid great hardship and suffering to elderly and retired people who could never replace their homes. Thousands depend upon you for help.”

Others endorsed the President’s letter. The National Capital Downtown Committee (Downtown Progress) released a resolution saying the North-Central Freeway “is an important element of the balanced transportation system which will promote the mutual accessibility between the center of the city and the suburban areas.” The Federal City Council agreed, with both groups saying construction should not begin until “satisfactory provision” had been made for displacees. [“North Central Foes Hit LBJ Statement,” *The Washington Post and Times Herald*, January 17, 1965; “Two D.C. Groups Back North Central Freeway,” *The Sunday Star*, January 17, 1965; “Takoma Park Sends Johnson Freeway Plea,” *The Evening Star*, January 18, 1965]

The *Star*’s editors summarized President’s Johnson’s “skimpy note” as relying on a major highway along the Potomac River in Maryland. “Mr. Johnson sounds as if the George Washington Parkway construction were proceeding just fine.” The Department of the Interior’s procrastination “is disgraceful”:

No one opposes the parkway. The department simply refuses to push it. Now that the President has publicly conceded its importance, his aide in charge of such things, Charles Horsky, should begin exercising his role as expediter.

As for the North-Central Freeway, the President’s words “should give some much-needed impetus” to the project, something neither NCPC nor NCTA had done. “If the English language has any meaning, however, the President has committed them to lending a hand now.”

Further, the President’s letter “unhappily omitted” reference to the needed Potomac River bridge to connect with I-66 in Virginia. This project was outside the geographical scope of the NCTA report, but “it is very likely to be one on which the White House will have to speak the final word.”

The editors questioned whether a freeway in the Wisconsin Avenue corridor “is really dead.” The need for such a freeway would depend on whether rail transit was built, the effectiveness of the George Washington Parkway, and how the North-Central Freeway meets travel needs. “If a

northwest freeway is to be forgotten for the present, however, these alternative facilities must be built as soon as possible.” [“Decision at the Top,” *The Evening Star*, January 18, 1965]

Reaction among groups battling over the issue, in the District and Maryland, continued to reflect their point of view. Lebling of the Bethesda Chamber of Commerce said he was “sincerely disappointed” by President Johnson’s letter. The President was the “recipient of bad advice” in rejecting a freeway in the Wisconsin Avenue corridor that the Mass Transportation Survey had called for in 1959. Neither the North-Central Freeway nor the proposed Potomac River parkway would reduce congestion in Bethesda, where the business district was choked with traffic. If the Wisconsin Avenue corridor was not preserved for a freeway now, commercial development would probably make acquisition of right-of-way too expensive. Abandoning the Wisconsin Avenue corridor now would doom Bethesda’s business section as businesses, shoppers, and employers deserted the city for other commercial centers. [“Officials Hit For Dropping NW Freeway,” *The Washington Post and Times Herald*, January 21, 1965]

The Northwest Committee for Transportation Planning released a report on February 11, 1965, showing that traffic between Montgomery County and the District was declining. According to the committee’s figures, traffic had declined since December 1962 when 266,758 vehicles crossed the District line to 244,499 vehicles in December 1964. As far as the committee was concerned, the highway officials in the District and Maryland calling for the North-Central Freeway could not justify the need based on traffic projections since they were declining. [“Montgomery Traffic to D.C. Dips Steadily,” *The Washington Post and Times Herald*, February 12, 1965]

### **The Public Has a Say - Again**

District and Maryland officials concluded that their plan for a joint public hearing at Coolidge High School on February 4 was impractical. Coolidge would not be able to accommodate the expected crowd and likely picketing. School Board President Wesley S. Williams said that school officials had received “numerous letters and telephone calls indicating that extensive picketing is planned.” He added, “we have enough troubles in the schools already,” without protests against highways.

The two jurisdictions decided to hold separate public hearings. The District’s would be in the Commerce Department Auditorium, which seats about 800, at 10 a.m. on February 4. Maryland would hold its hearing a week or two later. Airis told reporters that 40 requests had already been received to be heard. “It’s a spirited project and I assume we’ll have a spirited meeting.” [“Picketing Threat Shifts Freeway Heading Plans,” *The Washington Post and Times Herald*, January 30, 1965]

By the end of January, Peter Craig had examined the District’s information supplement regarding the safety benefits of the North-Central Freeway. He concluded that the opposite was true and that the supposed reduction of seven deaths was based on statistical sleight-of-hand. While freeways themselves are safer, he said that the access roads to and from them have the city’s highest accident rates. The *Post* summarized his findings:

He compared data on traffic fatalities in three Northeast Washington police precincts—Nos 3, 12 and 14—where freeway construction has been heavy, with figures from Northwest Precinct No. 8, where very little road-building has taken place.

In the case of the Northeast precincts, the rate of traffic deaths per each 1000 population has gone up since the freeways were built, whereas the rate in No. 8 has stayed about the same, he found.

Mathew Platt, the District Highway Department's assistant chief engineer for planning, could not comment on Craig's report, which he had not seen. But Platt questioned Craig's use of resident population for comparison. "There are two populations involved—the people who live there and those who drive through. Both have to be taken into consideration." ["Safety Claim of Freeways Is Disputed," *The Washington Post and Times Herald*, February 1, 1965]

The *Star* estimated that 1,000 people showed up for the February 4 public hearing on the North-Central Freeway in the Commerce Department Auditorium:

The crowd, apparently drawn almost completely from the neighborhoods bordering the recommended freeway location, began to assemble about 9 a.m. About 100 persons started carrying picket signs in an orderly line on the sidewalk outside the building at 14<sup>th</sup> and E Streets NW.

The protesters, described as forming a "well-mannered picket line," continued throughout the day, with the opponents holding up signs such as:

- Children Can't Play on Freeways
- Stop the Concrete Octopus
- Subway Yes, Freeway No
- The Great Society—Destruction of Homes, Schools, Churches, Playgrounds
- Who Can Protect the Needs for The Year 2000
- Stop the Freeway – We Need RAPID Rail Transit

A group called the Metropolitan Citizens Council for Rapid Transit distributed handbills to those entering the auditorium or passing by. It stated that "freeway hearings must continue! The entire secret network of freeways must be brought out for public examination!"

The *Post* began its report on the hearing:

The proposed North Central Freeway was put to another test of public opinion yesterday and, as expected, it flunked.

Residents along the path of the 10-lane freeway attacked the plan "from a dozen directions" during the hearing. "In summary, they don't like it, they don't want it and they are not at all convinced that it's needed."

Director Airis opened the hearing. He said the freeway had been endorsed by the area's planning agencies as part of a comprehensive regional transportation plan. Full consideration had been

given to the “socio-economic impact upon the community.” The freeway also had been “properly coordinated with planning for mass transit and is designed to keep to a reasonable minimum any adverse impact upon the community.” In view of the huge population growth expected in the area, the freeway was needed.

He understood the concern about relocation of families and businesses the freeway would displace, but he cited the District’s new relocation assistance program that Congress had authorized. “We now have the capability to handle satisfactorily the relocation of people affected by public works projects with a minimum of disruption and inconvenience.”

Airis read a statement from General Duke, who was not present but had prepared comments at the last minute in response to the reference in the handbills to a “secret network of freeways.” The North-Central Freeway was a “key element in a general freeway plan that has been in existence and generally accepted by all transportation planners since 1959.” He added that the freeway system shown on District highway maps is “all that is planned and needed for the highway portion of the total balanced transportation system” for the Washington area.

More than 30 witnesses testified during the hearing or submitted statements.

John Rector testified that the District Democratic Central Committee opposed the freeway. With 60 percent of the downtown business area devoted to streets and parking, the freeway would take 146 acres more of District land and would displace 2,500 workers and 2,194 residents, he said. The city already had a waiting list of 5,000 families for public housing and 15,000 more will be displaced by 1967. Rector said that “thousands of people, most of whom are Negro,” will not be able to go into “Virginia and Maryland with their lack of fair housing ordinances.” Not enough housing was being built in the District for these families. They would be forced into “areas already overpopulated.”

Several other witnesses echoed those sentiments. One of them, Ronald J. Donlavey of the Brookland Area Coordinating Council said that, “For Negro families, displacement does not present simply the necessity to find a new house; it presents the prospect that an adequate house may not be available at all.”

William B. Peer of Neighbors, Inc., a northwest community group working for integration, questioned the traffic forecasts supporting the freeway. The District Highway Department had made “irresponsible statements based on wholly inappropriate comparative data” about the number of lives saved if the freeway were built. The crowd, according to the *Star*, applauded some of his statements enthusiastically, but the reaction “was not accompanied by cheers.”

Peter Craig presented statistics that he said demonstrated the highway traffic into the District was below the city’s estimates. Traffic volumes on some freeways had actually declined since completion of the Capital Beltway.

Some witnesses endorsed the freeway. Former District Commissioner Camalier of the District’s AAA said that “one of the greatest advantages of the freeway is the fact that freeways are 50 percent safer than other streets and highways. One of the most important and least-considered

advantages of urban freeways is the reduction of traffic accidents, injuries and deaths.” The crowd, according to the *Star*, “listened politely” to his testimony.

Not all pro-freeway witnesses were received politely, according to the *Post*:

Many of the listeners walked out of the auditorium in protest when Harold E. Wirth, of the Rubber and Tire Manufacturers, urged residents to put themselves in the “beneficent hands” of the Highway Department.

James F. Mollison, speaking for the Board of Trade, was jeered when he said people “must learn to live with” the Freeway. “Where do you live?” cried several in the audience.

Chairman Funk attended the public hearing but did not speak. [Flor, Lee, “North Central Freeway Hearing Draws 1,000,” *The Evening Star*, February 4, 1965; Schuette, Paul A., “Freeway Is Again Attacked By Citizens and Businesses,” *The Washington Post and Times Herald*, February 5, 1965]

The District continued the hearing on February 5, during which 24 witnesses testified before only about 50 attendees. One witness was James P. Gleason, the attorney for the Save Takoma Park Committee who on this day was representing the Metropolitan Citizens Council for Rapid Transit. He advised officials to defer the freeway until a rail rapid transit system was built and its impact on traffic could be measured. “If rapid transit is built, that’s the last we will hear of the freeway planners in Washington.” He urged President Johnson to establish a five-member commission to study how the Capital Beltway affected traffic in the city. An objective study, he said, would demonstrate that current roads could meet traffic needs until the transit system was completed.

Robert H. Bruton, research chairman for the group, added that “the historical trend in peak hour traffic . . . clearly indicates that the existing road condition in combination with a rail transit system will easily accommodate all commuter traffic in the foreseeable future.”

The Reverend J. Raymond Favret was one of three witnesses from Catholic University who presented the university’s concerns about the freeway. He recommended shifting the freeway “immediately adjacent to the railroad tracks,” the location that Greiner had called “railroad east modified”:

The study noted that the present plan was taken to avoid taking of the adjoining new industrial buildings which are mostly serviced by the railroads. The housing between Michigan Avenue and Taylor Street is much more important to the integrity of the community than these small industrial plants.

Professor Paul J. Claffey, a professor of traffic engineering, favored the Greiner alignment showing the part of the freeway elevated over the railroad tracks. The additional cost of \$27 million would be justified because the alignment would save the homes of 300 families and permit existing industries to provide a buffer between Brookland and the freeway.

The Reverend Robert G. Howes, associate professor of planning, also favored alternate alignments, such as the one where the freeway was built over the railroad. However, while rail rapid transit was needed, Reverend Howes did not doubt the need for another freeway between the Capital Beltway and the Inner Loop. He added:

We cannot continue to march forever round and round our difficulties, facing only those we can, by pure chance, simply no longer avoid. It is not helpful to suggest that until all problems are solved, we solve none.

Several groups supported the freeway, including the Citizens Traffic Board and the Joint Committee on Transportation.

Airis indicated that the District would not make any decisions on the future of the North-Central Freeway until Maryland officials completed their public hearing process. [Schuette, Paul A. "Hearing Ended on NE Freeway," *The Washington Post and Times Herald*, February 6, 1965; Flor, Lee, "C.U. Asks Changes In Freeway Route," *The Evening Star*, February 5, 1965]

### **Reviving the Rail Rapid Transit Option in 1964**

Although the House, and therefore Congress, had rejected the bobtail rail rapid transit legislation on December 9, 1963, President Johnson made clear on January 21, 1964, that he supported rail rapid transit for the District when he submitted his annual message to the Congress on the District of Columbia budget:

The Administration and the Congress have been wrestling with the transportation problems of the District for many years. While some progress has been made, I hope for further progress during the coming year.

He was encouraged by the District commissioners' acceptance of the Policy Advisory Committee's recommendations for the North Leg Freeway and the central Potomac River crossing:

Although problems of specific location and of design remain to be worked out with the help of the advisory committee, the progress which has been made permits inclusion in the budget of funds for major additional segments of the urgently needed Interstate System in the District.

As noted earlier, he endorsed the District's proposed authorization of \$35 million in additional loan authorizations and a gas tax increase.

Then he turned to rail rapid transit:

The resolution of the problems of providing a rapid rail transit system for the National Capital Region is not yet in hand. Ten years and more of study, however, have made it abundantly clear that such a system is a critical necessity if intolerable traffic congestion is to be avoided. The recent recommittal of H.R. 8929 [Chairman Widener's bobtail bill] to the House District Committee demands a redoubling of efforts to find an acceptable

program which will permit a transit development plan to proceed. I have instructed the National Capital Transportation Agency, together with other Federal agencies, to work with affected local jurisdictions to that end. I am confident that the Congress agrees on the need, and I trust that an acceptable program can be formulated at this session of the Congress.

He concluded the transportation section of his annual message:

A comprehensive transportation system must, of course, be the result of joint efforts between the District and its neighboring jurisdictions. Indeed, the Congress has conditioned continuing Federal assistance to highway development in urban areas after mid-1965 on the existence of such cooperation. Many other local problems, too, extend beyond the District's boundaries, just as many problems in the suburbs cannot be efficiently and economically solved without the full cooperation of the District. I intend to give my full support to the development of cooperative efforts to meet these regional problems and to provide for the orderly development of the National Capital Region.

Although messages of this type are prepared by staff and vetted by the Bureau of the Budget, Schrag suggested that President Johnson, who had come to Washington in 1931 as a legislative aide to Representative Richard M. Kleberg (D-Tx.), was personally interested in the subject:

President Johnson proved himself supportive. Like Kennedy, he had spent decades in Washington. He retained Horsky as his capital affairs adviser, and he was even closer to Rowe than Kennedy had been, for the Johnsons and the Rowes had been friends since 1938. [Schrag, page 59]

(NCPC Chairman Elizabeth Rowe's husband, James H. Rowe, Jr., was one of the "Brain Trust" New Dealers who came to Washington with President Franklin Roosevelt. Rowe held a variety of posts in the Roosevelt Administration during the Depression years, as well as in the Truman Administration. According to Johnson biographer Caro, James Rowe "spent more time with Johnson than any of the other rising young New Dealers." James and Elizabeth Rowe also socialized with the Johnsons. Caro wrote of the young Representative Johnson:

In his circle of young New Dealers, he was the life of every party with his practical jokes, his quick wit, his wonderful "Texas Stories" about the hellfire preachers and tough old sheriffs of the Hill Country, his vivid imitations of Washington figures, and his exuberance . . . . "At parties, he was *fun*," Elizabeth Rowe says. "That's what no one understands about Lyndon Johnson—that he was *fun*." [Caro, pages 111, 119, italics in original])

The *Star* appreciated President Johnson's support of the "critical necessity" of rail rapid transit, but added that they were "alas, only words." As the President suggested, NCTA had many things to do to recover from the defeat of the bobtail plan:

But the problem is that the agency—and therefore the rail transit program itself—is at this moment in such deep trouble that vigorous action at the White House level also is needed.

First, the White House should reorganize NCTA, beginning with replacement of Stolzenbach. “The present troubles and past failings of the NCTA are so intimately associated with Mr. Stolzenbach that it is hard to see how he can continue to be of service in this job.”

Second, the editors suggested rethinking the plan to cut NCTA’s budget in half. “Under new leadership there would be a great deal of work for the agency to perform.”

Third, the President should ensure that the right-of-way of I-66 in Arlington County is wide enough to accommodate rail rapid transit as well as the highway lanes. Congress had appropriated \$1 million for this purpose but with the failure of the bobtail plan, the Administration had frozen the funds. Meanwhile, BPR had ruled that it could not spend Federal-aid highway funds for rail rapid transit purposes:

Perhaps so. But these considerations do not alter the fact that it would be a serious mistake for this project to proceed as just another highway. The route is an entirely logical path for rail transit, and on an interim basis the additional right of way could be profitably used by express buses. Once the right of way is acquired for the highway alone, however, the opportunity to preserve this additional value at reasonable cost will be gone forever. [“More Than Words,” *The Evening Star*, January 25, 1964]

As for Stolzenbach, he was still NCTA Administrator and he was determined to restore his own and the agency’s credibility while rebuilding support for rail rapid transit.

On January 28, 1964, he addressed alumni of his alma mater, the Massachusetts Institute of Technology, at the Cosmos Club. While defending rail rapid transit, he acknowledged that the automobile had “given mankind a vast new degree of personal freedom in living.” Automobiles and buses were “bound to carry most of the all-day traffic in our metro areas.”

He rejected the idea of an all-bus service operating on exclusive bus lanes:

All I can say is that we have seen no demonstration that this is so. Nor have we found out how to distribute buses efficiently in a congested downtown without either banning all auto and truck traffic, or building a very expensive bus subway—a feat that poses an enormous ventilation problem.

We have found that the more steps you take to bring the level of express bus service up to the standards and capability of a rail rapid transit system, the more expensive it gets and the more the bus system resembles a train-subway system.

He cited the new developments that would allow rail rapid transit to “achieve better ventilation, greater acceleration and deceleration and increased efficiency of operation”:

With all these potentialities, considered along with the economics of their operation, and notwithstanding the high capital cost of the basic facility, rail rapid transit systems today are regarded by engineers engaged all over the world to build new systems as having the most suitable technology. [Eisen, Jack, "Stolzenbach Calls Buses Inadequate," *The Washington Post and Times Herald*, January 29, 1964; "Stolzenbach Defends Rail Transit Plans," *The Evening Star*, January 29, 1964]

He continued trying to reach out on February 14 during a speech to the Committee of 100 on the Federal City. He told the committee that, despite the House action on the bobtail bill, he was "not pessimistic." In response to a question about whether he would submit a new bill in 1964, he said, "I don't think any time should be lost in trying to get a decision." However, he added, "I also agree with those who feel great care and caution should be exercised in trying to get a decision when the result might be questionable."

Speaking of a balanced transportation system, he said:

Rail rapid transit is the best friend the highway ever had. Without buses, a balanced transportation system . . . cannot operate efficiently, economically or completely . . . . Rapid transit is a tremendous generator of passengers for the bus systems, delivering customers by the carload to the bus.

Having been criticized repeatedly for lack of cooperation with other agencies and governments, he urged more discussion of the shape of a balanced transportation system. He rejected the views of those who urged single-mode "cure-all," including buses, automobiles on highways, and the rail rapid transit system, that would operate at the expense of automobiles, buses, or "roller skates or space ships." Downtown did not have enough room for automobiles to handle all peak period transportation. "What NCTA has proposed is a balance. The exact balance is now up for community discussion. What can NCTA do to bring this community the benefits you want?"

(The committee adopted a Peter Craig resolution in support of the 1-cent gas tax increase for the District, but opposing the increased borrowing authority.) ["Balanced Plan Of Rails, Buses Is Urged Here," *The Evening Star*, February 14, 1964; "Rival Transit Units Agree To Confer," *The Washington Post and Times Herald*, February 15, 1964]

As part of Stolzenbach's efforts to restore confidence, he sat for a *Post* interview. He doubted that NCTA would ask Congress in 1964 to reconsider a rail rapid transit bill. He did not want to make a second try until he could be "reasonably certain" of congressional approval. The 1964 election would shorten the congressional session. He thought the fate of a District transit bill would be harmed by President Johnson's call, in his State of the Union Address on January 8, 1964, for economy in government. In his first full year as President, he pledged "a progressive administration which is efficient, and honest and frugal." His budget would "cut our deficit in half – from \$10 billion to \$4,900 million. It will be, in proportion to our national output, the smallest budget since 1951."

As noted earlier, NCTA had analyzed why Congress did not approve Chairman Whitener's bill in December 1963:

The biggest factors, Stolzenbach concluded, were the just-enunciated economy policy, confusion and dissension over the national mass transit bill, labor policy problems and the cost of the proposed system . . . .

Stolzenbach said the financing proposal was misunderstood on Capitol Hill, where critics fastened onto the \$401 million price tag rather than the \$120 million capital contribution by the Government.

NCTA was reworking the financial plan, with the possibility of asking area jurisdictions to contribute more. The willingness of the jurisdictions to increase their share would shape the proposal eventually submitted to Congress.

He also was reaching out to critics of NCTA's cooperation. Meetings had been held with Engineer Commissioner Duke, Representative Sickles, and two key members of the Virginia General Assembly: Senator Fenwick and Delegate William Winston. He also had met with labor officials, and was planning to meet with the COG and separately with Montgomery County, which had withdrawn from the council. ["Stolzenbach Doubts Wisdom of Pushing Transit Plan Now," *The Washington Post and Times Herald*, February 13, 1964]

Reacting to the interview, the *Star* characterized Stolzenbach as "throwing cold water on the likelihood of any congressional action this year," despite President Johnson's stated hope that Congress would approve a bill during the session. The editors were bothered by Stolzenbach's intent to "throw in the sponge" on the President's hope. They recognized the problems inherent in reviving the proposal, but thought House and Senate hearings "might prove helpful in reaching agreements on some of the issues." They urged Stolzenbach to proceed with a "sense of urgency." ["Premature Surrender," *The Evening Star*, February 17, 1964]

Chairman Whitener agreed with the editorial. On February 18, his House District subcommittee adopted a resolution in executive session urging NCTA "to proceed with all possible speed so that a rapid transit system can be presented to Congress at an early date." The resolution noted President Johnson's call for a redoubling of efforts to secure approval.

Talking with reporters, Chairman Whitener said he drafted the resolution, which "does not ipso facto require that the program be brought to a vote this year." However, he said the House vote in December 1963 had not "killed" the bill, but simply indicated the members "wanted us to look at it again."

The *Star*, in its article about the resolution, added that, "Mr. Stolzenbach reportedly is working with Charles Horsky, White House advisor on National Capital affairs, on drafting a revised plan for a rail transit network here." [Eisen, Jack, "Transit Bill Given Push By Whitener," *The Washington Post and Times Herald*, February 19, 1964; "Rapid Transit Action Asked By House Unit," *The Evening Star*, February 18, 1964]

In February and March 1964, Stolzenbach testified before the House and Senate Appropriations Subcommittees on the Interior and Related Agencies, the subcommittees with jurisdiction over NCTA. He discussed the possibility of increasing the local contribution to the plan under

development, but ran into criticism related to failure of the bobtail bill. Representative Winfield K. Denton (D-In.) understood the need for a transit system, but said, “I never heard of an employer [the Federal Government] having to provide a rapid transit system to get employes [sic] to work.” He continued:

On the floor, and there is no use beating around the stump, I think most everybody thought it was inappropriate for [the local area] to pay such a small sum and the Federal Government so much.

Representative Julia Butler Hansen (D-Wa.) said, “I don’t think anybody denies that a better transportation system is needed in the District of Columbia.” However, she told Stolzenbach, “there should be some equity of financing, particularly . . . in the beginning”:

I think if you are going to get anywhere with this you will have to get some willingness and legislation which will enable local governments to pay the lion’s share of this proposition.

As a practical matter, she said that Members of Congress “do not feel like taxing people in their district, many of which are in depressed areas, to pay a bill which wealthier counties of the country would not pay.” She and her colleagues were “very much surprised” by the Federal/local financing formula in the bobtail plan.

Representative Hansen also raised the need for regional support. Stolzenbach replied, “We have been accelerating our discussions with the officials of this region since the Dec. 9 debate.” She told him:

This is since Dec. 9. We talked to you at this time a year ago. You certainly kept it in a dark closet until December.

Stolzenbach assured her that more work had been done “than you may be aware of.”

He was hesitant to reveal when NCTA might release a new plan, despite repeated questions from Chairman Bible. The Senator said the subcommittee needed answers if it was going to approve NCTA’s request for \$500,000 for staff salaries. The schedule, Stolzenbach told him, depended on close coordination with and support from three key groups: leadership of the House District Committee, officials of the 12 city and county jurisdictions in the area, and the White House. Before their support could be sought, NCTA had to resolve four important problems that Lee Flor summarized:

These are the size and scope of the rail rapid transit system, the question of the balance of Federal versus local contributions, the problem of demands for protection against automation by labor unions, and the question of whether private enterprise will operate any rail transit system, Mr. Stolzenbach said.

Senator Bible asked if Stolzenbach could conceive of a solution to Washington’s traffic problem without rail rapid transit. Stolzenbach replies, “No sir, I do not.” Senator Bible replied, “I agree with you—we must have a rail rapid transit.” He hoped NCTA would be “kept alive” because “it

would be a calamity to allow the agency to expire.” He promised to help move legislation through the Senate when the time came. [Flor, Lee, “Aid of 3 Groups Seen Needed in Transit Plan,” *The Evening Star*, March 3, 1964; Flor, Lee, “Rapid Transit Backed, City Warned on Costs,” *The Evening Star*, March 11, 1964; Eisen, Jack, “Transit Plan Cost to Area To Increase,” *The Washington Post and Times Herald*, March 11, 1964]

Following leaks to reporters, NCTA prematurely disclosed its latest concept for rail rapid transit on March 19. NCTA was considering a 15-mile “backbone” network, including a major cross-town route, at a cost of \$287 million. Jack Eisen described the route for *Post* readers:

Terminals would be located . . . to provide easy access for express buses from the suburbs.

The yards and shops would be located adjacent to the Potomac Electric Power Co. plant near Benning rd. ne. east of the Anacostia River.

From there, a line would cross the river and run past the Stadium, then go via South Carolina ave. to Pennsylvania ave., pass beneath the Capitol grounds and serve downtown with a G st. subway. A short branch would serve Union Station.

Near the White House, the line would split. One spur would go up Connecticut ave. and 18<sup>th</sup> st past Dupont Circle, then—beyond Rock Creek Park—out Connecticut ave. to Van Ness st nw.

The other spur would go beneath H st through Foggy Bottom, tunnel the Potomac to Rosslyn, then swing south to the Pentagon and Pentagon City area beyond.

Eisen added:

A map displayed by Stolzenbach showed express buses feeding patrons to railheads at Benning, Rosslyn, Pentagon City, and Van Ness st., plus railroad commuter service on two Baltimore & Ohio and Pennsylvania Railroad lines to Union Station.

NCTA, Stolzenbach told reporters, had been reaching out to local communities “and we will continue touching base with them and with congressional leaders as we go along.” He could not predict when NCTA would be ready to submit a bill to Congress.

Stolzenbach thought the 15-mile system would require about \$83 million in Federal and local grants, with the remainder of the cost financed by 50-year revenue bonds to be repaid by fare revenue. Distribution of responsibility for contributing the \$83 million had not yet been worked out. He added that the full 98-mile system NCTA had originally proposed was needed, but that the new plan was a practical start. “Basically, this is expandable into the earlier recommendations.”

Because the plan was new, local officials wanted to delay commenting on it. However, Engineer Commissioner Duke said the plan “has a lot of promise” because it would “overcome a great many of the objections.” He also complimented NCTA for working out its differences with the

transit regulator, the Washington Metropolitan Area Transit Commission. He said, “they are now working together harmoniously,” as a result of recent initiatives.

O. Roy Chalk told reporters that the new plan was “merely a retread of the last \$400 million bobtailed version which was so emphatically rejected by Congress.” The area’s bus companies were working on a “vastly expanded, all-bus rapid transit system” that would be unveiled “in the very near future.” He was convinced the plan would prevent the “eventual unnecessary and wasteful expenditure of more than \$2 billion” on NCTA’s plan. [Flor, lee, “Subway Plan Reduced Again,” *The Evening Star*, March 19, 1964; Eisen, Jack, “\$300 Million D.C. Subway Is Outlined,” *The Washington Post and Times Herald*, March 19, 1964; Eisen, Jack, “Transit Chief Outlines Latest Subway Route,” *The Washington Post and Times Herald*, March 20, 1964]

While Stolzenbach began discussing NCTA’s backbone plan with local officials, the *Star* editors were not impressed. “Its latest version seems designed mainly to permit Pentagonians to ride in style to the ball park.” The NCTA plans, they said, “get more and more modest” in hopes of convincing Congress to approve. The new plan probably was not the final version. As for reaching out to local officials, “There is nothing wrong, Lord knows, with that.” After all, “the main problem in the past has been the NCTA’s refusal to talk to anyone.” Its original \$793-million plan was wrapped “in the secrecy of the Manhattan Project.” After NCTA finally unveiled the plan, “it was thoroughly clobbered.” NCTA proceeded to develop the second plan, known as the bobtail, without any outside help:

Now, it appears, the NCTA is willing to talk to everyone—in the hope of developing a solid base of community support well in advance of any proposition to Congress.

The editors saw some reason for hope in the fact that the House had approved President Johnson’s modest budget request for NCTA. “Now that the situation is looking brighter, we hope that the Senate also will vote to approve the funds the agency needs to get its job done. For Washington needs rapid transit.” [“Stadium Express,” *The Evening Star*, March 23, 1964]

While Stolzenbach and NCTA reached out to local officials and agencies, the area’s four bus companies unveiled their all-bus transit plan on May 12. Chalk’s D.C. Transit System, its Virginia subsidiary (WV&M Coach Company), AB&W Transit Company, and WMA Transit Company described their plan to three local Members of Congress: Representatives Broyhill, who had initiated the plan in February, Mathias, and Sickles.

Although bus company officials left the meeting with their maps and without briefing reporters, Representative Broyhill told them that the \$25 million plan was in the form of an X. One line would run from Greenbelt in Prince George’s County, Maryland, to Seven Corners in Fairfax County, Virginia. The other would run from Rockville in Montgomery County, Maryland, to Springfield in Fairfax, Virginia, via Shirley Highway. The lines would intersect at Maine Avenue, SW., near the Bureau of Engraving and Printing on 14<sup>th</sup> Street. The system would include a fleet of minibuses to carry passengers to downtown destinations.

Public investment would be limited to \$25 million, half of it in the form of guaranteed loans for acquisition of buses. The other half would consist of public investment needed for terminals and fringe parking lots that would be owned by the counties.

Buses would include luxury equipment, including air conditioning and reclining chairs. Standees would not be permitted. Stations would be about 2 to 3 miles apart.

The intersection of the X was near the "Portal Site," which a real estate subsidiary of Chalk's company had won a contract in 1962 to develop. The Portal Site was a 7-acre property in the District's southwest quadrant. It was bounded by Maine Avenue, 12<sup>th</sup>, and 14<sup>th</sup> Streets, overlooking the waterfront. The Redevelopment Land Agency approved the lease for Chalk's company on June 6, 1962. According to the *Star*:

The decision to lease the land to Mr. Chalk, the agency said, was based on the fact that a design for an apartment and town house development he submitted was adjudged winner of an architectural competition in which there were 17 other competitors.

At the time of the announcement of the express bus plan, Chalk had not developed the Portal Site, and his plans for it were uncertain. [Lewis, Roger J., "Chalk Lease Approved For Southwest Tract," *The Evening Star*, June 6, 1962]

Representative Broyhill suggested that the company refer to the plan as the "Brand X" system. The three congressmen, who wanted to prevent the system from being known as the O. Roy Chalk Plan, said they would confer on possible legislation. They did not intend to ask NCTA for its views because, as Representative Broyhill put it, "It's no use consulting someone who has cast a vote for one solution, a rail rapid transit system." ["3 Area Representatives Back All-Bus System," *The Evening Star*, May 12, 1964; Eisen, Jack, "Transit Firms Sketch Bus Commuter Plan," *The Washington Post and Times Herald*, May 12, 1964]

While officials were considering rapid transit for the Washington area, Congress was completing work on a bill authorizing a national transit program. Strategists in support of the local program believed that the national program had to go first, but that it might put the NCTA plan in position for a vote later in the year. Prospects also appeared good, in that case, for congressional action on a proposed regional compact the area's political subdivisions were negotiating to operate the new rail rapid system. If the national transit program bill failed, congressional action on the local bill and the compact was out of the question. No Member of Congress would even introduce the bill if the national bill failed.

The timing was critical. As the *Star* put it:

[It] is important strategically to Mr. Sickles [the Representative from Maryland who headed the commission perfecting the compact legislation] and to Mr. Stolzenbach to avoid a collision course, defeating both their efforts, between the compact and the construction authorization. [Bassett, Grace, "National Transit Bill May Spark D.C. Action," *The Sunday Star*, May 24, 1964]

## The Urban Mass Transportation Act of 1964

On April 4, 1963, the Senate approved the Urban Mass Transportation Act of 1963 by a vote of 52 to 41. It called for a \$500 million, 3-year program for mass transit grants, with \$100 million authorized in FY 1963. The Federal share of project costs would be two-thirds. An emergency program would be available to pay one-half the cost of projects to meet urgent needs where an existing facility or service would otherwise no longer be available. A Federal loan program initiated by the Housing Act of 1961 would continue.

Its sponsor, Senator Harrison A. Williams (D-NJ), had described the bill when he introduced it on January 14, 1963:

It will give municipal officials, agencies, and planners the encouragement and financial assistance needed to make mass transit feasible in our urban-suburban areas. As the history of the declining transit industry indicates, we will produce only talk until we put up the money at the Federal level for a comparatively small part of the job that must be done in so many areas of our Nation.

The bill I introduce today is sensible; it is modest; it can do the job.

And it is one of the most important pieces of unfinished business left behind by the 87<sup>th</sup> Congress. ["Mass Transportation," *Congressional Record-Senate*, January 14, 1963, pages 214-217]

Despite this promising start in the Senate, the bill ran into problems in the House, as Professor George M. Smerk summarized in his history of the Federal role in urban transit:

In the House there was trouble; southern representatives, in an effort to retaliate against the Kennedy administration's civil rights program, took on an anti-urban stance. It was felt that there was a good chance the House version of the bill would never get out of committee.

The impatient had much to be fidgety about. The House version of the bill remained in committee for more than a year, but in real fact the House Rules Committee [which held hearings in June 1963] was not responsible for the delay. The bill was held in the Rules Committee because House Speaker John McCormack [D-Ma.] felt that if the bill did come up for a vote on the floor of the House, it stood a good chance of being defeated. There were two good strategic reasons for the speaker's reluctance; one was the need, for the transit bill's sake, to wait for a propitious moment. The second was political wisdom on the part of McCormack regarding more important legislation . . . .

Following the assassination of President Kennedy, President Johnson had called for passage of the late President's stalled legislation, beginning with the civil rights legislation:

Speaker McCormack was fearful he would jeopardize the Johnson administration's reputation for legislative success by bringing the urban mass transportation bill to the floor prematurely. [Smerk, George M., *The Federal Role in Urban Mass Transportation*, Indiana University Press, 1991, pages 88-89]

The fact that the mass transit bill was still not on the White House's "must pass" list by April 1964 "set into motion an unusual train of events" that went back to 1963 when the House of Representatives voted down a bill to construct a rapid transit system in the District of Columbia. "Labor lobbyists in Washington, in a virtual explosion of short-sightedness, were persuaded to bring pressure against Congress to defeat the bill as an anti-labor measure." [Smerk, page 89]

This defeat convinced transit supporters that in 1964, they would need a coordinated lobbying effort, particularly in the House, to get the Williams bill approved. They formed the Urban Passenger Transportation Association (UPTA) to lobby on behalf of "central city interests, the transit industry, the railroads, and organized labor (which was now firmly in the camp of transit as long as there was a *quid pro quo* in the legislation that protected jobs)."

When President Johnson learned that labor was supporting this effort, he added the mass transit bill to the White House's priority list:

With the UPTA group successful in impressing the White House, the problem then became one of persuading enough congressmen to vote in favor of it to assure passage. As in all things political, success means having enough votes. The speaker had to be shown that there were sufficient Republican votes from northern urban centers to offset the predicted loss of Southern Democrats opposed to the transit bill because of their fear of more (after civil rights legislation) federal incursions into local matters.

With assurances from UPTA in early May that as many as 40 Republicans would vote for the bill, Speaker McCormack allowed the bill out of the Rules Committee, but still hesitated to schedule a floor vote:

The speaker, yearning to keep the momentum of legislative success rolling on, could hardly be blamed for his foot-dragging, because late in May the House Republican Policy Committee took a firm party stand of direct and unalterable opposition to the mass transit bill. The Republican Policy Committee rarely digs in its heels when it fears defections from G.O.P. ranks, but UPTA had been busy lining up Republican support and the transit lobbyists felt they had enough votes to get the transit bill passed.

Representative John W. Byrnes of Wisconsin headed the Republican Policy Committee, which included the House Republican Whip, five Republicans on the Rules Committee, three members at large appointed by the leader, and one member elected from each of several designated regions. On May 28, the committee objected to Democratic bills to raise the national debt limit to \$324 billion, continue excise taxes, and provide \$500 million for mass transit programs. [Walsh, Robert K., "Halleck Expects to Remain House GOP Leader," *The Evening Star*, November 17, 1964; "G.O.P. Fights New Debt Limit," *The Evening Star*, May 28, 1964]

Representative William B. Widnall, a Republican co-manager of the bill who represented a district based in Hackensack, New Jersey, finally forced Speaker McCormack to bring the bill up for a vote:

Widnall threatened to embarrass both Speaker McCormack and the White House; he promised to call a press conference to indicate that there was Republican support sufficient to pass the bill and at the same time denounce the speaker and the White House for obstruction of legislative procedures. [Smerk, pages 89-90]

On June 23, President Johnson held a press conference, during which he pressured Republicans to reduce obstacles to about 30 bills “that we think are desirable” and that “we would like to see acted upon.” He listed many of the bills, including the mass transit bill and the pending Federal-aid highway bill.

The following day, the House began debating the measure. Despite strong opposition (Representative Oliver P. Bolton (R-Oh.) called the bill “the keystone in the arch of Federal domination and control of every town in this country”), the House passed the bill 212-189 on June 25, with 39 Republicans joining 173 Democrats in support of the bill. *The New York Times* speculated on the bipartisan support:

Some observers professed to see President Johnson’s influence in the fact that 34 Southern Democrats, including seven from Texas, voted for the measure. All eight of the 10 Georgia representatives present for the vote supported the bill.

Another major factor in the measure’s support among Southern and rural members was its sponsorship in the Congressional session by Representative Albert Rains, Democrat of Alabama. His advocacy made it seem less of a “big city” proposal . . . .

Credit for assembling the bill’s majority also goes to a coalition of national organizations in the fields of transportation, housing, planning and urban affairs, which conducted a thorough campaign among House members.

President Johnson congratulated House members of both parties and hailed House approval as “a major step forward in cooperation between Federal and state governments on urban problems.” [Weaver, Warren, Jr., “\$375 Million Transit Bill Passed by House, 212-189,” *The New York Times*, June 26, 1964]

On June 30, the Senate approved the House version of the Williams bill, 47 to 36. The major change involved a reduced authorization of \$375 million over 3 years for capital grants on a short- and long-term basis. The amount in the original Williams bill had been reduced from \$500 million because the White House claimed that no more than \$375 million could be spent during the 3-year period. No State could receive more than \$47 million over the 3-year period. The long-term funds could be used for any capital project except highway construction. Short-term aid was available to keep troubled transit properties in operation while local officials planned a replacement service. The legislation continued the demonstration program initiated by the Housing Act of 1961, but expanded it to include research, development, and demonstrations initiated by the Housing and Home Finance Agency. It also continued the little-used loan program launched in 1961, but it would remain little used. [Smerk, pages 92-93]

On July 9, 1964, President Johnson approved the Urban Mass Transportation Act of 1964 (P.L. 88-365) during a signing ceremony in the Cabinet Room of the White House. Guests included Senator Williams, Representative Rains, Administrator Robert C. Weaver of the Housing and Home Finance Agency, and other Senators, Representatives, Governors, and Mayors.

President Johnson called the legislation “one of the most profoundly significant domestic measures to be enacted by the Congress during the 1960’s.” He put the measure in historical context:

Our Constitution empowered Congress to provide for post roads. Since that time, congressional support of transportation has been a major constructive influence on the progress and development of our American society and our American economy.

In the last century, such support of transcontinental railroads and canals and river navigation gave immeasurable impetus to our expansion. Now, in this century, sound congressional policies in support of both highways and airways for automobile and airplane travel has [sic] given incalculable momentum to American progress.

This new act that all of you have contributed to passing remains faithful to this tradition of vision.

Not so long ago, he pointed out, 6 out of 10 Americans lived in rural areas, but now 7 out of 10 lived in urban areas:

The change has come rapidly and has come dramatically, and today urban congestion is an unpleasant fact of everyday life for too many millions of Americans.

All of us recognize that the curses of congestion in commuting cannot be wiped away with the single stroke of a pen, or 50 pens that we have here. But we do know that this legislation that we are coming to grips with faces the realities of American life and attempts to put in motion a movement to do something about it.

It is symbolic of the challenge facing us that most Americans today travel to and from work over city street patterns that were originally laid out by the horses which pulled our grandfathers’ carriages.

We face a great task, publicly and privately, of catching up with our full potential and making life as good as it can be and making life as good as it should be for this generation of Americans.

He hoped that this “milestone measure will serve as a beneficial forerunner of many other steps forward in meeting the present challenges of metropolitan life in America.” He was, he said, “determined that we will provide the vision and the leadership necessary and that they will no longer be a stepchild and be neglected by their Government in Washington.” [Weaver, Warren, Jr., “President Signs Transit-Aid Bill,” *The New York Times*, July 10, 1964]

Professor Smerk said of the Urban Mass Transportation Act of 1964:

The 1964 Act, in any event, is the cornerstone of the federal transit program. Its aim is to provide aid for the improvement and development of mass transportation and to encourage the planning and establishment of areawide coordinated transport. Along with the planning provision of the Highway Act of 1962, the intention was to offer incentives to plan and develop a rational and integrated urban transportation system combining both the private automobile and mass transportation. [Smerk, page 91]

Even before House action on the national bill, Chairman Whitener had been optimistic about the prospects for District legislation. On May 14, the chairman addressed the Institute for Rapid Transit, a group formed in the late 1950s to represent rail commuter and rapid transit operators who felt the bus-oriented American Transit Association had not been sufficiently supportive of their interests. He thought his bobtail plan might yet pass with a different financial mix:

I do not believe it was a vote against rapid transit. Neither then nor since have I encountered more than a very few members who doubt the need for rapid transit in Washington.

To the contrary, I believe there is general agreement on the need for such a system.

Many of those who voted to send the bill back to Committee have since assured me that they believe such a system is needed and that Congress must assist in its creation.

By and large their problem . . . appears to have been with the financing formula which, many felt, placed too heavy a burden on the Federal Government and too little on the District of Columbia.

This is certainly a problem that can be solved, and I am hopeful that a revised formula, one that my colleagues will consider more equitable, can be developed at a very early date.

NCTA's subway plan, he said, had developed more public support than any other program for the city. Another source of optimism, he said, was that the controversy pitting transit against freeways was at an end. [Eisen, Jack, "Whitener Hopeful for Transit Plan," *The Washington Post and Times Herald*, May 15, 1964]

Now, passage of the national bill gave new hope to those in the Washington area hoping for a rail rapid transit system. As Professor Schrag wrote, however, patience would be required:

Encouraged, Stolzenbach was ready to go back into battle, but the White House decided to wait out the 88<sup>th</sup> congress and try again after the election . . . . A skeleton staff at NCTA designed a new transit development program to appeal to the new Congress; its official motto became "stay alive 'till '65." [Schrag, page 59]

## Problems for the South Leg

As discussed earlier, District, NPS, and BPR officials signed an agreement on December 14, 1962, on building the six-lane South Leg (I-695) of the Inner Loop system to connect the Potomac River Freeway and the Theodore Roosevelt Bridge with the Southwest Freeway. Negotiations that had begun in 1960 resulted in agreement on dividing the South Leg into three segments. For the first segment, NPS would have complete control over the 1,400-foot tunnel under the Lincoln Memorial grounds from Constitution Avenue to a mid-point between the memorial and the Tidal Basin. For this segment, plans included removing the driveway between the memorial and the Reflecting Pool as well as the temporary buildings on both sides of the pool. BPR, which usually administered road construction projects for NPS, retained approval of consultants and final approval of plans. Buses and trucks would be prohibited.

BPR would be the contracting agent for the second segment from the mid-point to the Tidal Basin to just west of 15<sup>th</sup> Street. In addition, BPR would administer construction contracts to protect the cherry trees in the Tidal Basin area.

District highway officials would be primarily responsible for the third segment. It consisted of the interchange between 14<sup>th</sup> and 15<sup>th</sup> Street to provide the connection with the Southwest Freeway.

Each party to the agreement retained veto power over the work of the others. Construction, which would begin within a year, would be completed in late 1965. The estimated cost of the South Leg was about \$18 million. As Engineer Commissioner Clarke put it, that schedule “seemed reasonable.” He added, “We really don’t expect any trouble. We all understand each other’s problems.” [Flor, Lee, “Lincoln Memorial Inner Loop Tunnel To Be Begun in ’63,” *The Evening Star*, December 14, 1962]

*Star* editors were pleased but skeptical:

In the final analysis, however, the success of the new agreement will depend upon whether each of the principals who signed it—Gen. Clarke, Parks Director Wirth, and Federal Highway Administrator Whitton—continues to work together with a reasonable amount of good faith and mutual trust. [“‘In Accord’ – Again,” *The Evening Star*, December 18, 1962]

To comply with BPR requirements, the District Commissioners scheduled a public hearing on the South Leg Freeway for February 4, 1963, in the District Building. However, on February 1, District officials postponed the hearing because of a conflict with NPS regarding the interchange at 15<sup>th</sup> Street. The dispute stemmed from the desire of NPS to close 15<sup>th</sup> Street south of Constitution Avenue, NW., to reduce, by one, the number of crossings of the National Mall. NPS wanted to eliminate a ramp from the interchange to 15<sup>th</sup> Street, a change that would require redesign of the interchange.

NPS engineers questioned traffic figures for the interchange. William M. Haussmann, NPS's regional chief of design and construction, said his office was still looking at the figures. "We haven't really dug into the figures yet. Possibly there will be no disagreement."

The public hearing, as the *Star* explained, "was required by law to give property owners their opportunity to complain about freeways" before District officials could approve "general location" for the route. Until the "general location" was approved, the District could not transfer funds to NPS, the only property owner concerned with the South Leg, for construction of its segment. ["Early Solution Seen For South Leg Freeway," *The Evening Star*, February 2, 1963; Schuette, Paul A., "South Leg Of Freeway Hits Snag," *The Washington Post and Times Herald*, February 2, 1963]

Negotiations took longer than Haussmann expected. By July 1963, NPS had proposed construction of a second tunnel along the right-of-way of Independence Avenue for the segment through the Tidal Basin area. Negotiations among NPS, the District, BPR, NCPC, the White House, and the Commission of Fine Arts had remained out of public view until Chairman Natcher asked Aitken about the South Leg during a hearing on June 11 regarding the District of Columbia Appropriations Act, 1964. As discussed earlier, Aitken referred to the December 1962 agreement as "a gentlemen's agreement" on how to proceed. Chairman Natcher asked if the cost identified the previous year for the South Leg, \$18,442,000, was still valid:

Mr. Aitken. Well, pending agreement on the final plan, it is impossible to say whether that estimate will apply or not, sir; but it looks like the estimated cost now might be in the order of \$30 to \$40 million.

Mr. Natcher. How do you account for the difference here, Mr. Aitken?

Mr. Aitken. Well, it is an extension of the concept of the project. That is, the Park Service is interested in more tunnel construction so that this freeway will not disrupt the park features in this part of the city. [District of Columbia Appropriations, 1964, Hearings before a Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 88<sup>th</sup> Congress, 1<sup>st</sup> Session, on H.R. 7431, page 649]

Months of negotiations resulted in an agreement announced on August 3, 1963. The new agreement called for a 1,300-foot tunnel under the Tidal Basin just north of Kutz Bridge. Six acres of the Title Basin north of the bridge would be filled and landscaped to blend in with the rest of the park area. According to the *Post*:

Roads and Park Service officials agreed all along as to the need for a Tidal Basin tunnel to protect the scenic aspects of West Potomac Park.

Roads officials felt that a 950-foot tunnel would have been adequate, according to Presidential Adviser Charles Horsky, but saw the need for a longer tunnel last week when the Park Service set out stakes showing the comparative lengths as they would actually appear.

The Park Service felt that a shorter tunnel would mean that traffic from the surface portion of the freeway would impair the view of the Tidal Basin from 17<sup>th</sup> Street nw . . . .

A feature of the plan would be a “park road” along the banks of the Tidal Basin. This would be, for the most part, the existing road.

NPS Regional Director Jett said the NPS was “delighted” with the agreement on the length of the second tunnel segment of the South Leg.

(The Kutz Bridge was named for General Charles W. Kutz, who served three terms as Engineer Commissioner – appointed by President Woodrow Wilson for 1914-1917, 1918-1921, and by President Franklin D. Roosevelt for 1941-1945 – longer than any other Engineer Commissioner. During his third tenure, General Kutz oversaw planning and construction of the bridge to carry Independence Avenue eastbound over the northern section of the Tidal Basin. The bridge, opened in 1943, is a purely functional bridge, with little ornamentation. Vertical clearance above the water is limited; the only vehicles on the Tidal Basin are pedal-driven, two-seat boats rented by tourists during the warmer months. The northern end of the Tidal Basin is within the median between the eastbound and westbound travel lanes of Independence Avenue.

(On February 24, 1954, Engineer Commissioner Prentiss and NPS Director Wirth participated in a ceremony naming the structure for General Kutz, who had died on January 25, 1951, at the age of 80. A plaque was placed on the west end of the bridge:

KUTZ BRIDGE  
COMPLETED 1943 FOR THE  
NATIONAL CAPITAL PARKS  
BY THE DISTRICT OF COLUMBIA  
UNDER THE SUPERVISION OF  
BRIG GEN CHARLES W KUTZ  
ENGINEER COMMISSIONER  
1914-1917 -- 1918-1921 -- 1941-1945

(During the ceremony, Wirth said the bridge exemplified the role General Kutz played in the city’s development, but also the cooperation between the District and Federal agencies in the development of the city and the part played by the U.S. Army Corps of Engineers in that development. [“Gen. Kutz, Ex-Engineer Commissioner, Dies,” *The Evening Star*, January 25, 1951; “Kutz Bridge, Named For Former Officer Of D.C., Dedicated,” *The Evening Star*, February 25, 1954])

The District Commissioners announced the agreement along with plans for a public hearing on September 5 in the District Building on the South Leg and the Center Leg. [Doolittle, Jerry, “Officials Agree To Dig Tunnel At Tidal Basin,” *The Washington Post and Times Herald*, August 4, 1963; Flor, Lee, “Hearing Set on Tunnels Under Basin, Memorial,” *The Sunday Star*, August 4, 1963]

By the end of August, additional details of the plan had emerged. Given the NPS’s concern about trucks in the park area, officials had agreed to build the tunnels with only a 12½-foot clearance, less than standard for urban tunnels. Aitken told reporters, “this isn’t really much of a bone to gnaw on” since the South Leg had the same clearance where it passed under the

Theodore Roosevelt Bridge. Robert C. Horne of the NPS said the service was aware of the fire trucks and emergency vehicles that might need to get through the area, but said, “We know some military loads take more clearance, but there are a great many alternate routes such vehicles could take. We didn’t consider it a serious problem.” [Eisen, Jack, “Lincoln Shrine Tunnel Planned To Bar Trucks,” *The Washington Post and Times Herald*, August 30, 1963]

The date of the joint public hearing was shifted to September 3. As previously discussed, much of the focus was on the Center Leg. NPS Director Wirth took the lead in discussing the South Leg. He extolled the plan, with its tunnels under the Lincoln Memorial and the northern edge of the Tidal Basin. It would “accomplish the necessary traffic needs and also enhance the traffic circulation for the park user and visitor to the Nation’s Capital.” Construction of the 1,400-foot tunnel at the memorial would allow NPS to remove the present road in front of the facility. NPS planned to construct a “broad pedestrian plaza overlooking the reflecting pool.”

The plans also called for eliminating 15<sup>th</sup> Street at the Washington Monument. NPS and District highway officials were discussing how to tunnel 14<sup>th</sup> Street under the National Mall and to “dress up” the Washington Monument grounds.

With the critical focus on the Center Leg during the hearing, comments on the South Leg Freeway were generally supportive. However, Harold M. Wirth, representing the Board of Trade and the tire manufacturing association, recommended that the South Leg tunnels be built with a standard clearance of 14½-feet to ensure that military trucks would be able to use them in the event of a national emergency. [Eisen, Jack, “Width and Design of Freeway Draw Criticism at D.C. Hearing,” *The Washington and Times Herald*, September 4, 1963; “Inner Loop Plans Are Praised,” *The Washington Daily News*, September 3, 1963; “Center Leg Freeway to Evict 1,600 Persons, 105 Firms,” *The Evening Star*, September 3, 1963]

With the public hearing requirement satisfied, the District Commissioners approved the route of the South Leg Freeway on September 19. Aitken said officials were still discussing two design issues: a suitable link to the South Leg for northbound traffic on 14<sup>th</sup> Street, NW.; and a link for northbound traffic with the Rock Creek and Potomac Parkway. [“District Accepts Route for South Leg Freeway,” *The Evening Star*, September 19, 1963]

On October 23, 1964, Administrator Whitton selected Palmer and Baker, Inc., of Mobile, Alabama, to design the tunnel under the north end of the Tidal Basin. The contract, awarded for \$704,000, was expected to take about 15 months to complete. Whitton said that the location and design of the tunnel would give “every consideration . . . to the character of the area. No effort will be spared to preserve the existing amenities in Potomac Park, one of Washington’s most beautiful sections.” BPR had agreed to pay the entire cost of the \$16 million tunnel and approaches.

Meanwhile, plans for the NPS segment under the Lincoln Memorial plaza, also federally funded at 100 percent, were about 80-percent complete. The District’s 90-10 segment next to 14<sup>th</sup> Street was in the final design stage. [“Contract Let To Designer Of Tunnel,” *The Washington Post and Times Herald*, October 25, 1964]

*Star* editors appreciated the progress represented by award of the Tidal Basin tunnel contract:

These plans literally have required years of discussion. The results, however, are well worth the time – and the money – spent. Congratulations are due both the Highway Department and the Park Service, each of which, for once, has managed in this project to satisfy its own requirements without detracting from the other’s legitimate concerns. [“Under the Tidal Basin,” *The Sunday Star*, October 25, 1964]

President Johnson addressed the South Leg on February 15, 1965, in a special message to Congress on the needs of the Nation’s capital. It was a broad statement that covered many aspects of life in the District of Columbia. In speaking of the city as the capital, President Johnson said:

The District, as the Nation's Capital, must meet the special requirements imposed on the capital city of a great nation. We are committed to preserving and enhancing the great avenues, the great museums and galleries, the great sweep of the Mall.

He mentioned the initiative “to transform Pennsylvania Avenue from its present shabby state to a new dignity and grandeur.” He continued with examples of how development of highways could complement improvements to the city’s grandeur:

There are other areas where needed improvements can also be accelerated. The Washington Monument can be given the setting it deserves as soon as the development of the freeway from the Roosevelt Bridge to the 14th Street Bridge, and the 9th and 14th Street underpasses of the Mall permit the elimination of the 15th Street traffic from near the base of the Monument. The temporary buildings which huddled at its base are already gone, and the plans to improve its immediate surroundings must be pushed forward.

The Lincoln Memorial, long throttled by a circle of heavy automobile traffic, can be freed of its noose as soon as the freeway running beneath its grounds permits the area facing the reflecting pool and the Monument to be reserved for the visitor on foot. The Memorial will not achieve its proper setting, however, until the remaining obsolete and temporary buildings on Constitution Avenue are eliminated.

There are many other projects. Temporary buildings on public space throughout the monumental area must be removed. There is need to carry forward the plans to develop the potential of the Mall, so that it may be a place of life and beauty, of pleasure and relaxation. There is need for a Visitors' Center which will provide perspective and understanding regarding the Federal Government to the myriad students and tourists who come to Washington to see and learn . . . .

The great sweep of the Potomac River, Rock Creek Park, and the ring of parks where the old Civil War forts stood make the District a city in a park. In its heart the grandeur of the Mall, the many circles and squares, and the great street trees carry natural beauty to everyone.

Today there is new awareness of our urban environment. We can, if we will, make the District the symbol of the best of our aspirations. We can make it a city in which our citizens will live in comfort and safety, and with pride, and in which commerce and industry will flourish. We can make it a capital which its millions of visitors will admire. All this we must do. I am sure the Congress will join me in accepting the challenge.

By May 1965, the *Post* was predicting that the “great tunnel era” for Washington was about to get underway after years of “political and technical spadework.” Only “a few more obstacles” had to be overcome before construction would begin on the Center Leg tunnel under the Capitol and U.S. Botanic Garden grounds and the tunnels under the Lincoln Memorial grounds and the Tidal Basin. A 9<sup>th</sup> Street tunnel under the National Mall also was nearing construction:

The month of June promises to be a significant one for the District Highway Department’s underground planners. In that month, bids will be opened for the 1400-foot Lincoln Memorial tunnel; the Fine Arts Commission is scheduled to take a look at plans for the Tidal Basin structure, and the Highway Department is expected to wrap up negotiations with a developer on use of air space over the north portal of the Center Leg, connecting the Southwest Freeway and North Leg.

Issues of ventilation had to be resolved for the Center Leg tunnel. District highway officials had pushed advertisement for the construction contract to early 1966 instead of December as previously planned.

The South Leg was moving ahead:

Closest to reality of the four tunnels is the six-lane Lincoln Memorial structure, which will be built under the supervision of the National Park Service. Work could start in two months, if all goes without a hitch . . . .

The Lincoln Memorial tunnel will skirt the southeast corner of the shrine itself. Because it will be only 1400-feet long, ventilation will not be a major problem. The ventilation system will be aided by the piston action of traffic which will help air the tunnel.

The other South Leg tunnel also was progressing:

Further east at 17<sup>th</sup> Street, just north of Independence Avenue, the South Leg has been designed to dip under the Tidal Basin for 1600 feet. The Federal Government will pay the estimated \$16 million cost of the tunnel and the Bureau of Public Roads will supervise the building.

Plans to drain the Basin at that point and run the road overland were rejected, to preserve the beauty of the Basin. But the Basin will have to be drained temporarily when the trench is cut, possibly early next spring, according to Galyn Wilkins, regional director of the Roads Bureau.

The 9<sup>th</sup> Street tunnel under the Mall was in the design stage.

The *Post* summed up:

It all adds up to the busiest tunnel activity of any city in the country. It is all the more remarkable because, like most big projects in Washington, a host of agencies are involved. [Morgan, Dan, "City on Brink Of 'Tunnel Era' For Its Roads," *The Washington Post and Times Herald*, May 24, 1965]

### **The Strange "Directive"**

Within a month, a potential problem emerged in the Senate Committee on Appropriations.

On May 6, the District Subcommittee of the Senator Committee on Appropriations held a hearing where nondepartmental witnesses could comment on the District's proposed FY 1966 appropriations act. Peter S. Craig had been one of the witnesses, testifying as chairman of the roads subcommittee of the Committee of 100 on the Federal City. He requested deletion of appropriations for the District's share of five freeway projects: the Potomac River Freeway extension, the North Leg (west and center sections), the Center Leg, and the North Central-Northeast Freeway.

Based on Chairman Natcher's figures, Craig estimated that the five projects "contemplate the allocation of \$42,300,000 (10 percent in the District of Columbia appropriations and 90 percent in Federal aid), of which \$42 million would be for condemnation of property":

This \$42 million to be spent for the destruction of homes, churches, businesses and industry, would be more than the total amount of all capital outlay by the general fund and sanitary fund for schools, recreation, health, welfare, sewers, and so forth. In other words, the capital outlay budget . . . proposes to spend more for destruction of the city than for all public construction projects combined.

The five projects, he said, should be deleted for many reasons, but with only 5 minutes allotted to each witness, he would touch on only one reason, "and that is their illegality." He explained that, "Over the past several years, District highway planning has descended to a state of total anarchy." The agencies he said were responsible for planning (NCPC and NCTA) "have virtually abdicated their authority to the District of Columbia Highway Department." In the absence of home rule, the District Commissioners "act as if they don't care what their own citizens want – they have not bothered to even attend their own 'public hearings' on proposed freeways for over a year and a half."

More to the point, the freeways proposed by District highway officials "are totally beyond the limited authority given [to] the District Commissioners by Congress." Craig said that the official position was that if BPR approved a freeway "this is 'tantamount' to congressional approval and the [District] law as enacted by Congress may be ignored." This official position "has now been knocked into a cocked hat." The basis for his view was an opinion (B-156541) issued by Comptroller General of the United States Joseph Campbell on April 26, 1965, in response to an inquiry from Chairman McMillan of the House District Committee on April 13. Craig explained

that the opinion indicated that BPR approval does not constitute approval by Congress, and quoted the following passage:

Congress by including the District within the framework of the Federal-aid highway laws, may not be said to have abdicated its role in the conduct of the local aspects of the District's highway problems. Authority of the Commissioners of the District of Columbia concerning highways, streets, and bridges is contained in title 7 of the District of Columbia Code . . . . It does not seem reasonable to construe the authority granted to the Secretary of Commerce to participate with the District as an abandonment to the Secretary and the Commissioners by the Congress of its control and concern over the District highway matters.

In short, the authority granted by Congress to the District of Columbia under the Federal-aid highway program to construct Interstate freeways did not free the city from its own laws, also granted by Congress, for highway construction.

Craig summarized:

It is therefore clear, beyond any doubt, that the authority of the District Commissioners to build these freeways cannot arise from such "deals" as may be arranged between the District Highway Department and the Bureau of Public Roads. Instead, such authority, if it exists, must be found in title 7 of the District of Columbia Code.

District highway law, as enacted by Congress, authorizes the Commissioners to add new highways to the permanent system of highways only after prescribed notice, only after a public hearing, only with the approval of the National Capital Planning Commission, and only if such new highways do not exceed 160 feet in width.

The five freeway projects to which we take exception violate each of these limitations . . . . If the District Commissioners are of the opinion that any of these five projects have theoretical justification, it is incumbent upon them to subject their proposed legislation to the Senate and House District Committees and obtain the necessary legislative authority before they come to this committee asking for appropriations.

General Duke took strong exception to many aspects of Craig's testimony. In a May 10 letter to Chairman Byrd, General Duke responded. For example, he reacted to Craig's implication that the \$42 million to be spent on right-of-way acquisition for the five freeway projects could be transferred to the general fund for other uses:

Such is not the case. Ninety percent of this money is in the form of Federal-aid, and if not used for the highway purpose states, will not even be made available to the District.

General Duke also discussed the Comptroller General's letter. He would have selected a different paragraph from the letter to highlight, namely:

Of course, as a practical matter, the Congress retains its control over the District's highway program through the appropriation process. And if moneys are appropriated for

the District's share of a Federal-aid highway project, there would not be any question as to the authority for executing the project. But as we understand your inquiry, it is directed toward the rather technical question of whether sufficient authority exists to support an appropriation request in the first instance. While for the reasons stated above, we believe it would be more appropriate for the Congress to enact legislation specifically authorizing appropriations to the District for such purpose, we express no opinion as to whether a proposed appropriation therefor in the absence of specific authorizing legislation would be proper under the rules of the House of Representatives which is a matter not within our jurisdiction.

The District of Columbia, General Duke stated, did not make "deals" with BPR. All major highway projects are presented to NCPC for review and recommendation, as well as to the public in the form of hearings. "If it is the desire of the Congress that the District change the present procedures, we of course will be most happy to do so."

General Duke also responded to Craig's point about Section 7-108, the District's code on highways. "This was a matter of concern a number of years ago, and it was reviewed in detail by District officials, including members of our corporation counsel's staff." The law in question had been established by act of Congress approved on March 2, 1893. It provided "for extension of a permanent system of highways over all that portion of the District not included within the limits of the cities of Washington and Georgetown." Review of the issue showed that Congress had modified this 1893 legislation. In legislation approved in 1913 and 1924, the predecessor of NCPC had been given authority over the size and character of major thoroughfares. Later, Congress had included the District of Columbia among the States for construction of the Interstate System, subject to approved design standards that would require roads wider than 160 feet.

[District of Columbia Appropriations for 1966, Hearings before the Subcommittee of the Committee on Appropriations, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, on H.R. 6453, 1965, pages 457-459 (Craig testimony); pages 459-467 (Craig's statement); pages 469-472 (General Duke's letter); pages 475-476 (Comptroller General's opinion); pages 476-477 (city's opinion on Section 1-108)]

(This narrative will return to the 1893 legislation at a later point.)

The issue Craig raised about the authority to approve freeway projects would affect the Senate Committee on Appropriation's report on the District of Columbia Appropriation Bill, 1966, issued June 16, 1965. It was, in many ways, a routine measure covering a wide variety of District funding needs. The bill's proposed appropriations for the Department of Highways and Traffic were identical to the amounts in the House bill for electrical improvements (\$602,000); street improvements and extensions (\$3.7 million); highway planning, programing, surveys (\$400,000); and Interstate and primary, secondary, and urban projects, including:

- North leg, west section, inner loop - \$110,000
- South Leg, inner loop freeway - \$30,000
- Center leg, inner loop - \$900,000

- Northeast, North-Central Freeway - \$520,000
- Potomac River Freeway - \$1,600,000
- North leg, central section - \$1,200,000
- Interchange C, inner loop - \$150,000

Although these amounts were routine in that they matched the House appropriations bill, the Senate Committee on Appropriations included a statement in its report that had not been in the House report:

*Highway program.*—Several members of the committee have expressed deep concern about the absence of effective legislative control over the District of Columbia highway program. The committee shares this concern. Accordingly, the committee directs that all future budget estimates for the District of Columbia highway program be presented on the basis only of prior authorization by the respective District legislative committees. [District of Columbia Appropriation Bill, 1966, Committee on Appropriations, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 333, June 16, 1965, pages 12, 16]

Senators Clifford Case, William Proxmire (D-Wi.), and Joseph Tydings had drafted the language.

(A statement in a committee report is not a law or even, technically, a requirement, but as a practical matter, they have an effect because if the committee insisted on following this new procedure before taking further action, the District would have to act accordingly.)

When the Senate took up H.R. 6453 on June 22, it passed 76-14. However, as the final parliamentary move was about to take place to make the vote official, Senator Bible asked the floor manager, Senator Byrd, a question about the paragraph in the committee report. As preamble, Senator Bible said that the report appropriated \$900,000 for the Center Leg and that the District had spent approximately \$28 million for the freeway to date. This was an example of the “very important” question raised by the paragraph in the committee’s report:

My query is, Does the Senate committee language require the Highway Department to come back next year for authorization to proceed with the center leg of the inner loop after \$29 million has already been expended on this project?

Senator Byrd replied that several members of the committee raised the “necessity, in their judgments, for the District Highway Department to come before the legislative committees of the Congress for authorization before the Department proceeded with work on projects in the District of Columbia.” He had been reluctant to write the language because he did not want to straitjacket the District highway officials in pursuing projects “for which funds have already been allocated and appropriated.” Given his reluctance, the subcommittee authorized him to appoint a three-person committee to draft the language.

He introduced a letter dated June 15 that he had received from Engineer Commissioner Duke about the language. General Duke said that Representative McMillan, chairman of the House District Committee, had raised a similar concern in 1964 about activities and projects that were,

at the time, authorized only by appropriation acts. On advice of the District corporation counsel, General Duke told Senator Byrd:

There is no question but that the highway program of the District of Columbia is fully authorized by existing law. This is in contrast with other programs of the District for which authorizing legislation has only recently been drafted and submitted to the Congress.

Carrying the implication of the subcommittee's paragraph to its logical conclusion, General Duke wrote that Congress would have to approve authorizing legislation separately for minor widening, curb and gutter work, improving unpaved streets, traffic controls, and other minor highway-related activities.

The District also checked with the Comptroller General of the United States, who agreed that separate authorizations were not needed. General Duke quoted the reply:

“We agree with the Commissioners that inclusion of the District of Columbia within the term ‘State’ as used in Federal-aid highway legislation imparts a clear congressional intention to authorize District participation in the program” and “if moneys are appropriated for the District share of a Federal-aid highway project, there would not be any question as to the authority for executing the project.”

General Duke added that in obligating the District to complete all Interstate highway segments by October 1, 1972, “all of the elements of the Interstate System for the District of Columbia have been approved by the Congress and at least partially funded by appropriations through fiscal year 1965.”

Senator Byrd yielded to Senator Case to explain the concern that prompted the paragraph. Senator Case said:

We are concerned about the free hand which the Highway Department of the District of Columbia has been exercising in regard to streets and highways within the District. It has seemed to us that, when they get money to spend, it constitutes a kind of legislative authorization for their activities; that this is all they require.

He and his two colleagues thought “the legislative committee in the Senate and the legislative committee in the House have this responsibility as the governing body of the District of Columbia—which, in fact they are.” He was referring to the Senate and House District Committees.

This view had been prompted by his deep concern that “this monstrous plan for highways through and over the District of Columbia” was moving forward “like a juggernaut without really any responsible control by any governing authority.” He referred to a June 18 article in the *Post* by Wolf Von Eckardt titled “Freeway Tunnel Model Unveiled.” Senator Case said of the article:

The general thrust of the article is that if we are lucky, the Highway Department may permit us to save the beautiful Tidal Basin in front of the Jefferson Memorial, because

they will do something about changing the present plan which now involves, for example, the running of a great wide roadway right over it. They may even consider a change in the plan for tunneling under the Lincoln Memorial so that the beauty of this fine edifice and national monument will not be destroyed. But, they may not.

The article, introduced into the record, discussed President Johnson's beauty initiative launched earlier in the year with the First Lady. Secretary of the Interior Stewart L. Udall had retained architect Nathaniel A. Owings of Skidmore, Owings and Merrill "to take a critical look at Park Service plans to enliven the Mall and the project to slash the city's monumental heart with the proposed southern leg of the Inner Loop Freeway." Von Eckardt described the route of the South Leg/I-695:

As presently conceived the six-lane ribbon skirts the proposed John F. Kennedy Center for the Performing Arts. It worms its way under the Lincoln Memorial, covers a part of the Tidal Basin and then sends its tentacles onto the 14<sup>th</sup> Street Bridge just to the side of the Jefferson Memorial.

Planners, he stated, "have long felt uneasy about this radical highway surgery" because they thought it might "leave serious scars on a symbolic park that is the pride of the entire Nation."

Although Owings did not expect officials to repeal the freeway, he hoped to minimize the damage. "He has reportedly succeeded in persuading the highway engineers to spare the Tidal Basin" by tunneling the freeway under "that lovely body of water and preserve its natural contours." Owings also would "eliminate the present Independence Avenue crossing, which most planners consider an eyesore." He would create a walkway around the basin and plant additional cherry trees.

In addition, Owings was considering the other end of the freeway:

He also intends to restudy thoroughly the freeway's Lincoln Memorial tunnel which under present plans creates an enormously wide, cave-like gash at its entrances. This might be even more disturbing at night than during the day, since the wide tunnel under the shrine would, of course, have to be well lighted.

Owings also hopes to find some solution to the problem of leading the freeway ramps onto the 14<sup>th</sup> Street Bridge without giving the Jefferson Memorial the appearance of a lump of sugar in a bowl of spaghetti.

(In 1963, the *Post* hired Von Eckardt, who had fled Germany as a teenager with his mother and sister in 1936, to be the newspaper's art and architecture critic.)

After summarizing the article, Senator Case concluded:

It is time that someone besides the Highway Engineers for the District of Columbia makes these decisions. Anyone who has looked—as I have done many times before—at what has happened to the small segment of the highway plan which has been completed—and it is not all completed yet—in Southwest Washington, and who has seen

the destruction wrought by the construction which has begun in other areas near the Potomac River, cannot help feeling that it is time we called a halt to it.

The legislative committees of Congress should “have responsibility for deciding whether the plans should go through or not.”

When Senator Bible repeated his question about the prior investment in the Center Leg, Senator Case replied that “just because they may have made a start on a certain program, but have not had the moneys appropriated for any other part of it, does not necessarily give them carte blanche authority to finish it as they wish.” Instead, “they should feel they are obliged to get whatever approval is required on the basis of justification for the continuation of a certain job.”

Senator Tydings added that he and his colleagues did not mean to criticize District highway officials, but felt that “somewhere in the legislative process there should be somebody which [sic] would be answerable to the people at some time for the highway program of the District of Columbia.” He and his two colleagues thought the District committees should be that place. Until the District achieved home rule, anyone who wished to criticize the highway program “should be able to go to the appropriate legislative committee.”

After the colloquy about the paragraph, the Senate completed the parliamentary procedure for passage of the bill. [District of Columbia Appropriations, 1966, *Congressional Record-Senate*, June 22, 1965, pages 14349-14352; the Von Eckardt article, “Freeway Tunnel Model Unveiled,” is on page 14352]

Because of differences between the House and Senate versions, a conference committee was designated. The committee completed work on June 30. The Conference Report listed how differences were resolved, but added:

Highway program.—The managers on the part of the House are not in agreement with the statement in the Senate report which reads as follows:

Accordingly, the committee directs that all future budget estimates for the District of Columbia highway program be presented on the basis only of prior authorization by the respective District legislative committees. [District of Columbia Appropriations, 1966, Conference Report to Accompany H.R. 6453, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 568, June 30, 1965, page 4]

The House took up the conference report on July 1. After describing other elements of the final bill, Chairman Natcher discussed the statement in the Senate report. Referring to the Interstate System, he said, “Any effort to bring important highway projects in the District to a complete halt is a serious mistake.” The conference report, therefore, “clearly shows the attitude of our committee . . . and emphatically states that we disagree with the language contained in the Senate report.” He clarified:

This statement is not to be construed to mean that the committee is opposed to proper authorization for the various projects, but we are of the opinion there is already sufficient

general authority for the highway program and we feel that future budget estimates should be submitted in accordance with current procedures.

After the floor debate covered other issues, Representative O’Konski warned his colleagues that “very shortly there is going to come before this House a \$488 million bill to start a subway system in the Nation’s Capital.” The District’s share would be \$50 million. He asked Chairman Natcher if the pending bill included the \$50 million.

Chairman Natcher replied that the bill did not. The District would have to pay the \$50 million from tax revenue, the Federal payment to the District, or other sources. He added:

I would like for the gentleman to know that here in the District of Columbia there may be a place for both a rapid transit system and the highway system that we now have underway. But our committee under no circumstances is willing to permit those advocates of a rapid transit system to stop the highway program in this city just to see that the District of Columbia gets a rapid transit system.

Representative O’Konski warned his colleagues that the subway bill that would soon be coming to the House was “just the first bite of a possible \$3 billion subway system in the Nation’s Capital to be paid for by the taxpayers all over the country.”

Without further discussion of the highway or transit issue, the House approved the bill. [District of Columbia Appropriations, 1966, *Congressional Record-House*, July 1, 1965, pages 15504-15505]

Grace Bassett’s report in the *Star* on the vote began:

The House voted today its support of the District interstate freeway system with a unanimity meant to impress pro-transit opponents of highways. The vote of confidence was taken as the House passed, without objection, a \$360 million budget for the city.

After quoting Chairman Natcher’s comment about opposing efforts to stop highways to promote the subway, she added, “Nobody took this unlikely opportunity to defend transit.” She also cited Representative O’Konski’s warning to his colleagues about the transit bill they would soon be considering. “For years,” she told readers, “O’Konski has tried to block the big transit proposal given first priority locally by the White House.” [Bassett, Grace, “D.C. Budget Voted, Freeway Program Backed in House,” *The Evening Star*, July 1, 1965]

In “New Threat to Transit,” the *Star*’s editors wrote about the Senate Appropriations Committee’s “strange ‘directive.’” Following House action on the bill, “the confusion now is greater than ever.” Whatever “this obscure language” was intended to convey, the editors agreed with Chairman Natcher’s view that District highway officials had sufficient general authority for the Interstate program. They added:

For the mischief it has caused already has spread far beyond the problem of confused highway financing. No doubt unwittingly, the authors of this silly provision are also

responsible for a distinct new threat to Washington's rail-transit bill, which is due in the House for a vote in the next two weeks.

Chairman Natcher's warning to those who would block highways to promote the subway had to be taken seriously. The editors did not believe that groups advancing the transit bill, including NCTA, were trying to kill the freeways. However, "there are also those in the community whose first concern is not with the transit program, but in stopping freeway construction at any cost." These individuals "would welcome the confusion that would be generated by another divisive highway-transit feud," just as Representative O'Konski would welcome it in his longstanding effort "to scuttle the rapid transit bill in the House." ["New Threat to Transit," *The Evening Star*, July 5, 1965]

When the Senate considered the conference report on July 13, the strange "directive" took up most of the debate. After Senator Byrd summarized the contents of the final bill, Chairman Randolph of the Subcommittee on Public Roads wanted to make clear that he agreed with the language in the conference report stating the House's objections to the disputed language. "I believe that it requires discriminatory treatment of the District of Columbia in the administration of the highway program." District officials already were required by statute to conduct public hearings and consult with NCPC, NCTA, and the Commission of Fine Arts. The Senate report language, if implemented, "would unduly burden the officials charged with the responsibility to administer this program."

Senator Randolph pointed out that Section 105 of Title 23, United States Code, provided that following apportionment of Federal-aid system funds, the States, including the District of Columbia, "shall submit to the Secretary for his approval a program or programs of proposed projects for the utilization of the funds appropriated." The Senate report language "would violate the intention of the Congress in the Federal-aid highway statutes and would create an unnecessary and burdensome requirement on the District of Columbia." He wanted a colloquy with Senator Byrd on the record to try to clarify the issue.

Senator Byrd said he agreed with Senator Randolph. When the issue had come up in committee, Senator Byrd had suggested that the issue might be better handled by an amendment to strike whatever in the House bill the three Senators who raised the issue objected to "in order that we could take the question to conference with the House and resolve it there." He pointed out to the Senators that the committee had not questioned the District Highway Department on whatever issue they objected to, as reflected in the paragraph, and that putting the language in the report was a mistake. "I believe that subsequent events have substantiated and proved my position correct at that time."

Senator Case admitted that he had been "pressed by a number of good people and concerned people" to clarify the statement in the Senate report:

My own view is that the most helpful thing that any Senator can do in this matter at this time is to bring about a thorough investigation of the question, not only of its impact upon the city of Washington, our Federal city, but upon all cities included in the interstate highway program.

That is not said lightly.

He cited a July 11 article by Von Eckardt titled “Damning the Auto Won’t Save the City.” Senator Case cited the first paragraph:

If the beauty and grandeur of the National Capital are to survive the next decade, we must take a creative new approach to the design of our proposed freeway system.

The article stated that “ramming” superhighways “through the living tissue and green lungs of the city can only lead to its Los Angelization.” However, people should understand that rapid transit was not “the exclusive road to the orderly growth, livability and continued majesty of this seat of our National Government.” Developing the necessary balanced transportation system “takes creative teamwork”:

The endless and at times almost fanatical hassles between pro- and antihighway and pro- and antirapid transit advocates have only accomplished one thing: an unconscionable delay of both programs. Good transportation has suffered as a result, and good transportation is essential to a well-functioning city.

Instead of creative design, “all we are given is two equally disastrous alternatives.” Some, including NCPC, agree with urban critic Lewis Mumford’s suggestion: “Forget the damned motor cars; design the city for friends and lovers.” Unfortunately for these critics, the automobile is here to stay. “And friends and lovers are not likely in the foreseeable future to transport themselves to their encounters by other means than wheels.”

In Washington, “the spaghetti confusion of the freeway approaches east of the 14<sup>th</sup> Street bridge is bad enough,” but it was “outclassed by the octopus ugliness of the Theodore Roosevelt Bridge and its ramps on both sides of the Potomac.” The article repeated the summary of the South Leg proposal from the earlier article.

After a lengthy discussion of urban planning, the article turned back to the South Leg, suggesting that “the sane thing to do is reconsider the whole thing.” Owings was reviewing “the first dismal proposals” but even putting the entire freeway in a tunnel “won’t be able to get all the bugs out of it.”

The article concluded with a recommendation that President Johnson appoint “a committee to review and approve all freeway plans in the interest of the whole Federal City and what it stands for.”

After inserting the article in the record, Senator Case said:

I am not satisfied with the present procedures which confront the city of Washington in the next few months with the destruction of 100 acres of Potomac Park. One hundred acres of precious parkland in the District of Columbia will be covered with concrete. That is what will happen under the present system. This is not such a great system, after all, if it results in this kind of thing. We must stop it.

At least the highway engineers were not planning to run the freeway directly under the Lincoln Memorial. “That is something wonderful, of course,” but the taking of 100 acres of Potomac parkland “is a desecration that must not be allowed to take place. Yet that is what is planned.” Although the highway engineers had agreed to put a tunnel across the Tidal Basin, the tunnel would end in “a spiral of exits and ramps, and what-not, to get to the 14<sup>th</sup> Street Bridge.”

Some victories had occurred across the city, but they were haphazard. “The only reason why Glover Park [sic] has been saved from being overrun by the highway department builders is that the majority leader objected.” Representative Mansfield had a personal interest that was “good for the community.” In Virginia, the only reason freeways had not destroyed Spout Run was that the Department of the Interior “stood against it.”

At present, “the situation is very unclear and most unsatisfactory of its results.” As for the language in the Senate report, Senator Case said:

The language is in there for the purpose of expressing the concern of the Senators responsible—and I am one—about a situation in which we are being very unwise in letting the force of great sums of Federal money press upon not only the city of Washington but also other cities, with the result that what could be an enormous blessing and a great boon to those cities in the way of transportation and for other purposes is being misused, causing problems that we shall live to regret, and the loss of strong values that we can never replace.

Senator Tydings said that the Senators who drafted the language “determined that for a number of years the legislative committee of the District of Columbia had not been passing on any of the major highway projects” in the District, and that this went back to 1956.

The language was not meant as a criticism of highway officials, but:

We did feel that, in as important a matter as the highway program in the Capital City of the United States, no administrative body should be permitted to operate in a vacuum.

Senator Patrick V. McNamara (D-Mi.), chairman of the Committee on Public Works, pointed out that “if we are going to take over the highway program to the extent it is indicated that it might be taken over, action had better be taken before it is too late.” The result would be further delay in the District’s highway program. Moreover, there was no point in having the Committee on Public Works “do much work on the highway program when someone behind us will have a veto power over it.”

Senator Tydings made clear he was not referring to the Committee on Public Works, which in his view should not tell any city what to do, but should stick to “broad, general guidelines applicable to all municipalities.” The District was different, subject as it was to the Senate and House District Committees.

Senator Bible agreed with Chairman Natcher that the District already had statutory authority to advance Interstate projects and had it since 1956. Further, District highway officials cannot act alone. They have to secure clearance from NCPC, NCTA, and the Fine Arts Commission.

What he wanted to know is whether the District had to return to the District legislative committees before securing appropriations to continue Interstate projects. Senator Byrd replied that he did not think so. However, Senator Case reiterated the point that “the legislative committees of both the Senate and the House should keep a continuous surveillance and oversight of the building of roads in the District of Columbia as if they were, in effect, the governing body of any municipality . . . .”

Senator Bible cited the Center Leg as an example of millions of dollars having been spent, but the language seemed to indicate the District, nevertheless, would have to go back to the authorizing District committees. Senator Case said that in his view, “Before the center leg is built, the committee ought to have a look at the project and approve the depth, the width, and the construction of it.”

In that case, Senator Bible asked if Senator Case denied that the District had sufficient authority under the Federal-Aid Highway Act of 1956 to build the Center Leg. In reply, Senator Case said, “The Senator is correct.”

Senator Bible asked if Senator Case thought legislation should be enacted. Senator Case replied:

I do. We should consider the desirability of what I think is the first danger, and that is the roadway to Potomac Park. We should consider how that should be built, how it should be constructed, and how it should be connected with the 14<sup>th</sup> Street Bridge. We should consider the roadway in terms of what it would do to the existing parkway and in terms of what should be exacted from the highway system in recompense for the approximately 100 acres that would be taken.

Senator Bible emphasized that he thought the 1956 Act “provides ample legislative authority for the District government to construct its Interstate highway system . . . without additional or specific project legislative authority from the District legislative committees.”

Senator Case acknowledged an honest difference of opinion, saying in support of his view:

The best proof of that is what is going to happen to the District of Columbia, to Potomac Park, 100 acres of which will be wiped away and put under concrete, unless action of this sort is taken.

Senator Bible suggested consulting the Attorney General on the question of legal authority, but Senator Case replied that if the Attorney General “tells us the law as it now stands provides that the Secretary of Commerce—and that means the Public Roads Department in this instance—has a right to take any Federal lands he desired for the Interstate System, then I think, quite clearly, the law ought to be changed.”

Senator Randolph said he shared the concern about the beauty of the District of Columbia. However, “we must be very careful not to retard the orderly building of roads in the National Capital City and its environs for we must build these roads to accommodate the increased movement of traffic, both people and products and for better safety standards as well.”

Senator Byrd re-introduced General Duke's June 15 letter about the city's authority as well as a June 28 letter in which he discussed meeting with Senator Tydings, who said the provision did not apply to elements of the freeway system already planned that had received appropriations. It applied only to future projects. Because General Duke had briefed the Senator on the existing program, "his interpretation . . . was quite encouraging to us," but perhaps city officials misunderstood him.

Senator Byrd recalled asking Administrator Whitton about the provision when he testified before the Appropriations Subcommittee on the Departments of State, Justice, and Commerce, the Judiciary, and Related Agencies. Senator Case was present. Whitton, who had not seen the paragraph, asked for time to think about the language. Senator Byrd asked him to think about how it would affect the District's ability to meet the 1972 deadline for completing the Interstate System.

Whitton submitted a statement that emphasized that Federal law gave the States, including the District, the authority to proceed to complete the Interstate System within the specified time frame. The proposed additional review "could seriously disrupt and delay not only highway planning but the total overall planning for the area." The District already was far behind the States in completing its Interstate segments. Further delays could result in lapsing of the city's Federal funds.

Senator Byrd concluded that these letters and the Whitton statement provided "ample evidence to the mistaken judgment of the Appropriations Subcommittee on the District of Columbia as it is revealed in the language which appears in the report of the committee."

If that is so, Senator Case asked, "Does the Senator approve of the proposed extension of the Interstate System as it is now contemplated through Potomac Park?" Senator Byrd replied that he felt such decisions were the responsibility of the District Highway Department. He did not want the Congress to act like a State highway agency.

Senator Case said:

If the Senator does not believe that we have a responsibility to say "yes" or "no" when park land in the District of Columbia is planned to be taken for highways, he and I have a complete disagreement. Have we such a disagreement?

Senator Byrd replied, "we absolutely do." He thought the Appropriations Committee "has the responsibility of examining projects which are brought before it."

Senator Case wondered how the chairman could say this when the committee approved appropriations for the Three Sisters Bridge even though "the location of the bridge has not even been determined as yet." He went back to his earlier point, asking Senator Byrd if "as a person, not a Member of the Senate," he approved the taking of 100 acres for the South Leg.

Senator Byrd, instead of replying directly, said that if Senator Case objected to the South Leg, he should have introduced an amendment to delete the funds from the bill instead of introducing

language in the committee report that would “cripple the highway program.” Senator Byrd was confident in the judgment of the District Highway Department and BPR.

Frustrated that Senator Byrd would not offer an opinion on the South Leg, Senator Case repeated his objections to the destruction of parkland as a result of its design. “I ask the Senator again, Does he think that is a good idea?”

Senator Byrd replied, “That is not for me to say.” It was up to District and BPR officials. “The committees in a legislative body . . . do not possess the engineering experience and know-how to make these very difficult and technical determinations.”

Senator Case said he did not “want to play games.” He said:

I take it that the Senator feels, whether he agrees with it or not—and this will remain locked within his bosom, apparently—that it is a good idea to lay the concrete proposed to be laid across the 100 acres of the Potomac Park when it is not necessary.

Senator Byrd replied that Senator Case was not directing his comments to the issue. The issue was whether the committee report “is to be permitted to straightjacket the Highway Department of the District of Columbia,” with the result that roadbuilding would be delayed and the city might lapse Federal funds.

Senator Case said that, “It is wrong to have the force of Federal money on the basis of 9-to-1 poured in upon the cities and thus push them into unwise thinking all over the country.” The plan for the South Leg through Potomac Park was “the most striking example” of the problem.

In closing the colloquy, Senator Byrd said he was in good company in his views. He hoped the process in the city would proceed as advocated by the Chairmen of the District Committee and the Public Works Committee, as well as “the chairman of the Appropriations Subcommittee on the District of Columbia in the House of Representatives.” Senator Case did not concede the point, believing that his position would “succeed on its merits.”

The Senate, after discussing other issues, approved the bill “by voice vote with only four Senators on the floor at 8 p.m.,” according to the *Post*. [District of Columbia Appropriations-Conference Report, *Congressional Record-Senate*, July 13, 1965, pages 16666-16683; Von Eckardt’s article, “Damning The Auto Won’t Save The City,” is on pages 16669-16671; Morgan, Dan, “D.C. Budget Enacted After Brisk Debate,” *The Washington Post and Times Herald*; July 14, 1965]

On July 16, 1965, President Johnson held a signing ceremony in the White House Rose Garden for the District of Columbia Appropriations Act, 1966 (P.L. 89-75). With the city’s law enforcement forces well represented, he highlighted the funds appropriated to fight crime in the city. He also signed Executive Order 11234 on “On Establishing the President Commission on Crime in the District of Columbia.” His remarks, which did not mention the highway issues that had been so contentious in the final days of congressional action, ended with:

Let me conclude now by saying this: the District of Columbia has meant much to me practically all of my adult life. As I cherish my own home country that is far away this afternoon, I love this Capital City, I love its beauty and simple dignity, and all the meaning that is present here in its past and that is present in its promise.

There are many things that I hope to accomplish during my allotted time in this office. But with all my heart, I hope that for generations to come these will be remembered as the years when Washington flowered into its finest age.

This bill that I am about to sign is only a steppingstone, and all of us know that. There is more, though, much more, that is needed. What is needed will be done generously and fully.

We can all be proud to share in this work together, and I hope that the time is not too far-distant when this little group meeting on this porch this afternoon can reassemble and take inventory, and can point with great pride to the progress that began here this afternoon with the signing of this appropriation bill.

To the Members of the Congress who labored unselfishly long and hard to bring these results about, we say thank you for your understanding, and we will try to be worthy of your confidence.

### **A New Direction for the South Leg**

Senator Bible, as a result of the discussion with Senator Case on the Senate floor, asked Attorney General Nicholas deB. Katzenbach for an opinion. The question was whether Congress, in the Federal-Aid Highway Act of 1956, had given the District overall authorization to build its Interstate System without additional authorizations by the Senate and House District or Public Works Committees. [Eastman, Sam, "Justice Ruling Is Sought On D.C. Highway Work," *The Evening Star*, July 14, 1965]

In an editorial called "Unblocking Freeways" on July 17, *Star* editors expressed disappointment that the "clean-cut vote in the Senate" had not resolved the dispute on how the District commissioners should proceed. Senator Byrd advised them to "consider the language in the Senate report nullified" when submitting their FY 1967 budget. "The Commissioners should do precisely that," the editors said.

They did not think the "unexpected twist" of Senator Bible's request to the Attorney General would do any harm, but it also was not likely to help:

For if the Justice Department should rule against the financing procedures historically followed by the Commissioners, the most surprised people in the world will be members of Congress, who themselves have sanctioned these procedures for years.

The editors quoted Senator Tydings' comment that the report language was not "in any way" an attack on the highway system. They called the Senator's assertion "absurd," especially in view of Senator Case's comments about the South Leg.

They did not doubt Senator Case's sincerity, but suggested:

Indeed, if he can find the money and the means to assure better, more unobtrusive freeway designs, perhaps through national legislation which will not discriminate against the District, he will be doing this community a great service.

However, "the poor fellow obviously has no such definite solution in mind now – other than to keep the interstate system out of cities." He had every right to question city officials testifying before the Appropriations Committee, but "has not chosen to do so." Instead, he suggested that "*someone else* in Congress ought to assume that responsibility for Washington," a suggestion that Senators Bible and Randolph rejected on behalf of the only two other Senate committees with jurisdiction on the subject:

Nor is their reaction surprising. For if any serious move were made to impose on all the cities of the Nation the kind of restriction proposed against Washington in this instance, the roof would blow off the Capitol. ["Unblocking Freeways," *The Evening Star*, July 17, 1965; italics in original]

(After Congress adjourned for the year on October 23, George Lardner looked back on the first session of the 89<sup>th</sup> Congress from the highway point of view. As for Senator Bible's request to the Attorney General for an opinion on whether the District of Columbia had sufficient authority to build Interstate freeways without clearing each expenditure with the District Committees, Lardner wrote, "Justice has said nothing doing, according to a Committee spokesman. Apparently it doesn't want to get in the middle on this one." Senator Bible said:

I want to clear the air. Unless we resolve the question of authorization, it's going to keep coming up time and again. It could haunt us until 1972. ["Lardner, George, Jr., "City's Highway Builders Slow on Draw," Potomac Watch, *The Washington Post and Times Herald*, October 28, 1965])

The NPS planned to open bids on August 18, 1965, for a contractor to build the South Leg tunnel under the Lincoln Memorial grounds. However, on July 22, NPS announced that it would postpone construction indefinitely. The postponement followed a presentation by Nathaniel Owings to Interior Department officials on July 20. He recommended a new underground route for the South Leg that would bypass the Tidal Basin to the south along the route of Ohio Drive. It would connect with the Washington Channel Bridge and the Southwest Freeway. If adopted, this route would mean that the contract for the segment under the Lincoln Memorial grounds would have to be redesigned to swing the southern end of the tube toward Ohio Drive instead of Independence Avenue. According to the *Star*, Secretary Udall and other Federal and District officials had agreed to examine the feasibility of the route.

District highway officials began a study of the cost of the alternative. In addition, General Duke planned to meet with Senator Case in view of his concerns about the South Leg. [Morgan, Dan, "Lincoln Memorial Tunnel Delayed, Plans Restudied," *The Washington Post and Times Herald*, July 23, 1965; "Inner Loop Park Routing Under Study," *The Evening Star*, July 22, 1965]

As July neared an end, General Duke said he was awaiting a general plan that Owings would submit soon. He thought that Owings was now considering a surface routing along Ohio Drive rather than a tunnel. District highway officials would develop a cost estimate. He estimated the review would delay construction by at least 6 months.

District officials announced an unexpected complication on July 28. The delay in tunnel construction under the Lincoln Memorial grounds would delay completion of the Potomac Interceptor Sewer linking Dulles International Airport with the sewage treatment plant at Blue Plains in the District's southeast quadrant near I-295 along the Potomac River close to the city's southern border with Prince George's County, Maryland. The interceptor was part of the plan to clean the polluted Potomac River. A portion of the sewer main was included in plans for the Lincoln Memorial grounds tunnel. Moreover, the Department of Sanitary Engineering had recently built a sewer link to Blue Plains along the Ohio Drive segment that was now targeted for a possible South Leg route. ["Delay on Lincoln Tunnel Perils D.C. Sewer Link," *The Evening Star*, July 29, 1965]

On July 30, the *Star* printed a letter from Senator Case responding to the editorial "Unblocking Freeways." He said that "attempts to belittle and name-calling only confuse the issue." That issue was whether the Interstate System and other federally aided highway programs "shall be allowed to destroy our great cities, including the city of Washington." The "immediate concern" was the South Leg routing through Potomac Park that would cover "100 precious acres of the park with concrete." He recalled the comment that the plan would leave the Jefferson Memorial "looking like a lump of sugar in a can of worms," without citing its source in the *Post*. He concluded: "Does The Star approve of the plans for this segment of the interstate highway system in the District?"

The editors replied in the same issue: "The Star does, in fact, favor this plan and has said so editorially." They responded point-by-point to his concerns:

- (1) The plan in question would not cover 100 precious acres of the park (West Potomac Park) with concrete." It would add only 2.5 acres of concrete to what is already there.
- (2) The freeway link proposed would not rise in a confusion of ramps to the 14<sup>th</sup> Street Bridge. It would rise to the surface east of the Tidal Basin and underpass 14<sup>th</sup> Street with no connecting ramps.
- (3) It would not leave the Jefferson Memorial "looking like a lump of sugar in a can of worms." Rather, it would eliminate one of the ramps already in the Jefferson Memorial area and would pass well to the east of the memorial.

The plan was the "product of years of give and take" among NPS, BPR, NCPC, and District highway officials.

Had the Senator asked for the editors' view on the Owings plan, "our answer would be an emphatic no." The cost of an underground route in the Ohio Drive corridor, roughly estimated at \$100 million "would never be supported by Congress." The underground plan also would conflict with the Potomac Interceptor Sewer in the same corridor. If, as rumored, Owings changed his plan to a ground-level facility in the Ohio Drive corridor, "the project will have

come full circle and be right back where it was in 1956, when early plans for the South Leg—which located it along Ohio Drive on the surface—were abandoned after strenuous objections by the Planning Commission, the Park Service and the Ohio delegation to Congress that it would have an objectionable impact on the Jefferson Memorial and would obliterate the State’s namesake, Ohio Drive.

The only effect of the Owings proposal was “to delay matters further, require more reviews of a project that already has been reviewed repeatedly and provid [sic] anti-freeway obstructionists with yet another excuse for foot-dragging.” The editors recommended shelving the Owings plan and building the South Leg as planned. [Case, Senator Clifford P, “Freeway Cuts a Swath,” “Senator Case and the Loop,” “Tunnel Plan Hazards Cited,” *The Evening Star*, July 30, 1965]

During the last week of July, Senator Case met with General Duke and city officials about freeway planning in the District and the loss of parkland. They agreed to explore the possibility of using highway funds to replace park and playground land lost to the right-of-way for new roads. The question was whether the District had the authority under current law to provide replacement land or would need new legislation to do so. [“Funds Sought To Replace Park Lands,” *The Washington Post and Times Herald*, July 30, 1965]

On August 2, Senator Case took his concerns to the Senate floor to insert prepared remarks into the record. He inserted articles from two Washington newspapers about “the destructive aspects of our federally aided highway building program in its present form.” A July 28 article in the *Washington Daily News* discussed California’s plan to build a section of U.S. 199 through the redwood trees in Jedediah Smith State Park. He also cited a July 28 article in the *Post* by George Lardner, Jr., on the theme that, “Tunnels are getting cheaper all the time.” Despite concerns by highway builders about the cost and ventilation of urban tunnels, Lardner reported on a study by George Hoffman of the Rand Corporation concluding that “cost differences between tunnels and new urban roads may be indistinguishable before the end of this century.” Although Lardner commented that it might be “too early to take advantage of the trend” in Washington, he suggested that in view of continuing protests, “it would seem just as well to dig a trench and cover it over with new buildings.”

As for cost, Senator Case also reprinted a July 10 article from *The New York Times* about a decision to build a portion of the Delaware Expressway (I-95) in Philadelphia below ground “to avoid obstructing the view of the river from the residential areas beyond it.” BPR had agreed to cover the cost on a 90-10 basis.

Senator Case said that he had been critical of plans for the South Leg that would cover “acres of precious parkland” with concrete. “Fortunately, this plan has now been put into cold storage while new proposals are studied.” However, the threat in the District to “this world-famous memorial area” was “not unique.” Congress must reconsider the national highway program. “In building roads, are we not destroying other, also important, values?” This was not an “either, or” issue. “But we must make up our minds that we want both and that we will pay for both.”

Several things could be done to “avoid blight, prevent the loss of real estate values and tax revenue and preserve or enhance the beauty and livability of our cities.” Designs and alignments

could be improved. Greater coordination between highway planners and community development officials was needed. In addition, Congress should “establish the principle that in all cases where any parkland is taken for highway use, full compensation in kind must be made.” [The Nation’s Highway Building Program, *Congressional Record-Senate*, August 2, 1965, pages 19012-19013]

By mid-August, District highway officials had developed an idea that involved modifying the Independence Avenue plan for the South Leg. Between the tunnels at the Lincoln Memorial grounds and the Tidal Basin, the freeway would be built in an open cut that would preserve scenic views in the area. After leaving the east end of the Tidal Basin tunnel, the South Leg would continue in an open cut under the 14<sup>th</sup> Street Bridge approaches to connect with the Southwest Freeway. NPS could cover the depressed freeway in part or whole for park needs.

General Duke said the plan was considerably less expensive than the Owings proposal, which at more than \$100 million was about three times the cost of the original tunnel-and-surface freeway proposal. The new District plan would add only about \$15 million to the original estimate. If adopted, the plan would avoid costly delays and prevent conflicts with the city’s sewer system that was linked to the tunnel under the Lincoln Memorial grounds. The city planned to present the plan to NPS and BPR officials who had not yet reviewed it. [“D.C. Considers Sinking Of South Freeway Leg,” *The Sunday Star*, August 15, 1965]

### **Another New Plan for the South Leg**

On August 25, the *Star* and *Post* reported that Federal and District officials were considering a compromise plan developed by the Alabama consulting firm of Palmer and Baker. As the *Post* explained, the “middle of the road” plan proposed a “beeline tunnel” that “would roughly bisect the triangular wedge bounded by Independence Avenue, the Potomac River and the 14<sup>th</sup> Street underpass.” In this new location, the South Leg would tunnel across the center of the Tidal Basin. “Its west portal would be north of the Lincoln Memorial and its east portal near the Tidal Basin at 14<sup>th</sup> Street.” It would cost about \$58 million, compared with \$34 million for the original Independence Avenue plan and over \$100 million for the Owings plan. (Palmer and Baker estimated the cost of the new plan to be \$53 million, but District highway analysts raised the cost to \$58 million.)

General Duke was “very interested” in advancing the plan as quickly as possible, in part because it would allow construction of the interceptor sewer line. He and Airis acknowledged that the one disadvantage of the plan was that it did not provide access from the South Leg to Independence Avenue. Airis said the city wanted to encourage motorists bound for the northwest quadrant to stay on local roads until points west of the 14<sup>th</sup> Street interchange, a particular problem for people on the Southwest Expressway. [Morgan, Dan, “Tunnel Compromise Proposed,” *The Washington Post and Times Herald*, August 25, 1965; Pierce, Charles D., “Compromise Proposed On Route of Tunnel,” *The Evening Star*, August 25, 1965]

During a press conference, Secretary Udall threw his support behind the new plan. “We’re going to argue very strenuously” for the plan, he said. It would “get rid of highway dominance” around the Tidal Basin and “leave a large part of our great national Mall—some of the most priceless

land in the whole country—free for future development.” Further, it was “the cheapest of all the proposals if land costs are considered” and “fits in” with Lady Bird Johnson’s beautification program for the National Mall. (Land costs were virtually impossible to calculate because all alternatives involved land owned by the Federal Government.)

Secretary Udall stated that he had changed his mind about the Owings plan. He said of the Owings plan that, “It is so much more costly we are convinced we could not hold out for it.” Moreover, the new plan “brings us . . . and the District Government much closer in agreement.” The Ohio Drive alternative was no longer under consideration.

He was optimistic about the new plan, saying the project “can go right ahead.” The Department of the Interior planned to take the proposal to NCPC and the Commission of Fine Arts, adding, “and then maybe we can get the Federal Bureau of Public Roads to go along with it.”

City officials were pleased about the agreement, but Engineer Commissioner Duke was not completely satisfied because of the lack of a link with Independence Avenue. “We want to take care of the people in Southwest Washington.” He preferred the original, two-tunnel plan, but the South Leg “is located entirely on federal property, is being financed by the federal government and is primarily a federal project.” As a result, he could live with it. “I’m not going to pick a fight with Secretary Udall.” [“Interior Would Put Tunnel Under Tidal Basin,” *The Washington Post and Times Herald*, August 29, 1965; Hornig, Roberta, “Lincoln Memorial Tunnel For Inner Loop Is Backed,” *The Evening Star*, August 29, 1965; Morgan, Dan, “Duke’s Road Plans Roughed-Up,” News Analysis, *The Washington Post and Times Herald*, September 1, 1965]

The *Star*’s editors also were pleased that Secretary Udall dismissed the Owings plan:

At his news conference the other day, the Secretary abandoned, once and for all, we hope, the silly idea of building such a tunnel along the Potomac River beneath Ohio drive. This circuitous, exorbitantly expensive route, advanced by architect Nathaniel Owings, had no merit whatever, and would never have been built.

The editors were not entirely happy with the new all-underground plan, especially compared with the prior two-tunnel plan that the editors called “the eminently sound result of years of negotiation.” Instead, Secretary Udall’s endorsement of the new plan “may needlessly prolong a controversy everyone had thought was settled.” The plan, with its absence of a link with Independence Avenue, would “require substantial changes.” It also was more expensive than the two-tunnel plan. “Where would the additional money come from?” Perhaps, the editors suggested, “Mr. Udall—and Senator Case of New Jersey, who harbors similar sentiments—might be able to arrange for some other source of funds” than revenue from the Highway Trust Fund.

Another “disturbing aspect” of Secretary Udall’s support involved readiness for construction. He had said officials “can go right ahead” but his staff “suggested that uncertainty about the routing of the connecting freeway might delay the letting of construction contracts—perhaps for a substantial time.” The editors hoped the Secretary “meant what he said” and that any uncertainty

within his own department, the source of so much delay in highway and bridge construction, “will be promptly cleared up.” [“Tunnel Trouble,” *The Evening Star*, September 1, 1965]

As the Interior Department planned a presentation to NCPC on the new plan, Secretary Udall said he would personally state the case. His appearance before NCPC would be “unprecedented” because no one could recall a Cabinet-level official appearing before the commission.

In the meantime, the plan was being revised to provide the missing link for Independence Avenue traffic via loops at 14<sup>th</sup> Street. Lee Flor explained the problem with this concept:

However, it apparently would result in some complicated changes in the 14<sup>th</sup> Street roadway, and the loops would need some additional right-of-way.

Also, traffic from Independence Avenue SW would have to make a left turn across traffic at 14<sup>th</sup> Street, and then another right turn across opposing traffic flow to reach the freeway.

From the Interior Department’s standpoint, one advantage was that the new plan “would permit the present Independence Avenue right-of-way to revert to parkland.” It would equal 9.7 acres of additional parkland:

Udall said recently that a total of 37.3 acres of Potomac Park parkland land had been paved over for approaches to the Theodore Roosevelt, Washington Channel and 14<sup>th</sup> Street bridges. Udall apparently wants to get some highway land back for park use.

The proposal was still under study and might need additional adjustments.

(Flor also reported that NPS consultant John Clarkeson had submitted a preliminary report saying the Three Sisters Bridge was not justified based on the District’s traffic projections. NPS Director George R. Hartzog, Jr., who had succeeded Wirth as NPS Director in January 1964, did not release the preliminary report, which was subject to change.) [Flor, Lee, “Udall to Tell Board Of South Leg Plan,” *The Sunday Star*, September 5, 1965]

On September 9, Secretary Udall was called to the Capitol unexpectedly and was unable to make his planned presentation to NCPC. Director Hartzog, who took his place, described the proposal and acknowledged that the earlier two-tunnel plan had been approved with White House encouragement. In comparing prices, Hartzog argued that roadbuilders should forget the idea that they did not have to pay for parkland used for highways. He explained that NPS calculated the value of parkland at \$1.74 per acre based on the cost of land purchased for the performing arts center to the north. The two-tunnel plan was projected to cost about \$40 million, but the true cost was \$53 million when the value of lost parkland was included. The Udall-approved all-tunnel concept would cost \$58 million. However, it would permit NPS to close several service highways and return them to parkland. By subtracting the value of the new parkland, Hartzog told NCPC the estimated cost would be reduced to \$41 million. (Owings also made a detailed presentation to NCPC, emphasizing the parkland gain.)

Hartzog offered a motion to endorse the tunnel concept, at NPS parkland valuation, with BPR Administrator Whitton seconding the motion. Whitton, whose agency would have to pay for the plan, was “a bit skittish” about his action, according to the *Post*:

“I’m not committing the Bureau of Public Roads on a certain right of way for a certain type of job,” he said, adding, “We would have a hard time doing this here and not having San Francisco and New York and New Orleans doing the same sort of thing.”

Commission Chairman Elizabeth Rowe replied that Washington “is the place to set precedents.”

“I think so, too,” responded Whitton. “If we can afford them.”

There have been proposals to bury freeways in all the cities mentioned by Whitton, whose agency would have a final say on their approval.

Whitton was unwilling to commit to the NPS valuation of parkland at \$1.74 million an acre, but staff would have to work out the final value.

Lardner, in his Potomac Watch column, added one point that came up during the meeting. NCPC approved the idea of building as much of the South Leg in a tunnel as possible. “It was a good move,” especially since Hartzog said he did not think working out the traffic connections would be too difficult:

But it’s difficult to understand why it’s taken so many years to get even this far. The Park Service’s solution is somewhat dimmed by the long silence that preceded its discovery. “It seems to me,” said Commission Member Paul Thiry, who shuttles from Seattle for NCPC meetings, “that this should have come up a long time ago.”

Lardner also printed a plea from Whitton. “I just hate for us to continue to try to solve pieces of this traffic problem in Washington. Let’s look at it all now.” Lardner added:

The plea got lost in the shuffle. Few even seemed to be listening.

The *Post* characterized NCPC support for the proposal as “strong—but highly tentative.” Flor said that the Udall-supported plan “was boosted today by a planning agency decision to fix a cash value for parkland taken for the highway.” [Flor, Lee, “Price to be Computed On Freeway Alternate,” *The Evening Star*, September 9, 1965; “Tunnel Wins Tentative Approval,” *The Washington Post and Times Herald*, September 10, 1965; Lardner, George, Jr., “NCPC Picks Up Right Where It Left Off,” Potomac Watch, *The Washington Post and Times Herald*, September 16, 1965]

On September 14, Secretary Udall attended a meeting of the Commission of Fine Arts to present the all-tunnel plan for the South Leg. The commission gave its “strong endorsement” to the plan, with Chairman Walton saying:

Adding nearly ten acres to the Nation's most cherished and valuable monumental park is well worth the \$18 million extra cost of the Park Service plan. It's only a small proportion of the over-all cost of the Inner Loop system.

The plan, in short, "is a great way to save park land and to preserve the appearance of this important area." [Von Eckardt, Wolf, "Fine Arts Board Backs Tunnel for Tidal Basin," *The Washington Post and Times Herald*, September 16, 1965; "Fine Arts Group Favors South Leg Tunnel Plan," *The Evening Star*, September 16, 1965]

Lardner, in his Potomac Watch column, reported that Whitton and Hartzog had been discussing District highway plans informally for several months. They had begun talking during a flight from St. Louis. Whitton said he was ready "to start trading," and Hartzog agreed with the sentiment. Back in Washington, Hartzog told his colleagues, "We haven't had a highway commissioner in years who's been willing to work with us like this." Whitton wanted to get the entire Interstate network underway, while Hartzog wanted to keep as much of it as possible off parkland. [Lardner, George, Jr., "It's Time for Decisions on Highway Program," Potomac Watch, *The Washington Post and Times Herald*, November 17, 1965]

Secretary Udall wrote to members of the Policy Advisory Committee asking them to get together to discuss issues such as the South Leg and Three Sisters Bridge. Walter I. Pozen, Assistant to the Secretary, told reporters about the motivation for the invitation:

We detect a new sense of urgency and a new sense of cooperation on some of the things that have troubled us. It will be an opportunity to see how far we can go in settling these matters.

The agenda for the meeting was uncertain but as Fine Arts Chairman Walton put it, "We only meet when something's cooking. I would bet they'll back a bridge." The Policy Advisory Committee, as noted earlier, had voted in favor of a bridge upstream, with Director Hartzog and Chairman Rowe opposing it. The *Post* explained:

The victory turned out to be only a paper triumph for bridge backers since Mrs. Rowe has since declined to put the bridge question on the Planning Commission's agenda.

In letters to committee members, Hartzog suggested meeting on September 29. [Dimond, Thomas F., "Meeting on South Leg And Bridge Is Called," *The Evening Star*, September 17, 1965; Morgan, Dan, "Udall Acts In Freeway Deadlock," *The Washington Post and Times Herald*, September 17, 1965]

*Star* editors were encouraged by the developments. Referring to Pozen's comment about "a new spirit of cooperation," the editors wrote, "We do not know what sort of cosmic rays may be responsible for this sudden flash of illumination." Whatever the cause, "it is welcome."

The meeting, the editors hoped, would help resolve the South Leg issues and the location of the new Potomac River bridge:

They are difficult chiefly because their solutions, in order to protect federal parks, require imaginative planning—and amounts of money—beyond those customarily used in road building.

Additional studies were not needed. “The technicians on the agency staffs have kicked the possibilities around long enough.” Now was the time “for decisions by the top-echelon officials with the power to make them.” The urgency of the need for solutions was not new, but with the “new spirit of cooperation,” perhaps “the differences can be resolved.” [“New Spirit?” *The Evening Star*, September 21, 1965]

The suggested meeting took place on October 14 behind closed doors, with Chairman Rowe, Director Hartzog, Administrator Whitton, Engineer Commissioner Duke, Chairman Walton, and Nathaniel Owings in attendance. After the 3-hour meeting, the participants refused to comment on the discussion or outcome.

Using his sources, Lardner reported:

The first get-together at the District Building, suggested by Secretary of the Interior Stewart L. Udall, was purely exploratory, it seems. It covered, participants say, the entire interstate program for the city in a general way. Park Service did most of the talking but no agreements were reached.

The informal committee is scheduled to get together again on Nov. 23.

Lardner commented:

But the chronic failure to make decisions that stick is starting to pinch, not only on city highway officials, but at the Planning Commission where the 1985 plan for Washington is far behind the original schedule.

If Whitton and Hartzog are ready to start trading, there's no reason why the others can't, too. Highway officials should be required to come up with imaginative designs. But at the same time they're entitled to decisions on what they propose to build. Waiting much longer is only likely to produce a last-minute spate of rush jobs that no one can admire. [Lardner, George, Jr., “It's Time for Decisions on Highway Program,” *Potomac Watch*, *The Washington Post and Times Herald*, November 17, 1965]

Director Airis was not in doubt about who was delaying resolution of the impasses across the city, particularly the Inner Loop: “professional lobbyists – from esthetes who are concerned about the visual impact of these works on the city – and from worried residents, small businessmen and homeowners who are justifiably concerned over the effect of a specific project.” In a November 16 speech to the Washington Metropolitan Highway Users Conference and afterwards in talking with reporters, he declined to identify the “professional lobbyists.” However, he singled out NCPC for “debating too long.” It had failed to consider the Potomac River crossing or the Potomac River Freeway despite his department's encouragement. The overall result was that the city had completed only 8 of its 29 miles of Interstate freeways.

His audience also was to blame because highway users had “grown complacent, old and prosperous and no longer have the stomach needed for the battle to bring about the public improvements . . . .”

If the logjam could not be broken, the city might have to address the growing congestion by “artificial restrictions” on driving between Maryland and the District. This idea was not under active consideration, but was “an eventual possibility if we don’t get the interstate system.” For example, the city might change traffic signals to increase waits by commuters, limit downtown parking, or earmark more streets for one-way or reverse-flow traffic. He was not sure about the District’s legal authority to restrict Maryland traffic, but the city would “do whatever we could legally” if it reached that point. Because the impasse mainly affected traffic from Maryland, he did not expect to try to limit traffic from Virginia. [“Airis Assails Planners on Roads Delay,” *The Evening Star*, November 17, 1965; “Highway Director Sees Possibility Of Curbs on Washington Auto Traffic,” *The Washington Post and Times Herald*, November 17, 1965]

On December 5, 1965, *The Sunday Star* carried a lengthy editorial titled “Let’s Finish These Freeways to Nowhere.” It stated:

The five federal and District officials who have the power, among them, to resolve the entire mess, have been meeting secretly for some weeks, presumably seeking a compromise. They have talked, however, long enough. What the community needs now is decisions.

After describing how the George Washington Memorial Parkway on the Maryland side ends a few hundred yards of mud from Canal Road near the Maryland-District line (“Chain Bridge is clearly visible on the right”), the editors stated:

The fact is that all over town there are roads, or little parts of roads, which lead to bottlenecks—or, like the Maryland parkway, to nowhere at all.

All the roads were intended to be part of “an efficient, modern regional freeway system, painstakingly devised by highway and city planners over many years.” Today, however, “development of that system has come to an almost complete halt”:

Yet the freeway impasse drags interminably on, embroiled in one of those senseless bureaucratic controversies endemic to the Nation’s Capital.

The Inner Loop was the “crux of the dispute.” First, it would help people get to and from their downtown destinations “quickly and easily.” Second, it would pull thousands of vehicles off local roads:

But there is also a third great purpose to the inner loop. It serves as the vital connecting link among free-moving highways throughout the metropolitan area. Without it, the north-central freeway which Maryland and the District propose to build between Silver Spring and the central city cannot possibly function. To the west, the inner loop’s north leg ties the half-built Potomac River Expressway into the total system. That expressway, in turn, will connect to the new Potomac Bridge [sic] above Rosslyn, which is so essential

to the free movement of traffic from Virginia. Beyond that point, the expressway provided the connection, ultimately, to the George Washington Parkway—assuming the parkway ever gets past Chain Bridge.

Ironically, most of the top-level officials involved in the controversy recognize the valid concept of the loop. But the trouble is that each of them has fish of his own to fry.

That was why Secretary Udall and the NPS wanted the entire South Leg buried. Meanwhile, Chairman Rowe objected “most heartily” to the North Leg “because of its disruptive impact on Northwest neighborhoods.”

Alternatives must be found, including another route for the North Leg and the funds to pay for Secretary Udall’s tunnel. But if these officials cannot find answers, “President Johnson should break the stalemate personally, with a directed solution, as Presidents more than once have been forced to do in our past highway controversies.” If Washington was to be the “model city” he wanted, “completing the freeway design is every bit as important as beautification and the rest.” Automobiles, in short, were here to stay. “If we do not take effective steps to cope with them, it will be very difficult for the city to cope with any of tomorrow’s problems.”

### **Breakthrough on the North Leg**

Those secret meetings the editors mentioned led to a breakthrough of sorts from Chairman Rowe. On December 21, Engineer Commissioner Duke and Director Airis held a press conference to announce that the District was going to study Rowe’s suggestion of tunneling a six-lane, 23-block section of the North Leg under K Street, NW. As Flor explained:

As planned so far, the North Leg freeway would run from K and 27<sup>th</sup> Streets NW. generally along a line along Florida Avenue, to connect with two other freeways north of Union Station.

The tunnel alternative would connect with Whitehurst Freeway on a direct line instead of the roundabout route through residential areas in the previous plan. The path roughly along Florida Avenue would become a wide boulevard for local traffic.

Under Rowe’s proposal, the K Street tunnel would reach as far as 3<sup>rd</sup> Street at a point where vehicles could connect with the Center Leg. It might later be extended to Union Station to link with the North-Central Freeway.

The Rowe proposal also called for construction of a wide boulevard for local traffic along Florida Avenue, NW., where the North Leg Freeway had been planned for extensive tunneling under the Policy Advisory Committee agreement.

General Duke said, “Nobody’s saying this will be the final version” of the North Leg, but it would eliminate problems that had delayed construction through northwest. It also would solve one of the problems delaying the new Potomac River crossing. Trucks using the bridge under the earlier plan would travel through residential and hotel areas adjacent to the North Leg. Under the new plan, trucks would use Whitehurst Freeway and the K Street Tunnel/North Leg.

The plan to be studied involved using cut-and-cover construction that would require complete reconstruction of K Street. Because K Street was 147 feet wide, the project would involve mainly land owned by the city.

The District planned to negotiate with several engineering firms for the study. Airis told reporters he thought the study would take about 6 weeks and could be presented to the Policy Advisory Committee during its February meeting. [Flor, Lee, "Freeway Tunnel Studied by D.C.," *The Evening Star*, December 22, 1965; Morgan, Dan, "Tunneling Freeway Under K St. Studied," *The Washington Post and Times Herald*, December 22, 1965]

The *Star* editors saw this move as a breakthrough:

At a series of secret, informal meetings during the last several months . . . the half-dozen federal and District officials with the authority to make decisions on all aspects of the freeway network have been trying to reach agreement on a single package of proposals which would permit the entire program to proceed.

The most interesting aspect of the idea was that it came from Chairman Rowe, "who previously has blocked any east-west freeway north of the shopping district" and "also has halted progress on every other crucial element of the freeway system in the western part of the city, including Maryland's George Washington Memorial Parkway and a new Potomac River bridge in the Rosslyn area."

The editors saw merit in the new idea:

It would preserve intact the essential concept of a continuous inner-loop freeway system around the downtown shopping area. Indeed, its connection with the maze of freeways in the Georgetown-Foggy Bottom area would provide a shorter, more direct route to the east than the alternative road locations, swinging northward to Florida Avenue, which city highway officials have previously supported.

Highway officials had their doubts:

To be sure, there are a number of questions as to the feasibility and cost of the K-Street project which still require answers. The inconvenience and disruption along K Street, during construction would be enormous . . . . The Highway Department contends the new proposal would be less efficient than the original route in terms of the city's total traffic-distribution plan. It is keeping its fingers crossed on this point until consultant studies now under way are finished next February.

The idea needed study, but might prove helpful "provided Mrs. Rowe and everyone else understands that it is only one part of a package of agreements which will break the whole freeway stalemate." Piecemeal solutions were not enough. "The time has come now for agreement on the entire program." ["Freeway Breakthrough," *The Evening Star*, December 24, 1965]

In the Potomac Watch column, Lardner saw the District Highway Department as “getting ready to stick out its neck—again.” Several studies were due in early 1965:

Nearing completion are studies for the East Leg of the Inner Loop by the engineering firm of DeLeuw, Cather & Co., the Central Section of the North Leg by Vogt Ivers & Associates, and, most controversial of all, what is by itself commonly called the North Leg (the North Leg, West Section really) by Edwards & Kelcey.

All should be ready by springtime.

Now, however, the District had asked Edwards and Kelcey “for a quick study” of NCPC Chairman Rowe’s K Street tunneling proposal. In line with the Policy Advisory Committee’s unanimous agreement calling for “maximum consideration to the concept of tunneling” for the North Leg, the consultant had been doing just that in the study that began in July 1964 at a cost of \$175,000. Airis indicated that the study, which was to be completed in 1965, was taking longer than expected to identify alternatives that met the tunnel requirement. Lardner wrote:

Before Mrs. Rowe’s proposal came up, Edwards & Kelcey had narrowed 20 alternates for the North Leg to two routes. Each will continue to be studied, [District planner] Grant says, as a bored tunnel, a cut-and-cover tunnel, an open-air depressed roadway over which air rights buildings could be put up—and various combinations of the three possibilities. Now Mrs. Rowe’s suggestion will be added to the study.

According to Grant, all the studies would be released around the same time; no one could say the city was holding back. District highway officials hoped the Policy Advisory Committee, at its February 1966 meeting, would decide how to proceed on at least some of the projects.

Lardner said, “It promises to be a donnybrook, but City Highway Director Thomas F. Airis has the chiding advice of New York’s Robert Moses firmly in mind”:

“Cooperation of local officials, urban, suburban and exurban, on main arteries is almost impossible to attain without prolonged controversy,” Moses reminded State highway officials, who probably need no reminding of that, at their convention this fall.

The critics win, Moses said, when they are confronted by “highway men and other transportation and traffic engineers who lack courage when they can’t depend on support, who have no thirst for martyrdom, who shun ulcers and coronaries or, to use a different metaphor, won’t stick their necks out as they await their pensions.” Lardner wrote that, “No one will be able to accuse Airis of that, especially after next year.” [Lardner, George, Jr., “Highway Dept. Sticks Neck Out Again,” Potomac Watch, *The Washington Post and Times Herald*, December 23, 1965]

### **NCTA Prepares for 1965**

With enactment of the Urban Mass Transportation Act of 1964 on July 9, 1964, Congress no longer had to consider the national program that had loomed in the background of the rail rapid transit legislation for the Washington area in 1963. With that landmark bill approved, the White

House had assured NCTA that 1965 would be the year for the Washington area's rail rapid transit bill to be submitted to Congress.

Stolzenbach, who had been trying to keep NCTA out of the freeway controversies since the House had recommitted the bobtail bill to committee in December 1963, was readying the bill with the outreach and cooperation that officials had claimed was absent in earlier years. However, as Professor Schrag discussed, Stolzenbach and NTCA were in trouble at the White House by mid-1964:

Even a neutered Stolzenbach had no place at the agency. His stock at the White House had dropped in late June 1964, when civil service inspectors found that, in addition to suffering "uncertain assignments, low productivity, depressed morale, and weak supervision," half of NCTA employees had been incorrectly graded, resulting in their being overpaid relative to counterparts elsewhere in government. Seizing the excuse to get rid of a troublemaker, the White House asked for Stolzenbach's resignation, which he submitted three weeks later, effective 15 August.

As Horsky searched for a replacement, Deputy Administrator Quenstedt declined the promotion and recommended against other NCTA officials because, he said, an outsider was needed:

After some months, Horsky began to think that it might be best to keep Stolzenbach until Congress authorized a system. [Schrag, page 60]

As a result, Stolzenbach, despite his resignation, remained NCTA Administrator well into 1965.

Labor was one of the main issues NCTA had to consider. As Jack Eisen recalled in June 1964:

During the period before the Washington Subway bill was debated by the House last December, members' offices were flooded with pleas from unions around the country to defeat the pending bill.

With relatively few members on the floor, the labor demands was defeated [sic] before the subway bill itself was rejected.

Members of the House District Committee privately have made it clear that they do not want to be involved in labor legislation that could set a national precedent.

What prompted Eisen's recollection was a statement by Walter J. Bierwagen, international vice president of the Washington-based Amalgamated Transit Union, that, "we will do everything within our power" to defeat the area's rail rapid transit bill unless it included labor safeguards. The union supported the rail system, but he said, "Plans must be made and put into effect before the problems get out of hand and solutions become more difficult—and costly."

His demands included assurance that bus drivers displaced or transferred to rapid transit operations would retain collective bargaining rights, arbitration of disputes, seniority, wages and welfare programs, and protection against job loss. All workers also must be protected if automation eliminated their jobs. Further, current pension plans must not be impaired, as some

cities were trying to do when they took over bus operations from failing private companies. [Eisen, Jack, "Labor Safeguards Seen Must in Rail Transit Bill," *The Washington Post and Times Herald*, June 2, 1964]

Area officials and groups did what they could to promote rail rapid transit. Four local organizations formed a joint committee to promote the Washington subway (Board of Trade, Board of Realtors, Downtown Progress, and Federal City Council). The committee supported completing the freeway system and the rapid transit system. Meanwhile, Representative Sickles appointed a committee of the JTC to coordinate with NCTA. He wanted to ensure that the negotiating team developing an interstate pact to operate the rail system knew of NCTA's progress in case adjustments in the pact were needed. The committee also would monitor events in Congress to see if it considered precluding a three-State operating compact. ["Business Units Fear Second Freeway War," *The Washington Post and Times Herald*, June 2, 1964; "Joint Transit Steering Group Is Appointed," *The Evening Star*, July 18, 1964]

In October, the Federal City Council announced on behalf of the four-member joint committee that completion of the Capital Beltway increased the urgency of building a rail rapid transit system in the area. The beltway would aggravate urban sprawl, but soon would become overcrowded as development exceeded facilities, including freeways. "The opportunity to create an exemplary, modern, efficient urban center for the Nation's Capital will have been lost." The committee called on NCTA to submit a bill to Congress for a \$400 million publicly owned, privately operated rail transit system. The plan, the committee suggested, would be similar to the bobtail plan, but would include a downtown subway loop. [Schuette, Paul A., "Rapid Transit Rail Urged by Policy Group," *The Washington Post and Times Herald*, October 1, 1964]

Monorail advocates had not abandoned hope of cracking the District market. In an October 6 speech to the Northern Virginia Builders Association, Representative Broyhill said he wanted NCTA to reconsider monorail as the solution to the area's rail rapid transit needs. He had been working with the American Machine and Foundry Company (AMF), which set up a shop in Alexandria, part of Representative Broyhill's district, on August 1 to promote its concepts. Representative Broyhill suggested construction of a monorail demonstration in three northern Virginia corridors to demonstrate the economic and construction speed of the technology. The three corridors were:

- Seven Corners to the Pentagon, 5.9 miles, five stations, running time of 9 minutes - \$25 million;
- Bailey's Crossroads to the Pentagon, 4.5 miles, five stations, 8 minutes, \$20.7 million;
- Springfield to the Pentagon, 9 miles, eight stations, 15 minutes, 3 seconds, \$37.6 million.

None of the routes, Representative Broyhill said, would conflict with NCTA's most recent plans for its surface-and-subway system. According to the Congressman, AMF could build up to 6 miles of suspended monorail for the cost of one subway mile.

Colonel Ben Elliott, AMF's area representative, told reporters the costs were "ballpark figures," but he added that monorail and surface rail costs were comparable. A monorail would be "more pleasing esthetically" than surface rail. He said that after Representative Broyhill had

approached AMF about its concepts, the company decided to set up shop in northern Virginia. “We recognized the importance of acquainting the various agencies in the Nation’s Capital with this approach as a solution to mass transportation problems here and throughout the country.”

A NCTA spokesman told reporters the agency would consider the AMF concept, as it had other monorail proposals, but thus far had found all of them unsuitable. Further, overhead monorail had been ruled out for downtown Washington. [“Broyhill Urges Monorail Try,” *The Washington Post and Times Herald*, October 7, 1964; Lardner, George, Jr., “Firm Sets Out to Sell Monorail Here,” *The Washington Post and Times Herald*, October 15, 1964]

Bus advocates had not given up, with BPR becoming one of the advocates. During an April 23 speech on “Transit and Federal Highways” to The Engineers Club in St. Louis, BPR Planning Director E. H. “Ted” Holmes had spelled out the agency’s ideas on adapting roads and especially freeways to encourage bus rapid transit. Holmes began by emphasizing that the title of his speech included the word “and,” not “vs.” Too often, he said, “the highway engineer or administrator is cast in the role of a competitor,” with the transit advocate not an advocate of transit, but of a “particular form of transit,” namely subways:

So right at the beginning it should be made clear that in this discussion transit will be considered in its broad and general sense. Since over three-quarters of transit patrons in the United States ride on rubber tires, not on steel rails, transit has to be for highways, not against them. And vice versa, highways have to be for transit, not against it, for the more that travelers patronize transit the easier will be the highway engineer’s job.

Highways and transit may now compete, but they have different goals:

The highway engineer in building a street or highway is providing for transportation, either public or private. To him transportation is not an end but a means—a means of serving the user and also of serving and helping shape the community.

Transit served the community as well, but if a private company provides transit, the goal also is to make a profit. For publicly owned transit service, the goal is “to come as near as possible to breaking even” from the farebox. In that respect, highways and transit compete because if good roads prompt people to leave transit for private automobiles, the loss is felt at the farebox by transit operators who have fixed costs and routes, regardless of how many people the service carries.

In discussing myths and misconceptions that distorted debates, Holmes said that freeways did not cause downtown congestion. Downtowns are, indeed, congested, but they always have been. “Chariots caused congestion on the streets of Rome.” Large cities throughout history, including in the 20<sup>th</sup> century, had experienced congestion as populations overwhelmed streets, regardless of the type of vehicles using them. On the positive side, the “freeway makes the downtown area more accessible to more people from a larger area.” In short:

Freeways will not kill the downtown area. Rather they may be the means of preserving it.

Myths aside, Holmes said the Federal Government, the Department of Commerce, and BPR are for transit. “I am for transit personally because I am a regular user, which is more than some of its strongest advocates can say.” (Holmes commuted by bus from his home at 4814 DeRussey Parkway in Chevy Chase, Maryland.) Highway engineers had been on the defensive too long because of their alleged opposition to transit:

Highway officials must, and I believe do, view transit not as a competitor but as a mode of transport complementary to private transportation. And to place it in its proper perspective it must be considered on a field of neutrality, not in a no-man’s land, if any recall that term from World War I.

Downtown was still the most important destination in a metropolitan area, and it also was the area best served by transit:

But the great mass of travel, up to 95 percent in the largest cities, is wholly outside that area [and] involves the almost countless prosaic trips from home to the store, to take the children to school, to call on friends, to go to work, or move about in earning a living.

These were the trips “that transit cannot easily serve and [that] are almost wholly dependent on the private vehicle or taxi.”

The freeway can support transit:

Only limited use is being made of the freeway as an aid to transit operation, however, in part at least because of the fact that in few cities are the freeway systems yet nearly enough complete to permit suitable experiments in their use by transit vehicles.

Freeway medians may be suitable for rail rapid transit in some locations. “But that is hardly reason for the assertion frequently heard that every freeway should provide for a rail line in its median. More often that is exactly the wrong place for a rail line.” Holmes explained that, “The most likely use of freeways by transit is by buses” and that presumably would be “in some form of express service.”

Holmes described an American Transit Association report surveying expressway bus operations, saying:

The theme of these operators’ comments . . . as well as common sense reasoning, points to effective bus operation as requiring free and rapid movement not generally possible in peak traffic on today’s freeways. And it is in the peak periods, of course, that the relief that might be afforded by greater transit usage is the most important.

The key was obvious from the name:

Full use of the bus for rapid transit means it must be just that – rapid, not stopped or moving slowly at points or times of congested traffic to which the bus itself is a contributor.

Although roads, even freeways, can be adapted to encourage bus usage, one way was especially promising:

The obvious answer is the reserved bus lane. Reserved lanes are not uncommon on city streets, but no attempts have yet been made to incorporate a reserved lane in a freeway.

It is our belief that it could be wholly practicable to provide a special freeway bus lane, but it would involve somewhat complicated layouts and undoubtedly adds to the highway cost . . . .

Many factors are involved in a decision to reserve a lane for buses, even during peak hours. The Bureau of Public Roads takes the position that such a reservation is reasonable if the usage by bus passengers exceeds the number of persons that would normally be moved in the same period in passenger cars—say, 3,000 per hour.

No matter how quick the ride on a reserved bus lane, “rapid bus transit will hardly be that unless the downtown terminal problem can be solved.” A private right-of-way in the congested area is an obvious answer for buses. Whether elevated or depressed, the right-of-way “could be in subway, as investigated and dismissed, for the present at least, in Washington.” Perhaps, however, “the answer is much simpler. Perhaps it is the downtown street system itself.” Completion of freeway networks would help by moving through traffic off local streets in congested downtowns:

In no city do we yet have a completed freeway system providing a satisfactory inner loop. Once that is achieved, as it will be in one after another of the larger urban areas, half or even two-thirds of the vehicles now on the existing streets will be diverted to the freeway. They are on the street now only because they are passing through.

By freeing downtown streets of traffic that was only passing through, the inner loop freeways around the country would allow streets to “indeed become the best possible downtown transit distributors, with traffic control adjusted to accommodate the predominant bus use.”

Enabling buses to provide rapid transit would require improvements:

To provide an effective system would be a bold step, but far less in the way of capital outlay and far more flexible in operation than any fixed rail operation, whether it be the conventional two rail system the new San Francisco subway will rely on, or the more fanciful monorail of the Sunday supplements. From the highway officials’ viewpoint the highway elements involved are practicable . . . . The transit operator would need some controlled imagination to hold up his end of the system and he might also need financial help.

Bringing about a “combination of highway design and of transit vehicle design and operation [is] the long-time aim of the Bureau of Public Roads.” Holmes concluded with a two-sentence summary:

Highway and transit officials cannot be adversaries. They must be partners.

On May 18, Acting Deputy Federal Highway Administrator Lowell K. Bridwell released a circular memorandum distributing copies of the Holmes speech to headquarters and field directors. Bridwell stated that the speech “describes the views of the Bureau of Public Roads on this subject.” He believed that BPR and State officials “will find the paper useful as background for discussions that may arise with respect to coordination of highway and transit improvement programs.” [Speech summarized in: Eisen, Jack, “Freeways With Express Bus Lanes Urged by U.S. Expert,” *The Washington Post and Times Herald*, June 4, 1964]

(Well into the 1970s, pressure increased in Congress to allow Highway Trust Fund revenue to be used for construction and operation of transit facilities, especial rail rapid transit. Throughout this period, BPR/Federal Highway Administration (FHWA) would promote bus rapid transit/exclusive bus lanes as an alternative to rail rapid transit, touting the lower cost and the absence of sufficient funds to provide rail rapid transit in every city that wanted it. For more information on the fight over diversion of highway user tax revenue to transit, see “Busting the Trust: Unravelling the Highway Trust Fund 1968-1978” on this Web site.

(Starting in 1964, BPR began working with District and Virginia highway officials on a demonstration project to add an exclusive bus lane to Shirley Highway (then a four-lane I-95). Partners included the Washington Metropolitan Area Transit Commission, the Washington Metropolitan Area Transit Authority, the Metropolitan Washington COG, the Northern Virginia Transportation Commission, the AB&W Transit Company, and the WV&M Coach Company. The first version of the exclusive lanes opened on September 22, 1969 – buses were given exclusive use of 4.5 miles of reversible express lanes on Monday through Friday mornings, initially saving an estimated 12 to 18 minutes for commuters. Exclusive evening service was not available at the start of the demonstration plan, but the service expanded as officials reconstructed Shirley Highway. The success of the lanes prompted similar lanes in other States and gave FHWA an object lesson in the advantages of bus rapid transit versus rail lines. [Erion, David F., “The Shirley Highway Story,” *Virginia Highway Bulletin*, July 1974, as available on Scott Kozal’s Web site, “Roads to the Future,” at [http://www.roadstothefuture.com/Shirley\\_Busway.html](http://www.roadstothefuture.com/Shirley_Busway.html).)

In September, Representatives Broyhill, Mathias, and Sickles prepared a joint resolution calling for “the immediate implementation of a program to improve existing transportation facilities in the Washington Metropolitan Area.” In particular, they wanted “to significantly upgrade” bus service even if the expansion was “beyond the resources of the private carriers.” The resolution called on NCTA, the Housing and Home Finance Agency, BPR, and the District commissioners to work with JTC and the bus regulator, Washington Metropolitan Area Transit Commission, to develop recommendations for enhanced bus service within 6 months.

The Representatives reasoned that “although [a rapid rail] system must be evolved, additional years will pass before it can be developed to its ultimate potential and capacity.” Representative Broyhill emphasized that, “Under no conditions should this [resolution] be used to delay rapid transit.” [Geremia, Ramon, “Congressmen Urge Better Buses While Waiting for D.C. Subway,” *The Washington Post and Times Herald*, September 4, 1964; “Area Congressmen Ask For Better Bus Service,” *The Evening Star*, September 3, 1964]

By early November, NCTA had sent its new rail rapid transit proposal to the Bureau of the Budget. In addition, NCTA sent a memorandum to other Federal officials outlining the plan's major features. The \$431 million plan involved 24.9 miles of subway and surface rail lines, mainly in the District, but linked to bus service and commuter parking garages. About half of the mileage or 13.1 miles, would be in subway format in downtown Washington. The plan provided limited service into Maryland and Virginia, but was designed to allow extensions further into the suburbs, as traffic and funding permitted, to the extent of NCTA's 1962 plan.

The downtown subway would connect the White House and Capitol Hill with five branch lines:

- One would be a subway line from the White House at Lafayette Park through northwest to the Bureau of Standards at Van Ness Street.
- The longest line would follow the Baltimore and Ohio Railroad right-of-way from Union Station to Woodside, Maryland, with stops in Takoma Park and Silver Spring, essentially the route of the proposed North-Central Freeway.
- A third line would run from the White House to the K Street, NW., corridor across Georgetown through a Potomac River tunnel to Rosslyn, Virginia, before curving south to Pentagon City.
- Another branch would run east from the Capitol to a terminal at Kenilworth Avenue and Benning Road across the Anacostia River.
- The fifth line would branch off the Van Ness Avenue line at a point north of Connecticut and Florida Avenues, NW., before ending at Georgia Avenue and Quincy Street in Columbia Heights.

The plan, as described in the staff memorandum, relied on closely knit rail and bus transit systems:

The proposed rail rapid transit system will be augmented by a comprehensive areawide network of feeder bus routes operating in coordination with the rail system under joint arrangements as to fares and transfers.

Ten of the 29 rail stations would include off-street shelters for transferring among the modes. Nine of the rail stations would provide a total of more than 12,000 all-day parking spaces.

The document stated that "the peak-hour problem in central Washington can be solved only by grade-separated rail rapid transit." It added:

Unless the proposed rail transit system is begun promptly, the effects of downtown congestion will become intolerable.

Some adjustments of bus lines would be needed:

A considerable portion of the existing service will remain unchanged, particularly in the areas not directly served by rail facilities. At the same time, the rail system will enable the bus companies to reduce the extent of their most time-consuming and costly peak hour operations in the downtown area.

Partial service on the system could begin in 1970, with the entire system to be completed by 1972:

Design of the subway in central Washington takes into account both the existing development and its potential expansion, with full regard for protection of monumental and historic places, parks and residential neighborhoods.

The fare would be 25 cents for rides within the original 10-square-mile area of the District of Columbia (i.e., including the portion returned to Virginia in 1846 through retrogression). The fare would be 35 cents for rides beginning or ending outside the 10-square mile boundary. NCTA estimated that farebox revenue would pay for all operating expenses and 65 percent of construction and equipment acquisition costs.

The Federal Government would contribute \$100 million to the cost of construction and equipment, while the District would provide \$50 million. NCTA would finance the remaining \$281 million in construction and equipment costs by the sale of federally guaranteed 50-year bonds, with farebox revenue repaying the bonds, plus \$52 million in interest, over that period. If farebox revenue fell short, the District would make up one-third of any loss the Federal Government sustained.

The *Post* listed the differences with NCTA's 1962 plan:

Chief among the ways in which the plan differs from the NCTA's original 98-mile conception is the elimination of several rail lines extending deep into the suburbs. Critics in Congress had said they doubted that so ambitious a scheme could win approval . . .

Also dropped [sic] from the original plan was the idea to provide expanded and improved commuter service on the Pennsylvania Railroad line to Bowie, Md.

A third change is to have a single branch line serve both Rosslyn and Pentagon City, instead of having a separate line to each.

Other differences are the substitution of the East Capitol st. line for one to the Anacostia-Bolling area and the extension of the Columbia Heights line from 7<sup>th</sup> st. and Columbia rd. to Georgia ave. and Quincy st.

As made available, the plan did not address the labor issues that had been one of the major reasons the bobtail plan had been recommitted in December 1963. [Clopton, Willard, "New Fast Transit Plan Is Outlined," *The Washington Post and Times Herald*, November 2, 1964; Eastman, Sam, "D.C. Prepares New Rail Plan," *The Sunday Star*, November 1, 1964]

The reaction was mixed, in part because the proposed network did not reach far enough into the suburbs. For example, Representative Mathias said:

I would be disappointed if we were not contemplating pushing the railheads out to serve the densely populated suburban areas. Whatever is done in the District has got to be done

as a foundation for a thorough and complete mass transit system serving the whole metropolitan area.

District highway planning chief Grant agreed because the District's highway plan was based on a comprehensive rail system. "I feel we will need more than the system now proposed if your highway system is to be adequate." Nevertheless, he thought the NCTA proposal "seems to be a right step providing we can work out details and coordinate our construction efforts."

Assistant Engineer Commissioner Israel thought the limited system might have an advantage because it would be financed by the District, the Federal Government, and bonds. Extending it further into Maryland and Virginia would require contributions from the States, and that could cause further delays in getting started. An early start on a limited system might spur efforts to complete negotiations on a tri-State compact and generate support for an expanded network that Maryland and Virginia would be willing to help finance.

In Virginia, Fairfax County Supervisor Frederick A. Babson, Jr. (and chairman of the new Northern Virginia Transportation Commission) agreed that it was "absolutely necessary that a beginning should be made," but he proposed that officials begin immediately to work on "plans for extending two or three of the lines into Virginia." [Clopton, Willard, "Officials Praise, Criticize Rapid Rail Proposal," *The Washington Post and Times Herald*, November 3, 1964]

Reaction was less positive at a forum on mass transit sponsored by Alexandria's Northeast Citizens Association. NCTA General Counsel Owen Malone told participants that the proposal "is a truncated system, but it's just a beginning." He added, "There's nothing wrong with what we have. We don't have enough of it."

Virginia State Senator Leroy S. Bendheim of Alexandria said the plan "doesn't do very much to solve our problems on this side of the river." Vice Mayor Nicholas A. Colasanto of Alexandria asked if the plan was designed to help suburbanites "or is it to keep parking out of Washington? I am of the opinion it is the latter."

Chairman John K. Pickens of the National Capital Regional Planning Council, complained that the plan had the same faults as a previous NCTA proposal "that failed because they didn't sit down with the bus companies and the communities to work out a balanced plan." He added that, "I don't see how the plan is co-ordinated with planning in Northern Virginia." As an example, he said the planned tunnel at Rosslyn would cause "complete confusion." In an apparent reference to the separate crossing to Pentagon City contained in NCTA's 1962 plan, he added, "I feel two crossings are essential."

According to the *Star*, "The forum became, in effect, a testimonial to bus service." Robert T. Mitchell of the Alexandria, Barcroft and Washington Transit Company said the plan would hurt bus service. The company did not oppose a downtown subway, "but prove to us you can justify the cost of coming under the river and extending it into Virginia. The people of this area should realize they've got a good transit system, and you've got to make sure you don't disturb that."

State Senator Bendheim agreed about the need for greater consultation by NCTA with bus and railroad companies to create a “more co-ordinated plan that all of us can be in complete agreement with.” He said the transit company “has been paying a lot of taxes in the city, and I intend to do everything I can for the bus company.”

General Counsel Malone, responding to the support for bus transit, said that buses cannot meet the community’s needs when population increases to 3.5 million in 1980. “Other cities the size of Washington and other world capitals have found that rail rapid transit is the answer. There’s no question of the quality of bus service” he said, but congestion was increasing and would continue to do so. [Kline, Jerry, “New Rapid Transit Plan Criticized in Alexandria,” *The Evening Star*, November 10, 1964]

Chairman McMillan was optimistic about early House action. He said:

The prompt completion of necessary legislative action and early construction of such a system is essential to the welfare of the District of Columbia and the metropolitan area. I anticipate early action on the NCTA recommendations by the House District Committee since we held extensive hearings and explored all facets of the problem in the 88<sup>th</sup> Congress. [“McMillan Sees Action On Rapid Transit Plan,” *The Sunday Star*, November 8, 1964]

NCTA informed District and Maryland officials that plans did not include building rail rapid transit in the median of the North-Central Freeway, which was being designed for that purpose. Agency officials preferred their original plan of providing two tracks in the right-of-way of the Baltimore and Ohio Railroad. In response, Grant said the North-Central Freeway would retain the widened median with reversible lanes for commuters and possibly express buses. [“Rail Transit on Freeway Opposed,” *The Washington Post and Times Herald*, November 22, 1964]

After receiving the Budget Bureau’s tentative approval, Stolzenbach sent a copy of the plan, titled *Transit Development Program, 1965*, to governing bodies and planning agencies in the area on December 2. He wrote:

The system proposed herein . . . is an essential and significant beginning toward the solution of the region’s long-range transportation problem . . . . It will take about five years to put into operation.

The system was “designed for efficient and speedy expansion into the suburbs as soon as Maryland and Virginia counties are legally and financially able to do so.”

The plan included some details not previously available. NCTA proposed to administer construction contracts until area governments reached agreement on a compact establishing a multi-jurisdictional agency to supervise construction and administer fares, schedules, financing, and additional contracts. Construction, NCTA officials suggested, would begin from the proposed main terminal at Kenilworth Avenue and Benning Road, NE., east of the Anacostia River, through downtown to at least Connecticut and Florida Avenues, NE.

However, NCTA proposed private, rather than public, operation of the system after it opened. Experience in other cities demonstrated “that a satisfactory arrangement can be worked out with a private operator that will provide efficient operation and will adequately protect the public interest in the rapid transit facilities.” Moreover, because rail workers would be employees of the private company, they would receive collective bargaining and other union rights. [“Enlarged Rapid-Transit Project For ’65 Unveiled by Stolzenbach,” *The Evening Star*, December 2, 1964; Lardner, George, Jr., “Budget Unit Backs Plan for Subway,” *The Washington Post and Times Herald*, December 2, 1964]

Recognizing that the proposal involved only the first stage of a larger plan, area officials and planners endorsed NCTA’s transit plan.

As the 89<sup>th</sup> Congress began organizing in January 1965, the Senate District Committee received two new members, both serving their first term: Senators Tydings and Robert F. Kennedy (D-NY), President Kennedy’s brother and the former Attorney General. Senator Tydings had served as U.S. Attorney in Baltimore under Attorney General Kennedy before running for the Senate and defeating Senator J. Glenn Beall. Given that service on the committee was, as the *Post* put it, “non-prestigious,” young Senators usually tried to avoid the committee. Nevertheless, Senator Kennedy volunteered for the committee and Senator Tydings, while not eager, was willing to serve.

The two “share a common interest in home rule for Washington and an improved educational program for the city’s youth.” Senator Kennedy thought the city had been ignored prior to the Kennedy Administration. “The Executive Branch thought it was the responsibility of the legislative branch and the legislative branch thought it was the responsibility of somebody else.” The new Senator had played a role in creating the post held by Charles Horsky, in part to correct that situation.

Commissioner Tobriner said, “I am highly pleased that Senator Kennedy has consented to be a member of the [District] Committee because of his long familiarity with District affairs and his constructive interest in improving the city. Sen. Tydings is also a most valuable addition to the Committee. Both he and his family have had a long association with the District and concern with its affairs.” [Schuette, Paul A., “R. Kennedy, Tydings Added to Senate’s District Committee,” *The Washington Post and Times Herald*, January 9, 1965]

### **President Johnson Jump Starts the Plans**

On November 3, 1964, President Johnson defeated the Republican candidate, Senator Barry M. Goldwater of Arizona, by a landslide in the popular vote (43.1 million to 27.1 million) and the electoral college (486 to 52). In a book about the Johnson presidency’s legislative record, Professor Julian E. Zelizer explained that the vote did more than give President Johnson a mandate:

Goldwater’s extreme right-wing candidacy, as well as the excitement over Johnson’s legislation and the positive memories in the electorate of John Kennedy, drove the size of Democratic majorities to historic levels. The composition of Congress . . . changed

dramatically. With huge majorities in the House (295-140) and the Senate (68-32), Democrats would have more seats than at any time since 1936 . . . . The conservative coalition in Congress had been reduced to its smallest size since it had formed . . . . “There were so many Democrats,” noted the young Illinois [Republican] representative Donald Rumsfeld upon surveying the landscape after Lyndon Johnson’s victory, “that they had to sit on the Republican side of the aisle.”

Johnson had had numerous successes in the more balanced 88<sup>th</sup> Congress, including the landmark Civil Rights Act of 1964 and Urban Mass Transportation Act of 1964, but the “Eighty-ninth congress was potentially more fertile ground for the broad range of controversial programs on his dream agenda.” [Zelizer, Julian E., *The Fierce Urgency of Now: Lyndon Johnson, Congress, and the Battle for the Great Society*, Penguin Press, 2015, pages 159, 164-165]

The combination of a Presidential landslide and widespread Democratic control of the new Congress gave President Johnson a legislative opportunity that few Presidents have had. He took full advantage of it domestically with a range of proposals big and small, national and local.

On January 4, 1965, in his State of the Union Address to a joint session of Congress, President Johnson outlined his vision of a Great Society. He had unveiled the concept of a Great Society in May 1964, when he outlined his first steps during a speech to the University of Michigan at Ann Arbor:

We are going to assemble the best thought and broadest knowledge from all over the world to find these answers. I intend to establish working groups to prepare a series of conferences and meetings—on the cities, on natural beauty, on the quality of education, and on other emerging challenges. From these studies, we will begin to set our course toward the Great Society

Now, in the State of the Union Address, he outlined the results of his review:

We worked for two centuries to climb this peak of prosperity. But we are only at the beginning of the road to the Great Society. Ahead now is a summit where freedom from the wants of the body can help fulfill the needs of the spirit.

We built this Nation to serve its people.

We want to grow and build and create, but we want progress to be the servant and not the master of man.

We do not intend to live in the midst of abundance, isolated from neighbors and nature, confined by blighted cities and bleak suburbs, stunted by a poverty of learning and an emptiness of leisure.

The Great Society asks not how much, but how good; not only how to create wealth but how to use it; not only how fast we are going, but where we are headed.

It proposes as the first test for a nation: the quality of its people.

This kind of society will not flower spontaneously from swelling riches and surging power.

It will not be the gift of government or the creation of presidents. It will require of every American, for many generations, both faith in the destination and the fortitude to make the journey.

And like freedom itself, it will always be challenge and not fulfillment. And tonight we accept that challenge.

The economic component of the Great Society included “Transportation for Growth”:

I will recommend heavier reliance on competition in transportation and a new policy for our merchant marine.

I will ask for funds to study high-speed rail transportation between urban centers. We will begin with test projects between Washington and Boston. On high-speed trains, passengers could travel this distance in less than 4 hours.

As the month progressed, rail rapid transit for the Washington area had been gaining momentum, but always with uncertainty about the prospects in Congress.

The highway departments in Maryland, Virginia, and the District of Columbia endorsed NCTA’s new plan. Chairman Funk said that Maryland’s planned highway network would not be enough to meet transportation needs without “an early implementation of a safe, comfortable, convenient and economical rapid transit facility in selected commuting corridors.” Virginia Highway Commissioner Douglas B. Fugate informed NCTA:

I think all of us realize the need for mass transit in the heart of the Washington Metropolitan Area, and your report appears to cover a basic system toward filling this need.

Maryland Governor Tawes and Virginia Governor Harrison endorsed the letters from their State highway officials.

Engineer Commissioner Duke said the city had provided its recommendations to the Bureau of the Budget and they must remain confidential. He said, however, that the District government “has always been in support of a balanced transportation system.”

As Lee Flor wrote:

The NCTA also has received endorsements from Arlington County, the Maryland-National Capital Park and Planning Commission, the city of Rockville, and Fairfax City. In addition, the Prince Georges County Commissioners approved the transit plan Friday . . . . Fairfax County and the National Capital Regional Planning Council are expected to approve the proposal tomorrow. [Flor, Lee, “Virginia, Maryland Endorse Rapid Rail Transit Proposal,” *The Sunday Star*, January 10, 1965]

On January 14, President Johnson's annual message to the Congress on the District of Columbia discussed the city's freeway impasse, as mentioned earlier. However, on rail rapid transit, he promised only to address the subject in a later document:

I shall shortly send to the Congress my recommendations with respect to the rapid transit program. Funds to meet the District's share of initial costs are included in the budget.

By January 24, the *Star* was reporting the White House's decision to replace Stolzenbach as NCTA Administrator. An anonymous White House official confirmed that President Johnson would accept Stolzenbach's resignation as soon as officials found a replacement:

Replacing Stolzenbach is designed to brighten chances for congressional approval of legislation authorizing a rapid rail network for the Washington area . . . . Critics have charged that Stolzenbach generated ill will toward his agency from several influential sources, including several key members of Congress.

According to critics, the agency's plans have suffered because of Stolzenbach's early recommendations for junking some highway construction projects, his feuds with some suburban planners, and because of alleged failure to coordinate planning with area officials and bus line operators.

Although supporters argued that "it was impossible to push ahead with the rail plans and at the same time make no enemies," the *Star* reported that:

The decision to replace Stolzenbach is part of an effort to erase old mistakes and create a fresh start when the new transit bill goes to Congress, the administration source said.

He pointed out, for example, that careful effort should have been made to end the rail transit-highway conflict and also to get support from area officials for the new transit plan. ["Stolzenbach Resigning As Transit Agency Chief," *The Sunday Star*, January 24, 1965]

On January 25, President Johnson submitted his annual message to Congress on the national budget. It included some references of interest to District officials. One was:

No recent step in improving the prospects for future urban development has been more significant than the enactment of the Urban Mass Transportation Act of 1964. To extend similar opportunities to the local communities of the National Capital region, I urge authorization of the special Federal assistance required to provide the nucleus of an adequate system of high-speed urban transportation for this area.

The Washington Metropolitan Area Transit Commission, the bus regulator, unanimously endorsed NCTA's proposal on January 27. The approval said the plan was "in the long-range public interest of the Washington metropolitan area," despite "some reservations as to the overall financial conclusions reached in the plan." Executive Director Ison said the decision was "an unqualified endorsement of the proposed rail system of NCTA, even though additional governmental subsidies over and above those contemplated by NCTA may be involved." He

pledged that commission staff “will cooperate and exert every influence within its capability in urging the enactment of appropriate legislation to achieve” the area’s needed rail rapid transit system. [“Rail Rapid Transit Gets Metro Backing,” *The Evening Star*, January 27, 1965]

Stolzenbach submitted NCTA’s revised transit plan to President Johnson on February 1, 1965. The transmittal letter stated:

This program would authorize a rail rapid transit system in the National Capital region essentially similar to that which the House Committee on the District of Columbia endorsed in 1963.

The revised system is capable of extension later to a system of the scope recommended by the Agency in its 1962 report. It will provide the region with greatly improved mass transit service, will be efficient and economically feasible, and would be operational in about five years.

He emphasized that appropriate State and local officials, as well as other interested organizations, had reviewed the proposal and that it had “received enthusiastic and widespread endorsement.” He concluded:

It is consistent with Congressional policy and directives outlined in the Agency’s enabling Act. I therefore recommend that it be transmitted to the Congress, together with appropriate implementing legislation which accompanies this report.

Professor Schrag described the 40-page report, *Rail Rapid Transit for the Nation’s Capital*:

Unlike the elegantly typeset and lavishly illustrated 1962 report, *Rail Rapid Transit* broadcast frugality. It appears to have been created on a typewriter, with only a few drawings thrown in. Inside, however, the plan essentially replicates the bobtail scheme defeated in 1963, extending the twenty-three miles of rapid transit to twenty-five miles, with a total price tag of \$431 million. Bonds, to be repaid out of the fare box, would cover 65 percent of that amount, leaving \$100 million in federal grants and \$50 million in D.C. grants, the same 2:1 ratio established by the Urban Mass Transportation Act of 1964. In contrast with the 1962 report, which advocated either a federal corporation or an interstate compact agency, the 1965 report proposed that a private company be found to operate rapid transit. This provision was designed to placate the labor unions; unlike a federal government [agency], a private operator faced no restrictions against binding arbitration.

Stolzenbach apparently had learned from experience, because the new report barely mentioned highways:

It notes, at the beginning, that “no highway system could be designed for the central area that would be both capable of handling all peak-hour trips and compatible with the city of Washington” and, at the end, that rapid transit “will enable the highway system to function more effectively” by diverting some drivers, but that is all. (Either of these statements would fit in well in the 1959 MTS plan.) It mentions no highways by name

and includes no highway map; an ignorant reader might not discern any controversy at all. [Schrag, pages 59-60; the report can be found in Rapid Rail Transit for the Nation's Capital, Hearings on H.R. 4822 before Subcommittee No. 5 of the Committee on the District of Columbia, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, February 17 and 24, March 3, 10, and 17, 1965, pages 7-36]

President Johnson transmitted the NCTA report and legislation to Congress on February 10:

The problem of mass transportation in the Washington area is critical. It is also a problem in which the Federal Government has a unique interest and responsibility. As Congress found in the National Capital Transportation Act of 1960, an improved transportation system for this area "is essential for the continued and effective performance of the functions of the Government of the United States, for the welfare of the District of Columbia, for the orderly growth and development of the National Capital region, and for the preservation of the beauty and dignity of the Nation's Capital."

There is widespread agreement that a high-speed and high-capacity rail transit system operating over separate rights-of-way through the more densely populated sections of the Washington metropolitan area provides the most promising approach to a long-range solution. Such a system will preserve the beauty, the dignity, and the historic and monumental character of our capital city. It will exercise a desirable influence on the pattern of growth of the metropolitan area. And such a system is vital if we are to achieve the goal of a balanced transportation system for the area. The highway network now proposed for the area is predicated on an adequate rail transit system.

The report and proposed bill which I am transmitting provide for a system which will furnish the Washington area greatly improved transit service and which can later be expanded to the total system eventually needed. The National Capital Transportation Act of 1960 authorized the negotiation of an interstate compact under which the District would join with Maryland and Virginia in creating an appropriate organization to develop a total system for the area. My hope remains firm that such a compact organization can be brought into being at an early date. In the meantime, however, work on the present proposals can and should go forward without delay.

The Agency estimates, based on engineering studies carried on over the past five years, that to construct and equip the system which it proposes will cost \$431 million, excluding interest costs. The proposed bill authorizes the appropriation of \$150 million – \$100 million by the Federal Government and \$50 million by the District. With these grants, system revenues will be sufficient to provide for both operating expenses and the balance of the capital costs. The grants will also supply all the funds needed for construction until near the end of fiscal year 1968. By that time I hope that there will be a suitable regional compact agency which can assume the responsibility for issuance and sale of the revenue bonds needed to meet the remainder of the cost. If such a compact agency is not timely created, I will be prepared to present alternative recommendations in time for the Congress to give full consideration to the course to be pursued.

The National Capital area should no longer be denied the forms of urban transportation which are vital to its welfare. The proposed program is an appropriate beginning – indeed, a long step toward the total transportation needs of the area. I hope that the Congress will give prompt and favorable consideration to the legislation which is needed to get the program under way.

Chairman Whitener introduced the Johnson Administration bill, the National Capital Transportation Act of 1965 (H.R. 4822), on February 10, and Chairman Bible followed on February 11 with Senator Tydings as a cosponsor. The bill authorized construction of the plan described in *Rail Rapid Transit for the Nation's Capital*.

The resulting lines and facilities “shall not be operated except under contract by private transit companies, private railroads, or other private persons.” The contracts were to be awarded “only after formal advertisement and negotiations” with interested, qualified parties “including private mass transportation companies in the National Capital region.”

The Secretary of Labor was to certify that contract terms were consistent with Section 10(c), “Labor Standards,” of the Urban Mass Transportation Act of 1964. The certification was designed “to protect the interests of employees affected by any such contract for the operation of the facilities authorized by this Act . . . .” The legislation also applied the Davis-Bacon Act’s requirement to construction workers to ensure they received the area’s prevailing wages. In addition, the legislation provided that relocation services authorized by the Act of October 6, 1964, would apply to the rail rapid transit plan for those displaced by construction.

The bill authorized \$100 million out of Federal revenues and \$50 million to finance the District’s share of construction costs. It also authorized a bond issuance of \$50 million by the District commissioners “to carry out the purposes of the National Capital Transportation Act of 1965.”

Chairman Whitener scheduled the first hearing on the bill for February 17. The Senate District Committee planned to hold off on hearings until the House District Committee completed its hearings. The idea was to find out if the House could proceed without encountering the problems that led to recommittal of the bobtail bill in December 1963.

Despite these steps, Representative Broyhill told the Northern Virginia Apartment Owners Association that he planned to introduce a bill offering a monorail system as an alternative to the NCTA plan. “I just don’t think monorail has had a fair trial,” he said. “I’m going to present it to the District Committee for its consideration . . . but it won’t be a rival to the National Capital Transportation Agency’s plan.”

When the association held a panel discussion, Representative Broyhill’s claim that monorail was about one-sixth the cost of a subway tunnel was contested. Fairfax County Supervisor Babson charged that Representative Broyhill was “comparing oranges and apples.” In downtown Washington, the monorail would have to go into a subway tunnel that would be more expensive because it would have to be designed to carry cars hanging from the ceiling. Moreover, Babson said, construction of rail lines on the ground or in open cuts would be “much cheaper” than monorail.

Representative Broyhill maintained that monorails, which would avoid the heavy costs of underpasses, overpasses, and right-of-way at grade, would be cheaper. For example, surface rail had been rejected on Columbia Pike in northern Virginia (State Route 244) because construction would be too costly. Monorail supports measuring 36 inches wide could be erected in the middle of Columbia Pike to provide fast transit service for the apartment complexes in the area. [Flor, Lee, "Broyhill Seeks Monorail System," *The Evening Star*, February 12, 1965]

On February 15, 1965, as mentioned earlier, President Johnson submitted his special message to Congress on the needs of the Nation's capital. He pointed out that the District could no longer be considered separately from the Washington metropolitan region:

Increasingly, the problems of the District blend into and become a part of regional problems. Transportation, water, air pollution, sewage and waste disposal, fire and police protection, recreation, employment, and economic development are only a partial list of matters in which neither the District nor any other part of the area can proceed behind its own jurisdictional curtains.

He said of the region's problems that:

The most critical of the regional development needs is transportation. Washington is now the only major capital in the western world lacking a rail rapid transit system. There is urgent need to begin the construction of such a system—largely within the District at the beginning, but eventually extending into the suburbs of Maryland and Virginia. I have already transmitted to the Congress proposed authorizing legislation.

The highway program in the region "must likewise not be allowed to lag." He said:

The cooperative efforts of District and Federal agencies through the Policy Advisory Committee to review some elements of the program should be continued. Construction should proceed as rapidly as funds can be made available.

### **The 1965 Interstate Cost Estimate**

On January 11, 1965, Secretary of Commerce Luther H. Hodges submitted the 1965 ICE to Congress. It was the third in the series of ICEs and the first since 1961. The ICE was intended to estimate, as of January 1, 1964, the cost of remaining mileage in each State compared with the national total to provide the apportionment factors for FYs 1967, 1968, and 1969 to ensure simultaneous completion of the freeways to full Interstate standards.

The ICE was based on estimates each State, including the District of Columbia, had submitted describing the cost of completing its remaining Interstate mileage. "These estimates, so prepared and developed under the joint effort of the Bureau of Public Roads and the State highway departments, represent the best coordinated engineering judgment in this important matter."

The 1961 ICE had projected the total cost of the 40,886-mile Interstate System to be \$41 billion, of which the 90-percent Federal share was \$37 billion. By contrast, the "1965 total estimate is \$46.8 billion, of which \$42.0 billion is the estimated Federal share." Over 50 percent of that

total had been expended. Of that \$46.8 billion total estimate, the funds (State and Federal) needed to finish the remaining mileage totaled \$20,332,134 (Federal share: 18,385,737).

The ICE report identified several reasons for the increased cost. One was the Federal-Aid Highway Amendments Act of 1963 that had changed the design year for Interstate standards from traffic needs in 1975 to traffic needs 20 years from the date of PS&E approval. This change added \$342 million to the estimated cost. The cost of preliminary engineering, right-of-way, and construction had increased from \$39,136 million in the 1961 ICE to \$44,744 million – a difference of \$5.6 billion:

This increase results from changes in unit prices between 1959 and 1963; changes in construction quantities reflecting more developed design plans, additional lanes, interchanges, etc., to accommodate the increase in traffic forecast for system segments; the increase in right-of-way values particularly in the growing urban areas; the change in design year noted above; and the increase in cost resulting from additions and adjustment to the Interstate System which have been made during the period between the 1961 estimate and the 1965 estimate.

Experience was another reason for the increased cost:

The experience gained in the construction of the system to date, the added safety features which are a part of the highway design, the advanced knowledge in pavement design practices and the most complete planning and design data available for this estimate all contribute to the increase in cost which is reported. The 1961 estimate was based on 158,449 lane-miles of highway. The 1965 estimate provides for 163,429 lane-miles.

(A lane mile is the length of a roadway multiplied by the number of lanes. Example: A 10-mile long road that has four lanes, two in each direction, contains 40 lane miles.)

In short, the Federal share of costs was \$42 billion, but Congress had authorized \$22.215 billion through FY 1966. To complete the Interstate System as designated, Congress would have to authorize \$19.785 billion. [The 1965 Interstate System Cost Estimate, Letter from Secretary of Commerce, Committee on Public Works, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, House Document No. 42, January 13, 1965]

The total cost of the District's 29 miles of Interstate highways, built and unbuilt, was estimated to be \$408,585,000 – an increase of about \$60 million since 1961. The 1965 ICE estimated that the remaining cost of the District's Interstate mileage was \$273,301,000.

The District's estimate took the probable rail rapid transit system into effect. The 1961 estimate had been based on the assumption that only 25 percent of downtown commuters would travel by transit, a figure that critics had questioned. For 1965, the District used NCTA projections that 60 percent of downtown commuters would use transit, with the remainder traveling on the freeway network.

District officials cited several reasons for the \$60-million increase, in addition to the general reasons that costs had increased nationwide. The estimates had been adjusted for inflation. Estimated right-of-way acquisition costs were up an average of 7.5 to 15 percent every year.

The District also had made design changes to address concerns about the proposed freeways. For example, the Center Leg Freeway had been moved to avoid impacting the Rayburn House Office Building (the change added \$15 million to the cost). The South Leg Freeway was another example. Putting the freeway in a tunnel beneath the Tidal Basin added about \$20 million to the cost. The District had concluded that the higher cost to address aesthetic concerns was justified. A BPR spokesman told reporters the District's estimated cost was "fairly stable" compared with other States. [Flor, Lee, "D.C. Freeway Cost Estimate Up \$60 Million," *The Sunday Star*, January 17, 1965]

Overall, the 1965 ICE meant that Congress would have to find additional revenue to complete the Interstate System. Administrator Whitton told reporters that current highway user tax revenue would provide all but \$3.4 billion of the total estimated cost. That was the amount Congress would have to find.

The Administration was expected to propose sources of added revenue, with truckers a likely target for increases. Senator Randolph predicted that the trucking industry faced higher taxes. "This naturally is going to make the truckers unhappy and the rails happy, but it's one of those things," he said in a speech to the Associated General Contractors of Missouri.

At the same time President Johnson was seeking new revenue for the Highway Trust Fund, he was planning to propose cuts in excise taxes, including the tax on automobiles. The idea was to bolster economic expansion by putting more money in the pockets of taxpayers. This proposal to cut Federal excise tax revenue would complicate efforts to find additional revenue for Interstate construction. Whatever sources the Administration and the House Ways and Means Committee identified, *The Wall Street Journal* predicted "a free-swinging fight on Capitol Hill this year." [Associated Press, "Tax Increase for Truckers Predicted," *The Washington Post and Times Herald*, January 16, 1965; Wentworth, Eric, "Cost of Federal Highway System Raised \$5.8 Billion," *The Wall Street Journal*, January 14, 1965]

President Johnson, in his January 25 budget message to Congress, stated:

The estimated cost of completing the Interstate Highway System – which is financed by highway user taxes—has recently been increased by \$5.8 billion. To avoid serious delay in completing the system, while remaining on a pay-as-you-go basis, I will include in my excise tax proposals specific recommendations for increasing certain highway user charges.

Lardner captured the District's problem in his Potomac Watch column of February 1, 1965. He began:

The first slip in the big interstate highway system's 1972 deadline has popped into sight. One look at the District of Columbia's creaking progress makes it easy to understand

why. Highway officials all over the country are running into holdout cities where the going is toughest.

Administrator Whitton was determined to meet the deadline in the District and elsewhere. “We’re reaching the critical point. I have said – and I’ll say again – we’ve just got to get the roads, both urban and rural, located this year. I can’t tell the states that and not mean it for the District, too.” Officials would have to sell the public on the need for the highways. “If you get too many people unwilling to go along, you just can’t build a road.”

Lardner said the District had yet to firm up the location of half its Interstate mileage (14.2 miles) to the point where detailed design or right-of-way acquisition could begin. The Three Sisters Bridge, the North-Central Freeway, and the North Leg of the Inner Loop, “remain unsettled after years of talk.” The city had “the poorest interstate record in the country when compared with the states.” Whitton agreed, but added, “The District has a greater share of the problems everyone faces” because it did not have rural mileage to increase its completion percentage as the States did.

Lardner pointed out that critics were suggesting that rail rapid transit would make the controversial freeways unnecessary, despite the fact that NCTA had “long since abandoned any such claims.” He mentioned the President’s statement in his message to Congress on the District of Columbia budget about the highway program being “urgently needed” and that it had “been coordinated with the proposed rail transit program.” Despite ongoing controversies, Lardner wrote that, “The Administration appears to have decided to end the dispute and go ahead with the roads.” Lardner did think all the routes could be fixed in 1965, but thought the Three Sisters Bridge and the North-Central Freeway “may win approval, though both could stand some changes in design.” [Lardner, George, Jr., “D.C. is Roadblock for Interstate Route,” *Potomac Watch*, *The Washington Post*, February 1, 1965]

The House and Senate Committees on Public Works took up the 1965 ICE with the focus on nationwide needs, not the District of Columbia, to approve the apportionment factors. The House committee hearings on March 23 and 24 and June 17 briefly touched on the District. When the Senate committee held hearings at the end of March on nationwide issues, the District’s challenges did come up on March 31 when General Prentiss testified on behalf of ARBA. Senator Randolph asked General Prentiss to explain his statement that highway contractors were operating below capacity at a time when many States needed to complete their programs by the target date of 1972. “There must be a bottleneck,” Senator Randolph suggested.

General Prentiss replied:

I am sure that there are problems, and I think that the District of Columbia is a fine example of one of those problems. It is not due to a lack of capacity [or] capability on the part of the highway industry to get the job done here in the District, but there is a real problem in overcoming the opposition which exists in many areas to building the highways that are so badly needed in order to serve the many.

It is the few who are objecting to the program, and in many cases it is the few who are able to hold the programs up.

He added that many States faced a similar problem of “local opposition to getting the things done, and it is the few local people who feel that they are being penalized for the benefit of the many, and they do not like it.”

Senator Randolph wondered what motorists must think when, for example, the Theodore Roosevelt Bridge opened and traffic was funneled west to the George Washington Parkway. Already, he said, three lanes of traffic were funneled into two, and now with the opening of the Theodore Roosevelt Bridge, another lane was added “and here you have a bottleneck.” He said, “There are people who ask me why do we build the bridges, we build these roads, and then we bottleneck them, and make it worse than before.”

General Prentiss said that as Engineer Commissioner at the time, he had been involved in securing approval for the bridge, but did not know all the details since then. However, he said, that when the bridge was completed, it was “opened to traffic just as soon as some exits were available on both sides . . . so that the structure would not sit there unused when some people could get some benefit out of it.” He added:

I am of the opinion that there are a considerable number of tie-ins that were not completed at the time the bridge was opened for traffic. Some of them may have to do with some of the highways leading into Washington, which are still under consideration, and the right-of-way has not been cleared as yet . . . .

The engineers that designed the bridge designed it for the ultimate traffic that it must carry. They are putting up a bridge to meet, say, the traffic requirements of 1975.

The highway program on the far side of the river has not been built to meet those same standards. But it would be very foolish on the part of the builders of the bridge to design one which had a capacity limited to the inadequate roads on the south side of the bridge.

Senator Randolph asked General Prentiss if he meant “there needs to be more effective coordination between Virginia and the District of Columbia and Maryland . . . .”

General Prentiss agreed. “And the program to distribute the traffic as it crosses needs acceleration.”

Senator Randolph said, “I agree with this statement. This is from personal observation.” [1965 Cost Estimates for Completion of Interstate and Defense Highway System, Hearing before the Subcommittee on Public Roads, Committee on Public Works, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, March 30 and 31, 1965, pages 112-113]

On April 1, Peter Craig wrote to Senator Randolph on behalf of the Committee of One Hundred on the Federal City:

Without questioning the wisdom of the efficient completion of the Interstate System, we do question the wisdom of sanctioning, even by indirection, the disproportionate expenditure within the District of Columbia of sums three times as much per capita as are being spent elsewhere in the country.

Craig enclosed a letter he had sent to Chairman Fallon on March 24. Craig wanted to testify in support of an amendment to any resulting approval of ICE apportionment factors:

*Provided, however,* That the total cost of the Interstate System in the District of Columbia shall not exceed \$400,000,000.

Based on the 1965 ICE, the per capita expenditure of Interstate funds in the District amounted to \$682, compared with \$245 nationwide. “By any measure—population, the city’s needs, the resident’s desires—this top-heavy apportionment to the District of Columbia is grossly excessive.” The Committee of 100 thought the cost should be limited to \$400 million “and probably should be even less.”

As on previous occasions, he cited changes in the routes covered by the ICE since the first ICE in 1958/1959. Some routes had been deleted from the Interstate System or built and then deleted as in the case of the Kenilworth Freeway. The new routes added since then “have put impossible strains on the District’s highway fund and are unacceptable to Washington residents.” He listed routes with increased lanes:

- Center Leg Freeway (increased from six to eight lanes)
- Southeast Freeway (six to eight lanes)
- Anacostia Freeway (four to six lanes)
- 14<sup>th</sup> Street Bridge (eight to ten lanes)

He also listed projects added in the past 5 years:

- North Central-Northeast Freeway (10 lanes)
- Extension of Potomac River Freeway west of Key Bridge (12 lanes, including relocated Canal Road) to new bridge crossings (six lanes)
- East Leg Freeway along west bank of Anacostia River (six and eight lanes)
- South Leg Freeway (four and six lanes)

Craig added that several projects had expanded since preparation of the District’s 1965 ICE:

By the latest District of Columbia Highway Department long-range plan, the 14<sup>th</sup> Street Bridge is shown as 12 lanes (versus 10 in August 1964); the North-Central Freeway as 10 lanes (versus 8 last year).

These changes and expansions reflected “the concerns of the Committee of One Hundred on the Federal City—concerns that we feel are shared by most Washington residents.”

In an exhibit, Craig elaborated on the changes and added that the revised estimates did not include reimbursement for the use of park lands or any estimates of the number of residents or

businesses that would be displaced by the planned expansion of the Interstate program in the city. [1965 Cost Estimates for Completion of Interstate and Defense Highway System, pages 133-134, 142-143; the House Subcommittee on Roads did not include Craig's letter to Chairman Fallon in the record of its hearings]

The Senate Committee on Public Works did not address the District of Columbia in its report on Senate Joint Resolution 81 to authorize the Secretary of Commerce to apportion Interstate construction funds for FY 1967 based on the 1965 ICE. It recognized that the estimate did not reflect the final cost of completing the Interstate. For example, it was based on 1963 unit prices, a figure that could be projected to continue increasing. The estimate also did not include the cost of President Johnson's announced highway beautification program, which had not yet been submitted to Congress.

Caveats aside, the committee approved the apportionment factors based on the 1965 ICE. "Irrespective of whether the present level of authorization is maintained or is altered, an equitable distribution of authorized funds among the States requires that the recommended apportionment factors for 1965 be applied." [Cost Estimate for completion of the National System of Interstate and Defense Highways, Committee on Public Works, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 187, May 13, 1965]

On May 14, the Senate approved Senate Joint Resolution 81 by unanimous consent without debate. [Authorization for Secretary of Commerce to Apportion Sum Authorized for Fiscal Year Ending June 30, 1967, for the National System of Interstate and Defense Highways, *Congressional Record-Senate*, May 14, 1965, pages 10515-10516]

President Johnson submitted his wide-ranging proposals on excise tax changes on May 17. The message to Congress covered many subjects, including user fees, which he said allowed taxpayers to pay directly for the services they receive. "Users of highways come closer to reimbursing the Federal Government for its transportation investment than any other group. But inequities remain among the various classes of highway users." He recommended that Congress approve the 1965 ICE but also increase highway user excise taxes to meet the \$3 billion shortfall in anticipated revenue.

To begin, he recommended extending existing highway user taxes from their current end on September 30, 1972, to February 28, 1973. This change, he said, "will meet most of the increased costs of the Interstate System" but would not prevent a shortfall that could force States to cut back on their construction plans. Therefore, he recommended increasing user taxes on heavy trucks to yield about \$200 million a year until 1973. Changes included increasing the tax on diesel fuel from 4 cents to 7 cents a gallon, as well as increases in the truck use tax and tread rubber.

President Johnson said that the changes in truck taxes were justified by BPR's 1961 study allocating cost responsibilities among the classes of highway users. The highway cost allocation study, he said, "clearly show that heavy trucks are not paying fully for the additional cost of heavier pavement and other design features needed to carry them." Thus, his proposed changes would "achieve a fairer sharing of costs among the users of the highways." He had considered

increases in the size and weight of trucks allowed on the Interstate System, but based on cost allocation, they would lessen the fairness of the current distribution of taxes among highway users. He would recommend changes in sizes and weights “as soon as just and appropriate user charges are enacted.”

The House Ways and Means Committee, which is responsible for initiating tax legislation in the Congress, wanted to avoid bogging down the President’s overall proposal that was inevitable if the powerful trucking industry opposed the increases in truck taxation. Moreover, in the face of lobbying by truckers, some members of Congress doubted the accuracy of the 1961 cost allocation study and the 1965 ICE. The trucking industry advocated extending current highway user taxes by 9 months beyond September 1972. They also suggested that instead of eliminating the 10-percent Federal excise tax on passenger cars as President Johnson had proposed, the tax should be continued at the 1-percent level the committee had approved, but with the revenue directed to the Highway Trust Fund.

Chairman Wilbur D. Mills (D-Ar.) decided to advance a bill cutting excise taxes, while postponing action on the truck tax increases for consideration at “a later date.” Truckers were hopeful the heavy truck tax increases would be postponed indefinitely, and that was a possibility in view of all the other volatile measures in the committee’s bill that President Johnson had proposed. However, an anonymous trucking official said, “If he decides to push it, things will be different.” [Large, Arlen J., “White House Request for New Truck Taxes Appears Shelved for This Year in Congress,” *The Wall Street Journal*, July 1, 1965]

With funding issues unresolved, the House Committee on Public Works acted on Senate Joint Resolution 81 on July 26. It struck out the Senate-approved text and substituted its own bill based in part on the assumption that “the Interstate System must be continued on schedule and completed as required by law in 1972.” The committee increased the authorization for FY 1967 from \$2.9 billion to \$3 billion, but it could not approve the apportionment factors “until it is certain that the necessary means will be found to finance the additional increase in the cost of completing the system as contained in the cost estimate.” Instead, the amended resolution authorized the Secretary of Commerce to apportion funds based on the 1965 ICE, “but the Congress reserves the right to disapprove the cost estimate . . . .”

The bill also called for the Secretary of Commerce to conduct a comprehensive study of future highway needs and added a provision establishing a highway safety program. Under the safety provision BPR could not apportion Federal-aid highway funds after December 31, 1967, to any State that did not have a highway safety program approved by the Secretary to reduce traffic deaths, injuries, and property damage resulting from crashes on Federal-aid highways. This provision, creating Section 135 in Title 23, United States Code, was a response to the fact that 47,700 people lost their lives on the roads in 1964. [Interstate System Apportionment for Fiscal Year 1967, Needs Study, and Highway Safety Programs, Committee on Public Works, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 681, July 26, 1965]

Despite some concerns about the safety provision, the House of Representatives approved amended Senate Joint Resolution 81 on August 2, by a vote of 313 to +11. [Interstate System Apportionment, 1967, *Congressional Record-House*, August 2, 1965, pages 18963-18968]

A conference committee resolved differences between the two resolutions on August 11. The revised resolution authorized apportionment of \$3 billion in Interstate construction funds for FY 1967 based on the 1965 ICE but subject to congressional disapproval. It included “the sense of Congress” that the Secretary of Commerce should submit a report on his estimates of future highway needs in January 1968. The resolution included new Section 135, which called on States to have a highway safety program, including an effective accident records system, measures to improve driver performance, vehicle safety, highway design, and maintenance, traffic control, and identification and correction of high accident locations. However, the funding penalty the House had imposed was eliminated. The reconciled bill did not alter the completion date of the Interstate System [Interstate System Apportionment, Conference Report to accompany S.J. Res. 81, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 778, August 11, 1965]

The House and Senate approved Senate Joint Resolution 81 on August 12, both with minimal discussion and without recorded votes. [Interstate System Apportionment, *Congressional Record-House*, August 12, 1965, pages 20232-20234; National System of Interstate and Defense Highways – Conference Report, *Congressional Record-Senate*, August 12, 1965, page 20210]

While at his Texas ranch, President Johnson signed the bill on August 28 (P.L. 89-139). With his signature, he said, “we are authorizing the largest single year apportionment of [Interstate] Federal aid to the States for highways.” He praised the provisions on future needs and highway safety, but said the legislation “is but part of what is needed to insure that our highways will be able to meet the increasing demands placed upon them.” He referred to the legislation he had proposed to increase Highway Trust Fund revenue and to beautify the Nation’s roads. He intended to pursue the legislation “with all the vigor of the executive department until acted upon.” He explained why:

We are a Nation of almost 100 million drivers and 90 million vehicles. By 1970 we will be driving a trillion miles a year in America. We cannot depend on the roads of yesterday to carry the motor traffic of today and tomorrow. The life and pocketbook of every American are affected by the efficiency of our motor transportation system. The legislation now before Congress is necessary if we are to meet the new needs essential to the progress of our motor transportation system.

I appeal to all patriotic citizens interested in the improvement and continued development of our highway system to unite to the end of making that system adequate, superior in construction, and most important, attractive and beautiful.

By then, President Johnson had signed the Excise Tax Reduction Bill of 1965 (P.L. 89-44) on June 21, calling it “a bright day for all Americans.” His signature on the bill would “lift \$1¾ billion of onerous taxes from the American economy” at midnight. Excise taxes were repealed on retailers (jewelry, furs, toilet preparations, luggage, handbags, etc.), manufacturers (refrigerators, freezers, air condition units, appliances, electric light bulbs, radio and television sets, photographic equipment, business machines, pens, mechanical pencils, and lighters and matches), facilities and services (general admissions, race tracks, cabarets, club dues, communications on local and toll telephone and teletype-writer services, private communications services, telegraph service and wire and equipment services, transportation of people by air, and

safe deposit boxes), and miscellaneous taxes (bonds and stocks, playing cards, coin-operated amusement devices excluding gaming, bowling alleys, billiard and pool tables).

The 10-percent tax on the manufacturers' price of passenger automobiles was reduced to 7 percent upon enactment of the law, and gradually decreased to 1 percent on January 1, 1969. Consumers who purchased a passenger car between May 15 and the date of enactment of the law on June 21 were entitled to a refund of 3 percent of the tax prior to June 21. The 8-percent tax on the manufacturers' price for automobile parts and accessories (except truck parts) was extended to the end of the year, then repealed. The same was true of excise taxes on lubricating (6 cents a gallon) and cutting oil (3 cents a gallon). These changes did not direct any additional revenue to the Highway Trust Fund.

President Johnson said the bill "reflects the confidence of the administration and the Congress that the benefits of excise tax reductions will be passed along to the American consumer." He called it "another shining chapter in the legislative record that a great Congress is writing—a new chapter of progress in American life." [Joint Committee on Internal Revenue Taxation, *Summary of the Excise Tax Reduction Act of 1965 (H.R. 8371, 89<sup>th</sup> Congress, Public Law 89-44)*, U.S. Congress, October 9, 1965, pages 2-4]

### **North-Central Freeway Study**

In January 1965, President Johnson had ruled out freeway construction in Northwest for the foreseeable future, thereby continuing the prohibition initiated by the National Capital Transportation Act of 1960. The North-Central Freeway and the George Washington Parkway, the President indicated, should be sufficient.

The Maryland State Roads Commission held a public hearing in the Silver Spring Armory on March 9 at 10 a.m. to explain and receive comments on the North-Central Freeway. As about 700 people entered the armory, they passed a picket line. STOP THE CONCRETE OCTOPUS read one sign. Another: FREEWAY AIR COULD GAG A MAGGOT!

Chairman Funk was the first speaker. He assured the crowd that the Maryland State Roads Commission would make its recommendations "based on sound evidence and conclusive data and will not be influenced by attacks on the judge and jury." Anticipating one likely argument, he said, "No responsible transit authority claims that the transit vehicle is a total answer" to transportation problems in urban areas.

In contrast to the public hearing on the freeway 3 months earlier, the crowd did not boo or jeer him. That began with the next speaker, as Lee Flor wrote at the start of his report on the hearing:

A bitterly angry crowd—booing and jeering—disrupted the testimony of officials today at the opening of a hearing on the North Central Freeway.

The immediate cause was that Walter J. Addison of the Maryland State Roads Commission told the crowd that the 148 witnesses would be limited to 5 minutes each. The hearing, he added, would end that evening at 10 and continue on March 10.

Mildred Bozzi of 48 Underwood Street, NW., jumped up to plead about babysitting problems. “We should be able to go home to our children and not have to stay here all night.”

Sammie Abbott charged Addison’s desk as he tried to gavel the audience to quiet. “We are determined to be heard,” Abbott said banging his fist on the desk. “When my time comes, I won’t be dragged off there,” he said, referring to the podium.

From this rough start, according to the *Post*, “you might have thought you were sitting at a performance of an old-time melodrama—encouraged to hiss the villain and cheer the innocent ingénue.”

After Addison quieted the crowd, Bruce Herman of J. E. Greiner Company summarized the company’s study of the North-Central Freeway. As his presentation reached 20 minutes, the audience began complaining that he had exceeded the 5-minute limit. “Will you allow me to proceed?” he asked. The audience chanted, “No.” Mayor Miller of Takoma Park made a “point of order” about the length, prompting Addison to rescind his 5-minute rule.

Takoma Park officials spoke against the freeway “definitely and unequivocally,” in the words of City Councilman Russell B. Jones. Among those displaced by the planned route, the officials pointed out, were more than 85 elderly home owners who would have difficulty obtaining mortgages for new homes. If the freeway must be built, the city favored shifting the freeway to the Baltimore and Ohio Railroad tracks, which would be four-tenths of a mile shorter, and reduce disruptions to homes and businesses.

One Takoma Park resident, Herbert D. Smith of 11 Pine Avenue, favored the freeway. “What Takoma [sic] needs is a new freeway . . . cutting through the heart of the town to bring new life and light, commerce and industry to the community,” he said. The *Post* reported he did so “amid boos, catcalls and jeers.”

At the end of the day, attorney Gleason, speaking for the Metropolitan Citizens Council for Rapid Transit, charged that the “highway lobby” had killed the bobtail bill in 1963. Now, he charged, a “temporary honeymoon has been entered into by the National Capital Transportation Agency and freeway proponents whereby they have agreed not to oppose each other’s currently limited program.” Gleason also claimed that as many as 45 government groups had some responsibility for transportation planning in the area and many of these agencies had a conflict of interest. He charged that freeway proponents were deliberately sabotaging extension of rail rapid transit into the suburbs by claiming it could be built in the medians of freeways that citizens opposed. No wonder “there is so much confusion in objectives by official representatives.” He cited Donald Gingery of the Maryland-National Capital Park and Planning Commission who had testified in 1963 in favor of building rail rapid transit in freeway medians.

Melvin R. Harris, president of North Takoma Citizens Association, drew heavy applause when he urged escalation of the fight against freeways by tearing out the Southwest Freeway, the first in the city. He warned elected officials that voters would strike back if they did not kill the North-Central Freeway.

Roderick F. Davis, chairman of the Save Takoma Park Committee, argued that the people who lost their homes would gain nothing while real estate speculators and highway builders would make “real money.” He charged that the Mayor and City Council of Takoma Park were not representing their constituents when they recommended a study of an alternative along the railroad tracks. Residents, he said, were opposed to any freeway, regardless of location.

By day’s end, most speakers had opposed the North-Central Freeway. [Flor, Lee, “Jeers End Cutoff On Freeway Talk,” *The Evening Star*, March 9, 1965; Diggins, Peter S., “Takoma Park Shouts ‘No,’” *The Washington Post and Times Herald*, March 10, 1965; Flor, Lee, “Transit Backer Charges ‘Sabotage’ By Promoters of Freeway Proposal,” *The Evening Star*, March 10, 1965]

On March 10, the crowd of about 200, dwindling through the day, heard witnesses who were nearly unanimous in opposing the North-Central Freeway. The exception was Donald A. Melnick of 7301 Birch Avenue in Takoma Park. “I am in favor of the freeway . . . even though I have a great love for the city of Takoma Park.” He admitted “my credentials fall short in that I am not a property owner.” His testimony prompted a loud dispute with his Birch Avenue neighbors, including Sammie Abbott of 7308 Birch Avenue. “You have no right to speak,” Abbott shouted at Melnick in the vestibule of the armory as a Maryland State Trooper stood by to ensure peace.

In the armory, Addison pounded his gavel for order, according to Lee Flor. “He has as much right to speak as anybody else. Please be quiet or you’ll have to leave.” (*The Post* recorded him as saying, “Will you please sit down. It is a public hearing, and everyone is going to speak.”)

In all, about 90 witnesses testified during the 10-hour hearing. [Diggins, Peter S., “Takoma Park Shouts ‘No,’” *The Washington Post and Times Herald*, March 10, 1965; Flor, Lee, “Pro-Freeway Witness Assailed by Neighbors,” *The Evening Star*, March 11, 1965; Diggins, Peter S., “Hearing on Freeway Has Heated Moments,” *The Washington Post and Times Herald*, March 11, 1965]

The Silver Spring Armory was booked for another event on March 11, but the Maryland State Roads Commission resumed the hearing on March 12. Robert Bruton, research chairman for the Metropolitan Citizens Council for Rapid Transit, was one of the witnesses on March 12, the final day of the hearing on the North-Central Freeway. Echoing Peter Craig, he argued that computer-based projections of traffic needs in the corridor were grossly overstated. Traffic, he said, had decreased between the District and Montgomery County. He said that a 1959 traffic study predicted that about 30,000 motorists would use the corridor in 1965. Instead, the figure was now about 20,000, Bruton said. As “a logical foundation for the need for any urban freeway,” the traffic projections were not sufficient:

The historical trend in peak-hour traffic from the area that would be served by the North-Central Freeway clearly indicates that the existing roads system in combination with a rail transit system will easily accommodate all commuter traffic in the foreseeable future and that the present road system alone will be sufficient until the rail system is in operation.

The North-Central Freeway, if built, would encourage creation of a “freeway system that will create an ever-spiraling increase in traffic and create an ever-increasing ‘need’ for more freeway construction.” Moreover, the construction of the freeway would “seriously jeopardize the success of any rail transit system.”

By midnight, the parade of witnesses finally ended. With oral statements concluded, Chairman Funk said the commission would be kept open for written comments until April 11. He also planned to meet with Takoma Park officials to discuss alternative routes. [Flor, Lee, “Statistics on Need Of Freeway Are Hit,” *The Evening Star*, March 12, 1965; “Freeway Views May Be Filed Until April 11,” *The Sunday Star*, March 14, 1965]

With the 3C planning process set to take effect on July 1, 1965, Wolf Von Eckardt saw the North-Central Freeway as an example of how the process could go wrong. In 1962, he said, President Kennedy had asked for legislation prohibiting Federal-aid highway funds for projects in urban areas unless they were “consistent with comprehensive plans” and an “integral part of a soundly based, balanced transportation system.” Senator Case claimed that highway interests prompted a change in this language to the ambiguous “transportation planning process carried on cooperatively by states and local communities.” (As noted earlier, the Federal-Aid Highway Act of 1962 required “a continuing comprehensive transportation planning process carried on cooperatively by States and local communities in conformance with the objectives stated in this section.”)

This ambiguity, Von Eckardt wrote, “virtually invites the highway department to run the show, make their own projections of needs and continue to equate ‘transportation’ with speeding private cars through the city at 60 miles per hour.” The fear was that the 3C transportation planning process would become the “continuing, comprehensive freeway building” program. He added, “That is no joke.”

He pointed out that the North-Central Freeway would cost \$21 million per mile in the District, pump 11,309 more automobiles into the city every day (“each of them requiring 250 square feet of parking space”), and displace “anywhere from 2000 to 4000 people, depending on what side you’re on.” He added, “no one disputes that most of them are Negroes, who’ll have a very hard time finding decent homes.” It would “gobble up several playgrounds,” divide neighborhoods in Woodside and Takoma Park, “and destroy the historic identity of Brookland and Michigan Park as neighborhoods serving Catholic University.”

These losses might be justified if the freeway were needed, but “a large number of serious and respected experts” disputed the District Highway Department’s traffic projections. He repeated the statistics showing declining traffic between the District and Montgomery County. Community leaders pointed out that while highway officials plan the North-Central Freeway, other officials are planning a rail rapid transit system that “would carry at least three times as many people at one-third the cost.” Peter Craig had told Von Eckardt:

Even if rapid transit construction takes place, the highway people believe that the presumed demand of suburbanites to drive their own cars is so strong that, if they receive

continued coddling through more radial highways and more central city parking, rapid transit will fall of its own weight.

NCPC's procrastination in completing its Year 1985 Plan for the District was one of the reasons why objective answers were hard to come by. The delay "left a vacuum and we can't really blame the highway bulldozers for moving in."

Von Eckardt saw some hope in efforts to create the 3C planning board required by July 1, 1965. The organizing committee, chaired by Frederick A. Babson, Jr., of the Fairfax Board of Supervisors, had proposed a 17-member Transportation Planning Board (TPB) from the District, Maryland, Virginia, NCTA, the Washington Metropolitan Transit Commission, the Federal Government, and a member appointed by the President. Four members would serve in an *ex officio* capacity and not have voting rights (BPR, the Housing and Home Finance Agency, NCTA, and the Washington Metropolitan Area Transit Commission), while the presidential appointee would have the option on whether to vote.

Von Eckardt pointed out:

"Only three of the 12 [voters] represent highway departments. It sounds promising. Now it will be interesting to see what, if anything, the new body will do about the North-Central Freeway. [Von Eckardt, Wolf, "Highway Planning Brings Nation to the Crossroads," *Cityscape*, *The Washington Post and Times Herald*, March 14, 1965; Flor, Lee, "17-Man Transit Board For Region Endorsed," *The Evening Star*, March 16, 1965]

(On March 16, Chairman Funk announced that construction of the 22-mile, \$50 million segment of I-95 between the Baltimore Beltway and the Capital Beltway would begin in the summer. Completion was scheduled for 1969. The Maryland State Roads Commission had decided to increase the number of lanes to eight, instead of six, based on traffic projections.

(To reach the District's inner loop, the State planned to extend I-95 across the Capital Beltway and through Langley Park, a community established in the 1920s in Prince George's County near the border with Montgomery County. The 5.3-mile freeway extension would connect with the North-Central Freeway in the vicinity of Soldiers' Home in Washington. The State was planning the extension as a six-lane freeway, with eight as the maximum number of lanes if traffic projections warranted the increase. The extension was scheduled for completion in 1971. [Guinn, Muriel, "8-Lane Route To Baltimore Starts Soon," *The Washington Post and Times Herald*, March 17, 1965])

Chairman Funk appeared at a Takoma Park meeting on April 1 to respond to questions from "irate residents of that community," according to the *Star*. He told reporters after the meeting that he was not concerned about loud attacks on him. "I was just the symbol of the Freeway. [sic] If my name had been Jones it wouldn't have made any difference." After the meeting, he said, "they actually applauded me." He added:

I think people are beginning to feel we're honestly trying to work out a solution. We don't rip things down regardless of feelings. We have feelings, too, you know.

Takoma Park's objections had created a "serious" situation that might require additional study:

I personally feel that some additional information should be studied by the consultants. Just because we've made so many studies of this thing, it doesn't mean that we've exhausted all the possibilities.

The *Post* reported that he also said:

"Even my 80-year-old mother, who lives out in Brunswick, Md. [in Frederick County], knows about this," Funk said.

"She reads the Washington papers and watches television and when I saw her recently she said, 'Now, John, what are you doing about the people in Takoma Park?'"

On April 2, he had a breakfast meeting in Silver Spring with the District's Airis and Albert Grant. They decided to ask J. E. Greiner Company to restudy the route, especially through Takoma Park, to reduce impacts on homes and business. The railroad alignment would be examined.

Funk told reporters that while studies were important, "hearings bring to light a lot of neighborhood patterns and feelings of folks—the impact on every-day living." Airis agreed:

We're most sympathetic with folks whose area we go through. It's difficult but we try for the very least impact possible on adjoining property.

Funk cautioned that, "I don't say we're going to please everybody, but our staff is busy studying the hearing transcript, which is as big as a Sears Roebuck catalogue." ["D.C., Maryland Aides Restudy Freeway Plan," *The Washington Post and Times Herald*, April 2, 1965; Asher, Robert L., "Freeway Route To Be Redrawn," *The Washington Post and Times Herald*, April 3, 1965; "New Study Due On Freeway," *The Evening Star*, April 2, 1965]

As far as the Save Takoma Park Committee was concerned, the only good thing about the restudy plan was that it would delay the freeway a little longer. The committee's statement referred to the decision as an "admission that the \$350,000, three-year study is inadequate":

But their proposal for a new route survey evades the real issue—namely, that no study has demonstrated that this ten-lane freeway is necessary,

As responsible citizens of the greater metropolitan area, the people of Takoma Park are greatly concerned with the relocation problems caused by the freeway, especially upon District residents.

The North-Central Freeway "would open up the Pandora's box of all the other proposed freeways, including the Inner Loop." The result of all those freeways planned for the District of Columbia would be that "an additional 20,000 people would lose their homes." The committee "demands" a study of the need for the North-Central Freeway and called for hearings on areawide freeway and bridge plans. ["Unit Opposes Any Freeway In NE Area," *The Washington Post and*

*Times Herald*, April 4, 1965; “Shelve Plan Of Freeway, Group Urges,” *The Sunday Star*, April 4, 1965]

On April 10, Chairman Funk confirmed recent reports that District and Maryland highway officials would ask Greiner to study building the North-Central Freeway for most of its length above the Baltimore and Ohio Railroad. The consultant also would consider estimates for an alternative ground-level route that would avoid Takoma Park. Lee Flor pointed out:

The Baltimore & Ohio Railroad is below ground level at some places and at other points is perched on an embankment 20 feet above existing street levels, so it may be difficult to double-deck the freeway all the way over the tracks, Funk said.

Funk said he planned to fly along the railroad route in a helicopter to get a “birds-eye” view of the engineering problems that might have to be examined.

Funk and Airis had met in a “summit conference” with BPR Administrator Whitton to secure clearance for the study.

They estimated that the study would take 60 to 90 days and cost about \$35,000. [Flor, Lee, “Consultant to Study Elevated Freeway,” *The Sunday Star*, April 11, 1965]

The District commissioners approved the study on April 20. However, they also agreed on a second study that would authorize an “outstanding traffic engineer of national repute . . . to independently review and evaluate” the traffic projections that had been the source of much of the criticism of the freeway. Airis said, “We’re convinced, of course, of our statistics” but agreed to the study “just to make sure.”

The commissioners also agreed to ask NCTA to participate in and “monitor” the traffic study. Assistant Engineer Commissioner John A. Israelson argued that NCTA’s participation was needed “so the figures cannot be held suspect as highway figures or subway figures.” He acknowledged, “There seems to be a rising challenge to traffic statistics that are used to support projects, whether they are a Potomac River bridge or the North Central Freeway.”

Airis, however, had a practical attitude about the two studies:

I’m sure we never could allay the opposition entirely. We’ll always have some professional “againers”—that’s all there is to it. [Pierce, Charles D., “Elevated Freeway Study Is Ordered,” *The Evening Star*, April 20, 1965; Asher, Robert L., “Study of Elevated Route Over Tracks, Traffic Project Double-Check Set,” *The Washington Post and Times Herald*, April 21, 1965]

In mid-May, NCTA agreed to participate in the study. NCTA would be part of a joint committee overseeing the study that would include the District and Maryland highway agencies, NCTA, and the Metropolitan Area Transportation Study, which was described as “a statistical bureau financed by the District, Maryland and Virginia Highway Departments.”

Planning chief Grant, in announcing the agreement, told reporters that the consultants would be free to submit any report they think is correct. The consultants would examine the analyses that critics often cited to undermine the case for the North-Central Freeway. Lee Flor explained, “most of the citizens’ arguments were based on an analysis by Peter S. Craig, a Washington attorney who had made a part-time hobby out of analyzing district highway justifications.”

“If we’ve been wrong all along.” he said, “we’ll admit it.” [Flor, Lee, “Freeway Restudy Accord Reached,” *The Evening Star*, May 17, 1965; “Consultant to Evaluate Freeway Arguments,” *The Washington Post and Times Herald*, May 18, 1965]

On May 24, Senator Tydings took to the floor of the Senate for a colloquy with Senator Proxmire about the District’s budget. As a member of the Senate District Committee and an *ex officio* member of the District Appropriations Subcommittee, he had listened to the recently completed hearings on the District’s FY 1966 appropriations act. The District had many problems, including crime, education, recreation, and aid to dependent children, each of which he discussed.

But with all those needs, the House appropriations subcommittee had included funds in the act for acquisition of right-of-way “for highways whose plans have not been approved or integrated with the proposed new rapid transit system.” The amounts were:

- Center Leg - \$900,000
- Potomac River Freeway - \$1.6 million
- North Leg - \$1.2 million
- Northeast-North-Central Freeway - \$520,000 (right-of-way and PS&E)

He said the “Commissioner’s authority to request appropriations for these projects is unclear.” He recalled the statement in the Comptroller General’s letter to Chairman McMillan indicated it would be “more appropriate” if the District commissioners asked the two District Committees for authorization of these expenditure.

Moreover, Senator Tydings had “serious questions” about the last two projects. “The North Leg, Central section of the Inner Loop does not seem to be satisfactory in its present form.” It would destroy upper income and slum dwellings in the Dupont Circle area. “If and when the necessity for such a freeway is finally established, a tunneled highway requiring less destruction of property, should be given primary consideration.”

He had “very strong feelings” about the Northeast-North Central Freeway:

I do not believe that the need for this freeway has been sufficiently justified. Further, I do not believe that the proponents of this proposed freeway have made plans to integrate their highway plans with the proposed District rail rapid transit system. As a Senator from Maryland, I do not believe this freeway should be thrust up to the Maryland border at this time.

If it were up to him, he would withhold the funds. He did not consider it “wise policy to give the Highway Department millions of dollars to go ahead with plans for freeways which have not even been finally approved yet, or made part of an integrated transportation system, including the proposed rail rapid transit network.”

Senator Tydings acknowledged that, “I am a very new member of this body,” but added, “I have been moved to speak about the needs of the children of the District simply because those needs are so great.”

Senator Proxmire responded regarding the other issues, particularly education. Senator Tydings pointed out that the city was neglecting education and other issues, while spending funds on areas that could be cut. For example:

It is not wise policy to give the Highway Department millions of dollars to go ahead with plans for freeways which have not even been finally approved yet, or made part of an integrated transportation system, including the proposed rail rapid transit network. There are plans to connect some District highways with roads in my own State of Maryland, which roads have not been made a part of an integrated transportation system.

The remainder of the colloquy concerned the other issues. [District of Columbia Appropriations, *Congressional Record-Senate*, May 24, 1965, pages 11430-11435]

The *Star*'s editors took exception to the Senator's suggestions. It was “nothing new,” they said. “This is the tired old theme which a small but well-organized group of freeway haters in our town has been singing for years.” It was, however, disappointing to see the Senator, who obviously was trying to understand the District's problems, “suckered into camp by these forces” because their arguments were “full of holes.”

Contrary to his assertion, the freeways he cited had been agreed to years earlier, before the current transit planning. Much of the funding the District commissioners had requested for the projects comes from local gas tax revenue that District law restricted to highways; they could not be used for anything else. “The Senator should know this.” The District had asked Congress to increase the city's gas tax by a penny and its borrowing authority to meet the schedule for completing the Interstate System. The additional revenue “is desperately needed. To talk, at the same time, of removing the inadequate funds already available, is senseless.” Further, his position, if actively pursued, would revive the “destructive business of pitting the advocates of transit and of highways against one another.”

Senator Tydings' concern about the District's range of problems was meritorious. “But the proper financing procedure is to approach these needs on their merits—not to rob, in the process, other programs which are fully justified in their own right.” [“Bill of Goods,” *The Evening Star*, May 27, 1965]

Senator Tydings replied to the editorial in a letter published on June 6. The editorial had misunderstood his statement. He had suggested an increased Federal payment to the District, passage of the commissioners' requested changes in taxation, and greater use of borrowing

authority. “I did not suggest a diversion of monies from the highway fund.” He had simply suggested not appropriating funds “for those freeway projects which have not been previously authorized by Congress.”

He pointed out that his argument against the North-Central Freeway was borne out by the fact that Maryland and the District sought a new study of the freeway. As for the freeway network predating transit planning, the editorial “hits the nail on the head—I propose that the highway plans be revised in the light of new transit planning.”

With the highway fund “rapidly being exhausted,” he questioned using its revenue on projects “whose necessity has not been proven.” Delaying action would preserve the city’s core and prevent disruption of “thousands of families for whom replacement housing is simply unavailable.”

At the same time, the editorial barely mentioned his concerns about education, health, welfare, crime, and other topics. All he wanted to do was make the District “a safe, pleasant, orderly city in which to live and work.”

In an editor’s note, the *Star* noted the Senator’s clarification that he did not mean to divert highway funds to other problem areas, as was “generally interpreted” from his words on the Senate floor. “The statement, in fact, did not say that, and we welcome his assurance that he intended no such meaning.” However, the editors “disagree firmly” with his proposal to refuse to appropriate funds for “a freeway system which is clearly essential to the well-being of the Nation’s Capital, and which Congress has consistently supported with appropriations.” [“Fund for Freeways,” *The Sunday Star*, June 6, 1965]

The District selected two firms to evaluate the traffic projections used in planning the freeway network. One was Alan M. Voorhees and Associates, founded in 1961 by a transportation engineer and urban planner. For 10 years, Voorhees had been with the Automobile Safety Foundation before founding his consulting firm, which was involved in subway design around the world, including in the District. The other was Wilbur Smith and Associates.

On June 9, Chairman Funk took a helicopter ride along the Baltimore and Ohio Railroad tracks to view the possible location for the North-Central Freeway. He said of the proposed 150-foot wide freeway “floating” on pillars 50 feet off the ground, “My off-the cuff reaction is that it could be done.” The *Post* reported:

If the B&O Route is chosen, it could be made a type of “transportation corridor,” he said, with space being set aside for rail transit to complement the freeway and railroad traffic. Since much of the building around the B&O tracks is commercial or industrial, it could blend in with such a transportation corridor, Funk said.

The consulting firm of Skidmore, Owings and Merrill was drawing sketches for the elevated freeway. Meanwhile, J. E. Greiner Company was conducting its review of the proposed location of the freeway along the railroad tracks.

Funk used the word “floating” to convey the idea that the elevated freeway would rest gracefully on its pillars in a way that would blend with the nearby neighborhoods. However, according to news reports, he was greeted by a delegation of about 15 “housewives” from Takoma Park and Silver Spring who protested the freeway. At one point, as Funk and aides discussed their helicopter trip with reporters, one of the housewives approached to stand next to him with a sign that read:

Mr. Funk: get down to earth . . . We need a Subway!

Funk told reporters that no decisions would be made until at least August when he expected to receive the Greiner report. [Flor, Lee, “Freeway Over B&O Line Called Feasible by Funk,” *The Evening Star*, June 10, 1965; Barnes, Bart, “B&O Route Studied for Freeway,” *The Washington Post and Times Herald*, June 10, 1965]

### **Rapid Rail Transit Gets a Hearing – Day 1**

On February 17, 1965, Chairman Whitener opened hearings on rail rapid transit before Subcommittee No. 5 of the Committee on the District of Columbia. The hearing was called to consider the National Capital Transportation Act of 1965, H.R. 4822, a bill to authorize the prosecution of a transit development program in the National Capital region. In opening remarks, he called H.R. 4822 “one of the most important items that we will deal with in quite some time, insofar as the orderly development of the District of Columbia is concerned.” The extensive hearings in past years gave the subcommittee “a record of the community need and the information that would normally come to us” in much longer hearings. “And so, for that reason I am hoping that we can handle this matter with some dispatch,” while giving everyone a chance to express their views.”

(He pointed out that due to a death in the family, Representative Broyhill was unable to attend the hearing.) [Rapid Rail Transit for the Nation’s Capital, Hearings on H.R. 4822, before Subcommittee No. 5 of the Committee on the District of Columbia, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, February 17 and 24, March 3, 10, and 17, 1965, pages 1-2]

After brief statements of support from Representatives Mathias and Sickles, NCTA officials took their place at the witness table:

- Darwin Stolzenbach, Administrator
- Gerry Levenberg, Chairman, Advisory Board
- Howard W. Lyon, Director, Office of Engineering
- William I. Herman, Director, Office of Planning and Finance
- Owen J. Malone, General Counsel
- Edwin H. Seeger, NCTA’s former General Counsel, now retained as a consultant

Although Stolzenbach submitted a formal statement, he began his oral presentation by discussing how H.R. 4822 addressed the concerns that prompted the House to recommit the bobtail bill in December 1963:

Just briefly, the bill incorporates the labor protective provisions of the Urban Mass Transportation Act of 1964. It provides that the facilities authorized by this bill would be operated, under contract by private enterprise. And what is very important, the financing formula has been changed so as to provide a considerably less Federal investment in the program, and a larger local investment.

I want to add at this time an additional fact; namely, that is that the Agency and the highway departments of this area are now agreed on a comprehensive and balanced transportation plan for the region which includes the programmed highways of the highway departments and the rapid transit system. The highway departments, in fact, assume in their planning construction of a rail rapid transit system.

Stolzenbach discussed the scope of the proposed rail rapid system, as described earlier. In response to a question from Representative Harsha about financing for extensions of the system into Maryland and Virginia, Stolzenbach replied that H.S. 4822 addressed only the proposed limited network. "The extensions of this in our opinion have got to be worked out by the device of an interstate compact or by the localities in some way that we have not seen yet.

The financing plan called for \$150 million in appropriated funds split among the Federal (two-thirds) and District governments (one-third) in accordance with the formula in the Urban Mass Transportation Act of 1964. An additional \$281 million in capital funds would be raised by bonds. Counting \$52 million in interest charges, the total payout from system revenues would be \$333 million. The bonds would have to be issued before completion of construction and, therefore, would require additional security. The Federal and District governments would underwrite the \$333 million in bonds, "on a fully taxable basis, and that the ultimate responsibility for such underwriting be shared" by the Federal and District governments in the same two-thirds/one-third basis provided for in the 1964 Act.

Representative Harsha asked if the Federal Government would have to underwrite any additional financing for expansion. Stolzenbach said, "Nobody in the executive branch contemplates asking the Federal Government for any more money than the \$100 million that is proposed in this bill." He explained why he was confident of that statement. He expected the percentage of transit use compared with motor vehicles to increase from 40 percent at present to 48 percent "and still be not anywhere near as much as is experienced in the other rapid transit cities." One of the reasons NCTA felt so confident was that the plan included "certain safeguards in the financing plan." He said "the bond amortization period has been set at 41 years and could be extended to 50 years, thus reducing the yearly payments on the bonds." In addition, "a substantial cash depreciation reserve is provided for and could be used if necessary to meet debt service charges":

Now, the significance of these two factors is that if traffic does not meet expectations and if the proportion of persons using public transportation is as low as 41 or 42 percent—not the 48 percent which we have predicted—the debt service charges on the bond could still be met. This is the reason why the committee can be confident that the proposed \$100 million investment will be the Federal Government's total contribution to this system.

[Rapid Rail Transit for the Nation's Capital, Hearings on H.R. 4822, pages 40-46; the formal statement is on pages 47-58; Stolzenbach's February 1965 report to the White House, *Rail Rapid Transit for the Nation's Capital*, is reprinted on page 7-29]

After Stolzenbach completed his statement, subcommittee members began their questioning. Representative Horton of New York was concerned about safety in view of the "very high" crime rate on the New York City subway. Stolzenbach said "the policing of the subway facilities is the responsibility of the city police." In response to another question from Representative Horton, Stolzenbach said he did not have crime numbers for other systems, such as the Tokyo or Toronto subways. "I want to assure you, Mr. Horton, that we are quite concerned about the problem." He thought "it was really a little too early to go into it," but he promised to get the requested information.

Representative Horton asked about the difference in cost between the 1963 bobtail plan (\$401 million) and the current plan (\$431 million). Stolzenbach and Lyon explained that the new system was longer by about 1.5 miles and included three more stations. Lyons said:

In addition to that, we have analyzed it rather thoroughly over the past year with respect to operating procedures and we have invested some money in turnback points so as to get a more efficient operation. The trains do not have to go to the end of the line in all cases.

We have improved the operation by having all grade-separated junctions. By that I mean there is no crossing at grade of any track, when one line merges with the other. This in turn has called for a difference in the profile, if I can be explicit, which often backs up into the preceding station and requires us to have a multilevel station because the tracks cannot be quite at the same level.

Representative Horton wanted to know if there was "any prospect that the Federal Government get that \$100 million back." Stolzenbach said that "very far into the future," after the bonds are retired, Congress could possibly call for repayment from "growing revenues that could be used for that purpose."

What about monorail, Representative Horton asked. Stolzenbach said that NCTA had "not closed our eyes" to monorail or any other new technology, but had chosen "the modern version of a conventional steel wheel on steel track train." Virtually every other city in the world was using this same technology. "There is practically no doubt that at the present time this is the best technology . . . ."

Representative Horton asked if NCTA had worked out the plan with the local bus companies. Stolzenbach replied:

Mr. Horton, I must say that the situation that pertained 2 years ago still pertains. The management of the District of Columbia transit system has not indicated any willingness to sit down with us and discuss this matter at all. We have stood ready and do today at any time. [pages 59-62]

Representative Dowdy wanted a better understanding of the financing plan. NCTA's plan anticipated \$333 million in bonds. Was that in H.R. 4822? No, Stolzenbach explained, the President had said in his message that he would submit legislation in 1965 or 1966 seeking bond authority when it would be needed. Until then, the \$100 million in Federal funds and \$50 million in District funds would be sufficient to get construction started. When Stolzenbach referred to Federal Funds and District funds, Representative Dowdy offered a side comment: "actually I cannot see any difference" between them.

Representative Dowdy said he's heard "some talk" that after the bonds are retired, the District's contribution would be repaid. Stolzenbach had never heard that, "There is no authority in here for us to do that."

They discussed how fares would pay for approximately two-thirds of the cost of construction over 41 years. Representative Dowdy wondered if the legislation "might make it easier" by providing that the \$150 million should be repaid at that point. Stolzenbach said he would not object to such a provision, but added, "We just thought that was a long way off." Representative Dowdy told Stolzenbach:

It is a long way off. But in spending Federal money—in most everything around here they figure on getting their money back in 60 or 100 years and claim it a good deal. I think it would be a good deal if they get it back in 500 years. But I was wondering if that would be a good provision in the bill.

Stolzenbach replied only, "Yes, sir." [page 63]

Representative Ancher Nelsen (R-Mn.) agreed with Representative Dowdy, saying, "if the financing is as soundly planned as has been indicated, and if there is a chance that the bonds can be retired in the time allotted, then it would also perhaps enhance the prospect of the passage of the bill to indicate . . . that finally the Capital City and the Government would recover."

In view of the attitude of area bus systems, Representative Nelsen asked about the private contractor who would be brought in to operate the system. NCTA had not worked out the specifications, but Stolzenbach said the agency contemplated seeking bids and awarding the contract based on price and ability to do the best job. Could the contract be divided, so that one contractor might operate the buses while another would operate the subway? NCTA had not considered that but anyone who thinks he could manage the system would be considered. [page 64]

Representative Don Fuqua (D-Fl.) asked if expanding the system into Maryland and Virginia would "require major alternatives to the present plan?" No, Stolzenbach told him, the system was designed to be expandable. Lyon said that the proposed network included junctions at the points in the 1962 proposal that carried the lines into the adjoining States. [page 64]

In reply to a question from Representative Harsha, Stolzenbach confirmed that the operations contract would be based on negotiation regardless of bids. He also confirmed that the fare would

by 25 cents within the original 10-mile square of the District of Columbia, but would increase to 35 cents for two of the Maryland stations on the Baltimore and Ohio line.

Representative Harsha asked how many cars would be taken off the highways by the proposal. Stolzenbach said that about 14,000 cars would be replaced by transit going into downtown.

Had NCTA formally asked the area bus companies for comment on the report? Yes, Stolzenbach said, but only one, the smallest, had replied (WMA Transit Company serving passengers between the District and Prince George's County, Maryland). WMA indicated it was willing to discuss schedules. NCTA had sent the plan to O. Roy Chalk but he replied that he had written to President Johnson and that Stolzenbach should check with him to find out the answer.

[pages 65-66]

Representative George W. Grider (D-Tn.) asked about parking. What was to stop drivers who weren't using transit from occupying the free parking contemplated in the proposal. Various ways had worked in other cities to prevent that. Would the system have sufficient parking spaces? "We have put in as many as we thought the system could afford," but others could be added "if this proved desirable at a later time."

Would the contract allow the operator to increase the fare if he were not making profit at the current prices? Stolzenbach thought the system's owner, the Federal Government at this point, should determine fares. NCTA contemplated that the contract would pay the operator a "flat fee to manage the system." The Federal Government could change the fare if the fee exceeded revenue. He added that the public authority managing the system would probably make those decisions once it begins operation.

Seeger pointed out that this procedure was used for the system in Memphis and St. Louis. Representative Grider said that his experience with the Memphis system was why he raised the subject. The private operator wanted a higher fee every year:

There are, as you undoubtedly know, experts in the field who make a living from testifying in these cases. That is what concerns me. Inevitably if it is left to the operator he is going to want larger fees. If he works on a flat fee, I am concerned that he might begin to cut corners in the service. That is a problem we had better be prepared to face.

Stolzenbach assured the Congressman that "we would certainly provide service standards which we would require the operator to live up to." He also thought incentive could be written into the contract that would "give the manager some incentive to meet those standards, and to the extent that he can he may earn a slight additional fee to make it worth while for him to do so."

[pages 66-67]

Malone added that NCTA had not yet worked out the details of the contract, but officials were familiar with practices in Memphis and other areas. For the District, he said:

We do not contemplate a situation in which these facilities would be leased off – that is put under the ordinary type of control of the lessee that is associated with the lease. We contemplate an arrangement whereby the Agency would retain control of basic matters

such as I have covered here—including fares, including standards of service, including scheduling of service. [pages 67-68]

Representative O’Konski, a member of the full committee but not the subcommittee, was allowed to ask questions. “Being the culprit who is responsible for the motion to send this bill back to the committee,” he said, “I just have two questions I would like to ask.”

First, he recalled the “chaos as far as transportation was concerned” that resulted in Congress authorizing the 20-year franchise for Chalk’s D.C. Transit System, Inc. Congress made guarantees and assurances to the contractor, including a fair return on their investment, and the fact that the Federal Government would not finance any competition. His question was whether in passing H.R. 4822 and providing grants for a subway, Congress would be breaking faith with the contractor by setting up competition for the company. Stolzenbach replied:

I think the answer to that is “No,” Mr. O’Konski. This is not a system that is being set up in competition with the D.C. Transit Co. It is one that will supplement the service that he is providing under his franchise.

Representative O’Konski said that on the map displayed in the hearing room, “it looks to me like the 25 miles that you are going to build skims the cream off the milk and takes the gravy of the transportation.” How could D.C. Transit system “survive when you are going to come along and take 25 miles of gravy from them?”

Stolzenbach did not think the situation was as bad as the Congressman suggested. For example, the Connecticut Avenue line would overlap the bus service:

But what it will permit the company to do is to operate much more economically by turning back his buses from Chevy Chase Circle at our Van Ness Terminal, and in the morning rush period, where now one bus and one driver can make only one trip from Chevy Chase into downtown, that same busdriver [sic] could make three trips, round trips, between Chevy Chase Circle and Van Ness Street.

NCTA calculated that the loss of revenue would be offset by the reduction in operating costs.

Representative O’Konski’s second question actually was a request to Chairman Whitener that Chalk be invited to testify. He did not “want to be an obstructionist in this matter,” but he thought Chalk should be given an opportunity to comment:

Possibly they are for it. If they are, that will be wonderful. I don’t know what their reaction is going to be.

I strongly urge, Mr. Chairman, that they be given an opportunity to present their testimony and how this will affect them—because we are talking about balanced transportation, and if this is going to drive them out of business, you are going to have a worse situation than you have now.

[pages 68-69; Chairman Whitener ensured that the record included Public Law 84-757, approved July 24, 1956, granting the charter to D.C. Transit System, Inc., pages 70-76]

Chairman Whitener said later that, in view of the extensive prior hearings, he had hoped to limit testimony to government agencies. Others were invited to submit statements for the record. However, if the subcommittee wanted to invite Chalk, who had not attended the hearing, he would agree to do so. [Carper, Elsie, "Transit Plan Runs Into Chalk Block," *The Washington Post and Times Herald*, February 18, 1965]

The hearings would not resume until February 24.

Although Chalk was not there, George Lardner began his column on the mood at the hearing:

O. Roy Chalk's dapper shadow darkened the room, but the Capitol Hill Debut of Washington's new subway proposal still had its bright spots.

A young woman handed out orange pins reading "Support Rapid Rail for D.C." and red-and-white stickers reading "D.C. Needs a Subway."

Engineer Commissioner Duke joked with Stolzenbach about the freeways versus transit fight:

"I'm just going to go in there and tell them to torpedo the subway," Duke said outside the House District Committee's hearing room.

"Well, I'll just have to go in and say the hell with highways," Stolzenbach replied with a smile.

Both officials made clear they want to end the feud for good.

As for Stolzenbach, he had "kept himself in a cocoon since the House whomped an earlier subway proposal in 1963."

Chalk, Lardner wrote, preferred an all-bus system. "But if there is to be a subway, he wants Congress to hand it to him on a silver platter." As for whether Chalk would testify, Lardner quoted Chairman Whitener as saying:

I've no desire to cut anyone off, but I don't know whether [calling Chalk] would be helpful or not. It could be confusing.

Lardner concluded his column by warning that "NCTA officials had still better watch out if they don't want to end up in the back of the bus again." [Lardner, George, Jr., "Clouds Hover Above Hearing on Rapid Transit," Potomac Watch, *The Washington Post and Times Herald*, February 19, 1965]

As Lardner also pointed out, the White House had responded to Chalk's letter.

On February 15, Lee C. White, Associate Special Counsel to the President, had met with Chalk at the White House regarding the proposed subway system. After talking with "administration

people familiar with the proposal” and relaying “to the President some of the points which have given you concern,” White wrote to Chalk on February 18:

That there will be a subway in the Nation’s Capital is, I think, a matter no longer open for discussion. A decade of study, the 1960 act of Congress, plus the public commitments of Presidents Eisenhower and Kennedy, as well as President Johnson, indicate broad agreement that the increased population expected in the area, together with the greatly increasing traffic congestion, dictates that there be a subway system.

White acknowledged the uncertainties that the limited rail system posed for D.C. Transit System, Inc., but said that predictions “are always risky,” especially for a rail system that was at least 5 years away. The 1956 law granting the charter to the company included “explicit language . . . that D.C. Transit waives its claim for any damages for loss of franchise after 7 years.” However, White said, “there may be some rights that would be compensable after the rail system commences operation.” Therefore:

For these reasons the administration would interpose no objection to an amendment making it clear that nothing in the proposed legislation should be construed to deprive D.C. Transit of any right it may have to recover for any damages to it.

In closing, White said that “it seems only fair that there should be absolutely no question that the proposed legislation does not destroy any legal rights which the company may presently possess to recover damages.” [Rapid Rail Transit for the Nation’s Capital, Hearings on H.R. 4822, pages 239-240]

The *Star*’s editors referred to the letter’s line about there no longer being any question about a rail subway system. “It would be hard to imagine a more gratifying, or more timely, expression of administration policy on this subject.”

Unfortunately, the White House letter was not likely “to draw any applause from Mr. Chalk.” He had “been trying to scuttle the concept of a publicly constructed rail transit system from the start.” He contended, in a view that “virtually no one else” shared, that an all-bus system would be sufficient. But if the area needed rail rapid transit, he contended that the 1956 law granted him a vested right to operate it. Chalk’s views aside, White’s letter “shed some much needed light” on Chalk’s rights. The 7-year period during which Chalk’s company could claim damages for loss of franchise had expired 2 years earlier.

The editors hoped Chalk would testify to get his views “spread clearly and unequivocally on the public record” to forestall any misunderstanding when the bill reached the House floor. Chalk’s rights or role did not have to be settled now. Instead, the editors called on Congress to “quickly support” the bill. [“Transit and Mr. Chalk,” *The Evening Star*, February 20, 1965]

Separately, WMA Transit Company and the Alexandria, Barcroft and Washington Transit Company indicated they would bid for the right to operate the rail rapid transit system. Woodrow S. Miller of WMA said, “I want to have the right to bid on it as well as Chalk.” He added that WMA “paid more taxes than D.C. Transit” because of tax exemptions granted by the

1956 Act. [Flor, Lee, "Private Bus Owners Want Bids on Subway," *The Sunday Star*, February 21, 1965]

### **Rapid Rail Transit Gets a Hearing – Day 2**

As Subcommittee No. 5 prepared to hold a hearing on February 24, the morning *Post* carried a Potomac Watch column about the uncertainties regarding the financing plan. Lardner began, "Don't trade in your cars just yet. A ride on Washington's proposed subway system is still a long way off." At present, the source of the money for the plan was "not even clear." Further, "Federal officials are still fussing about how much Federal support" the plan should receive or whether the Federal Government, the District, or the compact agency should issue the bonds. As a result of the indecision," the bill was silent on how the funds would be raised beyond the \$150 million in appropriations.

Although Stolzenbach had testified that the \$333 million in bonds would be guaranteed by the Federal and District government, the White House reportedly had not "definitely committed to the bond underwriting formula." President Johnson had said he hoped the regional compact agency would be established before the \$150 million in grants ran out and could then issue the bonds.

Officials developing the compact were close to announcing "the proposed 75-page compact," but one of the negotiators, Representative Sickles of the JTC, said, "Part of our delay has been in getting a Federal consensus. But we can't solve that now." Some officials thought the Federal share in the matching ratio should be higher in view of the unique status of the Federal Government in generating traffic and congestion. In view of the uncertainty, the financing formula probably would not appear in the compact. State Senator Fenwick explained, "If we put in a financing formula and Congress didn't approve, then we'd just have to start our work all over again."

Lardner concluded his column:

Whatever happens, it seems rather startling that Federal officials should still be hemming and hawing about whether mass transit in the Washington area should get more Federal-aid than mass transit in Podunk. They ought to know the difference by now. [Lardner, George, Jr., "Subway Financing Agreement Is Elusive," Potomac Watch, *The Washington Post and Times Herald*, February 24, 1965]

Senator Tydings was the first witness when Subcommittee No. 5 began its hearing at 10:20 a.m. He offered strong support for H.R. 4822, calling it "perhaps one of the most significant measures before this Congress" as far as his constituents were concerned. Everyone, including highway officials, agreed that highways could not answer all transportation needs in the region. If it "is our desire to bring the Great Society to our doorstep, this is one place we can start. Now." [pages 97-99]

The next witness, Engineer Commissioner Duke, supported H.R. 4822 on behalf of the District commissioners. "As staunch proponents of a balanced transportation system, we urge timely and

favorable action on this bill.” The District’s highway program would “provide only the essential minimum basic framework of the total transportation requirements.” He agreed with Senator Tydings “that in an urban community such as ours, there is a limit beyond which highway construction should not proceed because of its impact on the District inhabitants generally.”

The District’s highway program, which was predicated on a balanced transportation system, had “reached that point” and he did not expect any increase in mileage, even though population and automobiles would continue to increase. “It is evident that a comprehensive mass transit system is required and every effort must be made to provide it.”

General Duke regretted that some area residents still did not believe that “at least informally, a basic coordinated transportation plan has been developed” that was generally supported by all regional officials. The President and Congress also generally supported the highway network, but there was a problem:

Having seen only highway construction to date, many people have apparently concluded that a rail transit system will never be implemented unless they block the highway program. Now is the time for Congress by prompt action on this bill to assure these well-meaning residents that their fears are unwarranted . . . .

Congress now has the opportunity to provide the leadership for such a comprehensive community attack on our transportation problems by prompt favorable action on this bill, H.R. 4722, by early favorable action on the proposed District of Columbia gas tax increase and related loan authority, and by general support of the current coordinated highway and mass transit programs.

He emphasized that the District commissioners were in agreement with the cost-sharing formula for the grants and additional borrowing authority:

In proposing that the District finance the required initial grants, the District faces on the one hand, the urgent need for a rail rapid transit system and on the other hand, limited ability to divert current revenues to this purpose. Present District tax sources are, and will continue to be, inadequate to provide large grants for this project. Accordingly, we see no means of providing the District grant other than by increasing its loan authority as proposed in H.R. 4822, and borrowing from the U.S. Treasury in the amount of the required grant and repaying the loan over a 30-year period.

He concluded:

The highway program is underway but it cannot do the job by itself. Our transportation demands require the immediate implementation of a rapid rail transit system. And now is the time to start.

After representing the District commissioners, General Duke provided a separate statement as vice chairman of the Washington Metropolitan Area Transit Commission, the area’s bus regulators. On January 26, 1965, the commission had endorsed NCTA’s 1965 transit

development program, with the caveat that it had “some reservations as to the overall financial conclusions reached in the plan.”

Since then, members had met with Stolzenbach, who assured them that the plan was not intended to interfere with the compact entered into in 1960 creating the commission to regulate bus companies. On behalf of the commission, General Duke recommended the addition of language to H.R. 4822 stating:

Nothing in this Act shall be construed as altering or amending the Washington Metropolitan Area Transit Regulation Compact.

This amendment was proposed “strictly as a safeguard and as a clarification of the intent of Congress.” It was, in addition, “completely harmless to the purpose of the proposed legislation.”

General Duke assured the subcommittee:

The Commission pledges its full cooperation with the NCTA, or its successor agency, in the coordination of bus service with the proposed rail operations. If it is subsequently determined that it is necessary to amend the [Washington Metropolitan Area Transit Commission] compact to effectuate the required coordination between rail and bus operations, appropriate amendments will have the support of our Commission.  
[pages 100-104]

Representative Horton asked for clarification of the statement that the District did not have the means of providing its \$50 million grant. General Duke replied that \$50 million was a sizable amount that would be required immediately to get construction underway. “We do not have the financial resources at the moment to collect additional taxes of this magnitude in the time frame that they would be required, except by an extension of our borrowing authority . . . .” If the final version of H.R. 4822 did not include a provision extending the District’s borrowing, “we are not quite sure how we could provide the money at this time.”

Representative Horton, recalling his discussion with Stolzenbach about crime in the subway, asked if the District agreed that the District would provide policing for the system. General Duke said the District commissioners agreed that anything that might aggravate crime in the city “should be planned for and very carefully evaluated.” In view of that discussion during the hearing, Stolzenbach and the District’s Chief of Police had met on February 19. They did not agree on a specific plan, such as how many police officers would be needed, but “all of us are generally of the opinion that this problem can be met in the time that is remaining before the problem actually is with us.” He assured Representative Horton that the District commissioners “agree with you as to the necessity for facing up to this and solving it, and at the same time we are confident it can be solved by the time it is required.”

General Duke had not stated that policing would be a city responsibility. Representative Horton asked the question directly. General Duke told him, “I hate frankly to evade your question,” but officials had not yet agreed on “any specific division of responsibility in this matter [between] the

Metropolitan Police force and the Agency that would be operating this system.” He promised he would send a letter to the subcommittee before the hearing record closed on March 1.

(On March 5, he wrote to Chairman Whitener on several matters including policing. The District commissioners agreed that the Metropolitan Police Department would assume responsibility for policing the rapid rail transit network within the District’s borders. Maryland and Virginia would have to assume responsibility for segments in their jurisdiction. The city was talking with the two States about “extraterritorial jurisdiction for Metropolitan Police into other jurisdictions,” as might be needed. The city also was talking with NCTA about the size and cost of “manpower requirements” for policing the system.) [pages 105-107; General Duke’s March 5 letter is on page 223]

Representative Roudebush asked General Duke about legislative activities in Maryland and Virginia regarding a transportation system for the District. In addition to the 1960 transit regulation compact, General Duke said that Virginia had enacted a law establishing the Northern Virginia Transportation District “to provide an organizational structure that would fit into a subsequent interstate compact” for rapid rail transit system. Maryland was considering two bills. One would establish a transportation district to correspond with the district for northern Virginia.

The other would approve the interstate compact that had not yet been announced:

The whole compact, if these plans materialize . . . would take advantage of the establishment of the corresponding organizations in Maryland and Virginia to lay the basic framework for the operation of the rail transit system that we are discussing here today.

Maryland legislators were not considering financing. Further, the compact would not address the financing, because the role of the compact agency in financing had not yet been announced. However, the compact would set up “a basic framework which would accept future financing proposals without a basic modification of the compact itself.”

Representative Roundebush wanted to know if the jurisdictions wanted Congress to proceed with H.R. 4822 without waiting for approval of the compact. Yes, General Duke replied, “it is our very strong recommendation that Congress proceed to enact H.R. 4822 into law in the environment in which we exist at the moment . . . .”

If Maryland or Virginia rejected the compact, Representative Roudebush asked, “You would be stymied to an extent, would you not?” General Duke referenced President Johnson’s statement that the compact agency would be needed when the system became operational, which was still several years in the future. If a compact had not been approved by then, President Johnson would submit legislation “with alternative recommendations.”

Representative Roudebush asked if Maryland and Virginia would be willing to participate financially. General Duke could not reply about the intent of either legislature, but in talking with State officials on the JTC, “this has been a basic assumption under which we have been discussing this compact.”

Representative Broyhill, in attendance after missing the initial hearing, interrupted to say that local jurisdictions had agreed to pay a share of NCTA's 1962 proposal and "have recognized that any extension of this system into the suburbs is going to require local financing contributions and justly so." Representative Roudebush said, "I am delighted to hear that."

Representative Sickles followed up on Representative Broyhill's comment about Virginia. "I would like to say the same for the State of Maryland." He anticipated that the State would set up a special taxing district for financing the State's share. Representative Roudebush concluded his question period by saying, "That is fine." [pages 107-109]

Representative Broyhill was the next questioner. In view of General Duke's comments about the "old fight between the so-called highway users and rapid transit advocates," Representative Broyhill asked if the District would abandon any proposed highways if H.R. 4822 were enacted. "No, sir," General Duke replied. "I cannot think of any at the moment." The city's freeway network had been designed with rail rapid transit in mind:

It is our conviction that the requirements for travel in the metropolitan area at the end of this century are so tremendous that our completely planned highway system and this rail system and the most efficiently organized bus system that can be devised, can all be brought to bear and still we will have a traffic problem.

Representative Broyhill stated that the new river crossing, which he described as "let us say a bridge upstream from the Theodore Roosevelt Bridge" because he did not want to call it the Three Sisters Bridge, could not be abandoned, "can it?" General Duke replied, "In my judgment, no, sir." Travel in the I-66 corridor "requires both elements of the transportation system." It would require "the full exploitation of the new Theodore Roosevelt Bridge, which obviously is not being exploited to its capacity today, and it will also require every particular capability of this particular rail system with which we are concerned today."

General Duke added that some people might think the corollary would be true, too, namely that if Congress did not approve the rail rapid transit system, more highways would be needed to meet demand:

I wanted to emphasize the fact that this is a very densely populated urban area and we on the Board of Commissioners, and I as Engineer Commissioner, want to acknowledge that there is this limit that Senator Tydings referred to a while ago, beyond which you should not go in building highways and freeways in an urban community.

Now, where this limit is, of course, is a somewhat arbitrary decision, but we think we have reached that limit, and I wanted to make that clear. [pages 109-110]

Representative O'Konski was concerned about price escalation. For example, he said the Jefferson Memorial was expected to cost \$3 million, but cost \$9 million. The Pentagon cost \$87 million, not \$21 million as expected at the start. The \$27 million New House Office Building ended up costing \$125 million. He added that "we have had experience in building underground railways right here in the Capitol":

It cost us \$7,700,000 to build a 300-foot underground between the Rayburn Building and the Capitol, and 5 years for the construction. This is roughly \$26,000 per foot, where the terrain is good, where all the land, right-of-way, was free, and any damage that it did, the taxpayers made up.

And here you come along with a proposal telling us that the tunnel that you are going to build is going to be larger, and with more stations, including parking lots, and you tell us you are going to build that for \$3,300 a foot, when it cost \$26,000 per foot right here in the Nation's Capitol.

Representative O'Konski stated that the cost "is going to be worse than" \$3,300 a foot.

General Duke said he did not want to evade the question, but hoped the Congressman would "forgive me for the evasion that I will have to give to the answer." NCTA had developed the engineering estimates. The Board of Commissioners had examined the estimates "in a rather general sense," not into engineering detail. Instead, the board relied on NCTA's estimate not only of construction costs but usage and revenue. "At least our Board does not have the capability at the moment to indicate that they are in error . . . ."

Representative O'Konski ended his question period with the observation that, "If I were convinced it could be built for \$431 million, I would vote for it. [pages 110-111]"

Representative Dowdy said his understanding was that the local transit company was grossing \$32 million a year and NCTA was projecting \$32 million in gross business per year. Was this \$32 million in subway revenue entirely new business or was it taken from the local transit company's revenues? General Duke did not know, but recalled that Stolzenbach had said that by realigning routes, the result would not be a significant change in the bus company's overall financial condition.

Representative Dowdy admitted he did not understand Stolzenbach's point, but thought that the only way D.C. Transit System, Inc., could continue doing \$32 million gross business per year was if the subway generated \$32 million in new gross business – "would there be a doubling of traffic?" General Duke could respond only that he could not confirm the amounts the subway was expected to generate or what the bus company's revenue per year was.

Representative Dowdy turned to the policing of the rapid rail system. Based on experience in Chicago, New York, and elsewhere, he wondered what precautions might be needed to cope with crime in the Washington area subway. General Duke could reply only in general terms:

The only feeling I have for that is that the stations will be designed particularly to eliminate the dark areas, you might say, to have them as open as possible, and as fully lighted as possible.

Stolzenbach also had indicated that closed circuit television might be included in the stations. "I am only saying in a rather general way that thinking has been directed to this problem, although the specifics on how this problem will be met have not been [made]."

Representative Dowdy tried to engage in a detailed discussion of costs and revenue, but General Duke had to say he did not have the technical knowledge “to comment wisely on the facts.”

Representative Dowdy, in trying to rationalize NCTA’s passenger numbers, pointed out the experience in Toronto, which opened its system in 1954. The first year, the system carried 320 million revenue passengers. However, that figure declined steadily until 1961 when the system carried 267 million passengers. The number increased by 1 million passengers after the system opened several extensions:

So they have had a continual falling off of passengers—revenue-paying passengers—since this thing was put into operation.

Now, at the same time that the system was experiencing this downward trend in revenue passengers, the area was experiencing a growth in population amounting to 38.4 percent. And as if it is of any benefit, it can be noted that during the same period the automobile registrations increased parallel with the population growth, around 40 percent.

As his time expired, he wished someone could explain these facts. [pages 111-117]

Representative Grider changed the subject. What would happen to the city if the rail rapid transit system were not built. General Duke replied “that the long-range future of the downtown business core in Washington will not be too bright.” Would it result in stagnation of the core of the city? “I do not think there is any question, sir, that by the end of this century grave adjustments would be made between the business community farther out from Washington and our downtown core to the disadvantage of the District of Columbia.”

Has the stagnation at the core of most large cities in the Nation been caused by inadequate transportation? General Duke said that whether it was caused by transportation or not, “this is the external manifestation of it, of course.” Congestion was caused basically by people trying to get downtown and how they got there.

If downtown stagnated, how would it affect crime? It would have “a deteriorating effect on the general environment.”

Representative Grider asked what would happen if New York City stopped the subways. General Duke replied, “I think that would be too terrible to contemplate.”

Did General Duke have “any alternative solution” to transporting people in and out of the city other than a subway? Some alternatives had been proposed, such as monorail or bus-only transit, but General Duke said, “I cannot help but feel that a reliance on such a system, any of those, would be unwise, because in the long future the requirement to transport people and goods is so staggering as to transcend the capacity of any of these modes of transportation.” [pages 118-119]

Deputy Director Staats of the Bureau of the Budget was the day’s final witness. He stated that “it is essential to have the rapid transit program for this area, because of the Federal Government’s interest and because this is essential to the preservation—I use that word advisedly—of the beauty of the Nation’s Capital.” The Federal Government was the area’s dominant employer,

with 275,000 employees living in the area, 180,000 of them living in the District. “So the Federal Government has more than the usual interest in the development of an adequate transportation system for the metropolitan area.”

His prepared statement indicated that NCTA’s financing plan was “both feasible and consistent” with the congressional mandate in the National Capital Transportation Act of 1960. Considering how to fund the project beyond the \$150 million in capital contributions would be inappropriate at this time. That amount would “enable the program to get underway immediately and will supply all the funds needed until near the end of fiscal year 1968.” By then, an interstate compact should be in place that could be vested with authority to issue bonds. If local jurisdictions did not reach agreement on an interstate compact, the Administration would submit an alternative financing plan to be administered by a corporation. But H.R. 4822, wisely, did not address these issues. The presently proposed system “can stand on its own feet financially.” As a result, Congress did not need to address financing for extensions at this time or in H.R. 4822.

Further, the Bureau of the Budget considered the provisions on a private operator and labor relations to be appropriate.

In conclusion, he stated that three successive presidential administrations believed the “region urgently requires decisive action to provide a balanced transportation system.” The highway program, financed under the Federal-aid highway program, “is moving forward and its future progress is assured.” However, the success of that program depended on the assumption that “an efficient and effective mass transportation system would come into being.” H.R. 4822 would “furnish a similar assurance that the mass transit system needed to complement the highway system will also move forward promptly.” He urged early and favorable consideration of H.R. 8422. [Rapid Rail Transit for the Nation’s Capital, Hearings on H.R. 4822, pages 127-129]

During the question period, Representative Broyhill wanted to get the Johnson Administration on record that to be “completely and ultimately workable satisfactorily, we will have to extend it further out into the suburbs, and it would be part of this overall program and would require to some extent some Federal assistance.” Staats said the system covered by H.R. 4822 “would be self-supporting; it would pay out with the \$150 million grant that is provided.” It was developed to lend itself to extensions into Maryland and Virginia. The Federal Government’s interest extends beyond the District of Columbia:

It has never been stated in terms of the District of Columbia as presently delimited. So I think in principle we recognize that the Federal Government does have an interest and responsibility outside of the District of Columbia, which should prevail, as the system is extended.

The specific financial arrangements would have to be worked out when the extensions are planned based on conditions at the time:

But we believe that the practical thing to do now is to develop this system as contemplated in this bill, and then we can work with the compact negotiators or other authorities as time goes on in developing this principle.

Representative Broyhill said he brought this up because when the program gets to suburban extensions, Members of Congress from other parts of the country “might well think this is a local matter . . . and that there is no greater Federal interest involved than there would be in some other section of the country.” Anticipating the debates, he wanted to make clear that the rail rapid transit system was for the national capital region, “and not three separate State or several separate political subdivisions or we will never solve the problem.”

Staats pointed out that the National Capital Transportation Act of 1960 had called for negotiations throughout the region to develop an interstate compact. It was a difficult process, but in the meantime, “we are developing something here which will fit in with the interstate compact organization if it comes about.”

Representative O’Konski understood that the Federal interest in H.R. 4822 stemmed from the presence of the Federal Government in the capital region. At the same time, cities around the country would like to have similar treatment:

Don’t you think a better answer would be to decentralize, particularly when we know that one bomb dropped in the Nation’s Capital will wipe out our complete Government?

For example, the U.S. Forest Service and the Bureau of Land Management owned extensive lands around the country. “What are they doing in Washington?”

Staats replied:

There are only about 10 percent of the Federal employees here . . . . There is a policy in the executive branch to locate every activity outside of Washington that is adjudged to be able to function effectively outside . . . . I would like to emphasize again that many of these operations are headquarters-type operations, they cannot be performed effectively outside.

Representative O’Konski did not know of a single city that would not welcome Federal agencies without asking the Federal Government to pay for its needs. Even with the per capita income in the Washington area, “they are asking the Federal Government to put up the formula of 2 to 1.” Staats replied that the matching ratio was the same as “we have in national legislation . . . it is exactly the same pattern.” [pages 129-134]

On February 26, Representative Sickles unveiled the draft interstate compact negotiated by the JTC for the rail rapid transit system under consideration in Congress and its extension into the suburbs. The premise was that, “the provision of transit facilities and service is primarily a function of local government.” The draft compact called for an organization called the Washington Metropolitan Transit Authority with a six-man board of directors consisting of two each from Maryland, Virginia, and the District of Columbia. This would assure the authority, which would absorb NCTA over time, was “politically responsive and publicly responsive” in running the system.

For operation of the system, the compact required the authority “to negotiate such an operating contract with all interested parties, including private transit companies now operating in the

established zone.” The Washington Metropolitan Area Transit Commission would continue to regulate bus companies in the area, but the compact authority would control rates and service for the rail and subway facilities in the area. The compact included labor protections similar to those in H.R. 4822.

Referring to President Johnson’s transmittal letter calling for an interstate compact, Representative Sickles said, “We are moving now to make the President’s hope a reality.” Legislation to approve the compact was to be introduced in the Maryland House of Delegates and would be introduced in the Virginia legislature when it convened in 1966. Upon approval by the two States and the District commissioners, the compact authority would take over for NCTA.

Representative Sickles urged Congress to approve H.R. 4822:

It would be a shame if anyone should feel we should wait to start digging until the compact is approved. There is no spirit of competition with NCTA. We are working hand-in-glove.

NCTA Deputy Administrator Quenstedt denied rumors that his agency opposed the compact idea:

[This] agency has never opposed the creation of a regional authority. We cooperated in preparation of the compact.

NCTA is very pleased to see the progress that has been made and we look forward to the day when the regional agency comes into being. It is absolutely essential to create a regional subway system and the authority provided by the compact will be the device for doing this.

State Senator Fenwick, who had been part of the negotiating team, said he was confident Virginia would approve the compact, calling it “practical and necessary.” The bobtail plan in H.R. 4822 was “totally inadequate” to meet the area’s overall needs. “However, we must get a start.”

General Duke called the compact an important “part of the major plan” for rail rapid transit that the area “so urgently needs.” He did not expect “too much difficulty” in securing approval by the District commissioners.

Gregory B. Wolfe, the White House representative on the negotiating commission, said the compact would help make the Nation’s capital “the great American city and part of the Great Society that Washington should represent in transit as well as in government.” Local action on the interstate compact would be “a test of the willingness of local governments to meet their responsibilities in handling an essentially local problem.” If local officials did not approve a compact, the alternative to a regional authority was a Federal corporation to complete the system.

In that case, suburban residents would have little voice in where the lines go or their operation. “Also, there is no assurance Congress would be willing to pay for extension of the lines beyond the District of Columbia.” [Pierce, Charles D., “Interstate Pact Sought to Spur Transit System,”

*The Evening Star*, February 26, 1965; Asher, Robert L., "Transit Agency Pact Approved," *The Washington Post and Times Herald*, February 27, 1965]

### **Rapid Rail Transit Gets a Hearing – Day 3**

When Subcommittee No. 5 resumed its hearing on March 3, Architect of the Capitol Stewart was the first witness. As a member of the Commission for the Extension of the Capitol, he was concerned that a portion of the rail rapid system would be built within the boundaries of the U.S. Capitol grounds with a subway station under the Capitol Plaza. No such construction should take place, he said, until the commission had studied and approved the location, as provided for in Section 3(b)(10) of H.R. 4822:

In view of the statutory provision and the fact that studies have been made and proposals considered for underground developments in the Capitol Grounds, it is considered only proper that any improvements, either underground or above ground, should be made only after consultation with, and approval by, this Commission.

He was concerned that as drafted, H.R. 4822 called for construction of NCTA's plan and did not permit an alternative location if the commission did not approve construction under the Capitol grounds.

Chairman Whitener pointed out that during hearings in 1963, Stewart had suggested the very language that had been included in H.R. 4822. Stewart agreed, but added that he now thought a line should be added to H.R. 4822 in case the commission did not agree with the location.

Representative Harsha raised the issue of NCTA's consultation with other agencies. "Here again this year they have not consulted with you." Stewart agreed that all he had was the map in NCTA's prospectus. "I have no details of depth, positive location as far as measurements are concerned or things like that. I have nothing more than a directional line right now on the map."

Chairman Whitener interrupted to ask if Stewart meant that NCTA had not consulted with him this year. "Did you not have a conference with them just a few days ago?" Stewart replied, "Yes, sir; day before yesterday by phone; yes, sir."

The chairman pointed out that plans for the location in the vicinity of the Capitol grounds are not definite. Under H.R. 4822, "that will be resolved later by your Commission because it has absolute authority to decide whether there shall or shall not be any part of this facility constructed within the U.S. Capitol Grounds." Stewart agreed that the chairman was correct.

Representative Harsha said his point was that Stolzenbach had testified that he consulted with all interested parties, but "I question now whether this has actually been done. Certainly the Architect . . ." Chairman Whitener interrupted to say he did not follow the point since H.R. 4822 included the very provision Stewart had requested "so it does not seem to me there is any point of discussing it at this time as to where it will be here because . . ."

Stewart, trying to back out of the dispute, tried to clarify that as a member of the commission, "I am perfectly satisfied with the bill as it is drawn now." He was simply concerned that as the

bill was worded, if the commission rejected routing under the Capitol grounds as currently indicated in the NCTA report, H.R. 4822 might not have the flexibility to allow a different location.

In the absence of further questions, Chairman Whitener thanked Stewart for his testimony without further consideration of his point. [pages 149-152]

The next witness, Chairman Rowe of NCPC, said NCPC owed Congress “a great debt of gratitude . . . for its wisdom” in setting up NCTA in 1960 before the community was ready for a rail rapid transit system. It was a pioneering effort, but “now the community has caught up, and it is marvelous to be here to support a planning program which has just about universal support.”

NCPC, which had been “unswerving in its conviction that rapid transit is essential” to the region, strongly endorsed H.R. 4822. “Good mass transportation will be essential” as employment in the area grows:

We feel that this system, with further extensions into the neighboring jurisdictions, will make a major contribution to the solution of our transportation needs and can be relied upon to provide a necessary service and still preserve the beauty and character of the city with a minimum of disruption of the homes and businesses of the people who live here.

No one had any questions for her. Chairman Whitener said, “it seems that you have been a very convincing witness.” [pages 152-154]

Chairman Babson of the Northern Virginia Transportation Commission, then still in the organizational stage, told the subcommittee:

The rail rapid transit system that would be authorized by H.R. 4822 is inadequate, particularly for northern Virginia. However, the plan represents that all-important phase of rapid transit development—a start. If we do not start, we can never finish.”

After discussing the commission’s role and the need for extensions into Virginia, Babson said:

In summary, there is a great need for rapid transit in northern Virginia. We must not delay any longer in getting started . . . . Therefore, on behalf of the estimated 643,098 residents of its transportation district, the Northern Virginia Transportation Commission endorses H.R. 4822.

Babson said that in previous hearings, a question had been raised about whether the suburban areas would be willing to pay their share for extension of the system to serve their area. The answer, he said, is yes as reflected in creation of the Northern Virginia Transportation Commission, which would participate in the interstate compact that would supersede NCTA. “I believe the affirmative answer is further amplified by the enthusiastic participation in our commission” by area cities and counties. “We are prepared and anxious to begin planning extensions of the NCTA rapid transit system into Virginia, because we are fully aware of the need for fast, high-capacity rail service, and we are already undertaking to preserve needed rights-of-way.”

Representative Harsha asked if NCTA had coordinated with the commission. When Babson said that he had “countless” talks with Quenstedt, Representative Harsha asked about NCTA’s outreach to other agencies. Babson confirmed that, “NCTA this time has really worked closely with the local jurisdiction.” Representative Harsha had no further questions.

Representative Roudebush was confused by Babson’s statement that his commission was securing right-of-way for the Virginia extension. Was he referring to the design routes of the rapid transit system? Babson clarified, “Actually the one I refer to right now is not one that NCTA had planned for an extension, although I believe personally that it is one. I am talking of the W. & O.D. right-of-way with which Mr. Broyhill is familiar, and I believe that in the future this will be needed for an extension of the NCTA system.”

Representative Sickles wanted to reemphasize that the purpose behind creation of the Northern Virginia Transportation Commission was “to provide a vehicle by which the contribution is made by Virginia.” Babson replied, “I feel that is true, Mr. Sickles.” [pages 155-159]

#### **Rapid Rail Transit Gets a Hearing – Day 4**

In early March, the *Post* and *Star* reported that O. Roy Chalk, in anticipation of his March 10 testimony before the subcommittee, was circulating a memorandum on Capitol Hill. It disputed Stolzenbach’s testimony that the rail rapid transit system would benefit D.C. Transit System economically because the company could focus on the more lucrative suburban lines.

There was a suggestion at the hearings that it might be possible to operate publicly-owned rail transit lines in the National Capital region without damaging the operation of D.C. Transit. Any such thought is unrealistic.

The damage was not simply from the loss of passengers. “The availability of a different mode of service will have far-reaching effects upon the riding habits of the entire area.”

Instead, the damage would begin as soon as H.R. 4822 was enacted because the threat of loss of passengers, even termination of the company’s charter, would cause its property to lose value and make it impossible to obtain loans for expansion:

[All] future planning will have to be suspended. Improvements and expansion of service will have to be suspended. Purchase of new equipment will be impossible. And the present equipment maintenance and replacement programs will have to be reviewed.

Congress, in approving his company’s charter, had pledged to maintain interest in the company’s and the stockholders’ interest if the company provided “a good public transportation system.” D.C. Transit System had done its part and now Congress “must keep the faith” with the company.

The memorandum recommended amending H.R. 4822 to compensate D.C. Transit System for the damages it would sustain or provide for a public takeover of his company and others in the area. If not, “utter chaos will exist in mass transportation in the National Capital Region.” Compensation should be based on the amount of revenue the companies received with the

subway in operation compared with earnings in prior years that were expected to increase 3 percent annually.

If Chalk had to sell the company, he would insist on fair market value. The memorandum estimated that the sale price would be \$63 million.

In responding to inquiries from reporters about the memorandum, Chalk denied that he wrote it. He had not authorized anyone to circulate a memorandum on Capitol Hill. It was “unauthorized,” he said, adding, “We have not as yet decided upon our position.” [Flor, Lee, “Chalk to Present Views At Rail Transit Hearing,” *The Evening Star*, March 3, 1965; Carper, Elsie, “Compensate D.C. Transit for Losses Under Subway Bill, Chalk Memo Urges,” *The Washington Post and Times Herald*, March 4, 1965]

On March 10, Chalk appeared before the subcommittee. He began with “a simple philosophy of being cooperative”:

Our first point is based upon a simple philosophy of being cooperative. We do not wish to oppose the program of the President. We do not wish to oppose the desires of the public. We do not wish to oppose the principle of establishing a subway system predicated upon sound financial precepts. We, therefore, do not wish to oppose H.R. 4822. We wish, however, to suggest several reasonable amendments.

A *Star* editorial a few days later would say of this opening that when Chalk assured the subcommittee of his “cooperative” attitude toward a rail transit system, “no one keeled over.” That was because:

For everyone knew what was coming next. Without a moment’s hesitation, Mr. Chalk ripped into virtually every feature of the administration bill which is specifically designed to achieve a rail transit system. [“Mr. Chalk on Transit,” *The Sunday Star*, March 14, 1965]

He wanted an amendment indicating that the company would not be deprived of its anticipated earnings. He said NCTA’s financial projections, including the cost of construction and likely revenue, were “grossly unrealistic and fallacious.” He did not believe the subway would relieve congestion or bring more shoppers downtown; he recommended an amendment that, if his prediction proved correct, would halt extension of the system. He also indicated that H.R. 4822 did not project “a private enterprise venture in the ordinary sense of a businessman’s concept”:

Accordingly, under H.R. 4822, the D.C. Transit System would decline to operate or bid to operate the new subway system. The NCTA plan is, pure and simple, a public ownership and public operation plan with an employment-contract management arrangement. This is of no interest to us.

In view of the company’s concerns about compensation, “we felt impelled to discuss them with the President and members of his staff at the White House.” His impression was that “the administration is sympathetic to the principles contained in our proposals and they will not object to an amendment of H.R. 4822 which adopts the principle either of the two proposals.”

Chalk made those points at the start of his 25-page presentation, and then elaborated on each one, before concluding:

D.C. Transit system is not opposed to H.R. 4822. But, to fulfill the pledge made in 1956 by Congress in D.C. Transit's franchise to the effect that "Congress would maintain a continuing interest in the welfare of the company and investors," we respectfully ask the protection of Congress in the form of an amendment to H.R. 4822 which would assure D.C. Transit of compensation for such damages as it may suffer, an assurance suggested by the President of United States. [pages 190-201]

Representative Dowdy began the questioning by following up on Chalk's comments about the projected cost of the subway. Did Chalk have something to back his judgment that it would cost four times more than the estimate instead of twice as much, as often was the case? The problem with government estimates, Chalk replied, was that often they were made by people with no practical experience. That was true of Stolzenbach and Horsky, neither of whom had any experience in construction or operation of a transit system.

Experts compared subways "to a projectile that is going up—a lot of noise is made about it before it goes up and takes off and then it peters right out." He said that "it is my considered opinion that it will not do the miracle that has been proposed. That is, as had been proposed, that there would be double the number of passengers available in the area and they would take at least half the present number of passengers available for transit in the area."

As for Stolzenbach's claim that D.C. Transit System had not been cooperative, Chalk said that Stolzenbach had come to him only after the plan was complete and presented "as a fait accompli." It was a "pure formality on his part." Chalk, had he been asked, would have shared his views on the cost of construction and operation.

Representative Dowdy also asked about Chalk's concerns about private operation of the rail rapid transit system. The difference, Chalk said, involved "NCTA's impression of private enterprise and a businessman's impression." NCTA thought that private enterprise meant that a private individual was involved. "Private enterprise is more than just employing private people to work for you." [pages 201-203]

Representative Harsha asked about Chalk's claim of potential damages. Under Section 2 of the charter dating to 1956, D.C. Transit System waived its claim for damages for loss of the franchise after 7 years. The Congressman asked Chalk to explain how the company, which had been in operation longer than 7 years, could claim damages.

Chalk said that when he was negotiating the charter, he wondered the same thing, but he was told to read on. They told him, "Mr. Chalk, if you and your company do a good job we will maintain a continuing interest in your welfare. We want you here. We would like you to do a good job. Don't worry about [the earlier clause]. This is merely a technicality which is taken care of by section 4." Section 2 must be read with Section 4.

Representative Harsha disagreed because Section 3 was so specific, but Chalk referred to Lee White's letter that had assured Chalk that "the proposed legislation does not destroy any legal rights which the company may presently possess to recover damages." Representative Harsha did not dispute that there would be damages, but he pointed out the phrase in White's letter "legal rights which the company may presently possess" that left open whether any rights remained. [pages 203-205]

Representative Harsha and Chalk were discussing provisions of Public Law 84-757, "An Act to grant a franchise to D.C. Transit System, Inc., and for other purposes," approved July 24, 1956:

- Section 2 granted the franchise for 20 years, with Congress reserving the right to repeal the franchise at any time for non-use. "In the event of cancellation of this franchise by Congress after seven years from the date this franchise takes effect for any reason other than non-use, the Corporation waives its claim for any damages for loss of franchise."
- Section 3 stated that no competitive "street railway or bus line, that is, bus or railway line for the transportation of passengers of the character which runs over a given route on a fixed schedule" was to be established in the District of Columbia "without the prior issuance of a certificate by the Public Utilities Commission (PUC) of the District of Columbia . . . to the effect that the competitive line is necessary for the convenience of the public."
- Section 4 established "a legislative policy" that to ensure the Washington area had an adequate transportation system operated as a private enterprise, D.C. Transit System, Inc., "should be afforded the opportunity of earning such return as to make the Corporation an attractive investment to private investors." Given that a return of 6½ percent net after taxes "would not be unreasonable," the PUC should facilitate that outcome "as promptly as possible and as conditions warrant not later than August 15, 1958." The section continued, "It is further declared as a matter of legislative policy that if the Corporation does provide the Washington Metropolitan Area with a good transportation system, with reasonable rates, the Congress will maintain a continuing interest in the welfare of the Corporation and its investors." [pages 70-76]

Representative Horton, after asking about passenger totals and revenue on the bus network, asked about Chalk's objection to the way H.R. 4822 contemplated private operation. If the bill were amended to permit a truly private operation, would Chalk's company submit a bid?

Chalk replied, "Not necessarily so, sir." Any company considering whether to bid would want to determine if the operation would be profitable and that would depend on other provisions of the bill and the rules and regulations. He also would be concerned about whether the bill established clear rights of the regulator and the company. "That would be a matter of negotiation." He also would be concerned about what happens to labor by the time operation would begin in 5 or 10 years ("The Lord only knows when"). He doubted Stolzenbach's low estimate of damages to current employees of D.C. Transit System. "It is my impression that back of his mind is the elimination of a lot of labor. He couldn't possibly expect to run a \$32 million enterprise [such as D.C. Transit System] with \$9 million and still maintain the jobs of my 4,000 employees, not counting me."

Had Chalk given any thought to building the subway himself? Chalk replied that he had offered to do that at one point, referring to his proposal to consider other modes, such as monorail. “I didn’t have very much of a receptive audience.” [pages 205-209]

Representative Fuqua wanted to know how Chalk thought damages should be handled and how long they should be paid. The amount, Chalk explained, should be measured in comparison with current circumstances. The payment of damages should continue for at least one renewal period under the charter.

What if future losses were a result of poor management? “That is why we would like to have things spelled out clearly.” Opinions can vary depending on whether the person making the judgment knows the subject or does not. [pages 209-210]

Representative Nelsen referred to Chalk’s comment about visiting the White House. Chalk clarified that he felt compelled to speak with the President, but had not done so. He spoke with the President’s assistants.

Chalk had referred to the labor protections in H.R. 4822, but referred to “certain limitations.” What did he have in mind? The bill did not include protections for employees who lost their jobs as a result of the transition from buses to subway. Also, the company’s contract with the labor union expired in October 1965:

How can I sit down . . . to negotiate with the president of the union as to a future contract, and I can see there is a guillotine hanging over my head and I can’t plan any more for the future? I got to figure how do I get out of this, not how can I go further.

With a pending “death sentence,” how can he negotiate potential raises? “As far as I am concerned, progress stops unless we are properly protected by this bill.”

Representative Nelsen referred to the 7-year provision in the charter and the 20-year term of the franchise. Would the bus system meet area needs indefinitely, or will there come a time when another mode, such as a subway or monorail, might be needed? Chalk replied:

It is within our long-range plans to keep abreast of the time, to have the most modern, newest type equipment that both economics and the demands of the public require.

He was meeting on the following day with engineers to discuss “atomic-powered vehicles which are not even in contemplation in this subway.”

Was he saying that rolling-stock type of transit would meet needs or that the area would never need a rail system. Chalk supported new modes of transportation, whether that meant a different type of bus, a bus powered by a different energy source, a different-powered train, a one- or two-wheel train, or a modern construction method. “In other words, our transit system operating under private enterprise should be able to keep abreast of the present and the future.” He was however, not proposing a specific alternative:

I am supporting the concept that if this is what the administration wants, if this is what the public wants, I am not opposed to it. I only say that I am not interested in operating as it presently is, and if you don't think enough of our ability to do the job today and in the future, this is your privilege, and we regret you may take over my company, pay us a fair and reasonable damage bill, what it might be, and I suppose we part good friends and that is it.

Representative Nelsen asked about the \$63 million valuation of D.C. Transit System, Inc., that he had read in the newspapers. "I am not responsible for someone else's projection. I did not propose any figure, no less \$63 million, neither more nor less."

Representative Nelsen felt Congress needed to know Chalk's estimate in view of his statement that Congress had a moral obligation. "If we have a moral obligation, what is it?" Chalk replied that first they should determine if Congress did have a moral obligation before thinking about dollars. [pages 210-212]

Representative Roudebush asked Chalk about his claim that the proposed system would not relieve congestion. Chalk based it on his experience of trying to travel in Paris, New York, and London, all of which had a subway that "does not relieve the traffic problem upstairs."

Representative Roudebush recalled a statement by Chalk that traffic was no worse in the District than in any comparable city. What cities did he mean? Chalk said that he was referring to cities across the country and the world. "Traffic problems have never been solved any place in any major city of the United States . . . or in any of the major and minor cities of the world":

Mr. Chalk. The subject of solving the traffic problem is one that no one can boast of having accomplished. No one has ever solved the traffic problem to date, whether it is in Washington or any other city of the world.

Mr. Roudebush. Mr. Chalk I asked that question because I simply agree with you.

He pointed out that he lived near Detroit "where they have a tremendous traffic problem," and added that the city of Chicago "is almost impassable at the time of discharge of employees at the end of a workday."

As an advocate of free enterprise, how would Chalk finance this bill? Chalk said he had not offered an alternative and said only that "the financial aspects of this entire project are ridiculous, preposterous, and unrealistic." The funds, he explained, were to come from the U.S. Treasury and the District, but they would all come from the U.S. Treasury. "In effect, yes, even the District funds will only bring a bigger deficit to the District and they would have to still go back under another guise to Washington. Let's face reality. This is purely coming out of Uncle Sam's pocket and every taxpayer."

Was he aware that the union had filed a letter in support of the bill. He was aware, adding, "but I don't think they are aware of the consequences to them as it is presently written."

What about Chalk's estimate that the system in the bill would cost \$2 billion, not the \$431 million that NCTA had suggested. Chalk said he based his estimate on "the historical

calculations of construction under the Government enterprises in Washington.” He thought a study should be made of the subject, and had even offered to pay for it. “I would like to reaffirm that if this—if the calculations come within 200 percent of accuracy, I reaffirm my offer to pay for that study.” [pages 213-214]

Representative Broyhill asked if Chalk meant that he would not want Stolzenbach to conduct the study. Certainly not, Chalk replied. He would want a “nationally credited firm of engineers” to conduct the study.

Commenting on Chalk’s visit to the White House, Representative Broyhill said that despite Chalk’s view that the Administration was sympathetic to his position, the truth was that the President submitted the bill that became H.R. 4822 and that Staats had expressed the Bureau of the Budget’s support for it. Representative Broyhill suggested that the subcommittee might seek a clarification from the White House.

Next, he asked about the discussion with Representative Roudebush about congestion in other cities. Chalk said he thought the subway would make congestion worse:

Every time you take your car off topside and put the passenger downside, you are encouraging two more cars to go to the empty space and that is the way it works.

Representative Broyhill said that statement was distressing to those seeking a break in congestion. Chalk said there are many steps that can be taken but:

You will never remove the problem. The problem, no matter what you do is controlled by the birth rate. Not only traffic, but people keep on increasing as years go by.

What if officials put more buses on the streets, even if they required subsidies? Chalk said the Congressman was “putting the cart before the horse.” The question was not how many vehicles were used, but whether they could move rapidly through the city. “It is the speed of the movement rather than the number of empty seats that you may have available.” Twenty buses on a street might be nice, but if they could not move, “no one is going to get in them.” Basically, if officials want to solve traffic congestion, they would have to deal with what was on the surface, not what they could put below or above it.

Representative Broyhill referred to the legislation that he had introduced in 1964, with Representatives Mathias and Sickles, to subsidize additional buses until the subway began operation. Would that be helpful? Chalk thought that might be helpful “if you put more buses on the street [and] gave them more room to move,” such as exclusive bus lanes.

But what about residential areas? Chalk called that marginal operations, from which the Congressman concluded that subsidies would be needed to make the additional service profitable to the company. Would it not encourage more people to ride the system? Chalk said:

Service, more service always attracts more passengers. This is a premise well known in transportation. The greater the availability of the service, the greater the availability of passengers.

How would H.R. 4822 affect the company's service? The company would have to seek ways to preserve capital, rates, and business, as expected by its stockholders. "We would have to reappraise all of our long-range plans and determine upon a short-range plan if it is written as it presently is." He would "take such precautions as a prudent businessman would necessarily have to take to preserve the investment."

Was a surface company working profitably in a city with a subway anywhere in the United States under separate ownership? Chalk said that a route might be profitable if the subway did not go there, but no, he had never heard of a profitable surface line that duplicated a subway line.  
[pages 214-218]

Chairman Whitener, the next questioner, referred to Chalk's repeated statements that he did not oppose the bill. What parts did he agree with? "I agree with the entire statement except insofar as those sections of the act which are not consistent with the amendments which I have suggested." He did not oppose the proposed system. "I merely am trying to improve it."

Did Chalk's repeated disparaging comments about Stolzenbach have any bearing on his views on the bill. "None whatsoever."

Chairman Whitener referred to a memorandum dated February 16, 1965, that supposedly was written by Chalk. It said, "it is our conviction—that is—it is the intention of Messrs. Horsky and Stolzebach to nationalize in a socialistic fashion transportation of our Nation's Capital contrary to the will of the Congress and the will of the President of the United States." Was that an accurate statement of Chalk's philosophy – that the chairman was a socialist?

Chalk replied that the statement referred only to Horsky and Stolzenbach, but Chairman Whitener said he was the sponsor of the President's bill. "So I suppose that President Johnson and I are now confederates of Messrs. Horsky and Stolzenbach, so just by simple—not only legal but just ordinary deduction, that sort of makes us a party of this."

Chalk stated that he did not believe in guilt by association and was not referring to the President or the chairman:

I am referring specifically to one part of this bill on which I think I have very clearly set my position. This bill is not a private enterprise bill. It is private only in the sense that it employs private individuals to do the job. Otherwise it is public ownership and private operation and this in my book is socializing the transit system.

If the government passed a bill that provided for construction of the tunnels and the tracks, but offered a franchise to your company to provide the rolling stock with a guarantee of 6½ percent profit and certain tax forgiveness, would that be private enterprise? Chalk pointed out that the government already did that with D.C. Transit System. "It builds the roads . . . and it allows the D.C. Transit System to go across them. There is no difference between building a highway on the surface or building a highway beneath the surface." He was permitted to buy his own equipment and operate it on a public road; that would be private enterprise.

In relation to White's statement about any legal rights the company may possess, Chalk had said the White House would not have any objection to his amendments on damages. Did he mean to imply that the company had a commitment to operate a bus network in perpetuity? No, he did not say that. Did not the formula for compensation imply that? Chalk said he had not advanced a formula, but merely said the company should be compensated.

Chairman Whitener tried to determine the number of people the company employed. Chalk had said 4,000, but the record indicated the company had 2,819 employees. While Chalk's concern for his employees was "commendable," the company employed 3,242 people when he took over the charter. Did that reduction result from automation and other advances in the industry? Chalk blamed the reduction on "whoever dreamed up the idea of cutting out the trolley cars in Washington":

I do believe that when we converted, as was required by Congress, from trolley cars and bus operation to all-bus operation, some of the men who were not qualified to drive a bus, some of the men who were not qualified to repair an engine did, unfortunately lose their jobs. But to place the blame on myself or my organization is very unfair.

Chairman Whitener replied, "We are not placing the blame. We are just going . . ." but Chalk interrupted to say, "It was the man who dreamed up the idea of disposing of the trolley cars."

The chairman pointed out that the man in question was a Member of Congress who put the disposal idea into Section 7 of the act approving the charter. "So you were in on the dream, I would say."

Chalk protested, "I didn't create it. I was opposed to it," but the chairman moved on.

He cited Chalk's description of the NCTA estimates of cost as "grossly unrealistic and fallacious," and his recommendation that they be subjected to "an unbiased and impartial engineering study and report on the true facts." Chairman Whitener said, "I am not sure whether you are aware of the identity of the engineers who made this study" leading to NCTA's estimates. He listed three nationally known consultant engineering firms (DeLeuw Cather of Chicago, Kaiser Engineers of Oakland, and Louis Klouder and Associates of Philadelphia) and listed their accomplishments in the transit and other areas. "Are these the engineering firms that you imply have not been of the quality that you would like to see?"

Chalk denied saying that. "I only say they were selected by Mr. Stolzenbach and are not independent in the sense that they can render an unbiased view of Mr. Stolzenbach's recommendations."

Without commenting on Chalk's reply, Chairman Whitener moved on to the operating contract. In response to a question, Chalk had said his company had submitted a bid to operate a system in Dade County, Florida. Why then, "would this be so abhorrent to you if it were not so in Dade County?" Chalk replied that the District charter was the company's main business, while Dade County would have been supplementary. The District charter provided "our major income," but

if the company wished to supplement it outside the area, it would do so. “But where it becomes our major income we are not interested.”

Chairman Whitener asked what Chalk’s position had been when the idea of a subway was under discussion during consideration of the National Capital Transportation Act of 1960. Chalk recalled pointing out that “there were alternatives to a subway and that I thought it would be wise to consider the alternatives before a final decision was made in connection with the subway.”

The chairman recalled Chalk’s statement about proceeding in stages, but only advancing one stage at a time. As a businessman, would Chalk start a new bus system with only one line? Chalk replied that what a businessman and a government would do “are two entirely different things”:

Now, if I were doing this I would be very careful before I decided how I was spending my money as a private enterprise. I would make darned sure that every contemplated future expenditure brought back dollar for dollar value. I merely say that the figures as presented by the NCTA are under a financial cloud. I would go slow before I would spend taxpayers’ money.

Would anything in H.R. 4822 prevent NCTA from doing just that? No, but the bill approved the NCTA program that “sets up a series of lines and each line starts before the previous one is completed.”

They discussed subsidies, which Chairman Whitener said included the tax and other incentives in the D.C. Transit System charter. He observed, “I believe you have had a 7-year period and about \$2.6 million in exemption from motor vehicle fuel tax.” In addition, the charter included substantial real estate tax exemptions. Chalk replied, “This was offered to us in 1956 as an inducement to take over a city that had nothing but heartache in transportation.”

Chairman Whitener said that some 55 community organizations and 20 or so individuals had submitted statements to the subcommittee in support of H.R. 4822. These groups and individuals who supported the bill presumably also supported the subsidies the bill contained. Chairman Whitener did not mean to deprecate Chalk’s private interests, but “we do have the cooperation of practically every agency including the labor organizations in the city and the only major discordant note is what I heard from you.”

Chalk replied, “I have heard no discordant notes from me. I support the bill. I merely say amend it so it does not do an injustice to me.”

Chairman Whitener turned to Chalk’s contention that a subway would not reduce the number of vehicles on the streets. Chalk said, “I cannot see where any subway system in any of the major cities of the world have affected the traffic on the streets.” The chairman asked if traffic on city streets would be about the same. Chalk thought that might be the case. If so, would that mean continued business and economic life as a result of the transit system? Probably so, Chalk replied:

There may be many reasons, sir, to build a rapid transit system other than the solution of traffic problems. Now, these I have no quarrel with. I merely say that the construction of the subway would not necessarily solve the traffic problem upstairs.

Chairman Whitener tried to convince Chalk that based on the number of passengers and a minimum fare of 25 cents, “that would seem to be a good omen for the fare box taking care of the bonds that this legislation contemplates would be issued; would it not?” Chalk said, “I think that would be most optimistic.” [pages 218-232]

After Chairman Whitener’s lengthy, detailed questioning of Chalk, Representative Sickles had a couple of questions. He had assumed prior to Chalk’s testimony that the company would be protected “if we insured that any procedure or steps that were necessary to insure that you could get in court in order to recover damages would have been satisfactory.” Was Chalk asking for some sort of formula for calculating damages to be included in the bill? Chalk replied, “If we were not receiving the net income that we are presently receiving, or have a reasonable expectation or anticipation of receiving, I feel that that should be compensatory.”

Could Chalk have conceived that a rail rapid transit system was coming to the metropolitan area “as far as the planners are concerned”? Chalk said he “could conceive that this would come and we would be properly taken care of when it would happen.” In other cities, local governments took over mass transit where it was no longer profitable for operation by a private company:

It is reasonable to anticipate that if the Government wishes to take over a private operation, if this is the tendency and it appears to be, well, then, we go along with it. I don’t necessarily enjoy the prospect of turning my business over to the Government, but if this is what the Government wants, I will go along with it. But at least if you do this to me, compensate me as they do in all other cities.

Representative Sickles said that at the start of Chalk’s statement, the impression was that he supported the subway, but then, it seems, “you would think that improving the bus system or some other system would be even more satisfactory than the subway system.” Chalk did not want to talk about alternatives “since it appears to be a foregone conclusion that this is what the public of this area wants.” He did not want to oppose the Johnson Administration. “If they in their wisdom feel that this is what they want and should have, I will not oppose it. I am for it.”

Representative Sickles pressed Chalk, as a transportation expert, for an opinion, but Chalk refused to express a view. “This has already been passed upon. The public wants it and they are entitled to have what they want.”

Could private enterprise raise the capital to do what NCTA proposed to do?

In 1960, I appeared before this very committee and I proposed that private enterprise could and would be interested in operating a new transit system and I stand by what I said in 1960, yes, the answer is yes, it is conceivable under certain conditions, not by grant, but possibly by guarantee and certain phases of it, for private enterprise to run and construct a large transit system

As an example, Chalk cited highways. The government provided the funds to build them, but private individuals bought motor vehicles to use on them.

Representative Sickles recalled Chalk's testimony about improving the bus system. Chalk said he had proposed building a vehicular tunnel, but had "discarded that thinking since it is not in accord with the administration's thinking and I will be delighted to abandon it." He could think of many other alternatives, "but there is no point in making suggestions when the subject is a closed one."

Representative Sickles observed that according to Chalk's statement, he did not think enough feeder services would be available after the subway opened to provide the company with a fair return on its costs. Would that be true even though population will continue to increase? Chalk explained:

If we have a route running down Connecticut Avenue, which we presently have, and the subway wishes to run down Connecticut Avenue, there isn't enough business for both of us. And there is no feeder line in history that operates as a feeder line and made money. You would have to go out of business or it could be run, or it should be run by whoever runs the trunkline, should run the feeder line. The feeder line by itself cannot support itself.

Chalk emphasized that all he was saying was that if the company was damaged, it should be compensated. If the company was not damaged, if it continued to be profitable, "we don't want 1 cent."

Representative Sickles was trying to pin down what damages the company would be entitled to under current law, but Chalk was unclear. The Congressman said he wondered about the wisdom of putting a damages provision in H.R. 4822 if "as a matter of law you would not be entitled to any recovery" at present. Chalk thought that including a provision for damages or condemnation proceedings was only fair. "There is no provision in this bill to protect us at all. It doesn't even recognize the fact that we are going to be hurt."

When Representative Sickles suggested that the subcommittee "make sure there is adequate procedure for you to recover these damages," Chalk said, "that is an excellent suggestion" and he would like to explore it with members of the subcommittee. "Let's talk about it." [pages 232-237]

Chairman Whitener reminded Chalk of the language in White's letter that the legislation should not "destroy any legal rights which the company may presently possess to recover damages." He then engaged in a dispute with Chalk regarding Sections 2, 3 and 4 of the legislation granting the charter to D.C. Transit System. The chairman focused on Section 2, but Chalk wanted Section 2 to be read in the context of the entire law, including Section 4. Chalk said Section 4 promised that Congress would be "very mindful of what happens to the company in the future and it had no limit on the number of years in the future." They could not reach agreement on this point, ending Chalk's testimony. [pages 237-239]

The *Star* editorial cited earlier, “Mr. Chalk on Transit,” summarized the testimony by saying that Chalk would be the foremost advocate for rail transit “if the new form of transit were wholly his show, from start to finish.” His announcement that he would not bid to operate the system was “something of a surprise,” but “if that is the way Mr. Chalk feels, so be it.” However, any decision by Chalk to reduce service “most assuredly is not Mr. Chalk’s alone to make.” That service “is a matter of concern to the public transit regulatory commission, and no doubt should be left in anyone’s mind on that point.”

As for Chalk’s concern about damages, his company currently had a virtual monopoly, and that would change with the coming of rail rapid transit. The editors did not think “that Congress should attempt now to determine, as Mr. Chalk demands, what compensation, if any, may be due D.C. Transit after the rail system becomes operative.” However, under the 1956 charter, the company waived damages for loss of franchise after 7 years, as White House counsel White had stated. “And beyond that, the fact is that no one is in a position at this point to know whether any compensable damages will occur or not.” Congress should not provide any “protection” beyond White’s assertion that nothing in the bill “should be construed to deprive D.C. Transit of any rights it may have for any damages to it.” [“Mr. Chalk on Transit,” *The Sunday Star*, March 14, 1965]

A *Post* editorial summarized Chalk’s testimony by saying he was “a man of active but gloomy imagination.” If a subway were built, “he can foresee no future for his D.C. Transit System but chaos, rapid decline and eventual ruin.” He supports H.R. 4822 in general, but “is compelled to oppose it in every particular.” Chalk still enjoyed “some of the great good will that met his arrival here nine years ago.” However, he had “dissipated much of that good will with his exaggerated claims and his excessive complaints.” He was running one of the best bus systems in the country, “and it is not his fault that buses alone can no longer meet the city’s demands.” The editorial concluded:

Congress has dealt considerately with Mr. Chalk in the past, and he has no right to ask for what amounts to a vast pension for his bus company now. [“He Asks Too Much,” *The Washington Post and Times Herald*, March 18, 1965]

At the start of the hearings, Chairman Whitener had announced that he wanted to finish on February 24 and close the hearing record on March 1. However, in view of Chalk’s maneuvers on the subject, including the memorandum circulating on Capitol Hill, the chairman had extended the hearing to hear his point of view. According to Lee Flor, Representative Multer “had been expected to give Chalk’s side of the controversy,” but he had been rescheduled and Chalk appeared instead. Chalk’s request “was unexpected.” [Flor, Lee, “Chalk to Present Views At Rail Transit Hearing,” *The Evening Star*, March 3, 1965]

On March 17, Representative Multer told the subcommittee that he thought private enterprise should be preserved to participate in this project to the fullest extent. In his view, NCTA had “not done all that should have been done to be sure that private enterprise was invited in to participate in this program to the extent that private enterprise can and is willing to participate.” He admitted that “mine is a lone voice in the wilderness in talking against a subway system for the District of Columbia.” Thus far, he said that virtually every witness supported rail rapid

transit. "Almost every witness, however, has avoided the use of the word 'subway,' as though it were a dirty word." He added, "I am inclined to suggest that it is a dirty word."

As a native of New York City, he said, "I think the subway system there is typical of what subway systems and rail systems should not be." It was experiencing maintenance problems as well as crime problems despite all the funds spent and its own police force of 1,119 officers. Crime in the District was increasing without a subway, but would increase even more with one.

He questioned NCTA's projections and estimates. He said:

It is my information—I cannot document it—that many outstanding engineering firms that could give an unbiased and proper report on this subject were consulted by this agency and told in advance what the agency wanted, and they refused to enter into such contracts with the results predetermined.

He recommended that the committee undertake a survey, complete and independent, to determine if a subway is the proper alternative, the likely cost of the recommended alternative, and the prospective cost of operation. He suggested the survey could be conducted for \$431,000 or one-tenth of 1 percent of the proposed expenditure of \$431 million:

If we want to put the Government into the building of the subway, let's do it. But let us meet the issues squarely and if that is the determination, let's do it, but make up your mind that the U.S. Government is going to pay this bill directly or indirectly, because the city of Washington will never be able to contribute its share.

No one, he said, seemed to be aware of how much disruption construction of the subway would cause. Based on living in New York City his entire life, he could assure the subcommittee that "for the next 20 years . . . your streets are going to be torn up, they are going to be impassable. You are going to drive the businessmen away from the route of the subways, and for 20 years the District will lose the revenue and the taxes in addition to having put those people out of business."

He concluded by saying "I hold no brief for any one company or companies, no matter what the newspapers may say." However, if the city was determined to build a subway "then by all means let's get the proper and true cost of this construction and the proper and true projection as to cost of operation." He urged the subcommittee to rewrite H.R. 4822 to include "a proper provision that will safeguard private enterprise and give them the opportunity to come in and participate in this program if they want to and they can." [pages 249-254]

During the question period, Representative Broyhill agreed with Representative Multer that NCTA should have considered all alternatives but "I strongly feel that they inferred that everybody wanted a subway system, and they went hellbent to justify a subway system without giving proper consideration to existing transportation, existing rail lines, and other alternatives such as monorail." He said he had been working with AMF, which had an office in his district. (Representative Multer called AMF "one of the finest companies in Brooklyn, N.Y., which contains my district.")

NCTA, Representative Broyhill said, had not given adequate consideration of “this all-weather suspended type monorail,” despite the requirement in the National Capital Transportation Act of 1960 that it consider the most advanced means of mass transportation. The system studied in 1962 for NCTA did have deficiencies, but the “truly advanced development” that AMF was developing had eliminated those problems. The company and its French associates, had invested \$20 million “in bringing this development to a point where the transportation of the future can really be ours today. And I think they should have their day in court.”

Representative Broyhill said he had decided against asking the committee to consider this alternative. He was afraid that the committee, which was considering whether to approve the NCTA bill, might not want to act on the monorail option, leading to “an inference . . . that the committee rejected a monorail system.” He was convinced that a full hearing on the subject would elicit “a great deal of support by this committee and the Congress.” He added, “And there would be no problem of right-of-way, it would cost only a fraction of the cost of a subway, and we could build it in a fraction of the time.”

Regardless of what happened with H.R. 4822, Representative Broyhill would continue to promote the monorail option, possibly for extensions of the rail rapid transit system:

I am going to urge the committee and the Agency and the surrounding communities to give strong consideration to the employment of a monorail system. I think it is inevitable, I think we are going to come to it, and when we do, we are going to look back and wonder why we didn't get to it before.

Representative Multer said that one thing had been overlooked, namely that once construction of the subway begins, “surface transportation in the District is going to begin to deteriorate.” Based on experience, he said:

Once it is completed, you can be sure that it will only be a matter of time, and a very brief time, before the District of Columbia or the Federal Government will have to take over the surface transportation system of the District, because, again drawing on experience in New York, first we took over the subways, the municipality took them over. It was only a matter of time when one transportation company after another had to be taken over by the city of New York. Private companies just could not operate in competition with the subways. They were put out of business, temporarily, because some of their routes were taken away. They just could not travel over the streets where they were building the subways, and when the subways were completed, they just could not compete.

Many people will still want to rely on surface transportation. “That is the experience all over the world where they have subways.” Surface transportation companies cannot compete:

If the subway system goes in, be prepared to have the Government take over the surface transportation and operate that too with the Government paying the deficits between cost and fare revenues.

That is also part of the cost that you should contemplate as part of the cost of operating this system and an additional cost of acquisition. [pages 256-259]

Representative Sickles said he was concerned about Representative Multer's comments impeaching the integrity of consultant findings that NCTA used to propose its system. Earlier, Chairman Whitener had listed the consultants, all of whom were highly respected.

Representative Multer said he did not intend to attack the good faith of those firms. However, consultants only do what they are paid to do. "I think they gave the Agency that which the Agency bought and paid for":

I think these engineers gave value for what they were asked to deliver. But I don't think they were asked to deliver enough.

Instead of assuming that everybody agreed that a subway was the ultimate answer, NCTA should have studied all alternatives fairly:

Then, having determined that this should be a subway, they then should have asked for a full and complete survey as to what was involved and then prepare the plans and specifications needed from which to build this subway, both as to roadbed and as to equipment. Then they should have called for the engineering studies as to the cost of that construction. I don't think you have got that. I think, despite the length of the document and the detail, this is a good guesstimate and not a fair estimate.

Chairman Whitener interrupted the dialogue to say that committee staff could provide Representative Multer with evidence that "will cover the very thing you are talking about. There is no secret about it."

Further, he had been in meetings with NCTA officials when they discussed monorail. They had concluded that a monorail was not the best alternative for a downtown system that "they think is absolutely essential to move people, and that just putting a rapid rail out on the periphery of the city would not do the job." Moreover, when he had been in Japan in late 1964, he had talked with officials there about why they chose a subway over monorail. They had installed monorail to go from downtown to the airport:

They felt that monorail had some limitations, and they thought it could do that kind of job, but it could not carry the great numbers of people that would have to be carried in a major downtown system. And that is why they ruled it out . . . .

My own feeling about the monorail is that it sounds glamorous, sounds like it can do the job, and it is much less expensive, so that you would be inclined to believe that NCTA would analyze it thoroughly. And I think they have.

He also wanted to comment on the observation that the word "subway" had been little used during the hearings. A subway could be several things, such as the subway "through which we walk from here over to the Capitol," so the term is not really definitive. In the past, Chalk and others had suggested a subway for buses. "Rapid rail we understand is steel on steel."

Representative Broyhill objected to the chairman's comment about NCTA's study of monorail. NCTA had studied monorail, "but not in sufficient detail . . . . I think that they were in error, serious error, as to their judgment." The modern system, with rubber-tired suspension, was in operation in Paris, but he admitted that Washington had a unique problem. In Washington, "we have got the Fine Arts Commission and a lot of other agencies that have a say-so in this thing, and of course, they think esthetically, that the monorail is not as attractive as some of us think." They favored underground "in order to duck that problem."

As for Japan, the monorail system considered may not be able to support the needed volumes, "but this is another example of what I consider an inadequate evaluation of currently available systems." He said that the AMF monorail could carry 50,000 passengers per hour in each direction, "and it has the flexibility for using smaller numbers of cars during off-peak hours, with a consequent saving in operation and maintenance and cost." [pages 259-263]

Chairman Whitener asked Representative Multer if he believed that despite the cost advantage of monorail, "the people of the District of Columbia would ever support or permit the erection of a monorail system which would run in front of the White House and the Capitol and all these other monuments that we have around here?" Representative Multer replied that a subway is simply a tunnel that could accompany a rail line, buses, or monorail. "A monorail is a vehicle that runs on one rail, and it can run underground as well as above ground."

Mr. Whitener. If it is not going to be run above the ground, then we get right back to our objection about engineering studies for the underground system, don't we?

Mr. Multer. I would like to make clear that mine is a minority view as to the subway.

Mr. Whitener. I would hope so.

Mr. Multer. From all I have seen, I know it is.

Recalling his trip to Tokyo with Representative Sickles on other business, Chairman Whitener said they had spoken with "the very top man in the subway system" who had said "that they had the monorail line that they have, one route, just more or less as a showpiece, and that it was impractical, that it attracted tourists more than it did regular users." Representative Sickles said that was his recollection, too. Chairman Whitener repeated the comment about the monorail not being able to carry enough passengers:

And it was for that and other reasons it was not a practical system. So I suppose that that same experience that they have had would apply whether you ran your monorail underground or on top of the ground.

Representative Multer also had been in Tokyo in September 1964, and he had looked into the rail transit system. He agreed that the monorail to the airport was mainly a tourist attraction. However, it also attracts passengers who use it as a basic utility:

And so here, too, whether you build it underground with a monorail or the two-rail track, people are going to be using it because it is a utility, it is something they need to get places, and therefore, they will use it.

Representative Broyhill pointed out that if people would not use the monorail for basic transportation service, “why would they ride the same type of vehicle sitting on two rails or underground rather than overhead?”

Representative Whitener replied:

I think the answer to that is readily seen by anyone who goes to the Tokyo subway system, because they have men employed whose sole function is to push more people onto the subway cars, they actually use their feet to push passengers onto it.

Representative Broyhill said that if the subcommittee wanted to consider how many people would use rail rapid transit, “we need to get more discussion on this monorail alternative.” The subcommittee could hear from experts who could answer every question in detail “to the satisfaction of the committee.”

Representative Multer pointed out that a monorail was built as a temporary service for the 1962 World’s Fair in Seattle, but had been retained as a utility even after the novelty of its fair-service had worn off. Today, it was still serving a useful purpose.

Representative Broyhill did not see the monorail as objectionable from an aesthetic viewpoint, even though he realized the Commission of Fine Arts and others might find it unattractive. “But we did have streetcars that ran in front of the White House and past the Capitol for years, and no one raised an objection about those. They were removed for other reasons.” But aesthetics were only one factor to be considered. Cost and efficiency must be taken into account as well.

After a brief discussion of the crime issue on buses in the District, Representative Multer concluded his testimony:

Mr. Multer. I trust we can cooperate together to try to cut down the crime rate as Mr. Whitener is trying to do.

Mr. Whitener. Mr. Multer, of course, here in the District of Columbia we have crime on the buses, unfortunately that happens here. And you would not recommend to your wife that she ride a bus late at night here in the District of Columbia unaccompanied, would you?

Mr. Multer. I agree.

Mr. Whitener. So this problem of crime on transportation facilities is a problem, and we have to face it. And it is the responsibility of all of us to do what we can to help eliminate as much of the crime as we can.

Mr. Multer. I agree, sir.

The hearing was at an end. [pages 264-270]

## **E Street Expressway**

For several years, the District had been developing the E Street Expressway as a depressed roadway along E Street between 19<sup>th</sup> and 23<sup>rd</sup> Streets, NW., as a major approach to the Theodore Roosevelt Bridge. The District and BPR would split the cost of the expressway, 50-50, under the

Federal-aid highway program because it was not part of the Inner Loop or the District's Interstate System.

The expressway's engineers, Dummel, Klepper and Kahl of Baltimore and Harrisburg had hired prominent architect Cloethiel Woodard Smith, as noted earlier, to design the project with aesthetics in mind. The design involved bridging over 23<sup>rd</sup> Street and tunneling under Virginia Avenue. The *Star*'s Robert J. Lewis described the plan:

It would rise to the surface at Twentieth Street and meet two streets flanking Rawlins Park, east of Nineteenth street. The plan requires demolition of an apartment building, just north of the State Department building on Twenty-third street and of an old auditorium at Nineteenth street, so that Rawlins Park may be extended.

The design included "special lighting and walls, landscaping and railings specially adapted . . . to the expected increasing attraction of the area for tourists and other pedestrians:

The proposal, as she outlined it, would screen the depressed section of the expressway, and a tunnel entranceway, through landscaping, and other means, including a pool, fountain and plaza at Twentieth street.

Smith presented the design to the Commission of Fine Arts on October 19, 1961. She said that highways were a "new and demanding element" that tends to destroy the quality of life in central cities:

If the surface of the city is destroyed by brutal paved and walled gashes that separate it into a series of islands, it will become only a city for vehicles and not a city for people, by destroying the elements in the city that bring people together and contribute to a rewarding urban life.

Members of the Fine Arts Commission praised Smith's design. Chairman Finley called it "very impressive," while Ralph Walker, a former president of the American Institute of Architects, called it, "very thoughtful." William Perry, a Boston architect, said the result was "a very handsome arrangement," a statement that painter Peter Hurd agreed with. "I've just got back from Los Angeles," Hurd said, "and have seen what a mess they have made of their city with their expressways out there."

In contrast with the praise for Smith's design, Chairman Finley said the Fine Arts commissioners were pleased to learn that NCPC had hesitated during a recent meeting to approve the East Leg and other segments of the Inner Loop without further study:

The Commission of Fine Arts has never approved the Inner Loop . . . which we feel will be destructive to the beauty of the city. The commission has advocated, instead, an underground rapid transit system which, if adopted, we feel would meet our traffic needs without irreparable damage to the city's appearance.

Engineer Commissioner Clarke and Director Aitken responded to the NCPC criticism, with Clarke pointing out that Smith's design for the E Street Expressway was "indicative of the kind

of treatment planned for the entire inner loop.” He rejected critics’ claim that the Inner Loop would be “an eight-lane ditch.” As with the E Street Expressway, the District had required consultants hired to design any segment of the Inner Loop to retain an architect to ensure proper consideration of aesthetics. For example, Aitken said the city planned to take the entire block from 10<sup>th</sup> to 11<sup>th</sup> Streets to provide a landscaped buffer for the East Leg Freeway. [Lewis, Robert J., “Fine Arts Unit Hits Plan for Inner Loop” (October 18, 1961) and “Arts Unit Praises Plan For E Street Roadway” (October 19, 1961), *The Evening Star*]

The *Post* and *Star* praised Smith’s design. *Post* editors called it “a marvel of ingenuity,” adding that “architecture shows us how to make a quite attractive little park out of a four-block sunken freeway.” They hoped the engineers designing the city’s other freeways would listen to her message about a rewarding urban life. “There is only barely time to heed Mrs. Smith’s warning.”

*Star* editors shared that hope. “If Mrs. Smith has successfully avoided deleterious effects of the freeway in the State Department area through the use of tunnels, specially designed walls, landscaping and plazas, it follows that these same techniques can be and should be employed in many segments of the inner loop.” Highway critics would be well advised to urge such steps, which “would be more fruitful than adamant opposition” because the Inner Loop “probably has progressed too far now to be stopped.” [“Freeways and the City,” *The Washington Post and Times Herald*, October 21, 1961; “Beautifying Freeways,” *The Sunday Star*, October 22, 1961]

All praise aside, the Commission of Fine Arts, the Committee of 100 on the Federal City, and the Committee on the National Capital of the American Institute of Architects came out later that month against not only the Inner Loop but Smith’s design for the E Street Expressway. Chairman Finley said the commission was withholding endorsement of the E Street Expressway because:

We feel a depressed roadway, such as is being planned will not only be destructive of the E Street Mall, but would direct too great a volume of traffic past the White House.

Smith’s design, he said, made the expressway more acceptable, but commissioners opposed the “depressed trench” facility:

If, after further consideration, it is determined that the freeway is still necessary in this location, then members hope the District Commissioners will consider putting the expressway underground from Twenty-third to Twentieth streets, so far as possible, and thus preserve the greater part of the area as a park.

The Committee of 100 called for “a thorough evaluation of the probable impact of the Inner Loop on the appearance of the National Capital and the lives and property of its inhabitants.”

The Northwest Committee for Transportation Planning, formed to block an expressway in the Wisconsin Avenue corridor, released a 50-page study supporting a moratorium on the four Inner Loop projects that NCPC was studying. “The Inner Loop and related street widenings and arterial freeways would not solve traffic congestion problems, but would create an even worse

strangulation of automobile traffic.” [“3 Groups Join Protest Of Inner Loop Plans,” *The Evening Star*, October 27, 1961]

In view of the objections, Aitken asked the District’s “little fine arts commission” of three architects to study the proposed E Street Expressway. He asked Washington architects Leon Chatelain and Leon Zach, and Paul Goettlemann, head of the Catholic University School of Architecture, to report back by December 12, 1961.

Their report said that Smith’s proposal was “over-designed” and needlessly expensive. They favored a more conventional design featuring greenery along sloping expanses. Aitken admitted he agreed with their conclusions, but assured reporters that he had not made any recommendations to them on this, the first review since their appointment on November 9. “These men are not rubber stamps. They’re hard, sensible, rational thinkers.” He added, “An architect can’t be unmindful of cost.”

The *Post*’s Willard Clopton described Smith as plainly “miffed” by the reaction. She said:

If they want to make a great hole in the city in the name of being a quote architectural advisory committee unquote, let them. They couldn’t be more wrong.

She would be willing to redesign the expressway, but only up to a point. “I’m not going to redesign a big cut in the city.” [Clopton, Willard, “Panel Criticizes E. St. Expressway Design,” *The Washington Post and Times Herald*, December 31, 1961]

The *Post*’s architectural critic, Frederick A. Gutheim, described Smith as “a willing pioneer” who had examined the basic elements of the E Street Expressway only “to seize upon those elements which she could control, and attempt to manipulate them into a design which would dominate the earlier fundamental engineering.” He continued:

The end result showed there were just not enough such elements, that hostility to more-than-engineering design was to be encountered all along the line, and that even the brightest designer was doomed to failure.

He understood the position the Commission of Fine Arts and others had taken:

Her major objective was to tame the wild engineering form of high speed expressway, and give them a more architectural and urban character compatible with the surrounding buildings.

But a highway is not a boudoir; and what in the end must be considered a cosmetic treatment—even if less costly because of the use of open-cut designs—cannot be considered effective.

Gutheim concluded by stating the challenge facing engineers and architects alike:

If we are to have urban expressways, they should be designed as such. They should fit into cities, not disregard them. Their design should embrace these factors, at the start, not tinkered with at the end to arrive at some sort of futile compromise.

This is a new engineering task and we are overdue in facing it. [Gutheim, Frederick A., "Need Highways Be Ugly Scars?" *The Washington Post and Times Herald*, January 11, 1962]

Smith met with Director Aitken and his architectural team on the morning of January 16, 1962, to seek a solution to design of the E Street Expressway. After the meeting, she told reporters, "The basic design is going to hold . . . . I didn't have to compromise very much." The fuss in December, she said, was a "misunderstanding," and she expressed confidence in Aitken, describing him as "one of the few good highway engineers around."

Aitken was less certain of the outcome of the meeting. "We're very close together on her basic concepts." In view of the architectural team's concern that the concrete Smith had identified might not be durable enough for Washington weather, Aitken said he would search for a more durable concrete, adding that "cost will be secondary." [Clopton, Willard, "Expressway Design Wins Vital Support," *The Washington Post and Times Herald*, January 17, 1962]

On April 18, the Fine Arts Commission "reluctantly" approved the Smith design for the E Street Expressway, but wanted the opportunity to review the materials to be used on the facility. The commissioners agreed with Smith to reject the request from American Red Cross officials to build the expressway on a bridge in front of their headquarters between 20<sup>th</sup> and 21<sup>st</sup> Streets, NW. The commissioners concluded that a structure at that location would "confuse" the design. The Committee of 100 for the Federal City remained opposed to the expressway. ["Brick Safety Strip Cut From Plan for Avenue," *The Evening Star*, April 19, 1962]

NPS Director Wirth was concerned about the traffic the expressway would deposit on E Street south of the White House. Existing E Street carried traffic in a slight curve between the White House grounds and the Ellipse, but the area to the west included the Red Cross Building, the Freer Art Gallery, and the planned performing arts center. Wirth predicted that with the opening of the Theodore Roosevelt Bridge and the expressway in 1964, Constitution Avenue, "overloaded now," would not be able to handle the traffic. Congestion on Constitution Avenue would cause motorists to switch to E Street, an outcome that would ruin "the whole complex and the Ellipse." With the Red Cross, art gallery, and performing arts center involved, "They've got themselves a real problem." As a result, a tunnel was "inevitable."

District highway officials pointed out that the E Street Expressway was designed to handle traffic for the office area west of the White House. Through traffic volumes would not be heavier, they said. As a result, they were not planning to extend the expressway south of the White House, whether in a tunnel or not. [Flor, Lee, "Tunnel Proposed At White House," *The Sunday Star*, July 22, 1962]

The District opened bids on October 13, 1962, for the first segment of the E Street Expressway. The contract involved construction of a bridge to carry 23<sup>rd</sup> Street over the new facility. The

bridge had been modified to match the aesthetic standards applied to the expressway. Smith said, “This is a very exciting project,” one of the first highway projects designed aesthetically to make an area more beautiful:

It will save a real pedestrian area, and make it very attractive. This is a historic project, and the more support the Highway Department gets, the better.

Acknowledging critics of the design, she predicted that “everyone will be happy with it” when the expressway is completed.

Blackwell Construction Corporation of Merrifield, Virginia, won the contract with a low bid of \$575,824.10. On November 9, District highway officials gave the company the order to “proceed immediately” on the contract. [“E St. Expressway Work Due to Start” (October 14, 1962) and “Work to Start Soon on E Street Expressway” (November 9, 1962), *The Evening Star*]

An exhibit on “Washington in Transition” at the Octagon Gallery by the American Institute of Architects opened on January 8, 1963. It gave Wolf Von Eckardt a chance to consider freeway and other designs for the city. “All this,” he wrote, “conveys a vivid impression of the almost frightening extent to which we will keep the bulldozers roaring and sledgehammers clanking in the years to come.” He was referring not just to freeways but to commercial buildings planned for the city. Referring to storefronts, office buildings, and hotels “now overshadowing Farragut Square, Thomas Circle and other vital downtown areas,” he wrote, “An exhibition of models and drawings for many of these slipshod designs would be far less encouraging.”

By contrast, Smith’s design for the E Street Expressway proved “that traffic needs can be turned into an aesthetic asset.” Freeway underpasses such as those built to date did not have to be “shocking gashes in the cityscape”:

Their ugliness is emphasized by forbidding, massive tube railings. The new tunnel under Washington Circle is the most recent example of how to ruin the appearance of a city.

Mrs. Smith, in contrast, has designed what amounts to a little park. Lovingly landscaped greenery will make the tunnel entrances seem almost a natural feature. Her design immeasurably enhances the front yard of the Red Cross building on 21<sup>st</sup> street. If we can’t, with the millions of dollars we spend on expressways, afford more such thoughtful treatment, we should stop talking about our aesthetic aspirations for the Nation’s Capital.

He contrasted her design with the proposal for the Georgetown waterfront that “seems to emphasize rather than diminish the visual damage done by the elevated freeway.” He predicted that “more imaginative ideas will undoubtedly come forward.” [Von Eckardt, Wolf, “Architects Sponsor Display of City’s Future Face,” *The Washington Post and Times Herald*, January 6, 1963]

In June 1963, a joint bid by Brookfield Construction Company and Baylor Construction Corporation of New York won the contract for construction of the expressway. [“Expressway Bid Received by City,” *The Washington Post and Times Herald*, June 22, 1963]

In late 1964, the *Post* described Foggy Bottom as “a maze of tunnels, bridge ramps, expressways, detours and traffic jams.” It was “a sidewalk superintendent’s dream-come-true”:

Within one square mile, the District Highway Department is carving out such massive projects as the E Street Expressway, the Inner Loop and its vast tunnel under Virginia Avenue, the Potomac River Freeway, K Street remodeling, Theodore Roosevelt Bridge ramps, and innumerable underpasses, overpasses, on-ramps and off-ramps.

If prizes were given for this sort of thing, this project would take one . . . . For the time being, the area . . . is just one big detour.

The article referred to the E Street Expressway as “a huge concrete gash between 19<sup>th</sup> and 23<sup>d</sup> Streets” that was scheduled to open in late 1965. [Dewar, Helen, “Foggy Bottom Is a Mammoth Detour,” *The Washington Post and Times Herald*, November 22, 1964]

As the opening of the E Street Expressway approached in 1965, the *Post* reported that the “glorified three-block-long trench” includes “walls decorated with a three-inch layer of reddish granite” along the tunnel segment between 21<sup>st</sup> and 22<sup>nd</sup> Streets. “It is an off-beat touch, as modern freeways go, and one of the few flourishes surviving from architect Chloethiel W. Smith’s original design for the Expressway.” She had hoped to transform an “open wound” into “a model for such projects across the country”:

But the proposals ran up against the economics of roadbuilding and, one by one, most were dropped or modified. According to a spokesman for the District Highway Department’s design division, Mrs. Smith’s landscaping and lighting ideas would have cost “about four times as much money as we had available.”

Recessed lighting in the curbing, indirect illumination by use of lights hidden in trees, and a pool, fountain, or decorative patio above the tunnel were dropped:

The city designers did adopt another of her ideas, the placement of planter boxes atop the portals at each end of the tunnels. These will be planted, and there will be “imaginative” use of trees and shrubs in beautifying the general area, the spokesman said. “We believe the result will be esthetically pleasing,” he declared.

The “regal red” granite used in the project came from Oklahoma, was cut in Vermont, and installed by Spanish stone smiths. The District’s resident engineer, Jacob LeMair, said officials had been hesitant to use the granite. “But we figured that since we’d hired Mrs. Smith to advise us, we’d better accept her recommendations in some areas anyway.” He added that except for the granite and planter boxes, the project would be a “fairly typical” specimen of an urban expressway.

As for the architect, the *Post* wrote:

Mrs. Smith, whose creations have often been beyond the ken, or at least the means, of her customers, said she hadn’t kept track of how her design had fared.

“I’ve been too busy with my other lost causes,” she said. [Clopton, Willard, “E Street ‘Ditch’ Ditches Its Flourishes,” *The Washington Post and Times Herald*, May 6, 1965]

On July 12, 1965, the E Street Expressway opened to limited traffic. The three-block long expressway, built in a trench with one block in a tunnel, cost \$4.5 million. Work remained to be completed later in the month on an additional ramp for eastbound traffic to reach Virginia Avenue, leaving only some paving to be completed in October. [Eisen, Jack, “Expressway Due To Open Monday,” *The Washington Post and Times Herald*, July 10, 1965]

### **East Leg Advances**

The District commissioners scheduled a public hearing on June 30, 1964, to consider the \$27 million, three-level interchange “C.” Originally planned in the 11<sup>th</sup> Street corridor, the interchange had been shifted along with the East Leg Freeway. The *Post* described the new interchange proposal:

The T-shaped network of roads and ramps will extend from the Southeast Freeway at 6<sup>th</sup> st. se. to a point past 19<sup>th</sup> st se., where [it] eventually will tie to the East Leg. The stem of the “T” will connect the interchange to the 11<sup>th</sup> Street Bridge and the Anacostia Freeway.

Highway officials say the new design was prepared with consideration of the sociological, economic and esthetic consequences – factors the Department was accused of ignoring two years ago.

According to Planning Chief Grant, the primary interchange lanes would parallel the curving right-of-way of the Pennsylvania Railroad from 11<sup>th</sup> to 19<sup>th</sup> Streets, SE. This alignment would reduce the number of families the interchange would displace. Still, the city estimated that 170 dwelling units would be removed. The city planned to begin construction in early 1968.

As the *Post* put it, the interchange had emerged from “a cloud of controversy,” with “a trimmer figure and a more tactful personality.” [Schuette, Paul, “Loop Interchange Flagged in 1962 Emerges with Revamped Personality,” *The Washington Post and Times Herald*, June 28, 1964]

Writing about the June 30 public hearing, the *Post* and *Star* reported a surprising change in attitude. The controversy over interchange “C,” the *Post* wrote, “appeared dead yesterday at an uneventful public hearing before the District Commissioners.” Lee Flor wrote that witnesses – only eight testified, fewer than expected – questioned details but not the basic concept of the interchange. “This appeared to be a reversal of earlier hearings when opponents of the highway program used the opportunity to launch attacks on the entire District freeway program.”

Walter Washington, executive director of the National Capital Housing Authority, testified that he was working with District highway officials “to maintain the loss of public units at an absolute minimum.” Despite his efforts, “We face a substantial loss of public housing.”

Peter Craig, representing the Committee of 100 on the Federal City, criticized the city for not providing adequate notice of the public hearing. He opposed the interchange because it was the

bottom hinge for the East Leg Freeway. Interchange approval might force construction of the freeway, he argued. He said that the East Leg and North Leg Freeways would take over 1,000 homes, displace over 3,000 people, and require about \$10 million from the District highway fund at a time when the city was facing a shortage of gas tax revenue. He recommended building the East Leg Freeway on the east side of the Anacostia River along the existing Kenilworth Expressway.

Four citizen associations based in the southeast quadrant testified that the area needed more recreational space. “Children of the area,” said Mrs. Beverly Baumgart of Circle on the Hill, “should not be deprived of what little play space they have so that someone can cut 10 minutes off his commuting time or receive his evening newspaper a few minutes earlier.” [Flor, Lee, “Witnesses Question Impact of Interchange on Housing,” *The Evening Star*, June 30, 1964; “Inner Loop Interchange Fight Dies Down,” *The Washington Post and Times Herald*, July 1, 1964]

A *Star* editorial suggested that if public hearings meant anything, the commissioners would soon approve interchange “C.” The plan, which included extending the Southeast Freeway to the western shore of the river beyond Barney Circle at 17<sup>th</sup> Street and Pennsylvania Avenue, was “clearly superior to the original proposal,” as most of the “handful of witnesses” had said at the hearing.

The only remaining question was whether NPS, which had posed “massive resistance” to the East Leg routing along the Anacostia River, was willing to go along with the new plan.

The hearing had displayed “a welcome and totally unfamiliar atmosphere of co-operation.” The animosities of past hearings, as well as the “recalcitrance of highways officials” were both gone. The editors could only hope “this healthy new climate is not a passing thing.” [“New Freeway Climate?” *The Evening Star*, July 7, 1964]

District officials were in a “simmering backstage controversy” with NCPC, as Jack Eisen put it in the *Post* on July 24, because NCPC was going beyond “general” questions to details, such as the sprinkler system for the John F. Kennedy Center for the Performing Arts. General Duke, a NCPC member, said, “We’re taking on a job that is somebody else’s to do.” Chairman Rowe, with strong support from Paul Thiry, disagreed. They often approved proposals conditionally, holding final action until NCPC could see final plans and models. Thiry said NCPC had a “moral obligation and an accountability to see what we are voting on.”

On July 24, NCPC took up interchange “C” and a 1.5-mile East Leg Freeway section to Barney Circle:

It followed such a course in acting last spring on a freeway interchange near 11<sup>th</sup> and M sts. Se. A model of that facility, Interchange C, was inspected . . . with final action put off until this morning.

NCPC members looked at the model for over an hour, suggesting possible changes. One concern was the height of the interchange structure. In eliminating the cloverleaf design of 2 years

earlier, the District had saved land but had to raise the interchange to three levels to provide the needed service. They criticized aspects of the plan, arguing that the design, coupled with the new 11<sup>th</sup> Street Bridges across the Anacostia River, was not appropriate for a “major gateway to Washington.”

Finally, NCPC conditionally approved interchange “C,” endorsing the “concept” but expressing concerns not only about the height of freeway structures, but ramp connections, landscaping, and proximity to buildings. [Eisen, Jack, “Planning Panel Quarrels On Scope of Its Advice,” *The Washington Post and Times Herald*, July 24, 1964; “Interchange For Freeway Is Approved,” *The Washington Post and Times Herald*, July 25, 1964; Lewis, Robert J., “Freeway Leg Wins Approval,” *The Evening Star*, July 24m, 1964]

The District commissioners approved construction of interchange “C” on August 4, 1964, with contracts to be advertised in November.

(By mid-1966, construction was underway on some ramps of interchange “C,” but relocation problems were delaying other parts of the project.)

Shortly after the District commissioners approved interchange “C,” the city opened the last 3 miles of the 8-mile Anacostia Freeway on the east side of the river. Without ceremony, the District opened the freeway, from Firth Sterling Avenue, SE., to Pennsylvania Avenue, SE., on August 7, 1964. The completed freeway provided a north-south bypass of downtown from the Woodrow Wilson Memorial Bridge on the Capital Beltway to the Baltimore-Washington Parkway and U.S. 50 to Annapolis.

The new freeway contained what the *Star* described as “several built-in booby traps” for commuters coming from the north:

If they are used to coming down the freeway to Pennsylvania avenue or Eleventh street S.E. to turn west to reach downtown, they are going to discover their last turnoff now will be at East Capitol street.

If they miss this turnoff, they will become “freeway captives” and will have to go on across the Woodrow Wilson bridge to Virginia [where they could turn north to reach the city on Shirley Highway].

Or they will have to turn east, get off the freeway, hunt around for a detour turnaround on the Anacostia street system, and then head back west to reach downtown.

Signs would warn motorists that their last turnoff to downtown was at East Capitol Street. [“New Anacostia Route Closes Popular Cutoffs,” *The Sunday Star*, August 2, 1964; “Anacostia Freeway Now Open All the Way,” *The Washington Post and Times Herald*, August 8, 1964]

The lack of additional exits ramps to downtown stemmed from the District’s inability to secure permission from NPS to allow connections through Anacostia Park west of the river.

## **The Tunnel in the Sky**

After traveling over the route of the North-Central Freeway in a helicopter, Chairman Funk of the Maryland State Roads Commission was convinced the freeway could be built on “stilts” over the Baltimore and Ohio Railroad tracks. The plan would reduce demolition of homes and businesses and avoid dividing communities that were not already split by the railroad.

*Post* editors congratulated District and Maryland highway officials “for a notable, if somewhat belated, display of imagination and sensitivity to the community’s interest.” It would cost more than the original plan that involved demolishing over 1,000 homes, but “there are many kinds of cost in highway construction.” Funk’s plan “represents a substantial advance in highway engineering here.”

The editors suggested, “The helicopter is becoming the symbol of a political commitment.” [“An Elevated View,” *The Washington Post and Times Herald*, June 12, 1965]

At a time when the Senate was considering the proposal to require authorizations for highway projects before appropriations, Engineer-Commissioner Duke met with Senator Tydings, one of the authors of the report language, on June 25 to discuss the District’s freeways. During the 65-minute meeting, General Duke and the Senator discussed the Inner Loop and the North-Central Freeway, with the engineer commissioner displaying photographs of construction.

The meeting concluded with Senator Tydings saying he wanted more information. They planned to travel over the area by helicopter, although the aerial view does not appear to have taken place. [“Duke Briefs Tydings on Highways,” *The Evening Star*, June 26, 1965]

On September 25, 1965, NCPC staff released a draft 1985 Comprehensive Plan for development of the District of Columbia. One premise of the plan was that the city’s population would increase from its estimated 803,000 residents in the mid-1960s. The plan set a goal of holding the city under one million residents by 1985 – to 950,000 people. Priority should be given to “improved quality of living environment rather than to accommodating a significant population increase.”

The plan relied on transportation as the backbone of its proposals to pull the city’s disparate elements into reasonable patterns. Freeways were an important element of the plan, as were extensions of rail rapid transit to create a 110-mile system. For downtown, future developments “must reflect major shifts in accessibility resulting from the new basic transportation systems under construction and scheduled for development during the next decade. Freeways, with careful design and tunneling, would protect residential areas by pulling cut-through traffic off local streets.

Planning staff recommended several of the city’s controversial freeway segments, such as the entire Inner Loop Freeway system, including the North Leg Freeway on an alignment north of downtown along a route not yet determined. Staff endorsed the North-Central Freeway, a Palisades Parkway on the north bank of the Potomac River, and a “vehicle-carrying facility” in the vicinity of Three Sisters Islands; the term implied the facility could be a bridge or tunnel.

(Chairman Rowe, who opposed the bridge, was refusing to put it on NCPC's agenda.) They also endorsed a Potomac River bridge between Bolling Air Force Base and a point south of National Airport. In short, staff endorsed the planned 29-mile Interstate System.

The draft plan described the freeway plan as "moderate," and said it was designed to ensure "the fullest possible use of transit." Rail rapid transit would include extensions, as Lee Flor summarized:

Under the staff proposals for expansion of the subway system there would be an extension toward Annapolis, following the route of the Baltimore & Ohio Railroad line from the end of the National Capital Transportation Agency line at Kenilworth Avenue and Benning Road. The extension would have an entirely new station near Sheriff Road and Minnesota Avenue NE.

There would be an entirely new branch line to serve Anacostia Center. This would come off the NCTA line at Fifth Street and Pennsylvania Avenue SE, to a station in the Naval Weapons Plant, another near Anacostia Center at Good Hope Road and Nichols Avenue, and one at Alabama and Pennsylvania Avenues.

The NCTA line, using a railroad branch north from Union Station, would be extended from its planned end at Woodside to Rockville.

Another extension would start from the NCTA Columbia Heights line and extend north along Georgia Avenue to a terminal with the other NCTA line to Rockville. New stations would be at Missouri and Georgia Avenue NE and near Georgia Avenue and Upshur Street NW.

There would be an extension out Wisconsin Avenue, with new stops at Nebraska and Western Avenues.

In northern Virginia, the Rosslyn line would be extended out toward Fairfax City. There would be another extension of the Pentagon line out along the railroad tracks to Springfield.

For downtown Washington, the plan also recommended a second rail rapid transit line south of the National Mall:

It would have three new stations, one near Independence Avenue and Third Street SW, a second near the large "Junior Pentagon" being built along Tenth Street south of Independence, and a third in the Federal Triangle, near Tenth Street and Pennsylvania Avenue NW.

As Flor pointed out, this line had been in NCTA's 1962 plan, but had been discarded in the bobtail plan.

He summarized the overall rail rapid transit plan environment by NCPC staff:

The NCPC is not giving out any official figures on costs for the transit extensions. However, the entire transit system would be around 110 miles, compared to the \$431 million, 24-mile approved system.

Based on prior information about the contents, Peter Craig denounced the highway recommendations. He charged that NCPC staff had simply adopted the traffic projections and other information provided by District highway officials, instead of developing independent forecasts and adjusting the system accordingly. NCPC staff denied his charge, telling reporters they had used their own judgments.

The draft 1985 Comprehensive Plan covered many subjects. It proposed centralization of Federal activities in the city rather than dispersing them to its suburbs. As described by Lee Flor, the draft plan called for facilities to accommodate the increased number of government workers:

Planners see the federal government requiring new buildings to accommodate about 300,000 persons. This would mean new space about equal to the amount now existing, except for tempos and other outmoded structures.

This forecast of construction needs derives from an expectation that in the next two decades 150,000 more federal workers will be employed in the metropolitan area, and that new space also will have to be provided to replace existing worn-out offices now occupied by about 50,000 employees. [sic]

Worker accommodations would be placed, according to the proposals, as follows: Within the city, 150,000; outside the city, 50,000.

Federal development within the city would accommodate 50,000 workers in the center proposed along South Capitol Street; 50,000 in clusters on the fringe of the business district, such as at 12<sup>th</sup> Street and New York Avenue NW. as well as along Pennsylvania Avenue and at other central sites, and 50,000 outside the central area but still inside the District, at subway stops and other locations.

The plan also sought strict controls on off-street parking in the downtown area. By not meeting demand for parking spaces, planners hoped to shift people out of automobiles and into rapid transit. "It would be inappropriate for the Nation's Capital to be dominated by its circulation system."

Staff Director W. C. Dutton, in transmitting the draft to the NCPC commissioners, wrote, "It is my hope that the report will stimulate widespread community discussion leading to consensus on the issues raised."

In releasing the draft for public review, Chairman Rowe said, "the Commission itself has not taken a position." She wrote:

Washington can have no ordinary plan. Although it shares the problems of many of the country's other large cities, it is unique in its functions, its site, its history and its plan.

She added that the area was fortunate to have the Federal Government overseeing development. [Flor, Lee, "Transportation Viewed as Backbone of D.C.'s Future," *The Sunday Star*, September 26, 1965; Eisen, Jack, "City Planners Push Three Sisters Span In 20-Year Program," *The Washington Post and Times Herald*, September 26, 1965]

Except for the Palisades Parkway and the Three Sisters crossing, all of the freeway plans would be east of Rock Creek Park. Director Airis endorsed the planners' freeway proposals in an interview on September 29. He said that freeways east of Rock Creek Park would be less disruptive than freeways proposed for construction west of the park.

The North-Central Freeway was the key to serving the Maryland suburbs. If built wide enough, possibly 10 lanes, it would have a chain reaction on city streets. First, it would reduce peak period traffic on arterials such as 16<sup>th</sup> Street, Wisconsin Avenue, and Connecticut Avenue. That shift also would reduce the desire of frustrated drivers to shift onto side streets in neighborhoods such as Chevy Chase, Cleveland Park, American University Park, and Brookland. "Give us the freeways," he said, "and we can start talking about improving the bus service, providing reserved lanes and all that." He added, "Now we just can't do it." [Eisen, Jack, "Road Plan See Easing Residential Street Load," *The Washington Post and Times Herald*, September 30, 1965]

Nine citizens groups from throughout the area released an analysis prepared by Peter Craig on October 9. They wrote to President Johnson and congressional and local leaders to object to a statement in the President's budget for the District of Columbia that the freeway program was based on plans for a 98-mile rail rapid transit system. The budget claimed the system would shift commuters off the freeways, a theory that made the freeway plans reasonable.

The organizations Craig represented said that the 1985 forecast by District, Maryland, and Virginia highway officials was "either a deliberate attempt to undermine the official planning goals for the Nation's capital or else is the product of gross incompetence." They called for a halt to all freeway construction until an objective reappraisal of planning assumptions behind the freeway could be conducted. ["9 Citizens Groups Ask Halt of Freeway Work," *The Sunday Star*, October 10, 1965]

On November 17, Chairman Funk unveiled a 6.3-mile, 107-foot high walled-in structure carrying the North-Central Freeway, rapid transit, and railroad tracks in Maryland. The "elevated express transport compound" would run from Rhode Island Avenue to the Capital Beltway along the Baltimore and Ohio Railroad tracks, with room on the roof for parks, heliports, and cafeterias. The transportation modes would be arranged in tiers, with the railroad on the bottom, rail rapid transit or high-speed buses next, followed by two tiers for the freeway. The structure would not require the taking of homes and, because it would be built over an existing railroad, would not disrupt the community.

Peter Krajcinovic, a 65-year old Yugoslav bridge engineer employed by the engineering firm Beam, Inc., had submitted the proposal to the Maryland State Roads Commission on his own, not under contract to the State. Funk said the engineer had developed a relatively inexpensive construction method using pre-stressed concrete and pre-stressed steel. Krajcinovic estimated

that the 6-mile structure would cost \$13.5 million a mile – less than the \$20 million a mile for the original 10-lane plan.

Funk said the plan was being “seriously considered” to solve the problems blocking construction of the North-Central Freeway. “It’s the logical solution to our difficulties if we can work out some problems at the interchanges and some problems at the interchanges and some engineering problems,” Funk said. “And right now it looks like we are going to be able to work them out.”

Funk had discussed the idea with Director Airis. District highway officials had not had a chance to review it, but he planned to send copies of the proposal to Airis for examination. [Barnes, Bart, “‘Tunnel in Sky’ Plan Seen as Solution to North Central Area,” *The Washington Post and Times Herald*, November 18, 1965; “Multilevel Freeway Above B&O Studied,” *The Evening Star*, November 18, 1965]

Officials were not certain how Takoma Park would react to construction of a 107-foot high “wall” through the city, but they did not have to wait long to find out. On November 19, the Save Takoma Park Committee called for Funk to be fired because of his “shocking disregard for citizens.” The committee said the plan would “make Washington the laughing stock of the world.” Roderick F. Davis, the committee’s head, said, “Even if we do need a freeway, we don’t need something that will make a four-story apartment building look like a match box.” Sammie Abbott said, “It’ll make the Berlin wall look like a country fence.”

Peter Craig, asked about the proposal, said the time had come “for city planners to stop planning for more cars.” Downtown already had too many.

Byron Sedgwick, who headed Montgomery County’s Planning Board, had a more positive reaction. He said, “It’s a new concept and an exciting one.” But he added, “Of course you know it’s going to be higher than an 11-story building.”

Airis, who had not been available for comment when Funk unveiled the Tunnel in the Sky, said he had spoken with Funk about it. If Maryland adopted the plan, the District would consider it. “We’re going to leave no stone unturned in our efforts to work out a freeway and rapid transit route over the B & O corridor where there will be a minimum of displacement.” [“Takoma Unit Asks Firing of Funk In Freeway Row,” *The Evening Star*, November 19, 1965; Barnes, Bart, “Arguments Flow Anew On New Freeway Plan,” *The Washington Post and Times Herald*, November 19, 1965]

Wolf Von Eckardt also did not need long to form his opinion. In “A Critique,” he said “we can’t allow a 6.3-mile long, 107-foot high Chinese wall to divide our communities.” He called it a “monster” that would “only cause exhaust problems, divide communities worse than ever and look uglier than sin.”

Officials should “bend every effort to cut this thing down to size and make it as invisible as possible.” Good creative designers would conclude:

The subway and railroad and even the freeway could, at least in substantial stretches, be tunneled or sunken. Above ground the two freeway decks won't always have to run atop each other. In stretches they could run parallel.

What we would come up with in the end are light, airy ribbons and spans, elegantly rising and falling, dipping underground and emerging and spreading and joining. It could be quite handsome.

The subway stations would provide room for Krajcinovic's cafeterias and heliports as well as "some greenery." With these adjustments, the freeway "might yet develop into something that would not just be useful but also attractive." [Von Eckardt, Wolf, A Critique, "Corridor 'Air Tunnel' Labeled Monstrous, Unnecessary Wall," *The Washington Post and Times Herald*, November 19, 1965]

On November 22, Funk said the idea also might work in Baltimore, which was experiencing the same types of problems as the District of Columbia. "I think it has a lot of potential in areas that [Baltimore] would not like to have destroyed and where the necessity for a narrow right of way is great."

Back in the District, Airis revealed that the city had hired Skidmore, Owings and Merrill to help in "the initial conceptual" stages of reviewing the tiered highway plan. The goal was to minimize "displacement of people and industries" while integrating the freeway facility into the urban landscape." [Associated Press, "Elevated Freeway Eyed As Ideal for Baltimore," *The Washington Post and Times Herald*, November 23, 1965]

The *Star's* editors had their doubts. Citing Funk's comment that the plan "might work," the editors wrote:

If he means this *specific* scheme "might work," our advice is firm: Forget it. This kind of engineering, apart from all the technical questions which spring to mind, Washington can do without.

If he meant that using air rights "might work," they said, "we're with him." They added, "Innovations in highway planning do not have to be silly to be imaginative, or to produce incalculable savings in land, in money and in avoiding community disruption." ["Highway in Orbit," *The Sunday Star*, November 28, 1965]

NCPC met in the District Building on November 30 with civic associations in the North Central section of the city to discuss the draft 1985 Comprehensive Plan. One of the most frequent questions was: "Why do we need both a freeway and a rapid transit system?" Why, they asked, did they need the "potentially disruptive" North-Central Freeway paralleling the railroad when rapid transit would "get people in and out at peak hours."

Sydnor F. Hodges, NCPC's assistant director for comprehensive planning, explained, "Vehicular traffic is inevitable. A metropolitan area needs both plans." Transit would take care of commuters during peak hours, but the highways were needed, he said, for the in-between hours.

[Murphy, Betty, "Civic Groups Voice Fears On Planning," *The Evening Star*, November 30, 1965]

The Maryland State Roads Commission's Patrick J. McCaffrey, assistant chief of the Bureau of Highway Information, replied to the *Star*'s editorial "Highway in Orbit." He appreciated the endorsement of the idea of using air rights over the railroad. "It was this principle, a vertical freeway," that Funk was endorsing in his interview. The commission had not committed to any concept for the North-Central Freeway, and would not do so until it received reports on the corridor from J. E. Greiner Company, Alan Voohees and Associates, and Wilbur Smith and Associates. The reports were due after January 1, 1966.

No one knew the results. Washington was "facing the all but unsolvable problem of finding space and corridors to place the various types of transit it needs" without disrupting the community. "Innovation is indeed needed." [McCaffrey, Patrick J., 'Highway in Orbit,' Letters to the Editor, *The Evening Star*, December 18, 1965]

Chairman Funk met with Airis on December 21 to discuss the four-level "transportation compound" idea. They conceded that citizens might be right that the four-deck stack would be an ugly "Chinese wall" that would divide the communities the Sky Tunnel passed through. Without revision, it would be unacceptable. However, they thought the stacking concept might be useful with some revisions. They were considering ways to reduce the height of the structure or build a stacked facility that would be elevated in part, at ground level in some locations, and underground in others. Along those lines, they had asked the architectural firm of Skidmore, Owings and Merrill to study the concept Von Eckhardt had proposed.

While the Funk proposal was "undergoing major surgery," as the *Post* put it, the newspaper said one thing was clear:

The original North Central Freeway proposal – a route just east of the B&O tracks that would have displaced 570 families in Washington and 720 in suburban Maryland – was shelved after citizens groups assailed it at public hearings a year ago.

Funk and Airis did not expect a decision on the revised transportation compound idea until studies were completed in 1966. [Barnes, Bart, "Highway Chiefs Take Down-to-Earth Look at 'Sky Tunnel' Plan," *The Washington Post and Times Herald*, December 22, 1965]

In George Lardner, Jr.'s first Potomac Watch column in December 1964, "Freeway Pushed on Basis It Is All Things to All Men," he had discussed the North-Central Freeway:

The mammoth expressway will have four lanes going north, four lanes going south and two lanes in the middle that will shift directions with rush-hour traffic . . . .

The consultants who recommended the route have pictured everything imaginable on it. Housing developments could stretch across the top. The two reversible center lanes could one day be set aside exclusively for rapid rail transit or express buses.

A freeway, in short, designed to be all things to all men—except to homeowners in its path.

NCTA, he noted, had rejected the center lanes for its rail rapid transit system, preferring an alignment along the Baltimore and Ohio Railroad tracks, but use by buses was possible:

To be sure, D.C. Transit's O. Roy Chalk is quite keen on them. And officials of Downtown Progress estimate that five-bus "trains" could carry as many as 27,000 passengers an hour on a single freeway lane set aside for them with stations along the route. The buses would uncouple in the suburbs to serve individual neighborhoods.

Such dreams for the future seem to assume that the motorists who use the Freeway's center strip to zip down from the Beltway will quietly fold up their Volkswagens and steal away.

Officials considered the North-Central Freeway inevitable because it was the only one planned between the District and Montgomery County, but Lardner pointed out that saying no other freeways are planned is not the same as saying "none will be sought over the next 20 years, a promise that has not and could not be made." Still, the 90-10 Interstate program was coming to an end in 1972, supposedly. "There'll be an effort to keep the interstate program or something like it going as sure as there's a highway lobby to make the try." [Lardner, George, Potomac Watch, "Freeway Pushed on Basis It Is All Things to All Men," *The Washington Post and Times Herald*, December 21, 1964]

### **Under the Potomac River Freeway**

On December 29, 1965, District highway officials announced they would use \$10,000 from the Highway Beautification Act of 1965 to hire Doxiadis Associates to plan development of the Georgetown waterfront area. The firm, which had developed the Downtown Progress plan in 1962 for the downtown core, was to plan park areas, residential and commercial buildings, pedestrian access, and recreation facilities for the area from K Street to the Potomac River between Key Bridge and Rock Creek and Potomac Parkway.

Planning chief Grant said the first stage would be to integrate existing facilities with a desirable development of the waterfront and Georgetown. The firm was to complete this work in 45 days. The next phase included providing for shops and residences under the Potomac River Freeway, which was to be built adjacent to Whitehurst Freeway, and creation of a yacht basin that would include restaurants and other facilities that would invite pedestrians to explore the area.

The Georgetown Planning Council, consisting of 35 architects, city planners, and landscapers, wanted to replace the elevated Whitehurst Freeway and the planned Potomac River Freeway with tunnels. On December 30, the council urged the District Department of Highways and Traffic to broaden the Doxiadis study to include the tunnels:

Unfortunately, the report seems to indicate that Mr. Doxiadis is not being allowed to consider the total question . . . . Our studies indicate it would not be possible to make an

elevated freeway tolerable by “decorations” or by any other superficial treatment—or by supposing the good quality land uses will be attracted to its shadows.

Council chairman and architect Walter G. Peter, Jr., noting the plan to widen Whitehurst Freeway from four lanes to eight, said that unless the city removed the freeway, “the beauty of the river and the Federal City will be marred forever.” He said the 20-year old elevated steel structure was tolerable in an industrial area, but “would be intolerable among residential uses.” In thinking about the waterfront, he said, the council had come “to the conclusion that the first and most important step to a proper solution is removal of the Whitehurst Freeway.”

At the same time, the Department of the Interior was considering whether to designate the waterfront a national historic site. Doing so would give the department a say in how the waterfront would be developed. [Dimond, Thomas, “Georgetown Waterfront Planner Hired,” *The Evening Star*, December 29, 1965; Morgan, Dan, “Doxiadis Assigned to Plan Park at Georgetown’s Shore,” *The Washington Post and Times Herald*, December 30, 1965; Lewis, Robert J., “Georgetown Unit Urges Removal of Freeway,” *The Evening Star*, December 30, 1965]

*Post* editors compared the Georgetown waterfront to “an unattractive heiress,” saying “the ugly cluttered segment of Georgetown below M Street does not lack suitors.” It “could bloom into real beauty,” but the question was “how best to transform the industrial jumble.” Based on past battles over urban renewal in the area, the editors suggested that a solution “will not come easily”:

The District Highway Department, which would like to gain acceptance for its proposed Potomac River Freeway, has commissioned Constantine Doxiadis to provide plans for a park along the river’s edge that will distract attention from the bulky scar of road across the area.

The plan from Doxiadis, who had an office in lower Georgetown, “will be welcome, for the idea of a park along the river bank is sound and should be incorporated in planning for the area, no matter who administers the facelifting.” [“On the Waterfront,” *The Washington Post and Times Herald*, December 2, 1966]

Like the *Post* editors, the *Star*’s editors were clear about the purpose of the contract. It was intended to find a way of “accommodating the Potomac River Expressway within an attractive park and recreational environment along the Georgetown Waterfront.” The editors disagreed with the Georgetown Planning Council’s idea of removing Whitehurst Freeway and the parts of the Potomac River Expressway already built, and burying any thoroughfare across Georgetown in a tunnel. “Freeways need not be buried to be attractive.” What was missing in the District’s highway planning was “imaginative, pleasing design, not merely of the roadways but of their surroundings, and the Georgetown waterfront offers an ideal challenge for a test of this theory.” As highway officials sought to navigate the many controversies over planning freeways, the editors thought:

An attractive, attainable plan for rejuvenating the Georgetown waterfront could be an enormous help in ending the controversy. ["Life on the Waterfront," *The Evening Star*, January 4, 1966]

In selecting Doxiadis Associates to conduct the study, District highway officials were gambling because the principal owner, Constantine Doxiades, had often spoken about the problems urban expressways caused. A well-known city planner from Greece, he had said in 1961 that cities would be choked to death by the new expressways. They should be built outside cities, with only short connectors to downtown. A year later, he told the Potomac Chapter of the National Association of Housing and Redevelopment Officials:

Most of the downtown committees of businessmen advocating more highways are helping to kill the downtowns. By bringing in more highways they are bringing in more cars and are making it more difficult for people to walk, with the result that more people are moving out of the city.

In September 1963, Doxiadis pointed out that London was "full of modern, high-speed vehicles. Yet they can cross London only at the speed of a horse-drawn bus." Similarly, Los Angeles "has built some splendid new thruways, but every one of them has attracted more cars and increased the traffic problem." After studying 6,000 years of city planning, "we find that man cannot live next to noise and fast speed without developing mental problems. Ten miles an hour he can live with. Modern speedways must be removed from the residential areas." ["New Roads Seen Choking U.S. Cities," *The Evening Star*, October 30, 1961; "Downtown Stores Are Cautioned On Expressways," *The Evening Star*, December 6, 1962; Pearson, Drew, "The World's No. 1 City Planner," *The Washington Merry-Go-Round*, *The Washington Post and Times Herald*, September 9, 1963]

In 1963, Doxiadis Associates, headquartered in Athens, and operating in 17 countries, opened a United States office in Georgetown along the towpath of the Chesapeake and Ohio Canal at 1058 Thomas Jefferson Street, NW. The 150-year old building had once been a Masonic temple. Doxiadis said:

We decided to purchase and remodel this structure because of its human scale and peaceful setting by the canal. Here were combined some of the elements which would make it possible to express in a most tangible way the human sort of urban life to which our firm is dedicated.

(In 1964, Chloethiel Woodard Smith and Associates moved to 1049 Thomas Jefferson Street, NW., after being evicted from the firm's Dupont Circle location that was being replaced by an office building. The Jefferson Spring Service Company occupied the ground floor of the building, which had been built in 1925. The architectural firm occupied 7,000 square feet on the second floor that had served as a beer warehouse and photography laboratory, but had lain vacant for years. [Eckardt, Wolf Von, "Architects' New Offices Enhance Towpath," *The Washington Post and Times Herald*, March 15, 1964])

As recently as December 16, 1965, Doxiadis, appearing on the NBC television program *Meet the Press*, had said of urban problems, “We should not forget that the final solution is going to be to separate completely the machine from man. These two completely different elements can not coincide in the same space.” He said the “most livable” city in the world was Venice, Italy. “It is the city which has not been invaded by high-speed machines, and thus it has kept the human scale which it had in the past. This is our task: to give human scale to our cities.” [“Expert Tells How to Save Cities,” *The Washington Post and Times Herald*, December 27, 1965]

This, then, was the man who would make recommendations to the District Department of Highways and Traffic on the future of the Georgetown waterfront.

The Georgetown Planning Council appeared before NCPC on January 7, 1966, to present its ideas for the waterfront, with the key being replacement of Whitehurst Freeway. The council’s Philip Huber, a former NCPC planner, referred to the city’s plan to widen the freeway to eight lanes. “It’s like Cyrano’s nose. It can’t be overlooked and it can’t be camouflaged.” Removing the eyesore was critical, and the best way to do so was to rebuild the freeway in a tunnel under the Potomac River. The six-lane tunnel would parallel the waterfront, go under the water at K Street and Rock Creek and Potomac Parkway, and emerge from the riverbed 1,000 feet west of Key Bridge. Doing so, Huber said, would be aesthetically pleasing and economically desirable. It might cost \$30 million, but removing the elevated freeway would allow for additional development that would repay the tunnel’s cost over a 25-year period.

Grosvenor Chapman, the council’s secretary, said that no matter how well designed, an eight-lane elevated freeway would be a blighting influence. He compared the waterfront situation “to a fully ripe melon - it is a matter which must be served or it will spoil.” [Lewis, Robert J., “Planners Ponder Proposal for Freeway Under Potomac,” *The Evening Star*, January 8, 1966; Clopton, Willard, “Tunnel Whitehurst, Georgetown Group Tells City Planners,” *The Washington Post and Times Herald*, January 8, 1966]

The Georgetown Planning Council met with Secretary Udall for over an hour on January 17, 1966. The council’s goal was to convince him that it was “now-or-never” time to declare the waterfront an historic landmark. He also was “sympathetic and very interested” in the tunnel plan. He suggested the group prepare a detailed land use plan and seek the backing of other parties. He planned to ask NPS Regional Director Jett to work with the group.

After the meeting, Chapman said the council believes the waterfront should be preserved while accommodating through traffic. “The council estimated the proposed six-lane tunnel would cost \$31.5 million, but Chapman said the city’s estimate was \$40 million for an eight-lane tunnel. Moreover, Whitehurst Freeway did not meet Interstate standards, he said. “We are flexible about the tunnel’s size.” However, widening the Whitehurst Freeway now by building a parallel structure would merely postpone the time when it would have to be rebuilt or replaced.

Chapman said, “The initial cost of the tunnel will be more than an elevated freeway, but in the long run the cheapest element is seldom the best.” He added, “Our preliminary analyses show that the additional cost of the tunnel will be largely offset by the increased value of the land, which will be recaptured and revived.” He explained that a full economic study would “reveal

that our proposal is the practical thing to do.” He hoped to have a plan ready in time to present it to the February 10 meeting of the Policy Advisory Committee. [Hailey, Jean R., “Udall Adds His Support For Georgetown Tunnel,” *The Washington Post and Times Herald*, January 18, 1966; Hornig, Roberta, “Whitehurst Tunnel Plan Stirs Udall’s Interest,” *The Evening Star*, January 18, 1966]

A day later, the Committee of 100 on the Federal City voted to support the council’s plan, but with a caveat. The committee agreed on demolishing Whitehurst Freeway, but said it supported the council’s riverbed tunnel only “if necessary.” Peter Craig advised the committee that he thought that a replacement freeway might not be needed. He pointed out that the opening of the Theodore Roosevelt Bridge had reduced traffic volumes on Key Bridge and Arlington Memorial Bridge. Retaining the elevated freeway “tended to perpetuate” its existence when it could be demolished without causing traffic problems. [Lewis, Robert J., “Fight to Raze Freeway Gains Added Impetus,” *The Evening Star*, January 19, 1966]

(The Department of the Interior approved National Historic Landmark District status for the Georgetown waterfront on May 28, 1967. That same day, the department added the historic district to the National Register of Historic Places.)

### **The Potomac Crossing**

On January 6, 1965, the *Post* published a letter from Peter Craig, listed as chairman of the Northwest Committee for Transportation Planning. His target was the District’s new Six-Year Public Works Plan. The highway component “has been increased by \$127 million in the past year,” with \$100 million of the increase “budgeted for acquisition of right-of-way to replace private property with 8, 10 and 12 lane ‘interstate’ freeways now deemed essential by the District’s highway planners for what they style a ‘balanced transportation system.’”

When Congress approved the National Capital Transportation Act of 1960, Craig wrote, “the price tag on the District’s highway program was about \$560 million, including about \$320 million of so-called ‘interstate’ freeways.” Since then, the ‘interstate’ component had grown by over \$400 million. “Where once the District’s highway planners proposed 30 lanes of ‘interstate’ freeways between Washington and Virginia or Maryland, they now have added 32 more.”

District highway officials, Craig wrote, often lamented the city’s ranking behind most States in “completing” its Interstate freeways. “The ‘lag’ is solely because new highway projects are added faster than former ones are completed.” Craig concluded his letter:

In the long run, public works must meet a public need. And the public’s reaction to the two most recent brainchilds of the highway planners—Three Sisters Bridge and the North-Central Freeway—documents that while the public accepts the need for rapid transit, it will not tolerate the doubled dosage of ‘highway improvements’ presently being concocted. [Craig, Peter S., “Double Highway Dosage,” Letters to the Editor, *The Washington Post and Times Herald*, January 6, 1965]

Although Craig focused on the District highway budget, the decision on the Potomac River crossing also affected I-66 in Virginia. Without a new bridge, I-66 traffic would have only one option for crossing the river: the six-lane Theodore Roosevelt Bridge with its restriction on truck traffic. Meanwhile, BPR and Arlington County had agreed in the fall of 1964 on a 10-lane stretch of I-66 between Dulles Access Road and Glebe Road, with the assumption that a second six-lane crossing, designated part of I-266, would be built to carry overflow traffic as well as trucks.

John E. Harwood, now the Virginia Highway Department's Chief Engineer, said, "If there is no bridge, we'll have to look at the question of highway width and design once more." [Flor, Lee, "Bridge Fuss Casts Doubt On Width of Route 66," *The Evening Star*, January 15, 1965]

The Three Sisters Bridge may have been the generic name but where it would be built was still in debate as 1965 began. Officials in Virginia and the District were considering three alternatives:

1. Between Key Bridge and Three Sisters Islands,
2. Downstream of Key Bridge, and
3. Upstream near the Georgetown Reservoir.

Construction across the islands had been abandoned.

On March 4, Harwood said that his staff preferred the location between Key Bridge and Three Sisters Islands. They preferred this alternative because it conformed best to Arlington's master plan and would serve traffic better than the other alternatives and require less taking of property. This location, which consultants estimated would cost \$9.5 million, involved tunneling through the Palisades on the Virginia side. Arlington County Manager Johnson also had endorsed the location. ["Central Crossing of Potomac Now favored by Virginia," *The Washington Post and Times Herald*, March 5, 1965]

On March 17, the District's Policy Advisory Committee voted 5 to 2 to recommend construction of a Potomac River crossing near the Georgetown Reservoir. The vote endorsed the consultant's plan 3, the farthest upstream of the firm's recommendations.

Committee members supporting plan 3 were:

- Charles M. Duke, engineer commissioner, District of Columbia
- William Walton, chairman, Commission of Fine Arts
- C. Darwin Stolzenbach, administrator, National Capital Transportation Agency
- John Kohl, assistant to the administrator, Housing and Home Finance Administration
- Joseph Barnett representing BPR

Opposing the location were:

- Mrs. Elizabeth Rowe, chairman, National Capital Planning Commission
- George B. Hartzog, Jr., director, National Park Service

General Duke said that plan 3 was best for serving traffic and offered the most promising site for an attractive bridge. As Walton put it, “A bridge can be a beautiful thing.”

According to Wolf Von Eckhardt, the committee rejected plan 1 because it would require “a spaghetti maze of ramps across the river” and plan 2 because “it would string a concrete ribbon diagonally across the Potomac.” Its length, “the Committee majority felt, would spoil the view of the river.” By contrast, plan 3 offered “an opportunity for enhancing the landscape”:

The Committee was impressed with the Highway Department’s willingness to do just that. Its chief, Thomas F. Airis, presented several sketches of possible designs. The most daring and handsome of them was a soaring arch in the middle of the river from which the bridge would hang from cables.

Even more encouraging, committee members felt, were the Highway Department’s efforts to tame the highway along the shore. Its preliminary sketches called for construction that would tuck the maze of necessary ramps under the Palisades.

The whole mess of roadways would stay below the old streetcar tracks and would not disturb the new Georgetown Day School and other buildings. This would be accomplished by means of a tunnel near MacArthur Boulevard, a sharp U turnaround for the upstream lanes and stacking some of the lanes on top of one another . . . . It does not simply cut a swath through the landscape but makes use of engineering ingenuity to cause the least possible disturbance.

Hartzog wanted to defer action for several reasons, including the possibility of studying whether to allow trucks to use the Theodore Roosevelt Bridge. He was concerned about the effect of the bridge on the Georgetown waterfront, especially with Whitehurst Freeway already in need of additional lanes. He also feared that increased traffic would eventually add pressure for a highway through Glover-Archbold Park.

As for NCPC Chairman Rowe, she doubted the need for another river crossing and, like Hartzog, recommended additional study.

The crossing would enter Arlington between Danville and Edgewood Street before connecting with I-66 at Lorcom Lane. Arlington County Board Chairman Fisher said the committee made “a very bad decision—very bad, indeed”:

I am not convinced that another crossing is needed at this time in this area. I question the way the traffic estimates were made. What we need next is a rapid transit crossing and we should digest that before we think of another bridge.

This is a case where the highway lobby with their associates in various positions of government are running roughshod over the wishes of the people most directly affected. I will continue to oppose this.

If a bridge were needed, the board favored the downstream location near Three Sisters Islands.

The Virginia State Highway Commission, in a unanimous vote, tentatively approved the plan 3 location on March 18. Commissioner Fugate told the commission that the Virginia Highway Department had favored the location crossing Three Sisters Island. It was “more in line” with what seemed to be the least objectionable crossing as far as the Arlington County Board was concerned. “However, we have been hampered by the Board[‘s] . . . objections to any bridge.” He added:

I’m reluctant to go ahead with something of such great moment to a Virginia county without letting the Board have a final say. I recommend we give tentative approval for this crossing.

Although the board was scheduled to consider the location on Saturday, March 20, the prospect for change was not good. Board Chairman Fisher said Arlington was “still very much opposed” to plan 3:

We voted unanimously against it. We think a case for another bridge crossing has not been approved [and] that Plan 3 is the most damaging to Arlington.

It cut into a very fine, well-established neighborhood and it would violate a most beautiful part of the Palisades by cutting an enormous gap right through them, filled with concrete lanes of highway.

[Pierce, Charles D., “Upstream Site Backed For Potomac Bridge,” *The Evening Star*, March 18, 1965; “Three Sisters Span ‘Tentatively’ Voted By Highway Board,” *The Washington Post and Times Herald*, March 19, 1965; Von Eckhardt, Wolf, “8-Year Battle Over Site For New Span Rages On,” News Analysis, *The Washington Post and Times Herald*, March 20, 1965]

On March 19, NPS Director Hartzog held an unusual midnight meeting to tell Fisher the NPS would reverse its position on prohibiting trucks from the Theodore Roosevelt Bridge, undercutting the argument that the additional Potomac River bridge was needed for trucks. NPS also would support plans to add a double deck to Chain Bridge and expedite construction of an additional 14<sup>th</sup> Street Bridge span and widen George Washington Memorial Parkway between Roosevelt Bridge and Arlington’s Spout Run Parkway.

As expected the board opposed plan 3, voting unanimously to:

- “Reiterate its overwhelming opposition to any new bridge at this time” because the greater need was for rail rapid transit.
- “Specifically oppose a bridge at site 3 as being one that would have the most devastating impact on Arlington County,” citing the loss of 127 homes and the cutting of a “huge gash” in the Potomac Palisades.
- “Urge that new proposals by the National Park Service be studied carefully” before further consideration of an additional crossing.

Having adopted those views, the board voted in support of a plan:

If and only if it is determined that a bridge is to be built, we urge the Virginia Highway Commission to support the bridge crossing in the general area of Plan 2 as modified by the County Manager as being the least devastating to Arlington County.

As Fisher put it:

This is a truly excruciating situation. We don't know how much voice we have in this matter, but if we don't make some choice, we may deal ourselves out of the game.

Twelve speakers addressed the board, all urging opposition to all three recommended sites. [Cheek, Leslie III, "Arlington Board Opposed To Any New Bridge Now," *The Washington Post and Times Herald*, March 21, 1965; Kelly, Brian, "Arlington Board Fighting Upstream Site for Bridge," *The Sunday Star*, March 21, 1965]

Several problems delayed further action. The Virginia State Highway Commission's "tentative" approval gave pause because the Arlington County Board was not likely to change its view to support plan 3. However, NCPC and NPS posed a more direct threat. NCPC chairman Rowe refused to put the decision on the agenda, where it likely would be approved. Instead, Rowe preferred to wait until the results of a new NPS study. NPS had selected Clarkeson Engineering Company to study whether alternatives, such as improving existing bridges, another span at 14<sup>th</sup> Street, and better approaches, would alleviate the need for the new crossing.

George Lardner referred to the Clarkeson firm as a "familiar name on several dusty District highway reports" and said that by this point, the "firm . . . now can join what ought to be called the American Association of Consultants on How to Cross the Potomac." He added:

The new study hardly promises to be a model of coordinated transportation planning but perhaps it was inevitable. It takes elaborate footwork to get a decision out of the Planning Commission nowadays.

As for General Duke, Lardner said he "seems to wince whenever he's asked about bridge building." He had the "uneasy expression of a man on the verge of discovering that he's been marching backward instead of forward." Like District highway officials, he saw the NPS study as a stalling effort. After meeting with Rowe and Hartzog, Duke said, "I have been given no indication that the bridge will come before the Planning Commission anytime within the next few months."

NPS officials hoped the study could be completed by early August. Already, District highway officials had been asked to supply data, "no doubt a painful chore."

Lardner understood that the crossing was a serious matter for those who might be displaced. However, he said that, "politically the situation right now can best be described as a farce without a finale":

Once Clarkeson makes his report, the District Highway Department will probably want to make a study of that. Each side may succeed only to the extent of killing off the other's suggestions. Not even a good five-cent ferry could weather that kind of transportation

planning. [Lardner, George, Jr., “Battle Over Bridge Keeps Duke on Go,” Potomac Watch, *The Washington Post and Times Herald*, June 4, 1965]

As it happened, NPS had not awarded the contract. In an August 22 article about “human error,” the *Post* reported that when “it was first discovered that the contract for the study had not been awarded, a Service spokesman said it was because the expert it thought best qualified to do the job was ill.” However, regional director Jett “also said that the Park Service will vigorously oppose what it regards as wanton highway construction.” The article quoted Jett as saying, “We’re park people living under a conservationist concept. If we can eliminate a highway, we will; if we can tunnel it, we will.” In view of NPS opposition, the article explained, “its reluctance to find more than one expert for the study is a part of that long-term opposition based upon conservationist ideas.” [Plate, Thomas, “You Can’t Mow Human Error,” *The Washington Post and Times Herald*, August 22, 1965]

On October 14, the Policy Advisory Committee met for 3 hours at the District Building to follow up on Secretary Udall’s suggestion for a meeting. Participants refused to comment on the discussions. [Dimond, Thomas F., “Aides Quiet On Bridge, Loop Talks,” *The Evening Star*, 1965]

As discussed earlier, some positive ideas emerged from the secret meetings that followed, but not regarding the Potomac River crossing. When 1966 began, officials had not decided whether to build the I-266 Potomac River crossing or, if so, where to put it.

### **Walter J. McCarter To The Rescue**

On May 6, 1965, the White House announced the departure of C. Darwin Stolzenbach as NCTA administrator. His successor would be Walter J. McCarter, 65 years old, who had retired as general manager of the Chicago Transit Authority a week earlier. McCarter was at his retirement home in the Virgin Islands when the White House announced his appointment.

With McCarter’s arrival, NCTA would, for the first time, have a transit professional at its head. He had headed the Chicago Transit Authority since its creation in 1965 until his retirement. He had previously managed transit systems in Cleveland and Milwaukee.

Jack Eisen described McCarter as a “gum-chewing, bristle-haired official, who is of stocky build.” He was pro-transit “without being anti-highway.” He had helped organize the Institute for Rapid Transit and still served as its unpaid president. “This group was the nucleus for lobbying efforts [on] behalf of the Administration’s mass transit bill, approved last year.” McCarter had been in Washington frequently promoting the legislation.

He thought the Federal Government had, in Eisen’s words, “made hash of urban transportation” by financing freeways alone, without the balance provided by space-saving rapid transit.” After interviewing McCarter in 1959, Eisen had called him “Chicago’s evangelist of rapid transit.” He listed some of McCarter’s accomplishments:

Among his pioneering creations as head of the Chicago Transit Authority was the Congress Street Expressway – now officially called the Eisenhower Freeway – which was

the first (and as yet the only) interstate road to incorporate both highway lanes and transit tracks.

Its creation involved some hard bargaining with highway officials because the road wiped out an obsolescent elevated line. Now the two-track line in the freeway median is capable of handling more people than the eight-lane road.

McCarter also has made certain that two other Chicago freeways save space for transit, whether rail or bus.

He also proved that feeder service, an oft-cited obstacle to rail transit, can work. As Chicago abandoned the Nation's largest streetcar system—the last line disappeared in 1958—McCarter arranged the new bus routes to feed the subway and “el” lines

The result: Half of the former streetcar riders now reach the congested Loop by train. Half as many transit vehicles congest downtown streets.

He had, in short, “welded the Windy City’s rival, sagging elevated and surface systems into a modern, integrated bus and rail rapid transit network.”

In announcing the appointment, President Johnson said, “We are fortunate in having been able to persuade Mr. McCarter to take charge of the construction of a rail rapid transit system for the Nation’s Capital.” His knowledge and experience, the President said, “will be invaluable.”

In a letter to Stolzenbach, the President accepted the resignation, which had been dated July 13, 1964, with “a real sense of regret.” He praised Stolzenbach for developing a “sound and financially feasible rail rapid transit plan.” He continued:

Your term with the agency has been a period of major progress toward the resolution of transportation problems of the National Capital region. The agency has prepared a solid foundation from which the construction and operation of a balanced transportation system can proceed.

Stolzenbach had accepted a position with a recently-formed Bethesda consulting firm, Davidson, Talbert and McLynn, Inc., as an operations research specialist on urban transportation.

McCarter flew to Friendship International Airport where he was met by NCTA officials who escorted him to Washington. His primary goal was to find a place to live; he did not want to hold a press conference until the Senate confirmed his appointment. [Eisen, Jack, “White House Shakes Up Transit Unit,” *The Washington Post and Times Herald*, May 7, 1965; Flor, Lee, “Transit Agency Chief Arrives To See Officials,” *The Evening Star*, May 7, 1965; Eisen, Jack, “McCarter: Evangelist, Practical Innovator,” *The Washington Post and Times Herald*, May 7, 1965]

During his confirmation hearing before the Senate District Committee on May 13, McCarter said he “was as reluctant as I thought I could be in good conscience,” but accepted the nomination because, “I was ham enough to think my contribution could be useful.” He added that after

President Johnson signed the Urban Mass Transportation Act of 1964, he gave McCarter one of the pens. “I want another pen—one used for signing the Washington transit bill.” He was reluctant to leave retirement, but after receiving a personal request from President Johnson, “I couldn’t take that lightly.”

Asked by Chairman Bible about his philosophy on transit planning, McCarter replied, “I came here to work, not to study.” NCTA’s current proposal “was an excellent start.” [Flor, Lee, “‘Came Here to Work,’ Transit Nominee Says,” *The Evening Star*, May 13, 1965; Lardner, George, Jr., “McCarter: I’m Ham and Fighter,” Potomac Watch, *The Washington Post and Times Herald*, May 19, 1965]

The committee approved the nomination unanimously on May 18. Following Senate confirmation, McCarter took the oath of office on May 24, before about 30 NCTA staff and guests, including Engineer Commissioner Duke and Stolzenbach. McCarter said he was a “man in a hurry” to get the system built. “I don’t know that I will succeed, but I will do my best.” He said that “the big barrier, of course, is the big barrier of most things – money.” He hoped Congress would pass President Johnson’s bill and that Washingtonians could be riding the subway by 1971. Actually, he said, “I’m hoping to move faster.” For now, he walked to his office overlooking Farragut Square from his new apartment on Thomas Circle.

Lardner said the “fast-talking transit executive” would not have to learn the lesson that Stolzenbach had learned too late:

Stolzenbach teamed up with highway critics far more devoted to fighting freeways than promoting rail transit. The headaches have been blossoming ever since. Stolzenbach tried to duck, but that didn’t help.

By contrast, McCarter understood that rail transit could not relieve traffic congestion until it’s built. He said, “The only thing I’ll fight about is to get rapid transit. And I don’t like to fight unless I have to.”

He suggested, “Talk to any highway man in Illinois about me.” One of them, Representative John S. Kluczynski, the Chicago-based chairman of the Subcommittee of Roads, knew and endorsed McCarter. He had won “the esteem and support” of freeway advocates in Chicago, especially during the discussions leading to the transit line in the median of the Eisenhower Expressway. In Representative Kluczynski’s opinion, the appointment of McCarter “bodes well” for the President’s rail plan. [Lardner, George, Jr., “McCarter: I’m Ham and Fighter,” Potomac Watch, *The Washington Post and Times Herald*, May 19, 1965; “Nominated Transit Head Wins Praise,” *The Washington Post and Times Herald*, May 14, 1965; Flor, Lee, “‘Came Here to Work,’ Transit Nominee Says,” *The Evening Star*, May 13, 1965; [“New Subway Chief, Man in a Hurry, Has Hope of Beating 1971 Schedule,” *The Washington Post and Times-Herald*, May 25, 1965]

Professor Schrag said of McCarter’s appointment:

Like Bartholomew, he was a Midwesterner [from Indiana] whose qualifications came not from Washington political experience but from professional expertise—he had a reputation as the “Dean of the Transportation World.” McCarter had just retired to the Virgin Islands, but President Johnson’s famous arm-twisting brought him back to the mainland.

As a pure transit man, McCarter was seen as less likely to go meddling into highway planning than loose-cannon Stolzenbach. One lobbyist recalled him as “a kindly old gent who sat back, pulled on his pipe, and got along with everybody.” Shortly after his appointment on 21 May, the D.C. division of the American Automobile Association, long an antagonist to Stolzenbach, welcomed the new administrator with a gift shovel for ground breaking . . . .

At the White House, Horsky noted with relief that “the appointment of McCarter to succeed Stolzenbach was well received [in the House of Representatives], and should enhance the prospects for the bill.” [Schrag, pages 60-61]

On June 1, the National Capital Democratic Club held a reception for Stolzenbach at the Sheraton Carlton, sponsored by General Duke and NCPC Chairman Rowe. Speaking before 200 guests, Horsky told Stolzenbach, “We owe a lot to you.” The rail rapid transit program had “come a long, hard way” since Stolzenbach took office in May 1961. “There were a great many ups and downs but you always kept the program going. Now you’re turning over to Walter McCarter a program that we all can happily, cheerfully endorse.”

McCarter told the guests, “I appreciate the fact that Darwin has done all the work.” McCarter had come to Washington to build a transit system, not plan one. “Darwin has laid a marvelous foundation—we’ll go on from there.”

Stolzenbach said he was particularly proud of the planning staff he had assembled. “I think it was the best in the country, and there is still a wonderful nucleus here for carrying on the program.” [Flor, Lee, “Stolzenbach Is Praised At Farewell Reception,” *The Evening Star*, June 2, 1965]

Chairman Whitener wanted his subcommittee to approve the bill on June 9. In closed session, the subcommittee rejected amendments by Representatives Multer and Dowdy intended to increase private enterprise’s role in the system. Before the subcommittee could complete work, however, the specter of O. Roy Chalk intervened.

At the start of the session, each member of the subcommittee found a letter and telegram from Chalk on his desk calling for further study in view of the selection of McCarter to head NCTA. “In light of this important change, it might be wise to consider reappraisal of the entire situation since the recommendations of the former Administrator are clouded with serious doubts.” He would, he said, “applaud” the bill if it were amended to propose full private operation of the subway, a unified bus-rail system, increasing and guaranteed profits, city financing of all subway police, and a 20-year extension of D.C. Transit System’s franchise to 1996.

The subcommittee did approve one Chalk amendment to permit continuation of bus routes that competed with subway lines. However, the subcommittee's work was interrupted when Representative O'Konski made a point of order that forced adjournment at 11 a.m, when the bell rang signaling that the House was in session an hour early. As Eisen explained, "For a committee to meet while the House is in session without specific approval is a technical violation of House rules honored often in the breach." The maneuver was seen as a favor to Chalk. [Eisen, Jack, "Subway Measure Action Delayed in House Committee," *The Washington Post and Times Herald*, June 10, 1965]

The delay was temporary. On the following day, the House District Committee voted 18 to 3 in favor of the bill. Representatives Multer and O'Konski, considered allies of Chalk, and Representative Roudebush, who opposed rapid transit anywhere, were the three opponents. They reportedly voted against the bill because of financing, private enterprise, crime, and other issues.

In a closed session, the committee rejected several Chalk private-enterprise proposals. They provided for extension of the company's franchise for 20 years with a guaranteed net operating income; required NCTA to acquire D.C. Transit System within 180 days after approval of H.R. 4822; and designated the company the sole operator of a unified transportation system for the region, including rail rapid transit.

However, Chairman Whitener's subcommittee added language guaranteeing the rights of private bus companies if the transit system was constructed. The committee also voted to delete the Administration's language calling for elimination of bus lines competing with transit lines.

The White House had taken an active role before the session, in contrast to its inaction before the 1963 vote. Administration officials called committee members to urge them to attend the closed session, a step reserved for the President's high-priority bills.

Chairman Whitener told reporters that the committee had changed its strategy on bringing the bill to the House floor. Normally, the bill would be brought up on a regularly scheduled twice-monthly "District Day," held on Mondays when most Representatives, who had little interest in District bills, were out of town. Instead, he planned to ask the Rules Committee to schedule a midweek vote for late June.

He knew the vote would not be easy. "I'm sure there will be spirited opposition and I'm hoping there will be spirited support." Representative Nelsen, the ranking Republican, agreed, but was optimistic. "Mass transit is a must for the District of Columbia . . . . I think this time we'll see a different situation than we did the last time we had a vote."

White House advisor Horsky said the committee's vote "bodes well" for success in the House, while McCarter, appearing at a AAA luncheon in the Mayflower Hotel, said, "I see absolutely no conflict" between freeways and rail rapid transit. "I do feel that people should have a choice." He cited his experience in Chicago as illustration. The *Post* summarized:

With almost no freeways in 1956, he said, 85 per cent of the 317,454 persons who were downtown at 1 p.m. on a typical afternoon got there by some form of transit, 49 per cent by rapid transit or railroad. The balance, 15 per cent, got there by automobile.

By 1963 all of Chicago's planned freeways were completed, he said, and transit's share of the 268,506 persons downtown was 89 per cent, including 71 percent by modernized rapid transit or railroad.

The same day of the committee vote, NCPC approved, 5 to 4, a \$65 million portion of the Center Leg Freeway between D, 2<sup>nd</sup>, and 3<sup>rd</sup> Streets, and New York Avenue, NW. McCarter's NCTA deputy, John Rannels, voted on the Administrator's behalf against delay as if to underscore McCarter's message to AAA.

The vote took place after what Lee Flor called "an impassioned debate between commission members. Chairman Rowe and member Thiry urged delay for at least 2 months, raising questions about whether the freeway could be tunneled or at least built a few feet below the surface. Thiry pointed out that District highway officials had provided a model to NCPC only 2 days earlier, not allowing sufficient time for study.

General Duke pointed out that the Commission of Fine Arts had approved the freeway design after extensive review. He added that the segment was part of a larger freeway that NCPC had approved numerous times.

The vote might have been different if Walter Louchheim, who was ill, had been present. He typically voted with Chairman Rowe on freeway issues. A tie vote would have delayed the decision as she wanted. [Eastman, Sam, "House Group Clears Bill on Rail Transit," *The Evening Star*, June 10, 1965; Eisen, Jack, "House Unit Approves Subway Bill," *The Washington Post and Times Herald*, June 11, 1965; Flor, Lee, "\$65 Million Freeway Leg Is Approved," *The Evening Star*, June 10, 1965

The Committee on the District of Columbia released a report on H.R. 4822 on June 21. After discussing aspects of the bill, the report concluded that:

The Committee agrees with President Johnson that the program which would be made possible by H.R. 4822 is needed and is vital to the welfare of our National Capital . . . . Your committee and the Congress have long recognized that if a modern subway rail rapid transit system is to be developed in the Nation's Capital, it is squarely up to the Federal Government to take the first step. Your committee is satisfied that the Agency's estimates concerning construction costs, traffic, revenues, and operating expenses of the proposed system have been well prepared and are reasonable . . . .

In the judgment of your committee, the time for action has arrived. There is no questioning the soundness of the investment. The rail rapid transit lines and related facilities are essential for the preservation of the beauty, dignity, and livability of the National Capital, for the welfare of the people of the District of Columbia, and for the orderly future development of the National Capital region. [Rail Rapid Transit for the

National Capital Region, Committee on the District of Columbia, U.S. House of Representatives, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 536, June 21, 1965, pages 24-25; the discussion of Chalk amendments, mentioned earlier, is on page 21; the NCTA report is reprinted as appendix A, pages 33-55]

Representatives O’Konski and Roudebush provided their minority views urging the House to reject the bill. Among other things, they said:

- Make no mistake, this poorly conceived underground boondoggle is only a foot in the door – a legislative Trojan horse . . . . The larger system will unquestionably have a price tag – including interest – in excess of \$2 billion, all of which – in the final analysis – will be paid for by the Federal Treasury – bonds, grants, and Agency propaganda notwithstanding.
- It is said that the bonded debt would be paid for out of the farebox – that the program will be self-liquidating. What incredible foolishness . . . . On the basis of current experience and trends of all subway operations in this country there is absolutely no justification for any claim that a subway here in Washington would be self-supporting; coupled with the fact that urban transit ridership generally has shrunk from 17 billion fares in 1950 to 9 billion in 1960, such a claim is ludicrous.
- Now the planners of the transit system claim that 14 subway stops will fulfill the role of 640 bus stops. Really?
- If H.R. 4822 is enacted into law in its present form, it will haunt the Congress for many years because it established unequal and preferred treatment for the District of Columbia, Maryland, and Virginia which is not available to other cities and States.
- Operating losses should be defrayed from the general tax collections of the District of Columbia and not by the Federal Government. If the operational figures as presented are sound, there can be no objection to this, and there should be no difficulty in effecting sale of the bonds.
- Business people, property owners, and tenants along the route of construction of the subway will be faced with disruption during the 5 years of subway construction and financial damage will be extensive. The history of the construction of the Dupont Circle underpass will be repeated and it is predicted that many merchants and businesses will be forced to go out of business.
- Crime in the subway has become a major problem in every subway city, for the subterranean chasms and tunnels and the underground stations provide the perfect breeding ground for crimes of the most repulsive nature—rape, robbery, mugging, and murder—which fester in darkness . . . . The cost cannot be considered a transportation but a community cost. The bill does not provide for this.
- Let no one be misled by the estimated cost of the proposed subway. History proves that no planned expenditures of a major nature in the District of Columbia are kept within bounds.
- The facts are that labor will be definitely prejudiced by this legislation and by the developments which it envisages . . . . Thus, the present labor forces will be seriously curtailed. Wherein the benefit to labor lies is a mystery.

- This bill H.R. 4822 deliberately makes no provision for private enterprise – except in its mention of a management contract. The profit incentive is completely ignored.

The two Congressmen concluded:

There will be two systems operating in the District of Columbia if H.R. 4822 is passed – surface and subway. This city does not have enough riders, nor can a sufficient number be attracted, to permit either service to operate at a profit. This is simple economics; and yet it has been completely ignored by the sponsors of this legislation.

For the foregoing reasons, we are opposed to the enactment of H.R. 4822. [pages 63-75]

(The mention of Dupont Circle, NW., referred to construction of tunnels under and around the circle. In the late 1940s, Dupont Circle was considered one of the city's worst traffic bottlenecks, partly because of streetcars interacting with motor vehicles. John DeFarrari's book on District streetcars explained:

With three major avenues (Connecticut, Massachusetts and New Hampshire) converging on two other cross streets (Nineteenth and P), Dupont Circle was a perennial traffic bottleneck. Matters were made worse by the fact that streetcar tracks ran around only the west side of the circle, resulting in northbound streetcars running disconcertingly against the flow of automobile traffic. [DeFarrari, John, *Capital Streetcars: Early Mass Transit in Washington, D.C.*, The History Press, 2015, page 174]

(The placement of the tracks only on the west side of the circle dated to the days when streetcars were powered by horses; the west-side tracks shortened the connection to the O and P Street loop to Georgetown. This arrangement was satisfactory in the era of slow-moving, horse-powered streetcars, but less effective and safe with the faster moving, electric-powered streetcars. [DeFarrari, footnote, page 222]

(To resolve the perennial traffic nightmare, the District began construction in March 1948 on a \$3.7-million underpass project to provide a tunnel under the circle for motor vehicles moving north-south and tunnels around the sides for streetcars with platforms underground for passengers entering or leaving the vehicles. A 1961 retrospective in the *Post* described the scene:

[The] work began and it was not long before the circle was a morass of mud and clay, surrounded by detours and dotted with concrete mixers, steam shovels, scaffolding and piles of assorted unattractive materials.

(Through traffic, including trucks, had to be detoured while parking was restricted; only vehicles serving residences and businesses around the circle were allowed. Pedestrians had to watch their step. Alice Roosevelt Longworth, President Theodore Roosevelt's daughter, fell and broke her arm; she called the sidewalks "Rocky Mountain goal trails."

(The 1961 *Post* retrospective explained that the 3-year project "kept the circle looking for most of that period like a drag strip for bulldozers" Throughout construction, merchants complained of lost business and residents were inconvenienced:

Hardest hit, perhaps, were those Connecticut Ave. merchants whose patrons finally wearied of trying to shop where there was only rubble, rubble everywhere and not a place to park. Many of the businessmen operated for several years on the brink of insolvency and several toppled over . . . .

Seventeen Connecticut ave. merchants filed damage suits against the District because of their loss of business during the construction period (the suits later were thrown out of court) . . . .

(The northbound streetcar tunnel opened on November 2, 1949, with the southbound tunnel following on December 14. The motor vehicle tunnel opened on May 5, 1950. According to the *Star*, the result was that Dupont Circle contained “the world’s greatest concentration of traffic lights”:

The traffic lights around the circle have given pedestrians a source for new and salty gripes against traffic authorities. Frustrated by 60 “don’t walk” and “walk” red neon signals, pedestrians say the best years of their lives will be spent in angry idleness on safety platforms, if they obey the signals. In addition to the three score pedestrian lights, there are 26 red, green and amber lights to control the flow of vehicles traffic at the circle . . . .

It is virtually impossible for a law-abiding citizen to cross any street at the circle now in one continuous movement. The best he can expect is to reach a safety island and wait for another signal to flash before continuing to the opposite curb.

(Representative O’Konski was in Congress during construction of the underpasses, having been elected to the House in 1942. At the time, he lived at 2801 Pennsylvania Avenue, SE., and would not have been affected directly by the Dupont Circle construction project. Representative Roudebush did not become a member of the House until 1961, but he and Representative O’Konski likely remembered the closing of the streetcar tunnels when the last streetcars on the Mount Pleasant line were replaced by buses in December 1961 – and the articles recalling the harmful impacts during construction. (The motor vehicle tunnels under Dupont Circle remain in use.)

(City officials considered using the streetcar underpasses around the circle for bus traffic, but a study found that because the tunnels were narrow and curved, “buses could travel through only at prohibitively slow speeds.” In addition, “the limited visibility at the entrance and exit curves would pose driving hazards for auto traffic.”

(Initially, the tunnels were used as civil defense shelters, but eventually sealed. Efforts in recent years to repurpose them have, as of this writing, been unsuccessful.

([“Dupont Circle Traffic Rerouting Plan Goes Into Effect Monday,” *The Evening Star*, March 12, 1948; “Streetcar 1550 Adds a New First As It Opens Dupont Underpass,” *The Evening Star*, November 2, 1949; “1550 Leads Way; First Southbound Car in Underpass,” *The Evening Star*, December 14, 1949; “\$4 Million Dupont Underpass Opens for Automobile

Traffic,” *The Evening Star*, May 5, 1950; Eastman, Sam, “Dupont Circle Tunnels Eyed as Blast Shelters,” *The Sunday Star*, November 16, 1961; Clopton, Willard, “Bell Tolls for Dupont Streetcar Underpass,” *The Washington Post and Times Herald*, December 10, 1961; Kelly, John, “Subterranean Homesick Blues: The Story of Dupont’s Streetcar Tunnel,” John Kelly’s Washington, *The Washington Post*, June 6, 2015])

Representative Harsha offered the separate dissenting view that, “I cannot in all conscience concur with the contention that this rapid transit proposal is either economically or practically feasible.” He was not opposed to subways, but only to the “plan conceived by Mr. Stolzenbach, who has just been replaced as Administrator of the National Capital Transportation Agency.” He questioned whether using a concept dating back to the turn of the century was “the modern solution”; the objectivity behind the plan; the cost and completion estimates calculated “to justify a preconceived course of action”; and the accuracy of the operational budget. H.R. 4822 was “only the first bit – I see no alternative but for the Federal Government to guarantee any deficit, for we are all well aware that there is no intention on the part of the users to defray any of the cost.”

The Urban Mass Transportation Act of 1964 had not singled out cities for subways:

I say if the citizens of the District want a subway so badly, why haven’t they come up with a plan to shoulder the cost just the same as the citizens of your State? All they have done and ever do is hold out their hand and ask for Uncle Sam to give them the money. Let the subway be paid for out of the general tax base of the District.

He concluded:

A close, unemotional reading of the voluminous hearings on this proposal discloses many flaws, much glossing over of questionable statistics, and a continuous almost juvenile tendency to ignore both the sickness of urban rapid transit nationwide and the incredible cost that a Federal undertaking such as this one would most assuredly entail—official assurances to the contrary. I repeat, I am forced to vigorously dissent from the majority opinion. [Rail Rapid Transit for the National Capital Region, pages 76-79]

(Representative Harsha did not say so, but he was a leader in the fight against those in the Congress who wanted to tap the Highway Trust Fund to build rail rapid transit around the country and subsidize perennially money-losing operations. For more on his role, see *Busting the Trust: Unraveling the Highway Trust Fund – 1968-1978* on this Web site.)

## **D-Day for Transit**

Because the House District Committee did not want to bring the transit bill to the floor on low-attendance Monday District Day, Chairman McMillan had to secure a resolution from the House Rules Committee. He appeared before the committee on June 23 for what the *Star* called “a one-minute hearing.” In that brief time, the Rules Committee granted his request for a 3-hour floor debate open to amendments. The House was set to consider several important bills, including housing and poverty bills, so H.R. 4822 would not reach the floor until after the July 4

recess. [Eastman, Sam, "Rail Transit Bill Sent to House Floor," *The Evening Star*, June 23, 1965; "City Subway Bill Cleared For Early House Action," *The Washington Post and Times Herald*, June 24, 1965]

*Star* editors were pleased. Although the House District Committee was often criticized, in this case "both the Whitener subcommittee and the full parent committee have done an excellent job." H.R. 4822 addressed most of the deficiencies that defeated the bobtail plan in December 1963. In addition:

Culminating several years of intensive effort, the most encouraging sort of progress has been made in developing the regional political machinery necessary to complete the system. Maryland already has approved legislation creating an interstate compact commission for this purpose. The prospects of concurrence by the Virginia General Assembly next year are bright. All this will go for naught, however, unless Congress authorizes the initial construction.

The editors were concerned by the dissenting views expressed in the committee report, which "question virtually every aspect of the proposal." The report addressed every point, but in a floor debate, "it is easier to raise doubts than to settle them." The editorial ended by saying, "we trust that the bill's sponsors are aware that the greatest threats to its passage are confusion or misunderstanding of its provisions on the House floor." ["Green Light for Transit," *The Evening Star*, June 29, 1965]

By contrast, O. Roy Chalk saw the green light as a warning to fight harder against the bill. On June 23, he published the first of several full-page ads in local newspapers. The headline:

## **Mr. Congressman: Private Enterprise Speaks**

The "Subway Bill—H.R. 4822—comes up before you for vote early next week on or about June 29. We most respectfully urge that this Bill be passed only if certain fair-play amendments protecting the rights of private enterprise are included!

The text explained that D.C. Transit System had "given the District of Columbia and its environs the best surface rapid transit system with the newest and most modern air-conditioned equipment of any municipality in the world! Under the 'continuing interest' congressional clause of its franchise, it deserves your careful consideration."

Chalk asked the Congressmen, in the spirit of fair play, to consider four "private enterprise" amendments:

These amendments will not affect the objectives of establishing a rail rapid transit system in this community. These amendments will not increase the burden of financial involvement which the presently worded bill outlines. On the contrary, inclusion of these private enterprise amendments will undoubtedly result in a more efficient and effective operation and a lower than contemplated operational and construction cost. There can be

no doubt of the axiom that private enterprise is more cost-conscious than its counterpart government operation. A dollar in the hands of private enterprise often goes ten times as far and more than a dollar in the hands of government operator.

The four amendments, reprinted in full in the ad, would:

- Require that the system “shall not be operated except as a private enterprise operation under contract involving substantial investment of capital and facilities by private transit companies, private railroads or other private persons . . . .”
- To ensure fair play for transit operators in Maryland and Virginia, the second amendment stated that if unified bus and rail operation were required, “an election should be made promptly to such effect and not later than June 30, 1967.” If the vote results in acquisition of a private company, the purchase should be “consummated within one year thereafter.”
- If subway operation deprived any common carrier of income it otherwise would have received, “such loss of revenues would be compensable.”
- To correct “the shocking and bald-faced omission” in H.R. 4822, the fourth amendment directed NCTA “to negotiate with private enterprise representatives to design, engineer, construct, equip and contract for the construction of the system of rail rapid transit lines, equipment and related facilities . . . .”

In the concluding paragraphs, Chalk stated that “it is generally conceded that we have done a good job [from] the depths of a 1956 ‘impossible debacle’ covering a span of ten years.” Now, D.C. Transit System shared everyone’s goal: “A better transit system—better service to the public—and fair play for all!” After quoting the Section 4 provision stating that “the Congress will maintain a continuing interest in the welfare of the Corporation and its investors,” Chalk concluded the ad: “We anxiously await your decision on these “private enterprise amendments.” [*The Evening Star*, June 23, 1965, section A, back page]

Chalk also placed signs on the outside of the company’s buses beneath the rear windows reading:

**“Mr. Congressman, Private Enterprise Needs Your Help.”**

The District Department of Licenses and Inspections stated that the signs violated the District Code forbidding advertising in public spaces unless it advertises the business of the owner. The department thought the remedy might be to add a line stating “D.C. Transit urges,” because it would then be a case of a private business defending itself against public agencies. [“D.C. Cites Code to Bar Transit Plugs on Buses,” *The Evening Star*, June 28, 1965]

On July 1, 1965, representatives for 35 city and county governments in the Washington area held the first meeting of the 3C coordinating council for regional transportation planning, as required by the Federal-Aid Highway Act of 1962. (Takoma Park, Maryland, was the only jurisdiction not to participate.) It fell within the Metropolitan Washington COG, which had formed in 1957 to coordinate regional cooperation. The committee elected Fairfax County Supervisor Babson as the first chairman. [Flor, Lee, “Transit Coordinators Elect Babson of Fairfax,” *The Evening Star*, July 2, 1965; Schrag, page 103]

In early July, Representative Nelsen took the unusual step of writing to all Republican Representatives urging them to support H.R. 4822. The letter acknowledged that his support “might seem inconsistent” with his opposition to the Urban Mass Transportation Act of 1964. He opposed that bill because he, like many Republicans, thought cities should meet their own responsibilities:

But as ranking minority member of the House District Committee I’m fully convinced that the circumstances are entirely different. Constitutionally, Congress is charged with the exclusive legislative control over the District. With this control goes the grave responsibility of solving – through this concisely prepared bill – the ever-growing traffic problem in this area. We cannot shirk this responsibility.

We, and our people back home, have a very special interest in Washington. We expect that our National Capital will be second to none in its vitality, beauty, dignity and manner of development. I am convinced that this program is absolutely essential, and I commend it to you.

Representative Nelsen planned to send a similar letter to House Democrats. [Eastman, Sam, “Rapid Transit Bill Pressed,” *The Sunday Star*, July 4, 1965; “Subway Bill Is Given Key GOP Boost,” *The Washington Post and Times Herald*, July 5, 1965]

During this period, House and Senate conferees were meeting to resolve differences in the District budget bill. As discussed earlier, one of the sticking points was a Senate District Committee statement that the District Committees must approve each freeway project before the Appropriations Committee would consider appropriating funds for them. Speculation was that the issue might threaten H.R. 4822 when it reached the floor. *Star* editors wrote, “Whatever this obscure language may mean, and no one seems to know,” but House District Committee leaders strongly objected to it:

For the mischief it has caused already has spread far beyond the problem of confused highway financing. No doubt unwittingly, the authors of this silly provision are also responsible for a distinct new threat to Washington’s rail-transit bill, which is due in the House for a vote within the next two weeks.

Last Thursday, for example, Mr. Natcher stated flatly that the House Appropriations Committee has no intention of permitting the transit program to proceed at the expense of halting Washington’s freeway program. And the implication of that statement was that the Senate committee restriction is evidence of an attempt by transit advocates to block freeways.

The editors were not aware of any evidence for the claim; NCTA, for example, had cast the deciding NCPC vote allowing a segment of the Center Leg Freeway to proceed:

But there are also those in the community whose first concern is not with the transit program, but in stopping freeway construction at any cost. These people welcome the confusion that would be generated by another divisive highway-transit feud. Just as it

would be welcomed, for an entirely different motive, by Representative O’Konski, who is determined to scuttle the rapid transit bill in the House.

Why the authors of the language did not foresee the result – “giving aid and comfort to both these groups” – was not important at this point. “What matters is that they repair the damage before it is too late.” [“New Threat to Transit,” *The Evening Star*, July 5, 1965]

House leaders were optimistic. Majority Leader Carl B. Albert (D-Ok.) said that based on his information, the bill should pass. Chairman Whitener, who would be the floor manager for the bill, said, “It looks good, but it’s still a fight.” The Senate District Committee planned to hold hearings on the bill within weeks of its House passage.

President Johnson gave another boost to H.R. 4822 by informing Speaker of the House McCormack that the bill was on the Administration’s list of “must” legislation. The White House congressional liaison staff was pressing hard for the bill. The *Star* reported, “Congressional staff workers said they could not recall any matching White House drive for a local bill.” [“House to Get Subway Bill Next Week,” *The Washington Post and Times Herald*, July 10, 1965; Eastman, Sam, “Rapid Transit Bill Gets a ‘Must’ Tag,” *The Sunday Star*, July 11, 1965]

On July 12, a group of businessmen published a full-page ad in the newspapers:

## **FOR A BALANCED TRANSPORTATION SYSTEM ... D.C. Needs a Rail Rapid Transit System**

The text was brief:

Dear Mr. Congressman:

You will shortly have an opportunity to vote for the Whitener-Bible Bill (H.R. 4822) which would provide Washington with a rail rapid transit system. This bill is of vital importance to the economic health of your Nation’s Capital. The businessmen of Washington strongly support this legislation for a balanced transportation system, and we appeal to you to vote for it. Your consideration and support will be very much appreciated.

Respectfully,

Nearly 80 prominent businessmen signed the letter, including Ulysses G. Augur of Washington’s popular Blackie’s House of Beef; Edward Burling, Jr., of Covington and Burling; architect Louis Justement; and national or regional officials of institutions such as Aluminum Company of America, Mayflower Hotel, The National Bank of Washington, Pepsi-Cola Bottling Company of Washington, Potomac Electric Power Company, The Riggs National Bank, Safeway Stores, Southern Railway System, United States Steel Corporation, and area department stores (Garfinckel’s, Hecht’s, Lansburgh’s, Woodward and Lothrop, and Sears, Roebuck and Company) [*The Evening Star*, July 12, 1965, page A-4]

Chalk's full-page ad appeared again on July 13 [*The Evening Star*, July, 13, 1965, B section, back page]

*Star* editors called July 15, 1965, "D-Day for Transit," as the bill neared House consideration:

The vigorous support the White House is giving Washington's revised rail transit bill is well deserved. No legislation in recent years has had more crucial, far-reaching importance to the Nation's Capital.

As for Chalk's claim that the bill was unfair to "private enterprise," the editors responded, "Nothing could be further from the truth":

The system would be designed and built by private engineering firms, under contract, with public dollars. The bill unequivocally requires that the system, under contract, be privately operated. The operating personnel would be employees [sic] of the private operator – not government workers.

Chalk could compete for contracts, if he wished, but clearly "it would not give Mr. Chalk the arm-lock on the rail system which he quite naturally desires." In 1963, he had tried to kill the whole system. Now he was trying to secure protective amendments. "Some of his demands are unnecessary. Some are simply preposterous. The House should resist them."

The editors praised "the strengthened leadership" of NCTA, as well as McCarter's recognition that freeways were needed in the area's balanced transportation system. "But he insists, and he is right, that rail transit is the only alternative to an endless proliferation of freeways which in time could become intolerable." The editorial concluded:

In moving this vital bill to the House floor, the full District Committee approved it by the overwhelming margin of 18 votes to 3. We trust that the House will grant its indorsement in as conclusive fashion, as an inducement to the Senate to complete action during this session. ["D-Day for Transit," *The Evening Star*, July 13, 1965]

On July 15, the House began considering H.R. 4822 by adopting House Rules Resolution 434 setting the terms of the debate. Chairman Whitener then introduced the bill. In addition to describing the bill, he said:

I would say, as a member of the Committee on the District of Columbia, that one of the most frustrating things I have experienced as a Member of Congress has been the problem as we legislate for the District in getting District citizens together on propositions which are before the Congress.

In this instance, however, it has been most gratifying to see such a unanimity of opinion on the part of the citizenship of this area. More than 400 official and private organizations filed statements supporting this legislation. As far as I know, only one business organization has raised a discordant note in connection with the legislation, and I am not here to criticize them because they have a right to do so. [National Capital Transportation Act of 1965, *Congressional Record-House*, July 15, 1965, page 17003]

(He did not mention O. Roy Chalk, but he was the apparent target.)

During questioning, Representative Gross asked who was going to provide the parking lot for the Pentagon City station near where he lived. Chairman Whitener replied that the parking lot was included in the estimated cost of the system:

Mr. Gross. Are the taxpayers of the country going to be saddled with a lot of expense of providing parking lots to serve the subway in Virginia?

Mr. Whitener. Of course, the gentleman knows that after the \$150 million is paid out of the District and Federal Treasuries, the fares paid into the fare boxes will pay the balance. The folks who use the system will be paying for it.

Mr. Gross. Will they pay for that the way they are paying off the stadium bonds?

Mr. Whitener. I believe they will do much better than that.

Mr. Gross. I am glad the gentleman so believes, but I am completely unconvinced that will be the case. [page 17006]

Representative Roudebush expressed his reasons for opposing H.R. 4822, promising that a motion to commit it to the House District Committee would be made later. "I intend to support such a recommittal motion. [pages 17006-17008]

Representative Multer said he would introduce what he called a "Let us face up to it" amendment:

The only way it can be done is by the U.S. Government or the Federal Treasury paying the cost of it. It cannot be done otherwise. Let us not camouflage it by saying the District of Columbia will give \$50 million of the entire sum toward the cost, because there is no such sum available to the District of Columbia unless it comes out of the U.S. Treasury.

So, let us face up to it. If this is going to be done, let us do it directly with U.S. treasury money . . . . I tell you the cheapest way to finance this, if it is going to be financed by borrowing, is let the U.S. Government do the borrowing on bonds that are sold to the public at the lowest possible interest rate you can get on those bonds when you issue them, and let them be paid by the U.S. Treasury.

He also would offer amendments to ensure precise language regarding private enterprise involvement in the project and an amendment assigning the cost of police protection to the District of Columbia. He also would introduce an amendment "to provide that anyone, man, woman, or child, business firm or corporation, that is damaged or injured by reason of the building of this subway will have a cause of action and have a right to sue the District of Columbia and be paid for whatever damages they may be able to prove in a court of law as a result of the building of this subway."

Regarding police protection, Representative Gross suggested, "Since the taxpayers of the Federal Government—your taxpayers and mine—are going to build this subway, why not put taxpayer supported marines or soldiers aboard to ride 'shotgun' on the subway cars?" Representative Multer replied, "I believe the gentleman knows the answer to that," but he added that this was a

civilian facility. Therefore, “we want a civilian and not a military police force.” [pages 17008-17009]

Representative Harsha expressed his concerns, saying “I cannot in good conscience concur with the contention that the rapid transit proposed in the present bill is either economically or practically feasible.” He could not believe that a technology dating to the turn of the century, “a plan already outmoded in many of our major cities, can offer a solution to our modern transportation needs unless there are major changes not apparent in the present plans.”

He was concerned about the financial structure of the bill “and the Federal participation which would establish an entirely new principle of Federal financing for the District of Columbia, on a project the estimates for which I question the accuracy with respect to cost, completion, equipment and operational budget.” The bill put the District “on an entirely different footing from the rest of the country in whose cities subways have been and are being built.”

Other concerns included that the bill did not provide “for the operation of the rapid transit system by what has been historically known as the free enterprise method,” that taxpayers from around the country would have to pay for extensions into Maryland and Virginia, and the cost estimate. Regarding the estimate, he cited the recent example of Dulles International Airport, “which was originally estimated to cost some \$14 million, and to date the Federal Government has spent \$120 million on this project.” He added, “Yet not one aircraft hangar has been constructed there.” [pages 17009-17011]

Representative O’Konski explained that that the question was not whether Washington needed a subway, but “who is going to pay for this thing.” The \$483 million covered in H.R. 4822, counting interest payments, was “just the first bite and the first lick . . . . Anyone who tells you otherwise is telling you a falsehood.” Eventually this bill, and its extensions would “involve the Federal Government in nothing less than a \$3 billion authorization and expenditure by the District of Columbia and the taxpayers of the United States.” He asked his colleagues to recall the old saying that, “Once you get your foot in the door you are at the point of no return.”

He asked, “Why should the people of Wisconsin, Minnesota, Illinois, Iowa, and Ohio vote today to put themselves on record as burdening and saddling the people of their States under this present program with the entire cost of the grants and the guarantee of the bonds . . . .”

As for the District paying its share, he said, “that is all poppycock because the District of Columbia does not have a dime in the Treasury. They are just going to come and ask us for more money and that means that the Federal Government is going to foot the bill entirely.” In contrast with districts around the country filled with hard-working, tax-burdened citizens, the District of Columbia was “a taxpayers’ paradise . . . a tax dodger’s paradise.” He illustrated:

The cigarette tax is 2 cents a pack in the District of Columbia. In Maryland, I believe it is 7 cents a pack. No wonder there is such a traffic jam. Everybody from Maryland is coming over to the Nation’s Capital to buy cigarettes. If we want to alleviate the traffic congestion, let us stop making the Nation’s Capital a tax dodger’s paradise.

The same was true for the gas tax, with Maryland and Virginia charging 7 cents a gallon, and the District, only 6 cents. “Yes, we would bring [the gas tax] up, but the bill has not yet passed.”

Representative Sisk asked him, “Whose fault it is that the tax has not been increased” on these or any other product in the District.” Representative O’Konski replied:

I think very largely it is the fault—or some of it is—of Congress, but some of it also goes to the door of all these millionaires who signed that ad in the Washington Post and the Washington Star, the president of Riggs Bank and all of those other people. They love this and they say it is wonderful for the city and it brings in big business. They even want the subway to bring in more business so that they can get cheaper beer and cigarettes.  
[pages 17011-17012]

The debate continued, primarily in support of the bill, before the amendment process began. The District Committee introduced several amendments, the first being to add the statement:

Nothing in this Act shall be construed as altering or amending the Washington Metropolitan Area Transit Regulation Compact.

The second was:

Nothing in this Act shall be construed to affect any right to damages which any common carrier engaged in the private transportation of persons in the National Capital region may have by virtue of Public Law 757 of the 84<sup>th</sup> Congress (70 Stat. 598) or Public Law 669 of the 86<sup>th</sup> Congress (74 Stat. 537).

The protection accorded the private bus companies under the provisions of the National Capital Transportation Act of 1960 (74 Stat. 537), and particularly under section 205(a)(2) thereof, shall not be impaired by this Act.

(Public Law 757 approved the charter for D.C. Transit System. Public Law 669 was the National Capital Transportation Act of 1960.)

The House adopted the amendments, and a couple of typographical corrections, by voice vote. On this and later amendments, action would be by voice rather than a recorded vote, except as noted.

Representative Harsha introduced an amendment that he said “assures the Congress that those persons using the transportation system will have to pay sufficient fares to retire the bonds and meet the operating expenses.” Transit backers should not object; they claimed NCTA’s estimates that everything was paid for were accurate, so there should not be any unexpected costs to be financed. “On the other hand, if their estimates are not accurate . . . great pressures will be exerted to subsidize rather than raise fares.”

Representative Gross supported the amendment. “The States of Virginia and Maryland want a free ride out of this thing, no question about that. We build the bridges across the Potomac River for them, but do not get any free bridges across the Mississippi River into Iowa.” He cited the

District of Columbia stadium overruns as an example. “I got licked, and I have no doubt that the skids are greased . . . this afternoon to put this bill through.” On the assurance of expert consultants, Congressmen asserted on the House floor that the stadium would not cost the taxpayers “a dime for that white elephant stadium.” Similar experts had put their professional reputations on the line to assert that H.R. 4822 was fully paid for:

I said at that time that I did not care if a stadium was built at every street intersection in the District of Columbia, and I do not care today if you build a subway system east, west, north, and south in the District of Columbia, but I want the taxpayers of the District of Columbia and not the taxpayers I represent to pay the bill.

If his colleagues wanted to explain to their constituents why they should build a \$3 billion subway for Washington, “then you explain it to the citizens you represent. I want no part of it.”

The House rejected the Harsha amendment.

Representative Multer introduced the Chalk amendment calling for private enterprise to construct, alter, and repair the system. The House rejected the amendment.

Representative Dowdy offered an amendment calling for lease of the tracks, saying something similar had been done with the railroads in the 19<sup>th</sup> century. “If we are going to return to this 19<sup>th</sup> century concept for the transportation of people, this would be the way to do it.” The House rejected it.

Representative Roosevelt introduced Chalk’s bus and rail unification amendment. He explained, “it seems to me that in all fairness we recognize here that we are going to do something to going businesses.” The House rejected the amendment.

Representative Multer introduced an amendment that would require each contract for operation of the rail rapid transit lines to be approved by Congress. He assured his colleagues that this was not, as they probably thought, a Chalk amendment. He thought Congress should determine what went into the contracts advertised for operation of the system. He demanded a recorded vote on the amendment. The House rejected it, 11 to 93.

Representative Multer’s next amendment made the District of Columbia responsible for any court-awarded damages in the form of injury, death, or damage to property. The House rejected the amendment.

Representative O’Konski introduced an amendment to adjust the dollar amounts in H.R. 4822 that reflected the 66 and two-thirds percent Federal share in the Urban Mass Transportation Act of 1964. In all other matters, the Federal share of District expenses was about 12 percent. “This bill sets the pattern” for increasing the Federal share in areas beyond the subway bill. His amendment reversed the percentages, reducing the Federal share to 33 and one-third percent. Congress, he conceded, had a constitutional responsibility for the welfare of the Nation’s capital. “But nobody in his right mind has ever come up with a proposal that the Federal Government’s responsibility exceeds 33½ percent.” With the Congressman requesting a recorded vote, the House rejected the amendment, 31 to 92.

Representative Multer introduced an amendment that followed up on his earlier discussion of the District's lack of funds or bond authority to pay its share. "This amendment calls for the financing of this system by the U.S. Treasury making available to the agency whatever money it may need . . . ." The House rejected the amendment. [pages 17026-17034]

With amendments concluded, Speaker McCormack said, "The question is on the engrossment and third reading of the bill." It was so ordered. Representative O'Konski introduced his amendment to recommit the bill.

The Speaker. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. O'Konski. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

The Speaker. The question is on the passage of the bill.

The question was taken; and the speaker announced that the ayes appeared to have it.

Representative O'Konski objected that a quorum was not present. After a count, the Speaker declared, "Two hundred and nineteen Members are present, a quorum."

Mr. O'Konski. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were refused.

The bill was passed. [pages 17034-17035]

Newspaper coverage provided color to the debate not apparent on the pages of the *Congressional Record*. Jack Eisen wrote that the bill was approved "with so little opposition that its foes could not even force a roll-call vote." As the 5½ house debate was coming to a final vote:

The House chamber was nearly filled as the time approached for a vote.

O'Konski moved to send the bill back to the District Committee for amendment—which would have killed it—but only 16 of the required 50 members stood up to indicate a demand for a roll call.

When O'Konski and Representative Thomas B. Curtis (R-Mo.) sought a roll call vote on final passage, only 42 stood up.

Then McCormack gaveled the bill through to passage on a voice vote so fast that members barely had time to respond.

(Representative Curtis is not cited in the record of the debate or its conclusion. Eisen may have been referring to Representative Donald H. Rumsfeld (R-Ill.) who received permission, immediately after the bill passed, to add his remarks to the record. In the added remarks, he objected to the voice votes on the bill. "I support this legislation and wish to express my concern that this measure, as so many other important measures, was approved by a voice vote rather than a recorded vote." He believed the public's business should be conducted in public and hoped that the Joint Committee on Organization of Congress will recommend holding recorded events on important matters. [page 17035])

In the gallery, Morris Fox of D.C. Transit System watched the debate. Asked by Eisen for comment, “Fox frowned and replied ‘No!’” NCTA’s McCarter also watched the debate. He said, “I’m very happy that we’ve taken the first step.” Deputy Quenstedt said, “I’m just overwhelmed.” [Eisen, Jack, “House Votes D.C. Area Subway Bill,” *The Washington Post and Times Herald*, July 16, 1965]

In the *Star*, Sam Eastman reported that the measure passed “late yesterday afternoon with an impressive display of strength,” citing particularly the failure to muster enough votes for a recorded vote.

Eastman reported that staff members of the Senate District Committee indicated that hearings on the bill would start on the following Tuesday, July 20. Senator Bible, the chairman, said:

This is a great day for Washington, and it will be greater the first day the subway cars roll down the track.

After many years of hard work in planning this effort, it is gratifying to me to see the first real signs of accomplishment. Now the job lies with the Senate . . . . [Eastman, Sam, “House Votes D.C. Transit Bill,” *The Evening Star*, July 16, 1965]

In the *Post*, Dan Morgan reported:

How did transit backers salvage victory from the shambles of the 1963 defeat of a similar measure?

Much of the credit goes to two men, Lawrence J. Hogan, the lawyer and public relations man who helped start the Joint Committee on Transportation; and Lawrence Henderson, who had helped steer the 1964 national transit measure through Congress.

If there was a starting point for last week’s victory, it might well have been the day in 1963 when Hogan took his friend, G. Yates Cook, vice president of the Federal City Council, to lunch.

The freeway advocates, including tire companies, the asphalt and roads construction industry, the bus lines, the trucking firms and the automobile associations, were at the throats of the subway advocates then.

“We decided that while they were fighting, Washington was suffering. Something was needed to calm the troubled waters,” Hogan said.

Hogan and Yates put together the framework for the joint committee and enlisted the Federal Council, the Washington Board of Trade, Downtown Progress, and the Washington Board of Realtors to participate. Their campaign included sending “canned” editorials for newspapers around the country to print to attract the attention of Members of Congress.

When Congress killed the bill in December 1963, the committee regrouped, hiring Henderson to help with congressional liaison. He “polled every Congressman to learn his position on the bill,

then ‘assigned’ a leading area businessman to work on every doubtful one.” He also arranged letter writing campaigns by civic groups. NCTA Deputy Administrator Quenstedt and Cody Pfanstiehl, NCTA’s director of public relations and community services, addressed area groups to ease resentment about the agency. In the end, these and other efforts helped build the widespread support that Chairman Whitener had commented on:

O. Roy Chalk, the influential head of D.C. Transit, remained pitted against the bill until the vote. But by that time, as a transit supporter put it, “he was just a voice crying in the wilderness.” [Morgan, Dan, “Intensive Lobby Pushed Subway,” *The Washington Post and Times Herald*, July 18, 1965]

According to Professor Schrag:

Congressional confidence in McCarter was crucial, for in July the stripped-down bill again went before the House. Whitener helped the agency tailor its plan to Congress’s frugal mood; later, after passage, he admitted that “legislative tactics,” more than transit engineering, had determined the shape of the proposed system. Responding to the critics of 1963, the new bill proposed a system that cost less, relied on a higher proportion of D.C. rather than federal funds, and specified private operation to preserve the rights of both labor and the existing bus companies.

Thanks to such adjustments, the agency found more friends and fewer opponents. O. Roy Chalk, head of the bus company, still ranted against a “socialist” subway, but the AFL-CIO, which had helped sink the 1963 bill, now endorsed the new version. The Federal City Council, relieved by Stolzenbach’s departure, mobilized its members – bankers, stockbrokers, university presidents, and an archbishop or two. Each visited four or five congressmen, quietly counting votes. Meanwhile, Whitener wrote to every member of the House not on the District Committee. Some were skeptical, but they replied that Whitener’s endorsement was sufficient reason to back the bill. Even then, Whitener feared the bill could not pass a roll-call vote. Eventually, he persuaded enough congressmen who opposed the bill but liked him to remain in the House cloakroom, and the bill passed the House on a voice vote. [Schrag, pages 62-63]

The bill that passed the House authorized funds that would require separate congressional action to appropriate the funds. Until then, the funds would not be available to NCTA. Eisen told *Post* readers:

Washingtonians can now look forward to their first subway ride as early as the middle of 1970, but a bumpy stretch of legislative track must be crossed before that schedule can be met . . . .

Once the bill is enacted, the White House must ask for money. And Congress must provide it.

Rep. Winfield K. Denton (D-Ind.), who heads the Appropriations subcommittee that passes upon NCTA fund requests, is a critic of the Washington subway proposal. During Thursday's debate he expressed worry that it would lose money.

And Representative William H. Natcher (D-Ky.), who heads the District Appropriations Subcommittee, has expressed misgivings about the subway. He wants to be positive it will not interfere with freeway construction.

If Congress approved the funds by Labor Day, NCTA could meet its timetable for opening the first segment:

Howard W. Lyon, NCTA's engineering chief, said the first six months would be taken up in preparing standards, design criteria and specifications and making more detailed site and soil studies.

By next spring the first contracts would be let to consulting engineering firms for preparing designs. The first construction contracts would be let in mid-1967.

Three years later, in mid-1970, the first line—from Benning Road and Kenilworth Avenue ne. to Northwest Washington, either out Connecticut Avenue or through Columbia Heights—would be running. This would serve D.C. Stadium, the Capitol, the downtown shopping area, Farragut Square and Dupont Circle.

The other lines, to the Pentagon, Silver Spring and Northwest Washington, would be running by January, 1972. [Eisen, Jack, "1<sup>st</sup> Stretch of Subway May Open in Five Years," *The Washington Post and Times Herald*, July 17, 1965]

*Post* editors thought the vote was "an outstanding demonstration of responsible government of the city." The city was "greatly indebted" to Chairman Whitener for "the skill and perseverance" he devoted to the bill. The editors also praised Representative McMillan and Nelsen, as well as "three suburban Congressmen, Mr. Broyhill, Mr. Mathias, and Mr. Sickles, who otherwise do not frequently agree." The Johnson Administration deserved credit for its "steady and characteristically forceful help." In addition "the highly effective work of lobbying and community organization carried on by Washington citizens, especially the joint committee, "was incalculably important to the bill's success." As the editors stated:

The Washington subway bill embodies the common concern for a Capital increasingly incapable of handling the volumes of traffic funneled into it . . . . If a subway proves that it can move people around this metropolis more efficiently, more comfortably and more rapidly than surface transport, then the Washington system will give hope to every afflicted city in the country. ["Votes for the Subway," *The Washington Post and Times Herald*, July 17, 1965]

*Star* editors were, of course, delighted. As others had pointed out, the "handful of members" who tried to water down or kill the bill, "were defeated on every test, so sharply that at the end they could not even gather the slight support needed for a roll-call vote . . . ."

The editors credited the White House, which “threw its full weight behind the bill – with the ball carried this time by professionals, not the White House amateurs who so often manage District legislation.” The strengthened NCTA leadership helped, the bill “was vastly improved, and Chairman Whitener “did an excellent job.” Just as important, if not more so, was that “the idea has finally taken hold that rail transit is not a dream, but an urgent necessity for the well-being of the Federal City and the great metropolitan community surrounding it.”

The editors made the significance of the event clearer:

It is hard to exaggerate the benefits which may spring from the House vote on Washington’s rail transit bill. The subway system, when it is built, will make this city an infinitely more accessible and useful place.

Much remained to be done before then:

But the most important hurdle was cleared yesterday in the House of Representatives. It was indeed, as Senator Bible commented later, “a great day for Washington.” [“A Great Day for Washington,” *The Evening Star*, July 16, 1965]

## **Senate Review**

The assumption had always been that if the National Capital Transportation Act of 1965 passed the House, it would find easy going in the Senate. Now that the House had approved the bill, Senate Bible opened a hearing on July 20 to consider H.R. 4822 and its Senate counterpart, S. 1117, introduced by Senator Tydings. The chairman expressed personal satisfaction in opening the hearing:

Washington, D.C., has no greater need today than an efficient, balanced transportation system to meet its main purpose – service to the public.

Mass transportation in the Nation’s Capital has held the attention of the Senate during the last four administrations. The problem is a visible one each day and each of us – oftentimes unfortunately – is a part of that problem . . . . Now I believe that we have a piece of legislation that hopefully the Congress can approve and that will be beneficial to all of us moving from place to place in the Washington area . . . .

There is no other feasible answer to this problem that has been suggested than to accompany the construction of planned highways with the construction of a rapid transit system. This is what Congress intended when it passed legislation 4½ years ago authorizing preparation of a rapid transit plan.

What Congress does – and I hope it will be done this year – will determine the Capital area’s transportation and traffic pattern for the next 75 years or more. Highways and rapid transit – we need them both and need them badly and I am hopeful that a cooperative attitude toward a common goal will prevail. [Rail Rapid Transit for the National Capital Region, Hearings before the Committee on the District of Columbia, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, July 20, 21, and 23, 1965, pages 1-2]

He introduced Chairman Whitener, who hoped the Senate would join the House in approving the bill:

I think that the legislation has the greatest amount of support of any that I have seen during my service here as a member of the Committee on the District of Columbia in the House of Representatives. We have had the unstinting support of the business community, labor groups, the civic organizations, and practically all of the people of the community.

He also cited the support of President Johnson, the Bureau of the Budget, the District of Columbia government, and NCTA:

I think that those of us who have a strong interest in this community have an opportunity now to move forward and to make a real contribution to it. [page 3]

Elmer Staats was the first witness. He said, "The need for the system . . . is no longer open to serious question." He supported NCTA's cost estimate, calling it "both feasible and consistent with the mandate of Congress in the 1960 act." Consideration of future financing beyond the system authorized in the bill was "inappropriate." The funds in the bill would provide all that is needed through FY 1968. "The more important thing, however, is that during that time work can continue on an interstate compact which both the Congress and the administration believe to be the best organizational solution to the mass transit problems of this region." The compact authority would have the "authority to issue and sell the revenue bonds needed to meet the remainder of the costs." If the compact is not approved, a government corporation could be created, but the best alternative is the compact authority.

Aside from financing, the bureau had studied the provisions in the bill regarding private operation and labor standards. Staats said, "we consider them appropriate." He said the bureau also accepted the amendments approved during the House debate, namely those introduced by the District committee.

He concluded:

Mr. Chairman, may I repeat the view expressed by three administrations: The National Capital Region urgently requires decisive action to provide a balanced transportation system. The highway program, financed by Federal aid grants, is moving forward, and its future progress is assured.

That program has been planned on the assumption that an efficient and effective mass transportation system would come into being.

Senator Bible asked if the White House was satisfied with the provision calling for operation by private parties under contract. Staats pointed out that it was not a unique arrangement, citing Memphis and Philadelphia as having "essentially the same system." The mechanisms in the bill were, in the view of the Administration after much debate, "the appropriate way of operating a mass transit system in the District of Columbia." This was the only subject during the question period. [pages 35-39]

The NCTA team took the witness stand, lead by Administrator McCarter, and accompanied by Acting General Counsel Owen J. Malone; Acting Chief Engineer Howard Lyon; William Herman, Acting Director of Planning and Advances; and consultant Edwin H. Seeger, the former General Counsel. McCarter's lengthy statement was placed in the record. [pages 40-58]

After the statement was in the record, McCarter said that through the leadership of Senator Bible and Chairman McMillan, "we are now at the point where we can at least take a big step forward in the solution of our Capital's transportation crisis," which was visible "every morning and evening when the city streets are swamped with traffic." It grew worse every year "and will continue to do so unless we are able to develop an underground transit system free from surface traffic congestion."

After discussing the routes in the proposed system, McCarter continued:

So we expect to have a . . . system unified with the bus operations, with the automobile, both by parking and by what I have paraphrased "kiss and ride," where people are delivered by some member of the family and by people who walk to the station, so that combination must be a unique system.

He added that he was surprised to discover that an almost equal number of men drive their working wives to stations as women who drive their husbands.

The cost estimate had been compared with the experience in Toronto and estimates in San Francisco, as well as his experience in Chicago. "I think it is a conservative estimate, one prepared with a view to assuring as much as possible that the Agency could live with it."

In reply to a question about tunnel construction, Lyon explained that NCTA planned for 13 miles of subway:

- 5.52 miles in earth or alluvial tunnels, "driven in a circular section under ground with the aid of a shield and perhaps the aid of a mechanical miner so there is no disturbance of the surface,
- 0.71 mile of mixed-faced tunnel "which means the section is partly rock and partly alluvial materials,"
- 2.46 miles in rock tunnel, and
- 4.45 miles in cut-and-cover construction by "digging a trench to open up the surface, constructing the facility in the form of a concrete box, decking over the street temporarily while this construction proceeds underneath, removing the decking, backfilling, and restoring the street surface."

The tunnels would have a 16-foot diameter and a height of 16 feet.

As for cost, McCarter said, "65½ percent of the cost would be liquidated by the riders of the system, 23 percent by the Federal Government and 11½ percent by the District of Columbia." The repayment period was 41 to 50 years.

In view of the concern about crime, McCarter said he believed “a subway can be one of the safest places in the city if it is properly designed”:

Robberies, vandalism, hoodlumism, youngsters getting overexuberant, that sort of thing . . . can be controlled first by extremely well-lighted equipment and stations, and by extremely quick communications.

He had visited or had photographs of stations in a number of cities, and had met with the Commission of Fine Arts on the subject.

Senator Robert Kennedy asked if McCarter agreed with the plan for private operation of the system. McCarter said, “I believe in the efficiency of private management.” Senator Kennedy asked if it would be appropriate to “give greater franchise participation in this system.” McCarter thought at the time, the present arrangement was “completely adequate,” but they did not know what the future would be. “We don’t know the nature of the revenue bonds yet, [so] I don’t think we should tie our hands at this time.”

Would not making operations available as a private franchise, based on low bid, make it “even more successful?” McCarter agreed that a negotiated low bid would work if the private operator were “dedicated to making this operation a success”:

Senator Kennedy. Would you be opposed to having it on a low-bid franchise basis as we run it here?

Mr. McCarter. I am not sure. It depends on whether the low bidder would qualify.

Senator Kennedy. If he qualified?

Mr. McCarter. No, I would not be opposed to it then.

The Senator wondered if the situation of private operation was analogous to building roads that would then be made available to a bus company. McCarter replied that aside from the significant Federal and District contribution, revenue bonds were to be sold to investors who would want to know the operating conditions. “You can’t say now that it is going to be a franchise,” as was the case with bus operations in the city. In the end, it might be by franchise, instead of by contract, “but we will have to see what the best thing to do at that time is.” Trying to make the decision now could cause “great difficulty with your revenue bonds.”

Citing the language in the bill about operation under contract, Senator Kennedy asked if that did not eliminate the possibility of a franchise. McCarter told him, “You can’t grant a franchise for a system that is entirely publicly owned.” The question, instead, was how much responsibility will be given to the contractor. “The one thing to try to avoid is to turn over the entire system financed with public money to a private operator.”

Senator Kennedy. You are opposed to turning the system over to a private operator?

Mr. McCarter. Except under a contract. We must see that this system repays most of the investment, that the car riders pay their share of the operation. This is the first charge against the system. We would have to be sure in any kind of contract that we had that this objective is met.

Senator Kennedy asked if the present bus system would be integrated with the rail rapid transit system. McCarter said that from the riders' standpoint, the two must be integrated.

Asked how rail rapid transit would affect the bus system, McCarter told Senator Kennedy that the bus system would improve by eliminating "the most expensive part of their operation, the long-haul riders." It could continue "very much as it is now," and might even pick up some riders who currently use only their automobiles, but will instead use a combination of buses and rapid transit. No arrangement had been made, but "just in the nature of the thing I think [the bus system] must continue service." McCarter added that in Chicago, bus and rail transit were needed and "there was not one bus line discontinued because of rapid transit, for they served a different purpose."

Did McCarter contemplate acquiring D.C. Transit System? "We do not." Senator Kennedy indicated that the National Capital Transit Act of 1960 specifically prohibited acquisition, but added that Congress granted the 20-year franchise for the bus system in 1956, without expecting a rail rapid transit system to be built. Now that it is to be constructed "during the middle of that franchise," what kind of protection does the bus company receive? Malone explained that in 1955, Congress provided funds to NCPC for the Mass Transportation Survey.:

I think it can be said that at the time the 1956 [charter] legislation was enacted this mode of transportation was already on the scene. So far as the immediate operation of the bus system is concerned there is nothing to indicate any impact for a number of years . . . .

We can look forward to another 5 to 7 years of prosperity for the bus companies with every prospect that that prosperity will continue.

Senator Kennedy was not satisfied. "I think probably we need something more than the fact that there has been a different result or a certain particular result in Chicago." The situation in Washington, he suggested, "may be entirely different." He thought the "transit system" should submit a report to the committee for consideration. [pages 58-80]

Other witnesses included representatives of the Federal City Council who supported the bill.

O. Roy Chalk, who owned a New York newspaper, sat at the press table during the hearing. When Senator Kennedy asked if the city contemplated acquiring D.C. Transit System, Chalk "reacted as though this was all news to him," George Lardner wrote. Softly, Chalk said, "He asked a direct question; he got a direct answer. Now we know: we'll either have to compete or go out of business." Lardner characterized Chalk's comment by saying, "His pessimism seemed about as overdrawn as his suggestion that D.C. Transit has been chewing its nails up to now over the danger of a Government take-over." H.R. 4822 flatly prohibited acquisition:

But Chalk refuses to accept the suggestion that D.C. Transit and the subway can live together on any terms but his. If the Government won't give him a franchise to run the subway for a guaranteed percentage of the profits, Chalk wants the Government to buy D.C. Transit. Chalk got D.C. Transit nine years ago for a cash outlay of \$500,000 as part of an intricate financing arrangement. Rep. Basil Whitener (D-N.C.) said on the floor of

the House last week there were indications Chalk might want the Government to pay as much as \$63 million to buy it from him.

NCTA testified that with the two systems running, the buses could make a profit. “But second place for D.C. Transit, even a money-making second place, is a prospect Chalk apparently doesn’t want to consider.” As a result, “The Senate represents his last chance to get what was never promised.”

After the hearing, Senator Kennedy told reporters he was not taking a position on whether a franchise should be considered. Lardner concluded that “if yesterday’s hearing was any guide, the subway bill still has some rough riding ahead.” [Lardner, George, Jr., “The Senate, a Subway and O. Roy Chalk,” Potomac Watch, *The Washington Post and Times Herald*, July 21, 1965]

On July 21, Senator Brewster of Maryland appeared before the committee. He had been “most gratified” by House passage of H.R. 4822 because the region needed rail rapid transit. Unfortunately, “it will be another 7 years before it can become fully operational,” during which population will grow and the number of motor vehicles will further strain the area’s already crowded streets:

We know from experience that highways alone cannot meet our growing urban transportation needs. They can only make an effective contribution to transportation if supplemented by a mass transit system capable of handling large numbers of commuter passengers.

Maryland and Virginia officials had partly solved “one aspect of the commuter’s problem” by building “a magnificent circumferential highway entirely around the District.” It carried people “easily around the District, but the congestion on the radials coming into the District from the beltway is . . . tremendously difficult and . . . cannot possibly satisfy the needs of this community . . . .” A balanced transportation program encompassing automobiles, modern highways, a bus system, and rail rapid transit is needed.

The current plan in H.R. 4822 was “both modest and realistic,” the product of “careful study” by NCTA. It would benefit residents of the area, tourists visiting Washington, and “will contribute immeasurably to the beautification of our Capital City.” Approval by the Senate would “serve as a green light to National Capital area planners who have hesitated to base future plans on a tentative transportation system still in the need of congressional action.” He was confident the committee would “report a sound rapid transit bill to the Senate. You may be sure that it will have my wholehearted support.” [pages 87-89]

Senator Tydings, a member of the panel, moved to the witness table. He was proud to be a cosponsor of S. 1117. “I am impatient, as are the people I represent, to get on with the job just as soon as possible.” Officials and the public alike were drawing one conclusion from years of experience, namely that “there is a limit to the amount of land, the amount of money, and the amount of human relocation we can afford to pay for highways in cities—particularly in this city.” Washington was growing too fast for ‘any single kind of transportation facility to keep up

with our needs.” The area needed “every practical kind of transportation we can afford . . . in efficient balance so they can work together . . . and thus multiply their effectiveness.”

The area had highways and more were planned, but there were limits to what they could do:

I can say from my personal experience that the people of this region have been asking for a rapid rail system for years. Their unanimity on this subject is one of the great and encouraging areas of agreement in the National Capital region. I know of no other regional problem on which there is such strong and widespread agreement as to a solution.

He wanted a dependable system that would allow people to move around “no matter how long the bus delays caused by traffic jams”:

I mean the freedom for the suburban housewife who can have the use of the family automobile for her family responsibilities, for her daytime shopping, secure in the knowledge that her husband has speedy and efficient transportation.

I mean the ability to live where you want to live and work where you want to work, throughout the region.

I mean the saving of many hours each week for thousands of commuters – hours better spent with families than spent alone in an automobile . . . .

I mean making it possible for the youngster too young to drive to go downtown to the theater or the cultural centers, or for the elderly too old to drive to visit friends in the suburbs, or the handicapped to travel by public transportation without having to climb on and off – and we must make this rapid rail system in the Capital of the Nation accessible to those handicapped people, thus making it even more useful and pleasant for all.

In view of the discussion of private sector operation versus a franchise, Senator Tydings said:

I am unalterably opposed in the committee or on the floor, and in any other place, to any amendment which would give a windfall franchise to any operator at the taxpayer’s expense. I am unalterably opposed to giving to a private operator the profits of this rapid rail transit system which should be used to pay off the bondholders and for the benefit of the taxpayers.

I am going to resist any amendment in this committee and on the floor, just as the committee did in the House. [pages 89-91]

With Senator Tydings returning to his seat on the panel, Representative Nelsen took his place at the witness table. He talked about how the House District Committee had overcome the considerable opposition to the bill in 1963 by satisfying labor and business concerns. There was no question about the need:

Those of us who drive to town and listen to the radio, to Marie in the traffic helicopter telling us how traffic is backed up on Shirley Highway and other main arteries into the city, try to avoid congestion. We hear these reports every morning and anticipate that, in the future, conditions will be much worse.

(Representative Nelsen was referring to WWDC's Marie E. McDonald, who told listeners about traffic conditions as she observed the roads from a helicopter. She began her traffic updates in February 1965, reportedly the first woman to serve in that capacity. She and her pilot died when their helicopter crashed on September 1, 1966. [Adams, Michael, "Traffic Reporter, Pilot Killed in Copter Crash," *The Evening Star*, September 2, 1966; "Texas Rites Set Tomorrow For Marie E. McDonald, 29," *The Evening Star*, September 3, 1966])

He and his colleagues in the House District Committee were concerned about whether, as often happened with government projects, the cost estimates would be exceeded once construction began. They had checked the data on financial planning. They found that proper engineering had not been compromised to keep estimates low. They found that farebox estimates were accurately figured. "I think the bill is a good bill and I recommend it for passage." He added that the bill had passed the House by voice vote, "which indicates to me the opposition of a little over a year ago has melted because of the provisions we put in the bill to meet the objections that were previously there." [pages 92-93]

Representative Multer appeared next in support of the amendments that the House had rejected. He acknowledged that labor was satisfied that its interests were protected in H.R. 4822. As for the private enterprise features, "the rating of the bill would probably convince you private enterprise is being protected, too." He interrupted the statement because Senator Tydings had to leave the panel to take a telephone call; he wanted the Senator to hear this part of the statement. He moved on:

I don't believe there has been any bill in the 10 terms I served here that has had such an overwhelming demand by a majority of your colleagues in both Houses as well as by a majority of the people in the community, and I sought both in the House and here now to try to improve this bill and make it do the job that should be done.

He discussed each of the amendments, beginning with the amendment on payment of damages to property owners by construction or operation of the rail rapid transit system. The House amendment called for the District to be responsible, but he had amended it to reference Maryland and Virginia for their segments of the network. "I don't understand how anybody can oppose that kind of provision being admitted in the bill." In response to a question from Senator Bible, Representative Multer acknowledged that the House rejected the amendment. However, he did not think the House fully considered the implications of the amendment:

The . . . rush and turmoil of the District bill being the last bill of the week, many of the Members being anxious to get away, it was obvious to me they wanted to pass this bill and go to something else and that is what happened.

With Senator Tydings not yet back, Representative Multer skipped to his third amendment, the one he called the “face up to it” amendment. It called for the U.S. Treasury to issue all the bonds. The District, he pointed out, runs a deficit every year and “must come to us and beg for the money from the U.S. Treasury.” It will never be able to pay its share for the system. “I say the best way to do this, and the least expensive way to do it, is to finance this cost directly by loans from the U.S. Treasury.” Put aside, he said, “this camouflage of a guaranteed bond sold to the public to be paid by the fare box.” When deficits occurred, the District was going to ask the U.S. Treasury for help. “If they are not going to be paid, let’s do it the cheapest and most direct way with direct financing at the lowest possible cost and with the provision as provided in this amendment that the principle and interest shall be paid back in a period of 30 years . . . .”

Senator Tydings, back at his seat, said that States or municipalities usually issued bonds for transportation. “What you suggest is a novel idea.” Representative Multer said it was traditional “on the national level. On municipal levels it is usually not done.” Moreover, the District was a different case because it depended on the U.S. Treasury to make up its deficits each year. As a result, “we might as well do it on the lowest cost directly.”

Now he came to the amendment he was about to discuss when Senator Tydings had to leave the panel briefly. The system would not be operational for at least 5 to 7 years. However, H.R. 4822 committed the system to operation by private enterprise. It did not leave open the possibility that NCTA or the regional compact might conclude that a franchise might be the better option. “We don’t know what the system will be in the next 5 years, or what will be the best type of operation at that time.” His amendment calling for congressional approval of contracts addressed this problem:

In other words, when we are ready to operate this system, I don’t mean today, in a week or in a month, but when it begins to look as though it will soon be ready, then the Agency should negotiate a contract. They should say this is what we want and this is the way we want it done. Then they should determine whether it is to be private management or leased on a franchise.

At this time, neither he nor anyone else knew what would the best method would be, and yet H.R. 4822 dictated the method.

Senator Tydings asked if the amendment superseded the management type of operation in the bill. Representative Multer replied that under his amendment, either private management or a franchise would be possible. All his amendment did was provide that after NCTA or the interstate compact decided which is best, let Congress approve it. “Call in your private enterprise to bid on it, and come before the Congress and say this is what we would like to do.”

Senator Tydings was concerned that Congress would be giving responsibility to an authority to build the transit system, but retaining the authority to determine how it would operate. Representative Multer asked, “Do you think this is the time for giving a management contract, or a franchise today that will be effective 7 years from now?” Senator Tydings returned to the “heart of the question,” namely whether “you are going to give the authority where you put the responsibility.”

Representative Multer suggested that the panel ask Administrator McCarter if he would prefer to enter into a contract now based on bids from private enterprise or make a judgment closer to when the system was ready to go into operation. "I am sure he will be the first to tell you he will not sit down now and make a franchise or management contract or any other kind to operate this." He would undoubtedly want to talk with experts as construction progresses before making a decision.

Senator Bible assured the Congressman that the Senate District Committee would explore the matter before completing work on this bill. [pages 94-102]

The next witnesses, a panel of District officials, testified in support of the bill. Commissioner Tobriner, in a brief statement, concluded, "We are thoroughly convinced that the establishment of this system is in the best interests of the Federal Government, of the District of Columbia, and of the entire Washington metropolitan area."

The primary witness, Engineer Commissioner Duke, said, "As staunch advocates of a balanced transportation system for the National Capital region, we urge timely and favorable action on this bill." The District's current highway plan was based on the development of rail rapid transit. The highway system was as extensive as it would ever be "regardless of the outcome of this proposed legislation."

He was concerned that "many people have apparently concluded that a rail transit system will never be implemented unless they block the highway program." To refute this idea, now was "the time for Congress to take prompt action on this bill to assure these residents that their fears are entirely unwarranted":

Congress now has the opportunity to provide the leadership for such a comprehensive community attack on our transportation problems by prompt favorable action on this bill, by early favorable action on the proposed District of Columbia gas tax increase and related loan authority, and by general support of the current coordinated highway and mass transit programs.

An initial system as proposed in H.R. 4822 "seems to be the most appropriate beginning of a comprehensive transit system" in view of the District's resources:

In proposing that the District finance the required initial grants, the District faces on the one hand, the urgent need for a rail rapid transit system and on the other hand, limited ability to divert current revenues to the purpose. Present District tax sources are, and will continue to be, inadequate to provide the District grant other than by increasing its loan authority as proposed in H.R. 4822, and borrowing from the U.S. Treasury in the amount of the required grant and repaying the loan over a 30-year period.

He concluded:

The highway program is underway, but it cannot do the job by itself. Our transportation demands require the immediate implementation of a rapid rail transit system. And now is the time to start. [pages 103-107]

The next witness, O. Roy Chalk, took his seat at the witness table but said “I completed my statement at 4:30 this morning and they are still typing it this morning.” He asked the committee to delay his testimony until the following day. In the interest of fairness, Senator Bible agreed to do so. [page 109]

On July 23, Senators Bible and Tydings were joined on the panel by Senators Morse and Peter H. Dominick (R-Co.). Chalk began by asking that the record contain a copy of the 1956 law approving his company’s charter. He pointed out Section 4 calling on Congress to “maintain a continuing interest in the welfare of the Corporation and its investors.”

Senator Morse, one of the principle authors of the legislation, interrupted to recall the circumstances of that legislation that Senator Bible would recall because he also was on the committee at the time. In 1956, the District’s transit system “could best be described as in a state of either collapse or chaos.” Witnesses testified at the time about other municipalities that were taking over failing private transit companies and continuing transit as a public service, but Senator Morse “was one of those who made perfectly clear at the time that that would be the last thing that I wanted to see adopted by way of a transit system in the District of Columbia”:

In order to encourage private ownership of the transportation system in the Nation’s Capital, the provision of the franchise which you have just read was put into the law because there was a great deal of doubt as to whether or not we could get a company to come into Washington, D.C., and take over the transportation system under the situation that existed at the time without including the language that you have just put into the hearing record.

These discussions, Senator Morse pointed out, took place before Chalk was involved. As the proposal “started to crystallize it was then, as I recall, that Mr. Chalk appeared on the scene.”

Chalk resumed his statement, explaining how he had complied with Section 7 on conversion of the city’s street railway operations to bus operation. He also cited Section 3 prohibiting a competitive “street railway or bus line” for transporting passengers without prior issuance of a certificate by the Public Utilities Commission “to the effect that the competitive line is necessary for the convenience of the public.” Chalk added that, to the best of his knowledge, no such certificate had been issued.

He also cited Section 2 of the law calling for a 20-year franchise, but with Congress reserving the right to repeal it at any time “for its non-use.” Section 2 provided that if Congress cancels the franchise after 7 years “for any reason other than non-use, the Corporation waives its claim for any damages for loss of franchise.” He added that a provision of the conference report on the bill addressed this section:

This subsection is not intended to preclude the corporation’s property from being valued as that of a going concern in the determination of any damages resulting from a cancellation of the franchise for any reason other than nonuse.

He asked that the complete conference report be included in the hearing record. [pages 120-132]

Senator Morse asked if Chalk meant that he would not have the right to file damage claims unless Congress canceled his franchise. Chalk replied that he was not making that argument. “I am merely indicating that it was the intent of Congress to protect the rights of the D.C. Transit System.” He also cited Counselor White’s letter of February 18, 1965, to add, “and the apparent intention of the White House at this time to call attention to our legal rights.”

Chalk then recounted the company’s success in meeting the requirements of the charter. It completed conversion of the trolley car system 2 years ahead of schedule to establish an all-bus system. “In doing so, the company destroyed a streetcar system valued in excess of \$45 million.”

Senator Morse interrupted again. That may have been the value of the system, but he wanted to know what the net cost to the company was. Chalk said he was referring to “the reproduction value of such a system today,” and only brought it up to say, “We kept our part of the bargain.”

In fact, he recently had been in Barcelona, Spain:

My chest swelled with pride as I saw these very beautiful trolley cars which I had sold to the city of Barcelona—I think at about \$2,500 apiece—all over the city of Barcelona. They looked beautiful and the people appeared to be very happy using them. I had a slight pang in looking at it.

Chalk said that he paid \$13,540,000 for the franchise and had invested an additional \$35 million “for new vehicles, equipment, and maintenance facilities.” Visitors from around the world came to see his profitable system in operation.

Senator Bible agreed that it was a good system but wished Chalk could do something about the exhaust fumes from the buses. As a motorist, Senator Bible did not like to be stuck behind the buses for that reason. They agreed the problem was with the manufacturers, but Chalk said, “within a year we believe we will have available and in transportation the first of an atomic-source-powered, battery-operated bus, and we believe that when this type of power is introduced into automotive equipment the problem of the fumes will have disappeared.”

(In March 1966, Chalk indicated that his research branch was designing an atomic powered bus. Within “a year or 18 months,” he said, an experimental model would be used on District streets. Nothing appears to have come of this effort. The plan was never implemented, although an atomic-powered bus was the vehicle in the 1976 movie comedy, *The Big Bus*, a parody of disaster films. [Stacks, John, “Chalk Proposes Subsidy, Fare Cut in Slow Hours,” *The Evening Star*, March 3, 1966])

Returning to his statement, Chalk pointed out that the company had “kept its pledge to congress to keep the city free from economic warfare and labor strife.” That was in contrast to the previous 10 years when Capital Transit Company’s labor troubles “brought confusion and consternation to the public.” He added that D.C. Transit System was the only transit system in the United States “which has arrested and reversed the trend of declining patronage from the general public in the use of mass transit facilities.”

For all that the company had done to provide quality transit, it now faced “an ominous situation and we depend upon the integrity of Congress with whom we contracted in 1956, to redeem its pledge to us, ‘to maintain a continuing interest in the welfare of our company’ and its thousands of investors.” He did not want to be an obstructionist. He wanted the bill to pass, but he asked that Congress do so “in such manner as will afford us this and yet not harm the objectives of the bill.”

The bill called for private managerial service, but that was not private enterprise, which required private investment – “the true test of private enterprise”:

There appears to be no intent to grant a franchise to the most qualified bidder as was done in the award of Congress to D.C. Transit in 1956. There appears to be a mistaken presumption underlying the plan of the NCTA that Government operation is more efficient and more profitable than a true private enterprise operation . . . .

It seems to us that Congress – not the NCTA – should make the decision and final choice as to whether the subway shall be operated under a franchise-investment plan, under a management-employment, or under any other form of operational agreement.

It seems to us that if Congress, in its wisdom, decides to award a franchise to a qualified private enterprise operator, for which there is ample precedent, its authority should not be usurped by the NCTA.

He urged an amendment giving Congress that right.

He cited some of the advantages of a franchise, such as requiring the franchise holder to buy all the rolling stock and maintenance facilities, which could be a big savings to the U.S. Treasury. The franchise holder also could be obligated to assume payment of interest and principal on all outstanding bonds.

Chalk’s next point referred to the dialogue between Senator Kennedy and McCarter on the first day of the hearings. “In effect, the NCTA has ruled out, as a matter of policy, the unification of the bus system with the subway system.” McCarter said NCTA “had no need to acquire the D.C. Transit bus system.” Based on this “clear enunciation,” the two systems would have no choice “but to become competitive, each seeking its maximum share of the total transit market.” NCTA’s revenues could occur only by taking them away from the bus operators in the area:

It must resolve itself into a competitive battle for survival. There is not sufficient business to sustain two systems and one or the other, most likely both, will suffer financial hardship. On the subject of financial hardship, however, the edge is all the way with the Government.

It obviously becomes an unfair competitive situation when a private company must compete with a Government-operated facility.

The U.S. Government can afford to lose money without danger of bankruptcy while the private operator under such circumstances must face destruction.

Senator Morse said he did not understand why they had to be competitive since one would operate on roads above ground while the other operated below ground. Chalk referred to McCarter's statement that the bus and rail lines did not have to be unified:

If they are not unified, the inescapable conclusion is that they must be competitive. If they are competitive, someone is going to get hurt.

Perhaps, he said, he had "made my point too clear and it sounds too warlike." But as a private enterprise, "I must bend every way possible to get the last bit of business available in a true private enterprise competitive sense." If the two systems were combined in a franchise, that would be a different situation. "But here I am merely saying if we are competitive, as Mr. McCarter has said, as indicated by implication, of course someone is going to get hurt."

The subway, as a public enterprise, could call on the U.S. Treasury to make up deficits, but companies did not have that advantage. For that reason, an "equalization factor is necessary." The company might be guaranteed a fair return on the system. If Congress contemplated a balanced transportation system, "both systems, one beneath the surface and one on the surface, should be comparable quality and comparable treatment."

He introduced testimony that McCarter had presented during consideration of the Urban Mass Transportation Act in 1962. [pages 144-152]

Chalk pointed out where McCarter stated:

The reason why there is a serious lack of rail rapid transit today, and the reason why existing rapid transit systems cannot expand to meet even today's needs is obvious. Rapid transit systems are costly to construct, and costly to maintain and operate. Major improvements and extensions cannot possibly be financed out of the fare box alone at reasonable rates of fare.

I might digress to say that no rapid transit system can survive alone . . . . By itself, rapid transit is not self-supporting. In all the cities of the United States that now have rapid transit, the rapid part of the transit system is supported by profitable bus operations, or by a public subsidy of one kind or another.

Chalk pointed out the significance of these words:

I am presently in favor of the bill without any questions whatsoever. But I am pointing up the importance of the bus system and its relationship to a unified type of operation which seems to be in doubt under Mr. McCarter's statement.

Chalk also quoted the 1962 testimony on the national bill where Representative Multer questioned McCarter about rapid transit in Washington. McCarter stated that "in my opinion when it becomes a system there is going to have to be a very close coordination with the private system":

I would say that this system could be leased to either Mr. Chalk or the District could buy it, pay Mr. Chalk for his properties what they are worth, and consolidate them. It could be leased on a basis of a last charge on earnings, or it could be leased on the basis of percentage of net. The local community can determine . . . .

In short, in 1962, “Mr. McCarter was completely in accord with my views. There seem to be some differences today and I trust that these differences can be ironed out.”

When Senator Bible said he did not see “anything particularly inconsistent” in what McCarter said in 1962 and 1965, Chalk replied:

These then, Mr. Chairman, are the issues. First, the responsibility of Congress to redeem its pledges to the D.C. Transit System under the act of 1956 by maintaining a continuing interest in its welfare. Second, by retaining for itself, the Congress of the United States, the right to determine the eventual operator of the subway system and whether or not it shall be by franchise investment, management-employment contract or by any other form of operational agreement acceptable to Congress.

Third, justice requires an equalization factor as between the subway system and the surface system to avoid unfair competitive practices to the detriment of private invested capital as well as to the detriment of the Government’s investment in the subway.

The equalization factor, formula or statement of policy should apply equally in matters involving operations as well as in matters involving capital outlay.

In all other respects, we defer to the desires of the administration and the will of Congress.

Senator Bible wanted to know if D.C. Transit System was “adequately protected” under H.R. 4822. The House believed that the bill contained adequate protections. Because Chalk did not agree, Senator Bible asked what type of protection would be adequate. He referred to Chalk’s second point that Congress should make the decision on operations. “Did not the House of Representatives meet that issue in their bill,” by explicitly stating that it “shall not be operated except under contract by private transit companies, private railroads, or other private persons”?

No, Chalk replied. “They did not make it clear which type of management was most desirable. They have left it entirely up to the NCTA,” which “has already made it clear that it favors the employment type of management, and, therefore, we are not protected.” He was simply saying that NCTA should not be the final arbiter. “I say Congress in its wisdom should make the decision.”

Senator Bible pointed out that in the quoted phrase, Congress had made the decision that operation by private enterprise was preferable. It left to NCTA only the selection of the private enterprise firm that would win the contract to operate the system.

Chalk replied that he would not have brought the subject up if NCTA had not made clear that it favored operation in a way that he did not believe was true private enterprise. He explained the difference:

NCTA merely wishes to employ a group of men, management consultants, or whoever they might be, who have no risk involved, who have no investment involved, possibly furniture and fixtures, but who have no risk of their own, no inducement or incentive for the highest degree of efficiency and tight economic controls.

Their job is merely to run the business as efficiently as possible as a good Government employee would do but he has not the incentive of a private enterprise investment. When a man invests or a group of men invest millions of dollars under the American system of private enterprise they are going to try to protect their investment.

This is the very foundation of the American capitalist system; we have to protect our capital, and we will operate efficiently in order to do so. Now we take the view that we can do a better job. A dollar, as I said before, in the hands of a private enterpriser, is a long way further than a dollar in the hands of Government officials.

Senator Bible commented that nothing in H.R. 4822 prevented Chalk from bidding to operate the system. Chalk said that if the rail rapid system took in \$20-30 million a year, the operator's payment would be about \$100,000. "I am not so sure that I am interested in even devoting my energies or the energies of my company and staff to earning a hundred thousand dollars a year. It is that simple . . . . If this is to be divided among thousands of investors and stockholders [it] is just not worth while to my stockholders"

Senator Tydings asked why, in view of the investment of \$150 million by the U.S. Treasury and the District of Columbia, "you or anyone else [should] be permitted to come in [for what] would amount to a windfall, since you only intend to put up a small percentage of the contribution which the people of the District of Columbia and the United States are making." Chalk said, as he had previously, that "a road is a road whether it is on the surface or beneath the surface." It serves people either way:

It is a Government function to build a road on the top or beneath the surface of the streets and therefore this in itself is the justification. The city and the Government built a highway on which my bus runs. I have never then undertaken to pay the cost of that highway and I should never be asked to undertake the cost of building that tunnel underneath the highway.

Senator Tydings questioned the logic of that answer. Would it not be more logical, he asked, for the system to retain any profit from operation instead of "allowing an operator to make a windfall profit from a small investment in rolling stock, at the public expense?" Chalk said the presumption behind that question was wrong since he and McCarter were in agreement that it "is impossible to run such a system at a profit other than deficit financing." If someone could be found who could operate a subway at a profit and pay off the bonded indebtedness, as might be possible with a franchise, "I would say that you owe it to yourself to give him the job."

With a private enterprise operator, Senator Tydings suggested, the deficit to be reimbursed would be less than if a franchise operated the system. Chalk disagreed on the fundamentals:

I believe that private enterprise values a dollar – now this is no disrespect to Government officials – but the man whose shoe is tight, the man whom it hurts, he is the first to react where a man [who] is uninjured to any extent other than his conscience he does not react to situations as quickly as a man who is hurt.

This is our capitalist form of government, sir. So that a man in private enterprise will do a better job, with due respect to all Government officials.

Senator Tydings said the operator under H.R. 4822 is private enterprise just as a franchise operator would be. Chalk explained, “They are employees” of NCTA. Risk is the test and the private enterprise employees have no financial risk under their contract. “The moment they obtain employment and are paid without an investment, other than their abilities of course, it is an employment contract,” not capitalist private enterprise.

Senator Tydings changed topics to cover the responsibility of Congress to have a “continuing interest” in the welfare of the company and its stockholders. Had not Congress exempted the company from payment of gross receipts tax? Chalk replied that the exemption was in the 1956 Act and, in return, D.C. Transit System had kept its promise to provide a good bus system.

Further, was not the company exempt from the fuel tax, whereas Capital Transit Company did not have that advantage of tax savings? Chalk replied, “Nor did you get the service which you are getting today. You get what you pay for, sir.”

Chalk added that he was not complaining about the lack of “continuing interest” over the past 9 years. “I have no complaint . . . . I am merely talking about the next 11 years” of his charter.

Senator Morse’s question time interrupted Senator Tydings’ period. First, Senator Morse wanted to clear up the “reports, innuendos that I understand are in wide circulation” that he was in Chalk’s pocket. “I just want the hearing record to show that nobody has ever gotten me into a pocket or gotten a rope around my neck or even been able to direct my course of action.” He had no preconceived notions. He would consider all the information gathered before deciding on the merits. He was “an impartial legislative juror in the case.”

He and Chalk engaged in an exchange of hypothetical possibilities of Chalk operating both systems, drawing the conclusion that a conflict of interest would exist between his responsibilities to the stockholders of his bus company and his work as an employee of NCTA.

Continuing the dialogue with Senator Dominick, Chalk indicated he was reluctant to be put in the hypothetical situation Senator More had posed:

I have a duty to my stockholders and I have a duty as a citizen. I would be placed in a bad position. I would rather compete as Macy does against Gimbels and be divorced from the operation, a clear competition. Or I would rather be one altogether, one company, with an element of profit with my investment.

If I would invest \$25 or \$50 million in the subway, then I have a stake, then I have to protect that investment for the benefit of my stockholders. Likewise I have to protect it for the benefit of the bus system.

He again cited McCarter's 1962 testimony that rapid transit companies were never self-supporting, but had to be "supported by profitable bus operators or by public subsidy or one kind or another."

As Chalk's testimony neared an end, Senator Bible asked if he understood that Chalk did object to a rapid transit system. Chalk replied:

Not at all. It is my feeling that it is the prerogative of the U.S. Government to build a battleship and have it sunk if it wants to.

This is the right of government. There is justice in building a battleship and having it sunk if necessary because in the world competitive situation prestige sometimes is more important than money.

With no further questions for Chalk, Senator Bible ended the hearing, which lasted a little over 2 hours. [pages 111-170]

On August 2, Administrator McCarter submitted a nine-page letter to Senator Bible responding to testimony that occurred after the NCTA panel appeared before the Senate District Committee.

McCarter began by explaining why NCTA opposed Representative Multer's amendments, all of which, McCarter reminded the chairman, the House had rejected overwhelmingly. The first was the amendment requiring the financing to take place entirely through U.S. Treasury bonds. This amendment was in "direct conflict" with the National Capital Transportation Act of 1960, which called on NCTA to develop a plan that "shall provide for the equitable sharing of any remaining costs among the Federal, State, and local governments." The Multer amendment would not only contradict that explicit provision, but the Urban Mass Transportation Act of 1964, "which requires local financial contributions as a condition of Federal assistance."

NCTA also objected to the damages amendment, which "is unnecessary and would serve only to breed confusion." As a Federal agency, NCTA was subject to the same laws relating to claims and damages as other Federal agencies. "The laws concerning claims against the Government are well established, and there has been no showing that any greater or lesser requirements should be imposed on NCTA." Moreover, the amendment "would expose the Federal Government to an unknown amount of pecuniary liability arising out of actions to which it is not a party and which it would not be allowed to defend." In short, the Federal Government would be "a collection agency for other people's judgments."

The third Multer amendment required NCTA to secure congressional approval for the contract on operation of rail facilities. H.R. 4822 and S. 1117 were clear that Congress wanted NCTA to secure a firm to operate the system under contract. "In addition, in obtaining the services of an operator contractor, NCTA would be subject to the Federal statutes, regulations, and policies

governing Government contracts and procurement. The proposed amendment is thus unnecessary.”

McCarter also objected to the amendment because “it would constitute an exception to the usual and ordinary practice of the Congress which is to vest the executive branch with the authority to contract for services needed by the Government.” Further, the amendment covered only operations, but not design, construction, or other contracts “and there would appear to be no greater reason for the Congress revising the operations contract than these other contracts which will involve far greater expenditures.”

McCarter also wanted to address three issues that Chalk had raised on the final day of hearings. First, Chalk favored a franchise to operate the rail rapid transit system. The House and Senate bills called for operation under contract by private transit companies, private railroads, or other private persons.” Given the public investment of \$431 million, the risks were to be borne by the public, “and any plan for operation of the system must recognize that fact.” Under the companion bills, “any revenues of the system beyond those needed to meet operating costs must be dedicated to the retirement of the revenue bonds.” The franchise-investment system that Chalk advocated would be more costly than the method contained in the bills. “D.C. Transit concluded as much when it expressed doubt as to whether it would find a contractual approach to operation financially attractive.” Whether the government paid for rolling stock through bonds or a franchise acquired them, funds would be borrowed from private investors and repaid through the farebox. Thus, the advantage of the franchise providing the rolling stock was nonexistent.

Whichever method of operation was employed, capital outlay would be the same, as would system revenues and the cost of operations:

The principal difference will be in the financial consideration paid the operator for running the system. Under S. 1117 and H.R. 4822 the contractor would be compensated in accordance with the fair market value of the services required by the operating agreement with the Government. According to its statement, D.C. Transit would probably regard this as inadequate, and, under a franchise, would require a greater return.

As for unification of bus and rail facilities, the National Capital Transportation Act of 1960 contained a provision, added at the request of the bus companies, forbidding acquisition of the companies. “The Agency sees no need for the kind of ‘unification’ envisaged by the company.”

NCTA agreed with Chalk about the “very great need for coordination of bus and rail services but believes that the legal framework for such coordination exists right now in the processes of the Washington Metropolitan Area Transit Commission (WMATC) . . . . The present bill provides that the powers of that Commission are to remain unchanged.”

NCTA always recognized the need for a strong bus network. “The proposed rail system has been carefully planned to integrate with the existing bus routes,” with convenient bus transfer facilities at outlying stations and where bus routes intersect rail lines at stations. Through coordination, travel times can be reduced, large numbers of passengers will be attracted to bus and rail services, and the bus companies can eliminate many of their costly downtown lines.

“The legal processes of WMATC . . . assure that the private companies will not be at the mercy of NCTA’s view as to what is an appropriate division of transit-rail fares.” WMATC is required to set fares that ensure D.C. Transit System will have revenue to meet operating costs, interest, and a reasonable profit:

This fact, coupled with the company’s own forecast of a continued bus market producing some \$30 million in annual bus revenues, makes it clear that the protections the company requests are wholly unnecessary.

In sum:

Thus, the present bill and earlier legislation (1) assure private operation of a publicly financed and publicly owned rail system under contract by the best professional transit executive team that is available; (2) preserve existing rights of existing bus companies; (3) prevent NCTA from acquiring any private bus company in whole or in part; and (4) prevent NCTA from operating or making agreements for the operation of bus service competitive with private transit companies.

An appendix addressed Chalk’s use of quotes from McCarter’s 1962 testimony on a national program. NCTA’s position was not inconsistent with that testimony:

The present program calls for \$150 million in direct Federal and District of Columbia grants, and also calls upon the Federal and District of Columbia governments to make their credit available to support transit bonds.

There has never been any question that the Washington system needs this kind of direct public support. The 1962 statement referred to the fact that rapid transit systems cannot support all of their capital requirements.

Also, the 1962 statement referred primarily to older existing rapid transit system – not entirely new systems. The new system proposed for Washington will be a much more economical operation, and as stated by the Administrator before the committee, it can reasonably be expected to repay two-thirds of its capital costs.

Chalk also referred to a part of the 1962 testimony indicating that the rail system would have to be coordinated with local bus operations, and that acquisition of the bus companies was one way to achieve this. In that testimony, the appendix stated, McCarter was referring to NCTA’s 1962 plan for the Washington area that had not yet been made public at the time of the testimony:

He stated that Washington’s system would have to be coordinated closely with the existing bus operations. He also stated that among the ways to get proper coordination would be (1) to buy Mr. Chalk’s company and consolidate it with the rail system, and (2) to lease the rail system to Mr. Chalk. He also pointed out that Congress and the community would have to decide how to handle the problem.

McCarter had not said that either option was necessary for coordination, only that they were possible approaches. “That testimony did not advocate either.” Purchase of the bus company

was one way to achieve coordination, but the question was whether “such a step is necessary or desirable – especially where the bus companies involved are prosperous and have every reasonable prospect of continued prosperity.” However, coordination can be achieved by agreement and through WMATC’s regulatory commission without purchase. [pages 265-273]

### **To the Senate Floor**

The Senate District Committee, in executive session, approved H.R. 4822 unanimously on August 18, unchanged from the House version – even retaining the bill number. Announcing the vote, Senator Bible said, “I am very hopeful we can secure very fast action by the Senate and the bill will soon be . . . on its way to the President.” (One member of the committee, Senator Winston L. Prouty (R-Vt.) was absent but said later he would have voted in favor of the bill.) [Eisen, Jack, “Subway Bill Cleared by Senate Unit,” *The Washington Post and Times Herald*, August 19, 1965]

On August 23, the Senate District Committee issued a report on the bill. The report discussed the need for rail rapid transit:

There is universal agreement that it is impossible to meet the region’s growing transportation demands by means of highways alone. Recognizing this, the plans of the highway departments of the region are predicated on the development of an improved system of public mass transportation—one that will be attractive to the public. The highway departments recognize that the people of the National Capital region must be provided a real choice between using public transportation, or using their private automobiles, for trips between their homes and their places of employment.

Such a choice does not exist today in any meaningful sense. Due to downtown congestion, traffic intersections, and the number of stops that must be made to pick up and discharge passengers, the existing bus service is far slower than the private automobile. As a result, public transportation patronage has shown no significant growth in Washington for several years despite a steady growth in the population, and in spite of efforts to make bus service more attractive. Today, approximately 40 percent of morning peak hour trips to downtown Washington are made by public transportation. In contrast, in cities such as New York, Chicago, Philadelphia, and Boston, where there are comprehensive rail rapid transit, commuter railroad, and bus systems, between 70 and 90 percent of peak hour trips are made by public transportation. The conclusion is inescapable that if Washington is to achieve a higher percentage of public transit patronage – as it must do if the public pressures on the street and highway system are to be relieved – nothing short of a high capacity, high performance, rail rapid transit system operating in subways and on other exclusive rights-of-way can do the job. [Rail Rapid Transit For The National Capital Region, Report to Accompany H.R. 4822, Committee on the District of Columbia, United States Senate, 89<sup>th</sup> Congress, 1<sup>st</sup> Session, Report No. 637, August 23, 1965, page 9]

After discussing the provisions of H.R. 4822 and details of the planned system, the report addressed bus transportation. The plan “contemplates the continuation of areawide bus

transportation service, and that with the steady growth of population and employment in the region, bus services will have to be expanded to serve a constantly increasing transit market.” NCTA’s system “has been carefully planned to integrate with existing bus routes.” Close and effective coordination between NCTA and the bus companies was essential. NCTA would be expected “to do all in its power to coordinate its service with those of the private bus companies and to cooperate with the management of the private companies.”

H.R. 4822 did not alter the regulatory powers of the Washington Metropolitan Area Transit Commission:

In particular, that Commission will continue to have exclusive power to determine the bus portion of joint bus-rail fares so that the private companies shall earn a reasonable rate of return, and to establish fares for bus services that feed the rail system. Under the compact, it will be the commission’s duty to see to it that such fares are designed to meet bus operating costs, interest payment, and to provide the companies a reasonable profit.

The committee recognized that “the bus companies are the victims of the very traffic congestion they seek to relieve” because delays caused by congestion make buses a less attractive option. Moreover, gross revenue may be reduced “somewhat” by the advent of rail rapid transit. However, NCTA traffic projections indicated that the loss of passengers on lines that would be served by the new rail lines did not mean the companies would “suffer a proportionate decrease in net income.” These new rail lines “would relieve the bus operators of much of their high-cost operations, and permit a more efficient utilization of their equipment and personnel elsewhere.”

That said, the committee recognized that “final judgments . . . cannot be made at this time.” These companies, with their substantial private investment and “initiative and imagination,” had done everything they could “to provide the region with good bus transit services at reasonable fares”:

Accordingly, this committee intends to maintain a continuing interest, not only in the matters of coordination of bus and rail services, but also in the welfare of the investors of the existing private transit companies, should additional legislation be deemed appropriate in the years ahead. It is the committee’s intention that this interest necessarily include continuing concern for the investment rights of private stockholders because they are the foundation of the private enterprise system. [pages 16-19]

The report also discussed the conventional steel-wheel, steel-rail rapid transit train chosen for the system. NCTA had considered alternative systems, including “numerous types of ‘monorails,’ more exotic concepts such as ground-effect machines, and a number of proprietary proposals.” In the end, NCTA concluded that the conventional technology “is not merely the best that is available now or in the foreseeable future, it is the only technology that has been thoroughly tested by experience, and assures the high standards of performance, economy, and public acceptability required to meet today’s urban mass transit problem.” Experience in recent years in other cities will allow NCTA to benefit from “the newest developments in the art” for the Washington area. The committee, therefore, was convinced that the conventional option

“provides the best available technology and offers the best promise of preserving and protecting the beauty and dignity of the Nation’s Capital.” [page 20]

The report concluded:

In the judgment of your committee, the time for action has arrived. There is no questioning the soundness of the investment. The rail rapid transit lines and related facilities are essential to the preservation of the beauty, dignity, and livability of the National Capital, to the welfare of the people of the District of Columbia, and to the orderly future development of the National Capital region.

Your committee recommends H.R. 4822 to the Senate as soundly conceived, urgently needed legislation, and urges its adoption. [page 21]

Following committee approval, McCarter confirmed that if the Senate approves the bill, riders could be boarding cars in 1971. The first line would run between downtown and Benning Road across the Anacostia River. This line would be first because NCTA planned to put its car yard and maintenance garages at Benning Road where they would be less disruptive near the existing railroad yards and industrial area. NCTA had begun drilling to examine soil conditions, but people would soon see many more drillings after enactment of the bill. If all went well, groundbreaking could be held in February 1967. [Flor, Lee, “1971 Is Subway Target If Senate Passes Bill,” *The Sunday Star*, August 22, 1965]

On August 25, the Senate took up H.R. 4822 shortly after the noon start of business. Jack Eisen described what happened:

No sooner was the daily prayer concluded at noon than Chairman Alan Bible (D-Nev.) of the Senate District Committee moved that three city bills on the routine Senate calendar – one of them the subway measure – be called up.

The subway bill was approved by voice vote, with a brief statement by Bible and an even briefer one by Senate Majority Leader Mike Mansfield (D-Mont.). It was all over by 12:02 p.m.

Grace Bassett described the approval in the *Star*:

Action came immediately after the Senate met at noon . . . . The Senate accepted the House bill, without amendment.

That was the unanimous recommendation of the Senate District Committee, Chairman Alan Bible, D-Nev., told his colleagues. “The District of Columbia has no greater need today than a rapid rail system,” Bible said. “This issue has been the subject of study, restudy and study again. Now is the time for action,” Bible concluded.

Majority Leader Mike Mansfield, one of the few senators on the floor for the vote, said he was glad that Bible had stressed the bipartisan unanimity with the views of his District Committee on transit.

The move for immediate passage was cleared with the House leadership, as well as with the minority and majority leaders in the Senate, according to Mansfield

Eisen said the speedy approval “seemed anti-climactic” after 10 years “of talk, studies, politicking and controversy and a shattering House defeat in 1963.”

Because the Senate District Committee had decided to bring the bill to the floor as H.R. 4822, not S. 1117, Senator Bible was deprived of technical authorship of the landmark bill. Credit would go to Chairman Whitener. However, the committee had a reason for leaving H.R. 4822 untouched:

Backers of the system feared that any Senate amendment or action that might require House concurrence might delay or cripple the transit program by forcing another round of controversy.

With Senate approval, the bill could be sent without delay to President Johnson for approval.

His approval did not mean work would begin. Although H.R. 4822 authorized funds, they could not become available to NCTA without an appropriation act. The expectation was that President Johnson’s request for a supplemental appropriation bill would ask for \$15 million to begin detailed engineering work. Approval, however, was not assured as Senators Brewster and Case made clear in a statement to reporters. The appropriation was crucial, but they warned that the funding request was “a potential target – and a large target – for those who would seek to undermine the program by denying it necessary funds.”

The Senators did not specify who might block the funds, but the few suspects included O. Roy Chalk and a few Members of Congress who opposed the plan.

Another potential problem was the battle underway in the House over the Johnson Administration’s home rule bill for the District of Columbia. The Senate had passed the bill, but House District Committee Chairman McMillan was threatening to hold up all other District legislation to block the plan. [Eisen, Jack, “Subway in D.C. Voted, Bill Sent To White House,” *The Washington Post and Times Herald*, August 26, 1965; Bassett, Grace, “District Subway Plan Sent to White House,” *The Evening Star*, August 25, 1965; the record of the Senate passage is distorted by material added after the fact but can be found at: Rail Rapid Transit for the National Capital Region, *Congressional Record-Senate*, August 25, 1965, pages 21650-21657]

*Star* and *Post* editors were delighted by congressional action approving the bill. The *Star* recalled that the concept had “first earnestly” been advanced in the Mass Transportation Survey of 1959, but “suffered one frustration after another.” However, “with the Senate’s swift approval yesterday, Congress has at last given substance to the dream.” The significance of the event could “hardly be exaggerated.” As the region spread into the Maryland and Virginia countryside,

“stresses and strains [had] already changed the face of Washington in a dozen ways,” none more than the need for better transportation:

The District’s relatively modest freeway system is an absolute necessity if the central city is to retain its vitality. But an endless proliferation of highways would destroy many of the very values which must be saved. The vital role of rapid transit, sufficiently attractive to woo commuters away from their autos in large numbers, is to fill this gap.

The Senate District Committee deserved credit for the decision to refrain from amending H.R. 4822 “and to express its views and safeguards in its official report.” That was “most probably the key to its passage” in the Senate with “lightning-like” speed.

Much work remained to be done, and the result would be a system that barely reached beyond the District border. “For the moment, however, it is quite enough for anyone that a start finally has been made possible. With its voice vote of approval, the Senate marked a milestone in the life of the city. [“The Transit Milestone,” *The Evening Star*, August 26, 1965]

*Post* editors also cited the “years of planning, strife and disappointment” that finally had come to an end following the Senate’s swift approval of the bill. “Under the leadership of Chairman Alan Bible the Senate District of Columbia Committee closed ranks splendidly to give the bill a unanimity of support that reflected the feeling of the District’s residents and business community.” Supporters, however, “must not yet pause for celebration.” The urgently needed appropriation funds “could easily be lost in the backwaters of House subcommittees where several powerful opponents of the subway still lurk.” Nevertheless:

Under the most fortuitous circumstances Washington will now have an operating subway before the early 1970s. There should be no further delay. [“Subway at Last,” *The Washington Post and Times Herald*, August 28, 1965]

A *Post* article began, “Some said it would never happen, but it did.” After describing the long history of “work, marked by controversies and personality clashes and frustrating setbacks,” the article discussed the planned system. “It isn’t something out of Buck Rogers,” a space adventure comic strip that took place in the future, nor did it “resemble the stop-and-go streetcar system on which Washington commuters depended for six decades.” NCTA engineers planned to design “sleek, smooth, quiet trains” consisting of up to eight cars capable of speeds as high as 70 miles an hour between outlying stations. The trains would not “mix with any other form of traffic”:

The trains will be operated by a single crewman – a motorman – but the system will be automated as to speed, safety and the rate of acceleration and deceleration.

The cars would be 75 feet long and have 85 seats, with a maximum capacity of 126 riders. The four doors on each side of the cars would allow for “speedy loading and unloading.” In addition, “Standing loads are foreseen only for one or two stations out of the downtown area.” The system, according to estimates, would carry 50,000 riders each peak period by 1980 in the downtown area. “It could handle about twice that number without putting a strain on the G Street subway.”

Headway between trains could be as little as 1½ minutes in the G Street corridor, every 3 minutes on the Silver Spring and D.C. Stadium lines feeding the east end of the G Street tube, and 6 minutes on the Columbia Heights and Connecticut-Van Ness Street spurs.

The *Post* reported that about two-thirds of the system's 13 miles would be "built by boring a tunnel, a technique that does not even break the street surface except at stations":

The balance would be cut-and-cover, a method that involves cutting the surface and planking it over. This entails some traffic disruption . . . . The longest section of cut-and-cover would be on Connecticut Avenue nw. Other sections would be near D.C. Stadium, along the Baltimore & Ohio Railroad right of way to Silver Spring and near the Pentagon – none of them substantially disruptive.

Engineer Director Lyons said the completion schedule was uncertain. It depended on financing and decisions on traffic and service. "He insisted that a 1970 completion date for the first line is not unduly optimistic." ["Slick, Smooth, Quiet Subway Envisioned – It Took 10 Years of Plans, Frustrations," *The Washington Post and Times Herald*, August 26, 1965]

On September 9, 1965, President Johnson welcomed about 200 guests to the Rose Garden as he prepared to sign the National Capital Transportation Act of 1965. Before signing the legislation, he addressed the crowd, beginning:

Over the years, I have found two distinct schools of thought around Washington in regard to Senators. One holds that Senators should be treated like people. The other school is somewhat more revolutionary and holds that people should be treated like Senators.

The bill I am about to sign today represents a victory for the second school of thought.

So, henceforward, the people—including the House Members – will have what only Senators have enjoyed until now: high-speed subways to take them to and from their work.

(He was referring to the subway connecting the new and old Senate Office Buildings to the Capitol, the only subway in the city at the time.)

The bill meant "justice and progress at long last for the residents of our great National Capital." More people, he said, enter and leave downtown Washington on an average weekday than visit Manhattan Island. "Unless we want to pave the Potomac with bridges, there is little more that we can do to ease the congestion until we have properly balanced our transportation system. And that is what this bill permits us to do." The area's highway system had been "planned on the assumption that it would be balanced by a rapid rail system."

He congratulated Congress "on following through to make this balance feasible." More was needed. "Our goal must be to make the suburbs of Maryland and Virginia a part of this system." He observed that Maryland's legislature had approved the interstate compact and that Virginia was likely to do so in 1966.

Turning to a national perspective, President Johnson said the country had 75 million automobiles, with that number expected to exceed 106 million by 1980. By 1975, total vehicle miles traveled would increase by more than 64 percent:

Our great interstate highway program is meeting the needs for intercity and cross-country travel in this highly mobile Nation of ours. But we must not forget that of the 150 million automobile trips made each day in our metropolitan areas—10 percent of them are for distances of less than 5 miles.

Our most acute transportation problem – one that costs us billions of dollars each year now – is that of local traffic. In a day when our astronauts can circle the globe in less time than many Americans spend driving to and from work, our challenge is real, and it is serious, and it is urgent.

The bill would “help us fulfill our goal of making the District of Columbia the model city for the Nation that Washington ought to be.” He concluded:

As one who still remembers the years of fighting the traffic in Rock Creek Park . . . I am personally pleased to be able to sign this very important and this very long-needed piece of legislation.

He handed the first pen he used to Chairman Whitener. He also handed pens to Senator Bible Maryland Governor Tawes, and Mary Hepburn, president of the Montgomery County Council, among others.

The National Capital Transportation Act of 1965 was law (P.L. 89-173).

By the time Congress convened 90 minutes later, the White House had submitted a request for appropriations totaling \$9,179,000 for NCTA to pay for engineering and design contracts, right-of-way, incidental construction, and to additional staff. Of this amount, \$6.7 million was an appropriation for NCTA. The balance of \$3 million would be loaned to the District, then transferred to NCTA as the city’s share of the initial costs. [Eisen, Jack, “Johnson Signs Bill for Subway, Asks \$9 Million as Starter,” *The Washington Post and Times Herald*, September 9, 1965; Flor, Lee, “Johnson Signs Transit Bill,” *The Evening Star*, September 8, 1965]

In the House, the Appropriations Committee reduced the amount to \$6.2 million as part of the \$4.2-billion supplemental appropriations bill. During floor debate on October 14, Representative Glenn R. Davis (R-Wi.), a member of the committee, introduced an amendment to cut the amount to \$750,000 in engineering funds that would be enough only for soil borings. He argued that NCTA should complete the soil surveys before Congress appropriated additional funds:

I think the wise thing to do and it will not result in any unreasonable or unfair delay in the construction of this project, is to get the complete information with respect to the soil conditions where this subway is to be built . . . . Then we will have a much better idea as to whether we are talking about \$431 million or \$750 million in order to build a subway here in the District of Columbia.

Congress, he said, did not “have sufficient information in order to provide the initial construction funds which will irrevocably commit us to the construction of a subway.”

Chairman Natcher defended the original amount. In the face of several years of controversy about highways and rapid transit, he had always argued for a balanced system. The amount in the bill was less than the White House had requested, but the committee reduced the amount to what the members considered adequate for the balance of FY 1966. He had his doubt that the system could be completed for \$431 million or in 7 years or that the bonds would be retired out of the farebox. However, the Davis amendment “would simply slow down and bring to a halt the beginning of the rapid transit system for the city of Washington. This must not be done.” The House had approved the system, and Chairman Natcher urged the House to reject the Davis amendment.

Also urging rejection were Representatives Denton (“All things considered, I think this appropriation is at a reasonable level to accomplish the necessary planning”) and Nelsen (“We believe we have done everything we need to do to see to it that our dollars are wisely spent and that our Nation’s capital will be given a transit system that we believe they will need in the future”). The House rejected the amendment, 20 to 76. [Supplemental Appropriation Bill, 1966, *Congressional Record-House*, October 14, 1965, pages 26989-26991]

In conference, the House and Senate agreed to the House-approved amount of \$6.2 million. Without ceremony, President Johnson signed the supplemental appropriations act, which included this amount for rail rapid transit, on October 31, 1965 (P.L. 89-309).

### **District Home Rule**

The issue of home rule was far more controversial in October 1965 than the National Capital Transportation Act of 1965 or the appropriation needed to begin work on the rail transit system. With strong backing from President Johnson, including a “must pass” designation, the Senate had approved a bill in July 1965 giving the District of Columbia the right to hold elections for a Mayor, a 19-member City Council, a school board, and a nonvoting member of the House.

Chairman McMillan strongly opposed home rule and had blocked previous Senate-approved bills by holding them in the District Committee. Professor Tom Lewis, in his 2015 history of Washington, D.C., said of the chairman:

Between 1948 and 1966, from the 78<sup>th</sup> to 89<sup>th</sup> Congress, the Senate passed six home-rule bills only to watch them die on the desk of Democratic Representative John Lanneau McMillan of South Carolina. Whenever the Democrats controlled Congress, “Johnny Mac,” as he was known to his constituents in Florence, South Carolina, chaired the House District of Columbia Committee. He called Washington “the last plantation.” Like Senator [Theodore G.] Bilbo [“a white supremacist from Mississippi”] before him, racist but absent of bluster, McMillan thought himself mayor of the District, and acted accordingly. He cut the welfare budget to the bone, passed legislation favorable to Washington’s white business establishment and the Board of Trade, and, whenever a bill was introduced to give autonomy or home rule to Washington, made certain it died in

committee before holding hearings. Home rule would never pass while Johnny Mac was in control . . . .

McMillan and his fellow southerners might have lost on civil rights in 1964 and on voting rights in 1965, but they still could deny Washingtonians full citizenship and the right to elect voting representatives to Congress. Over the years they had thwarted nine home-rule bills . . . . [Lewis, Tom, *Washington: A History of Our National City*, Basic Books, 2015, pages 390-391, 419]

In a letter to all House members on August 17, 1965, Chairman McMillan argued, first, that the Constitution gave Congress authority over the District:

Thus the people of the states, in the exercise of their sovereign power under a free representative government, established the District as their national capital for their own benefit, reserving to themselves continuing control through their representatives in Congress.

A constitutional amendment, not a law, would be needed to change control over District affairs.

Second, he argued that District residents were not interested in home rule:

Contrary to the appearances of great interest in home rule proposals, so far as residents of the District of Columbia are concerned, the House District Committee has not received 50 letters during the past year urging adoption of such legislation. [Eastman, Sam, "McMillan Attacks Home Rule Drive," *The Evening Star*. August 17, 1965]

Supporters of home rule in the House, encouraged by the White House, decided to get around Chairman McMillan this time by securing signatures from other Representatives on a discharge petition. If successful, the petition would force the bill to bypass the District Committee and secure House consideration of the bill against the will of House leadership. Collection of the 218 signatures needed was completed on September 3.

The Washington Board of Trade made its views clear in a full-page newspaper advertisement. The White House-approved bill would "jeopardize the paramount Federal interest in our Nation's Capital." It would result "in Federal-local conflicts regarding the administration of National Capital affairs." Further, the bill "DOES NOT contain an effective, workable Federal payment formula. In removing this existing formula, sponsors of the bill placed political expediency ahead of the long-range interests of the City of Washington." The result was a "fiscal 'half-a-loaf' of local self-government." It would cause "fiscal chaos" for the city because "'half-a-loaf' is the worst possible legislative diet." ["An Open Letter to the United States House of Representatives," *The Evening Star*, September 26, 1965, B-Back Page, emphasis in original]

On September 30, the House rejected home rule and approved instead a bill introduced by Representative Sisk of California by a vote of 283 to 117. It called for an election within 100 days of the bill's enactment to let voters decide if they wanted home rule. If so, voters would select a 15-member charter board. The board would draft a self-government charter and submit it

to voters within 8½ months after the initial referendum. If voters supported the charter, Congress would consider whether to approve it.

Given the challenge of blending the House and Senate bills in a conference committee, House Majority Leader Albert told reporters, “Home rule is a dead duck this session.” [Eastman, Sam, “Congress Dims ’65 Prospects For Home Rule,” *The Evening Star*, September 30, 1965]

Professor Lewis described defeat of the White House-approved bill as unsurprising in view of Chairman McMillan’s views, but this time, the defeat was especially bitter:

This time, though, it was because of sabotage. [As] the bill neared a vote in the Congress, Washington’s Board of Trade sent a mass mailing to almost every newspaper across the country, which declared that many Washingtonians, including an overwhelming majority of local and professional business leaders, opposed the legislation. The ruse worked. Constituents swamped their representatives with letters protesting the bill, and newspapers wrote editorials in opposition. [Lewis, page 401]

With the first session of the 89<sup>th</sup> Congress having ended, Senator Bible flew from his home in Reno, Nevada, on November 30 to meet with Representative Sisk to decide how to proceed on home rule. Charles Horsky interrupted his vacation in Montana to attend the meeting on behalf of President Johnson, who had continued pushing for home rule. During the 5-hour meeting, they agreed to use the Sisk charter bill, with some changes, as the vehicle for securing home rule in 1966.

Senator Bible said the Senate could not accept the Sisk bill in its present form but might do so with several amendments that he, Representative Sisk, and Horsky agreed on. They were concerned about a constitutional issue, namely whether a locally elected board could decide how to run the city even though the Constitution had empowered Congress to “legislate exclusively.” From this concern, Senator Bible and Representative Fisk agreed on five amendments:

1. The board should consist of a mix of elected and appointed members, with the President, Speaker of the House, the president of the Senate (Vice President Hubert H. Humphrey at the time), and the District commissioners making some of the appointments.
2. Allow the President and Congress to modify the charter. Representative Sisk thought that letting the President modify the charter “might raise some hackles” in the House, unless the House had the same authority.
3. The charter board would deal not only with the form of government, but with its relationships with Congress. The Senate bill called for an annual payment to the city, fixed by formula, in lieu of taxes on Federal land and property; this commitment was one of the primary reasons for the bill’s defeat in the House. Representative Sisk said, “The House never will accept the automatic federal payment.”
4. Ensure that Congress votes on the charter before local residents do. This would ensure that Congress had a say in the charter before it was presented to the public for an up-or-down vote.
5. Advance \$500,000 from the U.S. Treasury to pay for the charter board’s activities.

Senator Bible and Representative Sisk could not guarantee their colleagues would go along with the final bill. “The truth of the matter,” Representative Sisk said, “is that it’s a rather touch-and-go proposition . . . whether they’re in favor of any home rule. The question is, ‘will they accept any change?’” Nevertheless, the best route to home rule was for the Senate to amend and approve the Sisk bill, then have the House approve it, too.

If the amended Sisk bill became law, it called for actions that would take at least 210 days before a charter went to Congress. The earliest the city could gain home rule under the new charter would be 1967.

Horsky, who said he would report developments to President Johnson, was “encouraged” by developments. “Senator Bible and Congressman Sisk . . . both want a home rule bill.”

Senator Bible said he was satisfied with the results of the meeting. His decision to pursue an amended Sisk bill reflected his judgment that the House could not be persuaded to pass his Senate bill. However, he said, if President Johnson indicated he was committed to the Senate bill and would use all the power he could command to get it through the House, the Senator would do an about-face in support of those efforts. [Bassett, Grace, “Charter Bill Drive Set for D.C. Home Rule,” *The Evening Star*, December 1, 1965; Eisen, Jack, “Bible, Sisk Agree on Home Rule,” *The Washington Post and Times Herald*, December 1, 1965; Bassett, Grace, “Home Rule Route Mapped,” *The Evening Star*, December 2, 1965]

Although the Bible-Sisk agreement offered a path forward, many home rule advocates were unhappy. Joseph L. Rauh, Jr., chairman of the District Democratic Central Committee, had urged Senator Bible to try to secure approval of the Administration bill. Rauh also had asked Horsky to promote the idea during the strategy meeting. “Senator Bible has now rejected our entreaties and abandoned his own bill.” Regarding Horsky’s position, Rauh said, “If Mr. Horsky’s statement that he is ‘encouraged’ by the compromise means that the administration also has abandoned its bill, one must realistically admit that chances of enacting a bill without help from its sponsors are not good.”

Rauh and other advocates recommended that the Senate go to conference with the House to reconcile the Bible and Sisk bills or attach the Bible bill to another, must-pass bill. Rauh added:

There is no reason to believe a charter group could write a better bill than the one that passed the Senate . . . [and] the only reason for writing a new bill would be to delay or defeat home rule.

Rauh and others planned steps to promote their preferred bill, including protests and lobbying President Johnson and Senator Bible, but Congress adjourned on October 23. No further consideration of home rule or charter would occur until the second session of the 89<sup>th</sup> Congress convened on January 10, 1966. [Carper, Elsie, “Boosters Glum on Sisk-Bible Home Rule Plan,” *The Washington Post and Times Herald*, December 2, 1965; Bassett, Grace, “Home Rule Route Mapped,” *The Evening Star*, December 2, 1965]

As a *Star* editorial titled “Unrest in the Ranks” put it on December 3, “Where all this may lead is hard to say.”

### **Chalk and the Fare Increase**

Throughout debate since the 1959 Mass Transportation Survey about the rail rapid transit system, O. Roy Chalk had refused to cooperate with NCTA. He had tried to gain control of the system. But now, with President Johnson having approved legislation to get the system underway, Chalk reversed positions.

Late in October, he met with McCarter. According to a NCTA spokesman, Chalk said he had opposed the proposal, lost the fight, and now would “fight to make it the best subway in the world.” He added that he had no personal animosity against McCarter. Chalk also initiated cooperation with NCTA on a comprehensive traffic analysis, agreeing that his company’s experts would serve on a technical advisory committee.

Chalk went public on November 2 in a speech to the Montgomery County Chamber of Commerce at the Indian Spring Country Club. He said, “it is my duty to see that the rapid transit system is a great success.” He added, “It is my intention to cooperate in every way” to make it “the best subway-bus system in the world for Washington.”

Chalk acknowledged that he had “ignored” NCTA under Stolzenbach until President Johnson appointed McCarter, “the new and able Administrator” of the agency. He explained his attitude by saying he was never lukewarm. “I am either enthusiastically for it . . . or I am quite the other way, determined to oppose it.” Now, he had “already so advised” McCarter of D.C. Transit System’s cooperation. [Eisen, Jack, “Chalk Vows Cooperation On Subway,” *The Washington Post and Times Herald*, November 3, 1965; Flor, Lee, “Chalk Pledges Subway Help, End of Feud,” *The Evening Star*, November 3, 1965]

While working with NCTA, Chalk was fighting a battle over the fare for using his buses. In June, he had reached agreement with Local 689 of the Amalgamated Association of Street Electric Railway and Motor Coach Employees on a 1-year contract, instead of the usual 3-year contract. It provided for a 15-cent-an-hour wage increase in four steps and improvements in the pension program. The contract gave pension increases to retirees, while offering early retirement for workers whose age and years of service totaled 85. On June 18, workers ratified the contract. [“D.C. Transit Employes Ratify Pact,” *The Sunday Star*, June 20, 1965]

Chalk, according to union president George W. Apperson was interested in an early settlement “so he could get this under his belt so he could apply for a new fare increase.” At the time, commuters paid 85 cents for four tokens, or roughly \$2.13 a week for 10 rides. These prices had gone into effect on April 14, 1963.

Chalk claimed the company was entitled to a 6.5-percent return on its farebox income, but had received only a 3.6-percent return over the previous year. Moreover, the company had lost \$25,127 during the first six months of 1965, with Chalk saying in a statement that the loss amounted to a “decline in net income of 115 percent” compared with the first 6 months of 1964:

We can foresee continued high labor costs and depreciation charges for the second half of this year. In summary, although revenue passengers and revenues for six months are running approximately 1.5 percent ahead of last year, operating costs have increased 2.5 percent over last year. [Flor, Lee, "D.C. Transit Is Expected to Ask Fare Rise," *The Sunday Star*, August 29, 1965]

D.C. Transit System filed an application with the Washington Metropolitan Area Transit Commission to increase the 25-cent fare to 30 cents and the cost of four tokens to \$1. The company, which wanted the increases to become effective on October 17, said that current fares had not resulted in "just or reasonable returns." With increased wages, salaries, and benefits for union and non-union employees, operating costs would increase an estimated \$2 million. If the current fare schedule remained in place, D.C. Transit System would lose more than \$580,000 in 1966. With the proposed fare increases, the company would have a return of 5.58 percent. ["D.C. Transit Asks For 30-Cent Fare," *The Sunday Star*, September 19, 1965]

On October 8, the commission suspended imposition of the new fare for 90 days or until it completed public hearings on the request. It directed the company to provide a copy of its request and documentation to individuals and organizations who formally indicated objections to the increase. At that point, objections had been filed by three citizens, the civil rights group Student Non-Violent Coordinating Committee (SNCC), and Local 74 of the Building Laborers Union.

The commission also ordered that D.C. Transit System was entitled to another year of exemption from the District's real estate taxes, a move that would save the company \$139,376. Under the 1956 charter, the taxes were to be suspended if the company did not have a 6.5 percent profit. [Flor, Lee, "D.C. Transit Fare Boost Blocked, Hearing Slated," *The Evening Star*, October 8, 1965]

Lee Flor told *Star* readers that the commission's decision on the company's request might be affected by a "little-noticed decision by the U.S. Court of Appeals" in April 1965. After the commission approved a fare increase in April 1963, two transit riders, represented by attorney Leonard N. Bebchick, went to court. The court found that Congress kept the bus rates high to allow Chalk to repay the mortgage used to acquire the franchise. Ten years later, "the gamble on traffic levels after the resumption of operations was won":

We think the time has come for the commission to make a careful review and analysis of the earnings experience of [the company] from its inception [in 1956] and of what that experience has meant . . . .

The 1963 fare increase was the first time the commission had been asked to review a change; previous fare requests had been considered by the commission's predecessor, the District's Public Service Commission. The court found that the commission should have considered how much profit the company was entitled to receive. Flor wrote:

The transit commission is concerned, because the court scolded the agency for its reasoning, judgment, and even for the language used when it tried to explain its decision in 1963 to raise transit fares.

The court, Flor continued, “ordered the transit commission to review its thinking and come up with a clearly defined set of reasons for either increasing the company’s fares or keeping them at the same level.” Critics of the new fare increase were likely to raise the court ruling as one basis for their objections. [Flor, Lee, “Bus Fare Hearing to Begin Tomorrow, With New Rules.” *The Sunday Star*, November 7, 1965]

On November 8, the commission opened a public hearing in the hearing room at the Interstate Commerce Commission. Engineer Commissioner Duke, newly elected chairman, was the major hearing officer. Almost immediately a dispute arose between D.C. Transit System and civil rights groups such as SNCC and Americans for Democratic Action (ADA) that had brought about 100 associates to the hearing.

These organizations and other civil rights groups had held a rally the day before to plan their protest against the fare increase. They discussed a bus boycott modeled on the successful boycott in Montgomery, Alabama, in 1955-1956. Roena Rand of the Congress of Racial Equality (CORE) said, “if the people of Montgomery could do it, there’s no reason why we can’t.” Julius W. Hobson of Associated Community Teams suggested putting private cars on bus lines to get boycotters to and from work.

At the rally, the Reverend Philip R. Newell of the New York Avenue Presbyterian Church urged Chalk to “go out and seek his profit elsewhere if he’s not interested in offering public service to this community.” SNCC counsel William L. Higgs said the company was returning a 25-30 percent profit. He argued “this is an unbelievable amount of money to be making, particularly at the expense of poor people who have to ride their buses.” The Reverend William Wendt of the University Neighborhood Council said:

The real issue behind this is segregation. All they want is more white people to ride those buses.

Other speakers at the rally included SNCC national Director John R. Lewis and Washington Director Marion Barry, Jr., and Executive Secretary Edward Hailes of the local chapter of the National Association for the Advancement of Colored People.

At the public hearing, D.C. Transit System’s attorney, Harvey Spear, objected to the appearance of the civil rights groups and Leonard Bebhick who was representing the Democratic Central Committee and the D.C. Federation of Civic Associations:

D.C. Transit’s record on civil rights is as high as any firm in the nation. We don’t want that spoiled by any implication that any single group would be discriminated against by this fare increase.

He argued that these groups were the same ones fighting for District home rule. Now, they wanted to use the hearing as a “political football” in support of their cause. He said he also

would research whether the tax-exempt status of some of the groups would prohibit them from protesting the increase.

General Duke deferred a decision, saying the groups could participate in the hearing. The commission would decide later whether their participation was appropriate. [Flor, Lee, "Bus Fare Hearings Open With a Fight," *The Evening Star*, November 8, 1965]

While the commission concluded several days and night of hearings, the civil rights groups planned a 1-day bus boycott. It took place on Monday, January 24, 1966, focused on the nine-bus routes along Benning Road, NE., but leaders encouraged boycotts of other lines. SNCC's Marion Barry, Jr., told reporters the boycott was 90 percent effective along Benning Road, and about 40-45 percent effective on other lines. SNCC claimed that about 130,000 people stayed off the buses, traveling to and from work in carpools, cars operated by volunteers, some private buses, and by hitchhiking. ["Buses Hit by Fare Boycott, Benning Rd. Effect Held 90%." *The Evening Star*, January 24, 1966; Corrigan, Richard, "SNCC Claims Bus Boycott Was a 90 Per Cent Success," *The Washington Post and Times Herald*, January 25, 1966; "Bus Rider Loss 130,000, Boycott Leaders Say," *The Evening Star*, January 25, 1966]

On January 26, 1966, the three-member commission unanimously rejected D.C. Transit System's rate increase request. The only concession to the company was that it could increase the fare for its money-losing downtown F Street minibuses from a nickel to a dime.

The commission praised the company's good bus service and observed that "uncontradicted testimony establishes that D.C. Transit is performing service at the lowest basic fares of any comparable private bus operation in the United States." The upward trend in ridership was one reason the company could expect to make more money during the coming year. The commission also suggested that the company could bolster its cash position by skipping its annual \$500,000 cash dividends, offering a stock dividend instead to increase investors' equity. (The parent firm of D.C. Transit System, Inc., of the District of Columbia was D.C. Transit System, Inc., of Delaware. Trans Caribbean Airways was the majority stockholder of the Delaware corporation. Chalk was the majority stockholder of the airways corporation.)

In addition, the commission ordered several bookkeeping changes that, coupled with fare income from increased numbers of passengers would produce a net income of \$2 million or 6.03 percent of gross operating incoming. Reckoned on the depreciated value of the company's properties, the return would be 7.4 percent. To achieve these goals, the commission directed the company to take \$1.3 million from a Riders' Fund, a reserve established in 1963 after the court determined that the company had received an unfairly high fare increase 2 years earlier. The fund would now be used to "reimburse" riders by paying for retaining the present fare. Another \$800,000 of the fund would be used toward depreciation reserves. The Riders' Fund would be exhausted in a year, when labor and cost-of-living adjustments were expected to rise again.

Delmer Isom, the commission's executive director, emphasized that the timing of the decision had nothing to do with the bus boycott 2 days earlier. Any reading of the complex, 44-page order would show that it was released when it was ready, not hastily assembled 2 days after the boycott.

Appeals of the decision were likely, but Chalk, from his office in New York, said, “We have not as yet had the opportunity of studying the opinion and we have no comment at this time.” [Eisen, Jack, “Transit Board Rejects Higher Bus Fares Plea,” *The Washington Post and Times Herald*, January 27, 1966; Flor, Lee, “Court Appeal Expected In Ban on Fare Boost,” *The Evening Star*, January 27, 1966].

### **The D.C. Revenue Act**

At the start of 1965, the *Star* expected several transit and highway issues to dominate the news during the year. “The leading issue” was whether Congress would approve legislation authorizing rail rapid transit system for the Washington area, an issue that was resolved when President Johnson signed the National Capital Transportation Act of 1965.

The region also faced pressure to complete work on the 3C charter for transportation planning by the deadline of July 1, 1965, imposed by the Federal-Aid Highway Act of 1965. The region met the deadline, as described earlier.

Another major issue left over from 1964 was the proposal authorizing the city to issue bonds to raise \$35 million in local money to match Federal-aid highway funds and increase the gas tax by a penny to retire the bonds. The *Star* stated that “without the additional borrowing power, the District’s freeway program is absolutely doomed, District officials say.” In 1964, the House District Committee had stopped the bill after holding hearings in May:

Because citizen groups may want to carry their fight against a proposed North-Central Freeway to Congress, this measure may be extremely controversial. Groups opposing the Three Sisters Island Bridge and any new attempt to build a freeway near Wisconsin Avenue NW also may show up to oppose the pending proposal.

District officials would ask the 89<sup>th</sup> Congress for the funds. [“Rapid Transportation Plan Remains A Major Issue,” *The Evening Star*, January 4, 1965]

Lee Flor wrote:

The Washington business community is entering 1965 with the future of its downtown center literally hanging on the fate of two proposals for transportation. Both proposals, one for a \$500 million system of freeways and the other for a \$431-million rail rapid transit system, are in trouble.

According to NCTA’s financial forecasts in 1963, the difference was that if transportation improvements were completed, downtown sales would total about \$817 million by 1980; if not, sales would be around \$567 million. Projecting the results to 2000, the difference was \$947 million compared with \$691.

To fight for both systems, the Metropolitan Washington Board of Trade, the Washington Board of Realtors, the Federal City Council, and Downtown Progress had formed the Joint Committee on Transportation. The committee’s support helped secure enactment of the transit legislation. However, the freeway system also was important:

With the bond issue, the District has a fighting chance to complete its inner loop freeway system. Without it, it has no chance at all. Congress rejected this proposal last year, but the business community is going to try to get it through once more. [Flor, Lee, "Downtown Fate Rests on Two Transit Plans," *The Sunday Star*, January 10, 1965]

President Johnson, a day after his inauguration following his landslide election victory, had referred to the issue in his annual message on the District budget.

The highway program, which is also urgently needed, will be delayed for lack of funds in fiscal year 1966 unless the resources of the highway fund are increased. I am, therefore, again recommending an increase of \$35 million in the loan authorization for the highway program and an increase of 1 cent in the gasoline tax. The new District gasoline tax rate of 7 cents will correspond with the rates in Maryland and Virginia and will yield an additional \$2 million annually, a sum sufficient to retire the \$35 million loan in 30 years. This tax and borrowing program continues the sound policy of financing the street and highway system by taxes based upon use.

Securing the revenue for the District was a two-step process. First, Congress would have to approve, and the President sign, authorizing legislation cleared by the House and Senate District Committees. Second, Congress would have to approve, and the President sign, a District appropriations bill making the funds available for use.

On March 18, the House Appropriations Committee approved a budget that sliced \$31 million from the District's FY 1966 budget, with more than half the cut coming from the school budget. This action reflected District Subcommittee Chairman Natcher's longstanding concern that District officials submitted unbalanced or deficit budgets in expectation of congressional actions on authorizations that ultimately did not take place, such as the failure of the revenue bill in 1964. Chairman Natcher was not willing to appropriate in expectation of an authorization. "Our Committee must present a balanced budget," he said.

He cut the appropriation for District schools, but the committee report made clear that the appropriators, and more specifically Chairman Natcher, wanted the District to advance the city's Interstate freeways. In the *Star*, Grace Bassett wrote:

Rep. William Natcher, D-Ky., made it clear that neither time nor area transit proposals must prevent completion by 1972 of District highways financed 90 percent by the federal government . . . . The intensity of his commitment to the interstate program was reflected in the language of the full committee report, including all interstate projects that can be financed within current gas tax and federal loan revenues . . . . Repeatedly at hearings, Natcher chastised highway construction delays in the face of rising construction costs.

The House committee recommended spending \$4.8 million for seven Interstate projects, and ordered District highway officials to "move" \$1.4 million previously appropriated for a Potomac River bridge and freeway and the northwest link of the Inner Loop.

To accomplish these goals, the report demanded that the city exhaust its borrowing authority for matching funds:

The \$3.9 million in federal loans for interstate roads cleared by the committee exhausts the \$50.2 million of federal loans authorized by Congress for this purpose. Local taxpayers are repaying previous highway loans at the rate of \$2 million annually, including interest. [Bassett, Grace, "House Unit Demands D.C. Speed Road Construction," *The Evening Star*, March 18, 1965]

In early April, Chairman McMillan introduced legislation authorizing the penny increase in the gas tax and \$35 million in additional borrowing authority to keep the city's highway construction program on schedule. The bill also contained other city tax changes to balance the budget, particularly for schools, as submitted by the White House in January. ["McMillan Introduces 2 D.C. Tax-Rise Bills," *The Evening Star*, April 7, 1965; "D.C. Tax Bill Offered, Half That Asked by Johnson," *The Washington Post and Times Herald*, April 8, 1965]

On May 6, Engineer Commissioner Duke appeared before the District subcommittee headed by Representative Thomas H. Abernethy (D-Ms.) that was considering the highway revenue provisions. General Duke disclosed that the total cost of the city's Interstate freeway network, built and unbuilt, had increased by \$100 million to \$600 million. The remaining segments would cost \$360 million, with the District's share being \$36 million based on the 90-10 Federal-State matching ratio. The additional revenue was needed if the city was to finish the Interstate network by the October 1972 end of the Interstate construction program.

General Duke told the subcommittee that the increased cost reflected the rising cost of right-of-way acquisition, the increased price index for construction, and expanded use of tunnels and other impact mitigation features. "Recent experience indicates that right-of-way costs, particularly in highly developed areas of the District, have been increasing between 7 and 13 per cent per year," he told the subcommittee during the 1-hour hearing. [Eastman, Sam, "New Road Costs Rise \$100 Million," *The Evening Star*, May 6, 1965; Clopton, Willard, "Duke Endorses Rise In D.C. Gasoline Tax," *The Washington Post and Times Herald*, May 7, 1965]

Overall, the District's Interstate and other highway projects would cost about \$527 million over the next 6 years, with the District's share totaling \$183 million. Based on current authorized sources, the city would earn about \$117 million during that period. The city needed an additional \$66 million to meet the 90-10 or 50-50 matching shares on Federal-aid projects and the cost of improvements developed with only District funds.

The Abernethy subcommittee approved the bill on July 14 containing the highway revenue increases and other changes. ["Tax Rise Bill For D.C. Gets House Backing," *The Evening Star*, July 14, 1965; "House Group Approves Income, Gas Tax Rises," *The Washington Post and Times Herald*, July 15, 1965]

For several months, Chairman McMillan held the bill while he battled home rule. After the House approved the Sisk charter bill, the House District Committee approved the revenue bill on October 8, leaving time for House consideration on the session's last Monday District Day of the

year. Representative William L. Dawson (D-Il.) had tried to kill the \$35 million in additional loan authority, but the committee defeated his motion by a 16 to 4 vote.

The committee report described the freeways as “urgently needed” and confirmed its “support of a balanced transportation system for the Nation’s Capital.” However, the committee was concerned about community dislocations:

The committee strongly urges that maximum effort be made to minimize the hardship of families displaced by highway construction. The Central Relocation Service must redouble their efforts to help displaced families. District officials must encourage the development of housing units for lower and middle-income families. Full authority must be exercised to alleviate the current crisis situation that exists with respect to housing in the District.

The location and design of future highways must minimize the impact on homes and residential communities wherever possible. Imagination and innovation must be the watchwords of the highway planner. Maximum use of tunneling and utilization of air space above highways for playgrounds and schools should be encouraged if feasible.

A poorly planned freeway can be a terribly disruptive factor in a local community. Use of existing rights-of-way, location of routes beside and over railroad tracks and along natural boundaries, such as rivers must be given first priority by highway planners. Construction of freeways or highways in industrial or commercial areas, particularly those past their economic prime, should be actively considered as an alternative to locations in residential areas.

Full consideration must be given to alternative routes which would minimize the impact of construction on residential communities. Federal officials are urged to cooperate fully with District officials and, to the extent possible, make federally-owned land available if it is not in use.

In a reflection of Peter Craig’s success in creating doubts about the factual basis for the program, the report also said:

Finally, in view of these deep concerns of your committee and other related issues which bulked large in committee hearings, there are indications of a real need for restudy and reevaluation of the highway program of the District of Columbia. Your committee has found that projects for highway needs for 1965 developed in the Mass Transportation Study of 1959 substantially exceeded actual traffic counts. Similarly, the projections of the National Capital Transportation Agency surpasses [sic] actual experience.

Analysis of traffic counts of crossing [sic] to and from the District of Columbia in recent years shows a declining ratio between population growth and daily trips. The forecasts and projections presented by highway officials cannot be reconciled reasonably with other information available to your committee. The projections and forecasts of future needs made by highway officials show trends contrary to actual experience and do not seem to

justify some of the proposed program. Accordingly, a careful, objective review and reappraisal is desirable.

Such restudy should result in a highway system abundantly adequate for the needs of the Capital City and at the same time preserve as much as possible of the original character and beauty of the city with a minimum of inconvenience and dislocation of its citizens and businesses.

Representative Dawson joined Representatives Charles C. Diggs, Jr. (D-Mi.), and J. Oliva Huot (D-NH), and Multer in offering a minority response in the committee report. They argued that Congress had not specifically approved many of the freeway projects. The freeways consumed valuable land area. The program was over-expanded and lacked planning justification. The additional borrowing would impact a “fiscally irresponsible” burden of \$2 million in debt service on Washingtonians. They added that “virtually all elements of the community” opposed the projects.

On October 11, District Day, the revenue bill reached the House floor where it “sailed through without debate or objection,” according to the *Star*. George Lardner, in the *Post*, referred to the “strongly worded 15-page minority report condemning the additional borrowing authority” and suggested it might lead one to expect a bit of debate on the House floor:

There was nothing of the sort. Nobody squawked. Passage by non-voice vote took less than a minute. Eight minutes after it started, District Day was over—with seven bills passed and not a word said about the merits or demerits of any of them.

Finally, House Majority Leader Carl Albert (D-Okla.) took a look around and decided it was time to get a quorum on the floor. The House had some important things to discuss.

[Eastman, Sam, “House Unit OKs Roads Bill,” *The Evening Star*, October 8, 1965; Eastman, Sam, “House Clears D.C. Funds Bill,” *The Evening Star*, October 11, 1965; Clopton, Willard, “Road Program Clears House, Senate-Bound,” *The Washington Post and Times Herald*, October 12, 1965; Lardner, George, Jr., “No-Quorum House, Without Debate, passes 7 City Bills in 8 Minutes,” Potomac Watch, *The Washington Post and Times Herald*, October 13, 1965; Providing Additional Revenue for the District of Columbia, *Congressional Record-House*, October 11, 1965, pages 26489-26495]

With Congress moving to adjourn the session in a week and a half, the prospects for rushing the bill through the Senate were not good. In addition, Senators Case and Tydings of the Senate District Committee were urging a go-slow approach to freeway building while other elements of the bill, such as the section on income taxes, had their critics. [Eastman, Sam, “Revenue Bill Imperiled on Two Points,” *The Sunday Star*, October 17, 1965]

In hopes of completing the legislation before adjournment, Senator Bible held hearings on the bill for October 20-21. Commissioner Tobriner and General Duke urged passage of the bill, but Senator Bible wondered about the urgency of completing action during the current session:

You say you have to have it now. You've got to have it without amendment. Yet the number of witnesses seeking to testify indicates that everybody in the city is far from agreed on the need.

He asked, "Can't it wait until January?"

Tobriner replied that "to be perfectly candid, the District is not going to fall apart if we don't get the money. Anybody with common sense would have to say that. But our services in the city will be impaired," he added, referring to the entire revenue bill, not just the highway portion.

General Duke argued that the District would be unable to seek Federal-aid highway funds without the loan authorization. Questioned by Senator Bible, General Duke conceded that District officials could work on the assumption that the authority would eventually be provided.

Senators Dominick, Morse, and Tydings questioned General Duke and Director Airis on the impacts of freeways on the city and displaced residents. Senator Morse was not reassured when Tobriner stated that under the new District housing law, the city must certify that housing is available at comparable rents before construction can begin on acquired property. Senator Morse asked, "But is the housing here? Will you be moving people from one slum to a worse slum?" He argued that the city and Congress must provide financial assistance to house displaced families. Tobriner told him, "We'd be happy to see it."

An unexpected problem arose because of a seemingly obscure provision that Chairman McMillan put into the House bill that benefitted only one District resident, former GSA Administrator Jess Larson. The provision related to tax relief for the sale of stock in the liquidation of a West Coast transport company. Senator Bible admitted, "Frankly, I don't know what it does." Tobriner said he was willing to accept the provision "as a matter of expediency" because of the importance of the rest of the bill to the city. Other provisions of the bill also raised concerns from members of the committee. [Bassett, Grace, "D.C. Revenue Bill Runs Into Trouble," *The Evening Star*, October 20, 1965; Carper, Elsie, "D.C. Revenue Bill Falsters In Senate Unit," *The Washington Post and Times Herald*, October 21, 1965]

By the end of 2 days of hearings, the bill was essentially dead until 1966. Senator Bible publicly blamed the failure on "adjournment fever," but many provisions of the bill had come under scrutiny, especially during the second day of hearings when citizens and civic groups testified. According to the *Star*:

On the highway issue, residents insisted at Senate hearings that freeways must not be allowed to displace poor people from homes unless new housing [at] comparable rents can be located for the displacees . . . .

One major argument of articulate, well-organized freeway opponents was that the inner loop never had been authorized as a whole by Congress. Instead, Congress voted money, segment by segment.

Bible recognized that Congress had failed to answer the question – "Is there or is there not authority to build the inner loop?"

Senator Bible attempted to call a meeting of the Senate District Committee on October 22. “We’ve got to clear the air.” He told reporters. “My legislative committee is going to face up to the problem: Is there authority for these freeways or isn’t there?” However, he could find only one other member, and canceled the meeting.

When the first session of the 89<sup>th</sup> Congress ended on October 23, the revenue bill was alive, but would have to be considered in the second session that would open on January 10, 1966.

As George Lardner began his Potomac Watch column:

City officials slipped on a king-sized banana peel when they trotted before the Senate District Committee the other day. They tried to get rush approval of a key tax-raising bill before Congress adjourned. And they fell flat on their faces.

They might have had better luck if they had “worked a bit harder at conveying a sense of urgency about the bread-and-butter legislation to pay for programs they think are needed.” For example, Senator Dominick “wondered what the city needed the money for” in view of the fact that Washington’s overall population had been more or less stable for several years. He even questioned why the city needed more money for schools, suggesting that “the public schools might not really be overcrowded.” Tobriner’s response was that the school-age population was growing faster than the overall population and that many students were taught in the basements of schools built in the late 19<sup>th</sup> century:

But Tobriner’s monotone answer [was] largely in generalities. He used the word, “urgency,” several times in his prepared statement, but he didn’t convey the idea.

The only statements in support of the income tax measure were “unread statements dropped into the record”:

The hearing room was full of familiar faces and organizations, such as the Democratic Central Committee – old standbys who show up time and again to testify about the city’s needs at hearings on crime, welfare programs and city appropriations. But when it came to hearings on a money-raising bill to help pay for the programs all they could do was complain about the city’s highway plans.

All things considered, Lardner wrote, “the postponement until next session was inevitable.” [Lardner, George, Jr., “City’s Laggard Tax Raising Plea Lost by Pallid Lack of Urgency,” Potomac Watch, *The Washington Post and Times Herald*, October 26, 1965]

On October 26, the *Star* reported that Chairman McMillan had appointed a special subcommittee to study revenue-raising measures for the District of Columbia. Representative Whitener was chairman of the special subcommittee, which included Democratic Representatives Dowdy and Fuqua and Republicans Harsha and Roudebush. The article did not state when Chairman McMillan appointed the subcommittee, but he appeared to do so after the House District Committee approved the revenue bill without several of the revenue ideas the city and President Johnson had recommended. In addition to studying revenue options, the subcommittee would consider the possibility of bringing the city’s income tax brackets in line with Federal brackets.

## **D.C. Freeway Revolt and the Coming of Metro**

### **Part 4**

### **Battling the Revolt**

#### **Unfinished Business**

In 1965, officials made progress in addressing the area's transportation problems. They secured funding to begin the rail rapid transit system the area needed. However, they would have to go back to Congress in 1966 for more money for the system and approval of the interstate compact authority to take over the program from NCTA. Moreover, the freeway network was stymied by citizen opposition, official obstacles, and the lack of District matching funds to complete the Interstate routes before the 90-10 construction program ended in 1972.

As for the rail rapid transit system, it had enjoyed some success in 1965, but as 1966 began, its future had many question marks. George Lardner, in his final month writing the Potomac Watch column, had this to say:

If the city and the suburbs can't unite on a program for a metropolitan rapid transit system, it's doubtful they can ever get together on anything.

In 1965, "everybody on the civic mailing lists and his brother were cited in support of Washington's subway bill."

Now comes "the tedious question of who's going to be in charge of the show." The District Democratic Central Committee had come out "with a blast against 'the current proposal for an interstate compact.'" The committee was demanding that the District have majority control of the 25-mile system, which was to be built mainly in the District of Columbia. As constituted in the draft, the interstate authority would include two members each from the Northern Virginia Transit Commission, Maryland's new Suburban Transit Commission, and the District Commissioners. The committee argued that the city could "be outvoted on every significant issue affecting the future of the system, including such essential matters as the location of routes and the setting of fares and schedules."

The Joint Transportation Commission, key activists for the system, was working to "help keep it from rolling onto the wrong track." It was working to secure the compact and extend the system into the suburbs:

But the fussing over how to do it is just getting started. Unless the Joint Commission can head it off long enough to get the interstate authority into business, development of a regional system could suffer a serious setback.

Jerome Alper, the commission's counsel, addressed the Democratic Central Committee's objection by pointing out that on issues such as fares and service, the interstate authority would have to approve decisions by a majority vote that includes at least one member from each jurisdiction:

A financing plan and a development plan, which would include the “service expected” and “probable fares,” could be put through by unanimous vote of all members from only two jurisdictions, but this was done, Alper says, simply “to assure that no single jurisdiction, seeking preferential treatment, could use its veto in such a manner as to paralyze the Authority.”

Even in that case, the decision would not impose “any obligation or commitment upon the dissenting jurisdiction” or the Federal Government. Congress would still have to approve the decision:

If anything, the compact seems to bend over backward to preserve local autonomy.

But none of this seems to satisfy the Central Committee. It apparently wants the city to run the whole show simply because the city is going to get rapid transit first. The suburbs are going to have to pay for what they get and probably for some of what the city gets, too.

Polly Shackleton, speaking for the committee, said the compact, which the General Assembly of Maryland had approved, should be changed to give the city “more protection”:

“It’s really suburban versus center city interests that I think are at stake here,” she says.

The interests of both are at stake. They won’t be served by pitting them against each other. [Lardner, George, Jr., “Democratic Group Throwing Rocks,” Potomac Watch, *The Washington Post and Times Herald*, January 5, 1966]

In the city, Director Airis and Planning Director Grant were trying to face reality, including efforts to discourage people from using the new freeways during peak periods. Lardner talked with highway officials about operational issues, including a new technique called ramp metering:

“We’re building a minimum system,” says city Highway Planning Director Albert A. Grant. “It’ll have a certain capacity and we might say that’s all the capacity we’re going to provide, that’s all the cars that are going to come in on the freeway system . . . .”

The key to the setup, the highway director says, would be a traffic control headquarters, “including some computerization of the street lights on the main arteries of the city and feeders to the freeways.”

Red lights would stop traffic moving along on-ramps until traffic would allow merging onto the freeway. The problem was ensuring motorists would obey the stop:

“Of course,” Airis says, “we might have trouble with people who wouldn’t pay any attention to the lights. If a light lasts too long now, drivers will wait just so long and then go ahead anyway. They’ll figure the light is broken or that they’ve just been sitting too long whether it’s broken down or not.”

But, says Grant, there could be signs telling drivers the lights are intentionally long—and automatic cameras to snap the photos of cars that insist on breaking the rules.

“We’re checking the other cities to see what they’re doing along this line,” Airis said. “And we’re checking with the hardware manufacturers of signal equipment to see what they expect to come up with over the next 20 years.”

Drivers blocked from the freeway would be channeled by the same lights onto alternate routes and regular streets taking them in the same general direction.

One concern was that freeway opponents would interpret these techniques as a way to “prove” the city needed more freeways. Airis and Grant discounted that possibility:

The result, they say, will be to promote more subway construction, provision of exclusive bus lanes and other methods of avoiding an endless program of highway construction.

At the same time, the highway officials feel that such controls would only produce “chaos” if they were attempted now without building the basic freeway system. To dump all “essential movements” over the next 20 years, including tourists, onto city streets, Grant feels, would foul up the economy.

Lardner thought that seeing highway officials thinking of ways to operate the freeways more efficiently was “a good sign”:

But the controls will have to be esoteric stuff.

It could prove difficult to figure out whether to block off traffic in suburbia from getting onto the freeways because they’ve started to get crowded along the downtown stretches. And if highway officials don’t do that, they will, instead, have to block off city drivers at interchanges closer in? Even a computer might have trouble deciding. [Lardner, George, Jr., “Esoteric Highway Controls to Be Needed Here,” *Potomac Watch*, *The Washington Post and Times Herald*, January 3, 1966]

(Although ramp metering had been installed on Chicago’s Eisenhower Expressway in 1963, the concept was still fairly new in the mid-1960s. According to an FHWA study:

The first metered ramp, as we know it today, was installed in Chicago on the Eisenhower Expressway in 1963. This first application, however, was preceded by successful tests of the effectiveness of metering traffic entering New York tunnels and ramp closure studies in Detroit. It is interesting to note that the initial Chicago study featured a police officer, stationed on the entrance ramp, who stopped traffic and released vehicles one at a time at a rate determined from a pilot detection program. [Piotrowicz, Gary, and Robinson, James, *Ramp Metering Status in North America – 1995 update*, DOT-T-95-17, FHWA, June 1995, pages 2-3])

(Although the District of Columbia did not employ ramp metering, motorists today can encounter meters on suburban freeways.)

Even if the opposition to the District's Interstate network could be overcome, the city would make little progress without enactment of a revenue bill providing additional loan authority and a penny increase in the gas tax. The legislation depended on action by Senator Bible's District Committee, but the committee's Senator Tydings had a different priority. Critics, as he knew, had asked why the city was trying to speed motorists into the downtown and government core where parking was limited. On January 6, even before the start of the second session of the 89<sup>th</sup> Congress, he opened hearings on easing downtown parking problems. He was thinking about asking Senator Bible to hold off on the revenue bill, which might be a good vehicle for any bill resulting from the hearings.

Opening the hearings, Senator Tydings said he wanted to "determine whether the creation of a balanced transportation system in the Washington metropolitan area requires action by the Congress and the District of Columbia to insure that there are an adequate number of properly located parking facilities to meet the requirements of the rapidly growing number of visitors and residents in the Nation's Capital." He also wanted to know how to control parking "so as to insure that parking is a functioning part of a balanced transportation system." [Eastman, Sam, "Parking Needs Spotlights As Tydings Opens Hearings," *The Evening Star*, January 6, 1966; Eisen, Jack, "Senate Group Is Told Of City's Parking Lag," *The Washington Post and Times Herald*, January 7, 1966]

Contemplating the hearings, Lardner referred to a study by Alan M. Voorhees and Associates that "found that the major motive of Washington area drivers who use fringe parking lots was not to avoid downtown congestion but to avoid downtown parking costs." The District, Lardner wrote, had been trying to do something about parking since the early 1940s. In 1942, Congress gave the city a municipal parking agency "but it didn't show much gumption for getting into the downtown garage business." When it tried to do so in the late 1950s, Representative Broyhill ("the friendly suburbanite") and Chairman McMillan "teamed up in 1961 to put a rider on a city revenue bill that emasculated the parking agency."

The District commissioners had been promoting a weak parking bill, but without success. The Tydings hearings "can only be helpful." Lardner added, "The private parking lobby has had its way too long." As for linking a parking measure to the revenue bill, "it's not so easy to get excited about the Senator's strategy":

The idea seems to be to get the highway lobby working for the package since the revenue bill contains roadbuilding provisions needed to keep the city's freeway program going.

Of course, Senator Tydings had "been rather critical" of the District's Interstate plans:

Some suspect he'd just as soon see the roadbuilding sections of the revenue bill scuttled if he can't get the parking authority too.

It was a dangerous strategy because the House District Committee had "shown itself much more interested in protecting private parking interests than in giving the city the money it needs." As a result:

Perhaps a parking rider is worth a try, but tacking it onto the revenue bill seems like hitching a Mack truck onto a Volkswagen going uphill. [Lardner, George, Jr., "Temporary Parking Lots No Solution To One of Our City's Key Problems," Potomac Watch, *The Washington Post and Times Herald*, January 10, 1966]

On January 14, Senator Tydings introduced his bill to establish a public parking board that would have the authority to buy and condemn land; operate, lease, or sell parking lots; and coordinate automobile parking in the city with bus, subway, and highway transportation programs throughout the region. Grace Bassett, referring to the District commissioners' bill, said the Tydings bill "was one quarter as long, and far more sweeping in the powers that would be given public officials over parking rates and lot use and expansion."

In doing so, Senator Tydings emphasized that, "The overriding philosophy of my bill is that parking is an integral part of a balanced transportation system." He added that he was "leaning strongly" toward adding his bill as a rider to the revenue bill pending in the committee. He argued that the bill would stand a better chance with his rider attached. However, as Bassett pointed out, Senator Bible was "generally opposed to riders." She added that on the same day as release of the Tydings bill, Senator Bible had "reasserted his interest in moving the loan and tax proposals through Congress soon." [Bassett, Grace, "Tydings Bill Would Put D.C. in Parking Business," *The Evening Star*, January 14, 1966; Carper, Elsie, "Parking Board Given Condemnation, Rate Powers in New Bill," *The Washington Post and Times Herald*, January 15, 1966]

On February 18, Senator Bible was ready to release his revenue bill containing the highway revenue measures to provide the city's matching funds. It also would raise taxes on beer, alcohol, telephone services, and tobacco products. In addition, it addressed the Federal payment to the District in lieu of taxes on Federal property, raising the limit from \$50 million to \$61.7 million for FY 1967. [Bassett, Grace, "5 District Tax Boosts Sought by Sen. Bible," *The Evening Star*, February 18, 1966; "Bill Readied Asking New City Taxes," *The Washington Post and Times Herald*, February 18, 1966]

By then, President Johnson had introduced a new element in the District's freeway battles.

### **President Johnson Intervenes**

With Congress having authorized and appropriated funds for rail rapid transit, President Johnson intervened on January 14, 1966, to jump start the highway component of the area's balanced transportation network.

He wrote to Engineer Commissioner Duke, beginning with the observation that, "Controversy continues to surround the plans for the interstate freeway system within the District of Columbia." Citing objections in Congress and "strong public resistance to some of the plans," he said that full support "requires every reasonable assurance that the plans have met the tests of the most careful and objective scrutiny, made in the light of the most recent data and circumstances."

President Johnson urged the Policy Advisory Committee, which General Duke still chaired, to “consider the desirability of a review of the freeway plans by a disinterested consultant with a high capability in systems analysis and operational research.” The consultant should examine the methodology and assumptions on which the highway network was based, as well as determining “the extent to which present data and other developmental information tend to validate the underlying forecasts.”

The goal was to assure the Federal Government and District residents “that whatever system may finally be built is based not only on the best techniques of highway planning, but also on a full appreciation of all significant needs and values.” He added that if General Duke agreed to initiate the independent review, it should be completed by April 1, 1966. “Review by that date would not delay the highway program . . . .”

President Johnson’s letter remained secret until January 25 when his annual message to Congress on the District of Columbia budget discussed “the dimensions and locations of the interstate freeway system within the District.” Concerns “should be promptly resolved”:

The magnitude of these projects, however, makes it important that both the Federal Government and the Washington community have full assurance that there will be no needless expenditures of moneys or dislocations of persons and businesses.

Some steps were already being taken. In an apparent reference to the K Street tunnel, he said “the Policy Advisory Committee was considering relocation of a portion of the Inner Loop Freeway.” He added:

I am requesting the Policy Advisory Committee to consider whether it should secure, in conjunction with the National Capital Planning Commission’s work on the 1985 comprehensive plan, a review of present highway plans. This review would examine not only methodology but also the basic assumptions regarding dislocation of families and businesses, real costs, Federal needs, and other community values on the basis of the most recent data available.

He asked for the study to be completed by April 1, 1966:

The Commissioners have advised me that the status of the most controversial items – the north leg of the inner loop and the northcentral [sic] freeway – is such that in the next few months there would be no major expenditures on these projects in any event except for planning.

He concluded his section on the highway program by saying he was “encouraged by the close cooperation which has been evident among the Federal and District agencies with responsibilities for developing the District’s transportation system.” He added, “Continued cooperation will insure a coordinated and efficient transportation network—one which will best serve the needs of the Nation’s capital.”

In releasing the text of the President’s January 14 letter, General Duke informed reporters that the Policy Advisory Committee had met on January 21 to discuss the full-scale review. Members

decided to employ management experts who had not been involved in freeway studies. To maintain objectivity, NCPC would develop the scope of work and advise the committee on consultant selection. In addition, NCPC and the Bureau of the Budget would assume staff responsibility for the study. General Duke confirmed President Johnson's statement that no major decisions on the highway and bridge controversies were planned before April 1.

The *Post* said the Policy Advisory Committee "has ordered a hard-nosed, McNamara-style analysis of road building plans for the Capital." Secretary of Defense Robert S. McNamara had brought the concept of "systems analysis" from his work at the Ford Motor Company to the Defense Department. Systems analysis involved breaking a complex problem down to its components, each of which can then be studied and resolved.

General Duke was confident the study would show that planning for the freeway system had been based on correct assumptions about population growth, projected traffic volumes, and potential impacts. "If we find we have overlooked anything," he told reporters, "we will revise our plans accordingly." [Flor, Lee, "D.C. Highway Review To Question Freeways," *The Evening Star*, January 25, 1966; Morgan, Dan, "Road Building Plans Under New Analysis," *The Washington Post and Times Herald*, January 26, 1966]

The Policy Advisory Committee selected Arthur D. Little, Inc., of Cambridge, Massachusetts, to conduct the freeway study. The company, in a January 30 advertisement seeking a secretary for its Washington office at 1735 I Street, NW., described itself as "the country's largest and oldest private consulting research firm." (The secretary had to be "an excellent typist" who could take shorthand at a minimum of "120 wpm.") ["D.C. Hires Firm to Study Road Plans," *The Evening Star*, January 27, 1966]

### **Revisiting Home Rule**

In the second session of the 89<sup>th</sup> Congress, the home rule initiative was pending. Back home in Florence, South Carolina, Chairman McMillan of the House District Committee told a reporter from United Press International (UPI) that home rule didn't have a chance. He debunked one common explanation for his opposition:

He said he opposes home rule not because of a large number of Negroes in Washington but "because the city was created to be governed by Congress."

He also thinks that there is a liberal sprinkling of "communist sympathizers" behind the drive for self-government, UPI said.

"Don't get me wrong," McMillan was quoted as saying. "There's a lot of good people in it, but a lot of people would just like to take the Nation's Capital over. Some of these are known to be communist sympathizers."

Joseph Rauh, chairman of the District Democratic Party and ADA vice chairman, held a press conference on January 4 to unveil the strategy for securing home rule in the District. The preferred option was to attach the Senate-approved home rule bill as a rider to a bill approved by a committee whose chairman was favorable to home rule. He cited possibilities such as

Chairman Adam Clayton Powell (D-NY) of the Committee on Education and Labor and Chairman Dawson of the Committee on Government Operations.

The other option was to send the Bible and Sisk bills to a House-Senate conference to reconcile differences. This option would work if Speaker McCormack, instead of Chairman McMillan, picked the House conferees. The House could then vote on a modified Senate bill. Rauh said the difference in the House vote was 24 members, but 4 had already said they would vote for the Senate bill. Pro-home rule forces had to change only 20 votes and, with “an all-out effort” by President Johnson, “we can make it.” [“‘Red Sympathizers’ Support Home Rule, McMillan Asserts,” *The Washington Post and Times Herald*, January 5, 1966; J. P. Leifermann of UPI conducted the McMillan interview]

Still, Senator Bible believed the Sisk charter bill was the “best hope.” He rejected the Rauh option of attaching the Senate bill as rider to a House bill. “Home rule must stand or fall on its own, he said. “I do not favor attaching home rule to any other legislation.” The suggestion for a conference committee with House participants appointed by House leadership would involve breaking tradition. Grace Bassett reported:

There have been some informal indications that McCormack would be willing to do that if he were actively encouraged by President Johnson.

The President has remained aloof from the controversy this year. Last session, the White House engineered a massive lobbying effort to wrest the mayor bill from the House committee by petition. But on the floor, the House voted a substitute charter-board bill sponsored by Rep. B. F. Sisk, D-Cal.

According to Majority Leader Albert, the votes were simply not there for the Senate bill. [Bassett, Grace, “Charter Bill Called D.C.’s Best Hope,” *The Evening Star*, January 11, 1966]

One target for home rule supporters was the Board of Trade. On January 11, the D.C. Coalition of Conscience met for an hour with F. Elwood Davis, the board’s president, and William Press, its executive vice president, regarding the board’s letter to newspapers around the country claiming Washingtonians “are opposed to pending home rule legislation.”

After the meeting, the coalition issued a statement accusing the board of a “stepped up campaign” that involved misrepresenting the city’s attitude toward self rule:

It is now time to say that the most potent opposition to effective Home Rule is not so much ‘up on the hill’ as it is in a relatively small group of men related to the Board of Trade and purporting to speak for the entire business community who do not want to relinquish the inordinate power they have long exercised over the affairs of the city.

The board’s claim was “an unjustifiable and irresponsible defiance of the public interest.”

In a telephone interview, Press denied a stepped up campaign. “It’s a perfectly normal thing if you’re attempting to influence Congress to use all the facilities out in the states.” As for whether

Washingtonians opposed home rule, he said, “This is our opinion.” Although the board opposed President Johnson’s bill, it favored voting representation in Congress for the city.

Press said the board agreed to give the coalition a list of the newspapers that had received its letter. The Reverend Walter E. Fauntroy, chairman of the coalition, said the group would send a rebuttal to all the newspapers. He added, “There’s a distinct possibility of direct action. There is the possibility of demonstrations with a big D.” [Lotito, Ernest A., “Trade Board Is Hit By Rights Group on Home Rule Action,” *The Washington Post and Times Herald*, January 12, 1966]

President Johnson, in his State of the Union message on January 12, referred to several pending District issues. He asked the House of Representatives to “complete action on three programs already passed by the Senate – the Teacher Corps, rent assistance and home rule.” He did not elaborate. During a press conference the next day, a reporter asked President Johnson about home rule:

Q. Mr. President, last night in your message you urged the House to act on a number of Senate-passed bills; one was home rule for the District of Columbia. I wonder if you are supporting the Senate version of this home rule bill, or if you would be for a compromise?

THE PRESIDENT. I am supporting the Senate version, as I did when I recommended it to the Congress. It's a matter for the Congress to work out, but my position is abundantly clear. I favor the Senate bill. I did when it was before the Senate. I did when it was defeated in the House.

He did not discuss the issue involving the Bible bill versus the Sisk charter bill. His suggestion that Congress would have to work it out prompted the *Post* headline: “President Won’t Press Home Rule.” [*The Washington Post and Times Herald*, January 14, 1966]

Clergy on behalf of the Coalition of Conscience picketed the Board of Trade on January 17 in protest of its letter to newspapers. The Reverend Fauntroy told reporters, “We disbelieve that the majority of Washington civic, professional, and business leaders don’t want home rule.” He said “an overwhelming number” of those organizations supported it. The coalition planned a week of events to dramatize the support for home rule.

The *Post* reported:

Inside the building, Board employees grinned at the pickets through the plate glass front door with its sign: “Member Of The Active Force Behind Our City’s Progress.”

Two well-dressed men left the building, smiled tolerantly at the pickets and then stepped into the warmth of a chauffeur-driven Lincoln, registered to the Riggs National Bank.

Davis issued a statement:

We don't think this activity is constructive, particularly when directed at this organization that has been a leading and effective influence in the development of Washington . . . .  
[Landau, Jack C, "Trade Board Home Rule Views Hit," *The Washington Post and Times Herald*, January 18, 1966]

In the Senate, Chairman Bible appointed Senators Kennedy and Prouty to work with him to confer with the White House and House leadership to secure home rule approval. Senator Bible preferred the Senate bill, but thought it might have to be revised to secure House approval. Perhaps the provision on the Federal payment in lieu of taxes on government property would have to be dropped or elected officials would have to be nonpartisan. He had "a built-in feeling that we may have to use the framework of the Sisk bill, but nothing would make me happier than to see a modified Senate bill. This would be 'Home Rule Now!'"

At the same time, he said, some District Committee members, including Senator Morse, "feel very firmly that we should stay very close to the Senate bill." ["Senate Group Is Named To Push for Home Rule," *The Washington Post and Times Herald*, January 26, 1966]

By the end of January, the D.C. Democratic Party had distributed pamphlets to constituents of 41 Democratic members of the House of Representatives who had voted for the Sisk bill. The pamphlets asked, "Did you know your Congressman voted 'No' to democracy in the Nation's Capital?"

At least one of the targeted Democrats was, according to Elsie Carper, "plenty mad" at the "blunderbuss campaign." Representative Hugh L. Carey (D-NY), who had a liberal voting record, had supported tactics to pass the home rule bill, even signing the discharge petition. However, when the House voted the home rule bill down, he voted for the Sisk bill. Referring to the "crack-pot pamphlet," he said, "I can't figure out how they think they are going to help home rule by getting me defeated and by electing some conservative Republican who is an enemy of home rule."

Despite his annoyance, Representative Carey still favored home rule. He said, "Home rule, yes, but Rauh rule, no!" [Carper, Elsie, "Democrats Here Irk Rep. Carey," *The Washington Post and Times Herald*, January 31, 1966]

Representative Sisk was not impressed by efforts to promote the Senate home rule bill. Senate District Committee members were "whistling in the dark" if they thought the House would approve local self-government. He said:

I think the House has gone as far as it will go. In fact, enthusiasm is not nearly as good as it was last fall. We hit the high water mark in basic support then. It's substantially less now.

Given the uncertainties of a conference committee on the Bible and Sisk bills, he urged the Senate to accept the Sisk bill. It was the "best and quickest possible way for the District to get a measure of self government – I wish they'd agree to go ahead." [Elder, Shirley, "Pass My Bill or Give Up, Sisk Says of Home Rule," *The Evening Star*, February 1, 1966]

Rauh and other home rule supporters opposed the Sisk bill because of the uncertainties involved in securing approval of the charter. If the District charter made it through the District Committee, headed by opponent Chairman McMillan, and the Rules Committee, headed by opponent Chairman Smith of Virginia, its fate on the House floor was uncertain.

Therefore, Rauh sent a memorandum to Speaker McCormack and House and Senate home rule supporters to explain how the Senate bill could be given a second chance in the House. First, the Senate would amend the bill to meet objections raised in the House. The problem was getting the new bill to the House floor in view of the fact that the House had already rejected the Senate bill in its original form. Bringing the new bill to the floor would be unprecedented unless the chairman of the committee with jurisdiction brought it up. Because that chairman was Representative McMillan, such a scenario was unlikely. Elsie Carper summarized Rauh's recommendation:

Rauh said that McCormack can call on any House member who signed the discharge petition to offer the motion. Or, Rauh said, the motion could be made by House Majority Leader, Carl Albert (D-Okla.).

“When the House goes to the trouble to discharge a bill, it should be easier – not harder – for that bill to wind its way through the legislative process,” the memorandum argued.

“The House always has prided itself on having enough flexibility in its rules so that any new situation can be dealt with effectively,” it continued.

“The present Speaker has never been at a loss to meet fairly and adequately the exigencies that arise. He, like many of his predecessors, has fashioned rules to meet realities and has never allowed the machinery of the House to stop because a situation was unprecedented.

This memorandum goes on to declare “what a tragedy it would be if home rule fails because of tortured application of parliamentary procedure.”

Supporters envisioned dropping the Federal payment provision, which had raised objections on the House floor. They would substitute a provision calling on the Federal Government to assume a percentage of the city budget or to make a payment equal to a specified percentage of the city's income from taxpayers. [Carper, Elsie, “Rauh Asks House Speaker to Give Home Rule a Parliamentary Break,” *The Washington Post and Times Herald*, February 3, 1966]

On March 5, the Free D.C. Movement called for a boycott of businesses in northeast Washington unless they displayed “Free D.C.” stickers in their windows. To obtain an orange-and-black sticker, a business had to pledge to support home rule by picketing and sending telegrams. In prior canvassing, about 175 of 300 businesses had signed the pledge. On a loudspeaker on a car driving along H Street, NE., spokesman Marion Barry told shoppers:

Shop only where you see the “Free D.C.” sticker. Anyone with no sticker is your enemy.

By the end of the campaign, most businesses displayed the sticker. The Free D.C. Movement staged a 1-hour “victory march” along H Street. Barry told reporters that fewer than 25 businesses refused to post the sticker. The *Post* reported:

But a survey by The Washington Post yesterday indicated merchants who did put up the signs gained no business and those who did not suffered little or no retaliation from shoppers.

When Barry targeted an 11-block section of 14<sup>th</sup> Street, NW., for the next boycott, the NAACP declined to go along in an area the *Post* described as “areas of predominantly Negro population with some degree of racial tension” where businesses were “heavily dependent on Negro patronage.” A spokesman said the NAACP did not realize the tactic would become movement policy. Barry dismissed the NAACP’s decision because the organization contributed neither money nor people to support the movement.

As far as Representative Sisk was concerned, the boycott strategy jeopardized passage even of his charter bill. At this point, he said, the home rule bill was “as dead as a dodo bird” in the 89<sup>th</sup> Congress. [Clopton, Willard, and Aarons, Leroy F. “Home Rulers Start Boycott At 100 Stores,” *The Washington Post and Times Herald*, March 6, 1966; Clopton, Willard, and Carmody, John, “Free D.C.’ers End Drive In Northeast,” *The Washington Post and Times Herald*, March 13, 1966]

## **Revenue Bill**

How the Little study would affect consideration of the revenue bill was an unknown. In early January, the Senate District Committee released the hearing record on the revenue bill. It contained a letter from General Duke addressing Representative Dawson’s objections. Replying to the Congressman’s statement that “virtually all elements” opposed the Interstate network. General Duke said that one man, whom he did not name, prepared virtually all the “factual” arguments for those fighting the freeways. The man was “a Washington lawyer working for the Southern Railway, who has been actively opposing the Department of Highways and Traffic of the District for at least five years as a ‘hobby’ . . . .” He was referring to Peter S. Craig.

General Duke argued that an “objective evaluation” of anti-highway testimony led to the single, unnamed source. His report involved “selected statistics” to take advantage of short-term changes in traffic patterns to disprove the need for the freeways in years to come. He ignored professional planning and long-range needs. Moreover, the individual never had “presented credentials indicating any educational background, formal training or experience in traffic forecasting.”

The Engineer Commissioner also responded to Representative Dawson’s other points. The legislative authority for the District’s Interstate plan was in the Federal-Aid Highway Acts. Highways took up only 21.5 percent of city land, but if the city abandoned freeways, it would experience harmful congestion. The plan, far from lacking planning justification, was an “orderly, logical” development. As for the burden on taxpayers from the \$2 million in debt

service, the penny increase in the gas tax would pay for the debt. [“Commissioner Scores Gadfly on Freeways,” *The Evening Star*, January 5, 1966]

By February, Senator Bible was trying to decide on the best way to secure a revenue bill and home rule. President Johnson’s message on the District budget had addressed the Federal payment:

The Federal payment, which is now authorized at \$50 million, should be authorized at a substantially higher level by approval of the formula contained in H.R. 6889, and appropriations should be increased accordingly. That formula provides a fair, equitable, and flexible measure of the amount of Federal support that should be provided the District government.

Senator Bible said, “I’ve decided that the federal payment [provision] has got to come out of the home rule bill.” He was leaning toward including the payment provision in the revenue bill, but that controversial tax provision would delay the bill. The President’s call for a study of the District’s whole Interstate program was another problem. The House of Representatives might act on the city’s budget before the report was completed. “I recognize the problem,” Senator Bible said. “Without the revenue authorization, there may be no money in the House budget to build freeways.” He added, “We’ll move as quickly as we can. But it is just too early to gauge how quickly that can be.” [Bassett, Grace, “President’s Fiscal Plan Perils D.C. Freeways,” *The Evening Star*, February 1, 1966]

### **Interstate Compact**

On February 4, Governor Miles E. Godwin, Jr., of Virginia signed legislation approving the interstate compact to create an authority to plan, develop, and finance the area’s rail rapid transit system. At the ceremony, State Senator Fenwick, who had steered the legislation through the General Assembly, said, “This probably is the most important piece of legislation for Northern Virginia ever to be enacted.”

With Maryland and Virginia having approved the compact, District approval was the final step. That, however, would have to come from Congress, and that could be affected by objections within the Washington area.

On January 18, the Committee of 100 on the Federal City had heard from Peter Craig, who opposed the compact as presently drawn. The compact was “totally unworkable and would be disastrous” for the system because it called for overrepresentation of the suburbs on the board of the transit authority. Craig also objected to inclusion of two District commissioners on the board. They were “not qualified by their method of selection, by their legal planning responsibilities or by their day-to-day duties to serve as adequate substitutes for the National Capital Planning Commission and the NCTA.”

At the next meeting of the Committee of 100, Craig planned to ask the members to approve a resolution he had drafted opposing the compact. It stated that the compact was not “feasible for area cooperation and sound planning.” Representatives of the District and the Federal

Government should constitute a majority of the board because 80 percent of mass-transit revenue would be generated in the District, where most of the usage would take place.

(Craig also spoke in support of the Georgetown Planning Council's proposal to demolish the Whitehurst Freeway, although he doubted the council's plan to build a replacement tunnel in the bed of the Potomac River was necessary:

He said opening of the Theodore Roosevelt Bridge downstream from Georgetown had reduced Key Bridge and Memorial Bridge traffic and the existence of the Whitehurst Freeway "tended to perpetuate" the [proposed] span between Georgetown and Rosslyn.

(The Committee of 100 voted in support of demolition of the freeway, but said the committee would support replacing it with a tunnel in the river only "if necessary.") ["Committee of 100 to Join Foes of Transit Compact," *The Washington Post and Times Herald*, January 19, 1966; Lewis, Robert J., "Fight to Raze Freeway Gains Added Impetus," *The Evening Star*, January 19, 1966]

Other opponents, such as the Democratic Central Committee in the District, appeared to complicate passage. The Joint Transportation Commission had reached out to the committee to discuss its objections. ["Godwin Signs Area Transit Compact Act," *The Evening Star*, February 4, 1966; "Transit Compact Clears Final Hurdle in Virginia," *The Washington Post and Times Herald*, February 5, 1966; "Transit Pact Being Readied For Congress," *The Sunday Star*, February 6, 1966]

*Star* editors agreed with Senator Fenwick. They said he "did not exaggerate" because "in terms of the physical, economic and social development of Northern Virginia, not to mention the cohesion of the metropolitan community as a whole, surely no other single element of regional progress ranks in importance with this project." They hoped Congress would give its "consent" without delay. ["Virginia for Transit," *The Evening Star*, February 12, 1966]

On February 14, President Johnson sent a letter to Congress transmitting NCTA's first annual report. In 1965, rail rapid transit made "significant advances" toward addressing the area's transportation problems. After Congress authorized funding, NCTA "began the necessary work still remaining before actual construction can begin."

Much work, he said, remained to be done. In particular, the system will not achieve "maximum usefulness" until it is extended into Maryland and Virginia:

The interstate compact among Maryland, Virginia and the District of Columbia will be promptly presented to Congress for its consent, in order that the interstate authority may develop plans for a full regional system and a financial plan for its construction. Arrangements must be perfected to transfer the responsibility for the system in an orderly and proper way from the Agency to the interstate authority. These tasks are not easy, and it will require diligent effort on the part of many people and agencies to master the problems that remain.

The White House was giving “the fullest and most diligent consideration” to the problems. He concluded that “none of them will be allowed to stand in the way of an uninterrupted schedule of construction.”

The following day, the District commissioners voted their “vigorous support” for the compact. They did so informally because in the absence of home rule, their concurrence was “legally superfluous,” as the *Post* put it. General Duke said the compact “clearly is of the utmost importance.” He added that rail rapid transit and “the planned highway network [were] essential to the total well-being of this region.”

According to Polly Shackleton, however, the District Democratic Central Committee “still views the compact as unacceptable.” She and Chairman Rauh denied that efforts to change the committee’s views were underway. [“D.C. Commissioners Back Transit Compact,” *The Washington Post and Times Herald*, February 16, 1966;]

*Post* and *Star* editors were happy about the progress on the compact, but puzzled by the Democratic Central Committee’s opposition. According to the *Post*, the committee had been “playing an elaborate spoiling game with the compact” that reflected “such deep distrust of the suburbs that it would prefer to sacrifice years of other people’s work, rather than enter into mutual agreements.” The editors were not astonished by this wrongheaded position: “the Democratic Central Committee has regularly been wrong on transportation policy over the past five years.”

The *Star* referred to the committee’s “absurd antagonism toward the compact proposal.” The argument, “reduced to its simplest and silliest terms,” was that the committee would oppose any compact agreement if it gave the District, Maryland, and Virginia equal voices. “The fact is, of course, that anything short of equal participation would result in no compact at all – and no regional system.” The committee, in battling the District’s freeways, “at least paid lip service to the concept of regional rail transit.” In view of their “weird posture” on the compact, the editors wondered if the committee had “become so accustomed to a distorted view of the freeway program that no other element of the transportation picture comes through in clear focus, either.” [“Subway Logic,” *The Washington Post and Times Herald*, February 16, 1966; “One Sour Note,” *The Evening Star*, February 18, 1966]

The committee took strong exception to both editorials, resulting in letters to the editors. To the *Post*’s statement that the committee had “been wrong on transportation policy” for years, the letter signed by Rauh, Shackleton, and Dr. Jackson said the committee “vigorously opposed several highway projects because they involved wholesale destruction of homes, schools, playgrounds, churches and other community facilities.” They had been particularly concerned about uprooted families in view “of a critical shortage of low and middle-income housing here.” They also were concerned about spending millions of dollars for highways “in light of cut backs, because of lack of funds, for much needed schools and health and recreational facilities.”

In 1962, the letter stated, the committee had testified in opposition to the accelerated Interstate program, pointing out that the proposed East Leg and Northeast Freeways “would displace 10,000 people from their homes without any provision whatsoever for their relocation.” In part

because of these efforts, the East Leg Freeway was rerouted, interchange “C” was reduced in size, and other projects “have undergone complete restudy to minimize their damage.” They had testified in support of building freeways underground:

We were gratified when President Kennedy in 1963 ordered a restudy of the social, economic and esthetic impact of the North Leg, Potomac Freeway, Three Sisters Interstate route, and more recently by President Johnson’s request for another look at the traffic assumptions on which the Highway Department has based its program.

And we are particularly pleased to note that serious consideration is now being given Mrs. Rowe’s proposal to completely reroute the North Leg along K Street, thus saving thousands of homes that were doomed under the original plan.

The committee was in the lead on blocking the bus fare increase requested by Chalk, but disappointed that the decision implied the next fare increase request would be approved. “Therefore we are making an appeal to WMATC and, if necessary, to the court.”

The committee was one of the strongest supporters of rail rapid transit and believes in the need for an interstate compact authority:

In our view the presently proposed compact can lead only to delays in getting the subway built. Because of the urgency to get it under way we have suggested that an interim corporation be set up which can act until a suitable compact can be negotiated.

The letter concluded:

The Central Committee is proud of this record. We believe that the people of the District whom we represent will continue to support our efforts. [“Democrats on Transportation,” *The Washington Post and Times Herald*, February 24, 1966]

The committee’s letter to the *Star* addressed the editors’ reference to the committee’s “distorted view of the freeway program.” The letter, again jointly signed, repeated the objections cited in the *Post* letter. [“Transportation Policy,” *The Evening Star*, March 7, 1966]

Chairman Whitener introduced another concern in early March when he said he would not necessarily back the interstate compact that Maryland, Virginia, and the District of Columbia had approved. “I want to study the alternatives. My interest is in getting holes dug and the trains running as quickly as possible.” Extending NCTA’s life might be the fastest way to get construction underway. “Also, I want to guarantee that the costs of expansion are paid by the suburbs.” [Elder, Shirley, “Whitener Won’t Back Area Transit Compact,” *The Sunday Star*, March 6, 1966]

As NCTA moved forward, it was attempting to comply with conditions the House Appropriations Committee had placed in its report on the District Appropriations Act before the committee would appropriate construction funds:

1. Results of an independent traffic survey be in;
2. Plans for issuance of bonds to finance the system be specific;
3. Stations in Maryland and Virginia be specifically located; and
4. Joint fares be arranged with local bus companies.

When McCarter appeared before the Senate appropriations subcommittee in March, he sought \$25 million for construction items, but not actual construction that was, at least in the House Appropriations Committee's view, contingent on satisfying the four conditions. He explained that \$12 million would allow NCTA to buy slabs of concrete and metal for tunnel liners. NCTA would use the rest of the funds to pay for materials.

As for the four conditions, McCarter said NCTA had contracted with Alan Voorhees and Associates to conduct and analyze the traffic survey. The interstate compact authority, if approved by Congress, would issue the bonds. If Congress did not approve the compact, the President would propose a public corporation to issue the bonds. McCarter would have to work with Maryland and Virginia officials on station locations because they, not NCTA, were planning stations. He was optimistic, saying, "Our working relations are excellent." NCTA could not arrange joint fares with the private bus companies until the traffic study was completed in July. Regarding the four points, McCarter said "we are alert to the problems and will be bending effort to produce sound, workable solutions."

Grace Bassett's account of McCarter's request concluded:

The House Appropriations Committee, in closed hearings earlier this year on the same budget, reportedly was dubious that the NCTA could spend in one year nearly so much money as McCarter was asking. [Bassett, Grace, "Millions Asked for Subway," *The Evening Star*, March 14, 1966]

### **North-Central Freeway**

The freeway network was in doubt, as well. Supporters were trying to reduce the widespread criticism that was hampering their efforts. On January 1, 1966, Chairman-Director Funk said Maryland was considering reducing the North-Central Freeway to eight lanes. According to the *Star*:

Funk also said in a report on progress of the District-Maryland study of the freeway that a 107-foot high "tunnel-in-the-sky" proposal for the freeway was never intended seriously.

. . . . Two months ago a freeway restudy ordered on the double-decking proposal flamed into public view again because of reports that the state roads commission was considering building a 107-foot high "tunnel-in-the-sky." However, Funk said yesterday that there was never "any question of a 107-foot-high structure."

"That was a figment of somebody's imagination," Funk said.

The North-Central Freeway, as planned, was to have four lanes in each direction plus two reversible lanes for peak period traffic. The "third route to Baltimore," I-95, was to be built west

of U.S. 1 and connect with the North-Central Freeway around Fort Totten Park. Maryland had decided to build the route with eight lanes, instead of six as previously planned. “This means that the traffic coming to the beltway and trying to go downtown will be heavier than expected.”

The District and Maryland were awaiting the results of the study being conducted by Alan Voorhees and Associates on traffic volumes in the corridor:

Funk said the traffic survey was made because so many citizens’ groups claimed that the count of commuters showed that fewer people used the North-Central Freeway corridor. The building of a large freeway would “induce” traffic which otherwise might avoid the freeway, Funk said.

Funk said the restudy and enlargement of the third route to Baltimore “raised questions about whether we should induce traffic to it.”

He planned to meet with District officials to discuss double-decking a smaller North-Central Freeway over the Baltimore and Ohio Railroad. [“Cut to 8 Lanes Considered For North-Central Freeway,” *The Sunday Star*, January 2, 1966]

On January 15, the Lamond-Riggs Citizens Association, based in northeast Washington, picketed the District Building in opposition to the North-Central Freeway and called for the resignation of Director Airis and Planning Chief Grant as well as the transfer of General Duke. In a petition handed out during the protest, the association charged that Airis and Grant “are motivated only by [a] desire to squander Federal highway funds in D.C. regardless of need, and to falsify facts and figures to deceive and confuse members of Congress and other interested parties as to the need for such freeways.” As for General Duke, he had “indicated repeatedly that he is in complete sympathy with and dominated by the highway lobby and the D.C. Highway Department.”

Thomas K. Chamberlain, the association’s president, told the protesters that the freeway controversy “should have been a closed issue years ago.”

Picketers, including 10 children, held signs declaring:

- Stop the Concrete Octopus
- We want Shady Streets, Not Shady Deals
- People Yes, Freeways No!
- D.C. Needs Homes, Not Roads
- Freeway Air Could Gag a Maggot

[“Oust Duke, 2 Road Aides, Freeway Foes Demand,” *The Washington Post and Times Herald*, January 16, 1966; “District Building Pickets Rap ‘Concrete Octopus,’” *The Sunday Star*, 1966]

In February, the Maryland State Roads Commission issued its revised 6-year program. It included a 10-lane, 4-mile North-Central Freeway from the District line to the Capital Beltway in Montgomery County. The estimated cost was \$16.4 million, including \$2.6 million for right-of-way.

The delay in routing the freeway prompted the *Post* to ask, “What ever happened to the North Central Freeway?” The location was, Bart Barnes reported, still under study. “There is no firm indication when a final decision on a proposed route for the expressway will be reached.” Airis told Barnes the decision should be “reasonably soon.” District and Maryland officials had the studies, but they were working on a plan that combined minimum displacement with maximum beauty. Funk said the railroad tracks remained the leading contender, but engineers had not committed to any route as yet. “He said engineers are still studying the possibility of elevating the freeway in some areas, stacking it in layers in others, and depressing it in still other areas.” [Rowland, James B., “Maryland Planning Beltway-D.C. Link,” *The Evening Star*, February 10, 1964; Barnes, Bart, “Northern Freeway Still Hazy,” *The Washington Post and Times Herald*, February 20, 1966]

### **The Arthur D. Little Report**

On March 22, 1966, Arthur D. Little, Inc., released its \$60,000 report, *Transportation Planning in the District of Columbia 1955 to 1965: A Review and Critique*. As Professor Schrag explained, the report was “a blistering critique of highway planning.” [Schrag, page 122]

The blistering began in the preface:

The history of transportation planning in the Washington Metropolitan Area has not been salutary. It is marred by inter-agency conflict and a lack of coordinated effort and direction. Also, careful study of the planning work of the past ten years discloses only the most superficial attempt at area-wide comprehensive planning for long-range goals; and only a perfunctory reference, in one policy statement, to the possible use of the transportation plan – an instrument of salient effectiveness – to achieve those goals. Nowhere in our examination of the plans and reports prepared during the period from 1955 to 1965 were we able to find clear, definitive statements relating the role of transportation planning to programs for area development.

Transportation planning “had been carried out in a fragmented manner.” Planners were concerned about movement of people and goods into and out of the District, but the Little team could not find “sufficiently demonstrable proof of their concern with transportation planning as a device for directing area development to conformance with a plan or statement of policy objectives.” The planners were right to consider ways to accommodate the automobile, “but it need not destroy the essential fabric of the city in doing so.”

The report called for a moratorium on freeway construction, saying the program was based on inadequate data. The city should stop planning a system and instead plan one link at a time consistent with a master plan that could be revised as needed:

If the incremental approach is adopted in place of entire systems, the community will gain the time necessary to reevaluate its transportation needs in light of technical and methodological criticism raised herein and mesh those needs with over-all regional planning goals.

The report explained how it reached its conclusions:

Practitioners in the field of urban design are finding – on a world-wide basis – that the gravitational pull of cities is creating, in a very real sense, physical problems of a dimension that places in jeopardy the essential elements in the concept of a designed environment. Most of the major problems – pollution, transportation, housing, water, etc. – result from a past failure to recognize that all land cannot be considered suitable for urban development. Urban land is now a scarce resource and becoming increasingly so. Americans must allocate that resource over the future with greater wisdom than ever before.

Pressure from automobile traffic in many cities “resulted in building expressways and freeways that experience has proved to be palliative devices at best.” More than any construction, highway and rail lines contribute “to land-use relationships and to social and economic interaction within the urban region. The singularity of their impact as spatial determinants cannot be overstated.”

The Little firm was not contracted to study alternatives, in a few short months, or to present plans. However, the contract implied some attempt to recommend how to resolve the present impasse. The recommendations rested on several major concerns, beginning with:

- (1) Washington’s transportation planning has had the very valuable feature of considering both transit and freeways together.

NCTA was to be applauded for its foresight, but “an unclear definition of community goals and the role transportation is to play in arriving at those goals, made the choice of analytical methods extremely difficult and, at times, faulty.” Studies were based on present behavior, “but, even more disastrously, by behavior in 1955.” Forecasts of traffic based on experience were not qualified “in any reasonable way”:

Important changes in the economy and social composition of the Washington area which would influence transportation were not investigated. For example, gross studies were done of locational changes by economic establishments without attempting to understand the basis for those changes.

Recommendations “seemed to have little to do with the analytical methods employed, regardless of whether those methods were found to be adequate.” The Interstate network was “largely fixed in its present form by studies which often followed, rather than preceded, decisions made on particular facilities.” Given the advances in transportation planning for urban areas over the past 5-7 years, road segments could be tested with transit segments to provide “a reasonable degree of certainty that major errors will not be made. Such tests were not conducted.”

Little found it hard to conclude that data and information in published and unpublished reports would have resulted in the overall pattern of the proposed freeway system. “Therefore, our conclusion is that the present freeway plan has not been proved to be the most appropriate for the area.” The fact that very few alternative plans, if any, had been seriously evaluated underscored this conclusion.

- (2) What is said here of the inadequacies of the studies and the resulting recommendations for freeway proposals applies, in general, to the transit proposals which have been adopted.

As a result, Little considered the transit proposal, too, but in less detail.

- (3) We seriously doubt that any but the most current and on-going transportation planning program could successfully meet the explicit concerns contained in the list of criteria supplied by the Steering Committee of the Policy Advisory Committee.

Little emphasized that while its report was critical, similar criticisms could be made “of transportation planning efforts in many other large urban areas of the United States.” However, in view of President Johnson’s desire that Washington should be a model for the country, “we doubt that there are sufficient and reasonable bases for many of the transportation proposals that have been made for the Washington Metropolitan Area.

- (4) Of major concern in the current Washington situation is the role of the Bureau of Public Roads.

Little commended BPR for its contribution to American transportation and its success in implementing the Federal-Aid Highway Act of 1956. The problems BPR was experiencing in urban areas around the country illustrated a need to reevaluate its standards and substitute “a new approach to costs and benefits that allows for non-quantifiable costs such as aesthetics.” The Washington region could be a demonstration area for this new approach for high density communities.

The 90-10 matching share of the Interstate program was “contributing to acceptance, on the part of local communities, of unbalanced transportation systems: the imbalance being in favor of the automobile.” Resistance to BPR’s standards (“viewed by many as a ukase”) was increasing sharply in urban areas, as illustrated by the impasse in the District of Columbia.

BPR’s “cost/benefit formula is inconsistent and incompatible with urban transportation needs; that by limiting alternatives it places undue constraints on the community’s choice of options.” Further, “There is evidence also that a rising level of aesthetic awareness, together with a rising demand that urban amenities be preserved, make the Bureau’s present schedule for completing the Interstate System unrealistic.”

- (5) Although our investigation indicates serious methodological and technical deficiencies in the system as planned, it does not necessarily follow that each link in the proposed system be considered a weak investment.

Little recommended a “link-by-link evaluation on a ‘low risk-high risk’ comparative basis and that priorities be established in accordance with criteria designed to assure ‘least risk’ commitment.” In short, such an approach was preferable to “making the massive, irrevocable commitments called for in accepting the proposed ‘system’ in toto.” Using an incremental approach, “the community will gain the time necessary to reevaluate its transportation needs in light of technical and methodological criticism raised herein and mesh those needs with over-all regional planning goals.”

The Policy Advisory Committee should keep in mind “the inherent diseconomies in the incremental approach to transportation system planning.” The incremental approach was not necessarily the only or best way to create a balanced transportation system, but “the special and unique role of Washington” meant that the incremental approach was necessary. In weighing cost-benefit aspects of the transportation network, the advisory committee should consider “the non-quantifiable variables that go into the transportation equation.” The resulting statistical uncertainties were less important than policy and goal uncertainties. “Therefore, the appreciation of non-quantifiable variables such as aesthetics, image, style and character must be reflected in policies rather than numbers.”

The Little report contained recommendations for several parties involved in the impasse, beginning with the Policy Advisory Committee. It should urge its member organizations to develop policy guidelines for all agencies concerned with transportation. The criteria should be based on projected space needs and employment patterns of the Federal Government in the area; housing needs and inventory; transportation plans related to the city’s ability to relocate displaced, low-income families; coordination with community renewal programs, land-use plans, and urban renewal; interagency cooperation and policy guidance; and aesthetic values.

The report urged BPR to request authorization for a “Special District for Transportation Planning Purposes” spanning the National Capital Region; revise its cost-benefit formula for the Interstate System to accommodate non-quantifiable variables such as aesthetics; revise its standards for urban areas; and request authorization to revise its compliance dates and requirements as they apply to metropolitan areas. In addition, BPR and the District should “delay action on all proposals for extending the District’s freeway network until the highway plan has been re-examined.”

The report urged the District commissioners to accept the incremental approach to transportation planning in place of the “total system” concept. They also should join with State and Federal agencies to establish a Regional Transportation Planning Agency that would have veto power over all transportation proposals affecting the National Capital Region. [*Transportation Planning in the District of Columbia 1955 to 1965: A Review and Critique*, Arthur D. Little, Inc., March 22, 1966, pages iii-xv/xvi, underlining in original]

H. C. Broley, Little’s project director for the report, summed it up. “The present situation strikes me as six traffic solutions in search of a plan.”

## Reaction to the Little Report

The report had been kept secret until it was delivered to the Policy Advisory Committee on March 23. Newspapers reported initial reactions:

- General Duke: “I’m in a state of shock.” The consultants “reached very damaging conclusions without recourse to facts.”
- NCPC Chairman Rowe: “I think it’s just fine. It’s looking at the city in toto, not just transportation.”
- Director Airis: It is a “cursory and superficial report, which betrays a prejudice on the part of its authors which is decidedly anti-freeway . . . . The American people have a love affair going on with the automobile and that’s the reality we must deal with.”
- Senator Case: The Little report was “heartening news to those who are concerned, as I am, with preserving and enhancing the livability of our Nation’s Capital.” He urged the Policy Advisory Committee to “heed this warning of its consultants, the city and its people . . . .” Arthur D. Little, Inc., apparently shared with him “the growing belief that the freeway program is working at cross purposes with other vital programs for the improvement of the quality of life in Washington.”
- William Walton, chairman of the Commission of Fine Arts: The report was “amateurish, in a strained way” and “very naïve.”

Professor Schrag discussed General Duke’s shocked reaction to the report. He had chosen Arthur D. Little, Inc., “seemingly confident that the consultant would ratify the highway program. But the report exploded in his hands.” Little had read not only official reports “but Craig’s studies as well.” Duke “apparently destroyed most copies, but the damage had already been done.” [Schrag, page 122]

Jack Eisen reported that Horsky, who had written President Johnson’s January 14 letter to General Duke, was one of the select Washingtonians interviewed for the report:

Following his interview, reports began circulating that Horsky had recommended against building any radial freeways within the Capital Beltway, a position close to that later advocated by the consultants.

Horsky told a newsman this report was “a damnable lie” and was based on a fragment of what he actually said. What he told Little’s people, Horsky said, was that many Washingtonians hold such a view while others hold a contrary view.

Broley confirmed Horsky’s account, but Eisen added:

Although one of Horsky’s original assignments when he was appointed by President Kennedy was resolution of the freeway issue, highway officials came to regard him as anti-highway and became reluctant to work with him.

General Duke, Eisen wrote, was perhaps “the man most frustrated by the rekindled controversy”:

Duke, a flexible man usually willing to seek compromise solutions, inherited a freeway restudy ordered by Mr. Kennedy and now faces a new crisis because of another restudy ordered by Mr. Johnson.

Friends say he is understandably concerned over the effect of the unresolved dispute on his future Army career.

General Duke's 3-year tour as Engineer Commissioner was likely to end in 1966. "Highway officials also foresee that the new Engineer Commissioner's arrival is sure to bring a period of hesitancy and lost momentum."

Officials feared the Little report would further stall congressional action on the revenue bill. If so, Chairman Natcher might refuse to appropriate funds beyond those legally accounted for. Pro-transit observers were afraid the report would reopen the freeway versus subway dispute that NCTA, and especially its new Administrator, had done so much to put behind them. An anonymous official who was not a member of the Policy Advisory Committee said. "It's my guess that if PAC adopts the Little recommendations, there won't be one damn nickel appropriated for the subway."

The Policy Advisory Committee planned to meet on March 28 to discuss the report with staff of Arthur D. Little, Inc., before preparing a response to the White House by April 1.

After the initial shock, District highway officials began picking the report apart. For example, the report said the District had not considered open space and park possibilities in designing the Center Leg Freeway between D Street, SW., and New York Avenue, NW. General Duke pointed out that the freeway would be built beneath ground level and that his staff had negotiated extensively with other agencies and received congressional approval for the freeway. After the Commission of Fine Arts considered but recommended against parks along the freeway, the District changed its plans. Chairman Walton said he could have corrected the error, and had offered to be interviewed, but Broley never called:

"If he had, he would have learned that the Commission of Fine Arts held perhaps 15 meetings with the Highway Department. We corrected their designs down to the last stone facings.

"Broley claimed they didn't know that. It's no wonder. They didn't come to see us."

Another inaccuracy was the report's recommendation that the District continue its plan to demolish the Whitehurst Freeway. The District had no such plans.

[Eisen, Jack, "Halt All D.C. Freeway Programs, Build on Small Scale, Study Asks," *The Washington Post and Times Herald*, March 24, 1966; Flor, Lee, "Consultants Blast D.C. Freeway Plan," *The Evening Star*, March 24, 1966; Eisen, Jack, "Road Dispute Imperils City Revenue Bill," *The Washington Post and Times Herald*, March 25, 1966; Flor, Lee, "D.C. Officials Fire Back At Attack on Freeways," *The Evening Star*, March 25, 1966; Eisen, Jack, "Highway-Subway Plans Imperiled By Consultant's Anti-Freeway Report," *The Washington Post and Times Herald*, March 27, 1966]

As might be expected, highway critics were pleased by the Little report. The Metropolitan Citizens Council for Rapid Transit, a coalition of seven citizen groups, hailed the report:

A path has potentially been opened to development of a rational, truly balanced transportation system adequate for the needs of Washington and its environs without engulfing the city, driving out its people, or smothering its beauty and national character with costly and irrevocable concrete.

The council hoped the Little report would halt explosive freeway growth, but recognized that “freeway-oriented special interests” were “already threatening civic blackmail, with more or less open threats to wreck the rapid transit program if denied unlimited freeway sprawl.”

The Save Takoma Park Committee saw the report in the context of citizen testimony advocating deferral of freeway expansion until the rail rapid transit system was in operation. Transit was, the committee said, the indispensable factor in a balanced transportation system. [“7-Group Citizens Unit Hails Report Rapping Freeway Plan,” *The Evening Star*, March 28, 1966]

The only positive thing the *Star* could say about the report was that the consultant had only 7 weeks to perform a complex review. Otherwise, a *Star* editorial said the report “surely deserves to rest in a niche of its own—preferably one marked ‘Filed and Forgotten.’” The “murky and superficial document” had not “resolved anything, but instead has added to the dissension.”

After a brief study, Little had “concluded that virtually all of the engineering, social and economic premises of Washington’s freeway planning during the past 10 years have been either fallacious or inadequate—and in the process made the same sort of blanket indictment against the planning basis for Washington’s urgently needed rail transit system.” No further construction should be started, according to Little, “until new, more effective techniques of planning, design and social adjustment are developed.”

The editors criticized the crux of the report, namely its suggestion to stop freeway construction as part of a total system and instead build one link at a time to reduce the chance of error. The problem with this thinking was that freeways “operate as a system or not at all.”

Further, the editorial observed that the report’s “basic philosophy seems to be that freeways are bad because they bring cars into cities—and that if it weren’t for the freeways the cars would go away.” Given the sprawling nature of modern urban areas, the *Star* said that if the region is to function “in any true sense as metropolitan communities, freeways are an essential part of the skeletal system”:

The second point is simply that automobiles, no matter how hard the pill is for some people to swallow, are here to stay. Transit, if it is attractive enough, will bear its share of the burden. But increasing numbers of others will drive, and if they don’t drive on freeways they will drive on congested business and residential streets, destroying the very values that the anti-freeway people are trying to protect.

If President Johnson abandoned his long support of the District's freeway program and endorsed the Little report, "the consequences for Washington would be severe." The timing could not have been worse, since Federal and District officials "were at last on the verge of resolving their differences on the basic elements of a freeway system for the city." Understandably, the Policy Advisory Committee would discuss the study. "After that discussion, however, the most sensible disposition of the report is for the PAC to file it—for good." ["Make No Little Plans for Washington," *The Evening Star*, March 27, 1966]

Gib Crockett, the *Star's* longtime editorial cartoonist (1933-1975), illustrated the report by depicting an elevated freeway coming to an abrupt end as a motorist drives through barriers and plunges to the ground. The caption: "Arthur D. Little, Inc., solves the freeway problem."

*The Washington Post* called the report a "broadside" in the "curious local tradition" of issuing reports every 2 or 3 years, "each of them roundly attacking its predecessors." The report did not point to any "specific mistakes" in the planning of the freeways or rail network, but "merely observes that all of these decisions are based on questionable data." True, those reports were based on "an imperfect view of the future," but that was "a defect that cannot be eliminated." The suggested moratorium while further study is undertaken was "a formula for delay." With area officials hammering out resolutions of their disputes, the Little report would "serve only those who want to stop the freeways altogether, and those who do not want to start building the subway." The *Post* editorial concluded:

Large transportation plans need to be constantly questioned and constantly reviewed; but to pause now for years of bickering over planning theory would be undiluted irresponsibility. ["Still Another Report," *The Washington Post*, March 26, 1966]

The *Post's* local columnist, Bill Gold, said the idea of halting the freeway program to "take a fresh look at the whole problem" might be called "a Capital idea." He extrapolated the Little idea by suggesting:

What we ought to do now, obviously, is suspend all activity until we can hold a plebiscite to select a panel that will appoint a commission authorized to hire a new team of experts to restudy the feasibility of compiling an index of all the committees that have in the past inventoried and catalogued the various studies aimed at finding out what happened to all the policies that were scrapped when new policies were decided on by somebody else. Once that's out of the way, I think we could go full steam ahead with preliminary plans for a new study of why nothing can be done right now. [Gold, Bill, "This Is Washington," *The District Line, The Washington Post and Times Herald*, March 25, 1966]

The Policy Advisory Committee met in General Duke's office on March 28 with the 12-member team from Arthur D. Little, Inc., that prepared the report. In this public session, Broley read a statement about press coverage of the report and individual criticism of it:

Much of it seems to imply that ADL may be biased against highways . . . . This is not true . . . . In the past . . . we recommended highway construction in support of area development, having given full attention to economic and social impact . . . .

Most of the press interpretation of the report have failed to make clear the terms of reference for our study . . . . [We] were asked to review past and current transportation studies. The criteria – economic, social and technical – on which reasonableness were to be evaluated were specified for us by the District of Columbia. There were 14 such criteria described in precise terms, and these were not dreamed up by us as seems to be implied [by the press].

The company's goal was to review the freeway program based on transportation planning over the past 10 years. The firm concluded that the program was based on outdated and inadequate data and methods, Broley said. He also said he regretted not interviewing William Walton.

Professor Leon Moses of Northwestern University, a member of the team, said that one area where data was entirely absent was the location of Federal employment centers. BPR Administrator Whitton replied that he favored good planning. At some point, though, an operating highway agency must tell planners "to stop planning and let us start building."

Lee Flor described General Duke's questioning of the Little representatives as a "cross-examination." They admitted they knew about plans to build the Center Leg Freeway in a tunnel across the National Mall at the foot of Capitol Hill when they criticized the plan for not considering aesthetics. General Duke also wondered why the report indicated that plans to tunnel the South Leg Freeway had been approved when they had not been. The District had agreed to tunnel only two segments of it. He asked why the consultants ignored what was approved for the two freeways. Flor reported:

The consultant's reply was vague. During the intense dispute, one of the consultants freely admitted there was a large semantics gap between the consultants and the critics. In other words, language used to describe freeways and language in the consultant's report had different meaning, depending on the previous opinions and conclusions of the members of the advisory committee.

General Duke also criticized the report's finding that only two possible transportation systems had been checked via computer. He said that more than 100 systems had been analyzed by computer since 1959.

After the public meeting, the Policy Advisory Committee decided in a closed session to defer action on the report for a couple days before deciding what to tell President Johnson. General Duke announced that the proposed moratorium was "impractical." Committee members were trying to "blend" some of the report's other recommendations into plans for the Interstate freeway network. He acknowledged that "quite a gray area" exists.

Some members were trying to find a way to keep the freeway program going, which implied they had already rejected the idea of a moratorium. Flor's assessment was that Chairman Rowe of

NCPC and Director Hartzog of NPS approved the report. “Three members are outspokenly critical of the report . . . . Two members are obviously trying to make some sort of compromise.” [Flor, Lee, “Policy Unit Rejects Freeway Halt Plea,” *The Evening Star*, March 29, 1966; Eisen, Jack, “City Rejects Moratorium On Freeway,” *The Washington Post and Times Herald*, March 29, 1966]

### **The Doxiadis Plan for the Georgetown Waterfront**

Long before creation of the Nation’s capital, Georgetown was a thriving port community. Writing in 2014, historian Camden Schwantes summarized the early history:

There was already a tobacco trade and warehouses along the river in what became the town of George [King George II]. Founded in 1751, the small port town’s original boundaries only extended north from the river a few blocks to Gay Street, now S Street NW. In fact, one of the original boundary stones [of the District of Columbia] can still be found in the backyard of the Laird-Dunlop House, on N Street NW. The western and eastern boundaries have remained static. The heights, where the university stands, marks the western edge, and in the east, Georgetown is bounded by Rock Creek . . . .

When the government was looking for a new place to settle after the Revolutionary War, Georgetown was an ideal place to begin. It had an established community, complete with taverns and boardinghouses for the commissioners to stay in as the district plans were laid out.

As the Potomac River silted over in the 19<sup>th</sup> century, trade that depended on navigation gradually disappeared. During the early years of the Nation’s capital, Georgetown was a separate town within the city unit. In 1871, as discussed earlier, Congress converted the capital consisting of three separate units (Washington County, Georgetown, and Washington City, which contained the government buildings) into a territory similar to the territories of the West with a presidentially appointed Governor and a nonvoting delegate to Congress, only to change it in 1874 to governance by a three-man board of commissioners that was still in effect in the mid-1960s:

Since 1871, the city of Georgetown has been, politically speaking, nothing more than a neighborhood. [Today], Georgetown remains seemingly a separate town from Washington. [Schwantes, Camden, *Georgetown*, Images of America, Arcadia Publishing, 2014, pages 7-8]

In March 1965, the *Post*’s architecture critic, Wolf Von Eckardt, described the historic Georgetown waterfront, which he defined as “the area south of M Street and between Rock Creek Park and Key Bridge, an area no larger than the grounds of Georgetown University or Fort McNair”:

At precisely the point where the Potomac River bends southward and broadens to afford a majestic view of the National Capital, we have managed to dump an ugly industrial mess, elevated freeway and sewage plans.

The area was being rebuilt by urban renewal and private initiative:

In these three years, private initiative has, to be sure, tastefully remodeled some of the dilapidated structures in this area. But most of the remnants of Georgetown's port day – some lovely old row houses and, of course, the picturesque Chesapeake & Ohio Canal towpath – are still overwhelmed by a medley of industrial plants, vacant lots and junk yards. Uncertainty about bridges and highways and a temporary slackening of the market for office space has inhibited drastic change.

The critical question involved the Potomac River Freeway paired with Whitehurst Freeway to provide an Interstate corridor for Maryland-Washington traffic. Whatever its value to the transportation system (a point in dispute), whether the freeway was built and the Whitehurst Freeway retained would be keys to the future of the historic Georgetown waterfront:

But change is bound to come, and come fast. The question is only whether it will be planned or unplanned. Unplanned change is easy to foresee. The Whitehurst Freeway is about to be doubled [if the Potomac River Freeway were to be elevated] and so will the blight beneath it. Some of the industry is still healthy but none is really happy. There is no place to expand and prosper. It is increasingly inaccessible and the markets are moving further and further away. Yet only the power of eminent domain and Federal relocation funds are likely to move it for decades.

Von Eckardt thought it “unlikely that the existing residential and other worthy buildings below M Street can long survive economic pressure. [Von Eckardt, Wolf, “Georgetown's View of the Potomac Is an Industrial Mess,” *Cityscape*, *The Washington Post and Times Herald*, March 28, 1965]

To address the controversy surrounding freeway plans for the Georgetown waterfront, the District Highway Department had contracted with Constantine Doxiadis for \$10,000 in December 1965 to recommend a solution. The plan was to include park areas, residential and commercial buildings, pedestrian access, and recreation facilities for the area from K Street to the Potomac River between Key Bridge and Rock Creek and Potomac Parkway. The plans were to be blended with the planned Potomac River Freeway to be built adjacent to the elevated Whitehurst Freeway.

As mentioned earlier, Doxiadis was one an internationally renowned city planner, but not a freeway admirer. He gave a hint of his ideas in a *Post* article published on October 3, 1965. Given the inevitable increase in the population of the Washington metropolitan area, he saw two options for accommodating this growth:

We can turn downtown Washington, which was conceived by L'Enfant for 200,000 inhabitants, into the center of this new 15 million metropolis. But that would kill it.

Or, with proper action, we can remodel Washington to serve 2½ million people efficiently and create new nearby centers for 2½ million each until we accommodate the total population we need.

The restructuring of the first option would take 10 to 20 years, during which millions more would arrive to live in the area:

That means more pressures, more economic investment, more cars. So we will have to have another urban renewal scheme to demolish what we did during the first 10 years and again change the structure of the inner city. This would mean we move in a vicious circle. This should not continue.

Around the world, city problems were compounded by the networks built to service them:

The networks are the newest element in the city. The modern city is out of control because a haphazard pattern of highway, railway, airfield, water supply, sewerage and drainage, electric, gas and telecommunication networks preceded city expansion out into the countryside.

In the absence of a unified plan for this expansion, “the essential networks commit us to a confused pattern”:

We start building houses only when there is a road, and we follow the road. Since there is no money to build another road which would be better for the houses, we build along an existing one which was conceived not to serve the new houses but to supply an industrial plant. And because there is a water main, we find it cheaper to connect a new housing project to it instead of going another way which would be better from every point of view.

In short, “We build first and think later.” In planning the new centers of his second option, planners must “determine what functions the new centers should have.” Each new center must have the same facilities as the old city center – “movies, shops, repairmen,” but must be linked with speed in mind:

The interconnections between the centers should be one-way, high-speed tunnels. I believe modern technology would easily allow us 200 mph. But even with present-day cars, we could have 100 mph speeds. If the centers were 20 miles apart, it would take only 12 minutes to get from one to another.

Later, with progressing technology, we will drive our vehicles to the tunnel entrance where a radar system will take over and speed them along on strips while the driver reads his newspaper. Such devices are already in the experimental stage. We also know that railroad systems are experimenting with speeds of hundreds of mph . . . .

Such fast interconnections would be essential because if the travel time – not necessarily the distance – between centers were too great, Washington could not function properly as the central city. My concern would be to serve the traditional function of the Federal City first. But the peripheral centers should be strong enough to thrive, or people would crowd back into Washington again.

In planning the peripheral centers “we can learn from our past mistakes.” We should touch nature as little as possible. We don’t want to change the city features that have served people well. We do not want to create “isolated or segregated groups”:

The only new element, then, is the transportation network, which is breaking down and must be radically changed. Up to the 18<sup>th</sup> century, it was meant only for man: streets and cross streets defined every block in the city. Then came the automobile – and chaos. Cars have to stop at every corner for traffic lights. You cross the city 9 mph, the speed of buggies of 100 years ago.

The fact is that the faster our means of transportation the longer it takes man to move from the outskirts of the city to the center. It took ten minutes in the 18<sup>th</sup> century, 20 minutes in the 19<sup>th</sup> century, and now it takes more than 40 minutes.

Thus, faster vehicles provide less service than the slower vehicles of the past:

We must conceive of a technological system that makes use of the faster vehicles. First, let’s take all traffic from the surface of the earth and put it under the skin, as nature does with our veins and arteries. The machine that moves fast cannot be in the same space as the man who walks.

We are beginning to understand this and separate freeways, permitting no access to them. But we have to develop a whole new system for motor traffic, and that system has gradually to go underground. This may seem expensive, but in the long run it would be economical. We now lose more than 50 per cent of the surface of cities to transportation and other networks. If they went underground, our cities could be much more compact. Furthermore, we would get rid of traffic noises and much air pollution.

On the surface, people could walk and children could run amid improved landscaping.

The new centers could determine many aspects of their lives, but the government “must create the big framework within which committees can make their own decisions”:

This will take planning, and what we do now is not planning. What we do is 10 per cent planning and 90 per cent solving existing problems and adjudicating conflicts between various interests.

Thus, the framework would be carefully planned, “but first we should be sure that highways go between communities and not within communities.” [Doxiadis, Constantine A., “How a City Can Grow Without Growing Pains,” *The Washington Post and Times Herald*, October 3, 1965]

On March 16, 1966, Doxiadis Associates unveiled its plan for the Georgetown waterfront. Doxiadis called the mile-long waterfront “a little treasure” that he would preserve in layers. The surface layer would include terraces, small buildings, restaurants and shops, exhibitions, art galleries, recreation, and parks. What he called an urban park would attract tourists and area residents without burdening the remainder of Georgetown. The existing waterfront – including the smelly Milton Hopfenmaier Rendering Company at 330 K Street and a vacant power plant

used by Capital Transit during the streetcar era – generated little economic benefit, but the urban park would yield high returns. Further, as Von Eckardt put it, “In addition it would attract some of the taverns and other Georgetown attractions which now often bother the town’s residents.”

He did not propose housing, which he said would be inconsistent with the history of the waterfront. He preferred the “small town” idea. If housing were included, he predicted that a few families would be able to live there, while pressure would grow for high-rise buildings that would, in his view, be disastrous.

Below the top level would be a second layer of parking for “thousands of cars.” The lowest level would serve transportation systems, including freeways. The Doxiadis plan suggested that the four-lane, two-way Whitehurst Freeway should remain in service “for many years,” but would be demolished when it had completed its economic life. The four-lane Pacific River Freeway would be on that lower level where room would be available to add lanes when the Whitehurst Freeway was finally demolished.

(Almost immediately, discussions of the Doxiadis plan indicated it included the demolition of the elevated freeway as part of the waterfront layers, leaving out the detail that the plan proposed to tear the freeway down only after “many years” when it had used up its economic value.)

In sum, Doxiadis said, “My study shows where we can go from where we are today to this ideal gradually, in phases.”

General Duke said the plan was a “bold, practical and imaginative long-range solution.” He added that “Doxiadis has offered superb reasons for his proposal,” but General Duke stressed that it was a long-range proposal because it “would obviously cost a lot of money.” As for the result, “It remains to be seen what we do with it.” [Hornig, Roberta, “Doxiadis Plan Unveiled for Georgetown,” *The Evening Star*, March 16, 1966; Von Eckardt, Wolf, “Park Urged for Georgetown Shore,” *The Washington Post and Times Herald*, March 17, 1966]

The Georgetown Planning Council, consisting of architects, city planners, and landscape architects residing in Georgetown, liked the part of the Doxiadis plan that called for tearing down the Whitehurst Freeway. However, with the backing of citizens’ groups, the council disagreed with his vision of the future waterfront as an urban park. The council advocated replacing the elevated freeway with a six-lane freeway in a tube under the river, an option the District Highway Department had rejected, and designation of the area as a National Historic Site. It also favored “a pleasant hilltown” of squares, plazas, and a waterfront promenade. [“Georgetowners Propose Residential Waterfront,” *The Washington Post and Times Herald*, March 19, 1966]

For Von Eckardt, the Doxiadis plan added to the expert voices whose “accumulative weight should now sink the Whitehurst Freeway out of sight.” Removal of “this blight” would be a significant first step in fulfilling “President Johnson’s promise of 14 months ago ‘to make the Potomac a model of beauty and recreation for the entire country.’”

The industry in the waterfront area, according to a 6-year old study, could survive relocation:

But there is no esthetic or economic gain in redeveloping the area if one-tenth of its 97 acres is covered by an elevated structure which, inevitably, turns all the rest into the kind of dismal slum New York's Third Avenue used to be before the El was torn down some decades ago.

In a May 1962 waterfront proposal, architect Chloethiel Smith had proposed to depress the freeway, but "nothing came of it." Now three expert groups were in agreement that the waterfront "must be freed of the ugly, elevated freeway." First, the Little report urged consideration of removing the Whitehurst Freeway. Second, the Georgetown Planning Council had proposed putting all freeway traffic through the area in an underground tube in the river off the waterfront. Third, Doxiades proposed a four-lane Potomac River Freeway in a tunnel under the waterfront "and then putting the present elevated freeway underground":

If expertise has meaning, this ought to clinch it at last. There is certain to be a good deal more hassling and argument over the freeway program. The fight has, in fact, already begun.

But tearing down the freeway had to be "an essential part" of the President's plan to provide "the city with efficient transportation without threatening its beauty, livability and orderly development." [Von Eckardt, Wolf, "Freeway Must Go, 3 Experts Agree," *Potomac Watch*, *The Washington Post and Times Herald*, March 27, 1966]

*Star* editors were encouraged by the Doxiadis plan. "Most important of all, perhaps, Mr. Doxiadis accepts the fact that the Potomac freeway is necessary, and nowhere does he suggest that its completion now, in whatever form, need preclude the sort of waterfront he envisions for the distant future." Whether his views would resolve the controversy over the freeways remained to be seen. "But it is just possible that they might." If a tunnel freeway were economically feasible, "that might at least be considered":

The more pressing need now, however, is that the inter-agency freeway committee created by the President should arrive at a firm conclusion once and for all on the basic form of the entire central-city freeway system – of which the Potomac section is only a part – as a single package. Mr. Johnson said early this year that he expected such a decision within a few months. He is still waiting for it, along with everybody else. ["River Freeway," *The Evening Star*, March 19, 1966]

The *Post's* editorial board also liked the Doxiadis plan, including its concept of a waterfront area "alive" with activities and large-scale parking off K Street:

The central concept is, of course, the tunnel. The Doxiadis study was commissioned by the Highway Department. Highway men, citing construction costs, have traditionally advocated surface or elevated roads. But additional monetary cost can be balanced by the demands of an urban society for parks and open space, for a city increasingly congenial to the needs of those who live in it. There is a great deal of flexibility in the Doxiadis tunnel: it could begin at several different points, it is designed for eight lanes but could be expanded at some later date, it could be built without disrupting traffic along the

present freeway. Those pushing frantically for completion of the Federal Highway System by the 1972 deadline will undoubtedly see in this concept a Pandora's box.

The editors did not want to argue about rival plans for the surface of the renewed Georgetown waterfront. They recognized that the questions about the freeway-in-a-tunnel remained to be decided, but "if the tunnel concept should be accepted, it would be a great victory for those who would revitalize the city. The skirmish over what exactly should be built above the tunnel is a separate question." ["A Tunnel for Georgetown?" *The Washington Post and Times Herald*, March 27, 1966]

(Doxiadis Associates' *A Georgetown Waterfront Study* was one of Doxiadis's last major consulting jobs in the Washington area. On June 28, 1975, he died in Athens after a long illness. He was 62 years old.)

### **Policy Advisory Committee Acts**

On March 31, the Policy Advisory Committee unanimously approved a statement on the District's freeway plans. Based on the Little report, the committee had carefully reviewed the city's freeway program "and is of the opinion that certain projects which have been approved and on which construction is either underway or imminent should proceed." The projects included the Center Leg under the Mall and north to New York Avenue; the Southeast Freeway and interchange "C" to Barney Circle; and the South Leg, which should include the maximum amount of tunneling permitted by traffic needs "to preserve the parks and monumental area through which this freeway must pass."

Consideration should continue for other projects. Extension of the Center Leg from Massachusetts Avenue to New York Avenue "should be reviewed to insure compatibility with the proposed K Street alternate and to permit flexibility in subsequent decisions pertaining to the North Central Freeway." The statement said, "final design of additional freeways in the eastern portion of the District must depend on further study, including consideration of connecting with Kenilworth Avenue [Expressway]" instead of building other connections to serve traffic from the north and east.

In November 1963, the committee had recommended maximum use of tunneling for the North Leg Freeway. Now it said the recommendation "has resulted in an attractive plan to construct this segment of freeway entirely in a tunnel under K Street, N.W.," as an alternative for the North Leg. The tunnel would run between Rock Creek Park and the Center Leg Freeway near Second Street, NW. The committee intended to study this proposal before making further recommendations.

The committee's statement continued:

It now appears that the Potomac River Freeway from Rock Creek Park along the Georgetown Waterfront should be tunneled to the maximum extent permitted by traffic service requirements and fund availability; however, the final design of this freeway will depend upon further study of the most practical way to connect Route 66 and the

Palisades Parkway to downtown Washington. This study will include the possibility of utilizing Jefferson Davis Highway in this connection.

The I-266 Three Sisters Bridge could be dropped if another way emerged as the most practical way to carry traffic between I-66 and downtown Washington. The study would consider using Jefferson Davis Highway as a link to the 14<sup>th</sup> Street Bridge complex. Another variable in design of the Potomac River Freeway was its connection with the Palisades Parkway, which was planned to link with the George Washington Memorial Parkway along the Potomac River in Montgomery County.

The committee rejected Little's idea of discarding the freeway system in favor of link-by-link action, but argued that the freeway system can remain flexible as the system is built. Flexibility "will permit the utilization of more current statistical data, future modifications in freeway design criteria and the National Capital Planning Commission's latest land-use plan for the District." The report added that, "In these plans, even greater emphasis must be placed on the protection of the homes and businesses of the District's residents."

The Policy Advisory Committee remained committed to a balanced transportation plan for the area that included a rapid transit plan and to the idea that "future transportation planning be thoroughly integrated with land-use planning on a metropolitan basis." The committee was confident that the freeway system "can be developed and constructed to meet transportation requirements with proper consideration of neighborhood values" as well as community values and proper aesthetic qualities:

The Committee feels that adherence to principles enunciated above will result in a freeway system which, when integrated with other components of the transportation network, will provide essential transportation services and also protect neighborhood values that are so important to the community.

Commissioner Tobriner transmitted the Policy Advisory Committee's statement to President Johnson on March 31. The District's Board of Commissioners, Tobriner wrote, "endorses the statement of the Policy Advisory Committee":

As you will note, the Committee advises that certain freeway projects, for which construction is either underway or imminent, should proceed without delay, and that future project plans be reviewed with increased emphasis on the reduction of the impact of such construction on our communities. The Commissioners strongly support actions to reduce such community impact in the District of Columbia, even though the obvious measures that are contemplated by the Committee will undoubtedly result in increased construction costs. [Major Highway Problems in D.C., Hearings Before the Subcommittee on Roads, Committee on Public Works, U.S. House of Representatives, 90<sup>th</sup> Congress, 1<sup>st</sup> Session, December 5 and 6, 1967, Report 90-19, pages 109-110; Flor, Lee, "Advisory Group Compromises on Freeways for D.C.," *The Evening Star*, April 1, 1966]

President Johnson replied on April 1. After acknowledging Tobriner's letter, the President said:

The Committee's decision to seek the aid of a consultant, and its unanimous statement following the consultant's report, are reassuring to me and will be reassuring to the Congress and the citizens of the District of Columbia. This review demonstrates that freeways, which the District must have, can and will be located and constructed in ways that reflect all significant community needs and values. I hope that the necessary funds will speedily be made available.

The *Post's* Jack Eisen pointed out that the committee's statement, Tobriner's letter, and the President's reply "ignored a consultant's controversial call for a moratorium on Washington construction together with changes in national urban freeway regulations." Eisen also translated the committee's statement for readers:

[The President] accepted an advisory panel's report, which disclosed that some parts of the network – notably the Three Sisters Bridge and two sections of the Inner Loop Freeway – may be scuttled if other ways can be found to handle the traffic . . . .

Among alternatives still under study is a crosstown tunnel beneath K Street nw. as a partial substitute for the North Leg of the Inner Loop. The North Leg itself would become a surface boulevard.

Three Sisters could be dropped, PAC said, if a way were found to bring surplus Interstate 66 traffic from Arlington into downtown Washington. PAC has revived the idea, first proposed by the National Capital Transportation Agency in 1962, of carrying the traffic along Jefferson Davis Highway, past the Pentagon, and feeding it into the 14<sup>th</sup> Street bridges.

NCPC Chairman Rowe issued a statement praising the Little report as "a notable contribution to the beauty of Washington and the rights of its people. It makes clear that past highway planning has not given sufficient attention to social and esthetic values." She observed that the committee had endorsed mainly projects that were under construction or nearly underway while not endorsing the two most controversial links, the North Central Freeway and the Three Sisters Bridge. She added:

I am pleased by the PAC report of the planning commission's solution of tunneling K Street for the north leg; the new study of the Jefferson Davis Highway and the Kenilworth Expressway; and the tunneling of the south leg of the Georgetown waterfront section.

The committee's findings "make evident the impact of the Little report on highway thinking." She favored "a new look at the total highway plan," adding, "We must fit transportation into our city – not our city into a freeway plan." [Eisen, Jack, "President Approves Proposals for Network of Freeways Here," *The Washington Post*, April 2, 1966; Flor, Lee, "Advisory Group Compromises on Freeways for D.C.," *The Evening Star*, April 1, 1966]

After learning of the President's letter, about 70 protesters picketed the District Building in support of the Little report and to ask President Johnson to accept its recommendations. Mrs.

Robert H. Bruton of the Save Takoma Park Committee, speaking on behalf of several citizen committees, said the Policy Advisory Committee's report was "a study in ambiguity":

We respectfully urge that the White House, reconsidering the excellent and comprehensive report from the Little company, take a vigorous position to implement its recommendations, in the interest of conserving and enhancing our National Capital and our great cities throughout the nation.

She added that General Duke's reaction to the study was "clearly an attempt to force supporters of the long-awaited rail transit system to accept an unwanted and destructive freeway complex at great expense to the city and its real needs for better housing and better schools." ["Pickets Urge Adoption of 'Little' Road Report," *The Evening Star*, April 2, 1966]

In an interpretive piece, Lee Flor wrote of the Little report, "All in all, the result adds up to a severe setback to the freeway program previously planned for the District." Critics will find support for whatever their concern may be. NCPC will go over "every freeway project in every little detail." The Commission of Fine Arts and park agencies will use the recommendations "to design what it feels are more esthetically-pleasing freeways and to save parklands." The recommendations on housing "will add support to citizens' groups fighting freeways." Moreover, the report "also wiped out the previous status of several freeways and bridges."

Flor offered Whitehurst Freeway as an example of the consequences. The elevated four-lane freeway was supposed to be part of the Potomac River Freeway, carrying four westbound lanes paired with four new eastbound lanes along the river. However, now that the Policy Advisory Committee was recommending building the freeway at least partly in a tunnel, Chairman Rowe may use the plan to bargain for tunneling the freeway in exchange for tearing down the Whitehurst Freeway:

For project after project, the language of the final recommendations by the seven members of the policy advisory committee have either vague statements or critical terms which mean a setback for the freeway program.

President Johnson's language was subject to interpretation, too. He did refer to the freeways "the District must have," which the city took as support, but added that the freeways "can and will be located and constructed in ways that reflect all significant community needs and values." Flor explained:

This [is] being interpreted by freeway opponents as a slap at previous freeway planning, and as a sort of "hunting license" to bag more freeways.

Flor added:

The next immediate round in the continuing battle over freeways will be with the Bureau of Public Roads, which already has said it will not finance extensive tunneling for roads. [Flor, Lee, "Freeway Study Adds New Fuel to Disputes," *The Sunday Star*, April 3, 1966]

On April 10, *The Sunday Star* carried an editorial titled “Mr. Johnson and the Freeway Impasse” that began:

It is hard to believe that President Johnson really understands what is being done, in his name, to Washington’s chances of dealing with its future traffic problems. The President loves this city, and wants to do right by it. But someone has sold him an awful bill of goods as to the real meaning of the current freeway controversy, and the threat that has been posed to the District’s last chance of acquiring the sort of freeway system the city desperately needs.

The net effect of the Little report, which the President had requested, “was to delay, rather than to expedite” the program. The reason the District was unable to continue work on the freeway network was “perfectly plain:

The decisionmaking machinery in Washington planning does not rest solely with city authorities, as elsewhere. And freeway opponents within this group—led by Elizabeth Rowe of the Planning Commission—have used this unwieldy machinery to delay decisions.

Even when Congress authorizes and appropriates funds to match Interstate construction funds on a 90-10 basis, the District cannot use the funds and was in danger of losing them after 1972:

The opponents of the program are of course completely aware of this dilemma. They know full well that it is impractical to build the major portions of the freeway system until a firm decision is reached on the system as a whole. In stalling that decision, they have been fighting a highly successful war of attrition. And if they are permitted to keep the issues at a point of impasse much longer, they will surely win the war.

The editorial added that only one person can cause the stalling to stop, and that is President Johnson. He should direct the District commissioner to build the system “and direct Federal agencies in language they can understand to cooperate fully in getting the job done.”

### **About Tunnels**

A week later, the tunnel issue was in the news again. On April 11, Senator Case wrote to urge General Duke to put the entire South Leg Freeway underground “so that the entire open-space setting for the Lincoln and Jefferson Memorials will be preserved without further erosion of our precious and limited parkland.” He dismissed the cost issue:

Whatever additional cost is involved in building a fully tunneled highway must be accepted as the necessary price to be paid for insuring that this park is preserved for future generations.

The *Post* observed that as the ranking Republican on the Senate District Appropriations subcommittee, Senator Case “has long maintained that no further funds should be appropriated for highway construction until Congress reviews and authorizes individual projects,” a view that city officials disputed. The dispute was a “major factor in holding up the Senate District

Committee's consideration of legislation allowing the city to borrow \$35 million for the highway fund and to increase gasoline taxes one cent a gallon." [Carper, Elsie, "Sen. Case Urges Tunnel For Leg of Inner Loop," *The Washington Post and Times Herald*, April 13, 1966]

In an unusual move, Joseph Barnett, BPR's chief of the Office of Engineering and Operations, disagreed with the Senator, in public, the day newspapers reported on his letter. Barnett, an alternate member of NCPC, said in a speech to the National Highway Users Conference:

I sometimes wonder for whom parks, parkways and highways are provided. Parks are not developed for landscape architects or for the exclusive use of a few people living near them, or even for the heads of park departments—and after reading this morning's paper, perhaps I should say "Not for U.S. Senators, either."

Tunnels, he pointed out, are more expensive than ground-level highways, and should be used "only where it is extremely difficult or physically impossible to do otherwise." As examples, he cited under rivers, through mountains, and other special situations. Eisen reported:

Barnett said he recognizes the problem of family and business displacement caused by urban freeway projects, and said this can be overcome by buildings constructed on "air rights" over surface freeways and enclosed beneath elevated roads.

"The locations of many arterial highways are through blighted areas where it is . . . a community benefit to clear out existing buildings," Barnett said.

"A desirable solution is to plan the highway with sufficient right of way to replace the substandard buildings with more desirable living quarters . . . [and] by reserving some of the new units for tenants" who are displaced. With careful planning, Barnett said, there can be a direct transfer from one dwelling to another.

In addition to depriving motorists of the sights along the highway, tunnel fumes were dangerous for their health. [Eisen, Jack, "Avoid City Tunnels, Advises Road Chief," *The Washington Post and Times Herald*, April 14, 1966]

On April 18, Senator Case went to the Senate floor to criticize Barnett, saying that "a Federal roads official publicly attacked the tunneling concept." Senator Case speculated:

Apparently he believes that parks are for one thing only – providing more space for highways. The whole range of needs of the urban human being are of no account; the only thing that matters is that the motorist's view be unobstructed. But what sort of a view of anything does the motorist get while traveling the superhighway at 60 or 70 miles an hour?

The official's statement brought to mind the old saying that war is too important to be left to the generals. "Equally," he said, "highway building is too important to be left totally to the highway builders." He did not question their expertise in building roads. "But I do challenge any assumption that they should have the final say as to where a highway ought to be placed, or how it should be designed":

I believe the final determination is a matter for those officials in each community who carry overall responsibility for maintaining its viability and livability. The best highway does not always run from point to point by the shortest distance.

Highway officials were “ignoring the chorus of protest” in cities around the country “over the destructive impact of superhighways on their communities, on their parks, and on historical sites.” Highways were a necessity, but they should be located and designed “so that they do not destroy the livability and individuality of our cities.”

These concerns were especially important in Washington. To retain historical resources and maintain the livability and charm of the city, “extra pains must be taken to make certain in our highway building—and in all other public projects—we give attention to the full range of community needs, both tangible and intangible.” Highway tunnels “should be viewed as an opportunity—not as an obstacle.”

Administrator Whitton, Senator Case said, understood what his associate perhaps did not. Whitton had approved tunneling of the South Leg, and had recently signed a joint statement that found a plan to construct another highway in a tunnel along K Street, NW., to be “attractive.”

Parks were for everyone, as the Federal official had stated. “But they will not exist for anyone if we permit them to be overrun by modern, multilane superhighways.”

He planned to introduce a bill that would require that parkland taken for highways or other non-park purposes, be replaced “acre for acre, or, if you will, foot by foot” in equivalent park land elsewhere.

He concluded by pointing out that the First Lady, Lady Bird Johnson, was pressing a beautification plan. At this time, “it is clear from the statement that spurred my remarks and from the threat of highway construction in the midst of the world-famous cherry blossoms, that some Federal officials still have not gotten the message.” [Protection of Parkland, *Congressional Record-Senate*, April 18, 1966, pages 8222-8223; “Case Bill Would Ensure Parkland Replacement,” *The Washington Post and Times Herald*, April 19, 1966]

### **Locating the North-Central Freeway**

On April 14, the Maryland State Roads Commission formally rejected plans for an elevated North-Central Freeway above the Baltimore and Ohio Railroad tracks in Maryland. In a letter to Director Airis, Chairman Funk said that rejection of the elevated freeway did not mean the State had settled on a route for the freeway.

The State rejected the elevated freeway based on “esthetics and socio-economic” factors. The *Post* explained:

Esthetically, Funk said, the Roads Commission had been thinking of a raised freeway that would offer motorists panoramic views on approaching the Capital and possible views of many “historic and distinctive structures.”

Aerial photographs, however, proved there wouldn't be any such views, the Commission's aide said.

In addition, Funk wrote, "Costs favor a low level concept."

Funk expected to decide on the route around July 1 after State officials had a chance to review the consultant report expected in about a week.

Sources told the *Post* that highway planners appeared to favor a route as close to the railroad tracks as possible:

This would avoid the "ten-lane swath of concrete" through residential Takoma Park that drew so much fire in the first freeway proposal and could keep displacement to a minimum." [Barnes, Bart, "Md. Rejects El Freeway Above B&O," *The Washington Post and Times Herald*, April 15, 1966]

As an alternative, the Land Committee of the Metropolitan Washington COG and the National Capital Regional Highway Planning Council suggested on April 14 that COG consider routing the freeway through Rock Creek Park. As Jack Eisen reminded readers, the idea of routing I-70S through the park had been proposed about 13 years earlier:

Despite endorsement by the Maryland-National Capital Park and Planning Commission and others, the Park route ran into stiff opposition, from residents, conservationists and the National Park Service.

It quickly died, and attention turned to routes along the Potomac Palisades and through the so-called "Wisconsin Avenue corridor," both of which also were stifled. Consideration is now centering on a North Central Freeway from Silver Spring.

Revival of the idea began at a hearing of the Montgomery County Planning Board on December 6, 1965. Thomas Wilson, representing 18 citizen associations in Bethesda, suggested running a four-lane road from the Capital Beltway near Kensington Parkway and paralleling Jones Mill Road to the west edge of the park:

As he proposed it, the route would stay to the west until Tilden Street, where it would jump to the east and join the existing Rock Creek and Potomac Parkway south of the Zoo.

Everett Jones, who was on the planning board and the regional council, thought the idea promising. He proposed it in a February letter to the council. According to Eisen, the idea was "incorporated in a joint statement that now goes to NCPC. There the reaction is likely to be frigid." While agreeing to send the statement to NCPC, the COG "pointedly disavowed the whole idea." [Eisen, Jack, "Rock Creek Freeway Proposal Is Revived," *The Washington Post and Times Herald*, April 15, 1966]

## Federal City Council Report

On April 20, Stephen Ailes, president of the Federal City Council, sent a report to President Johnson on *Freeways in the National Capital Region*, covering the period from 1946 to 1966:

It is our hope that this material will be useful to you in your efforts to improve the quality of life for the residents of the nation's capital and to provide a federal city worthy of national pride and international admiration.

The preface stated that the council "has been unswerving in its support of a balanced transportation system incorporating to full advantage both fixed-wheel and free-wheel modes of transportation." It also supported comprehensive planning of transportation throughout the Washington region.

Population, tourism, Federal employment in the city, and automobile and truck registration were all going to increase, regardless of what happens with transportation:

Regional growth is a fact. The variable is the shape and character of that growth. Whether it takes the form of orderly regional development or unruly urban sprawl depends in large measure on conditions at the heart of the region . . . .

The Nation's Capital presently is laboring with inadequate facilities for transportation. This inadequacy is reflected in a general reduction of the importance of the city's core area as the major concentration of commercial enterprise.

The key was a balanced transportation system serving the core:

It is the Federal City Council's position that the health and vitality of the city and the stability of the region can best be served by implementing at the earliest practicable date a system of transportation that affords the widest possible freedom of movement for people and goods. Such a system must include modern rail rapid transit and efficient freeways and parkways . . . .

After careful examination of the facts, the Federal City Council is convinced that a freeway system with an inner loop and connecting radials must be built. It must be built with continued proper regard to considerations of aesthetics, relocation, optimum land use, and service – but it must be built. The inevitable result of a failure to do so would be further diminution of the accessibility and viability of the center city and the flight of job-producing, tax-generating enterprises from the heart of Washington. [*Freeways in the National Capital Region*, Federal City Council, April 1966, page iv; the report is reproduced in *Major Highway Problems in D.C.*, pages 49-111]

The report described the history of freeway decisionmaking in the District of Columbia, including "25 major studies during the past 20 years involving freeway system planning . . . and numerous other studies corollary to the major studies." Eight studies were underway at the time of the report:

Consequently, planning for the freeway system in the District of Columbia has become fragmented and uncertain. Individuals and groups – both official and unofficial – have been able to inject confusion into the freeway planning picture. That confusion has increased the difficulty of securing firm planning decisions. The absence of such firm planning decisions has created a condition under which not a single freeway project can now be advanced to the final design stage. [page 1]

The history of the District's freeway and parkway program was "a record of deteriorated decision-making with regard to the planning of transportation in the Nation's Capital." That history was "an indictment of the city's planning process which has allowed confusion, frustration and indecision to prevail where order, reason and vision are required." What was clear was that "extraneous considerations" had been substituted for "sound planning principles."

The Little report had "made a difficult situation worse," while the Policy Advisory Committee's March 31 statement "approved no new projects and failed to produce a firm decision on the fundamental issue of whether a freeway system involving an inner loop with radials to the beltway should be built within the time frame of the federal interstate highway program":

There are certain individuals – some of them in key positions – who apparently believe the correct approach is to build no roads at all – to disregard Washington's transportation needs in the forlorn, nostalgic hope that doing so will somehow reincarnate the Washington of 50 years ago. Unfortunately, their solution is being foisted upon the Nation's Capital by default.

The council rejected "the apparent policy of answering questions with more questions and of substituting delay for decision-making." [pages 35, 40]

The council recommended "securing of necessary planning decisions by October 1, 1966." In the absence of final, lasting decisions, "no meaningful progress can be made":

The historical account of freeway planning indecision to date indicates that nothing short of personal intervention by the President of the United States will break the logjam of fixed positions held by his appointees and employees.

Furthermore, history also indicates that Presidential action be clear, concise and direct. The Presidential letter of June 1, 1963, directed the Board of Commissioners to "enlist the cooperation" of other federal agencies, to "conclude as promptly as possible" the proposed re-examination of certain elements of the program, and to "go forward as scheduled" with the remainder of the system. None of these Presidential directions has been accomplished.

The council urged the President to issue a policy directive to all elements of the Executive Branch stating his desire to complete the District's road program and directing members of the Executive Branch to cooperate fully in that effort. "THE DIRECTIVE SHOULD LEAVE NO DOUBT THAT OBSTRUCTION AND DELAY BY MEMBERS OF THE EXECUTIVE BRANCH WILL NOT BE TOLERATED." [page 48]

The report concluded:

The freeway and parkway network for the District of Columbia has been studied, restudied, planned and replanned but it has not been implemented. Until it is, the concept of balanced transportation cannot become a reality. And it is within the sturdy framework of such a balanced transportation system that the future urban greatness of the federal city must be formed.

If Washington had no other reason to aspire to urban greatness, its federal purpose alone should be enough to arouse the desire for civic fulfillment. But the greatness of this community lies not in a static federal reservation dotted with monuments and isolated from its urban environs. Its greatness lies in its role as a city – livable, beautiful, functional, inspiring – a place where the human purpose as well as the federal purpose may be consummated.

SUCH GREATNESS REQUIRES PLANNING. IT ALSO REQUIRES ACTION.  
[page 49, all capitals in original]

(The report was prepared by Lloyd Rivard of the Automotive Safety Foundation, who would become chief of planning for the District highway department and later an engineer-consultant for the House Public Works Committee.

(That same year, the Federal City Council created Citizens for Better Regional Transportation to promote passage of the initial Metro bond issuance.)

At a press conference on release the report, Ailes said, “We presumably have a decision to go ahead [with the freeway program] but it is being taken away” by overlapping planning agencies. “We should not let it be shot down on a lot of individual projects.” Decisions were being made “by default” as planning organizations stall and procrastinate to delay the freeway system until it died.

The report did not identify the individuals or organizations responsible for the delay, but Flor told readers, “it is apparent the study is referring to the National Capital Planning Commission and the National Park Service,” both of which had “virtual veto powers over any freeway program.” Regarding the section of the report referring to “certain individuals” who were nostalgic for Washington of 50 years ago, reporters asked Ailes which individuals the report meant and whether President Johnson was getting good advice. He declined to name them and sidestepped the question on advice. However, Flor told readers:

Presidential advisor Charles Horsky, the principal author of the most recent attempt to arbitrate the freeway controversy, is caught in the crossfire because the report implies that he has been unsuccessful in negotiating any solutions.

Flor explained that NCPC had supported the freeway layout of loops and arterials in the 1950s, but the new appointees by the Kennedy and Johnson Administrations constituted a majority that “basically opposed” freeway construction. As an example, Flor cited NCPC’s 5 to 4 vote to approve the Center Leg Freeway across the National Mall that would have been blocked if one

opponent had not been out sick on the day of the vote. [Flor, Lee, "Johnson Gets Freeway Plea From Federal City Council," *The Sunday Star*, April 24, 1966]

BPR Administrator Whitton praised the report's emphasis on the need for a "basic, long-term commitment to freeway planning." He said, "I do not favor the incremental basis. It's just a stalling method. You end up on a river bank with no way to get across." He favored the Federal-Aid Highway Act of 1962's call for "a comprehensive, continuing, cooperative planning process, meaning that as conditions change, you adjust accordingly," but always with the long-term commitment in mind.

Director Airis also praised the report. "Exhaustive planning," he said, led him to the conclusion that "failure to build the freeway portion of the balanced transportation system would lead to eventual disintegration of the inner city." He added that "the Council, better than any other group, is qualified to speak on these economic aspects."

Chairman Walton of the Commission of Fine Arts called the report "very fine" because:

They have put their finger on the basic problem – we have the automobile and we have to make arrangements for it . . . . I am happy they are pressing for a White House decision.

NCPC Chairman Rowe restated her opposition to freeway expansion even before reading the report:

The freeway plans have been questioned by every citizens group, including the Democratic Central Committee, and have been supported by no citizens organization. I question whether freeways can build more houses.

She added that the people of Washington almost unanimously agreed with her position on freeways. She pointed out that when NCPC included the basic freeway plan in its draft Year 1985 Plan, citizen groups fiercely criticized the plan. "There isn't a single citizen's association or civic association which supports it."

Mrs. Shackleton agreed that most city residents opposed the plan. She added, "Our position has always been clear – we've been very concerned over relocation."

Whitton urged that freeway construction in the city should be "immediately resumed." He told Lee Flor that he was "opposed to simply driving a highway through a city without looking to right or left." He said, "A lot of things have to be considered, but some day you have to stop planning and start building – you can't go on planning forever." ["Resumption of Freeway Plan Urged," *The Washington Post and Times Herald*, April 25, 1966; Flor, Lee, "Head Planner Sees Freeways Opposed," *The Evening Star*, April 25, 1966]

### **Home Rule Strategy**

Roy Wilkins, NAACP's national director, thought that Washingtonians were too apathetic to secure home rule. To do so, he said, people would "have to do some hard work and study . . . to devise plans and stick to them."

For that reason, he agreed with the decision of the District's NAACP chapter to reject Free D.C. Movement's strategy of staging boycotts of businesses that did not display one of its stickers. He did not agree with the idea that "if you make a corner merchant sign up, it will bring about home rule. Home rule is made in Congress, which is made up of people from Iowa, Michigan, Oklahoma, Texas and Mississippi." Getting home rule meant that people "will have to do some hard work and study . . . to devise plans and stick to them." He said that local NAACP chapters from around the country had written to their congressional representatives in support of home rule. ["Wilkins Calls District Citizens Too Apathetic About Home Rule," *The Washington Post and Times Herald*, March 14, 1966]

William Raspberry, a black reporter who was one of several *Post* staff writers continuing the Potomac Watch column, explained on March 22 that the goal of the boycott strategy was to show that the Washington Board of Trade, which claimed a lack of interest in home rule, did not represent most businesses in the District:

Based on these premises, the Movement was conceived as a means for bringing pressure on the Board of Trade both to force it to reverse its stand in opposition to home rule and to provide a means by which individual merchants could show their independence of the Board.

Movement leaders had planned to do this by circulating petitions supporting home rule, asking downtown merchants to use their influence with key Congressmen to urge passage of meaningful home rule legislation and requesting financial contributions from the merchants.

Debate over the contributions (Was it blackmail or wasn't it?) quickly obscured discussion of whether the Movement's tactics were in keeping with its goal.

With downtown businesses accusing the organization of extortion, Free D.C. Movement revised its policy to make it "ridiculously easy for a merchant to obtain a 'good buy' sticker. All he has to do is say he favors the right to vote." Raspberry observed that the easier the Movement made it for merchants to get the stickers, "the more meaningless the stickers will be." Further, the organization shifted its focus on influential downtown business leaders to focus on "the city's most vulnerable merchants – those in predominantly Negro areas." They had little, if any, influence on Board of Trade policy, or Members of Congress whose primary loyalty was to the people back home who voted for them.

Free D.C. Movement was planning to generate support around the country, but to date, "little has been done to organize such a nationwide campaign." Movement leaders were "too busy fighting the charges of 'extortion' and refurbishing their image." [Raspberry, William, "Tactics Meant Failure For Free DC Movement," Potomac Watch, *The Washington Post and Times Herald*, March 22, 1966]

On April 5, the Senate voted to ask the House to go to conference on the Bible-Sisk bills. Despite the significant differences between the two bills, Senator Bible told his colleagues that "reasonable and responsible men with conscientious differences of opinion have traditionally

worked out legislative differences by the conference route.” He admitted he was “an eternal optimist,” but hoped the conferees could “sit down around the conference table at an early date.”

The Senate appointed all seven members of the Senate District Committee as conferees, including Senator Morse. In committee, he had been the lone vote against going to conference. He saw no chance of reaching agreement. [“Senate Requests House to Discuss Home Rule,” *The Washington Post and Times Herald*, April 6, 1966]

At the same time, the Washington Home Rule Committee split on strategy. Rauh and J. C. Turner, president of the Greater Washington Central Labor Council, favored continuing to fight for the Senate-passed Administration bill supported by President Johnson. However, as the *Post* reported in a News Analysis:

The majority of the Committee’s board yesterday reluctantly disagreed, citing a host of legislative pitfalls in the House for the Senate-passed concept, and backing the House charter-commission approach as a way of getting something on the books before Congress adjourns.

Rauh opposed “defeatism,” saying:

The most important thing is to keep the home rule movement in tune with the President’s leadership. He has said he wants the Senate bill. We need his leadership to get anything. A charter bill that he doesn’t support would be hopeless. . . .

The House voted to discharge its District Committee from responsibility for a bill and that petition clearly states that the discharge covers the bill all the way to enactment.

By contrast, the president of the committee, Richard K. Lyons, agreed that President Johnson supports the Senate bill. However, “if the Senate approach faces trouble, I feel confident that he will throw his support behind any workable legislation. He is a practical, legislative strategist.” It was not a question of “defeatism.” He said, “We have to face the legislative facts of life. It is imperative that a step be taken before this Congress adjourns.”

Like many committee members, Lyons said he thought the House had acted in good faith in approving the Sisk charter bill. “If we accept this good faith, then we should hope the House would feel obligated to approve a workable, acceptable charter for self-government.”

The News Analysis concluded:

In Congress, both the opponents and supporters of home rule have grown weary of the whole business.

In the long run, Congress won’t listen to the local groups anyway, and both sides know it. Like the legislators, Washington’s residents will be watching the White House. [Asher, Robert L, “Strategy Splits Home Rule Forces,” News Analysis, *The Washington Post and Times Herald*, April 17 1966]

During a session with reporters on April 21, Speaker McCormack pledged to “do everything I can to get a conference.” The question of who would pick the conferees to represent the House remained unanswered. [“McCormack Vows Home Rule Help,” *The Washington Post and Times Herald*, April 24, 1966]

With the Speaker of the House undecided, the House District Committee voted 13-10 on May 11 against going to conference. Chairman McMillan told reporters after the vote that the House would have to clear other District legislation, including the crime bill, “before we’ll act on home rule.” He explained, “I think we should wait and see if the Senate agrees with us on other bills.” As for whether a potential conference could come together on home rule, he said it was “difficult for me to be hopeful under those circumstances.” He added that he had not been pressured on the issue. “Not one person has come to me,” he said.

Rauh called the vote “a prime example of the arrogance of power.” [“House Group Votes Against Conference On Home Rule, 13-10,” *The Washington Post and Times Herald*, May 12, 1966]

Chairman McMillan’s repeated claim that District residents never visited him to talk about home rule irritated its supporters. The Reverend Channing Phillips, acting co-chairman of the D.C. Coalition of Conscience, said that Chairman McMillan’s claim “is more indicative of the fact that D.C. residents don’t like his particular brand of southern plantation hospitality, than it is a register of any lack of interest for home rule”:

Not having any horses, such as a crime bill, to trade with Mr. McMillan in return for the right to vote, we feel the least we can do is accept [his] invitation to visit him. And the Coalition will begin next week to furnish such visitors . . . .

To begin, he intended to visit the chairman’s House office to “give him clues as to community support for home rule.”

A spokesman said Chairman McMillan would agree to a meeting, but with only one person, not a delegation. “We have a small office, you know,” the spokesman explained. [“Home Rule Group to Visit McMillan at His Office,” *The Washington Post and Times Herald*, May 14, 1966; “McMillan To See Agent Of Coalition,” *The Washington Post and Times Herald*, May 17, 1966]

The Reverend Phillips met with Chairman McMillan for over an hour on May 19. According to The Reverend Phillips, the chairman made it clear that he was “unalterably opposed” to home rule. He saw no point in a conference committee, at least until bills “more dear to his heart” had gone to conference. The only alternative was to convince Speaker McCormack to appoint conferees.

As it turned out, The Reverend Phillips was not the only visitor to speak with the chairman about home rule that day. Before he arrived, a group of Trinity University students arrived and threatened to stage a sit-in. They had decided to lobby for home rule after Free D.C. Movement staged a week of agitation on area college campuses. Finally, the chairman agreed to meet with one member of the group, and they chose Marion Barry.

The two met for about 15 minutes. Although the chairman did not talk to reporters about the discussion, Barry said the chairman was “just what I expected,” adding “I shared his gracious Southern hospitality and I came out with the same impression I had when I went in – that we live on a plantation. All the citizens of the District.” In short, “We both agreed neither of us would change the other’s mind,” Barry said. He had offered the chairman a Free D.C. home rule button, but the chairman declined. [Carrigan, Richard, “Home Rule Backers Enter McMillan’s Den,” *The Washington Post and Times Herald*, May 20, 1966; “‘Free D.C.’ Plans To Picket House Home Rule Foes,” *The Evening Star*, May 20, 1966]

A day later, on Saturday, Free D.C. Movement picketed the homes of Chairman McMillan in North Arlington, Representative Springer in Chevy Chase, and Representative Roudebush in a Capitol Hill apartment. None were home at the time. At Chairman McMillan’s home just off North Glebe Road, 14 pickets sang and shouted “Freedom Now” at the few passersby. Ten people picketed Representative Roudebush’s apartment at 200 C Street, SE., for about 2 hours. Supporters marched for about 15 minutes in front of Representative Springer’s home.

Barry told reporters that picketing Chairman McMillan’s home was purely symbolic since there was no chance of changing his mind. The movement was hoping for better results with the other two Congressmen. Picketing would continue every evening “until we get satisfactory results,” Barry said. [“Pickets March at Homes of 3 Congressmen,” *The Washington Post and Times Herald*, May 22, 1966; “Representatives’ Homes Picketed by ‘Free D.C.’” *The Sunday Star*, May 22, 1966]

By the end of May, Senator Morse was ready to tackle District issues. The *Post* listed the activities that had occupied him for several months:

The press of national concerns – the war in Vietnam, the Oregon primary, and his appointment by President Johnson to head a mediation panel in the machinist-airline dispute – forced Morse to neglect the city recently and gave rise to speculation that he had lost interest in city affairs.

Now, he was ready to act to break the logjam of city legislation, including home rule. He was ready to fight for the home rule bill, “and will consider attaching the Senate-passed measure on other legislation to get it back before the House.” A long-time advocate of home rule, Senator Morse agreed with Rauh that the best way to proceed was to attach the bill as a “non-germane amendment” on a minor bill. He preferred one from the Senate Committee on Labor and Public Welfare:

Several such bills are now pending before the Committee and as its second-ranking Democrat, Morse is in a good position to follow through.

“I want to hit home rule pretty strong,” Morse declared. If we can force it out we ought to do it.” [Carper, Elsie, “Morse to Cut Logjam On Legislation for City,” *The Washington Post and Times Herald*, May 29, 1966]

The groups supporting home rule were rearranging relations, with Marion Barry seemingly the agitator on the outside. In early June, the Washington Young Republican and Young Democratic Clubs joined with young people from ADA and NACCP to form Youth Organizations United (YOU) for Home Rule. They planned meetings throughout the city and a July 10 rally on the grounds of the Washington Monument. Barry, who had tried to get the groups into Free D.C. Movement, denounced them. The rival organizations “will only confuse people in the community.” The president of the Young Democratic Clubs of D.C., Lonnie C. King, Jr., said, “We are not saying the Free D.C. Movement is irresponsible, but we feel we are a responsible group.” [“4 Local Groups Form A Home Rule Coalition,” *The Washington Post and Times Herald*, June 7, 1966]

Barry scheduled a press conference at 2 p.m. on June 20 outside the Fleming Building at 800 17<sup>th</sup> Street, NW., where Davis, president of the Board of Trade, had a law office. Barry intended to announce “educational picketing” against Davis, the Woodward and Lothrop department store, and three utility companies. Barry was, however, 20 minutes late – an occurrence that reporters would learn to expect throughout his long political career in the District of Columbia.

While reporters waited for Barry, Davis arrived at 2 p.m. for a meeting in his office. He told the reporters he had a meeting with Barry the next day, but was surprised to see Free D.C. Movement pickets in front of the building. “Fortunately,” Davis said of Barry, “he’s not representative of the people of the District of Columbia.” He told reporters that the Board of Trade favored home rule. “The definition of that is that we’ve got to have a vote in Congress – an elected Senator and Representative . . . that’s your true legislative body.” Asked if he supported an elected city government, he paused, then said, “We are governed by a city government.” In apparent reference to Barry, the picketing, and press conference, he added, “This is typical of his flamboyant, publicity-seeking ways,” before going into the building.

Barry arrived a few minutes later “dressed in a \$3 straw Panama planter’s hat and seersucker suit,” according to the *Post*, to call the Board of Trade “public enemy No. 1.” He said that most business leaders disagreed with the board’s position, but added, “A lot of people don’t know the Board’s position,” which was one of the points of the demonstration. [“Barry Is Late, Trade Board Has First Word,” *The Washington Post and Times Herald*, June 21, 1966]

### **NCTA’s Executive Committee**

On April 21, NCPC’s executive committee, headed by Chairman Rowe, considered a nine-page document that recommended a three-stage approach to the city’s freeway plans. The results of each stage would be evaluated before proceeding with the next stage. The presently approved freeways would be built during the first stage (1966-1970) along with rail rapid transit. For the second stage (1971-1975), the document suggested a freeway in the New York Avenue corridor to connect with the Baltimore-Washington Parkway, an Eastern Avenue highway, and the construction of I-95 in Maryland. During the final stage (1976-1985), construction would be undertaken of a North Capital Street freeway and the Center Leg through the Soldiers Home grounds to upper Washington. During this stage, officials would “consider removing of Whitehurst Freeway” during redevelopment of the Georgetown waterfront.

The recommendations suggested delaying the remaining freeways until the rail rapid transit system “is in operation and has an opportunity to build up ridership,” estimated to be the mid-1970s at the earliest. The full NCPC membership would vote on the proposal in May or June to determine if it would be included in the Year 1985 Plan.

Jack Eisen told readers:

If carried out, the executive committee’s recommendations would shelve the Three Sisters Bridge, the North Leg of the Inner Loop Freeway, the East Leg north of D.C. Stadium, a third Potomac River bridge at the foot of 15<sup>th</sup> Street sw., the North Central Freeway to Silver Spring and a branch joining Maryland Interstate 95 to Baltimore.

Between now and 1970, the executive committee proposed to go ahead only with “facilities already decided upon.”

The executive committee listed these as the Center Leg of the Inner Loop beneath and north of the Mall, the South Leg past and beneath the Tidal Basin, an extension of the Southeast Freeway to D.C. Stadium and the East Capitol Street bridge, a crosstown tunnel between K Street nw. and a four-lane Palisades Parkway.

It also endorsed a tunnel under the Georgetown waterfront, subject to solution of the Three Sisters question and related Palisades Parkway design problems.

The executive committee recommended considering removal of Whitehurst Freeway as part of the plan for the Georgetown waterfront.

As an explanation for these proposals, the measure explained that “no one has yet ‘solved’ the transportation problem of the 20<sup>th</sup>-century urban America for all concerned, even at the physical level”:

No proposals for new physical facilities can be offered with much assurance that they will be regarded as wise 20 years from now.

Also, the transportation system is the subject of a sharp controversy of long duration, between two opposing schools of thought.

The transportation proposals . . . will inevitably generate a new round of debate, which is sure to enter the realm of politics. [Eisen, Jack, “NCPC Board Seeks Delay In Freeways,” *The Washington Post and Times Herald*, April 26, 1966]

The April 21 action by the NCPC executive committee was in closed session and not intended for release to the public, but the document had been leaked to reporters. On April 27, Eisen reported that General Duke had written to Chairman Rowe the day before the closed meeting to protest the plan. The committee’s action was “unreasonable” because it had been submitted to him only the day before, allowing “no time . . . to analyze it properly.” He said, “In my opinion, to follow the policies and procedures outlined in this document would serve only to postpone important decisions, the solution of which is essential, if unpleasant to many.” Businesses were

making decisions “which are inimical to the future development of Washington” in the absence of assurances regarding the freeway plan. “I, therefore, consider that the adoption of this document . . . would have exceedingly grave consequences for the welfare of the District and must advise you that I am strongly opposed to its consideration by the executive committee.”

Eisen also reported that at McCarter’s insistence, the executive committee had dropped the reference to delaying freeways until the subway was in operation and ridership could be gauged. He and executive committee member G. Franklin Edwards argued that roads and rails were part of a balanced transportation system, not competing modes. They feared inclusion of the phrase would rekindle the freeways versus rails dispute that had blocked passage of a rapid rail system for the area.

Leak of the document provoked a debate within NCPC that extended even to whether the executive committee had voted on it. Staff director Charles H. Conrad said the document was only “a status paper, a working paper, a discussion paper, not a specific recommendation to the Commission.” However, Edwards and Vice Chairman Louchheim said the executive committee endorsed the document.

Assistant Engineer Commissioner Reynolds, who was at the meeting, said he did not believe the committee had acted at all. However, General Duke referred to the document as “somebody’s bad dream.” He was confident that NCPC would reject the recommendations.

Reaction to the Federal City Council report continued. Representative Broyhill wrote to urge President Johnson to resume the freeway program, including the Three Sisters Bridge and the Inner Loop connections:

As you know, the Policy Advisory Committee created in 1963 to make a recommendation on the bridge, found earlier this month that the only decision it could reach was to unanimously make no decision . . . . It is not likely that this committee will ever find a way to present you with firm guidance.

Admiral Phillips of the Committee of 100 wrote to Ailes in defense of Chairman Rowe. “I am deeply interested in learning how the FCC [Federal City Council] refutes the factual and objective study recently published by Arthur D. Little, Inc [that] as you know found no basis for . . . the all-out freeway program.” [Eisen, Jack, “NCPC Board Seeks Delay In Freeways,” *The Washington Post and Times Herald*, April 26, 1966; Eisen, Jack, “Rekindled Freeway Dispute Widens, Broyhill Urges Projects Be Resumed,” *The Washington Post and Times Herald*, April 27, 1966]

On April 28, General Duke announced that in cooperation with community groups such as the National Urban League, the District would begin a study of whether replacement housing for low-income residents could be built alongside or above planned freeways. The idea was that the District would buy block-wide right-of-way for freeways that could be leased or sold for apartment houses. The initial study would cover only 2 blocks along the Center Leg Freeway (square 560, 3<sup>rd</sup> and 2<sup>nd</sup> Street, New Jersey Avenue, K and I Streets, NW., and the next block

south, square 562, between I, H, 3<sup>rd</sup>, and 2<sup>nd</sup> Streets, NW.). Whether alongside the freeway or on a platform over it, the housing would require more width than the freeway. Duke said:

We believe we can completely eliminate the problem of relocation housing caused by highway construction. At the same time we can provide for greatly improved aesthetic treatment in integrating urban design by varying residential, commercial, park and recreational development over and alongside the freeway.

BPR, Duke said, had looked at the proposal and agreed with District highway officials that it is “both feasible and highly promising.” The Post quoted Francis C. “Frank” Turner, BPR’s Chief Engineer, as saying the proposed showed “considerable promise here and elsewhere, in cities where we are having problems.” [Flor, Lee, “D.C. Study Seeks New Sites for Low-Income Families,” *The Evening Star*, April 28, 1966; Eisen, Jack, “New Freeway Plan Provides Housing Sites,” *The Washington Post and Times Herald*, April 29, 1966]

Chairman Rowe was cautiously optimistic about the study:

This is the kind of thing the Planning Commission would be very interested in. I think the Highway Department is going to do a good job and this is an imaginative approach.

She doubted that high-rise apartments were the best option for displaced families, and she would not speculate on whether the idea might change her mind on freeway proposals. She said, “I want to see the consultant’s report . . . . Let’s see how it works.” She agreed to put the plan on the agenda for NCPC’s meeting in the following week.

Eisen reported that during a discussion of highway policies, BPR’s Joseph Barnett raised the subject of Chairman Rowe’s opposition to freeways during the executive committee meeting:

During a discussion of highway policies, Joseph Barnett, an alternate member of NCPC who is an official of the Bureau of Public Roads, reportedly pointed at D.C. Highway Director Thomas F. Airis, who attended as an observer.

“Let’s face it,” Barnett said, “You want to build roads . . . .”

Then, pointing at Mrs. Rowe, he continued:

“. . . and you don’t.”

Mrs. Rowe declined comment on the incident. [Eisen, Jack, “Freeway Critic Gives Plan Guarded Praise,” *The Washington Post*, April 30, 1966]

*The Evening Star*, in an editorial, said the “new and dramatic aspect of the Commissioners’ proposal . . . is their hope that freeway and housing construction can proceed, in these block-wide areas, simultaneously, providing a ready-made supply of attractive relocation housing and other facilities for the residents of blocks into which the freeway will move next.” The most important point was that the proposal should not affect decisions on the freeway system. At this point,

“there is no excuse whatever for avoiding any longer a planning commitment on which freeways should be built.” Reality, however, had to be acknowledged:

No doubt the die-hard opponents of freeways will pooh-poo the housing-highway plan as merely a means of advancing freeways. The fact is, however, that it constitutes a positive, encouraging response to those critics who have accused highway officials, perhaps rightly in the past, of paying too little attention to the impact of freeways on people and neighborhoods. [“Housing and Highways,” *The Evening Star*, May 2, 1966]

The contract for the \$30,000 feasibility study was awarded to Tippetts, Abbett, McCarthy and Stratten of New York City, the engineering firms that had been retained a year earlier to design the Center Leg Freeway section of the Inner Loop. [Lewis, Robert J., “Freeways-Plus-Housing to be Studied for D.C.,” *The Evening Star*, May 12, 1966]

### **“Time to Stop This Foolishness”**

Beginning in March 1966, Chairman Natcher had held closed hearings on District appropriations for FY 1967. The transcript was not released until early August, but by then, it was clear he was prepared to use every budgetary tactic at his disposal to block rapid transit money if anti-highway forces continued to delay the District’s freeway plans.

On April 20, Commissioner Tobriner, Engineer Commissioner Duke, and Director Airis appeared before the subcommittee. Chairman Natcher began with a statement. In his 12 years on the appropriations subcommittee handling the District’s bills, “I have always been of the opinion that here in our Capital City there is a place for rapid transit and for a full and complete highway program”:

I have always believed that it was a serious mistake to permit any group or faction to stop the highway program in order to build a rapid transit system in the city of Washington. This applies also to the little pressure groups in our Capital City. This matter has been used as a political football and now is the time to stop this foolishness. Regardless of political policy this is a problem that should not be treated as a means of influence or political power.

We have reached an impasse as far as the highway program is concerned in the city of Washington. I want the members of the committee to know that I am unable to continue recommending to this committee that money be appropriated for a rapid transit system if the highway program is to be brought to a complete halt. Well over \$10 million has been invested in plans and designing of roads and parts of the Interstate System that have not been used. They are filed away and this started several years ago . . . . We have about \$172 million of Federal and District of Columbia funds now accumulated in the freeway program and we are unable to proceed. We will not meet the 1972 deadline set in the interstate program.

Chairman Natcher referred to President Kennedy’s letter of June 1, 1963, to Commissioner Tobriner calling for a reexamination of the city’s highway program:

Before the President's letter of June 1963 was issued I had an opportunity to discuss this matter with him and I informed him that it was a serious mistake to bring the highway program to a complete halt. This was not the way to build a rapid transit system in the city of Washington, and I explained this to him. He was ill advised and the letter followed.

If President Kennedy had been furnished with all of the facts he would not have signed this letter.

The letter proved to be a serious mistake that set the city's program back. "We have good Commissioners in our Capital City and here again is another example of their judgment being ignored and a serious mistake committed that must now be corrected."

He cited past hearings as far back as 7 or 8 years earlier when he "tried to sound the alarm":

For some three years now, I have believed that any program that attempted to stop the freeway program would fail. I do not intend to stand by and be a party to this pressure and bad judgment.

He described some of his efforts to keep the freeway program alive. Then came President Johnson's letter in January 1966 calling for another study:

A study was ordered which has recently been released. This study is a complete farce and is another obstacle carefully placed in the road . . . . Now, I say to you this is a serious mistake.

He introduced several editorials for the record, including "Mr. Johnson and the Freeways" and "Make No Little Plans for Washington," both from the *Star*. He especially liked the line from the latter suggesting that the Little report "surely deserves to rest in a niche of its own—preferably one marked 'Filed and Forgotten.'" That was, he said, exactly how he felt:

The very idea of being forced – and I say forced – to employ this consultant firm to say to us, at a total cost of \$60,000, "Bring this highway program to a complete stop. Bring it to a complete stop." In other words, kill it. That in substance is what this report says. I am against it and intend to do as the editorial says, "filed and forgotten."

He did not blame the District commissioners, adding, "Our President is my friend and with all of his problems he is receiving bad advice as to our freeway program." [District of Columbia Appropriations, 1967, Hearings Before a Subcommittee of the Committee of Appropriations, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, Part 1, 1966, pages 407-416]

Chairman Natcher asked General Duke for comments. The general said that "any explanation of why so much money has been spent on studies on the one hand, and why so much money is still unobligated on the other, is a very difficult question to answer." He thanked Chairman Natcher and the committee for their support of the freeway program, but said "that support isn't generally felt throughout the community."

Prosecution of the freeway program was “the epitome of the problem that is created by the necessity of suffering a short-range inconvenience in order to obtain a long-range benefit to the community.” Planning agencies agree the city needs a freeway network, but where they should be and what they should consist of had “met with a great deal of discussion.” Similarly, people generally want a freeway system, but “over there” somewhere, “and in the District of Columbia we have very little ‘over theres’ where we can place the legs of this system.” Everyone agreed on a balanced transportation system, but when trying to define the blend creating balance, “you run into varying shades of opinion.”

At present the Center Leg Freeway and interchange “C” of the Southeast Freeway were underway. Beyond those two segments, “I must acknowledge quite candidly today that there are many and very grave problems surrounding the resolution of their location.” Planning “is an exceptionally complicated process,” as a result of which “the main difficulty that we . . . have encountered is an inability to settle on any long-range system that reflects the requirements of the community.” The system’s elements “seem to be as pliable and unstable as a balloon. You squeeze it in one place and it pops out in another.”

General Duke added that in the absence of rural areas for Interstate construction, the District found that every segment of its Interstate network resulted in “exceptionally strong feelings that center around the esthetics of freeway construction and the social problems incident to freeway construction here in the Nation’s Capital.”

In seeking “the elusive answer” reflecting the proper balance between transportation and social values, he was hopeful of reaching agreement, but “it is getting more difficult day by day.” He would like to offer reason for optimism, “but I am afraid that I can’t”:

In fact, the latest thinking that I have been exposed to in the past few days indicates that the rate of prosecution should be slowed down even further. [pages 417-419]

(This comment was apparently in reference to the nine-page document NCPC’s executive committee had before it.)

During the question period, Representative Davis asked about NCPC’s role. General Duke summarized the long history of the Three Sisters Bridge, “probably the most thoroughly discussed problem in our whole Interstate System.” Airis added that the Policy Advisory Committee had agreed in late 1965 on an alternative location, “and then, after several attempts to get it before the Planning Commission, we were unable to do so.”

Representative Davis found this hard to believe (“I don’t think I follow you there”). Neither Airis nor General Duke could explain the problem. Airis said, “They wouldn’t hear us. I can’t say exactly why.” General Duke added that he could not recall “how many meetings of the Commission I requested that it be placed on the agenda for hearing . . . . At any rate, I was unsuccessful in getting the item placed on the agenda of the Commission for discussion.”

Representative Davis admitted he was “a little ignorant” about NCPC. He asked if there was an appeal from their decisions. General Duke replied, “So far as I know, none.” Representative

Davis concluded, “Then I would gather that this Commission has complete within itself uncontested power to veto any efforts by the Commissioners or by Congress to implement the freeway and parkway system within the District of Columbia.” General Duke could not recall if NCPC had a veto by law or only in practice, but “I think I can say that your statement is correct – that the Planning Commission, by a failure to approve segments of the Interstate System, could have the effect of modifying the expenditure of funds that have been appropriated.” [pages 464-466]

On April 26, during the hearing day for public witnesses, Peter S. Craig was one of the few witnesses to discuss freeways. Speaking on behalf of the Committee of 100 on the Federal City, he recommended three steps that were “necessary if we are to avoid casting further mistakes in concrete”:

1. No new appropriations for highway capital outlay;
2. Direct the District Highway Department “to recast its highway program so that the huge backlog in unobligated funds from previous years may be devoted to projects that are (a) consistent with existing legislative authorizations by Congress and (b) in conformity with approvals by the National Capital Planning Commission under both title 7 of the District of Columbia Code and the National Capital Planning Act”; and
3. Direct that funds appropriated for highway “planning, programing and surveys” be disbursed by or under NCPC’s direction.

These steps were necessary “to get the highway builders out of city planning, where they do not belong, and back to their job of building and maintaining highways, which is their job.”

The District highway program was “a complete fraud” and the department’s presentations to the subcommittee “have been complete phonies.” Craig’s assertions were “independently confirmed” by the majority and minority reports of the House District Committee last October and by the report by Arthur D. Little, Inc., and again, by a NCPC executive committee a week earlier.

As for the Federal City Council’s report, it was “replete with errors in its ‘factual’ premises and is not, in any respect, the product of the members of the Federal City Council.” Harold Aitken, Douglas Brinkley, and Lloyd Rivard, all former District Highway Department officials and “all actively working for the highway lobby,” prepared the report:

The report is regrettable, because 5 years ago the Council itself opposed construction of new freeways in areas to be served by rapid transit. The report is understandable, however, since the vice president of project planning for the Federal City Council is Gen. Louis W. Prentiss, executive director of the American Road Builders Association.

By contrast, the Little report “was not only an indictment of District freeway plans of the past decade but also an indictment of the freeway planners.” The needed rethinking of the freeway plans “will be meaningless if it is done by the same highway builders that produced our recent planning chaos.” For that reason, he recommended that NCPC conduct, or at least oversee,

future studies. “By legislation, it and it alone is given the task of final approval of the official highway plan, and of developing proposals for a ‘major thoroughfare plan.’” He added:

Most of the acrimonious “freeway fights” of recent years have their origins in the attempted usurpation of the Planning Commission’s functions by the District of Columbia Highway Department which, with no greater claim to authority than annual appropriations acts, has preempted both the District of Columbia appropriations and Federal matching funds that properly should be within the control of, and used by, the Planning Commission.

It has been said so often that it is now trite, but it is worth repeating: Just as wars are too important to leave to the generals, so also city planning is too important to leave to the highway builders.

As was customary for the subcommittee’s citizen hearings, Chairman Natcher did not engage Craig on his presentation. “Mr. Craig,” the chairman said, “thank you for your statement and for your appearance before our committee tonight.” [pages 913-915, with Craig’s formal statements on pages 915-920]

### **Jockeying for Position**

On April 30, Chairman Funk and Director Airis held a news conference to discuss the results of a study of the North-Central Freeway by Wilbur Smith and Associates and Alan M. Voorhees and Associates. Funk and Airis accepted the recommendation to reduce the number of lanes on the North-Central Freeway. The freeway, still planned along the Baltimore and Ohio railroad tracks, would contain eight lanes from the Inner Loop to just south of Missouri Avenue. From there through Silver Spring, the freeway would be six lanes wide. In addition, the freeway would be built at ground level on in a depressed cut.

One of the consultants’ important conclusions was that “techniques used in projecting travel for the Washington metropolitan area and for the North Central freeway are those which have been widely used and tested in other areas of the country.” (The report was completed before the Little report and did not address its findings.) The consultants concluded that the study by J. E. Greiner 2 years earlier was “basically valid” but “may, in the final design, suggest some over-design.” Greiner had overestimated trip lengths, resulting in predictions of more traffic than the new estimates. Traffic volumes that Greiner predicted for 1977 “appear to be more representative for 1985”:

In long-range terms a ten-lane facility might appear desirable. However, in the light of basic policy considerations, the need to minimize land-use impacts and the availability of parallel rapid transit, an eight-lane facility appears more appropriate.

Funk said he appreciated the correction because he would have been suspicious of a report that said all earlier predictions were correct. “We asked for an objective analysis and we got one.”

Unlike critics who thought rail rapid transit could substitute for the freeway, the consultants found that only 30 percent of vehicles on the freeway during peak hours would be commuters

going to or from downtown. The remaining motorists would be going to or from other neighborhoods or across the city:

If all [downtown] trips assigned to the freeway were diverted to rapid transit (and this is unlikely), freeway capacity requirements would be reduced by only 30 per cent.

The consultants found, in short, that the freeway should be built. [Flor, Lee, "Officials Proposal 8 Lanes For North Central Freeway," *The Sunday Star*, May 1, 1966; Eisen, Jack, "Both D.C., Maryland Accept a Reduction In Freeway lanes," *The Washington Post and Times Herald*, May 1, 1966]

As the Senate District Committee took up the revenue bill, Senators Tydings and Kennedy were considering an amendment that would require the city to submit each freeway segment to the House and Senate District Committees. After a specified period of perhaps 60 or 90 days, the project would be considered approved if it had not been specifically vetoed. Senator Tydings said the freeway deadlock "simply must be broken. The need for adequate highways is far too great to tolerate inaction." At the same time, he favored "reasonable legislative oversight." However, Senator Kennedy, who did not want to jeopardize the revenue bill, had not decided whether to introduce the amendment.

Chairman Whitener was opposed to employing a "negative authorization" for freeways. "There are many reasons – legal and practical." He did, however, favor some restrictions on the District's bridge building. "You can't let District officials string bridges anywhere." He did not want to apply the negative authorization for freeways suggested by Senators Kennedy and Tydings to bridges. "I wouldn't support that. The authorization for bridges, more than for highways, should be positive."

On May 4, Chairman Whitener held a hearing on a bill introduced by Representative Broyhill to build another bridge in the 14<sup>th</sup> Street Bridge complex. When the issue of authority was raised, General Duke asserted the opinion of city attorneys that the Federal-Aid Highway Act of 1956 provided the authority for additional bridges on the Interstate System.

Chairman Whitener disagreed. "The controller [sic] general of the United States is in flat-footed disagreement with you. And so am I." He argued that the 1956 Act allowed the city to apply for Federal funds, but did not give District officials the ability to build Interstate roads or bridges "unfettered by the control of city activities normally exercised . . . by the Congress." ["Tydings Supports Legislative Role In Road Disputes," *The Washington Post and Times Herald*, May 4, 1966; Bassett, Grace, "Bridge-Builder Role Of District Argued," *The Evening Star*, May 4, 1966]

On May 5, the Senate District Committee approved the revenue bill for consideration in the full Senate. It contained the additional loan authority and penny gas tax increase as well as increased taxes on many other products. that had not been in the House bill. Committee members debated the legal authority over individual Interstate segments, but Senator Bible sided with those who believed the 1956 Act and its successors provided all the congressional authorization needed for the District's freeway network. As a result, the Kennedy amendment was not part of the bill. The bill also dropped the House provision granting a tax break to Jess Larson. [Bassett, Grace,

“8 District Tax Boosts Asked by Senate Unit,” *The Evening Star*, May 5, 1966; Carper, Elsie, “Senate Bill Asks Rise in 8 City Taxes,” *The Washington Post and Times Herald*, May 6, 1966]

On May 5, NCPC voted 8 to 3 in closed session on the transportation element of the Year 1985 Plan to support stage construction of the Interstate System. Projects in the first stage for construction through 1972 were:

- Center Leg Freeway;
- South Leg Freeway;
- K Street tunnel from Rock Creek Parkway to North Capitol Street;
- Palisades Parkway;
- Georgetown Waterfront tunnel with improvements to Jefferson Davis Highway.

The post-1972 program would consist of:

- Three Sisters Bridge;
- North Leg Freeway in its former location;
- North-Central Freeway;
- Northeast Expressway linking the North-Central Freeway to I-95 in Maryland.

This breakdown meant that the second stage projects would be built after the Interstate program ended in 1972, but NCPC Staff Director Charles H. Conrad pointed out that Congress could extend the deadline. He emphasized:

Essentially the decision was to favor going ahead with completion of elements of the freeway program now underway or approved, with nothing at all that has been under discussion ruled out for consideration at a later stage.

He told reporters that the decision was not final. It was “a directive to the staff” to follow a “skeleton framework” reflected in the vote. Following another vote by NCPC, the plan would be made public, along with the rest of the Year 1985 Plan, to give government agencies, citizens groups, and others a chance to comment.

The three voting against the measure were BPR’s Joseph Barnett, Assistant Engineer Commissioner Reynolds, and Colonel Paul R. Sheffield of the U.S. Army Corps of Engineers.

NCPC also considered the city’s new plan for housing along freeways, but deferred action until more details were known. Seattle architect Thiry opposed the plan, saying it was doomed to failure by noise, fumes, and other problems. C. McKim Norton, a New York lawyer and planner, thought the idea showed promise and was worth exploring. [Eisen, Jack, “NCPC Suggests Delaying Some Freeway Jobs,” *The Washington Post and Times Herald*, May 6, 1966; Lewis, Robert J., “‘Staged Construction’ Of Freeways Is Voted,” *The Evening Star*, May 6, 1966]

The Federal City Council briefed local officials on its report on May 9. Although Director Airis said it was “probably an indictment in some respects” of District highway officials, “it is factual and certainly in the best interests of the whole metropolitan region. TPB Chairman Babson also

attended the briefing. Reading from a prepared statement, Babson endorsed the report, saying it “shows dramatically what happens when one part of this area moves ahead and another fails to make decisions compatible with the overall transportation development of metropolitan Washington.”

He confirmed his support for a balanced transportation system, including freeways. Rail rapid transit was vitally important but would be inadequate to serve all transportation needs. “It is nothing short of essential that we move, and move now, for a totally balanced system including a freeway . . . from the Northeast and a third bridge crossing . . . at 14<sup>th</sup> street.” He also announced that he had invited Peter S. Craig to appear before the board on May 23 to present the critic’s view. [Ikenberry, Kenneth, “3 Officials Urge Action On District Freeways,” *The Evening Star*, May 10, 1966; “Freeway Foe Will Report On May 23,” *The Washington Post and Times Herald*, May 10, 1966]

The Senate District Committee issued its report on the revenue bill on May 12 and it included sharp criticism of the Policy Advisory Committee. A complete freeway program was the only way to unclog residential streets:

Partial completion of the system will frustrate the objectives of an integrated system and only provide limited relief from the present intolerable traffic congestion.

The report said Congress should not decide the future of individual freeway projects. Instead, the Policy Advisory Committee was responsible for these decisions and should get on with it:

One aspect of the . . . interstate highway program that deeply disturbed the committee . . . was the indecisiveness over the last 3 years of the policy advisory committee to reach unequivocal conclusions about exactly what the scope of the interstate highway system should be to meet the needs of the Nation’s Capital.

The Policy Advisory Committee’s decision in March to endorse freeway projects that were underway and study others was an example of the indecisiveness. It was written that way to ensure all members would sign it, but it left an impression that NCPC had used its signature to justify its two-stage proposal. The Senate District Committee offered three recommendations for decisionmaking:

- Make decisions on a majority, rather than unanimous basis.
- Establish procedures to hold hearings on Interstate highways.
- Review each proposal and make “conclusive decisions to permit their immediate implementation.”

As Grace Bassett reported in the *Star*:

Abandoned publicly by the Senate committee were arguments of the President’s consultant Little and two presidential appointees who constantly have questioned interstate freeways here.

Those two appointees are National Capital Planning Commission Chairman Elizabeth Row and Charles A. Horsky, the President's advisor on National Capital affairs.

It was understood, however, that Horsky encouraged Sen. Kennedy to push for language in the committee report indicating a strong pro-highway sentiment. The force of a Senate recommendation could save the President from pressure to settle personally the bitter conflict between freeway and subway proponents. [Bassett, Grace, "Senate Unit Attacks Freeway Advisors," *The Evening Star*, May 12, 1966; Carper, Elsie, "Senate Unit Urges Advisers to Break Freeway Impasse," *The Washington Post and Times Herald*, May 13, 1966]

*Star* editors agreed with the Senate District Committee's "blast at the fumbling, bumbling mess which the administration has made of the Washington freeway program" – with one important exception. The Policy Advisory Committee had been "manipulated deliberately by some of its public-official members as a vehicle, not to settle freeway issues, but to block the freeway program."

The committee's three recommendations were impractical for resolving the impasse. Chairman Rowe's anti-freeway views made reaching any decision that would permit the freeway program to advance virtually impossible:

The recommendation the Senate committee should have made – and what needs to be done – is that the President must intervene to halt the obstructionist activities of some of his appointees, and see personally that a firm decision is made once and for all, on the total system which is to be built. In its latest action the other day, Mrs. Rowe's commission advocated precisely the opposite – a procedure of continued indecision and delay.

The editors indicated that Horsky had persuaded General Duke and Administrator Whitton to sign the unanimous report of the Policy Advisory Committee that "was viciously destructive to the highway program":

Presumably the PAC will meet again this month. We trust that on this occasion those PAC members who recognize the need for a reasonable freeway system will avoid being similarly entrapped again. ["The Decision Gap," *The Evening Star*, May 16, 1966]

The revenue bill reached the Senate floor on May 16. Senator Bible discussed the many measures in the bill affecting a range of taxation and Federal payment issues. Regarding the highway-related provisions, he expressed the concerns about the indecisiveness of the Policy Advisory Committee and listed the three recommendations in the committee report for improved decisionmaking:

One aspect of the District's interstate highway construction program that deeply disturbed the committee in its consideration of this general highway borrowing authority proposal was the indecisiveness over the last 3 years of the policy advisory committee to reach

unequivocal conclusions about exactly what the scope of the Interstate Highway System should be to meet the needs of the Nation's Capital City.

It was your District Committee's unanimous conclusion that the policy advisory committee should take the following steps at the earliest time:

First. Formalize its procedures to permit hearings on the interstate program, review the various proposals and make conclusive decisions to permit their immediate implementation thereafter;

Second. That the District Highway Department follow the conclusions of the policy advisory committee in its construction program;

Third. That the policy advisory committee be a continuing body to serve as a force for decisive and majority consensus among its members.

For the best interests of the District of Columbia, it was your District Committee's judgment that the guidelines set out above will affirmatively encourage more expeditious decisions by the policy advisory committee membership . . . .

He added:

I hope – and I say this with all sincerity and candor – that some finality can be reached in the attempt to balance freeways and rail rapid transit. I believe this is the best means we have designed to date to do that.

With only four Senators on the floor, the Senate approved the bill without debate on the highway-related provisions or a vote. The Senate would return the bill to the House, which was expected to request a conference committee to reconcile differences in the Senate bill and the bill the House had approved in 1965. [District of Columbia Revenue Act of 1966, *Congressional Record-Senate*, May 16, 1966, pages 10696-10706; Elder, Shirley, "Senate Approves D.C. Revenue Bill, *The Evening Star*, May 17, 1966]

The Senate bill, while consistent with the White House's proposal, contained many tax increases and changes that were not in the House bill. As a result, the bill's movement in the House District Committee would be delayed by further study and additional hearings.

### **Breakthrough Agreement on Freeways**

Peter S. Craig appeared before the TPB on May 23 to present the Committee of 100 on the Federal City's views on the Federal City Council report. He argued that the city's road builders no longer claimed that new freeways were needed to move traffic. If the entire network were built along with the authorized rail rapid transit system, the area would have more transportation capacity than needed. Construction of the freeway network would be "jeopardizing the economic feasibility of rapid transit" by providing competition within the subway corridors for travelers.

As described in the *Post*:

The meeting was marked by a sharp but polite confrontation between Craig and D.C. Highway Director Thomas F. Airis, whose program was under attack.

Repeatedly, as Craig made his assertions and reeled off statistics, Airis shook his head in dissent. At the end, Airis gave a partial rebuttal – which Craig said proved one of his points.

Craig charged that past projections of 1985 traffic were so high that Airis and one of the department's consultants had abandoned them. He pointed out that the Mass Transportation Survey of 1959 predicted peak hour traffic in the North-Central Freeway corridor would be 15,800 vehicles in 1965; instead, it was 7,673 vehicles while bus use doubled. Craig said the city had excess capacity in existing streets, especially if more commuters would use buses.

In response, Airis said that Craig's statistics contained "a large number of errors" and that the freeways were needed "to get traffic off city streets. For separating local and through traffic, freeways were the answer:

Craig called this "one of the fallacies of highway engineers generally," and said the road builders fell back on this argument when statistics showed no more freeways [were needed]. ["Builders Shift View, Freeway Foe Says," *The Washington Post and Times Herald*, May 24, 1966]

On May 25, 1966, the Policy Advisory Committee announced a 21-point agreement among the District of Columbia, Virginia highway officials, and NPS. The statement of agreement began:

The Policy Advisory Committee's statement of March 31, 1966, reflected unanimous concern that social and aesthetic factors be given full consideration on the design of urban freeways. At the same time, the Policy Advisory Committee recognizes the community's urgent need for all forms of transportation improvements, the desire of the President and the Congress to provide these improvements as soon as possible, and the practical considerations of system planning, financing, programming and scheduling required to insure orderly and logical development and construction of transportation facilities.

Since March 31, 1966, a concept of joint housing and highway projects has been introduced which appears to have great potential in eliminating problems of relocation. This approach, plus the requirement of the Board of Commissioners that satisfactory relocation housing must be available prior to construction of major highway contracts, has greatly reduced the concern of the Policy Advisory Committee on the question of social impact.

The Agreement between the National Park Service, the District of Columbia and the Virginia Department of Highways, dated May 25, 1966, is a great step forward in insuring that aesthetic considerations, particularly as related to parks and open space, are being properly balanced with transportation requirements. With this Agreement and the understanding that the Commission of Fine Arts will play an expanded role in the

architectural development of major highway facilities, the concern of the Policy Advisory Committee on the question of aesthetic impact has also been greatly reduced.

The committee approved the agreement, 5 to 1, with only NCPC Chairman Rowe dissenting.

Key project items endorsed:

- Building Three Sisters Bridge at the original location between Spout Run in Arlington and the foot of Glover-Archbold Park in Washington, with the city giving up any right to build a road through the park.
- Tunneling the entire South Leg of the Inner Loop Freeway between Constitution Avenue and 14<sup>th</sup> Street, keeping it out of sight of the Lincoln Memorial and Tidal Basin.
- Substituting, subject to more study, a depressed K Street crosstown expressway for the controversial North Leg of the Inner Loop, which would be abandoned.
- Depressing the Potomac River Freeway's westbound lanes beneath the Georgetown waterfront, with the surface from 31<sup>st</sup> Street west to Key Bridge to be developed as a park.
- Constructing the Palisades Parkway, the East Leg of the Inner Loop past D.C. Stadium, the North-Central Freeway to Silver Spring, and Interstate 95/Northeast Freeway across Fort Drive and Northwest Branch Park in the District of Columbia and Maryland.
- Tunneling E Street behind the White House and under Pennsylvania Avenue, one of several projects endorsed as part of plans for improving the Avenue and the Mall.
- Opening the Theodore Roosevelt Bridge to truck traffic.
- The Highway Department will tunnel 4<sup>th</sup>, 7<sup>th</sup> and 14<sup>th</sup> Streets beneath the Mall, eliminating these surface crossings plus 17<sup>th</sup> Street.
- Endorsing a third crossing for the 14<sup>th</sup> Street Bridge, with adequate connections to the George Washington Parkway on the Virginia side.

The *Post* reported that “the most sweeping [agreement] of its kind ever adopted by a Washington city planning body [was] a surprise.” The key man had been NPS Director Hartzog, “who gave several concessions and got others in return”:

The immediate effect of his agreement will be to add one pro-highway vote in future deliberations of the Planning Commission, which voted May 5 to push for curtailment and slowdown of the road program. Hartzog's representative voted for the curtailment.

This breakthrough was, as the *Post* noted, “a clear stand contrasted with one [the Policy Advisory Committee] took two months ago following issuance of the Arthur D. Little, Inc. report.” Jack Eisen described the transformation:

The Little firm . . . recommended a virtual moratorium on future projects pending further study. Urged by presidential aide Charles A. Horsky to reach a unanimous position, the committee said then that many elements of the road program needed further study. Mrs. Rowe and others took this to mean that the study could be made from scratch and the 1972 interstate deadline ignored.

Soon afterward, however, the Federal City Council asked the President to intervene to get the program moving. The Senate District Committee then also urged that the program be moved ahead and said the Policy Advisory Committee should “be a continuing body to serve as a force for decisive and majority consensus among its members” – an apparent criticism of Horsky’s call for unanimous action.

Another factor in reaching the agreement was Chairman Natcher’s threat to withhold appropriations for the District’s matching share of subway costs if the city did not move the Interstate freeway system forward. The Senate District Committee’s report on the revenue bill, with its criticism of the Policy Advisory Committee, was another factor.

The statement emphasized that all parties wanted the freeways to be attractive and avoid disruption to the city. Bridge crossings should “achieve an architectural excellence that will make them distinctive contributions to the total conservation program now underway along the Potomac.” District highway officials would consult “extensively” with the Commission of Fine Arts during the design stage.

The Policy Advisory Committee called the agreement “a great step forward in insuring that esthetic considerations, particularly as related to parks and open space, are being properly balanced with transportation requirements.”

The plan was to submit the agreement in time for the NCPC’s June 2 meeting. However, Chairman Rowe said, “I can’t go along with this,” adding that, “the people should be heard.” In a letter to Tobriner on May 26, she pointed out that the agreement differed from the committee’s proposal to the President as well as NCPC’s most recent policy on stage construction. As a result, “no purpose would be served” by bringing the agreement before NCPC until public hearings were held on the agreement, as suggested by the Senate District Committee. [Eisen, Jack, “Agreement Reached on Highways,” *The Washington Post*, May 26, 1966; Flor, Lee, “Freeway Projects Given Park Service Go-Ahead,” *The Evening Star*, May 26, 1966; “Mrs. Rowe Calls for Hearings On D.C. Freeway Proposals,” *The Evening Star*, May 26, 1966; the complete agreement can be found in: *Major Highway Problems in D.C.*, pages 129-131]

Editorial reaction to the agreement was positive. *The Washington Daily News* said:

At last, it appears, there’s a chance that somebody may be about to do something to complete the half-built expressways in the area.

We hope so. We hope nothing – nobody – will be permitted to stall or slow down the program, now that it has received this long-needed push.

As for Rowe’s call for public hearings, the editorial asked, “Public hearings for what?” Everyone had already been heard. “What more can possibly be said on the subject?” The call for hearings was “merely a stall, for no useful purpose.” NCPC should approve the agreement without delay. [“Action on the Highways,” *The Washington Daily News*, May 27, 1966]

*The Post* said the Policy Advisory Committee had “agreed on a reasonable and enlightened program of highway construction that will greatly strengthen the city’s ties to the surrounding

suburbs at a minimal cost in disruption.” As for Rowe’s call for public hearings, the *Post* suggested:

If Mrs. Rowe cannot bring herself to permit a prompt and straightforward vote in the Planning Commission on this urgent issue, then she ought properly to retire from it. If she will not retire voluntarily, then she ought to be asked to leave. Under her management, the Planning Commission has become the point at which essential municipal projects in highways or housing or urban renewal have repeatedly been met with unremitting hostility and destructive delay. Highway construction is an Administration program, and if Mrs. Rowe cannot support it then she ought to leave the Administration.

The President had asked the Policy Advisory Committee to study the highway plans and it had done so “thoughtfully and carefully” and with special attention to “protecting the esthetic qualities and social values of the city.” As far as the *Post* was concerned, “This agreement now deserves the entire city’s support.” [“The Freeway Treaty,” *The Washington Post*, May 27, 1966]

The *Star* called the agreement “a remarkable document,” the crux of which was compromise. “This is a package which no one but an unalterable opponent of freeways, in any form, could reasonably oppose.” Predictably, the editors wrote, Chairman Rowe objected. She already had “served notice that she has no intention of placing the subject on the [June 9] agenda” pending “public hearings” over the summer. (The editorial referred to them in quotes as “public hearings” to show skepticism about their real purpose.) She was “stalling again – more desperately now that she is virtually alone in left field.”

Unfortunately, NCPC’s usefulness was “vitiating by personal whim.” The commissioners should be allowed to vote on the agreement, but whatever the outcome, “it should be remembered, too, that the Planning Commission is after all an advisory body, not some mystical court of ultimate wisdom.” Regardless of what Rowe decided to do, “the President should see to it that the sensible new freeway proposal, on which such a broad degree of official unanimity has developed after all these years, is delayed no longer.” [“The Freeway Solution,” *The Evening Star*, May 27, 1966]

Senator Bible and General Duke exchanged correspondence to improve the decisionmaking ability of the Policy Advisory Committee. Senator Bible informed General Duke that the committee, “composed as it is of the heads of federal agencies and commissions having great authority over planning for the growth and beauty of the nation’s capital city and its environs . . . can serve as an effective sparkplug because of the great prestige and force its decisions can lend to assure a balanced transportation system of both highways and rapid transit facilities.”

General Duke informed the Senator that the committee was an “advisory,” not a “statutory” body, but could influence progress on highway construction by meeting regularly. If progress did not occur, the committee would give “further thought” to redefining its role.

Chairman Rowe revealed her strategy for blocking the agreement, which she refused to put on NCPC’s agenda for June. Because NCPC normally did not meet in July, failure to act in June

would delay action for 2 months, leaving time for a public hearing where she was confident citizens would oppose the agreement. She understood that the NPS Director's vote in support of the agreement would switch NCPC's anti-freeway majority to a minority on the vote.

Moreover, she maintained that the Policy Advisory Committee's March 31 report to President Johnson remained in effect because no further study had taken place before the May 25 agreement. That agreement was inconsistent with NCPC's action on the stage construction proposal. "We took action on it in May. There have been no new reports or planning studies which would make it relevant."

Senator Case commended the agreement on tunneling the entire South Leg Freeway under the Lincoln Memorial and the Tidal Basin. Otherwise, he believed that a public hearing would be helpful. He added that plans should be developed by "competent planners," not be a "deal" among officials.

Despite the disagreements, the city was ready to acquire land along the Georgetown waterfront for the depressed Potomac River Freeway in accordance with the agreement. The plan was to acquire six blocks between 31<sup>st</sup> Street and Key Bridge. According to reports, BPR had agreed to obligate \$7 million in Federal and local funds for the acquisition, but formal approval had not yet been obtained. [Flor, Lee, "Bible, Duke Back PAC on Freeways," *The Evening Star*, May 27, 1966; Eisen, Jack, "City Moves to Get River Freeway Land," *The Washington Post and Times Herald*, May 27, 1966]

On May 31, despite Chairman Rowe's refusal to put the agreement on the June 9 agenda, the District Board of Commissioners formally asked her to place "Approval of the Interstate System in the District of Columbia" on the agenda and to approve it. The letter, dated June 1, assured Chairman Rowe that the Board of Commissioners shares her "very legitimate concern that these new projects be esthetically pleasing and . . . not be permitted to detract from the dignity of the Nation's Capital."

During the meeting, the District commissioners approved the letter and discussed the plan for a six-lane boulevard in the Florida Avenue corridor. Commission President Tobriner said he was opposed to any type of freeway in the former corridor of the North Leg Freeway. He did not believe such a boulevard should "be any part of any contemplated highway system." It looked, he said, "like an ultimate north leg, under another name."

After the commissioners approved the letter, General Duke told reporters that no consideration had been given to bypassing NCPC. "We'd have quite a can of worms on our hands."

Citizen groups were beginning to react to the agreement. The Federation of Civic Associations adopted a resolution drafted by the Lamond-Riggs Citizens Association denouncing "the complete reversal" of the Policy Advisory Committee "from its position that further studies were necessary to ascertain the true facts at this time and afford the citizens an opportunity to be heard." The resolution added:

It would appear that congressional pressures from just a few gave the enormous highway lobby just enough of a boost to overcome justice and a fair hearing. Certain transportation facts used in the past have been found to be false. We do not understand how this complete ignoring of the wishes of the residents can occur, this wrecking of our homes and businesses.

The Metropolitan Citizens Council for Rapid Transit also denounced the agreement. It said two members of the Policy Advisory Committee were part of the highway lobby (General Duke and Administrator Whitton), so the council could understand their position:

But it is plain neglect of their public duties for the head of the National Park Service, the National Capital Transportation Agency, and the Fine Arts Commission to bow to such pressure.

Meanwhile, the Committee of 100 on the Federal City announced it was going to send protest letters to the White House, Department of the Interior, and NCPC. During the committee's meeting, members denounced Director Hartzog for his "sellout" to freeway interests. [Flor, Lee, "Commissioners Ask Okay for Freeways," *The Evening Star*, June 1, 1966; Eisen, Jack, "City Asks NCPC to Act on Freeways," *The Washington Post and Times Herald*, June 1, 1966; Adams, Michael, "The Bitter Taste of Freeways," *Voice of the City, The Evening Star*, May 28, 1966; "Protest Set On Freeway Decision," *The Evening Star*, June 1, 1966]

On June 2, during a panel discussion in Foggy Bottom on the Georgetown freeway situation, Hartzog explained his change of heart. He acknowledged that "a great deal has been made recently of the fact I switched in my position on the freeway proposals for the District," but added that a look at the record would clarify what happened. As Robert J. Lewis summarized Hartzog's comments in the *Star*:

Noting that the agreement in which he participated provides for concessions from the District Highway Department, including tunneling to save parkland, closer aesthetic control, eventual removal of the Whitehurst Freeway, diversion of the north leg of the Inner Loop highway system into a provisional depressed route along K Street and other proposals not originally a part of the District's program, Hartzog said:

"I ask you, who switched?"

One evidence of his view was that the 1964 freeway plan would have displaced 5,860 dwelling units, compared with an estimated 2,590 dwelling units under the new agreement.

Hartzog was speaking at a symposium in the State Department Auditorium on highway proposals for the Georgetown waterfront. Chairman Rowe also was on the panel. She said, "there is real community resistance to the freeway program." As for criticism of NCPC, highway supporters found it "easier to use the planning commission as a whipping boy than to criticize the people as a whole for opposing the program." As for the agreement, many details had not been spelled out for public consideration, she said, adding, "we don't even know how many acres of parkland will be taken" by the new plan.

As the symposium took place, 50 pickets representing the District, Maryland, and Virginia marched in front of the auditorium entrance with freeway protest signs. [Lewis, Robert J., "Support of Freeways Pact Is Defended by Parks Chief," *The Evening Star*, June 3, 1966]

At the *Star*, editors thought Director Hartzog's explanation the "most interesting aspect of the Georgetown freeway discussion." NPS "traditionally has taken a back seat to no one" among highway skeptics. Militant freeway opponents "have counted on the Park Service's support as a matter of course." Therefore, Hartzog's support for the Policy Advisory Committee agreement "was more than a matter of curiosity" among these groups.

The editorial explained that the District's freeway network dated to the 1950s and would have taken about 240 acres of parkland and replaced virtually none. Now, the inclusion of tunnels and underpasses would protect park values. Instead of thrusting truck traffic "like a juggernaut" into the city, the agreement made logical changes for serving traffic between Virginia and the District, reduced displacements, and would be designed under "the watchful eye" of the Fine Arts Commission. With all this, Hartzog had asked, "who switched?" The editorial concluded:

The full detail of Mr. Hartzog's five-page "explanation" is too extensive to go into here. It ought to be required reading, however, for the freewheeling opponents of highways. And for freewheeling highway officials, too. ["Who Switched?" *The Evening Star*, June 7, 1966]

Two days before NCPC's June 9 meeting, Chairman Rowe reversed her position and placed the agreement on the agenda. Why she did so was unclear. She denied speculation that White House pressure had forced the change, although she admitted to having spoken with Horsky. He said, "I talked to her, but she put the highway program on the agenda herself. You overestimate my capacity of persuasion."

She attributed the change to Commissioner Tobriner's June 1 letter asking her to put the item on the agenda. Her reply to Tobriner urged public hearings on the highway agreement. She also emphasized that three freeway projects should be studied further before NCPC decisions: The North-Central Freeway and its connection to the Center Leg Freeway, the East Leg of the Inner Loop Freeway system, and the Three Sisters Bridge and its approaches. ["Mrs. Rowe Puts Roads On Agenda," *The Washington Post and Times Herald*, June 8, 1966; Flor, Lee, "Planners Will Consider Full Freeway System," *The Evening Star*, June 7, 1965]

With pickets marching outside, NCPC approved the District freeway program on June 9, with the six Federal and District officials outvoting, as expected, the five citizen members (Rowe, Norton, Thiry, Edwards, and Louchheim). The precise meaning of the votes was unclear, as Eisen explained:

The road item was near the middle of the day's agenda and was reached 1½ hours after the session began. When Duke sought to gain the planners' approval for the Policy Advisory Committee's recent system, Mrs. Rowe ruled him out of order.

To be considered, she said, Duke's motion had to be a substitute or a proposed alternative for a transportation resolution adopted by the Commission last month during deliberations on the forthcoming 1985 comprehensive plan for the city.

At that time, the Commission endorsed a curtailed interstate system by a vote of 8 to 3.

Since rescinding the prior action would have required eight votes, Duke appealed Mrs. Rowe's ruling and won by the day's first 6-to-5 vote . . . .

Duke's motion called upon the Commission to give its "general endorsement of the Policy Advisory Committee statement" – an action that, he said, would help "develop the sense of the Commission" in its work on the 1985 plan.

General Duke added that, "The NCPC by its action is not forfeiting any prerogatives . . . it is merely giving this report a pat on the back."

NCPC then voted on each of the 21 points in the Policy Advisory Committee's statement, beginning by approving, 6 to 5, the North-Central Freeway to Silver Spring and its connecting the I-95/Northeast Freeway link to Baltimore. By the same vote, NCPC approved the East Leg Freeway from Barney Circle to the North-Central Freeway and the North Leg Freeway north of the Ivy City railroad yards. Next, NCPC approved several less controversial projects unanimously, including the South Leg Freeway tunneled under the Lincoln Memorial and the Tidal Basin, the depressed freeway along the Georgetown waterfront, and the crosstown tunnel in the K Street corridor.

The votes returned to 6 to 5 for the Three Sisters Bridge and opening the Theodore Roosevelt Bridge to trucks.

According to Eisen, the debate had been sharp but conducted in conversational tones. "Despite her obvious anguish, Mrs. Rowe remained calm and gracious." She admitted she was "disappointed" by the votes, but encouraged by unanimous support for public hearings on the transportation provisions of the Year 1985 Plan. General Duke initially opposed hearings, but voted for them in the end.

After the vote, General Duke told reporters, "Frankly, I am leery about placing too much judgment about what happened today." Hartzog, by contrast, considered the vote an endorsement of the compromise he had approved, while Administrator Whitton said he thought NCPC had approved the complete freeway system covered by the agreement, but left geometric details such as width or design of interchanges to District highway officials and BPR engineers.

Even NCPC's Conrad, who had been with the agency for 16 years, said, "I'm not too sure what 'general approval' means." Lee Flor discussed the uncertainties:

The vote yesterday apparently will produce little result. Individual freeway projects will have to be brought back to the commission piece by piece for approval. If any single member of the six ex officio members is absent, the five private members will block

approval. If two ex-officio members are absent, the five private members could vote some form of disapproval.

The executive committee of the commission also has asked its legal counsel for an opinion whether ex-officio members can send substitute delegates in their place if they have to be absent. If the lawyers rule that ex-officio members cannot send substitute delegates, the balance of power in the commission may shift overnight.

While NCPC was acting, the board of directors of the Metropolitan Washington COG approved a motion asking Federal agencies to “adopt and implement” the Policy Advisory Committee agreement. The motion stated that “it has been recognized that an adequate freeway system in the District of Columbia is an essential element of a balanced transportation system . . . .” [Eisen, Jack, “Planners Vote to Complete Freeways,” *The Washington Post and Times Herald*, June 10, 1966; Flor, Lee, “Full Program of Freeways Voted for D.C.,” *The Evening Star*, June 10, 1966]

The day after the votes on the freeway program, NCPC clarified what Eisen called “a sticky parliamentary problem.” NCPC had given “general approval” of the freeway agreement but had not rescinded its previous stage construction vote that put the more controversial elements of the Interstate freeway system beyond the 1972 deadline for 90-10 matching funds. On June 10, NCPC voted in closed session to discard its earlier decision and incorporate the freeway agreement as its own policy in the Year 1985 Plan. It would be subject to public hearings after publication later in the summer. [Eisen, Jack, “Plans Board Refuses to Endorse Bundy Site for New Shaw School,” *The Washington Post and Times Herald*, June 11, 1966; Lewis, Robert J. “Air Transport ‘Push’ Is Forecast in Area,” *The Evening Star*, June 11, 1966]

*Star* editors considered NCPC’s action doubly gratifying because it moved the freeway program forward and overcame “the incredible impediments that were placed in the path of this action by the NCPC chairman, Mrs. Elizabeth Rowe.” Whether she liked it or not, “her commission now is firmly on the record in favor of at least the broad principles of a workable, specific freeway system for the entire city.” Was it the end of the fight, the editors asked:

There is no reason to assume that Mrs. Rowe and those who share her blindness on the need for a balanced transportation system in Washington will not continue to harass efforts to implement Thursday’s freeway votes and, if possible, to overturn them.

Regardless, District highway officials should proceed, with “no hesitation whatsoever,” to work with other government agencies, let design contracts, acquire right-of-way, and expedite the program. “Congressional sentiment plainly is in favor of moving ahead with the freeway program.” Except for NCPC, the Johnson Administration is in support. For further reassurance, District highway officials should be encouraged by “the vigorous, unexpected support for the freeway program also voted this week by the Washington Metropolitan Council of Governments.” [“Clearance for Freeways,” *The Evening Star*, June 11, 1966]

Despite the action on the Policy Advisory Committee agreement, housing for displaced remained in doubt. In early June, Edward L. Ullman, president of the Washington Center for

Metropolitan Studies, proposed that low income families be moved to new suburban tracts instead of being housed in high-rise units over the new freeways on expanded freeway right-of-way. He said the plan to acquire block-wide rights-of-way for the freeways would be “in the long run a counsel of despair and a drastic backward step.”

On June 13, Thomas Lawrence, chairman of the freeway committee of the Washington Urban League’s Neighborhood Development Center, objected that the only undeveloped land for new suburban tracts was “at the far reaches of the metropolitan area.” Families in the path of the Inner Loop Freeway, he said, preferred to stay in the city near their present homes. Based on Ullman’s statement, “it appears that a proposal is being made to establish new ghettos . . . which are impossible to reach by . . . public transportation.” [“Group Asks Air Rights Housing,” *The Washington Post and Times Herald*, June 14, 1966]

The District, on July 12, submitted legislation to Congress covering air rights. The District of Columbia Freeway Airspace Utilization Act set priorities for construction in highway air rights, with the first priority being buildings for municipal purposes. Low-income housing by the National Capital Housing Authority was second. The remaining priorities were buildings for Federal Agencies, public or private low or moderate income housing, construction by non-profit organizations, and construction for businesses. District officials considered the legislation “must-pass” in the current congressional session. [“Congress Gets D.C. Proposal on Air Rights,” *The Evening Star*, July 12, 1966]

On July 21, General Duke presented a revised plan to NCPC for the North-Central Freeway. Under a plan devised by J. E. Greiner and Company and Skidmore, Owings and Merrill, the freeway would be built 20 to 30 feet below ground beside the Baltimore and Ohio Railroad tracks in the District and Maryland. It would connect with a large interchange with downtown bypass routes around 10<sup>th</sup> Street and Rhode Island Avenue, NE. The new route would avoid Takoma Park and prime residential areas north of Silver Spring. It also would reduce residential displacement from 720 families in the District and 570 families in Maryland to 370 families in the District and 175 families in Maryland.

General Duke did not ask for a vote on the new plan. He said he only wanted to give NCPC an early look at it. The consultants, however, said the new route was the best they could come up with. [Flor, Lee, “Freeway Route Shift Proposed,” *The Evening Star*, July 21, 1966]

### **The Money Problem**

Despite efforts by NCPC, District officials, and others to avoid pitting freeways against rail rapid transit, the two were becoming increasingly intertwined, as Jack Eisen explained in the *Post* on May 8. He indicated a “key Capitol source” revealed Chairman Natcher’s intention to eliminate appropriations for the city’s transit matching funds in view of efforts to curtail the freeway program:

Such action would be intended to focus President Johnson’s personal attention on the road controversy in the hope that he would intervene, the source said.

Chairman Natcher's intention became known during the April 20 hearing, but the transcript of the hearing had still not been made public in May. If he followed through in blocking the matching funds, NCTA would not be able to spend the funds authorized for the Federal share of subway in the District, another source told Eisen.

Since then, NCPC had voted, 8 to 3, in support of stage construction to postpone the more controversial freeway segments until after 1972, a move the source told Eisen "will only harden the subcommittee's resolve":

The House subcommittee's determination to deal head-on with the issue began, it was learned, after the Policy Advisory Committee sent the President its report last month urging further studies of Washington freeway proposals.

On the urging of presidential aide Charles A. Horsky, the PAC made its recommendation unanimous although the body was badly split on its basic views.

As a result, freeway advocates on and off the PAC interpreted the report and the President's reply as calling for studies within the framework and timetable of the interstate program, with its 1972 expiration date.

Opponents, including NCPC Chairman Elizabeth Rowe, took the view that the studies could be basic and that the 1972 deadline could go out the window.

Moreover, two recent actions on Capitol Hill added to the "already confused" freeway program. First, Chairman McMillan of the House District Committee and Representative Whitener said they expected to insist that the city get individual congressional authorizations for Potomac River bridge projects on the Interstate System, including the Three Sisters Bridge and additional spans at 14<sup>th</sup> Street. Second, the Senate District Committee, in approving the revenue bill, had endorsed the Policy Advisory Committee report without spelling out what it meant. The committee also thought the Policy Advisory Committee should pass on pending freeway proposals:

The Senate committee's recommendations were made to head off an amendment to the financing bill which Sen. Robert F. Kennedy (D-N.Y.) was prepared to offer.

The amendment would have given the PAC a statutory responsibility to pass on freeway projects. It is an open secret on Capitol Hill and downtown that this proposal actually originated on the staff of Sen. Joseph D. Tydings (D-Md.).

Eisen also reported how the 8 to 3 vote came about:

The final NCPC vote was preceded by maneuvering, it was reported, in which District Engineer Commissioner Charles M. Duke sought approval for the full interstate program. This preliminary vote lost, 6 to 5, with Duke backed by representatives of the Army Engineers, U.S. Bureau of Public Roads, National Capital Transportation Agency and General Services Administration.

After winning compromises in the directive to the staff, NCTA Administrator Walter J. McCarter and GSA Public Buildings Commissioner Caspar F. Hegner agreed to vote with the majority on the full transportation report, which urged construction of the subway.

This, McCarter said later did not reflect an antifreeway position on his part.

The only Federal official on the NCPC who reportedly voted down the line to curtail the roads was T. Sutton Jett, regional director of the National Park Service. [Eisen, Jack, "House Unit May Kill Subway Funds in Bid For LBJ Intercession," *The Washington Post and Times Herald*, May 8, 1966]

When Senator Bible brought the revenue bill to the Senate floor on May 16, he discussed the committee's concern about the effectiveness of decisionmaking on the District's freeways. He also discussed one of the general provisions of title X of the bill. It gave the District the authority to enter into agreements with Maryland and Virginia to develop a 3C planning process. During hearings, the District commissioners made clear they had adequate authority under Title 23, United States Code, to enter into agreements with BPR and the two States "to undertake the construction of Federal aid highway projects." As a result, "the effect of this section will be to provide a restatement of existing authority." [District of Columbia Revenue Act of 1966, *Congressional Record-Senate*, May 16, 1966, pages 10702-10703]

These provisions addressed the concerns Senators Kennedy and Tydings had expressed. As noted earlier, the Senate engaged in limited debate on another aspect of the bill before passing the bill without discussion of these highway measures.

Chairman Natcher was holding the appropriations act pending action on the revenue bill. As in the past, the District budget was based on congressional authorizations for funding that had not yet been approved. He was unwilling to appropriate funds that had not been authorized. As of the end of May, the House District Committee had not scheduled hearings to consider the measures in the Senate bill that had not been in the bill the House approved in 1965.

However, on June 2, Chairman McMillan went to the House floor to request unanimous consent to pull the revenue bill from consideration and ask for a conference with the Senate. There being no objection, Speaker Pro Tempore Albert appointed House members to participate in the conference (Chairmen McMillan and Whitener and Representatives Broyhill, Dowdy, Fuqua, Harsha, and Nelsen). [Revenue For the District of Columbia, *Congressional Record-House*, June 2, 1966, page 12176]

This action was less encouraging than it might have seemed because the House District Committee still intended to hold hearings. Moreover, of the six District of Columbia bills under consideration in Congress, many of them minor and inexpensive, none had survived a conference report as yet. Further, Chairman McMillan said he would not take part in any other conferences until a District anti-crime bill was signed into law. Consideration of that bill was complicated by the landmark Supreme Court decision in *Miranda v. Arizona* on June 13, 1966. This is the decision that required police to inform defendants of their rights to an attorney and against self-incrimination as well as to determine if the defendant understood these rights. House and Senate

members would have to determine if the anti-crime bill was consistent with this decision. [Elder, Shirley, "D.C. Bills facing Death," *The Evening Star*, June 20, 1966]

On June 27, the House held a 1-day hearing on the revenue bill. Grace Bassett described the hearing as "a formality promised by McMillan when the Senate acted." After the hearing, Chairman McMillan said, "Now, I hope we can take the House bill and the Senate bill into conference without further delay." The highway revenue provisions, which were in the House and Senate bills, were not a concern during the hearing.

As the new fiscal year began on July 1, the city did not have a budget. Robert L. Asher, writing in the Potomac Watch column, suggested that the message from Congress was: "Happy Fiscal New Year – Use Your Credit Cards and Pray." The revenue bill, "which will inform us as to how much we can tax ourselves and thus, how much we'll have in the cash register for the next year, is in the legislative limbo known as 'conference':

Both the Senate and House District Committees assure regularly that they're pressing each other for action. So just because it's July is no reason to blame them.

And you can't get mad at the House Appropriations subcommittee on the District, for these guys say they're holding up approval of a budget until they get a reading on the revenues.

The Senate Appropriations fellows get out of it neatly, since the Senate doesn't act on spending bills until the House has. And even then we aren't through, because we have to go through a conference on this one, too. [Asher, Robert L., "D.C. Is in Business—but Only on Paper," Potomac Watch, *The Washington Post and Times Herald*, July 7, 1966]

As July ended without a resolution, one District official told a reporter, "This puts us in a scratchy position. We are scratching our heads wondering what to do next." [Elder, Shirley, "D.C. Budget Caught in 3-Ring Show," *The Sunday Star*, July 24, 1966]

### **The Compact – Extending the Promise**

On June 9, President Johnson fulfilled his promise to send legislation to Capitol Hill authorizing the interstate compact for the rail rapid transit system. His letter began:

This is the Congress which promised the citizens of the Nation's Capital a new system of mass transportation. I hope it will also be the Congress which extends that promise to the citizens of the entire Washington metropolitan area.

The economic well-being of this region – and the efficient functioning of the Government itself – depend more and more each year on adequate mass transportation facilities. No system of freeways, no matter how extensive or well planned, can suffice much longer.

He recalled how the Congress approved the 25-mile, \$431 million system, authorized \$150 million for it, and appropriated \$6.2 million to begin engineering. "But that system, even when completed, will only begin to solve our transportation problems."

Population shifts were part of the problem. Three-quarters of the area's population lived in the city in 1950. "By 1970, however," that situation will be almost totally reversed":

At that time, there will be an estimated 1,688,000 citizens living in our Maryland and Virginia suburbs—67 percent of the area's swelling population.

Even today, this shifting population is creating massive traffic problems, with more than a million automobiles entering and leaving our city every 24 hours. Even with a full mass transit system – on a regional basis – that figure is expected to double by 1985. Without such a system, a complete breakdown in area transportation would be only a matter of time.

To achieve that goal, he transmitted legislation to authorize an interstate agency "with the power to plan and finance a regionwide system." The bill would ratify on behalf of the District of Columbia the compact already ratified by Maryland and Virginia to create the Washington Metropolitan Area Transit Authority. With the grant of consent required by the Constitution and by Section 301(a) of the National Capital Transportation Act of 1960, the new agency would assume responsibility from NCTA for the mass transit system on September 30, 1967.

President Johnson emphasized what the bill did and did not do:

This legislation will not create a regional system. It will not build a mile of rail rapid transit. It does not impose on the United States, or on the District of Columbia, any financial obligation. But it is essential if we are to move ahead, for the Transit Authority will become the administrative framework within which further progress can be charted.

Maryland and Virginia had demonstrated their support "by prompt ratification" of the compact. With approval of the enabling legislation, Congress can "echo that determination."

The bill was assigned to the House and Senate Committees on the Judiciary, which customarily handle compacts among the States. [Washington Metropolitan Area Transit Regulation Compact, A Communication from The President of the United States, Committee on the Judiciary, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, House Document No. 452, June 9, 1966, pages III-IV]

The next day, the aspiring Washington Metropolitan Area Transit Authority met in the District Building for its first public meeting, with Representative Sickles presiding. The authority had, as yet, no official function, but the members wanted to assure the public that they would protect the interests of residents of Maryland, Virginia, and the District. The *Post* reported:

The new Authority would spend the next 15 months preparing a route and financing plan for a regional transit system. This would be an expanded version of the 25-mile system, mostly within Washington, authorized by Congress. ["Transit Directors Meet, But Agency Still Unborn," *The Washington Post and Times Herald*, June 11, 1966]

## Breaking the Auto Jam

NCPC's approval of the District's planned freeway network resulted in optimism that a headline in the *Post* referred to as "Breaking the Auto Jam." NCPC's action, Bart Barnes wrote, "may uncork – at least on paper – part of the traffic bottleneck suburban commuters go through daily to reach the city."

The North-Central Freeway, Three Sisters Bridge, and Palisades Parkway offered hope of relief of commuter traffic jams. Maryland and District officials were "close to agreement on the proposed route for the controversial and beleaguered North Central Freeway beyond the District line in Silver Spring." Designed to complement the rail rapid transit system, the freeway would be a vital link between Montgomery County and the District core while giving Prince George's County residents similar access via the I-95/Northeast Freeway link to Baltimore. Officials had agreed the freeway would "stick as close to the Baltimore & Ohio right-of-way as possible to keep displacement to a minimum."

The Three Sisters Bridge would connect I-66 to the city for commuters and shoppers. "The bridge, which would utilize Spout Run Parkway as a link between it and Route I-66 is likely to meet stiff opposition from Arlington residents."

Nevertheless, construction of the bridge "would help clear the way for the Palisades Parkway along Washington's Potomac shoreline and would remove the present "dead end" [at] the District line." To be constructed by NPS, the parkway would join with the E Street Expressway for a link to downtown:

It would probably eliminate the present commuter practice of "double crossing" – going from Maryland over the Cabin John Bridge, down the Virginia parkway, then cutting back to the city on the Key, Memorial, Roosevelt or 14<sup>th</sup> Street bridges. [Barnes, Bart, "Breaking the Auto Jam," *The Washington and Times Herald*, June 12, 1966]

This optimism was aided by new estimates of the number of relocations the freeways would require. NCPC estimated that the number of homes to be destroyed had been cut in half, from 5,860 dwelling units, "many of them occupied by low-income and minority families," to 2,590 units, or about 9,000 individuals. The relocations would be spread over several years, giving the District relocation agency time to find replacement housing. Lee Flor reported:

District Highway Department director Thomas Airis said yesterday that he thought the proposals for building relocation housing over the freeways might solve his relocation problem.

Airis also said that the first direction by the Highway Department, following the National Capital Planning Commission action last week, probably would be purchase of land along the Georgetown Waterfront. [Flor, Lee, "Approved Freeway Plan Eases Impact on Housing," *The Sunday Sun*, June 12, 1966]

In the opinion of *Star* editors, one of the District's "bright, encouraging developments" in the freeway controversy was the District's "decision to study the possibilities of using freeway

condemnation procedures to provide new sites for housing—especially housing to relocate some of the low-income families displaced by the roads.” Use of air rights was one way, but the other was to buy excess land for housing or other public purposes. “In either technique, or combination of the two, the theory is that the project would be carefully designed from the start as a multi-purpose enterprise.”

As for Edward Ullman’s characterization of these proposals as a “counsel of despair and a drastic backward step,” the editors declared them “ridiculous.” His idea of moving low-income families from the path of the freeway in the central city to the suburbs was “equally foolish”:

We agree that a part of the answer to a great many of Washington’s problems, not merely transportation, involves a rational racial dispersion of housing throughout the metropolitan area. But that is a long-range goal which will have to be achieved through a variety of means. To propose it as a short-range solution to imminent freeway relocation problems contributes nothing. [“Counsel of Despair,” *The Evening Star*, June 17, 1966]

To illustrate the point, the editors printed a letter from Thomas Lawrence, Chairman, Center Leg Freeway Committee, and neighborhood workers William Richardson and Henry Alston of the Neighborhood Development Center, Washington Urban League. They called Ullman’s suggestion “unwarranted, ill-timed and poorly considered.” As residents in the path of the Center Leg Freeway, their “overwhelming desire is to maintain ourselves in safe, decent and sanitary housing and to have adequate community facilities within our old neighborhood.” Their homes were convenient to their places of employment and public transportation. Embracing the Ullman plan “would be disruptive for our citizens and a cruel hoax”:

Only 450 solid, middle-class Negro families have found integrated housing in the suburbs over the last three years. With integrated housing largely unavailable within existing suburban communities and with undeveloped land available only at the far reaches of the Metropolitan Area, it appears that a proposal is being made to establish new ghettos in locations which are impossible to reach by the public transportation.

By contrast, the District’s study of air rights and excess condemnation appeared to be “real and workable.” It was the city’s first effort “to respond to the desires of a community to provide housing for persons before they are displaced by public works.” [“Path of Freeway,” Letters to the Editor, *The Evening Star*, June 17, 1966]

At this pivotal moment in the freeway controversy, sources at the White House indicated that General Duke’s tour of duty as Engineer Commissioner would probably be extended beyond the traditional 3 years that otherwise would expire July 8. As the *Post* reported:

Some city officials feel that it would be inadvisable to bring in a new and inexperienced man at the present time, with the highway crisis still in bloom.

After years of wrangling, the city’s highway crisis now seems on [its] way to resolution. Duke played a major role recently when the National Capital Planning Commission voted for the key elements of a multimillion dollar citywide highway plan.

With additional steps before construction can begin, General Duke's experience and expertise were "regarded as valuable in shepherding the plans" to completion. [Richard, Paul, "Duke to Stay on Job, White House Hints," *The Washington Post and Times Herald*, June 28, 1966]

### **The Home Rule Rider**

On June 7, Chairwoman Edith Green (D-Or.) of the Subcommittee on Education and Labor secured approval of a bill granting the District an independent, elected, seven-member school board with the power to tax and finance its own system. The subcommittee added the provision to a vocational rehabilitation bill for the District that Chairman McMillan had introduced in the House District Committee, and sent to the Committee on Education and Labor, chaired by Representative Powell.

Supporters of the McMillan bill feared that the school board issue might be challenged on the House floor as not germane to the overall bill. Reportedly, Chairman McMillan and Representatives Nelsen and Broyhill of the District Committee supported the school measure. Representative Green said, "this is the first District bill we've had sent to our committee in some time, and we think it entirely germane to amend it with the school board provisions." [Asher, Robert L., "House Unit Approved Elected School In a Surprise Move," *The Washington Post and Times Herald*, June 8, 1966]

The measure, using the rider method Rauh had proposed for home rule, gained support among Home rule advocates, as Robert L. Asher wrote in the Potomac Watch column:

The shattering thought of Congress actually slamming the door on home rule again is so hard for most local groups to contemplate [that] they may well overlook a chance to stick a foot in, just in case.

They were not "lowering any flags on the never-say-die battle for a mayor and council here . . . but an elected school board and a non-voting delegate to the House of Representatives are two steps that Congress seems a little more ready to act on if pressed." These steps would be "crumbs," but the city's home rule advocates were "now working toward these changes" while keeping "the greater goal" in sight.

The financial implications of the school board measure worried home rule advocates, but they preferred an elected board instead of one named by U.S. District Court judges, as at present. They especially liked the idea of a nonvoting member of the House, similar to the arrangement for Puerto Rico. Delegate Santiago Polanco-Abreu could not vote in committees or on the House floor, but he could "take to the floor and sound off." Representatives Mathias and Morris K. Udall (D-Az.) had introduced a bill to give the District a similar position. They considered it a viable alternative if home rule failed in the 89<sup>th</sup> Congress.

However, "everyone will be watching anxiously to see if Sen. Wayne Morse (D-Ore.) tries a last-ditch effort to enact the Senate's home rule measure by attaching it to a non-District bill that also could bypass the House District Committee. More power to him if he does." Just in case he fails, Asher wrote, "it seems only prudent to move ahead with some insurance measures that

might give us a crack at the polls.” [Asher, Robert L, “Backstop Measure A Home Rule Must,” Potomac Watch, *The Washington Post and Times Herald*, June 13, 1966]

Even as support grew for Senator Morse’s rider initiative, the underpinnings for Chairwoman Green’s school board fell apart in committee. On June 28, Chairman Powell declared the measure dead, while Representative Green denied it after “a first-class parliamentary fight” between the two, according to the *Post*. “After two stormy sessions that included a morning walkout, an exchange of charges and an afternoon boycott by Mrs. Green’s supporters, Powell announced that his Committee had disposed of the issue for good and that he’d hear no more of it.”

Powell, an African-American, accused Representative Green, who was white, of trying to “scuttle” home rule. “I hate to see her being used as a tool, aligning herself with segregationists . . . Republicans . . . strange bedfellows” who support a proposal “concocted by a group of Southerners.” He wanted nothing to stand in the way of Senator Morse’s rider plan. He said:

We have an excellent chance to get a free D.C. this year. The parliamentary maneuvers are under way. We planned this home rule tactic months ago, and the overwhelming feeling of local groups is that nothing should hinder it.

Chairwoman Green, citing her long support for home rule, denied the school board measure would jeopardize the home rule rider. She doubted that the House in the 89<sup>th</sup> Congress was any more supportive of home rule in 1966 than it had been in 1965. “If the home rule supporters can produce additional votes in the House, I’ll be one of the ones who will vote for it. But the people of Washington have waited long enough for some participation in the democratic process and they should have an elected school board. [Asher, Robert L, “Bid to Tie School Board Issue To Home Rule Fails in House,” *The Washington Post and Times Herald*, June 29, 1966]

In early July, Senator Morse was ready to advance his rider. His target was a \$2.9 billion higher education bill the House had passed. If the Senate approved the rider, the amended bill would be returned to the House where it would be considered by Chairman Powell’s committee, not the District Committee. Chairman Powell said he had killed the Green rider to prepare the way for the Morse rider. He planned to shepherd it through the House.

About 4,000 people attended the YOU home rule rally at the outdoor Sylvan Theater on the southeast corner of the Washington Monument grounds. Bishop Smallwood Williams of the Bible Way Baptist Church told them, “This is the ninth inning. There are two outs. The champ is about ready to bat and the other side is playing dirty. The pitcher is throwing spitballs. We want the big umpire in the White House to tell them to run the game right.”

Rauh said, “As one who has spoken for 20 years at every citywide home rule rally, I hope no one will take it amiss if I say this is the last time. I say to the President, we have done our part, Mr. President, give us now the final push across the goal line.”

The *Post* pointed out that some of the speakers “have not spoken to each other for years,” but they presented a united front in keeping with advice from Sterling Tucker, executive director of

the Washington Urban League. He said, "It's important that we don't begin fighting among ourselves, seeking the headlines, taking the credit. There's a place in this struggle for all of us."

Senator Morse appeared:

The crowd roared approval when Morse described the home rule rider he is tacking on the House-passed higher education bill in an attempt to circumvent the hostile House District Committee.

"It's more or less the same bill that's been passed by the Senate six times." He thought opposition to home rule was based on fear of a Negro-run city, but he said, "if it should be decided in the District of Columbia that the best qualified candidate for mayor is a Negro, then he should be elected."

He acknowledged his disputes with the White House over the Vietnam War had caused some estrangement with President Johnson. However, on home rule, "I want to find myself in agreement with my President." His rider was "the last hope we have for home rule in this session." He added, "I make my plea to my President . . . I plead with you to give us home rule in this session, so we can change the image of America." (Charles Horsky represented the President at the rally, but was not quoted in news accounts.)

YOU's King said, "We need a broadly based coalition movement – not 50 or 60 percent of the people, but 80 or 90 percent." The Reverend Fauntroy told the crowd that with home rule, "we will give the nation and the world a much-needed example of how Negroes and whites can work together." James Farmer, former head of CORE, looked at the crowd and said, "I see black, white, Catholic, Jew, Protestant, labor, young and old – that's the kind of coalition we need." Comedian Dick Gregory "who flew in from riot-torn Chicago," according to the *Star*, "capped the rally with a series of jokes and anecdotes, before reminding the audience that 'you can't laugh your problems away.'"

(In 1966, Dr. Martin Luther King, Jr., had launched the Chicago Freedom Movement in support of the open housing provision of the Civil Rights Act of 1964. Riots and disruption resulted during the summer. In August, Dr. King and Mayor Richard J. Daley signed an open housing agreement that proved ineffective.)

YOU had invited Marion Barry to address the crowd, but he declined. He arrived midway through the rally, but stayed outside the group. He told reporters, "With all the muscle they have, they should have had 20 times as many people here today." He added, "I don't think much of these rallies. I don't see the grass roots. I see the same old people you see at all the rallies." Previously, he had said if the rally attracted 10,000 people, Free D.C. Movement would drop its home rule campaign, but the rally did not reach that number. [Cronk, Sue, and Blumenthal, Richard, "LBJ Exhorted to Act For Home Rule Now," *The Washington Post and Times Herald*, July 18, 1966; Hoge, Warren, and Ikenberry, Kenneth, "Coalition Is Urged At Home Rule Rally," *The Evening Star*, July 18, 1966]

As the weeks passed, Senator Morse awaited his chance to introduce the rider when the House education bill reached the Senate floor. In a News Analysis, Robert Asher stated that the “feverish home-rule campaign of 1965, which saw unprecedented White House lobbying on behalf of the city, is ending with neither a bang nor much of an audible whimper.” Now, “mere mention of the topic draws only weary chuckles from the House members who pushed for it and their colleagues who pushed it aside.”

Unlike in 1965, the White House was quiet on the maneuver. Senator Morse, who had called on President Johnson to support the rider plan, admitted, “I see no signs of action.” Asher reported that a White House spokesman “confirmed last week that it is doing no real lobbying in Congress now, and is waiting to see how Morse fares.” If the maneuver proves promising, “the President then reportedly will decide what to do.” [Asher, Robert L, “Home Rule Struggle Is Quiet Now, But Far From Over,” News Analysis, *The Washington Post and Times Herald*, August 21, 1966]

Home rule advocates from the Greater Washington Chapter of ADA met on August 29 in a Senate Office Building hearing room to receive a briefing from Senator Morse. The big news, however, was that Vice President Hubert H. Humphrey sent a telegram to ADA:

Please be assured that under President Johnson’s leadership I shall continue to work with you so as to enable all the citizens of this great city to enjoy their fullest rights as Americans.

Neither the lateness of the hour nor the repeated setbacks we have sustained will dismay us . . . . In times past so many battles for other great objectives have had to be won in the closing weeks and hours of a Congressional session. We can win this battle. It is so very right.

Home rule would receive “the revitalized devotion it so well merits.”

Rauh hailed the telegram as “a great day for all of us. The message from the Vice President is President Johnson’s down payment on his pledge for home rule in the 89<sup>th</sup> Congress.” Senator Morse agreed that the message left “no room for doubt that the Administration continues to pledge itself for adoption of home rule.”

However, the Vice President’s office told reporters that the telegram supported home rule, not necessarily Senator Morse’s rider plan, and would not comment on whether the Vice President was speaking for the President. Only President Johnson, an aide said, could state whether the Administration supports the rider.

Senator Morse told the group that he planned to introduce the rider after Congress returns from its long Labor Day recess. “I raise no false promises and I raise no false hopes,” he said. He added, “the political climate has never been better.” [“Humphrey Urges ‘Revitalized’ Drive For Home Rule,” *The Washington Post and Times Herald*, August 30, 1966; Elder, Shirley, “Humphrey Pledges Renewal of District Home Rule Drive,” *The Evening Star*, August 29, 1966]

By October, the critical moment had not arrived. With Congress ready to adjourn to allow members to continue their reelection campaigns, time was running out. The education bill was

finally scheduled to reach the Senate floor, but it was accompanied by threats of a filibuster to block the rider. Majority Leader Mansfield was considering a motion to table the rider to avoid the filibuster and advance adjournment. Senator Morse was determined to argue his case. "I will be the most surprised man in the Senate if the leadership doesn't give me time to present my case."

The Washington Home Rule Committee sent a telegram to President Johnson urging his help. "A clear statement from you now reaffirming your unqualified support of home rule will ensure that our supporters will stand firm and the Morse rider will pass overwhelmingly." [Carper, Elsie, "Morse Pledges Fight for Rider On Home Rule," *The Washington Post and Times Herald*, October 4, 1966]

The issue was seen as a major civil rights issue. On October 8, Senator Richard B. Russell (D-Ga.), one of the leading opponents of civil rights legislation, warned that "there might be some opposed to this unusual procedure." That threat prompted Senators Mansfield, Dirksen, and 20 other Senators to file a cloture petition and schedule a Senate vote on Monday, October 10, on whether to cut off debate. Senator Mansfield warned that a filibuster "would most assuredly snuff out the last flicker of hope for an October adjournment, which now remains in the realm of the possible." He added, "There is scarce chance that a filibuster, however prolonged, could change one single vote." Under Senate rules, a two-thirds vote would be required to cut off debate.

Majority Leader Mansfield indicated that if the Senate defeated cloture, allowing a filibuster of the rider, he would offer a motion to table the amendment, thus ending the chances for home rule legislation in the 89<sup>th</sup> Congress. [Carper, Elsie, "Senators Bar Filibuster on Home Rule," *The Washington Post and Times Herald*, October 8, 1966]

Again, advocates tried to enlist President Johnson's support. Rauh sent a telegram indicating that if the rider, attached to the education bill, can make it to the House, "we are assured by the House liberal leadership that they . . . can pass the bill." ["LBL Asked To Help on Home Rule," *The Washington Post and Times Herald*, October 9, 1966]

On October 10, the Senate voted 41 to 37 to cut off the filibuster, 11 votes short of what was needed. Senator Russell led the battle for a filibuster, arguing that Senator Morse's rider maneuver was "shocking," a "legislative lynching," and a "complete travesty of the legislative process." Referring to cloture as a "gag rule," he said, "Never before in the history of the Senate has such short shift been given a parliamentary proposal." Senator Byrd, chairman of the appropriations subcommittee that handled District funding, called the maneuver "a mockery of the legislative process."

Senator Bourke D. Hickenlooper (R-Ia.) said the maneuver to attach the rider was a "most astonishing procedure" because the Senate would not have time to consider the 107-page amendment. Senator Morse responded that the amendment was similar to past home rule bills that passed the Senate. "We've walked up that hill six times," he said, "and this is the seventh."

With cloture defeated, however, Senator Morse asked and received unanimous consent to withdraw the rider. [Carper, Elsie, "Senate Vote Kills Bid for Home Rule," *The Washington Post and Times Herald*, October 11, 1966; Elder, Shirley, "Home Rule Bid Fails in Senate," *The Evening Star*, October 10, 1966; Higher Education Amendment of 1966, *Congressional Record-Senate*, October 10, 1966, pages 25869-25880]

Rauh made clear where the blame should be placed. "Without the help of the President, our efforts were doomed to failure." Richard Lyon, outgoing chairman of the Washington Home Rule Committee, said, "It's back to the old grind again." Still, as Rauh put it, "we'll try again next year and the year after and, like Irish independence, we will one day get it." ["D.C. Home Rule Defeat Laid To Silence of White House," *The Evening Star*, October 11, 1966]

### **Shifting the North-Central Freeway**

On July 21, District and Maryland highway officials unveiled the plan to NCPC for the North-Central Freeway to NCPC as drawn by J. E. Greiner and Company and Skidmore, Owings and Merrill. The freeway would be built as close as possible to the Baltimore and Ohio Railroad track, but 20 to 30 feet below ground level the entire distance. From the Inner Loop near Glenwood Cemetery at 2219 Lincoln Road, NE., to the I-95 Northeast Freeway interchange near Fort Totten Park, the freeway would have eight lanes. From the I-95 interchange, the freeway would contain six lanes to 16<sup>th</sup> Street and four lanes the rest of the way to the Capital Beltway.

The proposed route would almost completely bypass Takoma Park, site of so much anti-freeway protest, and Silver Spring's prime residential areas. It also reduced the number of dwellings that would be taken for the project. The previous plan would have displaced 720 families in the District and 570 in Maryland. The new alignment reduced displacements to 350 families in the District and 175 in Maryland.

The presentation to NCPC was for information only and to get the input of members before the plan was finalized in September. Initial reaction from at least two freeway critics was positive. Thiry, the Seattle architect, said District officials "should be encouraged" in the approach they had taken. Edwards, the Howard University sociologist, said the plan was an "improvement" over previous ideas, but added, "the people still need to have their say." [Flor, Lee, "Freeway Route Shift Proposed," *The Evening Star*, July 21, 1966; Clopton, Willard, "B&O Track Route Eyed For N. Central Freeway," *The Washington Post and Times Herald*, July 22, 1966]

In "A Critique," *Post* architecture critic Von Eckardt admitted that the new plan "shows that public criticism of urban freeway design is beginning to produce laudable results." The plan included "a number of improvements," such as not bulldozing a new corridor, "the first such exception since Federally subsidized interstate freeways began to invade our cities."

Of course, the reduced number of displacements, bypass of Takoma Park, and the availability of air rights for new housing were other improvements. Von Eckardt reported that Director Airis believed that multiple use of highway right-of-way "will be inexpensive enough to make possible public and moderate income housing as well as private construction." In addition, "construction

can be so staged that new housing will be ready and waiting for families that must be displaced as the freeway is built.”

The plan contemplated interchanges near rapid rail transit stations:

This would make the stations more accessible and allow their coordination with parking garages. A creative design approach thus could combine housing, shops and parking to turn the stations into new community centers that attract more people to fill the subway fare box.

Von Eckardt also appreciated the fact that architects were involved in the design:

In the past architects have been called in only to embellish the work of the engineers and their ideas have usually been badly compromised or rejected as too expensive . . . . Henceforth, says Airis, architects always will be called in at the inception of freeway design studies.

The critic contacted several people who had been involved in the freeway controversies over the years. The Reverend E. Channing Phillips of the Coalition of Conscience and chairman of the Housing Development Corporation, said, “I am ready to help with any scheme that reduces displacements and relocates displaced people within their area.” Sammie Abbott was less positive. “Although Takoma Park has been ‘spared,’ people out here are concerned with the city as a whole. And the city cannot absorb more cars and trucks.” Grosvenor Chapman, the architect serving as vice chairman of the Committee of 100, was hesitant to offer a view, saying, “It all depends on how things are actually done.” [Von Eckardt, Wolf, “New Plan Puts Road in Corridor With B&O, Lessens Disruption,” A Critique, *The Washington Post and Times Herald*, July 23, 1966]

Like Von Eckardt, *Star* editors were impressed by the growth the new plan demonstrated. “Washington seems to be learning, slowly but surely, that the disruptive impact of necessary urban freeways can be dramatically reduced by more painstaking route-selection and architectural design.” Based on the collaboration of engineers and architects, “much of the original dissent to the road appears to be dissipating.” The prospect of using air rights above the depressed freeway for housing “to accommodate all the families displaced along the North Central route [in] a city so severely short of sites for low and medium-income housing” meant that the city’s air-rights bill deserved the highest priority in Congress. [“Matter of Design,” *The Evening Star*, August 2, 1966]

### **Advancing the Compact – Senate**

The White House had included its bill approving the interstate compact among its priorities for the 89<sup>th</sup> Congress before Labor Day. On August 22, Senator Tydings, chairman of the Judiciary Subcommittee, held hearings during which most witnesses were overwhelmingly in support of the bill.

Some witnesses supported the bill conditionally. Lewellyn A. Jennings of the Federal City Council said the council supported the bill, but was concerned that if the expected bonds were to

be floated at this time, they would have to carry a guarantee from the District or Federal government, something not provided for in the bill as drafted.

Peter Craig was one of the few critics, as Jack Eisen summarized:

Craig . . . said Jennings “underscored our concern” that the compact would prove inadequate. He said it could delay construction of the 25-mile city system authorized by Congress last year.

Tydings replied that such problems can be dealt with as they arise and doubted any delay would result.

Craig also asserted that the compact is “being packaged and sold, especially by the newspapers, as being the next step to get the core system built.”

Tydings disputed this, saying it is a “necessary step to get the whole system built . . . . You can’t stop at the city line.”

If the compact is approved, Craig said, two sections of the enabling bill should be killed – one that abolishes the National Capital Transportation Agency on Sept. 30, 1967, and another that abolishes NCTA’s Advisory Board immediately. The Advisory Board is headed by lawyer Gerry Levenberg, a foe of the compact. [Eisen, Jack, “Action Is Sped On Transit Bill By Senate Unit,” *The Washington Post and Times Herald*, August 23, 1966; Bassett, Grace, “2 Congress Groups To Push Subway Compact Bill,” *The Evening Star*, August 23, 1966]

The few criticisms aside, the Senate Judiciary Committee approved the bill on August 24. Its report addressed the criticisms and concerns expressed during the 1-day hearing. One concern related to whether the District’s interests were adequately protected by the makeup of the interstate authority board. “The committee has considered these contentions and also concluded that the provisions of the compact and of the consent legislation properly and adequately protect the interests of the District of Columbia and of the other signatories.”

Equal representation by the three jurisdictions was necessary to build a regional system. Any costs not covered by the fare box would have to be “shared equitably” among the jurisdictions and the Federal Government. The report added, “it is difficult to understand how the interests of the District of Columbia are protected by assuming a preponderance of interest and responsibility for the District of Columbia for the purpose of determining representation on the Board of Directors of the Authority.”

The report also disputed concerns that the District would be outvoted, a concern that “reflects a misunderstanding of the voting arrangements.” For most actions, a majority vote must include at least one representative of each of the three jurisdictions. Most of the concern was about other actions, including the adoption, alteration, revision, or amendment of a mass transit plan or a plan of financing. For those actions, the majority could consist of the unanimous vote of the directors from at least two jurisdictions. These were, however, not final actions, but only

proposals that would not become final until those governments entered into financial commitments in accordance with the compact:

Thus, the adoption by the Board of Directors of the Authority of a mass transit plan or a plan of financing does not bind the District of Columbia or impose any obligations on that Government until and unless Congress appropriates for the District of Columbia the funds required of that signatory by the plans.

The concern about representation by two District commissioners on the board was, really, a home rule issue. “The Commissioners are Presidential appointees, subject to approval by the Senate, and are directly responsible to both the President and the Congress for the performance of their duties.” Maryland’s and Virginia’s representatives would be local officials or political appointees. “It would be a disservice to the District of Columbia, and impair the effectiveness of the compact, to separate the District of Columbia representatives on the Authority from executive responsibility for the general affairs of the District of Columbia.”

The committee also rejected the concerns about financing. Under the compact, costs were to be financed from the fare box and any shortfall “shared equitably” by the jurisdictions. The lack of tax authority was not, as suggested, a fatal deficiency. The New York law firm of Hawkins, Delafield and Wood, “the leading bond counsel in the country,” had concluded that the legislation provided adequate authority “to develop a financing program through the issuance of revenue bonds,” as needed. [Washington Metropolitan Area Transit Authority Compact, Committee on the Judiciary, United States Senate, 89<sup>th</sup> Congress, 2d Session, Report No. 1491, August 24, 1966, pages 23-25]

With only Senators Tydings and Virginia Democrats A. Willis Robertson and Harry F. Byrd, Jr., on the floor, the Senate approved the compact legislation on August 25. After their statements of support, the *Star* reported, “the bill was whisked through the Senate” on a voice vote. [Consent of Congress to Amend the Washington Metropolitan Area Transit Regulation Compact, *Congressional Record-Senate*, August 25, 1966, pages 20550-20561]

In the House, Chairman Whitener had introduced an amendment to the compact legislation that the Committee on the Judiciary adopted. Under the amendment, the authority would have until July 1, 1968, to prove to the House and Senate Judiciary Committees that it had a workable financial plan for building a regional rapid rail system. The amendment also eliminated the date of September 30, 1967, for the automatic end of NCTA. The *Post* reported that Chairman Whitener told reporters he did not think the interstate authority would be ready to begin operations by September 1967. “He has expressed strong reservations about the compact and the financing of the system outside the city and said he plans to offer other amendments ‘to clean up the bill’ when it reaches the floor.” [Carper, Elsie, “Senate Vote Speeds Rapid Rail Agency; House Unit Delays It,” *The Washington Post and Times Herald*, August 26, 1966; Elder, Shirley, “Senate Votes Transit Pact,” *The Evening Star*, August 25, 1966]

In support of Chairman Whitener’s amendment, Eisen reported, was the White House’s delay in submitting its bill to Congress. The bill’s takeover date was only 13 months away. NCTA Administrator McCarter had testified before the Senate Judiciary Committee that achieving the

goal in that period would be “a formidable task – an ambitious undertaking.” Nevertheless, the compact had been “the product of 12 years of patient and painstaking activity that has forged a link between the suburban courthouse and the White House”:

Considering that the compact opens a path toward a multimillion dollar investment by the suburbs, there has been surprising unanimity over the need for the Authority.

But there has been terrier-like resistance in some quarters to details of the compact, chiefly from those who want the D.C. or Federal governments to maintain control of the system of representatives. The controversy that has arisen at the Capitol centers upon the details.

Chairman Whitener proposed to substitute July 1, 1968, as NCTA’s termination date:

Officials regard Whitener’s amendment as not fatal but troublesome, not so much in the date as in the continued involvement of Congress in the details of suburban extensions and the financing plan that must be prepared in the meantime. [Eisen, Jack, “Details Cause Transit Treaty Dispute on Hill,” *The Washington Post and Times Herald*, August 28, 1966]

*Post* and *Star* editors considered the change a needless distraction. As the *Post* editors pointed out:

It would make the Judiciary Committees, which have no special technical competence in mass transit, responsible for the final decision on the planning as well as the legal structure of the system. Other congressional committees would be better qualified to undertake this responsibility, although if further review is really necessary, it would more properly fall to the President and the Executive Branch to approve the system.

Moreover, by eliminating the date when NCTA would cease functioning, the amendment “would encourage procrastination within the organization,” which might be reluctant “to rush plans for its own funeral.”

Chairman Whitener’s “purposes remain unclear,” but the approved amendment and his unspecified additional amendments were “unnecessarily compounding the confusion over future transportation in the Metropolitan area – a confusion he reduced with great skill and resourcefulness only last year.”

The *Star* also found it “difficult to understand” Chairman Whitener’s position. The Judiciary Committees were not the appropriate committees for considering mass transit financing. “So, since Congress through its control over any funds appropriated for the District would always have the last word, why insist on this unnatural form of review?”

The editors did not want “to look for things under the bed”:

But the Whitener amendment, if it stays in the bill, could seriously impair and might wreck the bond-issue aspect of the financing of the system. It could also knock the

compact in the head, thus leaving the job to the NCTA or to some federal corporation. In either event, the result probably would be that only the downtown or “core” portion of the system would be built. And this would contribute nothing toward the important objective of getting people from Maryland and Virginia to and from their jobs in Washington.

[“Confusing the Subway,” *The Washington Post and Times Herald*, August 29, 1966; “Threat to Rapid Transit,” *The Evening Star*, August 30, 1966]

## **The Revenue Impasse**

In early August, the District appropriations subcommittee released the records of its hearings on the District appropriations bill, FY 1967. Much had changed in the freeway debates since the hearings. The Policy Advisory Committee, with the help of NPS Director Hartzog, had agreed to advance the city’s freeway system. NCPC had given the go-ahead by a 6 to 5 vote. The District was proceeding on several fronts to advance the freeways that had been stalled. Congress was considering the White House bill giving consent, on the District’s behalf, to the interstate compact.

Chairman Natcher’s comments in April were seen as an ultimatum from a man who held near dictatorial power over government expenditures in the District. As *The Evening Star* put it, Chairman Natcher “is sick and tired of the stalling on this city’s freeway and bridge programs.” In April, Chairman Natcher, “noted for his restraint, had said bluntly” that if the District wanted a subway, it would also have to build freeways.

NCPC Chairman Rowe had managed to sabotage the freeway program for years, but that “barrier seemed to have been hurdled last June” by a one-vote margin. Nothing of “any consequence” had happened since then. Chairman Rowe, “vacationing on Cape Cod, doubtless is still as hostile to freeways as ever.” She apparently had used her influence to keep NCPC “from putting its stamp of approval on a final, complete and comprehensive plan.” That vote would occur at NCPC’s September meeting.

The editors encouraged General Duke to stop debating whether the new 14<sup>th</sup> Street bridge should have four or six lanes, “a controversy which tends to undermine support for the proposed Three Sisters Bridge, and push hard for definitive action when the Planning Commission meets next month.”

That, at least, was the editors’ idea based on Chairman Natcher’s threat:

This, we believe, is the message which Chairman Natcher is trying to put across. And it had better be heeded by all concerned, whether their primary interest is in freeways, a subway, or both. [“Natcher Serves Notice,” *The Evening Star*, August 10, 1966]

With no action taken on the revenue bill, Chairman Natcher moved on the FY 1967 appropriations bill on September 9 when the Appropriations Committee released its bill. The report stated:

For the third consecutive year the Committee has received a budget for consideration that is out of balance – currently there are deficits of \$23,021,000 in the general fund and

\$12,876,000 in the highway fund, a total of \$35,897,000. As in the past the budget was predicated on revenues to be generated through additional taxes, a formula Federal payment, and this year additional loan authorization for the highway fund, all of which require congressional action before they become effective.

The committee had delayed action in the hope the additional revenues would be authorized, but that had not happened. Therefore, it cut the District's appropriations total to \$380.7 million, a reduction of \$43.3 million from President Johnson's request.

The committee supported a freeway system and a rail rapid transit system. "In order to meet the tremendous day by day growth of traffic the highway program must be carried out along with the present rail rapid transit system." As of December 31, 1965, the District had \$20,927,305 million in appropriated funds to match Federal-aid highway funds totaling \$151,273,386 "that will be released as soon as projects are designed and approved." Despite this balance, the city had not "moved ahead at the required rate to meet the deadline of 1972 imposed by the interstate highway legislation." Additional appropriations were unneeded because:

Planning decisions have been and still remain the key obstacle to progress . . . . [As revealed during the April 20 hearing] as of now planning decisions still remain to be made and little or no effort is being made to place the major projects into final design for final approval.

On that basis, the committee made good on Chairman Natcher's threat:

Until decisions are made and approval granted to proceed on the freeway system the Committee is reluctant to provide additional funds for the National Capital Transportation Agency, and has accordingly denied the requested \$8,525,000 for the District's contribution for the construction of a rail rapid transit system.

In addition to refusing authorizations for District funds to match Federal NCTA funds, the bill cut highway appropriations for demolition of the old 14<sup>th</sup> Street Bridge (the Highway Bridge), the Center Leg, North-Central Freeway, North Leg, the 9<sup>th</sup> Street Expressway, and the East Leg. These cuts came as District officials were planning their presentation to NCPC on a 2-mile section of the North-Central Freeway and Three Sisters Bridge on September 15. NCPC planned to hold a public hearing on September 14 before the District's formal presentation the following day. [District of Columbia Appropriation Bill, 1967, Committee on Appropriations, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, Report No. 2019, September 9, 1965, pages 6-7; Flor, Lee, "House Unit Slashes District Roads Also In \$43 Million Trim," *The Evening Star*, September 9, 1966; Eisen, Jack, "House Unit Stops District Grant Needed to Start Subway in 1967," *The Washington Post and Times Herald*, September 10, 1966]

Chairman Natcher brought the bill to the House floor on September 13. His introductory comments discussed all aspects of the bill, but when he came to the freeway/rail rapid transit section, he repeated the summary in the committee report. After describing the available funds, he said:

For a period of 5 years now, our committee has attempted to go along on every request concerning our rapid rail transit system and our freeway system. Time after time when funds were appropriated for projects the plans were discarded and filed away. Millions of dollars have been invested and this money is money down the drain. If the people in our Capital City really understood what has transpired in our freeway system during the past 5 years they would be amazed.

From 1961 up to the present time we have pointed out in our hearings time after time the fact that millions of dollars has [sic] been expended for planning with no action to place the projects under construction. The same projects have been up for consideration year after year and by virtue of delay each of the projects now will cost hundreds of thousands of dollars more to finally complete and the overall amount will run into the millions . . . . Time is passing and the pressure groups who have succeeded up to this time to halt our freeway system are jubilant . . . .

Now is the time to have a thorough understanding and an agreement as to the construction of our freeway system and the continuation of our rapid rail transit system. A balanced transportation system is necessary and both freeway and rapid transit must go forward together.

We have reached an impasse insofar as our freeway system is concerned and now is the time to eliminate the roadblock which some believe was permanently fixed.

He recalled the decisionmaking machinery for the District's freeway system. "Each decision involves participation of some half-dozen Federal agencies and freeway opponents within this group, and especially on the National Capital Planning Commission have used this out-of-date machinery to delay decisions and make every effort to destroy our freeway system." Opponents knew that major portions of the network could not be built "until a firm decision is reached on the system as a whole."

Of the Little report, he said that following "7 weeks of huffing and puffing the company succeeded in bringing forth a mouse." It called for the freeway system to be brought to a complete halt. "The crux of this report" was that instead of planning a system, the city should plan "one link in the system at a time," in contradiction to the views of all experts. The resulting statement by the Policy Advisory Committee was "full of ambiguous language and really means very little."

He listed the 13 pending freeways and parkways, summarizing the long history of their planning:

Freeway opponents have succeeded up to this time in knocking down all of the main conclusions reached by transportation experts after 20 years of study costing millions of dollars and this pre-meditated foolishness must stop.

Our Capital City must not be embarrassed by further studies and further inaction and more wasted money in the completion of our freeway system. Meaningful decisions must

be made now to remove the planning obstacles set up by opponents of our freeway system.

He pointed out that the Committee on Appropriations had appropriated \$2 million the previous year to match NCTA funds. The committee still favored development of the rail rapid transit system:

At the same time we are not in favor of permitting our highway system program to be destroyed. Until we have decisions upon which we can rely placing the highway program underway we are unable to recommend that the District government borrow \$8,525,000 to continue the rapid rail transit system. We do not want to experience again what we did in 1963. This must not take place.

Representative Gross asked how the District could expect to finance a subway system if it could not complete the freeway network. He also asked what the subway would cost.

Chairman Natcher summarized the NCTA cost estimates, as well as the history of failure in 1963. The subway “will probably cost more than estimated and the bonds will not be retired out of the fare box.”

The chairman went on to other subjects but Representative Smith of Virginia asked to return “to the discussion of the highway system, the rather tragic system.” He wanted to know the chairman’s intentions about rail rapid transit. “Is that going to be laid aside until they start building some highways.”

Chairman Natcher said he hoped that before the appropriation bill was enacted, he would be in a position to return to the House to secure the District’s matching funds for rail rapid transit. NCPC was scheduled to hold a meeting later in the week that might make that possible. “We are not against rapid transit,” he said, but as Representative Smith knew, “there are a great many people who have, all down through the years, tried to destroy the highway system in the District of Columbia to put the rapid transit system ahead.” He hoped that both systems can move forward in the very near future.

After discussion among the members, especially Representative Gross, of several issues, including the D.C. Stadium, the House approved the bill, 320-3. [District of Columbia Appropriation Bill, 1967, *Congressional Record-House*, September 13, 1966, pages 22413-22427; the main discussion of highway-subway issues is on pages 22414-22417]

The editors at the *Star* understood Chairman Natcher’s action:

It is an act of rebuttal, clearly threatened in the past, which reflects an end of patience with the senseless, continued failure of this community to resolve its disputes over the highway program.

His frustration should be shared by every responsible citizen.

Only a few years ago, transit “seemed the far-away, difficult-to-achieve dream. Now, there was general agreement on it. “Yet it is the highways which have remained ensnarled in one red-tape planning hassle after another.”

Chairman Natcher’s cut in subway matching funds “precipitates a real crisis” that he was willing to unravel if “meaningful action” occurs to advance the highway program. The first “action” would come on September 15 when NCPC met to consider four essential freeway segments that NPS Director Hartzog had endorsed. The editors thought more would be needed:

Beyond mere approval, however, Natcher also appears to want some clearer evidence of a White House determination that the freeway system – along with rapid transit – will actually be built, and that the foot-dragging, obstructionist tactics by the President’s appointees to the planning commission will really come to an end. It is an assurance that is long overdue. [“Frustration,” *The Evening Star*, September 14]

### **NCPC Acts**

NCPC announced on September 8 that it would consider four freeway projects on September 15:

- The 2-mile section of the North-Central Freeway between Rhode Island Avenue and Buchanan Street, NE. As proposed 2 years earlier, this segment would be located between the Baltimore and Ohio Railroad tracks and 10<sup>th</sup> Street, NE.
- The Three Sisters Bridge over the Potomac River between Spout Run and the Georgetown waterfront. The proposal does not include approach structures.
- South Leg Freeway in a tunnel between the Lincoln Memorial and Tidal Basin, with interchanges excluded.
- East Leg Freeway between Barney Circle and Maryland Avenue along the west bank of the Anacostia River.

The day before, the announcement stated, NCPC’s transportation committee would hold an informal hearing, called a “presentation,” beginning at 2:30 p.m. Because of space limitations, NCPC said it would allow only the identified witness from each group into the hearing room at 1111 20<sup>th</sup> Street, NW.

The day before the hearing, 26 people representing citizens groups across the city signed a resolution denouncing the North-Central Freeway and the Three Sisters Bridge. As Lee Flor explained:

Construction of the highway projects would raise a complex of social problems, including more intense economic, employment, housing, racial and air pollution problems, according to the 26 persons who signed the resolution.

The groups did not “believe harmony between the races is increased by allowing families and neighborhoods which are predominantly Negro to be uprooted for the convenience mainly of white-suburban commuters . . . . Freeways in cities are surely to some extent ‘white men’s roads

coming through black men's homes.”” The resolution referenced the riots a year earlier in the Watts section of Los Angeles and the relationship between unemployment and transportation:

We know that such unemployment is a factor in explosions like that of Watts, a Los Angeles community surrounded by freeways but totally lacking adequate public transportation for employable residents without automobiles.

The Metropolitan Citizens Council for Rapid Transit released the resolution on September 13. The council's chairman, Duncan Wall, sent the resolution along with a letter to Charles Horsky at the White House. The letter said that NCPC's plan for the hearing was a “betrayal of public rights and pledges to the citizenship which we wish to believe were made in good faith.” The groups complained they did not have enough time to gather evidence after old freeway plans had been changed.

Other signers included:

- Bishop Smallwood E. Williams – Bible Way Church
- The Reverend Walter E. Fauntroy – New Bethel Baptist Church – Co-Chairman of the D.C. Coalition of Conscience
- The Right Reverend Paul Moore, Jr. – Episcopal Suffragen Bishop of Washington – Co-Chairman of the D.C. Coalition of Conscience
- Edward G. Hailes – NAACP
- Marion Barry, Jr. – SNCC and Free D.C. Movement
- The Reverend Duncan Howlett – All Souls Church
- The Reverend Geno Baroni – executive secretary of the Catholic Archbishop's Committee on Community Relations
- Peter S. Craig – Committee of 100 on the Federal City
- The Reverend E. Franklin Jackson, Democratic National Committeeman
- Charlton Ogburn, Jr. – national conservation leader

[Flor, Lee, “2 D.C. Road Projects Hit As Threat to Negro Homes,” *The Evening Star*, September 13, 1966; the list of signers from Eisen, Jack, “Freeway Opponents Form Coalition,” *The Washington Post and Times Herald*, September 18, 1966]

On September 14, G. Franklin Edwards, chairman of NCPC's transportation committee, held the informal hearing, which began at 3:15. Over 40 witnesses had signed up to testify. Highway officials presented a 2-hour briefing, with only nine witnesses speaking before a 7:00 break for supper. The result of the hearing before and after the break, according to Jack Eisen, was that the city's “embattled freeway program came under one of its sharpest attacks to date.”

Several witnesses raised racial issues, especially regarding the North-Central Freeway. Marion Barry, Jr., said the city was “planning highways for white people.” The people of Watts, he said, “got a nice freeway about five miles away but people couldn't get to work.”

District residents had to “compress their emotions” about the lack of decent housing and other problems. “At some point their frustrations are going to cut loose.” He warned of possible civil

disturbances if freeway development continued. One of these days, suburban commuters would discover District residents had “blocked streets and charged them some taxes for coming over here.” In a reference to Chairman Natcher, Barry said NCPC members “should consider it as an insult that a racist congressman from Kentucky would try to blackmail them.”

Sammie Abbott, described as “a white resident of Takoma Park” and a leader of the new Emergency Committee on the Transportation Crisis (ECTC), agreed. “It’s a white man’s freeway going through the black man’s homes and that’s going to be the slogan from now on.”

Several witnesses, including The Reverend Jackson, thought the subway should be built first, followed by the freeways, if they were still needed.

Peter Craig told the NCPC committee that the plans before them did not meet legal requirements for consideration. He and other critics cited the District’s Highway Act of 1893, which established procedures for considering highways, including hearings, that they claimed the District had not followed. (The 1893 Act will be discussed later.) The chairman of the transportation committee replied that NCPC’s general counsel had given an oral opinion that the four projects were legal and could be considered by NCPC. He intended to get that opinion in writing.

Craig also said that four government officials who were members of NCPC should be disqualified from voting on the plans because they were interested parties who had “plotted” to build the roads. He was referring to General Duke, Hartzog, McCarter, and Whitton. (Eisen reported that during the dinner break, Edwards assured Craig that his arguments “have not been taken lightly.”)

Arlington County and civic groups from the county made clear their opposition to the Three Sisters Bridge. The County Planning Commission’s J. Fuller Groom said the County Board had expressed “firm opposition to any bridge” in that area. [Eisen, Jack, “Freeways Are Called Highways for Whites,” *The Washington Post and Times Herald*, September 15, 1966; Flor, Lee, “D.C. Freeway Foes Picket, Jam Hearing,” *The Evening Star*, September 15, 1966]

Before NCPC’s monthly meeting on September 15, about 150 people had formed a block-long picket outside carrying signs opposing the freeways. One sign had the heading “et tu, Park Service” over a pig in a trough labeled “\$90-10 Money.” On a similar theme, another claimed “Hartzog Sold Out For \$90-10 Money.”

Lee Flor reported that when the meeting began, the crowd moved “into the small board room at the commissioners’ office . . . .” The crowd “became vocal” because the room did not have enough seats for everyone. “Mrs. James Rowe Jr . . . . said she was sorry about the smallness of the room and urged citizens to take turns sitting.”

The “large but orderly” crowd of anti-highway groups listened to the long discussion of the four freeway projects. Eisen reported:

As the time for voting neared, Sam Abbott . . . jumped to his feet several times with comments. Mrs. Rowe pleaded with him to follow Commission rules, which do not permit audience comments.

NCPC then voted 6-to-4 to approve the location of the 2-mile section of the North-Central Freeway and the meeting “dissolved into near pandemonium . . . when angry spectators shouted their outrage”:

When the vote came, there was a moment of silence. Then Abbott rose, shouting that the vote was a “sellout” by Duke and George B. Hartzog, Jr . . . Mrs. Rowe ordered Abbott removed. Others in the audience shouted support of Abbott. “This is the only forum we have!” cried one woman. “Let him speak! Let him speak!” yelled another.

Meantime, Mrs. Rowe gaveled a recess and Abbott led most of his group, by then about 25 persons, from the room. When one woman stopped to listen to Duke, Abbott grasped her elbow and led her out.

In the corridor, Abbott stopped before a television camera to “mobilize black power along with white power to defeat sellout power.”

. . . . Commission aides said yesterday’s incident was believed to be unprecedented in the body’s 40-year history.

The six ex-officio members who carried the vote were General Duke, Director Hartzog, NCTA’s McCarter, Everett Roberts of the U.S. Army Corps of Engineers, BPR’s Frank Turner representing Administrator Whitton, and William A. Schmidt of the Public Buildings Service. Conrad L. Wirth, the former NPS Director and ex-officio member of NCPC who had joined NCPC as a citizen member on September 15, voted against the freeway, as did Chairman Rowe, Edwards, and Thiry. (Louchheim was out of town.)

Failing in her pleas to quiet the audience, Chairman Elizabeth Rowe, herself a foe of the road, gaveled the session into recess, had the room cleared and resumed.

Then, a half hour later, the Commission cast another 6-to-4 vote endorsing an equally controversial project, the Three Sisters Bridge to Arlington.

NCPC also approved the East Leg Freeway segment, again 6 to 4, and unanimously approved the South Leg Freeway. [Eisen, Jack, “NCPC Backs New Bridge, Freeway Link,” *The Washington Post and Times Herald*, September 16, 1966; Flor, Lee, “Start Is Approved On D.C. Freeways Despite Protests,” *The Evening Star*, September 16, 1966]

In the hope of prompting Chairman Natcher to release the District’s matching funds for the rail rapid transit system, the District commissioners gave final approval to the four segments on September 20. With this approval, District highway officials would be able to let design contracts and begin acquiring right-of-way. Of the four freeways, the North-Central Freeway was the only one that would require displacements, estimated at about 284 families. Commissioner Tobriner secured assurances that the families would receive comparable housing.

Detailed design about take about a year and a half, with construction requiring about 3 years. Then, as the *Post* put it, “it will be possible . . . to drive from Georgetown to D.C. Stadium without stopping for a light.” [“Final Approval Granted for Four Freeway Sections,” *The Washington Post and Times Herald*, September 21, 1966; “City Gives OK For 4 Parts Of Freeways,” *The Evening Star*, September 20, 1966]

Approval of the design contracts was seen as the pivotal moment in the freeway-subway impasse created by Chairman Natcher. Eisen began an article, “Washington’s latest subway-freeway crisis appears to have passed its peak and the fever is now going down . . .” Approval of the contracts was the “final turning point.”

Chairman Natcher had cited 13 projects that were being delayed, but not all were advanced to the contract stage. Moreover, the four approved projects were the key to as many as eight of the other segments. As a result, “several sources” expected the design contracts would satisfy Chairman Natcher’s conditions for releasing the subway funds. At the same time, NCTA would ask Chairman Natcher to allow the agency to transfer \$2 million in previously appropriated funds for the design work to prevent the consultant, De Leuw Cather and Company, from laying off engineers.

At this pivotal moment, Acting House Majority Leader W. Hale Boggs (D-La.) was prepared to bring the interstate compact legislation to the House floor the following week. The crowded schedule for the week, including other components of the Great Society, might delay a vote.

At this time of optimism for highway and transit supporters, freeway critics were thinking about going to court. They were focusing on the legality of approving the planned design contracts without holding further public hearings in accordance with the 1893 District highway law (again, to be discussed later). Peter Craig had raised the question and said the Committee of 100 for the Federal City had retained his former firm, Covington and Burling, to test the issue in court. The *Star* also reported that, “Another organization, the Emergency Committee on the Transportation Crisis, submitted letters to all three commissioners today.”

In view of this challenge, the District commissioners asked Acting Corporation Counsel Milton Korman on September 27 whether they had to hold further public hearings before the pending contracts were signed. Within 5 hours, Korman issued a legal opinion that the District commissioners may approve the contracts without holding additional public hearings. A few minutes later, Director Airis signed contracts worth \$2.7 million for the design of three controversial freeways (Three Sisters Bridge, East Leg Freeway, and North-Central/Northeast Freeway) and the South Leg Freeway, which the *Post* described as “itself once controversial, that has since won city-wide endorsement.” [“D.C. Heads Ask Advice On Contracts,” *The Evening Star*, September 27, 1966; Flor, Lee, “Freeways Action Paves Way For D.C. Subway Fund Plea,” *The Evening Star*, September 28, 1966; “Pacts Let on Inner Loop, Sisters Bridge, NE Freeway,” *The Washington Post and Times Herald*, September 28, 1966]

Sources vary on when freeway opponents formed the ECTC, but a search of the *Star* and *Post* archives indicates that the September 27 reference in the *Star* is the first time the group’s name

appeared. However, in a News Analysis in the *Post* on September 18, Eisen described how opposition was “developing clear signs of turning into a broad-scale and well-organized revolt”:

Opponents of the city’s interstate system, whose efforts began with a series of individual neighborhood protective skirmishes, have stitched together a coalition of civic, racial and political groups to fight the whole program.

Most have proclaimed that a rail rapid transit system – blocked last week by Congress because of the freeway fight – would cure Washington’s growing case of hardening of the transportation arteries.

If the new coalition is successful, Washington will be in danger of having neither freeways nor rail transit, a circumstance that could stunt the city’s economic growth and further isolate the city from its suburbs.

As a result, the Capital Beltway could turn “into the metropolitan area’s economic Main Street, at the expense of the job-providing businesses and agencies now clustered in downtown Washington.” It also might threaten the viability of NCP’s upcoming Year 1985 Plan “which will call for increased centralization of employment downtown.”

Downtown business interests saw a balanced transportation system of freeways and rail rapid transit as the best way to attract businesses, agencies, and shoppers. Failure to create such a system would enhance the attraction of the suburbs where stores and offices were “easily accessible by automobile for county residents – and remote from the mid-city homes of the area’s Negro residents.”

One question was whether city highway planners, in their unsuccessful effort to mollify critics “may not be settling for a system too small to do much real good,” an observation also made by transit advocates about the 25-mile rail rapid transit system:

The whole situation also has intensified a widespread and growing feeling on both sides of the road issue that the Planning Commission’s structure and procedure are unsound and unworkable.

After discussing plans for legal challenges to freeway approvals, Eisen concluded his analysis:

As the long, hot summer of transportation disputes comes to an end, it looks like there’s a long, cold winter ahead. [Eisen, Jack, “Freeway Opponents Form Coalition,” News Analysis, *The Washington Post and Times Herald*, September 18, 1966]

### **Federal-Aid Highway Act of 1966**

On March 21, 1966, Secretary of Commerce John T. Connor and Treasury Secretary Henry H. Fowler wrote to Speaker of the House McCormack to transmit a draft of the Federal-Aid Highway Act of 1966 and the Highway, Airway, and Waterway User Act of 1966. Although the House Committee on Public Works had jurisdiction over the Federal-Aid Highway Act, both bills involved highway user taxes to address the increased cost of completing the Interstate

System as shown by the 1965 ICE. Tax changes must be initiated in the House by the Ways and Means Committee.

The letter explained that Section 2 of the highway bill authorized \$2.685 billion for an extra year of Interstate construction assigned to FY 1972. Section 3 authorized the use of the 1965 ICE as the basis for apportioning Interstate construction funds for FYs 1968 and 1969. Section 4 was a “conforming amendment” reflecting the earlier sections. Subsection 4(a) “would declare it to be the intent of Congress that the Interstate System be completed as nearly as practicable over the period of availability of 16 years’ appropriations authorized for the purpose.” Subsection 4(b) extended the apportionment formula for completion by 1 year. (Section 1 simply stated the name of the bill.)

The Secretaries said of the Highway, Airway, and Waterway User Act of 1966 that, “Enactment of this draft bill is essential if we are to complete our interstate highway program as contemplated.” The highway portion of the bill authorized increased user taxes on truckers to provide the needed additional revenue:

Even with the additional revenues proposed in this bill, the pay-as-you-go policy requires us to extend collection of highway user charges for 5 additional months. Without the additional taxes proposed in this bill, the interstate program and the collection of taxes for the highway trust fund would have to be stretched out for a further time. [Proposed Legislation Submitted by the Secretary of the Treasury and the Secretary of Commerce Entitled the “Federal-Aid Highway Act of 1966” and the “Highway, Airway, and Waterway user Act of 1966,” Ways and Means Committee, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, March 23, 1966]

On July 18, the House Committee on Public Works approved the Federal-Aid Highway Act of 1966, amending the original bill to increase authorizations for FYs 1968 through 1972. The committee also added a sentence specifying that nothing in the bill was intended to authorize the use of Highway Trust Fund revenues for Title 23, U.S.C., Sections 131 (outdoor advertising), 136 (junkyards), or 319(b) (landscaping and scenic enhancement). To limit Highway Trust Fund revenues to highway and bridge construction, the committee wanted revenue for these sections to come from the general Treasury.

The committee agreed that an additional year of authorizations should be provided for the Interstate System. The authorization for that additional year, FY 1972 means that “the actual construction of the system should be completed in 1973”:

It is essential that Congress act now to authorize the appropriation of funds sufficient to complete the system, so that the State highway departments and the construction industry may properly plan and schedule their work to avoid peaks and valleys in the construction program and so that necessary engineering, right-of-way acquisition, and construction may continue without interruption for completion of the system in 1973.

Testimony during the committee’s hearings indicated that the additional authorizations “will exceed estimated revenues to the Highway Trust Fund through September 30, 1972, by

approximately \$6 billion, under existing tax law.” If Congress did not approve additional highway user fees for the Highway Trust Fund, “the funds authorized to be appropriated for the Interstate System could be apportioned only in amounts that do not cause expenditures in excess of amounts available in the Highway Trust Fund.” [Federal-Aid Highway Act of 1966, Committee on Public Works, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, House Report No. 1704, July 18, 1966, pages 14-19]

The Senate Committee on Public Works issued its report on July 26. The report stated that “a revised and more accurate estimate of the cost of completion of the Interstate System” would be released in January 1968. Therefore, the committee’s bill deleted authorizations for Interstate construction for FYs 1970 through 1972. Authorizations in the bill would allow State highway agencies to continue construction of the Interstate System, while Congress awaited the new ICE before deciding how much funding to authorize beginning in FY 1970:

The committee cannot overemphasize the urgency of completing the Interstate System and adhering to the 1972 completion date as nearly as is technologically and economically feasible. The benefits of the program are of such magnitude that it warrants the best efforts of the Federal Government, the States, and the construction industry to push toward an early completion date.

Except in urban areas, the primary impediment to completion on schedule was “the shortage of funds.” The solution to that problem, the report stated, rests with the House Ways and Means Committee:

On three successive occasions since 1961 the administration has recommended revenue measures to augment the trust fund. And in each instance the Congress has withheld action. Others may speculate regarding the reasons for this impasse, but as a practical matter affecting the major civil works construction program in the Nation, this committee urges the administration to reappraise its assumptions regarding interstate financing and recommend to the next Congress a realistic revenue measure which will solicit congressional approval. [Federal-Aid Highway Act of 1966, Committee on Public Works, United States Senate, 89<sup>th</sup> Congress, 2d Session, Senate Report No. 1410, July 26, 1966, pages 16-18]

On July 28, the Senate passed the 1966 Act. The House approved its bill on August 11.

House-Senate conferees resolved differences between the two bills on August 29. The final bill retained House authorizations through FY 1972 with some changes in the annual amounts. It also retained the House language prohibiting the use of the funds for Sections 131, 136, or 319(b) of Title 23. [Federal-Aid Highway Act of 1966, Conference Report, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, Report No. 1903, August 29, 1966]

The Senate agreed to the conference report on August 30, and the House agreed the following day. On September 13, President Johnson signed the Federal-Aid Highway Act of 1966 (P.L. 89-574).

Although the 1966 Act extended the time for completing the Interstate System, Congress did not act on the proposed highway user tax increases to support the added costs reflected in the 1965 ICE. According to the *The Wall Street Journal*:

The LBJ proposals are lying untouched on Capitol Hill. The tax-writing committees show no desire to get caught in the bitter fight that higher truck taxes would provoke.

Instead, there were “plenty of ideas kicking around” Congress to increase highway user revenue without antagonizing the truckers. One idea was to shift revenue from the 7-percent auto excise tax to the Highway Trust Fund account. Another was to restrict Highway Trust Fund revenue to the Interstate System, with the remainder of the Federal-aid highway program funded from the general Treasury.

However, “the suggestion heard most often for solving the money pinch” is to repeal the Byrd Amendment to the Federal-Aid Highway Act of 1956. Senator Harry Flood Byrd (D-Va.), chairman of the Finance Committee at the time, was a highway booster during a long career in State and Federal offices. However, he was known for a trait that biographer Alden Hatch described as “an almost pathological abhorrence for borrowing that went beyond reason to the realm of deep emotion.” [Hatch, Alden, *The Byrds of Virginia: An American Dynasty, 1670 to the Present*, Holt, Rinehart and Winston, 1969, p. 347] To that end, Chairman Byrd amended the 1956 bill to require the Federal-aid highway program to operate on a pay-as-you-go basis. If the Secretary of the Treasury, in consultation with the Secretary of Commerce, determined that revenues would be insufficient to defray expenditures for any fiscal year, the Commerce Secretary was required to reduce apportionments by the percentage of the deficiency. In short, the Byrd Amendment, as it is known to this day, was intended to ensure the Federal-aid highway program, with its new Interstate component, was self-sufficient – and would not have to incur debt through bonds to pay the bills.

Senator Byrd’s retirement from the Senate for health reasons in November 1965, replaced by his son, Senator Harry F. Byrd, Jr., had “stirred [the] hopes of go-fast highway fans that the borrowing ban can be lifted.” By being able to borrow from the general Treasury, slowdowns due to shortages could be avoided. However, Chairman Wilbur Mills of the Ways and Means Committee “remains cool to the idea of abandoning pay-as-you-go highway financing,” as was the White House:

Perhaps an even bigger objection arises from fear that current borrowing against future highway tax revenues would rob money needed for road-building in the early ‘70s. “It’s like telling your wife to go out now and buy next year’s new dress before the price goes up,” says a Congressional authority on the trust fund’s workings. “You know darn well she’ll want a new dress next year, too.”

Moreover, highway officials were already thinking about extending the Interstate System after 1972:

State and Federal highway officials, plus individual members of Congress, already are hatching ideas for the kinds of roads to be built once the original 41,000 interstate miles are completed . . . . Other “post-1972” suggestions circulating in Congress: Massive Federal aid for modernizing city streets and Federal retirement of state and toll road bonds. [Large, Arlen J., “Interstate System Faces a Construction Delay Unless New Cash Found,” *The Wall Street Journal*, June 8, 1966]

The situation had not changed by the end of the 89<sup>th</sup> Congress later that year.

(Congress would not increase highway user taxes until the Surface Transportation Assistance Act of 1982 (P.L. 97-424), despite numerous proposals in intervening years. The best known change in 1982 was a nickel-a-gallon increase in the Federal excise tax on gasoline (to 9 cents). The 1982 Act split the Highway Trust Fund into a Highway Account, which received revenue from earlier taxes plus 4 cents of the nickel increase. The Transit Trust Fund received a penny of the increase.)

Details aside, the 1966 Act gave the District of Columbia extra time to resolve the freeway disputes and complete the Interstate System with 90-10 matching funds.

### **The New Challenge to the Three Sisters Bridge**

As discussed earlier, plans under the Capper-Crampton Act for the George Washington Memorial Parkway involved the State or county providing half the funds to acquire right-of-way before the NPS would proceed with a segment. When Arlington County secured the funds to acquire property for the parkway between Arlington Memorial Bridge and Spout Run, it entered into an agreement with the State, and the National Capital Park and Planning Commission that President Franklin D. Roosevelt signed on April 3, 1940. The agreement stated:

The property shall be acquired only for park and parkway purposes and that the United States will never use the land so acquired for any other purpose except with the consent of the county of Arlington and the Commonwealth of Virginia.

The agreement was binding “unless replaced by an agreement of equal dignity.”

Thomas S. Settle, secretary of the park and planning commission, announced on May 24, 1940, that the county’s check for \$45,000 had been deposited in the Treasury. The deposit allowed the commission to close \$70,000 in contracts that had been drawn for acquisition of waterfront property but held until the funds became available. [“Va. Parkway Land Buying Starts Soon,” *The Washington Post*, May 24, 1940]

On May 25, 1966, the Policy Advisory Committee had approved, 5 to 1, an agreement on freeway construction that included the Three Sisters Bridge at its original location between Spout Run in Arlington and the foot of Glover-Archbold Park in the District. NCPC approved the location on June 9.

In the wake of those actions, county officials cited the agreement signed by President Roosevelt. Thomas Richards of the Arlington County Board said, “The document is quite clear – Arlington has to be consulted before any non-park use is made of that land. The action of the federal government is a serious abrogation of the agreement, and Arlington has not been consulted officially nor has Arlington given its concurrence.” The board sent a letter letting President Johnson know that Arlington County was opposed to the bridge and I-266 and asserting its right to be consulted. [Flor, Lee, “Roosevelt Pact Backs Opponents of Bridge,” *The Evening Star*, June 17, 1966]

On September 27, 1966, the day the District let design contracts for the bridge, Arlington County Board Chairman Leo Urbanske, Jr., announced that, “There is a good possibility that the Arlington County Government will take legal action” to block the bridge.” In a speech to the Organized Women Voters of Arlington, he said the county could build a “good case” on the 1940 Roosevelt agreement. [“Urbanske Sees Basis To Block Bridge Plan,” *The Evening Star*, September 27, 1966; “Arlington Board Mulls Bridge Suit,” *The Washington Post and Times Herald*, September 28, 1966]

On October 26, the Arlington County Board filed suit in the U.S. District Court in Washington seeking a permanent injunction against construction of the Three Sisters Bridge. Defendants were the three District commissioners, the 10 members of NCPC, and Secretary Udall and NPS Director Hartzog. The suit contended that they did not have the right to construct the bridge to Spout Run without the consent of Congress and Arlington County. The county, which had paid a total of \$225,000 as its share for acquisition of the right-of-way for the George Washington Memorial Parkway, contended that the land could not be used for any purpose other than a park “except with the consent of the county of Arlington and the Commonwealth of Virginia.”

Already, the District had engaged the engineering firm of Howard, Needles, Tammen and Bergendorf to design the bridge. The suit claimed the bridge would be “devastatingly destructive of a very substantial portion of said park and completely inconsistent with its continued use for park purposes.” Arlington County asked the court to enjoin all efforts to design or build the bridge and to rule on the legality of NCPC acting without the county’s consent. [Valentine, Paul W., “Arlington Files Suit Over Span,” *The Washington Post and Times Herald*, October 27, 1966; Matthews, Kenneth, “Arlington Files Suit To Block Proposed Three Sisters Span,” *The Evening Star*, October 26, 1966]

The following day, a .17-mile segment of I-66 opened in Rosslyn. It connected Lee Highway and the Theodore Roosevelt Bridge. In conjunction with the opening, Arlington County changed several roads to one-way operation as part of an effort to shift traffic to the Roosevelt Bridge instead of Key Bridge. [“Route 66 Leg Opens in Rosslyn,” *The Evening Star*, October 27, 1966]

### **The Interstate Compact**

On August 25, the Senate approved the joint resolution endorsing the interstate compact for construction and operation of the area’s rail rapid system. Next, House approval was needed, starting with action by the Committee on the Judiciary.

The committee issued a report on August 30 in support of the resolution:

The approval of the compact, while imposing no additional obligations or commitments upon either the Federal Government or the District of Columbia, would broaden the choices available to the Congress for development and financing of a regional transit system. Without the compact, the creation of a Federal corporate entity is the only means to complete the basic system and to develop the regional system. The approval of the compact at this session, however, would create an option, which the Congress does not now have, for the financing of the basic system and for the development and financing of the regional system by an interstate instrumentality under a plan providing for the equitable sharing between the Federal, District of Columbia, and local governments of the cost of the transit system which cannot be supported by the fare box. If, when the Authority's plans are presented, Congress does not find them acceptable it can then proceed with a Federal corporation.

The report included three committee amendments for consideration on the House floor. One corrected a typographical error (substituting "operating" for "operation"). The second amendment indicated that the compact agency would not automatically take over for NCTA. The transfer would occur when the House and Senate Judiciary Committees are satisfied the authority has demonstrated a readiness to institute a workable financial plan, a physical plan for the system, and a program for taking over NCTA's work, including an orderly transfer of staff personnel. The third amendment gave Government Accounting Office (GAO) the same audit function for the authority that it had for other Federal corporations. [Washington Metropolitan Area Transit Authority, Report from the Committee on the Judiciary, U.S. House of Representatives, 89<sup>th</sup> Congress, 2d Session, Report No. 1914, August 30, 1966, pages 1-2, 7]

Despite the Judiciary Committee's approval, the joint resolution did not make it to the House floor promptly for a vote. The delay, according to the *Star*, was because of the objections that Chairman Whitener and a few others had raised about the proposed interstate authority. In view of his threats to introduce time-consuming amendments when the resolution reached the House floor, managers postponed consideration while the House dealt with other matters on President Johnson's aggressive must-pass agenda.

Chairman Whitener emphasized that he was not opposed to the rail rapid transit system he had helped to pass. He was opposed to the compact because it was "as full of holes as a Swiss cheese." He saw no need to rush the compact; he preferred to delay the authority until NCTA completed the downtown subway.

With indications that Chairman Whitener was picking up support for his views, Representative Broyhill sent a letter to all House members to urge their support of the compact. He denied Chairman Whitener's claim that the authority would be able to spend Federal funds without Federal controls as the system spread into the suburbs. Representative Broyhill assured his colleagues that Maryland and Virginia would assume "proper responsibility" for meeting the area's needs. The bill was, he wrote, the "last important step in a long and complex course . . . the final necessary instrument to allow this community to shoulder its transit responsibilities."

According to the *Star*:

Whitener retorted that Broyhill's version is precisely the opposite of what will happen. He said that the compact contains many vague phrases that could easily result in a continuing drain of federal money into an essentially local transit program. [Elder, Shirley, "House Foes Zero In on Transit Compact," *The Evening Star*, September 30, 1966]

The Members of Congress, especially in the House, were eager for adjournment so they could return to the campaign trail in time for the November elections. If the 89<sup>th</sup> Congress adjourned without acting on the compact, the resolution would be dead; Congress would have to start over on the legislation in the 90<sup>th</sup> Congress.

As the resolution languished, several other actions regarding the rail rapid transit system were underway in late September and early October. On September 30, the chairmen of three House and Senate appropriations subcommittees joined Chairman Natcher in allowing NCTA to transfer \$1.6 million to keep De Leuw Cather and Company from dismissing design engineers from its payroll on October 1.

Congress completed work on the District's revenue enhancing legislation and combined it with several unrelated revenue provisions in the District of Columbia Revenue Act of 1966. President Johnson signed the legislation on September 30, 1966 (P.L. 89-610.)

After President Johnson signed the revenue bill, Senator Byrd indicated that the District appropriations bill his committee was developing would restore the highway and transit appropriations that Chairman Natcher had deleted from the District's unbalanced appropriations act.

Representative Smith of Virginia, chairman of the Rules Committee, was still holding the resolution approving the interstate compact. A source told Jack Eisen, "The Judge [Smith] wants to see all his ducks in a row before he moves." In view of Chairman Whitener's opposition, Chairman Smith wanted to be sure Representatives from the big eastern cities would be on hand for the vote as reliable transit supporters. [Eisen, Jack, "One D.C. Subway Crisis Exchanged for Another," *The Washington Post and Times Herald*, October 1, 1966; Carper, Elsie, "Byrd Backs City Transit, Road Funds," *The Washington Post and Times Herald*, October 2, 1966]

The resolution finally reached the House floor on October 7. In the general discussion, Chairman Whitener said it had been assigned to the Judiciary Committee by custom, but this was not a customary compact. Compacts usually were between States, but this one included the Congress as the legislative authority for the District of Columbia. The result was that a committee that was not familiar with the issues had to act on the resolution.

He summarized the history of legislation on the rail rapid transit system, including recommitment of the authorizing bill for the bobtail system in December 1963, and its eventual approval in 1965:

I say to you for whatever it may be worth, as one who has been genuinely interested in rapid transit and who because of interest in helping this city and its environs to have a rapid transit system, I think you are on the wrong track by pushing this co-called compact.

He emphasized his support for the approved system as well as its eventual expansion as a regional network. At the same time, the committee with the legislative authority for the District, the Committee on the District of Columbia, had never reviewed the compact:

I would further point out to you that if you adopt this resolution, you will have done more than approve a compact because this joint resolution is a compact plus legislation. This resolution authorizes the expenditure of funds in an unlimited amount by the District of Columbia government in connection with this compact. It has other language which is legislation and it is not merely the approval of a compact as we normally have in compact legislation.

He wanted the resolution to go through the District committee “before you accept language that was written in Richmond and in Annapolis without Congress having the opportunity to pass judgment on it.” He added:

I say to you gentlemen in all earnestness that the proposed compact is about as devoid of any protection of the interests of the taxpayers and citizens of the District of Columbia and the taxpayers of the Federal Government as any minds could have created anywhere in this country. It could constitute a raid on the Federal Treasury and on the Treasury of the District of Columbia, for reasons that I shall point out as I offer amendments later.

He wanted the system to succeed, but warned that “if you blindly proceed with this proposition that we have before us now, the transit system will be in real jeopardy.”

The House considered the three committee amendments. It approved correction of the typographical error and the amendment giving GAO audit authority. However, the House rejected, 11 to 55, the provision removing automatic transfer of NCTA responsibilities to the authority.

Much of the remaining time of debate involved the Whitener amendments. Arguing that the interstate authority was “going to be the 51<sup>st</sup> State,” he offered three of his amendments that were defeated 11 to 55, 12 to 50, and 12 to 51. Finally, as the *Star* described:

Whitener gave up, tossed his last three proposed amendments onto the clerk’s desk, listened to them lose on a voice vote and said, “No use beating my head against a brick wall.”

Whitener said, however, that he offered all nine amendments “so that in a later day some historian will look back and say one potter saw the vase was cracked . . . . Every single amendment was a sound one.”

The House, after rejecting the amendments without further debate, approved the resolution endorsing the interstate compact authority. [Elder, Shirley, “Whitener Bows, House Passes

Subway Pact,” *The Evening Star*, October 8, 1966; Eisen, Jack, “Suburban Extension Included in Transit Bill Passed by House,” *The Washington Post and Times Herald*, October 8, 1966; Washington Metropolitan Area Transit Authority, *Congressional Record-House*, October 7, 1966, pages 25650-25865]

Because the resolution differed from the Senate version, the Senate would have to approve the House version for it to go to President Johnson. If not, the two Houses would have to convene a conference committee to resolve differences and then both Houses would have to approve the conference report. On September 13, Senators Tydings and Byrd brought the approved House bill to the floor of the Senate, which approved it without debate to complete congressional action. [Amendment of Washington Metropolitan Area Transit Regulation Compact, *Congressional Record-Senate*, October 13, 1966, pages 26526-26536]

The *Star*'s editors said of the victory:

Any bill that simultaneously earns the approval of the conservative Representative Howard W. Smith of Virginia and liberal Representative Carlton R. Sickles of Maryland must have special qualities to recommend it.

The bill “cuts across party lines and ideology.” The editors added, “The system should be not only a model for other cities but a memorial to the lawmakers who made it possible.” [“Victory for Transit,” *The Sunday Star*, October 16, 1966]

While awaiting President Johnson's signature approving the compact, the Washington Metropolitan Area Transit Authority (WMATA) was able to proceed to establish a permanent presence. It asked GSA to reserve space for its offices in the same building as NCTA at 1634 I Street, NW. Lee Flor outlined the immediate tasks:

The transit authority will have to complete arrangements to hire as much of the staff from NCTA as possible. Then it will have to complete hiring a staff which will serve as the District of Columbia transit construction and planning agency. The two suburban transit groups [Suburban Maryland Transit Commission and Northern Virginia Transportation Commission] are expected to keep most of their staff . . . .

The transit authority this year wants to spend about \$700,000, including \$250,000 for selection of new routes and studies of traffic along the new routes. Approximately \$100,000 is expected to be spent for developing costs for each new proposed route.

The area's two States and the District of Columbia were to formally nominate two directors each for the board of directors.

One of WMATA's priorities was extension of the 25-mile initial system, with a second District line in the Independence Avenue, SW., corridor considered a priority. NCTA's Quenstedt said the line was a high priority because it was needed for extensions into the suburbs. “We've always considered that extra downtown loop as part of the regional system. It's necessary to accommodate the increased number of trains that would result from extending the service into

the suburbs.” [Flor, Lee, “2<sup>nd</sup> Downtown Subway Line Due for Study,” *The Sunday Star*, October 9, 1966]

The original board of directors included:

District of Columbia:

- Commissioner Walter N. Tobriner
- Engineer Commissioner Charles M. Duke

Maryland:

- James Gleason, chairman of the Washington Suburban Sanitary Commission
- Frank J. Lastner, who was retiring at the end of the year from the Prince George’s County Board of Commissioners.

Virginia:

- Leo Urbanske, Jr., of the Arlington County Board
- Lee Rhodes of the Falls Church City Council

On October 17, 1966, the members gathered for their first meeting. They elected General Duke as the first chairman. Gleason was first vice chairman, and Urbanske the second vice chairman. At a press conference, General Duke explained that the chairmanship would rotate each year “in a spirit of metropolitan cooperation.” [Hornig, Roberta, “Transit Authority Picks Duke as First Chairman,” *The Evening Star*, October 17, 1966]

### **Finishing the FY 1967 Appropriations Act**

With the revenue legislation in the background, the House and Senate were completing work on the District of Columbia appropriations act for FY 1967. Senator Byrd had held the bill until President Johnson signed the District of Columbia Revenue Act of 1966. With the additional revenue assured, the Senate Committee on Appropriations released a report on October 11. The report stated:

The total request of \$12,805,000 for all highway projects eliminated by the House because of revenue shortages has been restored.

The committee also approved the District commissioners’ request for restoration of loan appropriations to the general fund of \$4,527,500 for the city’s portion of the rail rapid transit system for FY 1967. “The committee has approved this request which is equal to one-half of the amount appropriated to the National Capital Transportation Agency in the Department of the Interior and Related Agencies Appropriation Act, 1967 (Public Law 89-435).”

Overall, the bill appropriated \$26 million more than the House-approved bill and \$43.5 million more than for FY 1966. [District of Columbia Appropriations Bill, 1967, Committee on

Appropriations, United States Senate, 89<sup>th</sup> Congress, 2d Session, Report No. 1706, October 11, 1966, pages 4, 17]

On October 12, the Senate approved the District's appropriations bill, 70 to 0, without debate on the highway or transit appropriation measures. Senator Bible brought up the subject, noting, "I have always taken the view that we should have a balanced system." He asked if the appropriations in the bill were "sufficient to move the transit program ahead on schedule." Senator Byrd assured him that the committee had restored the full amount requested. Senator Bible said he understood the rail rapid system would be operational "in the range of 1971 or 1972." He brought up the subject only to ensure that "the amount allowed by the Appropriations Committee this year is sufficient to keep the NCTA on schedule." The answer was that it was. [District of Columbia Appropriations, 1967, Congressional Record-Senate, October 12, 1966, pages 26357-26363]

With the 89<sup>th</sup> Congress nearing adjournment, House and Senate conferees quickly resolved differences between the two appropriations bills for the District of Columbia. Although the final bill was \$2 million below the Senate appropriations total, it retained the amounts in the bill for highway and transit projects. [District of Columbia Appropriation Bill, 1967, Conference Report, U.S. House of Representatives, 89<sup>th</sup> Congress 2d Session, Report No. 2292]

On October 19, Chairman Natcher brought the conference report to the House floor. He explained how the revenue act had changed appropriations totals. On transportation, he said:

Beginning in the year 1958 our committee made every effort to convince those in authority that here in our Capital City we could have both a freeway system and a rapid rail transit system. We repeatedly made this statement over the years and made every effort to see that our freeway system was not destroyed. We believed then, and we believe now, that in order to meet the tremendous day-by-day growth of traffic the highway program must be carried out along with the present rapid rail transit system.

The District had not moved forward to meet the 1972 Interstate deadline, with planning decisions holding up the key elements in the freeway and parkway system. "Time after time when funds were appropriated for these projects the plans were discarded and filed away." Millions of dollars had been expended for planning from 1961 to the present "with no action to place the projects under construction." The District appropriations subcommittee had refused to recommend borrowing authority of \$8.5 million for the city to add to the amount unused. The House "sustained our position 320 to 3."

Now, however, was "the time to have a better understanding and an agreement as to the construction of our freeway system" and the rail rapid transit system. Several actions had occurred since the House approved the District appropriation bill for FY 1967. NCPC "has finally approved a number of our highway projects." In addition, the District commissioners had given final approval for \$140 million worth of freeway projects:

The Commissioners gave the Highway Department authority to have detailed plans drawn and to start buying land for the four sections of the city's freeway network approved by

the National Capital Planning Commission during the week of September 12. Two of the sections approved – the south leg and part of the east leg will complete the southern section of the inner loop. The Commissioners also gave approval to a section of the North Central Freeway and to the Three Sisters Bridge which are among the projects before the National Capital Planning Commission.

Chairman Natcher said that “it is now apparent that we will carry our freeway and parkway system along with the rapid rail transit system project.” He said that the committee had been right, at the time, to refuse appropriations for the District’s matching share for rail rapid transit in view of the delays in the freeway program. “We now recommend to the House that the conference report, and that portion pertaining to freeways and rapid rail transit be approved.” However, he cautioned:

Mr. Speaker, under no circumstances should further efforts be made to stop the freeway system here in our Capital City. This applies not only at this time, but at any time in the future, and all of us should keep in mind that it is imperative that we have a balanced transportation system and that both freeways and rapid transit must go forward together.

The House approved the bill, without a recorded vote or debate on the highway or rail rapid transit programs. [District of Columbia Appropriation Bill, 1967, *Congressional Record-House*, October 19, 1966, pages 27654-27658]

The Senate also approved the conference report on October 19, again without debate on transportation issues or a recorded vote. [District of Columbia Appropriation Bill, 1967- Conference Report, *Congressional Record-Senate*, October 19, 1966, pages 27621-27624]

President Johnson signed the District of Columbia Appropriations Act, 1967, on November 2, 1966 (P.L. 89-743).

### **Advancing North-Central Freeway**

After NCPC had voted in September to approve the freeway plans favored by Chairman Natcher, *Star* editors wrote, “No thanks to its citizen members, the National Capital Planning Commission is finally coming to its senses on the subject of highways.” NCPC’s action “flashes the go-ahead signal for the design of four key elements of a freeway system which has been intolerably delayed, and which Washington must have in order to function efficiently.” The editors asked:

What is one to say, meanwhile, of the fact that four citizen members of the planning commission, led by Chairman Elizabeth Rowe, are still clinging to a negative role on transportation?

The North-Central Freeway, “the most controversial of the freeway projects,” had been “modified drastically” to address concerns about its impact on residential neighborhoods. However, this advance “occurred in spite of the vacuum of leadership from the commission.” The commissioners, along with everyone else, favored a balanced transportation system, but to the NCPC minority, “balance” meant “no freeways at all—even if, in the process of trying to stop

them, rail transit should go down the drain as well.” [“Back on the Road,” *The Evening Star*, September 17, 1966]

On October 1, Chairman Funk of the Maryland State Roads Commission said he expected the entire I-95 between the Baltimore and Capital Beltways to be under construction by spring 1967, with completion in 1968. The commission hired the consultant firm, Rummel, Klepper and Kahl of Baltimore, to make location studies for the 6-mile “third route to Baltimore” in Prince George’s County near Takoma Park to the District line.

Funk expected the consultants to recommend the route that the Maryland-National Capital Park and Planning Commission had approved when it adopted the master plan for the Takoma Park area on September 4, 1963. The planning commission had tried to preserve the corridor for the freeway. Funk said the study was needed to justify the location to BPR. The *Star* described the route:

The missing freeway link would start from Exit 26 on the Capital Beltway, midway between New Hampshire Avenue and U.S. Route 1. Then it would run just west of the University of Maryland, and swing to the east, completely bypassing the city of Takoma Park, but going through West Hyattsville. Then it would enter the District line near Gallatin Street, and connect to the North Central Freeway near Ft. Totten Park along Galloway Street and the Baltimore & Ohio railroad.

The route would displace 163 families in Maryland, compared with 590 families under an earlier routing.

Funk had approached BPR seeking agreement that the State did not have to hold another public hearing on the North-Central Freeway. He argued that the State’s adopted route along the Baltimore and Ohio Railroad corridor was similar to plans presented at a hearing 2 years earlier. [“Engineering Firm Is Hired to Route I-95 Freeway Link,” *The Sunday Star*, October 2, 1966]

(On October 4, President Johnson approved Public Law 89-627 authorizing the District of Columbia to replace the Highway Bridge in the 14<sup>th</sup> Street Bridge corridor with a six-lane bridge on the general alignment of the old bridge. The law authorized the District to provide “approaches and roads connecting such bridge and approaches with streets and park roads in the District of Columbia and with roads and park roads on the Virginia side of the Potomac River.”)

The District Highway Department had two freeway-related items on the agenda for NCPC’s October 13 meeting. One was approval of the last 3 miles of the North-Central Freeway along the railroad tracks between Buchanan Street, NE., near Catholic University and the District line. The District also wanted NCPC to approve transfer of the city’s right-of-way through Glover-Archbold Park to NPS. In exchange, the NPS would provide park land elsewhere for freeways.

Before the meeting, NCPC’s transportation committee held an informal public hearing on October 11, with witnesses limited to 10 minutes although they could present longer written statements. Jack Eisen compared the 5-hour hearing with the hearing in September, saying it was “less strident but seemingly more intense.” Peter Craig presented a statistics-based critique, but

residents made “frankly emotional pleas.” For example, Isham O. Baker of the South Manor Citizens Association said the freeway would be located close to several schools. He asked, “What giant acoustical baffle will be built along the freeway to enable our children to hear their teachers in normal tones?”

The key issue, however, was a legal one. City planning chief Lloyd Rivard told the committee that the North-Central Freeway segment would require 17 acres of Fort Totten Park and that the Northeast Freeway link to I-95 would take eight acres of Fort Drive Parkway land. Committee Chairman Edwards questioned the legality of taking the park land, all of which had been acquired by the District with funds loaned under the Capper-Cramton Act. Although the District had repaid the funds, Edwards argued that the park land could not be used for freeways without congressional approval.

Craig agreed, recalling the dispute about the use of Rock Creek Park in the mid 1950s. He thought a “severe legal and moral question” existed over use of the Capper-Cramton Act land for freeways. NCPC attorney Daniel Shear pointed out, in contrast, that the Capital Beltway had been built through two Capper-Cramton Act parcels in Montgomery County. At Edwards’ request, NCPC attorneys would look into the issue.

After the public hearing, the transportation committee voted, 3 to 2, to recommend that NCPC approve the 2.5-mile section of the North-Central Freeway. [Flor, Lee, “Congress May Get Freeway Land Issue,” *The Evening Star*, October 11, 1966; Eisen, Jack, “Foes Unsheathe New Legal Weapon To Fight North Central Freeway Link,” *The Washington Post and Times Herald*, October 12, 1966; “Committee to Ask OK For North Central Leg,” *The Evening Star*, October 12, 1966]

On October 13, NCPC voted by a surprising 8 to 2 to approve the North-Central Freeway segment. “The united front of freeway opposition by citizen members,” Eisen wrote, “was shattered.” Two of the citizen members who had previously voted against freeways switched sides. Vice Chairman Louchheim reached his decision reluctantly. “I am apprehensive at our negativism . . . where we could be useful [creatively].” He added:

There comes a time when you’ve got to be realistic and pragmatic. It is about time we realized that these highways are going to be built.

He also was concerned about the very real possibility that Congress would delay the subway if the freeways did not advance.

Architect Thiry voted for the freeway after winning agreement that the city would consult NCPC on design details.

A third citizen member, former NPS Director Wirth, abstained. He was concerned about the legal issues that had not been resolved about the taking of park land.

Only Chairman Rowe and Edwards voted to turn down the freeway segment. Rowe acknowledged that, “Everyone realizes that this is better than it was before.” She voted to turn it down because she agreed with those who thought “Washington is a place to live, not a place to

get in and out of quickly.” Edwards, like Wirth, was concerned that the proposed use of parkland was not legal.

When Sammie Abbott called out repeatedly to demand that he be given time to express his group’s views, Eisen noted, “a policemen stationed in the lobby walked into the meeting room.” After the meeting, Abbott told reporters that NCPC had “sold out to the highway interests” and he planned to “mobilize black power along with white power against sellout power.” He predicted riots when the city began relocating 280 African-American families in the North-Central Freeway corridor. [Eisen, Jack, “Final Link On Freeway Voted 8 to 2,” *The Washington Post and Times Herald*, October 14, 1966; Flor, Lee, “2 on Plans Panel Shift, Help Pass Freeway Leg,” *The Evening Star*, October 14, 1966; Franklin, Ben A., “Highway Backers Win Capital Fight,” *The New York Times*, October 17, 1966]

Despite NCPC’s vote, Edwards was increasingly convinced that construction across parkland was prohibited. Aside from the prohibition under the Capper-Cramton Act, he now cited Section 8-133 of the District Code, which read:

There shall not be erected on any reservation, park, or public grounds of the United States in the District of Columbia any building or structure without the express authority of Congress.

Although he had questioned NCPC’s authority to approve the North-Central Freeway and Northeast Freeway through parkland acquired under the Capper-Cramton Act, he now questioned the authority under the District Code to route the South Leg Freeway beneath the Lincoln Memorial and the Tidal Basin as well as the East Leg Freeway through Anacostia Park near D.C. Stadium.

Lee Flor provided background:

The old legal prohibition [Capper-Cramton Act] apparently was cited by the Bureau of the Budget 11 years ago, when it said legislation forbidding use of parkland for an extension of U.S. Route 240 was unnecessary.

At the time, the Maryland State Road Commission wanted to run U.S. 240 through Rock Creek Park, for 2.5 miles between Wisconsin and Connecticut Avenues. Civic groups filed a complicated lawsuit, which was never tried.

Highway planners decided to build the U.S. 240 extension as a “parkway,” and prohibit trucks from using it. This compromise apparently satisfied the court, and it dismissed the case.

Then, in 1964, some parkland was incorporated into the Capital Beltway, but civic groups seemed to be caught asleep and never protested.

The District of Columbia argued that the Federal-Aid Highway Act of 1956, which authorized construction of Interstate highways in the city, provided the needed congressional authorization.

[Flor, Lee, "North Central Freeway Fight May Peril Others," *The Evening Star*, October 17, 1966]

Despite these concerns, the District commissioners approved the final 2.5-mile segment of the North-Central Freeway on October 20. General Duke said the impact of the freeway on the neighborhood was "certainly approaching, if not at, an irreducible minimum." [Matthews, John, "D.C. Chiefs OK Final Leg Of Freeway," *The Evening Star*, October 20, 1966]

Anti-freeway groups and individuals were planning their legal strategy. By the end of October, 10 groups had joined as plaintiffs:

- Washington's Federation of Citizens Associations
- Committee of One Hundred
- Lamond-Riggs Citizens Association
- Brookland Civic Association
- Save Takoma Park Committee
- South Manor Neighborhood Association
- Arlingtonians for the Preservation of the Palisades
- Georgetown Planning Council
- Democratic District Committee
- Washington's Federation of Civic Associations

Helen K. Leavitt of the Democratic District Committee told a *Star* reporter that the group had raised \$3,500 to finance the court suit to be prepared by Covington and Burling. Leavitt said, "We're demonstrating a metropolitanwide opposition to any more freeways." [Adams, Michael, "Freeway Foes Unite," *Voice of the City*, *The Evening Star*, October 29, 1966]

For FY 1968, the District Budget office recommended a record \$141 million for highways. Most of it, \$109.7 million, would come from BPR under the Federal-aid highway program. Another \$13.6 million was for operating expenses. The balance, \$17.9 million, would be the match for Federal-aid projects such as the Center Leg of the Inner Loop Freeway, the North-Central Freeway, the K Street tunnel, and replacement of the Highway Bridge in the 14<sup>th</sup> Street Bridge corridor. As the *Star* reported, "The total reflects favorable recent action by a number of public agencies on controversial expressway proposals." [Lewis, Robert J., "\$141 Million Is Requested For Highways," *The Evening Star*, November 7, 1966; Mathews, John, "Record Budget Is Proposed For District," *The Evening Star*, November 7, 1966]

As Abbott's comments after the NCPC approval suggested, highway opponents were not intimidated. ECTC held a rally in the board room of the District Building on November 16 "to unequivocally condemn every aspect of Washington's highway program," as the *Star* put it. The board room was full, with the crowd estimated at 400 people spilling out into the hallway:

The speakers at last night's meeting ranged from Mrs. Angela Rooney, speaking for the white, middle-class residents of the Brookland area who "reject the dreamworld of the frantically protected, segregated suburbs," to Marion Barry Jr., militant leader of the District branch of the Student Non-Violent Coordinating Committee.

“I’m not surprised that the three Commissioners didn’t show up,” said Barry, “because I think we live in a plantation system here . . . and the Commissioners are the slave masters.”

“But the white and black slaves are going to rebel,” he shouted to applause from the integrated audience.

Peter Craig said he expected Covington and Burling to file an “across-the-board” lawsuit before the end of the month to block the North-Central Freeway, East Leg, and the Three Sisters Bridge. ECTC had raised \$5,000 to help pay the prestigious law firm.

Craig also called for a boycott of city gas stations:

“You have the right to do something about the freeway problem every time you drive up to the gas pump,” he said, explaining that every gallon of gas bought in the District contributes \$.70 to the District highway fund—the 7 cent tax on the fuel, he said, is matched by 63 cents from the federal government. “So buy that gas in Maryland or Virginia,” he said. “This is little tiny action of self-help citizens of the District can do!”

As announced during the meeting, the law firm had written to Bernard W. Pryor, chairman of the Brookland Civic Association, to inform him that “a private property owner or occupant” was not required to allow District employees or agents “to enter upon his property to make appraisals or surveys for the so-called ‘North Central Freeway.’” The letter continued:

If you learn of any attempts by District agents to enter private property in connection with the North Central Freeway, we would be grateful if you would furnish us with complete information.

The protesters also criticized the District commissioners because they were part of “the nongovernment [that] permeates every aspect of life in the Nation’s Capital.” They asked President Johnson “to remove the District Commissioners from office at once” and “give some measure of elective control over District affairs to those who care, the people.” [Adams, Michael, “400 Foes of Freeways Urge Removal of Commissioners,” *The Evening Star*, November 17, 1966]

The lead attorneys for Covington and Burling, Roberts Owen and Gerald Norton, filed the suit on December 1, 1966. It asked the U.S. District Court for a permanent injunction and declaratory judgment to block the Three Sisters Bridge, the North-Central Freeway, the East Leg of the Inner Loop, and the Missouri Avenue Expressway. (The Missouri Avenue Expressway would be located along Missouri Avenue, NW., between 8<sup>th</sup> Street and 16<sup>th</sup> Streets.)

The complaint accused the District government and NCPC of acting illegally on 18 counts, including a charge that members of NCPC voted illegally and were in conflict of interest to approve the freeways because they were acting as judges of their own case. The vote also was illegal because alternates to six ex-officio NCPC members provided the margin of victory for the freeways. The suit argued that only the chairmen of the Senate and House District Committees could appoint alternates, and they had not done so before the votes. Further, the suit claimed that

the projects involved the illegal use of parklands after BPR pressured NPS to agree to the freeway projects; NPS officials then voted for the freeways.

The key legal issue, however, was based on the failure of officials to comply with the strict requirements of the Act of March 2, 1893 “Providing a Permanent System of Highways in That Portion of the District Of Columbia Outside the Cities of Washington and Georgetown.” The legislation grew out of concern that developers were building subdivisions within the District’s border, but beyond the established cities of Georgetown and Washington in Washington County. The developers did not align their roads with those within the Washington street plan. Gutheim and Lee summarized the legislation:

This act authorized the commissioners of the District of Columbia to prepare a plan for the extension of the L’Enfant streets, and required that all subdivisions—including those already extant—conform to this new plan.

A new map of the city was to be made showing the “boundaries and dimensions of and number of square feet in the streets, avenues, and roads,” and providing that circles be drawn up at intersections of principal avenues and streets. Anticipating that many legal difficulties would arise between existing subdivisions and condemnations by the commissioners to enforce the lines of this new highway map, the statute provided for a process of hearings and damages to be paid to the landowners.

The 1893 Act required a series of steps, such as:

- The District commissioners are directed “to prepare a plan for the extension of a permanent system of highways over all that portion of said District not included within the limits of the cities of Washington and Georgetown.” The plan was to follow the street plan of the city of Washington, to the extent possible, and call for streets between 90 and 160 feet, except for existing highways.
- The commissioners were to develop the plan in sections, beginning with “existing suburban subdivisions not in conformity with the general plan of the city of Washington,” referring here to suburbs within the city limits but outside of Georgetown and Washington.
- The commissioners were to prepare maps of each section showing the roads, including traffic circles at principal intersections.
- The maps were to be submitted to the Secretary of War, Secretary of the Interior, and Chief of Engineers “who shall make such alterations, if any, therein, as they shall deem advisable, keeping in view the intention and provisions of this act, and the necessity of harmonizing as far as possible the public convenience with economy of expenditure.”
- After the District commissioners approved the final map, they were to file it with the Office of the Surveyor of the District of Columbia. Future subdivisions were not to be approved unless “the same be first approved by the Commissioners and be in conformity to such map.”
- If land was to be condemned for highway purposes, the District commissioners were to petition the supreme court of the District of Columbia. The court was to provide public notice within 30 days of the petition to “warn all persons having any interest in the

proceedings to attend the court at a day to be named in said notice, and to continue in attendance until the court have made a final order in the premises.” Further, the court “shall afford all parties in interest a reasonable opportunity to be heard during the proceedings.” If “practicable to do so,” the court was to have the marshal of the District of Columbia serve notice “upon each of the owners of the land sought to be condemned.”

- The court was to summon a jury of “seven judicious, disinterested men” to hear the evidence, along with the court. After hearing the evidence and, if called for by the court, visiting the property, the jury was to issue a verdict unanimously or via majority. The court may accept the verdict or reject it if the court considers it “unjust or unreasonable.” If the verdict is rejected, the court was to summon a new jury to hear the evidence.
- The court may then proceed to issue its condemnation order. The jury was to assess compensation based on a formula specified in the law.

Many of the suit’s claims involved failure by the District government and NCPC to comply with the Act of March 2, 1893, including the public hearing requirements. In fact, in coming years, protestors would often claim that public hearings were illegal, meaning they did not comply with the 1893 Act. [Flor, Lee, “Citizens Suit Seeks Halt To D.C. Freeway Work,” *The Evening Star*, November 30, 1966; Gutheim and Lee, page 116; the 1893 Act can be found in *Laws Relating to the Permanent System of Highways Outside of the Cities of Washington and Georgetown*, Government Printing Office, 1908, pages 3-11])

*Star* editors dismissed the latest anti-freeway gambit:

Having failed to persuade anyone else that they are on firm ground, several die-hard bands of citizen opponents to the District freeway program now have decided to try the courts.

Whatever else may be said of this latest delaying tactic, the lawsuit is not timid.

The suit reflected a “catch-all, dragnet approach.” If the court ruled that the 18 counts were valid, the impact “would be remarkable, to say the least.” If NCPC’s ex-officio members had a conflict of interest, Congress having designated them for membership would be at fault. If allowing alternates to cast ex officio votes was invalid, “the status of literally hundreds of other actions taken by the commission on a variety of subjects would also appear to be questionable.”

The District commissioners, the editors argued, should continue “pushing ahead with all phases of the freeway program.” [“Freeway Challenge,” *The Sunday Star*, December 4, 1966]

### **Changes in Leadership**

On November 8, 1966, Maryland elected Spiro T. Agnew, the Republican leader of Baltimore County, as the next Governor. By 82,000 votes, he defeated Democrat George P. Mahoney, who ran a racist campaign with the slogan “Your Home Is Your Castle, Protect It.” Governor-elect Agnew had called for a “crusade for conscience” against the white backlash that Mahoney represented. The *Star* reported, “The bulk of Negroes in Baltimore City lined up behind Agnew, and were instrumental in his carrying the pivotal urban center.” (Baltimore City is not part of

Baltimore County where Agnew served as County Executive.) [Rowland, James B., "Voters Silence Backlash Cry In Maryland," *The Evening Star*, November 9, 1966]

Chairman of the Maryland State Roads Commission understood that he would leave his post with a new Governor taking office. In a year-end interview, he said his departure was "a normal thing to do." The Governor "naturally likes to have someone close to him, so decisions can be made by the chairman-director based on a close relationship between the governor and the Highway Department." Governor-elect Agnew selected Jerome B. Wolff, an attorney and engineer, to replace Funk.

Despite the change in leaders, Funk predicted that the North-Central Freeway would proceed as planned in the District and Maryland. He said that, "if there had been any weaknesses in the handling of the North-Central Freeway, it would have become a campaign issue." During the campaign, Agnew had not criticized the freeway or the State's highway plan.

BPR was formally reviewing the plans for the freeway, but had informally okayed the location in Montgomery County. Despite opponents' demands, Funk was confident BPR would soon approve the plan formally without requiring another public hearing. He indicated, however, that the Maryland State Roads Commission was planning a hearing in early 1967 on I-95 between the Capital Beltway and the District line. ["Funk Expects Freeway to Stand as Planned," *The Evening Star*, December 23, 1966]

On election day, President Johnson announced that General Robert E. Mathe would replace General Duke as the District's engineer commissioner. General Mathe was serving as Corps Engineer for the 7<sup>th</sup> Army Corps of Engineers in Germany, but was familiar with his new position because he had served as assistant engineer commissioner for urban renewal from 1955 to 1958.

General Duke, who had served as engineer commissioner since July 1963, said that "a more qualified person could not have been selected." During his years in the District, General Duke said he had a "thrilling experience," with his greatest satisfaction being the adoption of a balanced transportation system for the area.

General Mathe, a 49-year old native of Oshgosh, Wisconsin, earned a civil engineering degree from the University of Illinois. During World War II, he had been assigned to the 249<sup>th</sup> Engineer Combat Battalion during campaigns in France, the Ardennes, and Germany. He, his wife Elinor, and five children would live in a rented home at 3725 Fessenden, Street, NW., in the city's Chevy Chase neighborhood.

While stationed in Germany, he had not followed news about the city. "I hope to catch up as quickly as possible." However, he had been in Washington during the period when the freeway and rail rapid transit system were in early stages. He was convinced the city needed a balanced transportation system of freeways and rail rapid transit. He said he had observed cities all over Europe building the same types of networks. In addition, he said, "It gave me a thrill to see in actuality some of the things we were talking about when I worked here before."

He also saw another need. "Housing, of course, continues to be a major problem. I want to do whatever can be done to solve the housing problem," especially for the city's low income minorities.

General Mathe took the oath of office on December 14. He said, "Our problems are no worse than those of the cities of Chicago, Philadelphia and New York. We shall succeed." He already had received "a little indication last night of what it will be like to serve as District engineer commissioner," as the *Star* reported:

While he and Duke were being honored inside the Mayflower Hotel by the Washington Metropolitan Board of Trade, about 50 pickets paraded in the slush and snow to indicate their dislike for the Board of Trade specifically and District engineer commissioners in general.

"Board of Trade is the Enemy of the People," said a sign carried by Joseph L. Rauh, chairman of the District Democratic Central Committee. "Pave the Board of Trade," said another sign.

The picketing was instigated by Americans for Democratic Action, in which Rauh is a guiding light.

"We are picketing to show the new commissioner the low esteem by which the board is held by the citizens of this city," he said.

Also on the picket line were members of the Emergency Committee on the Transportation Crisis, Southeast Victims of the Freeway, Save Takoma Park Committee and the Brookland Civic Associations.

After receiving a scroll from the Board of Trade lauding his role in creating a balanced transportation system, General Duke said, "My tenure here as engineer commissioner is going out in good fashion . . . it snowed all day . . . and there's a picket line outside. In other words, things are back to normal."

On January 5, 1967, General Duke left to serve as commander of the 18<sup>th</sup> Engineer Brigade at Dong Ba Thin in Vietnam.

[Mathews, John, "President Names Mathe Engineer Commissioner," *The Evening Star*, November 9, 1966; Eisen, Jack, "Mathe Says He'll Attack Housing Crisis," *The Washington Post and Times Herald*, November 10, 1966; Conconi, Charles, "New Commissioner Urges Priority for Housing," *The Evening Star*, December 2, 1966; "Mathe Takes Oath of Office," *The Evening Star*, December 14, 1966]

## **The U.S. Department of Transportation**

President Johnson, as part of his Great Society initiative, proposed creation of a U.S. Department of Transportation. In his State of the Union Address on January 12, 1966, he explained that a Transportation Department would "bring together our transportation activities." With 35

government agencies spending \$5 billion a year on transportation, he said, the “present structure makes it almost impossible to serve either the growing demands of this great nation or the needs of the industry, or the right of the taxpayer to full efficiency and frugality.”

With bipartisan congressional support, President Johnson was able to sign the Department of Transportation Act of 1966 on October 15, 1966, before about 200 guests at the White House. The new Department “will have a mammoth task – to untangle, to coordinate, and to build the national transportation system for America that America is deserving of.” With its help, “A day will come in America when people and freight will move through this land of ours speedily, efficiently, safely, dependably, and cheaply. That will be a good day and a great day in America.”

The President selected Alan S. Boyd to be the first Secretary of Transportation. A 44-year old lawyer over 6 feet, 3 inches tall, Boyd had been general counsel of the Florida Turnpike Authority and chairman of the Florida Railroad and Public Utilities Commission before President Eisenhower appointed him to the Civil Aeronautics Board. Boyd became chairman in 1961 and was appointed Under Secretary of Commerce in 1965. He had been the Johnson Administration’s chief promoter of the new department.

He and his wife Flavel lived in Arlington, Virginia, at 1200 North Nash Street. A profile in *The New York Times* said the house across from Washington “overlooks the Potomac River and the Iwo Jima Memorial Monument.” [“Bold Transport Chief,” Man in the News, *The New York Times*, November 7, 1966]

On January 16, 1967, Boyd took the oath of office in the East Room of the White House. The President explained that Boyd would “coordinate a national transportation policy for this great land of ours . . . and give the kind of results that the American people would like to point to with pride.”

The new Secretary had not been directly involved in highway issues. His views on urban freeways were neutral initially but, as Professor Schrag wrote after interviewing Boyd, his perspective would change:

When Robert Weaver, secretary of housing and urban development and the nation’s first African American cabinet officer, drew him aside to discuss urban freeways, Boyd was willing to listen. Weaver introduced him to a group of black Baltimoreans who had worked all their lives to own houses, which were about to be taken for highway right-of-way for what they argued was inadequate compensation. Boyd was shaken and began reconsidering the desirability of urban freeways.

In the interview, Boyd recalled that one of the Baltimoreans was a stevedore who had volunteered for the army in World War II. He had worked all his life to buy his home. Then, in Boyd’s words:

. . . along comes the highway system, and [says], “For the greater good, we’re going to take your house. We’re going to pay you . . . \$28,000.” He said, “There is no way I can

buy a house like the one I have for \$28,000, and I haven't got any money other than that, other than what you give me." He said, "White folks—that ain't fair." That made an impact, I'll tell you. It really made an impact on me.

Secretary Boyd would have to find a new Federal Highway Administrator. Rex Whitton, who had assumed the post in 1961, resigned at the end of 1966. One of the most respected highway leaders in the country, he had done everything he could to keep the National System of Interstate and Defense Highways on schedule amidst growing criticism, especially in cities. He had worked hard to advance the District of Columbia's freeway program, seeking compromises with NCPC and NPS. However, he understood that one reason for creation of the U.S. Department of Transportation was to reduce BPR's power and influence based in part on close relations with members of the House and Senate Public Works Committees. Having become used to something approaching autonomy in the Department of Commerce, Whitton could see that his authority would be greatly diminished in the new Department.

In replacing Whitton and staffing leadership posts, Secretary Boyd was influenced by his discussions with Secretary Weaver as Professor Schrag explained:

Soon the upper ranks of the new department swelled with freeway skeptics. For his highway administrator, Boyd chose Lowell Bridwell, a former reporter who Boyd believed would stand up to the engineers. Paul Sitton, deputy under secretary, had monitored the Bureau of Public Roads as an examiner for the Bureau of the Budget. He had grown disgusted with the road builders, so he had used his post to support Stolzenbach and to feed information to Washington highway protestors. He had also served on the NCTA Advisory Board in its last year of existence. Now Boyd turned to him for background information and advice on D.C. highway issues.

Most inflammatory was Boyd's assistant general counsel for litigation: anti-highway activist Peter Craig. Craig recused himself from department work involving the Washington region, but by hiring him Boyd had made his sympathies clear. Boyd himself told the pro-highway Board of Trade, "I do not believe Washingtonians will receive the greatest possible return on their investment – returns in service and convenience – if the community tries to resolve today's problems by the simple expedients of more automobiles, more freeways, and more parking lots." [Schrag, page 126; stevedore anecdote from Schrag, Zachary M., "The Freeway Fight in Washington, D.C.," *Journal of Urban History*, July 2004, page 655]

(For information on the Baltimore freeway controversies, see Earl Swift's *The Big Roads: The Untold Story of the Engineers, Visionaries, and Trailblazers Who Created the American Superhighways* (Houghton Mifflin Harcourt, 2011). Swift uses the Baltimore freeway fighters to illustrate the urban controversies underway around the country during the construction phase of the Interstate System.)

Lowell Bridwell was the first head of the Federal road agency, dating to 1893, who was not, in some way, a road builder. Bridwell had been a journalist, most recently as the top writer on

highways for the Washington bureau of Scripps-Howard Newspapers, a post he had assumed in 1958. A biographical sketch in *America's Highway 1776-1976* said:

From this vantage point he set up close liaison with both government and industry. He became well known as an individual who was exceptionally well versed in the technical aspects of highway administration, finance, and construction.

As a representative for Scripps-Howard, Mr. Bridwell participated in many local and national highway meetings. These included numerous conclaves of State highway officials as well as leading trade associations.

He had joined the Commerce Department in April 1962 as assistant to Under Secretary for Transportation Clarence Martin, Jr., before being appointed Acting Deputy Federal Highway Administrator on January 20, 1964, a post he held until becoming Deputy Under Secretary of Commerce for Transportation (Operations) on July 2, 1964. He would provide strong support for Boyd in his advocacy work for the U.S. Department of Transportation.

Following Senate confirmation, he became Federal Highway Administrator on March 23, 1967, and held the position until the end of the Johnson Administration on January 20, 1969:

Mr. Bridwell was responsible for administering a \$4.4 billion highway program. This figure dwarfed everything else in the Department of Transportation's \$6.6 billion budget. [*America's Highways 1776-1976*, page 194]

The 44-year-old native of Westerville, Ohio, lived with his wife, son, and daughter in a District townhouse built in 1910 at 146 D Street, SE.

The U.S. Department of Transportation opened on April 1, 1967. The FHWA began operations that same day, with BPR as one of its four bureaus. BPR, now headed by a career employee, Director Frank Turner, would remain responsible for administering the Federal-aid highway program in partnership with the State highway agencies.

The first issue of FHWA's newsletter, replacing BPR's *The News in Public Roads*, explained the new agency's twin safety bureaus, the National Traffic Safety Bureau and the National Highway Safety Bureau. They had been "established last November 9 [1966], under separate laws passed by Congress last fall":

The major function of the Traffic Bureau is to develop and issue performance standards for all new motor vehicles to make them safer in operation. The other Bureau seeks to bring about improvement in State and local highway safety standards and programs, including vehicle registration, operation and inspection, driver training, accident investigation, highway design, traffic control, laws and codes, traffic surveillance and emergency services.

The fourth element of FHWA was the Bureau of Motor Carrier Safety, which the Department of Transportation Act of 1966 shifted from the Interstate Commerce Commission to FHWA. It had

jurisdiction over the safety of 3 million trucks and buses using America's roads. [*Federal Highway Administration News*, Vol. 1, No. 1, May 1967]

(The two safety bureaus separated from FHWA and became the National Highway Traffic Safety Administration in March 1970. The Bureau of Motor Carrier Safety remained with FHWA under January 1, 2000, when it became the Federal Motor Carrier Safety Administration under the Motor Carrier Safety Improvement Act of 1999.)

The 89<sup>th</sup> Congress had been productive in ways that few Congresses have duplicated. President Johnson had achieved important changes that advanced his Great Society even as escalation of the Vietnam War eroded his popularity.

Most Presidents lose support in mid-term elections such as those in 1966. True to form, the election reduced Democratic majorities in the 90th Congress, while increasing the percentage of Democratic and Republican conservatives who were less inclined than their 89<sup>th</sup> Congress counterparts to support President Johnson's liberal agenda. Professor Zelizer summarized the change:

As Johnson had expected, the elections went poorly for liberals. Although Democrats continued to control Congress, with 64 Democrats in the Senate and 248 Democrats in the House, the size of the conservative coalition had grown substantially. In the House, their numbers grew from approximately 240 members in the Eighty-ninth Congress to 278 in the Ninetieth. Republicans gained 47 seats in the House and 3 seats in the Senate . . . .

The number of liberal Democrats in the House and the Senate had significantly declined. Southern committee chairmen would face a diminished threat that the Democratic caucus could force bills out of their committees. Allied with non-liberal Republicans, conservative southern Democrats would have enough votes on the floor to threaten the success of liberal proposals . . . .

Ray Bliss, the Republican National Committee chairman, told a packed room of reporters in a Washington hotel, "This press conference will be a little different from my first one, when you were asking me if the Republican Party would survive. It looks to me as if we have a very live elephant." [Zelizer, pages 257-259]

### **Washington's Ponte Vecchio Bridge**

On October 7, 1965, Representative Harold T. Johnson (D-Ca.) introduced a bill to build a shop-lined pedestrian bridge from the Maine Avenue waterfront in the vicinity of the 10<sup>th</sup> Street Mall across the Washington Channel to East Potomac Park. The bill would permit the Secretary of the Interior to oversee the bridge to provide direct access to the National Fisheries Center and Aquarium scheduled to be built on East Potomac Park. Representative Johnson emphasized that the bill did not seek funds. "It is designed to satisfy public need through private enterprise." The concept would be similar to the way NPS contracted for concessions in National Parks.

The bridge would serve multiple purposes. It would provide “a diversity of tourist and visitor services” near the Smithsonian Institution museums and “complement the attractiveness of Washington’s redeveloping Southwest.” It also would provide pedestrian access to Hains Point “to accommodate the millions of persons expected to visit the aquarium each year as well as those wishing to take advantage of other attractions of East Potomac Park.”

Under contract with the Interior Department, the developer or concessioner would pay a franchise fee in return for subleasing portions of the bridge to businesses such as restaurants and specialty shops.

He continued:

As is the case with so many so-called new ideas, this one is based on an old concept that has already stood the test of time. What this bill proposes for Washington is an updated American version of a venerable structure located in Florence, Italy. It is called the Ponte Vecchio – or old bridge – and it remains a prime attraction today, drawing countless visitors to its rustic shops and specialty stores.

I respectfully submit that a modern-day version of the Ponte Vecchio connecting Washington’s Maine Avenue with East Potomac Park has the potential to become one of the major tourist attractions of the world while adding a desirable blend of charm, excitement, and beauty to America’s Capital City. [Providing a Bridge to East Potomac Park, *Congressional Record-House*, October 7, 1965, page 26323]

(Flooding in 1881 pushed water from the Potomac River across the riverfront marshlands almost to the White House and as far east as the Botanic Garden on the western edge of the Capitol grounds. Engineers concluded that taming the river and reclaiming the flats along the waterfront were essential to improving drainage and sanitary conditions at the Executive Mansion. Major Peter Conover Hains began the reclamation project in the late summer of 1882. The project used dredged material to create hundreds of acres of land separating the main channel of the Potomac River and the reclaimed waterfront. The water between the two was named the Washington Channel, a recreation of a historic channel in the same general location. A reservoir intended to supply fresh water to the channel was formed and later named the Tidal Basin.

(In 1897, with private interests seeking to develop the land, Congress approved legislation setting aside the 621 acres and reclaimed flats and the 118 acres of tidal reservoirs as “Potomac Park . . . to be forever held and used as a park for the recreation and pleasure of the people.” Charles C. Glover was largely responsible for securing the legislation. East Potomac Park, which is often called Hains Point, is usually referred to as a peninsula, although it actually is an island. [Gutheim and Lee, pages 94-97])

The idea for the bridge dated to 1959 when Chloethiel Woodard Smith suggested the “Ponte Vecchio proposal” as part of her concepts for the new southwest. The idea gradually gathered support, which increased when the Department of the Interior decided to move the National Aquarium from the Department of Commerce’s Herbert C. Hoover Building to Hains Point. In

January 1966, Smith signed a contract with NPS to design the bridge. [“Chloethiel Smith To Design ‘Ponte Vecchio’ Footbridge,” *The Sunday Star*, January 30, 1966]

The viability of the bridge and the aquarium depended in part on construction of a parking garage for visitors. It would have 2,500 spaces on several levels in the hill beneath an overlook at the end of the 10<sup>th</sup> Street Mall 40 feet above the waterfront.

On August 13, 1966, NPS unveiled the design for the “World Bridge,” which Robert J. Lewis reported would be “studded with 120 shops, stores, cafes, galleries and exhibit spaces to be built on five man-made islands across the Washington Channel.” The \$5 million project, which would provide access to the \$10 million aquarium on East Potomac Park, would include a roadway for trackless “mini-trains” to supplement pedestrian access:

The design prepared by Chloethiel Woodard Smith & Associates calls for a series of five 2-story and 3-story buildings to be built over the water on foundations driven deep into the channel bottom.

The buildings and connecting spans would be placed 20 or more feet above the water level to permit boats to travel beneath them . . . .

Also needed as part of the project are plazas at both ends of the bridge and a small span to carry pedestrians and mini-trains across Maine Avenue from the overlook. [Lewis, Robert J., “A ‘World Bridge’ for D.C.,” *The Sunday Star*, August 14, 1966]

In the final days of the 89<sup>th</sup> Congress, the Ponte Vecchio “World Bridge” was approved as part of the Flood Control Act of 1966, which President Johnson signed on November 7 (P.L. 89-789).

In February 1967, the Interior Department unveiled the “simple and dramatic” design for the National Fisheries Center and Aquarium. The main building would be on a square, 432-foot concrete deck six feet above the ground. The facility would include displays of fish and other aquatic life, a series of ecological systems and two 500-seat theaters. Construction and operation would be financed by admission fees paid by the expected 3 million visitors a year.

Kevin Roche, John Dinkeloo and Associates, which designed the facility, excluded the World Bridge. In its place was an empty bridge with shops and other retail facilities on an island abutting the north side of the bridge in mid-channel. In the view of the *Star*’s editors:

It falls far short of the design drafted by architect Chloethiel Smith, which is attractive both to users and to the private entrepreneurs who will be expected to put up the hard cash necessary to get the bridge built . . . . We trust, however, that the deserved praise heaped upon the aquarium portion of the Roche plan by Interior and the Fine Arts Commission does not mean that a Ponte-Vecchio-type bridge is in any sense precluded. [“Elevated Aquarium Design Unveiled,” *The Sunday Star*, January 12, 1967; “National Fish Bowl,” *The Evening Star*, February 22, 1967]

On March 14, 1967, the Interior Department invited bids for construction of the Ponte Vecchio-type bridge and the underground parking garage on Maine Avenue, SW. Contractors were

invited to bid on their own design for the bridge or the design submitted by Chloethiel Smith. Bids were due in mid-May.

The solicitation did not result in a single bid.

By mid-June, Lewis reported:

Southwest Washington's much-heralded "Marvelous Mile" is threatened with deep trouble.

Failure of the Interior Department last month to find a private developer for a proposed shop-lined bridge across the Washington Channel and a nearby parking garage has set off a chain of events which seems about to knock down several key beautification projects like a row of dominoes.

If that happens the long-awaited linking of the Smithsonian Institution complex along Independence avenue with a proposed \$10 million National Aquarium a mile south on East Potomac Park by way of the 10<sup>th</sup> Street Mall – the planned monumental gateway to \$500 million Southwest Washington redevelopment – may be dead.

The garage was "the key factor" in selecting East Potomac Park as the site for the aquarium. An anonymous planner said that "to push the aquarium through without the garage which in turn, jeopardized the bridge, would be one of the most serious mistakes that could be made in the Southwest area." [Lewis, Robert J., "Southwest 'Marvelous Mile' Is in Deep Trouble," *The Evening Star*, June 26, 1967]

Although the Interior Department would pursue the bridge concept, Washington's Ponte Vecchio bridge was doomed, along with the garage and the National Fisheries Center and Aquarium. The aquarium would remain in the Commerce Department building, while Congress bestowed the "national" designation in 1979 on an aquarium planned for Baltimore's Inner Harbor. The National Aquarium opened in Baltimore on August 8, 1981. The Commerce Department closed its aquarium on September 30, 2013.

### **The Furor of the Past – at an End**

The developments in 1966 gave highway advocates a sense of optimism. The *Star* reflected the optimism in an editorial about the East Leg Freeway on January 16, 1967. The editorial recalled the plan to build the freeway in the 11<sup>th</sup> Street, SE., corridor, a plan that would have uprooted many families. Citizens recommended construction of the freeway along the banks of the Anacostia River. "Well, after a great deal of inter-agency hemming and hawing, that has been done." NCPD had approved the route from the Southeast Freeway to Barney Circle at 17<sup>th</sup> and Pennsylvania Avenues, SE., "thence northward through Anacostia Park to Benning Road near the D.C. Stadium."

Considering "all the furor of the past," the fact that officials had agreed on this alignment "is noteworthy in itself." The freeway would improve access to the stadium and the National Arboretum, "an asset of the Nation's Capital which has never been used to its full potential by

visitors or residents because of its isolation.” West of the arboretum, highway officials planned to put the freeway in a 1,700-foot tunnel that would reduce family displacements in half.

Some may believe that “freeways have no place in Washington,” but “they are essential, and the fact is that, sooner or later, they will be built”:

The real message is that a variety of community benefits can be realized if the various agencies concerned really cooperate to develop the best possible freeway plans—and that grievous errors can result if they don’t. [“Improved With Age,” *The Evening Star*, January 16, 1967]

On January 18 and 19, the District commissioners held a public hearing on the East Leg Freeway between Benning Road and Rhode Island Avenue, NE. Sammie Abbott, the *Post* reported, “spent about 7 hours yesterday giving the District Government a piece of his mind.” Around noon, he led 20 ECTC members on a picket line in front of the District Building. They carried signs, such as:

- Gagged and gassed by the highway lobby
- Not one inch of the arboretum or parklands for freeways
- Bus fare rise means more cars means more freeways
- How come there’s plenty of \$ for freeways but not enough for homes & schools

A few witnesses endorsed the East Leg plan. Supporters included AAA, the Federal City Council, the Greater Washington Central Labor Council, NCTA, the Washington Trucking Association, and the local chapter of the Automotive Trade Association. However, “most people came to register opposition, Abbott perhaps most vociferously of all. “These are commuter roads,” he told the hearing. “Men come in an average of 1.6 to a car. They drive back to their bedrooms [in the suburbs] at night. They don’t care what happens in the District.” He added ECTC’s motto: “This is a white man’s road . . . through black men’s homes.” He said that ECTC was going to organize a boycott against buying gasoline in the District. “They take 7 cents out of every gallon, then use it to bury us in concrete.” What the city needed, he said, is rapid transit. He remained in the hearing room until the hearing ended at 7 p.m.

Peter Craig had new information to present based on a deposition that attorneys from Covington and Burling had secured from General Duke before he left for Vietnam. Craig emphasized several points. General Duke said he had never read the law establishing NCTA. He also had never attended a public hearing on the freeways or read the hearing transcripts, even though, as Craig noted, General Duke made many decisions on freeway development. [Milius, Peter, “Freeway Foes Carry Protest to District Building,” *The Washington Post and Times Herald*, January 18, 1967; “North Central Freeway Airing Continues Friday,” *The Evening Star*, January 18, 1967]

Senior District Court Judge Matthew F. McGuire delivered a setback to freeway opponents on February 2 when he agreed with the District that their lawsuit was vague and confusing. He gave litigants 60 days to “rewrite your complaint and put it in language that can be understood.”

[“Revise Suit On Freeway, Court Orders,” *The Evening Star*, February 3, 1967; “Suit to Stop Freeways Bogs Down in Words,” *The Washington Post and Times Herald*, February 3, 1967]

District highway officials planned to introduce their design for the North-Central Freeway to NCPC on February 9. Von Eckardt described it as “an improvement over last year’s controversial proposal,” but added that “it fails to live up to the promise that Washington’s freeways would henceforth be designed to enhance rather than split the city’s neighborhoods.” Officials had promised that freeways would “spark new housing, shops, offices and community facilities alongside and over the concrete ribbons.” BPR had even provided “pretty sketches” of what air rights structures might look like:

The important idea, enthusiastically expounded by top highway officials, was that new housing would be constructed along with the freeway so that families who must be displaced as the bulldozers move along would find a new home ready and waiting for them in the neighborhood in which they are rooted.

Von Eckardt understood why the sketches had not been specific as to location pending detailed studies. “But, it is not understandable, in fact, it is downright distressing, that such studies still have not been started and don’t even seem to be contemplated.” The department left itself open “to the suspicion that the much touted ‘joint housing and highway improvement project’ was merely a meaningless ploy to appease the freeway opponents.” (To be fair, he added, the District had asked Congress for legislation authorizing air rights construction and it was expected to be approved during the 89<sup>th</sup> Congress.)

The J. E. Greiner Company and architectural advisers at Skidmore, Owings and Merrill had “at least come up with a concept which would make new housing construction over the freeway technically possible.” They placed the freeway, with room for the rail rapid transit line, alongside the railroad tracks at ground level but depressed in parts. “Depressing the freeway affords the opportunity at a later date to bridge it with buildings, overpasses and parks.”

The architects gave the overpasses and retaining walls “elegant, well-proportioned simplicity and directness”:

But by adding the freeway ditch to the railroad, the design naturally also widens the swath that the B&O already cuts into the city’s fabric. This is particularly tragic in Brookland, the residential neighborhood east of Catholic University. To a lesser extent it makes itself grievously felt in Totten Park and Takoma.

The failure to propose new housing for the 535 displaced families was bound “to have unpleasant repercussions that will prolong the smoldering freeway feud in this city.”

Community leaders were afraid that opposition “of a voluble nature” might erupt. One said:

There is a lot of free-floating unrest in this city. In the slums it is disorganized. But the higher-income communities that are hurt by this freeway have a strong organizational capacity. They know the ropes.

Von Eckardt concluded:

The people of this city now need some evidence that all this talk means more than making the Tidal Basin more beautiful. And if such evidence is to be shown, it had better start along the North Central Freeway. [Von Eckardt, Wolf, "New North Central Freeway Fails to Solve Problems It Creates," *The Washington Post and Times Herald*, February 5, 1967]

On February 9, NCPC voted 8 to 2 to approve the general route of the 2.3-mile, \$48 million section of the East Leg Freeway. It would slice off part of the boundary of the National Arboretum and go into a tunnel next to Mount Olivet Cemetery. The segment would wipe out 350 homes and apartments and 26 businesses, mostly small stores, that paid approximately \$115,000 a year in property taxes. Professor Edwards and acting NCPC chairman Louchheim voted against the location, both citing the pending litigation among their reasons.

NCPC also acted on a NCTA proposal for the Connecticut Avenue subway line. The line would be built in a tunnel through solid rock from Dupont Circle to the next station near Woodley Road. It would tunnel under Rock Creek instead of on a new bridge or through the supports of the William Howard Taft Bridge on Connecticut Avenue. NCPC approved additional stations at Port Street and Van Ness Street, but rejected a proposed station below Columbia Road and 18<sup>th</sup> Street because of concerns that the projected use would not justify the added cost of \$11.5 million.

McCarter revealed that NCTA, which was planning to ask Congress for authority to build a second downtown subway line along Independence Avenue, SW., had concluded that the line would pay for itself. The first subway line would cost \$170 million, while the second would increase the downtown construction cost to \$203 million. However, abandoning plans for a subway spur to Columbia Heights would save \$55 million. The *Star* pointed out, "This would mean that with the new downtown subway, total construction costs would be only around \$41 million over previous estimates." [Levy, Claudia, "Subway, Freeway Routes Are Approved," *The Washington Post and Times Herald*, February 10, 1967; "2 Agencies OK Subway For Rock Creek Park," *The Evening Star*, February 10, 1967; "NE Section of Freeway Approved by Planners," *The Evening Star*, February 9, 1967]

Engineer Commissioner Mathe, appearing on WWDC's "Report to the People," said that criticism of the absence of housing proposals for the new design of the North-Central Freeway was premature. "Our plans are not so far along as to warrant criticism." After Congress approved the air rights legislation, "We will be making plans for air rights and hopefully for housing." ["Officials Still Considering Building Housing Above N. Central Freeway," *The Washington Post and Times Herald*, February 19, 1967]

### **Reconsidering Three Sisters**

On March 8, NCPC released its draft of the Year 1985 Comprehensive Plan for the Nation's Capital. The report divided the plan among the city's sections. For the Central Employment Area, the plan called for:

The construction program for highways, transit, and parking facilities should be designed to relieve promptly the greater part of downtown from heavy vehicular traffic.

The construction of the subway system and the completion of the freeway system will do much to achieve this objective (in addition to improving overall accessibility to and from downtown). So should the designation and improvement of selected streets for downtown arterial use, together with the construction of underpasses at key locations.

Neither of these systems will realize its full potential as a diverter, however, unless corresponding attention is given to the systematic provision of parking facilities. Within the downtown area, major parking facilities should be located on sites having direct access to the freeway and arterial systems. Many of these sites may have to be acquired through public action. Publicly created parking facilities uptown and suburban transit stops also will have an important role to play in relieving downtown from heavy vehicular traffic.

For the Near North, the plan predicted that as a result of early subway construction, “the downtown renewal effort should also gather momentum during this period.” Public works projects included completion of the K Street tunnel and the Center Leg Freeways, the Florida Avenue boulevard, and the Connecticut Avenue subway line.

In Capital East Southwest:

The first rapid transit line through CAPITOL EAST should be constructed, and the second line to serve the employment concentration on South Capitol Street and in the weapons plant area should be programmed for early construction in the second stage.

The plan included completion of the East Leg Freeway.

For the Anacostia section, the plan anticipated construction of the rail rapid transit line serving the northeast section of the city, with a station at Benning Road. “An early extension of this line northeast along the Pennsylvania Railroad should be programmed.”

For Northeast, the plan included:

The rapid transit system elements already committed should be completed, with three stops in NORTHEAST—at Rhode Island Avenue, at Michigan Avenue and at Riggs Road . . . .

Approved elements of the freeway system should be completed, including the North Central Freeway and the section of Interstate Route 95 in the District.

In the period 1973-1986, “Further study, including the evaluation of the rapid transit system in operation, will be required before the need for additional improvements to the highway system can be firmly established.”

In North Central, the approved rail rapid transit system should be completed with an extension of the Columbia Heights line to be provided in the later stages of the plan.

Similarly, in the Northwest section, the subway should be extended first to Connecticut Avenue and Van Ness Street, then to Wisconsin and Western Avenues. As for the Georgetown waterfront, direct public involvement on a large scale was needed “to remove the blighting conditions and to develop part of the area for public open space and recreation.” Some of this work would have to be deferred because of pressing needs elsewhere. “Deferral of some phases of the program would also make it possible to plan the redevelopment of the waterfront in conjunction with the proposed tunneling of the Whitehurst Freeway in the latter part of the planning period.”

NCPC planned meetings with community groups to obtain their comments and suggestions. After the period of review, NCPC expected to adopt the plan in 1967. [“1986 Guide Divides District Into 7 Planning Sections,” *The Evening Star*, March 8, 1967]

On March 9, NCPC voted to accept “preliminary geometric design” for the North-Central Freeway between Rhode Island Avenue and Buchanan Street, NE. This action was “step three approval” in NCPC’s four-step process for freeways and bridges. (NCPC approved District highway projects in four stages: (1) the system, (2) geometrics, (3) final geometrics, and (4) ensure the project is built in accordance with final geometrics.)

However, NCPC engaged in a bitter debate over the Three Sisters Bridge before approving, 6 to 5, the location of the bridge. As approved, the bridge would include an approach in Virginia that extended about 550 feet into the Spout Run Parkway. In the District of Columbia, the bridge connected with the Potomac River Freeway at 31<sup>st</sup> Street, NW. The freeway would serve as a mile-long approach between Whitehurst Freeway and the bridge.

Members of NCPC were aware of the lawsuit that Arlington County had filed to block the bridge. In response to the suit, the Justice Department had said that any discussion of adverse impacts on county residents was premature because the location of the bridge was not known. Following NCPC’s vote, Edmund Campbell, the county’s attorney, said the action would “give us a new legal weapon” because the location in Virginia was now specified.

NCPC also received a complaint from Chairman McMillan of the House District Committee:

I feel that there should be a slow-down on some of the highway proposals and attention be centered on such parts as are needed beyond question in the short-range future.

I personally have held the opinion that enough money had been spent in the vicinity of the Whitehurst Freeway.

The prolonged debate about the bridge ended with a split between the six Federal and District officials and the five presidentially appointed members of NCPC. However, the vote itself became a subject of debate, as the *Post* reported:

Further argument over the Three Sisters Bridge broke out after the vote for approval when minority members questioned the right of Robert Horne, alternate member representing the National Park Service, to vote for the project. The park land in dispute is maintained by the National Park Service and debate yesterday indicated that Horne's right to vote may be taken up with the Interior Department.

Louchheim raised a point of order regarding Horne's vote. Although NCPC counsel Shear ruled that Horne was entitled to vote, Chairman Rowe overruled him. Flor reported that she did so "contending the Park Service previously had agreed to preserve Spout Run Park in Arlington. The approaches for the bridge would intrude upon the park land and Interstate Route 266 would have to be built through the park to reach the bridge."

Shear concluded that "the action was not final." He said that NCPC had decided to submit the question to Secretary Udall. NCPC would vote on the bridge again at its April meeting. However, Engineer Commissioner Mathe said that "as a practical matter," the District considered the vote final. [Levy, Claudia, "Site Approved for Three Sisters Span," *The Washington Post and Times Herald*, March 10, 1967; Flor, Lee, "3 Sisters Bridge Site Voted After Bitter Fight," *The Evening Star*, March 9, 1967; Flor, Lee, "3 Sisters Site Not Final, Counsel Says," *The Evening Star*, March 10, 1967; Flor, Lee, "Interior Claims a Vote On Three Sisters Bridge," *The Evening Star*, May 5, 1967]

As reporters requested comment from the Interior Department about the dispute, Udall assistant Pozen was asked to reconcile the pro-bridge vote with the fact that Secretary Udall's Potomac Planning Task Force opposed the bridge. The task force had been appointed 2 years earlier following President Johnson's pledge to make the Potomac River "a model of scenic and recreation values for the entire country." Its report had not yet been published, but Von Eckardt reported that it called the Three Sisters Bridge "a major threat to present values" that should "somehow be averted." Officials should make "every effort" to prevent damage to the Potomac Palisades from the "ill-considered bridge with overbearing mazes of ramps and roads."

Pozen explained:

Support of the Three Sisters Bridge is part of the agreement between George B. Hartzog Jr., director of the National Park Service, and Rex M. Whitton, the former Federal Highway Administrator. It is part of the price we had to pay to get the East Potomac Freeway [sic] tunneled under the Tidal Basin.

He did not know if Secretary Udall would back Hartzog's agreement with Whitton or the task force's opposition. However, as Lee Flor reported, Secretary Udall had previously "insisted on staying out of disputes over the Three Sisters Bridge." He had delegated the issue to NPS.

The agreement had not been a handshake or secret deal. Flor pointed out that the agreement had been signed the previous May and made public. "The agreement has been cited by citizen groups suing the planning commission and District government." They argued that in view of the agreement, NPS should not vote on NCPC decisions on highway projects.

(The Potomac Planning Task Force report also stated, “The new highway that must replace the present hideously constructed Whitehurst Freeway should be either underground or so thoroughly assimilated in the surrounding urban fabric that it neither obtrudes from it nor conflicts with it.”) [Von Eckardt, Wolf, “Secret Bridge Pact Is Revealed,” *The Washington Post and Times Herald*, March 11, 1967; Flor, Lee, “Planners to Study 3 Sisters Wrangle,” *The Evening Star*, March 11, 1967]

Neither the *Star* nor *Post* agreed with NCPC’s decision to defer the vote. In view of NCPC’s call for a coherent freeway system in its draft Year 1985 Comprehensive Plan, a *Star* editorial indicated, the members “would normally be expected to support that essential element of their plan. The NCPC, however, almost never acts normally.” The minority, having lost their battle “to purge freeways from the plan,” aimed their “anti-freeway popguns this week at plans for one of the systems [sic] most crucial segments, the Three Sisters Bridge.” Although “the Rowe militia” was outvoted, they are still arguing the point. They probably would continue to do so until the freeways are built “or the planning commission gets a chairman whose views on urban transportation are not mired in the 19<sup>th</sup> Century.” The *Star* editors opted for the latter option.

The *Post* editorial began:

“The National Capital Planning Commission has cleared the way for work to begin on the Three Sisters Bridge across the Potomac next year . . .” began a story in this newspaper on August 6, 1961.

Five and a half years later, NCPC had voted to approve the location for the bridge. “The greatest menace to orderly development in Washington is the city’s inability to make up its mind.” If people thought that such delays would result in “unusually good design,” they need only look at the Theodore Roosevelt Bridge. After years of debate, “nothing about it rises above sedate mediocrity.”

The uncertainty about the Three Sisters Bridge was delaying other decisions, such as the location of the Potomac River Freeway. “Meanwhile, of course, the badly needed [George Washington Memorial] parkway down the north bank of the Potomac comes to an abrupt end in a patch of mud, where it waits for the planners downstream to decide how to proceed.” [“Time for a Change,” *The Sunday Star*, March 12, 1967; “Over and Over,” *The Washington Post and Times Herald*, March 12, 1967]

Chairman Rowe spoke with Secretary Udall, who agreed with the Justice Department that NPS did not have a conflict of interest in voting on freeways. Flor wrote:

It also was reported that another compromise was brewing over the exact location of the bridge. Last year the Arlington County staff recommended that it be tunneled through the Potomac Palisades bluffs, so it would not ruin parkland, and this compromise may be studied more by the planning commission and Interior Department. [Flor, Lee, “Interior Claims a Vote On Three Sisters Bridge,” *The Evening Star*, April 5, 1967]

### Three Sisters Tunnel

On March 28, Secretary Udall followed up on the discussion with Chairman Rowe by writing to Secretary Boyd about the Three Sisters Bridge controversy. Secretary Udall referred to the agreement of May 25, 1966, in which NPS accepted “a new Potomac crossing between Virginia and the District of Columbia at Spout Run.” Since then, “some preliminary studies have been made of a possible tunnel crossing of the Potomac at this location”:

It is my understanding, further, however, that these preliminary tunnel studies have not been explored to the point where meaningful costs (economic, social, esthetic, and cultural) and engineering feasibility can be weighed in comparison to similar costs and engineering feasibility involving a bridge crossing.

He believed that “the preliminary tunnel study should be completed to the point where such meaningful comparisons can be made.” In view of the funding made available to the District of Columbia for the project, he did not want to delay the highway program. “I believe that the additional study I suggest can be completed in not more than 60 days on the basis of the preliminary information already developed.”

Secretary Boyd forwarded the letter to Administrator Bridwell to prepare a reply for the Secretary’s signature.

At NCPC’s April 6 meeting, Chairman Rowe told the members about her meeting with Secretary Udall and his agreement to ask Secretary Boyd to study the tunnel option. In a prolonged debate, General Mathe complained that the bridge issue had already taken too long to resolve. “We have had our little dispute, and the chair went well beyond what she was supposed to do. Tunnel studies in the past have shown that a tunnel is not feasible.”

General Mathe considered the Three Sisters Bridge a “local problem” for local officials, including NCPC, to resolve, not the Interior or Transportation Departments. Louchheim replied, “What we are trying to do is protect the banks of the Potomac from the highways . . . .” He then withdrew his objection to Horne’s vote on behalf of Hartzog the previous month. Hartzog then made a motion to reconsider the vote, thus erasing the 6 to 5 vote in support of the bridge.

NCPC decided to delay the vote until May 4, but stipulated that it wanted Secretary Boyd’s study by April 19. According to the *Star*, Chairman Rowe “was jubilant over the vote.”

Director Airis, saying his department had a great deal of information from studying past tunnel proposals, promised to work with Federal officials to speed the study. General Mathe said his staff would “give the study everything we’ve got.” [Severo, Richard, “NCPC Nullifies Three Sisters Vote; Tunnel Study Due,” *The Washington Post and Times Herald*, April 7, 1967; “Road Aides to Push River Tunnel Study,” *The Evening Star*, April 7, 1967]

*Star* editors considered the decision to study a tunnel alternative inevitable. This, after all, is a time-tested tactic of delay for the bridge opponents.” A similar study delayed the Theodore Roosevelt Bridge “for months before the bridge was finally unblocked.” The new study was due in only 2 weeks, but that was “not as short as it sounds”:

Studies of tunnel possibilities at this location were made earlier in the Three Sisters game, and rejected. Beyond that, a vast amount of data collected during the Roosevelt dispute concerning the river bed and tunnel construction techniques is readily available.

The editors predicted the tunnel would be rejected on the usual grounds – cost and engineering issues such as excessive grades on the Virginia side:

The major absurdity in this whole diversion, however, is that it seeks an alternative to a bridge design which is in no sense offensive, and which has won high praise from nearly everyone who has studied it, including officials of the National Park Service and the Fine Arts Commission. The effort is an obvious stall. And it is too bad that Secretary Udall permitted himself to be persuaded to go along with it. [“The Tunnel Caper,” *The Sunday Star*, May 9, 1967]

The *Post*'s editors were equally dismissive. NCPC, they wrote, “is rarely useful, but it is always amusing.” Having approved the Three Sisters Bridge in March after years of delay, NCPC, “appalled at its own bravery . . . hastily revoked its decision to await further study.” NCPC’s “comedy comes, of course, at a price.” Citizens may wonder why general planning “has fallen into contempt among those people in Washington who must make decisions” or why NCPC’s “plans and decisions very rarely have any visible effect upon the development of the city.” Citizens seeking an answer to these puzzles “have only to regard the whimsical history of the Three Sisters Non-Bridge.” [“More Farce,” *The Washington Post and Times Herald*, April 11, 1967]

The cost of delay became clearer to the public on April 10 when Chairman Natcher’s appropriations subcommittee released the transcript of its hearing a few weeks earlier. The transcript revealed that the cost of the District’s Interstate network had increased by nearly \$150 million (from \$489 million to \$639 million, with the District’s share being around \$60 million). Airis told reporters the increase was mainly a result of “the yearly escalation in land and construction costs.” NCPC decisionmaking was another factor resulting in costly design changes, as reflected in the May 1966 agreement for extensive tunneling that allowed the freeway program to move forward.

Airis told the subcommittee that the District could meet the slightly extended deadline for Interstate completion “provided, of course, that planning decisions continue to be made and that further cutbacks or freezing of program funds are not imposed.”

General Mathe was less optimistic:

It has . . . been my observation that we are not out of the woods yet on the program; that each decision made at the Planning Commission is almost a forced decision; and that we still have . . . many difficult decisions to obtain from the Planning Commission.

He added that NCPC “keeps going back to the controversy of freeways versus no freeways, and therefore each decision is made after we re-travel some of the same area over and over again.”

Chairman Natcher reiterated that on the Appropriations Committee “we have believed sincerely for a number of years that there is a place in our Capital City for the freeway system . . . along with a rapid transit system.” In view of the many positive steps taken on the District’s freeway program, Chairman Natcher was assured that the May 1966 agreement was holding firm, but he warned Airis:

Now, if at any time in the future, Mr. Airis, they attempt to proceed as they have done in the past, we will take the same action that we took last year, and I say that to you frankly . . . we are not going to let them do this to you. [Flor, Lee, “Natcher Warns District on Freeways, Subway,” *The Evening Star*, April 11, 1967; “D.C. Freeway Cost Estimate Is Increased by \$160 Million,” *The Washington Post and Times Herald*, April 11, 1967]

Despite the *Star* editorial’s comments about the reception the design had received, the Commission of Fine Arts had reviewed preliminary sketches for the Three Sisters Bridge in January and said it wanted an elegant single span. On April 19, the commission reviewed the District’s second design by Gerald I. Sawyer for what the *Star* described as “a gentle-arched strip, with an 800-foot span, and with four piers, two resting in the water and two on land.”

The Commission rejected the design as ugly. Chairman Walton said “it may be improper to have any bridge at all” if this was the best the engineers could propose. “This design is an aesthetic disaster and nothing but a bad version of the Theodore Roosevelt Bridge, which is bad enough.” Commission Member John Carl Warnecke said the design looked like “just another freeway anywhere in the country.” Commissioner Gordon Bunshaft told District officials the commission wanted “the greatest bridge ever built” for this scenic location. Such a bridge should be an arched concrete span, one that is “exciting and ingenious.”

When the engineers pointed out such factors as cost, loads, and flooding, the commissioners suggested that in view of public objections, if the District wanted to build the bridge, it may take more than engineering talent. [“Fine Arts Unit Rejects 3 Sisters Bridge Design,” *The Evening Star*, April 20, 1967; Von Eckardt, Wolf, “Engineers Told to Make 3 Sisters ‘The Greatest Bridge Ever Built,’” *The Washington Post and Times Herald*, April 20, 1967]

Secretary Boyd sent letters on May 4 to Secretary Udall and Chairman Rowe before NCPC’s meeting on May 5. His department had worked with the District Highway Department to study four alternatives for a tunnel to replace the Three Sisters Bridge. The tunnel alternatives ranged in cost from \$176 million to \$214 million, compared to \$110 million for the bridge. His conclusion was that the tunnel was “a less desirable solution” than the bridge. However, he added that his conclusion was a response to “the narrow context of the question as presented to me.” In a broader context, he would “seek the cooperation of the Secretaries of the Interior and Housing and Urban Development in evaluating whether the proposed project is responsive to national and community goals for making this city a more desirable place to live . . . .”

His representative at the NCPC meeting, Assistant Secretary for Policy Development M. Cecil Mackey, emphasized that this answer was in response to the narrow question Secretary Boyd had been asked. The Secretary “did not intend to pass judgment on the question of bridge or no bridge.” He continued:

I think that it is probably safe to assume that that is a fair question that would go into the review of a request for a grant of federal money for a proposal of this sort.

Under the charge which we have, I don't think you can confine our review in such a way that we wouldn't get into that question. That is the intent of the Secretary's letter.

These comments were a surprise because NCPC members were operating on the assumption that the need for a crossing was no longer in question, whether individual members liked it or not.

After District highway officials explained the four tunnel alternatives, Chairman Rowe called a recess and invited commission members to her office for a meeting that excluded the press.

After NCPC resumed the public meeting, Director Hartzog offered a resolution asking Secretary Boyd to "complete at the earliest practicable date his review of the necessity for additional laneage in the interstate system now designated I-266." If additional laneage was needed, the resolution asked the Secretary to study "alternate locations and proposals for such laneage, including especially the up-grading of the Jefferson Davis Highway to interstate standards to accommodate this need."

The resolution included one concession for bridge supporters. If the Secretary concluded that additional laneage was needed and that "no feasible and prudent alternative" to the bridge existed in the vicinity of Three Sisters Islands, "the Commission approves the geometric design (stage 3) of the interstate route 266 Potomac River crossing . . . provided the District of Columbia connections between the bridge and the interstate east of Wisconsin Avenue are placed in cut and [cover] tunnel to be approved by the Commission."

Hartzog said that even if Secretary Boyd said the bridge was needed, NPS would not grant a construction permit for the Three Sisters Bridge unless the plan included tearing down the Whitehurst Freeway as called for in the resolution's reference to a cut-and-cover tunnel.

Louchheim, according to the *Post*, "was elated" by developments. He issued a statement saying he was satisfied that if Secretary Boyd conducts an objective study, he will conclude that the bridge is not needed. "We have great confidence in Secretary Boyd and his sincere concern for the social and aesthetic values in his consideration of highway projects." [Flor, Lee, "Three Sisters Bridge Wins Limited Planner Approval," *The Evening Star*, May 5, 1967; Severo, Richard, "3 Sisters Bridge Proposal Is Passed To Boyd for Study," *The Washington Post and Times Herald*, May 6, 1967]

Representative Gude warned that key Members of Congress may be annoyed by NCPC's decision to again delay approval of the bridge. He was supportive of rail rapid transit and, as a State legislator, had helped establish the Washington Suburban Transit Commission that represented Montgomery and Prince George's Counties under the interstate compact. However, he told WWDC's "Report to the People, "Subways [alone] aren't the answer" to the area's transportation problems. "There have been 20 years of studies costing a million a year. It's time we got moving."

With the Capital Beltway luring growth away from downtown, he said, the new growth pattern resembled an attractive doughnut with the District as the empty hole in the middle. He referred to Chairman Natcher's effort to hold up District matching funds for NCTA, fearing that he might do so again following NCPC's decision. ["Gude Prods for Action On Three Sisters Span," *The Sunday Star*, April 9, 1967]

For *Star* editors, the situation was clear. NCPC had approved the bridge as part of the May 1966 compromise agreement. Since then, one of the participants, Administrator Whitton, had left the scene and the U.S. Department of Transportation and Secretary Boyd had arrived. "And this process of change apparently has aroused in the opponents of highways in Washington –

represented by the leadership of the National Capital Planning Commission – new hopes of returning the freeway program to a state of confusion." First, they asked Secretary Boyd to study whether a tunnel would be a better alternative than a bridge at Three Sisters Island. He concluded that a bridge was preferred:

And that should have ended the matter. Of course it didn't.

Instead, NCPC agreed in "a secret meeting" to approve the bridge only if Secretary Boyd, after further study, agreed additional lanes were needed, that no alternative to the bridge could meet that need, and other conditions were satisfied:

Ironically, the new transportation secretary had made it plain that he would like to stay out of local controversies, but that probably is a desire he cannot fully realize in the case of the Nation's Capital.

In the case of the Three Sisters Bridge, "he should have no difficulty extricating himself." All he had to do was ask for a briefing "on the countless studies and decisions affecting this project in the past. They clearly justify the need." ["Back to Confusion," *The Evening Star*, May 12, 1967]

### **"Feasible and Prudent"**

NCPC's decision to include the phrase "feasible and prudent" in its May 5 resolution was not a random choice of words. Section 4(f) of the Department of Transportation Act of 1966 prohibited the Secretary of Transportation from approving "any program or project which requires the use of any land from a public park, recreation area, wildlife and waterfowl refuge or historic site unless (1) there is no feasible and prudent alternative to the use of such land, and (2) such program includes all possible planning to minimize harm to such park, recreation area, wildlife and waterfowl refuge or historic site resulting from such use."

The Three Sisters Bridge involved park land in Arlington County, recreational areas in the District, and the Georgetown waterfront, which the Department of the Interior had designated an historic landmark. Therefore, NCPC put its resolution in the context of Section 4(f).

On May 28, Lee Flor reported that BPR had approved the estimated cost of the Three Sisters Bridge for inclusion in the 1968 ICE. BPR approved the estimate "just as [NCPC] was balking at a clear-cut approval for the bridge, it was discovered yesterday."

Flor added that General Mathe had written to Secretary Boyd to point out that officials in the new department had studied the bridge many times:

Mathe asked Boyd to give the planning commission “early notification that Boyd’s agencies previously had studied the bridge question, always coming up with the conclusion that the bridge was needed.

There is a time to end planning, however, and to proceed with implementation. We are already overdue in this respect. [Flor, Lee, “Planners Balk Just as Span Clears Hurdle,” *The Sunday Star*, May 28, 1967]

As officials of the Department of Transportation, which had begun operations less than 2 months earlier, began considering the resolution, they concluded that the requested investigation involved broader questions than the need for the Three Sisters Bridge. Under Secretary Sitton, who had been the primary author of the 3C language in the Federal-Aid Highway Act of 1962, suggested putting the request in the context of the Washington area’s entire Interstate System network. In an internal summary, he and his assistant, Charles Carroll, explained that on the surface, the issue appeared to be narrow and limited to the Three Sisters Bridge, but “on closer examination, much broader questions concerning the traffic service features of Interstate expressway corridors in the Washington Metropolitan Region are evident”:

One such (and even greater) concern is the question of whether the planning process for transportation development in the Washington region has given appropriate consideration to the impact which the planned highway development program, involving financial commitments of over \$750 million during the next five years, will have upon the historical, cultural, social and economic characteristics of the Nation’s Capital. Without question, the transportation system profoundly influences the behavior patterns of an urban region and a city’s developing form and organization – more so probably than any other series of urban public policies and development programs.

On July 27, Secretary Boyd held a staff meeting on the issues. As for I-266 and the Three Sisters Bridge, staff recommended that the Secretary remove them from the Interstate System because the bridge had not been studied in the context of Section 4(f).

Beyond I-266, staff members had been impressed by the Arthur D. Little report that had concluded that the freeway network was based on insufficient data and questionable assumptions and forecasting techniques. They also were impressed by the House District Committee’s report in 1965 stating that “the projection and forecasts of future needs made by highway officials show trends contrary to actual experience and do not seem to justify some of the proposed program. Accordingly, a careful objective review and reappraisal is desirable.” (This quote is from Chairman McMillan’s report dated October 8, 1965, on the revenue bill, cited earlier.)

In addition to rejecting I-266, staff recommended that Secretary Boyd:

- Remove the designation I-70S from the District’s north central area along the Baltimore and Ohio Railroad tracks and re-route it along the north bank of the Potomac River as a

parkway between I-495 at the Cabin John Bridge and I-66 at the Theodore Roosevelt Bridge;

- Remove I-695 from the Interstate System between I-66 at the Theodore Roosevelt Bridge and I-95 near the 14<sup>th</sup> Street Bridges;
- Retain I-66 as a connection from the Roosevelt Bridge to some point on I-95 between K and V Streets to the north, with the routing to result from studies underway by the District of Columbia; and
- Retain the remainder of the Interstate System in the District as designated.

Administrator Bridwell, who attended the staff meeting, strongly dissented in a memorandum to Secretary Boyd on August 3. He pointed out that “no official nor responsible unit of Government or organization has presented any evidence which cast doubt on the traffic need for Interstate Route 266.” During the meeting, he had taken the “strong position and recommendation that we go forward as diligently as possible to construct the entire Interstate System as designated in the metropolitan area.” The staff recommendations “did not take into account any analysis of traffic requirements and effect upon systems operation and ignored the several criteria which, as a matter of law or policy, the Department of Transportation requires every State to meet.”

He cited four provisions of Title 23 that the recommendations had not considered:

1. Section 134 of Title 23 which states that the Secretary shall not approve “any program for projects in any urban area of more than fifty thousand population unless he finds that such projects are based on a continuing comprehensive transportation planning process carried on cooperatively by States and local communities in conformance with the objectives stated in in this section.”
2. Section 101(b) which states that it is the intent of Congress that “local needs, to the extent practicable, suitable, and feasible, shall be given equal consideration with the needs of interstate commerce.”
3. Section 103(d) which states that the routes of the Interstate System “shall be selected by joint action of the State highway departments of each State and the adjoining States, subject to the approval by the Secretary as provided in subsection (e) of this section.”
4. Section 109(b) which says that standards for the Interstate System “shall be adequate to enable such project to accommodate the types and volumes of traffic anticipated for such project for the twenty-year period commencing on the date of approval by the Secretary” and that “the Secretary shall apply such standards uniformly throughout all the States.”

He said of the idea of shifting I-70S to a parkway along the north bank of the Potomac River:

Item 4 above has specific application to the decision to approve as a part of the Interstate System a parkway type highway from the outer belt to 26<sup>th</sup> Street along the north bank of the Potomac River. Any rational assignment of traffic to that corridor would require more than a four-lane facility under the 20 year statutory requirement and the decision to build it to parkway type standards such as have been applied to the portion already constructed by the Park Service does not satisfy the Interstate System standards which the law says shall be applied uniformly throughout all the States.

He pointed out that such a shift “does not look at other alternatives or other potential solutions.”

He was sympathetic to concerns about the cost of building the South Leg in a tunnel from the Theodore Roosevelt Bridge past the Lincoln Memorial and Tidal Basin to 14<sup>th</sup> Street:

However, we presently face and will continue to face similar kinds of problems in many urban areas as the Interstate System progresses towards completion. A decision to drop a segment of the System merely because it seems to have a high price tag does not take advantage of the potential of a systematic analysis or evaluation of the cost as compared with community (not highway user) benefits.

He also commented that the recommendation to leave the North Leg on the System “as some undefined connection between the 26<sup>th</sup> Street interchange and I-95 [because] this is under study and is subject to analysis is not consistent with the type and degree of analysis which went into the above described decisions.”

These staff recommendations did not “square with DOT’s stated policies that transportation will be considered as a total system and will be carefully analyzed both from a standpoint of total transportation requirements and in support of other public policy goals and objectives.” He had been trying to apply this concept in considering Interstate controversies in other cities, such as Boston, New Orleans, and San Francisco, each of which could “be used as pilot or demonstration projects.” If the staff recommendations were adopted, they would:

- Deprive Washington of application of the findings from successful pilots;
- Deny the city “needed highway facilities without offering any alternatives”;
- Set a precedent for opponents of urban freeways throughout the country “again without being able to offer any alternatives or any meaningful understanding of the consequences”; and
- Deny to Washington and other cities the opportunity to use the new freeways “as a catalyst for urban aesthetic, recreational, cultural, and other forms of social improvement.”

In an August 8 memorandum to Assistant Secretary Mackey, Deputy General Counsel R. Tenney Johnson dismissed the legal objections Bridwell had raised. The provisions Bridwell cited did not “demonstrate any illegality in those recommendations.” He emphasized that he was addressing only the legal provisions Bridwell had cited and was “not passing a legal judgment on the recommendations themselves.” He suggested:

The decisions of the Secretary recommended in the meeting of July 27 can be phrased in terms such as “I am prepared to approve . . .” and formal approval would be given only when conforming proposals are cleared with the local agencies and formally submitted. This would take care of any technical objections implicit in the sections of law cited by Lowell regarding criteria to be met before formal approval is given.

This internal debate took place behind closed doors. Neither outside officials nor the media was aware that the U.S. Department of Transportation was considering extensive changes to the area's Interstate System.

(The internal documents cited in this section are from "District of Columbia Highway Dispute," part of an unpublished *History of the DOT in the Lyndon B. Johnson Administration*, Volume 4, The compilation is in the U.S. Department of Transportation Library.)

### **District Reorganization**

In 1966, President Johnson had supported home rule without making it a priority after the failure of the plan in 1965 despite the White House's vigorous efforts. Professor Tom Lewis cited the Washington Board of Trade's ruse in working to defeat the measure as one of the reasons:

"It was a bitter, bitter defeat," said John W. Hechinger, a prominent District businessman with a reputation for appointing and advancing blacks and women in his hardware and home improvement [stores]. Hechinger had worked [with] Johnson to secure the bill's passage. "Here was a man who had devoted so much of his energy to bringing people into the political system through civil rights legislation and the War on Poverty and yet he couldn't manage to bring the basic right of self-determination that all other Americans enjoyed to the nation's capital." [Lewis, pages 401-402]

The President could see the situation clearly. After all the efforts the White House had applied to securing the discharge petition in 1965, it, too, had failed to secure home rule for the city. He had to get around Chairman McMillan, who would continue to block home rule legislation as he had successfully done in years past. Now, in 1967, President Johnson decided on a different approach that Professor Lewis referred to as "a half measure," but one that Chairman McMillan might not be able to block.

On February 27, 1967, President Johnson issued a special message on the Nation's capital. He began, "Our goal for the Nation's Capital is a city of which all Americans can be proud." The city was the ninth largest in the country and "the center of the fastest growing metropolitan area in the country." The District's citizens "have all the problems – and are entitled to all the rights –

of the citizens of any large city in this country." These problems included "a rising crime rate, traffic congestion and parking shortages, decaying buildings and homes and inadequate health and education service." To help citizens meet those needs, "the District must have the most responsive and efficient government we are capable of providing."

He had submitted home rule legislation to the 89<sup>th</sup> Congress, he said. The Senate approved the bill, but the House did not, even though "a majority of its members clearly went on record in support of the principle of home rule" by signing the discharge petition.

He still believed that home rule was the best option, but improving the District government "need not await the passage of home rule legislation." For that reason, he planned to "shortly transmit to the Congress a reorganization proposal to strengthen and modernize the government of the

District of Columbia.” It would replace the current organization established nearly a century earlier:

The reorganization plan I propose would create a mayor-council form of government – the form which has been found most successful in the Nation’s 27 largest cities. Under the reorganization plan, the President, subject to Senate confirmation, would appoint from among District residents a single Commissioner as chief executive and a Council of nine Members.

The single Commissioner would serve at the pleasure of the President. Council members would serve two-year terms, five to be appointed one year and four the next. The staggered terms would insure continuity of experience on the Council.

The powers and responsibilities which the three-man Board of Commissioners presently have would be apportioned between the single Commissioner and the Council. The Commissioner would be assigned the executive functions now vested in the Board of Commissioners. Like most mayors, he would be given responsibility and authority to organize and manage the District Government, to administer its programs and to prepare its budget of revenues and expenses.

The Council would be responsible primarily for making local rules and regulations – the District’s city ordinances. This would include the quasi-legislative functions which are now performed by the Board of Commissioners, such as licensing rules, the issuance of police regulations and the establishment of rates for property taxation. It would also review and approve the Commissioner’s budget for submission to the President.

In addition, he recommended an amendment to the Constitution to give the District one Representative in the House “and such additional representation in the House and the Senate as the Congress may from time to time provide.” In the meantime, he recommended that Congress pass legislation giving the District a nonvoting delegate similar to the delegate representing Puerto Rico and the delegates who represented Alaska and Hawaii before they became States.

After discussing other local issues, President Johnson concluded that, “It will not be easy to achieve our goal for the Nation’s Capital – a city in which all Americans can take pride.” Nevertheless, “The task is difficult and success will take time. We must – and we will – succeed.”

Behind the scenes, the chief advocate for the reorganization would be Stephen J. Pollak, who had replaced Charles Horsky as White House Adviser for National Capital Affairs on January 31, 1967. Pollak, 38, was First Assistant in the Civil Rights Division of the Department of Justice before President Johnson announced the appointment. In prior years, he had been an attorney with Covington and Burling (1956-1961), assistant to the Solicitor General (1961-1964), and legal counsel to the President’s Task Force on the War Against Poverty (1964) before moving to the Office of Economic Opportunity as deputy general counsel. He joined the Civil Rights Division in April 1965. He had been chairman of the Washington Planning and Housing Association.

Pollak and Horsky, who left the White House to return to Covington and Burling, were friends. They had worked together at the law firm, the planning association, and the American Civil Liberties Association. Horsky was “enthusiastic” about his replacement.

In announcing Pollak’s appointment, President Johnson said the adviser would “handle a wide range of national urban affairs, not just District matters.” Anonymous sources told reporters that Pollak was “under orders to do his work in the District’s behalf behind the scenes and not take as active a public role as did Horsky.” [Grigg, William, “Pollak Succeeds Horsky As Johnson D.C. Adviser,” *The Evening Star*, February 1, 1967; Milius, Peter, “U.S. Civil Rights Aide To Succeed Horsky,” *The Washington Post and Times Herald*, February 1, 1967]

ADA Chairman Donald Green was one of the critics of the White House reorganization idea. He wrote to the White House to suggest that the plan be made available to the public 6 weeks before it was sent to Congress. The gap would allow time for public hearings and comment that would allow the White House to revise the plan to reflect “practicable revisions brought to light during the hearings.”

Pollak rejected the idea, saying members of Congress would not want details of the plan to be made public before they had seen it. He said he’d be willing to discuss the plan during a meeting with an ADA delegation, but Green said, “we told him we did not want privileged information but wanted community involvement.”

Green wrote again to the White House to request further consideration of his idea for public involvement. Strong citizen support, he said, would be needed to move the plan through Congress. As for Pollak’s argument, Green said, “It is just another case of residents of Washington being left out when important decisions are made concerning their government.”

Despite ADA’s concerns, Tilford E. Dudley, chairman of the D.C. Democratic Committee, supported the plan. Public involvement would be nice, he said, but “we will let the White House call the shots” on how to secure approval.

David Carliner of the Washington Home Rule Committee said that Pollak had discussed the proposal with his group on an off-the-record basis. “We support it as a welcome step toward self-government. We can appreciate the President’s problems in sending it to Congress and we do not want to second guess him.” Carliner had joined with Bishop Williams of the Bible Way Church as co-chairmen of the new Committee to Support the President’s Reorganization Plan. [Carper, Elsie, “2 City Groups Back Johnson D.C. Plan,” *The Washington Post and Times Herald*, April 19, 1967]

By mid-May, the President was reportedly having second thoughts. He met with House and Senate District Committee members who questioned whether the city government needed reorganization, with some members saying the District ran well and lacked the corruption found in other cities. They suggested that 1967 was not the year for Congress to consider such a plan in view of the many other issues under review. Further, House District Committee members were upset that they would be bypassed; reorganization plans are handled by the Committee on Government Operations.

As for details, they asked if the single commissioner should be a member of the President's party and a District resident or the best nonpolitical city manager in the country. As for the makeup of the council, they asked if it should consist of six Democrats and three Republicans, as the President had suggested, or be nonpartisan – the best men or women, regardless of party.

Amid rumors that the President might postpone the reorganization plan, he said, "No decisions have been made one way or the other." He denied that the White House would drop the idea. "I don't know whether we could abandon something we hadn't launched." [Elder, Shirley, "D.C. Reorganization Stalled by Johnson," *The Evening Star*, May 19, 1967]

President Johnson transmitted Reorganization Plan No. 3 of 1967 to Congress on June 1:

The plan I submit today is more than a matter of routine reorganization. Its vital purpose is to bring Twentieth Century government to the Capital of this Nation: to strengthen and modernize the government of the District of Columbia; to make it as efficient and effective as possible . . . .

Under the plan, subject to Senate confirmation, the President would appoint a single Commissioner as chief executive and a bipartisan Council of nine members. The Commissioner would serve a four-year term, corresponding to that of the President. Council members would serve three-year terms, with three members to be appointed each year. The staggered terms would insure continuity of experience on the Council . . . .

The Commissioner would be assigned the executive functions now vested in the Board of Commissioners. He would be given responsibility and authority to organize and manage the District government, to administer its programs and to prepare its budget. The plan also provides for an Assistant to the Commissioner to help him carry out these responsibilities.

The Council would be assigned the quasi-legislative functions now performed by the Board of Commissioners. The plan describes more than 430 functions which would be transferred to the Council. These include major responsibilities such as the approval of boundaries and plans for urban renewal, establishment of rules governing the licensing of professions, and setting of rates for property taxation. The Council would also be empowered to review and revise the Commissioner's budget before submission to the President.

Based on interactions with Members of Congress, the current commissioners, and others, the White House had modified the plan in four ways:

- First, the Commissioner could veto council actions that he disagrees with. The council could override a veto by a three-fourths vote of its members.
- Second, the reorganization plan extended the length of service for each council member to 3 years instead of 2. "The reduction in turnover and increase in experience would add strength to the Council."

- Third, salaries of the council members, including the chairman and vice chairman, would be increased “to reflect their important responsibilities.”
- Fourth, “the plan recognizes that the machinery of the District’s Government, no matter how modern, cannot realize its highest purpose unless it is infused with the most experienced, informed and able leadership.” The “best talents” must be found to fill the positions of Commissioner and assistant to the Commissioner. To balance the need for the best talent in the country and local involvement, the plan provided that, subject to Senate confirmation, “at least one of them be a resident of the District for three years prior to appointment.”

The plan would “provide improved management of the municipal responsibilities” and bring savings to District taxpayers even though the “overall costs will not be less because of the increasing scale and complexity of municipal government.” Savings “cannot be itemized at this time.” At the same time, the plan would not “in any way detract from the powers which the Congress exercises with respect to the District.”

The plan was “in no way a substitute for home rule . . . [which would] provide the District with a democratic government – of, by and for its citizens.” Home rule was “the truest course” and he would continue to work for that. In the meantime, “I recommend that the Congress allow the reorganization plan to become effective.”

The reorganization plan would go into effect in 60 days unless the House or Senate approved a resolution “disapproving” the plan by simple majority. The plan was not subject to change in committee or by amendment during debate on the House or Senate floor. The Committees on Government Operations in the House and Senate would have jurisdiction.

Ben A. Franklin, writing in *The New York Times*, put the plan in perspective. President Johnson “made his latest move against considerable odds in Congress, but also under mounting pressure to forestall municipal chaos in the capital”:

The risk of another, 1965-style House defeat on a District of Columbia plan was weighed against repeated warnings that the existing city government is near paralysis in the face of what may be a taxing summer of racial unrest. On the strength of compromises in the White House plan, which has some House opponents, the decision was finally made to submit the proposal.

The position of chief commissioner was “already being widely described as that of ‘mayor.’” The plan gave the “mayor” an “unusually strong veto power,” requiring a three-fourths vote of the council to override, compared with a two-thirds majority common “in American governmental practice.” In addition, the “mayor,” unlike members of the city council, did not have to be a prior District resident. (Either the commissioner or assistant commissioner, but not both, must have been a District resident for at least 3 years.) This difference would allow the President to recruit the best person for the job from around the country. “It also tended to placate segregationists’ fears of a local Negro ‘mayor,’ although the appointment of a Negro was not ruled out.” As for the council, Pollak “specifically declared that ‘race would be one of the

factors' in selecting the councilmen. No more than six would be of one political party. A majority, however, could be – and are expected here to be – Negroes.”

The possibility of civil unrest was another factor in the decision to proceed with the plan:

The reorganization device, if it works, also is expected to limit the effectiveness in Washington this summer of Stokely Carmichael, the militant Negro leader and former chairman of the Student Nonviolent Coordinating Committee. Mr. Carmichael said last month he would come here for a summer home rule campaign among Washington Negroes, an announcement that alarmed some community leaders, including some Negroes.

Southern opposition to home rule for Washington has been at least partly a reflection of segregationist views about a city whose population is 64 per cent Negro, and Southern members were aroused. One of their fears has been that a predominantly Negro city council would gain influence over the policy in this crime-ridden city.

The Senate, Franklin explained, was “not expected to take up the matter at all, thus extending their tacit approval.” [Franklin, Ben A., “Johnson Presses His Plan on District Home Rule,” *The New York Times*, June 4, 1967]

(On May 4, Carmichael had used a fundraising letter to announce that SNCC would be “conducting a major project in Washington, D.C., where almost a million people, the majority black, have long been denied a voice in government – in their own affairs.” As it turned out, however, he spent little, if any, time in Washington or fighting for home rule during the summer, with his focus on other issues around the country and the Vietnam War. The city did not experience the feared racial turmoil that Carmichael, who had begun using the term “Black Power” in June 1966, might have inspired that summer. [“Carmichael Confirms D.C. Is Target,” *The Evening Star*, May 5, 1967])

The House District Committee, the most vocal opponents of reorganization, planned a two-pronged attack. First, Representative Nelsen introduced legislation that was identical to the President’s plan but that, as legislation, would be referred to the District Committee, not the Government Operations Committee. As legislation, the bill also was subject to amendment, in contrast to the reorganization plan that could not be changed. The District Committee planned to hold hearings on its bill.

Second, the committee was considering a disapproval resolution. “They haven’t proved anything to me,” Chairman McMillan said. [Elder, Shirley, “House Unit Maps End Run On City’s Reorganization,” *The Sunday Star*, June 4, 1967; Elder, Shirley, “McMillan Hints Move To Kill Plan for D.C.,” *The Evening Star*, June 6, 1967; Elder, Shirley, “Hearings Will Be Held On Nelsen’s D.C. Plan,” *The Evening Star*, June 7, 1967]

### **Congress Considers D.C. Reorganization**

Pollak and Commissioner Tobriner conducted closed-door briefings for the District Committee on June 6 and 7, but they did not change minds. Chairman McMillan told reporters, “It seems to

me it makes a dictator out of the President, which may be all right as far as the District is concerned.” He concluded, “They haven’t convinced me it would save money or work any better.” He could not see how a commissioner and nine members of a city council could function better than the three current commissioners. He was pleased to introduce a resolution of disapproval if the District Committee members supported it. He realized the answers were not simple, but he believed the proposed system would be very “confusing.”

Other committee members were critical as well. Representative Nelsen complained that the plan was “the size of a summer-sale Sears Roebuck catalogue” but would require detailed study with an attorney and a copy of the D.C. Code. Representative Broyhill, a leading opponent of the plan, was concerned that the provision allowing the new commissioner to shift funds from one agency to another might rescind an act of Congress. He also thought the plan took power away from Congress. He added that he would introduce a resolution of disapproval if Chairman McMillan did not do so.

Representative Sam Steiger (R-Az.), serving his first term in the House, objected to Pollak’s unwillingness to commit to selecting Negroes for the council. He thought that to be “truly representative,” the council members should be at least three-fourths Negro and possibly the commissioner should be as well. “This is something no one wants to talk about,” he said, adding that Pollak would commit only to the selection of the best qualified people. [Elder, Shirley, “Hearings Will Be held On Nelsen’s D.C. Plan,” *The Evening Star*, June 7, 1967; Carper, Elsie, “House Unit Sharply Criticizes Plan for D.C. Reorganization,” *The Washington Post and Times Herald*, June 7, 1967; Carper, Elsie, “Hill Weighs Opposition to Rule Plan,” *The Washington Post and Times Herald*, June 8, 1967]

Representative John Blatnik (D-Mn.), chairman of the reorganization subcommittee of the Government Operations Committee, opened hearings on June 13. Before the hearing, the chairman and three District commissioners met with the press. The commissioners supported the President’s plan. Tobriner said, “A strong single executive would be more geared to today’s municipal problems, and the council will give people more effective say in the city government.”

Chairman Blatnik responded to the District Committee’s concern that the plan could not be amended. Nothing, he said, was stopping the District Committee from offering legislation to amend and possibly approve the plan after it went into effect.

As events turned out, Chairman McMillan and Representative Broyhill introduced identical resolutions of disapproval on June 14 that were referred to the Government Operations subcommittee. Chairman McMillan said, “I fully realize there is some need for change in the District government,” adding, “I think the District Committee is the only group with authority to change the city government.” Representative Broyhill declared the White House plan “dead as a dodo.” He explained, “I object to the District Committee working under the gun” of the automatic approval in the absence of a House or Senate disapproval within 60 days.

Representative Chet Holifield (D-Ca.) a member of the Government Operations Committee, expected the committee to report out one of the resolutions but recommend the House turn it down. [Elder, Shirley, “2 in House Act to Kill Johnson’s D.C. Plan,” *The Evening Star*, June 14,

1967; Carper, Elsie, "House Foes Push Vote on District Rule," *The Washington Post and Times Herald*, June 15, 1967]

By July, the White House was "lobbying in earnest in the House" to secure clearance for the reorganization plan. As the *Post* reported:

Presidential aides have begun telephoning Congressmen, stressing that the plan has high White House priority, and trying hard, as one put it yesterday, "to get the civil rights and home rule implications out of this thing."

They were "pushing it almost exclusively in terms of governmental efficiency."

At this point, the White House head-counters indicated the vote on a resolution of disapproval would be close. [Milius, Peter, "White House Lobbying For New District Plan," *The Washington Post and Times Herald*, July 3, 1967]

The House District Committee began hearings on the Nelsen bill on July 13, with subcommittee Chairman Abernethy of Mississippi in charge. Earlier, a committee clerk had denied a request from David Carliner to testify as co-chair of the Committee to Support the President's Reorganization Plan. The clerk, James Clark, explained that he could not comply because of the large number of witnesses already scheduled to address the panel. "We're not going to start off with Carliner. We want to hear from people with some expertise in local government."

The first witness was former Engineer Commissioner Lane (1954 to 1957), now retired. He said the first purpose of the District government was to protect Congress from "those who manipulate the city mob." At that, Carliner stood up to ask if he would be allowed to testify. The *Star* described what happened next:

He never got past: "Mr. Chairman . . ." Over and over, Abernethy pounded the gavel and shouted: "Will the gentleman take a seat?"

Finally, Abernethy, his voice cracking in anger, called for the police. Within minutes, three armed policemen arrived, but Carliner already was sitting down and the hearing proceeded stiffly under the eyes of police.

Chairman Abernethy later said he wanted "everyone to have the privilege of being heard," but added that he would not permit disturbances. Chairman McMillan later said that Carliner was on the list to be heard.

With police keeping an eye on Carliner, General Lane continued his testimony. The present governmental arrangements created a sanctuary where Congress could be "secure from the mob" because the Founding Fathers thought it important that the capital provide a "secure home for the legislature." The council, being more "responsive to the people," would be "hostile to Congress."

Chairman McMillan agreed. “The people seem to forget that the only reason Congress created this 10-mile square was to protect the federal government.” Congress must control the local government “or else we’ll be run out of the city as they were in Philadelphia.”

(Chairman McMillan was referring an incident in 1783 when the Continental Congress was meeting in what is now called Independence Hall in Philadelphia. Soldiers from the city barracks demanded that the Congress give them the pay owed for their service in the Revolutionary War. Under the Articles of Confederation, the Continental Congress had limited authority and could not raise revenue; it depended on voluntary contributions from the States. When Congress did not, and could not, provide the back pay, soldiers blocked the exits from the hall on June 20, only letting the members of Congress leave after Alexander Hamilton, a delegate to the Congress, persuaded them the Congress would meet later to address their concerns. On June 21, after State officials refused to protect the Continental Congress, the members fled to Princeton, New Jersey, and thereafter met in several cities, never returning to Philadelphia while the Articles of Confederation were in effect. During the Constitutional Convention held in Philadelphia in 1787, the Founding Fathers had this incident in mind when they included creation of a Federal District, over which Congress would be able to exercise authority and assure its own security, in Article 1, Section 8, of the Constitution.)

General Lane said the President’s plan was “without any redeeming feature whatsoever” and constituted “a reiteration of a management theory that has no validity in reality.” He considered the present city government “far superior to that in other major cities,” concluding that “there simply is no need for reorganization.”

Carl L. Shipley, chairman of the District Republican Committee, also opposed the plan. He said the current governmental structure was satisfactory. “The men who exercise the power are sometimes a little weak in the spine.”

Only two citizen representatives testified during the 3 days of hearings, Shipley and John Immer of the Federation of Citizens Association, both in opposition. Immer told the subcommittee that the plan was part of a plot to allow a few people to control the city government. He cited only one person as an example: David Carliner.

On July 26, Chairman McMillan and Representatives Abernethy, Nelsen, and Broyhill met to develop an alternative reorganization plan. The District Committee was split 14-11 against the plan, but opponents concluded they needed to develop a reasonable alternative if they wanted to convince the full House to approve the resolution of disapproval before Reorganization Plan No. 3 went into effect on August 11.

Shirley Elder described the draft plan:

Their draft calls for a city manager and election of school board members by wards. It retains the present three appointed commissions but directs the President to name one as head of the board, presumably eliminating the need for a White House adviser on national capital affairs.

Under the committee plan, District officials would be required to analyze the city government and report back to Congress with recommendations for changes.

It is inefficiency within the government, according to some committee members, that causes the city's problems. They charge that the President's plan fails to reach these root causes. On the contrary, they contend, the White House plan merely affects the superstructure, and is, therefore, useless . . . .

The city manager would "handle all administrative problems, with the three commissioners remaining as policy makers:

To avoid delays – one of the main complaints against the present board – the new president-commissioner would be able to act alone in cases of decision deadlocks.

When news of the draft came out, Carliner sent a telegram to Chairman McMillan:

You personally assured me that citizens of the District who favor the reorganization would be given an opportunity to testify before you took any action.

After citing the testimony of Shipley and Immer, he continued:

The 47 community organizations which support the plan are entitled to present their grievances regarding the commissioner form of government before your committee. Do you intend to keep your promise?

In what was seen as a direct threat to the President's plan, House Minority Leader Gerald R Ford (R-Mi.) announced that he supported the committee's plan as "a great improvement over the President's Reorganization Plan." He was certain that Republican leaders "will consider it favorably." The *Post* reported:

Ford's stand would appear to doom President Johnson's District-government reorganization plan. White House strategists have privately said many times they would need Republican votes to get the reorganization plan approved in the House, where Southern Democrats are expected to oppose it.

The *Star* added, "This set the stage for a GOP-Dixie Democratic alliance which has proved so effective this year in defeating other Johnson administration proposals." [Elder, Shirley, "House Unit Chiefs Draft Own D.C. Plan," *The Evening Star*, July 27, 1967; Elder, Shirley, "District Plan Climax Near," *The Evening Star*, July 28, 1967; Milius, Peter, "Ford Gives Support To Compromise Bill On Reorganization," *The Washington Post and Times Herald*, July 28, 1967]

Chairman McMillan scheduled an additional hearing during which Carliner and Representative Clarence J. Brown, Jr. (R-Oh.) testified. Carliner told the panel, "Sitting here in this air-conditioned sanctuary, you may not be aware of the state of tension and crisis in the District." He referred to rumors of riots and efforts by civic leaders to maintain order. He also warned that if the committee takes its reorganization plan to the House floor, an effort would be made to substitute a home rule bill.

Representative Brown, a member of the Government Operations Committee, opposed the President's plan. He was cosponsor of an alternative plan calling for one elected and two appointed commissioners, an elected nonvoting delegate to the House, and a nonpartisan, elected 15-member school board. When Chairman Abernethy suggested retrocession ("Wouldn't it be wise if some consideration was given – and I mean this seriously – to ceding as much of this area as possible back to Maryland if Maryland would take it?"), Representative Brown said the idea "boggles my mind a little." He added that he had been trying to find something wrong with the current organization of city affairs but "the commissioners and others failed to give us this testimony" in hearings before the Government Operations Committee. [Elder, Shirley, "Carliner Disputes McMillan On Need for Johnson's Plan," *The Evening Star*, July 31, 1967]

With the August 11 deadline nearing, the Reorganization subcommittee of the House Government Operations Committee considered a resolution that would push the date back. Members were concerned that if a vote took place in the House, the resolution of disapproval would be approved. The only way the extension could work was with White House support.

On August 1, the subcommittee discarded the delay plan because, as Representative John N. Erlenborn (R-Ill.) put it, "It didn't seem possible to get that delaying motion passed by the House and Senate in time." Based on the schedule, Congress had only 4 working days to defeat or delay the reorganization plan.

Instead, the subcommittee voted in support of the plan, 6 to 1, by voting against the resolution of disapproval. Representative Brown was the lone vote in support of the resolution. [Grigg, William, "House Unit Endorses President's D.C. Plan," *The Evening Star*, August 1, 1967]

On August 2, the House Government Operations Committee voted 26 to 4 to support the President's plan by defeating District Committee Chairman McMillan's resolution of disapproval. Among the surprises in the overwhelming vote, itself a surprise, was that Republicans voted 11 to 2 in favor of the plan, thus mitigating the fear that Republicans and southern Democrats would collaborate to defeat the proposal. Representative Holifield, who would be one of the floor managers, along with Representative Blatnik, for the White House plan, said the vote "makes me more optimistic than I was. Our chances have increased considerably. We got almost twice as many Republicans as I'd expected."

At the same time, the House District Committee was advancing the Nelsen bill as an alternative. Minority Leader Ford, who supported the Nelsen bill, met with civic leaders and clergy, including Carliner. According to Carliner, the Minority Leader said he was keeping an open mind. The strong Republican support in the committee prompted Ford to issue a statement saying, "I have not decided whether I will vote against the Administration plan." [Grigg, William, "House Committee Endorses D.C. Plan," *The Evening Star*, August 2, 1967; Milius, Peter, "Committee Approves LBJ District Rule Plan," *The Washington Post and Times Herald*, August 3, 1967]

On August 4, Senator Morse, whose plan to attach the home rule bill as a rider to an education bill had faltered in 1966, announced his support for Reorganization Plan No. 3. Calling the present District government a "mish mash," he said the President's plan was a "giant stride

toward home rule.” He added, “Congress should walk with him toward a goal of home rule, rather than throw a bomb of political rejection into the President’s proposal for progress in the District of Columbia.”

The result of the pending House vote was still uncertain. Democratic leaders counting votes found that many Democrats had not made up their mind. Advocates for the plan were lobbying as hard as they could. One unnamed supporter said, “I’m not going to be optimistic or pessimistic. I’m just going to work like hell.”

The House Republican caucus, meeting on August 8, discussed the reorganization plan. Representative Nelsen gave an impassioned speech against the President’s proposal and in support of his bill, prompting the only applause during the session. Given the uncertain outcome, he requested that the caucus not take a position. The members agreed to avoid taking a collective position, leaving members free to vote as they wished.

Although many Republicans were expected to vote with Nelsen, Speaker McCormack was encouraged by the outcome of the Republican conference. He needed 40 Republican votes to defeat Chairman McMillan’s resolution of disapproval; now he thought he would get them. [Elder, Shirley, “Present D.C. Rule Scored by Morse, Backing President,” *The Evening Star*, August 5, 1967; Elder, Shirley, and Grigg, William, “D.C. Plan Gets Push as GOP Takes No Stand,” *The Evening Star*, August 8, 1967]

Ahead of the House’s August 9 vote, President Johnson met with House and Senate leaders on August 7. The following day, he sent a letter to Speaker Mansfield calling on the House to “strike the antiquated shackles from the government of the District of Columbia.” The nearly 100-year old commissioner system “has never worked well. No matter how able, diligent, or energetic the Commissioners, they have never been able to overcome the defects of the machinery they inherited.” Those defects may have been tolerable at the turn of the century, but “amidst the complexities of America’s fastest growing metropolitan area – they are inexcusable.” Today’s problems would “not yield to archaic and obsolete government installed as a temporary solution just after the Civil War.”

After summarizing the plan and citing the votes in the Government Operations Committee, he urged the House to follow the same bipartisan path:

In the hands of the House is the long awaited chance to replace a jerry-built government of the 1870’s with a new government for the new problems of the 1960’s.

I ask for bipartisan support of this reorganization plan. What is at stake is good local government in the Capital that belongs to all of us.

Time and opportunity will not wait. We just must not lose the chance we have now.

On August 9, the House took up the resolution of disapproval. The “normally taciturn” McMillan gave “an emotional speech” before the vote. “I should be the last person to stand in the well here trying to protect anything for the District of Columbia” after the smears and misrepresentations he had been subjected to during his 30 years on the District Committee and

his 20 as chairman. “The only reason I did not get off the committee was because I did not want the Washington Post to think they could run me off.”

His committee heard from all available District commissioners during hearings, but none pointed out any deficiencies. By contrast, the new government would be able to pass laws, “and if the Congress does not object, then they will go into effect.” He asked, “who is going to have the time here on Capitol Hill to keep up with all this council will be doing downtown when we can hardly keep up with the three Commissioners?”

He warned those who opposed his resolution, “This is your baby and if you want to vote for it, I am not going to lose any sleep about it.” He had done everything he could for the District and thought his committee had “done a wonderful job.” Every year, the House passed 20 or 25 bills from the District Committee that became trapped in the Senate District Committee. “Do you ever hear the press criticize that committee? No – they are too busy criticizing the House Committee on the District of Columbia all the time.”

He did not think President Johnson really favored Reorganization Plan No. 3 “so that he could more effectively handle the affairs of the District of Columbia.” If he thought the President supported the plan, Chairman McMillan said he would not oppose it:

But I do not think the President created this plan. I do not think the President has time to know anything much about it because any man who is serving as President, with two wars going on, I am certain he does not have the time to think much about the District of Columbia affairs . . . .

If a majority of the Congress thinks that the President should handle the affairs of the District of Columbia, I am willing to let him do it. [House Resolution 512—Disapproving Reorganization Plan No. 3 of 1967, *Congressional Record-House*, August 9, 1967, pages 21941-21976]

(In citing two wars, Chairman McMillan was referring to the war in Vietnam and the outbreak of the Six-Days War on June 5, 1967, Israel and its Arab neighbors.)

The House voted 244 to 160 to defeat the resolution of disapproval. Although 50 Democrats, mostly from the South, voted for disapproval, 180 Democrats voted in support of Reorganization Plan No. 3. What the *Post* called “a surprisingly large number of Republicans (64) voted for the plan,” with 110, including Minority Leader Ford, favoring disapproval.

Following the vote, President Johnson issued a statement:

Today, after 93 years, the House of Representatives has voted to replace the rusted gears of government in the Nation’s Capital with an efficient city management.

It has said “yes” to good District Government – to responsive District Government.

In supporting this reorganization plan, the House has brought good news to every American – for the Nation’s Capital belongs to all of us.

I have begun an intensive search for a good executive to fill the new post of District Commissioner. High on the new Commissioner's agenda will be the task of stemming the District's spiraling crime rate.

With modern government and the best executive talent, the Nation's Capital can move forward into a new era of progress.

As President, and as a resident of the District for the past 36 years, I am proud of this moment and grateful for the action taken by the House of Representatives for the benefit of the citizens of the District and our country.

As Lee Flor wrote on August 11, the vote raised concerns among highway advocates. The District freeway system may be a casualty of the reorganization "as a result of major changes in personnel and procedures in several planning and housing agencies." The members of the City Council, who would have "proud powers over the \$700 million District freeway program," were to be "broadly representative of the District of Columbia community":

Because so many citizens organizations and other groups over the years have vigorously opposed the freeway program, many of the council members will be in a position to carry out this opposition and halt construction work.

The engineer commissioner carried out administrative duties for urban renewal, city planning, highways, and rapid transit. Now, the council would "carry out most of these responsibilities, passing on contracts and the day-to-day approvals which usually got only a few seconds consideration by the District Commissioners." For freeway advocates, Flor offered the worst possible analogy:

In effect, it is as if another National Capital Planning Commission had been created. With projects already being delayed while planners argue over details, another group may come along with different ideas on how programs should be carried out.

Planning and transportation officials told Flor that they "expected the new council probably would either kill or badly hinder the freeway building program."

The engineer commissioner, a member of NCPC, would be replaced by the District's new single commissioner who "may insist on more emphasis on social planning for housing and low-income housing and may not spend as much time backing up highway officials." As for the District Highway Department, which was trying to finish the \$700-million freeway network, it "has only freeway segments and plans to show so far":

The engineer commissioner has been the strongest force pushing for freeways, against almost completely unified opposition from citizens.

The highway projects reviewed and approved by the three District Commissioners normally were carefully worked out at the staff level, so the commissioners took the word of the Engineer Commissioner and passed projects. The new city council will have almost unlimited power over freeway and highway projects.

In effect, the basic decisionmaking responsibility for highways will be transferred from the executive branch, the commissioners, to the nine councilmen. [Flor, Lee, "D.C. Plan May Stall Freeways Program," *The Evening Star*, August 11, 1967]

Nevertheless, an editorial in the *Post* on August 10 said that congressional acceptance of the plan "has blazing significance as a symbol of hope and change." The city was "still far from self-government," but had "at least a somewhat improved possibility that this community will now be able to grapple with its immense and manifold programs." The vote was "wonderfully invigorating." The editorial's headline conveyed the feeling:

**Hallelujah!**

### **Addressing the North Central Freeway**

Throughout 1967, changes were occurring that would have unpredictable impacts on the shape of transportation in Washington. A new U.S. Department of Transportation opened on April 1 amidst implications that it would take a less positive view than the Department of Commerce on urban freeways. President Johnson was planning changes in the District government that would not be clear until the fall.

In the meantime, the current city government continued to advance the city's freeway network within the existing framework.

Early in the year, District officials were still considering construction of replacement housing above the North-Central Freeway if Congress approved the District of Columbia air-rights legislation. On February 18, Engineer Commissioner Mathe said on WWDC's "Report to the People" that if the legislation passed, "We will be making plans for air rights and hopefully for housing." ["Officials Still Considering Building Housing Above N. Central Freeway," *The Washington Post and Times Herald*, February 19, 1967]

The consultant firm of Tippetts, Abbett, McCarthy and Stratten submitted its report to the District on March 28 regarding the two-block pilot portion of the North-Central Freeway bounded by H, K, 2<sup>nd</sup>, and 3<sup>rd</sup> Streets, NW. The report called on the District to build high-rise apartments and town houses above the freeway, including 327 dwelling units in three ten-story apartment buildings and 18 three-story town houses. The housing would be grouped around a playfield, a children's recreation area, and an adults' landscaped recreation and sitting area.

The report emphasized that the air-rights proposal was feasible if the freeway were entirely depressed but complete decking would be needed to prevent fumes, noise, and dirt from interfering with a livable, healthful, and attractive residential area. Most families that would have to be displaced could be accommodated over the freeway, but 14 families would require larger living quarters than would be possible on the deck. The consultant estimated the proposal would cost \$14.8 million. [Hornig, Roberta, "Study Favors High-Rise Units Over Freeway," *The Evening Star*, March 28, 1967]

On April 23, Lee Flor reported on J. E. Greiner Company's latest study of the North-Central Freeway. In 1964, the consultant had recommended an eight-lane freeway with two reversible

lanes in the middle. Following public criticism, the District and Maryland had called for a new study. The new plan eliminated the reversible lanes to narrow the path of the freeway. It would “duck back and forth under the Baltimore & Ohio Railroad track to avoid homes, in part through tunnels.”

Flor compared the number of freeway lanes for I-70S and I-95 inside and outside the Capital Beltway:

Under the new plan the two freeways from suburban Maryland would have a total of 16 lanes outside the Capital Beltway, would be cut down to 12 lanes inside the Beltway, and then merge into eight lanes.

One advantage of the narrower route was that it would displace 775 fewer families than the earlier plan that would have displaced 720 families in the District and 590 in Maryland:

The consultant stated that displacement was not an insurmountable problem in Maryland, because families there, mostly white, generally have good incomes and own their homes. Therefore, if their homes were purchased, the families could easily buy others.

But within the District, protest groups charged, Negroes displaced by the freeway would have trouble buying new housing. Also, many Negro families do not have enough income to buy homes, the protest groups charged.

In 1964, Greiner had estimated that its design would cost \$128.2 million. The new reduced plan would cost \$196 million. Greiner attributed the increase partly to inflation, but also to the unique design involving tunnels. [Flor, Lee, “North Central Freeway Lanes Are Cut by Two,” *The Sunday Star*, April 23, 1967]

General Mathe saw air-rights construction as likely to find “more and more possibilities,” as he told a meeting at the National Gallery of Art on the schools and park section of NCPC’s Year 1985 Comprehensive Plan. “In my opinion, we could take a system of depressed freeways and put entire schools over it.” Sports arenas, as well as housing, were other options. All options were subject to congressional action on the District’s air-rights legislative proposal.

Only about 40 people showed up for NCPC’s presentation of its schools and parks ideas. They had a few questions “but no strenuous complaints,” according to the *Post*. [Blanchard, Eric, “Building Atop Roads Predicted,” *The Washington Post and Times Herald*, April 25, 1967]

By contrast, about 150 people were in the nurses’ auditorium of Catholic University for NCPC’s presentation on the city’s northeast quadrant within the Baltimore and Ohio Railroad, New York Avenue, and the District line. According to Flor, NCPC “was urged last night to roll back its proposals . . . and make a greater effort to be responsive to the wishes of citizens.” After NCPC’s presentation, most questions concerned the North-Central Freeway. The Reverend James Scanlon of St. Anthony’s Roman Catholic Church accused NCPC of being hypocritical:

You’re asking us if we want a guardrail here, or some other minor detail there. The real gutsy question is whether the freeway should be built, whether it is justified.

He stated that thousands of displaced families would have little chance of finding suitable replacement housing. Referring to NCPC four-stage approval process, he said that the freeway was now “at stage three,” but should really be in stage one.

Other questioners claimed that NCPC had ignored the strong anti-freeway recommendations by Brookland area civic associations. Charles Conrad, NCPC’s planning director, disputed the claim that NCPC had ignored such recommendations. Five years ago, he said, the District had been planning three freeways through northern Washington that would have displaced thousands of families. Now, only one freeway remained in the plans and would displace only a few hundred homes. [Flor, Lee, “Freeway Gets Most Fire in Briefing on ’85,” *The Evening Star*, April 27, 1967]

On May 4, NCPC approved the first construction project on the 8-mile North-Central Freeway. The \$900,000 project involved reconstruction of the Taylor Street Bridge over the railroad tracks at the edge of Brookland. The bridge was to be widened to allow for passage of the freeway, as well as the railroad, under its span. Because the bridge also would be modified to handle rail rapid transit, NCTA would provide \$200,000 for the project, the first construction money for the area’s 25-mile system.

The vote to approve the project was 7 to 3, with Chairman Rowe, Vice Chairman Louchheim, and Dr. Edwards opposing the plan. Chairman Rowe argued that the city should hold a public hearing on the project before it proceeded. They disagreed because the project did not involve displacing residents or right-of-way problems.

During the meeting, Walther Prokosch of Tippetts, Abbett, McCarthy, and Stratton told NCPC that BPR, now part of FHWA in the new Department of Transportation, had agreed to pay for a \$2.9 million deck over the depressed section of the Center Leg in the residential area bounded by H, K, 2<sup>nd</sup>, and 3<sup>rd</sup> Streets, NW. Chairman Rowe asked General Mathe to study building the Center Leg in a tunnel instead of as a depressed segment to save current housing. He agreed to do so, but pointed out that the tunnel would have to be so deep that it would be impractical.

NCPC also approved preliminary sites and plans for the National Aquarium and Fisheries Center in East Potomac Park. The members decided not to condition approval of the aquarium on construction of a Ponte Vecchio-type channel bridge and construction of a parking garage below the 10<sup>th</sup> Street overlook at Maine Avenue. They did so after NPS Director Hartzog warned that conditioning the aquarium on those projects, both of which had been delayed, might prove “tantamount to saying no aquarium will be built.” [Hoagland, Jim, “Planners’ Approval of NW Bridge Clears the Way for 1<sup>st</sup> Freeway Link,” *The Washington Post and Times Herald*, May 5, 1967; Lewis, Robert J., “Aquarium Site Approved In East Potomac Park,” *The Evening Star*, May 4, 1967; Bernstein, Michael, “Housing Complex Seen Over Freeway,” *Washington News*, May 5, 1967]

On May 7, Lee Flor published an Interpretive Report in the *Star* looking back on recent developments involving the Three Sisters Bridge and the North-Central Freeway. The report began:

Last spring's Policy Advisory Committee (PAC) agreement, which appeared to settle all District freeway disputes, apparently is falling apart at the seams.

NPS, which had been the key to the agreement, "apparently is balking at supporting freeway and bridge projects before the National Capital Planning Commission." As a result, the North-Central Freeway was "in deep trouble," as was the Three Sisters Bridge.

The Policy Advisory Committee agreement had allowed NCPC's six government officials to outvote its five citizen members "until two months ago" when a dispute arose over whether an NPS representative could vote for Director Hartzog in his absence:

The Park Service and the five NCPC members made a discreet agreement and voted solidly in April to force study of a tunnel for the Three Sisters Island crossing.

This was a tip-off that the PAC agreement was in trouble. But the real crisis came Friday when Mrs. James H. Rowe Jr., NCPC chairman, had the commission meet in her office, away from the press.

Flor reported on what he had learned about the meeting. General Mathe reminded NCPC of the Policy Advisory Committee agreement, "only to be told that it no longer was important because of the creation of the Department of Transportation on April 1, 1967." He reminded the other members that a key factor leading to the agreement had been Chairman Natcher's threat to withhold funds for rail rapid transit if the freeway network did not advance:

However, this year Natcher's Subcommittee has not been asked to vote for any subway construction money, so Natcher's influence reportedly was discounted at the NCPC executive session.

Out of that session came an NCPC resolution on the Three Sisters Island bridge which will be interpreted many ways. The resolution said the NCPC voted approval for geometric designs for the bridge, provided that the Department of Transportation reviewed the over-all traffic justification, review [sic] an alternate truck route highway, or, finally, say the bridge is needed.

NPS Director Hartzog, after the meeting, "made some remarks, in which he appeared to be apologizing for his participation in the PAC agreement last year." He explained that he now was fighting for restudy of the Jefferson Davis Highway as an alternate route for trucks, an option that would negate the need for the Three Sisters Bridge.

The bridge, therefore, would "once again . . . run the gauntlet of anti-highway forces, because the Transportation Department probably will have to ask the Interior Department and possibly NCPC itself for aid in the new studies." [Flor, Lee, "Split Perils Freeway Accord," Interpretive Report, *The Sunday Star*, May 7, 1967]

The cost of the new plan for the North-Central Freeway was raising concerns within FHWA. The agency's Division Office in the city had approved the District portion for right-of-way acquisition, but the Division Office in Maryland, based in Baltimore, was challenging the cost of

the State's segment. The office ordered a full review of the 3½-mile Maryland segment to determine if disrupting fewer people was worth the added \$22 million. Routing the freeway to minimize disruption in a densely populated area such as the District of Columbia could be justified, but FHWA questioned doing so in a loosely packed suburban area, especially one where residents would have much less trouble finding new homes than their counterparts in the city's African-American communities.

Maryland and District officials thought the Greiner plan had satisfied the goal of BPR/FHWA officials who spoke of weaving freeways into the urban fabric. According to Jack Eisen:

What especially bothers Federal road officials is the high cost per mile of each lane for a road so narrow that it almost certainly will not meet the needs for the corridor, the Washington area's heaviest generator of traffic.

For the four-lane section, this will average about \$5 million per lane per mile.

The cost is pushed up by the design dictated by hugging so close to the railroad tracks. It involves stone embankments, split-level sections and crossing of the B&O's two tracks on extra-long bridges because of the fact that the road and the rails are nearly parallel.

Maryland and District officials planned to meet with BPR Director Turner to reconcile differences in how its two field offices viewed the project. [Eisen, Jack, "U.S. Balks at 70S Plan Cost," *The Washington Post and Times Herald*, May 5, 1967; Flor, Lee, "Talks Slated on Cutting Costs Of North Central Freeway," *The Evening Star*, May 8, 1967]

Reading of the dispute, the Save Takoma Park Committee made clear that it did not want the freeway, whatever the cost or location. Mrs. Philip Young, a committee spokeswoman, said members had "no interest in discussing the cost, route or design of facilities for which the need has never been justified." The money could better be spent on schools, housing, recreational facilities, the subway system, and other facilities that served real needs. She also objected to the smog from automobile exhaust that would affect the predominantly Negro area of the District. ["The Committee in Takoma Park Doesn't Want a Freeway—Period," *The Washington Post and Times Herald*, May 10, 1967]

During a meeting with Montgomery County officials, Senator Tydings joined with Representative Gilbert Gude, a Republican State legislator from the county who had won election to the House in 1966, in denouncing BPR for its concerns about the cost of the North-Central Freeway. Senator Tydings said, "The Bureau of Public Roads is just all wet. The bureau has a habit of bulldozing and bullying cities all over the country." The concern about cost was "just another example of the bureau's short-sightedness." Representative Gude said, "They want to study, study, and study some more. It's time to stop studying and start building." They also rejected BPR's idea of an elevated freeway instead of one that hugged the railroad tracks. They pledged to continue working in Congress for the District's air-rights legislation. [Feuerzeig, Henry, "Officials Hit Roads Bureau," *The Evening Star*, May 27, 1967; "Montgomery Told It Should Oppose Elevated Freeway," *The Washington Post and Times Herald*, May 27, 1967]

(The District commissioners had submitted air-rights legislation to Congress on July 12, 1966. Assistant Corporation Counsel for Legislation Robert F. Kneipp said the commissioners considered it “must” legislation. “Because of the housing crisis, the commissioners would like to see the legislation pass this session, if Congress can see its way to holding public hearings.” The *Star* added:

Kneipp said the proposal took nearly a year to draft because it had to be reviewed by a variety of agencies, including the Bureau of Public Roads, the Justice and Commerce Departments, the National Capital Planning Commission and the Fine Arts Commission.

The latest delay resulted from a review by the Department of Housing and Urban Development to make certain that the language of the legislation would permit full use of federal funds from a variety of recently passed legislation.

(Under the legislation, the first priority would be allowing construction of government buildings over the freeways, followed by low-income housing that would be built by the National Capital Housing Authority. The demonstration project General Duke had unveiled a few months earlier for low- and moderate-income housing over a two-block section of the Center Leg Freeway was an example of a project the District of Columbia Freeway Airspace Utilization Act would allow.

(The 89<sup>th</sup> Congress had not acted on the proposal, but the District was hoping to secure passage during the 90<sup>th</sup> Congress. [“Congress Gets D.C. Proposal On Air Rights,” *The Evening Star*, July 12, 1966])

### **The Year 1985 Comprehensive Plan**

NCPC held a public briefing on the Year 1985 Comprehensive Plan on May 9 at MacFarland Junior High School at 4400 Iowa Street, NW., in the Petworth neighborhood. Although the housing and education sections of the plan received some discussion, freeways were the primary issue for the public. ECTC’s Sammie Abbott drew applause when he declared, “There’re asking our approval to bulldoze our own homes.” When NCPC presenters asked the 140 or so people in the crowd for a show of hands in support of the North-Central Freeway, only one person raised his hand. [“Citizens Assail Freeway At Briefing on ’85 Plan,” *The Evening Star*, May 10, 1967]

NCPC planned to hold a June 14 public hearing on the draft transportation section of the comprehensive plan at the State Department West Auditorium. The draft section had two elements: (1) highways and transit and (2) long distance, non-highway transportation (rail, water, and air). “Although these two elements have some important interrelationships (as in local transportation of air and rail passengers), they raise different issues and deserve separate treatment.”

In “the city of the future,” transportation would have to accommodate more people, more travel, and more city-suburban traffic. “It will be necessary not only to accommodate more physical movement, but to protect residential neighborhoods, local shopping districts, and institutions from the harmful effects of heavy through traffic.” Although the transportation system is “a shaper of urban development,” it also “requires sizable amounts of the city’s scarce land, and the

construction of freeways and rapid transit facilities may cause the destruction of some of the already inadequate supply of housing for low-income groups.” Further, these “large and usually very conspicuous facilities are prominent features in the cityscape.” As such they have powerful influences on the community:

Thus, the transportation plan must strive for economy in the use of land and minimal destruction of housing. The facilities should be as unobtrusive as possible and should be attractively designed.

The draft discussed the major transportation plans developed since World War II, including the 1950 Comprehensive Plan, the 1959 Mass Transportation Survey, and NCTA’s 1962 proposal for a rapid rail transit system. Each contained a different mix of transportation modes:

The current construction programs of the NCTA and the highway agencies represent still another combination of facilities. Although the rapid transit program is widely supported, the highway plans are the subject of debate. This debate is concerned not just with the location or design of highways, but with the quantity to be built.

In the past, transportation plans have proposed highways in sufficient quantity to carry all predicted traffic without congestion during the peak hours. This method produces proposals for highway systems larger than can or should be built in the District of Columbia. Construction of a highway system capable of carrying all peak-hour traffic without congestion would pre-empt too much land, destroy too many homes, produce too great a change in the overall character of the city, and would cost too much both in terms of initial investment and in the reduction of the city tax base.

The transportation system in the proposed Comprehensive Plan is therefore based on the assumption that construction of enough highways to carry all of the vehicles seeking to enter the highway system during the peak hour is neither feasible nor economical, and that the magnitude of the highway system will have to be determined by other criteria.

This does not imply an abandonment of the attempt to reduce congestion, or at least to minimize the ill effects of a shortage of peak-hour highway capacity. This is still a worthy objective, which should be pursued by reducing the amount of traffic on overloaded segments of the highway system, as well as by increasing the system’s capacity.

Because the highway system could not accommodate all peak-hour traffic, “a rapid transit system is essential to carry a large proportion of the daily movement along the most heavily traveled routes, and especially to carry workers into and out of downtown Washington.”

The plan identified three policies for freeways:

1. All new highway construction should be oriented to the service of specific land-use objectives. The north-south and east-west freeways through the city should serve the city and Region as a whole and should not be primarily peak-hour facilities for downtown traffic.

2. Design standards for freeways in the District should preserve urban amenity through the extensive use of tunnels, and through the use of design methods which will reduce operating speeds.
3. Management measures should be employed on freeways to prevent congestion due to overloading during peak hours, and to assure safe and efficient movement at all times of the day.

It described the segments that should comprise the Inner Loop, including the Southwest and Southeast Freeways as constructed. The South Leg should be tunneled under the Lincoln Memorial and Tidal basin. The Center Leg should be built in a tunnel under the National Mall and the proposed Labor Department building, “and perhaps under other structures north of the Mall.” The loop should include the West Leg as constructed and an East Leg from Barney Circle passing by D.C. Stadium, to the east of Spingarn High School, tunneled under Mount Olivet Road and elevated over New York Avenue and the adjacent railroad yards to connect with the North Central Freeway near Rhode Island Avenue. The plan also described the North Leg:

A North Leg in a tunnel under K Street between the Potomac River Freeway and the Center Leg. The K Street route must meet three conditions: (i) a detailed traffic analysis must support the use of the facility; (ii) the available right-of-way must permit construction of six traffic lanes to Interstate standards acceptable to the Bureau of Public Roads; and (iii) construction plans and procedures must permit the continued viability of its general utility.

Cross-river freeways “should” include a “Potomac River crossing near Three Sisters Island,” the Theodore Roosevelt Bridge, the 14<sup>th</sup> Street Bridge complex, and “an additional river crossing below Anacostia-Bolling” to be added “later in the program.”

The plan listed additional radial freeways and parkways. The Palisades Parkway, generally following Canal Road, entered the District near the river bank to a junction with the Potomac River Freeway near Foxhall Road:

The Potomac River Freeway should be tunneled across the Georgetown Waterfront from as close as possible to Rock Creek to a point beyond Key Bridge. After passing across the bottom of the bluff at Georgetown University it would split, one branch joining the Palisades Parkway, the other crossing the Potomac River to join Interstate Route 66 at Spout Run.

The North-Central Freeway would enter the District as close as possible to the Baltimore and Ohio Railroad to an interchange with the East Leg. “The route from this interchange to the Center Leg of the Inner Loop should be carefully located and designed to create minimum displacement and provide maximum service to the community.”

The I-95/Northeast Freeway would enter the city near Eastern Avenue at Gallatin Street and proceed westerly to the North Central Freeway.

The radial freeways from the east should remain largely as at present (Baltimore-Washington Parkway, John Hanson Highway, and Kenilworth Expressway). At a later stage, the John Hanson Highway might be extended to New York Avenue. From the south and southeast, facilities included the existing Anacostia Freeway and Suitland Parkway.

The plan also listed freeways that should proceed to construction:

- a. Center Leg of Inner Loop from the Southwest Freeway to a connection with the K Street Freeway;
- b. South Leg of Inner Loop from the Lincoln Memorial to 14<sup>th</sup> Street with as much of the freeway in tunnel as is consistent with local service requirements;
- c. Southeast Freeway (including Interchange C) from Sixth Street to Barney Circle;
- d. K Street Freeway in tunnel from the West Leg to the Center Leg;
- e. Palisades Parkway connecting to a tunnel under the Georgetown Waterfront;
- f. Jefferson Davis Highway improvements as an alternative route for Interstate 66 traffic to reach downtown via the 14<sup>th</sup> Street bridges;
- g. An additional 14<sup>th</sup> Street Bridge replacing the old Highway Bridge;
- h. A river crossing to connect Interstate 66 in Virginia with the Potomac River Freeway on the District side;
- i. North Central Freeway from Silver Spring, Maryland, to a connection with the Center Leg at K Street;
- j. Northeast Freeway connecting Interstate 95 in Maryland with the North Central Freeway near Fort Totten; and
- k. East Leg of the Inner Loop from Barney Circle to an interchange with North Central Freeway near Rhode Island Avenue.

The draft also covered parking garages. “They should be located and designed so as to harmonize with the rest of the system.” All-day parking should be limited to employment needs, with spaces downtown or in suburban park-and-ride facilities “when allowance has been made for maximum use of mass transit.” In the downtown area, parking spaces should be distributed to ensure vehicles do not exceed the capacity of the arterial streets.

To accomplish these goals for parking, off-street parking “should be provided promptly for bus riders, some of it at the prospective sites of rail transit stations.” Further:

All parking space in the downtown area should be offstreet [sic] and at locations established as a matter of public policy. Parking space in the CENTRAL EMPLOYMENT AREA should be located in structures associated as closely as possible with freeways and arterial streets.

A public authority should manage and control the amount of parking spaces in downtown “to encourage an equilibrium between parking space, arterial street capacity, and highly utilized transit.” The plan did not envision an increase in the number of parking spaces by 1985, but added that “some redistribution of offstreet [sic] facilities” should occur. To illustrate the need for redistribution, the plan pointed out the CENTRAL EMPLOYMENT AREA had 65,000 parking spaces, with 50,000 of them in the area bounded by Constitution Avenue, 23<sup>rd</sup> Street,

Massachusetts Avenue, and 2d Street. “Management of such parking spaces should insure the availability of adequate parking for non-work trips and keep the amount of employee parking in balance with the availability and usage of transit service.” In addition, a program should be undertaken “to provide offstreet [sic] parking space in crowded residential areas.”

The draft plan offered policies for transit. The authorized rapid rail system should be built as rapidly as possible, with extensions added to provide efficient peak-hour transportation. The system should eventually have “six trunk lines feeding into a downtown loop,” with an extensive bus system feeding the rail lines.” Much of the transit discussion involved identifying needed rail lines, with the plan adding that stations “should be located at points suitable for intensive development and convenient to residential areas of high and medium density.”

Bus service should be improved promptly “on routes eventually to be served by rail transit and on other routes.” The plan added:

There should be feeder service to the rapid transit system, express service to downtown on freeways, and a network offering good local service. Traffic management on the streets and freeways should expedite the movement of buses. The minimum system should be extended to serve downtown shoppers and tourists visiting monuments and museums in the Central Area park system.

The District should have arterial streets and avenues, but they should be “specially designed and limited in number, to carry vehicles that do not use the freeway system.” Widening the arterials and avenues “should be minimal and should only be undertaken to serve specific land-use objectives.” Traffic should be managed “to minimize the intrusion of traffic on other residential streets.” In the long run, these arterials and avenues could be converted to local streets “when results of new management measures and new construction of both freeways and transit are felt.” [Notice of Public Hearing, National Capital Planning Commission, *The Sunday Star*, May 28, 1967]

When NCPC presented its plans for the north-central area at a public hearing at Theodore Roosevelt High School on June 6, citizens targeted the North-Central Freeway. Adolph Edward of the South Manor Park Citizens Association said the plan “proposes to tear down hundreds of homes and businesses, acres of parks and playgrounds for an unwanted freeway system.” He urged NCPC to reject the freeway. Hosea Taylor of the Brightwood Community Association said the freeway east of Georgia Avenue would demolish “some of the finest middle income homes in the District.” Joseph Hairston of Neighbors, Inc., called for fringe parking and rush hour buses to replace the freeway that was being “jammed down our throats.

Chairman Rowe said, “I feel as the citizens do. When the freeways are financed and the other proposals aren’t, it is tough.” [“North-Central Freeway Comes Under More Fire,” *The Evening Star*, June 6, 1967]

In anticipation of the June 14 hearing on the transportation element of the Year 1985 Comprehensive Plan at the State Department West Auditorium, the Committee of 100 on the Federal City sent a postcard to everyone on its mailing list to encourage attendance. The *Star*

reported that this committee's initiative reflected the view of many civic groups that "the hearing is their last chance to show massive public opposition to the freeways and bridges proposed by the planning commission's six-member majority." ["Attendance Urged At Public Hearing On Freeway Plan," *The Evening Star*, June 13, 1967]

About 500 people attended the hearing. As Lee Flor began his report on the hearing, "A hooting, unruly crowd of freeway opponents at a public hearing last night wound up jeering one of their staunchest allies—Mrs. James H. Rowe Jr." She had limited all speakers to 10 minutes, a restriction that did not sit well with Sammie Abbott. "This is planning by egg timer," he said at the start of his testimony. "I do not propose to be limited." He began criticizing public officials for not attending hearings, but Chairman Rowe pointed out that he was not sticking to the subject of the hearing:

When the 10-minute timer buzz sounded, Mrs. Rowe tried to get Abbott to leave the podium, reminding him about the rules.

"The rules are the rule of people tonight," Abbott replied.

Many in the crowd . . . applauded, with some voices crying out over the din, "Let him speak, let him speak."

After a further confrontation, Mrs. Rowe asked the crowd whether any other witnesses would relinquish part of their 10 minutes for Abbott. Several anti-freeway witnesses gave Abbott extra time.

Abbott's basic theme was a charge that previous transportation studies had been grossly incorrect in predicting heavy auto use of certain traffic corridors, so that traffic justification for highways was false. The theme has been followed numerous times at previous hearings.

Abbott got a huge ovation from a standing crowd, after getting a straw vote by asking freeway opponents to stand. About 400 persons stood.

When he finished, Chairman Rowe declared a recess but asserted that she would enforce the 10-minute rule when they returned.

After the recess, Marion Barry, Jr., said, "We should take our bodies and stand before those bulldozers . . . we should say 'Hell no, you ain't going to build any freeways in this town.'" Angela Rooney of the Brookland area citizens group "warned that Barry was not kidding."

Flor counted 11 anti-freeway witnesses and 8 pro-freeway witnesses before the hearing ended at 11:30 p.m. "A relatively new development at the hearing was the appearance of several citizens who said they did not represent any pressure group, organized lobby, or special interest group, and then testified in favor of freeways."

When Chairman Rowe urged the crowd to be polite to pro-freeway witnesses such as Robert F. Koch of Bethesda, they jeered. Koch “was heckled repeatedly by the crowd, which at one point tried to drown out his testimony by clapping and shouting”:

“If this is a democratic process – I would be permitted to speak,” Koch said.

“During the past few years, I and hundreds of thousands of persons have left the [transportation] arena to a few noisy individuals,” Koch said.

The result was the false impression that most people opposed the freeways. He said that the loud voices should not “ride roughshod over citizens” who supported the plans. (On later occasions, Koch would be identified as representing the Bethesda-Chevy Chase Chamber of Commerce.)

NCPC held a second night of hearings at the State Department West Auditorium with about 100 people, mostly anti-freeway, in attendance. The witnesses, however, were about equal; Flor counted 14 witnesses in support of the transportation plan and 13 opposed. “Many of the anti-freeway witnesses had testified on Wednesday, when a big noisy anti-freeway crowd staged several demonstrations to show their anger.”

Thomas P. Rooney of Catholic University was one of the anti-freeway speakers. Interstate freeways had “become instruments of racial and economic discrimination.” He stated that indifference to the impacts of the freeways had “more to do with the rioting and the bloodshed of the worsening ‘long hot summers’ than the lack of kiddie pools and recreation”:

Several anti-freeway witnesses said that residents of Tampa, Fla., had been throwing Molotov cocktails at motorists on interstate highways which ran through areas where riots were going on. They indicated that rioters here also might do the same.

Chairman Rowe assured the crowd that NCPC would carefully consider anti-freeway testimony. [Flor, Lee, “Freeway Foes Jeer an Ally,” *The Evening Star*, June 15, 1967; Flor, Lee, “Hot Hearings On Freeways For D.C. End,” *The Evening Star*, June 16, 1967]

## **Freeway Conflicts**

While NCPC was working on its Year 1985 Comprehensive Plan, local officials continued to consider the area’s immediate freeway plans.

On June 21, the District Highway Department presented its plans for the South Leg to the Commission of Fine Arts. The commission objected to plans for a tunnel under the Lincoln Memorial’s Reflecting Pool and the placement of two 50-foot high ventilating shafts near the memorial. Chairman Walton said the plans would “leave a permanent scar on the single most important monument in this city.” The city planned to use the cut-and-cover method of building the tunnel, but the commission objected to that approach because the “cut” portion of the plan meant digging a trench that would displace some of the trees on the memorial grounds. “The trees are as important as the Memorial itself,” Walton told Deputy Director G. I. Sawyer. Walton urged use of the boring method to create the tunnel. Commission member Gordon Bunshaft suggested replacing the two ventilation chambers with a single globular structure of 35 feet or

fewer near the Tidal Basin. Sawyer promised to consider these ideas. [“Arts Unit Hits Tunnel At Lincoln Memorial,” *The Washington Post and Times Herald*, June 22, 1967]

At an Allied Civic Group banquet in Silver Spring, Governor Agnew said the conflict between State and Federal officials was causing “serious delays” on the North-Central Freeway:

Federal highway planners favor an economic route that would penetrate the existing neighborhoods and internal Takoma Park. The State Roads Commission, on the other hand, advocates a route following the railroad tracks which would neither disrupt the existing residential patterns nor contribute additional traffic congestion to Takoma Park. Obviously, communication is absolutely necessary and the mutual acceptance of a construction design policy is essential.

He said the roads commission also would intensively study I-70S to relieve the severe traffic congestion along the existing freeway in Montgomery County north of the Pooks Hill interchange with the Capital Beltway. [“Agnew Cites Conflict on Freeway Plan,” *The Evening Star*, June 15, 1967]

On July 12, Chairman Wolff revealed that the commission was considering a toll expressway parallel to I-70S in Montgomery County to relieve congestion in the corridor. He referred to discussion of the idea in the spring. In April, the Maryland-National Capital Park and Planning Commission had included a parallel 19-mile expressway, 2 or 3 miles west of I-70S, in its proposed 12-year comprehensive plan. The plan also called for a second Outer Beltway, 5 to 10 miles beyond the Capital Beltway, from a crossing of the Potomac River at River Bend, continuing south of Rockville in Montgomery County past Bowie, Marlboro and Clinton in Prince George’s County. It would cross the Potomac River in Charles County south of Fort Washington.

The plan included a 28-mile Third Beltway, also called the Cross County Freeway, from Edward’s Ferry across the Potomac River linking Montgomery County and Loudoun County, Virginia, circling through Montgomery, Howard, Anne Arundel and Charles Counties before crossing the river into Virginia at the Prince William-Stafford County line. This beltway would be a “regional bypass” rather than a service road like the Capital Beltway. It was included in the plan “to show recognition of the value – at some future date – of a regional bypass route for the Washington metropolitan area.”

Members of the Montgomery County Council appeared to support the freeway parallel to I-70S, with one, William W. Greenhalgh, calling it “the most critical need in the County.” The members tentatively supported the Third Beltway, but saw it as a project for a distant future.

Civic groups questioned both projects. They argued that a rail rapid transit line parallel to I-70S would be a better choice. Mary P. Vinton of the Citizens Planning Association said traffic was “beginning to get very bad, but we have to decide what’s more expensive – rapid transit or an alternate route – and which would take longer to get. I would hate to see more highways projected before we get further than we have with rail transit.” William S. Green of the Planning

Association objected to the I-70S parallel freeway because “any time you build a superhighway, it’s a good excuse to build high density around it.”

The groups also objected to the Third Beltway because it would cut through land the county’s General Plan for the Year 2000 had reserved for green space and low-density development, and likely lead to intensive development instead. Green, for example, was concerned a Third Beltway would lead “to the complete amalgamation of Washington and Baltimore.” [Drosnin, Michael, “Plan Urges 70-S Bypass, 3d Beltway,” *The Washington Post and Times Herald*, April 23, 1967; Hanrahan, John, “Parallel Road to Rt. 70-S, 3<sup>rd</sup> County Beltway Asked,” *The Sunday Star*, April 23, 1967; Levy, Claudia, “Council Likes New Road Plan, Citizens Object,” *The Washington Post and Times Herald*, April 27, 1967]

Wolff, during the State Roads Commission meeting in Baltimore on July 12, acknowledged that the State did not have money for the parallel expressway or several other needed freeways. Citing Chicago and New York City as metropolitan areas that found toll roads to be viable alternatives, he said the question was whether the Montgomery County facility would generate enough toll revenue to retire the bonds issued to pay for its construction. [Eisen, Jack, “Toll Road Considered To Relieve Jam on 70S,” *The Washington Post and Times Herald*, July 13, 1967]

On July 18, Representative Broyhill wrote to Secretary Boyd to object to the delay in building the Three Sisters Bridge. Representative Broyhill asked Secretary Boyd, while he reviewed the plan as requested by NCPC, to consider that the delay was holding up other projects. The projects included the Potomac River Freeway, Palisades Parkway, George Washington Memorial Parkway, I-66, and the Dulles Access Road. A decision on the bridge, Representative Broyhill told Secretary Boyd, was needed immediately to eliminate the roadblock to these other projects. [“Broyhill Raps Bridge Delay,” *The Washington Post and Times Herald*, July 18, 1967]

The District was advancing one of those projects, the Potomac River Freeway, by paying \$3.2 million to acquire the block that included an abandoned Capital Transit power plant on the Georgetown Waterfront. The block was between 32<sup>nd</sup> and K Streets and the present end of the freeway at 31<sup>st</sup> Street, NW. The power plant included 220-foot high smokestacks that, as Flor reported, “still dominate the waterfront.” District highway officials were debating how to remove the smokestacks because if they fell in the wrong direction, bricks would land on Whitehurst Freeway.

The city was appraising other needed properties between Whitehurst Freeway, 32<sup>nd</sup> Street, and Key Bridge, including the active Milton Hopfenmaier Company rendering plant at 3300 K Street, NW. For decades, Georgetown residents had complained about the plant “because of its odor.” The city wanted to acquire the property during the summer or fall, but had one problem. “The District has to prove an immediate need for possession, to get a business out of a building after it has condemned the site.” To do so, it had to demonstrate a need for the property that was contingent on construction of the Three Sisters Bridge. [Flor, Lee, “D.C. Moving on Georgetown Front,” *The Evening Star*, July 19, 1967]

(After negotiations, court challenges, and other delays, the District and company agreed on acquisition of the site in June 1971 for \$707,000. The company, which began operating at the site in 1873, closed on July 18, 1971.)

The route of the East Leg Freeway was under consideration as a result of a not-yet-released report by Lawrence Halprin, a San Francisco landscape architect. The Interior Department had hired Halprin at the White House's suggestion, as part of the President's beautification drive. He presented an interim version of the plan to Secretary Udall, NPS's Hartzog, Engineer Commissioner Mathe, and other officials at a meeting on July 21. Halprin suggested developing a major park and recreation area east of D.C. Stadium that would involve Kingman Island in Anacostia Park just north of the East Capitol Street Bridge. His plan would require moving the freeway farther from the river north of the stadium toward the National Arboretum. He recommended tunneling the freeway west of the stadium to minimize demolition of residences. ["Freeway East Leg Revision Urged to Develop Parkland," *The Sunday Star*, July 23, 1967]

On July 25, Wolff released a July 10 letter he had received from BPR Director Turner agreeing to a meeting to discuss the North-Central Freeway in Montgomery County. Maryland had requested the meeting 4 months earlier when BPR's District and Maryland offices provided different reactions to plans for the freeway, but BPR had refused. Turner's letter was in reply to Wolff's renewal of the request on June 12. Turner replied that when BPR completed internal discussions of the issue, he would invite Wolff and Airis to meet "for a full exploration of the proper next steps."

He added that BPR/FHWA now was part of the U.S. Department of Transportation, which is responsible for modal coordination. The North-Central Freeway involved a road, railroad, and rapid transit line. Therefore, it was "desirable that we attempt to achieve policy coordination within the Federal establishment before proceeding with further steps in the development of the design." ["Roads Chief Agrees To Set North Central Freeway Meeting," *The Washington Post and Times Herald*, July 25, 1967]

During this period, Senator Tydings of the Senate District Committee was holding hearings on air-rights legislation. The Washington Urban League and residents who were to be displaced by the Center Leg Freeway testified in support. Arlene M. Neal, the league's director, said the question was not whether the community should approve or reject freeways. "Our need to use air space comes from a single fact: In the face of growing needs the supply of available central city land is shrinking." Two residents of the Center Leg Freeway area that the District had designated for the pilot air-rights housing testified in support as well. Peggy Lee Horseley said, "Unless air rights legislation is passed, our community will be wrecked by this freeway and the people scattered into already overcrowded housing."

Several freeway opponents attacked the bill. One was Robert Kennan, Jr., a Washington attorney who had replaced Peter Craig as chairman of the Committee of 100 on the Federal City's roads subcommittee. The legislation was "plastic surgery for the wounds inflicted by freeways" that District officials would use as "political anesthesia for building more freeways." Senator Tydings replied, "I think your argument is specious. I wonder if this blind opposition [isn't] cutting off your nose to spite your face." Kennan replied that air rights proposals were only a

ruse to silence critics. He recommended changing the bill to allow the District to use air rights only if granted by Congress on a project-by-project basis.

When Airis testified on July 27, he took the opportunity to dispute Kennan's "deliberate falseness" in claiming that the city was paying only lip service to the air rights idea so it could build more freeways. Airis pointed out that the city had rerouted freeways to reduce impacts on families; the current network would displace 2,600 families, compared with a 1960 estimate of 9,038. The city had used the air rights authority it already had more often than people realized, as the *Post* reported:

Among examples that he cited were the Connecticut Avenue tunnel under Dupont Circle, the Twelfth Street expressway beneath the Mall, the plan to build the new Labor Department building over the Center Leg and "a whole block" under the Southeast Freeway between Seventh and Eighth Street se. that can be developed commercially "for a supermarket or something similar."

In applying air-rights, the city's priorities were, in order: municipal purposes, low-income housing, Federal construction, privately developed low- or moderate-income housing, nonprofit corporations, and general business use. He listed 12 potential sites, beginning with the model block set aside for the Center Leg Freeway. Five of the sites would be suitable for housing, while others could be used for shops, light industry, parking garages, and school expansion. Unlike the model block, the city had not studied the other sites in detail, partly because routing was not yet final and the city was awaiting statutory authority. [Hoagland, Jim, "Housing on Sunken Freeways Debated," *The Washington Post and Times Herald*, July 26, 1967; Flor, Lee, "Tydings, Kennan Tangle On 'Air-Rights' Housing," *The Evening Star*, July 25, 1967; "Road Chief Denies Stall On Freeway Air Space," *The Evening Star*, July 27, 1967; "Many Areas Listed For Using Space Atop Freeways Here," *The Washington Post and Times Herald*, July 28, 1967]

General Mathe emphasized the importance of the air-rights bill during an informal conference by members of the House of Representatives from Virginia and Maryland. From Virginia were Representatives Broyhill and William L. Scott (R), who had practiced law in Fairfax before winning election to the House in 1966; he replaced Representative Smith, the former chairman of the Rules Committee, who had lost in the Democratic primary. Representatives Gude of Montgomery County and Hervey G. Machen (D), a former State legislator from Prince George's County who had won election in 1964, participated from Maryland.

When Representative Broyhill asked General Mathe what Congress could do for the District, the engineer commissioner replied that the District needed the air rights and parking authority bills. The use of air rights over freeways was vitally important, as was, for example, the ability to set aside land at L'Enfant Plaza for parking to match the crowds expected at the aquarium planned for East Potomac Park. He said, "It's improvident for a city this size not to have authority to do what needs to be done."

General Mathe also expressed frustration with NCPD's delaying actions. He recalled the Policy Advisory Committee's agreement in May 1966 that resolved the freeway disputes. "But we haven't gotten any action out of the planning commission – that's where the delays come from."

The latest delaying tactic was to have decisions “pushed upward” to the new Department of Transportation, as had happened with NCPC’s request to Secretary Boyd for a decision on the Three Sisters Bridge. He also cited the Potomac River Freeway tunnel under the Georgetown waterfront and the Palisades Parkway as examples of projects stalled by NCPC’s procedures.

Representative Broyhill replied, “We’ll do that [approve the two bills] and I’m going to propose we have some members from the suburbs [on NCPC] – this may prevent some of these delays.”

General Mathe endorsed legislation to allow WMATA to join NCPC. A few days earlier, the White House had cleared a bill introduced by Senator Bible to add WMATA representation to NCPC when NCTA went out of business on September 30, 1967.

The director of engineering for the Virginia Highway Department, A. K. Hunsberger, provided the good news that plans were moving forward to untangle the “Mixing Bowl” where I-95 and Capital Beltway traffic mixed in a confusing set of interchange ramps. Final design of the revised interchange would be completed within 10 months and construction would take 18 to 24 months. Motorists would enjoy the results within 3 years.

In contrast to Hunsberger’s good news, Wolff reported that right-of-way costs were increasing for the proposed Outer Beltway. The State Roads Commission had paid \$2.2 million thus far for land needed to preserve the corridor and expected the remaining protective acquisitions to cost \$8 million. “We’ve very simply taken the position that we won’t do anything until we lay this before the legislature,” he said. He added that he was not pushing BPR for a quick decision on the North-Central Freeway. [Flor, Lee, “Broyhill Urges Voice For Suburbs on NCPC,” *The Evening Star*, August 8, 1967; “Planners Shirk Roads Duty, Mathe Says,” *The Washington Post and Times Herald*, August 8, 1967; Flor, Lee, “Subway Builders to Get Seat on Planning Board,” *The Sunday Star*, August 6, 1967]

In a meeting with the Montgomery County officials, Wolff said right-of-way costs for the Outer Beltway were 1,000 percent above estimates. He had ordered a halt to acquisition because the money was coming from the construction budget. He was not certain when he would allow acquisition to resume:

Wolff . . . indicated there was little likelihood of immediate improvement in the financial condition of the over-all road program.

Costs for the six-year program from 1965 through 1970 are running about 60 percent above estimates throughout the state, he said, while in Montgomery they are 73 percent above. The approved program for Montgomery was estimated at \$29.5 million, but revised estimates put the total at \$51 million, Wolff said.

The State had expended all but \$6 million of the original estimate; the county would have to make up the difference if it wanted the work to continue as planned. (Costs in Prince George’s County had increased from an estimated \$25 million to \$36 million.)

According to Joseph C. Kordella, the county’s public works director, about 70 percent of the right-of-way for the Outer Beltway had been acquired. He said the remaining 30 percent,

between Old Georgetown Road and Rockville Pike, would be extremely expensive. [Feuerzeig, Henry, "Costs Halt Buying For Outer Beltway," *The Evening Star*, August 12, 1967]

### **Secretary Boyd's Perspective**

On January 1, 1967, President Johnson announced that he had accepted Rex Whitton's resignation as Federal Highway Administrator. His acceptance letter told the outgoing Administrator, "the American highway system is unequaled in the world and your share in the credit for it is large."

Whitton told a reporter, "The job has been rewarding, exciting and challenging, and only occasionally depressing. But now at 68, I want to get out while I am still winning—or at least I think I am still winning." He had bought a home in Independence, Missouri, at 4320 Montclair Avenue, not far from the office where he would begin his new position with the consultant firm of Howard, Needles, Tammen and Bergendof. He had recently tested his commute, which took only 16 minutes in an off-peak hour.

When he had taken office in 1961, Interstate construction was under attack. Funding from the Highway Trust Fund was inadequate to complete the network on schedule. Allegations of corruption in the right-of-way and construction phases were undermining public and congressional confidence in the program. And the attacks on segments in cities were leading to calls for a moratorium on the urban Interstates. A penny added to the gas tax helped with the funding problem. He established an investigative unit to look into the allegations and worked with a congressional committee set up for the same purpose.

The 3C planning process, which went into effect in 1965, helped with urban issues, but did not solve them. The urban Interstate routes had been designated a decade earlier, for the most part, when their general alignment was set. Many of the problems that highway officials in the District of Columbia were experiencing were universal. Every big city was battling opposition, often with officials suggesting tunneling and air rights as a way to reduce impacts. Finding answers had not been easy. Whitton, like many road builders, initially thought the answer was public relations to tell people how much the completed urban freeway system in their city would benefit them.

By the time he left office at the end of 1966, he had helped pull BPR and the State highway agencies toward the new environmental movement. Changes in the urban freeway plans were needed, not just explanations. In his dealings with NCPC, NPS, and officials in the District of Columbia, Maryland, and Virginia, he had a direct role in trying to get freeways off the drawing board and onto the ground, but he had tried to resolve similar disputes in cities around the country.

As Whitton left his Federal post, he predicted that greater coordination among Federal, State, and local officials would be needed to complete the urban network. "I don't see an end to highway building. People like to drive their automobiles. They like the freedom and independence of movement." Going forward, "we're in a state of humanizing highways." By this, Whitton meant that the highway builder's responsibility was not only to design roads and lay pavement but to

consider the impacts on people, parks, fish and wildlife, historic sites and the myriad factors which make life so complex.

Transportation was vital to any city, he said, and could not be separated from a city's future. "Just as urban development will determine the demands on the efficiency of highway facilities, the planning and location of such facilities will shape urban development and affect the lives of generations of urban dwellers."

Highway officials had to accept that "there is little usable space left in most of our cities." Using that space efficiently was the key:

As freeways move close to or through the downtown areas of the larger cities, they take land which till the day the demolition crews move in has some other vital use as part of a city's life.

It doesn't matter that the houses are small and mean, the people crowded, the industries unattractive. Neither does it matter that the highway will bring stability and renaissance to a tired old area. As the right-of-way is cleared, the highway is a disruptive force on community life. Ironically, the older and more crowded the neighborhood, the more it warranted demolition or renewal, the more disruptive is the new highway.

He said that joint development, a form of air rights, responded to this demand:

A city could acquire entire blocks or wider areas on the route of a planned freeway. The highway department would need only a permanent three-dimensional easement – an air tunnel for the freeway. The community would then have available a valuable assembly of land for a fraction of the cost of acquiring it in separate steps.

For example, the typical rowhouse or tenement housing of blighted suburban areas could be replaced, under a joint development program, with an equal number of comparable-cost housing units on one-third the land area with modern buildings. The remaining land could be used for parks, playgrounds, swimming pools, schools or public and private buildings.

[Brandt, Raymond P., "Whitton's Views on Road Issues," *St. Louis Post-Dispatch*, December 18, 1966; Coyne, Joseph R., "Whitton Foresees New Era in Roads," *St. Louis Leader-Press*, January 1, 1967; Cauley, John R., "Whitton Happy to End Career," *Kansas City Star*, January 2, 1967; "Rex Whitton To Firm Here," *Kansas City Star*, January 6, 1967]

As the old road builder returned to Missouri, the new Department of Transportation was taking shape in Washington.

Secretary Boyd, in a presentation on February 13, 1967, to the National Press Club in Washington, said the Department's number one problem was urban congestion. "There is obviously a limit to the concentration of people that can be put in any one area." As demands of population grew "by several orders of magnitude" in coming decades, citizens were "going to have to suffer some constraints on their personal freedom of action." The problem could not be

solved within the confines of the city. He predicted a proliferation of “new towns” to disperse the urban population. [Reddig, William, Jr., “‘New Towns’ Seen As Relief Need For Urban Jams,” *The Evening Star*, February 14, 1967; Porter, Frank C., “Further Restraints Seen As Transit Needs Grow,” *The Washington Post and Times Herald*, February 14, 1967]

During an April appearance in Richmond, Virginia, he said, “Your situation is like that all over the country”:

The pure economics of expressway building force these things through the areas of lowest right-of-way cost, so it is usually the low-income citizens who suffer.

Right now we are studying and using entirely new concepts in dealing with urban highway rights-of-way. Joint land use – that’s the answer. You put the roads in, but use the air rights and right-of-way excess for community improvements.

Before a highway is built at all, you build an apartment complex for the people you are displacing. You leapfrog from the highway route, alleviating the social problems before construction of the roadway begins.

He did not see an end to the automobile. “American society is dependent on the pneumatic wheel.” Rail rapid transit could help solve urban traffic problems in larger cities, but could not provide the mobility Americans had come to expect. Bus transit on reversible lanes during peak periods would, he thought, would contribute to the solution. [Sauder, Bill, “U.S. Relocation Problems Cited,” *Richmond News Leader*, April 26, 1967]

On April 28, he announced creation of an Office of Traffic Operations in BPR to oversee two major programs. It would administer the new Traffic Operations Program to Increase Capacity and Safety (TOPICS) and the 3-year old Safety Spot Improvement Program. The office also would administer safety standards issued by the National Highway Safety Bureau, promote the use of uniform traffic control devices and other traffic engineering technology, help compile and analyze traffic and crash data, and encourage cooperation between State and local traffic engineers.

The goal of TOPICS was to increase the capacity of Federal-aid primary roads in areas of 5,000 population or more by employing techniques such as channelization of intersections, construction of grade separations to relieve bottlenecks, installation of electronic traffic controls, and other techniques that did not require major disruption.

The Safety Spot Improvement Program focused on remedying high-crash locations on the Federal-aid primary and secondary highway systems. In the 3 years since the program had begun, States had programmed 2,424 projects correcting high-hazard locations at a total cost of \$430 million.

Secretary Boyd said:

The establishment of the Office of Traffic Operations reflects a broadening of the Federal interest in improving our highway transportation system. The Federal Government has

for many years assisted the states in construction and major improvements of our principal roads and streets. But there has been a growing recognition that more must be done to make our existing highway network safer and more efficient. This need is especially apparent in our rapidly expanding urban areas, where traffic congestion has become an acute problem. [“DOT Office Attacks Problem Of Urban Highway Traffic,” *Transport Topics*, May 1, 1967; “Transport Secretary Announces New Traffic Operations Office,” News Release, Office of the Secretary, Department of Transportation, April 28, 1967]

In a speech in Miami, he said that freeways that slice mercilessly through neighborhoods hurt cities even if they improved traffic flow. The *Miami Herald* reported:

Present federal standards route expressways based primarily on safety and economy. It is time, Boyd said, that highway planners start caring about the neighborhoods they disrupt, the people they leave without housing and the aesthetic and cultural aspects which they destroy with the new expressways.

“They largely ignore the environmental factors that can – in the long run – prove far more important to the future of a city,” Boyd said. “As a result, we all too often tend to select the route that will give us the straightest and safest possible line at the lowest possible cost. We must begin to take a far more comprehensive approach.” [Reno, Robert, “Let’s ‘Humanize’ X-ways—Boyd,” *Miami Herald*, June 4, 1967]

Appearing on ABC television network’s Sunday morning interview program, “Issues and Answers,” on July 9, he was asked, “What is your major problem, our major problem in transportation and what do you plan to do about it?” He replied:

It’s urban congestion. No question about that. We’re an urban society now and a great society and we have great problems. So the department of Transportation is going to work on an integrated basis to provide the kinds of transportation . . . a balanced system of transportation within, to and through the cities of our country.

He was asked if Highway Trust Fund revenue should be diverted, as many suggested, to rail rapid transit after the Interstate System is completed:

This is a sort of a straw-man argument which the highway community has thrown up out of their normal fears that everybody is trying to “get into our money.” It’s one of those fruitless things which makes life miserable for everybody and doesn’t have any substance to it.

My own feeling is that with the increase in the number of motor vehicles in this country, we’ve got to continue building and rebuilding our highway system at a rate which is going to take more money than is in the Highway Trust Fund now.

He added that, “there has got to be provision for mass transit in our larger cities.” [“Boyd Calls Anti-Diversion Idea ‘Straw Man Type of Argument,’” *Transport Topics*, July 10, 1967]

In September, he told the Transportation Task Force of California that the Department was going to revise procedures for obtaining Federal approval of highway plans. “We intend to require in the future that state highway departments get the views of all interested departments in city, state, and federal governments before highway routings are submitted to the Bureau of Public Roads for approval.” The routings must reflect the will of the public. The new procedures would recognize that “the best judges of routes and designs are the people who will have to live with them”:

If there are objections to a proposed route, we will want to know what they are, in detail, and we will want a well-documented case from the highway department when it believes a route must be approved despite the objections.

The procedures would call for two public hearings:

The first hearing would concern itself with the broad highway corridor. The second would involve the specific highway alignment within that corridor. The two-hearing procedure will permit objections to a route to be voiced before costly commitments are made – while change is still practical.

The goal was to settle the controversies before they reach Washington. This could be done if “route selections reflect local desires and are consistent with local goals and objectives.”

He would take one additional step on disputed routes. “I will ask the governor of the state in which the conflict exists to become personally involved in the case.”

In the end, the goal was “an effective, balanced and safe system of transportation.” [“Boyd Bares New Road Route Procedures,” *Transport Topics*, September 11, 1967]

On September 20, Secretary Boyd addressed the National Capital Area Chapter of the American Society for Public Administration. He began:

A few years ago, it was the fashion to think in terms of a day when every commuter would own a helicopter and our traffic problems would vanish. You don’t hear that much anymore, but the period left some lasting impressions . . . .

We have outgrown the single-family helicopter phase, but I am afraid too many people have gone on searching for other quick and easy solutions . . . . And the first thing you know, there you are – like Walter Mitty [James Thurber’s mild-mannered character who daydreams heroic adventures] – looking down at a drawing board which has the complete plans for a system that will wipe out traffic jams and – in its spare time – create the parks we forgot to make room for and blow away the smog.

But I am afraid that sort of wishful thinking just makes an already enormously difficult job even harder to do.

Unfortunately, all of the work that must be done to improve transportation in America’s cities must be done the hard way. And anything that encourages us to grasp at the first

straw that goes by with wheels on it will just make us more impatient with a job that already requires more patience.

In “a handful of metropolitan areas, new or expanded rail rapid transit systems can offset serious congestion, particularly where highways cannot handle peak-hour traffic. But for the majority of American cities and towns, rail mass transit is not yet economically feasible.” A balance would be ideal, but “for now, the highway must be the basic tool for most cities.” Accepting that premise does not mean we are “forced to commit ourselves to our present methods of using it.” Similarly, we were not “by any means committed to the methods we have used in the past for choosing the routes over which we build the highways.”

“Given the present state of our research, economy and technology, highways are in the cities not only to stay but to spread.” The highway debate had “stirred some powerful emotions and strong language.” One faction believed that “all highway engineers should be ridden out of town on a rail – a monorail, if one is available.” Highway engineers “insist – and rightly – that they gave us – to the extent that we made our wishes explicit – what we asked for: An efficient highway system to serve travelers and commerce at the lowest cost.” They could not be accused of failing to follow a metropolitan plan “because we seldom – if ever – gave them one to work from”:

But the time has come to change the order, to include social values which cannot be measured by any standard economic formula in the design of our future urban highways.

He discussed the new two-hearing procedures the Department of Transportation was developing for approving highway routes. “And in order to provide the greatest possible leeway, we are developing methods for measuring the resource values that go beyond the standard cost/benefit analyses.”

Highways were “remarkably versatile,” but their full potential had yet to be tapped. However, the automobile was “not designed with the efficient movement of peak-hour volumes of commuters in mind.”

He suggested that buses, perhaps operating on exclusive lanes, might be a way to tap highway potential. Would that prompt commuters to leave their cars behind? “We don’t know the answer.” FHWA was trying to promote exclusive bus lanes on freeways. “And I intend to see that our efforts in this direction are expanded in the future.”

He discussed TOPICS as another example of making highways more versatile. “In some cases, these relatively minor adjustments will increase the capacity of the system by as much as 25 per cent.”

“We tend to talk in terms of the urban transportation problem, but there are, in fact, many problems.” Urban areas were not uniform. The problems of the suburban commuter are “far different from that of the man in the ghetto.” The poor were in desperate need of good alternatives to the automobile. “As the report on Watts stated, inadequate public transportation is one of the public deficiencies that handcuffs the man in the ghetto in his search for jobs, for education, for recreation.” The Department was studying whether free public transportation

“would make a significant contribution toward relieving rush-hour congestion in the cities [and] help people in the ghetto find jobs and hold onto them.”

“Finally, we come to the fourth dimension of transportation – the way it affects the quality of the environment in a city while it moves people and goods.” The impact of transportation on the environment in a city is hard to measure, but the impact “is there and it will be given a high priority in decisions on transportation policy.” Some of the problems, such as air pollution, may require new technology, but others could be solved “with present technology, common sense and cooperation.”

As an example, he cited “the way we buy land for urban freeways.” According to studies, the cost of buying land “for a variety of uses” could be done “at little more than the cost of buying the right-of-way for the freeway alone”:

Under joint development, entire city blocks could be acquired along freeway routes for housing, parking and playgrounds at a fraction of what the land might otherwise cost. Such joint development could help create new housing for people in poverty areas who are disposed [sic] by highways. The construction of residential communities, complete with shopping and recreational facilities, over or adjacent to, highways, pose [sic] only limited legal and engineering difficulties.

The concept already was in use “in planning and building municipal centers, schools and other public buildings,” but offered even more dramatic possibilities for freeways. Joint development, for example, was happening in Washington where the city was studying “the possibility of building apartments over a portion of the Inner Loop.”

He cited another example of innovation:

And in Baltimore, urban, social, economic and transportation planners are preparing to work together as a team to use Interstate 95 as a catalyst for achieving broader community goals in the areas of Baltimore it will pass through.

The catalog of possible solutions to urban transportation problems “is easier to read than to implement”:

The effort will put new strains on such contending interests as the central business district and the satellite city; the government plan and the operation of free enterprise. Perhaps the most difficult part of implementation will be the matter of timing. It will not make much sense to develop attractive new neighborhoods in a city if the school remains second-rate. A smooth-flowing traffic pattern cannot be considered real progress if the air is still filled with smog.

It would not be easy to find solutions, but two new elements were present. First, on November 11, 1966, President Johnson had called on Federal agencies to engage in “creative federalism,” which he said meant cooperation. For Federal, State, and local governments to achieve their goals, “more is needed than money alone.” Programs must be carried out jointly, worked out and planned “in a cooperative spirit with those chief officials of State, county and

local governments who are answerable to their citizens.” He wanted officials to give chief executives of State and local governments “the opportunity to advise and consult in the development and execution of programs which directly affect the conduct of State and local affairs.”

The goal was “to make certain that vital new assistance programs are made workable at the point of impact.” Secretary Boyd’s plan to involve Governors in decisions on contested freeway an example of creative federalism.

As for the second item, he recalled the President’s words at the signing ceremony on September 9, 1965, for the legislation creating HUD:

The other is the President’s insistence that we have no real alternative. As he reminds us: “We must seek, and we must find the ways to preserve and to perpetuate in the city, the individual, the human dignity, the respect for human rights – that has been part of the American character and the strength of the American system.”

Secretary Boyd concluded:

The Department of Transportation is not an end to our transportation problems; it is a beginning in the search for new solutions. But it gives us, for the first time a logical framework for seeking those solutions.

Secretary Boyd followed up on his reference to Baltimore by announcing on September 24 that a \$4.8 million contract had been awarded with the city that “may well set a pattern for designing urban highways across the nation.” A team of highway, traffic, and safety engineers would work with city planners, sociologists, economists, and others on the routing and design of a section of I-95:

For the first time in any major city, all of the environmental skills will be brought to bear on the design of a highway from the very beginning. It will give Baltimore a unique opportunity to use the highway program to help it reach other developmental goals; to help it become the kind of city it wants to be.

With early planning consideration of the highway’s social, economic, historic and functional impact, this will become not just a road through a city but an integral part of the city.

The contract had been under consideration for a year. With FHWA’s approval, the contract was eligible for the 90-10 matching ratio of the Interstate System. The Maryland State Roads Commission established a special office, the Interstate Division for Baltimore City, to help in the work, while BPR assigned a full-time representative to the project.

The Interstate Design Concept Team would cover the following categories:

1. Design criteria – Establishing the controls, conditions and treatment for various roadways and structures and translating permissible standards into specific details for use in the design process.
2. Urban design – Determination of the characteristics of neighborhoods through which the highways pass and the formulation of opportunities and recommendations by which the road can be blended with the area traversed.
3. Study design – Consolidation of prior studies, up-dating these studies, and the preliminary engineering design of the roadway, including type, size and location of structures. [News Release, Office of the Secretary, U.S. Department of Transportation, DOT – 8367, September 24, 1967]

The team, which was expected to take 2 years, included the J. E. Greiner Company; Skidmore, Owings and Merrill; Wilbur Smith and Associates; and Parson, Brinckerhoff, Quade and Douglas. Nathaniel A. Owings, the San Francisco architect who was involved in several activities in Washington, headed the team. Author Earl Swift said of Owings:

The interstate system, he wrote, had “raised more problems than it solved,” had “cut through neighborhoods, parks and historic areas” in cities throughout the country. “Part of the tragedy,” he added, “is that the cities themselves have rushed with a strange sense of urgency to cooperate in their own mutilation.”

Swift quoted James D. Dilts, a *Baltimore Sun* reporter who covered the city’s freeway battles, as describing the challenges facing the Interstate Design Concept Team by saying:

“Blending” a six- or eight-lane highway into the fabric of Baltimore is about as promising an assignment as “blending” a buzz saw into a Persian rug. [Swift, page 275]

In the *Post*, Von Eckardt referred to the contract as “a revolutionary first step to adjust freeways to cities rather than tear up cities to let the freeways through . . . . The move may end a ten-year conflict over freeways in Baltimore and promises to resolve similar hassles in major cities.” He quoted an unnamed Department of Transportation spokesman as saying that the cheapest way to build an urban freeway “is just to go crashing through,” but adding that it would cost more, socially and otherwise, in the long run. The design team approach was under consideration for other cities, including Washington, possibly for the North-Central Freeway. [Von Eckardt, Wolf, “New Freeway Theory Tested,” *The Washington Post and Times Herald*, September 24, 1967]

On September 26, Secretary Boyd addressed the Washington Board of Trade at the Mayflower Hotel. “The concern over the condition of transportation,” he said, “is not a new one.” Planners, engineers, community organizations, and the industry had been working for years “to improve one element or another – working harder in recent years as growth increases the strain on our transportation network.” Now, for the first time, with creation of the U.S. Department of Transportation, “a balanced system of transportation is a national goal, backed with national resources.” This new approach had a “unique application here in Washington,” which had already undertaken a “great deal of the planning that is needed to develop a model metropolitan system of transportation.”

The planned “83-mile rail rapid transit system” would link Washington and its suburbs. In addition:

For the year 2000, the Regional Planning Council is considering a network of nine radial freeways, three circumferential freeways and an Inner Loop System. Planners have recommended five general aviation airports to accommodate the upsurge of private aviation which they anticipate in the area. Helicopter airbus service to link the city and the three regional airports which serve the National Capital Region is under consideration.

That, as the planners say, will give Washington a transportation system fit for a showcase. And it certainly sounds like a welcome change from what many of us experience today.

Still, solutions were years off. Roads were crowded, the subways not yet underground, air lanes were crowded, Union Station was under-used, and bus terminals were falling behind demand. Parking in downtown was “a growing cause of irritation for those who live and work and shop in the heart of the city.”

All these frustrations aside, Washington’s business community remained healthy, with forecasts of “more jobs, more construction, more money in circulation, and more people.”

The city had prepared for growth. Groundbreaking for the subway was expected in the summer of 1968, with limited operations beginning in 1972. “New construction will add many miles of highways and freeways” that would “make it easier for many residents of the Capital region to get downtown and to other parts of metropolitan Washington.” For now, these new transportation services were “no more than dotted lines on maps” that would relieve the traffic jams “in five or six years or certainly no later than the turn of the century.”

He summarized, “For Washington, then, as for many American cities, the transportation crisis involves short-range answers as well as long-range planning. The problem is what to do until the subway arrives.” The twin goals were to improve operation of the current transportation system while planning for the future.

The highway system was the “obvious place to start.” The automobile, Secretary Boyd said, could not be “the only answer to Washington’s transportation needs.” They simply take up too much space – in other cities, an average of 28 percent of space is devoted to the automobile, but that figure is more than 30 percent in Washington. “In 1964, Washington had more freeway mileage per square mile and per capita than any other large urban area in the Nation” and twice as much freeway mileage per million population as Los Angeles.

He cited urban critic and author Lewis Mumford’s 1961 book, *The City in History*, as saying of the city:

Washington has proved a classic testing station for the question of whether a city dedicated whole-heartedly to traffic could sufficiently survive for other purposes . . . . The assumed right of the private motor car to go any place in the city and park anywhere is nothing less than a license to destroy the city.

Secretary Boyd was not proposing that people abandon their automobiles. “I am saying that the city and the community should make sure that they get full benefit from their streets and highways.” The city would not receive the greatest return on investment “if the community tries to resolve today’s problems by the simple expedients of more automobiles, more freeways, and more parking lots” (the same phrase he used years later in an interview with Schrag, cited earlier). Alternatives, some untested, included “wider use of a flexible system of bus transit,” exclusive lanes for express buses, a benefit for bus riders comparable to “Park and Shop” tickets that merchants issue to shoppers, and “simple steps” under TOPICS to improve traffic flow, such as better patterns of traffic light timing:

Some of these ideas might prove to be infeasible or uneconomical or even illegal. You will never know unless you try them. And it is possible to change the law when a need is demonstrated.

Boyd said, “Washington’s transportation problems are – in one form or another – a microcosm of our Nation’s transportation problems.” He did not “intend to try to dictate the terms of the transportation system in Washington or in any other city.” His Department could help in “the search for better ways to give the American traveler variety, comfort, efficiency and safety.”

The business leaders he was addressing must join with the community’s leaders and Federal officials to pursue short- and long-range alternatives that “might resolve the community’s transportation needs until such a day as the Federal City has become a true showcase for America’s cities, in transportation as well as in other categories.” He concluded:

We look to the day when the availability of the best will make it possible to forego the consideration of alternatives which are merely good.

That day has not yet come.

After his speech, Boyd answered questions from board members, including questions about the status of the review NCPC had asked him to conduct on the Three Sisters Bridge. He told the board that he did not know the answer. “I hate to be evasive. Three Sisters is being studied.” The *Post* summarized the resulting exchange:

Boyd has been under considerable pressure to give the go-ahead on Three Sisters, much of the pressure originating from highway lobbyists.

Pressure was apparent yesterday. During a question-and-answer period, Board member Harold Wirth gave an emotional speech in which he said that the facts presented by Boyd regarding Washington’s highway system were false and that Boyd was jeopardizing the development of transportation facilities by delaying his decision.

Wirth is an official of the Firestone Tire & Rubber Co. His comments drew applause from the Board of Trade.

Boyd was unperturbed. “If I were prepared to give you an answer,” Boyd said, “I would have done so.”

He defended his statistics, denied that Washington's transportation was in jeopardy and added:

“You fellows seem to think there is some sort of conspiracy to wreck the freeway program. There isn't . . . . We have Three Sisters under study.” [Severo, Richard, “Boyd Asks D.C. to test Express Buses,” *The Washington Post and Times Herald*, September 27, 1967]

During the speech, Secretary Boyd had supported express bus service on freeways. He thought Washington would be an ideal place for an experiment but after the speech, he acknowledged that his staff was not working on a specific proposal. However, as Lee Flor put it, Boyd had, in effect, given “local transportation officials the broadest hint possible, indicating he would be glad to provide help if they want it. [“Boyd Invites Plans to Aid Street Transit,” *The Evening Star*, September 27, 1967]

As explained in a September 1 press release, FHWA Administrator Bridwell had urged State highway officials to consider using reserved bus lanes on freeways at peak traffic hours:

With the increasing demands on highway budgets and the stronger focusing on problems of the metropolitan areas, it is imperative that highway officials at all levels of government take advantage of every opportunity to increase the productivity of our highway system as measured in terms of movement of people and goods.

Federal-aid highway funds could be used for the extra cost to create reserved lanes for buses, but heavy use of the lanes would have to be achieved to justify public acceptance. FHWA set the optimum range of usage at 120 to 180 buses per hour. In areas where that usage could not be achieved, FHWA suggested “preferential use,” which would permit vehicles other than buses to use the lanes. The number of other vehicles using the preferential lanes could be controlled at access ramps or by metering the flow with control devices. These guidelines aside, Bridwell said, “Each case will be considered on its merits.”

The lanes, between 3 and 5 miles long with no stops for passengers, should be reserved on a schedule covering the morning and evening rush hours. “The concept could be employed for special events such as football games and the like.” However, “reservation periods of less than an hour could hardly be justified.”

As for design:

The FHWA said reserved lanes could best be accomplished by using the reversible lanes in the center of the freeways where they exist. Where reversible lanes do not exist, the lane nearest the median could be used. Access and egress would be by special ramps, and Federal-aid funds would be eligible for design and construction of such ramps and other needed structures.

To be eligible for Federal-aid funding, the lanes must meet certain criteria:

To justify such design and construction funds, the FHWA noted, the number of bus passengers anticipated would have to be based on findings of the continuing comprehensive transportation planning process which communities of 50,000 population and over must carry on in order to receive Federal-aid highway funds. Transit operators also must give adequate assurance of the availability of buses and agree to maintain satisfactory levels of service in terms of comfort, convenience and fare structures. It must also be shown that reserved or preferential use of lanes ties in with the overall comprehensive development and transportation plans of the urban area involved.

By mid-October, Washington area transportation officials were ready to take the hint. They were studying plans for express bus service on reversible lanes planned for the I-95/Shirley Highway corridor. Buses from Alexandria and eastern Fairfax County would pick up passengers on city and county streets, then use special ramps to access the lanes at about 60 miles an hour. They would cross the 14<sup>th</sup> Street Bridge and cross into downtown Washington on the 11<sup>th</sup> Street expressway. At present, Shirley Highway had two northbound and two southbound lanes. Virginia highway officials were planning to add two reversible lanes to operate in the peak hour direction. To limit them to express buses, decisions would have to be made quickly. [Flor, Lee, "Shirley Highway Reversible Lanes Sought for Buses Only," *The Sunday Star*, October 15, 1967]

(Secretary Boyd had quoted Lewis Mumford, who was a long-time critic of the automobile, the freeway, and their dominance of the urban landscape. In the book cited, *The City in History*, Mumford praised Major Pierre Charles L'Enfant's original design for the new capital of the United States. It was a "bold conception" that was "brutally massacred." Despite having "planned superbly," he had "overlooked the fact that he himself could not build the city he had planned." Over time, his plan had been "visually disrupted by a wide scattering of unkempt and irrelevant buildings. Even to this day, the area immediately around the Capitol is spotted by an outbreak of urban eczema . . . ."

(Mumford praised Alexander Robey Shepherd, also known as Boss Shepherd, for "a series of major improvements after the Civil War." Shepherd "had the proper dictatorial qualifications for carrying out a baroque plan." He had "enough imagination to undertake, at last, the planting of the wide streets and avenues with trees, as L'Enfant had specified":

The other fact that redeemed L'Enfant's original plan, though it did not add to its beauty, was the filling up of the overload of wide streets with sufficient wheeled traffic to justify their existence: this came in only with the motor car. Though motor traffic has now caught up with the plan, clogging the most extravagant arteries, and hiding the verdure behind a metallic wall of parked cars.

(Secretary Boyd quoted the next passage about Washington proving to be a classic testing station for the assumed right of motor cars, with the two sentences separated by ellipsis (. . .). The sentence he did not read to the highway supporters he was addressing is:

Already it is plain in Washington – and will become plainer as the city receives the inundation of new expressways, which recklessly spoil every view and defile every approach to its finest urban prospects – that when traffic takes precedence over all other

urban functions, it can no longer perform its own role, that of facilitating meeting and intercourse.

(In a later section of the book, Mumford wrote:

Under the present dispensation we have sold our urban birthright for a sorry mess of motor cars. As poor a bargain as Esau's pottage. Future generations will perhaps wonder at our willingness, indeed our eagerness, to sacrifice the education of our children, the care of the ill and the aged, the development of the arts, to say nothing of ready access to nature, for the lopsided system of mono-transportation, going through low density areas at sixty miles an hour, but reduced in high density areas to a bare six. But our descendants will perhaps understand our curious willingness to expend billions of dollars to shoot a sacrificial victim into planetary orbit, if they realize that our cities are being destroyed for the same superstitious religious ritual: the worship of speed and empty space. Lacking sufficient municipal budgets to deal adequately with all of life's requirements that can be concentrated in the city, we have settled for a single function, transportation, or rather a single part of an adequate transportation system, locomotion by private motor car.

By allowing mass transportation to deteriorate and by building expressways out of the city and parking garages within, in order to encourage the maximum use of the private car, our highway engineers and city planners have helped to destroy the living tissue of the city and to limit the possibilities of creating a larger urban organism on a regional scale.

(By discouraging pedestrians and failing to extend and perfect mass transportation, municipal officials and highway engineers had "created a situation that calls for extremely low residential densities." Agents of mass suburbia had fostered the "absurd belief that space and rapid locomotion are the chief ingredients of a good life." Los Angeles was the "*reductio ad absurdum* of this myth":

Los Angeles has now become an undifferentiated mass of houses, walled off into sectors by many-laned expressways, with ramps and viaducts that create special bottlenecks of their own. These expressways move but a small fraction of the traffic per hour once carried by public transportation, at a much lower rate of speed, in an environment befouled by smog, itself produced by the lethal exhausts of the technologically backward motor cars.

(The sprawling suburbs and expressways, Mumford wrote, were sapping the life out of cities:

This is ruinous both to urban living and to leisured recreation; for the attempt to service the distant areas with expressways will not merely sterilize more and more of the land, but will scatter social facilities that should be concentrated in new cities, organized so as to diffuse and amplify the central facilities. [Mumford, Lewis, *The City in History: Its Origins, Its Transformations, and Its Prospects*, A Harvest Book, Harcourt, Inc., 1968: "The Lessons of Washington," pages 403-408, and "Mass Suburbia as Anti-City," pages 509-511])

## Reorganizing the District

On September 6, 1967, President Johnson announced that he had selected Walter E. Washington to serve as Commissioner of the District of Columbia under Reorganization Plan No. 3. After considering “literally hundreds of names and records,” the President said, the search came “to a happy end.” In Walter Washington, “we have found a man who can provide the leadership, the vision, the understanding, and the talent to move the Capital City forward – steadily and surely. We have found a man who will be a strong and authentic voice for the people of the District.”

Washington, a 52-year-old African American, was a native of Dawson, Georgia, who grew up in Jamestown, New York. He had spent much of his adult life in Washington. He graduated from Howard University in the District and secured a law degree from the university as well. He had taken sociology and public administration courses at American University. He joined the National Capital Housing Authority in 1941, rising through the ranks to become its director in 1961. After 5 years, he left the city to become chairman of the New York City Housing Authority where his salary was \$35,000. In returning to the District of Columbia less than a year later, he would take a salary cut to \$28,500.

He met his wife Bennetta at Howard University. They had retained their home at 408 T Street, NW., in the District’s LeDroit Park section near the university. The *Post*’s Robert Asher described their home as “a rambling, Victorian place owned by the prominent family of his wife.” Bennetta Washington had been the principal of Cardozo High School in the city before leaving the school system 3 years earlier to launch the Jobs Corps Program for women. When her husband took the job in New York City, she accepted a professorship in education at City College in that city.

President Johnson also announced that he had selected 43-year-old Thomas W. Fletcher to be Assistant to the Commissioner, calling him “an expert fiscal planner.” Fletcher, who was white, had been a city administrator for 15 years, most recently in San Diego, California, where his slogan was “City in Motion.”

A native of Portland, Oregon, Fletcher had graduated from the University of California at Berkeley in 1950 before taking graduate work in public administration. After a brief period in the private sector following his service in San Diego, he moved to Washington to become Deputy Assistant Secretary of HUD for renewal and housing assistance on July 10, 1967. His new salary would be \$26,500. He and his wife Margerie and two of their three children lived in an apartment at the new Van Ness Apartment building at 3001 Veazey Terrace, NW., off Connecticut Avenue in the District’s Forest Hills neighborhood.

The *Star* and *Post* commented on what the *Star* called “an unusually brief announcement” of the two important nominees. They speculated that the President was upset that the *Post* had reported 2 weeks earlier that Washington was the front runner for the position. The *Post* added, “The President was miffed at the disclosure, and there was doubt until this week that he would go ahead with the appointment.”

Reaction to the announcement was positive, as reflected in a comment by Joseph Rauh. "I can die happy now. I've seen this city go from iron-clad segregation to a Negro mayor-commissioner fully qualified for the job."

[Millius, Peter, "Washington Named D.C. 'Mayor,'" *The Washington Post and Times Herald*, September 7, 1967; "Washington Named D.C. 'Mayor,'" *The Evening Star*, September 6, 1967; James, Betty, "Washington," *The Evening Star*, September 6, 1967; "Fletcher," *The Evening Star*, September 6, 1967; Asher, Robert L., "Walter Washington: Back Home," *The Washington Post and Times Herald*, September 7, 1967; Kaiser, Robert G., "Fletcher, City's New No. 2 Man, a 'Top Administrator,'" *The Washington Post and Times Herald*, September 7, 1967]

According to Professor Lewis, Chairman McMillan did not share the enthusiasm for Walter Washington:

The appointment incensed Congressman Johnny McMillan. When Walter Washington sent his first budget up to Congress for approval, Johnny Mac sent the mayor a truckload of watermelons. [Lewis, page 402]

Following quick Senate confirmation, President Johnson attended the swearing in ceremony for Washington and Fletcher in the East Room of the White House on September 28. He said:

We celebrate a new era for the Capital City as we meet here to swear in Walter Washington as Washington's first mayor, and Thomas Fletcher as his deputy.

The citizens of the District have waited almost a century for this day to come, and all that it symbolizes.

This is the day – and this is the year – that the District emerges into the world of the 20<sup>th</sup> century government.

With the recent reorganization plan, the Nation's Capital was liberated from the outworn practices of past years. That reorganization plan equips the city with new machinery to let its government service the needs of its people.

Referring to Washington as "Mr. Mayor," President Johnson told him, "your walk will be long and arduous, but I believe it will be rewarding."

Justice Abe Fortas of the Supreme Court administered the oath to the two men while more than 200 people looked on.

After they took the oath of office, President Johnson said, "Mr. Mayor and Mr. Fletcher, you won't be walking alone." He then announced his choices for the city council. The *Star* subheadline reported: "Five Negroes Selected for 9-Man Panel." The choices were:

Max M. Kampelman (white), a 46-year-old Washington attorney, was named council chairman;

The Reverend Walter E. Fauntroy (African-American), the 34-year old pastor of New Bethel Baptist Church, would be vice chairman.

Stanley J. Anderson (African-American), 40, was director of the Recreation Department's Neighborhood Centers Division.

Margaret A. Haywood (African-American), 53, was an attorney active in civil rights work.

John Nevius (white), 47, an attorney who fought for better housing, was a leader in the city's Head Start program.

William Thompson (African-American), 55, was president of the Washington Urban League and a past president of the National Bar Association.

J. C. Turner (white), 51, president of the Greater Washington Central Labor Council of the AFL-CIO, had been active in civil rights and other issues affecting the working man.

Polly Shackleton (white) of the Democratic National Committee for the District of Columbia.

Joseph Yeldell (African-American), 35, had been a teacher but was currently a marketing executive with IBM Corporation.

All were present for the announcement except Shackleton, who was in Montreal for the World's Fair, Expo 67, and could not get back in time for the hastily arranged announcement. She was, the President joked, "observing conditions in Montreal as a background to what she's going to be doing here." As the *Post* pointed out, "That as many as eight of the nominees did appear was remarkable, for many were told of their nominations only an hour or so beforehand."

Although the normal terms of service would be 3 years, the initial group had been given staggered terms. The terms of Haywood, Turner, and Yeldell would expire on February 1, 1968. Kampelman, Nevius, and Fauntroy would serve until their terms expired in 1969. Anderson, Thompson, and Shackleton would serve full 3-year terms ending on February 1, 1970.

The three District commissioners under the old government were moving on. President Johnson had nominated Walter N. Tobriner to be Ambassador to Jamaica. John B. Duncan was to become a special assistant to Secretary Udall on metropolitan affairs. General Mathe planned to retire from the U.S. Army at the end of the year.

[“D.C. Emerges Into 20<sup>th</sup> Century,” *The Evening Star*, September 28, 1967; Concini, Charles, “Johnson Names Council for D.C.,” *The Evening Star*, September 28, 1967; Sarro, Ronald, “Tobriner Picked For Envoy Post,” *The Evening Star*, September 18, 1967; “Asher, Robert L., “President Selects Negro Majority to New District Panel,” *The Washington Post and Times Herald*, September 29, 1967]

President Johnson expected the Senate to approve his council nominees quickly, but questions arose about Kampelman. Representative Gross of Iowa charged that Kampelman had been director of a company that obtained \$4 million from the Agency for International Development under questionable circumstances. For background, Representative Gross cited a GAO report regarding the 1962 loan. Kampelman said he would discuss his activities during the confirmation hearing, adding, "I have every confidence that the facts will place the charges in a proper and satisfactory perspective."

On October 11, however, Kampelman indicated that conflict of interest laws would require him to resign from his law firm to become council chairman, and he was not willing to do so. Therefore, he withdrew his name from consideration for the post. ["Kampelman Says Reply Must Await Hearings," *The Evening Star*, October 6, 1967; Concini, Charles, "Kampelman Withdraws From Council," *The Evening Star*, October 11, 1967]

In his place, President Johnson nominated John W. Hechinger to be chairman. The 47-year old businessman was a fourth generation Washingtonian whose name was known throughout the area for the chain of Hechinger's hardware stores. He also had been active in other businesses, civic groups, and charities. He had worked with White House staff to prevent Congress from blocking Reorganization Plan No. 3.

His appointment was so new that when reporters asked him about his duties, he was not certain what they would be. He told reporters, "I was honored to be selected, and accepted the President's offer as a challenge. I hope to be able to do what he has in mind." He added:

I think the reorganization plan is a giant step forward, and that the proposal that has been framed up is so far superior to the mechanics of what we had to work with before that there is a real good chance for progress.

He was looking forward to working with Commissioner Washington:

I am particularly pleased to be working with Walter Washington . . . . I have known him and worked with him for many years . . . [he] seems like a man with a mission and will be a great boon to the city.

Like Kampelman, Hechinger was white, thus preserving the 5-4 racial balance of the council. He and his wife June, also active in civic groups and charitable work, lived with their four children at 2838 Chain Bridge Road, NW. [Concini, Charles, "Hechinger Named Council Chief," *The Evening Star*, October 12, 1967; "Hechinger Anxious to Start 'Challenge,'" *The Evening Star*, October 12, 1967]

Following Senate confirmation, the nine members of the new council took their oaths of office in the East Room of the White House at 11:45 a.m., on November 3.

President Johnson was the only speaker on this "very historic day," departing frequently from his text in a 15-minute address to about 350 guests. The goal of the new city government was to make the District of Columbia "the city that every other city in the world would like to copy." He emphasized the need to improve the city's schools and "clean up the crime situation and

make Washington the safest city in the Nation.” These would be the first steps that would unleash “so much encouragement and so much support from all of our people and all of our Congress that we could have the best educational system, we could have the cleanest city, and we could do all these other things that need so much to be done.”

He emphasized that he was not blaming anyone for these problems. In what appears to be one of his extemporaneous comments, he explained:

But I do want to say this to the Congress . . . . I want to appeal to them to try to quit treating the District of Columbia – now Senator Morse, I am not talking to you. You just stay seated. I am not going to attack. I want to say to the Washington Post I am not the slightest angry. And I want to say to the fellow the day before, I am not lambasting anybody. I am not attacking.

Now, that is what I am not doing. But what I am doing – I want to say to the Congressmen, of both the House and the Senate, as I said last night, let's don't treat the Nation's Capital as a stepchild.

He added:

I think we are living in a goldfish bowl here in Washington. I think that spotlight is on every one of us and the whole Nation is looking at us, because this is the Nation's city. This is the people's city.

He urged the new members of the council to get out on the streets “and talk to those people in their homes and in their businesses.” He urged them to “work as if you had to run for election every November.”

He praised the three former commissioners and asked them to stand for a round of applause. He praised their “patriotism, dedication and unselfishness,” adding that they had “worked themselves out of a job.” He said he “had never known men who have wanted to do a better job.”

He thanked the former special assistants on District affairs, Charles Horsky, now in private practice, and Stanley Pollak, who was leaving the White House to be a special assistant to Attorney General Ramsey Clark. President Johnson said he would no longer need a special assistant on the District because he would deal directly with Mayor Washington.

After the President's remarks, retired Supreme Court Justice Tom C. Clark administered the oath. The *Post* reported, “Cameras clicked like crickets as Justice Clark recited the oath from memory.” President Johnson and the new District officials stood in a receiving line, shaking hands with the guests for an hour. [Kaiser, Robert G., “City's New Council Takes Oath,” *The Washington Post and Times Herald*, November 4, 1967; Sarro, Ronald, and Delaney, Paul, “New District Council Sworn In,” *The Evening Star*, November 3, 1967]

### Three Sisters Bridge Inches Forward

On September 20, the Commission of Fine Arts approved the District's latest design for the six-lane Three Sisters Bridge. Chairman Walton said, "We think this is what a bridge should look like. It will enhance the landscape." The District's fourth official submission of a bridge design involved a 750-foot concrete span, 80 feet high, with only two supports at the river's edge. Airis said that his idea was that for a bridge at this location, it had to be "a Michelangelo."

Von Eckardt reported:

Fine Arts Commission objections to the previous steel structure designs finally prompted Airis to overcome his misgivings and try concrete and a new consulting engineer, Paul Weidlinger, of Cambridge, Mass. That turned the trick.

Concrete made it possible to design the bridge as one, elegant sculptural form stretching from abutment to abutment without disturbing the shores. To be built of prestressed, hollow box girders, it would be the longest span of its kind in the world, according to the engineers.

The bridge posed an unusual engineering challenge because it had to be high enough to permit river traffic under it while fitting under Spout Run Parkway on the Virginia shore. Weidlinger said, "It was a tricky geometric problem."

During the same meeting, the commission again rejected the District's plan for a tunneled South Leg Freeway skirting the Lincoln Memorial and tunneling under the Tidal Basin. The commission argued that the tunnel would destroy too many trees. Airis explained that preserving the 50 or so trees would add \$6 million to the cost of the project. Moreover, the tunnel would change the water table; the additional cost, therefore, would not ensure the survival of the trees:

But the Fine Arts commission would not have "a huge scar across the most important landscape of the city," Walton said. He suggested that the freeway alignment be relocated to run under the Munitions Building on Constitution Avenue and then cut across the Mall under one of the existing cross roads. [Von Eckardt, Wolf, "Mall Tunnel Blocked By Fine Arts Panel," *The Washington Post and Times Herald*, September 21, 1967]

(The Munitions and Main Navy Buildings were located on Constitution Avenue between 17<sup>th</sup> and 21<sup>st</sup> Streets in the approximate location of today's Constitution Gardens and a portion of the Vietnam Veterans Memorial.)

Airis called the commission's approval of the bridge "a gigantic step forward." City officials, however, had to await Secretary Boyd's response to NCPC regarding whether the bridge was needed, as well as the outcome of the pending court challenge.

*Star* editors took the approval in stride. "If every vote of approval this bridge has received over the years could have been traded for a foot of actual construction, it would have crossed the Potomac long ago." As for NCPC's request to Secretary Boyd, it had "rested in the bosom of

Boyd's new agency for an inordinate period of time." The editors urged Secretary Boyd to "get with it":

The decision's not that tough. Indeed, the only legitimate reason we can think of for taking this much time is that the Secretary may be trying to read *all* of the previous studies which have demonstrated the need for this bridge. We hope not, however. That could take years. ["Approved Again," *The Evening Star*, September 26, 1967; italics in original]

On October 15, Richard Severo of the *Post* reported on the departure of Engineer Commissioner Mathe from his office after 11 months:

Mathe was quite possibly the most outspoken, boat-rocking engineer commissioner in District history. And as it is with outspoken people, he was not universally loved, either in the District Building or in the multitude of agencies that promulgate, authorize, speculate, legislate and fluctuate, thus producing what passes for government in the Federal City.

His many supporters "cite his tireless energy, his emphasis on action rather than interminable planning, his support of public works, especially highways, and his candor in criticizing District thinkers who produce grand schemes but little else." His many critics "say he de-emphasized thinking a little too much, that he preferred premature action rather than thoughtful planning, and that he was more interested in keeping his highway planners busy than he was in preserving residential areas from the onslaught of the freeway."

He always wanted to see "tangible results." However, city problems were "not his first love." He said, "If I had my druthers, I would be in water resources development." His critics wished he had his druthers, and some of those critics were on NCPC where he "became locked in a battle he was unable to resolve: The Three Sisters Bridge":

The NCPC's public meetings frequently produced their share of fur-pulling, but the fight over Three Sisters has become a parliamentary nightmare.

Severo recounted NCPC's vote in March to approve the site for the bridge, the decision in April to postpone consideration, and the decision in May to approve the bridge only if Secretary Boyd said it was needed:

Thus far, Boyd hasn't said much about Three Sisters. But Mathe has said quite a bit about Three Sisters. Like the session of the NCPC when, sitting at the Board table in his characteristic pose, rocking back and forth, rubbing hands together and striking his jaw, Mathe said:

I take exception to the conduct of the chairman in not allowing Three Sisters on the agenda.

There was a brief argument, Mathe frowned, Mrs. Row was restrained, a few members of the NCPC staff coughed, but Three Sisters stayed off the agenda.

An unidentified member of NCPC told Severo, “Unfortunately, Mathe see his role as custodian of the Highway Department . . . he is more dedicated than his predecessors . . . more inflexible on highway issues.” A “more zealous anti-highway fighter,” also unidentified, said, “Bob Mathe is really hard to take. At least [former Engineer Commissioner] Duke was a gentleman. But this guy uses the sledgehammer approach.”

General Mathe said all he wanted was a “skeletal” freeway system that he considered the minimum to meet the area’s needs.

Severo concluded with an assessment of General Mathe’s short tenure:

And so now, a scant 11 months after he started, Mathe – who came through both World War II and a tour as assistant engineer commissioner unscathed – finds himself a casualty of government reorganization . . . .

But even Mathe’s critics must admit he gave an air of excitement to an office that all too seldom lacked it. His presence was a steel mallet on the machinery of District government. He made it move.

As for his next assignment, he said, “I stay in the Army as long as I am on the first team. As long as I continue to receive the assignments I think I deserve. If and when that stops, I get out.” [Severo, Richard, “Boat-Rocking Mathe Leaves City Post,” *The Washington Post and Times Herald*, October 15, 1967]

General Mathe made his retirement official on October 20. In view of his comments about staying in the Army, he added:

In announcing my retirement I would like to make it very clear I am doing it for personal and family reasons and that it has nothing to do with assignments that have been offered me.

He had not yet decided on his next job, but planned to stay in the Washington area with his family. [Sarro, Ronald, “Gen. Mathe To Retire From Army,” *The Evening Star*, October 20, 1967]

He accepted a position as a partner of HOK Associates, described in the *Star* as an engineering firm “specializing in urban planning, architecture, civil, mechanical-electrical and structural engineering and construction management.” Mathe headed the firm’s Washington office. (George Hellmuth, Gyo Obata, and George Kassabaum formed the architectural firm in St. Louis in 1955. The first letter of their last names provided the firm’s name.) [“Mathe Heads New Company,” *The Evening Star*, August 20, 1968]

Mayor Washington reorganized some parts of the District government. As for Airis, Professor Schrag explained:

Thomas Airis remained as the head of the Department of Highways – he was so popular on Capitol Hill that Mayor Walter Washington dared not fire him – and he continued to

favor the highways as planned. He dismissed critiques as “innuendo, half truths, threat of violence and amateur engineering” and included Boyd on his list of people “least competent to make a decision” on his highways.

Airis would stay on, but the reorganized leadership affected his ability to move forward:

Airis now got his orders from a civilian council [instead of an engineer with the U.S. Army Corps of Engineers]. The new council’s transportation man, John Nevius, knew little about highways, but he was impressed by Craig’s research and equally unimpressed by Airis and his staff, whom he found cynical and insincere. [Schag, page 127]

On November 6, Mayor Washington made his first official statement since the ceremony installing the city council. He announced that he had called on 21 national experts to study District problems and report to him on their suggestions for remedies. They would form five task forces to provide “action-oriented” reports on, economic development, environmental protection, housing and community development, human resources, and transportation.

President Johnson had asked the new government to transform the city into a model community. Mayor Washington said:

As a step in that direction, we are being given the services of top men in the nation in the critical urban problem fields. These experts will consider approaches that may be adopted here to attack these big city ailments.

He would make their suggestions available for public review:

The suggestions of the urban affairs experts will provide a framework for community reaction and participation. The ideas ultimately adopted, therefore, will represent a combination of technical expertise and experience and of citizens suggestions and involvements. [sic]

Asked why the city was going outside the District for expertise, Mayor Washington replied, “We want a fresh, objective look to see if we could get the advantages of other approaches. Let us see if this is applicable or has relevance . . . . Some of it may not.”

The members of the transportation task force were:

- George L. Dement, chairman, Chicago Transit Authority;
- Alger F. Malo, director, Detroit Streets Department;
- Edward M. Hall, Street Improvement Administrator, Phoenix, Arizona;
- Edward Haefele, Resources for the Future, Washington.

The *Star* reported on the topic areas for the transportation task force:

This group will look into all areas of transportation including highways, local and interstate carriers and airports.

Some suggestions are the displacement of people for highway construction, building on air rights over freeways, helicopter service, taxi and bus regulations and parking difficulties. [Concini, Charles, "21 City Experts Called to Attack D.C. Problems," *The Evening Star*, November 6, 1967]

### **Advancing Rail Rapid Transit**

As 1966 came to an end, NCTA Administrator Walter J. McCarter admitted he was looking forward to retiring after his agency ceased operations after September 30, 1967. Some supporters hoped he would stay as general manager when WMATA took over the network. After leaving the Chicago Transit Authority in 1964 at the age of 65, he intended to retire with his wife to their home on St. Thomas in the Virgin Islands. He was pulled out of that retirement to take the NCTA job. Now, asked about staying on in Washington, he replied, "I certainly am not going to take a full-time job after September 30, 1967." ["Transit Chief Looks to '67 Retirement," *The Evening Star*, November 16, 1966]

On January 25, 1967, when President Johnson released his message on the District of Columbia's FY 1968 budget, he indicated that, "The budget reflects substantial progress toward an ultimate solution of the transportation program that was made during the past year." He cited approval of the compact creating WMATA "with power to plan, finance and operate a regional system," as well as initiatives in Maryland, Virginia, and the District to fund operation of WMATA in 1967 and steps to continue budgeting in 1968.

Moreover, NCTA had funds for preliminary engineering and construction on the rail rapid transit system. He did not plan to request any additional construction funds for FY 1968. Lee Flor reminded readers of the plans for the system at the time Congress authorized it in 1965 with the expectation that the 25-mile network would be completed in 1972:

The construction schedule called for spending \$17 million in fiscal 1966, \$53 million in fiscal 1967, and \$85.2 million in fiscal 1968 . . . .

However, the District and federal government so far have appropriated \$6.5 million in District funds and \$13 million in federal funds in fiscal 1966 and 1967. Around \$15 million of this is unspent, so the subway builders will be able to use this construction money during fiscal 1968.

The net effect, however, is a two-year delay in the subway schedule, in a period when inflation increases basic subway costs by around 5 percent every year. The subway was originally supposed to cost around \$431 million, and the loss of two years could add around \$43 million in inflation costs.

Flor added that the budget did not contain funds for the proposed Independence Avenue subway line. "This means the Bureau of the Budget has made no decision yet on whether to build the Independence line, which would be the second subway for downtown Washington."

The budget did allow for "contingencies" in case construction funds were needed later in the fiscal year.

President Johnson's message said the May 1966 agreement on the freeway system and enactment of the District's revenue act "made it possible to provide adequate funds so that the entire freeway program can go forward." He planned to ask for \$127.7 million in construction funds for FY 1968, much of it (\$109,750,000) from the Federal-aid highway program. [Flor, Lee, "Budget Omits Subway, Plans Face 2-Year Snag," *The Evening Star*, January 24, 1967; Flor, Lee, "District Requests \$127.7 Million For Road Building," *The Evening Star*, January 25, 1967]

WMATA had begun planning for a financing mechanism, beyond the farebox, to pay for the rail rapid transit system. Encouraged by former Representative Sickles, WMATA planned to hire a special consultant to study financing options. One option was to levy special assessments against real estate values that were expected to increase in the vicinity of stations. Other options were special excise, income, and sales taxes. WMATA also established a citizens financial advisory committee consisting of representatives of area corporations and the AFL-CIO. [Flor, Lee, "New Regional Taxes Studied To Pay for Transit System," *The Evening Star*, January 27, 1967]

NCTA was trying to solve an operational problem resulting from the scaled down network shaped primarily to secure congressional approval. Professor Schrag described the problem:

[As] a means of moving commuters, it suffered from its reliance on a single trunk line between Farragut Square (at the west end of downtown) and Union Station (at the east). Every train originating at each of the five spur lines would pass through three stations: G and 12<sup>th</sup>, G and 8<sup>th</sup>, and Judiciary Square, causing tight scheduling, and potentially catastrophic backups. This bottleneck would only worsen as the five radial lines were extended out into the suburbs. One consultant suggested that the planned trunk's anticipated volume would require two subway tubes, one on top of the other. Moreover, each branching would require the construction of an underground junction, very difficult to build in a crowded city.

The single trunk also denied direct service to the enormous federal office buildings being built in the redeveloped Southwest. These buildings were expected to house 85,000 workers in the departments of Housing and Urban Development; Health, Education, and Welfare; and the new Department of Transportation, as well as the Department of Agriculture, long headquartered on Independence Avenue. The 1965 plan would require these workers to walk or take a bus three-quarters of a mile. Given that many riders would have begun their commute with a trip by car or bus to the rail station, an additional bus or long walk at the end was too much to ask.

A second trunk line along Independence Avenue was the solution. It had been dropped from the bobtail plan in 1963, but NCTA staff resumed planning it in September 1966.

To compensate for the additional cost of a second downtown trunk line, NCTA planned to delete the Columbia Heights spur off of the Connecticut Avenue line. The Independence Avenue line would generate sufficient revenue from the Federal workers to pay for itself, but the Columbia Heights spur served a primarily residential area of low-income neighborhoods that would not generate enough revenue at the farebox to justify the cost. Professor Schrag added:

Moreover, with only 16 percent of inner-city workers using cars to get to work, an inner-city line would be less effective at reducing the number of cars on the road. Although NCTA's critics, then and later, saw the agency's emphasis on fare-box revenues and its desire to delete the spur as callousness toward the poor city workers, in fact the real decision was not so much *whether* to serve Columbia Heights and adjacent neighborhoods, but *how*. Even as they erased the Columbia Heights spur, NCTA planners were penciling in a third trunk line that would serve the same general area.

This third mid-city line would be along 7<sup>th</sup> Street and its continuation along Georgia Avenue into Montgomery County. The line had been suggested and rejected in 1962, but NCTA revived the idea in 1966. [Schrag, pages 104-106, italics in original]

On February 9, McCarter announced that NCTA was ready to move forward with the subway line along Independence Avenue, SW. NCTA's studies demonstrated that the line would pay for itself through revenue from passengers. The new line would increase the cost of the downtown subway system from \$107 million to \$203 million. However, NCTA was abandoning the line to Columbia Heights, thus reducing costs by \$55 million. As a result, the cost of the downtown subway, including the Independence Avenue line, would be only \$41 million higher than previous estimates.

The same day, NCTA and NCPC agreed that the system's Connecticut Avenue subway would be built in a tunnel under Rock Creek Park, as suggested by Chairman Rowe. The decision ended consideration of crossing the park on a separate bridge or through the supports of Taft Memorial Bridge. McCarter advised that the tunnel would require the Woodley Avenue station on Connecticut Avenue to be only 12 feet deeper than planned without the tunnel. ["2 Agencies OK Subway For Rock Creek Park," *The Evening Star*, February 10, 1967]

O. Roy Chalk had been seeking the Washington Metropolitan Area Transit Commission's approval of a fare increase. In October 1966, D.C. Transit System had sought to increase the price of a token from 21¼ cents to 25 cents, with suburban fares increased by an average of 12 cents per trip. The change would eliminate the discount for tokens; a token cost 25 cents, but four tokens could be bought for 85 cents, leading to the cost of 21¼ cents.) He also wanted to charge a nickel for transfers from one bus to another. If approved, the increases would add nearly 38 cents per week for the average rider in the city. The area's other bus lines also were seeking fare increases.

With SNCC's Marion Barry promising to fight the increase, attorney Bebhick was in court with fresh arguments for rolling back the 1963 fare increase. He argued that D.C. Transit System's unfair profits made as a result of the increase should be put in a special transit fund for the use of bus riders to fight the latest proposal for a higher fare.

On January 12, 1967, the commission granted a temporary increase in bus fare of about 2.5 cents per ride. Flor calculated that the interim increase gave D.C. Transit System about two-thirds of the added revenue it had sought. The commission planned to hold additional public hearings before making a final decision. The increase was to be discontinued on March 15 if the commission had not decided on a permanent fare by then.

Within days, SNCC and other civil rights groups went to court seeking an injunction against the interim fare increase. By the end of the month, courts had ruled that the commission did not have sufficient justification for the increase. The interim fare ended after 2 weeks.

On March 13, the commission approved an increase in the price of four tokens to 98 cents, with increases for Maryland riders as well. According to Lee Flor, the increase gave D.C. Transit System \$900,000 less than Chalk had asked for. He called the decision “disheartening and disappointing.” The approved increase “neither satisfied nor solves the serious problems of the transit system and it neither satisfies nor solves the problems of the riding public.” He saw no alternative but to appeal to Congress for an immediate hearing on a subsidy “in the same manner as is done for other large American cities.” (In other cities, State and local tax revenue provided the subsidies. The Federal Government could not provide funds to subsidize transit services.)

The next day, Chalk said he would pursue another alternative. At a news conference he said, “It’s my firm intention to sell the transit system.” He said he had paid \$25 million for the company in 1956; that was the “bottom price” for the company at this time. He hoped to complete the sale within 60-90 days.

“I don’t think I should continue with the bus company, for a variety of reasons.” Under the 1956 Act of Congress, he was entitled to a fair profit. He pointed out that businesses such as the downtown department stores were not hated because they earned a reasonable profit, “but a transit operator is a different animal. Eventually it will develop that the people of Washington will dislike me in ever-increasing amounts.” He was aware of several offers for the company, but suggested that WMATA acquire it. Chairman Tobriner of WMATA said the idea was interesting and promised the agency would consider it.

On March 30, Chalk met with WMATA to discuss purchase of the bus company. A WMATA spokesman said Chalk “reiterated his desire to sell” the company for about \$25 million. A committee established to consider the issue did not make a counteroffer.

Chalk also approached Congress about the possibility of a subsidy. At Chalk’s request, Chairman McMillan introduced a subsidy bill and attended a hearing held by a House District subcommittee chaired by Representative Dowdy on May 23. Chalk told the subcommittee that his company was caught between rising costs (up 60 percent in 11 years) and pressure to keep fares low (increased only 25 percent during that same time). The bill would assure the company a profit of 6.5 percent of operating revenue or the total of all bus and charter revenue. Chalk said he would keep the company if the bill became law.

Chairman McMillan told Chalk, “I think it is only fair for Congress to see you receive what Congress intended in 1956.” A bill of this type should have been approved 5 or 6 years earlier. “I hope we can do something to help you. It would be disastrous to let the federal government take over the bus company.”

Toward the end of the hearing, Thomas F. Moyer, the District’s assistant corporation counsel, appeared to introduce a letter from the District commissioners objecting to the bill, with White House support, because it would be a “cost-plus” arrangement that would require the District to

make up the difference between Chalk's profit and the 6.5 percent. The commissioners joined with the Washington Metropolitan Area Transportation Commission in opposing the bill because of the way the rate of return would be calculated. The bill based the subsidy on gross expenses without reference to investment. They were concerned that the bill would penalize District taxpayers for service that extended into the suburbs.

At the end of May, the company announced a deficit of \$1 million in 1966, largely due to increased costs. In 1965, the company had lost \$339,692. The company expected to show a profit in 1967 because of the recently approved fare increases.

Transit Seeks End of Cut Rate on Tokens," *The Evening Star*, October 18, 1966; Still, Larry A., "Barry Hits Crime Bill, Bus Fare Rise Request," *The Evening Star*, October 22, 1966; "Transit Fare Rollback Suit Data Is Filed," *The Evening Star*, November 14, 1966; Flor, Lee, "Bus Tokens to Go Up 2½ Cents," *The Evening Star*, January 12, 1967; Flor, Lee, "Rights Groups To Sue Over Bus Fare Rise," *The Sunday Star*, January 15, 1967; "Court Asked To bar Rise In Bus Fare," *The Evening Star*, January 19, 1967; "Bus Fare Upset May Help Speed Final Decision," *The Evening Star*, January 28, 1967; "Who Gets Extra Money? Bus Fare Rise Foes Ask," *The Sunday Star*, January 29, 1967; Flor, Lee, "Bus Token Rise Is Granted to D.C. Transit," *The Evening Star*, March 13, 1967; Flor, Lee, "Chalk Says He Will Sell Bus Firm," *The Evening Star*, March 14, 1967; Flor, Lee, "D.C. Leaders Oppose Subsidized Transit Profit," *The Evening Star*, May 23, 1967; "Chalk's Bid to Get Transit Subsidy Hits Opposition," *The Washington Post and Times Herald*, May 24, 1967; "D.C. Transit Posts Deficit Of \$1 Million," *The Evening Star*, May 31, 1967]

### **Meet General Jackson Graham**

On March 17, WMATA announced the selection of General Jackson Graham as general manager of the regional transit agency. The 52-year old Graham, recently retired after 30 years in the U.S. Army Corps of Engineers, took the oath of office shortly after the WMATA directors selected him. After the brief ceremony, he said that rapid transit "is the only practical way to solve the problem of the terrible surface congestion in this area." For the system to pay its own way as Congress wished, the system would have to be functional and comfortable to lure people out of their automobiles. He pledged to do his best to provide such a system.

One of the lessons he had learned as the U.S. Army moved him around the world was the value of taking advantage of "the know-how and continuity" of permanent staff. Referring to NCTA staff, he said, "I certainly hope 95 percent of these people make the transition with us" when NCTA closed at the end of September.

Graham had been born in Mosier, Oregon, in 1915. He graduated from Oregon State College in 1936 with a degree in civil engineering. He joined the U.S. Army Corps of Engineers, serving in Europe during World War II, rising to the temporary rank of Colonel just before the end of the war. He was the Corps' Chief of Personnel in Washington, a sensitive position that gave him contact with high-ranking officials. Professor Schrag added:

In 1960 Graham almost became engineer commissioner for the District of Columbia. Instead Frederick Clarke got that job, and Graham – now a brigadier general – was sent to Cincinnati to command the Ohio River Division. From there, in 1963, he earned promotion to major general and the post of director of civil works, commanding 30,000 troops and civilians engaged on corps navigation and flood control projects nationwide.

In thirty-three years in the army, Graham had never missed a day of work. But the demands of the new job, coupled with lingering damage from a childhood case of rheumatic fever, wore out Graham's aortic valve. In 1966 he underwent open-heart surgery to replace the valve, suffering a heart attack as a complication. Although he recovered, he retired from the army on full disability.

General Graham and his wife planned to enjoy a peaceful retirement in a motor home. However, General Mathe, heading the WMATA committee charged with finding a general manager, contacted General Graham to ask about his interest in the position. At first, General Graham was not interested. He changed his mind because of his first-hand experience with “the terrible surface congestion” local commuters faced. He also attended a March 2 meeting of the Northern Virginia Transportation Commission, as Lee Flor recounted, “sitting quietly in the background.” He was impressed. “These are my bosses now,” he said.

One concern was that General Graham's military career might be a liability because the U.S. Army Corps of Engineers was “a favorite target of conservationists and civic groups.” Flor offered some reasons why that would not be problem:

Graham, however, is a soft-spoken individual with a broad sense of humor.

During his Army career, Graham was “non-West point,” but he still rose to one of the highest posts in the Corps. During his tours of duty here in the United States, he always lived off-post, among civilians.

His personal hobby is a most unmilitary one – tinkering with a model railroad set with 400 feet of track, which he built with his son. Now, at age 52, Jackson Graham is starting a new career, combining his lifelong passion for building things with his personal interest in transportation.

Writing for his 2006 book, Professor Schrag described General Graham from the perspective of a time long after his full career at WMATA was known:

Graham's manner remained so soldierly that his staff called him “General” and a reporter was reduced to describing him in military clichés: “ramrod straight . . . broad shouldered . . . square jawed . . . his hair so closely cropped that he looks bald.” He stood six feet tall, stayed slim, and wore broad suits as the closest civilian equivalent to his old army uniforms . . . . He was used to exerting authority and being obeyed. Having run the Corps of Engineers' entire civil works program, he was used to the scale of the project, able to think in billion-dollar terms . . . . Graham admired men who, in his words, “got

things done,” including generals Patton and MacArthur and the somewhat dictatorial planner Robert Moses. He too wanted to get things done.

Yet Graham was more complex than these stereotypes suggest. He had come up in the corps through personnel, and therefore had more personal skills than the average general. Before meeting the NCTA’s top staff, for example, he memorized not only all their names but also the names of their children. Although his weakened heart prevented him from fully participating in the Authority softball team, he would occasionally take a turn at bat, leaving his wife, Mabel Lee, to run the bases. Architects found Graham cultured and able to discuss color theory and graphic design. More significantly, he could work with politicians. As Graham himself later put it, “the reason I was hired . . . was not because I was a master builder or a manager of public works, but because I’d been successful at getting over \$1 billion a year out of Congress for the civil works program.” And he recognized “the social and cultural aspects” of large public works projects, telling a reporter “the days when there can be a Robert Moses shaping a community to his own vision are over.”

He could see the overall goal of WMATA, but also the engineering, architectural, construction, and public relations aspects of the project:

Yet he refused to let his holistic understanding insulate him from the details. He would constantly astonish his subordinates with his knowledge of their particular duties. And he awed them with his example. He slept five hours a night and spent six days a week in the office, using Sundays to tour Metro construction sites. As tunnels progressed, Graham roared through them on his Yamaha dirt bike, often with Mabel Lee clinging behind him. On Monday morning he would summon to his office any contractor in whose section he had spotted a flaw. Yet if he found a problem with a subordinate’s work, he would always try to correct the mistake and shield the errant staffer from the board of directors’ questions, rather than demoting or embarrassing him. Unsurprisingly, his deputies responded with intense loyalty.

His work would officially begin on October 1, 1967. In the meantime, General Graham intended to visit cities such as Montreal and San Francisco that had or were planning subways.

General Graham and Mabel Lee lived at 2836 Fort Scott Drive in Arlington, Virginia. The home, built in 1950, was off South Eads Drive. The main road in the area was U.S. 1/Jefferson Davis Highway across the Potomac River from Washington National Airport. [Schrag, pages 144-145; Flor, Lee, “New Transit Head Hopes To Keep NCTA Staff,” *The Evening Star*, March 18, 1967; Flor, Lee, “Transit Aide Started Young,” *The Evening Star*, March 20, 1967]

### **Deleting the Columbia Heights Spur**

When Chairman Natcher’s District appropriations subcommittee held hearing in March 1967 to discuss the city’s FY 1968 budget, Airis reported that the cost of completing the District’s Interstate network had increased by about \$160 million. Instead of \$550 million (\$489 million in Federal 90-percent funds), as previously reported, the system would cost \$639 in Interstate

construction funds, matched by \$60 million in District funds. Airis said the 31-percent increase was due to three factors. Two factors related to NCPC, namely delays caused in part by policy disputes with NCPC and design changes dictated by NCPC, such as extensive tunneling. However, Airis said the main cause of the increase was “the yearly escalation in land and construction costs” as the District awaited approvals.

Policy disputes with NCPC had taken their toll on the cost and schedule, but Airis thought the city could meet the October 1973 deadline for completing the Interstate System, “provided, of course, that planning decisions continue to be made and that further cutbacks or freezing of [Federal] program funds are not imposed.”

General Mathe described the problem posed by NCPC:

It has . . . been my observation that we are not out of the woods yet on this program; that each decision made at the Planning Commission is almost a forced decision; and that we still have . . . many difficult decisions to obtain from the Planning Commission.

He said that NCPC “keeps going back to the controversy of freeways versus no freeways, and therefore each decision is made only after we re-travel some of the same area over and over again.”

Chairman Natcher made clear that “on this committee, we have believed sincerely for a number of years that there is a place in our Capital City for the freeway system . . . along with a rapid transit system.” He was not happy about the progress of the balanced transportation system. The May 1966 Policy Advisory Committee agreement was a promising development but now, NPS had voted in NCPC to block the Three Sisters Bridge. Chairman Natcher warned Airis:

Now, if at any time in the future, Mr. Airis, they attempt to proceed as they have done in the past, we will take the same action that we took last year, and I say that to you frankly . . . we are not going to let them do this to you. [Flor, Lee, “Natcher Warns District On Freeways, Subway,” *The Evening Star*, April 11, 1967; “D.C. Freeway Cost Estimate Is Increased by \$160 Million,” *The Washington Post and Times Herald*, April 11, 1967]

NCTA was facing questions around this time as the Department of the Interior appropriations subcommittee considered its request for \$400,000 to cover expenses before it went out of business 3 months into FY 1968 on September 30. The subcommittee was critical of NCTA. Representative Julia Hansen told McCarter, “I see no greater proximity to a transit operation here today than I saw five years ago . . . . The committee is getting a little unhappy.” Referring to the deleted Columbia Heights line, she told him:

It seems to me that every time I pick up the paper there is a proposed change in a routing or a change in a station . . . . Your agency has spent thousands of dollars in studies for the routing of this line prior to the enactment of your authorizing legislation. Now it appears these expenditures were not particularly productive.

McCarter explained that NCTA had eliminated the Columbia Heights line in a cost-cutting move as it began developing a rail rapid transit system beyond the 25-mile shortened system Congress had approved.

Representative Hansen also criticized Maryland and Virginia officials for not developing a financing plan for needed extensions into the suburbs. She warned that she would not be receptive if WMATA came back to Capitol Hill for more money to extend the system. McCarter told her, "I suspect they will have to come back to the federal government for more money." He added that WMATA's directors would "have the most difficult job of any transit board that I have ever known." [Flor, Lee, "Subway Plan Slowness Criticized in Congress," *The Evening Star*, April 13, 1967]

Professor Schrag explained the challenge facing WMATA:

Whereas the NCTA had been responsible primarily to Congress, WMATA had to please its eight constituent jurisdictions as well. Rather than sticking to thrifty plans that Whitener could sell to his fellow representatives, the new Authority was tempted to think big in an effort to please as many people in as many places as it could.

Knowing that NCTA would cease to exist on September 30, 1967, the agency and the authority began coordinating early:

The transition began in the fall of 1966. The NCTA Advisory Board dissolved, replaced by the new WMATA board, but the NCTA staff remained, and for most of 1967 this WMATA-NCTA hybrid made key decisions about route planning, as well as the architectural decisions . . . . With the Advisory Board gone, the transition was cordial and gradual. McCarter was happy to return to his interrupted retirement, though he did agree to continue as administrator until the NCTA was fully phased out.

NCTA and WMATA shared office space, and about 50 percent of NCTA employees, including Deputy Administrator Quenstedt, transferred to WMATA. The first outside employee hired was Delmer Ison, the Washington Metropolitan Area Transit Commission official who had been critical of Stolzenbach's 1962 report. [Schrag, page 104]

As the hybrid organization began considering where to expand the rail rapid transit system, the decision to delete the Columbia Heights spur would resurface throughout the year. A mid-city line along 7<sup>th</sup> Street and its Maryland extension as Georgia Avenue emerged in late 1966. It would blend with an effort led by the Reverend Fauntroy to renew Shaw, a neighborhood between North Capitol and 15<sup>th</sup> Streets, NW. The line also would serve the downtown department stores and Howard University.

Dr. Edwards, the Howard University professor who also held seats on NCPC and the NCTA Advisory Board, encouraged NCTA to support the line, as Professor Schrag wrote:

In early 1967 he asked McCarter, "Walter, if you eliminate the Columbia Heights Line, do you propose a substitution or some modification along the Georgia [sic] Corridor?"

McCarter had little choice but to answer that yes, if funds were available, a third trunk line would be desirable.

With the mid-city line in the plan, the District commissioners and NCPC endorsed deleting the Columbia Heights spur:

Although both the NCTA and WMATA regarded service to the inner city as a lower priority than long-distance commuting, neither agency ever proposed abandoning the inner city entirely. [Schrag, pages 106-108]

As Chairman Whitener's subcommittee held a hearing on the change to the 7<sup>th</sup> Street corridor, McCarter said the proposal emerged from heavy lobbying by Cabinet officials. As he told reporters after the hearing, Federal Aviation Administrator William F. McKee approached NCTA about service for employees in FAA headquarters on Independence Avenue at 7<sup>th</sup> Street, SW. (The FAA is housed in its own building, not in the Department of Transportation headquarters that would be located at 400 7<sup>th</sup> Street, SW., or more recently at 1200 New Jersey Avenue, SE.) McKee formed a committee that included Secretary Boyd, HUD Secretary Weaver, and representatives of the Departments of Defense and Treasury, the Smithsonian Institution, and others, all with offices in the new southwest quadrant. The committee concluded that 85,000 people would be working in the area by 1985 and urged NCTA to provide a rail rapid transit line for them. McCarter said:

The first responsibility of the subway is to get people to jobs, and the modification is the way to do it. Without the subway, the freeways won't be able to handle that flow.

He pointed out that the Independence Avenue line would provide far more revenue than the four-station Columbia Heights line. He added that even without the lobbying, he would have recommended the change. [Hoagland, Jim, "Lobbying Is Cited In Subway Change," *The Washington Post and Times Herald*, July 27, 1967]

Civic and business leaders formed a committee in early August to lobby for retention of the Columbia Heights branch line. Ruth R. Webster, president of the anti-poverty group CHANGE, Inc., headed the group. She said the line would serve 500,000 people [sic], many of whom were without a car. "The subway plans call for fancy stations and facilities. What is needed is a good basic subway system . . . the frosting, in the form of fancy stations, could come later." She accused McCarter of "giving way to lobby pressures by federal agencies."

With elimination of the spur, the rapid rail system would serve mainly suburbanites, "depriving people in the city's poorest and most densely populated section of mass transit." Another committee member said that without the spur, the result would be a "lily-white" suburban line along Connecticut Avenue. The committee argued that the spur line would serve as many commuters as the proposed Independence Avenue line because many area residents commuted during off-peak hours, compared with the 9-to-5 workers the Independence Avenue line would serve. ["Panel Formed To Fight for Subway Link," *The Evening Star*, August 7, 1967; Gregory, John, "Loss of Subway Fought By Columbia Heights," *The Evening Star*, August 10, 1967]

On August 23, the ad hoc Columbia Heights committee testified before Chairman Whitener's subcommittee. McCarter had testified earlier that the Columbia Heights spur was not practical. Studies pointed out that people would use the system only if transfers from buses or cars to subway saved considerable time. The Columbia Heights line would not save enough time to attract riders.

Webster replied to that claim by pointing out that Maryland and northern Virginia needed construction workers, clerks, maids, and other workers who could not reach the area without transit:

A subway system that serves Columbia Heights will allow such workers to easily reach these Virginia and Maryland jobs. This will benefit the employers and other suburban residents while reducing welfare and unemployment in Columbia Heights.

She said that "to remove the Columbia Heights line would be to break faith with the 500,000 low income residents of the city."

Reed Scott, president of the Columbia Heights Businessmen's Association, warned that deleting the line would "create a large 'Watts' area in the center of our capital city by encircling it with this ultramodern rapid rail system and denying the use of that system to the very people who need it most." ["Columbia Heights Need For Subway Debated," *The Evening Star*, August 23, 1967]

Despite these arguments, the House District Committee approved the bill on October 5. The House took up the bill on a Monday District day, October 9. The bill was adopted without floor debate, but the committee report and extended remarks were added to the record. [Amend the National Capital Transportation Act of 1965, *Congressional Record-House*, October 9, 1967, pages 28152-28156]

As the Senate District Committee considered the bill, George F. Bason, Jr., Professor of Law at American University, testified that "a credibility gap" existed between WMATA and "the people who live in the inner city." The problem was that the passenger studies justifying deletion of the Columbia Heights spur were based on peak period usage during weekdays. The studies did not consider off-peak or weekend usage. "Simply as a matter of common sense, it is very puzzling that the most heavily traveled and most profitable bus line in the entire transit system would become the least heavily traveled and least profitable subway line." Professor Bason argued that if these trips were taken into account, WMATA's argument in favor of deleting the line would be in error.

General Graham expressed confidence in the study. He believed that the 7<sup>th</sup> Street line, planned for construction after the initial District system was completed, would better serve the Columbia Heights area than the spur.

John Immer, president of the Federation of Citizens' Associations, wrote to urge the committee to delay a vote until the new city government had time to review the issue. Immer indicated that Mayor Washington was "obviously upset that the Senate has been given incorrect information" by Assistant Corporation Counsel Kneipp. The mayor, Immer said, also was upset that he had

not been asked to testify. [“Route Shift For Subway Challenged,” *The Washington Post and Times Herald*, November 16, 1967; “Error Hinted in Survey For Subway,” *The Evening Star*, November 16, 1967]

On November 27, Mayor Washington supported the change in a letter to Committee Chairman Bible. Mayor Washington said he had been asked to testify, but declined because he had not yet had time to review WMATA’s report on the issue. He relied on action by the former Board of Commissioners in endorsing the change because of the importance of expediting construction of “this urgently needed mass transit service.” He said he had asked WMATA to study mass transit needs in the Columbia Heights area and along the 14<sup>th</sup> Street corridor, among several areas. In addition, he expected WMATA to proceed “as expeditiously as may be possible” on the 7<sup>th</sup> Street corridor line. [“SW Subway Line Favored by Mayor,” *The Washington Post and Times Herald*, November 28, 1967; “Mayor Backs New Plan For Subway,” *The Evening Star*, November 28, 1967]

The Senate District Committee delayed action until Mayor Washington offered support of the bill. Assured of his support and that the 7<sup>th</sup> Street line was part of the regional system, the committee approved the House bill and took it to the Senate floor on District Monday, December 11. As in the House, the Senate approved the bill without discussion as well as directing a reprinting of the committee report. [Transit Development Program for the District of Columbia, *Congressional Record-Senate*, December 11, 1967, pages 35660-35663]

President Johnson signed the act on December 20, 1967 (P.L. 90-220).

(Ultimately, Columbia Heights would secure a Metro station on the Green and Yellow lines.)

### **Creating a System**

While the Columbia Heights issue moved toward resolution, NCTA/WMATA was advancing the 25-mile District system that Congress had approved. It also was planning extensions in the Maryland and Virginia suburbs.

As early as April 14, McCarter warned WMATA that estimates for the original system were low because he had not been allowed to anticipate inflation. Federal agencies such as NCTA were prohibited from estimating inflation or escalation of costs, but subway systems in other cities were experiencing inflation of about 5 percent a year in construction costs. NCTA’s estimates, as a result, were about 15 percent too low.

General Graham told the board that the first subway line would be along the G Street corridor, not Connecticut Avenue as previously stated. According to the *Post*, the switch was made after talks with McCarter:

Graham and McCarter agreed that it makes more sense to construct G Street ahead of Connecticut Avenue, since the G Street line is pivotal for the entire area rapid transit system. The impetus behind the change was provided by the WMATA’s vice chair, James Gleason.

Harry Weese, who was in charge of architectural design, displayed subway design concepts.

Born in 1915, Weese had graduated from the Massachusetts Institute of Technology. Before World War II, he was employed as an architect by Skidmore, Owings, and Merrill, but after the war, he established his own practice in 1947, Harry Weese and Associates. His attitude about city development was:

Urban life must be maintained, improved, and made attractive again. But this cannot happen if each generation knocks everything down and starts over.

As noted earlier, Weese had been part of the team brought in by William Zeckendorf during redevelopment of the District's southwest quadrant. Among other things, Weese designed Arena Stage, the quadrant's theater. Professor Schrag said of Weese:

As befitted a banker's son, Weese had a reputation for thrift . . . . Most important, as it turned out, was his experience with prototype design, such as his work on a chain of dealerships for Cummins Engines and supermarkets for Purity Foods. Weese had even designed a prototype skyscraper for corporations that could not afford a flashy signature design. This was just the sort of thinking needed by an agency hoping to build dozens of transit stations quickly and cheaply.

When NCTA invited him to submit a proposal for the design contract, his experience with prototypes proved critical:

Whereas other finalists came into the interview eager to talk about the latest developments in concrete, Weese focused on the people who would ride the system. Moreover, his supermarket experience showed that he knew how to design spaces for people in motion.

NCTA hired him on March 10, 1966. He worked with NCTA's engineering consultant, De Leuw, Cather and Company, to adapt his ideas to the unique circumstances of the Washington area.

The *Post* described some of his early ideas:

Weese emphasized that the Washington subway would be a "rugged, basic, simple thing." He said that in some stations, no facing would be used on the natural stone found below ground to emphasize the subway's link with nature.

WMATA member Frederick Babson said that unadorned rock far below the surface might be natural for cave men, "but there are not many of them left around here."

"There are none left in Maryland," Gleason said.

With Gleason expressing concern about the delay in the start of construction, Weese stated that he would complete final designs within 2 months for the stations at Union Station and Judiciary Square. [Severo, Richard, "G Street Line to Be First In City's Subway System," *The Washington*

*Post and Times Herald*, April 15, 1967; Flor, Lee, “Subway Figure Appears 15% Too Low Already,” *The Evening Star*, April 14, 1967; Schrag, pages 74-78]

On June 21, Weese presented detailed architectural designs to the Commission of Fine Arts for the subway station at Judiciary Square. The station would be beneath 3<sup>rd</sup>, 4<sup>th</sup>, D, and E Streets. NW. The design was intended to establish a pattern for all stations, but a NCTA spokesman said:

Each station will be different from the others, but all will have certain unifying resemblances based on similarities or harmonies in design, materials, lighting and principles of use.

As soon as we have obtained approval of design concepts for these basic matters, contracts can be let for design of all 29 stations.

The prototype contained several common features, including use of natural or nonsynthetic materials, such as granite and bronze where possible; bridge mezzanines over the tracks and open to the station; brilliant floodlighting of ceilings and walls from recessed and free-standing fixtures; escalators from below-surface stations to the street; high-ceilinged spacious station interiors; and sound-absorbent surfacing of track beds. Platforms would be 600 feet long. As a safety and efficiency factor, ticket sales would not take place on the platforms but on a different level. [Lewis, Robert J., “Board Gets Subway Station Plan,” *The Evening Star*, June 21, 1967]

The 1966 legislation approving the interstate compact authority gave it responsibility for developing a regional system similar to NCTA’s 1962 proposal. The new map would have to be sufficient to encourage jurisdictions outside the District of Columbia to issue bonds or find some other means of financing extensions. Professor Schrag explained:

Such a map had to be, in the words of NCTA veteran Tom Deen, “big, bold, glamorous, fast, extensive, and, above all, [had to appear] to serve as much of the affected area as possible from the day the system first opens.” Given these requirements, Deen observed, “it’s easier to sell a billion dollar project than a hundred million dollar project.”

With a start on construction virtually assured, the rail rapid transit system took on a reality that it had not possessed when NCTA Administrator Stolzenbach unveiled his proposal in 1962. As Professor Schrag put it, “planners began to consider real routes in every direction”:

On the other hand, the staff had to keep some check on suburban appetites. One Capitol Hill observer noted, “WMATA members from each suburban jurisdiction will be under political pressure to nail down extensive facilities in their own jurisdictions for the home folks who help foot the bill . . . . Thus there arises a two-fold pressure, opposing forces which political leadership must resolve: Building and maintaining support for the system – and the tax money to pay for it – and resisting pressures to expand it beyond what’s practical. If WMATA log-rolling leads to a vastly overblown system requiring an unreasonable request to Congress, we could be in trouble.”

Because most of the funding for construction would come from bonds, planners sought lines that would carry the most passengers and, therefore, generate sufficient revenue to retire the bonds:

Moreover, the focus on bonds required planners to maximize projected patronage for 1990, though a subway tunnel would last far longer. But planners work with the political realities of their day, and they were apt to strike any segment that was not projected to pay for itself from the fare box within a few decades. Similarly, while planners acknowledged the desirability of serving employment centers, they concluded that service to the urban core would attract more riders and therefore had to be a greater priority.

Like their counterparts in 1962, planners saw existing rail lines, such as the Metropolitan Branch of the Baltimore and Ohio Railroad (Union Station to Rockville), as a way to reduce costs by including ground level or elevated trains. Other attractive possibilities included the railroad's Washington Branch (to Baltimore via College Park and Greenbelt), the Pennsylvania Railroad line to Bowie via Landover in Maryland; and several lines in Virginia (the Richmond, Fredericksburg and Potomac line to Colchester via Washington National Airport and Old Town Alexandria; and the Washington and Old Dominion line from Alexandria to Herndon near Dulles International Airport).

Another option was to use freeway right-of-way to reduce the cost of land acquisition. A potential example was I-66 in Virginia, but the planned median within the Capital Beltway was too narrow for the rail rapid transit service. [Schrag, pages 108-111]

To bring jurisdictions and planners together, WMATA met with local officials on July 28-30, 1967, including the Maryland and Virginia transit commissions, at Airlie House, a conference center in Warrenton, Virginia. Staff presented several versions of the system, with ridership and cost projections shown. After much discussion, the participants "pulled together elements from the two rapid transit alternatives to produce a single, consensus system," as Professor Schrag put it.

The system dropped destinations such as Laurel, Maryland, and Centreville, Virginia, that appeared too far away from downtown to be financially practical. As a compromise, the Capital Beltway became the practical limit for the end stations that would be busy intermodal transportation hubs serving buses and commuter rail lines. The Capital Beltway would provide access to parking garages at the terminal stations. The system included lines through Alexandria, Silver Spring, and other built-up suburbs.

Gleason told reporters that the Airlie House meeting did not result in final maps. WMATA planned to return to Airlie House in early September to develop the map for a regional transit system and a financial program that could be presented to the public in the fall. Babson added that WMATA was still studying proposals for commuter railroad facilities along existing railroad lines. [Schrag, page 112; Flor, Lee, "Rapid Transit Lines Plan Delayed Till September," *The Evening Star*, August 1, 1967]

While these discussions were underway, WMATA found that NCPC would pose obstacles to rail rapid transit plans. The directors said they were amazed that NCPC had not approved a rapid

transit station at Rhode Island Avenue, NE., and the Baltimore and Ohio Railroad tracks. NCPC wanted to see a model of the station and some members indicated they would prefer the line to be underground instead of elevated in the vicinity of Rhode Island Avenue, a move that would add \$14 million in construction costs.

WMATA's general counsel, John R. Kennedy, argued that the authority was not legally subject to NCPC and could bypass its decisions. On that basis, Gleason did not see why WMATA should pay for a scale model of the station. According to the *Star*:

Gleason said that the transit authority "wants the advice of the planning commission," but he went on to say that the agency was going to do everything it could to avoid bottlenecks.

"The B&O says it's ready to sit down and negotiate, but the project is faced with procrastination by the planning commission," Gleason said. "The planning commission is supposed to consider the transit station at its September meeting, and the transit authority may decide after that meeting how it will deal with the planning commission's requests for models and postponements for transit stations." ["Subway Panel in Hurry, May Ignore Planners," *The Evening Star*, August 4, 1967]

As noted earlier, legislation was under consideration, with White House support, to put WMATA's general manager, General Graham, on NCPC to replace the NCTA Administrator when the agency went out of business.

(Lee Flor, reporting on the legislation, added that Representative Harsha, the highway booster on the Public Works Committee, had introduced legislation to abolish NCPC. The legislation would transfer the "functions, powers and duties" of NCPC to the District commissioners.) [Flor, Lee, "Subway Builders to Get Seat on Planning Board," *The Sunday Star*, August 6, 1967]

On August 22, WMATA held a ceremony to award the first design contract for the rail rapid transit system to Ammann and Whitney of New York. In cooperation with the architectural firm of Kent Cooper and Associates, the design firm would produce blueprints for Weese's concept of the station at Judiciary Square. The contract, for \$979,500, was the last step before construction could begin. Commissioner Tobriner, still a member of the WMATA board, said, "We've hit the last lap before we get a shovel into the ground." ["Contract Let On Design for Subway Here," *The Washington Post and Times Herald*, August 23, 1967]

Plans for a return to Airlie House in early September had to be scrapped because WMATA and Virginia officials were unable to resolve issues, particularly involving whether the Washington and Old Dominion Railroad should be abandoned. WMATA wanted to build rail rapid transit for northern Virginia, but the Northern Virginia Transportation Commission wanted commuter rail service that could be instituted almost immediately along existing commuter rail lines. Babson, who was running for chairman of the Fairfax Board of Supervisors, also wanted time to consider a line along Columbia Pike, parallel to Shirley Highway, with a branch to Landmark Shopping Center (on Duke Street just off Shirley Highway) and one ending in Annandale. [Flor,

Lee, "Delay of Transit Talk May Bear on W&OD," *The Evening Star*, August 30, 1967; Flor, Lee, "Metro, Virginia Units Head for Transit Clash," *The Evening Star*, September 6, 1967]

These developments surprised some members of the WMATA board who thought officials had agreed on the map at the initial Airlie House conference. They had asked staff to develop cost estimates for the routes on that map.

Despite the uncertainty about northern Virginia, WMATA unveiled a 90-mile regional transit system on September 7, 1967. The system consisted of 80 miles of rail rapid transit and 10 miles of existing commuter railroads on the Washington and Old Dominion line. Much of the mileage outside of downtown would be above ground.

The District of Columbia's segment would include the north-south route in the 7<sup>th</sup> street corridor, subject to congressional approval. Deletion of the Columbia Heights line was not certain, but WMATA did not include it on the map. WMATA estimated that the proposed system would cost between \$1.5 billion and \$2.2 billion.

Montgomery and Prince George's Counties in Maryland each would have 25 miles of rail rapid transit. Maryland termini in the vicinity of the Capital Beltway for the lines were St. Barnabas Road, Branch Avenue, Largo, Greenbelt Road, Glenmont, and Nicholson Lane.

In Virginia, the Northern Virginia Transportation Commission was still in discussion with WMATA in support of the commuter rail lines. WMATA argued that the existing tracks were poorly located and would take commuters on slow, roundabout trips before reaching rail rapid transit stations, thus undercutting use of the system. Relying on commuter rail might reduce costs in the short run, but would be more costly in the long run. [Flor, Lee, "Rapid Transit Ideas Unveiled," *The Evening Star*, September 7, 1967; "Network of 80 Miles With Suburban Ties Planned for Subway," *The Washington Post and Times Herald*, September 8, 1967]

Officials met on October 20-21 to approve a final map of the Proposed Regional System (PRS). The result was a 95.6-mile rail rapid transit system, with 82 stations. WMATA's 39-page report on the PRS, released in December 1967, stated that the 82 stations would include 49 stations built underground, 29 stations at surface level, and 4 on elevated structures:

Platforms of all stations except those on the W&OD Shuttle Route [from Gallows Road to Herndon in the railroad right-of-way] will be 600 feet long to accommodate eight-car trains. The W&OD stations will have 300-foot platforms. The great majority of stations will have side platforms rather than center platforms. Every subway station will have a mezzanine level providing for centralized fare collection.

Stations will be attractive, well-lighted and air-conditioned for passenger comfort. In keeping with the Washington area, midtown stations will follow a basic design concept that is monumental and dignified. Outlying stations will be related to the area in which located. [Washington Metropolitan Area Transit Authority, *Proposed Regional Rapid Rail Transit Plan & Program*, December 1967, page 17]

WMATA would complete construction by 1981. Although engineering of the full network had not reached the point where WMATA could predict the staging of construction for all segments, the report did state:

Construction on the first segment in the downtown area is expected to begin in October, 1968. Service will be first provided on the segment from Dupont Circle, along G Street, Union Station, and the B&O Railroad to Rhode Island Avenue. [page 18]

WMATA estimated that 280 dwelling units and 160 business establishments would be displaced by construction of the full system. [page 17]

The system would cost an estimated \$2.4 billion, excluding bond interest. WMATA pointed out that the estimates of capital costs “were developed mainly as an economic tool for route and system comparison purposes”:

Thus, the estimates of cost shown are of an order of magnitude and not on an authoritative engineering cost basis. The estimated costs, however, are based on considerable experience and study accumulated by NCTA – the predecessor agency. [pages 15, 18]

Revenue estimates were based on a zoned fare structure and estimates of total yearly passengers reaching 281 million in 1990. The fare would be “calculated at 25 cents for the first zone and 10 cents for each additional zone.” Because the District of Columbia (defined as being within its original 10-mile square, including the portion that was returned to Virginia in 1846), had only two zones, the maximum fare for trips entirely within the city would be 35 cents. Outside the District line, the fare would increase in 10-cent increments as the train passed through each zone (shown as a series of concentric circles). [pages 25-27]

The report estimated that “revenues will be sufficient to cover all operating expenses and to repay approximately one-third of the costs of construction, equipment, and financing.” Revenue would come mainly from passenger fares, but would include advertising, concession leases, and other activities that would generate up to 2 percent of the gross farebox revenue. [pages 29, 31]

The balance, \$1.6 billion, would “have to be provided by the Federal and participating local governments.” WMATA had not made any firm decisions or even firm recommendations on how to finance this amount. “However, in order to provide some order of magnitude data for possible local obligations, the Authority has assumed at this stage of planning that the Federal government will supply two-thirds of the net project cost” or about \$1.1 billion. This two-thirds assumption was based on the normal matching ratio for the HUD transit program under the Urban Mass Transportation Act:

Assuming a Federal contribution of this magnitude, \$535 million would have to be supplied by the District of Columbia, and the local Virginia and Maryland jurisdictions.

Because trips would be multi-jurisdictional, allocating costs among these jurisdictions would require a formula that took into account construction costs, operating costs, ridership, and population, all in 1990, for the District, Maryland, and Virginia. Taking these figures into

account, WMATA allocated 35.2 percent of costs to the District (\$188 million), 37.4 percent to Maryland (\$200 million), and 27.4 percent (\$147 million) to Virginia, adding up to the one-third share of \$535 million. [pages 31-33]

Anticipated revenues after expenses would support \$810 million in revenue bonds. The bonds would be secured by a pledge of the gross revenue of the system and by long-term service contracts entered into with suburban transit commissions or local units of government. Maturity for the bonds would be set at 50 years from the issue date. WMATA assumed an average interest rate of 4 percent based on historical trends even though current rates were higher. [page 34]

Babson had been overruled on his idea of a Columbia Pike line. Staff argued that the line would not pay its own way. Babson, as the *Post* put it, “argued, pleaded and cajoled” for the line, but “to no avail.” In the end, he continued to believe that leaving the Columbia Pike line out of the system was a mistake, “but I want a regional system . . . . I won’t vote against it.” Officials decided to put the rail rapid transit line in the median of I-66 instead of routing it along the Washington and Old Dominion Railroad.

In Maryland, officials agreed to extend a line to Rockville instead of stopping it at the Capital Beltway.

Professor Schrag summarized the result:

The PRS had something for everybody. The federal core got service – mostly underground – to the Southwest office complexes as well as the Capitol, White House, Navy Yard, State Department, and Federal Triangle. The District of Columbia got the Mid-City line – a \$300 million investment in the inner city. Montgomery County got two long lines, one from Silver Spring to Glenmont, the other up the Wisconsin Avenue corridor – once slated for the Northwest Freeway – stretching to Rockville. Prince George’s County, which shares a longer border with the District, got four shorter lines, all of them ending roughly at the Beltway. Overall, 55 percent of the Maryland lines would be aboveground. Virginia got two long lines. By relying on the median strip of Interstate 66 in Vienna and on the RF&P and Southern Railway rights-of-way through Alexandria to Springfield, WMATA was able to project that 77 percent of the Virginia lines would be aboveground.

To mollify disappointed area officials, the PRS included “several thick, dashed lines indicating ‘future extensions,’ including the Columbia Pike line and extensions of the proposed lines far beyond the Beltway.” Lobbyist John Warrington declared that they “meant absolutely nothing,” but would help build political support for the PRS. [Schrag, page 112; Flor, Lee, “Views of Citizens, Agencies Asked on Rapid Transit Plan,” *The Sunday Star*, October 22, 1967; Severo, Richard, “Subway Plan Puts Trains Where the Action Is,” *The Washington Post and Times Herald*, October 22, 1967]

By the end of the year, WMATA received the good news that the system would not cost as much as expected. Consultants studying traffic projections reported that by 1990, the system would be carrying 281 million riders, about 9 million more than expected. The additional passengers

would provide more farebox revenue than previously forecast to support general obligation bonds. [Severo, Richard, "Bigger Subway to Cost Less, Planners Predict," *The Washington Post and Times Herald*, December 16, 1967]

WMATA made the plan official in March 1968. With some adjustments, the board finalized the Adopted Regional System (ARS). The 98-mile ARS would cost \$1.828 billion in 1968 dollars, but with inflation, the cost was estimated to be \$2.525 billion for expenditure between 1968 and 1980. (Contrary to the usual practice, the actual ARS mileage, 97.2 miles, was rounded up to 98 miles, instead of down to 97 miles.) WMATA projected the Federal share at \$1.151 billion, with local jurisdictions providing \$575 million in matching funds.

By then, the rail rapid transit system finally had an official name. On the morning of February 9, 1968, WMATA's board of directors approved a plan to call the system "Metro" and to use "M" as the symbol at station entrances, underground, and on posters and other printed material. The board also adopted Helvetica typeface for all system signs and written matter, including the "M."

Before the vote, General Graham listed the advantages of naming the system Metro. Calling it a "subway" would have been a misnomer because much of it was going to be above ground. Moreover, Metro "has an international, cosmopolitan flavor and lacks the stigma of 'subway.'" No other system in the United States used the name, but it was widely used "in other great cities of the world, including Montreal, Paris, Milan, Madrid, Barcelona, Lisbon, Rotterdam and the various Russian systems." The international implication was appropriate because it "suited the international flavor of this city."

Graham said the "M" was chosen because it "obviously stands for 'Metro,'" was unique, and could be read from front or back. He said it was structurally the strongest letter in the alphabet. According to Professor Schrag, a member of Harry Weese's team, Massimo Vignelli, came up with Metro, the symbolic M, and the Helvetica typeface. Professor Schrag wrote that with Vignelli's help, "Metro had raised its banner." ["Planners Vote for 'Metro' To Avoid Subway Stigma," *The Washington Post and Times Herald*, February 10, 1968; "Rapid Transit To Be Known As 'Metro,'" *The Evening Star*, February 9, 1968; Schrag, page 118]

## **Making Connections**

On September 12, 1967, the District's United Planning Organization (UPO) conducted its usual business meeting. Then citizens pleaded for UPO's support of a routing they had developed for the center section of the North Leg Freeway. It would be built in a tunnel along New York Avenue, NW., linking the Center Leg and North Central Freeways. The tunnel, from Mt. Vernon Place to the Baltimore and Ohio Railroad tracks, would not displace any families, the citizens said. Mrs. Vivian Alsbrook said citizens did not object to needed freeways, but they needed their homes. "We don't know where we're going. I'm out here to beg you. Leave us our homes." The UPO approved the routing. [James, Betty, "Antipoverty Board Endorses Alternate Freeway Route," *The Evening Star*, September 13, 1967]

UPO had no authority over the routing of freeways, but Director Airis did examine the proposal. In a speech to the Mid-City Housing Alliance, he said, "The rub is that not all of this section can

be tunneled, and some homes will probably be torn down on the north side of New York because an eight-lane freeway is wider than the avenue.” [“Airis Cites ‘Rub’ in Loop Tunnel Plan,” *The Evening Star*, October 6, 1967]

During NCPC’s September 15 meeting, members gave final clearance for the District to build an eight-lane bridge over Rhode Island Avenue for an interchange at the south end of the North-Central Freeway east of the railroad tracks near 10<sup>th</sup> Street, NW. The interchange would connect the North-Central Freeway to two other freeways. Opponents opposed bridge construction because they feared that the District would argue that the millions spent on the structure would be wasted if they did not build the rest of the freeway from Rhode Island Avenue to Silver Spring.

During the meeting, General Mathe attempted to secure NCPC approval of the Three Sisters Bridge. “We ought to stop playing around with the highway projects.” His motion to add the bridge to the agenda was defeated, 5 to 5. The tie was possible because James Shotwell, representing Federal Highway Administrator Bridwell, abstained, citing Secretary Boyd’s review of the bridge question. [Flor, Lee, “Freeway Span Gets Okay,” *The Evening Star*, September 16, 1967]

Shotwell’s abstention prompted Representative Gude to send a letter to Secretary Boyd. Shotwell’s action was “a severe setback . . . which further extends the seven year delay in construction of the Three Sisters Bridge.” The bridge “has been studied and restudied by consultants, and approved, disapproved, and reapproved by the planning commission, subject to the findings by your department”:

Failure of the Department of Transportation to produce a decision, failure of its spokesman to suggest at a recent meeting of four congressmen when such a decision might be forthcoming, and failure of your representative on the planning commission . . . . to vote even for renewed consideration, prompts me to conclude that the Department has become bogged down in the same sort of indecision that has plagued highway construction in the District for years.

He urged Secretary Boyd to personally “intervene in your department’s deliberations, to end the impasse and to clear the way for construction of the bridge.” [“Transportation Dept. Hit For Bridge Indecision,” *The Sunday Star*, September 17, 1967; “Gude Blasts Delay on Bridge,” *The Washington Post and Times Herald*, September 17, 1967]

A blue-ribbon task force of architects reported their findings to Secretary Udall on September 17, 1967, regarding Potomac River restoration. The report called for a 5-year, \$250 million program for a model Potomac River. The group called for rejuvenation of the Georgetown waterfront, including replacement of the Whitehurst Freeway and the industrial feel of the present waterfront. In their place, the task force called for an esplanade “strongly defined by a waterside development of consistent heights and harmonious design, composed of apartment houses and compatible commercial buildings.”

The task force also rejected the Three Sisters Bridge. The architects favored “stopping the practice of treating the river and the open riverside as property freely available for exploitation by highway departments”:

The River’s environs are sacrificed to highways. Ill-considered bridges are placed athwart the River, with overbearing mazes of ramps and roads, and others, similarly out of keeping, are projected.

Secretary Udall, who had asked the task force for an independent analysis, called it “a very bold, very creative, very far-sighted report—it’s just what we wanted.” He did not, however, endorse the recommendations pending the work of the Department of the Interior’s interdepartmental task force on the issue. [Hornig, Roberta, “5-Year, \$250 Million Plan Urged for Model Potomac,” *The Sunday Star*, September 17, 1967; Wentworth, Eric, “Curbs Urged On Potomac Construction,” *The Washington Post and Times Herald*, September 17, 1967]

On September 29, Mayor Washington addressed the annual meeting of the Federal City Council, his first formal speech since taking the oath of office. He discussed a number of topics, but on transportation, said he supported a balance of roads and rail rapid transit. Orderly development, he said, must include freeways as well as the subway, but he emphasized the importance of housing.

His suggestion that the city must take a fresh look at how to meet its transportation needs prompted ECTC to issue a statement accusing him of being a highway-lobby “puppet” who supported displacing people for freeways. The *Post* reported:

Apprised of the Committee statement, Washington promptly contacted Sam Abbott, the group’s publicity director, explained that he had in no way endorsed the city’s present highway program and invited the group to confer with him.

“I merely made the observation that we as a community are going to have to live with these things,” said Washington, “but that at the same time, people’s needs must be kept in perspective.”

After the telephone call, ECTC issued a second statement recognizing that Mayor Washington was willing to meet with all groups before making decisions. “We therefore are accepting his invitation and will meet with him this weekend.”

Mayor Washington said he hoped the conversation conveyed the idea of “the open door. I want to hear from people if they have complaints. We can meet and talk things over.” [“Freeway Critics Reassured,” *The Washington Post and Times Herald*, October 1, 1967]

The Pooks Hill interchange of I-70S with the Capital Beltway had not worked efficiently since the opening of the circumferential in 1964. The interchange included two ramps, but not ramps connecting westbound motorists on the Capital Beltway who wanted to turn south onto Wisconsin Avenue. Motorists northbound on Wisconsin Avenue could not turn east onto the Capital Beltway. The missing ramps had been deleted in an economy move, but their absence resulted in motorists moving out-of-direction to continue their desired trips.

“Continuing confusion and complaints by commuters and traffic authorities,” the *Star* reported, “prompted Maryland Gov. Spiro T. Agnew to approve spending of \$400,000 from state roads emergency funds last May.” The Maryland State Roads Commission awarded the contract, with FHWA approval, in mid-October 1967. The State predicted the ramps would open in June 1968. [Christmas, Anne, “Beltway Ramps Due At Pooks Hill in June,” *The Evening Star*, October 12, 1967]

Montgomery County officials were concerned about their residents’ link to the District via MacArthur Boulevard parallel to the Potomac River. In the absence of the Three Sisters Bridge and a link via the George Washington Memorial Parkway on the Maryland side of the river, officials were looking for a solution in case the U.S. Army Corps of Engineers followed through on its threat to close the boulevard to protect the 100-year old pipes that gave the road its original name, Conduit Road. Army officials said traffic was “squashing” the conduit.

The parkway, if completed, would provide the needed alternative that would allow the closing of the boulevard but NPS had no plans to do so pending a final decision on the Three Sisters Bridge, which was to provide the southern connection.

On October 9, Montgomery County, Prince George’s County, and State officials met for the first time with Mayor Washington and Deputy Mayor Fletcher. The meeting covered a range of topics in addition to transportation. The *Star* described the meeting as “congenial but nothing specific was resolved.”

Back in Rockville, the Montgomery County Council approved a resolution calling for approval of the Three Sisters Bridge. The resolution, addressed to President Johnson, stated that adequate transportation was vital to the “orderly growth and development” of the county. The Three Sisters Bridge was a key element of the regional highway network. NCPC “has been requested to end more than seven years of discussion surrounding the proposed bridge and to approve its construction.” The county council endorsed the bridge and urged NCPC and the Department of Transportation “to take all measures necessary to assure prompt completion of this much-needed facility and related elements of the interstate highway system for the National Capital area.” [Christmas, Anne, “County Seeks Mayor’s Aid,” *The Evening Star*, October 10, 1967; Rovner Sandy, “‘Squeeze’ Is On Montgomery Road,” *The Baltimore Sun*, October 11, 1967; Winterble, Peter, “County Set For Fight Over Road,” *The Washington Post and Times Herald*, October 11, 1967]

NCPC unanimously agreed on October 12 to enlarge a central city urban renewal area. The proposal by the District’s RLA, with support of the District Department of Highways and Traffic, added 21 acres to the 95-acre Northwest No. 1 Urban Renewal Area. NCPC also approved construction of low- and moderate-income housing on a deck over the Center Leg Freeway.

The RLA would acquire the land and give some of it to the highway department that would build a double deck of concrete above the freeway between H, K, 2d and 3d Streets, NW., for 327 federally subsidized housing units on the top deck for families displaced by freeway construction along with an acre of recreation area. The bottom deck would contain parking spaces. One

possible advantage of the plan was that by advancing it under urban renewal, the District would not have to wait for Congress to complete work on air-rights legislation.

(On December 14, the Senate approved, without debate or a recorded vote, two air-rights bills introduced by Senator Tydings. One would allow the District to lease space above or below freeways for housing, offices, commercial buildings, or other purposes. The second bill would allow similar authority on city streets. House action was still needed before the District would have air-rights authority. [“2 D.C. Air Rights Bills Approved by Senate,” *The Evening Star*, December 14, 1967; “Air Rights, Pollution Bills Backed,” *The Washington Post and Times Herald*, December 15, 1967; Lease of Airspace, *Congressional Record-Senate*, December 14, 1967, pages 36670-36675])

The plan also affected the proposal to tunnel the North Leg Freeway under K Street, as the *Post* reported:

The decision will also affect the alignment of the east section of the K Street tunnel. The tunnel would have linked the Center Leg, which will terminate at New York Avenue, and the North Central Freeway, which will end at Rhode Island Avenue.

Highway Department engineers said yesterday that the only feasible route for the tunnel now is under New York Avenue, surfacing near Florida Avenue and going over the Baltimore and Ohio Railroad tracks to Rhode Island Avenue. [Hoagland, Jim, “Planners Approve Air-Right Housing,” *The Washington Post and Times Herald*, October 13, 1967; Lewis, Robert J., “Planners Approve Houses Over Road,” *The Evening Star*, October 12, 1967]

Representative Gude drove his own car to the end of Maryland’s George Washington Memorial Parkway on October 13. His car bounded over the last paved section. From there, he walked 1,000 feet of dirt roadway to Chain Bridge. There he watched traffic on both sides of the river as reported by the *Star*:

“Ridiculous situation,” was his comment as he stood near a picturesque 12-foot waterfall within sight of the bridge and viewed the early-morning rush hour at its peak on the Virginia side and the sharply contrasting county dirt road in Maryland.

Occasionally a southbound motorist followed the same path that Gude had taken—down the \$10 million “highway to nowhere” on the Maryland side of the river to the end of the cement ribbon and then over the edge, with a dump, to the dirt section . . . .

Commuters with sufficient derring-do to reach the lower end of the 1,000-foot unpaved roadway then met another major problem – a seemingly unending stream of traffic rushing in both directions across Chain Bridge.

At the entrance to the bridge each workday morning, Virginia-bound traffic travels north on Canal Road and makes a sharp left turn onto the bridge. If it kept straight instead of tuning left, it would wind up on the dirt roadway that has been frustrating Maryland motorists ever since paved portions of the parkway were built.

While Virginia-bound traffic moves over Chain Bridge from Washington, two lanes of Washington-bound automobiles are proceeding into sharp right turns, to head south on Canal Road. The screech of their tires drowns out the sound of the tumbling waterfall nearby.

The *Star* explained that construction of the parkway was linked to construction of the Three Sisters Bridge and I-266. However, above Chain Bridge, the rights-of-way were “so narrow they form a potential hazard to traffic.” District officials were trying to convince NPS to complete design of the extension so it would be ready for construction when the bridge was approved. “Until these matters are unraveled, the District refused to give permission to take the parkway onto Canal Road, which would require extensive rebuilding because of the monumental traffic congestion at Chain Bridge.”

Representative Gude said, “There simply has to be a solution to this, and it makes me even more keenly aware of the necessity for expediting the Three Sisters Bridge as the final link of the parkway in Georgetown.” He was thinking of meeting with Representative Broyhill, whose district began on the Virginia side of Chain Bridge, and Director Airis. He would argue that even if Three Sisters Bridge were approved, construction would take years. “We plan to ask the District Highway Department to look into a temporary redesign of this section, so that George Washington Memorial Parkway on the Maryland side can be used to relieve congestion on MacArthur Boulevard and other commuter routes.” He acknowledged the concern about Three Sisters Bridge destroying the beauty of the river, but pointed out that “the old Cabin John Bridge, which carries MacArthur Boulevard over the parkway, proves that bridges can be beautiful.” [Christmas, Anne, “Gude Inspects Montgomery’s Road to Nowhere,” *The Evening Star*, October 13, 1967]

### **The Court Rulings**

Judge Alexander Holtzoff of the U.S. District Court of the District of Columbia heard arguments on October 17, in the civil suit brought by District citizens groups seeking to halt four freeway projects: North-Central Freeway, East Leg of the Inner Loop, Three Sisters Bridge, and Missouri Avenue Expressway. Roberts B. Owen, representing the groups, argued that Judge Holtzoff should halt the projects because the District had developed them in violation of the Highway Extension Act of 1893. As noted earlier, the 1893 Act required the compiling and public filing of a detailed map of the highway; public hearings for affected property owners; and limitation of new highways to 160 feet in width. The District must submit the map to NCPC for approval, after which it must be filed with the D.C. Surveyor’s office.

Owen presented a map to Judge Holtzoff, arguing that it was the only map of the proposed freeways. The District, Owen said, did not have “an official map of these four monster highways.”

Assistant Corporation Counsel Patrick O’Donnell told the court that the 1893 Act applied only to local highways, not Interstate highways. The District had to meet only the requirements of the Federal-Aid Highway Acts authorizing the freeways, which typically were about 250-foot wide. “The Federal interstate system cannot conform to local requirements all over the country.”

Plaintiffs also challenged NCPC votes in support of freeway projects where alternate attendees voted for the principals. Owen's co-counsel, Gerald P. Norton, argued that NCPC was bound by a resolution adopted in 1929 barring alternates from voting. O'Donnell responded that the 1929 resolution was "abrogated" because NCPC had never observed it.

A third issue was whether citizens have the right to sue to block a municipal government from spending tax revenue, in this case for freeways.

At one point, Judge Holtzoff asked Owen:

You're asking me to interfere with the building of the Three Sisters Bridge? . . . . It's nearly impossible to get a bridge built across the Potomac into Washington. It took years before they decided to build the Theodore Roosevelt Bridge, and we were lacking a bridge all that time. [Basham, William, "4 D.C. Road Plans Attacked in Court," *The Evening Star*, October 17, 1967; Hoagland, Jim, "Citizens Challenge Freeway Projects," *The Washington Post and Times Herald*, October 18, 1967]

(Judge Holtzoff lived in the Broadmoor Co-Op Apartments at 3601 Connecticut Avenue, NW., in Cleveland Park.)

On October 18, Judge Holtzoff ruled from the bench. He agreed with the government that because the freeways were part of the Interstate System, they did not have to comply with the requirements in the 1893 District law for local roads.

He also found that citizens organizations, property owners, and park system users did not have standing to sue NCPC, which is a Federal entity. Individual taxpayers may sue the city if they believe tax money is being spent illegally. He was particularly critical of the District Democratic Central Committee's inclusion among the plaintiffs. "It was extremely inappropriate . . . to bring what seems to be political consideration into the courtroom. The Committee should not have lent its name to this suit."

He also found that voting by NCPC alternates was proper. "Ex-officio members have numerous other activities . . . and cannot devote their entire time to this work." He added that former Engineer Commissioner Duke and NPS Director Hartzog had reached an agreement that bound them, or their alternates, to vote for the projects when they were presented to NCPC.

The court scheduled a hearing for additional arguments on October 23. [Basham, William, "Freeway Challenge Refused by Judge," *The Evening Star*, October 18, 1967; "U.S. Judge Dismisses Bid To Block Freeway Projects," *The Washington Post and Times Herald*, October 19, 1967]

Prior to further court action, Representative Broyhill wrote to Secretary Boyd. He was reacting to an October 13 letter that General Mathe had sent to the Secretary indicating that the Department of Transportation had not consulted District highway officials about the Three Sisters Bridge. Representative Broyhill's letter, pointing out that a decision had been pending since May, stated that he had urged Secretary Boyd in July to take quick action on whether the bridge was needed. The Secretary had replied that he "was fully aware of the urgency of

reaching decisions” on the bridge. In view of General Mathe’s letter, Representative Broyhill accused the Transportation Department of “trepidation” that was holding up 11 urgent highway projects that were dependent on construction of the bridge:

Surely there has been immediately available to you every possible bit of engineering data you could have needed for your decision.

We need only a simple yes or no from you in order to move forward in solving the rapidly increasing traffic congestion problem in the Washington area. [“Broyhill Pushes For Span,” *The Washington Post and Times Herald*, October 23, 1967; “Broyhill Prods Boyd for Decision,” *The Evening Star*, October 23, 1967]

When court convened on October 23, Owen narrowed plaintiffs’ arguments in view of Judge Holtzoff’s rulings the previous week. Owen challenged the District’s proposed use of parkland, citing a 1903 District law requiring congressional consent for construction of structures on parkland. The freeways (and their use of parklands) were: North-Central Freeway (13 acres of Fort Totten Park and Fort Drive); East Leg Freeway (100 acres of Anacostia Park); Three Sisters Bridge (part of Glover-Archbold Park); and Missouri Avenue Expressway (1 acre of Fort Drive).

He also argued that the Three Sisters Bridge could not use a portion of the Chesapeake and Ohio Canal property without approval of the railroad company that owned it. Moreover, the District’s plan for a viaduct carrying the East Leg over the Baltimore and Ohio Railroad tracks leading into Union Station violated a 1935 law prohibiting the opening of streets or avenues across railroad tracks leading into Union Station.

Judge Holtzoff issued a ruling on October 24. He began with the claim that the District did not have authority to construct bridges:

This seems to be an astounding proposition, when the Court contemplates the numerous bridges throughout the limits of the District of Columbia. For example, there is a large number of bridges, large and small, across Rock Creek, a beautiful, serpentine stream that serenely and leisurely winds its way through the entire length of Washington. There are bridges over parks, depressed highways and railroad tracks.

Some bridges were simply parts of a highway. He cited Section 101(a) of Title 23, United States Code, which defined “highway” as including roads, streets and parkways, including right-of-way and bridges.

Beyond Section 101, NCPC was expressly authorized to include highways, streets, bridges, viaducts, parkways, thoroughfares, and other means of handling traffic in its plans:

Naturally the Commission would not have been authorized to develop plans for bridges unless, by implication, the District of Columbia was given authority to build them. The Court, therefore, concludes that there can be no doubt that the District of Columbia has power to build bridges.

The argument that approaches to the Three Sisters Bridge would require a portion of Glover-Archbold Park, conveyed to the city to be dedicated as a park, “need receive no further consideration.” The corporation counsel stated “that it is not intended to use any part of the land so dedicated for the approaches to the bridge, and his statement has not been denied or questioned.”

He agreed with plaintiffs that a contract for the Chesapeake and Ohio Canal approved on August 6, 1938, required railroad consent for use of land “for the conveyance of freight or passengers by land.” Judge Holtzoff pointed out that if the District planned to build a bridge approach on the land, the railroad “may maintain an appropriate action in this court.” Taxpayers who are not party to the contract may not do so:

The fact that the contract is with the United States and not with the District of Columbia, makes this contention all the more remote. It has not been suggested that the Baltimore & Ohio Railroad will refuse to consent to the project or has threatened or indicated that it will bring suit to secure the performance of the contract. The Court overrules that objection.

He also considered the claim that bridge approaches would affect the Potomac Palisades, which the United States had acquired for park purposes. Congress, in approving the relevant District code (Section 8-115) in 1932 authorized the District and the United States to transfer jurisdiction of property “for purposes of administration and maintenance under such conditions as may be mutually agreed upon.” As a result, “the Court reaches the conclusion that Section 8-115 authorizes the transfer of park lands for use in connection with the construction of the projects involved in this litigation.”

Section 8-115 also addressed the question raised about a 1912 law (Section 8-133) requiring congressional consent for erection of any building or structure on “any reservation, park or public grounds of the United States within the District of Columbia.” The 1932 law, Section 8-115, prevails over the earlier law addressing the same issue. “In other words, if land of the United States is transferred to the District of Columbia for a use different than that to which it was being put, Section 133 would not apply.”

These findings also applied to the use of parkland for the other freeways. “Therefore, this objection is deemed to be without merit and is overruled.”

As for the law regarding Union Station, the intent of the 1935 Act was “to prevent any further grade crossings” and cannot be construed “as prohibiting the construction of a viaduct over railroad tracks.” The court found, therefore, that “this Act is not applicable and does not bar the construction of a viaduct over the tracks of the Baltimore & Ohio Railroad.”

Having disposed of all the plaintiffs’ arguments, Judge Holtzoff concluded:

The complaint is dismissed for lack of standing to sue as against those defendants who are officers of the United States. It is dismissed as against those defendants who are officials of the District of Columbia as to all of the plaintiffs except those who are suing

as taxpayers of the District of Columbia. The action may be maintained as against the District of Columbia officials by those plaintiffs – and those plaintiffs only – who sue as taxpayers of the municipality. The plaintiffs’ motion for summary judgment is denied.

The cross-motion of the District of Columbia defendants for summary judgment is granted as against the plaintiffs who have standing to sue. The action is dismissed as to the other plaintiffs. [*D.C. Federal of Civic Associations, Inc., v. Thomas F. Airis*, 275 F.Supp. 540 (1967), U.S. District Court, District of Columbia, Civ. A No. 3174-66, October 24, 1967]

Owen indicated that the plaintiffs would appeal Judge Holtzoff’s rulings to the U.S. Court of Appeals.

Judge Holtzoff retired at the end of 1967 and would not be involved in further rulings on the freeway issues.

### **Secretary Boyd’s Position**

By late October, newspapers began reporting rumors of Secretary Boyd’s decision on the Three Sisters Bridge.

On October 29, Flor reported that Norman R. Weiss, manager of AAA’s District division, said he had learned that Secretary Boyd planned to reject the bridge “on grounds that it is not needed.” Claiming he had a “reliable source” in the department, Weiss said, “Boyd’s apparent rejection of the bridge proposal will cripple the Washington area freeway system and set planning back 10 years.” He added that the decision was “based on sheer emotion, catering to a small but vocal anti-freeway group and guided by freeway critics within his office, not on the desires of a vast majority of Washington area residents.”

Federal Highway Administrator Bridwell responded that Secretary Boyd had not made a decision on the bridge, which was still under study.

At the same time, Flor reported, the department was developing an ICE that was due to Congress in January. With the estimate up since the 1965 ICE, the department was looking for ways to cut costs. Flor reported:

DOT has 23 crucial freeway segments which are being opposed in major cities across the nation. There have been many rumors that the department was preparing to eliminate the controversial segments from the national system of interstate defense highways. This would eliminate the 90 percent federal financing and would effectively scuttle the controversial highway projects.

The North-Central Freeway was one of the 23 segments. “DOT is making a major review of the North Central Freeway, and this also is in questionable status.” [Flor, Lee, “U.S. Denies AAA Claim It Has Vetoed Bridge,” *The Sunday Star*, October 29, 1967]

The delayed decision on the Three Sisters Bridge was affecting planning for inclusion of rail rapid transit in the I-66 right-of-way in Virginia. WMATA was planning to put a line in the median from Fairfax Drive in Arlington County past the Capital Beltway to Gallows Road. In addition to delays while waiting for a decision on the bridge, Virginia officials said their schedule was delayed because of plans to use a portion of the Washington and Old Dominion Railroad right-of-way for the highway. The Chesapeake and Ohio Railroad, which owned the unprofitable commuter line, wanted to abandon it and sell the right-of-way, but the ICC had not yet ruled. [Flor, Lee, "Terms Reached For Route 66 Rapid Transit," *The Evening Star*, November 2, 1967]

While speculation continued on Secretary Boyd's decision, Alan M. Voorhees and Associates completed a study for WMATA. Based on plans for a 96-mile rail rapid transit system, the Voorhees study assumed that the system would be expanded to 150 miles by 1990. The consultant then studied the freeway network that NCPC had approved in May 1966. Computer estimates suggested that 141,000 people would use the 150-mile rail rapid transit system daily in 1990 while another 25,000 people would use buses. However, 453,000 people would use only their automobiles for peak hour trips. The 14<sup>th</sup> Street Bridges would be congested and unable to handle any overflow from the Three Sisters Bridge.

This prediction was interpreted as support for the bridge. It also was seen as rejection of the idea that NCPC Chairman Rowe and others favored, namely not building the bridge and instead diverting traffic in the corridor to the Theodore Roosevelt Bridge and to the 14<sup>th</sup> Street Bridge. [Flor, Lee, "New Study Favors 3 Sisters Bridge," *The Sunday Star*, November 5, 1967]

On November 7, Flor reported that a department source was saying that Secretary Boyd was planning to let the new city government decide on the bridge. Secretary Boyd said, "All I can say is that we expect to have something out by the middle of the month in the way of recommendations":

In the past few months, Boyd has made a personal inspection of several cities which are having trouble making decisions on freeway and bridge construction.

Boyd has told these city officials he wants local people to get into the decision-making process so any final decision on freeway location will be supported, the Transportation Department source reported.

Secretary Boyd was aware that Mayor Washington had appointed a transportation task force of outside experts to study the city's transportation needs. If Secretary Boyd announced his decisions in mid-November, he would prejudice the task force's work. Therefore, the source indicated the Secretary might give the city several alternatives, then let the Mayor and city council "go to their drawing boards" to decide which they wanted to pursue. [Flor, Lee, "Boyd May Let D.C. Decide on Bridge," *The Evening Star*, November 7, 1967]

On November 8, the *Star* and *Post* reported that the Department of Transportation had given tentative proposals to the city for review, subject to Secretary Boyd's final decisions. In the *Post*, Wolf Von Eckardt, began an article on Secretary Boyd's pending decision based on comments by aides:

The Three Sisters Bridge is out.

Although Secretary Boyd had told NCPC a bridge was preferable to a tunnel, his staff had concluded that with elimination of the intermediate loop through Glover-Archbold Park and plans for rail rapid transit, the bridge was not needed:

The long-alleged Virginia commuter demand for a river crossing at this point, Boyd's aides say, will not materialize until 1980. By that time, they hope, the proposed area rapid transit system should be completed and meet Virginia commuter needs. If a bridge is later needed, Boyd's aides feel, it probably should be built upstream from Three Sisters.

As for the trucks that were to use the bridge, they could cross the Potomac River on the Theodore Roosevelt Bridge (pending congressional approval in view of the restriction imposed at President Eisenhower's suggestion).

On the Maryland side, the Secretary hoped that NPS would allow trucks on its parkway between the Capital Beltway and the District line so it could carry the I-70S designation. Secretary Udall "seems amenable to the idea":

The Department of Transportation wants to build the Potomac Parkway in a hurry to provide a link between Route 70S in Maryland and downtown Washington. And the Department wants to move on that Parkway in a hurry so as not to stall all freeway projects here for another year.

With I-70S shifted to an alignment along the river, funds designated for I-70S/North Central Freeway north of the I-95 interchange could pay for interchanges for the Georgetown link with the Theodore Roosevelt Bridge and the Potomac River Freeway.

The plan's disadvantage was that more land would be needed along the Georgetown waterfront to bring cars and trucks into the inner city:

The Department of Transportation hopes to assist with "a satisfactory solution" to both the highway and aesthetic problems of the waterfront, informed sources say. No one quite knows whether this means the elevated Whitehurst Freeway will be added to, torn down or whether a new depressed or tunneled highway will be built.

As the *Star* pointed out:

The suggestion that a parkway-type road along the Potomac River should serve as western Maryland's major traffic artery to the city revives a proposal first advanced under the Eisenhower administration in 1955, and later discarded as inadequate.

Secretary Boyd, according to Von Eckardt, also was thinking about canceling the South and North Legs of the Inner Loop:

Instead of these two controversial legs, the new plan would complete the loop by carrying traffic through one or more underground expressways to connect with the North-Central Freeway. One of them is likely to be tunneled under E Street and the Ellipse [south of the White House] in accordance with the Pennsylvania Avenue Commission's plan. Other possibilities are tunneling under K Street or along Independence Avenue and under the Washington Monument grounds.

The hope is that this connector can be consolidated with part of the proposed subway so downtown won't have to be dug up twice.

The fact that the initial 25-mile rail rapid transit network did not include a link in the general area of this freeway proposal would "have to be resolved."

That was only one issue about the not-yet-announced plan. The biggest problem was "whether the new proposal will settle the long freeway dispute or start it all over again." Pro-highway forces would see the plan as a betrayal of the longstanding plans for the freeway network. However, the planners advising Secretary Boyd argued that the plans were blocked anyway by "adamant citizen opposition expressed not only in public hearings but also by the so-called "citizen members" of the National Capital Planning Commission:

The new plan, its proponents say, would at last get the essential elements of the freeway system moving and at the same time give this community sound transportation with a minimum of displacement and disruption.

How this dilemma would be resolved remained to be seen. In the end, the Department of Transportation would have "the big say in what highways will be built" because its FHWA was paying 90 percent for the Interstate freeways – wherever they ended up. [Von Eckardt, Wolf, "Boyd Rejects Three Sisters Span," *The Washington Post and Times Herald*, November 8, 1967; "U.S. Seeks to Abandon Bridge, Inner Loop Plan," *The Evening Star*, November 8, 1967]

Reaction to these unofficial preliminary ideas was swift. In a November 8 editorial called "Highway Robbery," the *Post* said these proposals would tear apart the "precarious 'treaty'" worked out in May 1966. A "notable shortcoming" in the proposals was "the failure to make any provision for limited access routes into the city from the North. Instead, there would be no main artery in the whole section from Interstate 95 in Maryland, westward to George Washington Parkway." The editorial concluded:

At the moment it looks as though the Transportation Department had gone almost all the way back to the Stolzenbach plan, which quite frankly contemplated substituting mass transit for the freeway system. It seems to have embraced very conservative estimates of future traffic requirements, particularly with reference to [the] need for Potomac crossings.

The Transportation Department ought to take its proposals back to the drawing boards. It cannot stop the growth of the area, arrest the rising demands of traffic or enforce an order compelling all citizens to ride a transit system not yet built.

Chairman Natcher warned that if the proposals to abandon a balanced transportation system, including freeways, were adopted, funds for the rail rapid transit would again be in jeopardy:

Once before we refused to authorize rapid transit funds. And on a roll-call vote in the House, members voted 320 to 3 when the District of Columbia budget was presented on final passage.

Our committee is still of the opinion we must have a balanced transportation system and any move to destroy the freeways is a serious mistake.

Two weeks earlier, Representatives Gude and Machen of Maryland and Broyhill and Scott of Virginia had requested a meeting with Secretary Boyd regarding the Three Sisters Bridge. Now they received replies declining the meeting because the department was “at work on this matter and will have a decision at the earliest possible date.” As he had said publicly in recent days, “the Department will be prepared to provide advice on the issues presented for its consideration by approximately the middle of November.” He promised to send them copies of the information as soon as it becomes available.

As a result, they did not have an official description of the proposals, but could react to the news reports. Representative Machen took to the House floor on November 9 to discuss “an incredible situation.” On the same day he and his colleagues received Secretary Boyd’s rejection of a meeting, they read in the *Post* that the Three Sisters Bridge was out. He urged Secretary Boyd to take the *Post*’s “sage advice” to take his ideas back to the drawing board. The Congressman thought Secretary Boyd should “start taking some advice from those of us who have more than a vague inkling of the transportation needs of the metropolitan area.” If the *Post* story about “these unilateral decisions” was accurate, “the Secretary is on a dangerous collision course with a number of Members of Congress and I would not predict that he and his plans will prevail.”

Representative Broyhill was next up on the House floor. He was “shocked” at the newspaper reports. If the Secretary had suggested “constructive alternatives, we would have to consider it”:

But to suggest that further highways, freeways, and river crossings are not needed, and that we would have to rely upon rapid transit in lieu of these projects borders upon stupidity, particularly when the construction and completion of area transit is in the distant future.

Study after study had supported the projects, he said, and “all highway engineers with whom I am familiar agree that these projects are needed”:

The only opposition we have had has come from . . . so called conservationists [a term that referred to what were increasingly being called environmentalists] and members of the National Capital Planning Commission. Now they are using him, the Secretary of the Department of Transportation, as a fall guy to rubberstamp the proposition that they have been putting forth for many years.

The proposals would “create utter chaos,” requiring the Congress to “step into the picture to do the job that the Planning Commission, the Department of Transportation and others in the executive branch of government obviously are not capable of doing.”

Representative Broyhill thought the decision had been made back in May when NCPC asked Secretary Boyd for his view on the Three Sisters Bridge:

It seems to have been rigged from the beginning for Mr. Boyd to decide to scrap the careful planning of many highway experts in favor of a ridiculous set of “possibilities,” many of which were evaluated years ago and discarded as unworkable.

Surely Secretary Boyd and his advisors were aware that if they did not approve the bridge or other planned freeways, Chairman Natcher would refuse to release District matching funds for rail rapid transit. “As recently as today,” Representative Broyhill said, Chairman Natcher “advised me that his position in this regard has not changed”:

This decision concerns me greatly, because not only is our highway system endangered but the subway is threatened as well.

Mr. Boyd’s ill-conceived decision will result in transportation chaos throughout the Washington area.

He was followed by Representative Gude, who discussed “the incredible performance” of the Federal agencies involved in “stalling transportation in the Washington area.” They deserved “a hard look by this body.” The Department of Transportation’s views should worry every Congressman who represents an urban area:

The administration has pledged to make Washington a “showcase for the world.” I fear it will be a showcase with a wall around it. One wonders whose city will get the showcase treatment next.

The Three Sisters Bridge, which was the original reason NCPC asked Secretary Boyd for his views, had always been a stand-in for the entire freeway system:

Thus it is no coincidence that Secretary Boyd, in recommending against the bridge, took the occasion to call for a cutback in the entire proposed system including one of the most vitally needed facets in the State of Maryland – extension of the North Central Freeway into a densely developed area of Montgomery County.

The idea of extending the George Washington Memorial Parkway into the city “is nothing but a sop; that ought to be done anyway.”

These decisions, as reported in the press, were being made “without due consultation with the District, Maryland, or Virginia officials whose interests are vitally at stake. Regional implications are totally overlooked.” Without needed links to the city, the suburbs would “develop more independently, given greater emphasis to lateral road facilities,” all at the city’s expense:

Secretary Boyd has been recommending greater use of express buses on freeways. In the name of sanity, What freeways, Mr. Boyd?

Representative Gude recalled that Secretary Boyd “has proclaimed himself no enemy of freeways, and he argues persuasively for local solutions to transportation problems.” Therefore, the Congressman could “only conclude that he is acting on the basis of [faulty] information in thinking what can only be described as a totally unrealistic position opposing area freeways.”

Secretary Boyd should “take a long and realistic look at the region’s transportation problems, and genuinely consult with area officials on the regional problems and adopt a more constructive approach.” [Three Sisters Bridge/Shock and Amazement at Plans to Abandon the Three Sisters Bridge/The Incredible Performance of the Federal Agencies Responsible for Stalling Transportation in the Washington Area Deserves a Hard look by This Body, *Congressional Record-House*, November 9, 1967, pages 31920-31922]

Senator William B. Spong, Jr. (D-Va.), an attorney and State legislator who had been elected to the Senate in 1966, issued a statement saying the proposal “would in my opinion compound an already bothersome problem of traffic congestion at the Roosevelt crossing.”

David Scull, the outgoing president of the Montgomery County Council, said he would urge his colleagues to oppose the reported plans. Of the elimination of the North-Central Freeway extension into the county, he said, “we’ve got to have that road.” Traffic projections in the corridor were “hair raising enough,” but State and county officials had spent a great deal of funds for studies of the extension. He did not think State officials would let the proposal “just go down the drain.” The only positive idea was extension, finally, of the parkway along the Potomac River into the city. “At least something is being done, and we may be able to get some real use soon of the George Washington Parkway if they construct the Potomac Freeway link.”

[Hailey, Jean R., “Area Officials Attack U.S. Plan To Omit Bridge, Defer Freeway,” *The Washington Post and Times Herald*, November 9, 1967; “Three Sisters ‘Decision’ Hit,” *The Evening Star*, November 9, 1967; “Scull To Oppose D.C. Highway Cut,” *The Baltimore Sun*, November 11, 1967]

Editors at the *Star* responded to the reported proposals on November 12 in an editorial titled “Boyd’s Nonhighway Plan for Washington.” The editors had thought the new Department of Transportation would “stimulate more effective coordination, economy and innovative thinking among the government’s diversified federal aid programs.” It “sounded like a grand idea –

especially for the Nation’s Capital.” Here, at last, was an agency that would “end the Washington area’s senseless freeway controversy.” Surely such an agency, the editors had thought, “would nurture and support the rational agreement on a balanced program of freeways and rail transit facilities which has been tediously put together over a period of years with the blessings of top-level federal officials”:

Instead, the Department's current intention to recommend a virtual cessation of interstate freeway construction in Washington threatens to devastate that fragile political agreement.

It is our understanding that Secretary Alan S. Boyd is not irrevocably wedded to the destructive proposals which surfaced last week. We hope he is not. For they represent a throwback to the discredited theories of C. Darwin Stolzenbach, who believed that the way to get a rail-transit system built in Washington was simply to stop building roads . . . . We believe that Secretary Boyd has been sold a soiled bill of goods by the same little band of anti-highway enthusiasts – some of them members of his present staff – who prompted [sic] Stolzenbach several years ago and who have worked persistently ever since to sabotage the freeway program . . . .

Ironically, Secretary Boyd's advice was sought by other federal agencies last May, in terms of the Washington freeway-transit controversy, on a single project – the Three Sisters Bridge. The proposal to shatter the city's entire interstate freeway program was an unsolicited development which emerged at some point during the subsequent six months – and which was kept carefully under cover until the previous District Commissioners, whose antagonism to any such suggestion was fully predictable, had left office.

The editors suggested:

The Transportation Department seems to harbor a mystical conviction that if you stop building freeways, automobiles will simply disappear. It isn't so. We fervently hope that Washington gets a rail-transit system so attractive in convenience and its service that it draws thousands of motorists every day away from their cars. But a great many others who must come into the city every day are going to continue to drive . . . . If they don't drive on free-flowing highways they are going to jam into the existing street systems of residential neighborhoods and local business areas – with all the disruptive damage that will entail.

Of course, "it is theoretically possible to make roads so unattractive that many people who don't have to come into the city won't come." If businesses and employees leave, too, "the growth of the central core should begin to atrophy," resulting in "a stagnant city." The editors did not know if the Department of Transportation's "half-baked theories are restricted to Washington or whether it also intends to try to impose similar ideas in other American cities."

Perhaps one of these days, officials will "come up with dramatic technological advances which may make present modes of urban transportation obsolete." Until then, the "limited program of freeways and transit now projected, however, is in quite a different category. This program is needed now." Scrapping it or moving "to a point of starting to plan all over again, would be unconscionable." Congress and the White House should make these points "as forcefully as necessary . . . before the situation gets completely out of hand."

On November 25, members of ECTC and other citizens groups met informally with members of the city council: Vice Chairman Fauntroy, Anderson, Haywood, Nevius, and Thompson. The

groups demanded an end to acquisition of right-of-way for the I-70S/I-95 portion of the North Central Freeway between Rhode Island Avenue, NE., and Buchanan Street, NE., just east of the Baltimore and Ohio Railroad tracks. When the Reverend Fauntroy said he could hardly believe the District was buying right-of-way, the citizens showed him the letters warning people they had only 30 days to accept offers for their property or face condemnation proceedings.

Sammie Abbott said ECTC demanded an immediate halt to all freeway construction in the city, a moratorium on condemnation, public hearings on any future freeway plans, and adoption of the Arthur D. Little report to support transit planning. Rail rapid transit, he said, would enable poor Negroes to reach jobs. Doing so would avoid racial violence. "We're not going to let I-95 come into the District of Columbia if we have to lay down in front of the bulldozers with our bodies. There are going to be whites with our black brothers on this."

Chairman Pryor of the Brookland Neighborhood Civic Association said his home at 906 Hamlin Street, NE., was in the path of the freeway. Flor summarized:

When the Brookland area was first integrated years ago, homes sold to Negroes were sold at prices artificially inflated, Pryor said. Now, the prices being offered by the District would leave owners only enough for a small down payment on much more expensive homes in the suburbs, he added.

The District is putting pressure on homeowners in his immediate area [and many] already have sold out, he said.

"Myself, I'm staying until the bulldozers come through," he vowed.

Simon Cain, president of the Lamond-Riggs Civic Association and vice president of the Federation of D.C. Civic Associations, emphasized that District residents were in large-scale revolt against the freeways. The 25 opponents in attendance represented thousands of outraged citizens. The Reverend James Kennelly of St. Francis de Sales Church on Rhode Island Avenue warned that, "We need help in the near future, not two or three months." The Reverend Joseph Gibson of Nash Methodist Church said, "We can't afford to lose the people who are leaving,"

Councilwoman Haywood said, "The only way I see that the Council can represent the District of Columbia is to know what the District of Columbia wants. And the only way I can know that is if I hear it from you." She added, "Don't come here with a hostile attitude at the very first – give us a chance."

Councilman Nevius said he had not seen an invitation to an earlier public meeting the citizen groups held. Citizens urged him, "Get off the council." When he tried to explain, a member of the crowd shouted "Bull," while others shouted, "Get off, get off."

The Reverend Fauntroy said the meeting had been "useful and productive." However, Abbott told him, "This is no excuse for a public hearing."

According to Flor:

One of the persons who appeared most popular with the crowd was not there. Secretary of Transportation Alan S. Boyd, who has recently decided to recommend against building several District freeways, including part of the North Central Freeway, got a standing ovation when his name was mentioned.

Kenneth Kennedy, a leader of several Northeast Washington civic organizations, said citizens should write to Boyd or try to show in some other way how much they approved of his decision. [Flor, Lee, "D.C. Council Asked to Halt Freeway Land Acquisition," *The Sunday Star*, November 26, 1967; White, Jack, Jr., "Freeway Foes Present Case to Council," *The Washington Post and Times Herald*, November 26, 1967]

Wolf Von Eckardt saw the battle over the Three Sisters Bridge in epic terms:

In the late fall of 1967, the history books are likely to record, the Battle of Three Sisters Bridge in Washington, to settle the question whether American cities should be adjusted to automobile traffic or whether automobile traffic should be adjusted to cities, finally approached its climax.

The new Federal Department of Transportation entered the fray with three entirely new contentions. This shifted a befuddling fracas to new ground and revealed it as a contest of fundamental issues.

On one side were highway engineers aided by the National Highway Users Conference. On the other were "a majority of the voteless citizens of Washington, led by the 'citizen members' of the National Capital Planning Commission."

In May 1966, the six Federal representatives on NCPC had formed a coalition against the citizen members, but in October 1966, President Johnson signed the Department of Transportation Act. BPR, with its billions of dollars in Interstate expressway money, "was now under the DOT and subject to the coordination that DOT was charged to evolve.

Last May, NCPC had asked Secretary Boyd to review the need for the bridge. "The BPR had a letter affirming the need for a bridge on Boyd's desk within 24 hours. But Boyd did not sign the letter." Instead he was expected to announce soon that the bridge was not needed. The decision was based on new factors:

As Boyd's staff advisers see them, they are: (1) a provision in the law that established DOT; (2) recent drastic changes in metropolitan development patterns which made questionable the traffic forecasts on which most of the country's urban freeway plans are based, and (3) new studies that open new ways of handling city automobile traffic without freeways.

The new provision was Section 4(f), which would prevent the use of public land unless there was no feasible and prudent alternative to such use. "The bridge, says DOT, affects five such areas. It would take 53.6 acres of public land and damage the scenic, recreational and historic value of Spout Run Park, the George Washington Memorial Parkway, the C & O Canal, Archbold-Glover Park and the Georgetown waterfront. "

The department also doubted the traffic projections. “The D.C. Highway Department forecast in 1959 that traffic from Virginia into the District would increase by 25,000 cars a year over the next eight years. DOT found that it had taken all eight years together for cross-river traffic to increase by that much.” One reason for the “drastic miscalculations” was suburban growth. Homes and jobs were growing in suburban areas, along with department stores, shops, movie theaters, and other facilities that people previously had found only in the city. “This is a national phenomenon that has, according to DOT officials, thrown practically all previous traffic forecasts by America’s city highway departments awry by an average overestimate of at least 25 per cent.”

Of course, rush-hour traffic jams still occurred. People in Montgomery County were not going to be happy that Secretary Boyd wants to delete the I-70S/North-Central Freeway. Von Eckardt noted, parenthetically: “This is being recommended not by antifreeway zealots but by the Bureau of Roads, which feels that \$25 million a mile is simply too expensive for a four-lane highway.” In fact, “Why have a freeway at all?” BPR had published a report in 1962 called “The Wisconsin Avenue Study” showing how traffic flow could be improved by such measures as prohibiting parking, reversible lanes, bus bays and other techniques short of conversion to expressway design. “If the capacity of the other avenues leading to the Maryland suburbs were equally improved, the city could undoubtedly handle any traffic volume likely to come along in the next three decades.”

The National Highway Users Conference was “mobilizing its forces across the Nation for the final Three Sisters battle by warning that ‘DOT’s proposed directive would have far-reaching implications beyond the staggering blow it would strike against the efficient movement of people and goods in the Washington, D.C. area.’”

Von Eckardt concluded:

Secretary Boyd, according to some of his aides, feels that he is striking a blow only against a single-minded technocratic approach and in favor of better cities to live and do business in.

“Freeways run two ways,” one of them said. “The Beltway alone has already lost downtown 10,000 jobs. I don’t think the city can afford to lose any more, not to speak of housing, tax, income and a lot of human values.” [Von Eckardt, Wolf, “Defusing the Capital’s Rush Hours Without a Freeway,” *The Washington Post and Times Herald*, November 26, 1967]

On November 29, Chairman Fallon of the Committee on Public Works announced that Representative Kluczynski, chairman of the Subcommittee on Roads, would hold hearings on the District’s freeway disputes, beginning December 5. Representative Gude said, “This is the first encouraging news since the freeway dispute was reported early this year. I applaud the committee’s plans to investigate the situation here, and its concern as demonstrated by starting off with Washington, D.C.” [Flor, Lee, “Three-Day Hearing On Area Freeways Set for Next Weeks,” *The Evening Star*, November 29, 1967]

(On November 11, Senator Jennings Randolph, chairman of the Committee on Public Works, announced hearings on freeway disputes and national policy in cities:

Following the urban riots of this summer, investigators seeking the whys and wherefores of these great catastrophes found that highway construction in the core city was a serious point of complaint.

Among those factors which most disturb the residents of the ghetto are urban renewal and freeway construction . . . .

(Growing opposition to freeways in major cities suggested that “the laws are inadequate to encourage the full utilization of [city planning] opportunities presented by the highway [Acts] or that the legislative intent to do so is not fully being realized in the highway planning process.”

(The hearings would begin on November 14-16 but continue into 1968 when the Department of Transportation, HUD, and FHWA would testify, but were not focused on the District freeway controversies. [Flor, Lee, “Hearings Set On U.S. Policy On Freeways,” *The Sunday Star*, November 12, 1967])

### **Major Highway Problems in D.C.**

Late in the year, Secretary Boyd asked the department’s General Counsel if the department had the authority to deny Federal funds for the Three Sisters Bridge project. General Counsel Robson responded in a December 4 memorandum that the Secretary had two independent statutory reasons for such a denial. First was Section 109(a) of Title 23, United States Code. It prohibited the Secretary from approving projects if they failed to “adequately meet the existing and probable future traffic needs and conditions in a manner conducive to safety, durability, and economy of maintenance.” The Secretary must reject projects that were not designed or constructed “in accordance with standards best suited to accomplish the foregoing objectives and to conform to the particular needs of each locality.”

Robson wrote:

It is my understanding that the Three Sisters Bridge Proposal in its present form will not adequately meet existing and probable future needs in that its primary effect at the present time will be to transfer a traffic overload from one side of the Potomac to the other without significant reduction in total origin-to-destination time for the great bulk of the peak-hour traffic. Nor has it been established, moreover, that the proposal will “conform to the particular needs of each locality” concerned.

Section 4(f) was the second statutory basis for declining approval:

Under Section 4(f) the Secretary may not approve a project requiring the use of parkland, as the Three Sisters Bridge proposal does, without first determining that there is no feasible and prudent alternative to the use of parkland. As we understand the proceedings to date, no evidence exists upon which the Secretary could base such a determination. Alternative proposals have been made which would appear to be feasible and prudent and

to serve the needs of the communities affected at least as well as would the Bridge proposal. Unless and until such evidence is adduced to demonstrate that such alternatives are not, in fact, feasible and prudent, the Secretary is obliged not to approve the proposal.

The following day, December 5, Secretary Boyd was the first witness before the Subcommittee on Roads hearing on "Major Highway Problems in D.C." Administrator Bridwell accompanied Secretary Boyd.

Secretary Boyd had not yet released a formal statement of his views on the Three Sisters Bridge in response to NCPC's request or on the other freeway issues the department had been considering. Newspaper accounts based on unnamed contacts were the only accounts the public and most officials had of his ideas, whether accurate or not. Thus, Secretary Boyd's testimony was the first time he would go on record expressing his thoughts.

In introducing the hearings, Chairman Kluczynski wanted to clear up "some misinterpretation" of the goal. The chairman, who was from Chicago where he owned a restaurant, a catering business, and a bar called the Syrena, said, "the committee is neither opposed nor in favor of any specific plan, proposal, or suggestion." From the testimony, he hoped to give the three political jurisdictions "a sound base upon which to conduct discussions of potential solutions to the increasingly intolerable traffic conditions in this area." The hearings at this time would be confined to officials, but the committee planned hearings in 1968 to "hear from anyone who wants to be heard." By then, he said, "perhaps some potentially more fruitful and hopefully less controversial proposals will also be before us."

The committee had "no great desire to lay out, block by block, mile by mile, or bridge by bridge, what the highway construction program for the Nation's Capital shall be":

Rather, in holding these hearings the committee hopes to make it clear, first, that delay now must end; second, that no limited interest group will arbitrarily force its own proposals on the area and that by the same token, no one can expect to keep killing off every proposal offered; and finally, that if, by lending the strength of this committee to reasonable and realistic decisions, on the several facts of this problem, final agreement is not reached, the committee will then avail itself of whatever professional counsel it needs to legislate the highway program for this area and be done with it.

He was not interested in pure theory or speculation about a future transit system or a new means of transport. He said, "the problem is here, and it is now. People and commerce and industry and the Nation's Government in this city depend upon automotive transport."

Suburban growth was inevitable. "I do not propose, therefore, to let either apathy or contention or devotion to theory stall essential highway development, thereby forcing the people and the commerce and the industry and the government to the suburbs and in the process killing off the city." He concluded:

The citizens of the United States, *all* of the United States, have a right to expect their Nation's Capital will live and grow, and we intend to see that their expectations are met.

[Major Highway Problems in D.C., Hearings before the Subcommittee on Roads, Committee on Public Works, U.S. House of Representatives, 90<sup>th</sup> Congress, 1<sup>st</sup> Session, Report 90-19, December 5 and 6, 1967, pages 1-2, italics in original]

Secretary Boyd began by summarizing how the Department of Transportation had come to review the city's freeway plans at NCPC's request. He cited Section 4(f) and the similar provision in the Federal-Aid Highway Act of 1966. Taken together, these laws were "a clear indication of public concern as reflected in actions taken by our duly elected officials." Because several of the planned District freeways involved the taking of public land, Section 4(f) and the 1966 Act required Department review.

Although Department reviews prior to requests for formal approval were unusual, he agreed to NCPC's request that he review the proposed Three Sisters Bridge because of the Federal interest in the Potomac River, the uncertainty about implementation of Section 4(f), and his hope "to expedite review of the project." He had asked his staff to review the bridge and its relationship to the freeway program of the District of Columbia. He also had consulted with the Secretary of the Interior:

It is my considered judgment that, even if we resolve the questions related to section 4(f), the present design of the District freeway system, as it related to the Three Sisters Bridge, is inadequate. I could not, therefore, approve the Three Sisters Bridge until several basic questions have been answered.

Administrator Bridwell went through a series of maps showing the evolution of the District's freeway network. He used slides showing the 1950 thoroughfare plan of the National Capital Park and Planning Commission and the 1952 report by the Regional Highway Planning Committee. A slide showed the 1955 Yellow Book map of Washington, D.C.:

The Interstate System in the Washington metropolitan area as envisioned at that time included the Capital Beltway and the Anacostia Freeway on the east bank of the Anacostia River and up roughly over Route 1, and the Kenilworth Avenue segment with a connection to downtown along 11<sup>th</sup> Street SE. Interstate 70S, as then envisioned, followed along the east bank of the Potomac River. The system proposed at this time was in general agreement with the thoroughfares included in the 1950 National Capital Regional Plan.

The Federal-Aid Highway Act of 1956 provided additional mileage for the Interstate System. With this mileage, plus mileage freed as more direct routing was identified for designated routes, the Secretary of Commerce announced on October 18, 1957, additions around the country, including in the District of Columbia. "Mileage addressed in the Washington metropolitan area included a Potomac River crossing at Key Bridge now identified as Interstate Route 266 and a short section in Maryland at the junction of Interstate 495 with Interstate Routes 70S and 270."

(I-270 was a 2-mile route between I-70S and the Capital Beltway. It carried southbound I-70S traffic to the southbound beltway and northbound beltway traffic to I-70S. Other movements

were carried on the I-70S/Capital Beltway link. When I-70S was renumbered I-270, the original I-270 became known as the I-270 Spur.)

Bridwell discussed the changing locations for I-70S, initially along the Potomac River, then in the Wisconsin Avenue corridor as the Northwest Freeway. After the National Capital Transportation Act of 1960 imposed a freeze on freeway and parkway development in the northwest quadrant, NCTA in 1962 proposed combining the North Central and Northeast Freeways as a single route in the railroad corridor. BPR approved revised descriptions for the Interstate System in preparation for the 1965 ICE:

This proposed system included the addition on June 20, 1961, of the southwest leg (I-695) of the inner belt. Similar to the National Capital Transportation Agency proposal a combined routing for I-70S and I-95 in the B. & O. Railroad corridor from the inner loop to Fort Drive was used in computing costs. These are the interstate routes currently approved for the Washington metropolitan area.

When Bridwell concluded his history lesson, Secretary Boyd discussed I-70S/North-Central Freeway, which was now an extension of the North Leg Freeway north of the Capitol. It had been moved from its original Potomac River location to overcome opposition. “The freeway as it is now designed is a tremendously expensive and inadequate artery.” It and the Northeast Freeway (I-95) were six lane freeways that would funnel traffic into the eight lanes of the North Central [Leg] Expressway. “I don’t need to point out to you the congestion, delay, and safety hazard that would be created by this design.”

As for the South Leg of the Inner Loop Freeway, it was to be carried in a six-lane tunnel to join the six-lane section of the Southwest Expressway before it shifted to four lanes:

I should like to point out that the Southwest Expressway was originally designed without taking into account the traffic that would be generated by the south leg tunnel and third 14<sup>th</sup> Street Bridge, which is now underway. Neither of these facilities was even contemplated when the Southwest Expressway was planned.

Mr. Frank Turner, Director of the Bureau of Public Roads, has characterized this tunnel expressway as a “cannon” which will literally fire three lanes of traffic at three lanes which are already on the expressway.

At a cost of \$100 million for 1 mile of tunnel, “this massive expenditure would obtain only a marginal improvement over the surface streets we already have.” In addition, “it would severely overload the Southwest Expressway.”

Secretary Boyd pointed out that the Three Sisters Bridge was intended to provide a route to the city’s northwest, but “no acceptable agreement” had been reached on how traffic would move from the bridge. The proposed K Street expressway did not provide an acceptable solution because its construction would “severely disrupt commercial activity around this area for at least 3 years; and it will not provide a distribution of cars into the inner city.”

In summary, construction of the Three Sisters Bridge at its present location was “unwise at this time.” It would simply “transfer a growing traffic jam from the Virginia side of the Potomac to the interchange at 26<sup>th</sup> and K Streets.”

In view of these concerns, he proposed designation of the George Washington Memorial Parkway as I-70S between Chain Bridge and Georgetown, the facility known as the Palisades Parkway. Motorists in Northwest Washington and Montgomery County would be able to use the parkway for downtown trips. “This, in turn, would lessen the demand for a quick and perhaps ill-advised decision on the precise location of another radial to the Northwest.” He intended to talk with highway officials in the three jurisdictions about his ideas.

Summarizing his views, he emphasized “that the Interstate System in the Washington metropolitan area has not, as some have claimed, been hopelessly bogged down in controversy between local and Federal officials.” The Capital Beltway was one of the first circumferentials to be completed and progress had been made in the District on several completed radial corridors and several others were under construction. Still, “there is much work ahead before we can say that Metropolitan Washington has a balanced transportation network”:

There is no doubt in my mind that even with the subway, improved bus service, and expanded capacity of existing streets, the Washington area will need new and better highways in the years ahead.

Our concern is simply that the highways we build be as carefully designed and as relevant to need as possible so that they provide a foundation for growth in future decades, not an obstacle to that growth.” [pages 2-20]

During the question period, Representative Cramer of Florida, asked if the Secretary was familiar with the *Star*'s November 12 editorial “Boyd's Non-Highway Plan for Washington.” Secretary Boyd said he subscribed to the *Star* and was familiar with the editorial:

Mr. Cramer. It was publicized that the Three Sisters span is out, the Maryland Parkway favored; also the highly publicized Northwest Freeway is out. In trying to analyze your statement, are the bridge and freeway in or out?

Mr. Boyd. Insofar as I and the Department are concerned, the Three Sisters Bridge is out at the moment, the North Central is out at the moment, subject to the questions which I raised and which will be taken up in greater detail with the District Highway Department and the City Council and the Governor and State highway engineer in Maryland.

Representative Cramer asked for clarification on whether location was the problem for “this north link.” Secretary Boyd replied:

That is right. I want to be very clear. I am very much concerned about a north leg, and there will be a north leg. There is no question in my mind about that . . . .

As to the Three Sisters, what I am saying is at the present time until we get this other matter lined up, I don't think it is advisable to build a Three Sisters. I am not saying there

should be no Three Sisters Bridge, but I think we ought to know where we are going and look at the total package.

Representative Cramer gathered that Secretary Boyd's position was tied into WMATA, HUD's transit program, buses and fringe area parking, and subways. He understood that \$20 million had been spent on planning the freeways during the last 20 years. "When do we build highways? This has been planned almost to death." He asked when Congress can expect an answer on the North-Central Freeway and the Three Sisters Bridge? "I think it is quite evident Congress is getting a little bit impatient . . . ."

Secretary Boyd agreed that Congress was getting impatient. "Of course, this is getting to be a normal state with the District freeway system, as I understand it, the way the routing has been changed from time to time." However, he could not give a date when he would be able to say yes or no to either project.

Representative Cramer said the history of the expressways in the Washington area "shows it has been shuffled, reshuffled, juggled and rejuggled about as often as any in the country. It is obvious that the time for decision is imminent." Washington, it was often said, should be a model city, but as far as freeways were concerned, "It is more a model of dissension and indecision and changed position and lack of determination to finish the system." In view of similar concerns in other cities, he continued:

So it seems to me if we do not resolve this problem in the District of Columbia, then we give the city councils and State authorities in other areas – such as New York and Detroit and Boston and Los Angeles – license to fail to make decisions.

The States had agreed to complete their Interstate freeway systems. "So if the District of Columbia can get away with not finished the system, I think it has the effect of destroying the completion of the system in many of these other metropolitan areas, where they, too, are faced with admittedly difficult decisions." He asked the Secretary to expedite the studies to resolve locations soon. "I would hope that notice to the rest of the Nation would be given that there is an agreement to finish the system which is going to be lived up to, not only in the District of Columbia but by other States and metropolitan areas.

Chairman Kluczynski, citing similar problems in his home city of Chicago, agreed with Representative Cramer. "I am willing to give this matter my utmost concern and attention, and the sooner the highway problems are solved, the better." [pages 20-22]

Representative Richard D. McCarthy (D-NY), a journalist and public relations specialist who had won election from a Buffalo district in the 1964 Democratic landslide, asked about the reference to the George Washington Memorial Parkway segment known as the Palisades Parkway. Saying he was familiar with the route, he asked why the parkway stopped suddenly at the edge of a dirt road, "a segment of perhaps 300 or 400 or 500 yards" before reaching Chain Bridge just inside the District line. "Why was it not extended to the Chain Bridge? It could have a lot of utility if that segment had been completed."

Secretary Boyd understood that NPS simply ran out of appropriated funds. Representative McCarthy expressed astonishment. “They just ran out of money? There was no opposition to its extension up to Chain Bridge?” Secretary Boyd replied:

As far as I know. There clearly is a plan which is acceptable to all concerned to build the parkway right into the interchange at 26<sup>th</sup> and K.

Administrator Bridwell clarified:

The Secretary is correct, that the primary problem is that the Park Service has not had the funds to complete the highway. There are several alternative design plans, so that the design is not finally approved. I think the Park Service has taken the attitude that there will not be any problem in resolving the design, once money is available; so money is a primary problem.

Representative McCarthy asked if he understood correctly that the Secretary was now proposing to designate it as an Interstate highway and that the Department of Transportation would provide the funds. Secretary Boyd replied, “Yes, Sir.” That concluded his testimony. [pages 20-23]

Director Thomas F. Airis was the next witness. He was accompanied by Chief Planning Engineer Lloyd Rivard and Dan Hanson, Deputy for Traffic Engineering and Operations. Airis wanted to present a lengthy statement to the subcommittee, but before doing so, he commented on Secretary Boyd’s testimony:

Mr. Airis. Generally I think the planning he reviewed is in accordance with our own thinking. It evolved over a great many years.

I am most gratified to hear that he intends to cooperate and work with the three highway departments. This is very encouraging, and I hope we can speedily get work underway.

I do have the fear, as I have in the past, that what might happen is more and more planning, and less and less construction. I think that is something all of us must guard against.

Mr. Cramer. If I may interject, the Secretary did say he was going to consult with you, but I gather it is after he has told you what he is not going to do and where it is not going to be located.

Mr. Airis. I understand, sir.

Mr. Cramer. That is some consultation. This is my comment; you do not have to comment.

Airis began his statement by pointing out that the Washington area “has been one of the fastest, if not the fastest, growing metropolitan areas in the United States.” With this growth came increasing traffic and congestion on cross-river bridges and local roads. “This is the scope of the problem that the Department I represent has been wrestling with.” The city had a 13-point

program for dealing with traffic, including changes in parking lane restrictions, one-way streets, reversible-flow streets, adoption of left-turn restrictions at important intersections, and removal of streetcar tracks. The highway department used these and other techniques to “obtain greater capacity from its street system.”

The department was not responsible for construction of the rail rapid transit system, but “all prior planning has accepted its ultimate construction as a part of the District’s balanced transportation system need, and the Department actively supports this concept.”

As Secretary Boyd’s and Administrator Bridwell’s testimony demonstrated, the proposed Interstate System for the District “is the logical descendant of all the planning you looked at”:

It is only 29 miles in length; 10 miles are completed and are rendering heavy-duty service, thereby relieving the city streets and helping to remove through-type traffic from residential streets; 5 more miles are under construction, but 14 miles are still in planning stages . . . .

When the system is completed, expressways will comprise only 4.5 percent of the street system, and yet we estimate they will carry 35 percent of all traffic . . . .

As reflected in the earlier testimony, the history of freeway development in the city “is fraught with delays and problems. The very reason for these hearings being held today is the result of one more step in the line of indecision over the past two decades”:

Strangely enough, it is always some new issue or new line of thought which rears its head. Currently, the “ball” is in the hands of the Department of Transportation.

Thinking back to January 1966, he said, “freeway development had reached its alltime [sic] low in the District of Columbia. Planning decisions had become impossible to obtain and new obstacles were being encountered.” He introduced the Federal City Council’s report, *Freeways in the National Capital Region*, describing it as an examination of the historical aspects of the evolving issues. (As noted earlier, the report was introduced into the record, pages 49-111.)

Rivard summarized the planning activities leading to 1966, then said:

We had been hoping for planning decisions for each year, we had been getting the full appropriations from Congress, released both the District money and the Federal money, but all we could obligate because of these planning indecisions was less and less and less each year, so that by 1966 we were down below almost the \$10 million level, and we would be accumulating money year by year by year, so that in 1966 we had \$172 million in our pocket in projects, for example, all the money for the Three Sisters, ready to spend, but no agreement on the project.

Airis took over the presentation, saying that in his 9 years in the District, “I draw the inference that the District is long on planning in its freeway program and short on construction,” ranked next to last. “Actually, we are greatly indebted to Maryland, because Maryland ranks below us.”

He discussed the Arthur D. Little report released in March 1966. “It was a quick review of assumption, methodology, and adequacy of all previous transportation planning, and it was done at the request of the Commissioners’ Policy Advisory Committee. After reviewing the report’s controversial findings, the Policy Advisory Committee made a near unanimous finding on May 25, 1966, “that the freeway system must proceed substantially in accordance with the system” as approved. The agreement was introduced into the record (pages 129-131.)

NCPC approved all elements of the agreement in June 1966, allowing design and property acquisition to begin, while construction started on the North-Central Freeway in the form of the Taylor Street Bridge project to accommodate the freeway and rail rapid transit line:

The PAC agreement provided for an extensive amount of tunneling of the south leg, depressing the eastbound lanes of the Potomac River Freeway in front of Georgetown and adopting the K Street alignment shown, with certain contingencies. Although these changes decreased displacement of businesses and families, they also increased costs by \$200 million.

The result was that the city was “able to obligate in the past fiscal year 1967 about as much as has been obligated in the previous 4 years”:

So far in fiscal year 1968, we have obligated \$26.1 million, and if we obligated the full scheduled amount shown for fiscal year 1968, we still will have to obligate an additional \$600 million by the current 1973 completion date of the program. With prompt decisions on remaining planning, this will be difficult, but not impossible. Without them it will, of course, be impossible.

If the projects did not proceed, the Interstate funds would lapse and be lost to the city. Further, “it is entirely possible that the Federal Government might require return of 40 percent of the 90-10 funding already advanced, since the system would no longer be interstate.” Having to return the funds would cause “financial chaos” for the District’s highway program that was “too horrible to contemplate.”

The city made reasonably good progress until March 1967 when the city asked NCPC to approve the final geometrics for the Three Sisters Bridge. “This is stage 3 approval,” Airis explained.

Airis recounted NCPC Chairman Rowe request to Secretary Boyd regarding a tunnel and her subsequent request to the Secretary that he determine whether the bridge was needed. He mentioned the Section 4(f) issue, adding that the city did not think “the enabling legislation was intended to cover precisely this situation.” Seven months later, “we have no answer.” Despite recent news reports, “the question remains unresolved in the top echelon of the Department of Transportation.” (Airis was apparently continuing with his prepared statement, written before Secretary Boyd’s testimony regarding his findings – which had not been conveyed formally to the area’s officials or highway agencies.)

He summarized the traffic justification for the Three Sisters Bridge and displayed the 10 study reports, compiled at a cost of nearly \$20 million, that emphasized the need for it, including the

1959 Mass Transportation Survey, the 1964 and 1967 ICEs, studies by Wilbur Smith and Associates (1953 and 1955) and comprehensive plans by NCPC (for the Year 2000, released with National Capital Regional Planning Council in 1960, and the draft Year 1985 Comprehensive Plan released in 1967).

The only study, Airis said, that recommended against building the bridge was NCTA's 1962 report. Subsequent studies refuted NCTA's conclusion, including recent WMATA reviews.

The bridge would not result in the relocation of any families. The Commission of Fine Arts had approved the design of the bridge, which would cost about \$15 million. Because of the connection to the Potomac River Freeway, the bridge was essential to providing a "fast heavy-duty ground transportation link to Dulles Airport" that would allow the airport to compete with Washington National Airport.

Airis concluded his comments by observing:

I want to leave with you the thought that, contrary to some irresponsible charges, the District plan does not call for more freeways than any other city in the Nation, including Los Angeles and possibly even in the world.

Washington ranked "approximately in the middle of the 22 major cities":

Gentlemen, we are not proposing an extensive amount of freeways, nor do we have an extensive amount of freeways. We have what we think is a minimal system, and we are convinced it will prove to be an essential part of the balanced transportation system that is required to keep pace with the growth in the District and, for that matter, the entire metropolitan area. [pages 131-145]

During the question period, Representative Cramer asked Airis to confirm that the city had all the funds it needed for the Three Sisters Bridge. "According to Mr. Boyd," the Congressman said, "it looks like the answer is going to be more planning, more programing, more analysis, more spending for planning." Airis replied

I hope not, sir. Maybe I took an optimistic view of Mr. Boyd's testimony, but I would hope not, sire. I hope we can get things moving.

Representative Cramer pointed out that Secretary Boyd had taken 7 months to look at the issue. "And the only answer you have received, is it not, is the article in the newspaper which came out November 8, indicating the Three Sisters Bridge is out." Airis confirmed that the only information he had was that article in the *Post* (Wolf Von Eckardt's "Boyd Rejects 3 Sisters Span, Favors Parkway") and Secretary Boyd's testimony earlier in the day. At Airis's request, Rivard took exception to some of the statements in that article, particularly involving traffic volumes.

Representative Cramer also introduced the *Star* editorial, "Boyd's Nonhighway Plan for Washington" and Von Eckardt's November 26 article, "Defusing the Capital's Rush Hours Without a Freeway." The Congressman summarized the articles:

Of course, Mr. Von Eckhardt's [sic] basic concept seems to be you can keep people from driving automobiles into town by building fewer highways, by forcing them into the parking lots outside the town, and by forcing them to use mass transit systems.

They discussed the K Street alignment for the North Leg, an idea that was included in the Policy Advisory Committee agreement, subject to contingencies. The city had satisfied itself on some issues (not stated), but had not held a public hearing on the proposal. Airis said, "you cannot go really to a public hearing until you know what the corridor is going to serve." The city did not know if the Three Sisters Bridge was going to be built, or where. It did not know if the George Washington Memorial Parkway would be built to Chain Bridge inside the District line. Will I-70S traffic use the North-Central Freeway or an alignment along the Potomac River. "If we can nail these down, we can get at the K Street alignment or the old alternate alignment, whichever is the proper one."

Representative Cramer asked about Secretary Boyd's comment that the bridge would simply transfer traffic jams from Virginia to the District. Airis did not agree with that statement:

We think that, if the bridge is built, certainly then the Potomac River Freeway would be built, and we can get the traffic on into the city. With some of these things, it is a case of which comes first, the chicken or the egg, and you have to start somewhere. The worst possible alternative is to sit back and do nothing.

The Congressman agreed, saying, "Pointing out there may be some problems by doing something does not solve the problem of doing nothing."

They discussed the ramifications of Section 4(f). Representative Cramer asked how much parkland was involved with the bridge. "There is," Airis replied, "about, we estimate off the cuff, 3 acres by the bridge itself." He clarified that the acreage involved air rights in that the bridge would span the 3 acres. On the Virginia side, Airis did not have specific figures, "but it would be a small amount of additional parkway":

Mr. Cramer. We already have the George Washington Parkway program [in Maryland] for that area, do we not?

Mr. Airis. Yes. That is contemplated even in the comment that Mr. Boyd made and showed on the map, somehow, someday, a parkway would come through that area and would go through the Palisades area. His proposal calls for I-70S to come down that way. We frankly think that would be a mistake.

Mr. Cramer. Using the same reasoning, I suppose we should never have built the 14<sup>th</sup> Street Bridge, the Memorial Bridge, the Key Bridge. I do not quite get the difference. You have to have transportation. You already have a number of bridges, and you obviously have to consider esthetics, but that cannot be the controlling factor unless you just decide you are not going to build any more bridges.

Mr. Airis. Sir, we frequently point out that the Washington community is on both sides of the river, and there must be communication between the two sides. We frequently

refer to the fact that in Paris there are over 20 bridges, and they have been done in a rather handsome manner, and I think we will do as well here.

Representative Cramer could not understand the aesthetic problem because “you already have a road that goes along the river there,” referring to the George Washington Memorial Parkway. As someone who lived in the Lake Barcroft area of Falls Church, Virginia, he added:

I am concerned about what is going to happen. I have to drive in and out every day, too. I do not know of a place where there is a more muddled situation relating to highways than the serious traffic congestion in the District of Columbia and the surrounding areas. This is where the Nation’s business is supposed to be carried on.

A way must be found to “get away from the quagmire of indecision in which this highway system has bogged down in the District of Columbia.” The Interstate program was 11 years old, but “if these decisions are not made in the very near future, in the next year or so, what is going to happen in the District of Columbia?” He asked, “How can we hold this up as a model city to the Nation?”:

Mr. Airis. We think it should be built, and we should get going with the rest of the system.

Mr. Cramer. I think you point out a very significant factor in your testimony, which I tried to interrogate the Secretary about briefly, and that is that the District, as well as all the States in the Nation, had to agree at the very outset it would finish the system as programed within the metropolitan areas and elsewhere.

Mr. Airis. We are very worried about that.

Mr. Cramer. If this is not done, the District of Columbia is not conforming to the basic law, is it?

Mr. Airis. No, sir.

That exchange concluded Airis’s testimony. [pages 151-160]

Chairman-Director Wolff was the next witness, accompanied by Joseph D. Buscher, special assistant attorney general, Maryland State Roads Commission. Wolff began by pointing out that the Washington area’s freeway problems were similar to those in Baltimore. “Why? Well, because we are a motor-car oriented economy.” It may not be “an irreversible process [but] we can look forward to greater use of the automobile, even with substantial improvements in public transportation. It is of paramount importance that we realize this fact.” Freeways and mass transportation were compatible, “but freeways and expressways must constitute the backbone of a total transportation system.”

When he took office in March 1967, the commission was “in the middle of a roaring controversy concerning the location of the portion of I-70 known as the North Central Freeway” from its junction with the Capital Beltway in Maryland to the I-95 interchange in the District of

Columbia. He summarized the evolution of the dispute before Maryland, the District, and BPR agreed on an alignment along the Baltimore and Ohio Railroad at a cost of about \$25 million more than the original route. True, the alignment would not provide the required traffic service unless a rail rapid transit line were built in or adjacent to the corridor to induce motorists out of their automobiles. “We feel, however, that this is the best we can now produce to serve the long-felt need for major traffic movement in this corridor.”

Another important issue was the location of I-95 between the Capital Beltway and the District. “Its importance can well be indicated by the fact [that] this proposed portion of I-95 will carry eight lanes of traffic and an ultimate traffic load of 115,300 vehicles per day.” To meet demand, the Baltimore-Washington Parkway/Expressway must be upgraded to expressway standards through its entire length, including additional lanes and reinforced pavement capable of carrying trucks, to divert traffic from I-95.

Wolff also said the Three Sisters Bridge “has long been needed” as a primary link for Virginia, the District of Columbia, and Maryland:

We are convinced that all of these facilities – the Three Sisters Bridge, the North Central Freeway, which is I-70, the eight lane I-95, and the [Baltimore-]Washington Expressway are essential parts of our ultimate freeway network serving the Washington Metropolitan area and constituting the Baltimore-Washington corridor. They are minimum needs, the framework around which a balanced system of mass transportation can be developed.

We should not tolerate further delays in achieving these critical objectives upon which the economic viability of an entire region so heavily depends. We have lost valuable time. We cannot at this late date turn back the hands of the clock. [pages 160-164]

Chairman Kluczynski said he had not intended to hold hearings on this issue in 1967 “but the pressure has been so great on me as chairman of this [sub]committee and also the members of this committee that we felt the situation had reached crisis stage.” He knew that Wolff had heard Secretary Boyd’s testimony. Had Secretary Boyd entered into any agreement with the Maryland State Roads Commission? Wolf replied categorically:

No; we have had no agreement of any kind which might be of a secret nature or confidential nature regarding the entire subject with respect to any part of the freeway and Interstate System.

Representative Cramer asked if Secretary Boyd had consulted with Wolff on the Three Sisters Bridge or North-Central Freeway. Wolff said he had “had no conversation at all” with Secretary Boyd. The roads commission had “attempted through the Bureau of Public Roads to elicit from the Secretary’s office a response to the North Central Freeway,” as it evolved to its present concept. The only response was that the Secretary and his staff were looking at the matter “in the context of the total transportation problem in Washington.” Prior to the newspaper reports in early November on anticipated findings, Maryland had not heard anything about it.

They discussed the traffic deficiencies of the proposed alignment of the North-Central Freeway. Wolff said, "Now, the frailty of this system is that it simply is not adequate to carry the ultimate traffic generation. We confess that that is perfectly true." Asked if BPR had come up with anything better, Wolff replied, "We do not believe anyone has come up with anything better to this point." It has "many problems" but "the most compelling" reason to proceed was that it "minimized utterly the displacement problem."

Wolff failed "to see a cogent reason" for the resistance to the proposal. Representative Cramer suggested, "They just do not want to build a North Central Freeway and they are going to study it to death." Wolff feared the Congressman was right, but hoped he was wrong:

I fail to feel that they are not actually, conscientiously trying to get the best solution. If you are suggesting that there are forces at work which really wish to prevent roads from going in and possibly feel that urban transit by way of rail is the only solution, I can only say, that they have a wish. It is clear to me it will never happen. I hold to the point that I began with, that we are automobile oriented and will remain that way as long as all of those who are in this room remain alive.

It may very well be that we are going to find a way of supplementing the use of the automobile, which to me, represents too typically the end action of America generally. I simply do not see that any of those who would be in favor of rail transit mass transportation as a panacea could hope to see their dreams realized in, let us say a decade or two decades.

Representative Cramer recalled that during debate about the Department of Transportation Act of 1966, Congress was told the new Department of Transportation would "result in less cost, less duplication and more action to get the job done." Now that the department is in operation, "what is the excuse that can be used to ditch part of the system or look and study it to death?" As far as he was concerned, the department's job was "to resolve these problems and finish the job of building the Interstate System." He added, "Washington needs to have a team, with all members on the same side, trying to win the same ball game." Instead, the District had "about six teams fighting each other, apparently. And we end up with a tie; nothing is done."

He asked what happened to the Federal-State partnership on the North-Central Freeway. Wolff admitted, "I have not seen any indication that we have a final word on it. And if I understood the Secretary this morning, there is no final word."

Representative Cramer asked what would happen to the Interstate funds if the North-Central Freeway were not built. Maryland, Wolff replied, could conceivably lose the Federal share of the estimated cost of \$63.5 million.

The Congressman returned to a topic he had discussed with Director Airis. The State had an agreement that in return for 90-percent funding, Maryland would complete its designated Interstate System. If, however, the Department of Transportation continued to delay the project, "you will not be able to conform to that agreement," but "might be asked to repay some of the 90 percent of the money if you have not conformed to the agreement."

Under those conditions, Wolff said, Maryland would not be able to finish its network unless something were put into law to explicitly require each segment. [pages 160-170]

After additional discussion seemed to end Wolff's testimony, Buscher asked to add an observation. He talked about the process in Baltimore where the same routes, I-70 and I-95, were controversial, and the Interstate Design Concept Team was at work.

He also commented on Secretary Boyd's concern about impacts on park land. He referred to the long dispute about building the Capital Beltway across Rock Creek Park in Maryland on land acquired under the Capper-Cramton Act as an alternate to the taking of approximately 30 high-priced houses. Working with the Maryland-National Capital Park and Planning Commission, the State considered the cost of the alternatives. In the end, the Maryland State Roads Commission paid the commission a portion of the cost of acquiring the homes. The commission "took that money and actually acquired additional land for the park land that we took." Something similar might be the solution to the park issue in the District.

Representative Cramer recalled the dispute. He said, "Parkland was one of the basic problems you had on I-495, the Capital Beltway":

Mr. Wolff. Yes, where we have these poor geometrics.

Mr. Buscher. It is the most dangerous section on the Capital Beltway.

Mr. Cramer. Probably one of the most dangerous on the Interstate System. The conservation of park lands and the necessity of the highway, it all relates to that. And the testimony we had during the safety hearings of the Highway Investigating Subcommittee was that this was one of the most dangerous stretches on the Interstate System.

Mr. Buscher. I am ashamed to say that we have had to reduce the speed to 50 miles per hour.

Representative Cramer did not think "safety ought to be tossed out of the window." He also recalled that the number of lanes had to be reduced to cross the park lands. Wolff replied that was correct. "It is just wrong and we know it now."

The Congressman asked if Maryland, Virginia, and the District had consulted with Secretary Boyd. No, Wolff replied, but he and Airis had met with BPR Director Turner on November 24. Representative James C. Cleveland (R-NH), another highway supporter, joined the dialogue to ask what BPR's thoughts were. Although reluctant to characterize another agency's views, Wolff finally said "they felt that the bridge should be deferred." How long? They did not discuss time.

Representative Cleveland asked about Secretary Boyd's assurance that his office was consulting with State and District officials. Wolff replied "that I do not feel that we have been left out entirely." The State had consulted with Turner on two recent occasions about the problems with I-70 and I-95:

Mr. Cleveland. Both of these consultations postdated decisions that were reported in the papers, that action on the Three Sisters Bridge was deferred. Was that consultation or letting you in on something reported in the paper? Maybe we disagree on what a consultation is.

Mr. Wolff. . . . I must say that I had heard at the time I went in to see Mr. Turner, that through the newspapers that there was very serious consideration being given to deleting it.

Representative Cleveland asked Wolff if he could testify that Maryland was consulted before the irrevocable decision on the Three Sisters Bridge was made. Wolff quibbled with the term “irrevocable decision,” prompting a dialogue with Representative Cramer:

Mr. Wolff. I do not know how irrevocable that was. Let me explain something to you. In dealing with the Bureau, there is an element of creative license, if I can call it that. I do not consider it particularly dangerous if someone says, what would you think if we took this or that out. I respond accordingly.

Mr. Cramer. Creative license is not what this member is concerned with. I am concerned about destructive license. What is the next step for the State of Maryland to do under the circumstances?

Mr. Wolff. To fight like hell to keep it in . . . this location. We want it where we have it.

Mr. Cramer. Which the Secretary this morning said was not satisfactory.

Mr. Wolff. That is correct.

Mr. Cramer. So that is the very point I am getting at. This is destructive license. They have not suggested they will find another location or that there is some other way of resolving these problems. Maryland’s hands are tired at the present time under the present circumstances, are they not?

Wolff said that early on, as troubles mounted, “we were trying to get legislation – where we felt in our hearts – that was probably an executive function.” He did not think the State legislature or Congress should make location decisions that were more properly reserved for highway agencies, he tried to defend Secretary Boyd:

You know, as well as I, that he is caught on the tenterhook, on a number of tenterhooks. He knows that he does not have the answer, and he knows that he had got to consult with us. I do not feel that his consultation is complete by any means . . . . I think they have just started talking to us, and I expect they are going to continue. I would be appalled if I would learn today that this was an irrevocable decision.

Representative Cleveland explained the committee’s obligation was to find out if the Secretary was consulting with local government. “This committee is not trying to place roads and place bridges.” Wolff replied, “Please do not do that. I think that would be a terrible thing to try.”

Recalling the first BPR meeting on November 24, after the news reports on the Secretary's decisions, Representative Cleveland said, "I do not call that consultation – to call you in a couple of weeks after the decision has been announced in Washington." He was not interested in legislative action to place bridges, but was concerned about the decisionmaking process. Wolff conceded that the meetings he had cited with BPR regarding the North Central Freeway and I-95 was the total extent of consultation. [pages 171-175]

Chairman Kluczynski recalled Director Airis to the witness table to respond to additional questions from Representative Cramer. He wanted to know if Airis agreed with BPR Director Turner's characterization of the South Leg Freeway as being a "cannon" firing three lanes of traffic onto a crowded Southwest Freeway. "If so, why is it being built that way?"

Airis replied that he did not think Turner meant to make it sound as bad as it seemed. True, the South Leg Freeway from the Lincoln Memorial to the Tidal Basin was a six-lane freeway, but two lanes were linked to Independence Avenue. Thus, only four lanes would connect with the eight-lane Southwest Freeway. Airis thought it would work.

Next, Representative Cramer asked Airis to comment on the North-Central Freeway. Airis agreed with Wolff that the connection would result in "a minimal system" that would require "a lot less displacement." He said, "The design that we had, we think it is one we ought to adopt fully and completely and build."

Representative Cramer asked if Airis agreed with Secretary Boyd that I-70S should be shifted to the Palisades Parkway along the Potomac River. Airis replied:

No, sir. That is the one that I object to. I think the [George Washington Memorial] parkway should be built on into the District of Columbia, but it cannot be built until that Three Sisters Bridge is built in order to get your lane balance in the area. One of the things the Secretary has suggested is to use that for 70-S. I know the folks involved in that Palisades area, and I think that would take more courage than I have to attempt to bring 70-S down the river.

How, Representative Cramer asked, would that affect the George Washington Memorial Parkway, which was not being built to Interstate standards. Airis agreed that it was "not an interstate standard at all, both in the horizontal alinement or in the structural problems."

Representative Cramer summarized that the parkway was "not going to answer the need" for an expressway in the North Central Expressway corridor. Airis agreed, saying, "That is our opinion, sir."

If I-70S were shifted to the Palisades Parkway, Representative Cramer asked, "wouldn't we run into the same problem that Mr. Wolff testified to over to the east, and that is, being a parkway, trucks would not be allowed on it?" Airis, apparently referring to the meeting with Turner that Wolff had mentioned, replied:

That is correct. But there has been some talk. Frankly, when we talked here 2 weeks ago, there was some talk, and I, frankly, don't know how it could be accomplished under the

present regulations to the effect that there would be limited truck traffic placed on the parkway. Now, I don't know how such a thing could be policed, frankly.

The Congressman asked what "limited" meant, but Airis did now know. "It wasn't spelled out, sir, and I, frankly, don't know."

Representative James J. Howard (D-NJ) asked about the South Leg Freeway. If it were not built, what would happen to "the traffic that would be hanging on each end of the roadway?" Airis replied that "this is one of the very, very difficult questions":

The big mosaic shows just exactly the end of that freeway, and it is impossible to take care of the traffic – well, frankly, the traffic does not use the Potomac River Freeway. It cannot.

There are some contemporary connections that we have made to the parkway in the area, but certainly you would not want to funnel through-type traffic right into the Lincoln Memorial parkways there, and we would not recommend it, and I am sure the Park Service would not stand for it.

Representative Cramer summarized:

I suggest that if there was another system in this country serving a metropolitan area that had four dead ends – one, two, three, four – that you have in this system now, in the District of Columbia and Virginia, you would hear howls all the way to Washington about it.

Airis agreed. "I think, sir, they would probably fire the highway engineer":

Mr. Cramer. Yet, this is being perpetrated by the lack of decision by the Department of Transportation itself.

Mr. Airis. I have hopes, as Mr. Wolff, my colleague in Maryland, does, that after this morning things will be broken loose a little bit, I hope anyway. [pages 176-178]

That exchange concluded the first day of the hearing.

News coverage, not surprisingly, focused on Secretary Boyd's comments about his review of the District's freeway plans – he "broke his long silence," as the *Post* put it. The *Post*'s lead paragraph repeated his statement that he thought it would be "unwise at this time to construct the Three Sisters bridge as its planned location." The *Post* and the *Star* went through his testimony about the doubts he had about the bridge, the North-Central Freeway/Northeast Freeway, and the South Leg Freeway tunnel. The reports made clear that he was not ruling any of these projects out, but was calling for more study, as well as completion of the George Washington Memorial Parkway to the city line and the Palisades Parkway to provide the link to the Georgetown waterfront for a connection with the Potomac River Freeway. [Milius, Peter, "3 Major Road Projects Are Unwise, Boyd Says," *The Washington Post and Times Herald*, December 6, 1967;

Flor, Lee, "Boyd Warns of Dangers In D.C. Freeway Plans," *The Evening Star*, December 5, 1967]

On December 6, State Highway Commissioner Fugate of Virginia was the first witness, accompanied by John Harwood, Deputy Commissioner and Chief Engineer. In coming years, Fugate would be the strongest advocate for I-66 and I-266, and his testimony would reflect his aggressive approach.

He began by reading a letter he had written to Secretary Boyd after reading the November 8 article in the *Post* about the decision that the Three Sisters Bridge was not needed. (The letter mentioned that he had written to the Secretary about the bridge on September 26 but had not received a reply.) "Your decision, if the newspaper article is correct, comes as a distinct surprise to those of us who have been engaged in planning for transportation in the Washington metropolitan area in Virginia for many years."

Fugate's letter questioned the applicability of Section 4(f) to the decision on the bridge. He pointed out that Section 4(f) required cooperation and consultation with the State in developing transportation plans and programs. Virginia had "never been consulted in connection with the studies which the Department of Transportation has apparently made." (This was a reference to the first sentence of Section 4(f) calling for cooperation and consultation. The Secretary would rely on the second sentence, which did not include a clear reference to cooperation or consultation, that prohibited the Secretary from approving projects that did not meet the protective criteria.)

He continued:

We protest in the strongest possible terms the arbitrary removal of an interstate route that has been a part of the planning of the Northern Virginia area for many years and which is included in the transportation plan for the Washington metropolitan area of Virginia.

He believed that Secretary Boyd "subscribed to the philosophy" that decisions on any segment of the transportation system "should be based upon maximum consideration being given to the wishes of the state and the area." As a result, Fugate could not "understand a decision to eliminate this route without consultation with the state of Virginia."

The letter concluded:

If a decision has been reached as indicated in the press, I urge you to reconsider before an official announcement is made.

In response to followup letters from Members of Congress, Secretary Boyd stated in a reply on November 30 that he had agreed to the unusual step of reviewing the bridge prior to the request for final approval only "because of the strong Congressional mandate contained in Section 4(f) . . . . I have not yet arrived at a final conclusion."

After seeing these letters, Fugate immediately wrote to Secretary Boyd again. The Secretary's reply to the Congressmen was "the first advice we have received as to the basis of the decision

you were reported by the press to have already made.” Again noting the consultation provision in Section 4(f), Fugate summarized the history of the bridge, dating to June 30, 1960, when I-266 with a bridge across the Potomac River was approved. Everyone knew the bridge would have to cross NPS lands, leading to the agreement on May 25, 1966, with NPS, BPR, and others “for the Spout Run location of the interstate route.” At the time, NPS Director Hartzog approved the agreement because he “apparently did not consider that I-266 was going to do any great damage to the esthetic values of the park lands and the areas of historical significance.”

With the approval of NPS, BPR, and the others, “we had every reason to believe that we were in business,” and proceeded accordingly. The Commission of Fine Arts approved the preliminary bridge design. In addition, Virginia had worked toward the objectives of NPS, which he said wanted to eliminate all but Arlington Cemetery traffic from Arlington Memorial Bridge, and the Defense Department, which wanted to eliminate the connecting loop between the bridge and Jefferson Davis Highway to allow expansion of the cemetery. Traffic projections show clearly that the Roosevelt Bridge could not possibly absorb the commuter traffic which would be forced to move over from Memorial Bridge with elimination of the connecting loop without the added capacity of a Three Sisters Bridge.”

Despite the progress and the State’s cooperation with Federal agencies, “with the creation of the new Department of Transportation, matters suddenly took a change.”

Fugate informed Secretary Boyd that, “These accomplishments appear to us to be adequate compliance with the provisions of Section 4(f).” The letter concluded:

Together with the overwhelming traffic need, which is a matter of record . . . it seems to us there should be no question as to confirming the approval of this route in effect since June 30, 1960.

He agreed with Airis about the urgent need for the bridge:

I think it is particularly noteworthy that the latest traffic study by Alan Voorhees & Associates, made for the Washington Metropolitan Area Transit Authority – this was not a highway study, mind you, this was made by the transit people – confirmed the justification for the bridge, which has been so obvious over a period of many years.

Neither former Administrator Whitton nor anyone in a position of authority in BPR had ever questioned the need for the bridge.

The Federal-State partnership had always been the cornerstone of the Federal-aid highway program. In that spirit, Maryland and Virginia had given priority to the Capital Beltway at the start of the Interstate program, “with the enthusiastic approval of the Bureau of Public Roads.” The result was that the Washington area was one of the first metropolitan areas in the Nation “to gain substantial traffic relief from interstate construction.” He added, “facetiously, if the District had been involved, we would probably still be considering whether or not the beltway was needed.”

The “drastic eliminations and changes” under consideration would, “if carried out, have serious and damaging effects on highway transportation throughout the urban areas of Maryland and Virginia.” As a result, he protested the “emasculatation of the District interstate system.” A decision to eliminate I-266 and the Three Sisters Bridge “in the face of the overwhelming traffic need would be an arbitrary action entirely without justification.” He did not believe that “Congress gave any such mandate in enacting section 4(f).” Any view to the contrary was “in my opinion entirely unsupportable.”

He concluded his statement by expressing the hope that Secretary Boyd would “confirm the decision made in 1960, and confirmed many times since, to build the Three Sisters Bridge on the location and in the manner agreed by the three parties at interest on May 25, 1966.” If he did not do so, Fugate recommended that Congress intervene and require construction of I-266, including the Three Sisters Bridge. [pages 179-185]

Representative Cramer asked if the Governor of Virginia and its Congressmen favored deleting the Three Sisters Bridge. No, they did not. Was Virginia consulted prior to the Secretary’s announcements the day before? No, it was not. What about the meeting with BPR? Virginia did not consider that meeting to be consultation. What did you learn at the meeting? Virginia had learned that, as Secretary Boyd had said on the first day of the hearing, “he certainly looked with favor on making these changes and eliminating this bridge.”

Do you believe the Department of Transportation does not intend to build the bridge? “I think the Secretary practically said that yesterday, did he not?” Did BPR suggest an alternative location or request Virginia’s consultation to solve the problem? “No alternative location was mentioned. There were some alternative locations mentioned for the freeway system in the District and it was decided these would be mulled over.” Did they offer any hope that the bridge might be built at a different location? “I gained the impression that the bridge was pretty well out of the picture.”

Representative Cramer read the first section of Section 4(f) about cooperation and consultation, then asked if Secretary Boyd did that. “This is what occasioned our two letters, that we had not been consulted prior to the decision being made.” The Congressman then read the second sentence regarding prudent and feasible alternatives:

Mr. Cramer. You did get the approval, as I understand this agreement . . . of the National Park Service, did you not?

Mr. Fugate. That is correct, yes, sir.

Mr. Cramer. So as to location and as to minimizing harm to the park, the Park Service was satisfied, is that not correct?

Mr. Fugate. Right.

Mr. Cramer. So the second requirement is clearly met as far as you are concerned?

Mr. Fugate. In our view it was.

Mr. Cramer. Now is there a feasible or prudent alternative? I think your answer to that is, "No"; is that correct?

Mr. Fugate: Three locations in the same area have been studied, have been considered by everyone concerned, and the Spout Run location was the location decided upon and confirmed by this agreement.

Mr. Cramer. And this was agreed to by the Park Service, which has jurisdiction over it and is responsible for preservation of the park land, is that correct?

Mr. Fugate. That is correct, yes, sir.

Mr. Cramer. So it appears that both of the requirements have been fully conformed with?

Mr. Fugate. In our view.

Mr. Cramer. In your view. Well, in my view too. And that subsection 4(f) has been fully complied with.

The Congressman said the Secretary was substituting his judgment not only for that of NPS and the Department of the Interior but the State of Virginia, "without even consulting with them, and using this section as the basis for doing so."

If so, Secretary Boyd was "wholly misconstruing the authority that he claims Congress gave him under section 4(f)." As Representative Cramer recalled, the Committee on Public Works had discussed the matter with the Committee on Government Operations while it was preparing the bill for congressional consideration. The Public Works Committee was "given, at least this Member was given, every assurance that this did not add to the Secretary's authority, it gave him no power to act unilaterally, and was consistent with section 15 of the Federal-Aid Highway Act of 1966."

(Section 15 declared that, as a matter of national policy, the Secretary "shall use maximum effort" to preserve parklands and historic sites; shall cooperate with the States "in developing highway plans and programs which carry out such policy"; and shall not approve any project that requires the use of such land "unless such program includes all possible planning, including consideration of alternatives to the use of such land, to minimize any harm to such park or site resulting from such use.")

In Representative Cramer's view, "the Secretary is going far beyond what Congress intended him to have in the way of powers." Congress had never intended for him to act unilaterally. As for the facts in this case, "he has, in my opinion, no authority to act as he has under section 4(f)."

He asked if the traffic between Virginia and the District could be handled adequately without the Three Sisters Bridge. No, Harwood replied for Fugate, "I don't think it is possible." Would that be true even with the planned rail rapid transit system in place? Even with the transit system, "there would still be a deficiency [by 1990] in the Potomac River crossings to handle the traffic that would desire to cross."

Representative Cramer concluded his question period with a summary. Despite the agreement by NPS regarding parks and the facts that Virginia and the District support the bridge, the previous Federal Highway Administrator agreed about the need, and the transit system will not make it unnecessary – “despite all this, the Secretary saw fit to act unilaterally in deleting the bridge at the present time.” He recommended that the committee take another look at Section 4(f) if Secretary Boyd is going to misconstrue and misuse it. [pages 188-191]

(Superintendent Jett of the NPS’s National Capital Region denied Fugate’s claims about restricting Arlington Memorial Bridge traffic. “We have never had any idea of closing Memorial Bridge to commuters, and couldn’t if we wanted to. It is just incorrect to say the park service is planning to close Memorial Bridge to commuters.” The *Star*’s article about the denial added that Superintendent Jett planned to retire on January 1, 1968. [Flor, Lee, “Plan to Bar Memorial Bridge To Commuters Is Denied,” *The Evening Star*, December 7, 1967]

Later in the question period, Chairman Kluczynski mentioned the morning’s newspapers carrying reports on Secretary Boyd’s testimony the day before. “Do you think by reading those newspapers that the Three Sisters Bridge and the North Central Freeway are dead?” Fugate replied that based on the articles, “the applecart has been pretty well upset if the Secretary’s decisions hold, and I despair of the bridge being built under this present arrangement.”

The chairman said:

Well, for your information . . . that is wide open. We are going to do everything possible to clear up the chaos in the metropolitan area. This is the first area in the country where we have considered this problem. I know many other places in the country have similar problems, but this is the Capital of the Nation, where people come from my district and from all over the country, to this wonderful city, we are going to try to take care of your problems, and we are going to try to help the people from all over the country.  
[pages 193-194]

The remaining witnesses were Members of Congress, beginning with Representative Broyhill. He did not believe that any committee should get into administrative or technical details that belonged in the executive branch. “But the executive branch has failed.” The situation was “ridiculous” and would be “laughable” if it were not so serious. “Of course, what we have here now is a national disgrace insofar as progress on this freeway, highway, and interstate construction is concerned.”

Secretary Boyd had overruled all the studies and surveys “as if they didn’t know what they were doing.” If the Secretary and his advisers were right, Congress ought to “investigate the incompetency that caused the waste of all of these millions of dollars during the past years.”

He did not come before the committee to choose a site for the river crossings; experts had made that decision. His goal was a call to “the people who are responsible [to] get on with the job, construct immediately what has been planned and what has been recommended.”

The issue of the bridge was not the real problem. The real problem was “the contest between the so-called planners or dreamers and highway engineers.” On the one side are the people who are interested only in esthetic values, but “have no regard, no concern whatsoever about the movement of people and goods.” On the other side are “those who have the responsibility of doing something about solving our traffic and transportation problems”:

We have too many people in powerful positions, so to speak, that have a stranglehold over the construction of these facilities that just don't seem to care as to whether we solve this problem or not.

He was in favor of preserving scenic beauty but with so many thousands of people moving about to and from their job, “I don't think we can afford the luxury of just having tree-lined boulevards and walkways and places for the tourists to drive down in complete comfort without any traffic congestion in order to enjoy the beauty of this area.”

He cited the Theodore Roosevelt Bridge as an example. The two sides battled for years because opponents feared it would “destroy the scenic beauty of the Lincoln Memorial. They didn't want to upset the rabbits and reptiles on Theodore Roosevelt Island.” He recalled how the bill passed for the structure, followed by consideration of a tunnel. Congress tried to write additional legislation but “it was really a monstrosity” that was returned to committee:

Now, if the dreamers had prevailed when we were trying to get that Roosevelt Bridge constructed, we would have chaos at the present time, as we are going to have chaos in the future if we don't do something about the Three Sisters Bridge.

Secretary Boyd advocated Interstate designation for the parkway on the Maryland side of the river. “But can we proceed? Because you can't construct the freeway on the other side until you make a final determination as to whether Three Sisters is needed or not needed.” That decision had been made many years ago. “And something should be done about that,” Representative Broyhill said, because of the problem of double-crossers. He did not know if that subject had been raised in the hearings:

But the people of Maryland living out in the Northwest area, or beyond the Northwest area of Washington, find it more feasible to cross the river at Cabin John Bridge, come down the George Washington Memorial Parkway and cross again at the Memorial or 14<sup>th</sup> Street Bridge.

Certainly that is causing a great deal more, many thousands of additional vehicles crossing back and forth every day that could be eliminated.

He hoped the committee would “issue a mandate if necessary to direct these officials to proceed with construction of these projects forthwith.” [pages 196-200]

Questioning of Representative Broyhill was brief, but Representative Cramer did note Chairman Natcher's threat to withhold District matching funds for rail rapid transit if the freeway network did not advance. Representative Broyhill could not confirm it, but believed that would be the

case. He expected “strong resistance to any appropriation for the construction of the subway as long as this highway or freeway construction is held up.” [page 202]

Representative Machen, the next witness, recounted how just 7 months ago, the freeway system seemed ready to go. “Now, as a result of a unilateral decision it appears that the Three Sisters bridge is still hanging in the balance.” The Secretary wants more study. “If no decision is made soon on this project, it will be dead. It will have been planned and studied to death at a cost of millions of dollars.” What he objected to was “this back-door approach by people not interested in a balanced transportation system”:

I reiterate . . . somewhere, somehow along the line, there is a vested interest group or a group of people who seem to be able to continue to fight a rear guard action, notwithstanding the mandates of the engineering departments of the three jurisdictions, notwithstanding the mandates of the District Committee, notwithstanding the demands of the Appropriations Subcommittee for the District of Columbia.

It is this unilateral decision by the johnny-come-latelies in the transportation program that I object to.

He did not favor only freeways; he did not want the District of Columbia to look like Los Angeles. “But we must have the go-ahead for these interstate highway projects as a prelude to the construction of the rapid transit system and the go-ahead must be given now.” Someone has to say “yes” because the area “cannot afford to let a tragic lack of interstate highways choke this metropolitan area to death.”

Representative Robert V. Denney (R-Ne), an attorney and local official who won election to the House in 1966 and was, therefore, new to the committee, asked if Representative Machen could identify who the vested interests were that were holding up the freeway network. Representative Machen replied, “Well, very frankly, and candidly, I think it comes from the Planning Commission . . . . They have always, they have been consistent in fighting this rear-guard action of stopping any of the highway projects.” Referring to I-70S, he said, “They have gradually moved it in and in and in and it keeps everything, everybody off balance.” He did not like to see people dislocated, but “I think we have to think of the common objective of people getting to and from work.”

When Representative Denney suggested “that somewhere there is someone hiding in the woodpile,” Representative Machen agreed. Certain District residents had “convinced the Secretary of the Department of Transportation to bottle up your highway systems.” He wondered, “How could the Bureau of Public Roads, under the Commerce Department, have accepted it 7 months ago, and not now? I think the record is clear.” He hoped Chairman Natcher would follow through on his threat to hold up matching funds for rail rapid transit if the freeway network is delayed. “I hope he does, to be quite frank.”

Representative Cramer referred to a balanced transportation system. He did not agree with those who thought the best idea was to “dry up automobile transportation and use underground mass

transit.” They were, instead, “drying up the city itself” because if people did not want to use transit, they would stay out of the city. “And it seems to me that they are going to end up in suburban shopping centers.” Those who do not want the city to dry up “have got to support or should support a balanced system.” Representative Machen agreed that “they are not going to lick the problem of downtown Washington until they realize they have to have a balanced system.”

Representative Cramer concluded:

It seems to me some master planners are afoot. And maybe they are the ones in the woodpile, the master planners, who feel you can force the vast majority of commuters out of their automobiles and onto the mass transit. I think they are absolutely wrong.  
[pages 204-208]

Representative Gude was the final witness. He appreciated the hearing, but said, “I do feel it is pathetic that a committee of Congress has to get involved in worrying about the particular placement of bridges and highways.”

Numerous studies were “virtually unanimous” in supporting the freeway system, including the Three Sisters Bridge, North-Central Freeway, and the Inner Loop. This was a “minimal system,” as reflected in the fact that under it, the North-Central Freeway was the only link between the District of Columbia and Montgomery County. He accepted this minimal system “particularly in view of the utter failure of the Department of Transportation and local freeway opponents to produce anything resembling a credible alternative.”

He said that “a truly impressive degree of regional agreement” exists on transportation needs, and the agreement “reflects the will of the Congress”:

But why bother? Regional transportation plans developed through a comprehensive planning process are unilaterally dismembered by the Department of Transportation.

Representative Gude saw “strong indications of collusion between freeway opponents on the National Capital Planning Commission and advisors to Secretary Boyd in the sequence of events surrounding his review of the Three Sisters Bridge question.” He was not convinced that the intent of Section 4(f) was to give the Secretary of Transportation unilateral authority. His plan to convert a park road into an Interstate highway was “totally inconsistent” with his assertion of a “substantial Federal interest in the Potomac River and its shoreline.”

He clarified that he was referring to the George Washington Memorial Parkway in Maryland, “a road which goes to nowhere at this point.” The Secretary’s solicitude for items protected by Section 4(f) “somehow vanishes” in the case of the parkway “in the interests of avoiding freeways and bridges.” He wondered “what flexible legal interpretations” would allow trucks to use the parkway or how the parkway would meet the legal requirement that Interstate highways be designed to meet projected traffic volumes in 20 years.

He continued:

Antifreeway bias was clearly evident in the Secretary's speech before the Washington Board of Trade [on] September 26, apparently based on misinformation. Thus it was not surprising that the Secretary, in disclosing his disapproval of the bridge, sought to destroy other freeway plans, too.

Von Eckardt's November 26 article ("Defusing the Capital's Rush Hours Without a Freeway") had "exposed the caliber of information being furnished to the Secretary and the public."

Secretary Boyd had denounced the North-Central Freeway as a "tremendously expensive and inadequate artery":

Its expense stems directly from a routing designed to minimize disruption of existing development – presumably one of the enlightened goals of social considerations. The route and its language represent a compromise; its expense should be considered in light of the absence of other interstate facilities.

The Secretary's argument that two Interstate facilities (I-70S and I-95) feeding into one "will cause some congestion is valid," but simply confirms Representative Gude's observation that "the proposed system is indeed minimal and makes no claim to totally eliminate rush-hour congestion."

Although the Secretary discussed traffic management improvements and transit, including exclusive bus lanes, what was most striking was what he did not say:

He made no mention of his repudiation of the Policy Advisory Committee's agreement of last year to end the decades of delay and move ahead with the freeway program. He offered no explanation or defense. Understandably, the deed is indefensible.

Although Secretary Boyd said the department was "consulting and intends to continue consulting" with State and local officials, this statement was "demonstrably not so." The Congressman and others from the area "have found Mr. Boyd's staff and he personally to be totally unwilling to communicate with us on freeway matters."

The hearings thus far had been effective, if only because they "have elicited the first official and specific statement on our freeways to be wrung from the Department of Transportation." He urged the committee to "continue exploring the situation and assure that locally developed transportation plans are brought to function."

He emphasized the need for balanced transportation and referred to his work as a State Senator in securing Maryland's ratification of the interstate compact creating WMATA:

And I think once again this is being made out in some quarters as a battle between the transit system and an expressway system. I think we absolutely have to have both if we are going to have a satisfactory transportation system in the Washington metropolitan area . . . .

After commenting on the Voorhees traffic projections, Representative Gude concluded:

These highway and transit plans have been developed over a period of 20 years and they have involved a great deal of planning and political negotiation. You cannot just take these highways on and off the maps and the transit plans on and off the maps the way Alexander the Sixth divided the world back in the middle ages, by just drawing a line on a map. It is not that easy. [pages 208-214]

(Pope Alexander VI helped negotiate a treaty that divided the New World discoveries between Portugal and the Crown of Castille (Spain).)

In the brief question period, Representative Cramer agreed with Representative Gude about the inconsistency of canceling the Three Sisters Bridge to protect parkland while advocating an Interstate freeway instead of a parkway. “So I am hopeful your support and the efforts and actions of this committee will possibly result in doing away with the 4(f) designation on this bridge, that maybe we will get underway and into service.” He added, “We have all kinds of wars, we might as well get underway in the war against traffic congestion.” [page 220]

In closing the hearings, Chairman Kluczynski promised that the committee would study the issues under review and submit recommendations at a later date. However, he added in closing:

With respect to the Three Sisters Bridge, and I-266 as presently planned, however, the Chair announces that the committee will state its recommendations before the Congress adjourns for this session, with the expectation that if the Department of Transportation does not accede to those recommendations on or before December 31, 1967, the committee will take whatever legislative action is required to present its recommendations to the Congress for enactment into law. [page 222]

### **Awaiting a Mandate**

Coverage of the final day of the hearing focused on Chairman Kluczynski’s ultimatum. As Lee Flor reported, the chairman said at the start that he had begun the hearings only for fact finding. “But after listening to Boyd and District, Virginia and Maryland highway officials and congressmen, Kluczynski had made up his mind.” He wanted the Three Sisters Bridge.

The legislation could be a standalone bill or part of national highway legislation. Because 1968 was the year for the next biennial Federal-Aid Highway Act, the Committee on Public Works would have a legislative vehicle if the Department of Transportation did not change its position.

According to the *Post*, aides told reporters the committee members would probably send a similar ultimatum to Secretary Boyd regarding the North-Central Freeway:

But the Congressmen reportedly will tell Boyd that he cannot, as he proposed, turn Montgomery County’s section of the George Washington Parkway into an interstate highway and extend it across the District line and down the Potomac River bank to Georgetown.

The aides did not think a similar ultimatum would be sent regarding the South Leg Freeway.

The subcommittee members were “concerned not just about the District highway impasse, but about the precedent that Boyd’s intervention might set,” in view of similar controversies around the country. “Congressmen do not want Boyd moving into these local disputes, particularly if he is not emphatically pro-freeway.”

Chairman Kluczynski predicted that his proposals would pass the House easily. The *Post* added, “They would then go to the Senate where sentiment is not so clear.” [Flor, Lee, “House Group Will Insist on 3 Sisters Span,” *The Evening Star*, December 6, 1967; Milius, Peter, “Hill to Demand Boyd Approve 3 Sisters Span,” *The Washington Post and Times Herald*, December 7, 1967]

*Star* editors suggested that if the Roads Subcommittee had any doubt about the “unconscionable delays” blocking the Three Sisters Bridge, “they were resolved by two days of testimony from Secretary of Transportation Boyd” and area highway officials and congressional representatives. As for Chairman Kluczynski’s statement that “We want that bridge,” the editors said, “All we can add to these excellent words is that it is high time someone in authority said them.”

Secretary Boyd’s “rambling testimony . . . amounted, insofar as the bridge is concerned, merely to another stall.” He did not “come right out and say” he opposed the freeway system. “But he made it perfectly plain that he is not, of his own volition, about to lend his needed support to such a system – a message which he has been passing along informally to various groups around the city, incidentally, for the last month.”

The hearing had “nailed down” a couple of interesting points. First, virtually every Federal agency in town had been “a party to Three Sisters Bridge agreements which Boyd is now eagerly trying to abrogate.” Second, Secretary Boyd had not met his statutory obligation to consult with local officials “before reaching his half-baked conclusions on freeways in the National Capital Area.”

As Chairman Kluczynski, if not Secretary Boyd, understood, “resolution of the Three Sisters Bridge fight is the local means of beginning to unravel the freeway snarl.” The editors hoped Secretary Boyd would “reconsider the bad advice he has received” and support the bridge:

If he fails to do so, however, Chairman Kluczynski should not hesitate to override the objections and press for a direct congressional authorization. [“Kluczynski’s Mandate,” *The Evening Star*, December 7, 1969]

*Post* editors indicated that the Secretary’s testimony “reopens the painful highway controversies that were settled before he arrived on the scene.” Although other ways of solving traffic problems might exist, Secretary Boyd had spoken only “vaguely of them.” If he “has a better, cheaper or more effective way to meet District problems,” he should “put concrete proposals on the table” so they could be considered.

He seemed to be proposing that local streets, with minor improvements, could absorb traffic that would best be on an Interstate freeway. “It is to be doubted that his scheme of using the Potomac

parkways will give the city what a new upper Potomac bridge and Highway 66 promised – a 25-minute route from downtown Washington to Dulles Airport.”

When to advance or modify the freeway plan “put together after more than a decade of study and compromise” could be debated. However, the city “should not be asked to junk its plans until someone has presented an alternative program that holds out some prospect of meeting its needs.” [“Junking Highway Plans,” *The Washington Post and Times Herald*, December 8, 1967]

The reporters who covered the hearings summarized their meaning in followup articles. In the *Post*, Peter Milius observed that Secretary Boyd had not closed the door completely on the Three Sisters Bridge. “He said he is against construction of the bridge ‘at this time’ and ‘at its planned location.’” He wanted to defer its development “until two questions are answered. One is the location and the design of the so-called Inner Loop, the little beltway that may some day circle downtown. The other is the location and design of ‘a northwest arterial route,’ the big road that may some day run from downtown to Montgomery County.”

His point, “put simply, is: Don’t build the bridge at least until you know where people will be able to go once they get off on the District side.”

The *Star*’s Flor pointed out the contrast between Secretary Boyd’s views and those of the Roads Subcommittee. Flor summarized the disputes on the Three Sisters Bridge, North-Central Freeway, and South Leg Freeway. Regarding the South Leg Freeway, Flor cited Secretary Boyd’s observation that BPR Director Turner considered it a “cannon” sending traffic onto an already congested freeway.

This hurt worst of all. This was the supreme commander-in-chief, using highway design arguments to defeat other highway designers.

[Milius, Peter, “Boyd Leaves Door a Bit Ajar, Seeks More Data on Bridge,” *The Washington Post and Times Herald*, December 8, 1967; Flor, Lee, “Boyd Answer on Bridge Clouds Roads Picture,” *The Sunday Star*, December 10, 1967]

## **The Mandate**

While the hearings reflected the continuing freeway debate, Brookland was experiencing the reality. The District’s Real Estate Division had begun earlier in the year to acquire homes for the North-Central Freeway. On December 7, the *Post* reported on the experience in “one of Washington’s few stably integrated communities”:

Brookland is a quiet neighborhood, with older frame and brick one-family houses. Many of its people are older retired families who bought their homes years ago when real estate was cheaper and mortgages not so hard to come by. Almost all would stay now if the Freeway weren’t coming through.

In fact, many whose homes the District did not plan to acquire for the freeway would move anyway. As the Reverend Joe Gipson put it, “Who wants to live next to a freeway? Nobody”:

After fighting the Freeway since 1964 – at the District Building, at hearings before Government agencies, in the courts and in the streets – some Brooklanders have finally given up and moved out. A lucky few have found homes in their old neighborhood, but many more have been forced out of town or into neighborhoods where comparable houses cost twice what the Real Estate Division paid for their old homes.

The average price of the acquired homes was \$15,000.

Recently, RLA opened a relocation assistance office at 2726 10<sup>th</sup> Street, NE., but “it hasn’t been doing much business.” Brooklanders “trust neither the District government nor the RLA”:

Brookland residents lost faith in RLA when they heard about the Tubman School site at 11<sup>th</sup> and Kenyon sts. nw. The Tubman school [sic] is being built on what used to be a block of well kept, middle class homes, the only ones in a sea of slum housing.

Brookland residents see many similarities between the two cases. In both, residents fought the planned construction and lost.

Most who had moved because of the freeway had found new homes on their own, asking RLA to pay only moving expenses up to \$200:

And a few just don’t plan to move. They are hopeful that a suit that failed in U.S. District Court will succeed in the Court of Appeals . . . .

If the suit fails, there are others prepared to use more extreme measures to resist the Freeway. They are members of the Emergency Committee for the Transportation Crisis and some members of Northeast Group Ministry.

The Reverend Gipson thought the freeway could be stopped by convincing Mayor Washington and the city council to kill it. He agreed with ECTC that a rail rapid transit system could solve the traffic problem:

But if all else fails, “we’re prepared to get down in front of the bulldozers with our bodies,” and stop construction, Mr. Gipson added. [White, Jack, Jr., “Brookland’s Settled Calm Disrupted by Freeway Acquisition,” *The Washington Post and Times Herald*, December 7, 1967]

On December 13, Chairman Fallon of the House Committee on Public Roads wrote to Secretary Boyd to demand construction of the Three Sisters Bridge. Chairman Fallon said the committee had been reluctant to get into District highway issues in such detail, but recognized “the undeniable fact that there is apparently no other way to resolve the problems involved.” Without prompt resolution, “there is no hope of ever developing an adequate total transportation system for the District of Columbia metropolitan area.”

The committee, Chairman Fallon wrote, was “unalterably opposed to the designation of any part of the George Washington Memorial Parkway on the District . . . side of the Potomac as part of the interstate system.” Doing so “might very well be an excellent device by which to make

available to the National Park Service the money needed to complete that portion of the parkway.” The money, however, was not a sufficient reason for designating the parkway an Interstate highway that would not be able to carry the trucks that normally would use a freeway. The proposal also raised aesthetic concerns.

In addition, he recommended that the Secretary direct Administrator Bridwell to consider ways to make maximum use of the proposed I-70S right-of-way of the North-Central Freeway, consider the routing and design of I-95 in the city, and evaluate the option of taking the Baltimore-Washington Parkway out of NPS jurisdiction; Maryland and the District of Columbia would take over the parkway and upgrade it to Interstate standards. Further, in view of Secretary Boyd’s stated concern about the South Leg Freeway, Chairman Fallon suggested that Bridwell work with District highway officials to consider alternatives.

The committee regretted forcing the issue on these segments, but the chairman said it also “seems entirely likely that the committee would be faced with the obligation of proceeding similarly with all of the remaining segments of the highway network here . . . .” He added, “the time has long since passed when the developmental well-being of this area can be stalled or even controlled by the wishes of parochial philosophy or single sections of the city.”

Committee members planned to meet with Mayor Washington and the city council before the end of the year “on the assumption that the position of the District government will be favorable.”

Chairman Fallon, despite the committee’s reluctance to get involved in such detail, said:

It may well be that in the end, the Congress will have to bear the brunt of making the “hard, unpopular, political” decisions regarding these matters. If so, so be it. Other possibilities do exist.

The committee invited Secretary Boyd to return to testify in February with the results of these consultations.

During a December 14 press conference, reporters asked Secretary Boyd for reaction to the letter. He said he had received it, but “I have not yet read the letter.” He said, “It would not be appropriate for me to discuss the matter today,” but offered to give a copy of his testimony to the reporters “if you want it.” [Conconi, Charles, “Build Three Sisters Bridge, House Unit Demands of Boyd,” *The Evening Star*, December 14, 1967; “House Unit Insists on 3 Sisters,” *The Washington Post and Times Herald*, December 14, 1967]

*Star* editors called the letter “strong language – but language fully justified by the Department of Transportation’s flagrant failure to support a reasonable freeway network in the Nation’s Capital.” The editors characterized Secretary Boyd’s testimony as consisting of “little more than fuzzy promises of further studies.”

Regarding Secretary Boyd’s concern about how the District would handle traffic crossing the Three Sisters Bridge, the editors pointed out Chairman Fallon’s observation that “ample time” was available to determine how to handle traffic before the bridge is completed – if officials wanted to do so:

Of course he is right. Such problems are not insurmountable. Solutions have not emerged before because freeway opponents within the administration have successfully prevented effective policy decisions from being made.

If Secretary Boyd did not like current proposals, “he has the option, together with the District’s newly-appointed officials, of producing workable alternatives – or leaving the decision to Congress.”

The *Star* editors shared Chairman Fallon’s hope that Secretary Boyd would accept his responsibilities. However, “The chairman has no cause . . . to regret his committee’s forceful intervention.” His conclusion that there was no other way to resolve the dispute “was precisely right.” [“Showdown,” *The Evening Star*, December 19, 1967]

### **The First Budget**

While the hearings were underway, Mayor Washington submitted his first budget proposals to the city council. To address the city’s “fiscal crisis,” his proposed budget of \$580.2 million for FY 1969 included an increase in the sales tax (from 3 cents to 4 cents), an increase in the real estate and personal property levies, and elimination of the sales tax exemption for local telephone service. He also called for legislation that would establish the Federal payment to the city at 25 percent of the District’s local tax revenue. The change would increase the payment from \$68.9 million for the current FY 1968 to \$80.2 million for 1969.

In addition, the FY 1969 budget included funds for the North-Central Freeway and the South Leg Freeway. Reporters asked Deputy Mayor Fletcher if inclusion of this funding in the budget meant Mayor Washington endorsed them. “No, not necessarily,” Fletcher replied. “He may or may not endorse the program later.” He said the budget reflected continuation of the highway program developed by the District commissioners. “No decision has been made to change the previous decision made by the previous District government.” [Sarro, Ronald A. “\$580 Million Budget Asked For Fiscal ’69,” *The Evening Star*, December 5, 1967; “Two Disputed Freeways Included in ’69 Budget,” *The Evening Star*, December 5, 1979]

The city council took up the budget on December 16 with an all-day public hearing. Speakers covered many subjects, including Chairman Hechinger’s proposal that a “commuter tax” be imposed on income earned by Maryland and Virginia residents in the city. Several organizations attacked the proposed tax increases.

However, as the *Post* put it, “freeways and the Council’s legal power to block any further consideration of them, was the principal topic of interest at the District Building hearing.”

Fifteen organizations, described as “from the ghetto and from Georgetown,” demanded an end to construction of the North-Central, South Leg, and Potomac River Freeways, as well as the Three Sisters Bridge. “Comments on freeways went from the serene to the ridiculous, but never included a kind word.” The council heard 26 witnesses, 15 of whom testified on the freeways, “all of them against.”

Dr. Ellis Haworth, budget chairman of the D.C. Federation of Civic Association, said no further development of the North-Central Freeway should take place until all displaced people had not only been compensated, “but have been assured new homes or business facilities comparable to those from which they have been removed. The Committee of 100 on the Federal City’s Kennan pointed out that 30 percent of District land (40,000 acres) is devoted to streets and highways, a trend he said must not continue.

Simon Cain of the Lamond-Riggs Citizens Association and Orville F. Crutchfield of the Le Droit Park Civic Association urged the transfer of the millions of dollars planned for highway construction to meet other “serious needs,” such as restoring funds requested by the school system. Crutchfield warned that residents would “judge the council on how you handle our money” in view of pressure from “vested interests or commuters to the detriment of residents who are supplying the money.”

Grosvenor Chapman of the Georgetown Planning Council warned that the city could not accommodate “any more traffic and pollution . . . without strangulation.” He urged delay of any further action on freeways until Secretary Boyd completed a review of alternatives. He suggested a “motor vehicle parking tax” on commuters who parked 8 hours a day in a commercial establishment.

Sammie Abbott of ECTC received the “only applause of the day” when he called the city’s freeway program “institutional racism” and referred to the men who ran it as “lily-white bureaucrats . . . who live in Maryland and Virginia.”

The *Star* summarized the day:

No one spoke in favor of the freeways . . . . Mayor Washington has maintained that his administration has taken no position on the freeways and that their inclusion in the budget was merely to continue what was started by the old city government until a policy is evolved by the new regime. [Kaiser, Robert G., “Freeways Rapped At Budget Forum,” *The Washington Post and Times Herald*, December 17, 1967; Sarro, Ronald, “Mayor’s Budget Doesn’t Fill ‘Crisis’ Needs of District, Council Told,” *The Sunday Star*, December 17, 1967]

In view of the overwhelmingly negative testimony on freeways, several freeway advocates rushed to testify before the city council on December 19. “However,” the *Star* reported, “the representatives faced an unsympathetic council as they clashed with several lawmakers during the final hearing this morning.”

Harold Wirth of the Rubber and Tire Manufacturers pointed out that only 10 miles of the District’s 29-mile Interstate System had been completed, compared with 75 percent of Maryland’s Interstate network. He called on the District to end the delays, slowdown, and cutbacks and to include funds in the budget for the Inner Loop, Three Sisters Bridge, North-Central Freeway, and the Potomac River Freeway.

He said that businessmen who had moved their operations to the suburbs had told him they would return to the city if the freeway system were completed. When Councilwoman Hayworth challenged that claim, Wirth replied, "They have moved where the freeways are. You have no freeways here. Build freeways and you'll get them back." Wirth cited the automobile dealers who had left the city (from 118 in 1950 to 35 in 1967), but Councilman Nevius said, "I don't agree with you. The car dealers are following their customers who are moving to the suburbs."

According to the *Star*, the "heavy barrage of questions" for Wirth came from Council members Nevius, Thompson, Turner, Haywood, Shackleton, and Chairman Hechinger. Councilwoman Shackleton reminded Wirth that the city council wanted to be responsive to District residents who overwhelmingly rejected the freeways.

Glenn T. Lashley, director of public relations for AAA's District office, told the council that the District ranked 49<sup>th</sup> in obligation of highway funds and had opened only 25 percent of its Interstate mileage. He urged rapid construction of the freeways by 1970 in anticipation of the more than 24 million tourists who were expected to visit the city, 80 percent of them by automobile. Already, traffic across the Potomac River had jumped 73 percent between 1956 and 1966. The Three Sisters Bridge was the "only practical means at hand whereby the Georgetown waterfront can be rehabilitated."

After the public hearing, Nicholas Satterlee of the American Institute of Architects spoke during a session in Chairman Hechinger's office. He urged a halt to allocation of funds for the freeways and advised the council to restudy the District's transportation plans with a goal of a balanced system. He said:

Such action on your part would not be hailed as that of obstructionism. Rather, the council would be assuming its intended role of stewardship over the city's transportation system.

We are convinced that the temporary delay and inconvenience encountered by not building a poorly planned system will be more than offset by gains achieved from building an effective one.

Satterlee promised to provide the institute's recommendations on the freeway network.

At an informal press conference on December 19, Mayor Washington made clear that he would include funds in the budget for the North-Central, Center Leg, and South Leg Freeways. It would not include funds for the Three Sisters Bridge. Deputy Mayor Fletcher said the city was concerned that it would lose the 90-percent funds if the city did not ask for them in the budget without irrevocably committing to their construction. "The final decision has not been made until you let the contracts." [Delaney, Paul, "Highway Backers Battle for Funds," *The Evening Star*, December 19, 1967; "Freeway Funds In Budget Vital, Mayor Declares," *The Evening Star*, December 19, 1967; West, Hollie I., "Mayor Asks Funds for Freeways," *The Washington Post and Times Herald*, December 20, 1967]

*Star* editors stated that Mayor Washington's decision "came at a propitious time," despite the city council's "mixed feelings on the subject." Failing to do so "would constitute an incredible misjudgment of the District's vital stake in gaining a balanced transportation system." Mayor Washington, "who assumed office with little direct exposure to the freeway controversy," was under pressure to curtail freeways, but was wise to insist on "retaining my options," as he put it. In the end, the editors predicted that the facts will result in Mayor Washington's vigorous support for "a reasonable freeway program."

The other fact that freeway critics did not seem to grasp was that there was not the "slightest basis for any belief that local money diverted now from highways might be available for other city needs." District law earmarked revenue from gas and vehicle registration taxes to the Highway Fund to be used for highway expenditures. "They could not be spent for other purposes without a change in the law, and there is no prospect whatever that any such change could win the approval of Congress," which retained approval authority on the District budget and laws. If there was any doubt about that statement, critics needed only consider Chairman Fallon's recent letter to Secretary Boyd or Chairman Natcher's often repeated warning "that he will tolerate no abandonment of the freeway program."

Mayor Washington's explanation "indicates a healthy respect for all these considerations." For the city council to forget that its budgetary recommendations are merely proposals to the White House and to Congress "would place the new city government merely in a position of posturing and most irresponsibly so."

(The editorial did not state that the 90-percent share of funds from the Federal Highway Trust Fund also could not be shifted from Interstate projects to other needs, such as schools. The funds were restricted to use under the Federal-aid highway program.) ["Freeway Funds," *The Evening Star*, December 22, 1967]

On December 20, Chairman Wolff of the Maryland State Roads Commission announced plans to add a fourth lane in each direction to the State's 44-mile portion of the Capital Beltway. He explained that one reason for the project was that Interstate projects in Baltimore were not ready for construction. He was concerned about losing the funds if he did not use them.

A "well-placed source" told the *Post* that the additional beltway lanes across Rock Creek Park might become a factor in the North-Central Freeway battles. Under current plans, that section of the Capital Beltway would carry two numbers, I-495 and I-70S, as a link between I-70S at the Pooks Hill interchange and the I-70S North-Central Freeway interchange.

The source estimated that approval for the additional lanes would be needed from the Maryland-National Capital Park and Planning Commission, the Montgomery County Planning Board, and NCPC. The Maryland planners were expected to approve the widening, but NCPC's views were harder to predict. Chairman Rowe declined to comment in the absence of a formal proposal, but did point out that NCPC always favored the Capital Beltway because it served as a bypass around the city. The source told the *Post* that the defeat of either the beltway widening or the North-Central Freeway "could doom the other." [Angle, Martha, "Maryland to Widen Beltway," *The*

*Evening Star*, December 20, 1967; “I-495 Plan May Affect Freeway,” *The Washington Post and Times Herald*, December 30, 1967]

### **Secretary Boyd’s Response**

During Mayor Washington’s press conference on December 21, reporters asked about his pending meeting with Secretary Boyd. In view of Chairman Fallon’s letter to Secretary Boyd to legislate construction of the freeways, the threat from Chairman Natcher to withhold the city’s matching funds for rail rapid transit, and support from downtown businesses for the freeways, Mayor Washington was under pressure to find a way out of the impasse. He acknowledged that, “this is a very tense, touchy area.” He added, “I don’t have anything formal before me” that required an immediate answer.

Deputy Mayor Fletcher told reporters that the new city government “is certainly going to assert a position” on the freeways but “we’re not about to be stampeded.” Sooner or later, he explained, “we going to have to say this is what we think is the answer.” He knew, however, that when that day came, “the honeymoon will really be over.” [Milius, Peter, “Mayor, Boyd Will Meet on Freeway Issue,” *The Washington Post and Times Herald*, December 22, 1967]

On December 26, Secretary Boyd met with Mayor Washington and Deputy Mayor Fletcher to review the freeway situation. During the nearly 2-hour meeting, they were joined by Secretary Udall, NPS Director Hartzog, former District commissioner Duncan, now a special assistant to Secretary Udall, and Under Secretary Robert Wood of HUD.

After the meeting, participants declined to comment to reporters. However, Assistant Secretary of Transportation for Public Affairs John Sweeney said, “The meeting was held to find those areas of agreement which can be put into words and then reported to the House committee.” He added, “I think we’ve got a pretty good understanding.”

He emphasized that the meeting was not restricted to the Three Sisters Bridge. It concerned the entire freeway question. “I don’t think there is any difference of opinion affecting long-range problems.” He assured reporters that Secretary Boyd would respond to Chairman Fallon by the committee’s deadline. [“Quick Freeway Report Pledged,” *The Washington Post and Times Herald*, December 27, 1967; Delaney, Paul, “Decision on ‘3 Sisters’ By Deadline Is Promised,” *The Evening Star*, December 27, 1967]

On December 28, Secretary Boyd replied to Chairman Fallon. The Secretary explained that the decision on the Three Sisters Bridge was “of interest to other officials of the Government who are concerned about the development of a transportation system in the Washington metropolitan area which will serve the total public interest.” He had met with those officials, he said, listing the participants in his December 26 meeting:

All of us have raised questions about the system which is now proposed. We believe these questions must be thoroughly and quickly analyzed prior to making any final decision on any part of the system, including the Three Sisters Bridge.

Therefore, I must reluctantly inform you that I cannot take any steps that would result in the further processing of the construction plans for the Three Sisters Bridge by December 31.

His brief letter concluded:

I believe that when this analysis of all of the questions has been completed we will be in a position to make final decisions that will satisfy the concern which you and your Committee have legitimately expressed. I know I speak for all of those concerned in the Executive Branch when I pledge you a swift completion of this analysis and a quick submission of proposals.

Reporters immediately sought Chairman Fallon's reaction, but he declined, saying he had not yet read the letter. However, Chairman Kluczynski was ready to comment. He was not willing to accept Secretary Boyd's position that more time was needed. The chairman pointed out that the bridge had been studied for 20 years, with 20 consultants' reports backing the project:

What did he do with the reports – throw them in the waste basket? I'll be darned if I'll let them spend more millions in planning. If they don't do anything by Jan. 15, we will take action.

The second session of the 90<sup>th</sup> Congress would convene on January 15. He was preparing legislation to introduce the following day. "I'm going to poll the whole committee on this. I'm sure the whole committee and everyone in the House will support this legislation." He would begin hearings on the bill on January 22 "and get it on the floor of the House in no time." He added, "There is absolutely no opposition to this bill."

Mayor Washington declined to offer his views on the Three Sisters Bridge or other freeways. He recognized that the segments must somehow link, but acknowledged concerns. He did not want the city to act "until all the views are analyzed," adding, "Anything we do ought to be done expeditiously." [Hoagland, Jim, "Boyd Rejects Three Sisters Bridge Ultimatum," *The Washington Post and Times Herald*, December 30, 1967; Flor, Lee, "Kluczynski Gives Ultimatum To Boyd on 3 Sisters Span," *The Evening Star*, December 30, 1967]

The *Star* was not impressed by Secretary Boyd's response to Chairman Fallon:

Boyd's brief response on Friday was just about as unresponsive as his past performance on the issue . . . . What "questions" require further analysis? Boyd doesn't say, which is hardly surprising. It is difficult to conceive of any legitimate question on this subject which has not been obvious during all the long months the Department of Transportation has been sitting on its hands.

Perhaps Secretary Boyd's procrastination resulted from "a hope that Mayor Washington might be talked into taking the initiative in a move to curtail District freeways." Thus far, the editors indicated, Mayor Washington "has wisely resisted pressures to back him into that corner."

The editors' hope was that Secretary Boyd's "fence-straddling" would serve as "an invitation to proceed with legislation to get the freeway program moving." If so, the Committee on Public Works' action would be "fully justified." ["Unprepared," *The Evening Star*, January 1, 1968]

### **New Year, Old Battles – 1968**

As of January 1, 1968, the District's Real Estate Division had acquired full title for 32 lots, worth \$510,350 in the North-Central Freeway corridor along the railroad tracks between Harmony Cemetery south of Rhode Island Avenue and Taylor Street NE. The division had contracts for another 39 parcels worth \$1.7 million. Offers had gone out for 55 other lots, worth about \$3.7 million. The division also had acquired most of the cemetery at a cost of \$3.4 million. Appraisals were underway on the remainder of the parcels in the corridor. The District estimated that in all, it would need about 295 lots for the freeway to Taylor Street.

Critics such as Kennan of the Committee of 100 on the Federal City wanted the city to withhold its 10-percent share of the purchases, thus ending the acquisition process. Although the purchases had begun when the District commissioners were in office, Kennan said Mayor Washington had supported the North-Central Freeway by allowing the acquisitions to continue.

Kennan also accused the House Public Works Committee of hypocrisy in urging the Department of Transportation to approve construction of the Three Sisters Bridge:

The House Public Works Committee has no business addressing itself to local highway problems – its role ought to be that of overseer of the national highway program.

The works committee is acting contrary to the whole spirit of the highway program, that highway aid is on a reimbursement basis, and is not based on dictation from the federal level. In addition, the works committee's action is outrageous because the committee has not heard all sides of the highway dispute.

Because the District was considered a State under the Federal-aid highway program, Kennan said that even if Congress passed legislation ordering construction of the bridge, the city council had the power to decide against doing so.

Kennan also challenged Chairman Kluczynski's claim that the committee would hold hearings to hear all viewpoints. The committee has already decided what it would do before hearing from critics. [Flor, Lee, "Council Weighs Freeway OK, But D.C.'s Buying the Land," *The Sunday Star*, December 31, 1967; Flor, Lee, "Freeway Foe Hits House Unit's Stand On 3 Sisters Span," *The Evening Star*, January 1, 1968]

During a 2-hour closed meeting on January 2, District officials discussed whether to halt the acquisitions. Council Chairman Hechinger told reporters "we are still looking into it." However, at a later press conference, Mayor Washington denied to reporters that the matter was an issue at all. The acquisitions had been ordered by the District commissioners; the new government could not do anything about past contracts and acquisitions. ["District Defends Buying Of Land for Freeway," *The Evening Star*, January 3, 1968]

On January 3, the city council met to consider Mayor Washington's proposed budget, including continuation of funds for freeways. The *Star* characterized the discussion of the freeway funding as a first for the city council:

During debate on highway allocations, the councilmen engaged each other in arguments for the first time in their two-month history. Heretofore, they have gone to great lengths to keep everything harmonious.

However, harmony within the council lost out to harmony within the city government yesterday.

Councilman Nevius had headed the two-member subcommittee, with Councilman Anderson, that reviewed the freeway budget proposal. Speaking for the subcommittee, Nevius said that 700 middle-income families would be displaced by the North-Central Freeway and they would not receive sufficient compensation that would allow them to buy comparable homes elsewhere. Unlike the middle-income families, the low-income families that were displaced could at least expect help in relocation from RLA. In all, 89 businesses would be acquired.

He said the council had three choices: accept the budget, reject it, or leave the Mayor's options open while advising him to convene a planning team, similar to Baltimore's Urban Design Concept Team, to review the plans. He did not say he supported the options or formally offered them for consideration. However, he said, "I don't think any responsible person will deny there is a need for connecting links to the outer perimeter of the city." With 20 years of planning and \$20 million also invested, "The D.C. government has very little power to change what's already been done." Moreover, Nevius said, "The mayor has indicated he would veto the budget if highway funds are taken out."

Mayor Washington had emphasized that in seeking the funds, he was not taking a position for or against freeway construction. He was, as he had said, "leaving open my options." Eliminating the funds would be taking a position and he did not want to do so at this time. Councilman Turner, who was involved with the Highway Users Conference, led support for the budget proposals. He did not state support for the freeways, but argued that Mayor Washington should have a free hand rather than dividing the city government:

You don't sink half the ship, you sink the whole ship. When we have a champion performing as the Mayor is performing, I think the least we can do is give him support.

In the end, the city council voted 5 to 4 to approve an amendment by Chairman Hechinger in support of the funding. The amendment called for use of the "planning team concept" to restudy the network. It also called for Mayor Washington to report back in 30 days. In supporting the Mayor's proposal, Chairman Hechinger was joined by council members Haywood, Thomas, Turner, and Yeldell.

Council members Anderson, Fauntroy, Nevius, and Shackleton opposed the amendment. Anderson and Shackleton did so because they thought the freeway program should be

reevaluated. Shackleton said the council had a responsibility to the people who had made clear they opposed the freeways.

Vice Chairman Fauntroy opposed the amendment because he wanted to kill the North-Central Freeway. He wanted the land already acquired for the freeway to be sold back to the previous owners if they wanted it. He asked Chairman Hechinger what could be done if Mayor Washington's report did not satisfy the council. The chairman replied, "We could take the highways right off the map since we have to approve urban renewal and street closings. It's our ultimate authority that we could delete them right off the map – if we have the legal right. [West, Hollie I., "Divided Council Leaves Freeways Up to Mayor," *The Washington Post and Times Herald*, January 4, 1968; "Council Supports Mayor on Roads," *The Evening Star*, January 4, 1968]

Although neither Mayor Washington nor the city council claimed their actions meant they supported the freeways, ECTC wanted to make sure its views on the North-Central Freeway were known. Despite 25-degree temperature, ECTC arranged for 50 or so picketers in front of Mayor Washington's home at 408 T Street, NW. Picketers came from ECTC, the Brookland Civic Association, and civil rights groups, including Marion Barry of Pride, Inc. Signs included:

- Mr. Mayor: Stop Walking . . . Start Acting! Stop the Freeways
- Mr. Mayor: What OPTIONS do displaced Negroes have?

Another sign informed Mayor Washington that "the honeymoon is over."

After about 40 minutes, Mayor Washington came outside to talk with the protesters. The protesters demanded that Mayor Washington immediately halt acquisition of property for the North-Central Freeway. They told him the city's highway department was "harassing and intimidating" homeowners to get them to sell. Chairman Pryor of the Brookland Civic Association said he was one of the residents being harassed. Highway department officials had called him repeatedly during the past week trying to set up an appointment to negotiate purchase of his home. He told the mayor, "Our home is not for sale." He added that the city was offering "much too little" to acquire similar homes.

Louis Florento, a white resident of Taylor Street, NE., told the mayor, "I can move to Maryland if the freeway comes through, but my black neighbors have no option."

Mayor Washington replied that the acquisition program began in 1966. "This is not my problem," he said, but added, "I'm making it my problem."

ECTC's Sammie Abbott, who still lived in Takoma Park, Maryland, confronted Mayor Washington, as reported in the *Post*:

Washington: "I have hope that in the days ahead we can do something about the total situation."

Abbott: "What's the total situation?"

Washington: "If you wanted to know, you would have asked the question in another way."

Abbott: "We're going to be here for a long time."

Washington: "I've been here for 50 years and I don't think I'm going anywhere, not even in Maryland."

Later, Mrs. Abbott said that, although residents of Maryland, the Abbotts would be affected by the freeway.

Barry asked the mayor about his feelings on freeways and urban renewal, which he called "urban removal." Mayor Washington replied, "I'll give you my feelings in time."

Before returning to his home, Mayor Washington said he would "make a run" through Brookland to sound out citizen feelings and meet with them in a week. [West, Hollie I., "50 Picket Mayor Over Freeways," *The Washington Post and Times Herald*, January 8, 1968; Spencer, Duncan, "Mayor Picketed at Home," *The Evening Star*, January 8, 1968]

### **Secretary Boyd on Political Clout**

Secretary Boyd discussed the North-Central Freeway when he appeared on WTOP's television program, "Capital Conversations," on January 14. He said he had refused to approve the freeway because the location had been determined not by "where the traffic wants to go":

All the traffic surveys say it should be built along the Wisconsin Avenue corridor. But the people who live along Wisconsin Avenue or have businesses there have much more political clout than the people on the other side of town.

He recalled efforts to build the freeway along the Potomac River shore:

But it was pushed eastward and eastward until political opposition was insufficient to stop it.

He acknowledged that political pressure could not be avoided entirely. "I'm not kidding myself about that at all." However, "We must do better than taking the property of all the poor people and leaving alone people with political pull." The current plan "would displace poor people, Negroes, even though that's not where the highway ought to go."

Highways could be built "to compact themselves reasonably well" through neighborhoods if the air space was used for homes and businesses that would be displaced. "We should not just tear up the homes of poor people and Negroes. We ought to make a determined effort to put freeways where traffic wants to go."

As for the Three Sisters Bridge, he would continue to oppose it until he knew "what's going to happen to the traffic" using it. At present, "there is no provision for a distribution system" to carry the traffic through the northwest section of the city. He understood the "impatience" of

Chairman Kluczynski and others, but he would not approve the bridge until he was certain how it “fits into the District’s highway system.” He would, however, continue to discuss the bridge with Mayor Washington and the city council. “Decisions affecting local transportation should be made locally.”

Secretary Boyd also opposed plans for a tunnel under K Street between Whitehurst Freeway and the Center Leg Freeway. He said that without exits, the tunnel would be “a multi-million dollar or multi-hundred million dollar tomb.” He added, “It doesn’t make a bit of sense to tear up that major artery for several years with no way to get traffic in and out of the tunnel.” [Feinberg, Lawrence, “Boyd Charges Freeway ‘Politics,’” *The Washington Post and Times Herald*, January 15, 1968; Sarro, Ronald, “Boyd Says Politics Sets Freeway Path,” *The Evening Star*, January 15, 1968]

Secretary Boyd’s comments infuriated Representative Gude, who took to the House floor to criticize Boyd’s “incredible compendium of contradictions in defense of his opposition to Washington area freeways.” His reference to traffic surveys favoring the Wisconsin Avenue corridor over the North-Central Freeway corridor “ignores the fact that some experts have said both are needed, as he would know, had he not studiously isolated himself from local freeway experts.” His comment about “where the traffic wants to go” ignored the “paralysis” that would result if the North-Central Freeway were not built.

Decisions on freeway locations in the District were the result of “years of debate” that Secretary Boyd “dismissed as the product of ‘political clout’” even though “in the next breath” he insisted that “decisions affecting local transportation should be made locally”:

He crowns this absurdity by his own moves to block the Three Sisters Bridge, and his own attacks on local freeway planning, of which this morning’s article [in the *Post*] represents the most recent example.

Secretary Boyd’s comments about tearing up the homes of poor people and Negroes were “irresponsible demagoguery” and contradicted his own comments about how air rights could provide better housing for those displaced:

Such statements hardly contribute to the local decisionmaking process by Mayor Washington and the new District government. Just last month Mr. Boyd was talking about converting a park along the Potomac into an interstate highway. One can only wonder what he will recommend next month. [Washington Area Freeways, *Congressional Record-House*, January 15, 1968, pages 17-18]

*Star* editors agreed with Representative Gude. Secretary Boyd’s performance, the editors stated, “would be hard to top for pure demagogic irresponsibility.” His history of the shift of I-70S from the Wisconsin Avenue corridor to the North-Central Freeway “is a flagrant distortion of the history of the North-Central Freeway.” Further, “its racial implications are the most unconscionable of all.” While “political pressures from a variety of sources” played a role in foreclosing construction of the freeway west of Rock Creek Park in the 1950s, traffic studies

“were showing conclusively that the primary freeway needs then, as now, were not along Wisconsin Avenue but east of the park”:

The fact is that the officially-approved transportation plans of those days accordingly gave the highest priority to freeways east of the park *in addition to* relatively modest proposals on the west – not in lieu of them.

Either Boyd is unaware of these facts – which is hard to believe since many of his present subordinates were parties to those previous plans – or he is misrepresenting them deliberately.

Either way, his contention that the growing population in the Silver Spring-Wheaton area who would use the North-Central Freeway would prefer to use a freeway west of Wisconsin Avenue “is patently absurd.” In trying to force the District “to embrace – as its program – his own fallacious conclusions” was “a no less reprehensible game of politics” than the alleged political clout he described:

Washington’s freeway program has stagnated primarily because of the obstructionist tactics of a handful of federal officials who are philosophically opposed to urban freeways. When the new Department of Transportation was created, there were high hopes that its chief, as a cabinet-level coordinator, would get things moving. Boyd, instead, has proved to be a Secretary of Anti-Transportation, and one wonders how much longer the White House will permit this intolerable situation to continue. [“Boyd’s Distortions,” *The Evening Star*, January 18, 1968; italics in original]

As described in the *Star*, Mayor Washington and Assistant Mayor Fletcher met with more than 400 “angry” Brookland residents on January 16 at St. Anthony’s School. The residents complained about the pressure from city highway officials to acquire property for the North-Central Freeway. Highway officials, Gallaudet College Professor Leonard P. Siger said, had signed “death certificates” for 44 homes, with acquisition underway for 287 more.

The mayor told them he had inherited “complex legal issues” that would have to be solved before the city could build or abandon the North-Central Freeway. He said he could “do no more at this point than pledge my support to respond quickly to this sordid situation.” He could not call for a moratorium until the U.S. Court of Appeals resolved the legal issues. He recommended that Brookland citizens associations form a committee to meet with city officials on individual acquisitions.

As the 2-hour meeting was nearing an end, Sammie Abbott jumped on the stage, pointed at the mayor and charged that he was not using his “political clout”:

The mayor, visibly disturbed, stood up and retorted, “I can’t come out in an open meeting and solve all legal problems. I came out here to listen and to understand. No other city commissioner has done that.”

Washington added that he has met “almost daily” with U.S. Transportation Secretary Alan S. Boyd, who is reviewing the freeway issue . . . .

Fletcher commented: “We can promise you we are up to our antlers in this issue. We have a complex legal problem in finding what we can do on a decision made by a previous government.” [Gregory, John, “Can’t Halt Freeway Land-Buying, Mayor Tells Angry Group,” *The Evening Star*, January 17, 1968]

Potomac Watch columnist William Raspberry wrote that while Mayor Washington had included freeway funds in his proposed budget to keep his options open, Secretary Boyd’s comments were making those options “less attractive every day.” The mayor had “made some brilliant moves in his short term,” but for the first time was “stuck with a situation where there is no right move.”

Raspberry agreed with Secretary Boyd’s summary of how the freeway shifted east of Rock Creek Park, but during that time, Mayor Washington was running the city’s housing program. Now, with all that history behind the North-Central Freeway, he became mayor “too late to do much about the planning of the freeway but in perfect time to catch the flak that is certain to fly as soon as he makes any decision at all.”

He apparently had hoped to delay a decision until Secretary Boyd “took it out of his hands.” Then came the Sunday interview program, during which Secretary Boyd said decisions should be made locally, thereby declining “to take the Mayor off the hook.” Secretary Boyd planned to work with Mayor Washington and the city council but “he made it clear that he would leave the decision to them.”

Although shifting the freeway to northwest where it once was would “remove the specter of a government picking on poor folk and Negroes,” it would nevertheless dislocate many people and businesses. “What is needed, really, is a restudy of the entire freeway system, but it is awfully late in the day for that”:

Mayor Washington’s best bet may be to ignore them altogether and rely on his own judgment as to what is best for the city as a whole.

It must be small comfort for him to know that whatever he does – or fails to do – will be wrong. [Raspberrrt, William, “The Mayor Can’t Win On Freeway Decision,” Potomac Watch, *The Washington Post and Times Herald*, January 17, 1968]

## **The GW Link**

Representative Gude arranged a January 3 meeting with Nash Castro, the new NPS regional director, at the dead end of the George Washington Memorial Parkway near Chain Bridge.

Castro agreed to support a 1,300-foot ramp connecting the end of the parkway to MacArthur Boulevard, which the U.S. Army Corps of Engineers owned. The ramp would link the parkway from about 200 feet east of the Little Falls pumping station to the boulevard at Maryland Avenue in the Brookmont subdivision. The Maryland Avenue link was critical because it would remove traffic from the western end of the boulevard that was threatening to crush the underground conduits. The Corps, which had previously agreed to the plan, would strengthen the boulevard at the site of the ramp, but would not have to strengthen the remainder of the boulevard into the city because the conduits were not under that part of the roadway.

The NPS, still unwilling to pave the parkway link until it knew the fate of the Palisades Parkway and Three Sisters Bridge, would gain from the plan. Maryland traffic that was crossing the Potomac River to use the parkway on the Virginia side before crossing into the District, and vice versa, would now have an outlet in Maryland. Castro estimated the ramp, plus some culvert work, would cost \$170,000, a sum he would seek authority for from Congress.

The Federal Government owned most of the land for the ramp, but D.C. Transit System owned a portion that had been used for its abandoned Cabin John trolley line. Representative Gude said he would work with Castro to secure approval from O. Roy Chalk for an easement. Castro would seek NCPC approval for the project.

All parties agreed the ramp would be a temporary substitute for extension of the “parkway to nowhere.” When the freeway fights were resolved, they would plan a permanent end of the parkway.

On January 11, Representative Gude brought NPS and the Corps together to formally agree on the plan, subject to securing the easement from Chalk and approval by NCPC. [“Agencies Agree on GW Link,” *The Washington Post and Times Herald*, January 4, 1968; “Ramp From MacArthur To Parkway Endorsed,” *The Evening Star*, January 4, 1968; “2 Agencies Agree on Parkway Ramp,” *The Washington Post and Times Herald*, January 12, 1968]

The *Star*’s editors applauded Representative Gude’s initiative. “How he did it we’ll never know,” they wrote. The parkway had been finished except for the section that was “utterly inaccessible to anyone” because of “the interminable, asinine fuss over a Three Sisters Bridge.” They applauded Representative Gude for two reasons, one of which was the obvious one “that any further use of the parkway is better than nothing.” The other reason was that once the ramp opened, “one of the jumbo traffic jams of all time will occur on MacArthur Boulevard, especially in the area of Foxhall and Canal Roads.” They hope that “the ensuing howls of anguish in that event should apply some much-needed pressure on Secretary Boyd to settle the silly freeway dispute.”

The *Post* agreed that the link between the “parkway to nowhere” and MacArthur Boulevard “would provide some relief,” but was “a poor substitute for linking this parkway with the yet-to-be-built Palisades Parkway in the District.” The editors warned that, “Serpentine MacArthur Boulevard is no rational alternative. Somehow the seven-year war over the proposed Three Sisters Bridge must be brought to a head so that the essential Palisades Parkway may be speedily constructed.” [“Road to Somewhere,” *The Sunday Star*, January 7, 1968; “Poor Substitute,” *The Washington Post and Times Herald*, January 8, 1968]

## **Work Group Reports**

On January 13, Mayor Washington released the reports of the national work groups he had assembled to explore District issues. He said of participants in the five groups, “It would be difficult for me to overstate my appreciation for their work.” However, “no action has been taken on these proposals. All of our decisions lie ahead.” Inevitably, “some of the suggestions will be accepted, some rejected, and others adopted in some modified form.” Overall, the reports

provided “a package of fresh and stimulating ideas for attacking the city’s major urban problems.”

He emphasized that the reports were “not going to be filed and forgotten”:

Nor are they going to be fed into some slow-grinding municipal machinery, where they will yellow with age before decisions are made.

Instead, using our best resources for analysis and evaluation, we will move as swiftly as possible to make maximum use of all feasible proposals within the range of our possibility and capability.

We are, of course, hoping and expecting to hear from the citizens on these work group reports. The reaction from the community will provide us with an additional valuable tool to weigh and measure the value of these ideas.

The transportation work group addressed the planning problem by recommending that power over freeways and transit should be taken away from NCPC and centralized under the mayor and city council. The city should create a Department of Transportation to carry out the mayor’s and city council’s decisions. The new department would include the parking, motor vehicle, and highway and traffic departments. It would review and study proposals, but would not have veto power.

The department would not include WMATA, which had areawide responsibility. However, the work group suggested that the department assume some responsibility for transit, comparable to transit commissions in other area jurisdictions. At present, the District did not have a transit agency or even a single transit staff official to consider rail rapid transit plans.

The group’s other recommendations included:

- Establish a traffic management center that would, among other things, use computers to adjust traffic signals to speed traffic;
- Develop a continuous planning process that would use transportation decisions to help control city development;
- Use freeway air rights over freeways for housing;
- Create a parking authority to establish and run lots and garages on public and private land, including under the National Mall; and
- Establish a public relations program to bring citizens closer to planning and transportation decisions.

Overall, the work groups addressed “disorganization and fragmentation” by proposing creation of four super agencies. In addition to the department of transportation, the groups proposed agencies or departments for environmental protection, housing and community development, and human resources. Liaison with Federal agencies would be handled by an Office of Metropolitan and National Capital Affairs. [Flor, Lee, “Experts Urge City Control Of Freeway, Transit Plans,” *The Sunday Star*, January 14, 1968; Sarro, Ronald, “New Powers for D.C. Mayor, Four Super

Agencies Proposed,” *The Sunday Star*, January 14, 1968; “Summary of Task Force Reports on City Woes,” *The Washington Post and Times Herald*, January 14, 1968]

### **The 1968 Interstate Cost Estimate**

On January 12, Secretary Boyd submitted the 1968 ICE to Congress as the basis for adjusting the apportionment formula for Interstate construction funds.

The 1965 ICE had estimated the total cost of the Interstate System was \$46.5 billion (Federal share: \$42 billion). The 1968 total was \$56.5 billion (Federal share: \$50.6 billion). Counting all funds used thus far or authorized but not yet expended, FHWA would need an additional \$18,689,119 to complete the Interstate System to full standards.

The difference of \$9.7 billion was attributed to several factors:

- A \$310 million allowance for reserve mileage totaling 31 miles that had been estimated in 1965 at \$5 million per mile, an increase of \$155 million;
- An increase in the allowance for State highway and Public Roads planning, administration, and research and for contingency items;
- Change in cost due to the increase in unit prices;
- Additional interchanges and grade separations, plus improvements in design of ramps and structures;
- Additional lanes, including lanes added as a result of a provision in the Federal-Aid Highway Act of 1966 requiring all segments to have a minimum of four lanes;
- Extra pavement structure on earlier opened sections to accommodate design year traffic;
- Added landscaping, erosion control features, roadside rest areas, and rest facilities;
- Additional safety features on segments under construction, including flatter slopes, wider bridges, additional guardrail, safety posts, and light standards;
- Added safety features on segments previously opened
- System additions and replacement of segments.

Secretary Boyd, in transmitting the estimate to Congress, said, “These estimates . . . represent the best coordinated engineering judgment in this important matter.” [The 1968 Interstate Cost Estimate, Letter from the Secretary of Transportation, Committee on Public Works, U.S. House of Representatives, 90<sup>th</sup> Congress, 2d Session, House Document No. 199, January 15, 1968]

The District’s 29-mile Interstate System had increased from a total estimate of \$545.6 million to \$772.2 million. To complete it, the District would need \$506.7 million, compared with \$408.6 million in 1965.

Maryland’s estimate of the total cost of its Interstate routes was \$1,017 billion, up from \$780 million in 1965. The State had estimated in 1965 that it needed \$524.5 million to complete the network, but in 1968 estimated it needed \$632.9 million.

Virginia’s total estimate had increased from \$1,401 billion in 1965 to \$1,567 billion in the 1968 ICE. However, the amount needed to complete the State’s network had decreased from

\$807.3 million in 1965 to \$684.2 million, reflecting progress on rural segments. [Flor, Lee, “Cost Estimates Soaring For Interstate Roads,” *The Evening Star*, February 5, 1968]

In January 1968, Lee Flor in the *Star* and Jim Hoagland in the *Post* provided readers with summaries of the District’s transportation situation. Flor told readers that, “so many governmental agencies are making decisions about local transportation that it is almost impossible for the public to check these decisions.” He estimated that about \$2.4 billion was planned for the rail rapid system and about that much for highways and buses:

This year, some tough decisions will be made about rapid transit. The Washington area freeway program, already in trouble, may be cut back in a final settlement of disputes which have raged over the years.

Referring to the 95.6-mile rail rapid transit system identified in October 1967, Flor said that WMATA wanted to hear from the public before making a final decision in March on the scope of the network:

The March deadline is important, because Congress this year will be asked for about \$60 million in federal aid, plus about \$29.4 million in direct grants from the District . . . .

If the interstate authority [WMATA] gets clearance and funding from Congress, it wants to break ground for its first subway construction at the proposed 8<sup>th</sup> and G street site or the Judiciary Square station (at E and 5<sup>th</sup> Streets NW). The contract is to be awarded in October, with groundbreaking ceremonies following shortly.

The start would be for the 25-mile system Congress had approved in 1965. For the total system, WMATA expected to issue \$810 million in guaranteed revenue bonds to be repaid from the farebox. “If the number of riders does not come up to expectation, the cities and counties will be responsible for paying off some of the revenue bonds.” If revenue exceeds expectations, the balance would be used to retire the bonds sooner. In addition, WMATA expected to receive \$1.1 billion in Federal transit aid and about \$535 million from bond issuances by local jurisdictions:

At any rate, this year is the “make or break” year for the rapid transit system.

In 1967, most of the “news about freeways was bad – delays, little progress.” The new city council’s support for freeways in the budget was “lukewarm,” while Secretary Boyd had declared several segments “unwise.” A fight had erupted between Secretary Boyd and the House Committee on Public Works over the Three Sisters Bridge and the other segments. “The National Capital Planning Commission, which now has enough anti-freeway votes to block the bridge and the controversial freeway projects, also is on the spot”:

However, the District is proceeding with its Center Leg freeway as far north as H Street NW, between Second and Third Street NW. Also, the District is working on some bridges on the North Central Freeway, and is tying the Southeast Freeway into the Eleventh Street bridges across the Anacostia. [Flor, Lee, “More Decisions Than Speedup Likely in Area Transport,” *The Sunday Star*, January 7, 1968]

Hoagland began his summary:

The District's 20-year war over interstate freeways appears to be entering its most decisive stage.

Highway officials were pushing for approval of the basic network that Director Airis called "essential . . . to keep pace with the growth of the District." Opponents questioned parts of the 29-mile system and were "attacking many of the basic assumptions on which the system is planned." About the only thing everyone agreed on was "that the conflict must be settled now if an orderly transportation system is to be provided for Washington in the future."

He recalled the May 1966 agreement to move forward, followed a year later by NCPC's decision to ask Secretary Boyd if the Three Sisters Bridge was needed. His decisions, revealed during his testimony before the House Subcommittee on Roads, were "taken as an affront by the District Highway Department, which complains bitterly that \$20 million has already been spent studying the system." The dispute left Mayor Washington "the target of opposing pressures" from both sides, with citizens threatening to use their bodies to block bulldozers.

District highway officials believed the time for study was running out. They predicted a doubling of the metropolitan area's population and "that, on past performance, this means traffic on Washington's already congested streets and bridges will double in the same period." Without the new freeways, "chaos will ensue, the [Highway] Department warns."

The Department of Transportation questioned the prediction and the assumption that "anyone in the city should be able to drive at 50 or 60 miles an hour at any time," an assumption that would require "much more concrete than is good for the city":

The Highway Department counters with statistics – and rush-hour photographs – showing that traffic from the suburbs into Washington is already choking existing roads beyond their capacity.

New, ineptly planned roads will aggravate, not solve that problem, Transportation Department aides reply. Boyd says that new roads create traffic, like a vacuum cleaner sucking in dirt.

Actually, the rapid rail system of Washington has been the principal hostage of this freeway war. In 1966, members of the House threatened to kill the proposed subway unless freeways got the go-ahead.

They got it, and the subway system is still alive. But so is the threat of retaliation against the rapid rail forces if the House District Committee decided the freeway system is being slowed.

District highway officials predicted that if they could get started now, they could finish within the 1973 deadline for the Interstate System. Beyond 1973, the District runs the risk of losing 90-percent Federal funding for the freeways. "By then, the subway system would be half finished in the downtown area and thus able to stand on its own." As Hoagland pointed out,

“There is considerable doubt that Congress will actually shut off the interstate system in 1973. It could easily be extended, Department of Transportation experts say”:

They add that cities don't have to take the 90 per cent money just because it's there. The money, they say, could, in effect, ruin a city by speeding traffic through it.

It is with these weapons of conflicting ideas, statistics and assumptions that the battle over specific parts of the freeway system is being fought. The skirmish line is the Three Sisters Bridge.

Airis, Hoagland wrote, was proud that the Commission of Fine Arts had praised the bridge's design, which would span the river between the Key and Chain Bridges without displacing any families. Secretary Boyd argued that the bridge would displace trees and 50 acres of parkland, citing Secretary Udall's conclusion that the bridge was “a major threat to the scenic value” of Potomac Palisades. Airis pointed out that the bridge would take only 5 acres of parkland in the District, and those acres would be replaced although not necessarily in the same area. “From this narrow argument, both sides escalate their cases for and against the bridge, and other disputed segments.”

Airis argued that by 1990, cross-river demand would reach 34,000 vehicles an hour during peak periods, but even with the Three Sisters Bridge, capacity would equal only 30,700 vehicles an hour. Transportation aides pointed out that the four traffic studies the District used for those estimates differed by as much as 30 percent.

Further, District officials did not know what would happen to the traffic leaving the bridge. Building the bridge before decisions were made on traffic outlets would, as Secretary Boyd had said, transfer the traffic jam from Virginia to the District:

Airis derides this as a “chicken-or-the-egg” argument. He says plans for the bridge are more advanced than for a cross-town link for interstate traffic. “When we know where the ends of the systems are, we can nail down the center,” he said.

Department aides clearly fear what the center might be. Whatever its location, the route's designation will be the “North Leg.” Its purpose will be to funnel interstate traffic from Virginia into the Inner Loop, a tiny beltway in downtown Washington and part of the interstate system.

The North Leg has been an even more controversial part of the system than the bridge and is to many the real key to the lingering freeway dispute.

Hoagland summarized the shifting location of the North Leg. Congressional opposition had killed the expressway through Glover-Archbold Park. The substitute, along Florida Avenue and S and T Streets, NW, would have displaced 10,000 people as well as businesses and “would have sliced a corner off the prestigious Cosmos Club.” The May 1966 compromise resulted in shifting the North Leg Freeway to a tunnel under K Street, NW., from 26<sup>th</sup> Street to Mount Vernon Square at 9<sup>th</sup> Street, to a connection with the Inner Loop.

Secretary Boyd, who opposed the Florida Avenue and Glover-Archbold Park routings, argued that without them, the Three Sisters Bridge was an anachronism. “But he is also convinced that the K Street tunnel is unworkable, and that the Highway Department will have to abandon it.” Building the Three Sisters Bridge would be “like pointing a gun at the head of Northwest Washington” and give the city leverage to revive the Glover-Archbold Park and Florida Avenue routing:

That is not so, Airis replies. Neither route would be any more politically feasible after the building of Three Sisters than it is now, he argues. To him, both plans are dead and Three Sisters has nothing to do with them.

The sides disagree on the importance of the bridge to speeding traffic to and from Dulles International Airport. The city argued that the combination of the bridge and I-66 would cut 30 minutes off the 55-minute trip between the airport and downtown Washington:

Boyd’s aides point to the map, trace a finger over the Theodore Roosevelt Bridge, along Interstate 66 and the [Dulles] access road. This route will take two to three minutes longer than the Three Sisters route, they assert. Airis doesn’t agree, saying Roosevelt Bridge will become choked if Three Sisters is not built.

He also argued that without the Three Sisters Bridge and I-266, I-66 would need 10 lanes:

Traffic experts in the Bureau of Public Roads doubt that ten lanes would ever be built in Rosslyn, or that such a need will materialize.

Further, transportation aides argued that 60 percent of traffic leaving the bridge would be destined for the northwest quadrant or the Maryland suburbs west of the District:

That means the K Street tunnel would be useless to them, Boyd’s aides say.

The tunnel would provide no exits between 26<sup>th</sup> Street nw. and the Center Leg of the Inner Loop, near the Capitol. That’s fine if you want to avoid Washington’s downtown, but not so good if you’re coming from Virginia to shop, work or tour downtown, Boyd says.

Boyd agrees that a cross-town link is needed. Without it, the rest of the interstate system already built here, or which is not disputed, would be a white elephant, he concedes.

Critics also argued that business owners along K Street would never tolerate the disruption that building the tunnel would cause:

This argument angers Airis. “I’ve been an engineer for 40 years and I can assure you we can build the tunnel so as not to disrupt the commercial district,” he said.

Secretary Boyd had not endorsed any routing for the North Leg Freeway:

Some of his aides earlier mentioned tying the existing E Street Expressway into the Pennsylvania Avenue Commission's proposal to tunnel under the Ellipse and run the Expressway into downtown.

But Airis contends the E Street plan is unfeasible. He says the existing Expressway is already a heavily traveled feeder road that could not handle crosstown traffic, that the right-of-way needed could not be obtained along and under E Street without knocking down new, large buildings and that grading makes a depressed highway beyond the Ellipse impossible.

One argument for extending the E Street Expressway was that it would help accommodate traffic generated by the new southwest:

Getting them to and from there is the chief justification for the one segment of the freeway system that Boyd says should not be built in any case – the South Leg tunnel.

The mile-long South Leg tunnel connecting the West Leg Freeway with the Southwest Freeway would cost \$100 million or \$10 million a mile. The link could be provided at a lower cost, but NCPC, the Commission of Fine Arts, and others objected on aesthetic grounds:

Even so, it leaves some major engineering problems that have not yet been solved to the Fine Arts Commission's satisfaction – chiefly, how to provide an exhaust shaft without putting it near the Lincoln Memorial and how to save the trees near the Memorial that would be endangered by the tunnel.

Airis dismissed the cost argument against the South Leg Freeway, saying it was “no more proportionately” costly than the eight-lane, half-a-mile long tunnel carrying the Center Leg Tunnel under the Capitol grounds.

Secretary Boyd and BPR pointed out that traffic from the South Leg tunnel and the new 14<sup>th</sup> Street Bridge span would jam the Southwest Freeway that “already is what they call a ‘turbulent’ area, especially at the 12<sup>th</sup> Street and Maine Avenue exits.” As a result, the South Leg Freeway tunnel would provide only “marginal improvement” at a high cost.

Cost and safety were among the reasons why Secretary Boyd also opposed the North-Central Freeway. As with the South Leg Freeway, the high cost of the North-Central Freeway – \$193.5 million or about \$25 million for each of its 8 miles at a time when BPR considered \$10 million a mile “a reasonable price” for urban freeways – was not a result of engineering decisions. “The Highway Department says it has leaned over backward to reduce the displacement of families – cutting the original estimate of 2194 displaced families to 532.”

Secretary Boyd claimed that the North-Central Freeway would be dangerous because it would connect with the Beltway's most dangerous section – the hook between Georgia and Wisconsin Avenues. “Airis has an answer – straighten out the hook, and widen that part of the road.”

Even if that were done, Secretary Boyd pointed out the danger of forcing six lanes of traffic from the North-Central Freeway and six lanes of traffic from the Northeast Freeway into a junction

with the eight lanes of the North Central Freeway near Fort Totten Park. “That’s 12 lanes of traffic whizzing along at 60 miles an hour trying to squeeze into eight, according to Boyd.” The city planned to siphon two lanes of traffic away the Northeast Expressway before it reached the junction, for example by routing the two lanes of traffic under the North-Central Freeway for a link to North Capitol Street, NW.

They North-Central Freeway, highway officials argue, also was needed to keep truck traffic off local streets. Transportation Department aides countered that most of that truck traffic was local and would be on those streets anyway.

Hoagland added:

Boyd has not challenged the Northeast Expressway or the section of the North Central Freeway that continues to the Inner Loop after the Fort Totten Park junction. It is exactly this segment that is the most controversial issue to face the new city government.

Many residents of Brookland, just east of Catholic University, feel the road would shatter one of the city’s most racially heterogeneous neighborhoods. They voice resentment because this road, which originally was to go through Georgetown, has been shifted east into a less affluent area.

Although the freeway survived the preliminary vote in the city council on the FY 1969 budget proposal, “opposition was expressed.”

Highway supporters resented Secretary Boyd’s criticism, but were just as bitter over his alternatives. As an alternative to the Three Sisters Bridge and North-Central Freeway, he favored construction of the Palisades Parkway as an extension of the George Washington Memorial Parkway. The parkway would connect with the Potomac River Freeway, “already partially under construction at 31<sup>st</sup> Street.” This route, Boyd suggested, would carry the I-70S designation presently assigned to the North-Central Freeway and would be built with 90-percent Interstate funds. The Palisades Parkway would be four lanes wide; to avoid damage to the Potomac Palisades, six lanes could not be built:

Making the Palisades a part of the interstate system would, however, give Boyd more leverage in his reported desire to see limited truck traffic on this road.

By opening the Parkway to trucks and also routing them across the Theodore Roosevelt Bridge, which would become part of Interstate 66 in Virginia, Boyd would take some of the sting out of the argument that the North Central and Three Sisters are needed for trucks.

Publicly, Secretary Udall had not said that he would allow trucks on the George Washington Memorial Parkway or the Theodore Roosevelt Bridge, “but he has said so privately”:

Truck traffic is now barred from the Parkway because, according to the Park Service, the road will not support the weight of heavy trucks and buses. The already constructed part of the road would have to be reinforced for heavy trucks.

Udall would also face the charge of “breaking promises” in opening up the Parkway and the Roosevelt Bridge to trucks. But he can counter that opening Roosevelt to trucks has already been endorsed by the Policy Advisory Committee, in its agreement that cleared the way for the freeway system.

Airis would prefer to retain the restriction on truck use of the Theodore Roosevelt Bridge, which was “already congested and cannot handle truck or increased car traffic that failure to build the Three Sisters Bridge would aim at it.”

In closing his summary of the freeway battles, Hoagland returned to the North-Central Freeway, which was designed to meet needs in the northern quadrants of the city between the Baltimore-Washington Parkway and the Potomac River. Based on projections, the city needed 24 to 26 new lanes to accommodate traffic:

The North Central and Northeast Freeways would provide a total of only 14, meaning that there would still be congestion and that the idea on which the need for the new roads is based would not be met. Both the Department of Transportation and Airis agree that 24 lanes of highways cannot be built down that corridor.

This means, the Transportation Department suggests, that a new set of criteria should be found. These criteria give weight to displacement, aesthetic and other urban factors, along with traffic demand.

“Under that argument, you’d never built a highway,” says Airis. “Our assumptions here are the same ones on which the entire interstate system is based. They may not be perfect, but nobody’s come up with any[thing] better so far.” [Hoagland, Jim, “War Over City Freeways Is Entering Decisive Stage,” *The Washington Post and Times Herald*, January 23, 1968]

On January 24, Secretary Boyd addressed the Sigma Delta Chi journalism society at the National Press Club. During a brief question-and-answer session, he was asked about the proposed K Street tunnel. He opposed the tunnel, which would serve only through traffic “because there’s no way on or off.” He asked, “Why tear up the most expensive part of the city so someone can go from Charleston, South Carolina, to Buffalo, New York?” He added:

We’re not going to build highways in urban areas as we have in the past. Cities are for people.

### **After the Court Revolt**

#### **Considering the Three Sisters Bridge**

By late January, Deputy Mayor Fletcher was meeting with Secretary Boyd on the fate of the Three Sisters Bridge. “We hope to have something within the week,” he told reporters. On the basis of those talks, Chairman Kluczynski had agreed to hold off introducing his bill requiring construction of the bridge. He gave the city and Secretary Boyd until the end of the month to announce a “reasonable” solution. He defined “reasonable” as including construction of the bridge.

At month’s end, Fletcher said negotiations would require another week. “The problem is hugely complex. The solution, to be a good one, must not satisfy anyone completely. The solution requires a give and take on all sides.” [Hoagland, Jim, and Carper, Elsie, “Three Sisters Bridge Impasse Seen Broken,” *The Washington Post and Times Herald*, “January 25, 1968; Hoagland, Jim, “City Defers Proposal on 3 Sisters Span,” *The Washington Post and Times Herald*, January 31, 1968]

When NCPC met on February 9, it considered a proposal for a design team, similar to the Interstate design team reviewing Baltimore’s comparable problems with routing of I-95. The team would develop a comprehensive highway plan, including alternatives for the Three Sisters Bridge and North Central Freeway. NCPC members discussed the proposal in a lengthy executive session outside public view, but did not vote on it.

Chairman Rowe refused to talk with reporters about the discussions, but Flor’s sources told him “that she tried unsuccessfully to get the commission to adopt a new transportation plan, to settle the highway dispute, that would have been a clearcut victory for opponents of the highway program.” One reason for delaying the vote was that the NPS representative protested a decision until he had discussed it with Interior Department officials.

Flor wrote that the “intended effect of the action, apparently, was to put the planning commission back into the controversy over freeways.” In recent months, NCPC appointed members had been sidelined while the freeway debate had been dominated by Members of Congress, District officials, and representatives of Cabinet-level departments.

Flor also reported that Deputy Mayor Fletcher and Council Chairman Hechinger, who both attended the meeting, “discussed proposals developed by the District government which call for retention of plans for the Three Sisters Island Bridge.”

In public business, NCPC gave final approval for the National Fisheries Center and Aquarium in East Potomac Park. The approval did not cover the Ponte Vecchio-type bridge across Washington Channel. NPS officials told NCPC they had been unable to attract a bidder to develop the bridge. NCPC had given up hope for the associated underground parking lot beneath the 10<sup>th</sup> Street Mall overlook. Design of the aquarium was underway, with construction expected to begin in mid-1969 if budget cutbacks resulting from the Vietnam War could be resolved.

NCPC heard a presentation from landscape architect Halprin on his master plan for the Anacostia Park and Kingman Lake swimming lagoon near D.C. Stadium. The plan included locks to keep polluted Anacostia River water out and chlorinating the lagoon. The *Post* reported:

One feature of Halprin's master plan calls for a change in alignment of the pending East Leg of the Inner Loop highway system. Instead of an exposed right-of-way to the east of the stadium, Halprin suggests a tunnel to the west.

He also said NPS and District highway officials were studying his master plan.

In addition, NCPC gave final approval to addition of the Spacecraft Operations Building at Goddard Space Flight Center in Greenbelt, Maryland. The center's current 6,779 employees were already complaining about traffic problems on the interchange between the Baltimore-Washington Parkway and the Capital Beltway. More employees in the new operations building would worsen the problems. NPS Director Hartzog suggested that BPR compel the Maryland State Roads Commission to take over the Federal portion of the parkway so it could handle Interstate traffic. [Lewis, Robert J., "Planners Final Okay Given for Aquarium," *The Evening Star*, February 9, 1968]

Elsewhere on February 9, the President's Advisory Council on Historic Preservation adopted a resolution calling for a halt to new highway construction near the Potomac River until alternatives could be studied. The council was concerned that the Three Sisters Bridge would affect several historic sites, including the Chesapeake and Ohio Canal, the Georgetown waterfront, the Lincoln Memorial, and the Potomac Palisades. The *Post* article about the resolution concluded:

Mayor Walter E. Washington and [Secretary] Boyd are working on a compromise proposal in an effort to satisfy Rep. John C. Kluczynski . . . Kluczynski threatened to introduce a bill in Congress to force the building of the Three Sisters Bridge if Boyd continues his opposition. ["Historic Sites Unit Opposed Roads Plan," *The Washington Post and Times Herald*, February 9, 1968]

### **The U.S. Court of Appeals Acts**

On February 10, the U.S. Court of Appeals approved a temporary injunction forbidding "any further action whatever, including the acquisition of land, in connection with the proposed construction of the four highway projects known as the North-Central Freeway, the East Leg, the Three Sisters Bridge, and the Missouri Avenue expressway." Acquisition of right-of-way was underway on the North Central Freeway, but the other projects were in the pre-acquisition planning stage.

During a January 25 hearing, plaintiffs had requested a temporary injunction only on right-of-way acquisition for the North Central Freeway. That the U.S. Court of Appeals went beyond the request to prohibit any action "whatever" on the four freeways encouraged freeway opponents. Robert Kennan of the Committee of 100 on the Federal City, one of the parties to the appeal, reacted by saying, "It seems impossible to me that the Court will not hand down a favorable

decision.” He pointed out that before hearing the appeal on January 25, the court had turned down two requests for temporary injunctions pending a finding. Having now heard the case, the court’s decision to approve the injunction could be interpreted as leading to a finding in support of the appeal.

Reginald Booker, now ECTC chairman, reacted to the temporary injunction as well:

The Emergency Committee on the Transportation Crisis hails this decision and will redouble its efforts to unite the citizens in this fight against unwanted freeways that the highway lobby and its political stooges want to shove down our throats,

Edward J. MacClane, president of the D.C. Federation of Civic Association, called the injunction a victory for the people of Washington. “We have fought these freeways for the past 10 years. The District should not have purchased the homes while the court case was going on.”

Mayor Washington announced that the city would not appeal the injunction. He preferred to wait for the court’s final decision. However, the injunction left Airis with the problem of the Taylor Street Bridge. The bridge was mostly demolished in preparation for a longer bridge across the Baltimore and Ohio Railroad tracks. He ordered a halt to all right-of-way activities, but was uncertain what to do with the bridge project.

On February 12, Corporation Counsel Charles T. Duncan asked the court to modify its temporary injunction to allow the city to complete the Taylor Street Bridge project and permit contractors to finish design and planning contracts for the North-Central and East Leg Freeways. Duncan also sought authority to settle 21 pending acquisition contracts with people who had agreed to sell their property to the city.

The *Post* suggested that the temporary injunction would delay efforts by the District, Secretary Boyd, and others on a compromise plan that would allow the Three Sisters Bridge to proceed:

Deputy Mayor Thomas W. Fletcher said discussions of various proposals will continue.

It was learned yesterday that a draft proposal that the District Building has been circulating calls for building the Three Sisters Bridge and the South Leg Tunnel, and using a design concept team of architects, sociologists and other planners for the other freeway links.

[Von Eckardt, Wolf, and Hoagland, Jim, “Freeways Action Is Enjoined,” *The Washington Post and Times Herald*, February 10, 1968; Flor, Lee, “Court Blocks All D.C. Action On 4 Freeways,” *The Evening Star*, February 10, 1968; “Mayor Won’t Appeal Freeway Order, Awaits Final Ruling,” *The Sunday Star*, February 11, 1968; Valentine, Paul W., “Court Asked To Modify Freeway Ban,” *The Washington Post and Times Herald*, February 13, 1968]

On February 15, 1968, a three-judge panel of the U.S. Court of Appeals rejected Judge Holtzoff’s decision and ordered the District to cease planning and construction of the Three Sisters Bridge, the North-Central Freeway, the East Leg of the Center Loop, and the Missouri Avenue Expressway.

Judges David L. Bazelon, J. Skelly Wright, and Edward A. Tamm found that the primary question was whether the District had complied with the 1893 law, included in Title 7 of District code, on providing a permanent system of highways in the city. “We find that they have not and reverse the District Court judgment denying injunctive relief.” That finding resulted in reaching other issues involved in the appeal.

The ruling summarized the planning requirements of the 1893 law and amendments of that law in the District of Columbia Appropriations Act, 1913 (P.L. 62-201, approved June 26, 1912). The amendments adopted the 1893 planning procedure for changing the street and highway plans for any portion of the District of Columbia:

Another rider to the same Appropriations Act gave the Commissioners power to open and widen new streets and highways which conform to the plans so developed. Thus, following the 1913 Appropriations Act, the District Commissioners were empowered to plan and open highways throughout the District, provided the plans were developed in accordance with the procedures now laid out in Title 7 and the highways built in accordance with the plans. This wide power to plan and build highways is the only general authorization the District Government has to build highways.

In response to the appeal of Judge Holtzoff’s decision, District officials conceded they had not complied with the procedural requirements of the 1893 and 1913 laws. They argued that Congress had given the District the power to proceed by authorizing the freeways and providing funds to the District for Interstate highway construction.

“This argument is without merit,” the court found. None of the laws the District cited specifically mentioned these highways:

Thus, the lump-sum appropriations for street and highway construction did not expressly authorize the construction of these freeway projects. And as the appropriation of money to the District Commissioners for highway construction is entirely consistent with the provisions of Title 7, the appropriations acts cannot be seen to repeal implicitly Title 7 limitations.

Further, Congress’s actions did not ratify administrative actions contrary to Title 7. “Obviously, Congress cannot intend to ratify illegal action of which it is unaware.” Funding actions that do not except Title 7 procedures cannot be taken as evidence of an intention to do so. “Therefore, where the ratification by appropriation argument has been accepted, courts have been careful to demonstrate factors attesting to Congress’ specific knowledge of the disputed administrative action.” In the absence of congressional knowledge and intent, general knowledge of the freeway project “is insufficient to support the ratification by appropriation argument.”

Congressional support for the District freeway program does not imply that Congress intended the District to proceed in violation of Title 7. “Obviously Congress, in appropriating funds, has a right to assume they will be expended according to law.”

The panel also dismissed as without merit the District's argument that Federal-aid highway acts had provided authority for the city to advance the freeway projects without regard for Title 7 because the acts permit the District to receive Federal-aid highway funds. While the purpose of the Federal-aid highway acts is to stimulate and accelerate construction of the Federal-aid highway system, the legislation did not authorize the District, State, or Federal agencies to plan and build highways. That authority stemmed from State, Federal, or local laws such as Title 7. "State and federal courts considering the applicability of state laws to federal-aid highways have agreed that state laws regulating the planning and building of highways were not set aside by the Federal-Aid Highway acts."

Contrary to the District assertions, Federal-aid highway legislation was not inconsistent with Title 7. For example, the acts did not specify a minimum width for Federal-aid highways or concern itself with how State or District governments raised matching funds. "Thus, these D.C. Code provisions have not been impliedly repealed by the subsequent Federal-Aid Highway acts." If Congress had intended to set aside the provisions of Title 7, "it would do so explicitly."

The panel also rejected the District's argument that the Act of 1893 was not intended to cover "wide Interstate Expressways":

To the contrary, we believe that the procedures set out therein are even more important for regulating the "wide Interstate Expressways," for these projects generally affect more people and larger areas of the District than any other type of street and, therefore, are potentially more destructive of aesthetic values and fundamental property rights.

From the very beginning the aesthetic and functional advantages of planning have been afforded the Nation's Capital [and] the entire metropolitan region. To allow the District government to build large expressways without regard for the District highway plan, which was initiated for the express purpose of preserving the L'Enfant street plans, would be inconsistent with history, a strong tradition, and express statutory language.

After dismissing these arguments, the court concluded:

In sum, we believe that the only power the District government has to build roads is that granted by the provisions of Title 7, and we believe that this power extends to all types of highways built within the District. Nothing we have said is in derogation of this vast power, and nothing we have said pertains to the merits of the challenged projects. Rather, we are reversing the District Court decision because, without authorization from Congress, the District appellees have disregarded the relevant statutes in planning and constructing the four freeway projects in suit here.

Although this ruling was by a three-judge panel, the full U.S. Court of Appeals added, *per curiam*, that the ruling was not intended to prevent the District from completing existing contracts. The court specifically cited the contract for the Taylor Street Bridge, which the corporation counsel had stated "serves local traffic needs and must be rebuilt regardless of whether North Central Freeway is constructed." Similarly, the three-judge panel's opinion neither prohibited nor authorized the District "to complete settlement on those contracts of

purchase, already made, where the homeowners, after being advised of this Court's action, indicate a willingness to do so." The addendum did not address design and planning contracts with consultants. [*D.C. Federal of Civic Associations, Inc., v. Thomas F. Airis*, 391 F.2d 478 (1968), U.S. Court of Appeals, District of Columbia Circuit, No. 21416, February 15, 1968]

## **Reaction**

As *The Washington Post* explained:

The effect of the decision is to toss the controversial freeway program to the new city government. The City Council will have to hold new public hearings on these proposed projects, and Mayor Walter E. Washington will have to approve or reject them . . . .

It could take months to prepare detailed maps, hold public hearings in the City Council, wait for the Mayor's decision, and wait for the National Capital Planning Commission to consider and act on the plans one by one. All these steps will be required under yesterday's decision before planning and construction can continue.

The decision did not go into the merits of the heated freeway dispute since it was based on procedural grounds. However, it is clear that the whole freeway issue will now be reopened . . . .

In effect, the decision returned the case to the U.S. District Court. Because the U.S. Court of Appeals had not ruled on the merits of the four projects, initial speculation was that the District would return to the U.S. District Court to request a continuance to allow the city to comply with the provisions of the 1893 highway law.

City officials feared the court's ruling could be extended to other freeways, none of which were developed in accordance with Title 7. However, NCPC Chairman Rowe called the ruling, "A great day for the people of Washington and the face of this beautiful city." [Jewell, David, and Kaiser, Robert G., "Freeway Halt is Ordered," *The Washington Post and Times Herald*, February 16, 1968; "Court Bars 4 Roads Projects Until D.C. Follows Law," *The Evening Star*, February 15, 1968]

Mayor Washington called a meeting on February 16 to consider the ramifications of the decision. Participants included Deputy Mayor Fletcher, City Council Chairman Hechinger, Corporation Counsel Duncan, Director Airis, Acting Director of Administration Kenneth Back, and Isaiah Creswell, legal advisor to the city council. They discussed several options, including appeal of the three-judge panel's decision, seeking congressional action to address the court's concerns, and attempting to comply with the 1893 law.

After the 45-minute meeting, participants declined to speculate on how Mayor Washington would respond to the decision. However, Duncan told reporters the decision had "very wide and far reaching" implications. The "rationale of the decision would apparently apply to all [highway] projects." The opinion could affect the District "legally, economically and from other standpoints." He expected a decision "in the next few days."

One concern was that the decision had ruled only on what it called the primary question, namely whether the city had complied with Title 7. Having concluded, without dispute by the city, that it had not done so, the panel ruled, “it is unnecessary to reach other issues raised on this appeal.” One of the unresolved issues raised by plaintiffs was whether the District had congressional authorization to participate in the Interstate program.

Moreover, even if the District wanted to comply with Title 7, modern conditions might make it impossible. The *Star* recalled the origins of the 1893 law:

The 1893 legislation was drawn up at a time when most of the District was farmland. The city’s boundary on the north was Florida Avenue which today is practically regarded as the boundary of the downtown area.

But a few ambitious real estate developers started subdivisions north of Florida Avenue, and their pattern of streets did not match up with the streets south of Florida. Also there had been a series of court battles and fights over the practice of the District in condemning land in the 1870s for public improvements.

So Congress put stiff requirements in the 1893 legislation to protect property owners.

Section 115 of Title 7 said the District Commissioners were not to submit any highway plan to the planning commission for its approval until after the District Commissioners held hearings. The hearings were designed to give the property owners “embraced” by any such map a chance to comment on its provisions.

The District had held hearings for the Interstate freeway projects, but the hearings had not been heard by the District commissioners as the U.S. Court of Appeals thought required by the 1893 law.

If the District held a hearing in accordance with the 1893 law, the next step, securing NCPC approval, would be problematic. The 6-5 vote that had sustained the May 1966 Policy Advisory Committee agreement had disappeared. The five private citizens on NCPC now could block freeway projects with the help of NPS or in a tie vote.

While the District decided what to do, reaction to the decision continued. ECTC’s Sammie Abbott issued a statement:

For three years we have warned the District government and federal agencies they were proceeding in an illegal and tyrannical fashion . . . the Court of Appeals has put an end to this lawless, inhuman, coercive land-grabbing use of eminent domain to evict people.

He and Booker demanded that Mayor Washington “act immediately and move the people back in their homes.” They urged the city to adopt the Arthur D. Little report. Booker added that District highway officials should be replaced by “black and white District residents who would be responsive to the city’s problems.”

Members of Congress also reacted to the decision. Senator Brewster of Maryland said the “federal interest in the District is so important that it may become necessary for the Congress to specifically authorize the Federal Highway Administration to construct these roads as totally federal projects.” Using the precedent of the NPS parkways, he suggested that the Federal investment might have to be increased to 100 percent of costs. Senator Spong of Virginia said that if the District did not appeal the decision, it would have to comply with the 1893 procedures as quickly as possible. He did not want to criticize the court. “But it is disappointing that the effect of the decree will be to postpone a final decision on the construction of the Three Sisters Bridge between Virginia and the District.

Representative Mathias, who was running for Brewster’s Senate seat, said, “Congressional intervention at this point can be precluded only if the Commissioner, the City Council and the National Capital Planning Commission exert constructive leadership and act immediately.” Representative Gude hoped the District would appeal the decision to the U.S. Supreme Court. “If it chooses not to appeal, I would think Congress would give it a modern instrument by which it can expedite the implementation of its highway program.” He added, “This might well be a pyrrhic victory for the anti-freeway forces, because of the far-reaching implications of the decision . . . .”

Chairman Natcher renewed his threat to withhold the District’s matching funds for the initial 25-mile rail rapid transit system:

Our committee believes that there is a place for both the freeway system and the rapid transit system in our capital city.

In order to meet the tremendous day-to-day growth in traffic, the highway program must be carried out along with the present rapid rail transit plans.

Members of his committee, he said, believed that efforts to halt the highway program would justify withholding the District’s matching funds for the transit system. “Our committee will carefully investigate the requests for both,” he said, with emphasis on “both.”

As the *Star* explained, Chairman Natcher held up District matching funds for the transit system in an effort to persuade NCPC to vote for the freeways. Plaintiffs in the lawsuit had argued that NCTA’s vote for the freeway agreement on NCPC’s key vote in May 1966 was a result, in effect, of congressional blackmail. The U.S. Court of Appeals, having rejected the four freeways based on noncompliance with Title 7, did not address this issue.

[“District Weighs Roads Appeal,” *The Evening Star*, February 16, 1968; Kaiser, Robert G., “Congress May Act to Unblock Freeway Projects,” *The Washington Post and Times Herald*, February 17, 1968; Flor, Lee, and Grigg, William, “Freeways Ban Perils Transit System funds,” *The Evening Star*, February 17, 1968]

One person who did not want credit for the decision was Peter Craig. As the *Post* reported, he had been fighting freeways since 1961, “raising many of the same arguments that prevailed Thursday, but which had been rejected by the District’s Highway Department and former

Commissioners.” Now that he was in the Department of Transportation’s Office of General Counsel, he had severed involvement with the District freeway fighters. He declined to discuss the matter with a reporter, but said too many people were involved to single any one person out for credit:

Mentioning his name at the Highway Department is like waving a red flag in front of a bull. “Peter Craig and that crowd” is a standard dismissal of antifreeway groups by one District official, who asked that he not be quoted . . . .

Craig produced extensive documentation challenging Highway Department traffic studies and backing up his contentions that new roads were not the solution.

One of his documents, entitled “Freeways and Our City,” is the Bible of freeway foes here.

Craig had helped involve Covington and Burling in the case, while attorney Gerald P. Norton and Roberts B. Owen built their case around his documentation:

The victory has one minor point of irritation on the antifreeway side. “Too many people seem to think we dug up an obscure law to win this,” said a lawyer who asked not to be named.

“It’s in the D.C. Code, under ‘Highways.’ Just because a law has been on the books since 1893 doesn’t mean it’s still not good. We’ve been telling the District for at least six years that they should abide by the law.” [“Freeway Fight Led By Lawyer,” *The Washington Post and Times Herald*, February 18, 1968]

The *Post* titled its editorial on the decision: “Freeway Debacle.” The ruling had abolished one solution to the city’s economic and social problems, “but it has not abolished the problems.” Maryland and Virginia were not subject to the 1893 law that the court relied on. As they continued developing their freeway networks, companies “and their jobs are going to emigrate to locations that are served by highways and the central city will become increasingly a place of stagnating commercial enterprises, increasing joblessness and mounting dependence upon relief”:

This is a prospect that may please those who would like to see the simple, pastoral community of the last century restored – buggies, carriages and all. For the moment, they have their victory and most of them will not be around to deal with the misery that will exist in the city if it is permitted to choke in its own traffic.

The prospect of further litigation “is not recommended by the frailty of the statutes.” Further, the “long and painful reconstruction of the program with appropriate hearings promises to slow down an already lagging schedule.” The fragile compromise that resulted in congressional approval of rail rapid transit was “now completely unstuck and probably beyond repair”:

The city may be lucky if it salvages even the transit appropriations, in the face of the refusal of some of the transit supporters to stand by the bargain that for all too brief a time promised to get the community both systems.

Perhaps Congress will “step in and legislate a freeway system for the District.” If Congress took care of those displaced by freeway construction, “this could work.” [“Freeway Debacle,” *The Washington Post and Times Herald*, February 17, 1968]

*Star* editors saw an easy solution that was reflected in the title of their editorial: “An Appeal to Congress.” The Roads Subcommittee of the House Committee on Public Works had indicated it might intervene. “The new ruling by the Court of Appeals in the freeway controversy makes that congressional action a matter of urgent necessity.” The ruling “hangs on a single legal thread,” namely compliance with the 1893 highway law that would drag the city back to horse-and-buggy days.” For example, Title 7 restricted Washington highways to a maximum of 160 feet:

This provision has no relevance whatever to the realities of urban freeway construction in 1968, here or anywhere else. It would be absurd to believe that Congress, in appropriating millions of dollars for the District system, intended that the program should be bound by such ancient restraints.

From a practical standpoint, the law’s “requirements would bog down this city in precisely the sort of confusion and controversy so eagerly sought by those groups whose goal is to defeat any freeway program.” That is why Congress needed to act:

The legal technicality on which this ruling is based can be readily overcome by legislation, and in the process Congress should also eliminate the senseless administrative roadblocks which Secretary of Transportation Alan Boyd has placed in the path of the freeway program.

The editors concluded that “it is not too much to hope that Congress will shield the Nation’s Capital from . . . botched-up judicial interference in Washington’s transportation system – one which, if it stands, will surely produce utter chaos in the very near future.” [“An Appeal to Congress,” *The Evening Star*, February 17, 1968]

*The New York Times* also commented editorially on the decision because of its “far-reaching significance.” The decision turned on a unique feature of District law, but “as often happens in the law, a procedural question really opens up the heart of the matter.” If city officials had been required to take local opinion seriously, they “would have almost certainly rejected this highway master plan which would slash through existing neighborhoods, destroying homes and businesses and radically altering the face of the city.”

The unique significance of the District’s freeway battle had “national significance” because the leaders of the highway lobby “have viewed it as the Dienbienphu of the long guerrilla war between themselves and the anti-freeway forces.” (In 1954, guerilla bands defeated the French in the Battle of Dien Bien Phu, prompting a French departure from Indochina, resulting in a partitioned Vietnam and eventually American involvement in the Vietnam War.)

The reason behind the routing of the North-Central Freeway was “an open secret in Washington,” namely:

This freeway would have run twelve lanes wide through neighborhoods that are mostly low-income or Negro or both. Most of the traffic from the suburbs that this freeway would carry, however, really wants to reach the predominantly white northwest corner of the city. But since white citizens did not want twelve lanes barreling through Georgetown and adjacent neighborhoods, they successfully fought to keep it out, and the route ended up being pushed eastward to poorer Negro neighborhoods.

The court ruling, the editorial suggested, might set a pattern for the Nation:

The bulldozing of Negro and low-income white neighborhoods has to stop. A shift has to come in the use of Federal funds from scandalously expensive freeways – \$25 million a mile in the District of Columbia – to more economical mass transit. [“A Brake to the Bulldozer,” *The New York Times*, February 21, 1968]

### **Searching For a Way Forward**

As Congress began work on the Federal-Aid Highway Act of 1968, one of the many routine and extraordinary questions before it was whether Congress could overturn the Appeals Court ruling. One congressional aide thought Congress could pass a law that superseded those portions of the District code that the court said had been violated. Such a law might allow the District to proceed with the four expressways without the public hearings or decisionmaking that the court had ordered. However, another legal expert pointed out that such legislation would not work. Congress cannot pass legislation making a previous illegal act legal. These experts said the only option was to appeal the decision.

Even the question of jurisdiction was unclear. Pro-highway forces wanted the Committee on Public Works to address the problem. Of course, Representative Kluczynski had advised Secretary Boyd following his testimony that the committee would consider legislation in early 1968 to unsnarl the District’s freeway program. However, anti-highway forces thought the House District Committee had jurisdiction over a decision that turned on a District code. The committee had been critical of the freeway program and, as recently as 3 years earlier, had questioned the legal basis for it. [Flor, Lee, “Freeway Row Goes Before House Unit,” *The Evening Star*, February 19, 1968]

With hearings beginning on the 1968 Act, Chairman Kluczynski renewed his pledged to resolve the issue through legislation. Representatives from the area were cooperating in the drafting of the legislation.

Representative Cramer supported that approach. Lee Flor reported:

Cramer added that the court decision came as a shock to Congress because Congress thought it was granting the new District of Columbia government stronger responsibilities under the District reorganization plan proposed by the Johnson administration . . . .

Representative Cramer said, “It came as a shock that NPCPC would have the final say especially when the City Council is in the picture,” referring to its long opposition to freeways. [Flor, Lee, “House Unit Plans Move To Free Highway Work,” *The Evening Star*, February 20, 1968]

Drew Pearson, whose muckraking Washington Merry-Go-Round column was famous for its critical inside look at public figures, saw the present moment as “one of the most significant battles” of the day in Washington:

It’s the battle of a Florida Cracker, Alan S. Boyd, now Secretary of Transportation, to protect Negro and poor white communities against one of the most powerful lobbies in the nation – the freeway lobby.

No one ever suspected, when Alan Boyd was first recommended by his old University of Florida friend, Sen. George Smathers, that Boyd would turn out to be a sociologist and an opponent of lobbyists. But he has. The freeway lobby hates him, secretly is working to undermine him. It claims he must go.

(Senator Smathers was known for his opposition to civil rights for African-Americans.)

The lobby was concerned because Secretary Boyd had maintained “that freeways are not the sole solution of the transportation problem.” Officials should consider “mass transit, subways, high-speed trains, even monorails.” Worse, he had pointed out that “Negro communities are not the only ones to be relocated to make room for suburban commuter freeways. Wealthier communities should have to move too.” He had cited the North-Central Freeway as an example where, in Pearson’s words, the freeway had been “shifted over from a high-bracket residential community to a low-bracket area, because the white residents pack more political punch than Negroes do.” Pearson quoted Secretary Boyd:

We should not just tear up the homes of poor people and Negroes. We ought to make a determined effort to put freeways where the traffic wants to go . . . . We’re going to have to find a better way to do it than say we’re going to take the property of poor people and let everybody else alone.

The chairman of the Highway Users Conference, Harold Wirth of Firestone Tire and Rubber, had responded, “If these people around Boyd had their way, there wouldn’t be a paved street in Washington.”

In the wake of the U.S. Court of Appeals ruling, Mayor Washington was in the middle of the dispute, as Pearson explained:

Secretary Boyd has said he’ll let him make the decision. This puts Washington in the position of either bowing to white wealth and the powerful highway lobby or siding with the poor members of his own race.

Pearson also commented on some of the congressional supporters of the District freeway program:

- Chairman Fallon, “a potent friend of the highway lobby,” had “just returned from Puerto Rico, where he spent the Christmas holidays with a Public Works subcommittee. Refreshed and tanned, courtesy of the taxpayers, he’s ready to fight the battle of the lobby.”

- Chairman Kluczynski, “a Polish restaurant operator and caterer,” opposed the Highway Beautification Act and “has been a friend of billboards along new highways.” Likewise, he was “a pal of the freeway lobby.”
- Representative Cramer, another “friend of billboards,” operated a laundry in his Florida district, “partly owned by his campaign manager, Jack Insko, who in turn gets a salary of \$15,063.48 from the U.S. taxpayers courtesy of being on Cramer’s Congressional payroll.” The laundry had an \$80,000 contract “to wash the linen for MacDill Air Force Base in Florida.”
- Chairman Natcher, “perhaps most important of all,” illustrated “the inequity of one-man committee rule by threatening to cut off funds for Washington’s new subway if Secretary Boyd continues to block money for D.C. freeways.”

Pearson added, “This is how powerful the freeway lobby is.” The amount of their contributions to “these Congressmen’s campaign funds is not always recorded.” [Pearson, Drew, “D.C. Mayor on Spot in Freeway Fight,” *The Washington Merry-Go-Round*, *The Washington Post*, February 21, 1968]

On February 19, Mayor Washington met with about 15 freeway opponents, including representatives of ECTC, the District Democratic Committee, the Northeast Neighborhood Council, ACT, and, arriving late as usual, PRIDE’s Marion Barry. As summarized in the *Post*, they demanded that the city:

- Remove all freeway items from the city budget.
- Fire Thomas F. Airis, head of the Highway Department, and Lloyd A. Rivard, chief of highway planning and programming.
- Replace Highway Department personnel who live in suburban areas.
- Adopt the Arthur D. Little report calling for building subways first and then looking at the need for freeways.
- Move displaced persons back to their homes with the District assuming all financial obligations.

During “the heated confrontation in his outer office,” Mayor Washington listened as Booker said ECTC had entered a new phase of “militancy and resistance.” Barry said that if peaceful methods did not work, opponents would turn to other methods.

During the meeting, Mayor Washington was friendly toward several participants he knew. But the *Star* reported that “he had engaged in debate with Booker, who described the meeting as ‘not a happy or gala occasion.’”

Earlier in the day, Mayor Washington had said he would open a Neighborhood Assistance Office, at 2726 10<sup>th</sup> Street, NE., to reduce the hardship of people who had sold their homes and arranged to leave before the U.S. Court of Appeals decision. He said the city was not sure where the displaced people had gone, but added, “We’re trying to find the people, identify them and help them.”

When Mayor Washington told the anti-freeway group about the office, they protested that the staff did not include a citizens representative. When he agreed to hire one on the spot, the groups recommended Chairman Pryor of the Brookland Civic Association. Later, Assistant Mayor Fletcher confirmed that Pryor would be hired on a per diem basis. [West, Hollie I., "D.C. to Help Its Freeway 'Refugees,'" *The Washington Post and Times Herald*, February 20, 1968; Delaney, Paul, "Foes of Freeways Visit, D.C. Mayor Hires One," *The Evening Star*, February 20, 1968]

On February 21, Senate Majority Leader Mansfield appeared briefly on the Senate floor to introduce a letter into the record from Mrs. Anne Archbold, one of the donors of Glover-Archbold Park, to Mayor Washington. She said that she had donated the land in 1924 as a memorial to her father, John Dustin Archbold:

It was my purpose that this beautiful wooded valley be preserved perpetually for the benefit and pleasure of the public. Over the years my family and I, together with the Glovers, have had to resist efforts to convert the valley for other than the original purpose. It should remain and be enjoyed by all as a natural sanctuary.

I am told that the Department of Highways is anxious that a Three Sisters Islands Bridge be constructed at the bottom of the Park. I am told that any such construction would lead to a highway project within the Park, which would destroy the purpose for which the land was given. I urge most strongly that the bridge proposal be disapproved, and ask your support to this end.

Senator Mansfield added his hope that Mrs. Archbold's wishes "will be observed and adhered to, because after all, without the Glover-Archbold gift there would be no parkway, no beautiful valley in that part of Washington at this time." He added, "I would not like to see it destroyed." [Preservation of Glover-Archbold Park, *Congressional Record-Senate*, February 21, 1968, page 3750]

(On March 26, 1968, Mrs. Archbold, 94 years old, died of a heart attack at her winter home in Nassau, the Bahamas. Her *Post* obituary referred to her as "a colorful figure in Washington society for more than 45 years." She had many interests, but the article added that, "From 1948 until her death, Mrs. Archbold and the Glover family opposed a series of plans to construct high-speed highways through the wilderness of Glover-Archbold Park." ["Park Donor Anne Archbold, 94, Dies," *The Washington Post and Times Herald*, March 28, 1968])

The *Star* reported on February 23 that during a February 20 victory celebration, attorney Robert Kennan revealed a "secret document" that had been presented during an unreported meeting at the White House on February 9, the day the U.S. Court of Appeals issued its injunction. Officials from the District, HUD, and the Interior Department attended the meeting. According to the document, District officials had been considering three options for restudy of the freeway plan that they perceived as major concessions to anti-freeway forces.

The document stated:

The D.C. Department of Highways and Traffic will review plans for the [North Central] freeway to be absolutely certain that no properties are taken which are not essential and to determine whether the right-of-way could be adjusted to reduce displacement.” The D.C. Department of Real Estate will review its appraisal and acquisition procedures to assure that property owners receive the fair market value for their properties in every case, and to assure that the fair value properly reflects the particular real estate market conditions currently prevailing in the area.

For those families whose homes must be taken for the freeway and for those who wish to remain in the same general area, the Department of Highways and Traffic will attempt to make arrangement to move a reasonable number of homes to available vacant lots in the area.

An immediate review will be made of the I-70-S and I-95 routing through the District and the State of Maryland by the Bureau of Public Roads, the District Government and the Maryland State Roads Commission.

The *Star* reported that during the victory party, “Kennan asked sarcastically, ‘How in the world are you going to move a brick rowhouse on 10<sup>th</sup> Street NE to a vacant lot?’”

The document also indicated the District would redouble its effort to secure air rights legislation to allow development of North-Central Freeway sites “for housing and other community use.”

The document concluded:

These decisions have been made after careful consideration of the many problems connected with the freeway system and after extensive discussions with citizen groups and with the public agencies involved in the program.

The meeting ended abruptly when Director Airis called to inform Deputy Mayor Fletcher about the injunction.

Asked by a reporter, Deputy Mayor Fletcher conceded that the document was real, although he denied that the meeting was “secret.” The document Kennan released described one of the three options considered during the meeting, adding:

“That one was the one decided upon. We were in the midst of negotiation when the injunction was given. We were very close to coming up with some kind of a compromise. I can’t say if we would have announced it within a week, two weeks, or one day” . . . .

He said the three alternatives were under consideration a month ago, and indicated that at the time of the injunction, both District and federal officials were contemplating a complete review of the city’s freeway program . . . .

Fletcher was concerned that the city’s position would be misinterpreted. “We were trying to do the right thing at the time,” he said. “Are we the good guys or the bad guys?”

. . . The document concluded:

These decisions have been made after careful consideration of the many problems connected with the freeway system and after extensive discussions with citizen groups and with the public agencies involved in the program.

[Delaney, Paul, and Groer, Anne, "D.C. Was Set to Pacify Freeway Foes," *The Evening Star*, February 23, 1968]

The *Post* reported on February 25, that Mayor Washington and Corporation Counsel Duncan had reached several conclusions:

There are strong racial overtones to the highway problem. The Mayor and Duncan both accept, at least in part, the validity of freeway opponents' charges that the city wants to build "white men's highways through black men's bedrooms."

If the city decides to appeal, the Mayor is said to believe, people may interpret this as a vote for the white man over the black. The same is seen as true if the city decides to seek legislation to circumvent the effect of the Court of Appeals decision.

On the other hand, Washington and Duncan are aware of the strong Congressional and suburban interest in completion of the basic freeway program. They would like to be able to satisfy these interests without alienating the city's Negro population – a trick they acknowledge may well be impossible.

The city could lose millions of dollars if it acts too hastily to stop work on freeway projects not mentioned in the recent suit. The District could also lose a lot of money if it failed to stop action now on projects that later suits could tie up at more expensive stages

. . . .

The District could overcome most of the problems caused by the Court of Appeals' decision if it followed the procedure the Court said was necessary before freeways are built. But following this trail – culminating in approval by the Mayor, City Council, and National Capital Planning Commission – could take six months to a year, officials believe. [Kaiser, Robert G., "Mayor, Aides to Meet," *The Washington Post*, February 26, 1968]

On March 5, 1968, the city council met to discuss the plan for public hearings. Before the session could begin, the council had to deal with Sammie Abbott. He and five other ECTC members stood before the rostrum and said they would not move until a special meeting on freeways was scheduled. "I put my hands on this bench," Abbott said, "and we will stay here day and night until you decide to call a hearing."

Councilman J. C. Turner, president of the Greater Washington Central Labor Council of the AFL-CIO, jumped to his feet, shouting, "Mr. Chairman, I object to this kind of bullying tactic" and accused Abbott of using similar tactics to interrupt other meetings. Abbott replied, "Listen Turner, I'm familiar with your Jim Crow unions . . . . I'm using union tactics."

When the confrontation ended, the City Council decided on March 13 as the date for the public hearing. [West, Hollie, I., "Council Sets Hearing on Freeway Dispute," *The Washington Post and Times Herald*, March 6, 1968; Delaney, Paul, "D.C. Freeway Fight Reopens," *The Evening Star*, March 5, 1968]

The *Post's* City Life column reported on March 10 that, "The District has decided not to appeal last month's U.S. Court of Appeals decision against further work on four freeway projects here." During a meeting on March 7, Mayor Washington, Deputy Mayor Fletcher, members of the city council, Corporation Counsel Duncan, and highway officials agreed to ask Congress for legislation to resolve the issues:

The City wants new procedures written into law to govern modern freeway construction.

It may also seek clear legal authority to go ahead with half-finished, non-controversial segments like the Center Leg, implicitly threatened by last month's decision.

The corporation counsel's office was drafting the legislation. ["Congress to Get Freeway Plea," City Life, *The Washington Post and Times Herald*, March 10, 1968]

In anticipation of the special meeting on freeways, the Committee of 100 on the Federal City issued a statement on March 12 arguing that District highway officials had misled the Roads Subcommittee in December about the need for the Three Sisters Bridge. According to the statement, the bridge was not needed for 1990 traffic. The analysis of the District's testimony on December 5 and 6 "shows conclusively that the House Committee was misled by the testimony given – testimony which it should have had every reason to believe was from a reliable source."

The committee disputed the Voorhees study, conducted for WMATA, that was the basis for the testimony. The study, the committee's analysis said, had projected transit use without taking into account the planned transit bridge to be added to the 14<sup>th</sup> Street Bridge complex. Other assumptions about 1990 traffic, the analysis claimed, also were invalid. For example, the Chain and Key Bridges could accommodate several hundred more vehicles an hour if the Three Sisters Bridge were not built.

Had the District's testimony been accurate, in the committee's view, the Committee on Public Works would not have issued an ultimatum to Secretary Boyd demanding construction of the bridge. [Flor, Lee, "House Called Misled On Sisters Bridge Need," *The Evening Star*, March 13, 1968]

At 7:45 p.m. on March 13, Chairman John W. Hechinger called the special meeting to order in the District Building's Board Room. As the *Post* put it, "It was almost the last thing he was able to do promptly and very little order materialized." The standing room only crowd was about evenly divided among pro- and anti-freeway forces, with numerous speakers scheduled to make 5-minute presentations on both sides of the issue.

Elizabeth Johnson of the League of Women Voters was the first speaker, intending to explain the league's opposition to the freeways. But ECTC Chairman Booker grabbed the microphone

“shouting that the hearing was no hearing at all, but more of a meeting – and that he was against it.” He yielded the microphone to Abbott, who repeated the charge.

At 8:05, Johnson was still trying to reach the microphone, but Charles I. Cassell grabbed it to speak in support of Booker and Abbott. Cassell, an architect, represented the Black United Front (BUF), a group formed in January 1968 at the suggestion of Stokely Carmichael. Chairman Hechinger called a recess.

As the city council filed out of the room, they heard a chorus of catcalls: “Listen or Resign!”

When the city council came back into the Board Room, they saw that Booker and Abbott were still blocking Johnson from the microphone. Hechinger told them, “behave yourself.” But in the end, Johnson was one of the few scheduled speakers able to make a presentation. “The freeway opponents listened after a fashion, most of them apparently in surprise that she turned out to be on their side.”

Several freeway critics issued open threats, as Lee Flor reported:

The most open threats voiced at last night’s hearing came from W. L. Staton, of Pride, Inc., who attended the hearing in his Pride uniform, green pants and white shirt with his name lettered on the shirt.

Staton said the council would get the city into big trouble if it continued to favor freeway construction. “Big trouble – trouble-trouble,” crowd members shouted.

A member of the crowd shouted that the trouble in Washington would make previous riots in other cities look like “Sunday school stuff.”

Staton reached into his pocket, pulled out a matchbook, and opened it in front of the council. “This will stop it,” he said, as he held the matches up.

A member of the crowd shouted at a pro-freeway speaker that he could expect a Molotov cocktail. Other members of the crowd said they would picket the home of Deputy Mayor Thomas G. Fletcher and would follow him around to church and other activities in an effort to put pressure on him to stop working for freeways.

Hechinger had to use his gavel through most of the meeting, and commented on how the crowd was not honoring witnesses from the pro-freeway side and was not respecting the council.

Hechinger “aroused the crowd’s wrath by asking for the home addresses of the witnesses. They saw this request as a direct attack on Abbott, whose home in Takoma Park, Maryland, was no longer threatened by freeway construction.

When Booker’s time to speak arrived, he turned the microphone around so he could address the crowd. He explained, “I’m going to face the people – not some of those criminals who sit on the

city council.” Freeways, he said, benefit lily-white suburban people at the expense of Negroes in the ghetto.

Marion Barry said the freeway situation was a “race issue” and called the meeting “useless.” If the city did not end the freeways, the result would be riots. Julius W. Hobson, another civil rights advocate, called on the “black men on the Council” to oppose the freeways because they would “put black women and children out on the streets.”

Rear Admiral O. S. Colclough of Downtown Progress “managed a well-heckled five minutes at the mike, but several other scheduled pro-freeway speakers left the meeting early without presenting their views.”

Flor added that the crowd “appeared angry” about reports the District had decided to seek congressional relief from the U.S. Court of Appeals decision. Hechinger denied that the council had decided to seek White House support for legislation “and said the council was not even considering the issue.” [West, Hollie, “Foes Disrupt City Hearing on Freeways,” *The Washington Post and Times Herald*, March 14, 1968; Flor, Lee, “Militants Voice Threats to Council at Freeways Hearing,” *The Evening Star*, March 14, 1968]

By then, Chairman Kluczynski was ready to intervene legislatively. On March 18, he introduced H.R. 16000, a bill to require the construction of certain Interstate routes in the District of Columbia. It proposed to insert a new provision, Section 313, into Title 23, United States Code, that provided:

Notwithstanding any other provision of law, or any court decision or administrative action to the contrary, the Secretary of Transportation and the government of the District of Columbia shall, as soon as possible after the enactment of this section, construct all routes on the Interstate System within the District of Columbia as set forth in the document entitled “1968 Estimate of the Cost of Completion of the National System of Interstate and Defense Highways in the District of Columbia . . . .” Such construction shall be carried out in accordance with all other applicable provisions of this title.

He referred to the bill as a “simple one,” saying:

I have waited several months before I proceeded with legislation in the hopes that this most very important matter . . . could be resolved in an administrative manner. However, after more than 2 months since my statement of December, no further action is forthcoming to resolve the problem.

The Interstate System was “the responsibility of the Congress as well as the States and since the need for the program has been proven throughout the years,” the legislation was needed to accomplish the goals of the Federal-Aid Highway Act of 1956. He planned to hold hearings on the bill, during which “all parties who are interested in testifying on this bill” would be given the opportunity. [Completion of Segments of Interstate System Within The District of Columbia, *Congressional Record-House*, March 18, 1968, pages 6737-6738]

The Highway Users Federation's Wirth predicted the bill would get a lot of support. "This is the Nation's Capital, and belongs to all of the people. Congress is the voice of all the people in the United States speaking."

By contrast, Tilford E. Dudley of the District Democratic Central Committee expected the legislation to arouse opposition. "This legislation would impose highways on the people, regardless of whether they want them, in a dictatorial fashion." Edward J. MacClaine of the District Federation of Civic Associations, called H.R. 16000 "undemocratic. Our opposition to the freeway system is our fight to preserve American homes from the threat of freeways throughout the country . . . . This is a strong-arm power play." [Flor, Lee, "Bill to Finish D.C. Freeways Hailed, Scored," *The Evening Star*, March 19, 1968]

*Star* editors disagreed that the bill was a dictatorial interference in local matters. In view of the U.S. Court of Appeals' reliance on an 1893 highway law for its decision, Congress had a clear responsibility to restate the authority of the city to build highways:

What is needed now is a clear-cut assertion from Congress that the inability of the administration and the District government to advance the program through their own initiative has reached a point of absurdity that is no longer tolerable . . . .

The truth, too long avoided, is that the endless delays, the administrative stalls, the failures of effective decision-making and the so-far-successful efforts of several groups to block the completion of a freeway system here have all left Congress with no alternative but to act.

The editors applauded efforts by Maryland's Chairman Wolff to promote national legislation that would compensate displaced homeowners based on the fair-market value of replacement housing. They also endorsed the pending air rights legislation for the District. Proposals of this type were responsive to the issues as the heart of the debate:

Such proposals, however, will not dent the opposition of those who are blind to the necessity for urban freeways under any circumstances – and we trust the House subcommittee will not permit itself to be diverted from its primary responsibility.

Congress' first obligation is to see that a reasonable freeway program, as part of a balanced system with rail transit, is built. Mayor Washington, for his part, has a strong obligation to assure Congress of his total support in that venture. ["The Freeway Impasse," *The Evening Star*, March 20, 1968]

On March 27, an unnamed District official told reporters that the city had decided to consider resuming work on several freeway projects that were covered by the reasoning of the U.S. Court of Appeals decision, but not explicitly cited. The projects were the 9<sup>th</sup> Street Expressway under the National Mall, interchange "C," and the Center Leg Freeway. Work had proceeded too far to stop on the 9<sup>th</sup> Street Expressway and interchange "C," with all property acquired for the two projects. Officials would have to acquire additional properties for the Center Leg Freeway between Massachusetts Avenue and New York Avenue. ["Some Work On Freeways To

Continue,” *The Evening Star*, March 38, 1968; “2 Freeway Projects Continue,” *The Washington Post and Times Herald*, March 38, 1968]

### **Chairman Natcher’s Views**

While Chairman Kluczynski was preparing for hearings on his District freeway bill, Chairman Natcher began hearings on April 1 to consider the District of Columbia’s appropriations act for FY 1969. Mayor Washington, Deputy Mayor Fletcher, Chairman Hechinger, Vice Chairman Fauntroy, and other District officials were the first witnesses. (Throughout this and later hearings, Chairman Natcher referred to Washington as Commissioner Washington or Mr. Commissioner, his official title.)

The hearing covered all aspects of the city’s budget, but Chairman Natcher made his views clear regarding transportation in a brief comment:

Now here in our Capital City for a number of years we have had problems concerning our freeway and highway system. Mr. Commissioner, the members of this committee have believed for a number of years now that there is a place in our Capital City for both a freeway system and a rapid transit system, and any effort that is made at this time or at any time in the future to kill off the freeway system at the expense of building a rapid transit system is a serious mistake and one that I think the majority of the people in the city do not agree with, and it has been clearly shown to be the true fact all down through the years. As we consider the budget we will take a careful look at the requests for our highways, for our freeway system, and for our rapid transit system. Speaking only for myself, I hope this year we can carry both of these programs. In the past we have had to delete and take out of the budget the money requested for the rapid transit system until we stopped some of the chicanery and efforts that have been made to stop construction of the freeway system. I hope that is not the case this year and I hope we can go along with both systems. [District of Columbia Appropriations for 1969, Hearings Before a Subcommittee of the Committee on Appropriations, House of Representatives, 90<sup>th</sup> Congress, 2d Session, H.R. 18706, Part 1, page 104]

When WMATA officials, including Chairman Gleason and General Graham, appeared before the subcommittee on April 4, Chairman Natcher elaborated on his view. He explained the importance of a balanced transportation system that included freeways and rail rapid transit. “We believe that in order to meet the tremendous day-by-day growth of traffic and highway problems, we must have both systems.” Any effort to hinder one system “to benefit the other was a serious mistake.”

A few years earlier, when problems with freeways occurred, the subcommittee “did a little checking” on how much money had been spent on plans and specifications. He said, “we were amazed to find out just how many million dollars were involved”:

We do not blame you for the efforts that have been made to destroy the freeway system here in the District of Columbia. But one thing that confuses me – and I am speaking only as one member of the committee – is why we now find one or more of the opponents

of the freeway system employed and occupying positions in the new Department of Transportation.

That mistake confused him, especially when he reads newspaper editorials that essentially said, "My Boyd, who do you think you are fooling?" (He apparently was referring to the *Star*'s January 18 editorial "Boyd's Distortions," which did not use that phrase, but criticized his "demagogic irresponsibility" and called him the "Secretary of Anti-Transportation." Chairman Natcher introduced the editorial for the record [part 2, page 44].)

Chairman Natcher referred to 1963, when President Kennedy intervened in the highway program:

I had an opportunity to discuss this matter with him and I informed him that it was a serious mistake to bring the highway program to a complete halt. This was not the way to build a rapid transit system in the city of Washington, and I explained it to him. He was ill advised and his letter followed.

He recalled the subcommittee's efforts through the years to get the freeways built as part of the balanced transportation system:

Two years ago we begged and pleaded with them to continue the freeway system. We said to them, "If you do not do it, we cannot recommend rapid transit money."

On the House floor, he pointed out, the bill that included the delay in matching funds passed with the support of 320 Representatives. Only 3 Representatives voted against it.

He emphasized to General Graham, "There is not a man sitting on this side of the table, General, who has tried to stop the rapid transit program."

Referring to Chairman Kluczynski's bill, Chairman Natcher said it "may solve the freeway matter," but he did not know if or when:

I wanted you and the members of the Washington Metropolitan Area Transit Authority to know that as far as this committee is concerned, and speaking for myself as one member, General, I cannot recommend to this committee that we appropriate money for a rapid transit system if the freeway system in our city is halted. I just cannot recommend it to them.

He realized that NCTA under Administrator McCarter and WMATA had not done anything to stop the freeway system:

You know when Mr. McCarter was on the Planning Commission, he had nerve enough to stand up and vote like a man time after time. And General, if you do not believe it, go back and check the record. They did put pressure on him and he voted right and he voted for the best interests of our capital city.

McCarter had the chairman's respect.

He recalled the evolution of rapid transit proposals. First, he said, came NCTA's 98-mile system at a projected cost of \$1.29 billion. Then they cut it back to the 25-mile bobtail system at \$431 million.

Now WMATA was proposing "89, 98 miles, 110 miles" that was going to cost "not a billion dollars, it is going to run a little over two billion dollars, and General, a whole lot of money is going to be District of Columbia money that they have to borrow out of the Federal Treasury. They do not have it, they have to borrow their share, and it has to be amortized down through the years and paid out of the budget." He was not sure the District could afford it or that the House would vote for it.

He wanted the facts on the table, namely, "you will never pay for it out of the fare box. Go to New York and ask them and go any place and ask them." He admired McCarter for his honest answer when Chairman Natcher asked if the \$1-2 billion cost could come out of the fare box. "You cannot do it," he answered. The taxpayers of the 50 States will end up paying for it. "That is who is going to pay for it."

Meanwhile, if the funding is found, the next thing that will happen is the police department will appear before the subcommittee asking for millions of dollars for a thousand extra officers to cover the rail rapid transit system. "Just as sure as you are sitting there, General, and we know it."

The city deserved the transit system, but he did not know if the taxpayers of the 50 States would "want this much money invested that comes out of the Federal Treasury." He added:

President Kennedy was one of the finest men that ever lived, and I say that to you frankly. One afternoon they called and said he wanted to see me and I went down there, and he said, "Bill, I want to ask you a question. Are they right or wrong about the rapid transit setup and the freeway system?"

I said, "Mr. President, they are wrong about it," and I explained to him why they were wrong about it. He believed, General, that our committee was trying to do right because we are for both systems.

He closed his statement by telling General Graham:

I say to you frankly I cannot as the chairman of this committee recommend rapid transit money to the Congress of the United States if they are going to kill the freeway system here in the city of Washington. [pages 432-437]

On May 2, Director Airis, Chief Rivard, and other officials of the Department of Highways and Traffic appeared before the subcommittee. In an opening statement, Airis discussed all aspects of the department's operations.

On the subject of freeways, he referred to three significant events "that have brought new starts on the freeway construction program to a standstill." The first occurred in May 1967 when the

city asked NCPC for stage 3 approval of the Three Sisters Bridge. Instead, NCPC asked Secretary Boyd to review the need for additional lanes.

In succeeding months as everyone waited for Secretary Boyd's views, "neither the Secretary nor his principal aides have consulted with the highway departments of Maryland, Virginia, or the District of Columbia, although all are vitally concerned if the Secretary is actually contemplating changes in long-established routes." Despite articles in the newspapers about his views, he never really responded directly to NCPC.

During the December hearings before the Roads Subcommittee, Secretary Boyd said he would soon place a few questions before the area's three highway commissions. "He said this should not take very long. This has been almost 5 months ago, and the three highway departments have yet to receive the first piece of correspondence from the Secretary." Airis recalled the mandate from Chairman Fallon, and Secretary Boyd's reply that he was still not ready to render a verdict.

However, on February 29, 1968, Assistant Secretary Mackey wrote to NCPC:

Recent events, including the decision by the Court of Appeals of the District of Columbia have placed these issues in a different perspective, and additional evaluation by the District of Columbia and other units of the government is required to resolve the questions which exist with respect to several highway projects, including I-266. The Department's view is that the questions raised in your letter to the Secretary should be appropriately considered in this evaluation.

Airis said of the first event:

In short, Mr. Chairman, the referral to the Department of Transportation by the National Capital Planning Commission last May has in effect nullified all freeway planning activity for a full year. How long it will continue, of course, we do not know.

The second event was a cutback in obligation authority imposed by the Department of Transportation as part of President Johnson's budget cuts to support funds for the Vietnam War. Just a week earlier, the Department had increased the city's budget, allowing it to proceed with the Center Leg Freeway, interchange "C," and replacing the old 14<sup>th</sup> Street Bridge. "However, from a practical standpoint, we are prohibited from proceeding on two of these projects because of implications resulting from the recent court order."

The final event was the setback brought about by the U.S. Court of Appeals' February 15 decision. It affected the four projects in question but raised doubt "as to the legality of all our freeway projects." He summarized the decision related to the 1893 highway law. "Freeways were, of course, not even known 75 years ago, making those statutes totally unmanageable for a freeway program." He mentioned Chairman Kluczynski's bill "to correct this legal deficiency."

He concluded by discussing the increased cost of completing the Interstate System, and explaining that the city was not close to obligating enough funds to complete the Interstate freeways on schedule. [Part 2, pages 5-12]

Chairman Natcher took this opportunity to begin a long review of the committee's views:

Mr. Airis, as you well know, for a number of years now, the National Capital Planning Commission has decided, for some reason or other, that the freeway system as set up in the District of Columbia should be stopped and brought to a complete halt.

When WMATA appeared before the subcommittee, Chairman Natcher said, he discussed the 7 years of freeway/transit battles. Now that WMATA was planning a 98-mile network, he emphasized to the WMATA officials that they would not be able to pay for it, or the bonds, out of the fare box.

He recalled the editorials about Secretary Boyd and the fact that he has aides who were among the anti-freeway leaders. In view of Secretary Boyd's views and the court decision, "I am unable at this time to make a recommendation to our committee that we go along with a transit request calling for millions of dollars if these people downtown and other organizations are holding up the freeway system and the highway system in the District of Columbia."

He recalled the newspaper editorial, the House vote of 320-to-3, and 7 years of obstruction. Why people opposed the freeways was "beyond me." He said:

We have had interference from almost every source, and I want you to know this, Mr. Airis, that I still think that people who are trying to do this to our Capital City are making a mistake and certainly I, for one, don't intend to go along with them.

He commended Airis for his consistent support of the freeway system, as well as the Engineer Commissioners who "stood up with us and our city":

We have had people on the National Capital Commission [sic] that I thought would have enough courage to stand up and cast votes for our Capital City as they should be cast. I have seen them vote one way and 2 or 3 weeks later vote another way. Now, that is not good. [pages 12-15]

Chairman Natcher asked if the District could complete the Interstate System on schedule. Airis replied:

From a technical and practical standpoint, if we could immediately get an authorization to go forward with the project as the system and the project was originally scheduled, yes; otherwise, no.

The chairman asked for confirmation that the District had spent \$20 million for plans and specifications and for proposals "that have not been placed underway and a lot of this money is money that we will never be able to utilize. We will never obtain any benefits from it by virtue of delay."

Airis confirmed that "\$20 million covers all planning prior to 2 years ago." Part of that amount had resulted in construction, "but a large part has not."

At Chairman Natcher's request, Airis explained when the first appropriation occurred for each leg of the freeway system, as well as the status of each leg:

#### Southeast Freeway

The first appropriation for the freeway was in 1958. Construction began in 1961 and would continue until about 1969 or 1970.

#### Potomac River Freeway

With the first appropriation in 1959, construction began in 1960, but no work was underway at present. "It is tied up with the Three Sisters Bridge and future construction depends on whether or not it goes through." Parts were in use, carrying 15,000-20,000 vehicles a day, "but it should be carrying four or five or six times that amount."

#### North Leg Freeway

Although funds were first appropriated in 1965, construction had not begun. It was "one of the segments that is farthest away from actual construction."

#### The 11<sup>th</sup> Street Bridges

Money was first appropriated in 1962. "Both bridges will be completed in 1969."

#### Interchange "C"

With first appropriations in 1962, "the usable segment over to Barney Circle should be completed, if current thinking is actually implemented, in 1969 or 1970, probably 1970."

#### Center Leg Freeway

Construction began in 1965 after an initial appropriation in 1960. "It is well along but requires some contracts at the lower end in order to make it a usable segment by late 1970."

#### Central Potomac River Bridge

Although funds were appropriated in 1963, no work had begun. "This is, of course, the Three Sisters Bridge to which we are referring and it is now in limbo." The city was holding \$580,000 for the project.

#### Southwest Freeway

Congress first appropriated funds for the freeway in 1954. Construction began in 1957 and it was completed in the early 1960s "except for feeders."

#### North-Central Freeway

With an appropriation in 1965, work began on the Taylor Street Bridge in 1967. “However, the project is currently held up entirely as a result of the lawsuit.

### South Leg of the Inner Loop

Although funds were first appropriated in 1963, the project had undergone several design changes, but “this is one of the projects that is affected by the injunction by implication.”

### East Leg Freeway

Funds were first appropriated in 1963. “No construction work has been done and it is one of the projects that has been included in the injunction, so no work can go ahead on that.” | [pages 20-21]

Chairman Natcher returned to that 320-to-3 vote. Because he had no desire to stop rail rapid transit, he had promised on the House floor before that vote that when the freeway system moved forward, “we would make a recommendation for rapid transit money.” Following the May 1966 NCPC support for the Policy Advisory Committee’s agreement, “we were then free of those shackles they had placed on the freeway system.” He had asked the House to support the transit funds:

We did exactly what we promised we would do. This is our position at this time. We were deceived before and after we turned the transit money loose the freeway system was stopped again.

Since that time, the National Capital Planning Commission, beginning shortly after the time when we released rapid transit money, proceeded to stop the freeway system.

He completed his summary of the situation by referring to Chairman Kluczynski’s effort to overthrow legislatively the U.S. Court of Appeals of the District of Columbia ruling against the freeways. [pages 26-27]

(On March 27, Chairman Natcher held the subcommittee’s annual hearing for citizens and organizations. Witnesses, of course, commented on a range of District government issues. Several witnesses discussed freeways briefly, pro and con, but the testimony was mainly on other subjects. [part 1, pages 734-860])

### **The Kluczynski Hearing**

On April 2, 3, and 4, Representative Kluczynski held hearings on “The Interstate System in the District of Columbia.” He considered the hearings a continuation of those held in late 1967 when the subcommittee heard from government officials. He said he had “an open mind” about what should be included in the District’s Interstate System, but wanted “to hear what everyone has to say.” He had scheduled 80 witnesses for the 3 days. “I hope that each of you will present the highlights of your position in your oral statements; you may, of course, file additional statements for the record.”

The subcommittee's Ranking Republican, Representative Cramer, said, "I think we have a duty to show leadership here." He acknowledged problems "arising that perhaps were not completely foreseen at the time the system was established in 1956." He cited "political considerations," serious relocation problems that everyone should "try to find a solution to," and "serious location problems." The committee had asked the Johnson Administration for recommendations on relocation problems; they submitted a report on what the problems were and the costs, but minus recommendations:

I think these hearings can render a great service in helping point the way for this committee to determine how some legislative help and some of these relocations might be resolved not in 2 or 3 years from now, but now.

He added, however, that Congress had committed to completing the Interstate System, "wherever located," by October 1973.

The District's problems were unique, but had national implications:

It is particularly significant because the whole Nation is looking to the Nation's Capitol [sic] seeing the problems that exist, following its lack of leadership in many instances and some other major metropolitan areas are saying, political leaders and such, planners and so forth, that Washington is not solving its problem and why should we be in such a hurry to solve ours . . . . I think we have a duty to show leadership here . . . .

The hearings could "render a great service" in helping resolve the District's unique problems, which included "a circuit court of appeals decision that is apparently having the effect of causing complete stagnation relating to resolving these problems in the District and it involves an 1892 law [sic], involving the limitation of 160 feet of right-of-way; laws that have been on the books for years that obviously need review." [The Interstate System in the District of Columbia, Hearings on H.R. 16000 before the Subcommittee on Roads, Committee on Public Works, House of Representatives, 90<sup>th</sup> Congress, 2<sup>nd</sup> Session, Committee Print 90-26, April 2, 3, 4, 1968, pages 2-3]

The first witness was ECTC's Cassel, an architect. He said ECTC "deplores this proposal to strip the new city government of one of the independent functions that it now has, that of conducting its own highway development program." Following the court ruling in the suit brought in part by ECTC, the city could have appealed to the Supreme Court or considered a new highway program. "Neither course was followed." Instead, H.R. 16000 implied that "it is in the public interest to circumvent the law and to nullify the Court ruling." He said:

A resumption of planned freeway construction in this city would result in continued property taking, disadvantages to people of modest means, widespread family dislocation, and the destruction of existing and potential neighborhood political entities.

For a minority community that had suffered "long years of exploitation, neglect, and abuse," Cassel said, forcing these freeways on the District "is the stuff that civil disorder is made of and bayonets and Stoner guns" cannot overcome the public's response to the damage done by the

freeways. He attributed H.R. 16000 and the support behind it to the “road gang,” which he described as “freeway proponents who insist on creating more massive concrete canyons containing accelerated treadmills for rapidly dumping pollution-generating vehicles into a downtown area which is already hopelessly congested during rush hours.”

The issue, Cassel said, was “clearly black and white, with insignificant areas of gray: Black and white in the sense that freeways solve no problems and create only additional burdens”:

It is also black and white in the sense that they are white men’s roads through black men’s homes. The convenience, illusory as it is, would be for white, not District residents to speed through black communities and to the waiting bottleneck in the center city. Now, ironically, the black victims of this heartless property taking would have limited or no access to the freeways.

The resulting anger, disgust, scorn, and distrust of government on the part of the victims should be obvious to us all by now.

When Cassel concluded his statement, Representative Kluczynski asked if Representative Cramer had any questions or comments. Representative Cramer replied that, “I do not intend to dignify his statement by asking any questions.” He said Congress had passed the 1893 law, and could consider whether a change was needed. He rejected the notion that “this is some sort of a vendetta against a certain group of people” and added that problems could be worked out. “I must say my personal reaction is that you do not accomplish much by coming before a committee of Congress to make a presentation such as you have.” [pages 4-6]

During the question period, Cassel made clear that he wanted to stop further freeways. He was not interested in suggesting alternative locations for them. He believed that rail rapid transit was the answer to the District’s congestion problems. He granted that the Congress had enacted the 1893 highway law and could change it, but he hoped it would not do so. [pages 6-12]

Reginald Booker, ECTC’s chairman, told the subcommittee:

We say no more white man’s roads through black bedrooms. This is the resounding battle cry of those people who I should say are poor black people and white people, black mostly who are fighting against the freeway bulldozer.

After citing freeway battles in Philadelphia, Nashville, San Francisco, and Cambridge, Massachusetts, he said, “the entire freeway program as we can see it here is a case of racism, whether this is by accident or by design it happens to be this way.” He cited Secretary Boyd as referring to the “freeway here in Washington” as “a classic example of racism”:

With the freeway originally being planned to come down the Wisconsin Avenue corridor and being shifted essentially because of the fact of the people and the business interests who reside on Wisconsin Avenue are white, it then was shifted to a black area and again as Secretary Alan Boyd said, this was done on the premise that the people on Wisconsin Avenue had people cowed and the area which it was shifted to, the people did not have what he called political acumen.

He summarized the Little report as concluding that the best alternative was to build the subway and then see what else was needed. He added that the District government was suppressing the report:

The District government also refuses to release this report to the public because of the fact that the report states most emphatically that the solution to the transportation crisis in the District of Columbia is not a massive freeway system which would bring havoc into the community, but a mass rapid rail transit system.

He described the members of the city council as President Johnson's "ranchhands because the people in Washington did not vote for them," and said they were attempting to circumvent the U.S. Court of Appeals' decision through H.R. 16000.

The city had even, Booker said, refused to hold public hearings on the freeway question as directed by the court. Challenged on that point, he dismissed the city council hearing on March 13 as a meeting, not a hearing. [pages 13-14]

On questioning, he stated that the numbers of people displaced by the freeways do not "really represent the misery that is brought to families" whose homes are acquired. Asked if he had figures on the number of displaced white families, Booker replied that in urban areas, the Interstate System "invariably boils down to the fact that the freeway always comes through black communities." Told that color had nothing to do with location, Booker said that the planners and architects involved in the highway program in Washington were "lily white":

You see, the question here is simply one of the fact that black people are never in on the planning stages of the freeway or highway from the beginning stage until the ending stage.

Here is a situation where black people and poor white people, they do not have control of their destiny and this is one of the issues here we are talking about. [pages 14-17]

Sammie Abbott was the next witness. He explained that his home at 7308 Birch Avenue in Takoma Park, Maryland, was in the path of the third lane of the North-Central Freeway, "as is also the magnificent home of my widowed mother-in-law, lovingly built for her by my bricklayer father-in-law." He was, therefore, not an interloper in District freeway debates.

He questioned why they had gathered "in this sanctified chamber of legislative brainpower and wisdom." On this point, he quoted a broadcast interview the day after H.R. 16000 had been introduced, during which Chairman Kluczynski had explained, "We've got to get the traffic moving." The day he introduced the bill had been rainy. Traffic was tied up "and our office staff was more than an hour late coming to work." Abbott said that their lateness "may be reason enough to question, to chastise, and maybe fire those employees that give some lame excuses for being late to work, but it is sure not enough reason to engulf the Nation's Capital in freeways eight and 10 lanes wide." The lateness of congressional staff "does not in the slightest reduce the destructive and debilitating effect of freeways upon citizens whose taxes I may add here, pay for the salaries of Congressmen and their staffs."

Abbott also suggested that the reason for H.R. 16000 and the hearings was “to get Congressman [sic] Gude and Broyhill off your back.” He was, Abbott said, there to help with this problem by letting Chairman Kluczynski know that contrary to what the two Congressmen may have told him, “instead of an overwhelming demand for freeways in the suburbs, there is an overwhelming demand against freeways in Montgomery County.” He cited the public hearing in March 1965 (“the only legally constituted public hearing according to the rules of the Interstate Highway Act that has been held in the metropolitan area”), during which not one citizen organization approved the freeways.

As for the District, he said:

On no other issue have there been such a unity and action involved [sic], from the affluent Georgetown and Foxhall Road areas to the black power champions of the ghettos, from the federation of civic associations to its counterpart, the citizens associations, the one issue which has united rich and poor, black and white, renter and homeowner, has been the fight to save the Nation’s Capital from the destructive octopus, the freeway.

Regarding the official hearings in February (“and we are putting quotes around the word official”), he called them “an empty farce.” Highway lobby representatives supported the freeways, but every other witness opposed them.

Moreover, former Engineer Commissioner Duke, in a deposition related to the citizens’ lawsuit before leaving for Vietnam, admitted that “not a single Commissioner had read a single paragraph of a single page of the transcript nor had they attended a single meeting. Abbott asked, “Now, what kind of a hearing was that?”:

The 1893 law was specifically guaranteeing the right of the citizens to public hearings and if you read the court decision you can see why the District of Columbia and the Government agencies involved were afraid to take it to the Supreme Court because it is pointed out in there that the District of Columbia more than any other State in the Union by virtue of being voteless [in Congress], must have the umbrella of public hearings and the right to petition and the right to speak.

So, if in this act, H.R. 16000, you attempt to override this, you will be, in effect, taking away from the District of Columbia the one right, you see, one of the vital rights guaranteed in the first amendment. I say it is the right to petition which involves this, you see.

The fact that the District commissioners neither attended the hearing nor read the transcript was “a shameful episode in the history of the District Government” and he urged the committee not “to buttress up an invalid freeway system that has reached the state it has now on an edifice built on the denials of the citizens’ rights.”

To date, neither Mayor Washington nor the city council had come out in favor of the freeways. Secretary Boyd said he would be guided by the mayor and city government, as had Public Works Chairman Fallon. Chairman Kluczynski had been quoted recently as saying the purpose of the

legislation “was to smoke out the District officials and the Department of Transportation.” Abbott asked if Chairman Kluczynski did not realize “that what you are doing is to try and separate these local officials from the very people, the very constituents here if you want to call them that, who are now unanimously opposed to freeways?”

Abbott said that if an individual white racist blew up “an individual Negro’s home by dynamite, he would be universally condemned,” but when the government “unleashes a set of bulldozers to drive thousands of families from their homes, demolishing established and integrated communities then only the victims object.” This “institutional white racism” is easily understood in the case of the District where 15 of the top planners were white and 13 of them live in the Maryland or Virginia suburbs.

He ended his testimony by saying:

In conclusion, the black population is not going to allow any more dislocations, disruptions, and destruction of its communities. I think this was made clear by earlier speakers. I will say, Mr. Chairman, that neither will their white neighbors.

We are united in this joint effort to uphold the ancient dictum a man’s home is his castle, interlopers beware.

What I am doing myself, Mr. Chairman, and I am putting it as precisely as I can, will the subcommittee continue to advocate and build urban freeways which by now in 1968 we know means to build the incendiary causes, the very objective set of conditions that will result from revolts, riots, or call them what you will, by a frustrated, disillusioned and bitter citizenry [sic].

No man, black or white, with an ounce of manhood is going to allow such unwanted and unneeded, unproven freeways to continue to spread like a cancer after we have seen the damage they do.

It is in the tradition of our United States that in defense of our private property, our homes, and communities we will stand united against the encroachments of highway lobbies and public officials who distort and misuse the right of eminent domain, taking our homes for freeways is not in the common good, not within the true meaning of eminent domain.

We read about citizens arming themselves every day against individual crime. I am telling this committee here that I am getting myself a shotgun to defend my home and posting a sign for all highway appraisers and officials to beware of. [pages 18-31]

These early witnesses faced aggressive, skeptical questioning from the subcommittee. At one point, Representative Frank M. Clark (D-Pa.), tried to put Abbott on the spot when he spoke of the need for mass transit, but Abbott, who would be arrested 34 times during his anti-freeway years, was not easily intimidated:

Mr. Clark. How did you get up here today?

Mr. Abbott. Oh, look, I was asked that. I came by horse and buggy. I got it parked right outside. I anticipated that. I was exaggerating.

Mr. Clark. Mr. Abbott, I asked you a perfectly honest question.

Mr. Abbott. I came piggyback and my wife carried me.

Mr. Clark. I say, sir, I asked you a direct question and I want a direct answer.

Mr. Abbott. I came by subway. I used the Senate subway. If it is good enough for the Senators, it is good enough for me. End of question.

Mr. Clark. How did you get to the Senate?

Mr. Abbott. I hiked.

Mr. Clark. Mr. Chairman, I want him to answer this question.

Mr. Abbott. I take the fifth amendment.

Mr. Clark. Then we should adjourn this meeting.

Mr. Abbott. I came by car, sir. You ought to know that, just like you came.

Mr. Clark. Why didn't you come by bus?

Mr. Abbott. The fact I came by car has no relevancy. I have no other way of coming.

What do you want me to do, come by pogo stick? [pages 26-27; number of arrests, Leveys, page 16]

Other witnesses on the first day included:

- Edward J. MacClane, president, District of Columbia Federation of Civic Associations – opposed the bill. “Since 1960, our organization has opposed the construction of freeways through the Glover-Archbold Park, the north leg of the inner loop, and 11<sup>th</sup> Street SE. The federation is unalterably opposed to the North-Central Freeway and the Three Sisters Bridge.” The main objection was to “the displacement of thousands of District residents from their homes and many small businesses.”
- Floyd H. Agostinelli, North East Neighborhood Council – He expressed “unequivocal opposition to H.R. 16000” because the District’s transportation problems “are inexplicably tied to serious economic, racial, and other social problem areas.” They must be taken into account in considering transportation options.
- Thomas P. Rooney, Assembly of the Full Faculty, Catholic University of America – opposed inclusion of I-95 through northeast Washington in the freeway network, noting that no public hearings had been held on the route, no justifications given for routing the Maine-to-Florida truck route through the city, no study had been conducted on the health and environmental impacts of the freeway, and no replacement housing was available. “Again, if you are talking about ghetto and impacted areas, relocation money means nothing because there is no low-income housing in Washington, D.C. More housing has been torn down by urban renewal, freeways, and commercial development in the District of Columbia than has been put up.”
- Frederic Heutte, executive committee, Catholic Interracial Council of Washington, D.C. – Council members, “along with all concerned citizens . . . had believed that the controversy surrounding the ill-conceived interstate freeway program for the National Capital had been settled on February 15,” by the U.S. Court of Appeals decision. “We oppose the basic plan of the forces of greed, thirsting for all that highway trust fund

money to build unneeded and unwanted freeways, freeways which serve the interests of money only and pollute our air and environment, serve also as ‘Chinese walls’ to divide our community physically, socially, spiritually, into ghettos, black and white, rich and poor.”

- Professor Leonard P. Siger, Gallaudet College – He supported “a compelling necessity on the part of Congress . . . to find a way of reconciling the seemingly contrary nature” of the Federal-aid highway program and meeting the area’s transportation needs. Without taking a stand on the bill, Dr. Siger offered to visit with the engineers who may have a “career problem” and with the committee members who “may have a political problem.”
- John Immer, chairman, D.C. Federation of Citizens Associations – The group opposed H.R. 16000 “as a matter of principle as interfering with the orderly process of planning in the District of Columbia.” The bill would leave District residents “helplessly exposed to a splurge of highway projects.” Assuming that some members of the committee supported home rule, “how can those members cry for home rule as they stomp in the dust those who protest the taking of their homes?”
- Colonel Robert F. Evans, U.S. Army (Retired), president, Citizens Association of Georgetown – “This association has long opposed the construction of the Three Sisters Bridge not only as destructive of one of the most beautiful scenic vistas in the metropolitan area but also as a menace to the future of Georgetown.” Given the area’s desire for restoration of the waterfront, “construction of a superhighway through this area whether on stilts, at surface level, or in a cut, would block this long-sought objective.”
- Dr. Edward L. Maillet, Brookland Area Coordinating Council – He considered H.R. 16000 “a singularly bad piece of proposed legislation, even a dangerous one.” The council would be “vehemently opposed” to the bill even if Brookland “were not so directly affected” because the “implications of this proposed legislation reach beyond any one neighborhood of Washington, D.C.; indeed they extend beyond any one city.”
- Simon Cain, president, Lamond-Riggs Citizens Association – The association was “unalterably and inexorably opposed to the current freeway plan for the District of Columbia.” The committee was trying to impose “these injustices upon us.” He said, “I never thought that I would see the day when the Congress of these United States would move to ratify such an illegal action as that about which we are speaking – namely, the court suit and the highway program for the District of Columbia—and thereby become a party thereto. God forbid.”
- Bernard W. Pryor, Brookland Neighborhood Civic Association – Brookland residents “live in an area that is being harassed by the Highway Department to get us out of our homes to let the freeway monstrosity come through and break up our neighborhood”:  
The Government is supporting a program to kick the Negro in the teeth by taxing them to pay for freeways they do not want and cannot use. The system of freeways throughout the country seems to be directed through Negro areas, to destroy the unity of whatever political status they possess.
- James E. Drake, president, Foxhall Village Community Association – He was not opposed “to the interstate program per se,” but he opposed the Three Sisters Bridge because of its impact of the community and Glover-Archbold Park. The association opposes H.R. 16000 because it would require construction of the bridge, abridges citizen

rights, and would overturn a court decision that the people of the District “have a right . . . to be heard just as do the citizens of any State in the Union.”

- Grover Chapman and Robert Kennan, Jr., Committee of 100 on the Federal City – They disagreed with statements about the Three Sisters Bridge by “Mr. Thomas Airis of Potomac, Md . . . and Mr. Lloyd Rivard, of Alexandria, Va.,” for example disputing that any of the 10 studies Airis displayed during his testimony “provided any justification” for the bridge. Kennan questioned the traffic projections, including the latest report by Alan M. Voorhees and Associates, and suggested that the committee’s review demonstrates that “there will be no need in 1990 for a bridge across the Potomac River at Three Sisters Islands, but rather at some location between the 14<sup>th</sup> Street and Woodrow Wilson Bridges.”
- Alfred J. Zmuda, Metropolitan Citizens Council for Rapid Transit – Favored the rail rapid transit plan because “additional freeways, parkways, and bridges will not contribute to the solution of the primary transportation problem in the area.” He cited gross errors in traffic projections. “Freeways and parkways play no significant role in rapid movement of people as they are too inefficient,” since rail rapid transit “can take as many people as 20 lanes of highway.”
- Harry J. Quintana, 2MJQ (Black Advocate Planners) – He did not express a position on H.R. 16000, but advocated improved bus service instead of rail rapid transit. He referred to two types of transit: “very clean, conveniently timed, courteously operated” systems for middle to high income residents who owned private vehicles and “very crowded, irregularly timed system, manned by sadistic uninformed cattle ranchers” for the low income who “receive few public amenities, and exert no influence over their fate within the classical context of law and order.”

One additional witness was unfamiliar with H.R. 16000 and the issues that led to it. Avon N. Williams, Jr., of the law firm of Lobby and Williams in Nashville, Tennessee, had visited a member of the committee staff, heard about the hearing, and agreed to testify without a statement. He represented the Nashville I-40 Steering Committee in its court battle to stop I-40 from being built through the African-American community in North Nashville. The route would separate historically black colleges and take out homes and businesses along the entire length of Jefferson Street, which was the “main business drag for Negroes”:

In this general area lie approximately 234 Negro businesses of all types, excluding big business of course, excluding industrial business, but businesses like barbershops, shopping centers, a Negro savings and loan association, if you please, Negro insurance companies; practically all that Negroes have worked and slaved for in their segregated condition for more time than I care to remember, is in effect being devastated by this highway.

The District Court rejected the defendants’ case, “but in turning us down said that it doubted very gravely the wisdom of the selection of this particular route and admitted the tremendous damage that was being done to the only Negro business and educational community in Nashville.” The U.S. Court of Appeals of the Sixth District also turned the plaintiffs down, but “admitted the same thing.” He had appealed the case to the U.S. Supreme Court in October 1967, but did not yet have a ruling.

He was not clear on the role of the committee in these matters:

I would say to you that, from the standpoint of a lawyer representing Negroes in a southern community, that there are a concatenation of forces which are working to completely resegregate the Negro in our community. Unfortunately, these forces are aided by Federal legislation in its implementation. Unfortunately, the people who operate the Urban Renewal agencies, the housing authorities, the State highway departments in the State of Tennessee have no interest whatsoever in the legitimate aspirations of the Negro to be a part of the mainstream of American life.

Applause broke out at that, forcing Chairman Kluczynski to warn that, "There will be no demonstrations."

Williams continued by assuring the chairman that if he went to Tennessee, he would not "find a single Negro in any policymaking position or any position where he could do anything about – that is anything seriously about – anything important that happens in the planning of anything that has to do with municipal life and the development of human relations and human beings and the commercial, education or political society in the State."

The Federal Government had made no effort to judge the economic or social impacts of the routing of I-40, or any effort to determine if the State had attempted to judge it. The Federal Government "has let us down in this particular area of public works; that it has not, ladies and gentlemen, if you please, made a reasonable effort to see that what is happening down there is done fairly and that it conforms to the spirit of the United States of America."

When Representative Cramer pointed out the need for Interstate highways, Williams guessed that the people supporting Interstate highways in his area were all business people who have an interest in it. "I do not think you will find probably a majority of the people who feel that way," in view of racial discrimination:

And this is something with which the entire Nation is going to have to come to grips, is present in Nashville, I am sure it is present here in Washington, and that is the activities of the real estate interests in building massive white residential subdivisions in the suburban areas of communities which they sell only to white people and which are built primarily for the benefit of the white, burgeoning white labor and middle classes, to the exclusion of Negroes. And, yet, they want the interstate because they have to have some high-speed method of transportation into town.

I say to you that, you asked me what can the Federal Government do and I think one thing that Congress could write into the legislation would be a requirement that before an interstate highway is routed through any area that there be some kind of a realistic survey or analysis made of that area by people competent to do so, by engineers, architects, city or social planners, civil rights people, if you please, human relations people, people who are interested in the development of this country from the standpoint of our loving one another and getting along as human beings, rather than purely from the commercial

chamber of commerce standpoint which stands forth with great starkness in Nashville that a highway should be routed so as to benefit the commercial community.

Secondly, and in the course of this, you see, this would imply, if you had this kind of a team, you might never get a highway through the heart of town.

Representative Cramer asked if these issues were raised at the public hearing for I-40 in Nashville. Williams denied that a public hearing took place in accordance with the law. The hearing was held on May 15, 1957, at 9 or 10 a.m. in the courthouse, with notices posted in the main post office and five branch post offices, "not one of which was in a Negro community." The nearest was "in a white slum community adjacent to the Negro community, posted in the post office along with the FBI posters." The transcript identified only public officials who spoke because, according to one of those officials, "the questions came from the back, and [the recording equipment] just was not adequate to pick that up." Only about 10 people attended the hearing and the mayor at the time, who presided, could not recall that any were Negro. "That hearing is no more the kind of hearing contemplated by Congress than anything."

Representative Cramer pointed out the 3C planning requirement that went into effect in 1965. Congress had not been "oblivious" to the need for comprehensive planning. Williams said he had a memorandum from Administrator Bridwell denying that I-40 in Nashville was covered by that requirement.

In closing, Williams agreed that "your ideals are fine," but when the money gets to the States, it might be used "a little differently than Congress intended." [pages 31-45]

(The Supreme Court declined to hear the appeal that Williams had mentioned. As is usual with such decisions, the Supreme Court did not explain why it did not take up the appeal, but the result was that the U.S. Court of Appeals' decision went into effect.)

*The Washington Post* characterized the first day of hearings as "more than six hours of unanimous and sometimes emotional testimony . . . against a bill to force completion of the District's proposed freeway system." ["Freeway Foes Assail House Bill," *The Washington Post and Times Herald*, April 3, 1968]

On April 3, the lead witness was Nicholas Satterlee, chairman, Committee on Legislation, American Institute of Architects:

We oppose this legislation because, if enacted, it would force upon the District an ill-conceived and misrepresented highway plan based on motives and assumptions not consistent with the principles of the Federal Interstate System.

In addition, we oppose this legislation because it seeks to ignore a basic democratic principle; namely, that the people have a right through public hearings and discussion, to play a part in the highway planning process.

He emphasized that the organization was not opposed to highways. It favored a balanced transportation system in which "highways are an essential element." However, major change

was needed nationally in how these transportation corridors were selected. He recommended a three-part planning team consisting of “a decision team, city and Federal agency representatives, and a design team, architects, engineers, economist, sociologists, et cetera.” Such teams had worked in Cincinnati on its downtown plan and were at work in other cities, including Baltimore, Chicago, New York, and Seattle. As for Washington:

The present stalemate would seem to be a golden opportunity for the city to develop promptly a responsive team process of its own that will assure us of a truly comprehensive urban transportation.

The end result could well be what was hoped for in streamlining the District’s government: A coherent response to the total urban environment of the Nation’s capital.

The investment of the short time needed will buy back the public confidence, the lack of which is the true reason for 20 years of acrid debate. [pages 113-119]

Through the course of the day, many witnesses opposed H.R. 16000, including Arlingtonians for the Preservation of the Potomac Palisades, Izaak Walton League of America, National Audubon Society, Wilderness Society, and Greater Washington Citizens for Clean Air Society,

During the testimony of James Deane, special consultant on roads for the National Audubon Society, Representative Richard D. McCarthy (D-NY) engaged in a testy exchange with Chairman Kluczynski. A native of Buffalo, Representative McCarthy had been a reporter for the *Buffalo Evening News* and a public relations official for the National Gypsum Company before winning election to the House in 1964. The exchange occurred after Deane described some of the destructive impacts of the city’s freeway network, built and unbuilt:

The National Audubon Society submits that Congress should not advance a destructive trend, but should instead reexamine the premises of the proposal before you. The society believes that the public interest would be better served in Washington and in America’s other growing metropolises [sic] by putting less reliance on a proliferation of giant freeways and more on creating efficient metropolitan mass transportation.

The National Audubon Society respectfully urges that this proposed legislation be abandoned.

Representative McCarthy agreed with Deane that H.R. 16000 had national implications because it “ignites an issue that has been smoldering for a long time”:

I share your viewpoint on it; and if this bill is steam-rolled through, it is going to have far-reaching implications . . . . I certainly respect the chairman and understand his reasoning for introducing the bill; but I would think it has a very good chance of passage [unless] we can have support from more organizations like yours.

Chairman Kluczynski pointed out that since Representative McCarthy had served on the Public Works Committee for a number of years, “I’m sure he knows I have never steam-rolled a bill,” adding:

That is not my intention nor is it the purpose of these hearings. We want to hear everybody, whether he is for or against this legislation. After these hearings, we will sit in the subcommittee in executive session, and we will go over all the testimony that has been presented by witnesses. [page 138]

The first witness in support of the bill was Jay Pilzer, counsel, Yellow Cab Company of D.C., Inc.:

The need for the development of a good freeway system and thoroughfare system that will carry the interstate travel off of the city streets is absolutely critical. We cannot provide adequate service to the use of service transportation without unloading these streets of the traffic that is coming in from interstate and across through the district. [sic]

Some of the objections to the plan were “unrealistic.” The streets were “clogged with inappropriate traffic of usual and attempted high-speed nature – it is not very high-speed when you get on the streets; but it is not consistent with the development of residential streets.” He favored connections and loops, but especially the Three Sisters Bridge, which would “unload a great deal of traffic which apparently is being congested into the approaches to the existing crossings.” [pages 142-150]

Sanford Slavin, president of Princemont Construction Corporation of Rockville, also supported the bill. The freeway plan had been subject to “too much confusion and delay in getting the necessary segments of the Interstate System under construction.” As a result, he had been forced to lay off employees, many of them from minority groups. “The men need the jobs; we need the contracts; the District of Columbia needs the roads . . .” Members of Congress could make that happen. [pages 152-154]

Another contractor, Arthur Cox, president of Corson and Gruman Company, also cited the need for jobs to keep his workers employed, but said:

It seems to me that it would be hard to devise any program which could be more beneficial to the problems of this city than this vast public works program of this Nation. The interstate freeway system would not only be of benefit to the transportation system in the city of Washington, but it would generate \$100 million worth of employment for people who need the work now. [pages 154-155]

The day ended with testimony from The Reverend Gipson, treasurer of Upper Northeast Group Ministry, an alliance of 22 ministers in northeast Washington. He also was a member of ECTC. He began by saying of the ministries:

With no exception these organizations are opposed to the freeways and highways when they are incidental or accidental tools of evil perpetrated against our communities. We stand opposed to freeways when they destroy communities, dislocate our economy, and uproot citizens whom they essentially do not benefit.

His group was not “brandishing swords, knives or guns” to force congressional action. “We asked the courts to hear us and they responded favorably. We ask you to do the same.” If Congress would not do so, what other course of action was open to the community? He asked:

What good does talk about freedom of circumstance or equality of opportunity mean while we continue to institutionalize barriers and disregard the general welfare of the city dweller. What good is talk of reducing tensions and building a stable inner city, when we continue to bulldoze and destroy our communities. What good is talk of participatory democracy while we leave so many without a voice in highway places . . . .

He introduced a statement by the group that began:

No local public issue evokes a more anguished or unanimous cry of protest from the black people of Washington than the freeway issue. A massive Interstate Highway System, planned, promoted, and designed primarily to serve white residents of the suburbs, threatens to take away their homes, blight their neighborhoods and isolate them in the inner city. The freeway system will destroy the residences of more than 1900 families, mostly Negro and mostly low and middle income, displace more than 120 businesses employing more than 4,000 persons, and consume more than 120 acres of park land.

It would remove \$400,000 a year in real estate taxes from the District treasury and cost, overall, \$50,778,000 more in “money that might be better spent for better employment opportunities, education, welfare services and housing.” Approval of the 97-mile Metro rail system, and an experiment with express bus service from Virginia “offer assurance that it is no longer necessary for the people of the District to provide most commuters from the suburbs with the means to drive their cars to work.”

Now was “a moment of truth.” The statement said that, “White men’s highways through black men’s homes have a permanent symbolic significance, and there is increasing evidence of a direct relationship between racial discrimination in transportation planning and the bloodshed that took place in Watts, New Haven, and Newark.” The U.S. Court of Appeals ruling “offers [a] unique opportunity for re-evaluation of the whole freeway program in the light of desires and needs of the people of Washington today.”

The Reverend Gipson concluded:

Mr. Chairman, we seek to restore respect for law and order, particularly of the hostile group who feel the lawmakers disregard their interests and desires. We are seeking to call our youth to cooperate with police and civil agencies whom they feel repress them at every point. We are seeking to build a better society. We need your help. We pray God will give it by rejecting this proposed legislation.

Representative Cramer was the sole questioner. Was the Reverend Gipson recommending that all highway construction be halted in view of the court decision? Yes, and he also thought that the old Taylor Street bridge should be restored. Should noncontroversial city street projects also

be halted? They would not oppose upgrading existing structures, but “in terms of new highways bringing additional traffic, we are opposed to it.”

The Congressman pointed out that the court ruling would stop all types of construction, even some improvements of present facilities. The court, the Reverend Gipson replied, had done “a good thing” by stopping construction. The District could have talked to the defendants in “terms by which they could continue this,” but “they sought to do nothing.”

As far as Representative Cramer was concerned, the bill was a “good-faith effort to try to find a solution to some of these problems.” The court finding affected all highways in the city, and Congress had the power to do something about it. “I tend to think that those who filed the suit may not have realized that that would be the total effect.” The Reverend Gipson pointed out that the suit named specific highways, not all highways, and those were the ones the plaintiffs were most concerned about.

Referring to the statement about using the funds for other purposes, Representative Cramer said this was another example of how the ministers did not have “a full understanding . . . of the limitations relating to highway construction.” The Reverend Gipson replied that he believed Congress could make decisions to benefit the District, despite precedents for how funds have been used. “We feel that we cannot adequately administer in these areas where we have not the funds and where the funds are available they are used for other things.” The Congressman pointed out that if the funds were not used for highways, the District would lose them. “It would go to somebody else.”

He then referred to the statement that mentioned white men’s highways through black men’s homes. It was “interesting to me” that no organized objection was raised “when these white men’s highways were going through white men’s communities.” About 90 percent of all the homes and businesses displaced by the Interstate freeways had been in white communities. “And what would be your response to that?” The Reverend Gipson replied:

My response to that, Mr. Congressman, is that the replacement value gained by white residents for their homes was of such a nature they did not see fit to raise any objections.

This has not been true in terms of blacks selling their property and trying to rebuy – let’s get the next issue, too – that the oppressive housing codes of the surrounding areas have forced compacting of Negroes into these areas and has reduced the real estate possibilities for them; and at the same time where the surrounding counties, such as Montgomery, have such a high real estate value, those same people cannot afford to move from their present locations to the other places.

Representative Cramer acknowledged that this was one of the “very serious problems,” and it affected many cities, not just the District of Columbia:

We have no prospects of solution, and that one of the considerations I think we should seriously talk about is: What is the disparity relating to relocation and condemnation problems?

Is there a disparity? If so, we should give some consideration to it; so certainly this committee is not oblivious to the point you make.

He added, however, that the issue “is not a racial question at all, it is a question of the value of the property today, the present law and power of condemnation, and what can be paid under the law.”

The Reverend Gipson asked if Representative Cramer would help make solutions possible “before we make more problems by continuing highways?” The Congressman replied, “This is what the hearings are all about, as far as I am concerned, Reverend.” [pages 156-161]

The *Post* summarized the second day by saying the committee heard from “12 witnesses . . . nine of them opposed to the bill.” The account noted the exchange between Representatives Kluczynski and McCarthy, but added:

Another subcommittee source said yesterday that the antifreeway witnesses who have dominated hearings so far are having an effect, and that some major changes may be made in the Federal highway law this year. “They’re making some good points.”

Moreover, members recognized that the issues being raised were also being raised in other cities around the country. “Several subcommittee members have indicated that they look upon the District as a kind of test case.” [Milius, Peter, “Move to Unsnag Freeways Seen,” *The Washington Post and Times Herald*, April 4, 1968]

On April 4, the final day of the hearings, the first witness was Lieutenant General Elwood R. Quesada (U.S. Air Force, Retired). Having served as Federal Aviation Administrator (1958-1961), General Quesada testified about how he had helped select the site for Dulles International Airport. Access was an important factor, with “a requirement of being within 30 minutes of downtown Washington.” He helped design an access road, linked to I-66:

The point I am attempting to make . . . is that at that time we anticipated and planned for U.S. Highway 66 [sic] proceeding to the Potomac River at a point unknown to us, however, upstream of what is known as Key Bridge.

He doubted the airport would have been built where it is if not for knowledge of that planned bridge. The bridge the planners had in mind would eventually become the Three Sisters Bridge. He added that, “one very strong consideration that was in our minds then was that we did not want to use the U.S. Park Service highway on the south bank of the Potomac River which is called the George Washington Memorial Parkway.” [pages 163-166]

Representative Scott, who had cosponsored H.R. 16000, told the subcommittee that, “those persons residing within the District who oppose highways are doing a disservice to their city.” For the “inner city” to survive, officials must find a way for suburban motorists to get in and out of the city to the suburbs. The alternative was that more people and businesses would move out of the city.

He supported completion of I-66 and I-266:

The completion of this interstate highway will also provide better access to Dulles International Airport.

I appreciate a beautiful Potomac and the esthetic values of our capital, but no one can get much satisfaction out of the beautiful Potomac when they can only see it from an automobile that is stalled in a line of traffic because there is not adequate access into the city.

The District should be allowed to proceed with its freeway plans while development of the rail rapid transit system continues as quickly as possible “so that there will not be the need for additional highways after the planned metro system is completed in 1980.” He added, “My constituents certainly do not want to wait until 1980 before they can travel in and out of Washington with reasonable comfort.” [pages 168-169]

Representative Cleveland told Representative Scott that these hearings were not about a special case involving only the District of Columbia. Many cities were having similar problems, as demonstrated by recent hearings by the Senate Committee on Public Works on moving people in urban areas. Representative Cleveland had testified during the Senate hearing with John Morton, New Hampshire’s highway commissioner:

I notice in Mr. Morton’s testimony he reminded the Senate committee that at the time the Jefferson Memorial was being built, some of the good ladies of Washington, D.C., were sort of boycotting it and filling in the excavation as fast as the engineers were taking it out because they thought the building of the Jefferson Memorial would desecrate the Potomac and ruin that part of the city.

Time has proven the people who had thought it was going to ruin the city were wrong. [page 170]

Charles Coon of the Metropolitan Washington Board of Trade testified in support of a balanced transportation system, and that thinking the rail rapid transit system would meet the metropolitan area’s needs was “self-defeating.” He said, “freeways and rapid transit together are required to achieve an adequate level of mass transportation for Washington.” Subways moved people, but not goods. “If we should fail to build freeways we will be saying that the needs of the District will be well served without any new high capacity highway connections between the center city and the surrounding areas.” If that happens, the District “would become isolated from the rest of the National Capital area as suburban areas expand and establish their own economic independence.”

He urged the subcommittee to ensure construction of the routes identified in H.R. 16000:

This road system from the core of the city to the Capital Beltway would attract appropriate business development in the city. By connecting it with the suburbs it will maintain the District as a center of economic life in our area.

Otherwise, commerce would concentrate along the Capital Beltway and congestion “would become truly intolerable, making our Nation’s Capital less attractive as a city to visit and a community in which to live and work.”

Given the District’s lack of success in getting freeways under construction, the board recommended that Congress “direct that the freeway system be built.” [page 173-175]

Miles L. Colean, chairman, Transportation Committee of the Federal City Council, testified in support of the bill, calling it “not only timely, but urgent.” The bill addressed the problem of compliance with the 1893 highway act by ensuring the District had to comply with Title 23, United States Code, which it been doing prior to the U.S. Court of Appeals decision.

He also addressed the problem of displaced residents. They should be paid a fair price for their homes, but he added that it “would be true economy – as well as justice – if those displaced were given compensation sufficient for them to acquire a comparable home to the one they must vacate in the same or a similar neighborhood.” The government should assist them in finding such homes.

He concluded:

It seems a pity that somewhere along the long road we have traveled thus far, debating the freeway proposals and doing nothing about them, that this urgent situation could not have been resolved. It is a shame that the time and energy of the Congress of the United States must be used in resolving such a local problem. But it is apparent something must be done and soon – before a crisis of such proportion arises that panic sets in and a hasty and inappropriate system of roads is quickly laid down without thought to proper planning.

It is in the power of Congress to avert such a crisis by approving the bill introduced by Congressman Kluczynski. The Federal City Council is hopeful that this will be done. [pages 176-197]

Harold E. Wirth, Rubber and Tire Manufacturers, told the subcommittee he had been present “since the first opening of your very wonderful hearings,” and wanted to comment on a few points raised. He began naming some of the cities that “do have a very fine working transportation program with freeways,” including Atlanta, Chicago, Cleveland, Dallas and Houston, New Orleans, Pittsburgh, Salt Lake City, and San Antonio.

He disputed the idea that rail rapid transit alone would solve the area’s transportation problems. Those making such a statement were assuming that the entire problem was “a people-traffic problem.” On the contrary, the rail rapid transit system “was designed to carry never more than 25 percent of the total people traffic [sic] in the 1980-1990 period.” That cannot possibly solve the problem.

Some anti-freeway speakers have stated that the District had not held public hearings. He had personally appeared before 12 public hearings, and that was only some of those held.

He disputed the idea that freeways caused urban riots such as the riot in Watts:

The difficulties there broke out without either a mass transit system or a freeway system and now the good people of Los Angeles, in order to help the Watts situation and allow these people to get out of that ghetto area and into an area where they can obtain employment, is now building a freeway into the Watts area. They are also going to build bus rapid transit lines into the Watts area.

He addressed those who stated that “the 1893 law was essential and should not be repealed”:

[The] 1893 law was put on the books of this Government by the Congress in its wisdom at a time when not one automobile was driving on the streets of the Nation’s Capital, when the Nation’s Capital extended only to Florida Avenue on the northwest, and in its wisdom, Congress was trying to allow the people of the District of Columbia to extend its area from Florida Avenue on out to the line where Maryland ceded this land to the Federal Government for the use of all of the people in the United States.

He agreed that displacing families was “a real difficulty.” However, of the 1,753 families that would be displaced by the entire freeway system, almost one-third of the homes had been acquired. “So, we only need about two-thirds more to complete the entire freeway program.” Considering the millions of trips that would take place on the freeway system, “it is in the spirit of democracy, of our democracy, to discommode 1,753 people to accommodate 400 million.” He added:

Those people who are losing their homes have a case. I personally believe that if we have to take Jim Smith’s house for a freeway then we must provide Jim Smith with a new home – even using highway funds to do it

After the years of debate, the District of Columbia was in 48<sup>th</sup> place among all States in completing its Interstate System, “with only 36 percent of its meager and minimal 29.8 miles of programmed freeway open.” (Utah was 49<sup>th</sup> and Hawaii was 50<sup>th</sup>.) “This is a disgraceful position.”

The Nation’s Capital belonged to all 200 million Americans, not just those who live in the city. “This is a sacred trust you hold in your hands.” Wirth said the recent court ruling was “the greatest hindrance to public transportation in Washington’s history and what happens in Washington is an example to other cities around the Nation”:

The very people who are fighting freeways are the ones who will benefit most from them,

Construction would provide 8,000 to 10,000 jobs, many of them available “for so-called hard-core unemployed. Here appears to be the sought after opportunity to solve both the transportation and unemployment problems simultaneously.”

In closing, he cited the 20 years of planning at a cost of \$20 million. “Let us get on with the work. We are pleading with you committee members to give priority and preference to H.R 16000 for the future of the metropolitan community, our Capital of the United States.” [pages 190-195]

The hearing concluded with short statements by many witnesses, some in favor of the bill, some opposed, with very little questioning from subcommittee members. However, the appearance of James F. Bromley, chairman of the North Bethesda Congress of Citizens Associations, gave Representative McCarthy an opportunity to discuss his views.

The association was a group of 12 citizens associations in Montgomery County that Bromley said favored a balanced transportation system that included rapid transit and the freeway network advanced by H.R. 16000:

Automobiles and buses are undeniably here to stay as the most convenient method of transporting people directly from their homes to their jobs and back again. Rapid transit, for all its virtues, cannot provide this same essential degree of convenience and therefore must necessarily supplement, not supplant, automobiles and highways.

Otherwise, the District would experience an “ever-worsening arteriosclerotic effect, the presently overcrowded condition of the existing roads and highways in both the suburbs and the city will continue equally to strangle both the suburbanites’ efforts to drive to their jobs downtown and the efforts of city residents to drive to suburban areas to jobs for which there is substantially an increasing demand.” The Capital Beltway would continue to attract businesses that otherwise would stay in the District. For suburbanites and District residents, “the freeways will help everyone and they must be built.”

For the freeways to be built, some city homeowners must be displaced by freeway construction. To ensure they “share in the freeway benefits,” Bromley suggested they be compensated based on the replacement value of their homes rather than their fair market value under eminent domain. He cited the “pace-setting example” of a recently enacted Maryland law “authorizing replacement cost payments to Maryland homeowners displaced by freeway projects of up to \$5,000 above the fair market value of their homes.” On behalf of the association, he urged prompt passage of H.R. 16000 “so that these desperately needed freeways will at last become a reality.”

Representative McCarthy pointed out that while attending the sessions of Congress, he lived in Bethesda “and I know there are many people out there who do not subscribe to what you say.” Bromley’s testimony suggested that he believed “these are simply roads to the District for suburbanites.”

Bromley suggested the freeway network was mutually beneficial, but Representative McCarthy referred to the “virtually unanimous opposition from organizations representing over 200,000 residents of the District.” He explained:

My own experience in Buffalo would seem to suggest that many of these people who need job opportunities out in the suburbs – and I will grant certainly that there is certainly a lot of new industry located in the suburbs – most of them don’t have private vehicular transportation, but that they would utilize some form of public transportation in order to get out to these job opportunities.

Bromley said he supported rapid transit “but we do not believe that it would serve the entire need.” The automobile was “the most convenient method of transportation” and allowed access to jobs throughout an area.”

Representative McCarthy replied:

My own experience goes just counter to that. As a matter of fact, in Buffalo we have this problem. There are job opportunities in the suburbs, but the people who would like to capitalize on those opportunities do not have any method of getting there, although we do have an expressway system in the Buffalo area. And what they are doing now is – a test case, I understand the first in the country – where working with the public bus company, they are trying to provide new routes that would take the people out of the ghetto into the suburban areas.

When Bromley began to reply by saying, “Well, bus transportation,” Representative McCarthy interrupted to say, “It is bus transportation that they are going to rely on, not the private automobile.” Bromley emphasized, “I might say that these roads would be as available to bus transportation as automobiles, too. I certainly would favor that as well.” [pages 251-252; the section of witnesses not detailed here: pages 296-274]

Representative Gude was the final witness. He assured the subcommittee that while the hearing was about freeways in the District of Columbia, the issue affected the entire metropolitan area. The hearings had highlighted needs that the committee needed to address “from the point of view of the specific area and its related social and economic effects.” He was referring to the problem of relocating families, businesses, and public institutions. He was proud of his home State because, as Bromley had stated, Maryland had established “a formula to insure an increased remuneration over the fair market value for those homes displaced in critically needed areas.” This law may not be the full solution, but it was a step in the right direction.

Air rights legislation for the District was needed. It would “provide greater area for relocation of housing in both public and private buildings over and around the highway facilities.”

Representative Gude strongly supported rail rapid transit, especially for Montgomery County. However, to those who thought it would solve the problem without freeway construction, he referred to the statement by “the general manager of the transit authority [who] has stated the need for the full implementation of the freeway system.” In view of the many critics who put so much faith in rail rapid transit, Representative Gude encouraged the subcommittee to ask General Graham to comment. [pages 274-176]

Chairman Kluczynski closed the hearing with a few observations. He had introduced H.R. 16000 “to provide as broad a vehicle as possible for comment by the people who are concerned.” The committee’s action on this matter “may be quite different” from what was in H.R. 16000. He stressed that “the committee has not made up its mind about any specific part of this highway system.”

The hearing had achieved at least part of his objective in that “we have heard considerable testimony concerning the need for changes in the approach to relocation of freeways, a subject that has been of serious and growing concern to me for many months.” In addition, the hearings had performed “a very worthwhile service in making it clear that responsible officials at all levels must be prepared to act on these matters, that inaction cannot continue.”

Finally, he thanked all the witnesses and those who submitted statements for the record. “The committee will consider carefully all of the testimony presented and we appreciate the interest and patience the witnesses have demonstrated.” [page 276]

The final day of hearings lasted 6 hours, with proponents of H.R. 16000 dominating the proceedings. The *Post* reported:

Freeway opponents, outnumbered for the first time in the three-day affair, repeated earlier arguments about the impact of the roads on inner-city neighborhoods, particularly Brookland, which is in the path of the proposed North Central Freeway

The *Star* reported that the subcommittee’s members appeared to be convinced of two things:

- (1) A freeway system must be built here, despite considerable citizen opposition, to prevent the city from becoming an island of decaying business and joblessness.
- (2) The victims of this progress - the displaced residents in the paths of these freeways – must have more consideration and greater financial help.

While the hearings were underway, District officials developed a compromise bill that they hoped would bring about a truce in the freeway wars. The *Post* said the bill “lies between the Kluczynski bill and the U.S. Court of Appeals order” and would:

- Authorize completion of the three noncontroversial segments, the center leg, the 9<sup>th</sup> Street Expressway and interchange C, which would extend the Southeast Expressway east to Barney Circle.
- Establish new procedures for the remaining segments of the federally aided highway network.

Under these new procedures, plans for each new segment would go to the City Council for approval. The Council would have to hold public hearings, then could make whatever changes it wished.

The plans would then go to the Mayor. He could either send them on to the Department of Transportation for approval and the necessary Federal funds, or could veto them. The Council could override a veto by a three-fourths vote, just as it now can override the Mayor on city budget items.

As in the past, the plans would be subject to review but not approval, by the National Capital Planning Commission.

The city proposal would authorize somewhat higher payments than before to owner-occupants of homes in the paths of freeways.

District officials hoped the proposal would “buy time to work out new routes and designs for controversial segments that might win wider acceptance than the present ones.” They had sent the proposal to the Bureau of the Budget for clearance.

A spokesman for the committee said the bill would be welcomed:

The subcommittee is no longer wedded to its original bill. The bill has been a vehicle for hearings but as a result of the testimony today and in the last two days you may find the final bill to be considerably different.

The *Star* explained how the city’s compromise bill came about:

Agreement on the sweeping measure was finally reached Tuesday [April 2] in a meeting between Mayor Washington and the city council, after a series of meetings set up by Council Chairman John Hechinger.

After Hechinger met with representatives of the Committee of 100 on the Federal City, one of the plaintiffs in the successful court suit, lawyers representing the city council, the administration worked the proposal into final shape.

As drafted, the bill would not affect the four projects covered by the U.S. Court of Appeals decision, but would allow projects already under construction to continue (the Center Leg Freeway in front of the Capitol, the 9<sup>th</sup> Street Freeway, and interchange “C”). Although Kennan of the Committee of 100 refused to comment on the issue for the committee, “one source said that the committee probably would not balk if several projects, already nearly completed, were finished.” Kennan would say only that final agreement had not been reached. [Delaney, Paul, and Flor, Lee, “District Proposes Plan To Finish Road Projects,” *The Evening Star*, April 4, 1968; Milius, Peter, “City Drafts Bill Seeking Truce on Freeways,” *The Washington Post and Times Herald*, April 5, 1968; Grigg, William, “Hearings Point Up Need for Roads, Aid to Displaced,” *The Evening Star*, April 5, 1968]

### **Martin Luther King, Jr.**

On April 4, a little after 6 p.m., James Earl Ray assassinated Dr. Martin Luther King, Jr., in Memphis, Tennessee. In Washington as elsewhere, news of the assassination set off unrest and riots. The evening of April 4, crowds in the District of Columbia gathered as police tried to control the tense situation. The *Post* reported:

Tense, milling crowds of Negroes . . . swarmed along 14<sup>th</sup> Street’s inner-city strip last night and early today, wrecking and looting stores and heckling policemen.

Hundreds of people in clusters, at first embittered, moved haphazardly through the area and baited police into the use of tear gas at one major fire. It started as a parade that Stokely Carmichael and others began and later could not control . . . .

Serious fires broke out in at least six areas, the worst a blaze shortly after 2 a.m. in the 2600 block of 14<sup>th</sup> Street that burned out the interior of the Empire Supermarket at 2601 14<sup>th</sup> and an adjacent building before firemen arrived.

As problems erupted and officials tried to quell the damage and destruction, a different type of protest was attempted elsewhere:

Last night, after the hearing, Sammie Abbott, a vocal critic of freeway plans, gathered with ten companions in front of the home of Mayor Walter E. Washington at 408 T st. nw. The gathering was planned as a protest against the freeways; it evolved, instead, into a memorial service for the Rev. Dr. Martin Luther King. [Milius, Peter, "City Drafts bill Seeking Truce on Freeways," *The Washington Post and Times Herald*, April 5, 1968; "14<sup>th</sup> Street Sealed Off; Fires Set," *The Washington Post and Times Herald*, April 5, 1968]

Gutheim and Lee summarized the impact of the riots in the District of Columbia:

In Washington portions of the city were burned and looted, thirteen people died, and property damage was widespread. The crisis lasted five days, from April 4 through April 8. Nearly 13,600 federal troops and national guards were called up to protect the city. Destruction was concentrated in three major sections. On 7<sup>th</sup> Street between Mount Vernon Place and Florida Avenue, 263 buildings were damaged. Near 14<sup>th</sup> Street and Park Road, 275 businesses were damaged. On H Street in Northeast Washington, between 2<sup>nd</sup> and 15<sup>th</sup> streets, 90 buildings were damaged. The resulting loss of homes and jobs was matched by the destruction of property, the larger disruption of community services, and the damage to the city's morale. As in the earlier civil disturbances in Watts in Los Angeles, it was immediately clear in Washington that the task of reconstruction would not be easy and that reconstruction plans would not find any ready consensus . . . .

Total property damage was calculated at \$57.6 million, which included the value of looted and burned inventories of goods as well as real property damage. Nearly half of the damage was in the 7<sup>th</sup> Street corridor, the historic route that long ago had connected the Potomac port to the Baltimore turnpike.

NCPC and the city council studied the riots to find the causes, beyond the assassination, and how to address the economic, physical, and social impacts. Based on public hearings, the city council found that "the lack of housing, employment and other opportunities for ghetto residents were . . . the basic factors contributing to the disturbances." Gutheim and Lee wrote that as the city tried to reconstruct the damaged areas, "there was a pervasive if less clearly expressed view that the opportunity for fundamental changes in land use, transportation, recreation open space, and other physical characteristics of the damaged areas should not be thrown away." [Gutheim and Lee, pages 313-315]

## Seeking Elusive Compromise

As life in the city returned to normal, ECTC confronted Chairman Hechinger on the fifth floor of the District Building on April 13. They demanded that Mayor Washington and the city council attend a meeting on Tuesday, April 16, to discuss the freeway situation. They objected to congressional efforts to pass legislation to force construction of the four freeways blocked by the court decision. The Reverend Gibson of Nash Methodist Church said the city officials were “acting like the court order doesn’t exist.” The time had come, he said, for District officials to “stop pussyfooting about freeways” and shift the funds to other forms of transportation.

Officials agreed to a meeting on Thursday, April 18, in the city council’s chamber. Asked by reporters if ECTC was concerned that the chamber might be in use for some other purpose, Reverend Gibson replied, “the availability of the room makes no difference. We’ll be here and demand they be here.”

Because the chamber was previously booked, ECTC agreed to a meeting on Saturday, April 20. ECTC said Mayor Washington and the city council were expected to attend. “There will be no time limit on speakers, he said.” [“Freeway Foes Demand Hearing by Councilmen,” *The Sunday Star*, April 14, 1968; “Freeways Session Set For Saturday,” *The Evening Star*, April 17, 1968]

Secretary Boyd, in a speech on April 18 to the 12<sup>th</sup> Highway Transportation Congress in Washington, lamented the difficulties of advancing urban Interstate segments around the country:

About one-half of the scheduled 6,000 metropolitan miles of that system remains unbuilt. And in city after city, progress toward building the remaining miles has either slowed to a rush-hour crawl or come to a complete stop.

He listed some of the cities that were “still bearing the bruises from bitter freeway fights: Atlanta, Boston, Chicago, Cleveland, the District of Columbia, Indianapolis, Milwaukee, New Orleans, New York City, Philadelphia, San Antonio, San Francisco, Seattle, and St. Paul:

It’s getting to the point where it’s almost as hard to get an urban freeway through as it is a rapid-transit bond issue.

It is no longer simply a question of a few stubborn individuals lying down in front of bulldozers or tying themselves to trees. The people holding up the completion of our urban freeway program represent a very substantial cross-section of the urban leadership community – including mayors and city managers.

Route selection was at the heart of the problem:

If we don’t include the total needs and desires of our cities in planning urban highways – and not just the needs of the highway user in the narrow sense of the word – then let there be no mistake: Our cities are going to find it increasingly difficult to get the highways through.

The highway program and the industry that supports it would “flourish to the extent to which they meet the total needs of our society—not as narrowly conceived by any special interest, but as broadly conceived by the citizenry.” The three keys were:

First, each urban area itself must decide what kind of transportation system best serves and suits its particular needs.

Second, any assessment of the role of any segment of our urban systems must be made in the context of the system as a whole.

Third, and most important, we cannot make decisions on urban transportation systems without giving first and full consideration to the impact those systems will have on the total human environment in which they must operate.

In short, “cities are for people, and so are transportation systems.”

He cited Baltimore, with its design concept team, as an example of how some of the deadlocks could be broken. The outcome was unknown at that point, and the team “was set up rather late in the game, after the routes, for example, were already established,” and was not able to consider alternatives such as mass transit. Still, he was encouraged by the results thus far in finding ways “for improving and enhancing the life of an entire neighborhood.”

Even with the results not fully known, “I am convinced that it is only from efforts such as this, in cities across the country, that we can arrive at acceptable solutions to our urban transportation problems.” The results, he acknowledged, would cost more money, possibly adding as much as 1.5 percent to the total cost of the Baltimore segment being studied:

But let me also point out that, in the long run, the roadblocks that major American cities seem increasingly determined to place in the path of freeways they do not want will be far more costly . . . .

So it would seem that a brief delay for planning review would cost less than a long delay for quarreling over route and design – in or out of court.

On April 23, Secretary Boyd held a news conference to announce that he would soon submit the Johnson Administration’s proposal for the Federal-Aid Highway Act of 1968, the regular 2-year reauthorization of the Federal-aid highway program. One major departure in the proposal involved a new formula for right-of-way acquisition. He understood that Congress would like to “change the ground rules under which homeowners, farmers, businessmen, and others are compensated for property that is purchased for highways.” He added that, “Fair market value does not always cover the cost of changing houses, setting up a new business in another location, or starting a new farm.”

In addition, Secretary Boyd said the bill would propose to increase Interstate construction funds by \$8 billion and extend the deadline for completing the Interstate System to 1974. TOPICS would be funded at \$250 million a year, while the Federal Government would pay 75 percent of the cost of fringe parking facilities associated with mass transit systems serving cities with

populations greater than 50,000. [“Boyd Asks ’74 Deadline On Highways,” *The Washington Post and Times Herald*, April 23, 1968; Flor, Lee, Flor, Lee, “‘Bonus’ for Those Displaced by Highways Urged by Boyd,” *The Evening Star*, April 24, 1968]

*Star* editors appreciated the proposed changes, but lamented:

Rather than benefitting the District of Columbia as they will other cities and other metropolitan areas, however, these developments merely heighten frustrations in the Nation’s Capital – where the freeway program, for reasons having nothing to do with dollars, has been brought to a complete halt.

The ultimate irony is that Secretary Boyd has been in the vanguard of those directly responsible for this deplorable state of affairs. He has joined the anti-urban freeway forces in sabotaging the Washington program while proposing nothing approaching an adequate alternative. And the new city government, for its part, has timidly done nothing whatever of significance to move the program off dead-center.

Unless Congress acted “directly and firmly” to move the freeways forward, the District’s “moderate freeway system” with its links to Maryland and Virginia would not materialize. “In that event the plans for a logical, reasonable balance of highway and rail transit facilities so long advocated and so urgently needed in this region will simply slip down the drain.” [“Freeway Frustrations,” *The Evening Star*, April 26, 1968]

### **A Layman’s Guide**

The May 1968 issue of *Washingtonian Magazine* contained “A Layman’s Who’s Who on the Freeway Donnybrook” by Judith Hennessee. It began:

After twenty years and twenty million dollars worth of reports, studies, and plans, a large part of the District highway program is sitting behind barricades somewhere in limbo.

The Three Sisters Bridge and North-Central Freeway, the “two biggest bones of contention,” were blocked by “court injunction and the intervention of Department of Transportation Secretary Alan Boyd, and what will happen next is anyone’s guess”:

Through the years, the squiggles on the maps have moved around with such startling rapidity that it became difficult to know where the freeway would strike next. At one stage, from 1960 to 1965, the North Leg, West Section, would have cut through the Cosmos Club, the Phillips Collection, and Boy Scout Headquarters.

With each successive change, the sides have become more and more polarized, the meeting grounds fewer and fewer, and now the battle has degenerated into an acrimonious name-calling contest. The opposition is either crass, crazy, racist, or unpatriotic, depending on where it stands.

On one side was “a national Goliath” of highway interests, including “their captive Congressmen, as well as those who believe in freeways as a way of life.” Against them are

neighborhood groups, small businesses, the Committee of 100 on the Federal City, ECTC, and the Democratic Central Committee:

They see a voracious dragon, carving through the city, gobbling up people, neighborhoods, parks, land, leaving in its wake the homeless and dispossessed, pollution, miles of concrete twisted like spaghetti, a city of monuments, devoid of life.

Whatever the specifics of the debate, the arguments came down “to a basic philosophical approach – what kind of a city do you want?”

The debate over the Three Sisters Bridge was typical. Director Airis said the bridge met “our four major criteria – need, cost, esthetics, displacement . . . . The project passes all four tests better than anything, but, to the opposition, it’s a symbol of the system.” Opponents disagreed on all four criteria. And while Secretary Boyd was not convinced of the need, “he has not damned all freeways.” Instead, he thought the need for the system as currently shown on the map had not been established “and the design of the whole must be approved before going ahead with parts of it; and the cost must be reckoned in terms of people, as well as dollars.”

To help readers who were having trouble keeping up with the protagonists, Hennessee offered thumbnail sketches of each party.

#### Democratic Central Committee

The committee, “representing about 150,000 politically impotent voters in the city,” had been testifying against freeways for years as the bulldozers kept rolling:

“No one cares,” said Helen Leavitt, chairman of the Planning and Housing Committee, “and nobody wants freeways. Not a single citizens group in the District – or in Arlington – is in favor of them. I took a survey of precinct chairmen in 1965, and over eighty percent of them were absolutely against freeways. They wanted a subway. Mrs. Leavitt plunged into the fray late in 1964 when the North Leg, West Section, of the Inner Loop (one of the abandoned plans) was mapped to bisect her house.

The central committee opposed “freeways in all directions.” Families were uprooted, businesses displaced or forced into the suburbs, “leaving behind a corps of unemployed.” The tax base was diminished. Freeways added to air pollution, were ugly, and sliced up neighborhoods “creating a Chinese Wall.” They were “immoral, unesthetic, uneconomic, and unhealthy. And, it turned out, some of them were also illegal.”

The committee “found a soul mate in Peter Craig,” who “is either the hero or the villain of the story, depending on your freeway sympathies.” He found the 1893 highway law in Title 7 of the District Code, the one that led to the court injunction “that froze four freeways in their tracks.”

#### D.C. Highway Department

Each side has its own set of statistics, almost as if a little factory were manufacturing them to order, which they hurl at each other like brickbats.

The District Highway Department was the “biggest statistical generator of them all,” most of them emerging “from the drawing board of Lloyd Rivard,” the planning chief. Airis cited population growth, big new office buildings, and the resulting traffic increase:

When you add together all this procreation, the sum is a terrific amount of traffic generation downtown.

“That is pretty much the people talking,” Airis said. “Not the anti-freeway advocates or property owners. That’s the public-at-large talking.”

He said the 29-mile freeway network was a “minimum system” for meeting the growing need. Without the Anacostia Freeway and Southwest Freeway, the thousands of vehicles they carry would be on city streets. Freeways constituted only 2.8 percent of the 1,100 miles of city street surface. Airis said:

Yet they are carrying fifteen and a half percent of all traffic. The city streets still carry eighty-four and a half percent. This is improper. We need to get that traffic off the streets and onto the expressways.

If all 29 miles were built, he said, the freeways would comprise only 4.5 percent of roads in the city, but would “carry a whopping thirty-five percent of all traffic. That’s the reason for freeways.”

#### Harold Wirth and Highway Users

Harold Wirth was the “foremost freeway enthusiast.” He was local head of the Firestone Tire and Rubber Company, chairman of the Washington Representatives of the Rubber and Tire Manufacturers, and chairman of the Metropolitan Area Highway Users Conference.

He had loved automobiles his entire life, but that was not why he was a freeway advocate:

I do this for one purpose. I’m due to retire soon. I’m not going to use the freeways, and they won’t mean anything to me, but someday the young people will thank us. I love this Nation’s Capital, and I think it deserves better consideration than some people are giving it today for its future well-being and progress. We are free Americans, and we like to control our transportation. That’s my motivation.

“The progressive people,” he added, “are for freeways.” The Highway Users Conference, consisting of highway business interests, represented anyone who owns a car. “We have an obligation to you” to ensure that each car owner’s highway user taxes get what they paid for. That revenue, Wirth believes, must be used for highway construction “and never, under any circumstances, converted to other public uses, not even traffic police or lights.”

Wirth, like everyone who favored freeways, believed in a balanced transportation system “even though he believes it will be the greatest tax boondoggle on people who can afford to pay, for people who can’t.” Everyone agrees about the need for mass transit, he pointed out. “But mass transit carries *absolutely no goods*. Trucks bring everything. When people get that through their

heads they won't fight it." Even after rail rapid transit was provided, people will still ride their automobiles "because someone comes to their front door and picks them up. *They are not going to give that up.*"

As for the urban ghettos, the Highway Users Conference "subscribes to the view that freeways built through it are the best thing that could possibly happen to the poor, bringing to them the benefits of mobility":

And yet, the very people for whom the freeway will do the most good speak the most vociferously against its construction. "It seems ridiculous that a poor colored maid has to take two and a half hours to get from Anacostia to where she works in Montgomery County because there are no freeways to get her through town, or through a loop out of the downtown section that will get traffic out that doesn't want to be there. But her bus has to go through the heart of downtown. It's asinine. It's completely stupid. We are way behind every metropolitan area in the country. We are the only city of our size without one freeway in the heart of the city.

The District needed "the same shot of adrenaline the beltway provided for the suburbs." Los Angeles was "everyone's favorite comparative, and there, said Wirth, the freeways brought an enormous building boom, and the tax base went straight up in the air":

Let's face it – which will bring in the most tax money – a squalid eight-room house with rats and garbage with two people living in a room, or a great big building in which there is an industry alongside of a freeway? But we've got to uproot one to get the other.

The people whose homes were going to be taken for a freeway had a right to protest. "But this is a democracy, and the few have always had to sacrifice for the many."

#### Emergency Committee on the Transportation Crisis

In contrast with Wirth, ECTC was "a loosely knit but militant cross section of civic organizations (Brookland, Lamond-Riggs, South Manor) and ministers, as adamantly opposed to freeways as the builders, planners, and businessmen are for them":

The Emergency Committee had its genesis three years ago when Sam Abbott, its publicity director, came home to dinner one night and was told by his wife that an eight-lane freeway (I-95, the North Central Freeway [sic]) was scheduled to run through their Takoma Park living room.

Philosophically, the committee looks to Lewis Mumford, Jane Jacobs, and General James Gavin. "The greatest danger we face is uncontrolled technology, the role of the so-called expert."

The quote is from General Gavin. After retiring from the U.S. Army, General James M. Gavin became vice president of Arthur D. Little, Inc., in 1958. He became president in 1960 and remained with the consultant until retiring in 1977.

Hennessee continued:

A flamboyant tendency to disrupt City Council meetings to dramatize the race issue has placed the committee somewhat beyond the pale of respectability, but that's the least of their concerns. They're fighting a war against "the scourge," and anything goes.

Abbott accused the highway department of "institutional racism." The department responds with formulas, origin-and-destination studies, Hennessee wrote:

It is always least expensive to go through parks or the poorer sections of the city. It is also the least politically objectionable way; until very recently, black political power simply wasn't.

Referring to Watts, Abbott said the "revolt" (ECTC would not call it a "riot") was a direct result of the freeways of Los Angeles. His explanation employed the same example as Wirth had used:

"It was a two-hour trip for a laborer or a domestic in Watts to get to the available jobs. It's like that in the District now." The freeway won't solve the problem, even if hundreds of express buses speed out of the slums and across the city because the slums won't be there anymore. They'll have been replaced by shiny new unaffordable urban renewal projects.

He rejected "the voguish" design team concept. "He said it was like "calling in a plastic surgeon after the operation to remove the scars. A few petunias planted on top of a ditch won't change the vicious character of the ditch."

As for freeway advocates' support for a balanced transportation system:

Abbott said, "it's as sincere as a prostitute speaking of love. The only subways we have are under the Senate and House, and we have all these roads, with four thousand cars per square mile. Our first job is to correct this imbalance. Freeways would only add to it. Stop the freeways, build the subways first, then evaluate the necessity for more freeways."

Bernard and Vera Pryor

Most of the displacements thus far were for the North-Central Freeway in Brookland, "an integrated neighborhood of single-family homes and treelined [sic] streets." It was "an old, stable community with two politically aware civic organizations, affiliated with the Emergency Committee, that know how to make noises in the right direction." The Pryors of the Brookland Civic Association had received "the full flavor of District condemnation proceedings":

The appraisers – when they were allowed inside – offered a "fair market value," which turned out to be what the homeowners had paid for their houses ten years ago. Those who refused were subjected to a barrage of intimidating phone calls and letters threatening condemnation. Those who acquiesced put down payments on other, more expensive houses. The Pryors went to City Hall, but neither the Mayor nor the Assistant

Mayor, Thomas Fletcher, could offer anything more than sympathy. “Comparable housing,” guaranteed by law to the displacees, just wasn’t to be had.

The Pryors saw it as a race problem. When a community became mostly Negro over time, “just when it’s paid for and people are all settled, the power structure comes along with urban renewal or a new school or some kind of public thing.” Pryor cited the new southwest as an example. The displaced had owned their homes. “They didn’t give them enough money or take care of their mortgages. They didn’t care. A lot of them had to double up in other communities, causing crowding. That’s how a nice community goes down. That’s what pushes the slums around.”

#### Mayor Washington

Although Mayor Washington had hired Pryor to help displacees from Brookland, area residents “consider that the Mayor has given them little more than double-talk.” In his defense, Hennessee pointed out that he was trapped “in the middle with a headache inherited from the three-commissioner system.” Moreover, he was being pressured to favor freeways by the highway interests, Congress, and “Thomas Fletcher . . . who cannot conceive of any major city without its quota of freeways.” Mayor Washington also knew that “if Congress legislates to force the freeway program through, at least part of the veneer of District government will be stripped away.”

#### Federal City Council

The late Philip Graham, publisher of the *Post*, was “the original guiding spirit of the Federal City Council.” It was composed of “Important People” who created “a positive-thinking organization”:

It is almost never against anything constructive, but back in 1960 it did oppose the planned North West Freeway in the Wisconsin Avenue Corridor. Savagely attacked by everyone throughout the length and breadth of Wisconsin Avenue for the havoc it would wreak – it would have meant, for instance, lopping off part of the Chevy Chase Club’s golf course – the Northwest Freeway vanished in the language of the National Capital Transportation Act of 1960 which said that no freeway more than two lanes wide could be built west of 12<sup>th</sup> Street, N.W., for five years.

Like ECTC today, the Federal City Council said of the freeway at the time that “it was senseless to build it until *after* the subway was built, in order to give mass transit a fair trial.” Hennessee added:

Of the members (called trustees) of the council, less than half live in the District, all of them west of Rock Creek Park. The rest live in the suburbs.

General Prentiss, the former District engineer commissioner, was vice president of project planning, particularly transportation policy. His sister was married to Ben McKelway, who chaired “the editorial board of the *Star*, which, like the *Post*, believes freeways are irresistible.”

The Federal City Council generally manages “to avoid newspaper publicity, good or bad,” but that changed following release of the Arthur D. Little report in April 1966. Although the council, like Engineer Commissioner Duke, was in “a state of shock,” it hired Lloyd Rivard of the Automotive Safety Foundation to work with two former District Highway Department officials, Director Aitken and Douglas Brinkley, on a second report that was turned over to “a closed, nighttime hearing before the subcommittee on the District of the House Committee on Appropriations.”

Based on that report, Chairman Natcher withheld subway appropriations until NCTA Administrator McCarter voted in support of freeways. With the support of McCarter and NPS Director Hartzog, NCPC voted 6-5 in favor of the Policy Advisory Committee’s plan:

Soon after, Rivard and General Prentiss’s son, William Clark Prentiss, got jobs with the Highway Department, Rivard as chief planning engineer, and Prentiss as an assistant engineering commissioner to Duke.

Although NCPC Chairman Rowe had been outmaneuvered, she took advantage of her opportunity to reverse the decision with the arrival of Secretary Boyd. “Boyd’s reaction – dumping Three Sisters for the present – was all the anti-freeway people could have hoped for.”

#### Downtown Progress

In the interest of the city and in reversing the flight to suburbia, “the Federal City Council in 1960, put its head together with the National Capital Planning Commission and came up with Downtown Progress, a technical planning agency privately financed by the department stores, banks, and business groups.” Executive Director Knox Banner said, “Our job is to get others to do things – to get public agencies to do things we think appropriate for the community.” They accomplished this by conducting studies, such as the study the organization did of air-rights housing and commercial buildings along the Center Leg Freeway.

The idea, Hennessee wrote, was: “Progress equals growth, and without freeways there can be neither”:

The argument goes like this: as the region grows, more suburban people drive in. The freeway (including the Inner Loop around downtown), in its function as a bypass, helps the downtown area by getting traffic off the local streets, making it easier to get around.

Trucks that did not need to be in the District would use the Capital Beltway as a bypass:

“The trade-off,” said Melvin Levine, planning director of Downtown Progress, “is a residential area with through traffic on the streets and congestion, or a freeway removing through traffic from local streets. Without growth, more things will move out to the suburbs, resulting in higher taxes for the poor, the very people who are fighting freeways.” Also, unlike the subway, it’s a user-pay system, and isn’t a burden on the local tax base. The whole package produced more building, more business, more visitors, more sales, and more employment, especially in construction.

The subway was essential, too, and should be built as soon as possible:

“We would like to see the highest percentage of people using rail,” said Banner, “but the facts are different. We’d be tickled if it could be ninety percent, but people make individual choices.”

If people insisted on driving downtown, parking was the problem “and the solution to that is the Tydings Bill.” It had become, however, “another source of friction between the pro- and anti-forces.” The Federal City Council and Downtown Progress supported the bill:

The primary antagonistic response is to the eminent domain clause which could result in condemnation of more businesses, homes, and parks, to accommodate, and therefore invite, more cars.

#### Committee of 100 on the Federal City

Founded in 1923 by Frederic A. Delano, the Committee of 100’s main interests were planning, conservation, and preservation. Chairman Chapman was a Georgetown architect “and most of its members are professional people, businessmen, Government employees, conservationists.”

Unlike other pro- or anti- groups, the committee likes some freeways (the South Leg Freeway tunnel) and would like to replace others (razing the Whitehurst Freeway and tunneling the Potomac River Freeway under the Georgetown waterfront), but opposes the North-Central Freeway and Three Sisters Bridge:

It would like the subway built immediately; fringe parking at the edge of the city, with express bus service downtown; and it very much questions the economics of the air-rights solution to housing for displaced people. A platform covering the freeway costs more than the land for the freeway does, and it’s therefore impossible to put up low-income housing outside of urban renewal areas.

Kennan, the lawyer who chaired the roads committee, said, “The need for most of the freeways has not been established,” a view shared by his predecessor, Peter Craig. Hennessee wrote that Craig “spent six years disestablishing the Highway Department’s origin-and-destination studies and data:

Craig, an entire research organization in himself, went back to the source, the work sheets of those twenty million dollars worth of consultants’ reports, and came to the conclusion that the Highway Department’s statistics were full of helium.

Not only that, but none of the reports actually showed the need for a Three Sisters Bridge. And most of them didn’t recommend the North Central Freeway, either . . . .

His statistics proved that freeways running through cities increase congestion, add to the suburban population, and, by bypassing downtown, accomplish nothing for business. In freewayless areas like the Northwest, traffic jams are comparatively fewer – encouraged by the lack of a highway, more people have been riding buses. And in the North Central

Corridor, traffic has decreased without a freeway. The number of cars there in 1965 was closer to the number in 1955 than to the 1955 forecast of what traffic would be in 1965.

Not everyone appreciated Craig's "private library of raw data," his testimony, or his report, *Freeways and Our City*:

Craig and talked and testified to get his view across until his name became anathema to the freeway people, especially certain Congressmen, who are livid at Boyd, and think he has been brainwashed by Craig. "There is an individual," said Representative Broyhill, a member of the House District Committee, "at the right arm of the Secretary of Transportation, who has shut his mind against any additional river crossing. This person hasn't a fraction of the ability of the traffic engineers and highway experts who have made a profession out of this field."

### Congress

For the District of Columbia, Hennessee wrote, Congress had a "dual role of national and local arbiter," as well as "a proprietary interest in seeing that the Federal Interstate Highway program not be bogged down in a network of local city streets."

The House Committee on Public Works, which had sponsored the Federal-Aid Highway Act of 1956, held a hearing on the District's Interstate System "barely a month after Boyd dropped his bombshell on the Three Sisters Bridge last November." Although the issue would seem to be better suited to the House District Committee, the Public Works Committee members apparently did not trust that committee:

For example, District committee chairman John McMillan of South Carolina, is known to be very skeptical of the Highway Department's freeway statistics; and Basil L. Whitener of North Carolina is very fond of the mass transit idea. William L. Dawson of Illinois is so antagonistic to freeways that he put into the Congressional Record the entire Court of Appeals decision, and published a scathing minority report on a 1965 bill authorizing the District to borrow more money for highways.

Representative Broyhill supported the freeway plan even though "not a single Virginia citizens group has come out in favor of freeways." He said, "I don't believe this many experts over this period of time after this many surveys can be wrong. The people opposed to it are people who just don't want to move. They haven't got expert credentials." He cited conversations with the presidents of a leading business association, a leading department store, and a leading bank who supported freeways – and more parking facilities. "They want ways to get people in. Who among the opposition can match these three people in their stake in the economic well-being of our Nation's Capital? They haven't got a quarter invested."

His counterparts in Maryland agreed, noting that the North-Central Freeway was to be Montgomery County's only District freeway. Representative Machen said, "I don't want the Washington metropolitan area to look like Los Angeles." However, breaking the logjam was imperative "for the benefit of the hundreds and thousands of highway commuters in this area.

We cannot afford to let a tragic lack of interstate highways choke this metropolitan area to death.”

Chairman Natcher felt so strongly about a balanced transportation system for the District “that he flatly refused to appropriate any money for the subway until the freeway goes full speed ahead.” He did not believe the subway should be used to destroy the freeway system planned 12 years earlier.

Hennessee added that WMATA, “sensing a certain skepticism towards mass transit’s potential as a congestion reliever, has been holding its breath, hoping nobody will notice it until the freeway furor dies down.”

Chairman Kluczynski’s subcommittee was “weighing the merits of legislating the court injunction out of existence” by ignoring the U.S. Court of Appeals, the Transportation Department, and the District government and ordering the city to build the freeway system. As Representative Broyhill put it, “We can change the law so that no more hearings need to be held.” The problem with that idea, Hennessee wrote, was:

For the purposes of the Highway Act, the District is considered a state, and no Congressman in his right mind would want to establish a precedent allowing the Federal Government to override local governments on local affairs. If it’s done here, it could happen in any state.

Still, the 10-cent Interstate Construction dollar “has inflamed a good many Congressional imaginations, and the very idea of halting the program is inconceivable, a shocking waste. This don’t-look-a-gift-horse-in-the-mouth philosophy, rather than actual need, is at the root of the freeway fever. [Hennessee, Judith, “A Layman’s Who’s Who on the Freeway Donnybrook,” *Washingtonian Magazine*, May 1968, pages 42-49, italics in original]

### **National Capital Planning Commission’s Future**

With the District of Columbia’s new government in place, NCPC’s future was uncertain. Throughout the year, newspapers reported on the idea of abolishing or transforming NCPC and turning its responsibilities over to the new District of Columbia government.

In January 1968, Mayor Washington’s work group reports had recommended a change to give the city control over the planning function. On January 21, the *Post* reported that a “three-sided effort is being launched to reorganize the National Capital Planning Commission”:

A reliable source indicated yesterday that the push for reorganization, which is certain to be opposed by Commission members and staff, is also a key to the eight-month delay in appointing a new Commission chairman.

Mrs. James H. Rowe, Jr., whose five-year term expired last April, is sitting as chairman until President Johnson appoints a successor. But it was reported that the President is not eager to make a change while reorganization plans are being discussed at various levels.

Senator Tydings was planning legislation to change NCPC's authority, possibly to restrict it to Federal projects, thus leaving the city to plan its own public works.

Bureau of the Budget officials, according to congressional sources, were "on the hook" to shift NCPC and other autonomous agencies, such as RLA, under city control:

The Bureau is said to be considering the idea of turning over all Federal planning in Washington to an existing executive agency, such as the Interior Department, or to substitute a new agency for the Planning Commission.

The Washington Center for Metropolitan Studies was expected to release a 150-page report on NCPC in February:

Royce Hanson, who is president of the Center and is reported to be the leading candidate to succeed Mrs. Rowe, said, "The municipal planning functions of the Commission should be transferred to the municipal government." [Hoagland, Jim, "3 Plans for NCPC in Making," *The Washington Post and Times Herald*, January 21, 1968]

On February 11, the *Post* published a portrait of NCPC Chairman Rowe. Chairman "Libby" Rowe lived with her husband, "lawyer and Democratic organizer James H. Rowe," in Cleveland Park, "where she does much of her Commission work, by portable typewriter, pen and telephone."

She was, of course, known as a "foe of freeways," but she considered that term a misnomer:

She likes the Capital Beltway, for one, "even though it was routed through Rock Creek Park." This is because it has acted as a "distributor and a bypass."

She consistently stressed the virtues of beauty and functional efficiency:

Where the Nation's Capital is concerned, she maintains, the two are inseparable and no judge of what is good in urban planning for the city that is the seat of National Government will ever grant a divorce.

She believed that Washington, like other cities, was facing "the challenge to urban life of freeways. It is just that they have to be tamed when they come into a city. It is a question of values. Interstate traffic has no place in the Nation's Capital":

When they do not hog parkland, alter the characteristics of a neighborhood or block the Capital's magnificent vistas, she is no longer freeways' foe.

Going underground to prevent the isolation of a church from its congregation or of a school from its students, is a far better way, Mrs. Rowe believes. In her opinion, the Southeast Freeway's 11<sup>th</sup> st. interchange "never should have happened."

Hundreds of people were displaced, even though the proposed acreage was reduced from 40 to about 10, and the character of the neighborhood was changed so that Mrs. Rowe

now says, “The fabric is torn apart. I don’t know what that end of the city is going to look like.”

She was encouraged by the anti-freeway citizen activism:

“I am hoping that the community will find it unacceptable,” she says, pointing out that it is being opposed by citizens groups “east and west, north and south, white and Negro, low and high income, everyone from a retired colonel to Marion Barry.”

She would prefer to put land back on the tax rolls instead of removing it from them. She would prefer to see Virginia traffic routed over the 14<sup>th</sup> Street Bridges and the “presently under-used Roosevelt Island Bridge.” Actually, she still believed the Theodore Roosevelt Bridge should have been a tunnel:

“Bridges,” she says emphatically, “are symbols of the success or failure of a highway program.” By this standard, the controversial Three Sisters Bridge, which would take “untold acres of park land on both sides of the river,” is “wrong.”

She strongly favored the subway, and had since she took office in 1961:

Besides unsnarling traffic and making life more comfortable, as well as tidier for residents, it will add a big visitors’ center at Union Station (with rail use underground). It will also spark the rise of new neighborhoods around its cross-town and uptown stations.

These will include both commercial and residential development, and with good planning and careful zoning the clusters should help to distribute Washington’s growing population and offset a spread to the northwest.

As for those calling for abolition of NCPC, she did not agree:

Washington, next to New York, has the highest concentration of downtown employment of any city in the United States, she points out. Despite the exodus to the suburbs, “we will have a vital city center. Because of Federal employment and all the services – the restaurants, shops and professional organizations that exist here that keep people downtown – our downtown, although it can be improved, is in better shape than that of many cities.

It is because of this Federal role that she is opposed to a current proposal to split the functions of the Commission between the District Government and the Interior Department.

What she liked most about her tenure is “the change in attitude that has taken place.” She compared the 1950s-era redevelopment of southwest, which disregarded the displaced people, to the ongoing redevelopment of Shaw, where renewal was being done with and for the residents. As a result, it will be “handsomer, better, more livable but not so expensive that people who live there can no longer afford to live there.” She added, “This is the single thing that has pleased me

most. The ingredient of city planning is people rather than buildings.” [Shelton, Elizabeth, “Planner Believes in Low Road,” *The Washington Post and Times Herald*, February 11, 1968]

On February 15, Senator Tydings introduced his bill proposing creation of the Agency for Planning and Development under the supervision of the District mayor. The new agency would handle the local functions of NCPC, RLA, and the National Capital Housing Authority. In a speech on the Senate floor, he said the potential for America’s cities depended on “the rational and effective use of planning and development tools by the local jurisdiction.” Planning “brings about the rational use of available social, economic, and demographic information on conditions and needs to develop future patterns and objectives for the city’s growth.”

Other cities have been able to benefit from such planning, but the District government “stands at the opposite pole” from those cities. Planning for the District was “so highly fragmented as to make virtually impossible the establishment, let alone the execution of a cohesive and consistent policy.” The problem was “the profusion of independent agencies, each of which enjoys some authority for planning, or some development function.”

Although NCPC had no power to initiate or implement projects, “it can effectively block them through its review procedure,” which gives it the ability to implement its plans only by rejecting those of other agencies in the city:

But even here, this rejection can and is frequently ignored. The net effect is that planning in the District of Columbia which is supposed to act to rationalize development for the future is unable to have any real influence on the shaping of the city.

He said of his bill:

This legislation reflects two basic objectives, the centralization and strengthening of the planning and redevelopment functions of the municipal government to make it more capable of developing and carrying out coordinated and rational policies and the involvement of the citizens in that process. Traditionally, these two objectives have not been sufficiently reconciled. This legislation attempts to strike a sufficient balance between the two to make them not only compatible but complementary.

His legislation also called for creation of an Office of Federal Development “with responsibility for devising, in consultation with Council of Governments and the local jurisdictions, of a Federal site and Government facilities plans.” As an example of the need for such an agency, he cited “the Atomic Energy Commission building on a site where no major highway or other form of transportation reached for a couple of years after the building had been completed.”

(President Eisenhower participated in the dedication ceremony for the new Atomic Energy Commission headquarters in Germantown, Montgomery County, Maryland, on November 8, 1957. The main building, with one more yet to be built, was on 109 acres at the intersection of Maryland Route 118 and U.S. 240, about 25 miles from downtown Washington. President Eisenhower took a helicopter to the ceremony. At the time, U.S. 240 was on a new alignment that would become I-70S, then I-270, although paving had not been completed before employees

began moving into the building in January 1958. [“President to Dedicate AEC Building Friday; Strauss to Preside at Big Fete,” *The Evening Star*, November 6, 1957; “President Stresses Peace At AEC Dedication,” *The Evening Star*, November 9, 1957; McGuckian, page 152])

The bill was referred to the Committee on the District of Columbia. [S-2976 – Introduction of Bill Relating to the Reorganization of Planning in the District of Columbia, *Congressional Record-Senate*, February 15, 1968, pages 3130-3133]

Later that month, the *Post* reported that Assistant Budget Bureau Director Harold Seidman and Deputy Mayor Fletcher were on Capitol Hill seeking congressional reaction to a three-page summary of a reorganization plan that would abolish NCPC. Under the plan, “the District government would be given control over its own planning organization.” The summary stated that the proposal would give the mayor “those functions of the NCPC related to the development of comprehensive plans for the District of Columbia.” The plans would be subject to city council approval, thus ensuring that “citizen participation in the planning process would be enhanced.”

Because NCPC’s Federal functions would be transferred to a new Federal Capital Area Planning Agency, the Federal Government’s interest “would be protected by requiring that elements of the comprehensive plan affecting Federal developments and projects or the preservation of important natural and historical features be subject to approval by the Federal Capital planning administrator,” who would be subject to presidential appointment and Senate confirmation.

The *Post* pointed out that the “plan is also bound up in the city’s continuing freeway dispute. NCPC has consistently blocked freeway construction here, and Mrs. Rowe is an outspoken opponent of freeways.” Under the plan, the city council would be “approving new highway plans.”

President Johnson had not yet approved the proposal, which “still faces formidable opposition” from Chairman Rowe, “wife of a close friend of the President.” The article added, “The proposal could be part of the President’s expected message to Congress on the District late this month.” [Carper, Elsie, and Milius, Peter, “Plan Is Drawn Up To Abolish NCPC,” *The Washington Post and Times Herald*, February 21, 1968]

In the days before President Johnson’s message, the Bureau of the Budget modified its plan to retain NCPC, which would be able to veto parts of the city’s comprehensive plan affecting Federal, natural, and historic areas. NCPC would be able to review city highway and urban renewal plans but not veto them. In addition, NCPC would consist only of five private citizens appointed by the President. The ex-officio agency heads would no longer participate.

The *Post* reported that NCPC opposed the plan, with NCPC Vice Chairman Loughheim saying, “We consider it unworkable”:

“It’s impossible to make that division,” Loughheim said, pointing out that there is some kind of Federal involvement in almost every section of the city . . . . Where do you draw the line?

Separating the Federal from the local interest “is not orderly planning.” He supported the idea of the city having a strong planning function but with NCPC having final authority.

NCPC member Edwards said:

There has to be an agency with a mandate for overall planning. More than 43 per cent of the land in the central city is in Federal use.

The Commission is not subject to the same kind of political pressure the District government would be if planning power were in the Mayor and Council. The Commission can handle the Federal establishment as well.

Member Conrad Wirth, the former NPS director, said the plan would “create a double-headed monster. There would be more disputes than there are now.”

Similarly, member Thiry said:

[NCPC] is badly needed for the preservation of the Greater Washington area and the L’Enfant plan. There is a great coordinating job that has to be done by some coordinating agency. If it isn’t done there will be bedlam.

Reporters could not reach Chairman Rowe for comment. [Milius, Peter, “U.S. Shifts Proposal On Planning Roles, Would Retain NCPC,” *The Washington Post and Times Herald*, March 8, 1968; Milius, Peter, “NCPC Opposes Plan To Split Its Power,” *The Washington Post and Times Herald*, March 9, 1968]

President Johnson sent his District of Columbia message to Congress on March 13. It called for giving the city new tools to fight crime, improve courts, enhance enforcement of the housing code, establish community school centers, and ease restrictions on child labor laws.

The message did not mention freeways or rail rapid transit. It also did not touch on NCPC. According to the *Star*:

A presidential aide said at the briefing that the reported reorganization expected for the NCPC was delayed because complex issues must be ironed out before reorganization legislation is sent to the Congress.

He said it was doubtful that the plan to give the city its own planning authority would be ready this year. [Sarro, Ronald, and Conconi, Charles, “Johnson Offers Congress Broad New Plan for D.C.,” *The Evening Star*, March 13, 1968]

As the Johnson Administration was considering the future of NCPC, subcommittees of the House and Senate Committees on Appropriations were considering the Department of the Interior and Related Agencies Appropriations for 1969. NCPC was one of the related agencies.

On March 11, Chairman Rowe and other NCPC leaders appeared before the House subcommittee. While the testimony was largely about the funds NCPC needed for its activities,

Chairman Julia Hansen brought up the subject of NCPC's future. She asked Chairman Rowe about the delay in appointing her successor. Rowe confirmed that her appointment had run out a year earlier and that she had asked President Johnson not to reappoint her:

I felt that 6 years was a long time. But it was just at the time when the District government was being reorganized and there were so many questions up in the air that I said I would stay on for a few months and I am still here.

Although Chairman Hansen had not seen anything official on the abolition of NCPC, she asked Rowe to "give us any idea you can of what the future may hold":

Mrs. Rowe. Well, I believe that the abolition of the Planning Commission which you read about in the papers is not in the books. There may well be some functions which are properly municipal functions and are now in the Planning Commission that may be transferred to the new District government. The entity of the Planning Commission itself, I believe, from everything I know, will be maintained and---

Mrs. Hansen. Well, if maintained, but what authority would it have?

Mrs. Rowe. Well, its greatest measure of authority, Mrs. Hansen, is in the Federal field, in the planning of the Federal Establishment in the city and the area.

Chairman Hansen asked how the Federal establishment can be disassociated with "the total complexion of the city." She added that without the Federal Government "there would not be a city here." It would be "an undrained swamp." Congress favored the philosophy of self-government, but she wanted to be sure "the entire picture is crystal clear" on which responsibilities belong where "so that there cannot be impingement upon the Federal domain or the Federal interest just for the sake of a political expediency at some distant time":

We, as a Federal City, are international and national and it is not purely a parochial matter.

This is why I don't contemplate any dissolution of a National Capital Planning Agency [sic] that is related to the Federal establishment. The Federal Government can become the creature and the captive of the city government, because many things that happen in city government are not particularly meaningful to the development and advancement of the Federal Government, such as beauty, design, planning, or development.

Without good relations between the Federal and city government, the pressure to move the Nation's capital, or at least many of its functions, outside the current capital would increase:

All of our States are constantly on the move to find the kind of industry that the Federal Government is that guarantees a stable payroll. No other city in the United States has this particular advantage that Washington has.

Chairman Rowe agreed with Chairman Hansen “wholeheartedly.” The situation was unique. “We have a great city and it is the Nation’s Capital, and there must be planning through the Planning Commission which provides a place for the municipal and the Federal to meet.”

She praised the mayor, deputy mayor, and city council as “dedicated people,” but Chairman Hansen interrupted to say, “Mayors come and go. The Federal City remains.” She praised Mayor Washington, but added that in an elective government, the voters could choose different leaders who will try to tell the Federal Government what to do. She asked if Chairman Rowe agreed that “if Federal planning breaks down and if the colloquy fails and these joint, mutual discussions, the Federal institutions will move to [an] increasingly greater degree beyond the borders of the Federal City.” Chairman Rowe agreed.

Chairman Hansen continued:

Having had a long familiarity with campaigns and with politics, I know how easy it can be for someone to adopt a war cry – if I am elected, I will do this. You can see Pennsylvania Avenue eliminated in one fell swoop given the proper set of circumstances or you could see any other group of buildings eliminated by the expediciencies of the moment.

[Department of the Interior and Related Agencies Appropriations for 1969, Hearings Before a Subcommittee of the Committee on Appropriations, U.S. House of Representatives, 90<sup>th</sup> Congress, 2d Session, Part 3, pages 32-34. The subcommittee conducted the hearing in executive session, with the report not released until the week of April 29.]

Chairman Rowe appeared before a subcommittee of the Senate Committee on Appropriations on March 13, the same day as President Johnson’s message to Congress on the District. Chairman Carl Hayden asked Chairman Rowe to comment on press reports about reorganization of NCPC. She replied, “There have been conversations within the administration, Mr. Chairman. To my knowledge, no conclusion has yet been reached.” She added that NCPC officials had worked with the city government in the past, and they were “very pleased with the reorganized District government” and its dedicated leaders. “And we anticipate working very closely with the District.” However, on the specific question, “I am sorry. I have no answer.” [Department of the Interior and Related Agencies Appropriations for Fiscal Year 1969, Hearings Before a Subcommittee of the Committee on Appropriations, United States Senate, 90<sup>th</sup> Congress, 2d Session on H.T. 17354, part 2, page 2220]

*Star* editors addressed President Johnson’s message on March 14. In “a single flourish of rhetoric,” the message addressed “the total problems of the city.” It highlighted “the weaknesses of leadership, as well as the strengths”:

It seems incredible, for example, that the President while paying minute attention to many problems of lesser concern, failed to devote a single sentence in his lengthy message to the District’s transportation crisis—which happens at the moment to be its most divisive issue.

Approval of a rail rapid transit system was “a very significant political feat,” but the message was silent on efforts to secure funding for it. “Not a word.” President Johnson also “favored the city’s critical freeway impasse with the same silent treatment”:

This was a severe disappointment, which makes the necessity for Congress to straighten out the mess – if the White House will not act – more urgent than ever. The fiasco at last night’s City Council hearing should certainly stimulate efforts in this direction.

(This was hearing that prompted the *Post* to report that Chairman Hechinger began the hearing on time: “It was almost the last thing he was able to do promptly and very little order materialized.”)

The editors also criticized President Johnson for not addressing city planning, especially in view of reports in recent weeks that the White House was circulating reorganization plans. The editors accepted the spokesman’s observation that officials had not yet worked out the details, but the “absence of a reorganization plan involving the planning commission is being widely regarded as a personal victory for the NCPC chairman, Mrs. Elizabeth Rowe.” In the editors’ view, she was “not giving the NCPC effective leadership, and she ought to be replaced.” However, “the problem of planning organization goes deeper than that”:

The fact is that any new system of planning must be based on a method of reconciling differing local and federal interests, and no proposal which we have seen thus far fully meets that need. [“State of the City,” *The Evening Star*, March 14, 1968]

Elsewhere in the *Star* on that same day, an article reported that the idea of shifting NCPC’s functions to the city government “apparently has been killed for this year.” President Johnson’s failure to mention it in his message reflected this apparent reality. (President Johnson signed an order transferring control of the National Capital Housing Authority to the mayor’s executive functions and asked Congress to do the same with the D.C. Recreation Board and RLA.)

Senator Tydings said, “We’ll continue to explore the desirability of reorganizing the planning apparatus of the District.” Although Representative Gude appreciated President Johnson’s comments on the city’s school problem, he said the message “sent over the appetizer but not the main course.” Representative Nelsen of the District Committee said the absence of the NCPC proposal left him “wondering . . . in view of the preliminary work. It had a great deal of merit.” [“Move to Give D.C. Control Of Planning Appears Dead,” *The Evening Star*, March 14, 1968]

The Washington Center for Metropolitan Studies finally released Douglas Harman’s study of the city’s planning apparatus on April 15. It recommended abolishing NCPC and transferring its functions to the city government. Over the years NCPC “tended to be an institutional enemy of the District government.” In view of the new District government, NCPC’s “continued involvement in municipal politics could create further hostility between it and the District of Columbia government.” He said:

The new mayor and City Council should now be charged with planning responsibilities through the transfer of municipal planning functions to [the] District government. City

planning in Washington is too important to be delegated to an independent, Federal planning commission.

The report traced the effort to separate planning and politics, but in the long run, the planners were outside the will of the people.

In a press conference, Harman said he did not expect any problem:

He said the planning commission was apprehensive because of efforts earlier this year to abolish it and have its municipal planning programs transferred to the city government.

Therefore, the planning commission will wait until it is asked to make a decision, and then may assert its authority, Harman said. [Flor, Lee, "Study Calls For Abolition Of Capital Planning Board," *The Evening Star*, April 15, 1968; "Planning for D.C.," *The Washington Post and Times Herald*, April 16, 1968]

### **The City's View**

On April 18, Deputy Mayor Fletcher signed a letter to Chairman Fallon opposing H.R. 16000. The city, Fletcher wrote, "strongly recommends against enactment" of the bill. Officials were "very much concerned about the effect that enactment of the Kluczynski bill would have on the District's ability to plan an effective highway system to meet the city's needs and to allow maximum citizen participation."

H.R. 16000 would undercut the ability of citizens to "meaningfully participate" in "the city's decisions regarding development of highways affecting their vital interests." Public involvement could best be assured "if the final authority to determine the highway system . . . rests with the District of Columbia Council as the body most responsive to the wishes and needs of the community."

As an alternative, Fletcher recommended adoption of a bill the city had prepared and that he forwarded to Chairman Fallon. The *Star* described the bill:

The city government made its position clear today by submitting proposed new legislation to assure its major control over new projects, to assure construction of three highways not directly affected by the court decision, to guarantee maximum citizen participation in highway planning and to provide bonus payments of up to \$5,000 to help displaced families get adequate housing . . . . The supplemental payments would be made only for owner-occupied single or two-family houses.

The three freeways not covered by the U.S. Court of Appeals ruling, but that "might be considered to be subject to the same legal cloud," were the 9<sup>th</sup> Street Expressway from the Southwest Freeway to Constitution Avenue; the Center Leg of the Inner Loop from the Southwest Freeway to New York Avenue; and interchange "C" from 6<sup>th</sup> Street, SE., to Barney Circle, where it linked with the 11<sup>th</sup> Street Bridge:

The city's legislative proposal would require Mayor Washington to submit a new highway plan to the council, which would hold public hearings . . . . The council could approve, modify or disapprove the mayor's proposals. The mayor would have veto power over council changes, and the council could override vetoes as it is empowered to do on the city's budget.

The bill also would change the role of NCPC, which would have only an advisory role. Mayor Washington would consult with NCPC before submitting his plan to the city council, which also would seek NCPC's advice. However, NCPC's views would not be binding on the council. [Sarro, Ronald, "District Asks Congress For Freeway Control," *The Evening Star*, April 19, 1968; Kaiser, Robert G., "City's Freeways Bill Asks Council Role," *The Washington Post and Times Herald*, April 20, 1968]

As soon as the city's bill was released, ECTC demanded a meeting with Mayor Washington, Deputy Mayor Fletcher, and the city council. In an informal 3-hour public hearing on April 20 before an audience of about 125 people, Vice Chairman Cassell told the officials they were headed "the wrong way" on freeways. ECTC rejected the compromise and promised to return to court to block two more projects: the Center Leg and interchange "C."

Mayor Washington responded that the city thought continuing the three freeways was a "reasonable position." He explained, "We want to complete the items that are practically completed," while leaving the remainder of the system to be "looked at again" before decisions on them are made. By putting decisions in the hands of city officials, they would be "making some headway," unlike in the Kluczynski bill.

Hechinger agreed, saying that if the city had not submitted its compromise bill, Congress could "jam it down our throats. No decision has been made to construct anything that is not substantially completed":

He said that the Center Leg and Interchange C could be built as independent units; neither could lead necessarily to further construction, he said.

He also noted that, under the court order, the city could still build freeways, simply by starting over and following the procedures now in the code.

The city bill, he went on, merely sets up new procedures, and under these the Council could still vote not to build any more freeways.

But if the Public Works Committee bill goes through, said Hechinger, there will be no alternatives, and no citizen participation in planning the rest of the system.

ECTC said the city's bill was an attempt to sugarcoat rather than kill the freeways. Booker told the city officials, "There is no compromise on the freeways." He urged the city to cancel all the freeways and build the subway first. Cassell said of the three projects, "You can't take a portion of a badly conceived program and continue it simply because it was started." They, along with Sammie Abbott, objected that the bill called for citizen participation in consideration of "freeway routes." No further consideration should be given to freeways.

Abbott said, “The bill says citizens can participate in the planning of freeways. The hell with that. We’re going to participate in the stopping of freeways.” He added that the Center Leg Freeway and interchange “C” would lead logically to further freeway construction. ECTC intended to go back to court to seek an injunction on further consideration of the city’s bill.

He and other speakers said the additional \$5,000 for displaced families amounted to bribery. They warned that continuing the freeway program could lead to civil disorder, something the city had such recent experience with in the wake of Dr. King’s assassination.

Mayor Washington replied that he favored the higher payment, adding, “I believe it ought to be applied to all forms of relocation.” [Sarro, Ronald, “Withdraw Freeway Bill, Citizen Unit Asks D.C.,” *The Evening Star*, April 20, 1968; Milius, Peter, “Freeway Foes Reject Compromise,” *The Washington Post and Times Herald*, April 21, 1968; Sarro, Ronald, “Foes of Freeways Seek Court Ban on 2 More Projects,” *The Sunday Star*, April 21, 1968]

The *Star* reported that the “meeting with city officials was calm, contrasting with a similar session last month which was punctuated with outburst and disorder.” The *Post* agreed that the meeting was “polite.” [Sarro, Ronald, “Foes of Freeways Seek Court Ban on 2 More Projects” and “Withdraw Freeway Bill, Citizen Unit Asks D.C.,” *The Sunday Star*, April 21, 1968; Milius, Peter, “Freeway Foes Reject Compromise,” *The Washington Post and Times Herald*, April 21, 1968]

*Star* editors called their editorial on the city’s plan a “Freeway Surrender”:

Mayor Walter Washington, who has performed so ably in many other areas, has chosen to back away from his responsibilities toward transportation in the District . . . . Mayor Washington failed to recognize the urgent need to complete an adequate system.

The city’s bill did not contain a deadline for the mayor to initiate further proposals, or on the city council’s action on the proposal:

It takes no account of the factual determinations which already have emerged from years of highway planning. There is not a word of reference to the concept of an inner loop network which is vital to the future of the city. It offers, furthermore, no means whatever to resolve the conflicting views which inevitably occur among the influential federal and local officials involved in freeway decision-making.

Officials who opposed the freeways had delayed their construction for years. “What reason is there to feel that this impasse would be broken under a much more complex procedure?” As for citizen opponents, they “make it plain that their goal is not improved freeway planning but no freeways at all – not even a completion of those already begun.”

Adoption of H.R. 16000 was “essential at this point” to direct the city to build the remaining freeways “starting with the Three Sisters bridge and its connecting Palisades Parkway near the Georgetown waterfront.”

The editors praised some elements of the city's bill, "especially its sensible provisions for more liberal relocation assistance, which should be incorporated in the congressional legislation":

The Public Works Committee, however, should not hesitate to insist that certain projects must be built – as indeed Chairman Fallon and his subcommittee chairman, Representative Kluczynski, were prepared to do several months ago. If that determination should waver now, there will be little hope that this region's balanced transportation needs will be met. ["Freeway Surrender," *The Evening Star*, April 23, 1968]

On April 27, MacClane of the District Federation of Civic Association denied the federation planned to return to court to expand its lawsuit to block the three freeways under construction. He said that ECTC, while friendly to the suit, was not a party to it. ECTC leaders "were speaking for themselves." The parties to the suit thought that expanding it to projects under construction would be a poor strategy. [Flor, Lee, "Foes of Freeways Won't Ask Court To Ban Other Jobs," *The Sunday Star*, April 28, 1968]

In another matter, Lee Flor reported that Secretary Boyd had formally replied to NCPC request for a review of the Three Sisters Bridge. "The department's reply is ambiguous but concludes that the new District government and the planning commission will have to make up their own minds about the bridge." [Flor, lee, "Foes of Freeways Won't Ask Court To Ban Other Jobs," *The Sunday Star*, April 28, 1968]

On April 30, after a 2-hour meeting with ECTC officials, Mayor Washington announced the city would restudy several points in its proposed substitute for H.R. 16000. Mayor Washington and Deputy Mayor Fletcher were joined, an hour into the meeting, by Chairman Hechinger. Representing ECTC were Booker, Cassell, Willie David, John Carter, and Linwood Chatman.

According to the *Star*:

Booker commented prior to [the meeting] that the committee wanted assurances that no new highways would be constructed. He said that according to the city's proposal the counsel still could say that freeways could be built.

After the meeting, participants declined to describe what happened except in general terms. It was, they agreed, a "very good meeting" that left participants "optimistic" about the future. Mayor Washington summarized the meeting by saying that ECTC "made some very sound observations and we will restudy our proposal." [Delaney, Paul, "D.C. Will Take Another Look At Freeways," *The Evening Star*, May 1, 1968]

On May 7, the District of Columbia held a primary election. The ballot contained nine items in addition to the nominees for President. One of the questions was:

Shall the Democratic Party support legislation providing that before a new highway in the District of Columbia can be authorized, it must be approved in a referendum conducted in the District?

Around 94,000 Democratic voters supported the referendum idea, while only about 5,000 voted against it. This vote would be seen by anti-highway groups as proof that District voters overwhelmingly opposed freeways.

### **Return of the Freeway-Subway Rift**

General Graham and WMATA officials had testified before Chairman Hansen's subcommittee immediately after NCPC's appearance on March 11. They made clear that WMATA's top priority was construction of the 25-mile basic rail rapid transit system that Congress had approved.

In a prepared statement, General Graham pointed out that WMATA was working with the TPB, the area's 3C metropolitan planning organization under the Federal-Aid Highway Act of 1962:

This Board . . . has the objective of assuring that all plans for regional transportation are properly coordinated. One assumption basic to plans for the regional rapid transit system is that highway programs for the District of Columbia and of other [interstate] compact jurisdictions will be consummated. Rapid rail transit is considered to be a necessary element within the overall complex of a balanced regional transportation system.  
[page 91]

General Graham told the subcommittee about WMATA's plans to award the first construction contracts during the first quarter of FY 1969 which would begin on July 1, 1968:

Moving on to construction, ground breaking this October is planned to take place at Judiciary Square . . . . One contract extends from Third and D Streets, to 10<sup>th</sup> and G Streets, including the Judiciary Square and Eighth and G Street stations. The other contract extends from 15<sup>th</sup> and G Streets to Connecticut Avenue at K Street. [page 97]

Chairman Hansen mentioned "the usual controversy" common to "every major city in the United States, relative to freeways and subway transit." She believed in a balanced transportation system containing both, but she asked General Graham, "Is this coordination completely solved?"

Mr. Graham. I think completely, Madam Chairman. The Authority has planned a rapid transit system that will be efficient, convenient, safe, and attractive. While we are not responsible for highway planning, we respect the expertise of the area highway departments and the transportation planning board that I mentioned earlier in planning the area's highway program. So we assume that the current plans for the area should proceed, the current highway plans, and we have made the assumption that the highway network is in there in determining our traffic and revenue assumptions.

Mrs. Hansen. As you quite realize, transportation can never be considered as separate segments. Transportation is a totality. Your roads and freeways act as feeders to develop the highest potential of your transit system. A subway system can ameliorate the perplexing problems of freeways and doesn't add to the crowding of your city streets.  
I am glad----

Mr. Graham. That is absolutely right.

Mrs. Hansen. ----you have recognized the needs of the freeway system because it is a component part of the total transportation system. [page 99]

Later, she asked where WMATA fit in the “serious dissension today with regard to the development of the freeway system in the District of Columbia”:

Mr. Graham. I do not think there is much more to say, except that we have often called this regional system a motor age rapid transit system. By this we mean that 70 percent of our riders, when this system is complete, will come to the transit stations by highway, either by bus or private car, by driving their car and parking or being driven by others, to these stations. We are absolutely dependent for our success on an adequate highway network.

Mrs. Hansen. Adequate highway network and adequate parking.

General Graham. Yes. Our regional system includes 29,000 spaces, parking spaces, at the outlying stations for people to leave their private cars. [page 152]

Chairman Hansen also asked how withholding the District’s matching funds for the rail transit system would affect the construction schedule. General Graham said, “This again would jeopardize or forcibly delay the train operating dates.” All action to begin construction, such as general engineering and architectural contracts, would have to be suspended:

An extended delay would jeopardize meeting the operational date, or preclude meeting the date. If these funds were not available for a year, it is estimated that the delay would increase basic system costs by approximately \$25 million. Excessive delay would also render completed plans obsolete to some extent and could call for redesign of certain portions. [page 164]

During a May 3 meeting of the WMATA board, Chairman Gleason worried that the planned system was being “used as a whipping boy in the highway situation,” referring, without saying so, to Chairman Natcher’s threat to withhold District matching funds. He was particularly upset that freeway opponents suggested that the new rail rapid transit system alone could handle peak period traffic. “This is absolutely false . . . we have recognized that mass transit alone cannot take care of commuter needs for transportation.” WMATA was operating on the concept of a balanced transportation system of freeways and rail transit lines.

Councilwoman Shackleton, who served as an alternative WMATA director, replied, “I really don’t believe in blackmailing one for the other.” She said that tying the two modes together was “not healthy, not relevant” and she was “sorry this came up.”

Lee Flor recalled for readers that Gleason had once served as attorney to one of the anti-freeway groups, the Save Takoma Park Committee:

Reminded of this today, Gleason said he had never claimed that the rapid transit system “would eliminate the need for all freeways.”

Gleason said he left the anti-freeway groups “because there was growing evidence that really these people were not even in favor of mass transit.” [Flor, Lee, “Don’t Make Us Whipping Boy On Freeways, Rail Unit Asks,” *The Evening Star*, May 3, 1968; Eisen, Jack, “Road Rift Seen Peril to Metro,” *The Washington Post and Times Herald*, May 4, 1968]

### **The Administration’s 1968 Act**

When the House Subcommittee on Roads held hearings on the Federal-Aid Highway Act of 1968, Secretary Boyd, accompanied by Administrator Bridwell and other department officials, appeared on May 23 to discuss the Administration’s bill. The bill contained the usual provisions related to the Federal-aid highway program, but also a measure to extend completion of the Interstate System to 1974 and to add \$8.340 billion to Interstate Construction authorizations. Secretary Boyd said:

That will give us a final cost figure for the Interstate System of approximately \$50.640 billion.

The administration bill would revise the schedule of authorization of appropriations to make possible the completion of the 41,000-mile Interstate Highway System . . . . About 6,000 miles of the Interstate System are in metropolitan areas and about half of that mileage remains unbuilt, partly because of its high cost and partly because people who live in the cities have asked us to take another look at the functions of an urban highway from their standpoint. This we have done and some of the results are evident in this proposed legislation.

On a more comprehensive basis than ever before, this omnibus bill recognizes that population trends have made city problems national problems, and therefore provides Federal funds for various solutions to urban highway programs.

He was referring to funds for TOPICS and other programs intended to improve urban traffic flow. [Hearings before the Subcommittee on Roads, Committee on Public Works, U.S. House of Representatives, 90<sup>th</sup> Congress, 2<sup>nd</sup> Session, on H.R. 17134 and Related Bills, Committee Print 90-30, 1968, page 131]

The bill did not include a provision on District freeways or, despite his press conference a month earlier, a provision on right-of-way acquisition (other than an innovative measure allowing advance acquisition of property to prevent its development prior to the anticipated taking for a highway). He said of right-of-way reform:

Not part of the administration bill, but basic to it is a necessity for devising a new formula for compensation of homeowners dislocated by Federal-aid highway construction.

The Administration had decided to take a governmentwide approach as reflected in an earlier statement by Deputy Director Phillip S. Hughes of the Bureau of the Budget before the Senate Subcommittee on Government Operations concerning relocation payments, advisory assistance, and assurance of availability of standard housing.

Administrator Bridwell summarized the principal points of the Hughes statement from the standpoint of the Federal-aid highway program, although Hughes was referring to all Federal acquisition activities:

That each State would be responsible for assuring that it will provide fair and reasonable relocation payments, rent supplements, and replacement housing payments prior to the approval of projects by the Secretary under section 106, that is, relocation assistance programs would be offered – that relocation assistance in the form of advice, help to individuals in finding replacement housing. And that a State highway department could rely upon any other State or local organization having an established organization for conducting relocation assistance programs to carry out this responsibility. That the Federal share of the cost of this program would be in the same proportion as, in this instance, the highway program to which it applied.

The Secretary would have the authority to establish criteria for decent, safe, and sanitary housing for relocatees, and that would determine the eligibility for any one of the assistance programs – namely, rent supplement or a replacement assistance amount. The replacement assistance amount would be limited to a maximum of \$5,000, and the amount that a relocatee could claim would be that amount of difference between what he received for the purchased or condemned property under the traditional fair market system and the amount that he would have to pay for a decent, safe, and sanitary replacement dwelling. [pages 132, 145]

The Administration's bill contained other features that Secretary Boyd highlighted. One was related to the fact that under Reorganization Plan No. 2, to be signed on July 1, 1968, President Johnson would transfer administration of mass transit programs from HUD to the Department of Transportation:

To coordinate the urban highway program with the urban mass transit program being transferred to our Department July 1, we are proposing for the first time to provide Federal assistance for fringe parking in large urban areas . . . . The administration bill . . . would make it possible for us to pay 75 percent of the cost of fringe parking spaces if they were tied in with mass transit systems that would distribute people to the downtown area. Such parking facilities would have to be adjacent to Federal-aid highways serving urban areas of more than 50,000 population. [page 132]

He also mentioned:

Another "first" in the bill would make it possible for States to spend up to 2 percent of their allocation for advance acquisition of property for highways. The law now forbids this. As a result, highway planners often are forced to watch industrial or commercial

construction proceed on land they know is part of a long-range highway program. This bill would make it possible for them to buy land as many as 7 years in advance of actual need. It will cut eventual costs in many cases and will make it easier for cities to practice effective land-use planning. [page 133]

During Secretary Boyd's testimony, subcommittee members asked about many subjects, but not the District freeway controversy. Chairman Fallon raised the subject of delays in completing urban Interstate segments, but from the standpoint of the State highway agencies:

What is apparently happening is that the executive branch no longer accepts the concept of the relationship that has been going on for years between the local level and the Federal level. They seem to be exercising their will and control more and more all the time to a point where the States are complaining that it impedes progress of not only location but construction, planning, and engineering.

Secretary Boyd was not aware the concern, noting that he normally spoke with governors rather than highway officials. He mentioned some of the cities where he had been directly involved at the request of the governor or city, including Chairman Fallon's home city of Baltimore, but did not include the District of Columbia in the list. He explained:

Secretary Boyd. Now, my philosophy is one that I want to make very clear – as long as I am Secretary of Transportation, I expect to pursue this philosophy – that is that insofar as transportation in a city is concerned, the mayor and city council have a definite voice in what that transportation should be.

Mr. Fallon. I found that out in Baltimore.

Secretary Boyd. I have asked in every case where we have become involved in these local situations for the Governor to provide us with his views because I believe that, no matter what I happen to think about the wisdom or unwisdom on any particular design, location, or anything else, the people who are going to use it and live with it should have the final say.

He said the reason Chairman Fallon received complaints from State highway officials was that they "haven't bothered to get in touch with me":

One of the things that I must admit that scratches me a little bit is some highway officials in this country put out information about what I do and what I think which has no relation to the fact and they never come talk to me about it.

Representative Cramer asked Secretary Boyd for a list of cases where he overruled the State road agency regarding the location of the highway or related problems. Secretary Boyd submitted a list, noting that he excluded the District of Columbia because the committee was familiar with the situation. The four cases cited where BPR/FHWA rulings were preventing State proposals from fully advancing were:

- BPR required restudy of an 80-mile section of I-35 from Williams, Iowa, to Albert Lea, Minnesota. “The location ultimately approved was similar to that recommended by Mason City, Iowa.”
- FHWA requested additional study of the need for the Boston Inner Belt (I-695) after the State submitted its recommendation for a routing through Cambridge, which opposed the plan “This study is now underway.”
- BPR asked the Pennsylvania Department of Highways to abandon planning and right-of-way acquisition in Philadelphia for an interchange between the proposed Crosstown Expressway and I-95. “This expressway has been strongly opposed by Philadelphia officials because of displacement problems.”
- FHWA withdrew a 1958 BPR location approval and asked the California Division of Highways to recommend an alternative location for a 4.2-mile segment of I-280 in San Mateo County through watershed lands along Upper Crystal Springs Reservoir that were owned by the city of San Francisco. [pages 153-154]

When Airis testified on June 4, he discussed H.R. 16000 briefly and at greater length commented on issues associated with right-of-way acquisition, which he said was “one of the most crucial problems which affects the Interstate Highway System within the urban areas . . . .” He added that “one of the other aids in overcoming this relocation problem concerned with urban Interstate Freeways lies in the joint use concept of utilizing space over and under the freeways.” He mentioned the legislation the city was seeking and urged its adoption and said he supported fringe parking, but added that because it supported transit use, the facilities should not be funded out of the Highway Trust Fund. [pages 485-490]

Representative Robert C. McEwen (R-NY) asked Airis about a recent incident that closed Whitehurst Freeway. On the night of Thursday-Friday, May 30-31, the elevated freeway had been closed because a 216-foot high smokestack at the adjacent city-owned abandoned Capital Transit power plant had sustained a lengthy crack. Until the top of the smokestack could be removed, the danger that it might topple onto the freeway kept the road closed. The result on Friday was what a *Star* editorial called, “One of the worst traffic jams in anyone’s memory,” as traffic had to be diverted on an emergency basis to the Key and Roosevelt Bridges as well as onto M Street, Canal Road, and MacArthur Boulevard. On Saturday, a crane completed demolition of the smokestack around 1 p.m., allowing traffic to return to Whitehurst Freeway.

Airis told Representative McEwen that the closure of Whitehurst Freeway caused “some really magnificent and horrible traffic jams.” They demonstrated “that we really need some more bridge capacity across the river”:

What is happening now is we are running at capacity in the present bridges nearly all the time during any type of rush hour, and we had some really bad traffic jams all the time that we had the Whitehurst Freeway closed, except, of course, during the night hours.

Representative McEwen said he hoped “that those who think there is no need for additional crossings of the river and those who question the need of highways in this urban area will take a look at the result that flowed from the closing of this one artery, the Whitehurst Freeway.”

Airis agreed, adding:

Of course you compare this Nation's Capital here, where we have several bridges, but compared to Paris, they have 20-some bridges, and I have often pointed out that Paris is a beautiful city.

This dialogue was bringing Airis's testimony to an end. However, Chairman Kluczynski told Airis that, "I hope you do not think this legislation [H.R. 16000] is dead" because "we are planning to put the District roads into the highway bill." He explained, "I have been around a long time and I see no maneuvering on H.R. 16000." The President would probably veto a separate District highway bill, but if it were part of the Federal-Aid Highway Act of 1968, he would likely approve the bill regardless of any reservations he might have about the District freeway provision:

I assure you that the chairman and many members of the committee know that if you do not build the roads here in the District that money is going to go someplace else. I want it to go right here in the District of Columbia, where it belongs and that is why we are very interested in relocating these people, people who are opposed to this legislation. [pages 493-494; "The Crack That Closed A Freeway," *The Evening Star*, May 31, 1968; "Cracked Smokestack Razed, Whitehurst Freeway Is Open," *The Sunday Star*, June 2, 1968]

Later, he assured reporters that the Three Sisters Bridge would be in the bill. "Nobody's going to change my mind," he said, adding that, "95 per cent [of his House subcommittee members] will be with me." The bill also was likely to include the Potomac River Expressway, which was linked to the bridge, the North-Central Freeway, and East Leg of the Inner Loop Freeway. The *Star* pointed out:

Kluczynski seemed less enthusiastic about two tunnels contained in the original District highway plan. One would go under the Lincoln Memorial and Tidal Basin. The other would bridge traffic into the city under K Street. [Milius, Peter, "3 Sisters to Be Put in 'Veto-Proof' Bill," *The Washington Post and Times Herald*, June 5, 1968; Elder, Shirley, "A 'Veto-Proof' Order Sought on 3 Sisters," *The Evening Star*, June 5, 1968]

Secretary Boyd and his colleagues testified before the Subcommittee on Roads, Senate Committee on Public Works on June 5. They discussed the same issues as before the House subcommittee, again without discussing the District freeways; the subject was not part of the bills the Senate subcommittee was considering. Director Airis did not testify before the Senate subcommittee. [Federal-Aid Highway Act of 1968, Hearings Before the Subcommittee on Roads, Committee on Public Works, United States Senate, 90<sup>th</sup> Congress, 2d Session on S. 2888, S. 3381, and S. 3418, pages 155-184]

## Planning for the District

During the early operation of the city council, Chairman Hechinger established committees on an ad hoc basis as needs arose. In May, he confirmed that councilmembers had decided to form standing committees. He declined to explain the decision, but the *Star* reported:

However, another source reported that ad hoc committees have not provided the continuity, the leadership or the force needed to make the body a more effective voice in the District government.

“The council has sometimes found itself naming two and three different committees on the same subject,” the source said. “Ad hoc committees tend to fragment power, even take away some power.

“The fear in the beginning – fears expressed mostly by the administration – was the individual councilmen serving as chairmen of standing committees would gain too much power and thus present too many problems to the administration. As things stand now, the ad hoc committees don’t have too much punch,” the source said.

While Chairman Hechinger worked to establish the committees, they could be put into effect by striking Section 21 of the council’s rules of procedures, which stated: “There will be no standing committees. From time to time the council shall sit as a committee of the whole.”

The city council established 14 permanent committees in early June, including:

- Committee on Highways and Transportation: Chairman Fauntroy and members Shackleton and Yeldell.
- Committee on Planning: Chairman Fauntroy and members Nevius and Shackleton.
- Committee on Housing and Urban Development: Chairman Nevius and members Fauntroy, Thompson, and Turner.

The council decided to convert two ad hoc committees to permanent:

- Committee on Citizen Information and Complaints: Chairman Shackleton and members Anderson, Thompson, and Yeldell.
- Committee on Consumer Affairs: Chairman Hechinger and members Anderson, Shackleton, and Turner. [Delaney, Paul, “Council Shifts To Standing Committees,” *The Evening Star*, May 6, 1968; “14 Committees Set Up By D.C. City Council,” *The Evening Star*, June 6, 1968]

On June 15, 1968, President Johnson named Philip G. Hammer, a white city planner, to head NCPC, replacing Chairman Rowe. The President also named James O. Gibson, a social scientist, to replace Walter Louchheim, whose term also had expired a year earlier in April. Both were members of the Potomac Institute, Inc., a nonprofit civil rights organization.

Hammer, a 54-year old native of Philadelphia, was president of urban consultant Hammer, Greene, Siler Associates. He had graduated from the University of North Carolina in political

science and economics, and received a Harvard master's degree in economics. He had been heavily involved in city planning since 1950 when he directed a committee that reorganized the governments of Atlanta and Fulton County, Georgia. His firm, which had an office that opened in 1954 at 1140 Connecticut Avenue, NW., had conducted studies for over 140 cities and metropolitan areas on housing markets, retail and commercial locations, land development, urban renewal and bond issues.

His wife, Jane Ross of Charlotte, North Carolina, was a national director of the Inner-City project and served on the board of directors of the education fund of the League of Women Voters. The Hammers, who had three sons, lived at 5152 Manning Place, NW., in the Palisades area near MacArthur Boulevard.

Gibson, a 34-year old African-American, had been born in Atlanta. He graduated from Duquesne University in Pittsburgh and did graduate work at Atlanta University in Georgia and Temple University in Philadelphia. After serving in the U.S. Army, he worked in civil rights organizations in Atlanta before moving to Indianapolis as program director of a settlement house named Flanner House. He also served as consultant to Mayor Richard G. Hatcher of Gary, Indiana, while continuing to work on ghetto problems.

He moved to the District of Columbia in 1964 to direct the Neighborhood Development Center No. 2, a Federal juvenile delinquency-prevention project. He joined the Potomac Institute in 1966, working on equal opportunity and civil rights issues.

He and his wife Kathryn, an art student at American University, lived at 2409 Ordway Street, NW., in Cleveland Park near Connecticut Avenue.

Outgoing Chairman Rowe said she knew Hammer and Gibson and "thinks they're great." She anticipated that they would continue what she considered NCPC's greatest accomplishment during her tenure: an emphasis on planning for people.

As the *Star* explained:

One of the largest tasks facing the planning commission is the completion of the comprehensive plan for 1985, which is supposed to be a detailed blueprint for housing and location of federal and private employment centers in the District.

Since 1962, the planning commission has been trying to decide on the 1985 plan, but has been delayed by disputes over freeway location and housing policies.

As noted earlier, the White House had delaying the appointments while it considered abolishing NCPC. However, the White House dropped the plan at the urging of Chairman Rowe, who argued, in the *Post's* words, "that the Commission has been the main bulwark against wholesale freeway construction here and has been instrumental in preserving the city's traditional character." The *Post* continued:

As for the freeway issue – which has sparked deep citizen emotions – many city officials are said to feel that opposition to highways could subside if proper protections are assured for those relocated, and if designs can be made less massive and geographically divisive.

These considerations would involve increased emphasis and expertise in developing methods of guaranteeing housing equity, and proven relocation protections. [Hornig, Roberta, “Johnson Names D.C. Planner National Capital Plans Chief,” *The Sunday Star*, June 16, 1968; Asher, Robert L., “Urban Experts Join NCPC; Mrs. Rowe, Louchheim Out,” *The Washington Post and Times Herald*, June 16, 1968]

Hammer told reporters he wanted NCPC to be a strong tool for Mayor Washington in facing community controversies, including the freeway disputes. His top priority would be “rebuilding the slum areas of Washington,” including the areas destroyed by the April rioting after the assassination of Dr. King. He was not a foe of all urban freeways, but believed that they must fit a city’s overall makeup and help solve social and economic problems. He sidestepped reporters’ questions about whether he opposed the District’s freeway plans, saying his position would depend upon a detailed study.

Gibson also wanted to strengthen the new city government. As for freeways, he declined to offer a position:

“The freeway controversy, Model Cities, rebuilding areas affected by the civil disturbances and the Fort Lincoln project – all these are important issues,” he said.

Asked about his position on freeways, he said, “It is necessary to guard against the kind of abuses the highways and freeways have represented in many places. I feel that this now is and will continue to be a very hot issue.” [“New Chairman Eyes Big Local Role for NCPC,” *The Washington Post and Times Herald*, June 18, 1968]

Hammer and Gibson took their oaths of office on July 11. Hammer said that planning for the Washington area “must be compatible with the federal interest.” He was concerned about the “problems of the Inner City – the social and economic problems of the ghetto.” He also was “concerned about the efficiency of this city, and other cities and how to make cities work.”

He said his consulting firm was involved in many Washington area projects, including an economic impact study for the North Leg of the Inner Loop Freeway. The firm had not done any work on the study or received payment for it, and he was considering whether to break the contract to free him for any decisions related to the subject. He said he would not vote, or participate in discussions, of any projects that his firm had studied. He also would avoid future contracts that might pose a conflict of interest.

The *Post* report concluded:

Commission members attended a ceremony at James Bryce Park, Massachusetts and Wisconsin Avenues nw., at which Interior Secretary Stewart L. Udall, National Park Director George B. Hartzog, Jr. and Mrs. Rowe planted a littleleaf linden tree honoring

the outgoing chairman. [Eisen, Jack, "NCPC Strengthens Ties to City Regime," *The Washington Post and Times Herald*, July 12, 1968]

### **Mandating the Freeways**

The House Committee on Public Works completed work on the Federal-Aid Highway Act of 1968 on June 25 and issued its report on the bill, H.R. 17134. Section 22 of the committee bill added Section 313 ("Interstate routes in the District of Columbia") to Title 23, United States Code. It provided that notwithstanding "any other provision of law, or any court decision or administrative action to the contrary," the Secretary of Transportation and District were to construct, "as soon as possible after the enactment of this section," all Interstate sections described in the 1968 ICE. "Such construction shall be carried out in accordance with all other applicable provisions of this title." [Federal-Aid Highway Act of 1968, Report of the Committee on Public Works, U.S. House of Representatives, to accompany H.R. 17134, 90<sup>th</sup> Congress, 2d Session, House Report No. 1584, June 25, 1968, page 35]

The committee's report on the bill explained that, "The continued life of the city is dependent upon an adequate comprehensive transportation system." In Washington as elsewhere, "automotive transport is the Nation's major social and economic lifeline," with adequate highways needed. Construction of rapid rail transit was needed, too, but it would serve only a portion of the area's transportation needs. "The movement of goods and services in the area cannot be handled at all by the mass transportation system, nor can access to the area's airports . . . ."

The District's Interstate System has been planned and replanned over 20 years, but "most of it remains to be built." Meanwhile, the city had acquired much of the right-of-way and designed the routes "with the maximum possible consideration for community and aesthetic values."

As for critics of the freeway network, the report said:

The opponents of the Interstate System within the District of Columbia rely, for the most part, on emotionalism and outdated information. They are opposed, not to the building of specific Interstate routes within the District, but to the building of any new highway facilities within the District. The national and the economic requirements aside, safety consideration[s] alone preclude the dispersal of the traffic these routes will carry onto existing streets in residential areas, which is what the opponents of the Interstate System recommend.

The Department of Transportation, the report continued, had intervened in the controversy, but "backed out of it, leaving it to action by the city's government," which "is evidently unable to act to cope with the situation":

Quite obviously, the area within the District of Columbia boundaries cannot be left to eventual isolation from the rest of the Washington Metropolitan Area; the national interest simply will not permit that. Absent action by either the local government or the executive branch, the Congress must act.

Section 22 required construction, as soon as possible, “of all routes on the Interstate System within the District of Columbia as set forth in the document entitled ‘1968 Estimate of the Cost of Completion of the National System of Interstate and Defense Highways in the District of Columbia’”:

- The Three Sisters Bridge, I-266 (section B1 to B2).
- The Potomac River Freeway, I-266 (section B2 to B4).
- The east leg of the inner loop, I-295 (section C2 to C4).
- The east leg of the inner loop, I-295 (section C4 to C6).
- The center leg of the inner loop, I-95 (section A6 to C4).
- Interchange C, I-695 (section A5.1 to A5.2) and I-295 (section A4 to C2).
- The Northeast-North Central Freeway, I-95 (section C7 to C12).
- The Northeast Freeway, I-95, (section C12 to C13).
- The North Central Freeway, I-70S (section C1 to C2)(table E-2).
- The south leg of the inner loop, I-695 (section B1 to B6).
- The north leg west section of the inner loop, I-66 (section A3.3 to A3.11) and the north leg central section of the inner loop, I-95 (section C4 to C7).

Regarding the Three Sisters Bridge, the report stated that “immediately upon completion of construction of that facility, the Highway Department of the District of Columbia [must] relinquish to the National Park Service the right-of-way through Glover-Archbold Park that it presently holds.” [“Federal-Aid Highway Act of 1968,” pages 17-18]

Section 23 of the bill added a chapter 5 to Title 23 on “Highway Relocation Assistance” consistent with the Administration proposal but limited to Federal-aid highway projects. The report on Section 22 stated:

Relocation assistance provided in H.R. 17134 as here reported should be helpful in relieving most of the remaining problems with respect to certain other routes. [“Federal-Aid Highway Act of 1968,” pages 19-22]

Section 22 provoked a lengthy dissent from Representatives McCarthy, Schwengel, and Jerome R. Waldie (D-Ca.) urging deletion of the provision. They elaborated on five reasons for their opposition:

Section 22 Violates a Rules of the House Governing the Jurisdiction of This Committee and Creates A Precedent for Pork-Barrel Highway Legislation.

They referred to the 1913 creation of the House Committee on Roads. A Rules Committee resolution on the committee’s jurisdiction stated:

*Provided*, That it shall not be in order for any bill providing general legislation in relation to roads to contain any provision for any specific road, nor for any bill in relation to a specific road to embrace a provision in relation to any other specific road.

The purpose of this provision was that “Members would not be permitted to load it down with specific roads,” as the first chairman of the committee, Representative Dorsey Shackelford of Missouri, explained. On June 2, 1913, the House consented to the resolution without a recorded vote, thereby agreeing to creation of a Committee on Roads. [Committee on Roads, *Congressional Record-House*, June 2, 1913, pages 1856-1860]

Even though Section 22 did not name the specific roads, it did so by citing the 1968 ICE, which did identify them:

It is impossible to conceive of any more specific provision for specific roads in a bill providing general legislation in relation to roads.

Members of Congress lack the planning and engineering expertise to have the last word on the necessity, desirability, location, and design of interstate highways. These decisions were wisely left to local governments and local experts under the Federal-Aid Highway Act. Federal and State highway administrators have worked together for decades to create [a] professional partnership in implementing the greatest public works program in highways. But it is a partnership, not a dictatorship. If highway controversies were resolved in Congress through the device of amendments to the Federal-Aid Highway Act, this partnership would be destroyed and the interstate highway program would be undermined. [page 53-54]

The minority cited the second reason for their dissent:

Section 22 Would Sanction a Program Which Has Been Illegal Almost From Its Inception and Which the U.S. Court Of Appeals Has Excoriated and Enjoined.

The Congressmen were referring to the U.S. Court of Appeals’ ruling on February 15, 1968, enjoining the District of Columbia from constructing four major highway projects until it complied with the 1893 District law on highway development. The former District government had wanted to proceed without regard to the 1893 requirements, such as its hearing requirements, but “the present District government has taken a completely different view”:

It has noted that these projects are widely opposed throughout the community. Therefore, the incumbent District government has formally notified this committee that it strongly opposes the proposed section 22 on the ground that this action would deprive the citizens of the District of Columbia of any opportunity “to participate meaningfully in the city’s decisions regarding development of highways affecting their vital interest.”

They referred to Deputy Mayor Fletcher’s April 18 letter informing Chairman Fallon that “the government of the District of Columbia strongly recommends” against enactment of the Kluczynski bill:

The committee is also aware that the District government has proposed an alternative legislative solution designed to allow democratic procedures in the highway planning process. This committee has not even held hearings on this alternative to the proposed section 22. Instead, the proposed section 22 would direct the immediate construction of

these widely criticized highway projects without even pausing to consider either the views of the District of Columbia government or the citizens which it represents. It is hard to conceive of action more conducive to disrespect for the law in the District of Columbia than legislation which disregards and destroys the longstanding right of the people of the District to participate in the planning of highways in their city, a right which a Federal court upheld only a few months ago.

Their third point was:

The Drastic Effects of the Proposed Highway Program in the Nation's Capital Will Desecrate the City and Gravely Harm Its Businesses and Its People.

The recent hearings "show that the District's highway program has become a Frankenstein monster which devours far too great a proportion of the District's limited land and financial resources."

Since 1940, the city had spent about \$500 million on new highway construction. Some of the construction was useful, "but much has been overly destructive of homes, businesses, parks, and the best features of decent life in the city. Continuation of this course will bring civic disaster."

The city had lost one-third of its population since 1940, with highways and parking lots replacing row houses – leading to a desperate housing shortage. "More than 60 percent of the central business district is now devoted to highways and off-street storage of motor vehicles." About 30 percent of city land was preempted by highways, while only 35 percent was privately owned, tax yielding property. The sprawl was prompting businesses to move to the suburbs:

In return for its investment, the city has received increased smog, more traffic fatalities, a drastic loss of patronage in its public transit system, an ever-worsening housing crisis, and permanent scars on residential neighborhoods and monumental areas where older highways have been widened or new highways forced through to make room for more auto commuters.

In the National Capital Transportation Act of 1960, Congress rejected the highway plan proposed by the 1959 Mass Transportation Survey (MTS). Now, Section 22 proposes to force construction of more or less the same plan Congress had rejected.

Since release of the MTS and its congressional rejection, the District's problems had only worsened:

The plain and unvarnished fact is that the highway program will, as the Senate Committee said when it reported the NCTA legislation in 1960 (S. Rep 1631, 86<sup>th</sup> Cong., p. 5), "wreck the city – it will demolish residential neighborhoods, violate parks and playgrounds, desecrate the monumental portions of the Nation's Capital, and remove much valuable property from the tax rolls." Many thousands of District families will be unnecessarily displaced, and the burden of this forced dislocation will bear heaviest, and cause untold hardship, on low-income and middle-income families. The majority of these

families will be nonwhite, and the difficulties they would have in obtaining substitute housing are well known.

The city already had a waiting list of thousands for public housing. Even the enlightened right-of-way acquisition measures in H.R. 17134 were not sufficient because the relocation assistance “will not solve the housing shortage [in the city] or make the refugees from Washington’s freeways more welcome in the suburbs.”

Fourth, the minority report argued:

The Proposed Highway Program Is Totally Lacking in Planning Justification. It Is Overexpanded And Unnecessary. The Expenditures It Will Require Are Wholly Unjustifiable, Especially in These Days of Budgetary Stringency.

Major highway plans since 1940 were based on the premise the city would address its transportation needs with highways. That concept changed with development of plans for the Metro system. “It is obvious, however, that the highway program now being proposed openly mocks and repudiates these planning decisions.” Most of the freeways added since 1960 were radial highways that would serve only suburban commuting needs in direct competition with the planned Metro lines.

The District Highway Department had not provided “sound and detailed justification for the highway program” to the committee. “The reason for that failure is not hard to find.” Here, the three Congressmen cited the Arthur D. Little report’s analysis of traffic projections:

Because of basic deficiencies in data and traffic forecasting techniques, and because transportation planning has been “carried out with inadequate regard for long-range economic and social impact” (p. x), the Little report recommended that the District government “delay action on all proposals for extending the District’s freeway network until the highway plan has been reexamined” (p. xi). The recommendations of the Arthur D. Little report should have been followed. They were not followed. There was no valid reason or justification for not following them.

Finally, the Congressmen wrote:

The Highway Plans Are Widely Opposed by Virtually All Elements of The Community.

The “singular and overriding” fact the hearings revealed was “the unanimity of civic opposition to the present District of Columbia highway program”:

Never in the history of this committee has there been such an outpouring of civic protest against a highway program. Groups that ordinarily have little in common on other public issues stood shoulder to shoulder in opposition.

This opposition was initially limited to the city’s northwest quadrant, leading to the prohibition on freeway construction included in the National Capital Transportation Act of 1960, since extended. The predicted negative consequences of the prohibition had not proven to be correct:

Even though there has been no major arterial highway improvement west of Rock Creek or north of M Street since 1950, the predicted “strangulation” and “blight” from traffic growth has not materialized in this area. Growth in vehicular traffic in the northwest quadrant during the past decade has been virtually nonexistent. This area alone has not suffered material losses in transit patronage. And, contrary to claims that such a “do nothing” policy on highways would cause deterioration of property values, the tax appraisals in this area increased 14 percent between 1960 and 1965 compared with an increase of 18 percent elsewhere in the city.

They referred to the “unanimous opposition from civic groups” during the hearings on H.R. 16000:

This overwhelming civic protest against accelerated highway construction within the District of Columbia is not a device to promote rapid transit by “killing” freeways. The numerous hearings by the House District Committee since 1958 on Washington’s knotty transportation problems confirm that public opposition to new highway construction arises from a concern about their neighborhood, their city, and their taxes. Such opposition predated serious consideration of rapid transit plans, and it is destined to continue regardless of decisions on rapid transit development.

The three Representatives concluded the minority report:

Transportation determines the fabric and character of our cities. Transportation facilities can serve or dominate the people who live in them. Transportation planning can enforce separation of the races or encourage freedom and mobility. Above all, decisions concerning transportation must reflect the needs and desires of the people who are affected by them. Congress should not thrust an unwanted interstate highway system upon the people of the District.

Section 22 of H.R. 17134 would create a dangerous precedent. It would overturn a court decision in order to impose upon the people of the District an overexpanded [sic] highway system that is harmful to the nation’s Capital socially, economically, and aesthetically, a highway program that lacks both planning justification and essential community support.

We urge that section 22 be deleted from H.R. 17134.

*Post* editors applauded the Public Works Committee’s action in ordering the District “to go ahead with its controversial freeway network without further wrangling”:

At this point many objective observers find it impossible to believe that any law will end the dispute. But there is a powerful argument for Congress to go as far as it can in making the policy decision even if it cannot at this time resolve all the controversial details.

The freeways must “be carefully integrated” with the new rail rapid transit system, but even if that system fulfills all “the great expectations associated with it . . . this rapidly growing city will

need these minimal highway projects to reduce congestion and keep heavy traffic off residential streets.”

Changes in right-of-way acquisition procedures in the bill, including higher relocation payments for families and businesses, were especially helpful in being able to address concerns in the District:

Highways are for the benefit of the entire community. Their construction should not impose a special burden on those who have the misfortune to be living where the road must go.

Congress had been slow to apply the “just compensation” concept included in the 5<sup>th</sup> Amendment to the Constitution to the highway program. The editors concluded that “the mammoth highways bill that has now been set into motion through the legislative pipeline should not be passed without it.” [“D.C. Freeway Network,” *The Washington Post and Times Herald*, June 21, 1968]

Another provision of the bill, Section 17, addressed preservation of park lands in an attempt to reconcile Title 23, United States Code, Section 138 (“Preservation of parklands”) and Section 4(f) of the Department of Transportation Act of 1966. The two provisions were similar, but Section 138, introduced in the Federal-Aid Highway Act of 1966, had been watered down during congressional consideration. After declaring a national policy in support of preserving parklands and historic sites, it provided:

The Secretary shall cooperate with the States in developing highway plans and programs which carry out such policy. After July 1, 1968, the Secretary shall not approve under section 105 of this title any program for a project which requires the use for such project of any land from a Federal, State, or local government park or historic site unless such program includes all possible planning, *including consideration of alternatives* to the use of such land, to minimize any harm to such park or site resulting from such use. [Italics in original]

By contrast, Section 4(f) prohibited the Secretary from approving any transportation project affecting parks, historic sites, recreation areas, or wildlife and waterfowl refuges unless no feasible and prudent alternative to the use existed and “all possible planning to minimize harm” to the site had taken place.

The House report on the 1968 Act stated that “it is the committee’s opinion that the language of section 138, titled 23, as basic highway law, should be controlling.” Section 17, therefore, conformed the language. Parks, historic sites, and the other cited areas “have very real value”:

No rational person would suggest, however, that that value is the only one to be considered in a judgment as to the best public interest. In weighing alternatives for highway location, equal consideration must be given to other factors – to whether people will be displaced; to whether existing communities will be disrupted; to whether the established demand for adequate transportation facilities for people, goods, and services will be met; and to the preferences of the people of the area involved. Preservation for

use is sound conservation philosophy, and it is in that perspective that both section 138 and section 4(f) should be administered. [page 12]

The committee endorsed the “consideration of alternatives” standard.

As Representative McCarthy pointed out in an additional views statement objecting to Section 17:

What does it mean when an engineer states that he has “considered” an alternative? It could mean he has given all of 5 minutes thought to an alternative but remains firmly convinced that the route through a park is best because it is the straightest line or requires the least land acquisition. Such attitudes have been advanced in some cities, such as New Orleans, San Francisco Washington – and such attitudes have helped magnify the opposition to urban freeway construction. [page 63-64]

### **Senate Committee Action on the 1968 Act**

On June 22, Director Airis appeared before the Senate Appropriations Subcommittee on the District regarding the District’s FY 1969 appropriations act. Senator Proxmire conducted the hearing in the absence of the subcommittee chairman, Senator Byrd.

Airis endorsed the District freeway measure in the House Public Works Committee’s Federal-Aid Highway Act of 1968. He charged that freeway actions were being based on too many “political decisions,” instead of the “sound engineering principles” that should govern them. The U.S. Court of Appeals ruling distressed him, but he said the House bill would “overcome this legal hurdle” and allow the city to get back to work on the four facilities that were the subjects of the ruling.

He was particularly critical of the Department of Transportation. In the spring of 1967, Secretary Boyd had undertaken a review of the Three Sisters Bridge and, in December 1967, had promised to involve the area’s three highway departments. Based on Secretary Boyd’s statements, Airis had expected local officials to be involved in the department’s decisions:

The highway departments of Maryland, Virginia and the District of Columbia are all vitally concerned if the Secretary is really contemplating changes in long established routes. [But] insofar as we can determine, neither the secretary nor his principal aides have consulted any of the three departments on this question.

We fear that the trend is toward making all decisions on the District’s freeway system on the basis of political expediency.

Further, “unless our engineers and planners are brought into the review process, it is difficult to understand how the Secretary of Transportation can arrive at responsible decisions.” If this communications gap continued, the results would be a “chaotic transportation situation.”

As an example, he cited redevelopment of the city’s southwest quadrant. “Gigantic traffic generating facilities” were under construction in the form of Federal office buildings that would

employ 95,000 people. He also cited housing developments and a Department of Defense building in the Bolling-Anacostia area, construction in Foggy Bottom, housing and other construction at the National Training School site, the Visitors Center at Union Station, and the Southeast Federal Center in the vicinity of the Navy Yard. Without the planned freeways, traffic would be forced onto residential streets where it would endanger children. "Traffic conditions on the city streets will become chaotic."

Senator Proxmire asked about opposition from citizens in the path of the freeways. Airis replied, "Here it's been a little more vociferous than anywhere I've been." The right-of-way provisions in the House bill, along with the enhanced relocation payments, would help. As for those who thought the freeways should be held up until the rail rapid transit system was in place, he said that "each system of transportation should stand on its own feet" and not be pitted "one against the other."

Despite Airis's support for the House provision, a spokesman for the Senate Public Works Committee told reporters that the committee would not include a comparable measure in its bills on the Federal-Aid Highway Act. After the House and Senate pass their bills, the spokesman said, the issue "probably will be decided in conference" while working out a compromise bill. [Grigg, William, "D.C. Warns on Freeways," *The Sunday Star*, June 23, 1968; Asher, Robert L., "D.C. Roads Chief Supports Finishing Freeways Here," *The Washington Post and Times Herald*, June 23, 1968]

As predicted, the Senate Committee on Public Works did not include a provision on the District freeway controversies in its bill, approved on June 28, but at Senator Tydings' initiative, the Senate committee's bill included a Title III—the District of Columbia Parking Facilities Act. This measure was substantially identical to the Tydings bills the Senate had passed in three previous years. Title III would create a Parking Board and a Parking Advisory Council. The board would consist of the District Commissioner (mayor) and the chairman and vice chairman of the city council. The council would include 11 members representing government and the public, with an appointed administrator.

The Parking Board would acquire property for the operation of off-street parking facilities. It would have the authority to condemn properties, but could not use the authority to acquire existing parking facilities except to enlarge them. The board could build and operate parking facilities, lease property for development of parking facilities, and lease or sell parking facilities.

In addition, the board, in cooperation with agencies and local governments, could establish fringe parking lots in the area, including outside the District. It also would control parking meters in the city.

Title III authorized the board to finance its operations by issuing and selling tax-exempt revenue bonds, limited to \$50 million at any point, that would not be guaranteed by, nor in any way obligations of, the Federal or District Governments.

Another provision in Title III required that buildings constructed in the central business district include parking facilities on or off the premises. The Zoning Commission could waive this

requirement if a property was too small for parking or if parking facilities would interfere with the flow of traffic. In that case, however, the owner would make a comparable payment to the board.

The Parking Advisory Council would make periodic comprehensive reports on parking and advise the board on its role in the balanced transportation system. [“Federal-Aid Highway Act of 1968, Report of the Committee on Public Works, United States Senate, 90<sup>th</sup> Congress, 2d Session, Report No. 1340, June 29, 1968, pages 35-36]

The committee also addressed the contrast between the strict language of Section 4(f) and the less binding Section 138 of Title 23. The committee left Section 4(f) and Section 138 in tact:

The committee is firmly committed to the protection of vital park lands, parks, historic sites, and the like. We would emphasize that everything possible should be done to insure their being kept free of damage or destruction by reason of highway construction. The committee would, however, put equal emphasis on the statutory language which provides that in the event no feasible and prudent alternative exists, that efforts be made to minimize damage. To that end, the amendment contained in section 114 of S. 3418, as reported, which would expand the definition of “construction costs,” should be helpful.

Under the bill, definition of “construction costs” in Title 23, United States Code, Section 101 (“Definitions and declaration of policy”) would be expanded to include “the costs of adjustments to reduce adverse economic, social, environmental and other impact caused by a project.” In changing the definition, the committee recognized the importance of protecting the areas covered by Section 4(f)/Section 138, but “there are other high priority items which must also be weighed in the balance”:

The committee is extremely concerned that the highway program be carried out in such a manner as to reduce in all instances the harsh impact on people which results from the dislocation and displacement by reason of highway construction. Therefore, the use of park lands properly protected and with damage minimized by the most sophisticated construction techniques is to be preferred to the movement of large number of people. [pages 18-19]

Two members offered their individual views. Senator Spong, who was perennially dissatisfied with delays in regional highway construction affecting Virginia, said he regretted that the bill did not cover certain highway projects in the Washington area. The situation had “reached a stalemate, and congressional action is a necessity.”

He was particularly interested in the Three Sisters Bridge. The bridge was “essential to the proper development of Dulles International Airport,” which was planned with the bridge in mind and would “remain relatively idle while Washington National Airport will become even more congested” without the bridge.

To clear up “the clouded authority of District officials,” he recommended an authorization to permit construction of the bridge, the Georgetown waterfront highway, the Maryland section of

the George Washington Memorial Parkway, and completion of the Center Leg through New York Avenue to Brentwood Road and the East Leg from 11<sup>th</sup> Street to a point just south of East Capitol Street. [page 47]

Senator John Sherman Cooper (R-Ky.) strongly supported the committee's bill, which he considered "one of the most constructive measures to be recommended to the Senate during my service on the committee." However, he had heard that the Senate might consider an amendment to advance the District's freeway system:

This is a complex and difficult subject, involved in controversy; the committee has held no hearings on it. I have stated my belief that we should not enter this field, for the location and planning of highways is not within the competence of the committee of the Congress. The policy of reserving to the States and affected local jurisdictions the determinations of highway planning and route locations has proved to be a wise one.

If the Committee wished to get involved, Senator Cooper urged hearings to receive testimony from the District, planning bodies, and FHWA. [pages 48-49]

### **Congressional Action**

With House and Senate votes pending on the 1968 Act, the *Post* and *Star* supported Section 22 of the House bill.

The *Post* called the stalled projects "essential to give this city a modern transportation system." The planned rapid transit system was needed, too, of course, but even if it "fulfills the great expectations associated with it," the city would still need "these minimal highway projects to reduce congestion and keep heavy traffic off residential streets." The other provision in the bill for just compensation for highway relocatees made Section 22 even more desirable. Still, the *Post* said:

At this point many objective observers find it impossible to believe that any law will end the dispute.

The *Star* saw Section 22 as ending "the ridiculous controversy over Washington freeways." The views of the three dissenting members of the Committee on Public Works suggested a floor fight over the provision. However, their arguments "have added nothing new to the tired old tirades of those people who seem to believe that the best way to deal with automobiles is to ignore them." Any "unbiased forum" would reach the same conclusion as the committee that "a reasonable freeway program must proceed, as a necessary complement to a proposed rail transit system." ["District of Columbia Freeway Network," *The Washington Post and Times Herald*, June 21, 1968; "Congress Must Act," *The Evening Star*, June 30, 1968]

The Senate approved its version of the 1968 Act on July 1. Because the Senate Committee on Public Works had not included a comparable measure in its bill, the District's freeway controversy was discussed only briefly during the floor debate. Majority Leader Mansfield raised the issue to register his views on the Three Sisters Bridge:

Not being a highway engineer, I am not fully informed as to all of the technical factors that pertain to the selection of routes for highways and bridges. I am nevertheless not persuaded that the Three Sisters Bridge is the only solution to traffic problems in this area.

As in the past, he explained his concern that the bridge would “pose a permanent threat to Glover-Archbold Park”:

The Secretary of Transportation also testified last December that “the major justification for the Three Sisters Bridge involved its tying into two major corridors of traffic, one an intermediate loop.” Plans for an intermediate beltway through the length of Glover-Archbold Park are not now being actively promoted, but construction of the bridge would revive them.”

After discussing his objections to the bridge, he noted that a provision similar to Section 22 was not included in the Senate bill. “I hope that any such provision can be taken out of the House bill in the conference.”

Senator Case agreed. Section 22 was “just another effort on the part of those who would destroy the parks of this city and use them for purposes other than parks.” [*Congressional Record-Senate*, July 1, 1968, pages 19548-19549]

On a related topic, Senator Ralph W. Yarborough (D-Tx.) said the Senate bill was important for what it contained, but also for what it did not contain. It did not contain the change the House Public Works Committee had proposed to resolve the differences in the comparable Section 4(f) and Section 138. He had sponsored Section 4(f) and its earlier legislative variations, he said, as far back as 1958. Now, he saw that the House was proposing to take “from the Secretary of Transportation his authority to protect our parklands and our historical sites.” He applauded the Senate Public Works Committee for reaffirming the national policy. [pages 19549-19550]

Senator Henry M. Jackson (D.-Wa.) also raised the subject, pointing out that under the House bill, officials “would merely be required to ‘consider’ alternatives”:

It is highly important, in my judgment, to carry on the previously expressed intent of Congress on this question of the balance that must be struck between expanding transportation systems and the preservation of our public parklands.

He introduced a letter from Secretary Boyd dated July 1 to House Speaker McCormack about the House bill. It addressed several provisions of the House bill, including the provision modifying Section 4(f) by substituting the Section 138 language:

[The] Department opposes the proposed amendment at this time – little more than a year after the effective date of section 4(f). The Department is aware of no problems which have arisen in the course of administering the present language, nor does the Committee Report refer to any. We think the present language of section 4(f) is a clear statement of the Congressional purpose. Accordingly, there would appear to be no reason to amend it at this time.

With Senator Randolph's support, Senator Jackson proposed to amend Section 138 to adopt the Section 4(f) language. The Senate approved the amendment without a roll call vote. [pages 19529-19531]

(Secretary Boyd's letter to Speaker McCormack did not address Section 22 regarding the District freeways.)

Senator Spong introduced and the Senate adopted an amendment that authorized the District of Columbia to participate in the Highway Relocation Assistance program. He also introduced an amendment authorizing the District Commissioner (mayor) to transfer land to the Interior Department as replacement for park, parkway, and playground lands transferred to the District for public purposes. Senator Spong explained that the point of the amendment was to "aid in highway construction in the District of Columbia." The Senate adopted the amendment. [pages 19532-19533]

Finally, the Senate approved the bill without a recorded vote. [pages 19552]

On July 1, the House of Representatives began considering the Federal-Aid Highway Act of 1968. As the House reviewed provisions of the bill, Representative McCarthy took the House floor to express his concerns:

Section 17 would substitute for the standard "no feasible and prudent alternative" a vague requirement that planning include "consideration of alternatives" to the use of land in a park, recreation area, wildlife or waterfowl refuge, or historic site.

What does "consideration of alternatives" mean? How much consideration to what kinds of alternatives? The amendment might permit a highway engineer to glance at an alternative to a proposed highway – an alternative that is more costly but does not slice through a park – and rejecting the alternative use of parkland will keep down his acquisition costs. Section 17 is totally inconsistent with the intent of Congress to preserve and enhance this Nation's countryside by providing an explicit standard to guide the Secretary of Transportation's decisions. It should, therefore, be rejected.

Next, he turned to Section 22, stating the arguments in the additional views appended to the Public Works Committee's report. It would, he said, "establish a precedent for forcing urban highway construction over the opposition of local citizens and local governments." Citing controversies in other large cities, he said, "None is more bitter than the highway controversy in the Nation's Capital." Citizens battled District officials for a decade, but the new city government was trying to give citizens "opportunities for greater participation in making decisions about the highways that affect them."

In approving the Interstate System, Congress did not intend to "overrule local decisions concerning the necessity, desirability, location, and design of Federal-aid highways." That was, however, precisely what Section 22 did:

If this section is enacted, it will become a precedent for a rather simple solution to urban freeway controversies. Each time a cost estimate is made, we shall be overrun by State

highway officials who seek special legislation to overcome opposition to their urban freeway proposals back home. There is no reason why the Congress should legislate specific highway plans for the District or any other State.

He pointed out that the District's freeways had never received the public hearing required by the February court ruling, but Section 22 denied citizens their right to be heard. Still, the near unanimous rejection of the plans was well documented. The 3-days of hearings in April by the Subcommittee on Roads "demonstrated that most of the people of the District want a voice in the planning process, not a moratorium on highway construction. He also cited the vote during the May primary in which "Democrats voted 19 to 1 to oppose freeway construction unless the plans are submitted for popular vote in a referendum."

Section 22 ignored the District government's proposal to enhance citizen participation in the planning process and the city's objection to the measure. The District, he said, had proposed an alternative designed "to enhance democratic procedures in the highway planning process":

Because section 22 would depart from the democratic process, the District government strongly recommended against its enactment. There is no reason why these decisions cannot be made by the people of the District of Columbia and their government. There is no overriding national interest involved that calls for congressional intervention at this time.

Transportation presented hard choices that were vital to any city. He quoted Secretary Boyd:

Before a city can decide what kind of transportation it needs, it must decide what kind of city it wants to be. It must decide what kind of life and work and recreation it wants to offer its citizens.

Representative McCarthy said that the highway plans that Congress would force on the District of Columbia "would mutilate the Nation's Capital and gravely harm its businesses and its people." The plans "would commit the city of Washington to an auto-dominant transportation system for the foreseeable future."

He pointed out that Secretary Boyd had called the North-Central Freeway a "tremendously expensive and inadequate artery." Secretary Boyd also had said of the Three Sisters Bridge that it simply transferred the traffic jam from one side of the Potomac River to the other. Representative McCarthy recalled that Director of Public Roads Turner had "characterized the proposed South Leg tunnel under the Lincoln Memorial grounds as a 'cannon' which will literally fire three lanes of traffic at three lanes already on the Southwest Expressway":

On the basis of this testimony alone, we should hesitate to direct the District to construct these highways as soon as possible.

In conclusion, section 22 would be a precedent for imposing controversial highways on protesting citizens in cities throughout the country and would seek to eliminate democratic planning procedures for the very highways that have the greatest impact upon the people of the District. The highway plans to which section 22 refers lack essential

support in the community and in the District government. They are excessively damaging to the Nation's capital. For these reasons, section 22 should be stricken from the bill. [Federal-Aid Highway Act of 1968, *Congressional Record-House*, July 1, 1968, pages 19409-19411]

Representative Gude spoke briefly in support of Section 22. After spending \$20 million on planning for the freeway network, he said, the time had come to begin construction:

There is broad support for a freeway network balanced with a mass transit system and other components of a modern transportation system, such as fringe parking and utilization of air rights. If we fail to provide an adequate balance of expressways and mass transit the suburbs of Metropolitan Washington will flourish along the beltway and other expressways while the core city will deteriorate and decline.

He asked permission to reprint the supportive editorials from the *Post* and *Star*. [page 19411]

On July 2, Representative McCarthy introduced his amendment striking Section 17, which would "discard a meaningful and effective conservation policy and substitute a meaningless and vague admonition." Section 17 "would give the highway engineers and others virtual carte blanche if they chose to go through any park, national park, recreational area, wildlife area, or whatever . . . ." Referring to Senate support for Section 4(f), he said, "I do not know why this body should be the anticonservation body, when the other body yesterday felt so strongly that they actually were redundant." The House completed its work on July 2 without voting on the amendment to strike Section 17. [*Congressional Record-House*, July 2, 1968, pages 19756-19758]

Before debate on the bill began on July 3, Representative Gude pointed out in extended remarks, that time for debate of amendments would be limited. Therefore, he wanted to call his colleagues' attention to the *Post* and *Star* editorials he had introduced into the record on July 1. They were in "full support of the projects for the District of Columbia and have stated very precisely the reasons why we should enact a highway system for the District of Columbia as proposed by this legislation."

Representative McCarthy asked Representative Gude if he would "accept the idea that these newspapers are not completely disinterested in this matter?" As a former newspaperman, he understood that the newspapers were interested in the city "and the newspapers which they sell and which are delivered by truck."

Representative Gude responded that both newspapers "have a great compassion and interest for the inner city of Washington and for the problems which exist in this area." As for special interests, they can be found in any field, including the construction of rail facilities and underground facilities for mass transit. In his opinion, "a great deal of this depends upon whose ox is gored." The fact that these two "respected national newspapers" support Section 22 "merits our most careful consideration."

Representative Machen, also in extended remarks introduced due to the rule on limited debate, stressed the importance of Section 22. It would "break this logjam and obtain a balanced

transportation system for the city of Washington, D.C., before it is too late.” After Secretary Boyd “stopped a freeway program that had been approved by all agencies responsible for the highway program, including those in Maryland and Virginia,” the four Representatives from the adjacent area had met with “all interested parties . . . to resolve the question.” He urged his colleagues not to strike Section 22. [The Federal-Aid Highway Act of 1968 As It Affects the District of Columbia, *Congressional Record-House*, July 3, 1968, pages 19913-19914]

The debate on July 3 began with Representative McCarthy’s amendment to delete Section 17. Representative Cramer, the pro-highway member of the Committee on Public Works, offered an amendment to the amendment. It inserted “federally owned” before the list of protected facilities in Section 4(f) and called on the Secretary of Transportation to reject projects unless “such program or project includes all possible planning, including feasible and prudent alternatives to the use of such land, to minimize any harm to such park, recreation area, wildlife and waterfowl refuge, or historic site resulting from such use.”

Representative Cramer considered his amendment a “home rule, States rights” provision. Section 4(f) applied to “every county, city, and local community, park, recreation area, fishing area, estuarine area, and so forth.” His amendment would limit the provision to Federal facilities. After some discussion, the House adopted the Cramer amendment to the McCarthy amendment, then adopted the amended McCarthy amendment. [Federal-Aid Highway Act of 1968, *Congressional Record-House*, July 3, 1968, pages 19914-19917]

After the House considered other provisions, Representative McCarthy offered his amendment striking Section 22. He briefly restated his arguments from the House Report and his comments on July 1.

Chairman Fallon dismissed these arguments. They were the same arguments that had been “used throughout this country by people who are just against construction of the highways.” Based on his committee’s hearings, he said:

Not only is the interstate program at a complete stalemate in the District but furthermore a cloud has been placed over the entire highway program in our Nation’s Capital.

The February court ruling, which applied to only four projects, “in reality, stopped all highway construction in the District” because of “a technicality included in an outdated 1893 law” that had been enacted “before the birth of the motor vehicle.”

Congress had ample precedent in intervening in Washington area transportation facilities, having passed special laws in recent years for construction of the Woodrow Wilson Memorial Bridge, the Theodore Roosevelt Bridge, and the new 14<sup>th</sup> Street Bridge. He urged his colleagues to retain Section 22 in the final bill:

Rather than destroy our Nation’s Capital, this sorely needed interstate highway program in the District will enhance this city’s transportation system.

In extended remarks, Representative Machen supported the District provision, which would guarantee that the city “will have a balanced transportation system of freeways and rapid rail

transit.” The delays in the city were affecting the surrounding counties, where “many freeway projects in the suburban areas are being held up because of the continuing controversy and agonizing among some District citizens over the freeway system.”

Further, he specifically blamed Secretary Boyd for the impasse:

It took only one unilateral action by the Secretary of Transportation to cause the chaos that we are now attempting to correct. It is unfortunate that this public official listened to a handful of vociferous critics, and not to the broad spectrum of community interests who, in a responsible manner, have approved the balanced system. This public official has flown in the face of the responsible and responsive leaders of this community, including the major daily newspapers which have editorially spoken out for the balanced system . . . .

[It] is time for Congress to break the logjam on the District of Columbia freeway system. It is a tragedy that this problem has reached the point of congressional intervention, but we are acting on it and the District of Columbia freeway system shall be completed as planned so the balanced transportation can become a reality as soon as possible.

Section 22 was the result of an unfortunate situation:

It is, indeed, tragic that we in the Congress, as area Congressmen, have to come down here and ask all of you to break a logjam, where millions of dollars have been spent, and roads stop at the District line. It is tragic that we cannot complete this balanced transportation system that would help all of us.

Representative Broyhill also supported Section 22. He regretted that Congress had to intervene, but “the committee had no choice” in view of “all the procrastination and delay” in the city:

These programs and projects have been delayed for 22 years. We have had more than 26 separate studies, costing more than \$20 million of the highway system in the National Capital area.

He particularly endorsed the Three Sisters Bridge, which he said was vital for the success of Dulles International Airport. He saw the District fight this way:

The situation seems to boil down to a conflict between the dreamer-planners who envision tree-lined boulevards for Washington with only a few sightseeing minibuses or even horse-drawn carriages in sight, as opposed to the practical people who must provide for movement of people and goods. I am afraid our new Department of Transportation has too many of the former group on its staff.

Chairman Kluczynski told his colleagues that Section 22 “is absolutely essential to the future well-being of the Nation’s Capital.” Most of the land for the freeways had been purchased. For example, he said that on the North-Central Freeway fewer than 500 people, about 122 families, “remain to be relocated.”

He rejected the notion that the U.S. Court of Appeals opposed the freeways. The three judges had “very emphatically stated that they did not take issue with any of the projects involved, but only with the procedures.” Congress, in turn, had “appropriated money for it every year for years.” It also had supported rail rapid transit, which was essential for the freeway network to work effectively.

Critics suggested that the freeways would cause people and businesses to leave the city:

What is true – and this is the most important part of this whole controversy – is that if these highways are not built, both families and business, and particularly business, will be moving out and Washington as a living, operating city will cease to exist . . . . If Congress does not act, and approve section 22, we will have for all intents and purposes destroyed Washington, because as I understand the situation, the construction of the mass transit system is dependent upon progress in constructing a truly comprehensive transportation system for the District, including its highways . . . .

I believe in this country, and in the magnificent Capital City we have. I would like to keep it living and growing and moving ahead, and I think that is what my fellow Members want, too.

Representative Gude defended Section 22, clarifying that neither Archbold-Glover Park nor Rock Creek Park were involved at all. He pointed out that Maryland commuters had to employ “double-crossing,” which he defined:

For instance, the people from Montgomery County cross over into Virginia and come down the Virginia side of the Potomac and ultimately cross the river again to the District of Columbia.

The availability of freeways/parkways into the city on the Maryland side of the river would end “double-crossing.”

He also pointed out that in the absence of freeways, commuter and truck traffic was using neighborhood streets:

Under these conditions in many instances the highway engineers can do nothing except to widen the streets, chop down trees and tear up the lawns. Now, is that making for a more beautiful and finer Washington?

Representative McCarthy pointed out that “what really is at stake is a much broader concept than even the District of Columbia faces.” The question was “what are we going to do about transportation in the 20 or 30 largest cities in the United States of America.”

The House rejected the McCarthy amendment without a recorded vote. [pages 19919-19924]

Later that day, the House approved the Federal-Aid Highway Act of 1968 by voice vote. The bill included the Cramer amendment limiting Section 4(f) to federally owned resources. It retained

Section 22 to force construction of the District freeways but dropped the Senate's Title III authorizing creation of a District parking authority.

The bill also extended the time for completing the Interstate System to June 30, 1974, a 2-year extension that provided for completion in a total of 18 years. The Administration had proposed the change. The Administration also had proposed, and the House approved, using the 1968 ICE to apportion Interstate funds for FYs 1970 and 1971. The House also accepted the Administration bill's proposal that the date of the final ICE would be January 12, 1970. It would be used to apportion funds for FYs 1972 through 1974. (The Senate had not included the 2-year extension in its approved bill; it called for the 1970 ICE but provided for its use in apportioning funds only in FY 1972.)

In addition, the House bill modified the statutory mileage limitation on the Interstate System to 44,000 miles (up from 41,000 authorized by the Federal-Aid Highway Act of 1956). Neither the Administration bill nor the Senate bill included the extension. [*Congressional Record-House*, July 3, 1968, pages 19945-19950]

On July 6, Mayor Washington wrote to the chairmen of the House and Senate Public Works Committees to object to Section 22. He said "it was a great disappointment" that the House bill included "a section which requires the District to build a freeway system in accordance with a predetermined plan. It is our feeling that the transportation system within an urban community, especially the Nation's Capital, should be decided by the local government after an expression by the citizens of the community."

He continued:

The action of the House of Representatives would remove self-determination from our city government's authority. It is also regrettable that Congress would direct that a specific freeway system be built in any of the urban centers of our country.

We respectfully urge that the House and Senate review this provision in conference and remove the mandate for a specific system in the District. ["District Chiefs Criticize House on Freeway Bill," *The Evening Star*, July 8, 1968; "City Asks House to Drop Directive For Specific Freeway Plan Here," *The Washington Post and Times Herald*, July 9, 1968; Mayor Washington's letter is reprinted in Federal-Aid Highway Act of 1968 – Conference Report, *Congressional Record-Senate*, July 29, 1968, page 24034]

### **Completing the 1968 Act**

The House and Senate appointed members to the conference to resolve differences between the two bills. The House appointed:

- Chairman Fallon (D-Md.)
- Chairman Kluczynski (D-Ill.)
- Representative Cramer (R-Fl.)
- Representative Harsha (R-Oh.)

- Representative James C. Wright (D-Tx.)
- Representative Ed Edmondson (D-Ok.)
- Representative Donald Clausen (R-Ca.)

The conferees did not include the three critics who had strongly opposed Section 22 in the House report, Representatives McCarthy, Schwengel, and Waldie.

The Senate appointed:

- Chairman Randolph (D-WV)
- Senator Ernest Gruening (D-Ak.)
- Senator Everett Jordan (D-NC)
- Senator Birch E. Bayh (D-In.)
- Senator Stephen M. Young (D-Oh.)
- Senator John Sherman Cooper (R-Ky.)
- Senator Hiram L. Fong (R-Hi.)
- Senator Len B. Jordan (R-Id.)

As they began their work on July 10, reporters discussed the stakes. In a News Analysis, the *Post's* Jack Eisen began:

Washington's long-sought subway system now is facing a crisis so severe that top rapid transit officials fear the system may be delayed for years or even lost entirely.

WMATA did not believe that Chairman Natcher was bluffing when he threatened to withhold appropriations for the District's matching share of subway funds unless the city began construction of the remaining freeways:

If this occurs, transit officials fear that bond referendums scheduled this fall in three suburban Maryland and Virginia counties probably will be doomed to failure . . . . Loss of these elections in turn threatens stagnation and possible disintegration of the area's transit-planning structure, the officials believe, and shelving – perhaps losing – a public investment of about \$30 million in plans and property.

In contrast with the optimism at WMATA earlier in the year following approval of the 97-mile, \$2.5 billion Metro transit system, Chairman Gleason emerged from a closed board discussion on July 5 “with a warning that President Johnson's personal intervention probably will be necessary to keep the program on the tracks.”

The February decision of the U.S. Court of Appeals and Secretary Boyd's assessment of the freeway program “already had cast a long shadow across the plan.”

Chairman Natcher “was proceeding in the belief that the long-raging highway dispute had been settled.” However, the Democratic Party referendum during the District's primary “made it clear that a majority of Washingtonians opposed super highways as a threat to residential neighborhoods and a source of unwanted traffic congestion and air pollution.”

NCPC Chairman Rowe was “in their camp,” but she was retiring on July 11. Her successor, incoming Chairman Hammer, “is uncommitted on the issue.”

Chairman Natcher had not commented on the freeway provision in the House bill, but he knew WMATA believed that the rail network could not solve the region’s transportation problems without the freeways. He also knew that freeway opponents wanted to substitute the rail transit network for the freeways or at least halt all freeway construction until the rail system was completed. “That,” Eisen wrote, “would come around 1980 at the soonest.”

Although anti-freeway forces considered Chairman Natcher’s threat to be “blackmail,” they also thought he would “sound warnings, as he did at closed subcommittee hearings, but will give in and provide money at the last possible moment.”

General Graham said that withholding the matching funds would be “a major tragedy when we’re so ready to go . . . . It’s just going to be a damn shame if we don’t go ahead.” He recalled the optimism in the spring. “It was not long ago that people were talking about when the system would be built,” he said. “Now they are talking about if it will.”

If the matching funds were available, WMATA would be ready to advertise for bids in August on the first segment of the G Street subway, with groundbreaking expected in October. [Eisen, Jack, “Freeway Conflict Threatens Subways,” News Analysis, *The Washington Post and Times Herald*, July 8, 1968]

Lee Flor, in a *Star* Interpretive Report, wrote that the fate of the rail rapid transit system “could well rest on the outcome of Senate-House conference committee meetings this week,” even though the transit system was not mentioned in either the Senate or House versions of the 1968 Act. With the conference underway, “It may be several days before the compromise conference report is issued.”

Flor recalled Chairman Natcher’s threat that he was unable to recommend appropriations for the District matching funds for rail rapid transit construction while opponents were holding up the freeway system. Meanwhile, his subcommittee was holding the District of Columbia appropriations bill for FY 1969 pending congressional action on the District revenue act that would determine the additional revenue available to the city. As a result, he had time to restore the transit matching funds. “Now, if the Senate-House conferees approve the version with the freeway mandate, Natcher may change his mind.”

Meanwhile, Chairman Hansen’s Interior Department appropriations subcommittee, which had jurisdiction over WMATA, had approved \$34.7 million in Federal funds for the subway system:

However, it stuck a provision in its report that none of the money could be used unless the Natcher subcommittee approved matching funds in District money.

This provision gives Natcher complete veto over subway money. Without the Hansen provision, the transit authority would be able to start construction with the \$34.7 million.

If the final 1968 Act retained the freeway mandate, “it may put Natcher on the spot”:

Transit supporters may be able to point to the congressional mandate and say it means the freeway system will be built. Therefore, Natcher may feel he should approve subway funds, since he has said he favors both freeway and rapid transit programs here as part of a balanced transportation system. [Flor, Lee, "Area's Transportation Future Is 'In Conference,'" Interpretive Report, *The Evening Star*, July 11, 1968]

The Interior Department appropriations bill was delayed, but the amount included in the pending House and Senate bills was about 20 percent less than requested. Jack Eisen wrote:

Even if Natcher yields, the most his unit can now vote is \$21.9 million. When leftover money from the past fiscal year is added in, the Transit Authority would have \$68.8 million for this year's capital outlay program.

This reduced amount would hamper acquisition of right-of-way and delay construction of the subway section from 14<sup>th</sup> and G Streets to Connecticut Avenue and K Street, NW., beneath the Treasury Building forecourt and Lafayette and Farragut Squares.

Eisen also reported that on July 5, WMATA's board received a report on some of the construction problems it would encounter. Emil Press of DeLeuw, Cather and Company said that under the planned Metro Center station at the intersection of 12<sup>th</sup> and G Streets, NW., WMATA faced the biggest challenge:

"I doubt seriously that there is any place in the world that is so delicate from a telephone standpoint," Press reported. At least 171 underground cable-carrying ducts are there, including many that connect Government offices with the downtown telephone central office.

Graham said such problems may result in more deep tunneling instead of relatively shallow cut-and-cover construction. [Eisen, Jack, "Cut in Federal Funds to Delay D.C. Subway," *The Washington Post and Times Herald*, July 6, 1968]

(During this period, station names were tentative. Initially, WMATA considered street names for the stations, but architect Harry Weese convinced the board that names referring to nearby places would be more evocative. In 1969, General Graham adopted four criteria that would "indicate location distinctively and briefly." Some names were natural, such as Bethesda, DuPont Circle, Rosslyn, and Pentagon. Others might be named by one coordinate, such as Backlick Road and Georgia Avenue, or by traditional or colorful words, such as Foggy Bottom and Navy Yard. Names were to be limited to two words, but preferably one.

(On December 9, 1971, after "months of sound and fury," as the *Star* put it, the board finished naming the 82 Metro stations. [Schrag, pages 256-257; Eisen, Jack, "Metro Board Prepares to Name Its 82 Stations," *The Washington Post and Times Herald*, August 10, 1971; Eisen, Jack, "Hill Hearing Expected Soon On Metro Bonds Guarantee," *The Washington Post and Times Herald*, December 10, 1971; Barnes, Fred, "Name Game Ends," *The Evening Star*, December 10, 1971])

After the House approved the District of Columbia Revenue Act of 1968, Chairman Natcher released the subcommittee's bill. The Committee on Appropriations approved the Natcher bill on July 18 and issued its report. In a section of the report titled "Highway and Rail Rapid Transit Programs," Chairman Natcher made his views clear. He began:

For a number of years the members of this Committee have expressed the belief that there is a place for both a freeway system and a rapid transit system in the Capital City. Since 1962 a series of delays and obstacles to the construction of the authorized projects have occurred.

The Three Sisters Bridge had been "continuously blocked":

Progress was made in 1966 in breaking the planning logjam but in 1967 the newly created Department of Transportation came into the picture to such an extent that the Three Sisters Bridge project was used by that department as a means by which the entire Interstate highway program in the District of Columbia was blocked.

The U.S. Court of Appeals ruling had blocked four freeway projects, including the bridge. The ruling threw "a legal cloud" on other freeway projects not covered by the lawsuit. Overall, the report estimated that a total of more than \$200 million in authorized and appropriated funds was being held. In addition, the delays were inevitably increasing the cost of the freeways.

The Committee on Appropriations had often stated its support "for both a freeway system and a rapid transit system in the Capital City." Both were needed "to meet the tremendous day-by-day growth of traffic and population in the metropolitan area." The report recalled the events of 1966 when the committee was holding up subway funds, but a "slight breakthrough" allowed the committee to release the funds in conference:

A similar situation exists currently and until the freeway system is allowed to proceed the committee is again reluctant to provide additional funds for the construction of the rail rapid transit system by the Washington Metropolitan Area Transit Authority, and has accordingly denied the \$27,574,000 requested for the District of Columbia's share of capital outlay for the rail rapid transit system.

By contrast, the committee appropriated District funds for several freeway projects:

- Center Leg, Inner Loop Freeway - \$1,620,000
- Interchange "C," Inner Loop - \$300,000
- Northeast-North Central Freeway - \$1,100,000
- East Leg, Inner Loop Freeway - \$1,008,000
- Potomac River Freeway - \$850,000
- South Leg, Inner Loop Freeway - \$130,000

In the agency-by-agency section, the report said of WMATA that, "No funds have been allowed for the District's share of capital outlay for the rail rapid transit system." [District of Columbia

Appropriation Bill, 1969, U.S. House of Representatives, 90<sup>th</sup> Congress, 2d Session, Report No. 1729, July 18, 1968, pages 6-7, 23, 26]

WMATA Chairman Gleason called the move “disheartening but not surprising”:

This community now faces a proposition of neither or both. Mr. Natcher is for both and so am I.

I am hopeful that conference action will remove the obstacles that stand in the way of progress for both. [Elder, Shirley, “D.C. Schools, Subway Funds Cut,” *The Evening Star*, July 18, 1968]

In the wake of Chairman Natcher’s action, *Star* editors wrote:

Unless this vitally important program is to be put on ice, perhaps indefinitely, the essential thing now is to break the deadlock and thereby free the transit funds.

During conference on the Federal-Aid Highway Act of 1968, “it is of high importance that the mandatory language be retained intact by the conferees.” First, the language would overturn the U.S. Court of Appeals’ decision. Second “and more important,” it “should persuade Representative Natcher to approve the appropriation of the transit money.”

Otherwise, “transit construction is hopelessly stalled.” If WMATA had to postpone the planned October groundbreaking, “the transit program will run into very serious and possibly insuperable difficulties in nearby Maryland and Virginia.” [“Freeway Deadlock,” *The Sunday Star*, July 21, 1968]

As the House-Senate conference continued, reports began to emerge that the House provision forcing the District to complete its freeway system was leading to an impasse. The *Star* reported on July 13 that House conferees were “adamant” and “ready to sit for days” to retain the District provision, according to an unidentified source. Although one of the conferees, Senator Cooper, had objected strongly to the provision, other Senate conferees “have not expressed as much concern about the issue as he.”

The Senate conferees were more concerned about the House provision weakening Section 4(f):

Secretary of Transportation Alan Boyd has asked both House and Senate leaders of the conference to soften the District directive and leave the District government with greater flexibility to change the freeway plans allowing further hearings.
