## About

This page assists a presentation given by [Daniel Mietchen \(Q20895785\)](#)  at [Annual Conference 2023 of the German Mathematical Society \(Q122643579\)](#)  in [Ilmenau \(Q205929\)](#)  on [September 25, 2023 \(Q69306933\)](#) .

An archival copy of it is available at [Zenodo \(Q22661177\)](#)  via the [digital object identifier \(Q25670\)](#)  [10.5281/zenodo.8374548](https://doi.org/10.5281/zenodo.8374548) (<https://doi.org/10.5281/zenodo.8374548>) .

## Abstract

Wikidata is an open and collaborative database that anyone can edit, which thousands do on a regular basis. Launched a decade ago, FAIR (Findable, Accessible, Interoperable and Reusable) right from the start and closely integrated with its sister sites in the Wikipedia ecosystem, it has since become the edit button of the semantic web and is increasingly being integrated with scholarly databases and workflows spanning across all fields of research. This presentation will consider Wikidata through the lense of mathematics, covering content, infrastructure and community aspects and how each of these are curated and interlinked both within and beyond Wikidata. In terms of content, coverage of mathematical concepts will be explored, including objects of mathematical research, software and other methods used in mathematical research, along with mathematical aspects of research in other fields as well as mathematical literature and linguistic knowledge about mathematical terminology across natural languages. In terms of infrastructure, support mechanisms for describing, displaying and analyzing mathematical objects in Wikidata contexts will be discussed. In terms of communities, we will cover producers, curators and users of mathematical knowledge and data, along with community structures engaged in any aspect of the life cycle of mathematical entities, both in scholarly and Wikidata contexts.

# Mathematics tourism

tourism around mathematics and skill of maths

 Language

 Watch  Edit

[Travel topics](#) > [Cultural attractions](#) > [Historical travel](#) > [Mathematics tourism](#)

**Mathematics** has been developed at many different places of the world. It has themes in common with both [philosophy tourism](#) and [science tourism](#).

## ^ Destinations

- 1** **The Alhambra** (*Granada, Spain*). Islamic art is famous for its extensive use of geometric patterns and symmetry groups, and this palace especially so: its intricately tiled designs are said to include all 17 of the mathematically distinct [wallpaper patterns](#). This accomplishment, possibly unique in world architecture, attracted M.C. Escher to Granada to see it.   (updated Jul 2023)
- 2** **Great Pyramid of Giza** (*Pyramid of Khufu or Cheops*) (*Giza, Egypt*). The last surviving representative of the [Seven Wonders of the Ancient World](#) was built around 2500 BC. It was built to a height of 146 m (479 ft), but is now slightly reduced to a still towering 137 m (449 ft). Over 2 million blocks of stone were used to construct it, all through manual labour. While the pyramids and other monuments of [ancient Egypt](#) have marvelled posterity, the exact construction methods have been forgotten. Modern scientists have had many hypotheses about how the Pyramids were built, with much evidence that advanced geometry and mechanical devices were applied already in the 3rd millennium BC.  

Take a look at [Math tourism](https://en.m.wikivoyage.org/wiki/Mathematics_tourism) ([https://en.m.wikivoyage.org/wiki/Mathematics\\_tourism](https://en.m.wikivoyage.org/wiki/Mathematics_tourism)) on Wikivoyage or study [Topological invertibility criteria](https://de.wikiversity.org/wiki/Kurs:Topologische_Invertierbarkeitskriterien) ([https://de.wikiversity.org/wiki/Kurs:Topologische\\_Invertierbarkeitskriterien](https://de.wikiversity.org/wiki/Kurs:Topologische_Invertierbarkeitskriterien)) on Wikiversity.

Mathematical concepts

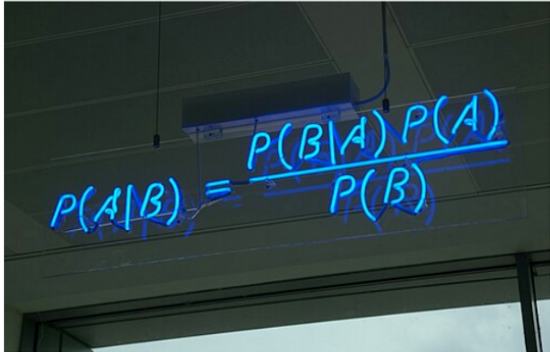

Bayes' theorem (Q182505)

In probability theory and statistics, Bayes' theorem, named after Thomas Bayes, describes the probability of an event, based on prior knowledge of conditions that might be related to the event. For example, if the risk of developing health problems is known to increase with age, Bayes' theorem allows the risk to an individual of a known age to be assessed more accurately by conditioning it relative to their age, rather than simply assuming that the individual is typical of the population as a whole.  **Contents** 

### ^Goals

#### Long term goals

- Organize data about mathematics

#### Short term goals

- Review the [#Scope](#)
- Use [maintained by WikiProject \(P6104\)](#) on all items and properties within [#Scope](#)
  - Use [field of usage \(P9488\)](#) on senses of lexemes within [#Scope](#) ([uses](#))
- Use the property [has facet polytope \(P1312\)](#) on all applicable items (7/??), and create missing items
- Gather information from infoboxes
- Create more properties that semantically describe items
- Create featured items that show how properties should be used
- Create "has part" property entries for formula components / identifiers -> discussion

### ^Scope

- All Wikidata properties for which [instance of \(P31\)](#) has the value [Wikidata property related to mathematics \(Q22988631\)](#)   (see [list](#)).
- All Wikidata entities with a statement that involves any of these properties.
- Auxiliary wiki pages that assist with the above.

WikiProjects like [WikiProject Mathematics](https://m.wikidata.org/wiki/Wikidata:WikiProject_Mathematics) ([https://m.wikidata.org/wiki/Wikidata:WikiProject\\_Mathematics](https://m.wikidata.org/wiki/Wikidata:WikiProject_Mathematics)) are one of the ways in which the Wikidata community organizes itself.

## Property proposals

## Wikidata:Property proposal/Alexander polynomial

☆ Watch

Edit

[< Wikidata:Property proposal](#)^ **Alexander polynomial** Originally proposed at [Wikidata:Property proposal/Natural science](#)

Done: Alexander polynomial (P5350) (Talk and documentation)

**Description** invariant of a knot. Use *t* as variable and list monomials in decreasing order.**Represents** [Alexander polynomial \(Q1634206\)](#)**Data type** [Mathematical expression](#)**Domain** [knot \(Q1188853\)](#)

- Example**
- [unknot \(Q1188344\)](#) → 1
  - [trefoil knot \(Q168620\)](#) →  $t - 1 + t^{-1}$
  - [three-twist knot \(Q7797291\)](#) →  $2t - 3 + 2t^{-1}$

**Source** [http://katlas.math.toronto.edu/wiki/Main\\_Page](http://katlas.math.toronto.edu/wiki/Main_Page)<sup>ⓘ</sup>**Motivation**This would improve our coverage of knots. – [Pintoch \(talk\)](#) 09:45, 7 June 2018 (UTC) [[reply](#)]

- **Support** [David \(talk\)](#) 13:00, 7 June 2018 (UTC) [[reply](#)]
- **Weak support** - we only have a few dozen knots in Wikidata right now, do we really anticipate having many more? Is it really justified to have a specific property just for this? Though I agree it's a good use of the mathematical expression datatype! [ArthurPSmith \(talk\)](#) 18:13, 7 June 2018 (UTC) [[reply](#)]
- [@Pintoch, 2 ديفيد عادل وهبة خليل 2](#): **Done** [ArthurPSmith \(talk\)](#) 19:48, 21 June 2018 (UTC) [[reply](#)]

Wikidata property proposal ([https://m.wikidata.org/wiki/Wikidata:Property\\_proposal/Alexander\\_polynomial](https://m.wikidata.org/wiki/Wikidata:Property_proposal/Alexander_polynomial)) for [Alexander polynomial \(P5350\)](#) **Recent changes**

## Thanks

---

The screenshot shows the Wikimedia Commons 'Send thanks' page. At the top right, there are language options (English, Antanana) and user preferences (Talk, Preferences, Beta, Watchlist, Contributions, Uploads, Log out). A search bar is located at the top right. The main heading is 'Send thanks'. Below it, the text asks 'Do you want to publicly send thanks for this edit?' and features a green 'Send thanks' button. The left sidebar contains navigation links for Main page, Welcome, Community portal, Village pump, Help center, Participate, Upload file, Recent changes, Latest files, Random file, Contact us, and Tools (Special pages, Printable version, Short link). The footer includes links for Privacy policy, About Wikimedia Commons, Disclaimers, Developers, Cookie statement, and Mobile view, along with logos for Wikimedia Project and Powered by MediaWiki.

What if we could more easily thank those who create and maintain the resources we use?
