Conteo de adultos – Evaluación de plaguicidas

Conteo de adultos - Vigilancia

Conclusiones

- Junto al reconocimiento y monitoreo de plagas, la disponibilidad de tecnologías permite la toma de decisiones tempranas frente a introducciones de especies invasoras o incrementos de poblaciones descontrolados de especies nativas.
- El uso de imágenes y análisis automatizado de estas, facilita el trabajo del fenotipado, en particular para la búsqueda de marcadores moleculares así como las evaluaciones para el monitoreo y aplicación de medidas de manejo de plagas

Gracias!
