

Abstract for seminar *Distance Education for Lifelong Learning*

The Hyperscapes Experience

by José Bidarra
Universidade Aberta

The Hyperscapes Experience is about the creation of rich learning environments, based on the expression of knowledge structures through cognitive mapping tools and its integration with rich information spaces. The presentation introduces a background of cognitive or learning models, that suggest the use of knowledge mapping tools and the support for different cognitive modes and learning styles. The power of video information, together with the exploration of non-linear access and navigation is then presented. Experiences in both dimensions of the approach are presented.
