The PHOTONICA2015 (The Fifth International School and Conference on Photonics) is organized by the Vinča Institute of Nuclear Sciences, University of Belgrade ([www.vinca.rs](http://www.vinca.rs)), the Serbian Academy of Sciences and Arts, the Optical Society of Serbia and Aston University, Birmingham, UK. Co-organizers of this meeting are: the Institute of Physics Belgrade, University of Belgrade ([www.phy.bg.ac.rs](http://www.phy.bg.ac.rs)), Faculty of Electrical Engineering, University of Belgrade ([www.etf.bg.ac.rs](http://www.etf.bg.ac.rs)), Institute of Chemistry, Technology and Metallurgy, University of Belgrade ([www.ihtm.bg.ac.rs](http://www.ihtm.bg.ac.rs)), Faculty of Technical Sciences, University of Novi Sad ([www.ftn.uns.ac.rs](http://www.ftn.uns.ac.rs)), Faculty of physics, University of Belgrade ([www.ff.bg.ac.rs](http://www.ff.bg.ac.rs)), and Faculty of biology, University of Belgrade ([www.bio.bg.ac.rs](http://www.bio.bg.ac.rs)), under auspices and with support of the Ministry of Education, Science and Technological Development, Serbia.

**The support of the sponsors of the Conference is gratefully acknowledged:**

## Committees

### Scientific Committee

Aleksandar Krmpot, Serbia  
Antun Balaž, Serbia  
Arlene D. Wilson-Gordon, Israel  
Boris Malomed, Israel  
Branislav Jelenković, Serbia  
Dejan Gvozdić, Serbia  
Dejan Milošević, Bosnia and Herzegovina  
Detlef Kip, Germany  
Dragan Indjin, UK  
Feng Chen, China  
Giorgos Tsironis, Greece  
Goran Isić, Serbia  
Goran Pichler, Croatia  
Jelena Radovanović, Serbia  
Jovana Petrović, Serbia  
Kurt Hingerl, Austria  
Laurentius Windholz, Austria  
Ljupčo Hadžievski, Serbia  
Milutin Stepić, Serbia  
Milivoj Belić, Qatar  
Misha Sumetsky, UK  
Nikola Burić, Serbia  
Pavle Anđus, Serbia  
Paul Harrison, UK  
Radoš Gajić, Serbia  
Sergei Turitsyn, UK  
Slobodan Vuković, Serbia  
Stefka Cartaleva, Bulgaria  
Vladimir Škarka, France  
Željko Šljivančanin, Serbia

### Organizing Committee

Milutin Stepić, (Chair)  
Misha Sumetsky, (Co-Chair)  
Suzana Petrović, (Secretary)  
Ljupčo Hadžievski  
Jovana Petrović  
Aleksandra Maluckov  
Goran Gligorić  
Petra Beličev  
Aleksandar Daničić  
Marija Ivanović  
Nevena Raičević  
Ana Radosavljević  
Milan Trtica  
Slobodan Zdravković  
Biljana Gaković  
Dalibor Čevizović  
Branislav Jelenković  
Zoran Grujić  
Jelena Radovanović  
Peđa Mihailović  
Jovan Elazar  
Bratislav Obradović  
Milorad Kuraica  
Zoran Jakšić  
Slobodan Vuković  
Miloš Živanov

### **COST actions BM1205 and MP1204 Training School Steering Committee**

Mauro Pereira, UK  
Anna Wojcik-Jedlinska, Poland  
Dragan Indjin, UK  
Jelena Radovanovic, Serbia  
Antoine Muller, Switzerland  
Andreas Wacker, Sweden  
Ivan Bucharov, Bulgaria  
Johan Stiens, Belgium  
Florin Mihalescu, Romania  
Czeslaw Skierbiszewski, Poland  
Shumin Wang, Sweden  
Igor Meglinski, Finland

## Conference Topics

1. Quantum optics
2. Nonlinear optics
3. Ultrafast phenomena
4. Laser spectroscopy
5. Devices and components
6. Biophotonics
7. Optical communications
8. Sensing: plasmonics, fiber optics and interferometers
9. Holography and adaptive optics
10. Optical materials

### **BMBS COST Action BM1205**

European Network for Skin Cancer Detection using Laser Imaging  
(24-28 August)

### **MPNS COST Action MP1204**

TERA-MIR Radiation: Materials, Generation, Detection and Applications  
(24-28 August)

### **WORKSHOP**

Control of light and matter waves propagation and localization in photonic lattices  
(28-29 August)

The **International School and Conference on Photonics- PHOTONICA**, is a biennial event held in Belgrade since 2007. The first meeting in the series was called ISCOM (International School and Conference on Optics and Optical Materials), but it was later renamed to Photonica to reflect more clearly the aims of the event as a forum for education of young scientists, exchanging new knowledge and ideas, and fostering collaboration between scientists working within emerging areas of photonic science and technology.

A particular educational feature of the program is to enable students and young researchers to benefit from the event, by providing introductory lectures preceding most recent results in many topics covered by the regular talks. In other words, apart from the regular lectures, the plenary speakers will also give tutorial lectures specifically designed for students and scientists starting in this field.

The Conference consists of oral presentations and vibrant poster sessions. The wish of the organizers is to provide a platform for discussing new developments and concepts within various disciplines of photonics, by bringing together researchers from academia, government and industrial laboratories for scientific interaction, the showcasing of new results in the relevant fields and debate on future trends. This year our conference will contribute celebration of the International Year of Light as a global initiative which will highlight to the citizens of the world the importance of light and optical technologies. This PHOTONICA 2015 will include two COST Action meetings and one workshop with the main objective to promote knowledge in various disciplines of photonics. In addition to the lectures and seminars, a Round Table "Scientific publishing: Editors et altera" will be organized where the editors will present editorial and publishing policies of their journals and share their experiences. Following the official program, the participants will also have plenty of opportunity to mix and network outside of the lecture theatre with planned free time and social events.

This book contains 219 abstracts of all presentations at the **5th International School and Conference on Photonics, PHOTONICA2015**. Authors from 50 countries from all continents will present their work at the conference. There will be six tutorial and seven keynote lectures to the benefits of students and young researches. Twenty four invited lectures, five progress reports of young Serbian researchers and thirty one contributed talks will present most recent results in their research fields. Within the two poster sessions, students and young researches will present 146 poster presentations on their new results in a cozy atmosphere of the Serbian academy of science and arts.

Belgrade, July 2015  
Editors

## ***Table of Contents***

### ***Tutorial lectures***

T.1	Probing primary light-induced events in biomolecules with ultrafast multidimensional spectroscopies <i>Giulio Cerullo</i>	1
T.2	Probes of quantum behaviour in organic molecules <i>Vlatko Vedral</i>	2
T.3	Optical and photocatalytical properties of solid and nanoporous nanostructures <i>Peter Schaaf, Y. Yan, A. Herz, D. Wang, D. Pudis</i>	3
T.4	Gas, glass and light: Light-matter interaction in microstructured optical fibres <i>P. St. J. Russell</i>	4
T.5	Superfluidity in ultracold atomic gases <i>Sandro Stringari</i>	5
T.6	Quantum optics and quantum information using cold Rydberg atoms and polaritons <i>E. Bimbard, R. Boddeda, A. Grankin, I. Usmani, V. Parigi, J. Stanojevic, E. Brion, A. Ourjoumtsev, Philippe Grangier</i>	6

### ***Keynote lectures***

K.1	Carbon nanomaterial for ultrafast fiber lasers in near and mid infra-red <i>C.Mou, M. Chernysheva, R. Arif, S. K. Turitsyn, A. G. Rozhin</i>	7
K.2	“Optical meta-atom”: localization of light with quantized energy <i>S. Lannebère, Mário Silveirinha</i>	8
K.3	Nanophotonics for holographic applications <i>T. D. Wilkinson</i>	9
K.4	Dipolar QED: an alternative paradigm for quantum optics, sensors, and non-equilibrium dynamics <i>C. S. Adams</i>	10
K.5	Plasmonic Stopped-Light Nanolasing <i>Ortwin Hess</i>	10
K.6	New generation of compact semiconductor based lasers in biomedical applications <i>Edik Rafailov</i>	11
K.7	Dielectric metasurfaces with optically induced dielectric response: control of wavefront and nonlinearities <i>Dragomir N. Neshev</i>	12

### ***Invited lectures***

I.1	Interacting topological quantum states of ultracold atoms <i>Walter Hofstetter</i>	13
I.2	Nonlinear graphene plasmonics and photonics: manipulating light on a surface <i>A. V. Gorbach</i>	13
I.3	TERA-MIR Radiation: Materials, Generation, Detection and Applications II <i>M. F. Pereira</i>	14

*Table of Contents*

I.4	Light-Matter Interactions in Graphene and Heterostructures made of 2D Crystals <i>C. Casiraghi</i>	15
I.5	Photonics Meets a Modern Transistor: Building High-performance Electronic-Photonic Systems with Integrated Silicon-Photonics <i>V. Stojanović</i>	16
I.6	How Quantitative confocal fluorescence microscopy without scanning for the study of fast dynamical processes via massively parallel Fluorescence Correlation Spectroscopy (FCS) <i>A. Krmpot, S. Nikolić, M. Vitali, D. Papadopoulos, S. Oasa, P. Thyberg, S. Tisa, M. Kinjo, L. Nilsson, W. Gehring, L. Terenius, R. Rigler, V. Vukojević</i>	17
I.7	Real-time measurements of intensity spatio-temporal dynamics in fiber lasers <i>Dmitry Churkin</i>	18
I.8	Optomechanics with cold rubidium atoms <i>N. Šantić, D. Aumiler, H. Buljan, Ticijana Ban</i>	18
I.9	Ramsey spectroscopy for high performance Rubidium vapour cell frequency standards <i>C. Affolderbach, M. Gharavipour, F. Gruet, S. Kang, G. Mileti</i>	19
I.10	Characterization of atherosclerotic arterial tissue using multimodal non-linear optical (NLO) microscopy <i>R. Cicchi, E. Baria, C. Matthäus, M. Lange, A. Lattermann, B. Brehm, J. Popp, F. Pavone</i>	20
I.11	Photonic Topological Insulators and Topological Anderson Insulators <i>A. Szameit, S. Stützer, Y. Plotnik, J. M. Zeuner, Y. Lumer, M. Bandres, M. Rechtsman, M. Segev</i>	21
I.12	Silicon photonics for the mid-infrared <i>G. Mashanovich, M. Nedeljković, J. Soler Penades, C. Mitchell, S. Stanković, C. Howle, A. Ortega-Monux, G. Wanguemert-Perez, R. Halir, I. Molina-Fernandez, P. Cheben, J. Ackert, A. Knights, G. T. Reed</i>	22
I.13	Prospects for Monolithic Electronics-Photonics Integration: Silicon Photonics as a More-than-Moore Device Technology in Sub-100nm CMOS <i>M. A. Popović</i>	24
I.14	Ultrafast magnetization control at high-gain Free Electron Laser(s) <i>N. Stojanović, T. Golz, P. Juranić, M. Berntsen, G. Grübel, M. Gensch, S. Schleitzer, L. Mueller</i>	25
I.15	Biophotonics and Molecular Imaging: looking at biological function and disease from cells to whole organisms <i>S. Psycharakis, E. Liapis, A. Zacharopoulos, G. Zacharakis</i>	26
I.16	Si-based Monolithically Integrated Polychromatic Interferometers: a new enabling tool for food safety applications <i>E. Makarona, I. Raptis, P. Petrou, S. Kakabako, K. Misiakos</i>	27
I.17	Pulsed Laser Assisted Generation of Novel Materials and Related Applications <i>Emmanuel Stratakis</i>	28
I.18	Superradiance in electrically pumped semiconductor laser structures: Myth or reality? <i>D. L. Boiko</i>	29

I.19	Fluorescence and photocatalytic properties of hybrid nanostructures that comprise inorganic nanoparticles and biomolecules <i>Vladimir Djoković</i>	30
I.20	Controlling Rydberg atoms in dense gases <i>T. Liebisch, M. Schlagmüller, K. Kleinbach, K. Westphal, F. Böttcher, R. Löw, S. Hoffereberth, T. Pfau</i>	31
I.21	Witnessing Multipartite Entanglement without Entanglement Witness Operators <i>L. Pezzè, Y. Li, W.D. Li, A. Smerzi</i>	31
I.22	Quantum magnetometry using single spins in diamond and cold atomic ensembles <i>Graciana Puentes</i>	32
I.23	Stability of Microresonator Soliton Frequency Combs <i>T. Hansson, S. Wabnitz</i>	33
I.24	100 W-class fs laser system based on hybrid laser technologies <i>B. Resan, V. Marković</i>	34
 <b><i>Quantum optics</i></b>		
PR.QO.1	Counting atoms with single-atom resolution <i>H. Zhang, R. McConnell, S. Čuk, Q. Lin, M. H. Schleier-Smith, I. D. Leroux, V. Vuletić</i>	36
PR.QO.2	Connection between stationary and transient electromagnetically induced transparency and slow light in Rb buffer gas cell <i>S. Nikolić, M. Radonjić, N. Lučić, A. Krmpot, B. Jelenković</i>	36
PR.QO.3	Modeling and applications of Quantum Cascade in external magnetic field <i>A. Daničić, N. Vuković, J. Radovanović, V. Milanović</i>	38
O.QO.1	Dissipation through localised loss in lattice bosonic systems <i>I. Vasić, D. Cocks, W. Hofstetter</i>	39
O.QO.2	Stationary localization in driven and dissipative Bose-Hubbard chains <i>U. Naether, F. Quijandria, J.J. García-Ripoll, D. Zueco</i>	40
O.QO.3	Role of real and virtual photons in the temporal and spectral modifications of one photon wave packet propagating in a 1D waveguide <i>M.A Bouchene, S. Derouault</i>	41
O.QO.4	Tuning the Quantum Phase Transition of Bosons in Optical Lattices <i>A. Pelster</i>	41
O.QO.5	Photorefectance study of InAs-InGaAs dots-in-a-well heterostructures <i>R. Nedzinskas, A. Rimkus, E. Poizingytė, B. Čechavičius, J. Kavaliauskas, G. Valušis, L.H. Li, E.H. Linfield</i>	42
O.QO.6	Dynamic tuning of the optical emission of InGaN nanowire quantum dots by surface acoustic waves <i>E. Chernysheva, S. Lazić, Ž. Gačević, H. P. van der Meulen, E. Calleja, J. Calleja</i>	43
P.QO.1	Stationary and Transient Properties of Photon Condensates <i>M. Radonjić, A. Balaž, W. Kopylov, T. Brandes, A. Pelster</i>	44
P.QO.2	Modeling of Light Emitters Based on Nitride Quantum Dots and Nanowires <i>N. Vukmirović, S. Tomić, Ž. Gačević</i>	45

*Table of Contents*

P.QO.3	Bounded dark-state polaritons in atom-cavity arrays <i>A. Maggitti, M. Radonjić, B. Jelenković</i>	46
P.QO.4	Fibonacci superlattice in the aqueous solution of $\text{Co}(\text{NO}_3)_2(\text{H}_2\text{O})_6$ <i>P. Petkova, G. Nedelcheva, M. Mustafa, D. Bachvarova</i>	47
P.QO.5	Relaxation time measurements in a 25 mm Rb vapor cell for high-performance Rb atoms <i>M. Gharavipour, S. Kang, F. Gruet, C. Affolderbach, G. Mileti</i>	47
P.QO.6	Composite localized modes in discretized spin-orbit-coupled Bose-Einstein condensates <i>P. P. Beličev, G. Gligorić, A. Maluckov, J. Petrovic, Lj. Hadžievski, B. A. Malomed</i>	48
P.QO.7	Electromagnetically induced transparency in four-level Y-type atom with degenerated and quasidegenerated excited levels <i>Lj. Stevanović, V. Pavlović</i>	49
P.QO.8	Double-double electromagnetically induced transparency in the four-level Y-type atom with spontaneously generated coherence <i>V. Pavlović, D. Delibašić, Lj. Stevanović</i>	50
P.QO.9	Atomic and Nuclear quantum optics: Multiphoton and autoionization resonances in a strong DC electric and laser field <i>A.V. Glushkov</i>	51
P.QO.10	Hydrogenic impurity states in the opened spherical core-shell quantum antidot <i>D. Stojanović, R. Kostić</i>	52
P.QO.11	Driven Bose-Hubbard Model with Impurity <i>M. Bonkhoff, A. Pelster</i>	53
P.QO.12	Improving Ginzburg-Landau Theory for Bosons in Optical Lattices via Degenerate Perturbation Theory <i>M. Kübler, A. Pelster</i>	54
P.QO.13	Parametric non-degenerate four wave mixing in hot potassium vapor <i>B. Zlatković, A. Krmpot, N. Šibalić, B. Jelenković, M. Radonjić</i>	54
P.QO.14	Strong Coupling Regime of Semiconductor Quantum Dot Embedded in the Nanocavity <i>S. Galović, D. Čevizović, A. Resethnyak, A. Chizhov, Z. Ivić</i>	55
P.QO.15	Quantum yield vs photon energy dependence of colloidal PbS quantum dots <i>M. Greben, J. Valenta</i>	56
<b><i>Nonlinear optics</i></b>		
O.NO.1	Energy light pulse localization in layered photonic crystal with non-instantaneous nonlinear response <i>V. Trofimov, E. Trykin</i>	58
O.NO.2	Sum-frequency generation of multi-line carbon monoxide laser in $\text{AgGaSe}_2$ crystal <i>O. Budilova, A. Ionin, I. Kinyaevskiy, Yu. Klimachev, Yu. Kozlov, A. Kotkov</i>	59
O.NO.3	Light guidance properties of kagomé hollow-core photonic crystal fibres <i>S. Rodrigues, M. Facão, M. Ferreira</i>	60
O.NO.4	Light shift averaging in antirelaxation-coated atomic cells <i>J. Sudyka, E. Zhivun, A. Wickenbrock, D. Budker, B. Patton, S. Pustelny, W. Gawlik</i>	61

*Table of Contents*

O.NO.5	Self-focusing and plasma generation of linear polarized laser pulse in optical schemes with preferential directions <i>A. Ionin, D. Mokrousova, L. Seleznev, D. Sinitsyn, E. Sunchugasheva, N. Fokina</i>	62
O.NO.6	Observation of flat band properties in photonic lattices <i>R. Vicencio</i>	64
O.NO.7	Charge Flipping Vortices in DNLS trimer and hexamer <i>P. Jason, M. Johansson</i>	65
P.NO.1	Formation of optically induced photonic waveguides in a bulk of lithium niobate with a pyroelectric response <i>A. Perin, V. Shandarov</i>	65
P.NO.2	Optical properties of spherical quantum dot with on-center hydrogen impurity in magnetic field <i>Lj. Stevanović, N. Filipović, V. Pavlović</i>	67
P.NO.3	On localized modes in nonlinear binary kagome ribbons <i>P. Beličev, G. Gligorić, A. Radosavljević, A. Maluckov, M. Stepić, R. Vicencio, M. Johansson</i>	68
P.NO.4	Interference structures in nonlinear processes in strong infrared laser fields <i>D. Habibović, S. Odžak, M. Busuladžić, E. Hasović, A. Gazibegović-Busuladžić, A. Čerkić, D. B. Milošević</i>	69
P.NO.5	Light propagation through the composite linear photonic lattice containing two nonlinear defects <i>M. Stojanović-Krasić, A. Mančić, S. Kuzmanović, S. Đorić Veljković, M. Stepić</i>	70
P.NO.6	On high power dynamically stable vortices in multicore optical fibers <i>A. Radosavljević, A. Daničić, J. Petrović, A. Maluckov, Lj. Hadžievski, A. Rubenchik, S. Turitsyn</i>	71
P.NO.7	The nonlinear optical properties and electronic transitions of thienylpyrroles—containing chromophores: A DFT study <i>D. Avci, Ö. Tamer, A. Başoğlu, Y. Atalay</i>	72
P.NO.8	Stable temporal dissipative solitons in resonant gases confined in PBG fibers <i>M. Facão, M. Carvalho, S. Rodrigues, M. Ferreira</i>	73
P.NO.9	Light propagation in deterministic aperiodic Fibonacci waveguide arrays <i>J. Vasiljević, N. Lučić, D. Timotijević, A. Piper, D. Grujić, D. Pantelić, B. Jelenković, D. Jović Savić</i>	74
P.NO.10	Counterpropagating optical solitons in PT symmetric photonic lattices <i>M. Petrović, A. Strinić, M. Belić</i>	75
P.NO.11	Quench Dynamics for Trapped Dipolar Fermi Gases <i>V. Veljić, A. Balaž, A. Pelster</i>	76
P.NO.12	Trapped Bose-Einstein Condensates with Strong Disorder <i>V. Lončar, A. Balaž, A. Pelster</i>	76
P.NO.13	Faraday Waves in Dipolar Bose-Einstein Condensates <i>D. Vudragović, A. Balaž</i>	77
P.NO.14	Linear modulational stability analysis of Ginzburg-Landau dissipative vortices <i>N. Aleksić, V. Skarka, M. Belić</i>	78
P.NO.15	Spectral Method for Numerical Solution of the Nonlocal Nonlinear Schrödinger Equation on the GPU <i>B. Aleksić, M. Belić</i>	78

P.NO.16	Control of power-dependent walk-off in bias-free nematic liquid crystals <i>M. Petrović, N. Aleksić, A. Strinić, M. Belić</i>	79
P.NO.17	Spatio-temporal general Jacobi elliptic function expansion method applied to the generalized (3+1)-dimensional nonlinear Schrödinger equation <i>N. Petrović, M. Bohra, M. Belić</i>	80
P.NO.18	Parity non-conservation effect in atomic optics and observation of the P and PT violation using NMR shift in a laser beam <i>O. Khetselius, V. Buyadzi, A. Smirnov</i>	81
P.NO.19	New nonlinear optics and dynamics of quantum and laser systems with elements of a chaos <i>A. Glushkov, V. Buyadzi, G. Prepelitsa, V. Ternovsky</i>	82
P.NO.20	Vortex necklace beams: Self-focusing and guiding properties in SBN crystal <i>L. Stoyanov, I. Stefanov, N. Dimitrov, A. Dreischuh</i>	84
P.NO.21	Transport of extended and localized waves in linear and nonlinear one-dimensional N-mer lattices <i>D. López-González, M. Molina</i>	85
<b><i>Ultrafast phenomena</i></b>		
O.UP.1	Ultrafast dynamics and imaging of laser-generated nano-acoustic waves in metal/substrate layered systems <i>M. Bakarezos, Y. Orphanos, I. Tzianaki, V. Kaselouris, V. Dimitriou, G. Tsibidis, P. Loukakos, M. Tatarakis, N. Papadogiannis</i>	86
O.UP.2	Photoemission electron microscopy as a tool for the investigation of advanced optical nanoantenna dynamics <i>M. Falkner, T. Kaiser, J. Qi, M. Steinert, C. Menzel, C. Rockstuhl, T. Pertsch</i>	87
O.UP.3	Generation of terahertz radiation in quantum-dot based ultrafast photoconductive antennae <i>A. Gorodetsky, I. Leite, N. Bazieva, E. Rafailov</i>	88
P.UP.4	Impact of Seidel aberrations in high harmonic generation: Theoretical and experimental results <i>M. González-Galicia, I. Sola, L. Plaja, W. Holgado, M. Rosete-Aguilar, J. Garduño-Mejía, N. Bruce</i>	90
P.UP.5	Ultrafast dynamics of a cyanine dye near liquid-liquid interface <i>K. Makhal, D. Kumar-Das, D. Goswami</i>	91
<b><i>Laser spectroscopy</i></b>		
O.LS.1	Ultrafast processes for H <sub>2</sub> ATPP-LuDTPA and its complexes with transient metals <i>I. Pozdnyakov, E. Ermolina, R. Kuznetsova, A. Melnikov, S. Chekalin, N. Semenishyn</i>	92
O.LS.2	Time behavior of NO absorption in gas mixtures excited by pulsed electric discharge <i>S. Derevyashkin, A. Ionin, Yu. Klimachev, I. Kinyaevskiy, A. Kotkov, A. Kozlov, A. Kurnosov</i>	93
O.LS.3	Photoacoustic frequency and spectroscopy technique for evaluation opto-thermal properties of macromolecular nanostructures <i>S. Todosijević, Z. Šoškić, S. Galović</i>	95

## Table of Contents

P.LS.1	Dipol-dipol Energy Transfer in CdSe/ZnS Quantum Dot – Eosin Molecule System Doped into the Polymer Matrix <i>N. Myslitskaya, I. Samusev, V. Bryukhanov</i>	95
P.LS.2	Rb-based Stabilized Laser at 1560 nm <i>W. Moreno, F. Gruet, R. Matthey, G.Mileti</i>	96
P.LS.3	Surface enhanced Raman spectroscopy of thiocyanine dye J-aggregates on single silver nanoaggregates <i>U. Ralević, G. Isić, B. Laban, V. Vodnik, V. Vasić, R. Gajić</i>	97
P.LS.4	Measurements of Rb hyperfine splitting with a femtosecond optical frequency comb <i>I. Brice, J. Alnis, J. Rutkis</i>	98
P.LS.5	Laser-induced features at Titanium implant surface in vacuum ambience <i>J. Ciganović, S. Živković, M. Momčilović, J. Savović, M. Kuzmanović, M. Stoiljković, D. Milovanović, M. Trtica</i>	99
P.LS.6	Spectroscopy of lanthanides atoms: Relativistic theory of autoionization resonances in spectra of some atoms <i>A. Svinarenko, Yu. Dubrovskaya, T. Florko</i>	100
P.LS.7	The interaction between variously shaped TiO <sub>2</sub> nanoparticles with UV laser determines the quality of the mass spectra of carbohydrates <i>I. Popović, M. Nešić, Z. Šaponjić, M. Petković</i>	101
P.LS.8	Photothermal Response of a Double-Layered Semi-Transparent Sample <i>M. Popović, M. Nešić, M. Rabasović, D. Markushev, S. Galović</i>	103
P.LS.9	The influence of multiple optical reflexions on the photoacoustic frequency response <i>M. Nešić, M. Popović, S. Galović</i>	104
P.LS.10	Characterisation of High Contrast Gratings (HCGs) by means of micro-reflectance spectroscopy <i>D. Urbanczyk, A. Wójcik-Jedlińska, M. Bugajski</i>	105
P.LS.11	Reverse analysis of mid-infrared laser beams with large divergences on the basis of goniometric far field measurements <i>E. Pruszyńska-Karbownik, K. Regiński, M. Bugajski</i>	106
P.LS.12	Near-field terahertz spectroscopy of anisotropic dielectric micro-resonators <i>I. Khromova, F. Dominec, P. Kužel, J. Reno, I. Brener, U-C. Chung, C. Elissalde, M. Maglione, P. Mounaix, O. Mitrofanov</i>	107
P.LS.13	Time-resolved FT-IR spectroscopy of rare earth ions in fluoride crystals <i>R. Stock, W. Royle, C. Hodges, M. Graf, B. Malkin, S. Giblin, S. Lynch</i>	108
<b><i>Devices and components</i></b>		
O.DC.1	Ordered InGaN/GaN nanowires as arrays of classical and quantum light sources: growth, characterization and modeling <i>Ž. Gačević, S. Lazić, E. Chernysheva, N. Vukmirović, A. Torres-Pardo, J. González-Calbet, J.M. Calleja, E. Calleja</i>	110

studies are conducted by analyzing each block of the device, starting with the control loop of the DFB laser at 1560 nm.

In the optical part of the DFB laser stabilization loop, we demonstrate the existence of two etalon-like cavities. The associated optical interferences lead to frequency instabilities, of the DFB laser frequency, in the order of  $2\text{-}6\cdot 10^{-11}$  for averaging times between 5 and 60 seconds. We will also report on our spectroscopic studies to evaluate the accuracy and systematic frequency shifts due to, for instance, the Doppler-broadened component of the signal. Depending on the selected sub-Doppler transition, these shifts may be at the  $10^{-9}$  level or higher and must therefore be well characterized in order to guarantee the overall system level specifications.

Dye-coated colloidal metal nanoparticles (NPs) exhibit interesting optical properties originating from the interaction between metal core and dye shell. Depending on the interaction mechanism between the two, optical properties of dyes or NPs can be changed separately or jointly within the dye-NP assembly [1]. Many of the recent studies are focused on dyes which are able to self-assemble in highly oriented structures called J-aggregates on the surface of metallic NPs [2,3]. Owing to the variety of mechanisms by which dyes and their J-aggregates can interact with metallic NPs, dye-NP assemblies can lead to applications ranging from nanoscale sensing [4] to advanced composite materials for novel active and nonlinear optical devices [5].

Here we study the influence of TC concentration on its J-aggregation on the surface of AgNPs assemblies using Raman mapping and atomic force microscopy (AFM). Aqueous solutions (colloids) of citrate stabilized AgNPs with an average diameter of  $\sim 10$  nm are mixed with TC dye solution and then deposited onto freshly cleaved highly oriented pyrolytic graphite and mica surfaces. The spectral signature of citrate ions is identified by (i) the O-H band around  $220\text{ cm}^{-1}$ , (ii) the C-H band around  $2950\text{ cm}^{-1}$  and (iii)

pronounced blinking in the 1000-1800  $\text{cm}^{-1}$  range. In contrast, dye molecules adsorbed on nanoparticles are recognized by several stable Raman bands between 200 and 1600  $\text{cm}^{-1}$ . In situ AFM measurements show that SERS 'hot spots' are formed either on large single nanoparticles (diameter > 100 nm) or within assemblies of small nanoparticles (with diameters in the 10 - 50 nm range). However, only the latter are found to yield a citrate or TC dye SERS signal. We find that the TC dye adsorbed on the surface of AgNP nanoassemblies always forms J-aggregates when the dye concentration in the TC-AgNP solution is varied between 0.5  $\mu\text{M}$  and 17  $\mu\text{M}$ . Even though, a clear SERS spectra of dye J-aggregates can be acquired for high dye concentration (17  $\mu\text{M}$ ) the citrate ions always exist on the AgNP surface and so does their SERS signature in form of O-H (220  $\text{cm}^{-1}$ ) and C-H (2960  $\text{cm}^{-1}$ ) bands. Assemblies with low TC concentration (0.5  $\mu\text{M}$ ) do not have a clear dye SERS spectra, but rather spectra similar to the one of citrate ions meaning that either not all AgNPs are dye coated, or rather that the amount of TC molecules adsorbed on the surface of the nanoparticle is small and hence not detectable.

We are grateful to the Serbian Ministry of Education, Science and Technological Development for financial support through projects Nos. OI 171005, OI 172023. This work was performed in the context of the European COST Action MP1302 Nanospectroscopy.

## **Measurements of Rb hyperfine splitting with a femtosecond optical frequency comb**

I. Brice, J. Alnis and J. Rutkis

*Institute of Atomic Physics and Spectroscopy, University of Latvia, Riga, Latvia*

e-mail: inga02@inbox.lv

The femtosecond laser frequency comb spectrum is composed of many thousands equidistantly spaced modes [1]. One could simply imagine it as a ruler consisting of narrow modes at known optical frequencies. It has provided us with optical clocks which use optical frequency standards and a clock operating at a higher frequency is more precise.

The advent of precision femtosecond optical combs brings a new set of tools for precision atomic and molecular spectroscopy. For example, it can be used for precision spectroscopy of electronic transitions [2]. The absolute frequency can be determined by
