

Identification of *Phytophthora infestans* US-8 lineage through genetic markers

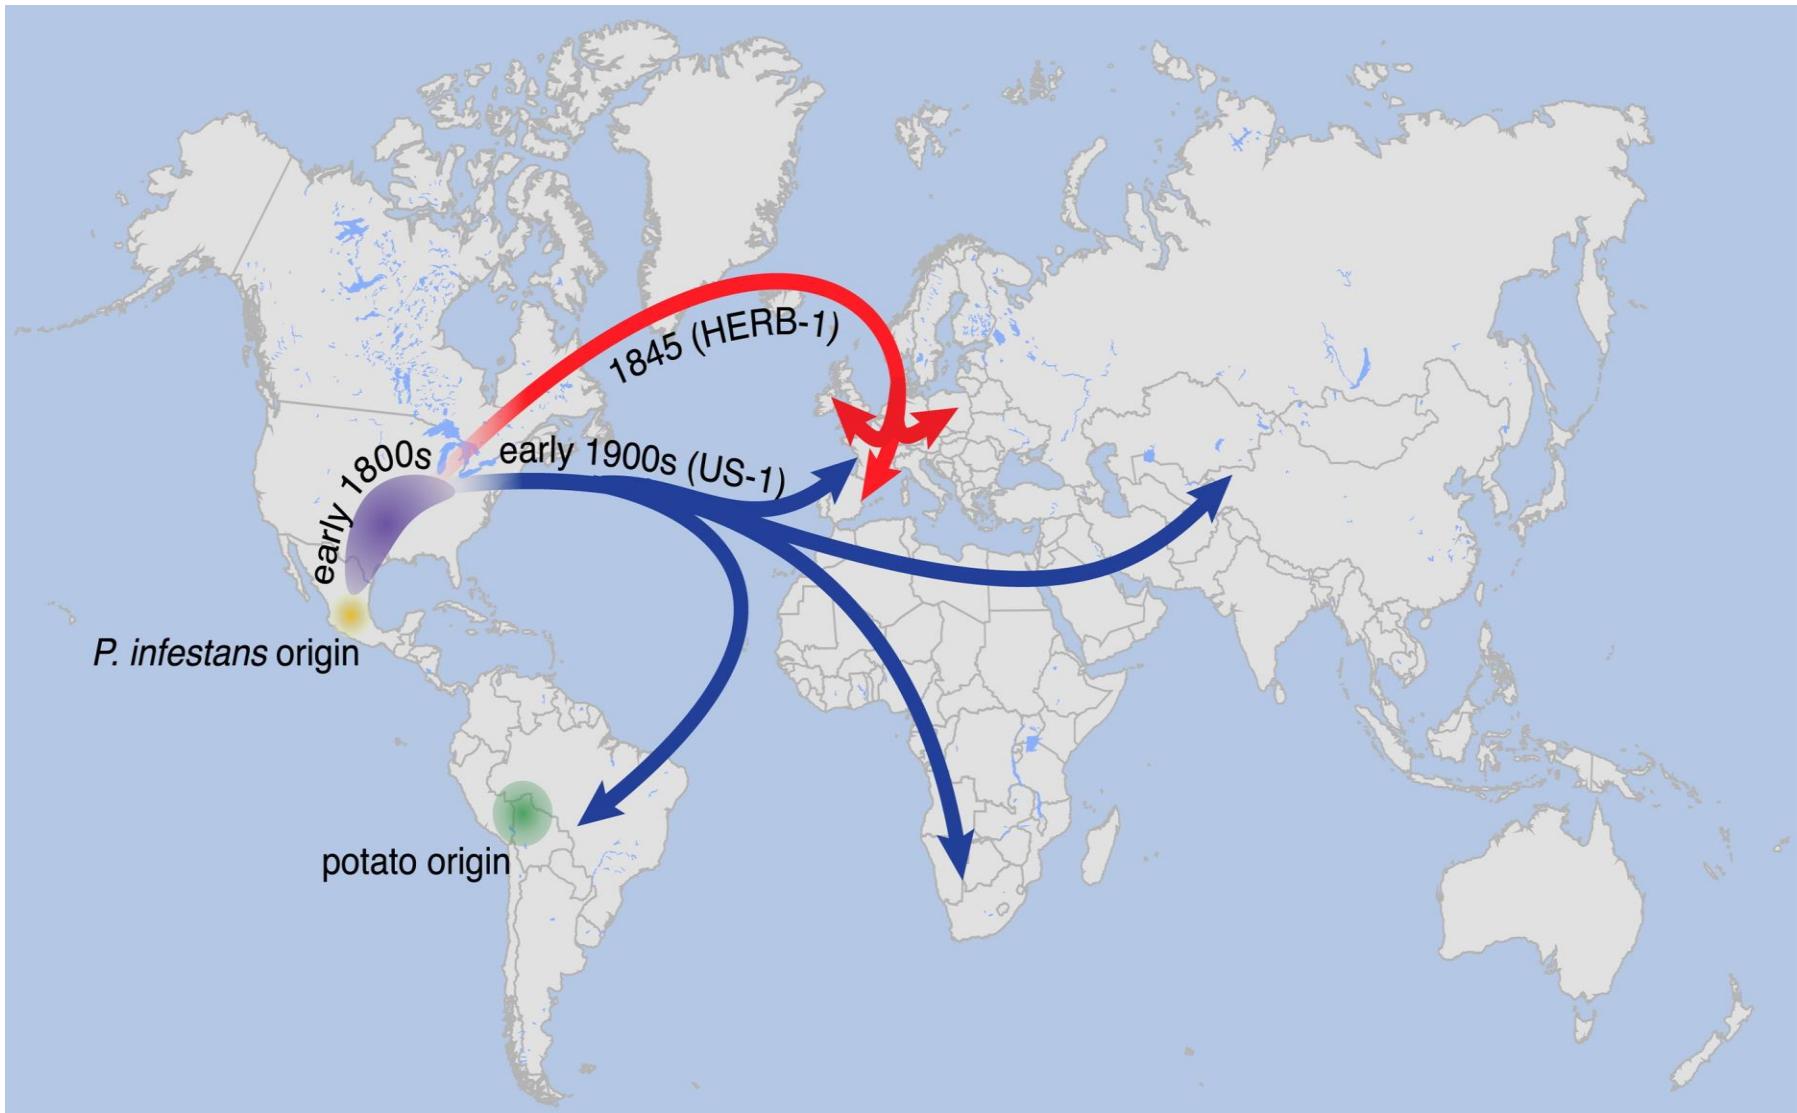

Eric Fritz, Dept. Botany and Plant Pathology, OSU
Dr. Brian Knaus, USDA ARS

Phytophthora infestans: bad spore

- Results in annual loss of potatoes that would be enough to feed more than 80 million people (Fisher et al., 2012)
- Certain strains, US-8 for example, are known to resist fungicide treatment (Daniels et al., 2013)
- Encysted zoospores and oospores can stay dormant for long periods of time
- 50+ known species of *Phytophthora* affects a wide plant base including: tomatoes, raspberries, cacao, *Rhododendron*, and juniper trees (Kroon, Laurens et al., 2012)

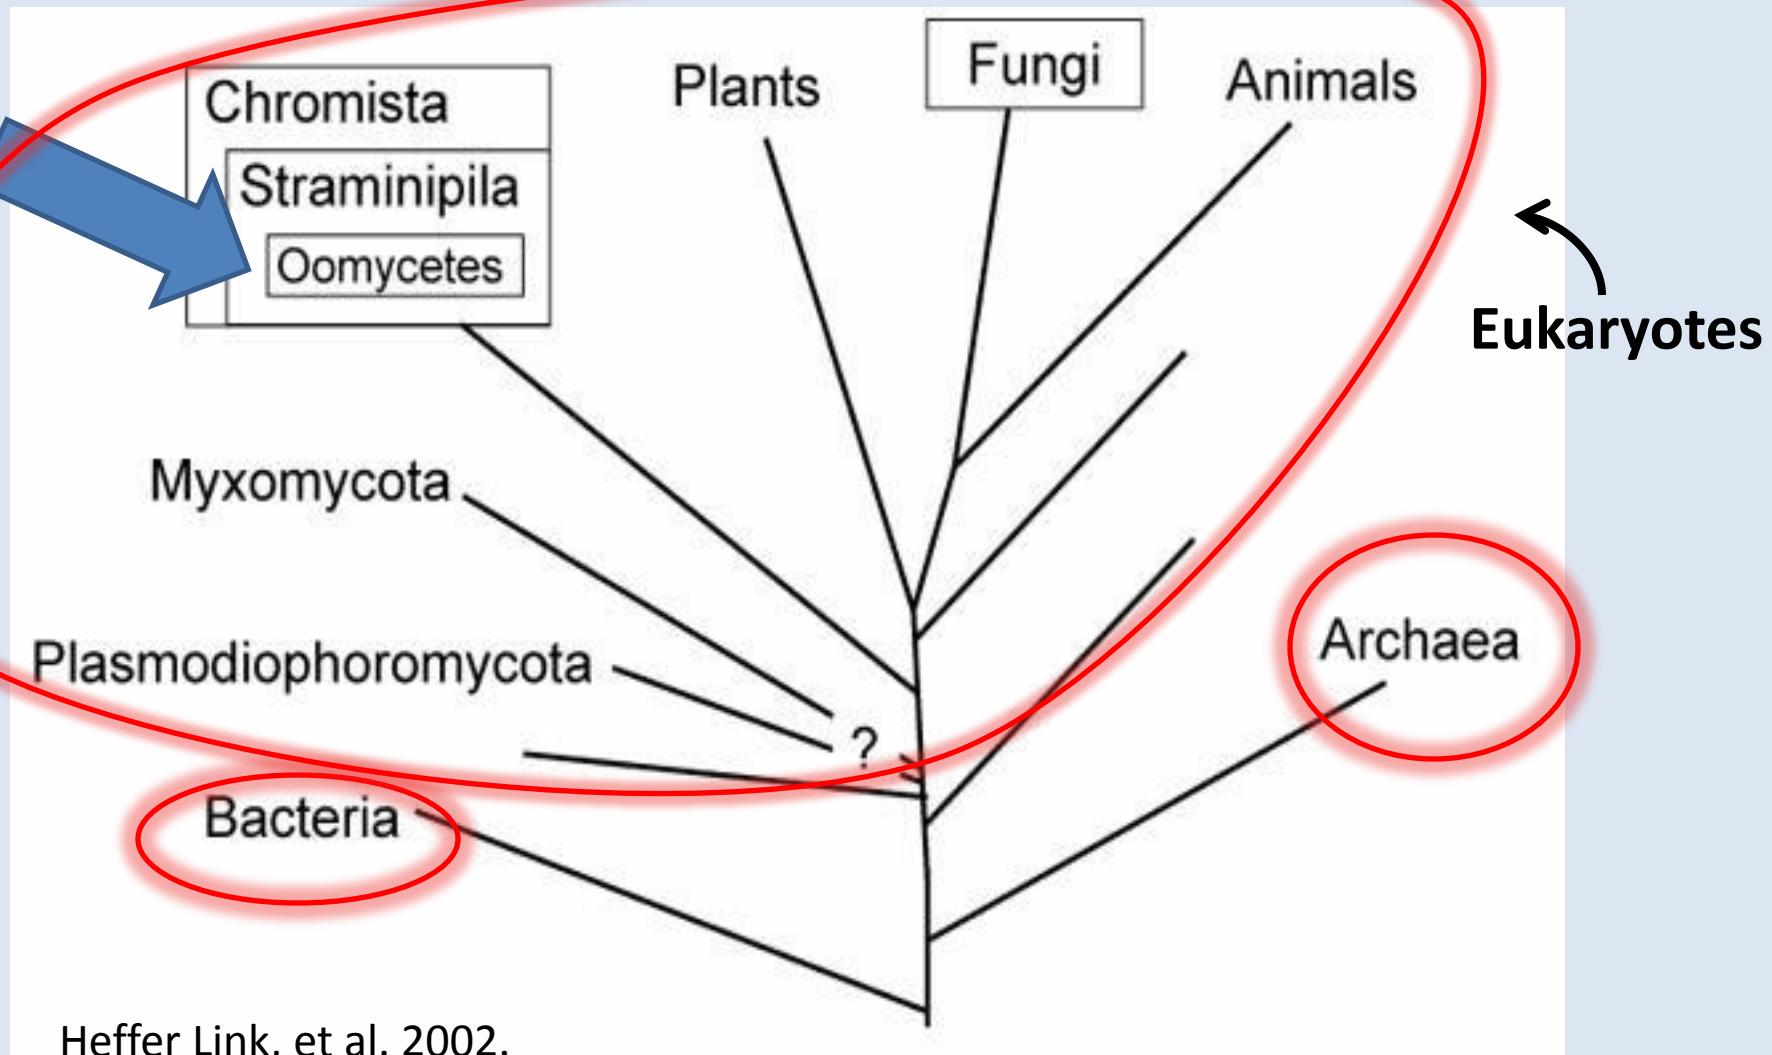

P. infestans global spread

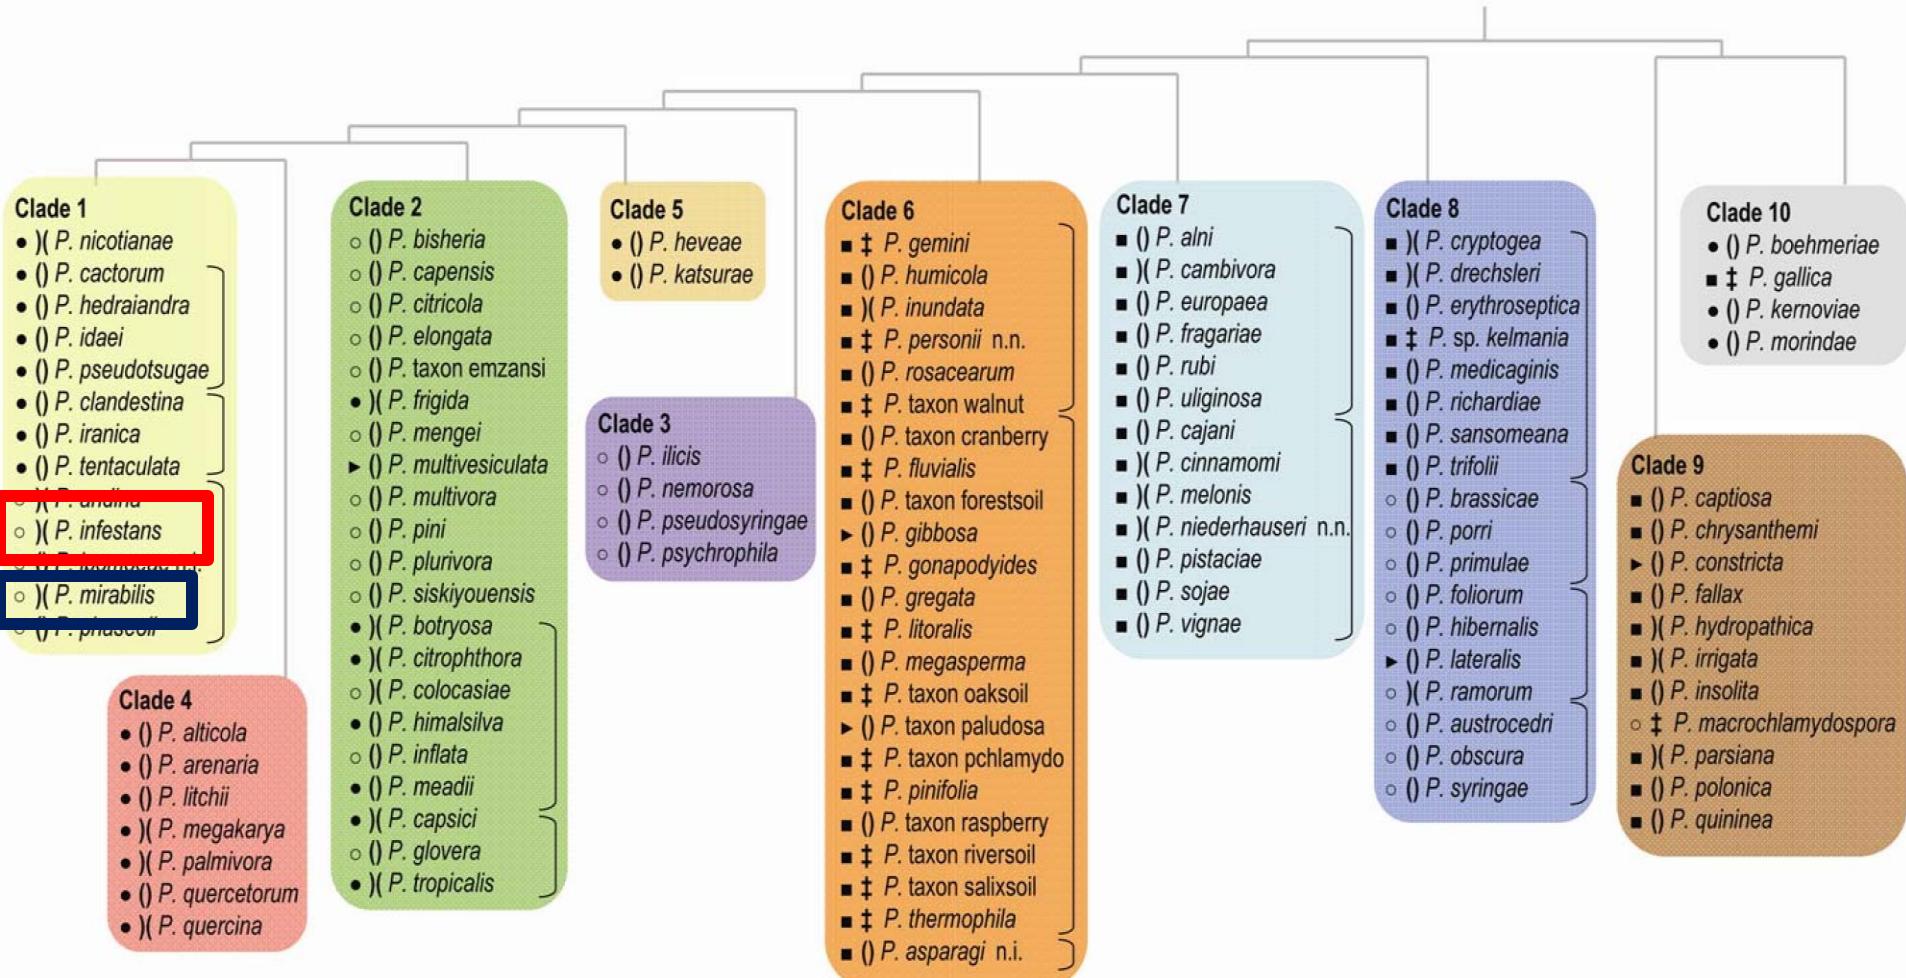

Yoshida, K. et al. 2013.

Where is *Phytophthora* on the Tree of Life?

Oomycetes are not 'true' fungi

“Families” of genus *Phytophthora*

Kroon, et al. 2012.

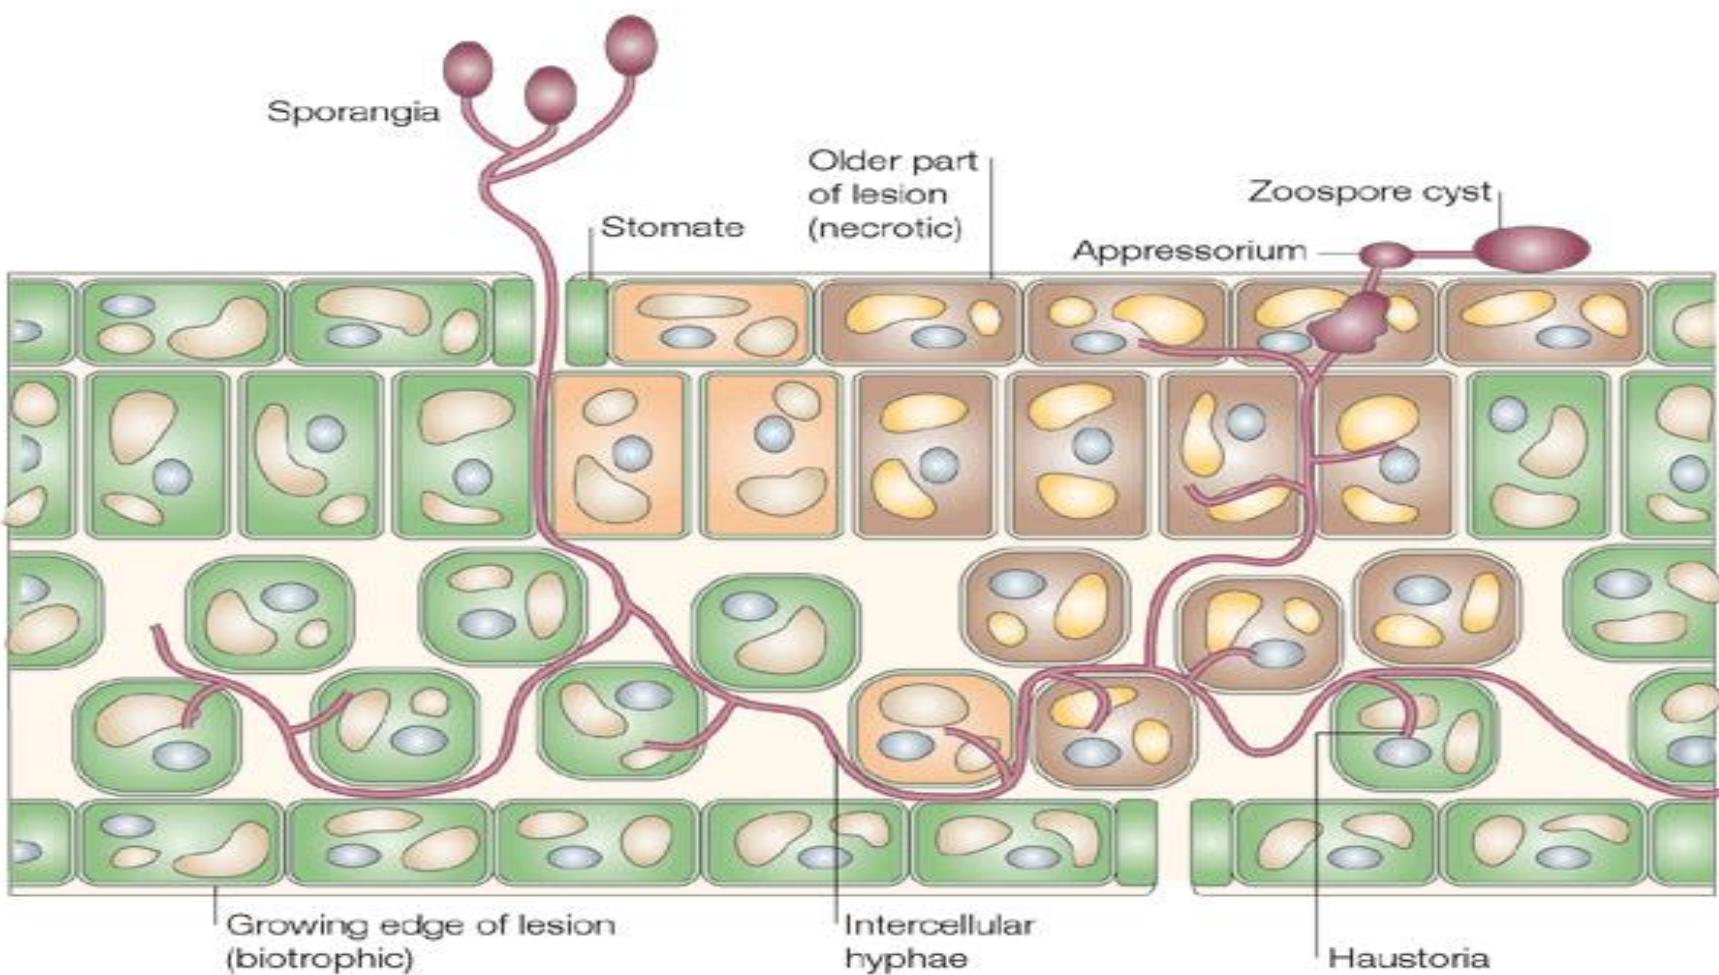

What is *Phytophthora infestans*?

- Name translates to “plant destroyer”
- Reproduces sexually and asexually

Heffer Link, Powelson, and Johnson. 2002.

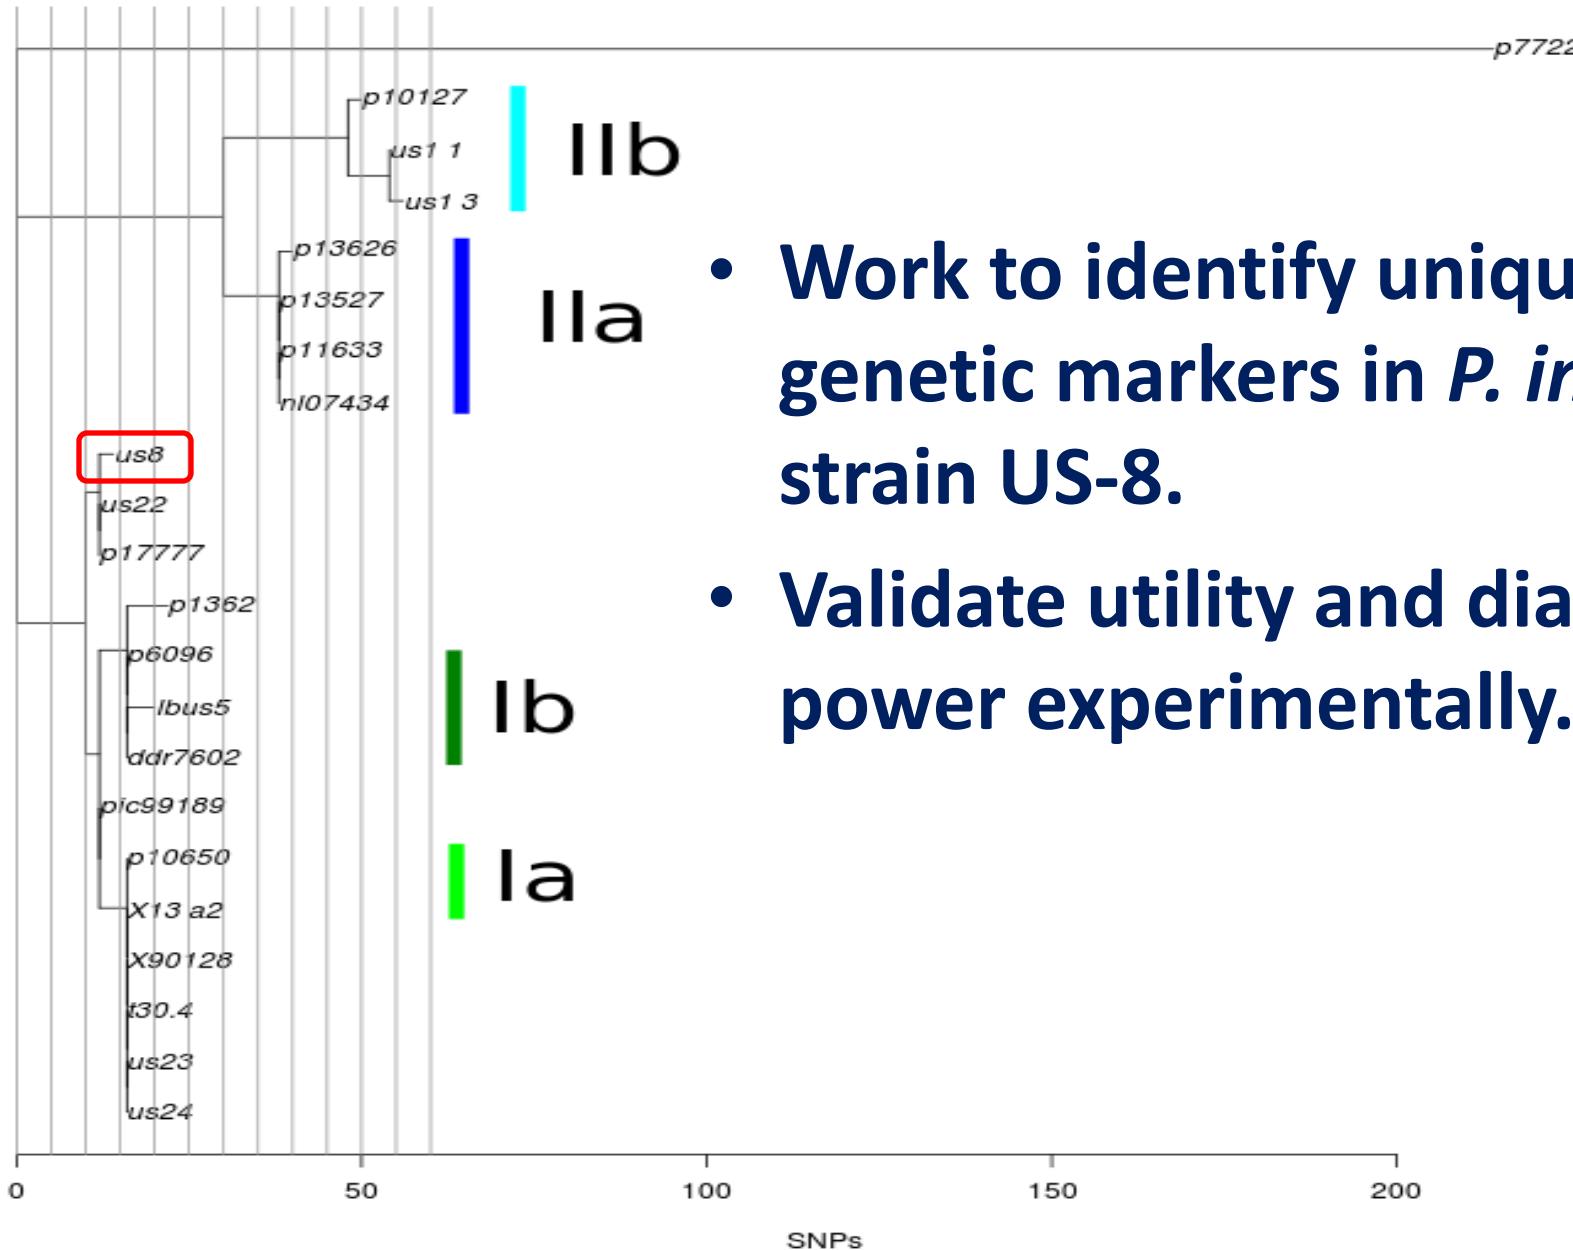

How does *P. Infestans* infect plants?

Nature Reviews | Microbiology

H.S. Judelson & F.A. Blanco. 2005. The spores of Phytophthora: weapons of the plant destroyer. Nature Reviews Microbiology 3, 47-58 (January 2005) doi:10.1038/nrmicro1064

Molecular techniques

Suspension of Primers

Biotinylate forward and reverse primers
using Qiagen PCR protocol

Run gel electrophoresis to high grade
selection process for pyrosequencing

Pyromark assay setup and run

Pyrosequencing

Results

Mitochondrial DNA

- 8 SNPs identified
- Primer sets designed
- PCR & Gel electrophoresis run
- 1 SNP pyrosequenced across 8 *P. infestans* lineages.
- Polymorphism was sequenced successfully, but was identical among the 8 lineages of *P. infestans*.

Nuclear DNA

- 4 SNPs identified
- Primer sets designed
- PCR & Gel electrophoresis run
- 2 SNPs run through pyrosequencer across 7 *P. infestans* lineages
- Samples were sequenced using the Sanger Method.

Assessment and Next Steps

- Validated method to bioinformatically call SNPs through pyrosequencing
- Pyrosequencing first step in validating larger SNP panels throughout the genome of *P. infestans*
- Continued work to identify and validate SNPs from nuclear and mitochondrial DNA of *P. infestans* lineages including US-8

Thanks

- Dr. Brian Knaus and Dr. Sydney Everhart
