This project was funded by Volunteering Matters as part of: 'Pathways to maximise the contribution of volunteering to public health'.
Thanks to Mandy James, Duncan Tree (Volunteering Matters), Dave Buck (The King's Fund), and Andrew Tyson (independent health consultant)

Introduction

Volunteering is associated with positive individual and community health outcomes.

However, in England and Wales only 27% of adults take part in regular formal volunteering¹.

The key research question was:
'What helps and hinders people – especially those at risk of social exclusion – taking part in volunteering?'

What we did

Rapid scoping review of published and grey literature; key literature on health inequalities and volunteering with a particular focus on barriers to volunteering.

'Protected characteristics' from Equality Act 2010 used as a framework – to examine multitude of exclusionary forces acting upon potential volunteers.

98 papers reviewed. 24 focused on the UK.

Data from Citizenship Survey: Community Spirit Topic Report (2009-2010) and Community Life Survey (2014-2015) of volunteering patterns in England and Wales.

Conclusions

An inverse care law – those with the greatest need are least likely to be able to take part in volunteering.

Range of barriers – these vary across the life course and for different groups.

Broader exclusionary factors – barriers passed on intergenerationally.

Need to address...

Exclusionary processes – foster human, economic and social capital – rather than 'target' groups.

Access issues – provide supportive enabling environments for volunteers, especially those at risk of social exclusion.

Impact - Ensure people are enabled to volunteer within diverse organisations and communities, in order to maximise the potential health and wellbeing benefits of volunteering.

Future research...

- barriers to volunteering – those experienced by different demographic groups, in a UK context
- comprehensive population-level data about volunteering

Key identified barriers to volunteering for different demographic groups

	Socialisation		Institutional factors			Personal Resources			View of volunteering			Caring responsibilities			Employment								
	Parental/peer support	Social justice/pro-social values	Volunteer management	Access to opportunities	Stigmatising/exclusionary context	Lack of appropriate support	Skills, qualifications	Time	Financial cost	Health/physical functioning	Transportation	Social connections	Poor perception	Knowledge volunteering/roles	Different conceptualisation	Domestic responsibilities	Caring roles	Not having children	Not being married	F/T employment	Not in F/T employment	Employer support	
Age (young people)	X	X		X	X		X	X	X				X										
Age (older people)			X	X	X		X	X	X	X			X			X							
Disability			X	X	X	X	X						X										
Gender (Men)		X						X					X					X		X			
Gender (women)				X			X	X			X				X	X				X		X	
Ethnicity				X	X	X	X		X				X	X									
Relationship status																		X					
Religion					X																		
Sexual orientation																							
Pregnancy/ Maternity (paternity)																		X					

Volunteering changes across the life course².

Men and women have different motivations and the relationship with volunteering is complex³. Women may be more likely to volunteer despite having free time constrained by housework/caring responsibilities (as reported).

No literature concerning transgender/gender reassignment

(heterosexual) marriage associated with volunteering...but what about changing family structures⁴?

Sexual orientation: no literature identified – surprising??
In the UK, a greater proportion of those identifying not as 'heterosexual' take part informal volunteering⁵.

People with a disability may encounter disablist attitudes and stigma; viewed as recipients not potential volunteers. May experience a relative lack of skills or concerns outside of 'safe' spaces⁶.

Different cultures think about volunteering differently and may experience less positive outcomes from volunteering⁷. A recent trend is for volunteering to increase among people from minority ethnic groups in England and Wales.

Being religious is associated with volunteering⁸. Attending church may create larger social networks but may form exclusionary boundaries.

No research about pregnancy/maternity (paternity) identified. People with children may be more exposed to volunteering opportunities (i.e. through school).
