Published 5 November 2018

There is an incorrect representation of the expression for resistances in parallel in equation (1) in section 4.1 ‘Voltage probe calibration’ on page 6. The numerator and denominator in the equation are reversed and should read:

$$I = U_C \frac{R_m + R_t}{R_m R_t}.$$

$R_m$  is the measuring resistor,  $R_t$  the terminating resistor at the oscilloscope and  $U_C$  is the voltage drop across  $R_m$  induced by the current  $I$ .

None of the calculations and conclusions of the paper are affected.

The authors apologise for any confusion that this transcription error may have caused.
