### Supplementary Figure S1

SBML models were extracted from Chapter 7 of the SBML specifications, Level 3 Version 2<sup>1</sup>, then they were loaded into Neo4j. The Arrows schema used and all nodes and relationships extracted from Neo4j were shown for each example. **A.** A simple example application of SBML. **B.** A simple example using the conversionFactor attribute. **C.** An alternative formulation of the conversionFactor example. **D.** Example of a discrete version of a simple dimerization reaction. **E.** Example involving assignment rules. **F.** Example involving algebraic rules. **G.** Example with combinations of boundaryCondition and constant values on Species with RateRule objects. **H.** Example of translation from a multi-compartmental model to ODEs (Ordinary Differential Equations). **I.** Example involving function definitions. **J.** Example involving delay functions. **K.** Example involving events **L.** Example involving two-dimensional compartments. **M.** Example of a reaction located at a membrane. **N.** Example using an event with a non-persistent trigger and a delay
