Zahraa AL-Taee, Sura Ihsan Abed Jabuk, Raflaa S.H. Hussian, Zainab H. Kareem, Yasir H. AL-Mawlah
64. Removal of Tetracycline from Aqueous Solutions using Pomegranate Peels Residues Accessing to ZRL. 349
Rajaa S. Abass Suad Turkey Ali, Tamara Sami Naji
65. Complications of Laparoscopic Cholecystectomy in a Sample of Patients Admitted to Al-Ramadi Teaching Hospital, Anbar-Iraq 354
Tarek Mahdi Salih
66. Physiological Study Comprising the Sequelae of Magnetic Radiation on Human 360
Wissam Sajid Hashim, Azal Hamoody Jumaa, Noor Thamer Alsaadi, Ayad Gaber Arean
67. Assessment of Transdermal Vasodilatory Effect of a Combined Panthenol, Amlodipine, Isosorbide Dinitrate and Betahistine HCl on Peripheral Vessels..... 365
Hussein Abdulkadhim A, Naser A Naser, Fadhaa A. Ghafil, Rana Talib Al-Nafakh, Karrar K. Alhaidary
68. Evaluation of Using Titanium Mesh in the Reconstruction of Traumatic Orbital Floor Fracture 372
Mukhalled Salim Alasady, Ihsan Abdullah Kumail, Alyaa Turkey Alsultany, Ali B. Roomi
69. Association of Epstein- Barr Virus (EBV) with the Development of Nasopharyngeal Carcinoma (NPC) in Western Region of Iraq: Unmatched Molecular Case-Control Study 378
Mothana Ali Khalil, Arkan Obaid Jasim Al-Essawi, Mohammed Tafash Dagash

VI

70. Molecular Detection of Toxogenic Cyanobacteria Isolated from Tigris River in Baghdad City –Iraq 385
Zainulabdeen H. A. AL-Khafaji, Ahmed S.Dwaish
71. Flame Atomic Absorption Spectrophotometry Analysis of Heavy Metals in Some Food Additives Available in Baghdad Markets, Iraq..... 390
Wasan Abdulwahid Jasim, Jassim Dawood Salman, Jasim Mohammed Shamar Jamur
72. Detection Malta Fever by Interferon-gamma and Steroid Hormone S Level 396
Ali Anok njum, Layla Saleh Abdul-Hassan Ihasan A. Hashem
73. Hepatic Toxicity in Patients with Rheumatoid Arthritis and Psoriasis Taking Methotrexate Therapy 402
Haider Hamza Omran, Basim Mohammed Mothlum
74. Scolicidal Activity of Zirconium Oxide (ZrO₂) nanoparticles Against Protoscolices of Hydatid Cysts 408
Amenah Abdul-Jabbar Ibrahim
75. Molecular Study of **Fimh** Gene in **Klebsiella Pneumoniae** Isolated From Urinary Catheter Patients 412
Israa Abdul Ameer Al-Kraety, Zahraa Hameed Oda Alquraishi, Aqeel A Alsadawi
76. Chemerin Level as a Marker in Preeclampsia and its Relation to the Disease Severity and Neonatal Outcome..... 417
Ali Mohammed Murad, Marwa Jaafar Sadac (M.B.Ch.B)²; Hanan Hazim Mohammed Noori (M.B.Ch.B, C.A.B.O.G, DGO)³
77. Production, Analysis and Optimization of Inulin Produced from **Pseudomonas fluorescens** 424
Alyaa Razooqi Hussein, Alaa Raheem Kadhim
78. Epidemiology of Hepatitis B and C in Al-Muthanna Province..... 431
Adian Abd Alrazak Dakl, Wafaa Ayad Alnuaimy

Inaam Ahmed Ameen, Sarah Hashim Mhaibes, Shahad Wisam Ahmed, Kaled Nather Taha And Dhikra Abdul Hameed Dawood
81. Robust Controller Electromyogram Prosthetic Hand with Artificial Neural Network Control and Position 447
Saygin Ahmed, Aydin S. Ahmed, Bülent Yilmaz, Nuran Dogru
82. Study the Genotoxicity of Aqueous and Alcoholic Extracts of **Adhatoda Vasica** on the Roots of **Allium cepa** L. by RAPD-PCR Technique 453
Adnan Owayez Jasim, Mohammed Mahdi Jawad
83. Histological Study of the Effect of Isoxicam on Ovary of Albino Mice Mus Musculus 459
Ali Khudheyer Obayes, Wurood Mohamed Mutar, Rasha Hamid Ayub, Sahar Abdullah Mohammed
84. Genotyping of Tumor Necrosis Factor- α in Inflammatory Bowel Iraqi Patients..... 465
Inas Fadhe, Wafaa Sabri Mahood

85. Antibacterial activity of Eruca Sativa Seeds Aqueous Extract Against Human Pathogenic Bacteria 472
Madeha H. Hussain, Aml Hendi Salih, Rajaa Hendi Salih, Ali S. Hassoon
86. Possible Role of Toxoplasmosis on Gene Sequence Alteration in Patients with Cardiovascular Diseases.. 476
Nazar Sh. Mohammed, Ammer Abd. Mohammed, Salwa S. Muhsin
87. Toxoplasma Gondii Infection and Toxoplasmosis in North Africa: A Review 480
Esraa Salman Jasim, Noor F. K. Al-Khawaja
88. Study the Cytochrome P450 Gene Expression Changes in Iraqi Patients with Chronic Liver Disease..... 485
Areej GH Al-Charak, Hamza H Kzar
89. The Reliability of Orthodontic Treatment, According to the Needs of Patients Using the Dental Aesthetic Index 490
Esraa Salman Jasim, Noor F. K. Al-Khawaja
90. Study the Protective Role of Arabic Gum Extract on Some Physiological and Histological Criteria for Liver of Male Rabbit Treated with Atrazine 497
Noor Rahi AL-Shimmari, Rasha Abdulameer Jawad
91. Relation between Working in Petrol Station and Blood Hemoglobin Levels for the Filling Workers in Al-Najaf City/ Iraq..... 504
Fulath Abdul-Redah Muhsin
92. Effect of Preoperative Breathing Exercise on Postoperative Patients' Lung Functions 509
Dhiaa A. Al-Reda, Rajha A. H.
93. Glomerular Diseases: Systemic Lupus Erythematosus is Most Common Finding: A Cross-Sectional Study 515
Fadhil Handhal Khleif, Haider Jebur Kehiosh, Salman Azeez Aljubori, Sabah Nemah Alfatlawi
94. Synthesis of Diimidazole Has Pyrazole, Isoxazole and Pyrimidine Derivatives and Evaluation as Antibacterial 520
Sahar Abdullah Kadham, Abdul Jabar Kh. Atia
95. Novel approach and Cloud Point Extraction Method for Determination of Acetazolamide Drug 525
Muna Iskandar Mahdi, Kassim Hassan Kadhim
96. Preparation and Characterization of Nano-Hydroxyapatite Particles and Chitosan by Sol-Gel Method (in Vitro Study)..... 532
Saja Kareem Esmael, Raghdaa Kareem Jassim, Rasha Mahdi
97. Inactivation of Enterococcus Faecalis in Drinking Water using Silver Nanoparticles Embedded Paper 539
Alaa H Al-Fatlawi, Shahad A. Raheem
98. Assessment of the Correlation between the Salivary Flow Rate and Dental Caries Experience among Children with β -Thalassemia Major 545
Mudhafar Fadhil Jaddoa, Alhan Ahmed Qasim
99. Determine Effect of Carbothera Therapy on Foot and Leg Ulceration for Diabetic Patients in Endocrine and Diabetic Center at Al-Nasiriya City..... 551

Abstract

Background: Urinary retention is a condition commonly seen after vaginal delivery, especially in the high-risk cases, such as assisted vaginal delivery, grade 3-4th perineal rupture, or another high risk. Urinary retention caused by unsynchronized between the contraction of the bladder detrusor. Urinary catheterization is one of the preventions of urinary retention. It gives a time for perineal trauma to relieve and no longer edema, so that urethra can be fully relaxed. Therefore, 24-hour catheterization expected to prevent bladder overdistention. It also prevents the bladder from becoming atonia.

Objective: This research aims to study the incidence of urinary retention in assisted vaginal delivery with and without 24-hour catheterization.

Method: This study used randomized control trials that compared two groups with 24-hour catheterization and without 24-hour catheterization. This study was conducted on 40 women in each group who experienced assisted vaginal birth at Dr Soetomo Hospital, Indonesia.

Result: Six women (15%) experienced urinary retention with 24-hour catheterization and six women (15%) had urinary retention without catheterization. There was no significant difference in the incidence of urinary retention with 24-hour catheterization and without 24-hour catheterization (p -value = 1.00). Also, there was no significant interference of urinary retention in the normal and prolonged second stage of labor (p -value = 0.736), and there was no significant risk factor contributing to urinary retention.

Conclusion: No significant difference in urinary retention occurred in assisted vaginal delivery with and without 24-hour catheterization.

Keywords: urinary retention, assisted vaginal delivery, catheterization.

Introduction

Urinary retention is a condition commonly seen in post vaginal delivery¹⁻³. This condition may become bladder overdistention and atrophy of bladder detrusor. If not treated immediately, this condition may become worse and increase into hospital stay^{4,5}. If not treated properly, urinary retention will turn into acute urinary retention^{6,7}. The variation incidence may occur due

to the broad definition of urinary retention. Urinary retention may be classified as overt and covert. Overt type is symptomatic, characterized by the inability to spontaneous micturition wheater covert is a type of asymptomatic while the patient cannot empty the bladder adequately so there is a little residual volume in the bladder. This classification often difficult to classified due to the difference in residual urine volume between 50-250 ml⁸. Urinary retention incidence also varied in some country. In Canada, according to Musselwhite, urinary retention incidence occurs in 4.7%. In Denmark, previous research report it only 0.7% in 2003⁸. Lim KJ report 6% case from 860 vaginal delivery in Korea⁹.

Glavind K and Bjork J report that 33% of women with assisted vaginal delivery experience urinary retention. Also, 17% of episiotomy may complicate urinary retention and 33% of anal sphincter rupture contribute and 33% use of epidural anesthesia may contribute as well to urinary retention. A significant risk contributed to assisted vaginal delivery and sphincter rupture⁸. In 2010, previous study reported 10.6% urinary retention case in India. An assisted vaginal delivery and longer stage of labor significantly contribute to urinary retention¹⁰. Another study also reports 0.2% of urinary retention. Primiparity, epidural anesthesia, assisted vaginal delivery, episiotomy, prolonged stage 1, and stage 2 labor significantly increase the risk of urinary retention. In 35 women who underwent assisted vaginal delivery, 16 of them experience urinary retention¹¹. Carley stated that assisted vaginal surgery and epidural anesthesia are independent risk factors¹². Yip stated urinary retention after labor may worry about the impact, even after 2-5 days of revocery¹³.

Unidentified urinary retention may over distended bladder and need prolonged catheter use. The use of a 24-hour catheter in post vaginal delivery women with the risk factors of urinary retention is expected to prevent overdistention of the bladder. Catheters are also often used for Ventriculo Peritoneal (VP) bypass surgery, and the resulting complications are very rare¹⁴. At Dr Soetomo Hospital, Surabaya, there is no certain protocol to prevent urinary retention, including 24-hour catheterization in post vaginal delivery. Since assisted vaginal delivery significantly risks to cause urinary retention, this study aims to compare the incidence of urinary retention in assisted vaginal delivery with and without 24-hour catheterization.

Method

This randomized control trial study was conducted at Dr. Soetomo General Hospital Surabaya for nine months. All subjects were gathered by consecutive sampling. The study population divided into two groups with a random lottery. One group consisted of women who underwent assisted vaginal surgery, then were treated with 24-hour catheterization, the other group was without 24-hour catheterization. Each group used a female catheter no.12 to gather residual urine and to ensure there was no residual urine bladder. Analgesia with sodium diclofenac was administered to women with post assisted vaginal delivery.

In the group with 24-hour catheterization after 24 hours, the catheter use was discontinued then observed for 6 hours. The residual urine samples were collected and classified in urinary retention if the residual urine volume were 200 ml or more. The group without 24-hour catheterization was observed for 6 hours after labor. If a subject could not spontaneously urinate in 6 hours, She was then treated the same as the 24-hour catheterization group. The residual urine volume was calculated by ultrasonography using the Koelbl formula described in Figure 1. The statistical Analysis employed T unpaired test, Chi-square test, and the Mann-Whitney test. All analyses were conducted using SPSS.

Results

As 80 subjects met the inclusion criterion, all subjects had homogenous characteristics in age, newborn birth weight, parity, instrumentation during labor, episiotomy, and perineal rupture. In stage 2 labor. As many as 75% of the women in the control group and 50% of the women in the experimental group had a prolonged second stage. These women had experienced assisted vaginal surgery before. A chi-square test was used to compare both groups with significant test results (p-value = 0.021).

The urinary retention was classified if the residual urine volume was more than 200 ml. Statistical analysis using chi-square revealed that there were no significant differences between the two groups (p-value = 1.00), as displayed in Table 2. To identify whether there was the interference of the second stage of labor in urinary retention, a statistical analysis using the Fischer test was performed. The analysis revealed no significant difference between the two groups as shown in Table 3. These subject risk factors were present and could affect

the incidence of urinary retention. To identify whether there was an interference of risk factors, multivariate analysis was conducted as displayed in Table 4. The analysis revealed no significant risk factor contributing to urinary retention (p-value >0.05).

Figure 1. Koelbl formula, $V = 0.7 (H \times W \times DL)$. H = height, highest superoinferior diameter, DL = depth, highest anteroposterior diameter, the height and depth are measured from sagittal aspect. W = width, is the highest anterolateral diameter measured from the transversal aspect. KK = bladder⁹.

Discussion

These complex factors explained why there is no significant difference in urinary retention incidence between both groups. Therefore, 24-hour catheterization is expected to prevent bladder overdistention. It also prevents the bladder from becoming atonia. Traumatic factors such as the vulva or urethral injury cannot be eliminated. Nevertheless, the micturition requires coordination between detrusor muscle contraction

and urethral relaxation. Subject characteristics in this study become known risk factors of urinary retention. Many studies report consistent risk factors for urinary retention. A previous study of a case-control study reported 52 cases of overt urinary retention in 860 postpartum women. Risk factors, such as perineal trauma and prolonged second stage, are significant in urinary retention ⁹.

In this study at Dr. Soetomo General Hospital, mediolateral episiotomy also contributed to risk factors compared to the subjects who do not undergo episiotomy (OR 3,2). Some study reported that assisted vaginal surgery is a significant risk factor for urinary retention. In this study, the researchers utilized 24-hour catheterization to prevent the weakening of detrusor muscle due to overdistention. In the group without 24-hour catheterization, a researcher found six subjects with urinary retention due to the inability to urinate in the first six hours or residual urine more than 200 ml, and 34 subjects could spontaneously urinate in six hours.

In the group with 24-hour catheterization, six subjects had urinary retention. One subject had symptom relief after first try intermittent catheterization, and five subjects were relieved after two times intermittent catheterization. Statistical analysis, t unpaired test revealed no significant difference between both groups. In this study, the second stage of labor was found as a confounding factor. In the group without 24-hour catheterization, the subjects with the prolonged second stage were greater than in the group with 24-hour catheterization. This factor was significant. To eliminate this factor, statistical analysis was conducted using the Fischer test. The result was there no significant interference of urinary retention in the group with 24-hour catheterization, where the subjects experienced a prolonged second stage or normal second stage of labor.

According to the previous study, urinary retention had occurred due to the neurological dysfunction, immobilization, trauma of the vulva, abnormality in bladder contraction, spasm of the external urethra due to perineal rupture¹³. In this study, all subjects were administered with mefenamic acid as analgesia. Risk factors such as the duration of the second stage of labor (OR 8.179), parity (2.387), and episiotomy procedure (3.200) contributed to urinary retention incidence, respectively.

Conclusion

There is no significant difference in urinary retention incidence in assisted vaginal delivery with and without 24-hour catheterization. However, this study requires more research with a bigger number of samples to determine the effect of 24-hour catheterization as prevention of urinary retention in assisted vaginal surgery.
