Dear Dr. Romdhoni,

Thank you for sending me the manuscript. I have skimmed through it and made suggested change as well as some comments. I hope you can incorporate my input and replace the submitted manuscript. In particular, please pay attention to the following:

Statements regarding the conclusions need to be consistent, i.e. smoking was associated with an increased incidence of NPC, but the OR did not reach statistical significance.

I cannot tell where in the process that the meta-analysis was limited to case-control studies. It looks like by coincidence all the studies included were case-control studies. Did you exclude studies simply because they are not case-control studies? If so, why? Cohort studies and cross-sectional studies are also relevant.

The study “Delfitri M (2011). No Association between HLA-DQB1 Genotypes with Nasopharyngeal Carcinoma in Batak Ethnic Groups in Indonesia. Biomedical Research 22(2)” was cited in the main text and tables but not included in the References.

If possible, please add some discussions about the effects of sex.

I will be more than happy to take a look at a revised version of the manuscript.

Sincerely,

How-Ran Guo, MD, MPH, ScD
