Background

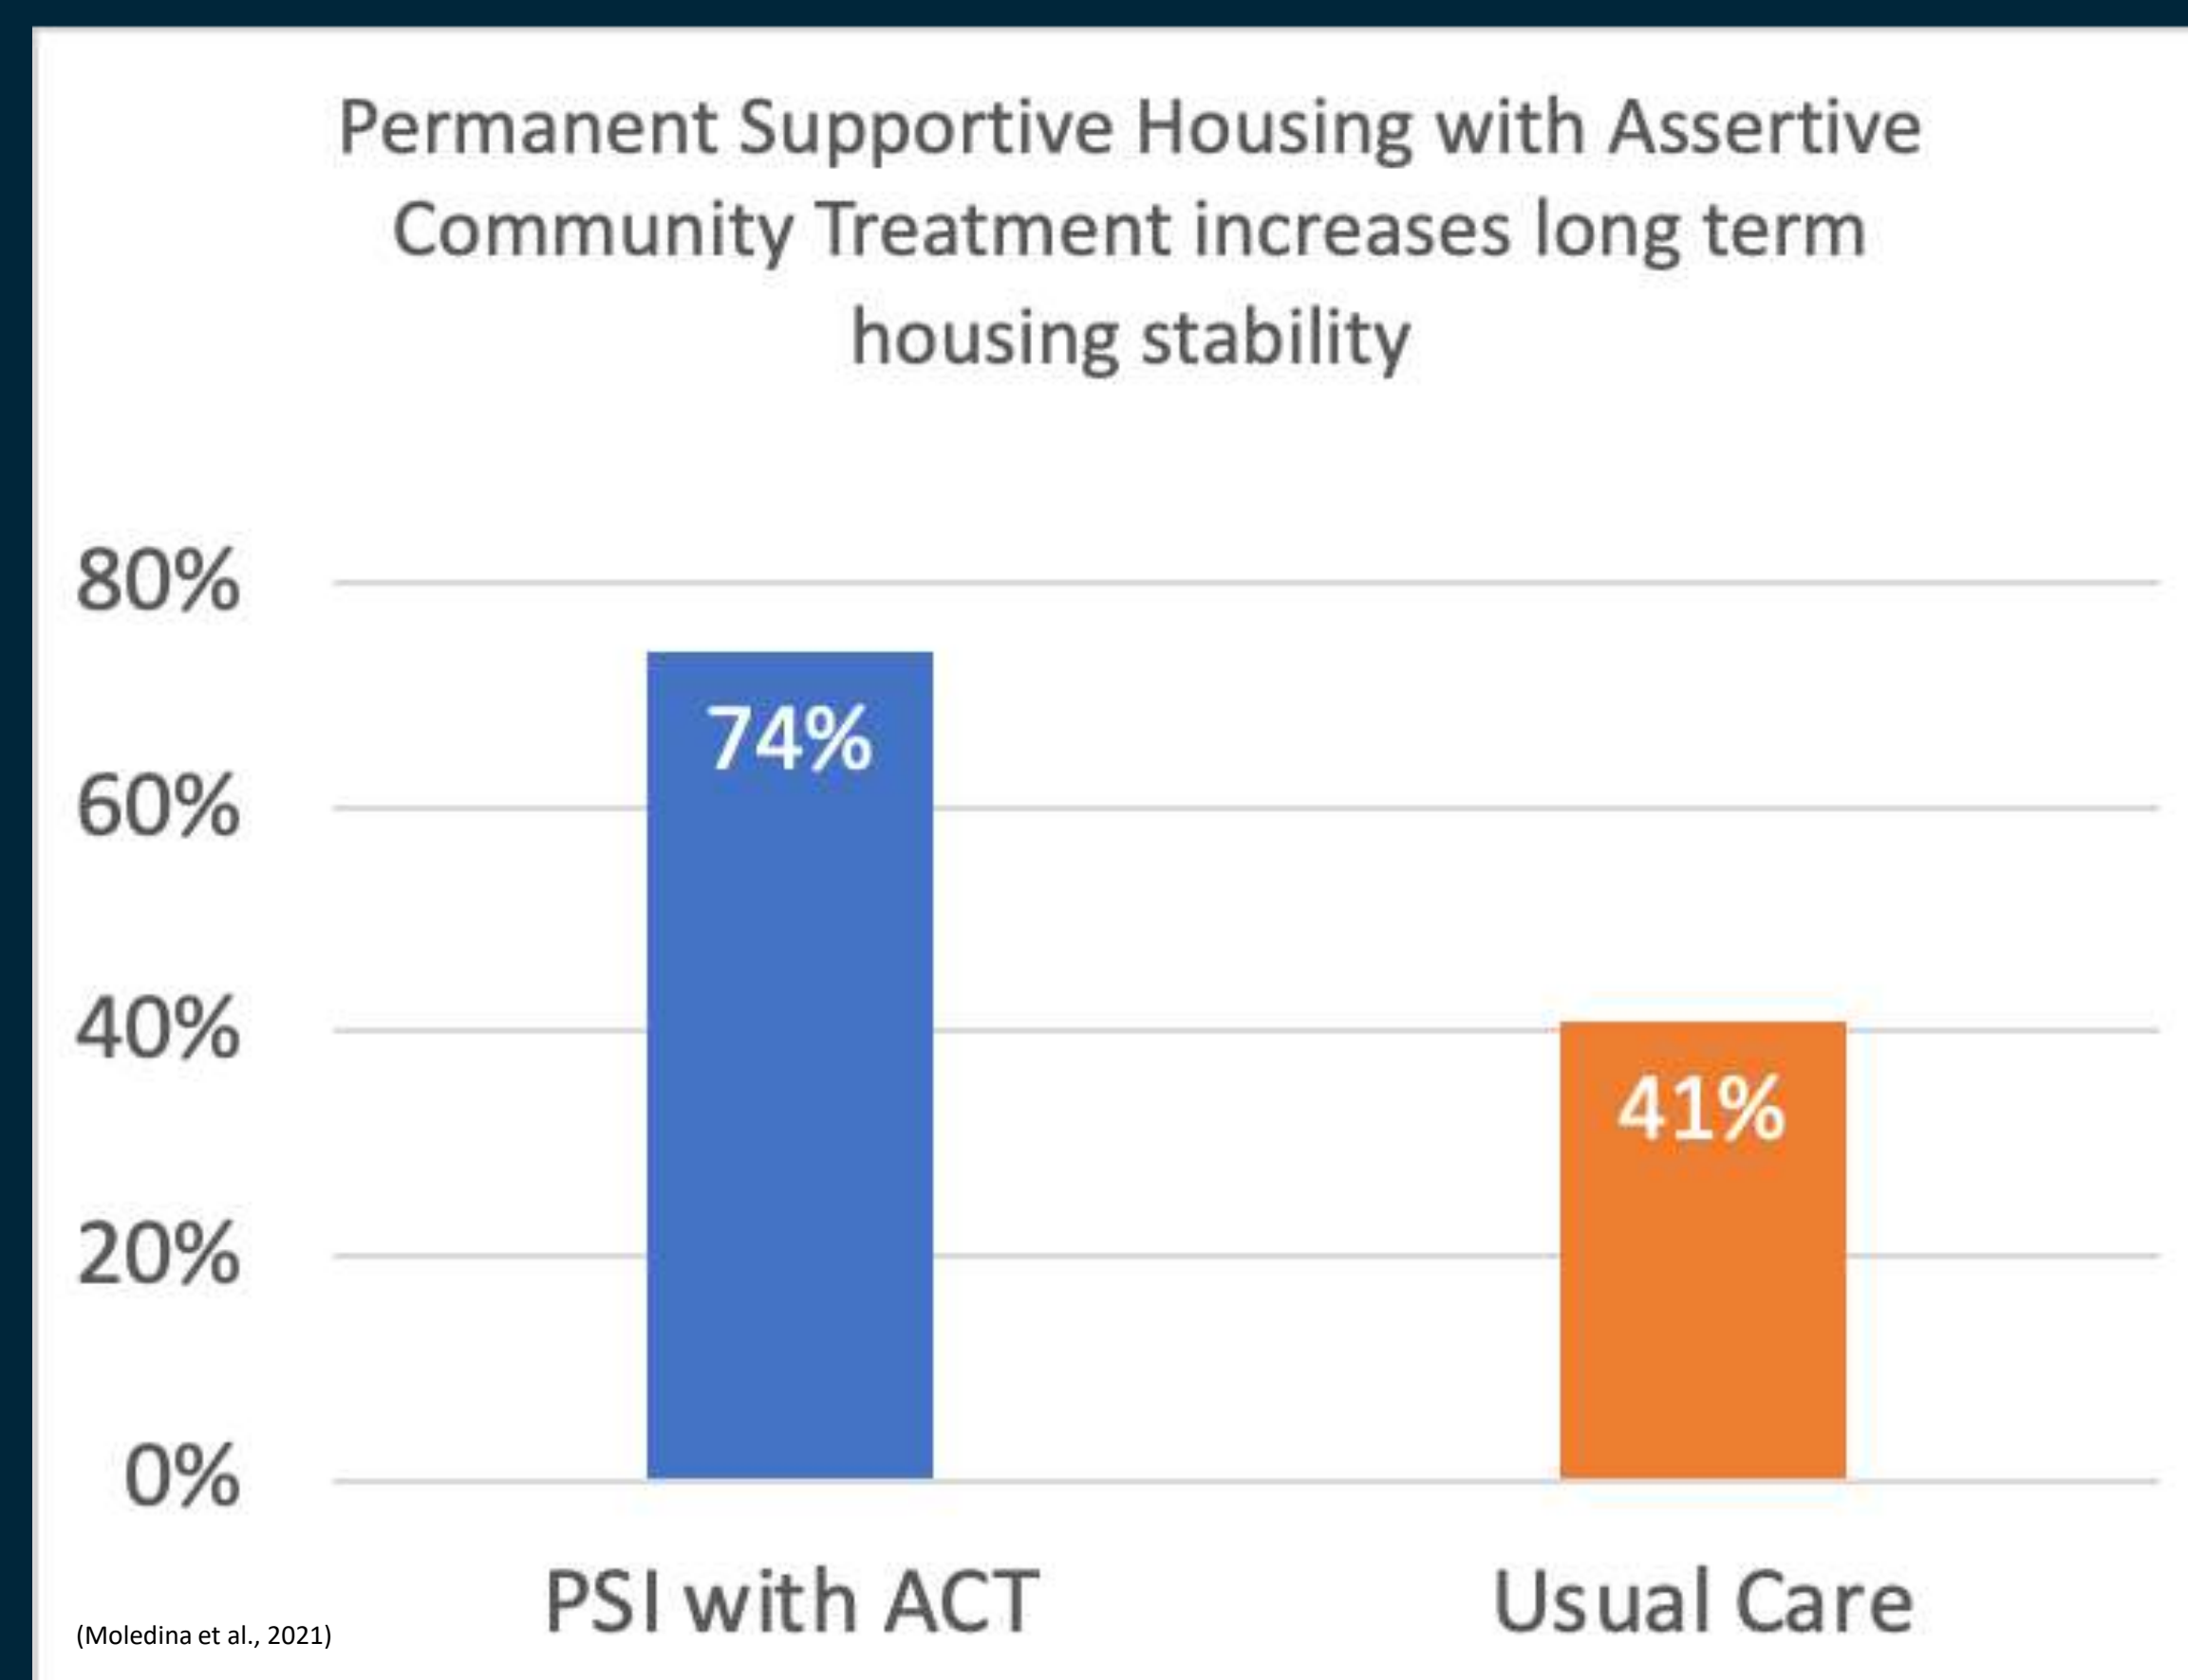

The Factotum lab with a community partner, Housing Connect, conducted lit reviews to utilize limited resources to find the most effective tools for upward mobility.

- In Utah, 3,131 individuals experienced homelessness on a given day in 2020 (USICH, 2020)
- Effective and cost-efficient practices can help those experiencing homelessness gain upward mobility and housing stability (Aubry et al., 2020)

What practices and programs can provide significant improvements on targeted outcomes?

Lit Review

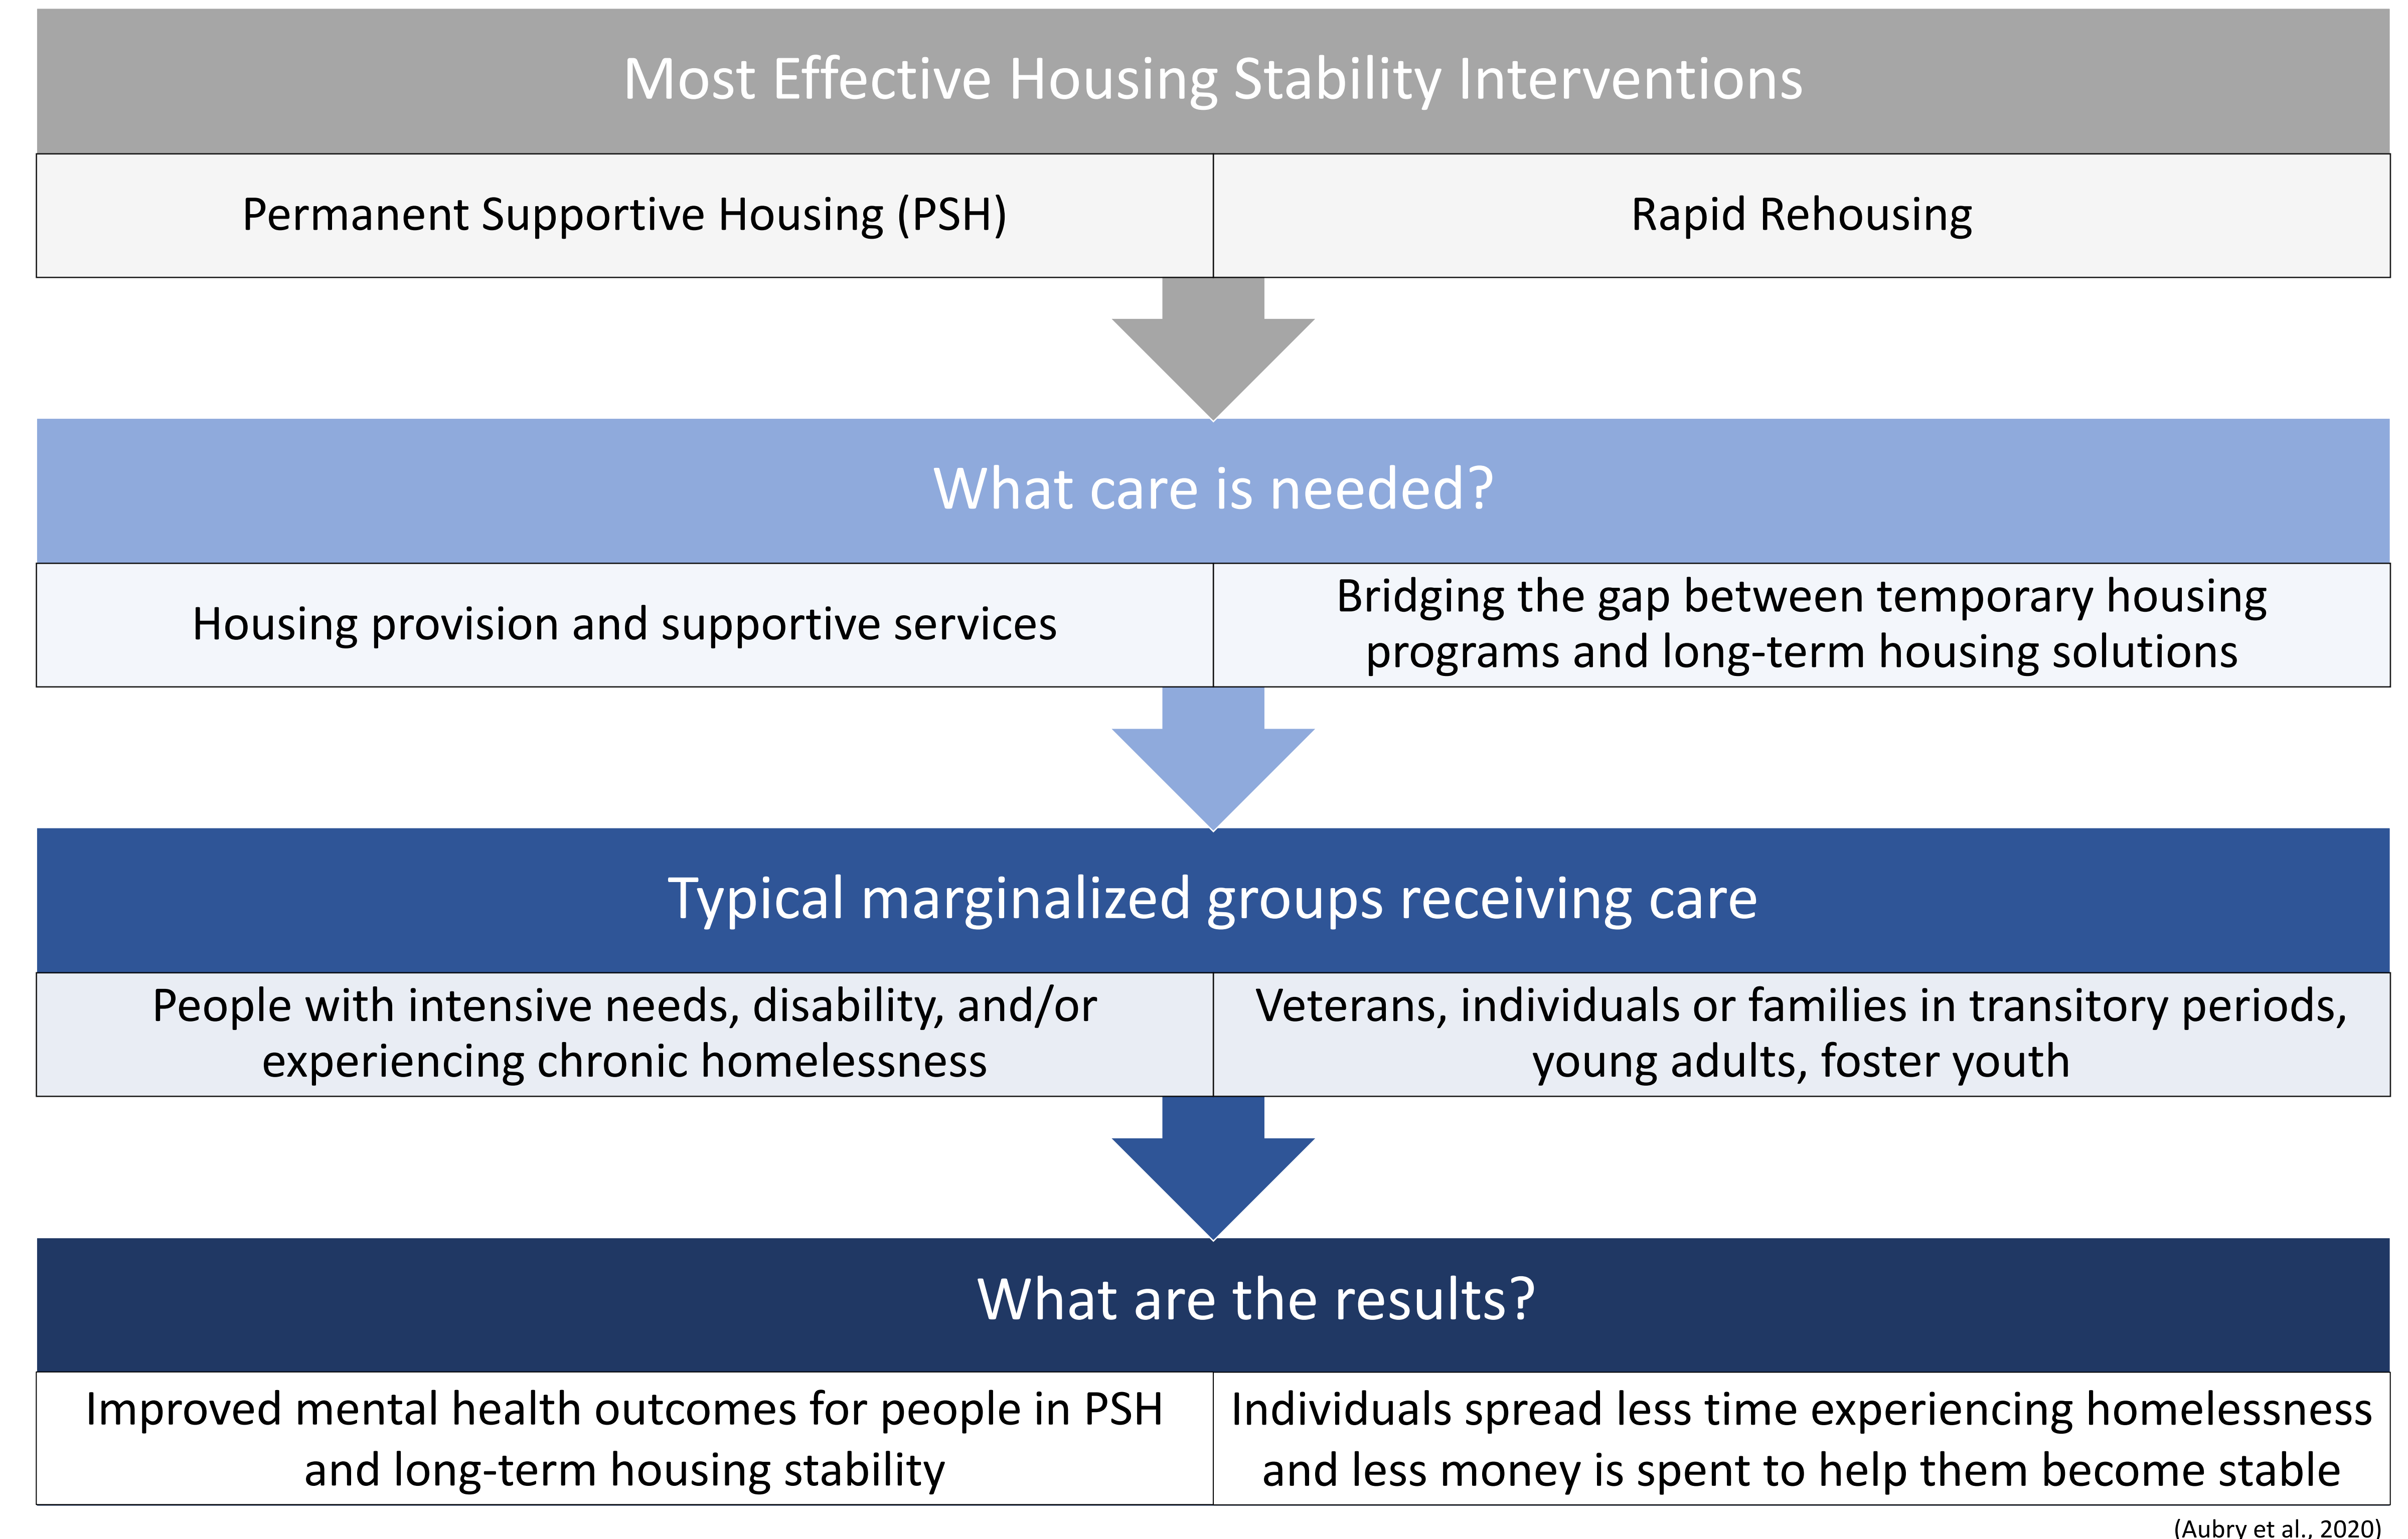

- On average, Rapid Rehousing is 1/5th the cost of similar alternatives (Cunningham & Bakto, 2018)
- Assertive Community Treatment (ACT) had a greater reduction in homelessness than usual care (Coldwell & Bender, 2007)

Conclusion

Rapid Rehousing and Permanent Supportive Housing can provide stable housing for those who have various needs:

- Individuals with severe mental illness
- Individuals with disability
- Those experiencing chronic homelessness

Targeted outcomes for people experiencing homelessness can be improved through **supportive housing with case management and health interventions**
