## INTERNATIONAL SCIENTIFIC COMMITTEE

**assoc. prof. Filip Kokalj, PhD, Faculty of Mechanical Engineering, Maribor, Slovenia, president**

prof. Andrea Matta, PhD, Politecnico di Milano, Milano, Italy

prof. Boštjan Pokorny, PhD, dean of Faculty of Environmental Protection, Velenje, Slovenia

Prof. Ute Margarete Meyer, PhD, dean of Faculty of Architecture and Energy Engineering, Biberach, Germany

prof. Alessandro Gasparetto, PhD, Polytechnic Department of Engineering and Architecture, Udine, Italy

prof. Niko Samec, PhD, Faculty of Mechanical Engineering, Maribor, Slovenia

prof. Ana Paula Vale, PhD, Polytechnic Institute of Viana do Castelo, Viana do Castelo, Portugal

prof. Michalis Koniordos, PhD, University of West Attica, Athens, Greece

prof. Anka Trajkovska Petkoska, PhD, Faculty of Technology and Technical Sciences-Veles, North Macedonia

prof. Yury Kuznetsov, PhD, Orel State Agrarian University, Orel, Russia

prof. Mohhamed-Salah Aggoune, PhD, University of Batna 2, Algeria

prof. Ilija Nasov, PhD, Faculty of Technology and Technical Sciences-Veles, North Macedonia

prof. Tihomir Latinović, PhD, Faculty of Informational Technologies, Vitez University, Travnik, Bosnia and Herzegovina

prof. Driss Nehari, PhD, Ain Timouchen University, Algeria

prof. Viliana Vasileva, PhD, Agricultural Academy, Institute of Forage Crops, Pleven, Bulgaria

prof. Dorin Camen, PhD, Faculty of Engineering and Applied Technologies, Timisoara, Romania

prof. Elizabeta Miskoska-Milevska, PhD, Faculty of Agricultural Sciences and Food, Skopje, North Macedonia

assoc. prof. Srećko Stopić, PhD, Aachen University, Germany

assoc. prof. Ezzaldeen Edwan, PhD, Palestine Technical College – Deir El-Balah

assoc. prof. Plamen Zahariev, PhD, University of Ruse "Angel Kanchev", Ruse, Bulgaria

Muharrem Hilmi Aksoy, PhD, Konya Technical University, Konya, Turkey

Gregor Rak, MSc, Vocational College of Traffic and Transport Maribor, Slovenia

Darko Ljubić, PhD, McMaster University, Hamilton, Canada

Dániel Kovács, Hungarian Museum of Architecture and Monuments Protection Documentation Center, Budapest, Hungary

Nataša Kraljević, LL.M., University Mediterranean, Podgorica, Montenegro

prof. Petar Uskoković, PhD, dean of Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

prof. Srđan Glišović, PhD, dean of Faculty of Occupational Safety, University of Niš, Serbia

prof. Goran Čpajak, dean of Faculty of Applied Arts, University of Arts in Belgrade, Serbia

Branko Savić, PhD, president of Conference of Academies of Applied Studies Serbia

prof. Aleksandar Petrović, PhD, Faculty of Mechanical Engineering, University of Belgrade, Belgrade, Serbia

prof. Aleksandar Jovović, PhD, Faculty of Mechanical Engineering, University of Belgrade, Belgrade, Serbia

assoc. prof. Biserka Vukomanović Đurđević, PhD, Military Medical Academy, Belgrade, Serbia

Marina Stamenović, PhD, president of Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

## PROGRAM COMMITTEE

**prof. Slaviša Putić, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia, president**

prof. Vojkan Lučanin, PhD, Faculty of Mechanical Engineering, University of Belgrade, Belgrade, Serbia

prof. Aleksandar Marinković, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

prof. Evica Stojiljković, PhD, Faculty of Occupational Safety, University of Niš, Niš, Serbia

prof. Momir Prašević, PhD, Faculty of Occupational Safety, University of Niš, Niš, Serbia

prof. Tanja Manojlović, MA, Faculty of Applied Arts, University of Arts in Belgrade, Belgrade, Serbia

assoc. prof. Saša Drmanić, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

assoc. prof. Milivoj Pavlović, PhD, Faculty of Fine Arts, University of Arts in Belgrade, Belgrade, Serbia

assoc. prof. Zoran Štirbanović, PhD, Technical Faculty, University of Belgrade, Bor, Serbia

doc. Vladimir Pavičević, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

doc. Katarina Trivunac, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

doc. Maja Đolić, PhD, Faculty of Technology and Metallurgy, University of Belgrade, Belgrade, Serbia

Danica Stojiljković, PhD, University of Belgrade – Institute for Multidisciplinary Research, Belgrade, Serbia

Aleksandra Patarić, PhD, Institute for Technology of Nuclear and Other Mineral Raw Materials, Belgrade, Serbia

Ivana Jovičić, PhD, Institute of Pesticides and Environmental Protection, Belgrade, Serbia

Dejan Blagojević, PhD, Academy of Technical Educational Vocational Studies, Niš, Serbia

prof. Dragan Šešlija, PhD, Faculty of Technical Sciences, University of Novi Sad, Novi Sad, Serbia

Valentina Mladenović, PhD, Technical College of Applied Sciences, Zrenjanin, Serbia

Dominik Brkić, PhD, Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

Aleksandra Nastasić, PhD, Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

Tatjana Marinković, PhD, Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

Predrag Drobnjak, PhD, Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

Goran Zajić, PhD, Academy of Applied Technical Studies Belgrade, Belgrade, Serbia

## ORGANIZING COMMITTEE

**Ana Popović, PhD, president**

**Nebojša Ćurčić, MSc, deputy president**

Predrag Maksić, PhD

Dragana Gardašević, PhD

Dragana Kuprešanin, PhD Arts

Aleksandra Božić, PhD

Zlata Živković, PhD

Tatjana Sekulić, PhD

Novak Milošević, MSc

Aleksandra Janićijević, MSc

Ana Cvijanović, MA

Natalija Gaković, MA

Aleksandra Božović, MSc

Milan Marković, MSc

Svetlana Živanović, MSc

## REVIEWERS

Svetozar Sofijanić, PhD, Marta Trninić, PhD, Radenko Rajić, PhD, Nikola Tanasić, PhD, Goran Đorđević, PhD, Daniela Ristić, PhD, Nebojša Ćurčić, MSc, Jasmina Rajić, PhD, Filip Kokalj, PhD, Ana Popović, PhD, Olivera Jovanović, PhD, Aleksandra Božić, PhD, Vesna Alivojvodić, MSc, Dominik Brkić, PhD, Darko Ljubić, PhD, Nataša Radić, MSc, Tatjana Sekulić, PhD, Aleksandar Stevanović, PhD, Saša Marković, PhD, Nada Ratković Kovačević, PhD, Aleksandar Petković, MSc, Đorđe Đurđević, PhD, Anka Trajkovska Petkoska, PhD, Ilija Nasov, PhD, Marko Jauković, PhD, Ivana Matić Bujagić, PhD, Aleksandar Ivković, MSc, Aleksandra Nastasić, PhD, Koviljka Banjević, PhD, Dragana Gardašević, PhD, Ana Slavković, PhD, Zorica Baroš, PhD, Dragana Đurić, PhD, Aleksandra Pavlović, PhD, Jasmina Đurašković, PhD, Bosiljka Srebro, PhD, Brankica Pažun, PhD, Željko Ranković, PhD, Biljana Ranković Plazinić, PhD, Svetlana Živanović, Dejan Jovanov, PhD, Marko Pavlović, PhD, Vladanka Stupar, PhD, Goran Zajić, PhD, Nenad Đorđević, PhD, Žolt Kovač, PhDArts, Ljubomir Maširević, PhD, Željko Zdravković, PhDArts, Jelena Zdravković, MA, Predrag Maksić, PhD, Dragana Kuprešanin, PhDArts, Jelena Drobac, PhDArts, Oliver Tomić, PhD, Duško Radaković, MSc, Natalija Gaković, MA, Sandra DePalo, MA, Ana Cvijanović, MA, Rajko Radosavljević, PhDArts, Muharrem Hilmi Aksay, PhD, Zlata Živković, PhD, Darko Stojićević, PhD, Michallis Koniordos, PhD, Tatjana Marinković, PhD, Marina Stamenović, PhD, Plamen Zahariev, PhD, Bogdan Marković, PhD, Andrijana Đurđević, PhD, Danijela Živojinović, PhD, Saša Marković, PhD, Đorđe Dihovični, PhD, Dragana Velimirović, PhD, Bojan Ivljanin, PhD

## FOREWORD

The International Scientific and Professional Conference POLITEHNIKA 2023 represents the seventh edition of the POLITEHNIKA scientific and professional events, occurring biannually since its inaugural event in 2011. POLITEHNIKA 2023 upholds a distinguished tradition and commitment to integrating higher education and practical application across a diverse spectrum of disciplines represented by defined thematic scopes.

Organized with the patronage of the Ministry of Education of the Republic of Serbia, the Ministry of Environmental Protection of the Republic of Serbia, the Ministry of European Integration of the Republic of Serbia, the Directorate for Occupational Safety and Health, the Office for Dual Education and National Qualifications Framework, the Conference of Academies of Applied Studies in Serbia, the Chamber of Commerce of Serbia, the Chamber of Commerce of Belgrade, the Institute for Standardization of Serbia, the Association of Belgrade Architects, the City of Požarevac and the Tourist Organization of the City of Požarevac, POLITEHNIKA 2023 stands as a collaborative platform at the intersection of academia, governmental institutions and industry.

This year heralds a notable progression with its international status and the incorporation of 10 conference scopes. Expanding beyond the thematic domains featured in previous events, the Conference now encompasses Environment and Sustainable Development, Occupational Safety and Health and Fire Safety, Smart Management Systems, Graphic Engineering, Design, Traffic Engineering, Biotechnology and Healthcare, Mechanical Engineering, Ecotourism and Rural development, and Mechatronics. By engaging experts, emerging professionals, and practitioners from these domains, the conference unifies fields of study programs of the Academy of Applied Technical Studies Belgrade. The thematic scopes, coupled with the structure of the compiled papers in this Proceedings, exhibit a rich diversity and multidisciplinary approach, fundamentally contributing to a holistic examination and resolution of societal and scientific challenges.

Comprising over 220 peer-reviewed contributions, the Proceedings represent a substantial intellectual asset, aligning with the conference's overarching objective of fostering the exchange of knowledge, research findings, and professional experiences among experts from industry, research institutions, and higher education establishments.

The Proceedings of the International Scientific and Professional Conference POLITEHNIKA 2023 serve as a comprehensive snapshot of the current landscape within the thematic realms of the conference, offering both insights and directives for ongoing scientific and professional development. Moreover, they proffer concrete solutions to practical challenges grounded in contemporary trends and pertinent insights.

The Academy of Applied Technical Studies Belgrade extends its sincere appreciation to all conference supporters whose financial contributions played a pivotal role in its successful realization. Special acknowledgment is reserved for the authors of the papers, whose diligence and eagerness to present their work to a wider audience, alongside the reviewers and members of the International Scientific Committee, Program Committee and Organizational Committee, have collectively contributed to the triumph of the International Scientific and Professional Conference POLITEHNIKA 2023.

Belgrade, December 2023  
EDITORS

## ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

### INVITED PAPERS

**Srećko Stopić, PhD, Bernd Friedrich, PhD, Process Metallurgy and Metal Recycling, RWTH Aachen University, Germany**

*Advances in understanding of a role of unit metallurgical operations for recycling*

**Svetlana Grujić, PhD, Faculty of Technology and Metallurgy, University of Belgrade**

*Emerging pollutants in the environment: contamination of the Danube river basin in Serbia*

**Marija Nikolić, PhD, Faculty of Technology and Metallurgy, University of Belgrade**

*Biodegradable polyesters – from ecology to medicine*

## DESIGN

### INVITED PAPER

**Jelena Ristić Trajković, PhD, Faculty of Architecture, University of Belgrade**

*Society, Ecology and Design Education: Transformative Learning for Future Sustainable and Healthy Environments*

## MECHANICAL ENGINEERING

### INVITED PAPERS

**Tamara Bajc, PhD, Faculty of Mechanical Engineering, University of Belgrade**

*Energy savings and CO<sub>2</sub> emission reduction potential through the existing building renovation*

**Marko S. Jarić, PhD, Innovation Centre of Faculty of Mechanical Engineering in Belgrade**

*Analysis of remediation of horizontal cylindrical tank for oil storage*

## ECOTURISAM AND RURAL DEVELOPMENT

### INVITED LECTURES

**Marko Perić, PhD, Faculty of Tourism and Hospitality Management, University of Rijeka, Croatia**

*Challenges of sustainable tourism: Example of Croatia*

**Snežana Štetić, PhD, Balkan Network of Tourism Experts, Igor Trišić, PhD, Faculty of Geography, University of Belgrade**

*Selective forms of tourism and sustainable development of rural tourist destinations*

### INVITED PAPERS

**Radomir Stojanović, PhD, Western Serbia Academy of Applied Studies**

*Education as a pillar of sustainable agritourism in Serbia*

**Jelena Premović, PhD, Faculty of Economics, University of Priština & Faculty of Economics and Engineering, University Business Academy in Novi Sad**

*Cultural heritage as a generator of sustainable development of tourism in local communities in the countries of the Western Balkans*

**Vladimir Živanović, Nevena Majstorović, Zlatibor Tourism Organization, Zlatibor**

*Analysis of the real number of tourist overnights based on the estimation of water consumption in Zlatibor*

## MECHATRONICS

### INVITED PAPER

**Andrea Matta, PhD, Dept. of Mechanical Engineering, Politecnico di Milano, Italy Mohsen Jafari, PhD, Dept. of Industrial and Systems Engineering, Rutgers University, USA**

*Towards a theory of digital twins: fundamental definition*

# TABLE OF CONTENTS

## SCOPE 1. ENVIRONMENT AND SUSTAINABLE DEVELOPMENT

<b>Srećko Stopić, Bernd Friedrich</b> <i>Advances in understanding of a role of unit metallurgical operations for recycling</i>	26
<b>Svetlana Grujić</b> <i>Emerging pollutants in the environment: contamination of the Danube river basin in Serbia</i>	32
<b>Marija Nikolić</b> <i>Biodegradable polyesters – from ecology to medicine</i>	38
<b>Alessandro Gasparetto, Stefano Grimaz</b> <i>The ESPeRT project: a “polytechnic” strategic plan focused on sustainability</i>	44
<b>Ana Stojković, Miodrag Stanisavljević, Ivan Krstić, Nenad Krstić, Dragan Đorđević</b> <i>Physical-chemical characterization of waste glass of general use</i>	50
<b>Ljiljana Tolić Stojadinović, Svetlana Grujić, Nikolina Antić, Tatjana Đurkić</b> <i>Impact of wastewater antibiotics on river water quality in Belgrade area</i>	54
<b>Nataša Karić, Marija Vukčević, Marina Maletić, Mirjana Ristić, Aleksandra Perić Grujić, Katarina Trivunac</b> <i>Removal of organic and inorganic pollutants from aqueous solutions using starch-diatomaceous earth adsorbent</i>	60
<b>Nataša Karić, Marina Maletić, Sara Živojinović, Marija Vukčević, Milena Milošević, Katarina Trivunac, Aleksandra Perić Grujić</b> <i>Alkali modification of fly ash for adsorption of selected dyes</i>	66
<b>Katarina Popović, Davor Antanasijević, Jelena Antanasijević, Viktor Pocajt</b> <i>Carbon footprint of bio-based and recycled plastic materials</i>	71
<b>Katarina Popović, Davor Antanasijević, Jelena Antanasijević, Viktor Pocajt</b> <i>Application of machine learning for the simulations and modeling in environmental science</i>	77
<b>Jasmina Bašić, Danijela Pecarski, Dragana Dragaš Milovanović, Slavica Krsmanović, Daka Tešić</b> <i>Air quality according PM concentration in the city of Belgrade in September 2023</i>	83
<b>Jelena Vesković, Milica Lučić, Slavica Ražić, Ivana Deršek-Timotić, Andrijana Miletić, Maja Đolić, Antonije Onjia</b> <i>Multivariate analysis of the Morava river plain groundwater</i>	89
<b>Eleonora Gvozdić, Ivana Matić Bujagić, Tatjana Đurkić, Svetlana Grujić</b> <i>Ecological risk assessment of aspartame and neotame in river sediments</i>	95
<b>Mirjana Ocokoljić, Djurdja Petrov</b> <i>Impact of urban heat island on butterfly-bush (<i>buddleja davidii franch.</i>)</i>	100
<b>Mirjana Ocokoljić, Djurdja Petrov, Dragan Vujičić</b> <i>Effects of urbanisation on <i>simplicarpos orbiculatus moench</i> in the green infrastructure of Belgrade</i>	106
<b>Anja Bubik, Katrin Školnik Škrabe</b> <i>Chemical variability of personal care and cosmetic products</i>	112
<b>Miloš Tošović</b> <i>Technical-technological disasters, risk assessment and environmental security</i>	118

<b>Radule Tošović</b> <i>Economic considerations of the relationship of national income, mineral reserves and environmental accounting</i>	124
<b>Slavica Krsmanović, Danijela Pecarski, Jasmina Bašić</b> <i>Quality of swimming pool water and hygiene</i>	130
<b>Jelena D. Lukić, Latinka J. Slavković-Beškoski, Katarina V. Trivunac, Antonije E. Onjia</b> <i>Analysis of heavy metal(loid)s in coal fly ash leachate by inductively coupled plasma optical emission spectrometry</i>	134
<b>Andrijana Miletić, Antonije Onjia</b> <i>Analysis of carbon monoxide in ambient air using passive sensors</i>	139
<b>Ivana Trajković, Milica Sentić, Slobodan Cvetković, Andrijana Miletić, Antonije Onjia</b> <i>Analysis of BTEX in sediments by purge-and-trap gas chromatography-mass spectrometry</i>	145
<b>Saša Marković, Darja Žarković</b> <i>Economic instruments in the function of environmental protection</i>	150
<b>Jelena Milosavljević, Snežana Šerbula, Tanja Kalinović, Jelena Kalinović, Ana Radojević</b> <i>Overview of air pollution in the city of Bor during the period of 2020–2022</i>	156
<b>Milan Trumić, Vladimir Nikolić, Mirjana Marić, Jelena Janković</b> <i>Mining solid waste around Bor, yesterday, today, tomorrow</i>	162
<b>Danijela M. Jašin, Ljubica Lazić Vulićević, Valentina Mladenović, Aleksandar Rajić</b> <i>The solution for reusing non-recyclable plastic-based materials</i>	167
<b>Filip Živković, Milica Stojković, Maja Đolić, Mirjana Čujić</b> <i>Elemental analysis of rare earth elements in coal fly ash from thermal power plants in the Republic of Serbia</i>	173
<b>Darja Žarković, Saša Marković</b> <i>Sustainable production in cardboard industry</i>	177
<b>Marija Prosheva, Jadranka Blazhevaska Gilev</b> <i>Sensors for ammonia detection based on carbon nanofiller</i>	182
<b>Marija Prosheva, Jadranka Blazhevaska Gilev</b> <i>Investigation of the UV stability of lignin/polymer composites</i>	188
<b>Ana Momčilović, Marta Trninić</b> <i>A comprehensive analysis: offshore renewable energy methodologies, benefits, and limitations</i>	193
<b>Danijela Đurić Mijović, Danijela Milanović, Jelena Savić, Miloš Nedeljković, Dušan Randelović</b> <i>Wind comfort design based on building position</i>	199
<b>Zaga Trišović, Tomislav Trišović, Ana Virginia Socalici, Corneliu Banesa Birtok</b> <i>Innovative system for electrochemical active chlorine production in coaxial and cabinet-type reactors</i>	204
<b>Đorđe Karić, Aleksandra Sretenović-Dobrić</b> <i>Analysis of energy-saving measures in residential buildings connected to district heating systems using information technology</i>	209
<b>Bosiljka Srebro, Stefan Milojević, Miljan Adamović</b> <i>Environmental accounting education for sustainable development: a comprehensive overview</i>	214
<b>Vladana Đurđević, Aleksandra Janićijević, Dominik Brkić, Ana Popović, Marina Stamenović, Aleksandra Božić</b> <i>Validation of the ICP-OES method for determining the elemental composition of water</i>	219
<b>Vladana Đurđević, Jelena Pavlović, Bojan Obradović, Ana Popović, Marina Stamenović, Aleksandra Božić</b> <i>Proficiency testing as a tool for quality control of laboratory test results in environmental pollution analysis</i>	225

<b>Radmila Marković, Zoran Stevanović, Zoran Štirbanović, Vojka Gardić, Renata Kovačević, Vesna Marjanović, Jelena Petrović</b> <i>Monitoring of the surface water quality in copper mining and metallurgy operation areas in Bor</i>	231
<b>Biljana Angjusheva, Ildiko Merta, Emilja Fidancevski</b> <i>Sustainable synergy: alkali-activated coal fly ash and CDW in sustainable construction</i>	237
<b>Vaishnavi Inamdar, Ana Popović</b> <i>Global ESG perspectives and the changing world of 2023: a sustainability odyssey</i>	242
<b>Nikola Stojković, Dominik Brkić, Svetlana Čupić, Aleksandra Božić, Sladjana Glišić, Vladana Đurđević</b> <i>Determination of polychlorinated biphenyls in waste oil</i>	247
<b>Dejan Vasić, Vladana Đurđević, Marina Stamenović, Aleksandra Božić, Aleksandra Janićijević, Dominik Brkić</b> <i>Determination of PAHS in medical waste</i>	252
<b>Vesna Alivojvodić, Aleksandra Vučinić</b> <i>EU taxonomy as a framework for a functioning circular economy</i>	256
<b>Milica Marković, Ana Momčilović, Maja Stanković</b> <i>Environmental concerns of lithium battery disposal</i>	261

## STUDENTS PAPER

<b>Miloš Kovačević, Nataša Radić</b> <i>Air pollution caused by modern-day armed conflict</i>	266
<b>Danijela Jeremić, Daniela Ristić</b> <i>Influence of "Stubo-Rovni" dam on climate change in the city of Valjevo</i>	272

## SCOPE 2. OCCUPATIONAL HEALTH AND SAFETY AND FIRE SAFETY

<b>Marta Trninić</b> <i>Application of 3D random e-glass fiber composites in construction hardhat design</i>	278
<b>Drago Pupavac, Ljudevit Krpan, Josip Knežević</b> <i>Cost-benefit analysis in employee health and safety protection</i>	284
<b>Svetozar Sofijanić, Vladan Pantović, Veljko Ognjanović</b> <i>Centralized information system for monitoring workplace injuries</i>	290
<b>Dragan Živanić, Nikola Ilanković</b> <i>Safety concerning cableways</i>	296
<b>Dragan Živanić, Nikola Ilanković</b> <i>Basic safety measures for chain conveyors</i>	302
<b>Nataša Ćirović, Ana Petrović, Marija Burilo</b> <i>Testing of microclimate and physical harms in the sawmills</i>	308
<b>Ana Petrović, Nataša Ćirović</b> <i>Noise level investigation in production process</i>	314
<b>Vesna Marjanović, Jelena Jelisić</b> <i>Comparative analysis of risk assessment in the field of construction</i>	320
<b>Saša Kuzmanović</b> <i>Analysis of assessed professional risks at the workplace of forklift drivers in the Logo company with comparative risk assessment methodologies and reference to the current law</i>	325

<b>Marija Mićanović, Tanja Radović</b> <i>Implementation of strategies for the development of critical thinking in English language teaching among the students of the Occupational safety and health study program at the Academy of applied technical studies Belgrade</i>	331
<b>Tanja Radović, Marija Mićanović</b> <i>Business communication obstacles in English language in occupational health and safety education</i>	335
<b>Radenko Rajić, Ivan Arandjelović, Nikola Tanasić</b> <i>A novel tabular method for estimation of waterflow rate at the hydrant nozzle</i>	338
<b>Goran Đorđević, Martina Petković, Ljubinko Rakonjac, Marko Tomić, Anita Klikovac</b> <i>Selection and use of mechanized equipment for extinguishing forest fires in order to increase efficiency - methodological approach</i>	342
<b>Darko Marković, Nebojša Ćurčić</b> <i>Prevention of occupational risks in transport and installation of concrete prestressed T-girders on project Iverak-Lajkovac</i>	350

## STUDENTS PAPER

<b>Milena Andrejević</b> <i>“Near miss” events in the TPS Zemun reconstruction project: a research and analysis</i>	357
<b>Maja Đikić, Novak Milošević</b> <i>Research and analysis of professional stress issues among employees in security roles</i>	363
<b>Lazar Milićević, Novak Milošević</b> <i>The impact analysis of stress accumulated outside the workplace on the occupational safety and health of employees in Institute of Nuclear Sciences „VINČA”</i>	368
<b>Jelena Tintor, Jasmina Rajić, Igor Babić</b> <i>Researching the harmful effects of cooling liquid on employees</i>	374
<b>Jelena Tintor, Jasmina Rajić, Igor Babić</b> <i>Employee safety during plastic deformation metal processing</i>	380
<b>Milica Marković</b> <i>Chemical hazards in horticulture from the aspect of occupational safety and health</i>	385
<b>Marijana Drakulić</b> <i>Potentially explosive atmospheres in flour production</i>	391

## SCOPE 3. SMART MANAGEMENT SYSTEMS

<b>Radoslav Raković</b> <i>Information security management standard and personal data protection – practical experiences</i>	398
<b>Miloš Jelić, Ana Aksentijević Jelić</b> <i>Deficiencies and advancement in organizational strategic decision - making</i>	404
<b>Igor Milić</b> <i>Civil protection management model at the local government level</i>	410
<b>Dragan Zlatković, Kostadinka Stojanović, Mirjana Tomić, Nebojša Denić</b> <i>Artificial Intelligence as support for quality 4.0: a review of current applications and future directions</i>	415
<b>Koviljka Banjević, Jovana Femić</b> <i>Adult education in Serbia and countries in the region</i>	421

<b>Dragana Gardašević, Dragana Rošulj, Mina Radišić, Koviljka Banjević</b> <i>Application of the Pareto analysis in quality control</i>	428
<b>Aleksandra Nastasić, Dragana Rošulj, Koviljka Banjević, Aleksandra Pavlović</b> <i>The influence of digital transformation on customer perception</i>	433
<b>Ana Maksimović</b> <i>The effectiveness of environmental social and governance due diligence in driving sustainable outcomes in the outdoor apparel industry</i>	439
<b>Aleksandra Pavlović, Aleksandra Nastasić, Andrea Ivanišević</b> <i>QMS and EMS implementation in Serbian organizations – a driving factor for sustainable development</i>	445
<b>Ana Maksimović</b> <i>Socially responsible chains: investigating the social implications of supply chain due diligence in corporate sustainability</i>	453
<b>Aleksandra Pavlović, Aleksandra Nastasić, Predrag Drobnjak, Ana Langović Milićević, Andrea Ivanišević, Ivana Katić</b> <i>PPP projects and economic growth in Serbia</i>	459
<b>Marija Marčetić, Danijela Misoloska, Bojan Kocić</b> <i>The threats and opportunities in modern forwarding business</i>	467
<b>Jelena Pavlović, Dragica Stanković</b> <i>Contemporary approach to leadership, management, knowledge and innovation</i>	472
<b>Marko Pavlović, Ana Petrović, Đorđe Pavlović</b> <i>Study on the attitudes of electronic banking users in Serbia</i>	477
<b>Jelena Pavlović, Dragica Stanković</b> <i>New technologies, labor market and human resources</i>	484
<b>Zorica Baroš</b> <i>The impact of the kelvin redefinition within the SI System on the improvement of temperature measurement technologies</i>	490
<b>Ana Đokić, Hana Stefanović</b> <i>Analysis and visualisation of COVID 19 data set in Python programming language</i>	496
<b>Sanja Pavlović, Dejan Crnoglavac, Aleksandar Starčević</b> <i>Examining the role of drones as educational tools: an practical teaching example in enhancing learning experiences in STEM education</i>	501
<b>Đorđe Dihovični, Dragan Kreculj, Nada Ratković Kovačević</b> <i>Experiences in teaching and mastering materials in WEB applications in vocational education</i>	507
<b>Marko Pavlović, Ana Petrović, Đorđe Pavlović</b> <i>E-learning: study on students' opinions</i>	513

## SCOPE 4. GRAPHIC ENGINEERING

## PANEL SHEAR PROPERTIES OF CARBON FIBER REINFORCED LVL BOARD REINFORCED LVL BOARD

*Neda M. Sokolović<sup>1</sup>, Faculty of Architecture, University of Belgrade  
Ivana Gavrilović-Grmuša<sup>2</sup>, Faculty of Forestry, University of Belgrade  
Nenad Šekularac<sup>3</sup>, Faculty of Architecture, University of Belgrade*

**Abstract:** *Problem of rational use and lack of quality wood raw material for producing veneer boards, can be solved using poor quality wood raw materials for design composite veneer board. Poplar LVL panels do not have structural use because of its mechanical properties. Fiber reinforced composites can improve mechanical properties of wood-based panels, and thus enable the structural use of poplar panels. Synthetic fibers can reinforce panels, minimize the negative properties of wood raw material and improved dimensional stability of the board. This paper presents the results of experimental testing of the panel shear tests of unreinforced and reinforced seven-layer LVL (laminated veneer lumber) poplar veneer panels. The aim of the research is to determine the influence of woven carbon fibers on the improvement of the panel shear test of LVL, in order to test the potential of using this composite material as a structural element. The orientation of fibers has a strong influence on the reinforcement. The main research task is investigation the effects of orientation of the carbon fibers and their position in the panel construction on the shear properties of the panel. This research present possibility of applying poplar veneer to design structural elements in LVL using epoxy adhesive.*

**Keywords:** mechanical properties; LVL; CFRP; epoxy.

### 1. INTRODUCTION

Wood as a natural material used throughout history as one of the most commonly materials in construction. As natural material wood have great potentials for use in construction, due to its availability, easy processing and good physical and mechanical properties. The disadvantage of wood raw material is that not every type of wood is suitable for structural use, especially fast-growing soft species. Domestic wood species like poplar wood are very common in south Europe. The two leading countries that encourage the use of poplar in the construction industry and its structural application are Italy and Spain. With its 32,000 ha, Serbia is the 5<sup>th</sup> country in Europe in terms of the area of poplar plantations [1]. Lower load capacity and weaker mechanical characteristics compared to other species used for structural timber, make poplar is a less represented species in the construction industry. In order to make the best possible use of wood raw materials, wood-based products were made. Products based on veneer layers, plywood and laminated veneer lumber (LVL) are of special importance, and they stand out additionally due to their mechanical and aesthetic performance. Advantage of composite products like LVL and plywood is on distributing the errors through the panel and eliminating them in production. This reduce the variability in material properties, and equalize the mechanical properties of the product in the longitudinal and transverse direction. In order to improve mechanical properties of wood raw material and wood-based products, various

strengthening techniques have been investigated throughout history. Strengthening timber construction with synthetic materials has been the subject of research studies since the 1960s [2]. The pioneers of using polymer composites - glass fiber reinforced polymers (GFRP) for strengthening of wood were Wangaard and Biblis [3]. During early 2000s, these authors continued to improve this idea, and examined the bending properties of three- and five-layer plywood reinforced with glass fiber fabric using phenol-based adhesives [4]. More intensive research in this area was made in the last ten years, and they mostly focused on bending properties of composite product created from wood veneer and fiber reinforced polymers. The research of mechanical properties of reinforced veneer based panels or LVL, can be defined into two types of reinforcement - carbon or glass fibers. The flexural strength and modulus of elasticity were tested on three- and five-layer boards made of pine veneer, reinforced on the outside with two-way woven glass mesh in two layers, impregnated with polyester resin [4]. Examining the influence of the amount of fibers on the buckling of GFRP-reinforced veneer panels when exposed to compressive stresses and their behavior when exposed to different temperature conditions was investigated by Choi (S.W) and others [5, 6]. Investigation of the influence to mechanical and physical properties of panel using glass fabrics reinforcement with fibers oriented in two directions and their position in the veneer panel construction show significant improvements, especially to modulus of elasticity and modulus of rupture [7, 8]. An examination of the influence of the amount of carbon fibers in the strengthening of plywood with CFRP products on its mechanical properties and, above all, on its bending properties was presented in research by Brezović et al. [9]. Strengthening of veneer-based panels with carbon fibers oriented in two directions and analysis of their position in construction on the mechanical properties of the plywood [10] shows an increase in flatwise bending strength, tensile strength, and Young's modulus of elasticity. Just a few researches analyse the examination of the panel shear properties of composite LVL or plywood panel. For the structural application of these panels, it is very important to examine that mechanical properties.

Depending on the design and position in the construction, panels can be exposed to different types of loads, differ primarily in their direction and position, which means that the elements are exposed to different type of stress. Panels used as diaphragm due to their small static height cannot accept bending perpendicular to the plane of the plate, and the diaphragms are designed as complex cross-sections of veneer plates and substructures. In these constructions, veneer based panels have the role of accepting shear forces perpendicular to the plane of the plate when the structure is exposed to a horizontal load, or shearing in the plane of the plate that occurs as a result of bending under the effect of gravity load. Potential of new reinforced material is to use panels as structural element, to unconventional way. This implies to use panel for folds, polygonal shells and structures formed in a constructive system of reciprocal constructions. To use panel as described, it needs to have exceptional resistance to in-plane compression and tension, as well as perpendicular to planar and panel shear.

This research investigates the possibility of producing composite panels based on veneer reinforced with CFRP. The aim of the research is to determine the influence of woven carbon fibers on the improvement of the panel shear test of LVL, in order to test the potential of using this composite material as a structural element. The main research task is investigation the effects of orientation of the carbon fibers and their position in the panel construction on the shear properties of the panel.

The focus is on the investigation of the possibility of applying this material as structural elements in architectural buildings, especially those exposed to forces in the plane of the plate, like beams, polygonal shells and folded structures.

## **2. MATERIALS AND METHODS**

### **2.1 Veneer**

In this study, constructive poplar veneers, produced by peeling (rotary-peeled veneers) at a thickness of 4 mm and humidity of  $7 \pm 1\%$ , were selected for the formation of LVL panels. All veneers are cut to dimensions of approx.  $550 \times 550 \times 4$  mm. Reinforced and control LVL panels were formed from

all veneers. Four set of sheets were formed using epoxy adhesive (EK panels). Three types of reinforced sheets and one type of non-reinforced sheet were formed. LVL panels were produced in the laboratory at the Faculty of Forestry.

## 2.2 Adhesives

Epoxy adhesive Mapei “MapeWrap 31” was applied in all layers, between the veneers as well as between the veneers and the fiber reinforced polymer (FRP). The adhesive was formed in a mass ratio of A:B = 4:1 (according to Technical sheet [11]). The same amount of adhesive was applied to each glueline and each layer of CFRP wood on both sides of the carbon fabric. Epoxy adhesive properties show in Table 1.

**Table 1.** Epoxy adhesive properties

Source: [11]

Technical properties	Epoxy	
	Resin – A	Hardener - B
Density $\rho$ (20°C) (g/cm <sup>3</sup> )	1.05	1.12
Brookfield viscosity (mPa·s (25°C))	17000	110

## 2.3 Woven carbon fiber

The unidirectional "plain-weave" type of knitting carbon fiber, MapeWrap C UNI-AX 300/40", weighing around 300 g/m<sup>2</sup>, was used for reinforcement. The physical and mechanical properties of the CFRP fabric are shown in Table 2.

**Table 2.** Physical and mechanical properties of MapeWrap C UNI-AX 300.

Source: [12]

Technical properties	MapeWrap C UNI-AX 300
Mass (g/m <sup>2</sup> ):	300
Density (kg/m <sup>3</sup> ):	1800
Equivalent thickness of dry fabric (mm):	0.164
Load resistant area per unit of width (mm <sup>2</sup> /m):	164.3
Tensile strength (MPa)	≥ 4900

## 2.4 Manufacturing LVL

All panels are produced as seven-layer panels with six veneer sheets oriented in the longitudinal direction, and the central, fourth veneer sheet oriented perpendicular to the grain of the outer veneer sheets. Reinforcements are placed between the veneer layers, according to the following scheme, shown in Figure 1:

- Combination 1 (K1) – reinforcement placed in the first and sixth glueline (S1 || 6 ||), unidirectionally oriented, carbon fibers placed longitudinally, parallel to the grain of outer veneer;
- Combination 2 (K2) – reinforcement placed in the first and sixth glueline, parallel-oriented as outer veneer, and the third and fourth glueline - perpendicular to the direction of orientation of the outer veneer sheets (S1 || 3<sup>⊥</sup>4<sup>⊥</sup>6 ||);
- Combination 3 (K3) – reinforcement placed in two layers perpendicular to each other, forming a mesh in two directions. The fabrics are placed in the first and sixth glueline (S1 || <sup>⊥</sup>6<sup>⊥</sup> ||), taking into account the symmetry of the cross-section;
- Combination 4 (K4) – unreinforced panels, i.e. control reference samples.

For each combination, 3 panels measuring 50×50 cm were formed. All plates were pressed in a laboratory press for 15 minutes from the moment of reaching a temperature of 100°C in the central layer at a pressure of 1.5 MPa. After that, they were stored for a week for additional curing. After that, 30-mm edges were trimmed off of the panels, and samples were cut from the panels. Samples

dimensions 150x50 mm, were conditioned in standard climate ( $20\pm 2$ )°C and ( $65\pm 5$ )% relative humidity during 30 days.

Determination of shear strength perpendicular to the plane of the panel or panel shear test was performed according to the standard [13] SRPS CEN/TS 14966:2010 Wood-based panels - Small-scale indicative methods for testing certain mechanical properties using a small-scale indicator (Figure 2).

### 3. RESULTS AND DISCUSSION

The test results for the test samples are shown in Table 3. For reinforce with two longitudinal, two longitudinal sheets and two perpendicular sheets, and sheets in disposition like a mash, the critical panel shear strength has increased by about 20.42%, 22.04%, 44.75%, respectively, compared to the untreated plate. These results show that higher panel shear load can be achieved using fiber reinforcement in two directions.

The best results are for combination K3, where carbon is oriented like mesh, in bi-directional orientation. In all tested samples, fracture occurred due to exceeding the shear stress. The fracture starts in the central sheet of veneer, whose wood fibers are transversely oriented in relation to the outer sheets of veneer, in the direction of the pressure force. In all other layers, shear occurs, which is manifested by the compression of fibers. Complete crush and cutting of the wood fibers does not occur, the fabric helps the test sample remains coherent (Fig.3).

**Table 3.** Shear properties of RLVL and LVL in edgewise directions, epoxy adhesive.

Combination	$f_{v,0,edge}$ (N/mm <sup>2</sup> )	x (%)
EK1	15.16	20.42%
EK2	15.36	22.04%
EK3	18.22	44.75%
EK4	12.59	

Note:  $f_{v,0,edge}$  – average shear stress, x – increase of average shears stress relative to EK4

For combination 2 the mechanical damage of the test samples is less expressed compared to EK1. All test samples have the same forms of damage. In this combination the possibility of splitting along the longitudinal fibers of the wood was reduced.

On all the test samples of Combination 3 the fracture occurred by shear stress, but the deformations on the samples are very small, and on some of them are noticeable. Plastic deformation occurred on the test samples due to compression and crumpling of the fibers at the point of weakening of the material.

In all test samples from the control, unreinforced plates of Combination 4, failure occurred as a result of shear stresses. In relation to reinforced samples, the fracture of the test samples is quite expressed. The fracture tends to complete fracture of the test sample EK4.

#### 4. CONCLUSION

In this study, laminated veneer lumber and reinforced laminated veneer lumber were produced with poplar veneer bonded with epoxy adhesive (EK). Reinforced laminated veneer lumber was produced by inserting woven carbon fiber between veneers, and some of their mechanical properties were tested. Reinforcement of EK3 panels, where the carbon fabric is placed in the first and sixth glue-line in two layers, like mesh, oriented perpendicularly to each other, shows a much higher degree of increase panel shear capacity. The force at which the fracture occurred increased by 57.05%, while the percentage of improvement in shear stress is 44.75% compared to the control sample (EK4). In the test samples from these plates, it was observed that the degree of damage is the lowest compared to all tested test samples. The conducted research confirmed the possibility of applying the newly obtained poplar veneer composite material for the design of structural elements in LVL using epoxy adhesive. In this way, the use of technically weaker wood in the construction industry is encouraged and the use of wood raw materials is rationalized.

#### ACKNOWLEDGEMENTS

*This research was funded by The Ministry of Education, Science and Technological Development which is financing the scientific research work of the University of Belgrade - Faculty of Forestry in 2023. on the basis of the Agreement on the realization number: 451-03-47/2023-01/200169.*

*This research was supported by the University of Belgrade, Faculty of Architecture, LAB—architectural engineering laboratory—structural problems of architectural buildings and laboratory of architectural space—form, function, and materialization; Faculty of Forestry, LAB—laboratory for the testing of chipboards and laboratory for testing wood properties. We would like to thank Mapei SRB d.o.o Beograd for providing carbon mesh for testing.*
