(IN)VISIBLE MINORITIES IN CANADIAN HEALTH DATA AND RESEARCH

CONFERENCE ON POPULATION CHANGE AND THE LIFE COURSE: TAKING STOCK AND LOOKING TO THE FUTURE
## MARCH 19-20, 2015

M. KHAN, K. KOBAYASHI, S.M. LEE (UNIVERSITY OF VICTORIA), AND Z.M. VANG (MCGILL UNIVERSITY) *

*NAMES OF PROJECT TEAM MEMBERS ARE LISTED ALPHABETICALLY

Why is this Research Important?

Significant increase in Canada's visible minority population in the past decade (Statistics Canada, 2013)

Why is this Research Important?

Increase in the Visible Minority Older Adult (VMOA) population in Canada

7.2%

2.3%

1981   2006

WHAT WE NEED TO KNOW

▶ Are visible minority Canadians healthier or less healthy than their white counterparts?

▶ Do risk factors for health conditions differ for visible minority and white Canadians?

▶ How do different visible minority groups compare with one another on health outcomes and measures?

PROJECT RESEARCH QUESTION

"Are Visible Minorities *Invisible* In Canadian Health Data and Research?"

Source: National Post, 2014

METHODOLOGY

A Scoping review to address four specific questions on:

- The mortality and morbidity patterns of visible minorities relative to white Canadians
- The determinants of visible minority health
- The health status of VMOA
- Promising datasets

FINDINGS

TABLE 1

| Description of Studies	Number of Studies (N)
Studies that focus on some aspect of health of visible minorities compared with whites, using national data	5
Studies that focus on some aspect of health of visible minorities, using provincial/local data	35
Studies that focus only on health of immigrant visible minorities	40
Studies with separate analysis of immigrant visible minorities and Canadian-born visible minorities	2
Studies that focus on some aspect of health of visible minority older adults compared with white older adults	2
Studies that focus only on health of immigrant visible minority older adults	9
Other publications	6

TABLE 2

	Total number of studies	Diabetes	Hypertension and Heart Disease	Mental health	Mortality	Cancer
All Visible Minorities	14	- +	++	+ + -	+ + + - +	= -
Select visible minority populations:						
Chinese	7	- -	+ + -	+ -		
Black	5	-	- - +	+		
South Asian	12	- -	- - - =	+ + -		- = -
Select visible minority populations, as approximated by country/region of birth for foreign-born persons.						
(all) Non-European	15					
China	6					
South Asia	5					
East Asia	1					
Africa	1					

FIGURE 1

Data Sources

FINDINGS

▶ *Major* gap in health data and research on visible minorities in Canada

▶ Many studies failed to distinguish between immigrants and Canadian-born visible minorities

▶ Visible minorities often treated as a monolithic category

▶ The visible minority older adult population is even more invisible in health data and research.

▶ The most promising dataset appears to be the Canadian Community Health Survey (CCHS).

▶ Discrimination as an important social determinant of health

RECOMMENDATIONS

1. **Data Needs:**

- Oversampling visible minorities in standard health surveys such as the CCHS, or conducting targeted health surveys of visible minorities

- Surveys should collect information on key socio-demographic characteristics such as nativity, ethnic origin, socioeconomic status, and age-at-arrival for immigrants

2. **Research Needs:**

- Researchers could consider an intersectionality approach in their analyses.
